This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

The business names used in this documentation are fictitious, and are not intended to identify any real companies currently or previously in existence.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Generating the Requirement Report.....	238
Understanding the Requirement Report.....	238
Page Used to Generate the Requirement Report.....	238
Generating the Requirement Report.....	239
Generating the Entity Group Table and Condition Table Reports.....	239
Page Used to Generate the Entity Group Table and Condition Table Reports.....	240
Processing the Entity Group Table and Condition Table Reports.....	240
Chapter 7: Setting Up Program Enrollment.....	241
Understanding Program Enrollment.....	241
Setting Up Academic Item Types.....	244
Pages Used to Set Up Academic Item Types.....	244
Defining Academic Item Types.....	245
Defining Academic Item Type Attributes.....	247
Using Delivered Academic Item Types.....	253
Identifying Child Item Types and Syncing Entities.....	263
Page Used to Identify Child Items and Sync Entities.....	263
Using the Item Type Matrix.....	263
Setting Up Rules for Program Enrollment.....	267
Page Used to Set Up Rules for Program Enrollment.....	267
Setting Up Rule Types for Program Enrollment.....	267
Associating Rule Types with Execution Events.....	271
Setting Up Program Formats.....	275
Understanding Program Formats.....	275
Page Used to Set Up Program Formats.....	276
Defining Program Formats.....	276
Setting Up AIR Administrator Security.....	280
Page Used to Set Up AIR Administrator Security.....	280
Setting Up AIR Administrator Security.....	281
Setting Up Enrollment Cohorts.....	281
Understanding Enrollment Cohorts.....	281
Page Used to Set Up Enrollment Cohorts.....	282
Defining Enrollment Cohorts.....	282

Setting Up Enrollment Categories for Program Requirements..... 284

 Understanding Enrollment Categories..... 284

 Page Used to Set Up Enrollment Categories for Program Requirements..... 285

 Defining Enrollment Categories..... 285

Setting Up Result Types..... 286

 Page Used to Set Up Result Types..... 286

 Defining Result Types..... 286

Setting Up Academic Item Registry Entries, Item Details, and Item Security..... 290

 Understanding AIR Entries..... 290

 Pages Used to Set Up Academic Item Registry Entries, Item Details, and Item Security..... 291

 Accessing the Academic Item Registry Component - AIR Search..... 292

 Defining AIR Entries..... 297

 Using Item Attributes to Extend AIR Data Elements..... 301

 Using Item Attributes in AIR..... 303

 Assigning Item Attributes to Child Academic Items..... 304

 Defining Academic Item Details..... 307

 Assigning Rules and Result Types to Academic Items..... 313

 Maintaining AIR Rich Text Fields..... 315

 Defining Academic Item Security..... 316

 Managing Special Edits in AIR for COURSE, COURSEGROUP, and COURSELIST
Academic Items..... 317

 Using the Academic Item Registry Copy Function..... 317

Creating Academic Items for Courses..... 318

 Pages Used to Create Academic Items for Courses..... 318

 Creating Academic Items for an Individual Course..... 319

 Viewing Academic Item Details for Courses..... 320

 Creating Academic Items for Multiple Courses..... 321

Building Programs by Format..... 324

 Understanding How to Build Programs by Format..... 324

 Page Used to Build Programs by Format..... 325

 Using the Build Program by Format Component in Add Mode..... 325

 Using the Build Program by Format Component in Update/Display Mode..... 332

Generating and Viewing Program Templates..... 333

 Understanding Program Templates..... 333

 Pages Used to Generate and View Program Templates..... 334

 Generating and Viewing an AIR Based Program Template..... 334

 Viewing the Template – Long Page..... 336

Setting Up Course Groups..... 337

 Understanding Course Groups..... 337

 Pages Used to Set Up Course Groups..... 337

 Defining Course Groups..... 338

 Defining Course Group Details..... 339

 Viewing Test Output..... 341

 Defining Filters..... 343

 Copying Course Groups..... 344

Setting Up for the Academic Progress Tracker..... 346

 Pages Used to Set Up for the Academic Progress Tracker..... 346

 Enabling Program Enrollment..... 346

 Mapping Campus Solutions Academic Programs, Plans and SubPlans to AIR Based
Programs of Study..... 346

Setting Up APT Action Security..... 348

Page Used to Set Up APT Action Security.....	348
Defining Security for APT Actions.....	349
Setting Up APT Reason Codes.....	349
Page Used to Set Up APT Reason Codes.....	350
Defining APT Reason Codes.....	350
Using the Common Attribute Framework to Extend Class Associations for Program Enrollment.....	351
Setting Up Common Attribute Framework to Extend Class Associations for Program Enrollment.....	352
Chapter 8: Setting Up Instructor Workload.....	359
Understanding Instructor Workload.....	359
Course Component Workload Hours Formula.....	359
Instructor Assignment Percentage Formulas.....	361
Prerequisite for Setting Up Instructor Workload.....	364
Implementing Instructor Workload Setup Tables.....	364
Pages Used to Implement Instructor Workload Setup Tables.....	365
Creating Assignment Types.....	366
Creating Instructor Assignment Classes.....	368
Defining Instructor Workload Preferences for Your Institution.....	370
Defining Subject and Component Multipliers.....	374
Linking Workload Hours to Courses.....	375
Linking Workload Hours to Class Components.....	375
Chapter 9: Setting Up Transfer Credit Processing.....	377
Understanding the Transfer Credit Business Process.....	377
Prerequisites.....	377
Transfer Credit Business Process.....	377
Defining External Organizations.....	378
Setting Up External Subjects.....	378
Setting Up External School Subjects.....	378
Page Used to Set Up External School Subjects.....	379
Linking External Subjects to External Organizations.....	379
Entering External Courses.....	379
Page Used to Enter External Courses.....	379
Recording External Courses.....	380
Setting Up External Terms.....	381
Setting Up Test and Component Information.....	381
Setting Transcript and Statistics Defaults.....	381
Making Overall Statistics Adjustments.....	382
Defining Study Agreements.....	382
Page Used to Define Study Agreements.....	383
Creating Course Transfer Equivalency Rules.....	383
Understanding Course Transfer Equivalency Rules.....	383
Pages Used to Create Course Transfer Equivalency Rules.....	385
Defining Component Subject Areas.....	386
Defining Subject Area Elements.....	388
Reviewing and Adjusting Incoming Course Information.....	394
Defining Course Transfer Rules.....	396
Reviewing Examples of Course Equivalencies.....	396
Example of a Many-to-One Course Equivalency.....	397
Example of a Many-to-Many Course Equivalency.....	398
Example of a Course Rejection Equivalency.....	398

Example of Multiple Equivalencies for the Same Course.....	399
Example of an Excess Credit Course Equivalency.....	402
Converting Existing Transfer Components into Component Subject Areas.....	402
Copying Transfer Components Between Component Subject Areas.....	403
Page Used to Copy Transfer Components Between Component Subject Areas.....	403
Copying Transfer Components Between Component Subject Areas.....	403
Defining Course Equivalencies for Academic Programs and Plans.....	407
Understanding Course Equivalencies for Academic Programs and Plans.....	407
Pages Used to Define Course Equivalencies for Academic Programs and Plans.....	408
Setting Up Basic Academic Program/Plan Data.....	408
Setting Equivalency Rules.....	410
Creating Test Transfer Equivalency Rules.....	412
Page Used to Create Test Transfer Equivalency Rules.....	412
Defining Test Transfer Equivalency Rules.....	412
Defining Test Equivalencies for Academic Programs and Plans.....	415
Page Used to Define Test Equivalencies for Academic Programs and Plans.....	415
Setting Test Equivalencies for Academic Programs and Plans.....	415
Chapter 10: Setting Up Attendance Tracking.....	419
Prerequisites for Setting Up Attendance Tracking.....	419
Setting Up Attendance Tracking Data.....	419
Pages Used to Set Up Attendance Tracking.....	419
Defining Attendance Type Translate Values.....	420
Selecting a Default Class Meeting Attendance Type.....	420
Defining Attendance Tracking Options for Course Components.....	420
Indicating Attendance Roster Generation for a Class.....	420
Chapter 11: Preparing to Track Student Data.....	423
Common Elements Used in Preparing to Track Student Data.....	423
Setting Up Academic Standing.....	423
Pages Used to Set Up Academic Standing.....	424
Defining Academic Standing Action Codes.....	424
Creating Academic Standing Rules.....	426
Linking Academic Standing, Honors, and Awards Rules to Academic Programs.....	432
Setting Up Honors and Awards.....	435
Pages Used to Set Up Honors and Awards.....	435
Defining Honor/Award Codes.....	436
Creating Honor Award Rules.....	436
Setting Up Special Grade Point Averages.....	439
Page Used to Set Up Special Grade Point Averages.....	439
Reviewing Committees and Committee Members.....	439
Setting Up Milestones.....	440
Pages Used to Set Up Milestones.....	440
Defining Milestone Codes.....	440
Creating Milestone Templates.....	443
Setting Up Extracurricular Activities.....	445
Page Used to Set Up Extracurricular Activities.....	445
Setting up Extracurricular Activity Codes.....	445
Managing Student Groups.....	446
Page Used to Manage Student Groups.....	446
Setting Up Student Attributes.....	446
Understanding Student Attributes.....	446
Pages Used to Set Up Student Attributes.....	447

Defining Student Attribute Codes.....	448
Defining Student Attribute Values.....	448
Chapter 12: Setting Up Grading.....	449
Understanding Grade Preparation.....	449
Setting Up Your System for Grading.....	449
Understanding Grading Setup.....	450
Pages Used to Set Up Your System for Grading.....	450
Defining Grading Schemes.....	451
Defining Grading Basis Exception Rules.....	458
Running the Grade Basis Exception Report.....	463
Creating Grade Rosters for a Single Class.....	463
Creating Grade Rosters for Multiple Classes.....	465
Chapter 13: Setting Up Degrees and Honors.....	467
Setting Up Degrees and Degree Honors.....	467
Pages Used to Set Up Degrees and Honors.....	467
Defining Degrees.....	468
Attaching Degrees to Academic Plans.....	470
Defining Degree Honors.....	470
Chapter 14: Setting Up Transcripts.....	473
Understanding Transcript Levels.....	473
Defining Transcript Type Security.....	474
Creating Transcript Notes.....	474
Page Used to Create Transcript Notes.....	475
Defining Transcript Notes.....	475
Creating Transcript Text.....	476
Page Used to Create Transcript Text.....	476
Defining Transcript Text.....	476
Reviewing Transcript Print Areas.....	480
Page Used to Review Transcript Print Areas.....	480
Reviewing the Transcript Print Area Table.....	480
Defining Transcript Types.....	481
Prerequisites.....	482
Pages Used to Define Transcript Types.....	482
Defining Transcript Type Basic Data.....	483
Linking Academic Careers to Transcript Types.....	487
Designating Student and Institutional Information.....	489
Designating Degree and Program Data.....	491
Designating Enrollment and Statistics Data.....	495
Designating Transfer/Test/Other Data.....	499
Designating Transcript Type Test Scores.....	503
Designating Special GPA Information.....	504
Defining Data Sorting Order.....	505
Setting up Transcript Fees.....	506
Setting Up Delivery Methods.....	509
Pages Used to Set Up Delivery Methods.....	509
Defining Delivery Methods and Fees.....	509
Setting Up Electronic Transcript Processing.....	510
Pages Used to Set Up Electronic Transcript Processing.....	511
Defining TS130 and TS131 Controls.....	511
Defining Reporting Codes and Email Information.....	513
Defining TS130 Contacts.....	515

Setting Up Data Maps for TS130 Outbound Processing.....	516
Chapter 15: Setting Up Activity Management.....	519
Prerequisites for Setting Up Activity Management.....	519
Setting Up an Activity Management Framework.....	519
Pages Used to Set Up an Activity Management Framework.....	520
Defining Content Categories.....	521
Defining Content Devices.....	522
Defining Exam Types.....	522
Defining Forms of Identification.....	522
Defining a Result Scale.....	522
Defining Content Messages.....	528
Defining Academic Periods.....	529
Defining Extenuating Circumstances.....	532
Defining Inclusion Types.....	534
Reviewing Date Sources.....	535
Defining Date Settings.....	536
Defining Action Dates.....	537
Defining Result Dates.....	539
Setting Up an Activity Definition.....	543
Understanding Activity Definition Setup.....	543
Pages Used to Set Up an Activity Definition.....	544
Defining Activity Definitions.....	544
Reviewing Content Inclusions.....	551
Setting Up the Activity Registry.....	552
Understanding the Activity Registry.....	552
Pages Used to Set Up the Activity Registry.....	553
Defining a Registry Header.....	554
Reviewing Self-Service Message Controls.....	559
Defining Copy Content.....	560
Defining Registry Details.....	561
Defining Content Notes.....	576
Establishing Common Attributes.....	576
Reviewing Coursework Item Dates.....	577
Defining Staff Instructions.....	578
Reviewing the Content Tree.....	579
Setting Up Anonymous Grading.....	581
Pages Used to Set Up Anonymous Grading.....	581
Configuring Access to Anonymous IDs.....	582
Validating Anonymous IDs.....	583
Setting Up Activity Management Throughout Campus Solutions.....	583
Define Various Activity Management Installation Options.....	584
Enabling Activity Management and Setting Up Activity Management Defaults.....	584
Setting Up EOCs.....	584
Chapter 16: Setting Up Research Tracking.....	585
Setting Up Research Tracking.....	585
Pages Used to Set Up Research Tracking.....	585
Setting Up Student Administration Options.....	586
Setting Up Research Tracking Options for Academic Programs.....	586
Setting Up Research Tracking Options for Academic Plans.....	590
Setting Up Research Status Codes.....	590
Setting Up Demographic Data Usage.....	593

Setting Up Consumption Load.....	593
Setting Up Consumption Actions for Program Actions.....	594
Using Common Attribute Framework for Research Tracking.....	596
Setting Up Research Topics.....	597
Pages Used to Define Research Topics.....	597
Defining Research Topic Categories.....	598
Defining Research Topics.....	599
Reviewing Available Research Supervisors.....	601
Associating Organizations and Contacts with Research Topics.....	601
Entering Additional Information.....	603
Entering Attachments.....	604
Setting Up Self-Service Research Topic Search.....	604
Setting Up Research Administrators.....	607
Pages Used to Set Up Research Administrators.....	607
Defining Administrators.....	608
Defining and Managing Administrator Profiles.....	608
Defining Supervisor Roles.....	611
Defining Additional Business Assignments.....	612
Setting Up Research Service Requests.....	614
Understanding Research Service Requests.....	614
Pages Used to Set Up Research Service Requests.....	616
Using the Notifications Framework for Service Request Notifications.....	616
Using the Notifications Framework for Service Item Notifications.....	619
Setting Up Research Service Request Categories.....	621
Setting Up Research Service Request Types.....	622
Setting Up Self-Service Research Service Requests.....	623
Setting Up Service Request Assignments.....	625
Setting Up Candidate Center.....	626
Pages Used to Set Up Candidate Center.....	627
Setting Up the My Research Projects Region.....	627
Configuring a Status Detail Page.....	629
Setting Up the My Service Items Region.....	632
Configuring a Service Item.....	633
Setting Up the Service Item Fields.....	637
Setting Up Rules for Online Edits.....	641
Pages Used to Set Up Rules for Research Tracking.....	641
Setting Up Rule Types.....	641
Associating Rule Types with Execution Events.....	644
Setting Up Online Notifications.....	646
Setting Up Integration Broker For Research Administrator Profile Affiliations.....	652
Integration Broker Setup for Research Administrator Profile Affiliations.....	652
Chapter 17: Setting Up Student Academic Projects.....	663
Understanding Student Academic Projects.....	663
Setting Up Academic Project Types.....	663
Page Used to Set Up Academic Project Types.....	663
Defining Academic Project Types.....	663
Setting Up Process Status Codes.....	664
Using Common Attribute Framework for Student Academic Projects.....	664
Setting Up Demographic Data Usage.....	666
Defining Student Academic Project Topic Categories.....	666
Setting Up Academic Project Topics.....	666

Page Used to Set Up Academic Project Topics.....	666
Defining Academic Project Topics.....	667
Reviewing Available Academic Project Supervisors.....	667
Associating Organizations and Contacts with Academic Project Topics.....	668
Entering Additional Information.....	668
Entering Attachments.....	668
Setting Up Project Supervisors.....	668
Defining Administrators.....	668
Setting Up Integration Broker For Profile Affiliations.....	669
Defining and Managing Administrator Profiles.....	669
Defining Supervisor Roles.....	669
Defining Additional Business Assignments.....	669
Defining Online Edits Using the Rules Engine.....	669
Setting Up Online Notifications for Student Projects.....	670
Setting Up Evaluation Management for Student Projects.....	670
Chapter 18: Preparing to Consolidate and Report Academic Statistics.....	671
Prerequisites for Preparing to Consolidate and Report Academic Statistics.....	671
Setting Up Academic Institutions for Reporting.....	671
Setting Up Academic Careers and Academic Programs for Reporting.....	672
Setting Up Academic Level and Load Rules for Reporting.....	672
Setting Up Student Attributes for Reporting.....	673
Setting Up Extracurricular Activities for Reporting.....	673
Setting Up Branch Codes for NSC Reporting.....	673
Page Used to Set Up NSC Branch Codes.....	673
Defining NSC Branch Codes for Reporting.....	674
Setting Up Statistic Period Types.....	675
Page Used to Set Up Statistic Period Types.....	675
Defining Statistics Period Types.....	675
Setting Up Academic Statistics Periods.....	677
Understanding Academic Statistics Periods.....	678
Page Used to Set Up Academic Statistics Periods.....	679
Defining Academic Statistics Periods.....	679
Setting Up For NSC Program Level Reporting.....	684
Chapter 19: (AUS) Setting Up Government Reporting.....	687
Understanding Australian Government Reporting.....	687
Prerequisites.....	687
The Government Departments That Require Higher Education Reporting.....	687
Setting Up DIISRTE Reporting Codes.....	688
Understanding DIISRTE Reporting Codes.....	688
Pages Used to Set Up DIISRTE Reporting Codes.....	689
Setting Up Institution Codes.....	691
Setting Up DIISRTE Country Codes.....	691
Mapping Country Codes to DIISRTE Country Codes.....	692
Setting Up DIISRTE Language Codes.....	692
Mapping Language Codes to DIISRTE Language Codes.....	693
Setting Up DIISRTE Citizenship and Residency Codes.....	693
Setting Up DIISRTE Citizenship and Residency Mapping.....	693
Setting Up DIISRTE Processing.....	694
Setting Up Level of Education Codes.....	697
Identifying CS Locations for TCSI.....	697
Map Types of Impairment With Disability Codes.....	698

Map Program Actions and Reasons to Program Completion Codes.....	698
Setting Up for Collecting Applications and Offers Data.....	699
Understanding Applications and Offers Data Collection.....	699
Pages Used to Set Up Applications and Offers Profile Parameters.....	700
Setting Up an Applications and Offers Profile.....	700
Setting Up Applications and Offers Element Mapping.....	701
Setting Up Applications and Offers Element Defaults.....	706
Setting Up Funding Source Codes.....	708
Setting up Element 702 Mapping.....	708
Setting Up HECS Liability in Student Records.....	709
Understanding HECS Liability in Student Records.....	710
Pages Used to Set Up HECS Liability.....	710
Defining Cohort Years.....	710
Setting Up HECS Band IDs.....	711
Mapping Liability Status Codes.....	712
Mapping Work Experience to HECS Liability Codes.....	712
Setting Up Aggregated EFTSL Values.....	713
Setting Up Centrelink Reporting.....	716
Pages Used to Set up Centrelink Reporting.....	716
Setting up Centrelink.....	717
Setting up the Load Search/Match Parameters for CART.....	717
Setting up the Last Cart Request ID.....	717
Chapter 20: (CAN) Setting Up Government Reporting.....	719
Understanding the Canadian Government Reporting Process.....	719
Defining Canadian Reporting Business Units.....	720
Pages Used to Define Canadian Business Units.....	721
Defining Canadian Reporting Business Unit Descriptions.....	721
Defining Canadian Reporting Business Unit Defaults.....	721
Defining Canadian Reporting Business Unit Career Usage Values.....	723
Reviewing Delivered Report Types and Element Numbers.....	723
Pages Used to Review Delivered Codes.....	723
Reviewing Delivered Government Report Types.....	724
Reviewing Delivered Government Elements.....	724
Defining Element Classifications.....	724
Page Used to Define Element Classification Types.....	724
Defining Element Classification Types.....	724
Defining Report Periods.....	725
Page Used to Define Report Periods.....	726
Defining Report Periods.....	726
Reviewing Delivered Government Element Codes.....	727
Pages Used to Review Delivered Government Element Codes.....	728
Reviewing Delivered County and Country Codes.....	728
Pages Used to Review Delivered County and Country Codes.....	728
Reviewing Delivered Language, School, and CIS Language Codes.....	729
Pages Used to Review Delivered Language, School, and CIS Language Codes.....	729
Defining Provincial Codes.....	729
Pages Used to Define Provincial Codes.....	730
Defining Program Funding Approval Codes.....	731
Defining Provincial Course Funding Codes.....	731
Defining Provincial Citizen Funding Codes.....	731
Defining Provincial Major Field of Study Codes.....	731

Defining Provincial Program Codes..... 732

Defining Provincial Program Funding Codes..... 732

Defining Provincial Special Initiative Codes..... 732

Defining General Mapping Tables..... 732

Pages Used to Define General Mapping Tables..... 733

Defining Mapping Language Codes..... 734

Reviewing Delivered Province Codes..... 734

Mapping Canadian Reporting Sequence..... 735

Mapping Terms and Sessions to Reporting Periods..... 735

Reviewing Delivered OUAC Application Numbers..... 736

Defining the Classification Mapping Table..... 736

Defining the Direct Mapping Table..... 737

Defining the Master Mapping Table..... 738

Defining the Separate Mapping Table..... 738

Defining School Reporting Classifications..... 739

Prerequisites..... 739

Page Used to Define School Reporting Classifications..... 739

Defining Address and Phone Usage Values for Canadian Government Reporting..... 739

Pages Used to Define Address and Phone Usage Table Entries for Canadian Government Reporting..... 740

Defining Address Usage Values..... 740

Defining Email Address Usage Values..... 740

Defining Phone Usage Values..... 741

Mapping Program Values for PSIS, USISE, MET, and OUAC..... 741

Pages Used to Define PSIS, USISE, MET, and OUAC Program Mapping Values..... 741

Defining PSIS Program Mapping 1 Values..... 742

Defining PSIS Program Mapping 2 Values..... 744

Defining PSIS Program Mapping 3 Values..... 745

Defining PSIS Program Mapping 4 Values..... 746

Defining USISE Program Mapping Values..... 747

Defining MET and OUAC Program Mapping Values..... 748

Mapping Plan Values for PSIS, USISE, MET, and OUAC..... 749

Pages Used to Map PSIS, USISE, MET, and OUAC Plan Values..... 750

Defining PSIS Plan Mapping 1 Values..... 750

Defining PSIS Plan Mapping 2 Values..... 751

Defining PSIS Plan Mapping 3 Values..... 753

Defining PSIS Plan Mapping 4 Values..... 754

Defining USISE Plan Mapping Values..... 755

Defining MET/OUAC Plan Mapping Values..... 757

Defining CIS Program, Plan, and Subplan Tables..... 758

Pages Used to Define CIS Program, Plan and Subplan Values..... 758

Defining the CIS Program Table..... 758

Defining the CIS Plan Table..... 759

Defining the CIS Subplan Table..... 759

Defining PSIS Course Data..... 759

Page Used to Define PSIS Course Data..... 759

Defining PSIS Course Data..... 759

Mapping Canadian School Codes to External Organizations..... 760

Page Used to Map Canadian School Codes to External Organizations..... 760

Mapping Canadian School Codes to External Organizations..... 760

Defining PSIS Student Data..... 760

Pages Used to Define PSIS Data for Students.....	761
Defining PSIS Student Program Data.....	761
Defining PSIS Student Enrollment Data.....	763
Loading the Student ID Table.....	765
Page Used to Load the Student ID Table.....	765
Loading Student Data.....	765
Chapter 21: (NZL) Setting Up Government Reporting.....	769
Understanding New Zealand Government Reporting.....	769
Prerequisites.....	770
Preparing for SDR Reporting.....	771
Pages Used to Prepare for SDR Reporting.....	771
Defining Funding Categories.....	772
Defining Course Classifications.....	773
Defining MoE Subject Codes.....	774
Setting Up Field of Study Codes.....	774
Preparing for NZQA Reporting.....	775
Pages Used to Prepare for NZQA Reporting.....	775
Defining NQF Fields, Subfields, and Domains.....	775
Defining Unit Standards.....	776
Linking NQF Codes to Milestones.....	776
Preparing for NZVCC Reporting.....	777
Pages Used to Prepare for NZVCC Reporting.....	777
Entering NZVCC Subject Codes.....	778
Entering NZVCC Qualification Codes.....	778
Chapter 22: (NLD) Managing the BRON-HO Interface.....	779
Understanding BRON-HO.....	779
Chapter 23: (NLD) Setting Up Test Administration.....	781
Understanding Test Administration Setup.....	781
Common Elements Used to Set Up Test Administration.....	781
Activating Test Administration.....	782
Page Used to Activate Test Administration.....	782
Activating Test Administration.....	782
Defining Tests and Calculated Results in the Catalog.....	782
Pages Used to Define Tests and Calculated Results in the Catalog.....	783
Defining Tests.....	783
Defining Test Offerings.....	785
Defining a Test Set for Calculated Results.....	786
Linking a Course to the Test.....	788
Creating Test Trees in Tree Manager.....	789
Pages Used to Create Test Trees.....	789
Creating a Test Tree.....	789
Validating Test Trees.....	790
Linking Test Trees to Programs.....	790

Linking the Test Tree to a Program.....	790
Setting up Default VAVO Combination Grade Courses.....	791
Pages Used to Set Up Default VAVO Combination Grade Courses.....	792
Adding Combination Grade Course Defaults.....	792
Running the Combination Grade Process.....	793
Creating Test Lists.....	793
Pages Used to Create Test Lists.....	793

Creating a Test List.....	793
Adding Tests to a Test List.....	794
Defining Evaluation Rules.....	795
Pages Used to Define Evaluation Rules.....	795
Defining Evaluation Requisites.....	796
Defining Evaluation Rule Details.....	797
Chapter 24: (NLD) Managing Student Higher Education Information.....	801
Tracking Student Higher Education Information.....	801
Pages Used to Manage Student Higher Education Information.....	801
Entering Academic Program Higher Education Information for a Student.....	801
Managing Student Higher Information.....	802
Viewing Higher Education Information for a Student.....	803
Chapter 25: (NLD) Managing Test Administration.....	805
Common Elements Used to Manage Test Administration.....	805
Creating Test Sessions.....	805
Pages Used to Create Test Sessions.....	806
Selecting Test Session Criteria.....	806
Inserting Test Sessions and Students.....	807
Maintaining Test Sessions.....	810
Pages Used to Maintain Test Sessions.....	810
Maintaining Test Session Details.....	810
Enrolling Additional Students.....	811
Entering Grades.....	812
Entering Grade Comments.....	813
Maintaining Test Sessions by Session.....	813
Pages Used to Maintain Test Sessions by Session.....	814
Enrolling Students by Test Session.....	814
Entering Grades.....	814
Entering Comments.....	814
Maintaining Test Sessions by Student.....	814
Pages Used to Maintain Test Sessions by Student.....	815
Maintaining Test Sessions by Student.....	815
Maintaining Session Grades per Student.....	816
Linking Test Trees to Students.....	816
Page Used to Link Test Trees to Students.....	817
Linking Test Trees to Students.....	817
Maintaining VAVO Course Options.....	817
Page Used to Maintain VAVO Course Options.....	817
Maintaining VAVO Course Options.....	817
Calculating Grades and Evaluating Students.....	819
Understanding the Calculation Process.....	819
Pages Used to Calculate Cumulative Grades and Evaluate Students.....	819
Calculating Grades per Student.....	820
Calculating Grades per Program.....	821
Evaluating Results per Student.....	821
Evaluating Results per Program.....	821
Viewing and Adjusting Evaluation Results.....	821
Pages Used to View and Adjust Evaluation Results.....	822
Viewing Additional Details of Student Evaluation Results.....	822
Approving Adjustments.....	822
Adjusting Evaluation Results.....	823

Reporting Evaluation Data.....	823
Page Used to Report Evaluation Data.....	823
Running the Appraisal Report Process.....	824
Loading and Viewing Grade Data in Test Trees.....	824
Pages Used to Load and View Grade Data in Trees.....	824
Loading Grade Data into Test Trees by Student.....	825
Loading Grade Data into Test Trees by Program.....	825
Chapter 26: Performing Repeat Checking.....	827
Understanding the Three Repeat Checking Methods.....	827
Running the Repeat Rule Checking Process in Batch.....	829
Page Used to Run the Repeat Rule Checking Process in Batch.....	829
Running the Repeat Rule Checking Process in Batch.....	829
Chapter 27: Managing the Schedule of Classes.....	833
Understanding the Schedule of Classes.....	833
Scheduling New Classes.....	834
Understanding New Class Scheduling.....	834
Prerequisites.....	835
Pages Used to Schedule a Class.....	835
Defining Basic Data for Class Sections.....	838
Adding Class Association Attributes Using the Schedule of Classes Component.....	844
Entering Class Fee Information.....	845
Defining Class Meeting Patterns.....	846
Defining Auto Enroll Options and Capacity.....	852
Defining Class Reserve Capacity.....	856
Linking Class Notes to Sections.....	857
Linking Exam Times to Classes.....	858
Defining LMS Data for Classes.....	859
Defining Textbooks for Classes.....	861
Interfacing Class Sections with the General Ledger.....	863
Modifying Scheduled Classes.....	865
Modifying Scheduled Class Meetings.....	865
Understanding Modifications to Scheduled Class Meetings.....	865
Pages Used to Modify Class Meeting Information.....	866
Updating Meetings Information.....	866
Updating Enrollment Control Information.....	866
Updating Exam Information.....	867
Viewing and Updating Class Sections.....	867
Prerequisite.....	867
Page Used to View and Update Class Sections.....	867
Reviewing Class Sections.....	867
Rolling Data from the Course Catalog to the Schedule of Classes.....	870
Prerequisite.....	870
Page Used to Roll Data from the Course Catalog to the Schedule of Classes.....	870
Running the Course Roll Process.....	870
Defining Class Associations.....	871
Understanding Class Associations.....	871
Using the Common Attribute Framework to Extend Class Associations.....	873
Prerequisite.....	874
Pages Used to Define Class Associations.....	874
Adjusting Units.....	874
Modifying Class Components.....	878

Modifying Requisites.....	882
Defining Class Permissions.....	883
Understanding Class Permissions.....	883
Prerequisites.....	883
Common Elements Used in This Section.....	884
Pages Used to Create Class Permissions.....	884
Creating Add Permissions for Classes.....	885
Creating Drop Permissions for Classes.....	887
Generating Add Permissions for a Subject Area.....	890
Creating Combined Sections.....	891
Understanding Combined Sections.....	891
Pages Used to Create Combined Sections.....	892
Defining a Combined Section ID.....	893
Linking Classes to a Combined Section ID.....	893
Scheduling Examinations.....	895
Understanding Exam Scheduling.....	895
Prerequisites.....	896
Pages Used to Schedule Exams.....	896
Scheduling Exams for Individual Classes.....	896
Running the Exam Scheduling Process.....	896
Troubleshooting the Exam Scheduling Process.....	897
Modifying Course Events.....	897
Prerequisite.....	897
Page Used to Modify Course Events.....	897
Defining Class Events.....	897
Viewing Instructor Schedules.....	898
Page Used to View Instructor Schedules.....	899
Viewing Instructor Schedules.....	899
Viewing Instructor Schedules Through Self-Service Pages.....	899
Viewing Class Facility Usage.....	899
Prerequisites.....	899
Page Used to View Class Facility Usage.....	899
Reviewing Class Facility Usage.....	900
Searching for an Available Facility.....	900
Pages Used to Search for a Facility.....	900
Creating Facility Search Criteria.....	900
Viewing Facility Search Results.....	901
Searching for Classes.....	901
Understanding Class Search.....	902
Pages Used to Search for Classes.....	902
Printing the Schedule of Classes Report.....	902
Pages Used to Print the Schedule of Classes Report.....	903
Setting Schedule of Classes Report Parameters.....	903
Setting Schedule of Classes Report Options.....	904
Copying Classes from One Term to Another.....	905
Prerequisites.....	905
Pages Used to Copy Classes from Term to Term.....	905
Defining Criteria for the Prior Term Copy Process.....	906
Selecting Options for the Prior Term Copy Process.....	907
Clearing the Resource Queue Table.....	908
Understanding the Resource Queue Table.....	908

Page Used to Clear the Resource Queue Table.....	909
Clearing the Resource Queue Table.....	909
Chapter 28: Tracking Instructor Workload.....	911
Viewing and Updating Term Workload Data.....	911
Prerequisites.....	911
Pages Used to View and Update Term Workload Data.....	911
Viewing and Updating Individual Term Workload Data.....	912
Viewing and Updating Workload Values on the Meetings Page.....	916
Using the Workload Copy/Update Process.....	916
Prerequisites.....	917
Page Used to Report and Update Workload Values.....	917
Reporting and Updating Workload Values.....	917
Walking Through Instructor Workload.....	919
Chapter 29: Managing Student Programs, Plans, and Subplans.....	933
Understanding Academic Program and Plan Activation.....	933
Understanding Program Actions and Statuses.....	933
Understanding Program Actions Where Future Enrollments Exist.....	935
Understanding Program Actions Where Future Active Terms with No Enrollment Exist.....	936
Maintaining Student Program Stacks.....	937
Pages Used to Manage Student Program Stacks.....	937
Maintaining Student Academic Programs.....	938
Selecting a Student's Career Requirements Terms.....	942
Maintaining Student Academic Plans.....	943
Maintaining Student Academic Subplans.....	944
Maintaining Student Additional Information.....	944
(AUS) Entering Australia-Specific Student Program Information.....	946
(CAN) Entering ESIS Student Program Data.....	950
Chapter 30: Managing Activities.....	951
Understanding Activity Management.....	951
Understanding Results in Activity Management.....	952
Understanding the Delivered Rules in Activity Management.....	954
Understanding Resit Eligibility and Calculation.....	965
Prerequisites for Managing Activities.....	970
Adding Courses to an Existing Activity Registry.....	971
Understanding How to Add Courses to an Existing Activity Registry.....	971
Pages Used to Add Courses to an Existing Activity Registry.....	972
Associating a Single Course with an Activity Registry.....	972
Reviewing Associated Courses and Topics.....	972
Associating Multiple Courses with an Activity Registry.....	972
Generating Activity IDs for a Course.....	975
Understanding the Activity Generation Process.....	975
Pages Used to Generate Activity IDs for a Course.....	977
Using the Activity Generator.....	977
Using the Advanced Activity Generator.....	986
Reviewing Class Sections for a Term.....	988
Generating Activity IDs for Multiple Courses.....	997
Page Used to Generate Activity IDs for Multiple Courses.....	997
Generating Activity IDs Using Batch Activity Generator.....	997
Generating Anonymous IDs.....	1003
Pages Used to Generate Anonymous IDs.....	1003
Generating Anonymous IDs.....	1003

Generating Anonymous IDs for Exam-Only Courses.....	1005
Managing Course Root Activities.....	1005
Understanding the Activity Manager.....	1006
Pages Used to Manage Course Root Activities.....	1006
Managing Content Tree Activities.....	1007
Redirecting Class or Exam References to Activity IDs.....	1012
Adding Sibling or Child Activities.....	1013
Adding System References.....	1014
Managing Activity Details.....	1015
Establishing Activity Manager Common Attributes.....	1018
Managing Section Activities.....	1018
Understanding the Section Manager.....	1018
Pages Used to Manage Section Activities.....	1019
Managing Activity Sections.....	1019
Managing Section Details.....	1021
Managing Staff Instructions.....	1025
Securing Scheduled Activities.....	1026
Managing Student Activities.....	1027
Understanding IAM Creation in Batch.....	1028
Understanding IAM Block Generation.....	1028
Pages Used to Manage Student Activities.....	1028
Adding an IAM for an Individual Student.....	1029
Reviewing Activity Status.....	1035
Reviewing Activity Detail.....	1037
Establishing IAM Common Attributes for Activity Details.....	1038
Entering Activity Results for an Individual Student.....	1038
Establishing IAM Common Attributes for Activity Results.....	1041
Understanding Reassessment.....	1042
Evaluating Reassessment Eligibility.....	1042
Creating IAMs Automatically.....	1046
Creating IAMs in Batch Using Student Enrollment.....	1046
Creating IAMs in Batch Using APT.....	1049
Generating an IAM Student Block.....	1050
Generating an IAM Activity Block.....	1051
Using the IAM Batch Generator.....	1053
Reviewing IAM Requests.....	1054
Reviewing the IAM Activity Request Log.....	1054
Managing Course Rosters.....	1055
Pages Used to Manage Course Rosters.....	1055
Managing the Roster Summary.....	1056
Managing the Activity Roster.....	1059
Reviewing Activity Roster Student Details.....	1062
Managing the Result Roster.....	1062
Viewing Overall Activity Results.....	1067
Viewing Activity Root Roster Student Details.....	1069
Posting Student Results.....	1071
Calculating the Primary Result in Batch.....	1072
Chapter 31: Performing Batch Term Activation.....	1075
Understanding Term Activation.....	1075
Prerequisites.....	1075
Term Activation.....	1075

Running Batch Term Activation.....	1076
Understanding Batch Term Activation.....	1076
Pages Used to Run Batch Term Activation.....	1078
Defining Global Exclusions.....	1079
Defining Degree Status Rules.....	1081
Entering Required and High-Level Criteria for Processing.....	1083
Entering Detailed Criteria for Processing.....	1086
Entering Enrollment Lapse Rules for Processing.....	1089
Entering Process Control Options.....	1091
Creating Custom Populations for Processing.....	1095
Chapter 32: Performing Quick Activation.....	1097
Processing a Quick Activation.....	1097
Chapter 33: Creating Student Blocks.....	1099
Understanding Student Blocks.....	1099
Updating Mass Change Operator Security.....	1099
Page Used to Update User Security.....	1100
Updating Operator Security.....	1100
Creating a Student Block Mass Change Definition.....	1101
Understanding Mass Change Definitions.....	1102
Pages Used to Create a Student Block Mass Change Definition.....	1102
Creating Mass Change Definitions.....	1103
Specifying Student Administration Parameters.....	1103
Specifying Student Block Criteria and Defaults.....	1103
Generating Mass Change SQL Text for Student Blocks.....	1105
Viewing Mass Change Execution History.....	1107
Chapter 34: Maintaining Student Career Term Records.....	1109
Prerequisites for Maintaining Student Career Term Records.....	1109
Using the Term Activation Component.....	1109
Pages Used to Maintain Student Career Term Records.....	1109
Maintaining a Student's Career Term Record.....	1111
(AUS) Setting Student Term Default Values.....	1114
(NZL) Maintaining SDR Reporting Data for a Student.....	1115
Maintaining a Student's Term Enrollment Limits.....	1115
Maintaining a Student's Session Data.....	1117
Maintaining a Student's Terms in Residence.....	1118
Maintaining a Student's Term Control Dates.....	1120
Tracking and Maintaining a Student's External Study Agreements.....	1121
Querying for Academic Level Differentials.....	1121
Chapter 35: Managing Enrollment and Validation Appointments.....	1123
Understanding Enrollment and Validation Appointments.....	1123
Setting Up Enrollment and Validation Appointments.....	1124
Understanding Enrollment and Validation Appointment Setup.....	1124
Page Used to Set Up Enrollment and Validation Appointments.....	1125
Defining Enrollment Appointment Limits.....	1125
Creating Student Appointment Blocks.....	1127
Understanding Student Appointment Blocks.....	1127
Pages Used to Create Student Appointment Blocks.....	1127
Defining Student Appointment Blocks.....	1128
Defining Processing Priorities for Student Appointment Blocks.....	1130
Creating Enrollment and Validation Appointments.....	1131
Understanding Enrollment and Validation Appointments.....	1131

Pages Used to Create Enrollment and Validation Appointments.....	1132
Selecting an Appointment Control Session.....	1133
Creating Enrollment Appointment Blocks.....	1133
Creating Validation Appointments.....	1136
Assigning Enrollment and Validation Appointments in Batch.....	1136
Understanding Assigning Appointments in Batch.....	1136
Prerequisites.....	1137
Pages Used to Assign Enrollment and Validation Appointments in Batch.....	1138
Assigning Appointments in Batch.....	1138
Assigning and Maintaining Appointments for Individual Students.....	1140
Pages Used to Assign and Maintain Appointments for Individual Students.....	1141
Assigning and Maintaining Appointments for Individual Students.....	1141
Creating Appointment Communications in Batch.....	1145
Prerequisites.....	1145
Page Used to Create Appointment Communications in Batch.....	1146
Creating Appointment Communications in Batch.....	1146
Viewing Appointments Through Self Service.....	1146
Chapter 36: Processing Class Enrollment Transactions.....	1147
Understanding Class Enrollment Processing.....	1147
Class Enrollment Processing.....	1147
Enrollment Request Processing for Drops.....	1151
Date and Time Stamps on Student Enrollment Records.....	1153
Processing Enrollment Transactions Through the Quick Enrollment Component.....	1153
Understanding Quick Enroll.....	1154
Pages Used to Process Enrollment Transactions Through the Quick Enroll Component.....	1155
Adding or Updating Quick Enrollment Requests.....	1155
Inquiring About Enrollment Request Messages.....	1166
Processing Enrollment Transactions Through the Enrollment Component.....	1167
Pages Used to Process Enrollment Transactions Through the Enrollment Component.....	1168
Entering Class Enrollment Information.....	1169
Viewing Enrollment Transaction Information.....	1173
Adding Transcript Notes and Text.....	1175
Indicating Requirement Designation Options and Independent Study Instructors.....	1176
Viewing Last Enrollment Action Information.....	1176
(AUS) Entering HECS Data.....	1177
(CAN) Entering ESIS Student Data.....	1179
(NZL) Entering Funding Information.....	1179
(NLD) Indicating Student Paper Information.....	1180
Processing Enrollment Transactions Through the Block Enrollment Feature.....	1181
Understanding the Block Enrollment Feature.....	1181
Pages Used to Process Enrollment Transactions Through the Block Enrollment Feature.....	1183
Predefining Student Enrollment Blocks.....	1184
Predefining Class Enrollment Blocks.....	1185
Setting Class Enrollment Block Defaults.....	1187
Merging, Retrieving, and Posting Data for Block Enrollment Requests.....	1187
Creating Custom Student Enrollment Blocks.....	1191
Creating Custom Class Enrollment Blocks.....	1192
Viewing Block Enrollment Request Details.....	1193
Maintaining Detail for a Student's Block Enrollment Request.....	1194
Processing Enrollment Transactions Through the Enrollment Request Component.....	1195

Pages Used to Process Enrollment Transactions Through the Enrollment Request Component.....	1196
Adding or Updating Student Enrollment Request Transactions.....	1196
Adding Transcript Notes to Enrollment Requests.....	1199
Processing Enrollment Transactions Through Self Service.....	1200
Posting Mass Enrollment Requests.....	1200
Page Used to Post Mass Enrollment Requests.....	1200
Posting Enrollment Requests in Mass.....	1200
Chapter 37: Working with Enrollment Request Messages.....	1203
Acting on Enrollment Request Messages.....	1203
Chapter 38: Using Enrollment-Related Processes.....	1219
Creating Historical Enrollment Records.....	1219
Pages Used to Create Historical Enrollment Records.....	1219
Recording Historical Enrollment Records.....	1219
Managing Wait Lists.....	1220
Understanding Wait List Management.....	1221
Pages Used to Manage Wait Lists.....	1223
Viewing a Student's Wait List Position.....	1224
Moving Students from Wait Lists to Enrollment.....	1224
Purging Students From Wait Lists.....	1225
Processing Withdrawals and Cancellations.....	1226
Understanding Withdrawal and Cancellation Processing.....	1227
Common Elements Used to Process Withdrawals and Cancellations.....	1228
Pages Used to Process Withdrawals and Cancellations.....	1230
Posting Withdrawals and Cancellations for Terms.....	1231
Posting Withdrawals and Cancellations for Sessions.....	1232
Resubmitting Failed Withdrawal and Cancellation Requests.....	1233
Viewing Withdrawal and Cancellation Request Status.....	1234
Purging Drop Enrollment Records.....	1234

Deleting Drop Enrollment Records.....	1234
Purging Shopping Cart Records.....	1235
Page Used to Purge Shopping Cart Records.....	1235
Purging Shopping Cart Records.....	1235
Chapter 39: Managing Post Enrollment Requirement Checking.....	1237
Understanding Post Enrollment Requirement Checking Setup.....	1237
Managing the Enrollment Requirement Roster.....	1237
Pages Used to Manage Enrollment Requirement Rosters.....	1238
Using the Enrollment Requirement Roster (Summary) Page.....	1238
Tracking Post Enrollment Requirement Checking Transaction History.....	1246
Running Batch Post Enrollment Requirement Checking.....	1247
Page Used to Run Batch Post Enrollment Requirement Checking for Multiple Classes.....	1248
Running Batch Post Enrollment Requirement Checking for Multiple Classes.....	1248
Printing Batch Enrollment Requirement Rosters.....	1251
Page Used to Print Enrollment Requirement Rosters in Batch.....	1252
Printing Enrollment Requirement Rosters in Batch.....	1252
Processing Batch Drop Requests for Post Enrollment Requirements.....	1254
Page Used to Drop Non-Compliant Students in Batch.....	1254
Dropping Non-Compliant Students in Batch.....	1255
Defining Enrollment Requirement Note Types.....	1257
Page Used to Define Enrollment Requirement Note Types.....	1257

Purging Post Enrollment Requirement Data.....	1257
Page Used to Purge Post Enrollment Requirement Data.....	1257
Purging Post Enrollment Requirement Data.....	1257
Chapter 40: Using Enrollment Web Services.....	1259
Understanding Enrollment Web Services.....	1259
Chapter 41: Managing Program Planning and Enrollment.....	1261
Understanding the Academic Progress Tracker.....	1261
Linking an APT Instance to the Student Program.....	1261
Pages Used to Link an APT Instance to the Student Program.....	1262
Creating an APT Instance from Admissions.....	1262
Creating an APT Instance from Student Records Program/Plan Component.....	1265
Creating and Managing APT Instances Using the APT Request Process.....	1268
Page Used to Run the APT Request Process.....	1268
Running the APT Request Process.....	1268
Creating and Managing APT Instances Using the Academic Progress Tracker Component.....	1275
Pages Used to Create and Manage APT Instances.....	1275
Adding an APT Instance.....	1276
Managing APT Instance Statuses.....	1278
Using the AIR Tree.....	1279
Using the APT Tree.....	1285
Managing APT Items.....	1286
Using the APT Timeline.....	1314
Using Item Attributes to Extend APT Instance Header Data Elements.....	1315
Managing APT Enrollment.....	1318
Understanding APT Enrollment Processing.....	1319
Page Used to Process APT Enrollment Transactions.....	1320
Processing APT Enrollment Transactions.....	1320
Deleting Planning Nodes.....	1326
Page Used to Delete Planning Nodes.....	1327
Running the Delete Planning Nodes Process.....	1327
Managing the APT Administrative Roster.....	1328
Pages Used to Manage the APT Administrative Roster.....	1329
Processing APT Administrative Roster Transactions.....	1329
Monitoring APT Action Processes.....	1341
APT API Detail.....	1343
SSR_APT:API.....	1343
Chapter 42: Managing Research Tracking.....	1379
Managing Research Candidates.....	1379
Pages Used to Manage Research Candidates.....	1379
Reviewing Candidate Information.....	1380
Tracking Research Topics.....	1381
Searching for Research Topics.....	1384
Assigning Candidate Supervisors.....	1385
Searching for Supervisors.....	1387
Tracking Consumption and Submission.....	1388
Tracking Additional Candidate Assignments.....	1393
Creating Assignments for Multiple Students.....	1396
Updating Candidate Management Data Using Admissions Components.....	1398
Managing a Candidate's Thesis.....	1405
Understanding Thesis Management.....	1406
Pages Used to Manage a Candidate's Thesis.....	1406

Entering Thesis Details.....	1407
Entering Thesis Evaluation.....	1410
Entering Thesis Comments.....	1413
Entering Additional Information.....	1415
Storing Thesis Attachments.....	1415
Managing Service Requests.....	1416
Page Used to Manage Service Requests.....	1417

Viewing Term Statistics.....	1438
Calculating Term Statistic Values.....	1443
Viewing Cumulative Statistics for Multiple Terms.....	1456
Calculating Cumulative Statistic Values.....	1457
Viewing Student Terms.....	1460
Viewing Student Class and Exam Schedules Using Self-Service Pages.....	1460
Viewing Class Rosters.....	1460
Page Used to View Class Rosters.....	1460
Viewing Class Rosters.....	1460
Viewing Class Rosters Using Self-Service Pages.....	1463
Printing Class Rosters.....	1463
Page Used to Print Class Rosters.....	1463
Printing Class Rosters.....	1463
Producing Student Study Lists.....	1465
Page Used to Produce Student Study Lists.....	1465
Generating Student Study Lists.....	1465
Chapter 45: Managing Enrollment Verifications.....	1467
Producing Enrollment Verification Reports.....	1467
Pages Used to Produce Enrollment Verification Reports.....	1467

Restricting Service Indicators from Enrollment Verification.....	1468
Entering Enrollment Verification Requests.....	1468
Entering Recipient Addresses for Enrollment Verifications.....	1470
Adding Notes to Enrollment Verifications.....	1471
Processing Enrollment Verifications in Batch.....	1472
Requesting Enrollment Verifications Through Self Service.....	1473
Chapter 46: Processing Transfer Credit.....	1475
Understanding Transfer Credit Processing.....	1475
Common Elements Used to Process Transfer Credit.....	1475
Transfer Credit Processing.....	1479
Converting Transfer Credit Units.....	1480
Recording External Course and Test Information.....	1483
Creating Student-Specific Agreements.....	1483
Pages Used to Create Student-Specific Agreements.....	1483
Describing Student Agreements.....	1483
Entering Student Agreement Details.....	1484
Processing Course Transfer Credit.....	1486
Understanding Course Transfer Credit Processing.....	1487
Pages Used to Process Course Transfer Credit.....	1488
Processing Course Transfer Credit Models with Predefined Rules.....	1490
Calculating and Posting Course Transfer Credit with Predefined Rules.....	1493
Processing Course Transfer Credit Models Manually.....	1495
Calculating and Posting Course Transfer Credit Manually.....	1498
Viewing Student Study Agreements.....	1500
Viewing Incoming and Editing Equivalent Course Information.....	1500
Processing Test Transfer Credit.....	1501
Understanding Test Transfer Credit Processing.....	1501
Pages Used to Process Test Transfer Credit.....	1502
Processing Test Transfer Credit Models with Predefined Rules.....	1504
Calculating and Posting Test Transfer Credit with Predefined Rules.....	1505
Processing Test Transfer Credit Models Manually.....	1505
Calculating and Posting Test Transfer Credit Manually.....	1506
Entering Incoming Test and Equivalent Course Information.....	1507
Processing Other Transfer Credit.....	1508
Understanding Other Transfer Credit Processing.....	1508
Pages Used to Process Other Transfer Credit.....	1509
Processing Other Transfer Credit Models.....	1509
Calculating and Posting Other Transfer Credit.....	1510
Adding Incoming Other Credit and Equivalent Course Information.....	1511
Processing Transfer Credit in Batch.....	1513
Understanding Batch Transfer Credit Processing.....	1513
Pages Used to Process Transfer Credit in Batch.....	1513
Posting Transfer Credit in Batch.....	1514
Viewing Process Results for Batch Posting of Transfer Credit.....	1517
Viewing and Printing Transfer Credit Information.....	1517
Pages Used to View and Print Transfer Credit Information.....	1517
Viewing Academic Test Summaries.....	1518
Viewing Schools by Group.....	1518
Retrieving Transfer Credit Summaries.....	1518
Viewing and Printing Transfer Credit Summaries.....	1520
Printing Transfer Credit Summaries in Batch.....	1521

Viewing Transfer Credit Reports Through Self Service.....	1522
Evaluating Transfer Credit Through Self Service.....	1522
Chapter 47: Tracking Attendance.....	1523
Understanding Attendance Tracking.....	1523
Generating Individual Class Attendance Rosters.....	1524
Prerequisites.....	1524
Pages Used to Generate Individual Class Attendance Rosters.....	1525
Generating Attendance Rosters for Individual Classes.....	1525
Entering Class Attendance Detail.....	1529
Generating Batch Attendance Rosters.....	1532
Understanding Batch Attendance Roster Generation.....	1532
Prerequisites.....	1532
Pages Used to Generate a Batch of Attendance Rosters.....	1532
Running the Attendance Roster Generator Process.....	1533
Entering Roster Generator Options.....	1535
Printing Attendance Rosters.....	1536
Using Attendance Rosters.....	1537
Prerequisites.....	1537
Pages Used to Record Attendance.....	1537
Tracking Attendance by Class.....	1538
Tracking Attendance by Class Meeting.....	1538
Selecting a Roster for a Student.....	1540
Tracking Attendance by Student.....	1541
Chapter 48: Tracking Student Data.....	1543
Common Element Used in Tracking Student Data.....	1543
Tracking Academic Standing.....	1543
Pages Used to Track Academic Standing.....	1543
Assigning Academic Standing in Batch.....	1544
Tracking Academic Standing for Individual Students.....	1544
Tracking Honors and Awards.....	1545
Pages Used to Track Honors and Awards.....	1545
Assigning Honors and Awards in Batch.....	1546
Tracking Honors and Awards for Individual Students.....	1546
Tracking Special Grade Point Averages.....	1547
Understanding How to Assign Special Grade Point Averages.....	1547
Page Used to Track Special Grade Point Averages.....	1547
Maintaining a Student's Special Grade Point Averages.....	1548
Tracking Milestones.....	1548
Pages Used to Track Milestones.....	1549
Assigning and Updating Milestones for a Student.....	1549

Using Student Records Service Impacts.....	1557

Assigning Academic Advisors to Students.....	1558
Page Used to Assign Academic Advisors to Students.....	1559
Assigning Advisors to Students Individually.....	1560
Defining the Parameters for Selecting and Matching Advisors and Students.....	1561
Viewing the Advisor Population.....	1566
Assigning Advisors to a Student Population.....	1566
Viewing Advisors Through Self Service.....	1568
Viewing Advisee Information Through Self Service.....	1568
Viewing Student Careers.....	1568
Page Used to View Student Careers.....	1568
Viewing Comments, Checklists, and Communications.....	1569
Viewing Student Photos.....	1569
Page Used to View Student Photos.....	1569
Chapter 49: Managing Interoperability for Learning Management Systems (LMS).....	1571
Understanding the LMS Interoperability Batch Extract.....	1571
Understanding Integration with LMS Self-Service User Authentication.....	1573
Understanding LMS Setup.....	1573
Setting Up LMS Values and Default Options.....	1577
Pages Used to Set Up LMS Values and Default Options.....	1578
Setting Up LMS Datasource Values.....	1579
Setting Up LMS Target Values.....	1580
Setting Up LMS Type Values.....	1580
Setting Up LMS Authentication Profiles.....	1581
Defining LMS Providers.....	1582
Defining LMS Default and Extract Options for Your Institution.....	1583
Defining LMS Default Options for Course Components.....	1583
Defining LMS Options for Classes.....	1584
Running the LMS Batch Extract Process.....	1584
Prerequisites.....	1584
Pages Used to Extract LMS Data.....	1585
Defining LMS Run Control Parameters.....	1585
Defining LMS Run Control Criteria.....	1587
Defining LMS Output Parameters.....	1588
Using Self-Service Pages and LMS Authentication.....	1590
Chapter 50: Grading Students.....	1591
Understanding Grading.....	1591
Prerequisites.....	1591
Printing Grade Rosters.....	1591
Understanding Printing a Grade Roster.....	1591
Page Used to Print Grade Rosters.....	1592
Running the Grade Roster Report.....	1592
Entering Grades Online.....	1593
Understanding Entering Grades Online.....	1594
Pages Used to Enter Grades Online.....	1594
Using the Grade Roster Page to Enter Grades.....	1595
Reviewing Student Enrollment Detail.....	1596
Reviewing Transcript Notes.....	1597
Reviewing Student Incomplete Information.....	1597
Entering Grades Through Self Service.....	1598
Entering Grades Through the Self-Service Gradebook.....	1598
Posting the Grade Roster.....	1598

Understanding How to Post Grades.....	1598
Prerequisites.....	1599
Pages Used to Post Grade Rosters.....	1600
Posting Grades for a Single Class.....	1600
Posting Grades for Multiple Classes.....	1600
Generating Midterm Deficiency Reports and Communications.....	1601
Understanding Midterm Deficiency Reporting.....	1601
Page Used to Monitor Midterm Deficiencies.....	1602
Generating the Midterm Deficiency Report.....	1602
Generating Midterm Deficiency Letters.....	1602
Running the Grade Lapse Process.....	1603
Understanding the Grade Lapse Process.....	1603
Pages Used to Run the Grade Lapse Process.....	1604
Defining Grade Lapse Rules.....	1604
Running the Grade Lapse Process.....	1606
Viewing the Lapse Report Results Online.....	1607
Viewing Student Grades and Statistics.....	1608
Prerequisite.....	1608
Pages Used to View Student Grades and Statistics.....	1608
Auditing Grade Changes.....	1608
Understanding Grade Change Audits.....	1608
Prerequisites.....	1609
Page Used to Audit Grade Changes.....	1609
Entering Grade Change Audit Search Parameters.....	1609
Chapter 51: Graduating Students.....	1611
Tracking Graduation Progress.....	1611
Pages Used to Track Graduation Progress.....	1611
Track Individual Candidate Progress.....	1611
Reviewing Graduation Status History.....	1613
Updating Academic Program for a Group of Students.....	1613
Tracking Candidate Group Progress.....	1615
Posting Degrees.....	1615
Understanding the Degree Posting Process.....	1616
Prerequisites.....	1616
Pages Used to Post Degrees.....	1617
Completing the Student's Program.....	1617
Verifying and Updating Student Degree Data.....	1618
Viewing and Modifying Degree Data.....	1618
Viewing and Modifying Degree Honors Data.....	1619
Viewing and Modifying Degree Plan Data.....	1619
Viewing and Modifying Degree Subplan Data.....	1621
Automating Graduation Processing and Reporting.....	1621
Understanding the Graduation Reporting Process.....	1622
Prerequisites.....	1622
Pages Used to Automate Graduation Processing and Reporting.....	1623
Entering Graduation Report Parameters.....	1623
Retrieving the Student Population.....	1626
Auditing Degree Changes.....	1627
Understanding Degree Change Audits.....	1627
Prerequisites.....	1628
Pages Used to Audit Degree Changes.....	1628

Entering Degree Change Audit Search Parameters..... 1629

Viewing Degree Change Audit Results..... 1629

Viewing Degree Honors Change Audit Results..... 1631

Viewing Degree Plan Change Audit Results..... 1632

Viewing Degree Subplan Change Audit Results..... 1634

Applying for Graduation Through Self Service..... 1635

Chapter 52: Producing Transcripts..... 1637

Understanding Transcript-Related Processes..... 1637

Processing Transcripts for Individuals or Small Groups of Students..... 1638

 Understanding the Request Transcript Report Component..... 1639

 Prerequisite..... 1639

 Pages Used to Create an Online Transcript Request..... 1639

 Creating Transcript Request Headers..... 1640

 Specifying Students for Evaluation..... 1643

 Entering Transcript Recipient Information..... 1644

 Viewing Process Messages for Transcript Requests..... 1645

Processing Batch Transcripts (Application Engine)..... 1646

 Page Used to Process Batch Transcripts..... 1646

 Defining Transcript Processing Options..... 1646

Using the XML Transcript Template..... 1649

 Understanding the XML Transcript Template..... 1649

 Personalizing XML Transcript Dates..... 1650

Creating Batch Transcript Requests (COBOL)..... 1652

 Prerequisites..... 1652

 Page Used to Create Batch Transcript Requests..... 1653

 Running the Batch Transcript Request Process..... 1653

Using the Grade Review Transcript Release Process..... 1656

 Pages Used to Run the Grade Review Process..... 1656

 Setting Up Grade Review Values..... 1657

 Specifying Required Grade Bases..... 1658

 Defining Grade Review Parameters..... 1658

Producing Electronic Transcripts..... 1662

 Pages Used to Produce Electronic Transcripts..... 1663

 Entering Electronic Transcript Request Information..... 1663

 Entering the Recipient's Address Information..... 1666

 Entering Send Options..... 1667

 Viewing Electronic Transcript Request History for a Student..... 1668

Producing Electronic Transcripts in Batch..... 1668

 Understanding Producing Electronic Transcripts in Batch..... 1668

 Pages Used to Produce Electronic Transcripts in Batch..... 1669

 Generating Electronic Transcripts in Batch..... 1669

 Sending Electronic Transcripts in Batch by Email..... 1670

 Entering a Text Message on the Request..... 1670

Reviewing TS130 Outbound Transactions..... 1671

Running the MET Extract Process.....	1796
Page Used to Run the MET Extract Process.....	1796

Entering MET Extract Process Parameters.....	1796
Running the OUAC Extract Process.....	1797
Page Used to Run the OUAC Extract Process.....	1797
Entering OUAC Extract Process Parameters.....	1797
Verifying Report Results and Viewing the Audit Reports.....	1798
Pages Used to Verify Report Results.....	1798
Running the Student Description Audit.....	1799
Running the Student Program Audit.....	1799
Running the Student Course Audit.....	1800
Reviewing Report Data.....	1800
Pages Used to Review Report Data.....	1800
(Optional) Correcting Report Data.....	1803
Archiving Extract Table Data.....	1804
Page Used to Archive Extract Data.....	1804
Running the Archive Process.....	1804
Chapter 60: (GBR) Managing HESA Returns.....	1807
Understanding HESA Returns.....	1807
Importing and Mapping HESA Codes.....	1808
Pages Used to Import and Map HESA Codes.....	1809
Importing HESA Codes.....	1812
Searching for the Imported HESA Codes.....	1813
Mapping Ethnic Codes.....	1815
Mapping Campus Codes.....	1815
Mapping Marital Status Codes.....	1815
Mapping Religion Codes.....	1816
Mapping Qualification Codes.....	1816
Mapping Nationality Codes.....	1817
Mapping Fee Eligibility Codes.....	1818
Mapping Mode of Study Codes.....	1818
Mapping Classification Codes.....	1819
Mapping Disability Codes.....	1819
Mapping Module Outcome Codes.....	1820
Mapping Gender Codes.....	1820
Mapping Orientation Codes.....	1821
Mapping Title Codes.....	1821
Mapping Entry Qualification.....	1821
Setting Up a HESA Return.....	1822
Pages Used to Set Up a HESA Return.....	1822
Setting Up a HESA Return.....	1824
Setting Up HESA Fields.....	1829
Setting Up HESA Types.....	1830
Setting Up HESA Action Reasons.....	1833
Configuring HESA.....	1835
Generating Student Identifiers During Registration or Enrollment.....	1838
Setting Up and Entering Data for HESA Reporting.....	1840
Understanding Setting Up and Entering Data for HESA Reporting.....	1841
Pages Used to Set Up and Enter Data for HESA Reporting.....	1843
Setting Up Data Capture Rules.....	1848
Entering HESA Data for an Institution.....	1850
Entering HESA Data for Qualifications.....	1852
Entering HESA Data for an Academic Program.....	1853

Entering HESA Data for a Program Offering and Program Year.....	1857
Entering HESA Data for an Academic Plan.....	1858
Entering HESA Data for a Plan Offering and Plan Year.....	1860
Entering HESA Data for a Subplan.....	1862
Entering HESA Data for a Subplan Offering and Subplan Year.....	1862
Creating HESA Modules.....	1864
Entering HESA Data for a Module.....	1865
Entering HESA Data for a Dummy Module.....	1867
Creating HESA Instance and Person HESA Data Records for Students.....	1867
Restricting Access to Person HESA Data Fields.....	1869
Entering HESA Data for a Person.....	1870
Entering Restricted HESA Data for a Person.....	1871
Entering HESA Instance Data for a Student.....	1871
Entering Mobility Data for a Student.....	1875
Entering HESA Entry Profile Data for a Student.....	1876
Entering Further Education Data for a Student.....	1877
Calculating Year of Student Values for Students.....	1878
Calculating Full-Time Equivalence for Students.....	1882
Entering HESA Advisor Data for a Student.....	1889
Entering HESA Data for an External Organization.....	1889
Entering DEGTYPE Value.....	1889
Preparing for Generating DLHE Return.....	1890
Understanding Preparing for Generating DLHE Return.....	1890
Pages Used to Prepare for Generating DLHE Return.....	1892
Identifying DLHE Target Population.....	1892
Importing the Target Population.....	1894
Importing DLHE Survey Data into the Staging Table.....	1898
Reviewing and Updating Imported Survey Data in Staging Table.....	1900
Using the Survey Link Pagelet.....	1902
Adding, Viewing, and Updating Surveys.....	1902
Adding a Survey.....	1904
Viewing or Updating Survey Details.....	1904
Generating a HESA Return and Creating a Return File.....	1907
Understanding Generating a HESA Return and Creating a Return File.....	1907
Pages Used to Generate a HESA Return and Create a Return File.....	1908
Importing the HIN Target List.....	1909
Generating a HESA Extract.....	1910
Reviewing the Extract Data.....	1924
Creating an XML Return File.....	1926
Validating an XML Return File.....	1927
Chapter 61: (GBR) HESA Field Derivation.....	1929
Understanding HESA Derivation Steps.....	1929
Student Record Return: Institution Entity.....	1932
Indicator for HEFCE Funding Approximations (INSTAPP).....	1932
Record Type Indicator (RECID).....	1932
UK Provider Reference Number (UKPRN).....	1933
Student Record Return: Course Entity.....	1933
Awarding Body 1 (AWARDBOD).....	1934
Awarding Body 2 to 8 (AWARDBOD2 to 8).....	1935
Bilingual ITT Marker (BITTM).....	1935
Closed Course (CLSDCRS).....	1936

Collaborating Organization (COLLORG).....	1937
General Qualification Aim of Course (COURSEAIM).....	1937

Preface

Understanding the PeopleSoft Online Help and PeopleBooks

The PeopleSoft Online Help is a website that enables you to view all help content for PeopleSoft applications and PeopleTools. The help provides standard navigation and full-text searching, as well as context-sensitive online help for PeopleSoft users.

Hosted PeopleSoft Online Help

You can access the hosted PeopleSoft Online Help on the [Oracle Help Center](#). The hosted PeopleSoft Online Help is updated on a regular schedule, ensuring that you have access to the most current documentation. This reduces the need to view separate documentation posts for application maintenance on My Oracle Support. The hosted PeopleSoft Online Help is available in English only.

To configure the context-sensitive help for your PeopleSoft applications to use the Oracle Help Center, see [Configuring Context-Sensitive Help Using the Hosted Online Help Website](#).

Locally Installed Help

If you're setting up an on-premise PeopleSoft environment, and your organization has firewall restrictions that prevent you from using the hosted PeopleSoft Online Help, you can install the online help locally. See [Configuring Context-Sensitive Help Using a Locally Installed Online Help Website](#).

Downloadable PeopleBook PDF Files

You can access downloadable PDF versions of the help content in the traditional PeopleBook format on the [Oracle Help Center](#). The content in the PeopleBook PDFs is the same as the content in the PeopleSoft Online Help, but it has a different structure and it does not include the interactive navigation features that are available in the online help.

Common Help Documentation

Common help documentation contains information that applies to multiple applications. The two main types of common help are:

- Application Fundamentals
- Using PeopleSoft Applications

Most product families provide a set of application fundamentals help topics that discuss essential information about the setup and design of your system. This information applies to many or all applications in the PeopleSoft product family. Whether you are implementing a single application, some combination of applications within the product family, or the entire product family, you should be familiar with the contents of the appropriate application fundamentals help. They provide the starting points for fundamental implementation tasks.

In addition, the *PeopleTools: Applications User's Guide* introduces you to the various elements of the PeopleSoft Pure Internet Architecture. It also explains how to use the navigational hierarchy, components, and pages to perform basic functions as you navigate through the system. While your application or implementation may differ, the topics in this user's guide provide general information about using PeopleSoft applications.

Field and Control Definitions

PeopleSoft documentation includes definitions for most fields and controls that appear on application pages. These definitions describe how to use a field or control, where populated values come from, the effects of selecting certain values, and so on. If a field or control is not defined, then it either requires no additional explanation or is documented in a common elements section earlier in the documentation. For example, the Date field rarely requires additional explanation and may not be defined in the documentation for some pages.

Typographical Conventions

The following table describes the typographical conventions that are used in the online help.

Typographical Convention	Description
Key+Key	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For Alt+W, hold down the Alt key while you press the W key.
. . . (ellipses)	Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.
{ } (curly braces)	Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ().
[] (square brackets)	Indicate optional items in PeopleCode syntax.
& (ampersand)	When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object. Ampersands also precede all PeopleCode variables.
=>	This continuation character has been inserted at the end of a line of code that has been wrapped at the page margin. The code should be viewed or entered as a single, continuous line of code without the continuation character.

ISO Country and Currency Codes

PeopleSoft Online Help topics use International Organization for Standardization (ISO) country and currency codes to identify country-specific information and monetary amounts.

ISO country codes may appear as country identifiers, and ISO currency codes may appear as currency identifiers in your PeopleSoft documentation. Reference to an ISO country code in your documentation

does not imply that your application includes every ISO country code. The following example is a country-specific heading: "(FRA) Hiring an Employee."

The PeopleSoft Currency Code table (CURRENCY_CD_TBL) contains sample currency code data. The Currency Code table is based on ISO Standard 4217, "Codes for the representation of currencies," and also relies on ISO country codes in the Country table (COUNTRY_TBL). The navigation to the pages where you maintain currency code and country information depends on which PeopleSoft applications you are using. To access the pages for maintaining the Currency Code and Country tables, consult the online help for your applications for more information.

Region and Industry Identifiers

Information that applies only to a specific region or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a region-specific heading: "(Latin America) Setting Up Depreciation"

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in the PeopleSoft Online Help:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in the PeopleSoft Online Help:

- USF (U.S. Federal)
- E&G (Education and Government)

Translations and Embedded Help

PeopleSoft 9.2 software applications include translated embedded help. With the 9.2 release, PeopleSoft aligns with the other Oracle applications by focusing our translation efforts on embedded help. We are not planning to translate our traditional online help and PeopleBooks documentation. Instead we offer very direct translated help at crucial spots within our application through our embedded help widgets. Additionally, we have a one-to-one mapping of application and help translations, meaning that the software and embedded help translation footprint is identical—something we were never able to accomplish in the past.

Using and Managing the PeopleSoft Online Help

Select About This Help in the left navigation panel on any page in the PeopleSoft Online Help to see information on the following topics:

- Using the PeopleSoft Online Help
- Managing Hosted online help
- Managing locally installed PeopleSoft Online Help

Chapter 1

Getting Started with Student Records

Student Records Overview

Student Records enables you to enter, track, and process all of your academic information. Campus Solutions minimizes repetitive data entry while enabling you to gain maximum control over the records—from the course catalog and schedule of classes to student programs, plans, and subplans.

After applicants are admitted and matriculate, Student Records moves forward to activate, enroll, grade, evaluate, and graduate students. In concert with PeopleSoft Academic Advisement processes, the Student Records application tracks students through graduation.

Student Records Business Processes

We discuss these business processes in the Student Records business process documentation:

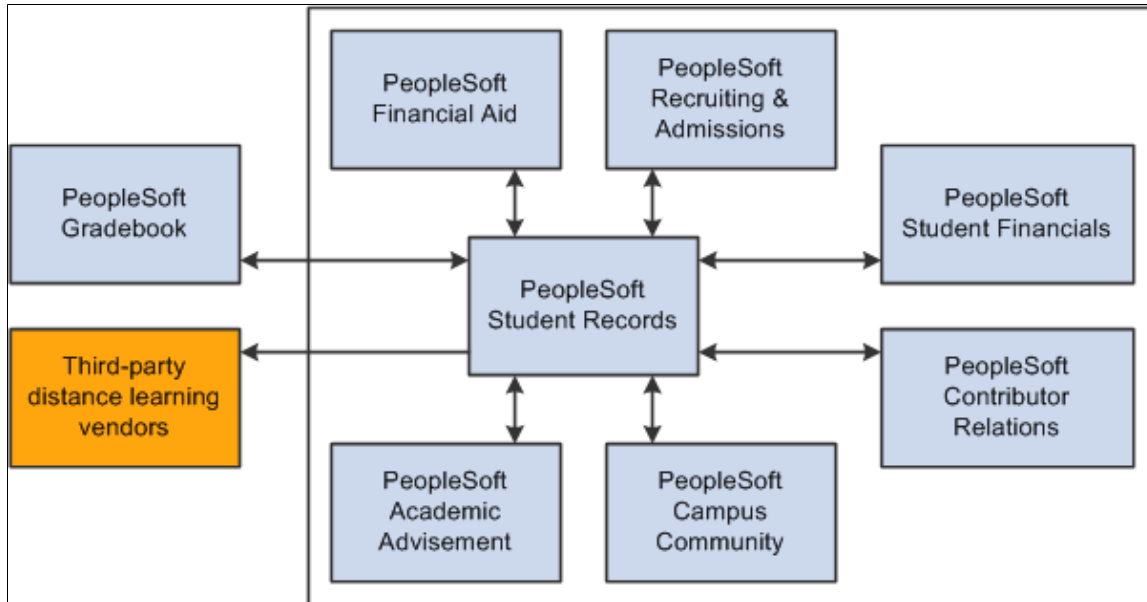

- *Repeat Checking*: Enables you to manage students' repeat coursework.
- *Course Catalog*: Enables you to set up courses.
- *Enrollment Requisites*: Enables you to set up requisite groups, equivalencies, and course lists.
- *Schedule of Classes*: Enables you to schedule classes, search for facilities, and roll the schedule from term to term.
- *Instructor Workload*: Enables you to update, track, and report workload hours for individuals.
- *Program Activation and Management*: Enables you to activate students into academic programs and maintain their academic program, plan, and subplan data.
- *Batch Term Activation*: Enables you to activate groups of students into terms.
- *Quick Activation*: Enables you to activate students into academic programs, bypassing the Activate Applications matriculation process (ABPCPPRC) in PeopleSoft Recruiting and Admissions.
- *Student Career Term Record Management*: Enables you to monitor and track student career term related records.
- *Enrollment Appointments*: Enables you to create and manage enrollment appointments.
- *Class Enrollment Transactions*: Enables you to enroll students into classes through various processes.
- *Enrollment Related Processes*: Enables you to enroll perform withdrawals and cancellations, manage wait lists, view summary statistics, and more.

- *Enrollment Verification*: Enables you to process enrollment verification reports for students, and if you have licensed PeopleSoft Learner Services, students can request the enrollment verification through self service.
- *Transfer Credit*: Enables you to evaluate, process, and post course, test, and other transfer credit using defined rules or manual rules.
- *Attendance Tracking*: Enables you to generate attendance rosters and track student attendance.
- *Student Data Tracking*: Enables you to link milestones to student records, manage honors and awards, manage academic standing, track student groups, maintain service indicators, and maintain extracurricular activities.
- *Interoperability for Learning Management Systems*: Give you the ability to provide a third-party learning management system (such as Blackboard CourseInfo) with personal profile data for learners and instructors, including enrollment data and maintenance, and limited course scheduling data maintenance.
- *Grading*: Enables you to generate grade rosters, enter grades and reviews, the midterm deficiency report, and the grade lapse process.
- *Graduation*: Gives you the ability to define degrees and honors, run the graduation reporting process, and graduate students.
- *Transcripts*: Gives you the ability to set up transcript data, define a transcript request, and produce transcripts.
- *Academic Statistics Consolidation and Reporting*: Enables you to prepare the system to consolidate academic statistics for students, to run processes that consolidate academic statistics, to make use of the consolidated statistics after processing them.
- (CAN) *Canadian Government Reporting*: Enables users with an installation country of Canada to generate reports for federal and provincial agencies.

Student Records Integrations

Image: Student Records integrations with other PeopleSoft applications

The following diagram illustrates the Campus Solutions applications that work with Student Records:

We discuss integration considerations in the Student Records implementation topics.

Supplemental information about third-party application integrations is located on the My Oracle Support website.

Student Records Implementation

Student Records also provides component interfaces to help you load data from your existing system into Student Records tables. Use the Excel to Component Interface utility with the component interfaces to populate the tables.

This table lists all of the components that have setup component interfaces:

Component	Component Interfaces	References
ACAD_CALENDER_TBL	SSR_ACAD_CALENDAR_TBL	See "Defining Traditional Academic Calendars" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
CIP_CODE_TABLE	SSR_CIP_CODE_TABLE	See "Modifying CIP and HEGIS Codes" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
HEGIS_CODE_TABLE	SSR_HEGIS_CODE_TABLE	As above.

Other Sources of Information

In the planning phase of your implementation, take advantage of all Oracle PeopleSoft sources of information, including the installation guides, data models, business process maps, and troubleshooting guidelines.

See *PeopleTools: Component Interfaces*

See *PeopleTools: Setup Manager*

Additional Information for Getting Started with Student Records

Additional, essential information describing the setup and design of your system appears in two companion volumes of documentation: Campus Solutions Application Fundamentals documentation and Campus Community Fundamentals documentation.

See *Campus Solutions Application Fundamentals*

See *Campus Community Fundamentals*

For information about deferred processing, see "Additional Information for Getting Started with Campus Solutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Chapter 2

Defining Student Records Installation Settings

Reviewing or Defining Student Records Installation Settings

To review or define Student Records installation settings, use the Student Records Installation component (SSR_INSTALLATION). The following topics discuss:

- How to review or define Student Records default installation settings.
- How to review or define Enrollment Requirement Roster default installation settings.
- How to review or define Enrollment Requirement Processing default installation settings.

Pages Used to Review or Define Student Records Installation Settings

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Student Records Installation	SSR_INSTALLATION	Set Up SACR > Install > Student Records Installation > Student Records Installation	Review or define Student Records default installation settings for general options, class searches, and enrollment requirement / requisite checking.
Enrollment Requirement Roster	SSR_INSTALLATION2	Set Up SACR > Install > Student Records Installation > Enrollment Requirement Roster	Review or define default installation settings for the enrollment requirement roster.
Enrollment Requirement Processing	SSR_INSTALLATION3	Set Up SACR > Install > Student Records Installation > Enrollment Requirement Processing	Review or define default installation settings for enrollment requirement processing.

Reviewing or Defining Default Installation Settings

Access the Student Records Installation page (Set Up SACR > Install > Student Records Installation).

Image: Student Records Installation page

This example illustrates the fields and controls on the Student Records Installation page. You can find definitions for the fields and controls later on this page.

Student Records Installation	Enrl Requirement Roster	Enrl Requirement Processing
Student Records Installation		
Defaults & Options		
<input checked="" type="checkbox"/> Use SR Class Schedule Facility Conflict Checking		
Default Section Size	<input type="text" value="30"/>	
Transcript Date Print	<input type="text" value="Do Not Print Any Dates"/>	
GPA Rounding/Truncating Option	<input type="text" value="Round to 3 decimal places"/>	
Class Search		
Class Search Results Limits		
Warning Limit	<input type="text" value="50"/>	rows
Error Limit	<input type="text" value="9999"/>	rows
Class Search Subject Option		
<input checked="" type="radio"/> Drop-Down List Box <input type="radio"/> Prompt Search		
Enrollment Requisite Checking		
Validate Conditions Using:		
<input checked="" type="radio"/> Max Program Effdt for Term <input type="radio"/> Action Date		
When Enrollment Requirement Status is Conditionally Satisfied		
<input type="radio"/> Return a warning message <input checked="" type="radio"/> Success		
New Features		
<input checked="" type="checkbox"/> Fluid Self Service		

Defaults & Options

Use SR Class Schedule Facility Conflict Checking

Select to enable facility conflict checking when scheduling classes. The check box value migrates from the Installation page to the Academic Institution 2 page to the Campus Table page. The system uses the value on the Campus Table page during processing. Clear this check box on the Campus Table page to use an external facility conflict checking process.

Note: This check box has no relation to the Check for Facility Conflict check box on the Facility Table page, which controls whether you can schedule multiple events in the same facility.

Default Section Size

Enter a number to use as a default for class size. This value is used in the creation of new class sections. The value is originally rolled into the Catalog record when it is created, and then it is used to enter the number by default into the ENRL_CAP field in the CLASS_TBL.

Transcript Date Print

Select the date on which you want the system to print when printing student transcripts. Select a value to be the default value when a row is entered. Select one value per term. Values are:

Print Class Dates: Prints the valid start and end dates for each class on a transcript.

Print Session Dates: Prints the valid start and end dates for a session within a term on a transcript.

Print Term Dates: Prints the valid start and end dates for the term on a transcript.

Do Not Print Any Dates: No dates print on the transcript.

GPA Rounding/Truncating Option (grade point average rounding/ truncating option)

Enter a value to indicate the number of decimal places to which you want to round or truncate the grade point average displayed for a student throughout the system. The maximum allowed is three decimal places.

Class Search

Class Search Results Limits

Enter a value in the Warning Limit and Error Limit fields to indicate the number of classes for the system to display when a student searches for a class.

- **Warning Limit:** When the limit is reached, the student receives a Warning message. The student can continue to the search results or cancel and add additional criteria to narrow the search.
- **Error Limit:** When the limit is reached, the student receives an Error message requesting that the student specify additional search criteria.

Class Search Subject Option

Select to indicate whether the Course Subject field on the Search for Classes page appears as a drop-down list box or as a select subject button.

Note: Regardless of the option setting, the Course Subject field dynamically changes to a select subject button if the selected institution has more than 300 course subjects.

Enrollment Requisite Checking

Use this group box to select how the requisite checking process validates programs, plans, and subplans for requisites that specify program, plan, or subplan conditions—for example, if a student enrolls in a class for a term and the class has a requisite condition of Plan = BIOCHEM, what is the maximum effective date that a plan of BIOCHEM can have to meet the requisite for that term.

Validate Conditions Using:

Max Prog Effdt for Term (maximum program effective date for term) This option is selected by default.

The requisite checking process uses the following logic to establish if a student meets program, plan, or subplan conditions:

- If the enrollment action date is before or equal to the term begin date, use the term begin date to determine the program, plan, or subplan: Find the maximum effective-dated row, where the effective date is before or equal to the term begin date.

For example, on 05/30/07 a student tries to enroll in a Fall 2007 class that has a requisite condition of the LAU program. Fall 2007 commences on 08/30/07. The student's current program is FAU (with an effective date of 01/01/06), but the student has a future-dated program change of 07/01/07 for the LAU program. The student meets the requisite condition because the maximum effective-dated program row (which is before or equal to the term begin date) is for the LAU program.

- If the enrollment action date is after the term begin date and before or equal to the maximum program effective date for Term, use the action date to determine the program, plan, and subplan: Find the maximum effective-dated row where the effective date is before or equal to the enrollment action date.

For example, on 09/05/07, a student tries to enroll in a Fall 2007 class that has a requisite condition of the LAU program. The student transferred to the LAU program effective 09/02/07. Fall 2007 commences on 08/30/2007 but has a maximum effective for term of 09/14/07. The student therefore meets the requisite condition.

- If the enrollment action date is after the maximum program effective date for term, use the maximum program effective date for term to determine the program, plan, or subplan: Find the maximum effective-dated row where the effective date is before or equal to the maximum program effective date for term.

For example, on 09/17/07, a student tries to enroll in a Fall 2007 class that has a requisite condition of the LAU program. Fall 2007 commences on 08/30/07 but has a

maximum program effective date for term of 09/14/07. The student transferred to the LAU program effective 09/15/07. The student does not meet the requisite condition, because FAU, not LAU is the program for which the maximum effective date is before or equal to the maximum effective date for term.

Action Date

The requisite checking process uses the enrollment action date instead of the maximum program effective date for term when the term begin date is reached:

- If the enrollment action date is before or equal to the term begin date, the process uses the same logic as when the Max Program Effdt for Term option is selected.
- If the enrollment action date is after the term begin date, use the enrollment action date to determine program, plan, or subplan: Find the maximum effective-date row where the effective date is before or equal to the enrollment action date.

For example, on 09/17/07, a student tries to enroll in a Fall 2007 class that has a requisite condition of the LAU program. Fall 2007 commences on 08/30/07 but has a maximum program effective date for term of 09/14/07. The student transferred to the LAU program effective 09/15/07. The student meets the requisite condition because LAU is the program for which the maximum effective date row is before or equal to the enrollment action date.

When Enrollment Requirement Status is Conditionally Satisfied:

Return a warning message

When requisite checking uses in-progress courses to satisfy an enrollment requirement, the user receives a warning message indicating that the prerequisite has been met conditionally and that the prerequisite must be satisfied prior to the start of the class.

Success

This option is selected by default. When requisite checking uses in-progress courses to satisfy an enrollment requirement, a message of success is returned.

See [Understanding Enrollment Requisite Setup and Maintenance](#)

New Features

Fluid Self Service

Select this check box together with the check boxes Track Admin Changes to Classes (on the Class Search Setup page) and Track Admin Changes to Courses (on the Browse Course Catalog Options page) to automatically track changes to courses and classes. These are used to determine what appears in class search and the course catalog in Fluid user interface.

See:

- "Setting Up Class Search and Enrollment for Fluid User Interface" (PeopleSoft Campus Solutions 9.2: Self Service)
- "Configuring Display Settings for the Course Catalog in PeopleSoft Fluid User Interface" (PeopleSoft Campus Solutions 9.2: Self Service)

Reviewing or Defining Enrollment Requirement Roster Default Installation Settings

The Post Enrollment Requirement Checking feature:

- Provides the ability to capture the status of the enrollment requirement check at the time of enrollment (satisfied, conditionally satisfied, overridden, permitted, enrollment component). Enrollments that do not satisfy the requirement are rejected. The feature captures the status for both enrolled and wait listed students.
- Provides the ability for users to re-run the Enrollment Requirement Checking process (where the Enrollment Engine calls Academic Advisement for enrollment requirement evaluation) on enrolled and wait listed classes after in-progress grades have been posted. The capability is delivered in on-line/remote call mode as well as a batch process.
- Includes an administrative component that allows decision makers to identify and view students who are in non-compliance of class enrollment requirements.
- Includes functionality to identify and process students that need to be dropped from classes for non-compliance as a result of post-enrollment requirement checking.
- Through the use of communications, includes functionality to notify students when they have been administratively dropped from a class for non-compliance.

If you plan to use communications for post enrollment requirement checking, use the instructions in the following document to set up communications and then use the 3Cs process to create and generate the communication, see *PERC Communications Setup and Processing* in My Oracle Support (ID 1982691.1).

- Includes a batch process to generate reports of students in non-compliance of enrollment requirements.

Access the Enrollment Requirement Roster page (Set Up SACR > Install > Student Records Installation > Enrollment Requirement Roster).

Image: Enrollment Requirement Roster page

This example illustrates the fields and controls on the Enrollment Requirement Roster page. You can find definitions for the fields and controls later on this page.

Administrative Term History page

Security

Enforce Academic Organization Security

Notes

Enable notes to be deleted

Find documentation about the pages that are used to run Post Enrollment Requirement Checking—the Enrollment Requirement Roster page and the Run Post Enrollment Requirement Checking page—in the Post Enrollment Requirement Checking topics.

Collapsible Area Defaults

Collapse Course Information group box, Collapse Enrollment

Clear these check boxes if you want course information, enrollment requirement description, and enrollment requirement

Requirement group box, and Collapse Filter group box roster filter to appear expanded by default on the Enrollment Requirement Roster. Select if you want the fields to appear collapsed.

Regardless of this setup, you can expand and collapse the fields on the Enrollment Requirement Roster.

Roster and Batch Processing Filter Default Settings

Enrollment Status Select the enrollment statuses that you want to appear by default in the Set Filter Options group box on the Enrollment Requirement Roster. You can override the values on that page.

Most Recent Requirement Status: Display Students in non-compliance Select the enrollment requirement non-compliance statuses that you want to appear by default on the Enrollment Requirement Roster. You can override the values on that page.

Most Recent Requirement Status: Display other students Select any additional enrollment requirement statuses you want to appear by default on the Enrollment Requirement Roster. You can override the values on that page.

Drop Review for Batch Processing

Enrollment Requirement Rosters must be reviewed prior to batch processing of drops Select this check box to ensure that an enrollment requirement roster is set to *Review Complete* before batch drop processing occurs. The Review Complete for Batch Drop Processing check box appears on the Enrollment Requirement Roster and the following message appears on the Process Drop Requests for Post Enrollment Requirements batch processing page: *Drops are only processed for classes where Drop Review is set to Complete.*

Clear this check box if you do not use batch processing of drops or if you do not want to ensure that the enrollment requirement roster is reviewed before batch dropping students for non-compliance. The Review Complete for Batch Drop Processing check box is not available on the Enrollment Requirement Roster and the message does not appear on the batch drop processing page.

Enrollment Action Reason

When a student is dropped for non-compliance of enrollment requirements, set Drop Action Reason to Define a default drop action reason code value to be used when a student is dropped for non-compliance of enrollment requirements. The value action reason code of *PERC* is delivered but can be changed. The value should be unique.

When a class is dropped using the action reason code of *PERC*, the enrollment record is retained regardless of the Academic Calendar date for the drop delete deadline.

Additional Student Information for Decision Makers

Provide link to student Course History

Select this check box to allow decision makers and other users to access student course history from a link on the Enrollment Requirement Roster (the Course History link on the Audit / Information Links tab). Clear the check box to hide the Course History link.

Provide link to Student Statistics

Select this check box to allow decision makers and other users to access student academic statistics from a link on the Enrollment Requirement Roster (the Statistics link on the Audit / Information Links tab). Select an option to identify whether the user links to the Academics page (recommended) as used in the Student Services Center or the Administrative Term History page. Clear the check box to hide the Statistics link.

Security

Enforce Academic Organization Security

Select this check box to enforce academic organization security within the Enrollment Requirement Roster and related processing.

Notes

Enable notes to be deleted

Select this check box to enable notes to be deleted from the Enrollment Requirement Roster: Tracking of Key Transactions & User Notes page. Clear to prevent notes from being deleted.

Reviewing or Defining Enrollment Requirement Processing Default Installation Settings

Find documentation about the pages that are used to run Post Enrollment Requirement Checking—the Enrollment Requirement Roster page and the Run Post Enrollment Requirement Checking page—in the Post Enrollment Requirement Checking topics.

Access the Enrollment Requirement Processing page ((Set Up SACR > Install > Student Records Installation > Enrollment Requirement Processing).

Image: Enrollment Requirement Processing page (1 of 2)

This example illustrates the fields and controls on the Enrollment Requirement Processing page (1 of 2). You can find definitions for the fields and controls later on this page.

 Allow Override of Action Date

Communication Category Default

PERC Processing

Use the Page Processing group box to select the information and values that you want to appear by default on the Enrollment Requirement Roster.

Page Processing: Run Post Enrollment Requirement Checking

Allow Post Enrollment Requirement Checking to be run from Enrollment Requirement Roster Select this check box to allow users to run post enrollment requirement checking from the Enrollment Requirement Roster. If selected, the Run Post Enrollment Requirement Checking group box appears on the roster. If cleared, the group box is not available—users would instead run batch post enrollment requirement checking.

Allow Drop Request Indicator to be set for Students in Non-Compliance If post enrollment requirement checking is enabled, select this check box to allow the Drop Request Indicator to be set from the Enrollment Requirement Roster processing page: If the check box is selected, the Set Drop Request for Students in Non-Compliance options appear in the Run Post Enrollment

Requirement Checking group box on the roster. If the check box is cleared, the options are hidden.

Default to: If process results in a status of Conditionally Satisfied and Default to: If process results in a status of Not Satisfied

If you have selected the Allow Drop Request Indicator to be set for Students in Non-Compliance check box, use these check boxes to set the status default settings—Conditionally Satisfied and Not Satisfied—on the Enrollment Requirement Roster.

You can override the values on the Enrollment Requirement Roster.

Page Processing: Process Drops for Non-Compliance

The check boxes and values that are selected here appear by default on the Enrollment Requirement Roster but can be overridden on that page.

Allow Drop Processing to be run from Enrollment Requirement Roster

Select this check box to allow users to run drop processing from the Enrollment Requirement Roster. If selected, the Process Drops for Non-Compliance group box appears on the roster page. If cleared, the group box is not available—users would instead run batch drop processing.

Default drop process to:

If drop processing is enabled from the Enrollment Requirement Roster, define the default selection to:

- selected students: The drop process is run only for selected students.
- students where Drop Request Indicator is selected: The drop process is run only for students for whom the Drop Request Indicator value is selected.
- students with a post enrollment requirement status of: The drop process is run only for students with a post enrollment requirement status of either *Conditionally Satisfied* or *Not Satisfied*. When this option is selected, the Conditionally Satisfied and Not Satisfied check boxes become available for selection.

Allow Override of Action Date

If drop processing is enabled from the Enrollment Requirement Roster, select this check box to allow a user to override the action date: the Override Action Date check box is available on the Enrollment Requirement Roster. The user must have enrollment security to override the action date.

Page Processing: Processing Limit

Return Warning Message when processing more than

Set the maximum number of students that can be selected for page processing before receiving a warning message. Our recommendation for a warning message is for 15 students—you therefore receive a warning message when 16 students or more are selected.

Error Message - Limit page processing to a maximum of

Set the maximum number of students that can be selected for page processing before receiving an error message. To assist with response time, use batch Post Enrollment Requirement Checking processing for large numbers of students. Our recommendation for an error message is for 20 students—you therefore receive an error message if 21 or more students are selected.

Batch Processing: Run Post Enrollment Requirement Checking**Allow Drop Request Indicator to be set for Students in Non-Compliance**

Select this check box to allow the Post Enrollment Requirement Checking batch process to set the Drop Request Indicator for a student when the process results in a non-compliant status. If you select this check box, the Action group box which contains the Set Drop Request Indicator for Students in Non-Compliance options is available on the Run Post Enrollment Requirement Checking page.

Default to: If process results in a status of Conditionally Satisfied and Default to: If process results in a status of Not Satisfied

Use these check boxes to set the status default settings on the Run Post Enrollment Requirement Checking page: Conditionally Satisfied status and/or Not Satisfied.

You can override the values on the batch processing page.

Batch Processing: Process Drops for Non-Compliance**Default Non-Compliance Selection To**

Process administrative student drops for students who are non-compliant with class enrollment requirements.

Process Drops for

Set the default options that you want to appear in the Non-Compliance Selection group box on the Process Drop Requests for Post Enrollment Requirement page:

- students where Drop Request Indicator is selected: the process drops only students for whom the drop request indicator is selected.
- students with a post enrollment requirement status of: When this option is selected, the Conditionally Satisfied and Not Satisfied check boxes become available for selection. The process drops only students that have a non-compliant post enrollment requirement status that matches the check box selection.

Allow Override of Action Date

Select this check box to allow a user to override the action date for Process Drop requests: the Override Action Date check box is available on the Process Drop Requests for Post Enrollment Requirement page. The user must have enrollment security to override the action date.

See [Managing the Enrollment Requirement Roster](#)

Communication Category Default

This value default is used when creating communications for PERC. A value of *PERC* is delivered but can be changed. The value should be unique.

See "Defining a Communication Category" (PeopleSoft Campus Solutions 9.2: Campus Community).

If you plan to use communications for post enrollment requirement checking, use the instructions in the following document to set up communications and then use the 3Cs process to create and generate the communication:

See: PERC Communications Setup and Processing.pdf in My Oracle Support (ID 1982691).

Chapter 3

Preparing for the Course Catalog and Schedule of Classes

Setting Up Catalog and Schedule Options

When you first create or update the course catalog and schedule of classes, the system prompts you for various types of optional course and class data. This section discusses how to:

- Define class notes.
- Define global notes.
- Define course attributes.
- Define when a course is typically offered.
- Define exam codes.
- Define course material types.
- Define course material type order.

Pages Used to Set Up Catalog and Schedule Options

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Class Notes Table	CLASS_NOTES_TBL	Curriculum Management > Schedule of Classes > Class Notes Table > Class Notes Table	Define class notes.
Global Notes Table	GLOBAL_NOTES_TBL	Curriculum Management > Schedule of Classes > Global Notes Table > Global Notes Table	Define global notes.
Course Attributes	CRSE_ATTR_TBL	Set Up SACR > Product Related > Student Records > Curriculum Management > Course Attributes > Course Attributes	Define course attributes and attribute values.
Course Typically Offered	SSR_CRSE_TYP_OFFER	Set Up SACR > Product Related > Student Records > Curriculum Management > Course Typically Offered	Define when a course is typically offered.

Page Name	Definition Name	Navigation	Usage
Exam Code Table	EXAM_CODE	Curriculum Management > Schedule of Classes > Exam Code Table > Exam Code Table	Define exam time codes for different types of examinations.
Course Material Type	SSR_CRSE_MAT_TBL	Set Up SACR > Product Related > Student Records > Curriculum Management > Course Material Type > Course Material Type	Define course material types.
Course Material Type Order	SSR_CRSE_MAT_ORD	Set Up SACR > Product Related > Student Records > Curriculum Management > Course Material Type Order > Course Material Type Order	Organize course material to be displayed in a specific order.

Defining Class Notes

Access the Class Notes Table page (Curriculum Management > Schedule of Classes > Class Notes Table > Class Notes Table).

Note: Class notes differ from global notes in that class notes are attached to classes on the Notes page, whereas global notes are attached to entire academic subject areas or academic groups.

Effective Date	Enter an effective date for the class note. The effective date determines when the status that you select is valid.
Status	Select a status for the class note. Select <i>Active</i> when adding a new class note. Select <i>Inactive</i> if your institution no longer uses this class note.
Description	In the Description field, enter a short, informative description for the note. This is used for internal processes only.
Long Description	In the Long Description field, enter a detailed description for the note. This text appears in the schedule of classes if you assign this note to a class on the Notes page.

Defining Global Notes

Access the Global Notes Table page (Curriculum Management > Schedule of Classes > Global Notes Table > Global Notes Table).

Note: You always associate global notes with an academic institution, academic group, and term. You can further associate global notes with a subject area. If you do not specify a subject area, the global note appears on the top of every corresponding schedule of classes page, before or after the academic group or subject area.

Print Location

Indicates whether the note text appears on the schedule of classes report before or after the subject area (if you specify a subject area), or whether the note text appears before or after the academic group for the term (if you do not specify a subject area). Available values are *Print After* and *Print Before*. You should not change these values because doing so requires a substantial programming effort.

Description

Enter a short description for the global note.

Long Description

Enter a detailed description for the global note.

This text appears on the schedule of classes report in the location that you specify.

Defining Course Attributes

Access the Course Attributes page (Set Up SACR > Product Related > Student Records > Curriculum Management > Course Attributes > Course Attributes).

Image: Course Attributes page

This example illustrates the fields and controls on the Course Attributes page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Course Attributes' page. At the top, it shows 'Course Attribute: HON'. Below this is a table of attribute values. The first row is for 'CHON' (College Honors) and the second row is for 'DHON' (Departmental Honors). Each row includes fields for 'Course Attribute Value', 'Description', and 'Formal Description', along with checkboxes for 'Catalog Print', 'Schedule Print', and 'Show In Class Search'. Navigation controls like 'Find', 'View All', 'First', and 'Last' are visible at the top of each section.

Course Attribute: HON	
*Effective Date:	01/01/1900
*Status:	Active
*Description:	Honors Course
Short Description:	Honors
<input checked="" type="checkbox"/> Show In Class Search	
Attribute Values	
*Course Attribute Value:	CHON
*Description:	College Honors
*Formal Description:	College Honors Course
<input checked="" type="checkbox"/> Catalog Print <input checked="" type="checkbox"/> Schedule Print <input checked="" type="checkbox"/> Show In Class Search	
*Course Attribute Value:	DHON
*Description:	Departmental Honors
*Formal Description:	Departmental Honors Course
<input checked="" type="checkbox"/> Catalog Print <input checked="" type="checkbox"/> Schedule Print <input checked="" type="checkbox"/> Show In Class Search	

Note: Use course attributes for institutional research purposes and to print repetitive text in the schedule of classes or course catalog, such as *Offered in Fall Only*. Course attributes are attached to courses on the Catalog Data page and to classes on the Basic Data page. Unlike requirement designations, course attributes do not transfer to PeopleSoft Academic Advisement.

Status Select a status for this course attribute. Select *Active* when adding a new course attribute. Select *Inactive* if your institution no longer uses this attribute and any of the corresponding attribute values.

Description The description that you enter here appears on the schedule of classes report or the course catalog report if you select the Schedule Print check box or the Catalog Print check box.

Course Attribute Value When you attach attributes to courses and classes, you can also specify attribute values. Therefore, you can define parent course attributes that have one or more attribute values.

Insert rows to create multiple attribute values.

Catalog Print Select to display the course attribute formal description in the course catalog report.

Note: The SSR_COURSE (Course Catalog) web service is one of a number of delivered Enrollment Web Services. The service operation SSR_GET_COURSES: Browse Course Catalog Summary obeys the Catalog Print setup that you select on the Course Attributes page and on the Requirement Designation Table page.

For detailed information about Enrollment Web Services, see *Enrollment Web Services Developers Guide* and *Enrollment Web Services Users Guide* in My Oracle Support (ID 1371391.1).

Schedule Print Select to display the course attribute formal description in the schedule of classes report.

Show in Class Search If this check box is selected for a Course Attribute and the Class Search Profile (for example, STDNT) includes a search criteria of Course Attribute, then a student can search by the Course Attribute in Self Service.

If this check box is selected for a Course Attribute Value, the Class Search Profile (for example, STDNT) includes a search criteria of Course Attribute, *and* the Include Course Attribute Value check box is selected for the profile, then a student can search by the Course Attribute Value in Self Service.

See [Setting Up Class Search Profiles](#)

See "Searching for Classes Using Classic Self-Service Pages" (PeopleSoft Campus Solutions 9.2: Self Service)

See [Searching for Classes](#)

Description

Enter a description of the attribute values.

Formal Description

Enter the text that you want to appear on the schedule of classes report or the course catalog report if you select the Schedule Print check box or the Catalog Print check box.

Defining When a Course is Typically Offered

The values that you define here are available in the Course Typically Offered field on the Offerings page of the Course Catalog component.

Related Links

[Creating Course Offerings](#)

Defining Exam Codes

Access the Exam Code Table page (Curriculum Management > Schedule of Classes > Exam Code Table > Exam Code Table).

Image: Exam Code Table page

This example illustrates the fields and controls on the Exam Code Table page. You can find definitions for the fields and controls later on this page.

Exam Code Table

Academic Institution: PSUNV PeopleSoft University
 Term: 0310 1998 Spring
 Session: 1 Regular Academic Session

*Exam Time Code	*Exam Date	*Exam Starting Time	*Exam Ending Time	Exam Type	Class Start Time From	Class Start Time To	M	T	W	T	F	S	S		
MWFAM	05/20/1998	8:00AM	11:00AM	Final	8:00AM	12:10PM	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
MWFPM	05/20/1998	12:30PM	4:30PM	Final	12:15PM	2:05PM	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
TRAM	05/19/1998	8:00AM	11:00AM	Final	8:00AM	12:10PM	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
TRPM	05/19/1998	12:30PM	4:30PM	Final	11:01AM	4:00PM	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Note: Define exam time codes for each term and session. The system uses these codes when you run the exam scheduling process on the Exam Scheduling page. You can also manually post these codes to individual classes.

Exam Time Code

Enter an exam time code to define (in an abbreviated manner) the exam code.

Exam Date

Enter the date for the exam.

Exam Starting Time

Enter the start time of the exam.

Exam Ending Time

Enter the end time of the exam.

Exam Type	Select the exam type. Values for this field are delivered with your system as translate values. You can modify these translate values.
Class Start Time From	Enter the minimum start time for classes with which you want to associate the exam time code. The system uses the value during the exam scheduling process. The system schedules exams for classes that fall within the two start times (and days) that you designate.
Class Start Time To	Enter the maximum start time for classes with which you want to associate the exam code. The system uses the value during the exam scheduling process. The system schedules exams for classes that fall within the two start times (and days) that you designate.
M (Monday), T (Tuesday), W (Wednesday), T (Thursday), F (Friday), S (Saturday), and S (Sunday)	Select the days of classes that you want to associate with the exam code.

[Scheduling Examinations](#)

Defining Course Material Types

Access the Course Material Type page (Set Up SACR > Product Related > Student Records > Curriculum Management > Course Material Type > Course Material Type).

Status	Select a status for this course material type. Select <i>Active</i> when you add a new course material type. Insert a new effective date and select <i>Inactive</i> if your institution no longer uses this course material type.
Description	The description that you enter here appears in the Textbook Assignment group box on the (Schedule of Classes) Textbook page and is used on the Class Detail page and the Faculty and Student Center Textbook Summary page.

See [Defining Textbooks for Classes](#)

See "Searching for Classes Using Classic Self-Service Pages" (PeopleSoft Campus Solutions 9.2: Self Service)

See "Viewing a Class Schedule" (PeopleSoft Campus Solutions 9.2: Self Service)

See "Using the Self-Service Faculty Center" (PeopleSoft Campus Solutions 9.2: Self Service)

Defining Course Material Type Order

Access the Course Material Type Order page (Set Up SACR > Product Related > Student Records > Curriculum Management > Course Material Type Order > Course Material Type Order).

Image: Course Material Type Order page

This example illustrates the fields and controls on the Course Material Type Order page. You can find definitions for the fields and controls later on this page.

Course Material Type Order					
	<u>*Display Order</u>	<u>*Course Material Type</u>	<u>Description</u>		
1	10	TEXTBOOK 	Textbook		
2	20	ARTICLE 	Article		
3	30	OTHER 	Other Course Material		

Note: The system uses the display order that you define here to determine the order in which course materials appear on the Class Detail page and on the self-service Faculty and Student Textbook Summary pages. If you do not define a course material display order, the course material appears at the end of the list.

Display Order

Define the order in which you want the course material type to appear on Class Detail page and on the faculty and student Textbook Summary pages.

Course Material Type

Select a value based on the course material type values that you defined on the Course Material Type page.

Description

The description appears by default from the Course Material Type page.

Defining Buildings, Rooms, and Classroom Facilities

To set up facilities, use the Building Table (BLDG_TBL), Room Characteristics Table (ROOM_CHRSTC_TBL), and Facility Table (FACILITY_TBL) components.

During the class scheduling process, you probably need to assign classes to classrooms, and you should set up your classroom facilities in advance. This section discusses how to:

- Define buildings.
- Define room characteristics.
- Define facilities and rooms.
- Define facility components.
- Define facility characteristics.

Pages Used to Define Buildings, Rooms, and Classroom Facilities

Page Name	Definition Name	Navigation	Usage
Building Table	BLDG_TBL	Set Up SACR > Foundation Tables > Facilities > Building Table > Building Table	Define all campus buildings that you might use in class and event scheduling. Building codes that you create here are prompt values on the Facility Table page.
Room Characteristics Table	ROOM_CHRSTC_TBL	Set Up SACR > Foundation Tables > Facilities > Room Characteristics Table > Room Characteristics Table	Define room characteristics, such as types of seating and resources that are available. You attach room characteristics to facilities on the Facility Characteristic page and you can use them when you: <ul style="list-style-type: none"> • Define courses. • Schedule classes. • Plan events. You must enter a numeric room characteristic code from 01 to 96.
Facility Table	FACILITY_TBL	Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Table	Define facilities and facility components.
Facility Component	FACILITY_COMPONENT	Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Component	Link components of facilities to parent facilities.
Facility Characteristic	FACILITY_CHRSTC	Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Characteristic	Define room characteristics and facility blackout times.

Defining Buildings

Access the Building Table page (Set Up SACR > Foundation Tables > Facilities > Building Table > Building Table).

Status

Select the status of the building. Select *Active* when the building is being used on the Facility Table page. Select *Inactive* when you no longer use the building.

Description

Enter a description of the building.

Short Description

Enter a short description of the building.

Defining Room Characteristics

Access the Room Characteristics Table page (Set Up SACR > Foundation Tables > Facilities > Room Characteristics Table > Room Characteristics Table).

Status	Select a status for this room characteristic. Select <i>Active</i> when adding a new room characteristic. Select <i>Inactive</i> only if your institution no longer uses this room characteristic.
Description	Enter a description.
Short Description	Enter a short description.

Defining Facilities and Rooms

Access the Facility Table page (Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Table).

Image: Facility Table page

This example illustrates the fields and controls on the Facility Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Facility Table' page with the following fields and values:

- SetID:** PSUNV
- Facility ID:** ANGE101
- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** Angel101
- *Short Description:** Angel101
- *Building:** ANGE
- Facility Group:** (checked)
- Room:** 101
- Capacity:** 50
- *Location Code:** HACIENDA
- *Facility Type:** Lecture Rm
- Partition:** (empty)
- Academic Organization:** (empty)
- General Assignment:**
- Minimum Utilization Percent:** 0
- Check for Facility Conflict:**

As an example, you might want to define Angel Hall Room 125 and its components, Angel 125A, 125B, and 125C. You cannot link components to parent facilities on the Facility Component page unless you first define both the parent facility and the facility components on the Facility Table page.

Status	Select a status for this facility. Select <i>Active</i> when adding a new facility. Select <i>Inactive</i> only if your institution no longer uses this facility.
Facility Group	If this check box is selected and unavailable for entry, the facility is a parent facility with facility components.
Building	Enter the building in which the facility is located. Define buildings on the Building Table page.

Room	Enter the room number.
Capacity	Enter the maximum number of people that a facility accommodates.
Location Code	<p>You can specify locations such as a building cluster on campus or satellite campuses. Define location codes on the Location Address page (Set Up Common Objects >Foundation Tables >Organization >Location Address</p> <p>See:</p> <ul style="list-style-type: none"> • "Setting Up Locations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals) • <i>PeopleSoft HCM: Application Fundamentals</i> "Setting Up Organization Foundation Tables"
Facility Type	Select a facility type to further define the space. Values for this field are delivered with your system as translate values. You can modify these values.
Partition	<p>Select a partition field value to indicate the section of the campus where the facility is located, such as <i>First</i>, <i>Second</i>, <i>Third</i>, or <i>Fourth</i> quadrant. Use the Partition field to interact with Universal Algorithm Schedule25, which can look at where an instructor's office is located and attempt to schedule the instructor's classes in facilities within the same partition.</p> <p>The maximum number of partitions for Universal Algorithm Schedule25 is 96. Therefore, be sure that you select a value between 01 and 96. Values for this field are delivered with your system as translate values. You can modify these values. For more information about the interface with Universal Algorithm Schedule25, refer to the Universal Algorithm Schedule25 documentation.</p>
Academic Organization	<p>Enter an academic organization to indicate that this facility is reserved for the sole use of that academic organization.</p> <p>Locations might be reserved by an academic organization so that only classes for that academic organization are assigned to that location when you are using the Universal Algorithm product, Universal Algorithm Schedule25. When using the PeopleSoft internal facility search and assignment feature, the system does not use academic organization.</p>
General Assignment	Select to open the location for general assignment. When you select this check box, the Academic Organization field becomes unavailable.
Minimum Utilization Percent	<p>Enter the minimum usage that a facility should experience.</p> <p>This field is for internal record keeping only, and has no programming associated with it.</p>

Check for Facility Conflict

Select to have the system allow only one class to be scheduled for this facility at any given period of time. If you want to schedule more than one class at the same time in this particular facility, such as a field or gymnasium, do not select this check box.

Defining Facility Components

Access the Facility Component page (Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Component).

Image: Facility Component page

This example illustrates the fields and controls on the Facility Component page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Facility Component' page. At the top, there are tabs for 'Facility Table', 'Facility Component', and 'Facility Characteristic'. The 'Facility Component' tab is active. Below the tabs, there is a search bar with 'Find | View All' and a pagination indicator 'First 1 of 1 Last'. The main content area displays the following fields:

- SetID:** PSUNV
- Facility ID:** ANGE101 Angel101
- Effective Date:** 01/01/1900 **Status:** Active
- Building:** Angel **Room:** 101 **Capacity:** 110

Below these fields is a table with the following columns: *Component Facility ID, Building, Room, Capacity, and two empty columns. The table contains three rows of component data:

*Component Facility ID	Building	Room	Capacity		
ANGE0125A	Angel 125A	Angel	125A	20	+ -
ANGE0125B	Angel 125B	Angel	125B	20	+ -
ANGE0125C	Angel 125C	Angel	125C	20	+ -

At the bottom of the table, there is a search bar with 'Find | View All' and a pagination indicator 'First 1-3 of 3 Last'.

As an example, Angel 125A, B, and C might be linked as components of Angel 125. To link facility components to a parent facility, you must first define all facilities on the Facility Table page. As soon as components are linked to a parent facility, the system calculates the capacity of that facility by adding up the capacities of all components. If a class is scheduled in a component of a facility and someone attempts to schedule a class in the parent facility, the system prevents the new scheduling.

Component Facility ID

Select the component facility ID for a component that you want to link to this facility. All facilities on the Facility Table page are available for selection. To link more than one component to a parent facility, add rows.

Defining Facility Characteristics

Access the Facility Characteristic page (Set Up SACR > Foundation Tables > Facilities > Facility Table > Facility Characteristic).

Image: Facility Characteristic page

This example illustrates the fields and controls on the Facility Characteristic page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web application interface for 'Facility Characteristic'. At the top, there are tabs for 'Facility Table', 'Facility Component', and 'Facility Characteristic'. Below the tabs, there are navigation links: 'Find | View All', 'First', '1 of 1', and 'Last'. The main content area is divided into several sections:

- Facility Information:**
 - SetID: PSUNV
 - Facility ID: ANGE101 Angel101
 - Effective Date: 01/01/1900
 - Status: Active
 - Building: Angel
 - Room: 101
 - Capacity: 110
- Room Characteristics:**
 - Navigation: Find | View All, First, 1-2 of 2, Last
 - Row 1: *Room Characteristic: 04 White Board, *Quantity: 2
 - Row 2: *Room Characteristic: 15 Biology Laboratory, *Quantity: 3
- Facility Black-out Times:**
 - Navigation: Find | View 1, First, 1-2 of 2, Last
 - Row 1: *Facility Black-Out Nbr: 1, *Start Time: 6:00AM, *End Time: 7:50AM, M: , T: , W: , T: , F: , S: , S:
 - Row 2: *Facility Black-Out Nbr: 2, *Start Time: 1:00PM, *End Time: 3:00PM, M: , T: , W: , T: , F: , S: , S:

Room Characteristic

Select characteristics for this room. Room characteristics are defined on the Room Characteristic Table page. Insert rows to add characteristics. The system uses the Room Characteristic field to interact with Universal Algorithm Schedule25. The maximum number of room characteristics for Universal Algorithm Schedule25 is 96. Therefore, be sure that you select values between 01 and 96.

Quantity

Enter the quantity of the room characteristic. For example, enter 2 to indicate that the room has two white boards.

Facility Black-Out Nbr (facility black-out number)

You can define periods when a facility is unavailable. The facility blackout number is system-generated. This number indicates the number of blackout periods that exist for a facility. You can override the system-assigned facility blackout number.

Start Time and End Time

Enter a start and end time for the blackout period.

M (Monday), **T** (Tuesday), **W** (Wednesday), **T** (Thursday), **F** (Friday), **S** (Saturday), and **S** (Sunday)

Select the days of the week for which the blackout period applies.

Note: Student Records provides the facility blackout structure for compatibility with Resource 25. When using Resource 25, the system prevents class and event scheduling during blackout periods. When using Campus Solutions internal conflict checking logic, the system does not use this structure.

Designating Approved Instructors and Advisors

This section discusses how to:

- Assign faculty rank and advisor status.
- Designate approved course instructors.

Pages Used to Designate Approved Instructors and Advisors

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Instructor/Advisor Table	INSTR_ADVISOR	Curriculum Management > Instructor/Advisor Information > Instructor/Advisor Table > Instructor/Advisor Table	<p>Indicate faculty rank, advisor status, instructor availability, and the courses that an instructor can teach.</p> <hr/> <p>Note: You are not adding new people to the database on this page, but updating information for individuals who are already in the database. The IDs that are available depend upon the way that you set up your instructor edit.</p> <hr/>
Approved Courses	INSTR_ADVISOR2	Curriculum Management > Instructor/Advisor Information > Instructor/Advisor Table > Approved Courses	Indicate courses that an instructor can teach. The system uses the values that you enter as part of the Instructor Edit feature, which is an option that enables you to link instructors to specific campuses, subjects, or courses within an academic organization. This way, when you schedule classes, only the relevant instructors appear as choices.

Assigning Faculty Rank and Advisor Status

Access the Instructor/Advisor Table page (Curriculum Management > Instructor/Advisor Information > Instructor/Advisor Table > Instructor/Advisor Table).

Image: Instructor/Advisor Table page

This example illustrates the fields and controls on the Instructor/Advisor Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Instructor/Advisor Table' page for Raymond Reynolds (SR0499). It features two main sections: 'Instructor Details' and 'Instructor/Advisor Role'. The 'Instructor Details' section includes fields for Effective Date (07/27/2004), Status (Active), Instructor Type (Assistant Professor), Academic Institution (PSUNV), Primary Acad Org (ENGLISH), and Instructor Available (Available). The 'Instructor/Advisor Role' section includes fields for Advisor Number (1), Percent of Appointment, Academic Career (UGRD), Academic Program (LAU), Academic Plan (ENGL-BA), and Academic Sub-Plan.

Instructor Type

Select an instructor type. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. If you select a value of *Advisor Only*, the system selects the Advisor check box by default and you cannot change it.

Advisor

Select to indicate that the individual is also an advisor and to place the individual into the system's Advisor view. You can later select the Advisor view as a search tool on various pages.

Academic Institution

Select the academic institution with which you want to associate this record.

Primary Acad Org (primary academic organization)

Select a primary academic organization for this instructor. Academic organization values are defined on the Academic Organization Table page.

Instructor Available

Select the instructor's availability to teach within the effective dates. Select *Available*, *Sabbatical*, or *Unavailable*. If the instructor has an advisor type of *Advisor Only*, the system populates the Instructor Available field with *Unavailable* by default. You can override this value.

Instructor/Advisor Role

Use the Instructor/Advisor Role scroll area to indicate the academic career, program, plan, and subplan to which the instructor or advisor is linked.

Advisor Number	The system populates this field with <i>I</i> by default. If an instructor advises students in more than one academic career, program, plan, or subplan, you can have multiple advisor numbers by adding rows.
Percent of Appointment	Enter a percent of appointment value that this instructor has for the indicated academic career, program, plan, and subplan. Instructors with dual appointments can have different percentages reflecting their responsibility. The total percentage must equal 100.
Academic Career	Select the academic career to which the instructor or advisor is linked. Academic career values are defined on the Academic Career Table page.
Academic Program	Select the academic program to which the instructor or advisor is linked. Academic program values are defined on the Academic Program Table component.
Academic Plan	Select the academic plan to which the instructor or advisor is linked. Academic plan values are defined on the academic plan pages.
Academic Sub-Plan	Select the academic subplan to which the instructor or advisor is linked. Academic subplan values are defined on the academic subplan pages.

Designating Approved Course Instructors

Access the Approved Courses page (Curriculum Management > Instructor/Advisor Information > Instructor/Advisor Table > Approved Courses).

To make use of the values on this page, enable the Instructor Edit feature. To do so, on the Academic Organization Table page, choose to edit instructors against the Instructor/Advisor table rather than the Personal Data table for the related academic organization. You must also select this option on the Course Catalog Description page for the courses involved.

Having done this, when you schedule classes on the Class Meeting Pattern/Instructor page and have to assign an instructor to a class that falls within the academic organization and courses that you have set up in this manner, the system displays only the relevant instructors in the ID field.

In the lower portion of the page, select the subjects, courses, or campuses at which the instructor is approved to teach based on effective date. The availability of these fields depends on the options that your institution selects by which to edit instructors on the Academic Organization Table page.

Seq Nbr (sequence number)	The system populates the Seq Nbr field by default. Sequence numbers are sequential numbers that the system assigns to identify rows in the table.
----------------------------------	---

Acad Org (academic organization)	Select the academic organization to indicate that the instructor is approved to teach all courses within the academic organization that you specify. If your institution has set up the academic organization to edit instructors by campus, subject, and course, you can further narrow the courses. This field is required.
Subject Area	If available, select the subject area that the instructor is approved to teach. Subject area values are defined for each academic institution on the Academic Subject Table page.
Course ID	If available, select the course ID of the course that the instructor is approved to teach. You are prompted from the course catalog. If your course catalog has only one offering number, the system supplies the offering number by default.
Offer Nbr (offering number)	If available, select the offering number of the class that the instructor is approved to teach.
Catalog Nbr (catalog number)	The system displays the catalog number, based on the course catalog definition.
Campus	Select the campus for which the instructor can teach. Campus values are defined for each academic institution on the Campus Table page. Add rows to further specify courses that the instructor is approved to teach.

Defining Requirement Designations

To set up requirement designations, use the Requirement Designation Table component (RQ_DESIGNATION_TBL).

This section provides an overview of requirement designations and discusses how to define requirement designations.

Understanding Requirement Designations

Requirement designations, unlike course attributes, transfer to PeopleSoft Academic Advisement. A requirement designation can be extra credit that a student has done for a course, such as design credit. For example, you can attach a requirement designation of *Design* to all first-, second-, third-, and fourth-year architecture studio courses that carry the optional add-on enrollment of *Design Credit*. When students enroll in any of these studios, they can elect to take the course to fulfill their design credit certification. Requirement designations are intended as optional add-on credit for a course in which some students are taking the class alone, and others in the same class are taking both the class and attempting to pass the requirement designation portion. In this way, the requirement designation reflects extra credit. Some students in the class attempt it, while others do not.

Requirement designations should be used sparingly, and are *not* intended to track general advisement requirements. They are meant as additional qualifiers that alone may be a requirement. With relation

to the previous example, you may require a total of six hours of design credit across four years of architecture study, in addition to the minimum unit and grade-point-average requirements for the courses. By using a requirement designation, you enable students to complete their design credit at any stage and pace across four years. Student A might attempt design credit during second and fourth years, in the spring term. Student B might complete all six design hours while enrolled in the fourth-year studio, during the fall and spring terms. Although these two students are in the same studio classes across the four years, they pace themselves and complete assignments differently. Student A begins to explore design practices as a sophomore (by doing some type of additional design work in consultation with a professor), while student B decides to wait and load up on design work the last year of his or her career as an architecture student. Typical requirement designations may include Counts Toward Design Certification, Preparation for Licensing Exam, Electing course to be the basis of Liberal Arts Thesis Credit, and so on. Requirement designations can be graded as Satisfied or Not Satisfied.

In the previous example, the design credit requirement designation was set up as an enrollment option. Students can elect to take the design credit requirement designation at the time of enrollment in certain architecture studio classes. You can also create a requirement designation that is not optional at enrollment. This type of requirement designation is strictly attached to a class. Taking the class, along with the requirement designation, is required of all students who enroll. The distinction between a requirement designation that is elective at enrollment and one that is automatically added to a student's enrollment request is the way that you set the At Student's Option check box on the Requirement Designation Table page. This option and others like it are discussed in the following section.

[Understanding Grading](#)

Page Used to Define Requirement Designations

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Requirement Designation Table	RQ_DESIGNATION_TBL	Set Up SACR > Product Related > Student Records > Curriculum Management > Requirement Designation Table > Requirement Designation Table	Define requirement designations.

Defining Requirement Designations

Access the Requirement Designation Table page (Set Up SACR > Product Related > Student Records > Curriculum Management > Requirement Designation Table > Requirement Designation Table).

Image: Requirement Designation Table page

This example illustrates the fields and controls on the Requirement Designation Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web form titled "Requirement Designation Table". At the top, it indicates "Requirement Designation: COLB". Below this is a navigation bar with "Find | View All" and "First 1 of 1 Last". The main form area contains several input fields and controls:

- *Effective Date:** A date picker set to "01/01/1995".
- *Status:** A dropdown menu set to "Active".
- *Description:** A text input field containing "College Breadth Requirement".
- *Short Description:** A text input field containing "CollBredth".
- *Formal Description:** A text input field containing "Satisfies A&SCI College Breadth Requirement".
- Academic Institution:** A dropdown menu showing "PSUNV" and "PeopleSoft University".
- Academic Plan:** An empty text input field with a search icon.

At the bottom of the form, there are several checkboxes:

- At Student's Option
- Separate Course Grade
- Show In Class Search
- Catalog Print
- Schedule Print
- Print in Transcript
- Display in AA Reports

Status Select a status for this requirement designation. Select *Active* when adding a new requirement designation. Select *Inactive* only if your institution no longer uses this requirement designation.

Description, Short Description, and Formal Description Enter a description, short description, and formal description. The formal description appears on the course catalog report, schedule of classes report, and transcript if specified.

Academic Institution Select an academic institution with which to associate the requirement designation. This affects the availability of this requirement designation on the course catalog and schedule of classes prompts.

Academic Plan Select an academic plan if you want to link the requirement designation to a specific plan. At enrollment, a student must be active in the specified plan to enroll in any class with the related requirement designation. The Enrollment Request 1 page includes overrides that enable you to override this general rule if you have the appropriate security permissions. On the Enrollment page, the system does not validate this.

At Student's Option Select to indicate that the student can select the requirement designation at enrollment. You can indicate a student's choice of requirement designation on the Enrollment Request Page, the Student Enrollment 4 page, or the Block Enrl Detail 2 page.

If you do not select this check box, students who enroll in classes that have this requirement designation are required to take the course and attempt the additional requirement designation credit.

See:

- [Processing Enrollment Transactions Through the Enrollment Request Component](#)
- [Processing Enrollment Transactions Through the Block Enrollment Feature](#)

Catalog Print

Select to enable the display of the formal description of the requirement designation and the course in the course catalog report.

Note: The SSR_COURSE (Course Catalog) web service is one of a number of delivered Enrollment Web Services. The service operation SSR_GET_COURSES: Browse Course Catalog Summary obeys the Catalog Print setup that you select on the Requirement Designation Table page and on the Course Attributes page.

For detailed information about Enrollment Web Services, see *Enrollment Web Services Developers Guide* and *Enrollment Web Services Users Guide* in My Oracle Support (ID 1371391.1).

See

Schedule Print

Select to enable the display of the formal description of the requirement designation and the course in the schedule of classes report.

Print in Transcript

Select to print the requirement designation and requirement designation grade on the student's transcript.

Separate Course Grade

Select to indicate that the requirement designation involves work that someone must grade separate from the course. If this check box is cleared, students who earn credit for the course will, by default, earn a grade of Satisfied for the requirement designation. The professor does not need to assign two grades for every student (for example, a letter grade of B for the course, and a grade of Satisfied for the requirement designation).

Alternatively, should the professor want to evaluate a student on each of these two areas independently, select the check box.

This setting is optimal in the event that a student receives a passing grade for the class, but fails to successfully complete the requirement designation. In this instance, the professor could assign a letter grade of B to the class, and assign a grade of Not Satisfied for the requirement designation. The class would not fulfill an advising requirement that requires both a class and a requirement designation for the class. It would fulfill only an advising requirement that requires the class alone.

See [Using the Grade Roster Page to Enter Grades](#).

Display in AA Reports

Select to enable the system to display the requirement designation code and description in the advisement report.

Show in Class Search

If this check box is selected for a Requirement Designation and the Class Search Profile (for example, STDNT) includes a search criteria of Requirement Designation, then a student can search by the Requirement Designation in Self Service.

See [Setting Up Class Search Profiles](#)

See "Searching for Classes Using Classic Self-Service Pages" (PeopleSoft Campus Solutions 9.2: Self Service)

See [Searching for Classes](#)

Setting Up Unit Conversions

To set up unit conversions, use the Unit Conversion Table component (UNIT_CONVR_TBL).

This section provides an overview of unit conversions, lists prerequisites, and discusses how to set up unit conversion rules within your institution.

Understanding Unit Conversions

If students at your institution take classes outside of their current career, you should define unit conversions. You should especially do this if some careers are on a quarter system and other careers are on a semester system (for example, if an MBA student takes a law course, but the MBA program is on a quarter system and the law program is on a semester system). The system also uses the unit conversion rules when you process internal transfer credit for students, which can include students with internal coursework that transfers from one career to another career, or students with internal coursework that transfers from one program to another program.

Prerequisites

If you want to use term types other than the translate values that are delivered by Campus Solutions, you must first create them in the TERM_TYPE_CONVR_TO translate table.

Page Used to Set Up Unit Conversions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Unit Conversion Table	UNIT_CONVR_TBL	Set Up SACR > Product Related > Student Records > Enrollment > Unit Conversion Table > Unit Conversion Table	Set up unit conversions within your institution.

Setting Up Unit Conversion Rules within Your Institution

Access the Unit Conversion Table page (Set Up SACR > Product Related > Student Records > Enrollment > Unit Conversion Table > Unit Conversion Table).

Image: Unit Conversion Table page

This example illustrates the fields and controls on the Unit Conversion Table page. You can find definitions for the fields and controls later on this page.

Unit Conversion Table

SetID: PSUNV

Term Unit Type: S Semester Hours

***Effective Date:** 01/01/1900

***Term Type Convert To:** Quarter Hours

Unit Multiplier: 1.5000

Term Type Convert To

Select the value to which you want to convert the value in the Term Unit Type field.

Unit Multiplier

Enter the number for the system to use to multiply the term unit type units by to convert them to the term type convert to value, for example, (term unit type units) \times (unit multiplier) = (term type convert to units).

Defining Standard Meeting Patterns

Define class meeting patterns for your classes on the Standard Meeting patterns page on the Academic Group Table.

Related Links

"Defining Standard Class Meeting Patterns" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining Modes of Instruction

To set up instruction modes, use the Instruction Mode component (INSTRUCT_MODE).

You need to set up instruction mode values that you use when you define courses and schedule classes. This section discusses how to define instruction modes.

Page Used to Define Modes of Instruction

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Instruction Mode	INSTRUCT_MODE	Set Up SACR > Product Related > Student Records > Curriculum Management > Instruction Mode > Instruction Mode	Define instruction modes.

Defining Instruction Modes

Access the Instruction Mode page (Set Up SACR > Product Related > Student Records > Curriculum Management > Instruction Mode > Instruction Mode).

Important! Set up an instruction mode value of *P* for every institution in your system. You can enter any description and short description; however, you should use *In Person* for both fields. The system uses this value as a default for the Instruction Mode field on the Schedule of Classes - Basic Data page (when you enter the page in *Add* mode). In addition, you can generate rosters only for those classes with an instruction mode value of *P* on the Basic Data page.

Effective Date and Status	The effective date determines when the status that you select is valid. The active effective date must be equal to or before the effective date of the course component to which you assign the instruction mode.
Description	Enter the description of the instruction mode. The system displays this value on the Course Catalog report and the Schedule of Classes report, as well as on the Course Catalog component and Schedule of Classes online pages.
Short Description	Enter a short description for the instruction mode.
Print On Course Catalog	Select to display the instruction mode on the course catalog report.
Print On Schedule of Classes	Select to display the instruction mode description on the schedule of classes report, as well as on the online schedule of classes.
Print On Transcript	No programming is attached to this field.

Setting Up Class Search Profiles

This section discusses class search configuration only for the classic user interface and describes how to:

- Define class search criteria.
- Define class search result options.

- Define class detail options.

For information about other Class Search setup such as search results limits,

See [Reviewing or Defining Student Records Installation Settings](#)

The delivered Class Search Profiles are:

- STDNT (Student/Visitor Self Service)
- INSTR (Instructor/Advisor Self Service accessed through Faculty and Advisor Centers)
- ADMIN (Administrative class search)
- SSAPT (for use with Program Enrollment)

Pages Used to Set Up Class Search Profiles

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Search Configuration	SSR_CLSRCH_CONFIG	Set Up SACR > Product Related > Student Records > Curriculum Management > Class Search Configuration > Search Configuration	Define class search criteria.
Class Result Options	SSR_CLSRSLT_CONFIG	Set Up SACR > Product Related > Student Records > Curriculum Management > Class Search Configuration > Class Result Options	Define class search result options.
Class Detail Options	SSR_CLSDTL_CONFIG	Set Up SACR > Product Related > Student Records > Curriculum Management > Class Search Configuration > Class Detail Options	Define class detail options.

Defining Class Search Criteria

Access the Search Configuration page (Set Up SACR > Product Related > Student Records > Curriculum Management > Class Search Configuration > Search Configuration).

Note: This page is not used for class search in Fluid.

Image: Search Configuration page

This example illustrates the fields and controls on the Search Configuration page. You can find definitions for the fields and controls later on this page.

Search Configuration | **Class Result Options** | **Class Detail Options**

Class Search Profile SSAPT

Search Options

Incl Topic on Course Keyword Include Course Attribute Value

Incl Long Desc on Crse Keyword

Add Search Group **Reset Values**

Configure Search Find First 1 of 1 Last

Group Sequence 1 Active

Message Set Number 14690 Collapse by Default

Message Number 3146 Filter Class Search Results

Seg Nbr	Use Common Attribute	Search Criteria	Common Attribute		
1	<input type="checkbox"/>	Session Code		+	-
2	<input type="checkbox"/>	Meeting Times		+	-
3	<input type="checkbox"/>	Class Days		+	-
4	<input type="checkbox"/>	Instructor Name		+	-
5	<input type="checkbox"/>	Open Only		+	-

Use this page to define, for each profile, the search criteria that are available on the Search for Classes page. For example, if you select *Session Code* for the INSTR profile, then instructors who use class search in Self Service can select *session* as a search criterion.

Search Options

Incl Topic on Course Keyword
(Include Topic on Course Keyword)

If this check box is selected and a Class Search Profile includes *Course Keyword*, then if a user searches by *cognitive*, the search returns all classes for which *cognitive* is found in the Course Description or Long Course Title. The search also returns all classes for which *cognitive* is found in the course topic Description or Formal Description if a Course Topic ID exists for the class.

Incl Long Desc on Crse Keyword
(Include Long Description on Course Keyword)

If this check box is selected and a Class Search Profile includes *Course Keyword*, then if a user searches by *cognitive*, the search

returns all classes for which *cognitive* is found in the Course Description, Long Course Title, or Long Description.

Include Course Attribute Value

If a Class Search Profile includes *Course Attribute*, then:

- If this check box is selected, a user can search by Course Attribute and Course Attribute Value—for example, search by Course Attribute: Honors, and Course Attribute Value: Math Department Honors.
- If this check box is cleared, a user can search by Course Attribute only.

Configure Search

Add Search Group, Group Sequence, and Seq Nbr (sequence number)

Configure groups of search criteria for a profile and define the sequence order in which fields are displayed on the Search for Classes page.

Criteria can be used in only one group box within a profile.

Message Set and Message Number

Define the labels for class search groupings through the Message Catalog (Message Set 14690).

Reset Values

Click this button to access a default setting where all values are displayed and configured into two groups: Class Search, which is expanded by default and Additional Search Criteria, which is collapsed by default. You can then modify the search criteria and groupings.

Use Common Attribute

Select this check box to use class association attributes in class search.

When you select the check box, the Search Criteria field is not available and the Common Attribute field displays the available class association attributes as defined on the CLASS_ASSOC Record Context. An attribute can be used only once within a profile.

When students search for classes from Program Enrollment Self Service, a controlled class search is used. Therefore unlike other class search profiles, you do not need to include Subject and Course Number as search criteria for the SSAPT profile.

See [Using the Common Attribute Framework to Extend Class Associations for Program Enrollment](#)

"Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Maintaining Student Additional Information

Use Search Result Filters

If you select this check box, filters appear on the class Search Results page, as explained below.

Sequence Number

Determines the order in which filters appear on the class Search Results page.

Use Common Attribute

If you select this check box and then select a Common Attribute value (and the attribute is associated with the relevant associate class in the Schedule of Classes component), then the attribute is available as a filter on the Search Results page when a user searches for classes.

When viewing the class search results, the filter check box is selected by default if the attribute is attached to the student's program as well as the relevant associated class and section.

The user can change the filter. However, if the Match selection option on the Class Result Options page is *Required Match* and there is a match on the student's attribute and associated class attribute, then the Search Results page shows matching class sections only. The student cannot change the filter.

See [Adding Class Association Attributes Using the Schedule of Classes Component](#)

Criteria

Select a value to indicate that the criteria should be available as a filter on the Search Results page when a user searches for classes.

If you select the *Academic Shift* criteria, an Academic Shift value must be selected for the class in the Schedule of Classes component.

See [Defining Class Meeting Patterns](#)

Match

Filter Default: A filter option appears with a check box selected on the class Search Results page when the class search returns a class with sections that match the filter criteria. A student can clear or re-select the check box to expand or narrow the search results. If no match occurs, the filter does not appear on the Search Results page

Required Match: The class Search Results page displays only sections that match the required criteria. A filter option appears

with a check box selected but the student cannot clear or change the filter criteria. For example, if an institution wants to display to the student only class sections that match the student's campus (see Student Program/Plan component), the institution can define campus as a required match.

See [Maintaining Student Program Stacks](#)

Note: If no matches are found for a given default filter criteria, the respective filter does not display on the Search Results page. For example, if there is a filter default defined for the attribute of student language but there are no sections with the associated class attribute for a student language value, the filter does not display on the Search Results page.

Note: If a student accesses My Schedule Builder and only one class section matches the *Required Match* filter criteria, that section displays on My Schedule Builder. The student does not see the Search Results page.

Defining Class Detail Options

Access the Class Detail Options page (Set Up SACR > Product Related > Student Records > Curriculum Management > Class Search Configuration > Class Detail Options).

Use this page to define, by profile, the fields that appear on the Class Detail page. For example, if you select the Enroll Rqmt: Requisite check box for the STDNT profile, then in Self Service, when a student clicks the link for the class and is taken to the Class Detail page, the student can see the enrollment requisite information for that class.

All check boxes are selected by default.

Textbook Information

The information that appears on the Class Detail page depends on the data that you enter on the Schedule of Classes–Textbook page (Curriculum Management, Schedule of Classes, Schedule New Course, Textbook).

See [Defining Textbooks for Classes](#)

Chapter 4

Setting Up Repeat Checking

Understanding Repeat Checking Functionality

The Student Records repeat checking functionality is a flexible, fully integrated feature that updates students' academic statistics based on an academic institution's course repeat policies. Through the repeat schemes, repeat codes, and repeat rules that your institution defines, the functionality regulates academic statistics that are usually governed by the grading scheme.

The repeat checking functionality enables you to manage repeats at the beginning, middle, and end of students' coursework. The functionality enables you to:

- Identify automatically that students are repeating courses when students enroll in classes (front-end processing).
- Identify automatically that students are repeating courses when you grade students through the Enrollment Request page (back-end processing).
- Identify automatically that students are repeating courses when you post transfer credit (back-end processing).
- Identify in batch that students are repeating courses by running the Repeat Checking process once per term through the Repeat Checking page.
- Identify repeats manually by assigning repeat codes to students' records on the Student Enrollment page, Enrollment Request page, or Quick Enrollment page.

The repeat checking functionality consists of the following two processes, both of which are fully integrated with each other:

- The Allowable Repeats process, which enables you to define rules on the Catalog Data page of the Course Catalog (CRSE_CATALOG) component that regulate whether a student can repeat a course or course topic for credit and, if so, how many total units and total completions the student can attempt.

In conjunction with this setting at the course catalog level, you can define by grade (Repeat Checking Option) or by existing repeat code (Count and Process Option) if a class is defined as an allowable repeat.

- The Repeat Checking process, which takes effect only after a student exceeds either repeat maximum in the course catalog.

You can also define by grade (Repeat Grade Option) or by existing repeat code (Count and Process Option) if a class should be processed by the repeat check engine.

To use the repeat checking functionality, your institution must first define repeat schemes, repeat codes, and repeat rules.

- *Repeat schemes* are the set of valid repeat codes that an academic institution can use to define the repeat rules for an academic career.
- *Repeat codes* are the settings that adjust academic statistics.

Repeat codes can adjust academic statistics in the following ways: they prevent the system from including repeated coursework in a student's grade point average (GPA) and they prevent the system from including repeated coursework in a student's academic level. You can also decide to not adjust statistics for previously assigned repeat codes.

- *Repeat rules* are defined by academic careers and assigned to academic programs. The rules are analyzed during the repeat checking process and appropriate repeat codes are then assigned to the student enrollment record.

Repeat rules inform the Repeat Checking process when a student's repeated coursework matches the repeat policy of an academic career or an academic program. The Repeat Checking process then assigns the appropriate repeat codes to the student's enrollment record.

After you define these elements, you must link the repeat rules to academic careers. These rules carry to the academic program unless you make a different repeat rule assignment at that level. You can assign to academic careers and academic programs only the repeat rules that are valid for the repeat scheme of the academic career. Finally, you must specify when you want the Repeat Checking process to run at the academic institution, academic career, and academic program levels. These controls enable you to turn on and off automatic repeat checking during enrollment and grade input. They also enable you to temporarily suspend automatic repeat checking during peak enrollment and grade input periods.

After your institution defines these elements, the repeat checking functionality is ready to use. When the Repeat Checking process runs, it looks for a matching pair of course IDs or courses deemed equivalent (on the Course Equivalencies page). When the process finds a matching pair, it associates the appropriate repeat rule and assigns the designated repeat code to the student's enrollment record for the repeated class. You can view the assigned repeat code on the Enrollment Request page or the Quick Enrollment page. Depending on your setup, the repeat code can prevent a repeated course from counting towards a student's academic level or GPA.

The Allowable Repeats process and Repeat Checking process set the repeat candidate flag (REPEAT_CANDIDATE) on the student's enrollment record (STDNT_ENRL) to *Y* or *N* for all components of a class. The COBOL process sets the flag to *Y* for all classes identified as repeat candidates as long as the following conditions are met:

- You must set up front-end repeat checking to issue warning messages whenever the COBOL process encounters a repeat candidate.
- You must process the enrollment transaction through the enrollment engine.

The COBOL process does not validate enrollment transactions that are processed through the Enrollment (STDNT_ENRL) component and, therefore, does not issue a warning repeat message. For enrollment transactions that are processed through the Enrollment component, the system sets the repeat candidate flag on the student's enrollment record to *N*, even for repeated classes.

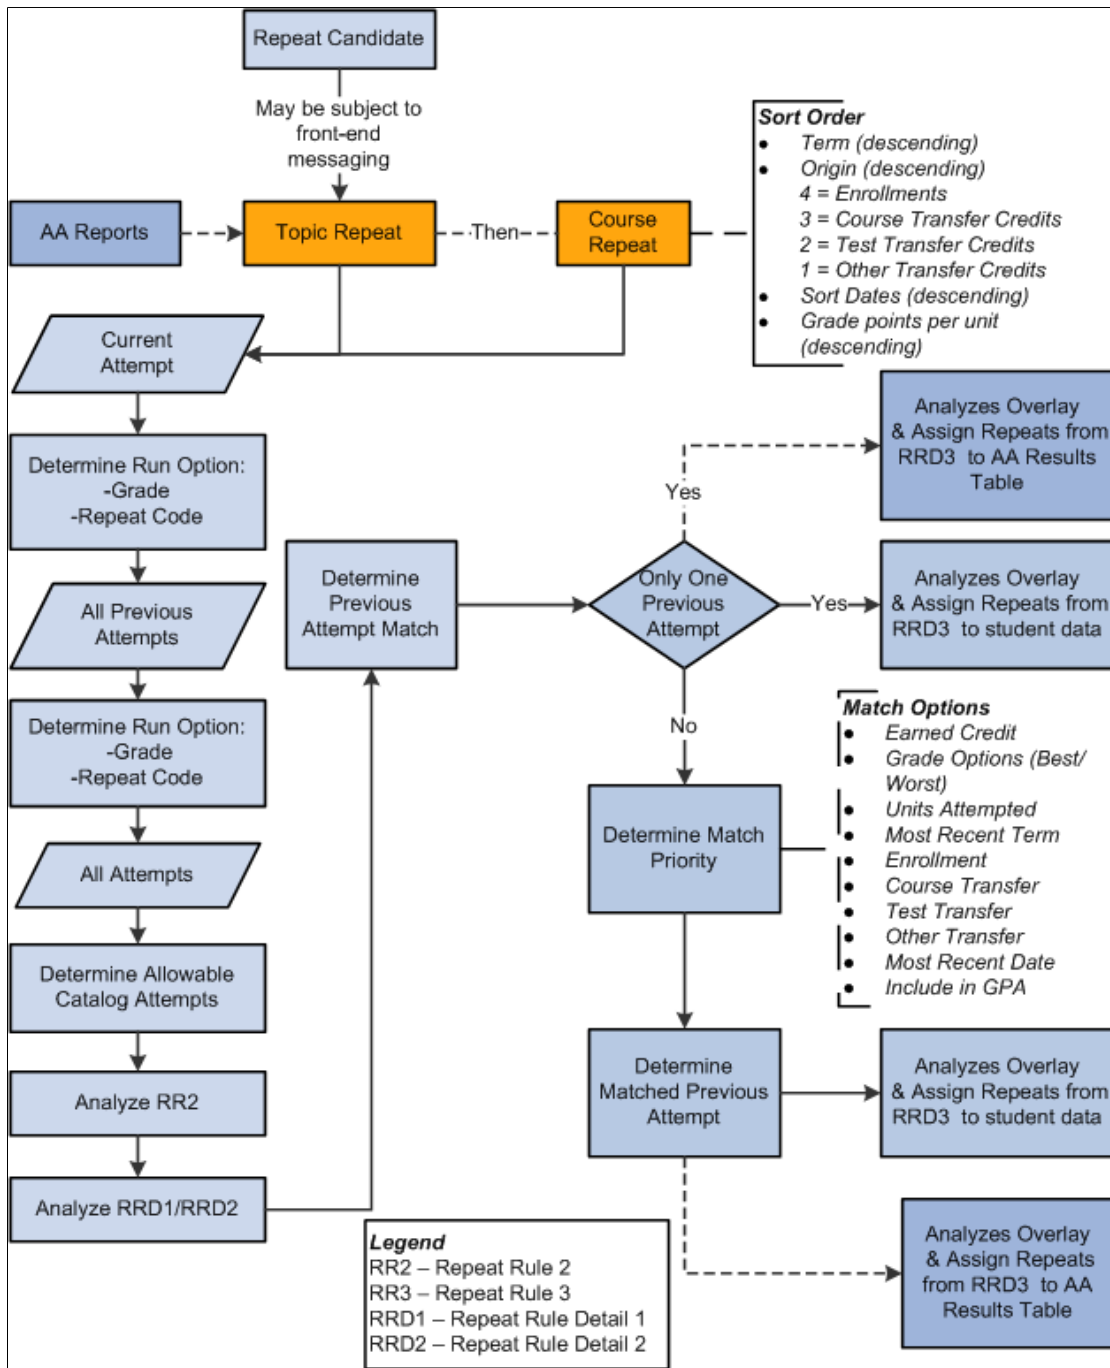

On the Repeat/Incomplete page of the Academic Program Table (ACADEMIC_PROG_TBL) component, if you set the Process on Enrollment field to *No* and the Course Catalog Repeat Messages field to *Warning*, the Allowable Repeats process is activated. When students submit enrollment requests and the student exceeds the total completions allowed for the class, as determined by the Course Catalog Detail page, they receive a warning message.

If you set the Process on Enrollment field to *Yes*, the Course Catalog Repeat Messages field is automatically set to *Warning* and becomes unavailable for edit. On enrollment requests, the Repeat Checking process looks to the repeat rule setup for messaging rules.

For the process to correctly and consistently set the repeat candidate flag to *Y*, you must set the Enrollment Message field to *Warning* for the repeat rule on the Repeat Rule2 page and for every detail rule on the Repeat Rule Detail 1 page. If you set the Enrollment Message field to *Ignore*, the process does not send a message for that rule and, even if the course is a repeat candidate, the process sets the repeat candidate flag to *N*, provided that it does not violate other repeat rules.

Image: Repeat Engine logic

This diagram explains the Repeat Engine logic:

[Understanding the Three Repeat Checking Methods](#)

Defining Repeat Schemes and Repeat Codes

To set up repeat schemes and codes, use the Repeat Scheme Table (REPEAT_SCHEME_TBL) component.

This section discusses how to create repeat schemes and codes.

Page Used to Define Repeat Schemes and Repeat Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Repeat Scheme Table	REPEAT_SCHEME_TBL	Records and Enrollment > Term Processing > End of Term Processing > Repeat Scheme Table > Repeat Scheme Table	Create repeat schemes and the repeat codes within each scheme.

Creating Repeat Schemes and Codes

Access the Repeat Scheme Table page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Scheme Table > Repeat Scheme Table).

Image: Repeat Scheme Table page

This example illustrates the fields and controls on the Repeat Scheme Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Repeat Scheme Table' interface. At the top, it displays 'SetID: PSUNV' and 'Repeat Scheme: UGRD'. Below this is a search bar with 'Find | View All' and '1 of 1'. The main form contains several sections:

- General Information:**
 - *Effective Date: 01/01/1900
 - *Status: Active
 - *Description: Undergraduate
 - *Short Desc: PSU
- Repeat Code Details:**
 - *Repeat Code: EXCM
 - *Description: Repeated - Excluded
 - *Short Desc: Repeated
 - Formal Description: Repeated - Excluded
 - Earn Credit
 - Include in GPA
 - Print Repeat Description
 - Print Repeat Date
 - *Units Attempted: Yes
 - Display in AA Reports
- When this code exists in student data:**
 - *Count and Process Option: 1) Count = Y Process = Y
 - Allow to be overlaid
 - Bypass processing if it is on Current Attempt

The purpose of repeat codes is to adjust students' academic statistics appropriately when students repeat courses, rather than having the system calculate statistics by using the grading scheme.

Repeat Code

Enter a repeat code for this repeat scheme. If assigned, this code appears on a student's enrollment record. You can view codes that are assigned to a student's enrollment records on the Enrollment Request page or the Quick Enrollment page.

Earn Credit

Select to indicate that a student with this repeat code on a class enrollment record can earn credit for the class. To prevent a repeated course from counting toward a student's academic level, clear this check box.

Include in GPA (include in grade point average)

Select to indicate that a student with this repeat code on a class enrollment record can have the class included in the GPA calculation. To prevent a repeated course from being calculated in the student's GPA, clear this check box.

Print Repeat Description

Select to have the system print the formal description of this repeat code on the student's transcript when applicable.

Print Repeat Date

Select to print the date that the student completed the repeated course on the student's transcript.

Units Attempted

From the following choices, enter a value to indicate how the units attempted from a repeated course count towards a student's academic statistics when this repeat code is assigned to the student's class enrollment record. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require substantial programming.

Yes: Indicates that a student with this repeat code on a class enrollment record can have the class included in units attempted.

No: Prevents the units from a repeated course from counting toward a student's academic statistics.

In Progress: Units in progress is used for courses coded with this repeat code.

Display in AA Reports (display in Academic Advisement reports)

Select to allow the system to display the repeat code and its description in the advisement report.

When this code exists in student data**Count and Process Option**

Select an option to indicate whether a class with this repeat code should be counted as a repeat candidate and whether the class should be processed by the Repeat Checking process. Values are:

1) *Count = Y Process = Y:* If you select this option, any class with this repeat code is counted in the pool of repeat attempts and is selected and processed when the Repeat Checking process is run.

2) *Count = Y Process = N:* If you select this option, any class with this repeat code is counted in the pool of repeat attempts, but is not selected and processed when the Repeat Checking process is run.

3) *Count = N Process = Y:* If you select this option, any class with this repeat code is not counted in the pool of repeat attempts, but is selected and processed when the Repeat Checking process is run.

4) *Count = N Process = N:* If you select this option, any class with this repeat code is not counted in the pool of repeat attempts, nor is it selected and processed when the Repeat Checking process is run.

Note: The Repeat Checking process analyzes the value in the Repeat Checking Option field on the Grading Scheme Table page before it analyzes the value in the Count and Process Option field on this page.

See [Understanding Repeat Checking Functionality](#).

Allow to be overlaid

Select this check box to allow the Repeat Checking process to overlay this repeat code in subsequent process runs. Clear the check box if this repeat code should never be replaced.

Bypass processing if it is on Current Attempt

Select this check box if the current attempt already has this code assigned and the class should not be picked up by the Repeat Checking process.

Defining Repeat Rules

To set up repeat rules, use the Repeat Rule (REPEAT_RULE) component.

This section discusses how to do the following tasks and concludes with an example of a repeat rule:

- Describe repeat rules.
- Define conditions for repeat rules.
- Define the criteria and order that are used to determine a match when three or more repeat candidates are processed.
- Define repeat rule sequences.
- Define conditions for repeat rule sequences.
- Designate process actions for repeat rule sequences.

If you want to run repeat checking at the academic career level but want to exclude an academic program without having to select each academic program for which you do want to run repeat checking, you can set up a repeat rule called NONE. After naming the repeat rule, complete the required fields in the component and attach it to the academic program that you want to exclude. When the Repeat Checking process sees the NONE repeat rule, it does not run for that academic program.

Pages Used to Define Repeat Rules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Repeat Rule	REPEAT_RULE	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule	Describe the repeat rules that you later link to academic careers and academic programs.

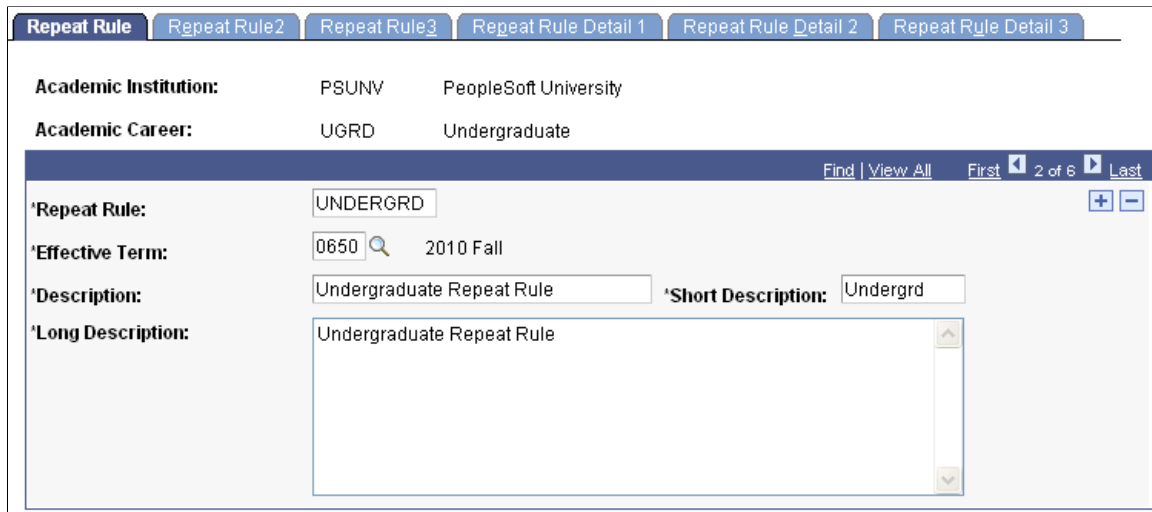

Page Name	Definition Name	Navigation	Usage
Repeat Rule2	REPEAT_RULE2	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule2	<p>Define the total attempts and units that are allowed for a course to which the repeat rule applies.</p> <p>You define the repeat code that is assigned to the student enrollment if the defined attempts or units are exceeded. You establish how the enrollment engine notifies a student when this violation occurs. Lastly you can define if there are any repeat codes that are exempted from the attempts and units allowed totals.</p>
Repeat Rule3	REPEAT_RULE3	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule3	Select the criteria and the order that are used by the Repeat Checking process to determine a match between the current attempt and multiple previous attempts.
Repeat Rule Detail 1	REPEAT_RULE_DTL	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 1	Further define a rule when your institution restricts the number of times that a student can repeat a course within a certain grade range. This page describes the <i>previous</i> course in the matched pair of repeat courses. For example, a student can repeat courses with F or D grades (grade points between 0.00 and 1.999) only twice.
Repeat Rule Detail 2	REPEAT_RULE_DTL2	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 2	Define what the repeat checking rule should do, based on the value of a preexisting repeat code on the current course attempt.
Repeat Rule Detail 3	REPEAT_RULE_DTL3	Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 3	Designate the codes that the Repeat Checking process should assign to the enrollment records of both the current and previous course attempts.

Describing Repeat Rules

Access the Repeat Rule page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule).

Image: Repeat Rule page

This example illustrates the fields and controls on the Repeat Rule page. You can find definitions for the fields and controls later on this page.

Your repeat rules are keyed by the academic careers, so your description might be *Undergraduate Repeat Rules*, *Fine Arts Repeat Rules*, *Graduate Repeat Rules*, and so on.

Repeat Rule

Enter the code for this repeat rule. You can attach this code to academic careers on the Repeat Checking page (Academic Career Table (ACAD_CAREER_TBL) component) and to academic programs on the Repeat/Incomplete page (Academic Program Table component).

Effective Term

Enter the term that this repeat rule becomes effective. Only terms associated with the academic career are available. The system validates the repeat rule by effective term.

Defining Conditions for Repeat Rules

Access the Repeat Rule2 page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule2).

Image: Repeat Rule2 page

This example illustrates the fields and controls on the Repeat Rule2 page. You can find definitions for the fields and controls later on this page.

Total Attempts Allowed

Enter the total number of attempts that a student can make for a course to which this repeat rule applies. The value that you enter should include all attempts of the course, including the first attempt.

Total Units Allowed

Enter the total number of units that a student can take for a course to which this repeat rule applies. The value that you enter should include all units taken for the course, including the units of the first attempt.

You can set both total attempts and total units maximums, or you can set just one. If you set both maximums, the Repeat Checking process uses the first maximum that it reaches. If you set neither maximum, the process uses the system defaults, 99 for total attempts and 999 for total units.

Note: If your institution restricts only the number of times or units that a student can repeat a course *within a certain grade point range*, use the Repeat Rule Detail 1 page to set these restrictions.

Repeat Code Violated

Enter the repeat code that the Repeat Checking process assigns to a student's enrollment record if the student exceeds the defined attempts or units.

For example, if your organization allows students to repeat a course only twice, regardless of any grades that the student receives, you would enter 3 in the Total Attempts Allowed field

—one for the initial enrollment plus two additional repeated attempts. Then, if the student attempts to enroll in the course a fourth time which exceeds the total attempts allowed for the rule, the process assigns the Repeat Code Violated value to the course.

If your organization chooses to have no restriction on the number of times a student can repeat a course, use the total attempts allowed default value of 99.

You must enter a Repeat Code Violated value.

Enrollment Message

You can define how the Repeat Checking process alerts a student during enrollment if the student exceeds the total attempts or units allowed:

- Select *Error* to stop the enrollment process and alert the student by displaying an error message.
- Select *Warning* to alert the student by displaying a warning message about the possible consequences of continuing with the enrollment.
- Select *Ignore* if you do not want the Repeat Checking process to issue a message.

The enrollment message applies only to repeat checking on enrollment (front end).

Current Repeat Codes Exempted from Attempts/Units Allowed

Use this field to ensure that a repeat code on the current attempt is not counted in the total attempts or units if it is manually assigned during the enrollment process.

In the above example, if you set PETM as the repeat code on the current attempt, the class is exempt from exceeding the defined total attempts or units.

You can assign repeat codes to a student's enrollment record on the Enrollment Request, Quick Enrollment, or Student Enrollment 1 page.

Defining the Criteria and Order That are Used to Determine a Match When Three or More Repeat Candidates are Processed

Access the Repeat Rule3 page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule 3).

Image: Repeat Rule 3 page

This example illustrates the fields and controls on the Repeat Rule 3 page. You can find definitions for the fields and controls later on this page.

Use the Repeat Rule 3 page to define the criteria and the order that are used by the Repeat Checking process to determine which previous attempt should be matched with the current attempt. This criteria is processed only when multiple previous attempts exist.

Prior Attempt Match Priority

Select the process order in which you want the Repeat Checking process to identify the class to be matched with the current attempt. The selected class is assigned the Set Prior Attempt value that is defined on the Repeat Rule Detail 3 page.

Select up to ten processing options to indicate the order in which you want the Repeat Checking process to find a prior attempt match. This logic is invoked only when the student has two or more previous repeat candidates for the class. The process stops when it finds a class that meets the criteria or it finds a blank value in the Prior Attempt Match Priority field.

The processing options are:

- *Earn Credit Flag = Y*
- *Best Grade Points Per Unit or Worst Grade Points Per Unit*
- *Units Attempted = Y*
- *Most Recent Term*
- *From Enrollment*
- *From Course Transfer Credit*

- *From Test Transfer Credit*
- *From Other Transfer Credit*
- *Most Recent Date*
- *Include in GPA = Y*

You can change the order of the criteria to meet the requirements of your institution.

Note: Regardless of the order that you select for the Prior Attempt Match Priority field, when the Repeat Checking process utilizes either the *Best Grade Points Per Unit* or *Worst Grade Points Per Unit* options, it matches only on classes for which the Earn Credit flag = Y.

Note: When multiple previous attempts exist, the Repeat Checking process invokes the default criteria order to find a match if only minimal criteria are defined—for example, if only From Course Transfer Credit is listed and no match exists, the remaining criteria are processed in default order until a match is found.

Defining Repeat Rule Sequences

Access the Repeat Rule Detail 1 page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 1).

Image: Repeat Rule Detail 1 page

This example illustrates the fields and controls on the Repeat Rule Detail 1 page. You can find definitions for the fields and controls later on this page.

Repeat Rule Sequence	
'Seq. No.:	1
Grade Points:	0.000
Through:	4.000
Total Attempts Allowed:	99
Total Units Allowed:	
Repeat Code Violated:	ILGL Illegal Repeat
Enrollment Message:	Ignore
'Description:	Special Permission
'Long Description:	Special permission to repeat course

Seq No (sequence number)

Enter the sequence number for this detail line of the repeat rule. You can have as many rule detail lines as necessary. The sequence number tells the system the order in which to evaluate the detail lines of the repeat rule.

For example, you might have four detail lines: one for special permission of all grades; one for the repeats of F grades (those grade points between 0.000 and 0.999), which are permitted twice; one for repeats of D grades (those with grade points between 1.000 and 1.999), which are permitted once; and one for repeats of all other grades (those with grade points between 2.000 and 4.000).

Important! The sequence number of the detail lines is crucial because as soon as the Repeat Checking process (SRPCERPT) finds a rule detail line that applies, it ignores subsequent detail lines.

Grade Points

Enter the lowest value in a range of grade points per unit for which the detail line of the repeat rule applies.

Through

Enter the highest value in a range of grade points per unit for which the detail line of the repeat rule applies.

For example, at PSUNV we use a 4 point grade scale. To apply a detail line to the grade of F, we would enter Grade Points *0.000* and Through *0.999*. To apply the detail line to all grades we would enter Grade Points *0.000* and Through *4.000*.

Total Attempts Allowed

Enter the number of attempts that a student is allowed within this grade point range. This number includes the original attempt and repeat attempts. The value that you enter should include all attempts of the course, including the first attempt.

Total Units Allowed

Enter the total units for which a student is allowed to receive a grade within this grade point range. The value that you enter should include all units taken for the course, including the units of the first attempt.

You can set both total attempts and total units maximums, or you can set just one. If you set both maximums, the Repeat Checking process uses the first maximum that it reaches. If you set neither maximum, the process uses the system defaults, 99 for total attempts and 999 for total units.

Repeat Code Violated

Enter the repeat code that the Repeat Checking process assigns to a student's enrollment record if the student exceeds the defined attempts or units of this detail line of the repeat rule.

For example, if your organization allows students to repeat a course only twice, within a certain grade point range, you would enter 3 in the Total Attempts Allowed field—one for the initial enrollment plus two additional repeated attempts. Then, if the student attempts to enroll in the course a fourth time and violates the total attempts allowed for the rule, the process assigns the Repeat Code Violated field value to the course. If your organization has no restriction on the number of times that a student can repeat a course within a certain grade point range, use the Total Attempts Allowed default value of 99.

You must enter a Repeat Code Violated field value.

Enrollment Message

You can define how the Repeat Checking process alerts a student during enrollment if the student exceeds the total attempts or units allowed of this detail line of the repeat rule:

- Select *Warning* to alert the student by displaying a warning message about the possible consequences of continuing with the enrollment.
- Select *Ignore* if you do not want the Repeat Checking process to issue a message.

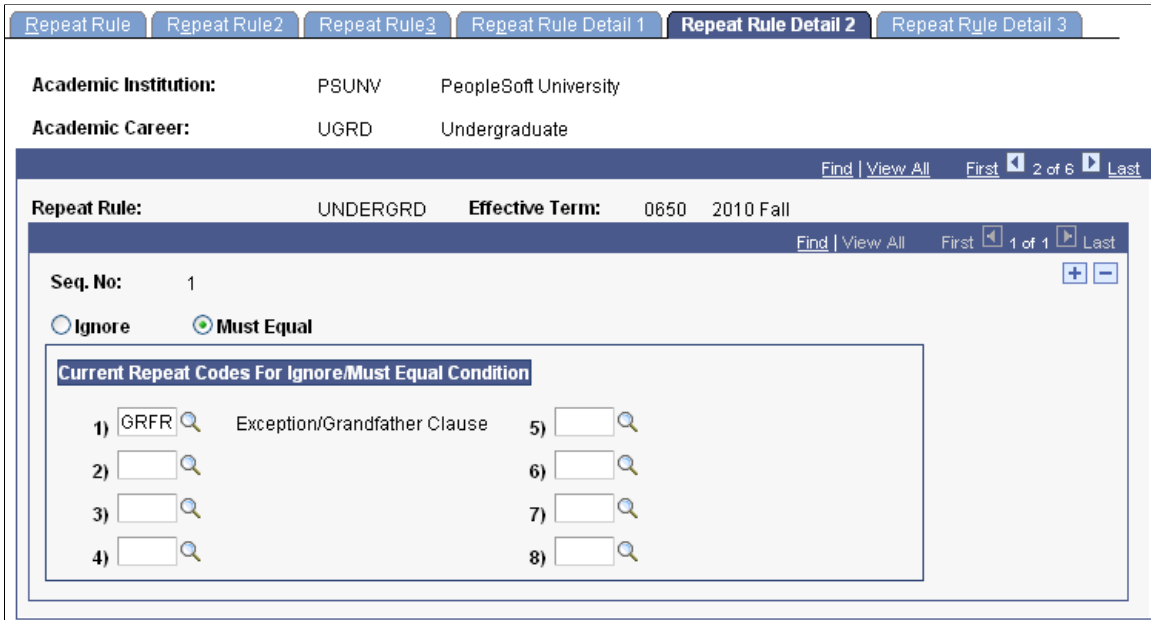

The enrollment message applies only to repeat checking on enrollment (front end).

Defining Conditions for Repeat Rule Sequences

Access the Repeat Rule Detail 2 page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 2).

Image: Repeat Rule Detail 2 page

This example illustrates the fields and controls on the Repeat Rule Detail 2 page. You can find definitions for the fields and controls later on this page.

Sometimes a course that the student repeats already has a repeat code assigned. For a student's current course attempt, a repeat code might have been assigned manually during the enrollment process on either the Student Enrollment 1 page, the Quick Enrollment page, or the Enrollment Request page. Use this page in conjunction with the rules that you define on the Repeat Rule Detail 1 page.

Ignore

Select to have the Repeat Checking process (SRPCERPT) ignore this detail line of the repeat rule when evaluating the current course attempt *if* the repeat code already present for the current course matches any of the repeat code values that you select in the Current Repeat Codes For Ignore/Must Equal Condition group box fields.

Must Equal

Select to have the Repeat Checking process consider this detail line of the repeat rule when evaluating the current course attempt *only if* the repeat code already present for the current course matches any of the repeat code values that you select in the Current Repeat Codes For Ignore/Must Equal Condition group box fields.

In this example, for Seq. No 1 of the Repeat Rule Detail 1 page to be applied, the current attempt of the course must already have repeat code GRFR assigned.

Designating Process Actions for Repeat Rule Sequences

Access the Repeat Rule Detail 3 page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Rule > Repeat Rule Detail 3).

Image: Repeat Rule Detail 3 page

This example illustrates the fields and controls on the Repeat Rule Detail 3 page. You can find definitions for the fields and controls later on this page.

Enter codes for each repeat rule detail line that you create for the repeat rule. The Repeat Checking process assigns these repeat codes only if the student's grade point on the prior course attempt falls within the range that you specify on the Repeat Rule Detail 1 page.

Set Current Attempt

Enter a repeat code for the current attempt. The Repeat Checking process assigns the repeat code that you select here to the student's current attempt of the course.

Set Prior Attempt

Enter the repeat code for the prior attempt. The Repeat Checking process assigns the repeat code that you select here to the student's previous attempt of the course.

If Current Attempt is Best Grade

In the If Current Attempt is Best Grade group box, select the appropriate repeat codes for the Repeat Checking process to post to a student's enrollment record if the current attempt of the course has the best grade.

If Prior Attempt is Best Grade

In the If Prior Attempt is Best Grade group box, select the appropriate repeat codes for the system to post to a student's enrollment record if the prior attempt of the course has the best grade.

If Current and Prior Attempt Grades are the same

In the If Current and Prior Attempt Grades are the same group box, select the appropriate repeat codes for the system to post to a student enrollment record when the current and prior attempt grades are the same.

Examples of Multiple Repeat Matching

If multiple repeated courses are counted, the prior attempt that is selected to match with the current attempt is determined by the setup on the Repeat Rule 3 page.

The following options are available:

- Earn Credit Flag = Y
- Best Grade Points Per Unit *or*
- Worst Grade Points Per Unit
- Units Attempted = Y
- Include in GPA = Y
- Most Recent Term
- From Enrollment
- From Course Transfer Credit
- From Test Transfer Credit
- From Other Transfer Credit
- Most Recent Date

Note: In certain scenarios, certain options are inserted into the logic: best/worst grade matches are based on the earn credit flag = Y and the most recent date is analyzed if more than one of the same Most Recent Term exist.

Here are some scenarios in which the following repeat codes are assigned:

- EXCM (Earned Credit and Include in GPA = N)
- GPAI (Earned Credit and Include in GPA = Y)
- PETM (Earned Credit and Include in GPA = Y). Setup to not be overlaid.

Example 1

The course is set up in the course catalog to allow credit for two repeats:

- Fall 2006, grade C
- Fall 2007, grade D
- Fall 2008, grade B

Scenario 1 - *Best Grade*

According to school policy, the student can retake the course an unlimited number of times. No limits exist on the Repeat Rule 1 or Repeat Rule Detail 1 setup.

The course that is selected as the previous course attempt is the course with the best grade points per unit where the Earn Credit check box is selected on STDNT_ENRL. In this example, the Fall 2008 attempt is the current attempt, while Fall 2006 is selected as the previous attempt.

Based upon the Repeat Rule Detail 3 setup (If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned:

- Fall 2006, grade C EXCM
- Fall 2007, grade D
- Fall 2008, grade B GPAI

Scenario 2 - *Worst Grade*

The course that is selected as the previous course attempt is the course with the worst grade points per unit where the Earn Credit check box is selected on STDNT_ENRL. In this example, the Fall 2008 attempt is the current attempt, while Fall 2007 is selected as the previous attempt.

Based upon the Repeat Rule Detail 3 setup (If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned:

- Fall 2006, grade C
- Fall 2007, grade D EXCM
- Fall 2008, grade B GPAI

The student takes the class again with an A grade. Again the course that is selected as the previous course attempt is the course with the worst grade points per unit where the Earn Credit check box is selected on STDNT_ENRL. In this example, the Fall 2009 attempt is the current attempt, while Fall 2006 is selected as the previous attempt (because Fall 2007 has the Earn Credit flag = N due to the existing EXCM code).

Here is how the enrollment records for this example would look:

- Fall 2006, grade C EXCM
- Fall 2007, grade D EXCM
- Fall 2008, grade B GPAI
- Fall 2009, grade A GPAI

Example 2

The course is set up in the course catalog for no allowable repeats:

- Fall 2006, grade C
- Fall 2007, grade D

Scenario 1 – *Most Recent Term*

According to school policy, the student can retake a course an unlimited number of times, but only the latest attempt counts.

Because the Most Recent Attempt option disregards the Earn Credit flag on STNDT_ENRL, this setting always compares with the most recent attempt.

Based on the Repeat Rule Detail 3 setup (If Prior Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned:

- Fall 2006, grade C EXCM
- Fall 2007, grade D GPAI

The student takes class Fall 2008, grade A. Fall 2008 is considered the current attempt and Fall 2007 is the Most Recent Attempt. Based upon the Repeat Rule Detail 3 setup (If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned as follows because the school policy always counts the latest attempt:

- Fall 2006, ENGL 101, grade C EXCM
- Fall 2007, ENGL 101, grade D EXCM
- Fall 2008, ENGL 101, grade A GPAI

The student takes class Fall 2009, grade B. Fall 2009 is considered the current attempt and Fall 2008 is the Most Recent Attempt. Based upon the Repeat Rule Detail 3 setup (If Prior Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned as follows because the school policy always counts the latest attempt:

- Fall 2006, ENGL 101, grade C EXCM
- Fall 2007, ENGL 101, grade D EXCM
- Fall 2008, ENGL 101, grade A EXCM
- Fall 2009, ENGL 101, grade B GPAI

Scenario 2 – Most Recent Term with repeat code to not be overlaid

School policy (as defined on Repeat Rule Detail 1) does not allow a repeat on grade points < 2.000, but the student petitions and receives permission. The following repeat codes are manually assigned after the student completes Fall 2007:

- Fall 2006, grade D EXCM
- Fall 2007, grade C PETM

The student takes class Fall 2008, grade A. Fall 2008 is considered the current attempt and Fall 2007 is the prior attempt. The Repeat Rule Detail 3 is setup as If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM. While it still matches on Fall 2007, because the PETM is not to be overridden, the repeat codes are assigned as follows:

- Fall 2006, ENGL 101, grade C EXCM
- Fall 2007, ENGL 101, grade D PETM

- Fall 2008, ENGL 101, grade A GPAI

Scenario 3 – Most Recent Term – Multiple Same Terms exist – Most Recent Date

When multiples of the same Most Recent Term exist, the repeat engine analyzes the session start dates to determine the Most Recent Date.

- Summer 2006, grade D (session 1 – June 1 start date)
- Summer 2006, grade D (session 2 – July 5 start date)

Because the start date of session 2 is the most recent date, it is determined to be the current attempt while session 1 which has an earlier start date is considered the prior attempt. Based on the Repeat Rule Detail 3 setup (If Current and Prior Attempt are Same Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned:

- Summer 2006, grade C (session 1 – June 1 start date) EXCM
- Summer 2006, grade D (session 2 – July 5 start date) GPAI

Student takes class Fall 2008, grade A. Fall 2008 is considered the current attempt and Summer 2006 session 2 is the prior attempt (based on the Most Recent Date). Based on the Repeat Rule Detail 3 setup (If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned as follows because the school policy always counts the latest attempt:

- Summer 2006, grade C (session 1 – June 1 start date) EXCM
- Summer 2006, grade D (session 2 – July 5 start date) EXCM
- Fall 2008, ENGL 101, grade A GPAI

Note: When Most Recent Date is used as a criteria, the session start date is the first determiner. If the start dates are the same, then the session end dates are used as the determiner.

Scenario 4 – Most Recent Term – Enrollment before Transfer

According to school policy, the most recent attempt is always counted, but internal enrollments are counted before transfer credit. To accommodate such a policy the repeat checking matching option might be setup as follows:

- Most Recent Term
- From Enrollment

When multiples of the same Most Recent Term exist, the repeat engine analyzes the session start dates to determine the Most Recent Date.

- Fall 2006, grade C (session 1) Enrollment
- Fall 2006, grade C (session 1) Transfer Credit

Based on the Repeat Rule Detail 3 setup (If Current and Prior Attempt are Same Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned:

- Fall 2006, grade C (session 1) Enrollment GPAI

- Fall 2006, grade C (session 1) Transfer Credit EXCM

Student takes class Fall 2008, grade A. Fall 2008 is considered the current attempt and Fall 2006 session 1 Enrollment is the prior attempt. Based on the Repeat Rule Detail 3 setup (If Current Attempt is Best Grade - Current = GPAI, Prior = EXCM), the repeat codes are assigned as follows because the school policy always counts the latest attempt:

- Fall 2006, grade C (session 1) Enrollment EXCM
- Fall 2006, grade C (session 1) Transfer Credit EXCM
- Fall 2008, grade A GPAI

Example of a Repeat Rule

Image: Example repeat rule (1 of 7)

The following example shows how your institution might set up a repeat rule with two detail lines. This example defines a repeat rule that allows students to repeat a course twice only or earn up to 12 units in a repeated course. In addition, students must seek special permission to repeat classes. If students receive a D or F in the course, they can repeat the course only once rather than twice. The Repeat Rule2 page might look like this:

Current Repeat Codes Exempted from Attempts/Units Allowed			
1)	PETM	Repeat Allowed via Petition	5)
2)			6)
3)			7)
4)			8)

- The Total Attempts Allowed field is set to 3.

Undergraduate students can repeat courses twice only (first attempt plus two repeats equals three total attempts).

- Undergraduate students can repeat courses for a total of 12 units, as specified in the Total Units Allowed field.

- We enter *ILGL* (illegal repeat) in the Repeat Code Violated field.

If the process finds a student in violation of the total attempts allowed or total units allowed, the process assigns the *ILGL* repeat code to the student's enrollment record for the repeated course.

- The Enrollment Message field is set to *Warning*.

If the Repeat Checking process identifies the repeat on enrollment as exceeding the total attempts allowed or total units allowed, it issues a warning message to alert the student about the possible consequences of continuing with the enrollment.

- We enter a repeat code exemption.

If a student's current term enrollment contains the *PETM* (repeat allowed via petition) repeat code, the repeat rule does not prevent the enrollment—this exemption would also override the total attempts allowed or total units allowed maximums on the Repeat Rule2 page during back-end processing. For the student's enrollment to contain this repeat code, manually assign it to the enrollment record on the Student Enrollment 1 page, the Quick Enrollment page, or the Enrollment Request page. In addition, the assumption is that the exemption codes are included in special permission rules where these codes are established as Must Equal conditions on the Repeat Rule Detail 2 page, though this is not required.

Image: Example repeat rule (2 of 7)

To require that students seek special permission to repeat classes, the Rule Detail 1 page might look like this:

The screenshot displays the 'Repeat Rule Detail 1' page. At the top, there are navigation tabs: Repeat Rule, Repeat Rule 2, Repeat Rule 3, Repeat Rule Detail 1 (selected), Repeat Rule Detail 2, and Repeat Rule Detail 3. Below the tabs, the following information is shown:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Career:** UGRD Undergraduate

Navigation options include 'Find | View All' and 'First 2 of 6 Last'. The main section is titled 'Repeat Rule Sequence' and includes:

- Repeat Rule:** UNDERGRD
- Effective Term:** 0650 2010 Fall

Below this is a 'Repeat Rule Sequence' table with one entry:

Repeat Rule Sequence	
'Seq. No:	1
Grade Points:	0.000 Through: 4.000
Total Attempts Allowed:	99 Total Units Allowed:
Repeat Code Violated:	ILGL Illegal Repeat
Enrollment Message:	Ignore
'Description:	Special Permission
'Long Description:	Special permission to repeat course

- The sequence number is 1.

The Repeat Checking process considers this detail line first.

- The process includes any repeated courses that have a grade-points-per-unit range from 0.000 through 4.000.

This range ensures that the Repeat Checking process evaluates every attempt, regardless of the student's grade. Because this is our most restrictive rule, we want the Repeat Checking process to consider this rule first.

- Because the student must have special permission to repeat a course, we enter the value of 99 in the Total Attempts Allowed field.

A student can repeat a class as many times as special permission is given.

- No total units allowed restriction exists for this detail line of the repeat rule.

Image: Example repeat rule (3 of 7)

The Repeat Rule Detail 2 page might look like this for the special permission detail line:

Repeat Rule Repeat Rule2 Repeat Rule3 Repeat Rule Detail 1 **Repeat Rule Detail 2** Repeat Rule Detail 3

Academic Institution: PSUNV PeopleSoft University
Academic Career: UGRD Undergraduate

Current Repeat Codes For Ignore/Must Equal Condition

1) PETM Repeat Allowed via Petition	5)
2)	6)
3)	7)
4)	8)

Image: Example repeat rule (4 of 7)

The Repeat Checking process applies the codes on the Repeat Rule Detail 3 page if the current course attempt has been coded with *PETM*. The Rule Detail 3 page might look like this for the special permission detail line:

Academic Institution:		PSUNV	PeopleSoft University
Academic Career:		UGRD	Undergraduate

Repeat Rule:		UNDERGRD	Effective Term:	0650 2010 Fall
---------------------	--	----------	------------------------	----------------

Seq. No:	1	Find View All	2 of 6
-----------------	---	-----------------	--------

If Current Attempt is Best Grade	
Set Current Attempt:	REXC Repeated - Excluded from Stats
Set Prior Attempt:	REIG Repeated - Included in GPA

If Prior Attempt is Best Grade	
Set Current Attempt:	REIG Repeated - Included in GPA
Set Prior Attempt:	REXC Repeated - Excluded from Stats

If Current and Prior Attempt Grades are the same	
Set Current Attempt:	REXC Repeated - Excluded from Stats
Set Prior Attempt:	REIG Repeated - Included in GPA

- If the current attempt of the class has the best grade, the system codes that class with *REXC* and sets the prior attempt to *REIG*.
- If the prior attempt of the class has the best grade, the system codes that class with *REXC* and sets the current attempt to *REIG*.
- If the current and prior attempt have the same grade, the system codes the current attempt as *REXC* and the prior attempt as *REIG*.

Image: Example repeat rule (5 of 7)

If the current course attempt does not meet the criteria (current attempt has PETM) then the program moves to the next sequence detail line.

For the next detail line of the repeat rule, we want to specify that students can repeat D and F grades only once. The Repeat Rule Detail 1 page looks like this:

Repeat Rule	Repeat Rule2	Repeat Rule3	Repeat Rule Detail 1	Repeat Rule Detail 2	Repeat Rule Detail 3
Academic Institution:	PSUNV	PeopleSoft University			
Academic Career:	UGRD	Undergraduate			
Find View All First 2 of 6 Last					
Repeat Rule:	UNDERGRD	Effective Term:	0650	2010 Fall	
Find View All First 2 of 2 Last					
'Seq. No.:	2				
Grade Points:	0.000	Through:	1.999		
Total Attempts Allowed:	2		Total Units Allowed:		
Repeat Code Violated:	ILGL	Illegal Repeat			
Enrollment Message:	Warning				
'Description:	Repeat Ds and Fs				
'Long Description:	Ds and Fs may be repeated only once (two total attempts)				

- The sequence number is 2.

The system considers this detail line of the repeat rule second in the Repeat Checking process.

- Repeated courses that have a grade-points-per-unit range from 0.000 through 1.999 are included.

Note that the grade range is concerned with only the grade of the *prior* course in the matched pair.

- A student is permitted to repeat a D or F grade once, and this is reflected in the Total Attempts Allowed field value of 2.

Course attempts include all attempts of the course, not just the repeats. In addition, the allowable course catalog repeats constitute the first attempt in this total attempts allowed. Therefore, if the catalog allows four attempts, all four of those attempts would constitute the first attempt in this number.

- No total units allowed restriction exists for this rule.
- If students violate the number of attempts, the Repeat Checking process assigns the repeat code *ILGL* to the student's enrollment record for the current attempt, as defined in the Repeat Code Violated field.

Image: Example repeat rule (6 of 7)

The Repeat Rule Detail 2 page might look like this for this detail line of the repeat rule:

The screenshot shows the 'Repeat Rule Detail 2' page. At the top, there are navigation tabs: Repeat Rule, Repeat Rule2, Repeat Rule3, Repeat Rule Detail 1, **Repeat Rule Detail 2**, and Repeat Rule Detail 3. Below the tabs, the following information is displayed:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Career:** UGRD Undergraduate

Navigation links: Find | View All First 2 of 6 Last

Repeat Rule: UNDERGRD **Effective Term:** 0650 2010 Fall

Navigation links: Find | View All First 2 of 2 Last

Seq. No: 2

Ignore Must Equal

Current Repeat Codes For Ignore/Must Equal Condition

1) EXCM	Repeated - Excluded	5) <input type="text"/>
2) RATT	Repeat Forgiveness Attempt	6) <input type="text"/>
3) RFCP	Repeat Forgiveness - Included	7) <input type="text"/>
4) RFAT	Repeat Forgiveness - Excluded	8) <input type="text"/>

On this page, the system does not apply this rule detail sequence if the current attempt has any one of the selected repeat codes attached to it.

Image: Example repeat rule (7 of 7)

The Repeat Rule Detail 3 page might look like this for this detail line of the repeat rule:

The screenshot shows the 'Repeat Rule Detail 3' page. At the top, there are navigation tabs: Repeat Rule, Repeat Rule2, Repeat Rule3, Repeat Rule Detail 1, Repeat Rule Detail 2, and **Repeat Rule Detail 3**. Below the tabs, the following information is displayed:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Career:** UGRD Undergraduate

Navigation links: Find | View All 2 of 6

Repeat Rule: UNDERGRD **Effective Term:** 0650 2010 Fall

Navigation links: Find | View All 1 of 1

Seq. No:

If Current Attempt is Best Grade

- Set Current Attempt:** GPAI Repeat for GPA Improvement
- Set Prior Attempt:** RINC Replaces Previous Attempt

If Prior Attempt is Best Grade

- Set Current Attempt:** GPAI Repeat for GPA Improvement
- Set Prior Attempt:** RINC Replaces Previous Attempt

If Current and Prior Attempt Grades are the same

- Set Current Attempt:** GPAI Repeat for GPA Improvement
- Set Prior Attempt:** RINC Replaces Previous Attempt

Note: When the Repeat Checking process finds a matched pair of courses that violates a detail line of the repeat rule, it moves on to the next pair of matching courses.

Setting Up Repeat Checking for Academic Institutions

This section discusses how to set up repeat checking for academic institutions.

Page Used to Set Up Repeat Checking for Academic Institutions

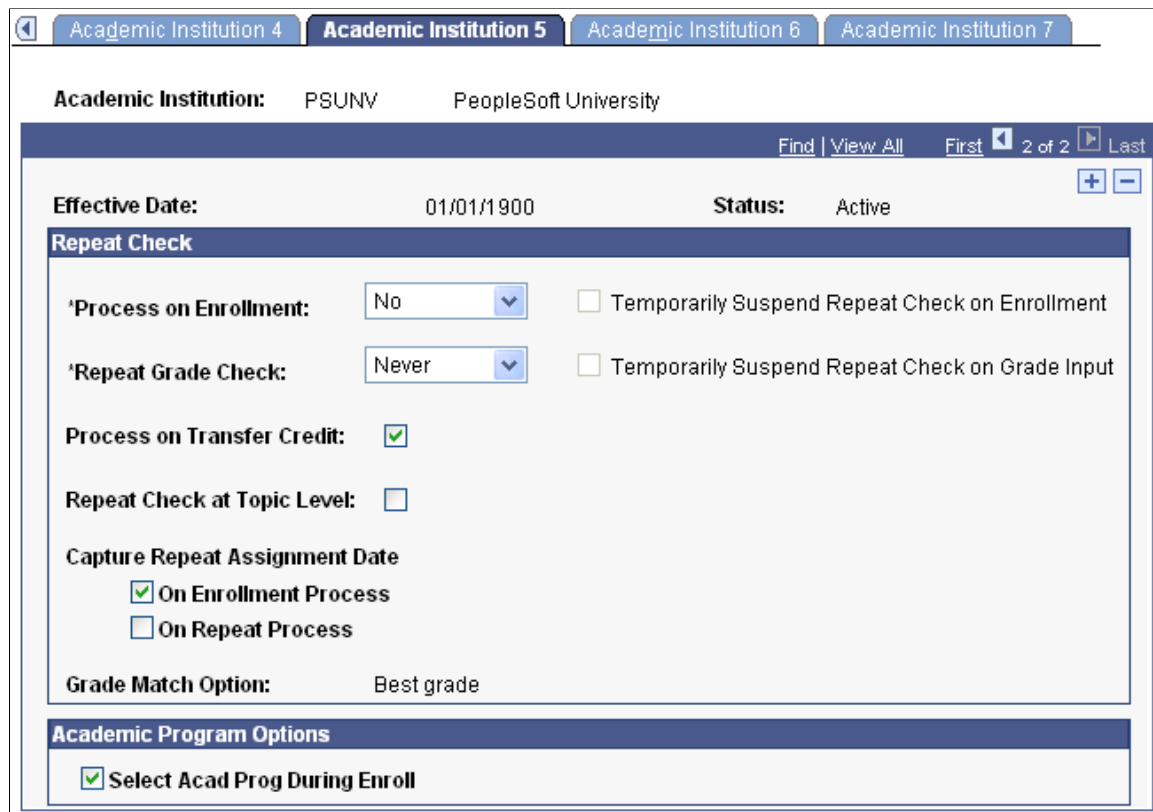

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Academic Institution 5	INSTITUTION_TABLE5	Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 5	Set repeat checking controls for academic institutions. Academic institution level is the highest level of control for the automatic Repeat Checking process.

Setting Repeat Checking Controls for Academic Institutions

Access the Academic Institution 5 page (Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 5).

Image: Academic Institution 5 page

This example illustrates the fields and controls on the Academic Institution 5 page. You can find definitions for the fields and controls later on this page.

Academic Program Options

Select Acad Prog During Enroll

Process on Enrollment

Use this field to activate or deactivate the automatic Repeat Checking process at enrollment time (front-end processing) for this entire academic institution. Enter one of the following values.

Yes: Enter if you want the Repeat Checking process to automatically run during enrollment for this academic institution. This is a front-end process that checks repeats, based on repeat rules that you set up in the Repeat Rule component.

The process is front-end because it checks for repeats at enrollment, rather than when you post grades. You can run the Repeat Checking process for this entire academic institution, for students in specific academic careers within the academic institution, or for students in specific academic programs within the academic careers. When you enter *Yes* at the academic institution level, this value cascades down to the academic career and academic program levels. Thus, when you enter *Yes* for an academic institution, every academic career and academic program within that institution is also set to *Yes*. However, you can still manually enter *No* at the academic career and academic program levels.

No: Enter if you *do not* want the Repeat Checking process to run for this entire academic institution during enrollment. If you

enter *No* here, the system sets the Process on Enrollment field at the academic career and academic program levels to *No* and renders them unavailable.

Warning! When you enter *Yes* at the academic institution level, every academic career and program within this institution is set to *Yes*. The same is true if you enter *No*. If you change the setting from *Yes* to *No*, you also change the settings for every academic career and program within this institution. To reset the fields, you must go into each academic career and academic program and change them manually.

Repeat Grade Check

Use this field to activate or deactivate repeat checking on grade input for this entire academic institution. The available values are:

All Crse (all courses): Enter if you want the Repeat Checking process to run during grade input (on the Enrollment Request page) for every course in this academic institution. This is a back-end process that checks for repeats based on repeat rules that you set up in the Repeat Rule component. The process is back-end because it checks for repeats when you post grades, after the student has already completed the class. You can run the Repeat Checking process for this entire academic institution, for specific academic careers within the academic institution, or for specific academic programs within academic careers. When you enter *All Crse* at the academic institution level, the system runs the Repeat Checking process for every academic career within this academic institution that has a value of *All Crse* in the Repeat Grade Check field in the Academic Career Table component. Similarly, if you select *All Crse* at the academic career level, the system looks at the repeat grade check setting at the academic program level to determine whether to run the Repeat Checking process for each academic program within the academic career.

Never: Enter if you do not want the Repeat Checking process to run during grade input on the Enrollment Request page. If you enter *Never* here, the system sets the Repeat Grade Check field at the academic career and academic program levels to *Never*, and renders the field unavailable.

Only Rep (only repeats): Enter if you want to run the process against all class enrollments on a student's enrollment record (STDNT_ENRL table) where the repeat candidate field is set to *Y*. The only time that the system does not set the repeat candidate field to *Y* is for class enrollments that are entered through the Enrollment component or for classes for which the course is defined as an allowable repeat through the Course Catalog component.

Warning! When you enter *All Crse* at the academic institution level, every academic career and academic program within this academic institution is also set to *All Crse*. The same is true if you enter *Never*. If you change the setting from *All Crse* to *Never*, you also change the settings for every academic career and program within this academic institution. To reset the fields, you must access each academic career and program and change them manually.

Note: The automatic Repeat Checking process runs only when you post grades using the Enrollment Request page. The process *does not* run when you post grades using the grade roster, Quick Enrollment page, or Student Enrollment 1 page.

Temporarily Suspend Repeat Check on Enrollment

Select to temporarily suspend the Repeat Checking process at enrollment for this academic institution. This check box enables you to temporarily suspend repeat rule checking during peak enrollment periods, when the Repeat Checking process would seriously impair performance. After the peak period has passed, return to this page and clear this check box to re-enable the Repeat Checking process on enrollment. Use this functionality sparingly, because students attempting to repeat a class are not warned about a possible illegal repeat. Selecting this check box renders the Process on Enrollment and Temporarily Suspend Repeat Check on Enrollment fields at the academic career and program levels unavailable. However, selecting this check box does not change the settings in the Process on Enrollment fields at the academic career or program levels. Note that this is the main difference between the cascading functionality through the Process on Enrollment and Repeat Grade Check fields and the suspension functionality—suspension does not alter the previous settings of lower levels.

Temporarily Suspend Repeat Check on Grade Input

Select to temporarily suspend the Repeat Checking process during grade input for this academic institution. This check box enables you to temporarily suspend repeat checking during peak grading periods, when the Repeat Checking process would seriously impair performance. After the peak period has passed, come back to this page and clear this check box to re-enable the Repeat Checking process on grade input. Use this functionality sparingly because the system does not check for repeats, so you will not know whether any repeat rules apply to students until you run the Repeat Checking process manually. Selecting this check box renders the Repeat Grade Check and Temporarily Suspend Repeat Check on Grade Input fields at the academic career and program levels unavailable. However, selecting this check box does not change the settings in the Repeat Grade Check fields at the academic career or program levels. Note that this is the main difference between the cascading functionality through the Process on Enrollment and Repeat Grade Check

fields and the suspension functionality—suspension does not alter the previous settings of lower levels.

Process on Transfer Credit

When you post on line or batch transfer credit, use this check box to include or exclude the Repeat Checking process. The check box is selected by default.

Note: If the value in the Scope field on the Repeat Checking page is *All Work for Term* or *Transfer/Test Credit*, the Repeat Checking process assigns repeat codes to transfer credit even though the Process on Transfer Credit check box is *not* selected. If you do not want to run repeat checking on transfer credit, clear the Process on Transfer Credit check box and enter a value of *Student Enrollments Only* in the Scope field on the Repeat Checking page.

Repeat Check at Topic Level

Select if you want to enable repeat checking at the course topic level for this institution. Define repeat rules in the Repeat Rules component. You can disable repeat checking at the course topic level for a specific course on the Course Catalog - Catalog Data page.

Capture Repeat Assignment Date

Select the On Enrollment Process check box if you want the Repeat Date (REPEAT_DT) populated on STDNT_ENRL when repeats are processed during the Enrollment process.

Select the On Repeat Process check box if you want the Repeat Date (REPEAT_DT) populated on STDNT_ENRL when repeats are processed during the Repeat Checking process.

Grade Match Option

Use the Repeat Rule3 page to establish grade match options.

Academic Program Options

Select Acad Prog During Enroll (select academic program during enrollment)

Select to enable the Academic Program field on all enrollment pages that allow users to select an academic program to associate with each class. The field is available within enrollment only when a student is matriculated in more than one program. Clearing this check box hides the Academic Program field on all enrollment pages and associates the student's primary academic program with each class.

See "Setting Up Self-Service Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Setting Up Repeat Checking for Academic Careers

This section discusses how to set repeat checking controls for academic careers.

Page Used to Set Up Repeat Checking for Academic Careers

Page Name	Definition Name	Navigation	Usage
Repeat Checking	ACAD_CAR_RPT_CHK	Set Up SACR > Foundation Tables > Academic Structure > Academic Career Table > Repeat Checking	Set repeat checking controls at the academic career level. Also, link a repeat rule to an academic career.

Setting Repeat Checking Controls for Academic Careers

Access the Repeat Checking page (Set Up SACR > Foundation Tables > Academic Structure > Academic Career Table > Repeat Checking).

Image: Repeat Checking page

This example illustrates the fields and controls on the Repeat Checking page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Repeat Checking' page with the following details:

- Academic Institution:** PSUNV (PeopleSoft University)
- Academic Career:** UGRD (Undergraduate)
- Effective Date:** 01/01/1900
- Status:** Active
- Repeat Check Section:**
 - Scheme:** UGRD (Undergraduate)
 - Repeat Rule:** UNDERGRD (Undergraduate Grading Rule)
 - *Process on Enrollment:** No (checkbox for 'Temporarily Suspend Repeat Check on Enrollment' is unchecked)
 - *Repeat Grade Check:** Never (checkbox for 'Temporarily Suspend Repeat Check on Grade Input' is unchecked)
- Course Catalog Repeats Section:**
 - *Course Catalog Repeat Message:** Warning

Scheme

Enter a repeat scheme for this academic career. Repeat schemes contain the set of all valid repeat codes for this academic career.

Repeat Rule

Enter a repeat rule to assign to this academic career. Repeat rules contain the conditions that define your repeat checking policies. For example, the repeat rule can specify how many times a student can take courses given certain conditions, such as the grades earned. Settings at the academic career level serve as defaults for all of the academic programs within this academic career wherein a repeat rule is not attached to the academic program. Repeat rules must be assigned to an academic career for the Repeat Checking process to function at enrollment or grade input. Define repeat rules on the Repeat Rule page.

Process on Enrollment

Use this field to activate the Repeat Checking process for the academic career at enrollment. Values are *Yes* and *No*.

Enter *Yes* if you want the Repeat Checking process to run during enrollment for this academic career. This front-end process checks repeats based on repeat rules that you set up in the Repeat Rule component. The process is front-end because it checks for repeats at enrollment rather than when you post grades. You can run the Repeat Checking process for the entire academic institution, for students in particular academic careers within the academic institution, and for students in primary academic programs within academic careers. When you enter *Yes* at the academic career level, the system runs the Repeat Checking process for all students in every primary academic program within this academic career that has a value of *Yes* in the Process on Enrollment field in the Academic Program Table component. This field is unavailable if *No* is entered at the academic institution level.

Warning! When you enter *Yes* at the academic career level, every academic program within this academic career is also set to *Yes*. The same is true if you enter *No*. If you change the setting from *Yes* to *No*, you also change the settings for every academic program within this academic career. To reset the fields, you must go into each academic program and change them manually.

Repeat Grade Check

Use this field to activate the Repeat Checking process on grade input for this academic career.

All Crse (all courses): Enter this value if you want the Repeat Checking process to run during grade input for this academic career. This back-end process checks repeats based on repeat rules that you set up in the Repeat Rule component. The process is back-end because it checks for repeats when you post grades on the Enrollment Request page, after the student has completed the class. You can run the Repeat Checking process for the entire academic institution, for academic careers within the academic institution, and for academic programs within academic careers. When you enter *All Crse* at the academic career level, the system runs the Repeat Checking process for every academic program within this academic career that has a value of *All Crse* in the repeat grade check field in the Academic Program Table component. This field is unavailable if *Never* is entered at the academic institution level.

Never: Enter this value if you do not want the Repeat Checking process to run during grade input on the Enrollment Request page. If you enter *Never* here, the system sets the Repeat Grade Check field at the academic program level to *Never* and renders the field unavailable. Likewise, the Repeat Grade Check field on

this page is unavailable when you enter *Never* at the academic institution level.

Only Rep (only repeats): Enter if you want to run the process against all class enrollments on a student's enrollment record (STDNT_ENRL table) for which the repeat candidate field is set to *Y*. The only time that the system does not set the repeat candidate field to *Y* is for class enrollments that are entered through the Enrollment component or for classes for which the course is defined as an allowable repeat through the Course Catalog component.

Warning! When you enter *Never*, the system changes the setting in the Repeat Grade Check field for every academic program to *Never*. To reset the fields, you must go into each academic program and change them manually.

Note: The automatic Repeat Checking process runs only when you post grades using the Enrollment Request page. The process *does not* run when you post grades using the grade roster, Quick Enrollment page, or Student Enrollment 1 page.

Temporarily Suspend Repeat Check on Enrollment

Select to temporarily suspend the Repeat Checking process during enrollment for this academic career. This option temporarily suspends repeat checking during peak enrollment periods, when the Repeat Checking process would seriously impair performance. After the peak period, return to this page and clear this check box to re-enable the Repeat Checking process on enrollment. Use this functionality sparingly, because students attempting to repeat a class are not warned about a possible illegal repeat. Selecting this check box renders the Process on Enrollment and Temporarily Suspend Repeat Check on Enrollment fields at the academic program level unavailable. However, selecting this check box does not change the settings in the Process on Enrollment fields at the academic program level.

Temporarily Suspend Repeat Check on Grade Input

Select to temporarily suspend the Repeat Checking process during grade input for this academic career. This check box enables you to temporarily suspend repeat checking during peak grading periods, when the Repeat Checking process would seriously impair performance. After the peak period has passed, return to this page and clear this check box to re-enable the Repeat Checking process on grade input. Use this functionality sparingly because the system does not check for repeats while grading through the Enrollment Request page, so you will not know whether any repeat rules apply to students until you run the Repeat Checking process in batch. Selecting this check box renders the Repeat Grade Check and Temporarily Suspend Repeat Check on Grade Input fields at the academic program level unavailable. However, selecting this check box does not

change the settings in the Repeat Grade Check fields at the academic program level.

Course Catalog Repeat Message

Enter the message type that the system displays during enrollment when the course catalog Allowable Repeats process detects that the student has previously taken the course. The choices are:

Error: Issues an error and prevents the student from enrolling in the repeated class.

Warning: Issues a warning that the repeatable limit, as established on the course catalog, has been exceeded. The system allows the student to enroll in the class.

None: Issues no warning or error and allows the student to enroll in the class.

The course catalog Allowable Repeats process runs at class enrollment and looks at settings at the course catalog level to see whether a course can be repeated. This process does not affect student statistics; it is used to determine whether a student can repeat a course. When the completions maximum or units maximum is exceeded, the system issues enrollment messages, depending on the message type selected (assuming that the course catalog repeats functionality is in effect).

The system renders the Course Catalog Repeat Message field unavailable when you enter *Yes* in the Process on Enrollment field. The system renders the field unavailable because when you run the Repeat Checking process on enrollment, the course catalog Allowable Repeats process does not issue a message when a repeated course is in violation of the course catalog repeat maximums. The Repeat Checking process analyzes the student's enrollment records for repeated courses and issues warnings only after the course catalog Allowable Repeats process identifies an enrollment that exceeds the completions maximum or units maximum set on the Catalog Data page of the Course Catalog component.

Setting Up Repeat Checking for Academic Programs

This section discusses how to set repeat checking controls for academic programs.

Page Used to Set Up Repeat Checking for Academic Programs

Page Name	Definition Name	Navigation	Usage
Repeat/Incomplete	INCOMPLETE_GRADE	Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Repeat/Incomplete	Set repeat checking controls at the academic program level and link repeat rules to academic programs.

Setting Repeat Checking Controls for Academic Programs

Access the Repeat/Incomplete page ((Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Repeat/Incomplete).

Linking a repeat rule to an academic program is the last step in setting up repeat checking. However, this is not a required step. If you *do not* attach a repeat rule at the academic program level, the Repeat Checking process uses the repeat rule set for the academic career to which the academic program belongs. Thus, link a repeat rule to an academic program *only if you do not* want the Repeat Checking process to use the repeat rule that is specified for the academic career.

See "Defining Repeating Rules and Grade Lapse Rules for Academic Programs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Chapter 5

Setting Up the Course Catalog

Understanding the Course Catalog

When you first set up your course catalog, make sure to do some preliminary work to research how your institution structures course prerequisites and corequisites, and how new requisites are created and approved. Our course requisite design lets you structure requirements that can be shared among many courses. Requirements can encompass prerequisite courses, grade point average (GPA) and unit requirements, and course lists, among other factors. To minimize duplicate data entry, plan your requisite requirements carefully. In addition, note that the data you enter in the course catalog is provided by default to the schedule of classes. This feature is key because it saves you data entry time when you schedule classes. The Course Catalog (CRSE_CATALOG) component uses effective dating, which enables you to track historical course changes and to prepare for curriculum changes in the future.

Prerequisites for Setting Up the Course Catalog

Before you can define courses in the course catalog, you must set up the following data for your institution:

- Institution codes
- Academic groups
- Subject area
- Campuses
- Academic organizations
- Academic careers
- (Optional) Room characteristics
- (Optional) Requirement designations
- (Optional) Course attributes

Creating Course Offerings

This section provides an overview of course offerings, lists prerequisites, and discusses how to:

- Define course catalog data.
- Define course offerings.
- Define course components.
- (NZL) Set up government reporting data.
- Link milestones to course data.
- Interface course offerings with the general ledger.

Understanding Course Offerings

The Course Catalog component contains several pages that enable you to enter all information for a course offering: the course title, units, workload hours, components, description, topics, requisites, and so on. We review each of the pages in the order in which you use them to set up a new course offering. In our design, a course offering includes all components of a course, such as lecture, laboratory, and discussion.

You complete these steps to create a course:

1. Define the course title, description, units, grade bases, repeat rules, equivalent course groups, topics, and course attributes on the Catalog Data page.
2. Define the course offering number, catalog number, subject area, academic organization, Classification of Instructional Programs (CIP) and Higher Education General Information Survey (HEGIS) codes, and attach requirement designations on the Offerings page.
3. Define the course components and the final exam and room characteristics on the Components page.
4. Map courses as course item types to specific general ledger accounts on the GL Interface page.

Prerequisites

After you set up your institution codes, academic groups, subject areas, campuses, academic organizations, and academic careers, you can set up the basics of your course catalog. At this point, you should have set up room characteristics, requirement designations, enrollment requisites, and course attributes also.

Pages Used to Create Course Offerings

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Catalog Data	CRSE_CATALOG	Curriculum Management > Course Catalog > Course Catalog > Catalog Data	Define course titles, course units, grade bases, topics, and repeat rules.
Offerings	CRSE_CATALOG_OFFER	Curriculum Management > Course Catalog > Course Catalog > Offerings	Define course numbers, link academic organizations to course offerings, and so on.
Components	CRSE_CATALOG_CMPNT	Curriculum Management > Course Catalog > Course Catalog > Components	Define components, such as lecture, laboratory, and discussion, as well as instructor workload hours, room characteristics, additional fees, and final exams.
Crse Catalog NZL (course catalog New Zealand)	SSR_CRS_CAT_NZL	Curriculum Management > Course Catalog > Course Catalog > Crs Catalog NZL	<p>Set up SDR and EFTS data for a course.</p> <hr/> <p>Note: The fields on this page are available only if you select the New Zealand Catalog, SDR, EFTS, StudyLink check box on the Academic Institution 6 page. You should also select the New Zealand NSI and SDR Personal Data, SDR Degree check box on the SA Features page in the Student Administration Installation component.</p> <hr/>
Course/Milestone Link	SSR_CRS_MILESTN	Curriculum Management > Course Catalog > Course Catalog > Course/Milestone Link	Link milestones to courses and (NZL) establish links between a course and unit standard milestones.
GL Interface (general ledger interface)	CRSE_OFFER_GL	Curriculum Management > Course Catalog > Course Catalog > GL Interface	Map course fees as item types to their proper general ledger accounts. The system generates charges to the student's account based on the course code you define on this page and offsets these charges based on the general ledger you define on this page. Your office should coordinate the information on this page with your controller's office.

Defining Course Catalog Data

Access the Catalog Data page (Curriculum Management > Course Catalog > Course Catalog > Catalog Data).

Image: Catalog Data page (1 of 2)

This example illustrates the fields and controls on the Catalog Data page (1 of 2). You can find definitions for the fields and controls later on this page.

The system generates a unique course ID when you add a new course, as long as you do not enter a course ID yourself. You should let the system generate the course ID.

Effective Date

Enter an effective date for this course. The effective date defines when the status you enter is valid. Use a new effective date each time you make a change to a course offering. Insert new rows as needed, and modify the record. Effective dates enable you to track historical course changes.

Status

Enter a status for this course. Enter *Active* when the course is valid for your institution. You can keep all courses in the database for historical research purposes by inserting a new effective-dated row and setting the status to *Inactive* for courses that you no longer offer.

Note: When you schedule a class for a term, the system prompts against the Catalog Data page using the start date of the term as the effective date to find the appropriate row in the catalog. Therefore, you do not need to create a new catalog entry for every term. Instead, insert a new effective-dated row for your revisions.

Short Course Title and Long Course Title

The short title appears on items such as transcripts, advisement reports, study lists, and the schedule of classes. The long course title appears on the Browse Course Catalog page and the course catalog report.

Long Description

The long description can appear in the course catalog report if specified.

Course Units/Hours/Count

You can attach four unit types to a course in the course catalog:

- Minimum units
- Maximum units
- Academic progress units
- Financial aid progress units

These values appear by default on the Schedule of Classes - Class Associations page, where you can override course unit values for a class. When a student enrolls in a class, corresponding fields on the enrollment page populate with the values on the Class Associations page. After a student enrolls, the system uses each unit type to determine the student's academic and financial aid load, academic level, and grade point average. In general, the minimum, maximum, academic progress, and financial aid progress units are always the same. The exception is multi-term courses, remedial courses, and variable unit courses.

Note: For courses that use the same minimum and maximum units, the Minimum Units field populates the Units Taken field on administrative enrollment pages and the Units field on self-service enrollment pages.

Minimum Units and Maximum Units

Enter the minimum units and maximum units that the course is worth. The minimum and maximum units are the same, except for a variable unit class. For a variable unit class, the minimum and maximum units would constitute a range, and the student or administrator would be able to select from within that range how many units the class is worth. For example, the minimum units could be set at 2, and the maximum units could be set at 3. After you schedule the class, you can enroll the student and enter the number of units the student chooses to take for the class in the Units Taken field on the enrollment page.

Academic Progress Units

The system uses academic progress units in conjunction with the billing factor to calculate billing units and, subsequently, per unit fees. The system also uses academic progress units to calculate academic load. Academic progress units are usually equal to the minimum/maximum units, except for a multi-term class. A multi-term class is when all credit for a sequence of classes (HIST 101a + 101b) is granted after a student completes the last course in the sequence. To prevent the student from earning units taken, which are used to calculate GPA, or units earned, which are used by the Academic Advisement application, you could enter 0 in the Minimum Units field and the Maximum Units field. Then, you could enter 3 (or another unit value) in the Academic Progress Units field.

The system would calculate the billing units and academic load using 3 (or another unit value) academic progress units, but the student would earn no credit.

Financial Aid Progress Units

Enter the number of units for the course that the system counts towards tracking a student's financial aid load for a term.

Note: When minimum units and maximum units are not equal, the Academic Progress Units field and the Financial Aid Progress Units field on the Catalog Data page become unavailable, and Progress Units and FA Progress Units on the enrollment page appear by default from the student's Units Taken field value.

Last Course of Multi-Term Sequence Select this check box so that academic progress units can be less than the minimum units for this course. The academic progress units for the last course in a multi-term course is less than the minimum units because the minimum units have been accumulating over the entire sequence, and they are only granted after the student completes the last course. The academic progress units, however, are still granted for each course in the sequence, so they are less than the minimum units at the end of the sequence. See the Multi-Term Course example in the next section.

Enrollment Unit Load Calc Type
(enrollment unit load calculation type)

The value you enter determines how the enrollment engine calculates the student's academic load. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values requires a substantial programming effort. Values are:

Actual Units: The system populates the Enrollment Unit Load Calc Type field with *Actual Units* by default. Enter this option for any course that has identical values for the Minimum Units, Maximum Units, and Academic Progress Units fields. The exception to this rule is when you are creating a variable unit course; even though the minimum and maximum units are different, use *Actual Units*. The enrollment engine calculates the number of units the student can take in the term by looking at the Units Taken field on the Enrollment Request 1 or Student Enrollment 1 page (see the Variable Unit Course example that follows). You can also enter this option for a remedial course, as an example, if you do not want the course to count toward the student's academic load.

Academic Units: Enter this option for any course that does not have identical minimum units, maximum units, and academic progress units, such as remedial courses and multi-term sequence courses. Entering this option requires the system to look at the academic progress units when it calculates academic load. For example, the minimum units and maximum units might be 0 because you do not want academic level and GPA to be affected by this course. The academic progress units might be 3 so that the course would be used to calculate academic load and billing units (see the Multi-Term Course example that follows). Furthermore, you could use this option for a remedial course, as an example, if you wanted the course to be used in calculating load but not in calculating GPA.

Course Count

If you count courses (in addition to units) toward academic advising requirements or limits, enter a course count value in this field. The system populates this field by default from the course catalog. The course count indicates the worth, or count, of the course towards an advising requirement. Some institutions count courses, as well as units, towards degree requirements.

Course Contact Hours

The system populates this field by default from the Schedule of Classes - Instructor Contact Hours page, where the value is used to calculate total contact hours. Each component of the course can have different contact hours on the Components page.

Grading Basis

Enter a grading basis for the course. Grading basis values are defined on the Grading Scheme Table page. You can override the grading basis for individual class offerings when you create the schedule of classes.

Graded Component

The system displays the graded component based on the Grade Roster Print field value on this page and the Graded Component field value on the Components page.

Grade Roster Print

Enter the type of grade roster that you want to print for this course offering, as processed through the Grade Roster Print page. Values for this field are delivered with your system

as translate values. Do not modify these values in any way.

Any modifications to these values requires a substantial programming effort. Values are:

By Student: Enter to print grade rosters for each student. Each student has a distinct grade roster, separated by a page break.

Component: Enter to print grade rosters for the graded component of the course. The graded component is specified on the Components page.

Instructor: Enter to print grade rosters for the graded component of the course. The graded component is specified on the Components page. A copy of the grade roster prints for each instructor, primary or otherwise. The number of copies that prints is equal to the number of instructors for the course, primary or otherwise.

None: Enter to not print a grade roster for the course.

Repeat for Credit

Select this check box to indicate that the class can be repeated for additional credit, as opposed to repeating for grade improvement only. If you do not select the check box, the class is subject to the repeat rules set up in the Repeat Rule Table component.

Allow Multiple Enroll in Term (allow multiple enrollments in term)

Select this check box to permit a student to enroll in this course multiple times within the same term. An example would be an independent study course.

Total Units Allowed

The system populates this field by default with the maximum units for the course (by default, one full course completion is always permissible). However, if you select the Repeat for Credit check box, you may edit and increase this value. This value must be equal to or greater than the maximum units for the course. The system enforces the lower of the two limits, units or completions, that you define.

Total Completions Allowed

The system populates this field with 1 by default (by default, one full course completion is always allowed). However, if you select the Repeat for Credit check box, you may edit and increase this value. This value must be equal to or greater than 1. The system enforces the lower of the two limits, units or completions, that you define.

Instructor Edit

Enter a value to indicate how you want the system to prompt for instructor IDs during class enrollment. This option determines the availability of and the prompt values for the instructor ID field on the Enrollment Request, Quick Enroll, Enrollment, and self-service enrollment pages. The system populates the value for the Instructor Edit field by default to the Class Associations page, where you can override the value. Values for this field are delivered with your system as translate values. Do not modify

these values in any way. Any modifications to these values requires a substantial programming effort. Values are:

No Choice: Enter if you want the system to make the Instructor ID field on the Enrollment Request page unavailable and to automatically assign the instructor who is scheduled to teach the class, as indicated on the Assignment tab of the Schedule of Classes - Meetings page: Thus, the student has *no choice* of instructor.

Class Instructor Edit: Enter this option if you want the system to make the Instructor ID field on the Enrollment Request, Quick Enroll, Enrollment, and Self Service Enrollment pages available and to prompt the user with only the Primary Instructors for the class, as defined on the Meetings page. Select this option for independent study courses or the like, for which the student can select one of several *Primary* instructors.

Instructor/Advisor Edit: If you enter this option, the Instructor ID field appears on the Enrollment Request, Quick Enroll, Enrollment and Self Service Enrollment pages. The system prompts the user with only the instructors available to teach this course, as defined on the Instructor/Advisor Table page.

See [Designating Approved Instructors and Advisors](#).

Add Consent and Drop Consent

The *No Consent* value appears by default. Values for these fields are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values requires a substantial programming effort. Values are:

No Consent: Enter if no special consent is required for a student to add or drop a class.

Instructor or Department: Enter if consent is required.

Consent can be granted by using class permission numbers or student specific permissions. The consent requirement can be overridden in the enrollment process by setting an override permission option.

Requirement Designation

Enter a requirement designation for the course. A requirement designation can be additional work that is needed for a course, such as Design Credit, or a requirement designation can specify a special variety of a course to use in a course list for the Academic Advisement application.

Requirement designation values are defined on the Requirement Designation Table page. Example requirement designation values are *Design Credit*, *Thesis Choice*, and so on.

Requirement designations are provided to the Academic Advisement application.

Equivalent Course Group

You can enter an equivalent course group for the course. Equivalent course groups are defined on the Course Equivalencies page. Here, you are adding the course to a group of equivalent courses for requisite checking and degree progress requirement purposes. If two courses have the same Equivalent Course Group number, then they are equivalent to each other and can fulfill the same requirement.

Course Attribute and Course Attribute Value

Enter the general characteristics that describe the course offering in the Course Attribute and Course Attribute Value fields. Course attributes are defined on the Course Attribute Table page. Course attributes are not provided to the Academic Advisement application. They are primarily used for institutional research purposes, and for printing repetitive text in the catalog and schedule of classes. Example course attribute and course attribute values are *Degree Seeking Only - Open to Students in Any Plan* and *Fall - Offered in Fall Only*.

Override Topic Link ID

Select to manually update topic link IDs. When you select this check box, the Topic Link ID field becomes available for edit. Use this functionality to link course topics across effective-dated rows by giving them the same topic link ID.

Description Tab

See the previous exhibit for a view of this tab.

Use the Description tab to define course topics associated with a course. You attach topics to specific classes on the Schedule of Classes - Basic Data page.

Course Topic ID

The system assigns a unique course topic ID number to identify the topic record. Insert rows to add topics.

Course Topic Title, Short Description, and Formal Description

Enter the course topic title, short description, and formal description.

Topic Link ID

The system assigns a unique topic link ID number for each topic. The repeat checking process uses this number when determining if the topic was already taken. If you create a new effective-dated row for this course, the system carries over the topic link ID to the new effective-dated row. If the Override Topic Link ID check box was selected, the Topic Link ID field becomes available for edit. This selection enables you to link course topics within a course across effective-dated rows by giving them the same topic link ID. Because the repeat checking process uses the topic link ID, the process views similar topics that have the same topic link ID as being identical.

Repeat For Credit Tab

Select the Repeat For Credit tab.

Repeat for Credit

Select to allow students to repeat the topic for credit. If you do not select this check box, additional enrollment in the same topic is subject to the repeat rules set up in the Repeat Rule Table component.

Total Units Allowed and Total Completions Allowed

If you select the Repeat for Credit check box, the Total Units Allowed and Total Completions Allowed fields become available for entry. Enter the maximum number of units and course completions allowed for credit within the topic. If you enter a value in both fields, the system enforces the lower of the two limits.

Example of Multi-Term Course

At PSUNV, when a student takes History 101a for the fall term and History 101b for the spring term, the student's credit for both courses is contingent upon the successful completion of the entire course sequence. To define this multi-term course in the course catalog, we purposefully place the minimum units, maximum units, and academic progress units out of synchronization so that the enrollment engine correctly calculates the student's academic load and GPA. The course catalog might look similar to this:

Course	Term of Student Enrollment	Minimum Units	Maximum Units	Academic Progress Units	Last Course of Multi-Term Sequence	Enrollment Unit Load Calculation Type
History 101a	Fall 1999	0	0	3	No	Academic Units
History 101b	Spring 2000	6	6	3	Yes	Academic Units

Because the minimum and maximum units are set to 0, History 101a is not calculated in the student's GPA or Academic Level (that is, if academic level increments by units). But, when the student completes History 101b, he or she will receive credit for both classes because the minimum and maximum units are set to 6. Academic load and billing units are counted for both classes because academic progress units are set to 3, and the Enrollment Unit Load Calculation type is set to *Academic Units*.

Example of Variable Unit Course

At PSUNV, students can select how many units they earn for ENGL 1a. They can select from the range of 2 and 3 units. Because ENGL 1a is an elective course, they can take it for only 2 units, in which case they are not required to complete a final project. Students who complete the project earn 3 units. In this case, the course catalog might look similar to this:

Course	Minimum Units	Maximum Units	Academic Progress Units	Financial Aid Units	Enrollment Unit Load Type
ENGL 1a	2	3	Unavailable	Unavailable	Actual

When students enroll in ENGL 1a, they have to select how many units to take. If they enroll online or through an interactive voice response system, they can select the number of units they want to take when they add the class. If they enroll in person, the Registrar's Office most likely creates an enrollment request. If the minimum and maximum unit fields on the Course Catalog Data page vary, the Units Taken

field on the Enrollment Request page becomes available, and the Registrar's Office can enter the number of units the student chooses to take. The possible enrollments would look like this:

Student	Units Taken	Units Earned	Academic Progress Units	Financial Aid Units	Billing Units
Student 1	2	2	2	2	2
Student 2	3	3	3	3	3

As shown, the student chooses the number of units to take and the system determines the units earned, academic progress units, and financial aid units based on the units you enter in the Units Taken field when the student enrolls in the class.

Defining Course Offerings

Access the Offerings page (Curriculum Management > Course Catalog > Course Catalog > Offerings).

Image: Offerings page

This example illustrates the fields and controls on the Offerings page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Offerings' page for Course ID 000145. The page is divided into several sections:

- Course Offering Section:**
 - *Course Offering Nbr:** Input field with value '1'.
 - *Catalog Nbr:** Input field with value '103' and dropdown 'ACCT'.
 - *Academic Institution:** 'PSAUS' (PeopleSoft Australia Uni).
 - *Academic Group:** 'ECON' (Faculty of Economics).
 - *Subject Area:** 'ACCT' (Accounting).
 - Campus:** 'MAIN' (Main Campus).
 - *Academic Organization:** 'ACCT_AUS' (Department of Accounting).
 - *Academic Career:** 'UGRD' (Undergraduate).
 - Course Typically Offered:** Dropdown menu.
 - Tuition Group:** Input field.
 - Dynamic Class Date Rule:** 'DYN_AUS' (Dynamic Date Rule).
 - *Course Approved:** 'Approved' dropdown.
 - Allow Course to be Scheduled
 - Exam Only Course
 - Catalog Print
 - Print Instructor in Schedule
 - Schedule Print
 - Schedule Term Roll
 - Use Blind Grading
 - GL Interface Required
 - Split Ownership
- Enrollment Requirement Group Section:**
 - Requirement Group:** Input field.
 - Long Description:** Text area.
- Taxonomy Section:**
 - CIP Code:** Input field.
 - HEGIS Code:** Input field.
 - Field of Education Code:** '080101' (Accounting).
 - HECS Band ID:** '2008 Clust' dropdown.
 - *Work Experience Indicator:** 'Not Wholly Work Experience' dropdown.
 - Summer School Full Fee Ind. E551:** Dropdown menu.
 - Year Long Indicator E622
 - Exclude From HEIMS Reporting
 - Use Discipline Group From Plan
 - Discipline Group Code:** '0902' (Accounting).

Course Offering Number

The system generates the course offering number and uses it for sequencing. The system also uses the course offering number to distinguish cross-offered courses for which the course ID is the same, as are the requisites, but the course itself is listed in different subject areas, academic groups, and so on.

Catalog Number

Within an academic group, catalog number ranges are linked to academic careers on the Academic Group Table page. If you have already specified an academic group for this course offering, the system automatically displays the appropriate academic career when you enter a catalog number. This field is 10 digits. The system reserves the four left digits exclusively for numeric characters, and the right six digits for both alpha and numeric characters. A field edit enforces this programming.

Course Typically Offered

Values available here are defined in the Course Typically Offered component.

See Defining When a Course is Typically Offered.

The system automatically reformats the catalog number you enter to fit the defined system format, as this table illustrates:

Catalog Number	N	N	N	N	A/N	A/N	A/N	A/N	A/N	A/N
12			1	2						
120		1	2	0						
1A				1	A					
12B			1	2	B					
120AB		1	2	0	A	B				
B12					B	1	2			
AB1200					A	B	1	2	0	0
10001A	1	0	0	0	1	A				
1B12				1	B	1	2			

N = numeric character

A/N = alpha or numeric character

Academic Institution

The system displays the academic institution by default. Multiple institutions can offer the same course by way of multiple course offerings.

Academic Group

Enter the academic group to which this course offering belongs. You can define global notes by academic group, which can

appear on the Schedule of Classes report. In addition, academic group controls the valid meeting pattern values and their corresponding normal class duration values. Academic group values are defined on the Academic Group Table page.

Subject Area

Enter the subject area of the course offering. Subject area values are defined on the Academic Subject Table page.

Campus

Enter the campus at which your institution offers the course. If the course is offered at one campus, you should place a value in this field. If the course can be offered at multiple campuses, leave this field blank.

Academic Organization

The system populates this field by default from the academic organization linked to the subject on the Academic Subject Table page. You can override the value.

Academic Career

Enter the academic career to which this course offering belongs. The system automatically displays the default values of the Dynamic Class Data Rule, Allow OEE Enrollment, and OEE Dynamic Date Rule fields according to your settings for these fields in the Academic Career Table component. The default values of these fields vary depending on the academic career that you enter and the effective date of the course. Academic career is important because it specifies which students can enroll in the class (in accordance with the Academic Career Pointers page specifications), as well as which grading bases are available.

Tuition Group

The system charges tuition based on the student's enrollment records. If the tuition group that you set on this page matches the student's assigned tuition group, the additional fee defined on the course component is assessed.

Dynamic Class Date Rule

If you have specified a dynamic class data rule for the academic career to which you assign this course offering, the system displays that rule by default in this field. You can override the default value. Select a dynamic class date rule to have the system assign that rule by default to all dynamic class sections of this course offering that you schedule (excluding open entry and open exit sections). Attaching your rule to the course offering rather than to the class section ensures consistency and eases maintenance because you only have to attach the rule to a course one time (to apply to all class sections), rather than having to attach a rule to each course offering that you schedule. The system requires dynamic date calculation for each class section that you schedule for this course offering. After you schedule the class sections, you can run the Dynamic Class Dates process to calculate landmark dates for each class section. The process automatically uses the rule that you specify here for all dynamic date class sections. You can override this default rule on a section-by-section basis through the Dynamic Class Date page. This field prompts you with only the dynamic class

data rules that have not been designated for OEE enrollment on the Dynamic Class Dates page. If you leave this field blank and schedule the course within a dynamic date session, you receive a warning message indicating that a rule has not been defined.

You need to define a rule on the Dynamic Class Dates page.

Allow OEE Enrollment (allow open entry/exit enrollment)

The system assigns the value of this check box by default based on the Allow OEE Enrollment check box on the Academic Career Table page for the academic career with which you have associated this course offering. You can override this default on an offering-by-offering basis. Select this check box to attach a dynamic date rule to the offering, thus enabling students to enroll in OEE class sections of this course offering. The OEE Dynamic Date Rule field becomes available for edit. If you do not select the check box, you can always define the rule on the Dynamic Class Dates page.

OEE Dynamic Date Rule (open entry/exit dynamic date rule)

The system assigns the value of this field by default based on the OEE Dynamic Date Rule field on the Academic Career Table 2 page for the academic career with which you associate this course offering. An open entry/exit (OEE) dynamic date rule is a dynamic class date rule that has been designated for OEE enrollment. The enrollment engine uses the OEE dynamic date rule to calculate significant class dates for a student whenever a student enrolls in an open entry/exit class.

This field is available for edit only if you select the Allow OEE Enrollment check box for this course offering. Select an OEE dynamic date rule to have the system assign that rule by default to all OEE class sections of this course offering that you schedule. Attaching your rule to the course offering rather than the class section ensures consistency and eases maintenance because you only have to attach the rule to a course one time (to apply to all class sections), rather than having to attach a rule to each course offering that you schedule. The system thus automatically requires dynamic date calculation for each OEE class section that you schedule for this course offering. After you schedule the class sections, you can run the Dynamic Class Dates process to calculate landmark dates for each class section. The process automatically uses the rule that you specify here for all OEE class sections. You can override this default rule on a section-by-section basis through the Dynamic Class Data page.

The system prompts you with only the dynamic class data rules that have been designated for OEE enrollment on the Dynamic Class Dates page.

If this field is blank and you schedule the course within an OEE session, you receive a warning message that indicates a rule has not been defined. You can then save the page and define the rule on the Dynamic Class Dates page.

Course Approved

Enter the course approved status. Values for this field are delivered with your system as translate values. Do not modify

these values in any way. Any modifications to these values requires a substantial programming effort. Enter *Pending* or *Denied* to prevent anyone from scheduling the class—the system does not list the course in the class scheduling function. Enter *Approved* and select the Allow Course to be Scheduled check box to enable scheduling of the course offering.

Allow Course to be Scheduled

Select this check box so that the course can be scheduled for a term. A course can only be scheduled for a term if you select this check box and set the Course Approved field to *Approved*.

Exam Only Course

Select this check box when a course will have no class sections scheduled and the only requirement for the course is that students must complete an examination. When the check box is selected, the Allow Course to be Scheduled field is disabled and the field defaults to the Activity Registry when this course is entered as the Course Control Record.

Note: For courses that are set up solely as transfer articulation courses, set the Course Approved field to *Approved* but clear the Allow Course to be Scheduled check box. This setting ensures that you never accidentally schedule the course.

Catalog Print

Select to display the course offering in the course catalog report.

Print Instructor in Schedule

Select to display the names of all the assigned instructors in the schedule of classes report.

Schedule Print

Select to display the course offering in the schedule of classes. The system selects this check box by default.

Schedule Term Roll

Select to enable the prior term copy function for this course offering.

See [Copying Classes from One Term to Another](#).

Use Blind Grading

Select to enable grade rosters for blind grading. The system populates this field by default from the Academic Subject Table page.

When you generate grade rosters for a course that invokes blind grading, instead of student names on the roster, the system generates random numbers.

See [Printing Grade Rosters](#)

See [Entering Grades Online](#)

GL Interface Required

Select to include this class in the GL Interface process. If you select this check box, the system requires you to enter the necessary data into the GL Interface page of this component.

Split Ownership	Select if multiple academic organizations own the course. If you select this check box, the Owner group box becomes available for entry.
Course Academic Item	Click to access the Course Academic Item page. See Creating Academic Items for Courses
Enrollment Requirement Group	
Requirement Group	Enter the requirement group that links the appropriate requisites to this course. Enrollment requirement group values are defined on the Course Requisite page and can consist of a variety of elements: courses, units, GPA, and so on.
Long Description	The system enters the long description of the enrollment requirement group from the Course Requisites page.
Taxonomy	
CIP Code (Classification of Instructional Programs code)	Enter the CIP code for the course. CIP codes provide a taxonomic scheme that support the accurate tracking, assessment, and reporting of fields of study and program completions activity. The system prompts you from the CIP Code Table page.
HEGIS Code (Higher Education General Information Survey code)	Enter the HEGIS code for the course. HEGIS codes provide a taxonomic scheme that support the accurate tracking, assessment, and reporting of fields of study and program completions activity. The system prompts you from the HEGIS Code Table page.
(AUS) Field of Education Code	The system enters the Australia Department of Education, Science and Training (DEST) field of education code that you entered on the Subject Taxonomy page for this course. <hr/> Note: This field is available only when you select the DEST, HECS, Centrelink, TAC check box on the Academic Institution 6 page. <hr/>
(AUS) HECS Band ID (higher education contribution scheme band ID)	The system enters the Australia DEST HECS band ID for the field of education code. <hr/> Note: This field is available only when you select the DEST, HECS, Centrelink, TAC check box on the Academic Institution 6 page. <hr/>
(AUS) Work Experience Indicator	Select the work experience indicator for this course.

This value is used to confirm whether the course is considered wholly or partially work experience in industry for Australian DEST reporting purposes.

Note: This field is available only when you select the DEST, HECS, Centrelink, TAC check box on the Academic Institution 6 page.

(AUS) Summer School Full Fee Ind. E551

Select to indicate whether the unit is a full-fee summer or winter school unit of study.

(AUS) Year Long Indicator E622

Select to indicate that the unit of study is a full year unit.

(AUS) Exclude from HEIMS Reporting

Select to indicate you don't want to report this course to HEIMS.

(AUS) Use Discipline Group From Plan

Select to disable the discipline group field. The system uses the discipline group from a student's plan when a student enrolls in this course.

Note: This field is available only when you select the DEST, HECS, Centrelink, TAC check box on the Academic Institution 6 page.

(AUS) Discipline Group Code

The system enters the discipline group from the Subject Taxonomy page.

Note: This field is available only when you select the DEST, HECS, Centrelink, TAC check box on the Academic Institution 6 page.

Ownership

Use this group box to link course offerings to multiple academic organizations.

The system assumes a course offering has a single academic organization owner, unless you indicate split ownership on this page. Course ownership data is tracked for reporting and analysis purposes at the course offering level.

Important! The Ownership group box is only available if you select the Split Ownership check box.

Academic Organization

Enter the academic organization owners of the course offering. The system prompts you from the Academic Organization Table page.

Percent Owned

Enter the percentage of ownership. The total percentage must equal 100.

Examples of Equivalent and Cross-Offered Courses

Equivalent courses, unlike cross-listed courses, can have different prerequisites, requirements, and so on. Each equivalent course has a unique course ID number. Use the Course Equivalency component to create Equivalent Course Groups.

Define cross-offered courses on the Course Catalog - Offerings page. Cross-offered courses have the same course ID number; therefore, they possess the same Catalog Data page information. When classes are scheduled, each class is associated with a single offering.

Note: Repeat checking and multiple enrollment rules apply across all offerings of the course because the same course is offered in every case.

Image: Offerings page example 1

The following examples show the defined course ID number 003302, Literature and Philosophy. It is a cross-offered course in both the English and Philosophy departments. In all ways, the two course offerings are exactly the same. They possess the same description, equivalencies, and so on. On the Offerings page, the course offering number distinguishes the two offerings.

In course offering number 1, we indicate that Literature and Philosophy is listed under the English Literature subject area, catalog number 270.

Image: Offerings page example 2

Add another row for course offering number 2. The second offering of Literature and Philosophy is listed under the Philosophy subject area, catalog number 170.

The screenshot shows the 'Offerings' page for Course ID 003302. The main header includes navigation tabs: Catalog Data, Offerings, Components, Crse Catalog NZL, Course/Milestone Link, and GL Interface. Below the header, the course details are displayed: Effective Date: 01/01/1900, Status: Active, and Description: Lit and Phils. The 'Course Offering' section is active, showing details for offering number 2. Key fields include:

- *Course Offering Nbr: 2
- *Catalog Nbr: 170
- *Academic Institution: PSUNV (PeopleSoft University)
- *Academic Group: LBART (College of Liberal Arts)
- *Subject Area: PHILO (Philosophy)
- *Academic Organization: PHILOSOPHY (Philosophy)
- *Academic Career: UGRD (Undergraduate)
- *Course Approved: Pending
- Allow Course to be Scheduled:
- Exam Only Course:
- Print Options: Catalog Print, Print Instructor in Schedule, Schedule Print, Schedule Term Roll, Use Blind Grading, GL Interface Required, Split Ownership.

 Below the offering details are sections for 'Enrollment Requirement Group' and 'Taxonomy' (CIP Code and HEGIS Code).

Select the Catalog Print and Schedule Print check boxes to enable printing of both course offerings in the catalog and schedule.

"Setting Up Course Fees and Class Fees" (PeopleSoft Campus Solutions 9.2: Student Financials)

Defining Course Components

Access the Components page (Curriculum Management > Course Catalog > Course Catalog > Components.).

Image: Course Catalog - Components page (1 of 2)

This example illustrates the fields and controls on the Course Catalog - Components page (1 of 2). You can find definitions for the fields and controls later on this page.

Image: Course Catalog - Components page (2 of 2)

This example illustrates the fields and controls on the Course Catalog - Components page (2 of 2). You can find definitions for the fields and controls later on this page.

*Room Characteristic	Description	*Room Characteristic Quantity
03	Podium	1

Course Component

Course Component

Enter a course component for the offering. Values for this field are delivered with your system as translate values. You can modify these values. The course component indicates the parts of the course offering, for example, lecture, laboratory, seminar, and so on. One course offering can have multiple components.

Instructor Contact Hours

Enter the contact hours you want to record for the instructors teaching this component of the course. You can also assign specific instructors and corresponding contact hours when

scheduling classes on the Schedule of Classes - Meetings page.
Use this field only if you want to report contact hours manually.

The Instructor Workload feature does *not* reference this free-form field.

Default Section Size

Enter the default section size. You can override section sizes in the schedule of classes. The system uses the value in this field to populate the Requested Room Capacity field and the Enrollment Capacity field.

Workload Hours

If you want to track instructor workload based on course component workload hours, enter a workload hours value for the course component. The system uses the value that you specify here to populate the same fields on the Class Associations - Class Components page when you schedule a new course. Therefore, if you set the lecture workload hours to 3 on the Course Catalog - Components page, then whenever someone schedules a lecture for this course, the lecture component, 3 workload hours, appears by default on the Class Components page. Similarly, if you set the laboratory component to 1 workload hour on the Components page, then whenever someone schedules a laboratory for this course, the laboratory component, 1 workload hour, appears by default on the Class Components page. The user can modify the component values on the Class Components page if necessary. This field is optional.

OEE Workload Hours (open entry/ open exit workload hours)

If you want to track instructor workload based on course component OEE workload hours, enter an OEE workload hours value for the course component. The value you specify here represents the number of workload hours for the entire course, unlike regular workload hours, which represent weekly hours for the course. The system populates the value in this field by default to the same components on the Class Associations - Class Components page when you schedule a new course. In other words, if you set the lecture OEE workload hours to 45 on the Components page, then whenever someone schedules a lecture for this course, the lecture component, 45 OEE workload hours, appears by default on the Class Components page. Similarly, if you set the laboratory component to 15 OEE workload hours on the Components page, then whenever someone schedules a laboratory for this course, the laboratory component, 15 OEE workload hours, appears by default on the Class Components page. You can modify the component values on the Class Components page if necessary. This field is optional.

Final Exam

Enter a value to indicate whether a final exam is given in the course. The value you enter here defaults to the Schedule of Classes. Final exam values are delivered with your system as translate values. Add as many values to the translate table for the final exam as needed. The only value that you must

not remove from the translate table is *Yes*, which has coding attached to it. Values are:

Yes: The *Yes* value enables block final exam scheduling. This value cannot be modified without programming effort.

No: Indicates that this component has no final exam. Entering *No* eliminates this component from the block exam scheduling process.

Last Class: Indicates that a final exam is taken in the last regularly scheduled class (as opposed to during final examination week). Entering *Last Class* eliminates this component from the block exam scheduling process.

Exam Seat Spacing

If you enter *Yes* in the Final Exam field, the Exam Seat Spacing field becomes available for entry. Enter the number of spaces between student's seats during the exam. For example, enter 2 to have two empty seats between each student taking the exam. This value has no programming tied to it. Use this field for your information or for third-party interface.

Provider for Authentication

If this course is a learning management system (LMS) course requiring self-service user authentication, and the Provider for Authentication is not set on the Academic Institution 3 page, then enter the provider here. The value entered here appears by default on the schedule of classes when you schedule a class, but you can override it. If this field is left blank, any time you schedule a class for this course the system uses the LMS file type from the Academic Institution 3 page.

LMS File Type

If your institution uses the LMS interoperability feature, enter the LMS file type for the interface. The value entered here appears by default in the schedule of classes when you schedule a class, but you can override it. If this field is blank, any time you schedule a class for this course, the LMS file type is provided by default from the setting on the Academic Institution 3 page.

Values are *XML V1.01*, *Blackboard CourseInfo 4*, and *API Input. WebCT Campus Edition* and *WebCT Vista* both support XML V1.1 and user authentication.

Auto Create

Select for each component to have the system automatically create that component of the course in the schedule of classes. This saves you data entry and ensures that the system schedules at least one section for each required component.

See [Scheduling New Classes](#).

Graded Component

Select to enable grading of this component. Only one component can have a final grade. The value you select for this course offering appears by default on the (Schedule New

Course, Schedule of Classes) Basic Data page when you schedule a class section for this course offering.

Primary Component

Select whether this is the primary component of the course. If you are using the Dynamic Class Dates feature, it is mandatory that you select a primary component for the course, even if you only have one component. The Dynamic Class Dates process always uses the scheduled class section of the primary component to calculate the landmark dates on a dynamic academic calendar. The process uses the primary component value on the Class Associations - Class Components page.

Optional Component

If available for entry, select so that the system does not require that students enroll in this component. If you clear the check box, the system requires students to enroll in the component.

Include in Dynamic Date Calc
(include in dynamic date calculation)

Select to include this component of the course offering, in addition to the primary component, in the Dynamic Class Dates process. The system automatically selects and makes unavailable for edit this check box for the primary component of a course because the Dynamic Class Dates process always uses the scheduled class section of the primary component to calculate the landmark dates on a dynamic academic calendar. This check box is optional for other components. The value here appears by default on the corresponding field for all class sections of the component that you schedule on the Basic Data page. For non-primary components, you can override the default value on a section-by-section basis.

Generate Class Mtg Attendance
(generate class meeting attendance)

Select to indicate that you want the system to always generate attendance rosters for all classes your institution schedules for this course component. This value defaults to the Schedule of Classes where you can override this setting. Selecting this check box marks the class so that when you generate attendance rosters through the Attendance Roster Generator page you have the option to limit processing to only the classes that have this check box selected and that meet your processing criteria. If you clear this check box on the Attendance Roster Generator page, the generator creates attendance rosters for all classes that meet your processing criteria, regardless of the check box setting. When you generate attendance rosters through the Class Attendance page and this check box is selected for a scheduled class, the setting has no effect on processing.

Add Fee

Click to add an additional fee for the course component and to access the Course Fees Modal page. The additional fee is attached to the course component that you specify.

See "Setting Up Course Fees and Class Fees" (PeopleSoft Campus Solutions 9.2: Student Financials).

Course Attendance

Instruction Mode

The instruction mode indicates whether the course component is taught *In Person* or using *Interactive TV*, *World Wide Web*, *Correspondence*, and so on. The instruction mode relates to the attendance type. You can indicate an instruction mode, then select attendance type values for the course component that relate only to this instruction mode. For example, by selecting the *In Person* instructor mode, you can select an attendance type that applies only to the *In Person* instruction mode. If you leave the Instruction Mode field blank, the attendance types that you define for the course component applies to all instruction modes. When you create and update attendance rosters, only the attendance type values that relate to the instruction mode for the class are available for you to use. Instruction modes for classes are set on the Schedule of Classes - Basic Data page. Instruction mode values are defined on the Instruction Mode page.

Attendance Type

Select each attendance type that your institution might use for the course component. The attendance type indicates the type of class meeting attendance roster you want to generate, such as *Class Meeting*, *Conference*, *Field Trip*, *Instructor Consultation*, or *Study Group*. Add rows for additional attendance types.

When you track attendance, the system prompts you only with the attendance type values that your institution defines for the course component. Values for this field are delivered with your system as translate values. You can modify these values.

Note: At the least, you should specify the attendance type value that your institution has selected on the Academic Institution Table 3 page to use whenever you generate attendance rosters, as well as the fields you want the system to use for this component's attendance type. Although you can generate attendance rosters for a course component without defining attendance type values and their associated fields, the system only creates a default attendance roster that includes the Template Number for the class meeting attendance roster; the Attendance Type and its description; the Attendance Date; and each student's ID, name, and career. You must return to the Components page and define these values for your institution to be able to track student attendance.

For each attendance type of the course component, select the fields you want the system to use when generating class attendance rosters. You can set up the system to generate attendance rosters with as few or as many fields as you want to appear for each class section. When you generate attendance rosters, the available fields that appear on the attendance rosters for each attendance type depend on the options you select for each attendance type of the course component. Values for any given course component's attendance type are:

Use Present	Select in order for the attendance rosters to have a Present check box on them.
Use Reason	Select in order for the attendance rosters to have a Reason field on them. You can use the reason field to describe a reason for why a student is present, tardy, leaves early, or any other reason your institution wants to track.
Use Tardy	Select in order for the attendance rosters to have a Tardy check box on them.
Use Left Early	Select in order for the Attendance rosters to have a Left Early check box on them.
Use Contact Minutes	Select in order for the attendance rosters to have a Contact Minutes field on them. The system populates the contact minutes time with the total minutes of the class meeting. The system determines this value based on the Class Meeting pattern that your institution has set up for the class in the Schedule of Classes.
Use To and From Time	Select in order for the attendance rosters to have a to and from time field to designate the start and end time of a class meeting. The system determines this value based on the class meeting pattern that your institution has set up for the class in the Schedule of Classes.
Override Template Date/Time	Select for the attendance rosters to have an attendance date field on them. Also, you can override the attendance date, from time, and to time values that appear on the attendance rosters. Otherwise, the corresponding fields that appear on an attendance roster template control the attendance date, from time and to time values that appear for each student on the attendance rosters. A template only identifies an attendance roster as unique.

Room Characteristics Required

Room Characteristic	Enter the room characteristics that you require for the course component. Room characteristic values are defined on the Room Characteristic Table page. Characteristics you enter here default to the schedule of classes. Insert rows to add additional characteristics. This field is used for interfacing to the Universal Algorithm's product, Schedule 25. The maximum number of room characteristics for Schedule 25 is 96. Therefore, be sure you select values between 01 and 96 if you use Schedule 25.
Room Characteristic Quantity	Enter the quantity of each room characteristic that you require.

(NZL) Setting Up Government Reporting Data

Access the Crse Catalog NZL (course catalog New Zealand) page (Curriculum Management > Course Catalog > Course Catalog > Crs Catalog NZL).

Image: Crse Catalog NZL page

This example illustrates the fields and controls on the Crse Catalog NZL page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Crse Catalog NZL' page for Course ID 000381. The page is titled 'Intro to Management Accounting' and is currently 'Active' with an 'Effective Date' of 01/01/1900. The course is associated with the 'ACCT 101' program at 'Silver Fern University'. The 'Main Program' is set to 'BCOM' (Bachelor of Commerce), and the 'NZSCED Detail Code' is '080101' (Accounting). The 'Course Type' is 'Type A - Program EFTS' with an 'EFTS Factor' of 0.0000. The 'NQF Level' is 'Level 1' and the 'NQF Credit' is 5. The 'Course Classification' is '03' (Arts; Humanities; Social Sciences), and the 'Funding Category' is 'A2' (Arts & Soc Sci - Degree). The 'Pre-Service Stage' is 'First stage of programme'. Other fields include 'eLearn Status', 'Average Course Fee', 'Foreign Fee', 'Eligible for PBRF' (Not PBRF Eligible), 'Compulsory Course Costs', 'Exempt Indicator' (Not Exempt), and 'VRF'.

Main Program

Enter the main program for this course.

When you generate the SDR course register file, the prospectus code from the program you select here is reported as a qualification code.

NZSCED Detail Code

Enter the NZSCED field of study code for this course.

Set up NZSCED field of study codes on the NZSCED Field of Study NZL page.

Course Type

Enter the course type for this course.

Values are:

- Type A - Program EFTS
- Type B - Hourly EFTS

If you enter Type B, the system displays the Hours field, in which you can enter the total hours for the course. The system calculates the EFTS factor based on the new value.

If you enter Type A, the system recalculates the EFTS factor whenever the values change for the UNITS_ACAD_PROG, UNITS_MINIMUM, and UNIT_MAXIMUM fields in the CRSE_CATALOG record. The system calculates the EFTS factor for type A courses by multiplying the academic progress units for the course by the EFTS Translation A value defined for the institution.

EFTS Factor

The system automatically calculates the EFTS factor for the course whenever you add a new course or whenever you change the course type or hours for the course. The system calculates the EFTS factor by multiplying the course hours by the EFTS Transaction B value defined for the institution.

NQF Level

Enter the New Zealand Register of Quality Assured Qualifications level for the credits in this course.

NQF Credit

Specify the number of New Zealand Register of Quality Assured Qualifications credits contained in this course.

Course Classification

Enter the course classification code for this course.

Define course classifications on the Course Classification NZL (SSR_CRS_CLSF_FNDC) page.

Only Course Classifications that have an effective date less than or equal to the current date and a status of *Active* are available for selection in the Course Classification field.

Funding Category

Enter the funding category for this course.

Define funding categories on the Funding Category NZL (SSR_FUND_CAT_NZL) page.

Pre-Service Stage

For courses that are part of a teacher training program, enter the pre-service stage code for the course.

eLearn Status

Enter the eLearn status to indicate whether or not this course is offered through the internet.

Average Course Fee

Enter the average fee for the students enrolled in this course for the reporting period.

Foreign Fee

Enter the tuition fee paid by foreign, fee paying students.

Eligible for PBRF (eligible for Performance Based Research Fund)	Use this field to indicate if a course is eligible for the Performance Based Research Fund.
Compulsory Course Costs	Enter a dollar amount for the total compulsory fees for this course.
Exempt Indicator	Indicate if a course was granted an exemption from FCCM (Fees/Course Costs Maxima).
VRF (Volume of Research Factor)	Use this field to capture Volume of Research Factor data. This field is for informational purposes only.
Embedded Literacy/Numeracy	Select this check box to indicate that the course has an embedded literacy or numeracy component. The check box is cleared by default.

Linking Milestones to Course Data

Access the Course/Milestone Link page (Curriculum Management > Course Catalog > Course Catalog > Course/Milestone Link).

Milestone

Link a milestone to a course. If the Writing milestone for example is selected for a course, when a student enrolls in a section of that course, the Writing milestone is assigned to the student. A row is inserted in the Student Milestones page.

The Enroll into Course Milestones check box must be selected on the Academic Institution 2 page and the Academic Career Table 2 page.

(NZL) Enter the unit standards to link to this course. Link unit standards to milestones in the NQF Detail group box on the Milestone Table page.

Related Links

Interfacing Course Offerings with the General Ledger

Access the GL Interface page (Curriculum Management > Course Catalog > Course Catalog > GL Interface).

Copy and paste icons appear on this page, next to the Jrnl Set field. Use the copy icon to copy the setup for the row, which can then be pasted to the new, or any proceeding, row.

Receivables From Item Type

Select if you do not want to track revenue by course. The system allocates revenue based on the credit entry defined for the tuition item type. In this case, do not enter ChartField information.

The system automatically tracks receivables for a course based on the debit entry defined for the tuition item type (on the Item Types - GL Interface page). If you want to track revenue by course, you must select the GL Interface Required check box on the Catalog Data page and then enter a credit entry for the class by completing the ChartFields on this page.

"Mapping Item Types to General Ledger Accounts" (PeopleSoft Campus Solutions 9.2: Student Financials)

Creating Course Equivalency Groups

Course equivalency groups link different course ID numbers as equivalent for requisite checking purposes. The courses themselves can possess different components, requisites, topics, and so on. Equivalent course groups are for different course IDs and are, therefore, different from multiple-offering courses.

Complete these steps to create a course equivalency group:

1. Define an equivalent course group on the Course Equivalencies page.
2. Add courses to the equivalency group on the Catalog Data page.
3. Return to the Course Equivalencies page and click the Fetch Equivalencies button to review the group of equivalent courses.

Related Links

[Defining Course Catalog Data](#)

Page Used to Create Course Equivalency Groups

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Course Equivalencies	CRSE_EQUIV	Curriculum Management > Course Catalog > Course Equivalencies > Course Equivalencies	Define the course equivalency group.

Creating a Course Equivalency

Access the Course Equivalencies page (Curriculum Management > Course Catalog > Course Equivalencies > Course Equivalencies).

Image: Course Equivalencies page

This example illustrates the fields and controls on the Course Equivalencies page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Course Equivalencies' page. At the top, there is a navigation bar with 'Find | View All' and pagination 'First 1 of 1 Last'. Below this is a form for creating an equivalent course group. The fields are: 'Equivalent Course Group' (05001), '*Effective Date' (01/01/1980), '*Status' (Active), '*Description' (Elementary Statistics), and 'Short Description' (Statistics). A 'Fetch Course Equivalencies' button is located to the right of the description field. Below the form is a table titled 'Equivalent Courses' with two rows. Each row shows a 'Course ID', 'Course Name', 'Effective Date', 'Status', and 'Equivalent Course Group'. To the right of each row is a 'Course Offering' table with 'Find', '1 of 1', and 'Last' controls. The first row shows '001011 Applied Statistics' with 'Effective Date: 01/07/1980' and 'Status: Active', linked to '05001 Elementary Statistics'. The second row shows '001012 Economic Statistics' with 'Effective Date: 01/07/1980' and 'Status: Active', linked to '05001 Elementary Statistics'.

Effective Date

Enter an effective date for this equivalent course group. The effective date defines when the status you select is valid.

Use a new effective date each time you make a change to an equivalent course group. Insert new rows as needed, and modify the record to track historical equivalent course changes.

Status

Enter a status for this equivalent course group. Select *Active* when adding a new equivalent course group. The *Inactive* option should only be used if your institution no longer wants to use this equivalent course group.

Note: If you want to inactivate an equivalent course group, you need to delete that equivalent course group number from each course to which it is attached on the Catalog Data page, and change the status to *Inactive* on the Course Equivalencies page.

Description and Short Description

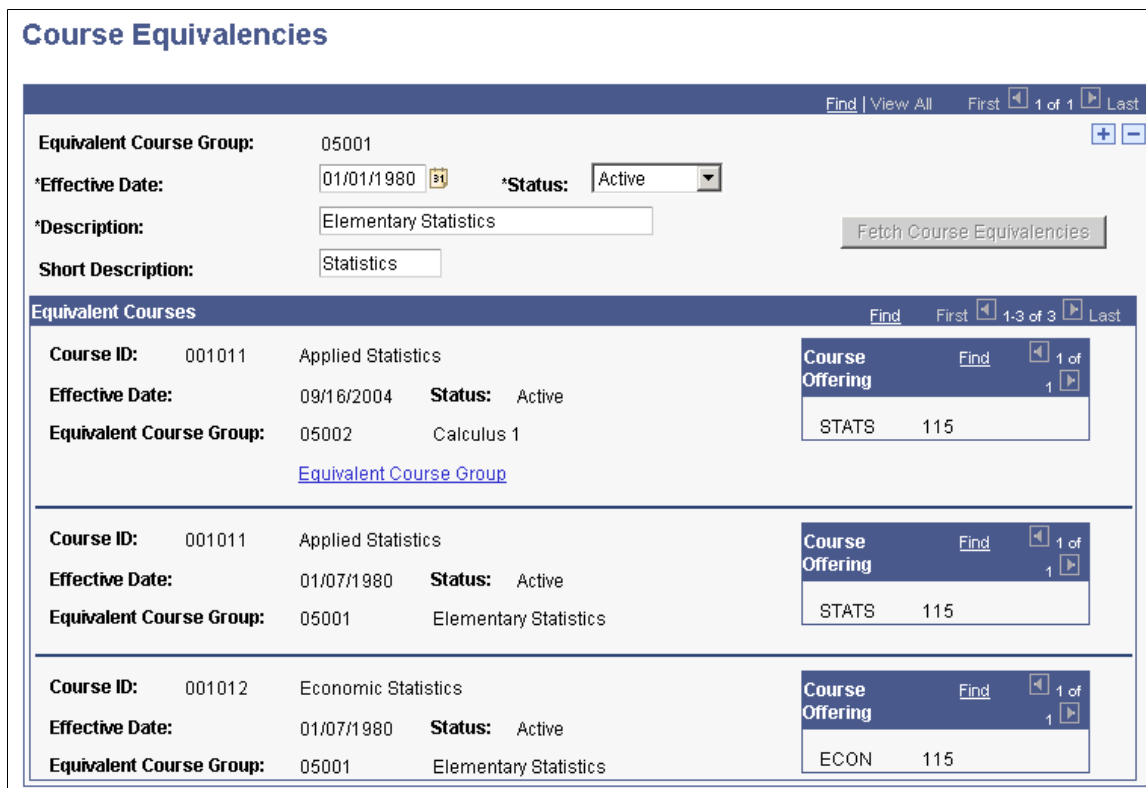

Enter the descriptions of the equivalent course group.

Fetch Course Equivalencies

After you attach courses to this equivalent course group on the Catalog Data page, click this button to view all courses linked to the equivalent course group.

Image: Assigning Courses to a New Equivalent Course Group (CRSE_EQUIV)

This example illustrates how to assign courses to a new equivalent course group.

The system displays an effective date and equivalent course group for every course. To determine when data for an effective-dated row is superseded, look at the next row. In the example, the system shows that course ID 001011 was part of Equivalent Course Group 05001 until 09/16/2004. As of 09/16/2004, course ID 001011 became associated with Equivalent Course Group 05102.

Click the Equivalent Course Group link to view other equivalent course groups for a specific course.

Viewing Course Catalog Summary Information

This section discusses how to review course catalog summaries.

Page Used to View Course Catalog Summary Information

Page Name	Definition Name	Navigation	Usage
Course Catalog Summary	CRSE_CATALOG_SUM	Curriculum Management > Course Catalog > Catalog Summary > Course Catalog Summary	View a summary of course offerings.

Reviewing Course Catalog Summaries

Access the Course Catalog Summary page (Curriculum Management > Course Catalog > Catalog Summary > Course Catalog Summary).

If the course is a part of an equivalent course group, the equivalent course group appears. Click the Open button to toggle between the equivalent courses.

Click the Detail button to go the Course Catalog - Catalog Data page for the course. You can use this button to view further details or to modify data for the course.

Printing the Course Catalog

This section discusses how to enter course catalog report parameters.

Page Used to Print the Course Catalog Report

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Print Course Catalog	RUNCTL_SRYCATLG	Curriculum Management > Course Catalog > Print Course Catalog > Print Course Catalog	Use the Print Course Catalog page to print the course catalog (SR301 Report).

Entering Course Catalog Report Parameters

Access the Print Course Catalog page (Curriculum Management > Course Catalog > Print Course Catalog > Print Course Catalog).

From Date and **End Date**

Enter a from date and an end date. These dates are the effective dates of the course offerings. They are required fields. The system prints all active courses that are greater than or equal to the from date, and less than or equal to the end date.

Academic Institution

The system populates this field with the value on the User Defaults 1 page.

Academic Organization

Enter the academic organization. You are prompted by the Academic Organization Table page.

Academic Group and **Academic Career**

Enter the academic group and academic career if you want to limit the scope of the report. Academic group values are defined

on the Academic Group Table page. Academic Career values are defined on the Academic Career Table page.

Course Approved

Select whether you want to display *Approved*, *Denied*, or *Pending* courses. To report courses of all three types, run three reports, each with a different Course Approved field value.

Catalog Print

Select whether you want to view text designated as catalog print text. If you select *Yes*, all courses with the Catalog Print check box selected on the Course Catalog Offerings page appear in the report. If you select *No*, the courses that do not have the Catalog Print check box selected appear in the report. If you select *All*, all courses appear, regardless of the setting of the check box.

Report Only

Clear this check box to specify that you want to create a Course Catalog report and send the Course Catalog report to your file path location in .csv format. Select this check box to create a Course Catalog report without creating a .csv file. If you select this check box, the File Path field becomes unavailable.

File Path

If you clear the Report Only check box, this field is available. In addition to sending report output for this process to a file (through setting preferences in the PeopleSoft Process Monitor), you can also send any additional output files created by this process to a file directory. To send the extract output to a file directory, enter a valid directory path that maps to a folder with appropriate read/write permission. If you cannot locate such a folder, consult your system administrator.

Select the print options to display the described detail on the report. If you clear them, the detail does not appear on the report.

Run

Click to run the report using PeopleSoft Process Scheduler. You should set the type to *Web* and the format to *PDF*.

Searching for Courses

This section discusses how to:

- Browse the course catalog.
- Select a course offering.
- View course catalog details.

Pages Used to Search for Courses

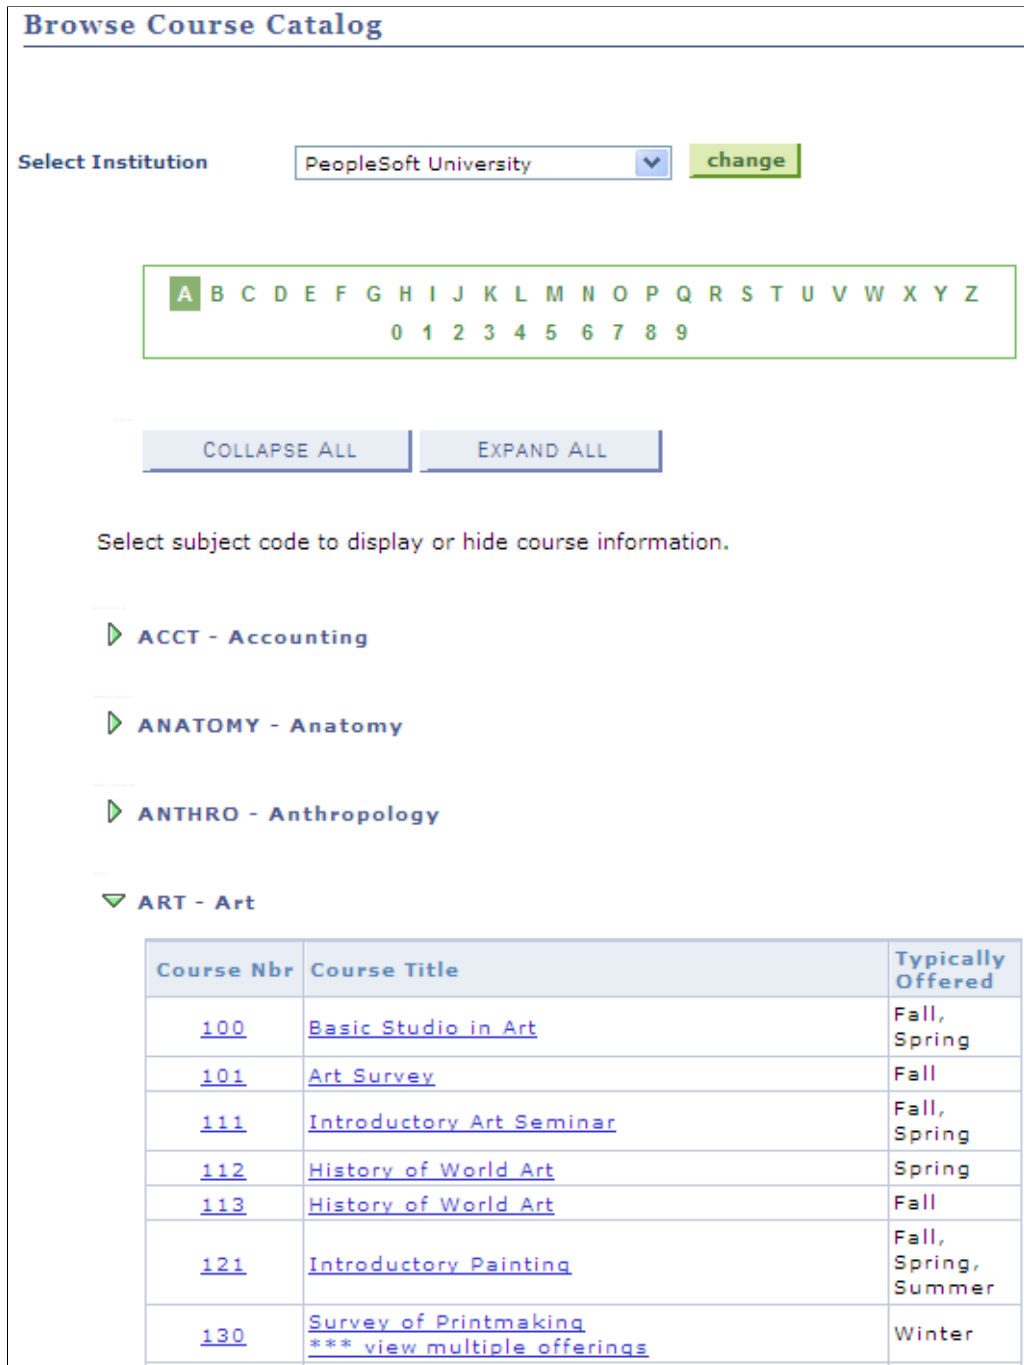

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Browse Course Catalog	SSS_BROWSE_CATLG	Curriculum Management > Course Catalog > Browse Course Catalog > Browse Course Catalog	Browse the course catalog to see a list of courses offered at the institution.
Browse Course Catalog - Select Course Offering	SSS_BCC_SEL_CRSE	On the Browse Course Catalog page, click a course title that includes this message: *** view multiple offerings.	Select the appropriate offering when a course ID has multiple offerings with the same subject, course number, and title, or when multiple course IDs have the same subject, course number, and title.
Browse Course Catalog - Course Detail	SSS_CRSE_OFFER_DTL	Click a course number or course title on the Browse Course Catalog page.	View course details and access class sections.

Browsing the Course Catalog

Access the Browse Course Catalog page ((Curriculum Management > Course Catalog > Browse Course Catalog > Browse Course Catalog).

Image: Browse Course Catalog page

This example illustrates the fields and controls on the Browse Course Catalog page. You can find definitions for the fields and controls later on this page.

Select Institution

Enter the institution for which you want to search for courses.

Course Nbr (course number) and Course Title

Click a course number or a course title to view course details and section information.

You are taken to the Select Course Offering page when a course ID has multiple offerings with the same subject, course number, and title, or when multiple course IDs have the same subject,

course number, and title—see ART 130 in the previous example page. Notice that the course title includes this message: *** view multiple offerings.

Typically Offered

The terms in which a course is typically offered, as defined on the Offerings page.

Selecting a Course Offering

Access the Browse Course Catalog - Select Course Offering page (on the Browse Course Catalog page, click a course title that includes this message: *** view multiple offerings.)

Chapter 6

Setting Up Enrollment Requisites

Understanding Enrollment Requisite Setup and Maintenance

In Student Records, two levels are available at which you can create enrollment requisites and requirements:

1. Enrollment Requirement Groups, which handle requirements for specific courses or class reserve capacities.
2. (Optional) Enrollment Requirements (with or without course lists), which handle complicated requisite rules.

Most likely, you can meet 90 percent of your requisite needs with the Enrollment Requirement Group component alone.

Related Links

"Understanding Academic Requirement Groups" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

"Setting Up Academic Course Lists" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Prerequisites

Depending on the structure and complexity of your enrollment requirement groups, you must first define the following data:

- Academic institutions.
- Requisite program statuses.
- (Optional) Tests for requisites.
- Student Groups for requisites.
- (Optional) Requisite conditions.
- (Optional) Enrollment requirements.
- (Optional) Enrollment course lists.
- (Optional) Entity groups.
- (Optional) Requirement designations.
- (Optional) Courses.

Defining Requisite Program Statuses

This section discusses how to define valid academic program statuses for use in requisite checking.

Page Used to Define Requisite Program Statuses

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Define Requisite Prog Status	SSR_ENR_RPT_TYPE	Curriculum Management > Enrollment Requirements > Define Requisite Prog Status > Define Requisite Prog Status	Enter valid academic program statuses for use in Enrollment Requisites conditions.

Defining Requisite Program Statuses

Access the Define Requisite Prog Status page (Curriculum Management > Enrollment Requirements > Define Requisite Prog Status > Define Requisite Prog Status).

Use this page to identify valid program statuses for an institution. The statuses that are defined on this component are considered valid for enrollment requisites using conditions that specify academic programs, plans, or sub-plans. The requisite checking process evaluates only programs, plans, or subplans for which the student's current (for the enrollment term) academic program status matches one of the statuses defined here.

Effective Date Enter the date for which the program status is effective for requisites.

Program Status Enter the valid program statuses for the assigned effective date.

Note: In most cases, you need to define only one status here (ACTV). Adding any other non-active program statuses allows requisite conditions based on academic program, plan and sub plans to be satisfied by non-active students.

Defining Tests for Use in Requisites

This section discusses how to define tests for use in enrollment requisites.

Page Used to Define Tests for Use in Requisites

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Define Tests for Requisites	SSR_REQ_COND_TEST	Curriculum Management > Enrollment Requirements > Define Tests for Requisites > Define Tests for Requisites	Set up test information for use in conditions in enrollment requirement groups and requirements.

Defining Tests for Requisites

Access the Define Tests for Requisites page (Curriculum Management > Enrollment Requirements > Define Tests for Requisites > Define Tests for Requisites).

Image: Define Tests for Requisites page

This example illustrates the fields and controls on the Define Tests for Requisites page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Define Tests for Requisites' page. At the top, there is a navigation bar with 'Find | View All' and 'First 1 of 1 Last'. The main form contains the following fields:

- Academic Institution:** PSUNV (PeopleSoft University)
- Test ID:** ACT (ACT Assessment)
- Effective Date:** 01/01/1900
- Status:** Active

Below these are the 'Processing Controls' section:

- Months Valid:** 30
- Test Score Method:** Highest Score
- Checkboxes for 'Enable User to Override Months' and 'Enable User to Override Method' are both checked.

At the bottom is the 'Valid Data Sources' section with two entries:

- 'Data Source: American College Testing
- 'Data Source: School

Use this page to identify the tests and related data that you want to use in conditions in enrollment requirement groups and requirements. The Test IDs are already defined in the Test Tables component. Here, you are identifying which Test IDs and related data that you want to use in enrollment requisites.

Important! If you want to use test scores in academic requirements, you must define your Test IDs and related data in the Define Tests for Advisement component.

See "Setting Up Tests for Use in Academic Advisement" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Note: Tests defined in this component are saved with a requirement usage code of *ENR*. Users can retrieve such rows using this component only.

Test ID

Select the Test ID (such as ACT, GMAT, or GRE) that you want to use in enrollment requirement groups or enrollment requirements. The system displays values defined on the Test Tables page. This field is unavailable for entry unless you are in Add mode.

Status

Select the status of the report identifier. Values are:

Active: Select when adding a new report identifier.

Inactive: Select only if your institution no longer uses this report identifier.

Values for this field are delivered with your system as translate values. Do not modify these values in any way.

Any modification to these values will require a substantial programming effort.

Months Valid

Enter the number of months for which a test score can be considered valid. An empty (blank) field is interpreted to mean that the test is always valid.

Test Score Method

Select the test score method. Values are:

Average of All Scores Taken: Select to have the enrollment engine average scores for a given test when it processes the test for a condition in an enrollment requirement or requirement group.

First Test Taken: Select to have the enrollment engine use the test score with the earliest date when it processes the test for a condition in an enrollment requirement or requirement group.

Highest Score: Select to have the enrollment engine use the highest score for a given test when it processes the test for a condition in an enrollment requirement or requirement group.

Last Test Taken: Select to have the enrollment engine use the score from the last test date taken when it processes the test for a condition in an enrollment requirement or requirement group.

Lowest Score: Select to have the enrollment engine use the lowest score for a given test when it processes the test for a condition in an enrollment requirement or requirement group.

Enable User to Override Method

By default, this check box is cleared, which means that the user is unable to change this value for this test ID in the Enrollment Requirement, Enrollment Requirement Group, or Define Requisite Conditions component pages.

Select this check box if you want to enable a user to change the Test Score Method field value on the enrollment requirement or enrollment requirement group components. This check box label is defined in the Message Catalog. You can change this label as needed.

Enable User to Override Months

By default, this check box is cleared, which means that the user is unable to change the Months Valid field value in the academic requirement or academic requirement group component pages.

Select this check box if you want to enable a user to change the Test Score Method field value on the Enrollment Requirement, Enrollment Requirement Group, or Define Requisite Conditions components. This check box label is defined in the Message Catalog. You can change this label as needed.

Data Source

Select one or more valid data sources (American College Testing, for example) for the test ID you are defining. Values for

this field are delivered with your system as translate values. You can modify these translate values. The delivered testing agency values that appear here are *American College Testing*, *College Board*, *Educational Testing Services*, and *Law School Admission Services*. These are the data sources that are considered valid when processing a test score in an enrollment requirement or requirement group.

| Student Group | Enter the valid student group or groups for the assigned effective date. |

Defining Requisite Conditions (Optional)

This section provides an overview of conditions for use in enrollment requisites and discusses how to define them.

Understanding Requisite Conditions

When you want to create an enrollment requisite that contains a condition, you select a value from the list of delivered "standard" condition codes (Cumulative Grade Point Average, for example). For example, you might set up a course prerequisite whose condition is that the student's cumulative GPA is greater than 3.0.

Requisite conditions enable you to create conditions that are more complex and then use those as conditions in an enrollment requirement or requirement group. They enable you to use multiple standard conditions (student group equals athlete and academic standing is good, for example), user programmable conditions (a milestone, for example), or a combination thereof. For example, you might set up a requisite condition whereby academic level must be less than sophomore and that the SAT math score must be greater than or equal to 650.

A condition specification (requisite condition) is a condition that includes connector types, lines, process types, parameters, and controls. It can also be referenced by another requisite condition. Using Boolean logic, requisite conditions can be combined within a condition specification to create more complex requisite conditions. For example, you could create two requisite conditions, and then point to these from a third requisite condition. Requisite condition #1 equals academic level = freshman and cum GPA >= 2.0. Requisite condition #2 equals sophomore and cum GPA >= 2.5. Requisite condition #3 equals requisite condition #1 OR requisite condition #2.

Page Used to Define Requisite Conditions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Define Requisite Conditions	RQ_CONDITION	Curriculum Management > Enrollment Requirements > Define Requisite Conditions > Define Requisite Conditions	Define the conditions for use in enrollment requirements or enrollment requirement groups.

Defining Requisite Conditions

Access the Define Requisite Conditions page (Curriculum Management > Enrollment Requirements > Define Requisite Conditions > Define Requisite Conditions).

Image: Define Requisite Conditions page (in Add mode)

This example illustrates the fields and controls on the Define Requisite Conditions page (in Add mode). You can find definitions for the fields and controls later on this page.

Condition Specification

This is an arbitrary number that is unique for each condition specification. You can use this condition specification as a condition in an enrollment requirement or enrollment requirement group.

Description

Enter a description for the condition specification that you want to establish. The description appears on the enrollment requisite (requirement group) summary, enrollment requirement summary, the enrollment advisement report, the requisite requirement report, and the reverse engineering report.

Short Description and Long Description

Enter descriptions for the condition specification that you want to establish. These descriptions are used for documentation purposes only.

Academic Institution

Select the academic institution. Each condition specification is associated with only one academic institution.

Connector Type

Select the main connector type for this condition specification. Values are: *None*, *AND*, and *OR*. (*None* converts to *AND*.) The

connector type indicates the Boolean operator to be used in the equation that contains the condition lines.

Condition Line Sequence

This number indicates the order in which the condition lines are evaluated. The condition line sequence number is automatically assigned, but can be overridden by the user.

Condition Process Type

Select a condition process type. Values are:

Standard Condition: Indicates that the condition is one of the delivered, standard conditions. This is the default field value. If you use this type, then the condition code field is available.

User Programmable Condition: Indicates that the condition is a user programmable condition. If you select *User Programmable Condition*, the Condition Process Identifier field becomes available.

If you select the condition process type *User Programmable Condition*, and the condition process identifier of Milestone Check, then you are presented with additional fields. Use these to specify the details about the milestone for use in this dynamic condition.

Condition Code

If you select the Condition Process Type field value of *Standard Condition*, then select one of the following delivered translate values:

None: Indicates no field value.

Academic Level: Indicates the year of study. For example, valid values include freshman and sophomore. This value is evaluated against the student based on whatever As of Date field value is specified at run time.

Academic Plan: Indicates the area of study, for example, a major or minor within the academic program. Some plans are subdivided into sub-plans. Academic Plan and Primary Academic Plan reference the exact same plan when the student has one plan only.

Academic Plans: Indicates that all of a student's plans are part of the equation.

Academic Program: Indicates the program of study to which a student applies and is admitted. *Academic Program* and *Primary Academic Program* reference the exact same program when the student has one program only.

Academic Programs: Indicates that all of a student's academic programs are part of the equation.

Academic Standing: Indicates a student's standing at the institution. For example, values might include good standing,

probation, and dismissal. You define values in the Academic Standing table. This value is evaluated against the student based on the as of date that you specify at run time.

Academic Sub-Plan: Indicates a further specialization within the academic plan.

Academic Sub-Plans: Indicates that all of a student's sub-plans are part of the equation.

Cumulative Grade Point Average: A student's cumulative grade point average (derived from the student's term history cumulative statistics, in conjunction with the processing as of date).

Dynamic Condition: Indicates a dynamic condition that has been previously created in the Define Dynamic Condition component.

Primary Academic Plan: Indicates a student's primary academic plan. The primary academic plan is designated by the lowest plan sequence number on the Student Plan page. For example, under a program of LAU, a student might have two plans, Psychology and Classics Minor. If Psychology has a plan sequence number of 10 and Classics Minor has a plan sequence number of 20, then Psychology is the primary academic plan. On the Student Plan page, student career number 0 is the primary career.

Important! The primary academic plan is designated by the lowest plan sequence number on the Student Plan page, and the primary academic program is designated by the lowest career sequence number on the Student Program page. However, when a student has multiple programs (containing multiple plans), the primary academic plan is not necessarily the lowest plan sequence number under a given program, but it is that plan with the lowest plan sequence number under the program with the lowest student career number. For example, under a program of Liberal Arts Undergraduate (attached to a student career number of 0), a student has a plan of Psychology with a plan sequence number of 10. The same student has a plan of Art with a plan sequence number of 10 under a program of Fine Arts Undergraduate (attached to a student career number of 1). Both plans have a plan sequence number of 10, but the plan under the program with the lowest career number is the primary plan. In this example, the primary plan is Psychology, which is tied to a student career number of 0 through the Liberal Arts Undergraduate program. **Primary Academic Program:** Indicates a student's primary academic program. The primary academic program is the program designated by the lowest career sequence number. On the Student Program page, student career number 0 is the primary career.

Student Group: Indicates a grouping of students. For example, values might include athlete and veteran. You define values in the Student Group table.

Student Groups: Indicates that all of the student groups containing a student are part of the equation.

Test Score: Select to use a test score as a condition. If you select this field value, the following additional fields appear: Test ID, Test Component, Condition Operator, Test Score, Months Valid, and Test Score Method.

Months Valid and Test Score Method are editable according to the setup on the Define Tests for Advisement page.

If you select *User Programmable Condition*, the Condition Process Identifier field becomes available. Select the appropriate value for the condition process. The delivered values are: *0001* (Milestone Check), *0002* (Internal Degree Check), and *0003* (External Degree Check). Milestone Check verifies whether a milestone is completed, in progress, or not completed. Internal Degree Check verifies whether a student has received a degree from the home institution. External Degree Check verifies whether a student has received a degree from another institution.

Note: You can create additional condition process identifier field values in the Condition Processes table. Delivered field values are numbered from 1 through 500. Client-added values should be numbered above 500.

Condition Operator

Values are: *Equal*, *Greater Than*, *Greater or Equal*, *In*, *Less Than*, *Less or Equal*, *Not Equal*, and *Not In*. *None* is the same as *Equal*.

The operators of *In* and *Not In* are for use with requisite entity groups and so are available only when you select the following condition codes: *Academic Plan*, *Academic Plans*, *Primary Academic Plan*, *Academic Program*, *Academic Programs*, *Primary Academic Program*, *Academic Sub Plan*, *Academic Sub Plans*, *Student Group*, and *Student Groups*.

If you select the operator *In* or *Not In*, the Condition Data field prompts on requisite entity groups that you set up using the Requisite Entity Groups component.

Note: A student with a null set of entities is always considered true for all plurals of that entity for both *In* and *Not In* because the null set is included in all entity groups and all entity group complements.

Operators are not used if the precondition is *Dynamic Condition*. If the precondition is *Dynamic Condition*, then select

one of the dynamic conditions that you previously created in the Define Dynamic Condition component.

Condition Data

The system prompts you with values based on your selections in the Condition Code and Condition Operator fields.

Academic Institution

If applicable, enter the academic institution. Each condition line detail is associated with only one academic institution.

Academic Career

If applicable, enter the academic career that contains the academic program that is associated with this condition line detail.

Academic Program

If applicable, enter the academic program that is associated with this condition line detail.

Academic Plan

If applicable, enter the academic plan that is associated with this condition line detail.

Milestone

Enter the milestone that must be achieved to satisfy this condition line detail. For example, a milestone could be an audition, qualifying exam, or thesis. You define milestones in the Milestone table.

Milestone Complete

Select the appropriate milestone. Values are:

None: Indicates that the field is not applicable.

Completed: Indicates that the student must complete this milestone to satisfy the condition line detail.

In Progress: Indicates that the student must be working towards completing the milestone to satisfy the condition line detail.

Not Completed: Indicates that the student must not have completed this milestone to satisfy the condition line detail.

Milestone Level

Enter the minimum level for this milestone. Some examples of milestone levels are honors, undergraduate, or graduate.

Minimum Grade Points

Enter the minimum grade points that are acceptable to complete this condition line detail.

Milestone Title

Enter a descriptive phrase as the milestone title. Use this field for documentation purposes only.

If the condition process type is *User Programmable Condition* and the condition process identifier selected is *External Degree Check* or *Internal Degree Check*, the user then must select a degree.

Degree

Enter the degree that must be obtained to satisfy the condition line.

If you select the condition process type of *standard condition* and the condition code of *Test Score*, the appearance of the page changes.

Test ID	Select a Test ID from those defined on the Define Advisement Tests page.
Test Component	The selection options are based on the Test ID selected.
Condition Operator	Identifies what type of comparison is to be applied to the condition data. Possible condition operators include: <i>None</i> , <i>Less or Equal</i> , <i>Greater or Equal</i> , <i>Equal</i> , <i>Greater Than</i> , <i>Less Than</i> , and <i>Not Equal</i> . Make sure that you use an operator that makes sense in the equation. Values for this field are delivered with your system as translate values. Do not modify these values. Any modifications to these values require a substantial programming effort.
Test Score	Enter a score required for the test component and condition operator selected.
Months Valid	The value indicates the number of months for which a test score is valid. This field is available for editing based on the setup on the Define Tests for Advisement page.
Test Score Method	<p>Values are:</p> <p><i>Average of All Scores Taken</i>: Select to have the advisement engine average scores when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>First Test Taken</i>: Select to have the advisement engine use the test score with the earliest date when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>Highest Score</i>: Select to have the advisement engine use the highest score for a given test when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>Last Test Taken</i>: Select to have the advisement engine use the score from the date of the last test taken when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>Lowest Score</i>: Select to have the advisement engine use the lowest score for a given test when it processes the tests for a condition in an enrollment requirement or requirement group.</p>

When you select the Calculate Test Score check box, other fields become available so that you can define the details of the calculation to be performed when the dynamic condition is used in an enrollment requirement or enrollment requirement group.

Test Component Taken Option	This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. Valid values are: <i>Tests Taken on Different Dates</i> and <i>Tests Taken on Same Date</i> .
------------------------------------	---

Test ID	This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. These prompt from the Test IDs defined on the Define Advisement Tests page.
Condition Operator	<p>This field appears in the Condition Details group box only when the Calculate Test Score check box is selected.</p> <p>Identifies what type of comparison is to be applied to the condition data. Possible condition operators include: <i>None</i>, <i>Less or Equal</i>, <i>Greater or Equal</i>, <i>Equal</i>, <i>Greater Than</i>, <i>Less Than</i>, and <i>Not Equal</i>. Make sure that you use an operator that makes sense in the equation. Values for this field are delivered with your system as translate values. Do not modify these values. Any modifications to these values require a substantial programming effort.</p>
Calculation Method	This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. Valid values are: <i>Average of the Components</i> and <i>Sum of the Components</i> .
Score Required	This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. Enter a valid score required as it relates to the values selected in the preceding fields.
Months Valid	This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. This field is available for editing based on the setup on the Define Tests for Advisement page. The value indicates the number of months for which a test score is valid.
Test Score Method	<p>This field appears in the Condition Details group box only when the Calculate Test Score check box is selected. Values are:</p> <p><i>Average of All Scores Taken</i>: Select to have the advisement engine average scores when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>First Test Taken</i>: Select to have the advisement engine use the test score with the earliest date when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>Highest Score</i>: Select to have the advisement engine use the highest score for a given test when it processes the tests for a condition in an enrollment requirement or requirement group.</p> <p><i>Last Test Taken</i>: Select to have the advisement engine use the score from the date of the last test taken when it processes the tests for a condition in an enrollment requirement or requirement group.</p>

Lowest Score: Select to use the lowest score for a given test when tests for a condition in an enrollment requirement or requirement group are processed.

Condition Line Sequence

Appears by default, starting with the number 1. Each condition line must have a unique condition line sequence value.

Test Component

This field appears in the Condition Lines group box only when the Calculate Test Score check box is selected. The selection options are based on the Test ID selected.

Minimum Score

This field appears in the Condition Lines group box only when the Calculate Test Score check box is selected. Enter the minimum acceptable score for the test component identified for the condition line sequence.

Defining Entity Groups for Use in Requisites (Optional)

This section discusses how to define entity groups for use in enrollment requisites.

Entity groups are similar items (programs, plans, subplans, or student groups) that are grouped together to be used in a condition. An example is that you have a requisite for a course that states a student must be enrolled in one of five plans to enroll in the course. To make this a simple condition, the five plans are placed into an entity group. When the condition is defined, it states that academic plans must be in the entity group. This allows for many similar objects to be grouped together for comparison.

Page Used to Define Enrollment Requisite Entity Groups

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Define an Entity Group	SSR_RQ_ENTITY_GRP	Curriculum Management > Enrollment Requirements > Define Requisite Entity Groups > Define Requisite Entity Groups	Define the academic entity group to be used as a precondition or condition requirement.

Defining Requisite Entity Groups

Access the Define Requisite Entity Groups page (Curriculum Management > Enrollment Requirements > Define Requisite Entity Groups > Define Requisite Entity Groups).

Image: Define Requisite Entity Groups page

This example illustrates the fields and controls on the Define Requisite Entity Groups page. You can find definitions for the fields and controls later on this page.

Define Requisite Entity Groups

Find | View All First 1 of 1 Last

Entity Group: 000015

*Effective Date: 01/01/1900 *Status: Active

*Description: Fine Arts Majors Short Description: Fine Arts

Long Description: Fine Arts Majors

*Academic Institution: PSUNV PeopleSoft University

*Entity Group Type: Plan

Entity Group Item Detail				Customize	Find	First	1-4 of 4	Last
	Academic Plan	Description						
1	ART	Art (BFA)		+	-			
2	ARTHIST	Art History (BFA)		+	-			
3	DANCE	Dance (BFA)		+	-			
4	MUS-BA	Music-BA		+	-			

Note: Entity groups that are defined in this component are saved with a requirement usage code of ENR.

- Entity Group** This system generated number is unique for each entity group. It can be used to build a condition at the enrollment requirement group or enrollment requirement level.
- Effective Date** The latest effective date that you enter for the entity group is used during processing.
- Academic Institution** Select the academic institution. Each entity group is associated with only one academic institution.
- Description** Enter a description for the entity group. The description appears in the enrollment requirement group and enrollment requirement summaries.
- Entity Group Type** Select the entity group type that indicates the type of items that are contained in the group. This field value determines what information appears in the Entity Group Item Detail group box. *Program* is the default value.

Entity Group Item Detail

This group box lists the details (entities) in this requisite entity group. An entity group item number is a sequential line number that the system automatically assigns to each item in the entity group. You can override the number. The system automatically supplies the description.

Defining Enrollment Requirement Groups

This section provides an overview of enrollment requirement group setup and discusses how to:

- Define enrollment requirement groups.
- Define overall requisite parameters.
- Define requisite details.
- Define requisite detail level parameters.

Understanding Enrollment Requirement Group Setup

Enrollment requirement groups encompass requisites based on a variety of factors including grade point average and units, courses, and much more. Virtually every prerequisite or corequisite that your institution has for courses can be satisfied with the Enrollment Requirement Group component alone.

Enrollment requirement groups are also used for reserve capacity portions of classes. You can create enrollment requirement groups which are later attached to classes designating a reserve capacity for students who meet a certain criteria (for example, you can set aside 10 seats in a class for students with a certain academic level, cumulative GPA, number of units earned, and so on).

You attach enrollment requirement groups to courses in the course catalog, and you can override these requisite rules or append them on a class-by-class basis when you create the schedule of classes. One course catalog offering can refer to one enrollment requirement group rule, but that rule can contain multiple course requisites and noncourse enrollment restrictions (such as condition requirements). Multiple course offerings can use the same enrollment requirement group or different ones. Reusability, and thus a reduction in data entry and maintenance, is a valuable aspect of this feature.

Of course, a number of ways are available for you to structure your course requisites. Many times more than one "correct" way exists to structure requisites using a combination of enrollment requirement groups and enrollment requirements (which we review later in this section). We review examples of course requisite setup in this section as well.

Here is a high-level overview of how to create a simple enrollment requirement group or reserve capacity:

1. Create a description of the enrollment requirement group on the Course Requisite page.
2. Determine whether parameters such as minimum GPA, units, or number of courses are an attribute of the requirement on the Requisite Parameters page.
3. Enter any other parameters of the requisite such as a course, a range of courses, a student attribute (such as program or plan), and so on, on the Requisite Detail page.
4. Determine whether any course validation parameters exist for the requisite courses on the Requisite Detail Parameters page.
5. Attach the enrollment requirement group to a course offering on the Course Catalog - Offerings page (as a requisite); or attach the enrollment requirement group to a course on the Schedule of Classes - Reserve Cap (Schedule of Classes - Reserve Capacity) page (as a reserve capacity).

Pages Used to Define Enrollment Requirement Groups

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Course Requisite	CRSE_REQUIS_RESTR	Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Course Requisite	Describe the enrollment requirement group. The system generates a unique numeric identifier for the group, although you can enter your own number for the group.
Requisite Parameters	CRSE_RQS_RSTR_PARM	Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Parameters	Specify overall GPA and unit requirements for all of the requisite detail lines in the group. The GPA, course and unit minimums that are entered apply to the overall course restrictions for the classes that are specified in the subsequent requirement pages.
Requisite Detail	CRSE_RQS_RSTR_DET	Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Detail	Link the actual courses or noncourse requirements to the enrollment requirement group. The page is similar to the Academic Requirement Group - Detail page in PeopleSoft Academic Advisement.
Requisite Detail Parameters	CRSE_RQS_DET_PRM	Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Detail Parameters	Further define the details of Course or Wild Card Course group line types.

Defining Enrollment Requirement Groups

Access the Course Requisite page (Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Course Requisite).

Image: Course Requisite page

This example illustrates the fields and controls on the Course Requisite page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Course Requisite' page with the following fields and controls:

- Requirement Group:** 008047
- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** Soc 100 Pre-Reqs
- *Short Description:** ERG 2
- *Long Description:** Requires PHILO 100 (3 units minimum grade of C) and HISTORY 100 (3 units minimum grade of C)
- *Report Description:** Soc 100 Pre-Reqs
- *Report Long Description:** Course A (SOC 100) requires Course B (PHILO 100) and Course C (HISTORY 100) 3 units min Grade C in each
- *Academic Institution:** PSUNV (PeopleSoft University)
- Academic Group:** (empty)
- Subject Area:** SOC (Sociology)
- Catalog Nbr:** 100 (Introduction to Sociology)
- Enable Catalog Print**

Effective Date

Enter an effective date for this enrollment requirement group. The effective date must be equal to or less than the effective date of the course to which this course requisite is attached.

Note: The system accesses the enrollment requirement group rules based on the start date of the term for which the requisite checking occurs. As long as your effective date is less than or equal to the term start date and the status is *Active*, the enrollment posting process checks this rule.

Status

Select a status for this enrollment requirement group. Select *Active* when adding a new enrollment requirement group. Select *Inactive* only if your institution no longer wants to use this enrollment requirement group.

Note: If you want to inactivate an enrollment requirement group, you need to delete the number for that enrollment requirement group from each course to which it is attached on the Catalog Data page.

Description, Short Description, and Long Description

Enter a description, short description, and long description for the enrollment requirement group.

Report Description and Report Long Description

Enter a report description and long description for the enrollment requirement group to be used by the enrollment requirement checking processes.

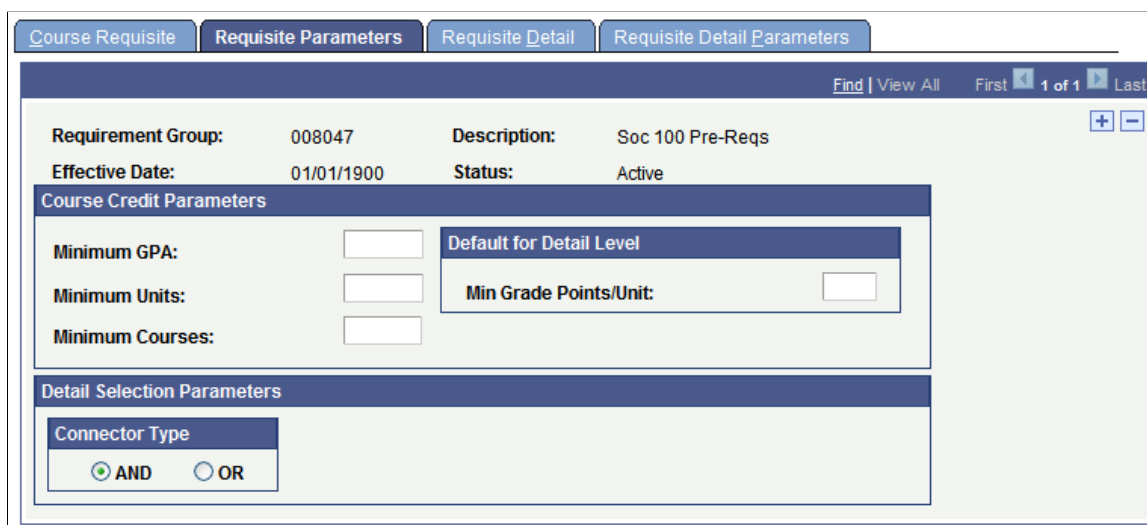

- Academic Institution** The system populates the academic institution field by default. You can change the value.
- Academic Group, Subject Area, and Catalog Nbr** (catalog number) The system does not include these values in the analysis of the requirement group. These values are helpful tools for searching the database for the appropriate requirement group to attach to a course. You may want to use these fields to signify the course to which the requisite is attached, or to specify department ownership of the requisite.
- Enable Catalog Print** Select this check box to display the long description of the enrollment requirement group in the course catalog.

Defining Overall Requisite Parameters

Access the Requisite Parameters page (Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Parameters).

Image: Requisite Parameters page

This example illustrates the fields and controls on the Requisite Parameters page. You can find definitions for the fields and controls later on this page.

Course Credit Parameters

Course credit parameters are overall criteria that the system uses in the evaluation of all combined requisite detail lines.

Minimum GPA (minimum grade point average) Enter the overall minimum GPA for classes that are selected to meet this requirement.

Minimum Units Enter the total minimum units for the classes that are selected to meet this requirement.

Minimum Courses Enter the total minimum courses for the requirement.

Default for Detail Level

Min Grade Points/Units (minimum grade points/units)

The system uses the minimum grade points per unit value as a filter in the requisite checking process. This technique is used to simplify and generalize the comparison logic. The minimum grade point/unit value is the minimum grade points that are required for any individual class that is selected to meet the requirement. The system includes a student's in-progress work as counting toward the minimum.

Detail Selection Parameters

Connector Type

For enrollment requirement groups with more than one requisite detail line, select the appropriate connector type. The connector type indicates whether the student must meet *all* of the requirement line detail conditions (*AND*) or whether the student only needs to meet one of the requirement line details (*OR*). This value is used as the connector default on the Requisite Detail page when rows are inserted.

Defining Requisite Details

Access the Requisite Detail page (Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Detail).

Image: Requisite Detail page

This example illustrates the fields and controls on the Requisite Detail page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Requisite Detail' page with the following information:

- Requirement Group:** 008047
- Description:** Soc 100 Pre-Reqs
- Effective Date:** 01/01/1900
- Status:** Active
- Group Line Type:** 0010
- *Group Line Type:** Course
- Report Description:** Philo 100
- Report Long Description:** Requires Philo 100 with a minimum grade of C.
- Requisite Type:** Pre-Requisite
- Course ID:** 001208 (Introduction to Philosophy)
- Term:** (empty)
- Associated Class:** (empty)
- Topic ID:** (empty)
- PHILO 100** (course code and number)
- Include Equivalent Courses

Refresh Parentheses

This button is available only when you add a new detail line. Click this button to refresh the parentheses setting. You cannot explicitly set parentheses to group detail rows.

If the main connector type is *AND*, then the system automatically groups *ORs* together with parentheses. For example, if A or B and C or D is entered, then the implied statement is (A or B) and (C or D).

If the main connector type is *OR*, then the system automatically groups *ANDs* together with parentheses. For example, if A or B and C or D is entered, then the implied statement is A or (B and C) or D.

Line

The system generates the line number. The number determines the order in which the system evaluates the detail lines. You can change the number, but no two lines can have the same number.

Group Line Type

Select the requirement line type. The group line type that you select determines the format for this line. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires a substantial programming effort.

The four group line types are:

- *Condition*

Specifies allowable values of data elements that are associated with a student, for example, a condition of *Academic Level*. When you specify a condition that you want to require in the Condition Code field, other fields appear that enable you to complete the condition statement.

If you select the condition code *Dynamic Condition*, select a condition specification that was previously defined on the Define Requisite Conditions component. If you select the condition code *Test Score*, then you are presented with additional fields (Test ID, Test Component, Condition Operator, Test Score, Months Valid, and Test Score Method) based on the setup on the Define Tests for Requisites page.

- *Course*

Specific course a student must take to fulfill the requisite.

Specify the course ID, and if you want to allow equivalent courses to satisfy this requisite, select the Include Equivalent Courses check box for the system to include in its evaluation both the course ID that you specify and all courses that are set up as equivalent to the selected course ID for this requirement. If you select this check box, the following fields become unavailable: Term, Associated Class, and Topic ID. *Clear* this check box to further narrow your course parameters with the Term, Associated Class, and

Topic ID fields. For example, you can specify not only the course ID, but also the term in which the specific course must be taken to fulfill the requisite.

- *Requirement*

Specifies individual required elements. You are prompted for the requirement number. You can enter an enrollment requirement number or an academic requirement number.

Enrollment requirements are used to fulfill your more complicated requirement rules and are created in the Enrollment Requirement component. Specify the enrollment requirement or academic requirement for this line in the Requirement field.

You can view examples of how to use an academic requirement (as opposed to an enrollment requirement).

See "Setting Up Academic Requirements" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

- *Wild Card Course*

Specifies a range of courses based upon subject area and catalog number, for example, wild card course of *English 1##*, where the range starts at any three-digit English course beginning with 1. Specify as few or as many criteria as you want using the Academic Group, Subject, and Catalog Nbr fields. Blank fields return all values.

Report Description and Report Long Description Enter a report description and long description for the requisite detail to be used by the enrollment requirement checking processes. If neither of the fields is populated, the enrollment requirement checking processes generate a default description based on the data on the page.

This table shows the way the fields on this page change, depending on the group line type that you select:

Group Line Type	Fields That Appear	Fields That Are Hidden
Condition	<ul style="list-style-type: none"> • Condition Code • Condition Operator • Condition Data <hr/> <p>Note: The Condition Operator and Condition Data fields appear after you select the condition code.</p> <hr/>	<ul style="list-style-type: none"> • Requisite Type • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID • Requirement • Academic Group • Subject • Catalog Nbr • Test ID • Test Component • Condition Operator • Test Score • Months Valid • Test Score Method

Group Line Type	Fields That Appear	Fields That Are Hidden
Condition	If you select a condition code of <i>Dynamic Condition: Condition Data</i>	<ul style="list-style-type: none"> • Requisite Type • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID • Requirement • Academic Group • Subject • Catalog Nbr (catalog number) • Test ID • Test Component • Condition Operator • Test Score • Months Valid • Test Score Method
Condition	If you select a condition code of test score: <ul style="list-style-type: none"> • Test ID • Test Component • Condition Operator • Test Score • Months Valid • Test Score Method 	<ul style="list-style-type: none"> • Requisite Type • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID • Requirement • Academic Group • Subject • Catalog Nbr (catalog number)

Group Line Type	Fields That Appear	Fields That Are Hidden
Course	<ul style="list-style-type: none"> • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID 	<ul style="list-style-type: none"> • Condition Code • Condition Operator • Condition Data • Requirement • Academic Group • Subject • Catalog Nbr • Test ID • Test Component • Test Score • Months Valid • Test Score Method
Requirement	Requirement	<ul style="list-style-type: none"> • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID • Condition Code • Condition Operator • Condition Data • Academic Group • Subject • Catalog Nbr • Test ID • Test Component • Test Score • Months Valid • Test Score Method

Group Line Type	Fields That Appear	Fields That Are Hidden
Wild Card Course	<ul style="list-style-type: none"> • Academic Group • Subject • Catalog Nbr 	<ul style="list-style-type: none"> • Course ID • Include Equivalent Courses • Term • Associated Class • Topic ID • Condition Code • Condition Operator • Condition Data • Requirement • Test ID • Test Component • Test Score • Months Valid • Test Score Method

Include Equivalent Courses

Select for the system to include in its evaluation both the course ID that you specify and all courses that are set up as equivalent to the selected course ID for this requirement. If you select this check box, the following fields become unavailable: Term, Associated Class, and Topic ID.

Clear this check box to further narrow your course parameters with the Term, Associated Class, and Topic ID fields. For example, you can specify not only the course ID, but also the term in which the specific course must be taken to fulfill the requisite.

Term

Enter the term in which the student must take the course that you specify for the course to be used in this enrollment requirement group. Leave this field blank to return all values.

Associated Class

Enter the associated class number (of the course that you specify) that the student must take for the course to be used in this enrollment requirement group. For class associations, indicate a term to prompt off valid values. Leave this field blank to return all values.

Note: You cannot enter 9999, because this special associated class number can be associated with any other associated class number and is never an enrollment section.

See [Defining Class Associations](#).

Topic ID

Enter the topic ID (of the course that you specify) that the student must take for the course to be used in this enrollment requirement group. This field prompts from the topics defined in the course catalog. Leave this field blank to return all values.

Requisite Type

Specify whether this requirement line is a prerequisite or a corequisite. A prerequisite is something that a student must complete before the start date of the desired class. If you use an enrollment course list (as part of an enrollment requirement), you can allow in-progress coursework to fulfill prerequisites. A corequisite is something that a student can complete prior to, or at the same time as, the desired class. Conditions are always set up as prerequisites in the background. Students either meet the condition at the time of enrollment (which means that they currently have the required condition), or they do not.

Defining Requisite Detail Level Parameters

Access the Requisite Detail Parameters page ((Curriculum Management > Enrollment Requirements > Enrollment Requirement Groups > Requisite Detail Parameters).

Image: Requisite Detail Parameters page

This example illustrates the fields and controls on the Requisite Detail Parameters page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface with a breadcrumb trail: [Course Requisite](#) > [Requisite Parameters](#) > [Requisite Detail](#) > [Requisite Detail Parameters](#). The main content area is titled "Detail Parameters" and includes a search bar with "Find | View All" and pagination "First 1 of 1 Last".

Key fields and controls visible:

- Requirement Group:** 008047
- Description:** Soc 100 Pre-Reqs
- Effective Date:** 01/01/1900
- Status:** Active
- Course Validation Parameters:**
 - Course Information:** Introduction to Philosophy
 - Minimum Units:** 3.00
 - Minimum Courses:** 1.00
 - Min Units/Course:** 3.00
 - Min Grade Points/Unit:** 2.00
 - Transfer Level Allowed:** Always Allow
 - Requirement Designation:** [Searchable field]
 - Valid Begin:** [Date picker]
 - Valid End:** [Date picker]
 - Course must be GPA material
 - Test Credit is Allowed
 - Other Credit is Allowed
 - Exclude In-Progress Credit

Note: This page is necessary only if you have a line type of course or wild card course on the Requisite Detail page.

Minimum Units

Enter the minimum units that are required for the course or the wildcard course for this requisite detail line.

Min Units/Course (minimum units per course)	Enter the minimum units per course value to indicate the minimum number of units that a single course must be worth to be evaluated. For example, if you set this to 3, the system picks up only courses that are worth three units or greater. If the system finds a course on the student's record that matches the course on the Requisite Detail page, but it is only two units, the course is not used to meet the requisite.
Minimum Courses	Enter the minimum number of courses that are required of the course or wild card course that you specify. For example, if you set this to 2, the system looks for at least two courses of the course or wild card course that you specify. When the system finds at least two courses that match your requisite detail line, the requisite is satisfied.
Min Grade Points/Unit (minimum grade points per unit)	Enter the minimum grade points per unit that each course must have to be used to satisfy the course requisite. For example, if you set this to 7, then each course must be a grade C or greater to be evaluated ($.7 \times 3$ units = 2.1, or a grade of C).
Transfer Level Allowed	<p>Enter a transfer-level-allowed value that indicates what type of transfer credit (if any) is acceptable. Values are:</p> <p><i>Always Allow:</i> All applicable transfer credit can be used to satisfy the requisite.</p> <p><i>Never Allow:</i> Transfer credit can never satisfy the requisite.</p> <p><i>Two Year Institution Only:</i> Only transfer credit from two-year institutions can be used to satisfy the requirement.</p> <p>On the School Data page, an institution can be identified as a two- or four-year institution.</p> <p>See Defining External Organizations.</p>
Requirement Designation	<p>Select the requirement designation that each course for this requisite detail line must possess to be evaluated. For example, if you specify a wild card course list of <i>ARCH 4##</i> on the Requisite Detail page, then specify a requirement designation of <i>DSGN</i> on the Requisite Detail Parameters page. Only ARCH 400 - level courses that have a designation of <i>DSGN</i> (with a grade of Satisfied) meet this requisite.</p> <p>Requirement designation values are defined on the Requirement Designation Table page.</p> <p>See Understanding Requirement Designations.</p>
Valid Begin and Valid End	Enter valid begin and valid end dates to specify the date range when the courses must be taken to satisfy the requisite. Leaving these fields blank means that it does not matter when the courses are taken. When the system compares the date range, it uses the start and end dates of the term in which the course was taken.

For transfer courses, the system uses the start date and end date of the articulation term.

Course must be GPA Material

Select this check box to require that courses evaluated for this requisite must be applied toward the student's career GPA calculation. For instance, any courses that a student took for a pass/no pass grade basis would not be evaluated, as typically this grade basis does not have the Include in GPA check box selected on the Grading Scheme Table page.

Test Credit is Allowed

Select this check box to allow test credit courses to be evaluated.

Other Credit is Allowed

Select this check box to allow other credit courses to be evaluated.

Exclude In-Progress Credit

If the course that the student takes to satisfy this requisite must be fully graded for the system to consider it valid, select this check box. If this check box is cleared, the system will include in analysis, and pass all parameters any nongraded courses, as well as any graded courses that have the In-Progress flag enabled (such as incomplete courses), and that match the course ID or wild card course on the Requisite Detail page. Leaving this check box cleared is the least restrictive, and allows for maximum user/student flexibility.

Examples of Enrollment Requirement Groups

The enrollment requirement group feature is robust. While reviewing the Academic Advisement documentation will significantly enhance your knowledge of enrollment requirement groups, we review some examples in this section of how to set up the Requisite Detail page.

You can create course requirements many ways, and usually more than one way exists to create any particular course requirement. Some of the complex examples use the enrollment requirement and course list features, documented later in this section.

Course or Condition Requisite

Image: Setting up a course or condition prerequisite (CRSE_RQS_RSTR_DET)

At PSUNV, Psychology 288, Neuropsychology, requires that students have either passed Psychology 124 *or* declared a primary academic plan of psychology. In this example, Psychology 124 is a course prerequisite, and the primary academic plan of psychology is a condition prerequisite. Notice that for the condition, the Requisite Type field becomes unavailable for entry. This is because the system is populating the field to prerequisite in the background.

The Requisite Detail page has two requisite lines, joined together with an "or" statement:

The screenshot displays the 'Requisite Detail' page with the following information:

- Requirement Group:** 000000
- Description:** Psych 288
- Effective Date:** 01/01/1900
- Status:** Active

The page contains two prerequisite lines:

- Line 1 (Course Prerequisite):**
 - *Group Line Type: Course
 - Course ID: 003010 (Physiological Psychology)
 - Include Equivalent Courses:
 - Requisite Type: Pre-Requisite
- Line 2 (Condition Prerequisite):**
 - *Group Line Type: Condition
 - Academic Institution: PeopleSoft University
 - Condition Code: Primary Academic Plan
 - Condition Operator: Equal
 - Condition Data: PSYCH (Psychology)
 - Requisite Type: (Unavailable)

The two lines are connected by an 'OR' operator. The 'Requisite Type' field for the second line is disabled.

Wild-Card Course Requisite

Image: Setting up a wild card course and course prerequisite (CRSE_RQS_RSTR_DET)

At PSUNV, Education 338, Development of Reading Skills, requires a prerequisite of any Education 200-level course, *and* Psychology 240. In this example, the Education 200 level course is specified as a *Wild Card Course* prerequisite, and Psychology 240 is a regular *Course* prerequisite.

The Requisite Detail page would have two requisite lines, joined together with an "and" statement:

The screenshot displays the 'Requisite Detail' page for requirement group 000000, description 'Ed 338', effective date 01/01/1900, and status 'Active'. It shows two prerequisite lines:

- Line 0010:** A Wild Card Course prerequisite. The group line type is 'Wild Card Course', academic institution is 'PeopleSoft University', academic group is 'LBART' (College of Liberal Arts), subject is 'EDUC' (Education), and catalog number is '2##'. The requisite type is 'Pre-Requisite'.
- Line 0020:** A Course prerequisite. The group line type is 'Course', course ID is '003018' (Learn Behv), and the course is 'PSYCH 240'. The requisite type is 'Pre-Requisite'. The 'Include Equivalent Courses' checkbox is checked.

The two lines are connected by an 'AND' operator, indicating that both prerequisites must be satisfied.

Requirement, Course, and Course List Requisite

At PSUNV, Biology 231, Neurobiology, requires Biology 1 and 2 (as almost all biology courses require), as well as Chemistry 101 and 102. Because the requisite of Biology 1 and 2 will be used repeatedly for virtually every biology course, we developed an enrollment requirement called Biology 1 and 2. Within that enrollment requirement is a course list of Biology 100 and 101. In our Biology 231 enrollment requisite group we define a group line type of *Requirement* that points to the Biology 1 and 2 requirement, as well two group line types of *Course* for Chemistry 101 and Chemistry 102.

Note: Alternative ways are available of defining such a requisite scenario without using course lists, but this is one way that you can define these requisites.

Image: Using Requirement Line Types, Line 10 (CRSE_RQS_RSTR_DET)

After we defined a Biology 1 and 2 course list and an enrollment requirement, we created the enrollment requirement group, entering the following detail lines on the Requisite Detail page. The page has three detail lines: one for the enrollment requirement of Biology 1 and 2, one for the course requirement of Chemistry 101, and the last for the course requirement of Chemistry 102:

The screenshot shows the 'Requisite Detail' tab in a software interface. At the top, there are navigation tabs: 'Course Requisite', 'Requisite Parameters', 'Requisite Detail' (selected), and 'Requisite Detail Parameters'. Below the tabs, there are fields for 'Requirement Group: 000000', 'Description: NeuroBiology 231', 'Effective Date: 01/01/1900', and 'Status: Active'. A 'Group Line Type' section is visible, showing a search bar with '1 of 1' results. The main form area includes: '*Line: NEW', '*Group Line Type: Requirement', 'Requirement: 000001169 Biology 1 and 2 Courses', 'Requirement Usage: Requisite/Restriction', and 'Requisite Type: Pre-Requisite'.

On the preceding page:

- This requisite is considered first by the system because the line number is *0010*, the lowest number in our detail lines.
- The group line type is *Requirement*.
- The requirement is *Biology 1 and 2* (Biology 1 and Biology 2).

These are in a course list because they are used repeatedly together as a prerequisite requirement in a large number of courses.

- The requisite type is *Pre-Requisite*.

Image: Using Course Line Types, Line 20 (CRSE_RQS_RSTR_DET)

The second and third detail lines appear like this:

The screenshot shows the 'Requisite Detail' tab in a software interface. At the top, there are navigation tabs: 'Course Requisite', 'Requisite Parameters', 'Requisite Detail' (selected), and 'Requisite Detail Parameters'. Below the tabs, there are fields for 'Requirement Group: 000000', 'Description: NeuroBiology 231', 'Effective Date: 01/01/1900', and 'Status: Active'. A 'Group Line Type' section is visible, showing a search bar with '2 of 2' results. The main form area includes: 'Refresh Parentheses' button, 'AND' dropdown, '*Line: NEW', '*Group Line Type: Course', 'Course ID: 001163 Elementary Chemistry I', 'Include Equivalent Courses' checkbox (checked), and 'Requisite Type: Pre-Requisite'.

On the preceding page:

- The connector type is *AND* because this rule must be fulfilled along with the Biology 1 and 2 requirement.
- The line number is *0020*. The system evaluates this rule second, because one rule line is preceding it.
- The group line type is *Course*.
- The course ID represents *Chemistry 101*.

The third detail line for Chemistry 102 is exactly like the preceding sample page.

Condition and Wild-Card Course Requisite, Exclude In-Progress Credit

At PSUNV, for a student to enroll in HONORS 499, he or she must have a verifiable cumulative GPA of greater than or equal to 3.0.

To create an enrollment requirement group for this course prerequisite:

1. On the Course Requisite page, enter the necessary data.
2. On the Requisite Parameters page, enter *1* in the Minimum Course field.
3. On the Requisite Detail page, create two detail lines and attach as a requisite to HONORS 499.
4. For the first detail line, create a condition of cumulative GPA greater than or equal to 3.0.

Image: Creating a condition for cumulative GPA (CRSE_RQS_RSTR_DET)

Example of the Requisite Detail page as discussed above:

The screenshot displays the 'Requisite Detail' page. At the top, there are tabs for 'Course Requisite', 'Requisite Parameters', 'Requisite Detail', and 'Requisite Detail Parameters'. Below the tabs, there is a search bar with 'Find | View All' and navigation buttons for 'First', '1 of 1', and 'Last'. The main content area shows the following details:

- Requirement Group:** 000000
- Description:** Honors 499
- Effective Date:** 01/01/1900
- Status:** Active

Below this, there is a section for 'Group Line Type' with a search bar and navigation buttons. A 'Refresh Parentheses' button is highlighted in yellow. To the right, there is a '*Line:' field with the value 'NEW' and '+' and '-' buttons. The main form fields are:

- *Group Line Type:** Condition
- Academic Institution:** PeopleSoft University
- Condition Code:** Cumulative Grade Point Avg.
- Condition Operator:** > or =
- Condition Data:** 3.0

For the second detail line, set the connector type to *And*, then select a group line type of *Wild Card Course*.

Image: Creating a detail line for wild card course (CRSE_RQS_RSTR_DET)

Example of the Requisite Detail page as discussed above:

On the Wild Card Course Detail Requisite Detail page, select the Exclude In-Progress Credit box.

This requisite verifies that not only does the student have a cumulative GPA of greater than or equal to 3.0, but that the student is not a first semester student with no courses completed at all.

If you decide to include in-progress credit, then even those students who have no coursework completed, but at least one course in progress, will meet this requisite. This assumes that the student will not only complete his or her in-progress credit, but will also complete the in-progress credit with the required GPA.

If you want to be more conservative with this requisite and really ensure that the student has a proven track record, be sure to select the Exclude In-Progress check box on the Requisite Detail Parameters page.

Condition and Course Requisite, Exclude In-Progress Credit

At PSUNV, a total of five seats are reserved in Advanced Fiction Writing 2 for students who have a verifiable GPA of greater than or equal to 3.0 and have passed Advanced Fiction Writing 1 with a grade of A.

To create an enrollment requirement group for this reserve capacity check:

1. On the Course Requisite page, enter the necessary data.
2. On the Requisite Parameters page, enter *1* in the Minimum Course field.
3. On the Requisite Detail page, create two detail lines and attach as a reserve capacity to Advanced Fiction Writing 2 on the Schedule of Classes - Reserve Cap page.
4. For the first detail line, create a condition of cumulative GPA greater than or equal to 3.0.
5. For the second detail line, set the connector type to *And*, select a group line type of *Course*, select the course ID for Advanced Fiction Writing 1, and select a requisite type of *Pre-Requisite*.

Image: Creating a condition & course prerequisite (CRSE_RQS_RSTTR_DET)

Example of the Requisite Detail page as discussed above:

The screenshot displays the 'Requisite Detail' page with the following information:

- Requirement Group:** 000000
- Description:** Advanced Fiction Writing 2
- Effective Date:** 01/01/1900
- Status:** Active

The page contains two 'Group Line Type' sections:

- Group Line Type 1 (Condition):**
 - *Line: NEW
 - *Group Line Type: Condition
 - Academic Institution: PeopleSoft University
 - Condition Code: Cumulative Grade Point Avg.
 - Condition Operator: > or =
 - Condition Data: 3.0
- Group Line Type 2 (Course):**
 - *Line: NEW
 - *Group Line Type: Course
 - Course ID: 003334 (Adv Fict Writ I)
 - ENGLCOMP 555 (selected)
 - Include Equivalent Courses
 - Requisite Type: Pre-Requisite

- On the Detail Parameters page, select the Exclude In-Progress Credit box, and enter a minimum grade point per unit of 4.0.
- This requisite line ensures that, if the system finds Advanced Fiction Writing 1 on the student's record, the student has completed the course and earned a grade of A.

If you decide to include in-progress credit, then a student with Advanced Fiction Writing 1 in-progress (but not yet completed or graded) will meet the reserve capacity, and the system will allow this student to enroll. Sometimes you may want to be this liberal, but in the instance here, we require that the course be verifiably an A grade.

Course Requisite, Include In-Progress Credit

At PSUNV, for a student to register for ECON 205, the student must either currently be enrolled in ECON 115, or have completed ECON 115 with a C grade or better.

To create an enrollment requirement group for this requisite:

- On the Course Requisite page, enter the necessary data.
- On the Requisite Parameters page, enter 1 in the Minimum Course field.
- On the Requisite Detail page, create one detail line and attach as a requisite to ECON 205.
- For this detail line, select a group line type of *Course*, select the course ID for ECON 115, and select a requisite type of *Pre-Requisite*.

- On the Requisite Detail Parameters page, enter a minimum grade point per unit of 2.00 and leave cleared the Exclude In-Progress Credit box.

Image: Creating a course prerequisite detail Line (CRSE_RQS_RSTR_DET)

Example of the Requisite Detail page as discussed above:

The screenshot displays the 'Requisite Detail' page with the following information:

- Requirement Group:** 000000
- Description:** Econ 205
- Effective Date:** 01/01/1900
- Status:** Active
- Group Line Type:** Course
- Course ID:** 001012 (Economic Statistics)
- Requisite Type:** Pre-Requisite
- Include Equivalent Courses**

This requisite enables both students with ECON 115 in-progress and students with ECON 115 completed with a C grade or higher to fulfill the requisite.

Condition Requisite, Include In-Progress Coursework

At PSUNV, all students with a cumulative GPA of 3.5 and higher may register for EDUC 100 (first semester freshmen with no verifiable GPA at all are also eligible).

To create an enrollment requirement group for this requisite:

- On the Course Requisite page, enter the necessary data.
- On the Requisite Parameters page, enter any necessary data.
- On the Requisite Detail page, create one detail line and attach as a requisite to EDUC 100.

For this detail line, create a condition of cumulative GPA greater than or equal to 3.5.

Image: Creating a condition for cumulative GPA(CRSE_RQS_RSTR_DET)

Example of the Requisite Detail page as discussed above:

The screenshot displays the 'Requisite Detail' page. At the top, there are tabs for 'Course Requisite', 'Requisite Parameters', 'Requisite Detail', and 'Requisite Detail Parameters'. The 'Requisite Detail' tab is active. Below the tabs, there are fields for 'Requirement Group: 000000', 'Description: EDUC 100', 'Effective Date: 01/01/1900', and 'Status: Active'. Below these fields, there is a section for 'Group Line Type' with a search bar and '1 of 1' results. The 'Group Line Type' section is expanded to show a form with the following fields: '*Group Line Type: Condition', 'Academic Institution: PeopleSoft University', 'Condition Code: Cumulative Grade Point Avg.', 'Condition Operator: > or =', and 'Condition Data: 3.5'. There is also a '*Line: NEW' field and a search icon next to the '3.5' value.

This requisite is satisfied by students with some graded coursework (all of which averages greater than 3.5 GPA), as well as by first semester freshmen with no coursework completed at all. This is because a null value passes all parameters.

Example of Maximum Unit Limit for Enrollment

At PSUNV, students can take no more than 12 units of physical education courses. If students attempt to enroll in a physical education course that takes them over the 12-unit limit, their enrollment is blocked by a prerequisite requirement.

To create this maximum unit enrollment requisite:

1. Create an enrollment course list that references all physical education courses (wild card or course by course).

Set up any course parameters. Enter minimum grade point per unit values for each course if you want to count only physical education courses that were successfully completed. If you also want to limit F graded courses, you can leave this field clear.

2. Create an academic requirement that has a line item page line type of *Course Requirement*.
3. Set the Credit Include Mode field to *Verify*, and the Maximum Units Allowed field to *12.00*.

Be sure this is set to *Verify*. This is the power that regular ENR usage enrollment requirements do not have.

4. Point to your enrollment course list on the Line Item Detail page.
5. Create an enrollment requirement group that points to the academic requirement.

Attach this requirement as a corequisite.

Image: Requisite Detail page (CRSE_RQS_RSTR_DET)

Example of the Requisite Detail page as discussed above:

Attach this enrollment requisite to all physical education courses.

Defining Enrollment Requirements

This section provides an overview of enrollment requirements and discusses how to:

- Define enrollment requirements.
- Define overall enrollment requirement parameters.
- Define enrollment requirement line types.
- Define line item parameters.
- Define line item course detail.

Understanding Enrollment Requirements

Enrollment requirements are for more complicated requisite needs, and are also great tools for reusability. Create enrollment requirements only if you are using the *Requirement* group line type in an enrollment requirement group. You can use enrollment requirements in conjunction with other enrollment-requirement group line types.

To fully understand enrollment requirements, see "Setting Up Academic Requirements" (PeopleSoft Campus Solutions 9.2: Academic Advisement). The pages in PeopleSoft Academic Advisement mirror those in Student Records but with additional functionality. You can set up enrollment requirement groups that reference academic requirements (in the event that you need to take advantage of their complex functionality), so we suggest that you learn as much about them as possible.

Here is a high-level overview of how to define an enrollment requirement:

1. Evaluate your need to use the group line type of *Requirement* on the Requisite Detail page.
2. Enter a description of the enrollment requirement on the Enrollment Requirement page.

3. Determine whether GPA, units, or courses are part of the requirement on the Parameters page.
4. Select a requirement line type and enter a description on the Line Item page.
5. Enter course credit parameters on the Line Item Parameters page.
6. If you're using a course list, create it in the course list component, and add the course list number on the Line Item Detail page.

Note: If you are going to select the line type of condition and specify a dynamic condition or test score, then you must first have set up dynamic conditions and valid test IDs on the Define Requisite Conditions component and Define Tests for Requisites component, respectively.

Pages Used to Define Enrollment Requirements

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Enrollment Requirement	CRSE_REQUIREMENT	Curriculum Management > Enrollment Requirements > Enrollment Requirements > Enrollment Requirement	Describe the enrollment requirement.
Parameters	CRSE_RQRMNT_PARM	Curriculum Management > Enrollment Requirements > Parameters	Enter overall GPA and unit requirements for the requirement.
Line Item	CRSE_RQRMNT_LINE	Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item	Define the requirement line type.
Line Item Parm (line item parameters)	CRSE_RQ_LINE_PARM	Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item Parm	Specify the unit and GPA requirements for the line type. The fields that appear on the page depend on the line type that you select on the Line Item page.
Line Item Detail	CRSE_RQ_LN_DETAIL	Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item Detail	Link course lists, derived course lists, and conditions to your line items. The page controls that appear on the page depend on the line type that you select on the Line Item page.

Defining Enrollment Requirements

Access the Enrollment Requirement page (Curriculum Management > Enrollment Requirements > Enrollment Requirements > Enrollment Requirement).

Image: Enrollment Requirement page

This example illustrates the fields and controls on the Enrollment Requirement page. You can find definitions for the fields and controls later on this page.

Effective Date

Enter an effective date for this enrollment requirement. The effective date must be equal to or less than the effective date of the enrollment requirement group to which this course requisite is attached.

Note: The system accesses the enrollment requirement rules based on the start date of the term for which the requisite and restriction checking occurs. As long as your effective date is less than or equal to the term start date, and the status of the enrollment requirement is *Active*, the system checks the rule in the enrollment process.

Status

Select a status for this requirement. Select *Active* when you add a new requirement. Select *Inactive* only if your institution no longer uses this requirement.

Note: If you want to inactivate a requirement you also need to remove any reference to the requirement number on the Requisite Detail page.

To determine which enrollment requirement groups reference a particular requirement, run the reverse engineering report.

See [Generating a Reverse Engineering Report](#).

Report Description and Report Long Description

Enter a report description and long description for the enrollment requirement to be used by the enrollment requirement checking processes.

The report fields are hidden when the group line type is set to *Requirement*. In this case, the report descriptions are defined within the Enrollment Requirements component.

Academic Institution

The system populates this field by default when you access the page. You can change this value. The institution determines the enrollment requirement groups that can reference this requirement.

Academic Group, Subject Area, and Catalog Nbr (catalog number)

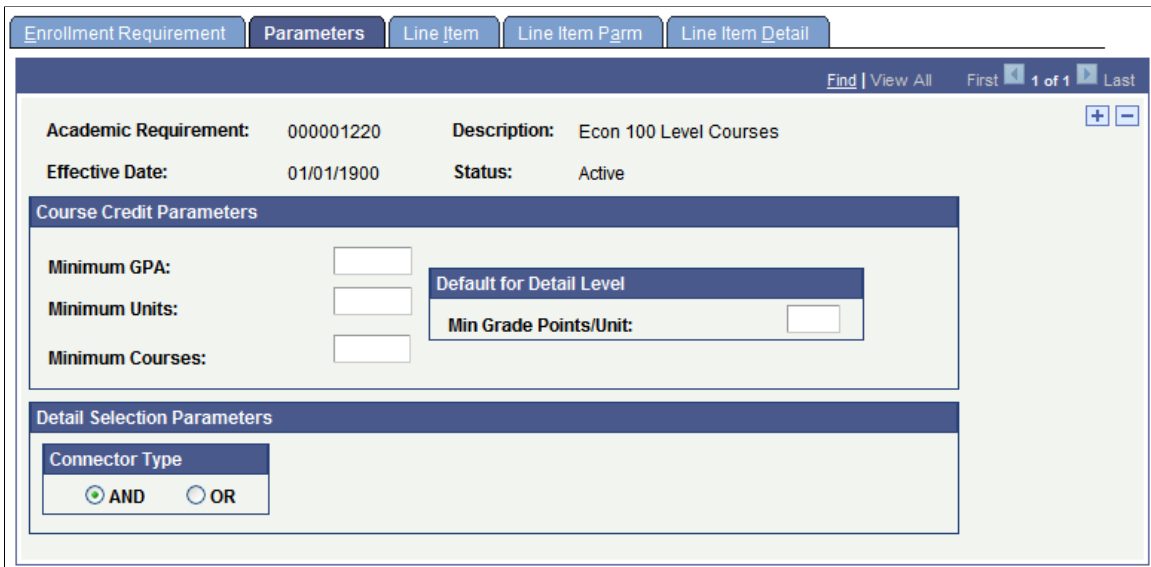

Academic group, subject, and catalog number are not used by the system in the analysis of the requirement, but are helpful tools for when you are searching the database for the appropriate requirement to attach to an enrollment requirement group. You may want to use these fields to signify the course to which the requisite will be attached, or to specify department "ownership" of the requisite. These values are optional.

Defining Overall Enrollment Requirement Parameters

Access the Parameters page (Curriculum Management > Enrollment Requirements > Enrollment Requirements > Parameters).

Image: Parameters page

This example illustrates the fields and controls on the Parameters page. You can find definitions for the fields and controls later on this page.

Course Credit Parameters

Course credit parameters are overall requirements for all line items. These fields are optional.

Minimum GPA (minimum grade point average)

Enter the overall minimum GPA that all classes that are selected to meet this requirement must satisfy.

Minimum Units

Enter the total minimum units that all classes that are selected to meet this requirement must satisfy.

Minimum Courses

Enter the total minimum courses that all classes that are selected to meet this requirement must satisfy.

Default for Detail Level

Min Grade Points/Unit (minimum grade points per unit)

The system uses the value that you enter as a filter in the evaluation process. This technique is used to simplify and generalize the comparison logic. The minimum grade points per unit are the minimum grade points that are allowed for any individual class enrollment that is selected to meet the requirement.

Detail Selection Parameters**Connector Type**

Select the appropriate connector type. The connector type indicates whether the student must meet *ALL* of the requirement detail conditions (*AND*) or whether the student needs to meet only one condition (*OR*). This page control is used as the connector default on the Requirement Line Item page when you insert rows.

Defining Enrollment Requirement Line Types

Access the Line Item page (Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item).

Image: Line Item page

This example illustrates the fields and controls on the Line Item page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Line Item' page within a software application. At the top, there are navigation tabs: 'Enrollment Requirement', 'Parameters', 'Line Item', 'Line Item Parm', and 'Line Item Detail'. Below the tabs, there are search and navigation controls: 'Find | View All', 'First', '1 of 1', and 'Last'. The main content area is divided into two sections. The top section, 'Academic Requirement', shows 'Academic Requirement: 000001220', 'Description: Econ 100 Level Courses', 'Effective Date: 01/01/1900', and 'Status: Active'. The bottom section, 'Line Item', shows 'Line: 0010' with '+' and '-' buttons. Below this, there are several fields: '*Line Type:' with a dropdown menu set to 'Course Requirement'; 'Line Name:' with the value 'LI-LN Econ 100 Level Courses'; '*Short Description:' with the value 'Econ 100 L'; 'Description:' with the text 'LI - D Complete two of the following courses (minimum grade of B in each): ECON 120, ECON 140, ECON 142, ECON 150'; '*Report Description:' with the value 'LI - RD Econ 100 Level Courses'; and '*Report Long Description:' with the text 'LI - RLD Complete two of the following courses (minimum grade of B in each): ECON 120, ECON 140, ECON 142, ECON 150'. There are also 'Refresh Parentheses' and 'Find | View All' buttons in the Line Item section.

Line

The number determines the order in which the system evaluates the detail lines. The system generates a sequential line number. You can override the number, but it is best to insert the rows in the correct order.

Line Type

The line type that you select determines the format for this line, and it also determines the fields that become available for entry on the Line Item Detail page and Line Item Parm page. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires a substantial programming effort.

Each line type value is defined in the PeopleSoft Academic Advisement documentation.

See "Creating a Requirement Line Item" (PeopleSoft Campus Solutions 9.2: Academic Advisement).

Report Description and Report Long Description

Enter a report description and long description for the line item to be used by the enrollment requirement checking processes.

Defining Line Item Parameters

Access the Line Item Parm page (Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item Parm).

Image: Line Item Parm page (when the line type is Course Requirement)

This example illustrates the fields and controls on the Line Item Parm page (when the line type is Course Requirement). You can find definitions for the fields and controls later on this page.

If the line type is *Condition*, no fields appear on the Line Item Parm page.

Minimum GPA (minimum grade point average)

Enter the minimum GPA that is the minimum overall GPA requirement for classes that are selected to satisfy this requirement. (For example, if a requisite states that the student needs to take four Math 100-level classes with an overall GPA of 3.00 for a total of 12 units, then enter 3.00 in this field.) Any existing value in the Minimum GPA field on the Parameters page is supplied by default to the Line Item Parm page when you add a requirement line.

Minimum Units

Enter a value that represents the minimum total units for the courses that are selected to satisfy this requirement. If this line item references a course list, then the number of units represents the total number of units that all courses found on the student's record (that match the course list) must be worth.

Minimum Courses

Enter value that represents the minimum number of courses that are required for this requirement. If this line item references a course list, then the number of courses represents the total number of courses that all courses found on the student's record (that match the course list) must be worth.

Maximum Units Allowed

Enter a value that represents the maximum number of units that can be evaluated for this requirement. This is not a way to verify whether a student has exceeded a unit limit. This is a way to limit what is evaluated.

Maximum Courses Allowed

Enter a value that represents the maximum number of units that can be evaluated for this requirement. This is not a way to verify whether a student has exceeded a course count limit. This is a way to limit what is evaluated.

Min Grade Points/Unit (minimum grade points per unit)

Enter the minimum grade points per unit that each course must have to satisfy the enrollment requirement. For example, if you set this to *2.0*, then each course that is evaluated must be a grade C or greater. If a course is evaluated that does not meet this minimum, the requisite is not satisfied.

"Specifying Requirement Line Item Parameters" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Defining Line Item Course Detail

Access the Line Item Detail page (Curriculum Management > Enrollment Requirements > Enrollment Requirements > Line Item Detail).

Image: Line Item Detail page (when the line type is Course Requirement)

This example illustrates the fields and controls on the Line Item Detail page (when the line type is Course Requirement). You can find definitions for the fields and controls later on this page.

Line Detail Sequence

The system assigns a sequential number to a specific line detail. You can have multiple detail line sequences under a single line number. The line detail sequence affects the order in which the system evaluates each line item detail. Those with the lowest number are evaluated first.

Line Detail Type

Select the line detail type value that indicates the type of line detail. Values are:

CLST: Indicates a static course list that can be used to satisfy the requirement.

DLST: Indicates a dynamic, user-defined course list that the system draws from a subset of a student's transcript or academic record.

Course List	Appears with a line detail type of <i>CLST</i> . Enter the course list number that indicates a grouping of classes that the system can evaluate.
Derived Course List	Appears with a line detail type of <i>DLST</i> . Enter the derived course list that indicates a type of class that the system can draw from a subset of the student's transcript or academic record.
List Include Mode	Appears if you have multiple line item detail rows. Indicates how a previous line detail sequence interacts with a new line detail sequence. (This field is available for every line except the first one.) Choices include: <i>Y</i> , indicating union; <i>I</i> , indicating intersection; and <i>N</i> , indicating subtraction.
List Recall Mode	Appears with a line detail type of <i>DLST</i> . Indicates the conditions that the system uses to select courses from the student's transcript.
View	Appears with a line detail type of <i>CLST</i> . Click the View button to access the course list summary where you can review the course list details.

"Setting Up Requirement Line Item Detail" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Defining Enrollment Course Lists

This section provides an overview of enrollment course lists and discusses how to:

- Create course list descriptions.
- Link courses to the course list.
- Define details of courses in the course list.

Understanding Enrollment Course Lists

Create enrollment course lists only when you are creating enrollment requirements that have a course list requirement. Enrollment course lists should be set up before enrollment requirements are established.

Enrollment course lists and enrollment derived course lists are available. Enrollment course lists are static predefined lists of courses. Enrollment derived course lists are dynamically generated course lists as identified in a particular student's transcript. You can attach both types of course lists to enrollment requirements and can specify how many courses from the list (static or dynamic) are needed to satisfy specific enrollment requirements. Course lists and derived course lists are also used in the Academic Advisement application as a precursor for academic requirements.

Here is a high-level overview of how to define an enrollment course list:

1. Create the enrollment course list description on the Course List Description page.

2. Specify courses for the enrollment course list on the Course List Detail page, including a range of wild card courses.
3. Enter the parameters of each course list on the Course List Parameters page.

Related Links

"Setting Up Academic Course Lists" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Pages Used to Create Enrollment Course Lists

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Course List Description	RQ_COURSE_LIST_ENR	Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Description	Describe the course list.
Course List Detail	RQ_CRSE_LIST_DET	Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Detail	Link the actual courses to the course list. A course is specified either by a unique course ID or by using the wild card indicator.
Course List Parameters	RQ_CRSE_LST_DPR2	Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Parameters	Define the details of units, GPA, and other information for each course in the course list.

Creating Course List Descriptions

Access the Course List Description page (Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Description).

Image: Course List Description page

This example illustrates the fields and controls on the Course List Description page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web application interface for 'Course List Description'. It has three tabs: 'Course List Description' (selected), 'Course List Detail', and 'Course List Parameters'. The main content area contains the following fields and values:

- Course List:** 000000127
- *Effective Date:** 01/01/1900 (with a calendar icon)
- *Status:** Active (dropdown menu)
- *Description:** ART 140 and 142
- *Short Description:** ART Test
- Long Description:** Art 140 and 142 (with a scrollable text area)
- *Academic Institution:** PSUNV (dropdown) PeopleSoft University
- Academic Career:** UGRD (dropdown) Undergraduate
- Academic Group:** LBART (dropdown) College of Liberal Arts
- Subject Area:** (empty dropdown)
- Catalog Nbr:** (empty dropdown)

At the top right of the form, there are navigation controls: 'Find | View All', 'First', '1 of 1', and 'Last', along with '+' and '-' buttons.

Course List

The system generates a unique course list number each time that you add a new course list. You should use the system-generated course list number rather than entering your own course list number.

Effective Date

Enter an effective date for this course list. The effective date must be equal to or less than the effective date of the enrollment requirement to which this course list is attached.

Status

Select a status for this course list. Select *Active* when adding a new course list. Select *Inactive* only if your institution no longer uses this course list. If you want to inactivate a course list, you also need to remove all references to the course list on active Requirement Line Item Detail pages.

To identify which Requirement Line Item Detail pages reference a particular course list, run the Reverse Engineering report.

Academic Institution

The system supplies the academic institution by default. In Add mode, you can change this value.

Academic Career, Academic Group, Subject Area, and Catalog Nbr (catalog number)

Academic career, academic group, subject, and catalog number are not used by the system in the analysis of the course list, but are helpful tools for when you are searching the database for the appropriate course list to attach to an enrollment requirement.

You may want to use these fields to signify the course to which the course list will be attached, or to specify department "ownership" of the course list.

Linking Courses to the Course List

Access the Course List Detail page (Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Detail).

Image: Course List Detail page

This example illustrates the fields and controls on the Course List Detail page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface with three tabs: 'Course List Description', 'Course List Detail' (selected), and 'Course List Parameters'. Below the tabs is a header bar with 'Find | View All' and '1 of 1'. The main content area is divided into two sections. The top section contains a table with the following data:

Course List:	000000246	Description:	Math requisite
Effective Date:	01/01/1980	Status:	Active

The bottom section is titled 'Course List Details' and contains several fields and controls:

- *Course Sequence: WildCard Indicator Display Wildcard Courses
- Academic Institution: PSUNV PeopleSoft University
- Academic Group:
- Subject: Mathematics
- Catalog Nbr: Report Description:
- Include Cross-Listed Courses

Fetch

When you access this component, the system loads only effective-dated rows, without any detail. This is to enhance performance for those course lists that have hundreds of course sequence rows. Click the Fetch button to retrieve and display the course sequence data, including the related detail parameters for the effective-dated row.

Course Sequence

This number acts as a course specification, indicating either a specific course ID or a group of equivalent courses. Each course sequence number indicates a unique component of the course list and can be arbitrarily assigned except when you are using a line type of sequential restriction on the Requirement Line Item page. If the sequence is important, enter the correct course order here so that the student must take the courses in the specified order.

WildCard Indicator

Select this check box to indicate a wild card course, rather than a specific course ID.

Academic Group

Appears if you select the WildCard Indicator check box. Specify an academic group for the course offering. All courses with this academic group may be considered.

Subject	Appears if you select the WildCard Indicator check box. Specify an academic subject for the course offering. All courses with this subject may be considered.
Catalog Nbr (catalog number)	Appears if you select the WildCard Indicator check box. Enter the required portion of the catalog number that is up to ten characters (NNNNAAAAA), where the first four characters are numeric (leading zeroes are blank padded) and the last six characters a an alphanumeric suffix. For example, a catalog number of 3## indicates that any 300-level course is acceptable, including 301A, because suffixes are ignored when a number wild card is specified unless a suffix value is exclusively indicated.
Course ID	If the WildCard Indicator check box is cleared, use this field to specify the exact course ID.
Include Equivalent Courses	Select for the system to include in its evaluation both the course ID that you specify and all courses that are set up as equivalent to the selected course ID for this requisite. If you select this check box, the following fields become unavailable: Term, Associated Class, and Topic ID. Clear this check box to further narrow your course parameters with the Term, Associated Class, and Topic ID fields. For example, you can specify not only the course ID, but also the term in which the specific course must be taken.
Term	Enter the term in which the student must take the course that you specify for the course to be used in this enrollment course list. Leave this field blank to return all values.
Associated Class	Enter the associated class number (of the course that you specify) that the student must take for the course to be used in this enrollment course list. For class associations, indicate a term to prompt off valid values. Leave this field blank to return all values. <hr/> Note: You cannot enter 9999, because this special associated class number can be associated with any other associated class number and is never an enrollment section. <hr/>
	See Defining Class Associations .
Topic ID	Enter the topic ID (of the course that you specify) that the student must take in order for the course to be used in this enrollment course list. This field prompts from the topics that are defined in the course catalog. Leave this field blank to return all values.
Include Cross-Listed Courses	This check box is available when the WildCard Indicator check box is selected. Select the Include Cross-Listed Courses check box to have cross-listed courses evaluated for purposes of

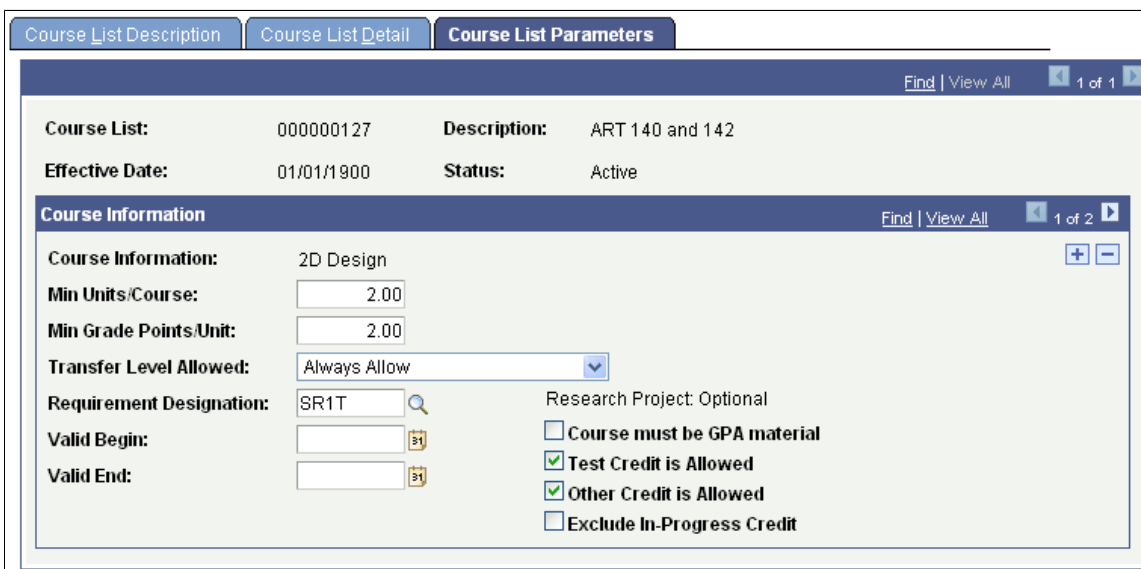

satisfying a requisite. By default, the check box is cleared and cross-listed courses are not evaluated or used to satisfy the requisite.

Defining Details of Courses in the Course List

Access the Course List Parameters page (Curriculum Management > Enrollment Requirements > Enrollment Course Lists > Course List Parameters).

Image: Course List Parameters page

This example illustrates the fields and controls on the Course List Parameters page. You can find definitions for the fields and controls later on this page.

Min Units/Course (minimum units per course) Enter the minimum number of units that the course to which this line refers must be worth to be used in the course list or as a wild card course. For example, if you set this to 3, the system uses only courses for this line that are worth three units each or greater. If the system finds a course on the student's record that meets the course list, but it is only two units, the course cannot be used to satisfy this requirement.

Min Grade Points/Unit (minimum grade points per unit) Enter the minimum grade points per unit that the corresponding course or wild card course must have to be used in the analysis. For example, if you set this to 2.0, then the course must be a grade C or greater to fulfill this requisite.

Transfer Level Allowed Enter a value that indicates what type of transfer credit (if any) is acceptable. Values are:

Always Allow: All applicable transfer credit can be used to satisfy the requisite.

Never Allow: Transfer credit can never satisfy the requisite.

Two Year Institution Only: Only transfer credit from two-year institutions can be used to satisfy the requirement.

Four Year Institution Only: Only transfer credit from four-year institutions can be used to satisfy the requirement.

Requirement Designation

Select the requirement designation that the course or wild card course must have. For example, if you specify a wild card course of *ARCH 4##* on the Course List Detail page, then specify a requirement designation of *DSGN* on the Course List Parameters page. Only ARCH 400 - level courses that have a designation of *DSGN* (with a grade of Satisfied) meet this requisite.

Requirement designation values are defined on the Requirement Designation Table page.

See [Defining Requirement Designations](#).

Valid Begin and Valid End

Enter dates to specify the range of dates when the course must be taken to satisfy the requisite. Leaving these fields blank means that the courses can be taken anytime. When the system compares the date range, it uses the start and end date of the term in which the course was taken. For transfer courses, the system uses the start and end date of the articulation term.

Course must be GPA material
(course must be grade point average material)

Select to require that the course taken for this requisite be applied toward the student's career grade-point-average calculation. For instance, any courses that a student took for a pass or no pass grade basis could not be used to meet this requisite if this grade basis does not have the Include in GPA check box selected on the Grading Scheme table page.

Test Credit is Allowed

Select to allow test credit courses to be evaluated.

Other Credit is Allowed

Select to allow other credit courses to be evaluated.

Exclude In-Progress Credit

If the course taken to satisfy this course list must be fully graded for the system to consider it valid, select this check box. If this check box is cleared, the system will include in analysis and "pass" all parameters any non-graded course, as well as any graded course that has the In-Progress flag turned on (such as Incomplete), and that match the course ID or wild card course on the Requisite Detail page. Leaving this check box cleared is the least restrictive, and allows for maximum user/student flexibility.

Viewing Enrollment Requisite Summary Information

This section lists the pages used to:

- Review summary rules for enrollment requirement groups.
- Review summary rules for enrollment requirements.
- Review summary rules for enrollment course lists.

Generating a Reverse Engineering Report

This section provides an overview of the Reverse Engineering Report and discusses how to generate the report.

Related Links

"Producing a Reverse Engineering Report" (PeopleSoft Campus Solutions 9.2: Academic Advisement)

Understanding the Reverse Engineering Report

Use the Reverse Engineering Report page to search for a requirement, course, course list, or condition that the system is using. You can search to find out which requirement group contains a specific requirement; which course list contains a specific course; which requirement contains a specific course list; and which requirement group, requirement, or requirement line contains a specific condition.

The Reverse Engineering reports include enrollment and academic advisement requirement groups, requirements, and course lists.

To produce a Reverse Engineering report:

1. Enter the report type and any other general parameters on the Reverse Engineering Report page.
2. Click the Run button to process the report.

Page Used to Generate a Reverse Engineering Report

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Reverse Engineering Report	RUNCTL_SRREVENG	<ul style="list-style-type: none"> • Academic Advisement > Advisement Reports > Reverse Engineering • Curriculum Management > Enrollment Requirements > Reverse Engineering Report 	Enter the parameters that are to capture the data that you want to review. Select a report type to enable the page to display the appropriate parameter fields.

Generating the Enrollment Requirement Group Report

This section provides an overview of the enrollment requirement group report and discusses how to generate the report.

Understanding the Requirement Group Report

The Requirement Group report lists the contents (or structure) of a specific enrollment requirement group or all enrollment requirement groups that meet the criteria established for the report. This report provides an easy way to verify the enrollment requirement groups for any institution, subject, or catalog number.

For example, if you need a list of all the enrollment requirement groups defined for courses at PSUNV with a subject of BIOLOGY, you can run this report.

Here is a high-level overview of how to run the requirement group report:

1. Enter your processing parameters for the requirement group report.
2. Specify details about how much or little you want to print about each enrollment requirement group.
3. Click the Run button to process the report.

Page Used to Generate the Requirement Group Report

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Requirement Group Report	RUNCTL_SRENRADV	Curriculum Management > Enrollment Requirements > Requirement Group Report > Requirement Group Report	Enter your processing parameters for the requirement group report.

Generating the Requirement Group Report

Access the Requirement Group Report page (Curriculum Management > Enrollment Requirements > Requirement Group Report > Requirement Group Report).

As of Date

The system automatically populates this field with the current date, but you can modify it.

The report accurately reflects the requirements contained in the specified requirement group (or requirement groups that meet the search criteria) as of this date.

Requirement Group

Enter the requirement group for this report. Each enrollment requirement group consists of detail lines pointing to conditions, courses, or requirements as well as parameters that include unit and course requirements.

Note: If you enter a requirement group number, then the remaining search fields on the page become unavailable. If you do not enter a requirement group number, then the remaining search fields are available for entry and you can use them to identify a set of enrollment requirement groups.

Academic Institution, Academic Group, Subject, Catalog Nbr (catalog number)

Enter the institution, group, subject, or catalog number for which you want to report related enrollment requirement groups. Leave this field blank to return all values (wild card).

Honor Blank Values

Select to indicate that the blank fields on this page represent actual values. For example, if the check box is selected and the Academic Group field is left blank, then the report does not contain enrollment requirement groups with an academic group because no academic group has been specified. If the check box is not selected, the blank field acts as a wild card and every

enrollment requirement group with an academic group in the specified academic institution is contained in the report.

Description Options

Use this group box to control how descriptions are presented in the summary report.

Values for these fields are delivered with your system as translate values. Do not modify these values. Any modifications to these values require a substantial programming effort.

Print Group Level

Select the type of requirement group description to be included in the report. Values are:

- *All*: Indicates that the standard, short, and long descriptions on the Requirement Group page, plus the catalog description print on the report.
- *Catalog*: Indicates that the description on the Requirement Group page prints on the report.
- *All Except Cat*: Indicates that the standard, short, and long descriptions on the Requirement Group page print on the report.
- *Long*: Indicates that the long description on the Requirement Group page prints on the report.
- *Standard*: Indicates that the description on the Requirement Group page prints on the report. This value appears by default.

Print Requirement Level, Print Line Level , Print Course Level

Select the type of requirement level, requirement line, and course list description to be included in the report. Values are:

- *All*: Indicates that the standard, short, and long descriptions on the Requirement page, Requirement Line Item page, or Course List Description page print on the report.
- *Long*: Indicates that the long description on the relevant page prints on the report.
- *Standard*: Indicates that the description on the relevant page prints on the report. This value appears by default.

Detail Options

Use this group box to control how details are presented in the summary report.

Print Group Level, Print Requirement Level , Print Line Level

Select to print the requirement group detail, requirement detail, or line detail on the report. If the check box is cleared, no group detail prints.

Course List Detail Level

Select how the course list detail should appear in the report. Values are:

- *None*: Converts to List and Courses.
- *List and Courses*: Indicates that the course list, plus specific courses print on the report. This value appears by default.
- *List and Courses with Detail*: Indicates that the course list, plus specific courses with detail print on the report.
- *List Only*: Indicates that only the course list prints on the report.
- *List Only with Detail*: Indicates that the course list with detail prints on the report.

Values for this field are delivered with your system as translate values. Do not modify these values. Any modifications to these values require a substantial programming effort.

Generating the Requirement Report

This section provides an overview of the enrollment requirement report and discusses how to generate the report.

Understanding the Requirement Report

The Requirement report lists the contents (or structure) of a specific enrollment requirement or all of the academic requirements that meet the criteria established for the report. This report is an easy way to verify the academic requirements that you have defined for enrollment requisites. For example, if you need a printout of all of the enrollment requirements that are defined at PSUNV with an academic group of LBART you can run this report.

While preparing to print this report, you can request that the requirements, lines, and courses be summarized in generalized terms or in specific detail. The parameters that you define for the requirement advisement report appear on the report.

Here is a high-level overview of how to run the requirement group report:

1. Select the academic requirement or enter other general parameters on the Requirement Report page.
2. Enter the description and detail options.
3. Click the Run button to generate the report.

Page Used to Generate the Requirement Report

Page Name	Definition Name	Navigation	Usage
Requirement Report	SSR_RUNCTL_RQR_ADV	Curriculum Management > Enrollment Requirements > Requirement Report > Requirement Report	Enter your processing parameters for the requirement report.

Generating the Requirement Report

Access the Requirement Report page (Curriculum Management > Enrollment Requirements > Requirement Report > Requirement Report).

As of Date

The system automatically populates this field with the current date, but you can modify it.

The report accurately reflects the requirement lines in the specified requirement (or requirements that meet the search criteria) as of this date.

Academic Requirement

Enter the requirement for this report. Each enrollment requirement consists of detail lines pointing to conditions as well as parameters that include unit and course requirements.

Note: If you enter a requirement number, then the remaining search fields on the page become unavailable. If you do not enter a requirement number, then the remaining search fields are available for entry and you can use them to identify a set of enrollment requirements.

For information about other fields on this page, refer to the field descriptions for the Requirement Group Report page in the previous section.

Generating the Entity Group Table and Condition Table Reports

The Entity Group Table report and Condition Table report display all the information about the appropriate data defined in the tables for the particular institution and the as of date.

To generate an Entity Group Table or Condition Table report:

1. Select the as of date and institution on the Entity Group Table and Condition Table Reports page for which you want to report conditions.
2. Click the Run button.
3. Select either the Condition Table Report or the Entity Group Table Report process to specify the report type.
4. Click the OK button to process the report.

Page Used to Generate the Entity Group Table and Condition Table Reports

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Entity Group Table and Condition Table Reports	SSR_RUNCTL_MIS_RPT	Curriculum Management > Enrollment Requirements > Miscellaneous Requisite Report > Entity Group Table and Condition Table Reports	<p>Process one or both enrollment requirement administrative reports: the Entity Group Table report and the Condition Table report.</p> <p>The Entity Group Table report lists all the entity groups for the institution based on the as of date that you enter.</p> <p>The Condition Table report lists all the dynamic conditions for the institution based on the as of date that you enter.</p>

Processing the Entity Group Table and Condition Table Reports

Access the Entity Group Table and Condition Table Reports page (Curriculum Management > Enrollment Requirements > Miscellaneous Requisite Report > Entity Group Table and Condition Table Reports).

As of Date

The report accurately reflects the retrieved information as of this date. This field is automatically populated with the current date, but you can modify it. A value is required in this field.

Chapter 7

Setting Up Program Enrollment

Understanding Program Enrollment

In order to gain the most value from the documentation about Program Enrollment, we recommend that you are familiar with the following features:

- Basic PeopleSoft tree structure, vocabulary and components.
- Campus Solutions academic structure.
- Campus Solutions course catalog.
- Basic academic structure security.

We also recommend that you access the Activity Management documentation. See:

[Setting Up an Activity Management Framework](#)

[Understanding Activity Management](#)

Program Enrollment describes an educational model where students must complete a strictly defined set of courses towards their academic objective in a specified sequence. Requirements must also be completed at certain points in the program and are often structured in a series of levels or stages, where one stage must be successfully completed before a student can progress and enroll in the next set of courses, examinations, or other academic activities. In core Campus Solutions, enrollment is largely a course driven process in which students select courses (with some controls and restrictions) that apply toward degree requirements. The Program Enrollment feature provides a flexible structure that can enable institutions to build frameworks that use various program requirements to organize curriculum and provide the structure to order and control enrollment.

At the center of the setup for Program Enrollment are two important components:

- **Academic Item Types:** Academic programs that follow the Program Enrollment model have various items like courses, milestones, study periods, and groups of courses, for example, that organize what students are required to enroll in and when they are required to enroll. Academic Item Types allow you to define the attributes and to establish the role and level of each of these types of items and build them into a program structure hierarchy.
- **Academic Item Registry (AIR):** The foundation of program enrollment setup is the Academic Item Registry (AIR). Use AIR to define the framework, content, and rules for a *program of study* – essentially a set of academic requirements that define what courses a student needs to take and the sequence in which they need to be taken and satisfactorily completed.

The features described in this documentation, principally Academic Item Types and the Academic Item Registry, allow you to create program offerings using hierarchical frameworks that support institutional policies and practice for recording and calculating results, tracking student progress through a program of study, and ultimately assessing whether a student is eligible for the relevant

degree or award upon completion. These hierarchies are organized using parent child relationships, in which the various levels can contribute to the next level. These hierarchies can be generated and viewed as a *tree* that represents the various levels of a program of study.

Image: Program Structure example page

This is an example of the Program Structure page.

The image shows a screenshot of the 'Program Structure' page. At the top, a tree view displays the hierarchy: 100 - Graduate Business (highlighted in yellow), 200 - Year One, 220 - Term One Year One, 240 - Term Two Year One, 300 - Year Two, 320 - Term One Year Two, and 340 - Term Two Year Two. Below the tree is a table with columns: Expand / Collapse, Item Description, Item Type, Item ID, and Format Node. The table lists the program structure from 'Business Administration - Graduate' down to 'and BUSADM 625B: Intl Business Communications'. Annotations with arrows point to specific parts: 'Root Program of Study level' points to the top row; 'Year One and Two Direct children of the Program of Study' points to the Year One and Year Two rows; 'Each Year has two child Semesters, each with child courses/groups of courses' points to the Semester rows under each year.

[-]	- or Corporate Internship)	Student Milestone	00000001808	
[-]	- and BUSADM 713: Forecasting	Course	00000001807	
[-]	- and Communications Competency	Course Cluster	00000001783	
[-]	- BUSADM 525: Manag Writing	Course	00000001793	
[-]	- and BUSADM 625A: Business Communications	Course	00000001801	
[-]	- and BUSADM 625B: Intl Business Communications	Course	00000001802	

The example above shows a program constructed based on the Academic Item Registry. This particular component (Build Program by Format) shows the tree-like framework of the program and, in the grid section, shows how the parent and child data represent the program structure depicted in the tree.

The Academic Item Registry allows an administrative user to generate a full view of a program's structure in a Program Template. AIR setup represents an extensive way for an institution to categorize all of the objects that are used to define and constitute a full program offering. This structure is used to organize enrollment transactions.

Image: Template example page

This is an example of the Template page.

Other features that comprise the fundamental support of Program Enrollment setup are:

- Program format
- Enrollment cohort
- Enrollment category
- Item attributes
- Course group

Understanding the Academic Item Registry

The Academic Item Registry (AIR) is used to define the framework, content, and rules for a ‘program of study’, such as a bachelor’s or master’s degree, or set of academic requirements that specify what courses a student needs to take and when they need to be taken, as well as the rules for calculating results and degree or qualification awards. The AIR allows you to organize academic requirements into a hierarchy that can be used to provide a program template for driving and controlling enrollment activity.

The AIR provides a flexible way for your institution to define all of the objects that constitute a program offering. These entries must be categorized and grouped in order to define program hierarchies. The categories are established by system and user defined Academic Item Types that allow you to define the types of attributes an item can have, and to establish the role and level of an item in a program hierarchy.

Academic item types can:

- Represent a level in a program of study hierarchy, the program itself, a year or stage, a list of courses, or a single course.
- Provide user defined values with configurable attributes.
- Allow you to create as many items/levels as you need to define your program offerings.
- Point to existing Campus Solutions *core* objects such as courses, components, and milestones.
- Be configured to represent a level in a structure where statistics (for example, credits, results) can accumulate.

Although you can define your own academic item types, some item types are delivered as system data. For further information,

See [Using Delivered Academic Item Types](#)

This documentation discusses the AIR (and supporting features) and its role as a tool to define and maintain the programs of study for an institution.

The AIR also provides the data or *academic items* that feed into the student data structure—the Academic Progress Tracker (APT).

See [Understanding the Academic Progress Tracker](#)

Setting Up Academic Item Types

This section discusses how to:

- Define academic item types.
- Define academic item type attributes.
- Use delivered academic item types.

Pages Used to Set Up Academic Item Types

Page Name	Definition Name	Navigation	Usage
Academic Item Type	SSR_ITEM_TYPE	Set Up SACR > Product Related > Student Records > Program Enrollment > Academic Item Type > Academic Item Type	Define academic item types.

Page Name	Definition Name	Navigation	Usage
Attributes	SSR_ITEM_TYPE_DEFN	Set Up SACR > Product Related > Student Records > Program Enrollment > Academic Item Type > Attributes	Define academic item type attributes.

Defining Academic Item Types

Access the Academic Item Type page (Set Up SACR > Product Related > Student Records > Program Enrollment > Academic Item Type > Academic Item Type).

Image: Academic Item Type page

This example illustrates the fields and controls on the Academic Item Type page. You can find definitions for the fields and controls later on this page.

Academic Item Type		Attributes				
Academic Item Type	Description	Short Description	*Item Order	Program Format Tree Node		
PRG	Program of Study	Program of Study	100	<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>

MILESTONE	Student Milestone	Student Milestone	900	<input type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>

Define academic item types (by installation) on the Academic Item Type page by inserting new rows in a grid. When you insert a new row, you are taken to the Attributes page to define the detail for the item type. The Academic Item Type page also provides a summary view of all academic items. You can also update Item Order and Program Format Tree Node values on this page. The default sort order for the grid is by Item Order so that you can quickly scan items to verify logical order.

Note: You cannot delete an academic item type row here if an academic item of this type has been created in the Academic Item Registry.

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

Description and Short Description

Click the Description or Short Description links to access the Attributes page and further define the item type.

Item Order

Enter a number to define the hierarchy and sort order of the items in the user interface. The lowest number represents the highest node – for example, the number that you enter for YEAR is lower than the number you enter for COURSE.

The potential children of an academic item type must have an item order greater than that of the item type itself. You define child item types for an academic item type in the Item Type Matrix component.

See [Identifying Child Item Types and Syncing Entities](#)

We advise you to increment child item orders by ranges of 50 or 100, ensuring that you have space between two levels so that you can insert additional items in your structure if needed in the future. If two academic items are at the same level in your program hierarchy, they can bear the same Item Order number.

PRG item type is delivered with an item order of 100 but you can change the item order. The system ensures that the item order for PRG is always the lowest.

For more information about delivered item types,

See [Using Delivered Academic Item Types](#)

Program Format Tree Node

Select to identify an academic type as one that can be used to construct a Program Format definition. The Program Format Tree Node field also appears on the Attributes page. For more information about this field,

See [Setting Up Program Formats](#)

See [Defining Academic Item Type Attributes](#)

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

Defining Academic Item Type Attributes

Access the Attributes page (Set Up SACR > Product Related > Student Records > Program Enrollment > Academic Item Type > Attributes).

Image: Attributes page

This example illustrates the fields and controls on the Attributes page. You can find definitions for the fields and controls later on this page.

AIR Entity SCC_ENTITY_20120613165411

APT Entity SCC_ENTITY_20120525001442

Extension Record SSR_AIR_H_CMPNT

	Associated Field	Required
1	SSR_COMPONENT	<input checked="" type="checkbox"/>

Use the Attributes page to define the types of attributes that are available for an item in the AIR, and, through the Extension Record, what type of external (to AIR) objects can be referenced by the item (such as courses or milestones).

See [Defining Academic Item Type Attributes](#)

The setup options that you select on the Attributes page impact the Academic Item Registry component (AIR).

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

System Data

If an academic item type is delivered as system data, the System Data check box is selected and is not available for edit.

See [Using Delivered Academic Item Types](#)

Item Order

Define the value for this field on the Academic Item Type page. You can update the value here.

Program Format Tree Node

This check box identifies an academic item type as one that is used to define a Program Format, which provides the framework for a program of study, based on level, such as year or stage, study period or semester.

Grading Item Type

If you select this check box, academic items of this type can be assigned as child grading items for another academic item type using the Grading Academic Items grid on the Item Details page in AIR. When selected, this check box makes the Grading Items check box in the Item Type Properties group box unavailable for editing—an academic item that is identified as a grading item cannot itself have grading items attached to it. A grading academic item type could represent a set of courses for which a result might need to be calculated outside of the regular, structured program requirements. For example, a Chemistry student might need to achieve an average score of 70 in all courses taken from the Chemistry department. A grading academic item type could also be used to determine if a student was eligible for some kind of degree or certificate award.

Item Type Properties

Credits

If you select this check box, the Credits field is available for the academic item on the Academic Items Registry page. This allows you to assign a credit value to an academic item which is also reflected in student's APT instance (if the item is added to it). The field is disabled for COURSE items, because a course credit value is established and maintained in the course catalog.

Degree

If you select this check box, the Degree field is available for the academic item on the Academic Items Registry page, allowing you to assign the item a Degree value in AIR. You would typically select the check box only for an item type that represents an overall program of study leading to a degree or certificate, or for an item type that represents an element of a program (for example, a year or stage) for which a student might receive an award (or intermediate degree) during progress towards the overall degree/certification objective.

Note: Note: Currently this field is informational only.

Instructions	Select this check box to enable the Instructions field on the Item Details page in the AIR component.
Item Parameters	Select this check box to enable the Academic Item Parameters grid on the Item Details page in the AIR component. This check box is disabled for the delivered COURSE item type. See Using Delivered Academic Item Types
Child Academic Items	If you select this check box, academic items of this type can have other academic items associated with them as children—the Child Academic Items grid becomes available in AIR on the Item Details page. For example, an item representing a Year or Stage would probably need to have child items such as courses. For COURSELIST item types, the Child Academic Items check box is selected and not available for edit.
Show Connectors	Select this check box to activate AND/OR connectors in the AIR Child Academic Items grid.
Add parent before children	This property is used in the student self-service user interface. When the check box is selected, no child item of the item can be selected until the item itself is added to APT. For example, if a CONCENTRATION has four child courses, you must first add the CONCENTRATION item to APT before you can add the child course. This serves two main purposes: It provides another way of representing the parent/child dependency to self-service users and allows you to attach rules to a parent item that can enforce eligibility before course selection—for example, a student might need a particular number of credits in order to select a particular concentration. <hr/> Note: Select this check box only for an academic item type that is truly an optional selection, regardless of the child items and enrollment categories. <hr/>
Results	If you select this check box, results can be attached to academic items of this type in the Item Type Usage grid on the Result Type page. See Setting Up Result Types
Child Grading Items	If you select this check box, the Grading Academic Items grid is available in AIR on the Item Details page.
Requires Enrollment Category	If you select this check box, items of this type require an Enrollment Category code when they are inserted as child items of another item. See Defining Academic Item Details

Activity Management Mapping

These mapping fields allow you to map an academic item type to one of the delivered Activity Management Content Types. This mapping is used when defining Result Types.

See [Setting Up Result Types](#)

See [Setting Up an Activity Management Framework](#)

Content Definition	Currently only the Coursework content definition is available.
Content Type	This field lists all Activity Management Content Types flagged as system data.

Entities

AIR Entity and APT Entity	A system generated ID for the entity that is created for this academic item ID. Program Enrollment uses the Entity Registry to access AIR and APT data. See "Setting Up Entity Registry" (PeopleSoft Campus Solutions 9.2: Campus Community)
----------------------------------	--

Note: For information about the Sync Entities process and when you must run the process,

See [Identifying Child Item Types and Syncing Entities](#)

See [Using Item Attributes to Extend AIR Data Elements](#)

See [Using Item Attributes to Extend APT Instance Header Data Elements](#)

Note: Each time that you create a new academic item type or make changes to an existing academic item type, you must run various entity sync processes. The steps you must follow are documented in the "Identifying Child Item Types and Syncing Entities" section.

See [Identifying Child Item Types and Syncing Entities](#)

Using Academic Item Type Extensions

An academic item type can point to an existing Campus Solutions object. The AIR structure can use core functionality, such as courses and milestones and Program Enrollment features such as Course Groups.

An object that is created outside of the AIR, for example, a course, must still be *registered* within the structure. To do this, you create academic items that are linked to the external object through an extension record. The extension record contains the necessary keys to allow the external (to AIR) object to be referenced within the hierarchy. The addition of an extension record (and associated fields) to an academic item type opens up the indicated fields in the AIR, providing the link to the external object.

The Extension Record field prompts against PS record definitions with the pattern `%_AIR_H_%` (where % represents the record prefix and name/suffix). This is the recommended naming convention for any custom extension that you add.

The following extension records are delivered:

- SSR_AIR_HDR_PRG: Program Extension: Used by the delivered Academic Item Type PRG. Used to store Program (item type) specific fields.

Image: Extension Record SSR_AIR_HDR_PRG example

This example illustrates a SSR_AIR_HDR_PRG extension record.

Extension Record SSR_AIR_HDR_PRG		
	Associated Field	Required
1	SSR_AVAIL_TO_USE	<input checked="" type="checkbox"/>
2	SSR_FORMAT_ID	<input checked="" type="checkbox"/>
3	SSR_LAST_ADM_DT	<input type="checkbox"/>
4	SSR_LAST_PRS_DT	<input type="checkbox"/>

- SSR_AIR_H_CRSE: Course Catalog extension: Used by the delivered Academic Item Type COURSE and references a Course defined in the Course Catalog. As delivered, you can create academic items that point to a course ID or a course offering or to a course ID/offering with a specific Course Topic ID.

Note: Course ID is always required (Required check box is selected and not available for edit).

Image: Extension Record SSR_AIR_H_CRSE example

This example illustrates a SSR_AIR_H_CRSE extension record.

Extension Record SSR_AIR_H_CRSE		
	Associated Field	Required
1	CRSE_ID	<input checked="" type="checkbox"/>
2	CRSE_OFFER_NBR	<input type="checkbox"/>
3	CRS_TOPIC_ID	<input type="checkbox"/>

- SSR_AIR_H_CMPNT: Course Component extension: Allows you to create academic items at a level below the course. Academic items representing Course Components can be built and graded in AIR and then be available for use in calculating the overall course and for evaluation outside of the course. For example a student might need a CHEM 101 LAB score of 65 in addition to an overall course result of 60, in order to pass a particular requirement.

Image: Extension Record SSR_AIR_H_CMPNT example

This example illustrates a SSR_AIR_H_CMPNT extension record.

Extension Record SSR_AIR_H_CMPNT		
	Associated Field	Required
1	SSR_COMPONENT	<input checked="" type="checkbox"/>

- SSR_AIR_H_CGRP: Course Group extensions: Used by the delivered COURSEGROUP Academic Item Type, and allows you to create academic items that reference the Course Group feature which makes available loosely defined group of courses (using wild card indicators within a program hierarchy).

See [Setting Up Course Groups](#)

Image: Extension Record SSR_AIR_H_CGRP example page

This example illustrates a SSR_AIR_H_CGRP extension record.

Extension Record SSR_AIR_H_CGRP		
	Associated Field	Required
1	SSR_CRS_GRP_ID	<input checked="" type="checkbox"/>

- SSR_AIR_H_MLSTN: Milestone extension: Used by the delivered MILESTONE Academic Item Type, and allows you to create academic items that point to existing Milestone records, making the Milestone itself available in a program hierarchy.

Image: Extension Record SSR_AIR_H_MLSTN example page

This example illustrates a SSR_AIR_H_MLSTN extension record.

Extension Record SSR_AIR_H_MLSTN		
	Associated Field	Required
1	MILESTONE	<input checked="" type="checkbox"/>

Using Delivered Academic Item Types

The following academic item types are delivered as system data. The item order value shown for each item can be modified if needed.

- PRG: Program of Study:

- PRG is used for all academic items that represent an overall educational objective and that comprise all of the child items necessary to achieve the objective.

Note: You must define an academic item with an Academic Item Type of PRG for every Program of Study that you want to build in AIR.

Image: Academic Item Type PRG example

This example illustrates an academic item type of PRG.

	Associated Field	Required
1	CRSE_ID	<input checked="" type="checkbox"/>
2	CRSE_OFFER_NBR	<input type="checkbox"/>
3	CRS_TOPIC_ID	<input type="checkbox"/>

- The main purpose of the COURSE academic item is to serve as a pointer to an established Course ID, Course offering (CRSE_OFFER) or Course topic. Because a course has predefined unit/credit value (at the CRSE_CATALOG level) the credits and so on for a COURSE item are always inherited directly from there—the item has no credit value itself.
- Attribute Restrictions:

Cannot have Credits or Item Parameters, because these define a credit value that could contradict the Course Catalog definition. The Credits check box and the Item Parameters check box are not available for selection.

Child Items are allowed, because AIR can be used to support a model where components could be graded, (themselves defined as academic items) rolling up to a parent course.

Cannot have Grading Items.

The Requires Enrollment Category check box is selected and cannot be edited.

- COMPONENT: Component
 - COMPONENT is used to build Course components in AIR, such as Lectures and Labs. When a COMPONENT item type is built in AIR, the component field is visible and prompts against the XLATABLE for the field SSR_COMPONENT

Image: Academic Item Type COMPONENT example page

This example illustrates an academic item type of COMPONENT.

APT Entity SCC_ENTITY_20120525001532

Extension Record SSR_AIR_H_CGRP

	Associated Field	Required
1	SSR_CRS_GRP_ID	<input checked="" type="checkbox"/>

- The main purpose of the COURSEGROUP item type is to serve as a placeholder (or pointer) to a loosely defined list of courses defined using wildcard indicators. Some attributes are therefore restricted.

- Attribute Restrictions:

Cannot have Child Academic Items or Grading Items.

The Requires Enrollment Category check box is selected and cannot be edited.

- COURSELIST: Course List

- COURSELIST is used to define a list of courses that can be attached to another academic item.

Image: Academic Item Type COURSELIST example

This example illustrates an academic item type of COURSELIST.

The screenshot shows the 'Academic Item Type' configuration window for 'COURSELIST'. The window has two tabs: 'Academic Item Type' and 'Attributes'. The 'Attributes' tab is active. At the top right, there are navigation controls: 'Find | View All', 'First', '18 of 24', and 'Last'. Below the navigation, there are several fields and checkboxes:

- Academic Item Type:** COURSELIST
- *Description:** Course List
- Short Description:** Course List
- *Item Order:** 600
- Program Format Tree Node
- Grading Item Type
- System Data

Below these fields is a section titled 'Item Type Properties' with a list of checkboxes:

- Credits
- Degree
- Instructions
- Item Parameters
- Child Academic Items
 - Show Connectors
 - Add parent before children
- Results
- Child Grading Items
- Requires Enrollment Category

At the bottom of the window, there are two lines of text:

- AIR Entity SCC_ENTITY_20120613165445
- APT Entity SCC_ENTITY_20120525001514

- The COURSELIST academic item type is provided for defining academic items that represent lists of courses. While user defined items can be used for this same purpose, various system edits are triggered by using the delivered COURSELIST item.

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

- Attribute Restrictions:
 - Only COURSE items can be assigned as child items.
 - Cannot have Grading Items.
 - The Child Academic Items check box is selected and cannot be edited.
 - The Requires Enrollment Category check box is selected and cannot be edited.

- MILESTONE: Student Milestone
 - MILESTONE points to a predefined Milestone definition.

Image: Academic Item Type MILESTONE example

This example illustrates an academic item type of MILESTONE.

Academic Item Type COURSEGROUP

Description Course Group

Item Order 600

System Data

Program Format Tree Node

This item is not set up to have child academic items.

Identifying Child Item Types

As explained earlier in the “Setting Up Academic Item Types” section, the Item Order value of an academic item (defined on the Academic Item Type page) indicates which items are potential child items for that academic item.

After you create your academic item types, use the Item Type Matrix component to determine which item types (those with a higher item order than the item itself) can be defined as child item types for each academic item.

When the Child Academic Items check box is cleared on the Attributes page for an academic item type, a message appears in the Item Type Matrix for that item type: *This item is not set up to have child academic items.*

The Valid Child Item Types grid is refreshed whenever the component is opened. For each item type, the system retrieves all other academic item types with an item order (SSR_ITEM_TYPE.SSR_ITEM_LVL) that is greater than its own item order.

Select

Select this check box to identify the item as a valid child for the academic item type.

Note: Only item types for which this check box is selected are listed as potential child items in any prompt for this item. This applies in:

Program Format definition.

Academic Item Registry: adding child elements

Academic Progress Tracker: adding child items and substituting items.

See [Setting Up Program Formats](#)

See [Defining Academic Item Details](#)

See [Managing APT Items](#)

Sort items by

Sort by *Item Order*, *Item Type*, or *Item Description*. The default value is *Item Order*.

Syncing Entities

If you implemented Program Enrollment before April 2013, you must run the processes listed here after you apply those updates.

Each time that you create a new academic item type, make changes to an existing academic item type, or set or make changes to the child item matrix for an academic item type, you must run the following processes:

1. Item Type Matrix Sync Entities

Here on the Item Type Matrix page (SACR, Product Related, Student Records, Program Enrollment, Item Type Matrix):

- Click the Sync Entities button. This initiates the SSR_PE_SYNC process.
- Check the Process Monitor to ensure that the process completes successfully.

This process can be scheduled using the process scheduler

Note: If you make changes on the Item Matrix page, be sure to *save* those changes before you launch the Sync Entities Process.

2. Entity Property Sync

Go to the Entity Property Sync page (SACR, System Administration, Entity, Entity Property Sync) and:

- Click the Sync All Entities button.
- Check the Process Monitor to ensure that the process completes successfully.

3. Wipe Entity Cache

Remain on the Entity Property Sync page and:

- After the Sync All Entity Properties process has completed successfully, click the Wipe Entity Cache button.
- Check the Process Monitor to ensure that the process completes successfully.

See "Setting Up Entity Registry" (PeopleSoft Campus Solutions 9.2: Campus Community)

Note: You must also run these processes when you add common attributes for the AIR (SSR_AIR_HDR, SSR_AIR_ELEM) and APT (SSR_APT_HDR) record contexts.

See [Using Item Attributes to Extend AIR Data Elements](#)

See [Using Item Attributes to Extend APT Instance Header Data Elements](#)

Setting Up Rules for Program Enrollment

This section discusses how to:

- Set up rule types.
- Associate rule types with execution events.

See Program Enrollment Activity Management (PEAM) Documentation in My Oracle Support (ID 1400723.1).

- Using the Rules Engine for Program Enrollment Student Self-Service: System/Example Data
- Using the Rules and Engine for Program Enrollment Calculation and Evaluation: System/Example Data

Note: The Rules Engine requires PeopleTools 8.53.

See "Understanding the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Setting Up the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community)

Page Used to Set Up Rules for Program Enrollment

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Program Enrollment - Rule Type Table	SSR_RULE_TYPE_TBL	Set Up SACR > Product Related > Student Records > Program Enrollment > Rule Type Table	Set up rule types.
Program Enrollment - Execution Event Rule Types	SSR_EXEC_EVENT	Set Up SACR > Product Related > Student Records > Program Enrollment > Execution Event Rule Types	Associate rule types with execution events.

Setting Up Rule Types for Program Enrollment

The Program Enrollment - Rule Type Table provides a link between Program Enrollment-related features and the Rules Engine (RE) in these ways:

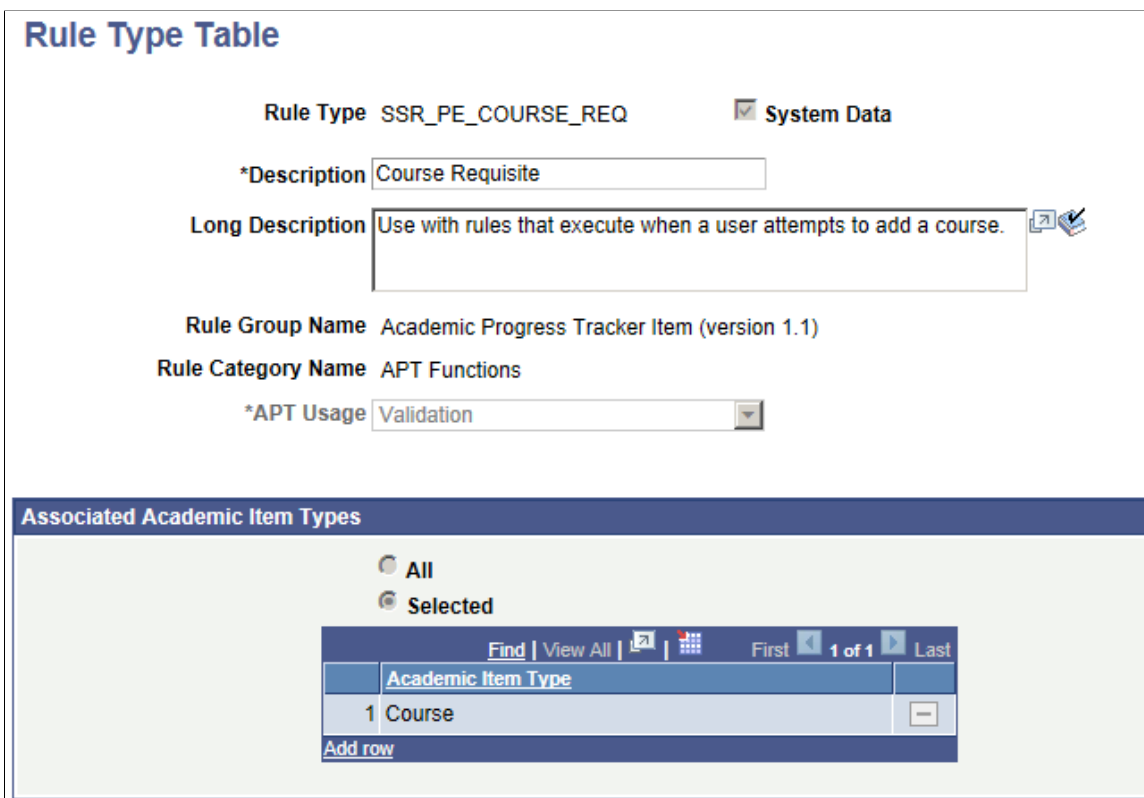

- Provides a functional 'wrapper' around a RE Rule Group (the RE construct that determines what a rule can do, the inputs and outputs of a rule and so on) that makes sense in the context of the Academic Item Registry, and which therefore simplifies rule prompting, and provides context for the user.
- When attached to an execution event, a rule type enables the invocation of rules, based on a user action (in the User Interface) or some other system event (see "Associating Rule Types with Execution Events" later in this section).
- Because a rule type can categorize rules from a functional perspective, the combination of type and execution event can be used to enable different behaviors and controls in a User Interface.

- Controls rule prompting in the Academic Item Registry component such that available rules can be restricted by item type.

Access the Program Enrollment - Rule Type Table page (Set Up SACR > Product Related > Student Records > Program Enrollment > Rule Type Table).

Image: Program Enrollment - Rule Type Table page

This example illustrates the fields and controls on the Program Enrollment - Rule Type Table page. You can find definitions for the fields and controls later on this page.

Rule Type and Description Enter a Rule Type code (20 character limit) and a Description (30 character limit).

System Data If a rule type is delivered as system data, this check box is selected and is not available for edit.

Rule Group ID, Search, Rule Group Name, and Rule Category Name A Rule Type must be associated with a single Rule Group. Click the Search button to launch a search using a standard Rules Engine search utility. When you select a Rule Group ID, the Rule Group Name and Rule Category Name are displayed.

APT Usage Determines how rules of this type relate to an APT Instance. Select from:

- *Validation:* Rules of this type can be associated with an Execution Event and can be used to validate APT entries. A Validation rule type must be associated with at least one academic item type.

- *Result Calculation*: Rules of this type can be associated with an academic item type on the Result Type component as the default calculation rule for that result type/academic item type combination.
- *APT Status Evaluation*: Rules of this type can be associated with an academic item type on the Rule Type table. Academic Item types associated on the rule type table can be used in APT Status Evaluation rules in the APT Administrative Roster.

See [Setting Up Result Types](#).

Copy

This button is available only when you add a new rule type. The copy feature provides a prompt against all rule types defined in the system, including those for which the System Data check box is selected (delivered rule types).

Delete

When a rule type is saved successfully, a Delete button is available. Delete is not available for rule types for which the System Data check box is selected.

Associated Academic Item Types

This grid is available only when the APT Usage value is *Validation* or *Evaluation*.

All

Select this option to indicate that this rule type can be assigned to any academic item regardless of academic item type. Assign rule types to academic items on the Rules / Results page in the Academic Item Registry component.

Note: This option is not available for APT Status Evaluation

Selected

When you select this option, the Academic Item Type field becomes available and you can select the academic item types to which the rule type can be assigned. The Rules / Results page is available in the AIR component only for academic items of the type selected here.

Delivered Rule Types

The following Rule Type definitions are delivered as system data, specifically for use in Program Enrollment Self-Service. These rule types can be used on the My Education Plan and Schedule Builder components.

See "Using Program Enrollment Self-Service Features" (PeopleSoft Campus Solutions 9.2: Self Service)

SSR_ACE - AIR Connector Engine:

This rule type is not tied to a Rules Engine Rule Group definition and does not invoke the Rules Engine, but rather serves as a hook to invoke the AIR Connector Engine API. This API validates a student's

course choices against the structure or ‘tree’ defined in the Academic Item Registry for a particular planning node.

Image: Program Tree Requirements example

The following example shows the program tree requirements for year one of a program. In this particular case, the Item Type *Stage* is a planning node for this program.

Expand / Collapse	Item Description	Enrollment Category	Item Type	Item ID
[-]	Year 1 - Foundation and Business Core		Stage	00000002139
[-]	[-] B.A. Bus Mgt - Semester 1		Study Period	00000002140
	[-] ECON 2: Macroeconomic Principles	Mandatory	Course	0000000388
	[-] and ECON 3: Microeconomic Principles	Mandatory	Course	0000000389
	[-] and POL SCI 1: Intro to US Govt and Politics	Mandatory	Course	0000000100
	[-] and Modern European Languages - Intro Level	Electives	Course Group	00000001697
	[-] or Survey of Modern Math I	Electives	Course	00000002151
[-]	[-] and B.A. Bus Mgt - Semester 2		Study Period	00000002141
	[-] ECON 198: Special Topics in Economics	Mandatory	Course	00000002152
	[-] and ECON 1004B: Economic Methods II	Mandatory	Course	0000000446
	[-] and Social Sciences for Business	Electives	Course Group	00000002210
[-]	[-] and Business Foundation - Economics Options	Electives	Requirement	00000002153

	[-] and POL SCI 101: Introduction to Government)	Required Electives	Course	00000000095
	[-] or (ECON 1013: Public Sector Economics	Required Electives	Course	00000000399
	[-] and POL SCI 105: Intro to World Politics)	Required Electives	Course	00000000097

To satisfy the course requirements for Year 1, students must satisfy the course requirements for each Study Period within the year, Semester 1 and Semester 2 as follows:

- For Semester 1, students must have ECON 2 and ECON 3 and POL SCI 1 and select a course from the Modern Languages Course Group or select Survey of Modern Math.
- For Semester 2, students must have ECON 198 and ECON 1004B and select a course from the Social Sciences Course Group and satisfy the Business Foundation options requirement.
- For Business Foundation options, students must select one pair of courses from List A or List B.
- To satisfy List A or List B student must select a matching pair of courses.

The Air Connector Engine (ACE) process traverses this tree and verifies that each of these requirements – as defined by the AND/OR connectors in AIR – have been met. If all items are not satisfied, an error message is returned.

Currently, ACE can be invoked on the student My Education Plan and Scheduler Builder components. (see Execution Event Rule Types below).

SSR_PE_COURSE_REQ - Course Requisite:

This rule type is linked to the delivered Rules Engine Rule Group *Academic Progress Tracker Item (version 1.1)*. It is associated with delivered COURSE academic item type, but others, including user defined item types can be added. This rule type allows the user to deploy a subset of their rules such as those that check for course requisites.

SSR_PE_ITEM_PRECOND - Academic Item Precondition:

This rule type is also linked to the Rule Group *Academic Progress Tracker Item (version 1.1)*. It is associated with the delivered COURSELIST academic item type, but others, including user defined item types can be added. This rule type allows the user to deploy a subset of their rules such as whether a student has meet a condition that is satisfied based on data typically associated with the student, such as a particular Academic Plan or Sub-Plan code.

The following Rule Type definitions are also delivered as system data, and are used to calculate and evaluate results.

- SSR_PE_CALC_RESULTS:
- This rule type is linked to the *Rule Group Academic Progress Tracker Item (version 1.1)*. Rules of this type can be used to calculate student results for a specific academic item and result type.
- SSR_PE_EVAL_STATUS:

This rule type is linked to the *Rule Group Academic Progress Tracker Item (version 1.1)*. Rules of this type can be used to evaluate the APT Statuses for an academic item within the student's APT. Only academic item types associated against this rule type can be used in APT Status Evaluation rules in the APT Administrative Roster.

See Program Enrollment Activity Management (PEAM) Documentation in My Oracle Support (ID 1400723.1).

"Setting Up the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community)

Associating Rule Types with Execution Events

Execution Event rule types determine how and when the Rules Engine is invoked in Program Enrollment, by tying rule types to a specific action that a user might take in the delivered User Interface. The PeopleCode event referenced in the Execution Event definition is a pointer to the code that invokes the Rules Engine when the action occurs, such as user a clicking a button in the User Interface. Each event in turn can invoke certain rule types, each of which can be set to active or inactive.

See the Using the Rules Engine for Program Enrollment Student Self-Service: System/Example Data document in My Oracle Support (ID 1400723.1).

Access the Program Enrollment - Execution Event Rule Types page (Set Up SACR > Product Related > Student Records > Program Enrollment > Execution Event Rule Types).

Image: Program Enrollment - Execution Event Rule Types page

This example illustrates the fields and controls on the Program Enrollment - Execution Event Rule Types page. You can find definitions for the fields and controls later on this page.

Rule Type	Description	Process Entire Rule	*Rule Execution Error Handling	*Status	System Data
1 SSR_ACE	AIR Connector Engine	<input type="checkbox"/>	Obey	Active	<input checked="" type="checkbox"/>
2 SSR_PE_COURSE_REQ	Course Requisite	<input type="checkbox"/>	Obey	Active	<input checked="" type="checkbox"/>
3 SSR_PE_ITEM_PRECOND	Academic Item Precondition	<input type="checkbox"/>	Obey	Active	<input checked="" type="checkbox"/>

System Data

This check box displays for Execution Event Rule Types definitions delivered by Campus Solutions Development. See further information below.

Status

Campus Solutions Development events are delivered as *Inactive*. Events must be *Active* for Rules Engine invocation to occur.

Copy

This button is available only when you add a new execution event. The copy feature provides a prompt against all execution events defined in the system, including those for which the System Data check box is selected. (see below).

Delete

When an execution event is saved successfully, a Delete button is available (Delete is not available for execution events for which the System Data check box is selected).

PeopleCode Event

Select a value: *Field Change*, *Field Edit*, *Save Edit*, or *Save Pre-Change*. The event selected here documents where the trigger PeopleCode that invokes the Rules Engine is called from by the component processor. In most cases, and specifically for the

delivered self-service execution events, the PeopleCode event is *Field Change*.

Menu Name, Component Name, Page Name and Field Name These fields are used to document the actual page/field location where the execution event occurs.

Run All Rules

When this check box is deselected, rule execution stops when the first error is encountered. For example, if a student adds three courses to their planner in self-service and each of those courses has a Course Requisite rule attached to them, and the student fails the first requisite, an error is returned for the first requisite but the other two requisite rules are not checked. If the Run All Rules check box is selected, all three rules are executed.

Rule Types Grid

Use this grid to indicate which types of rules should be executed when the triggering event occurs.

Rule Type

Prompts against the Program Enrollment - Rule Type table.

Process Entire Rule

This check box determines whether the entire rule (of this type) is executed when it is invoked for this event. For example, if a Course Requisite rule requires successful completion of Course A and Course B and the Process Entire Rule check box is selected, the Rules Engine checks to see if both conditions are satisfied and can return the results of both parts of the rule to the User Interface (for example, Course A was not satisfied but Course B was satisfied). Otherwise the Rules Engine executes the rule until the first error condition. Using the same requisite example, processing stops when the Course A component of the rule fails.

Rule Execution Error Handling

Determines whether a rule type is applicable to a certain event and – if it is applicable – whether the user or process can proceed with a task (or system process) if the called rule(s) return errors or failure. Select from:

- *Obey*: If error/failure is returned by the called rule, the user cannot proceed; record would not be processed in a batch process.
- *Warn*: If error/failure is returned by the rule, the system returns a warning message, but the user/process can continue.
- *N/A* (not applicable): Rules of this type are not invoked for this event.

Status

Determines whether a rule type is active for a particular event. If the status is *Inactive*, rules of this type are not executed.

Delivered Execution Event Type Definitions

The following Execution Event Rule Type definitions are delivered. These events are tied specifically to the My Education Plan and Scheduler Builder components to enable invocation of both Rules Engine based rules and the AIR Connector Engine.

See the Using the Rules Engine for Program Enrollment Student Self-Service: System/Example Data document in My Oracle Support (ID 1400723.1).

Note: The trigger code for these execution events has been added only for the PeopleCode events specified in the definition (FieldChange).

- SSR_PE_UPD_PLANNER - My Education Plan Update Planner

If active, this event executes when a user clicks the Update Planner button on the student self-service My Education Plan component. The Update Planner button saves any course selection if all validation (including Rules Engine validation) logic is satisfied. Only those rule types with a status of *Active* are executed. The following rule types are tied to this event:

- SSR_PE_COURSE_REQ - Course Requisite
- SSR_PE_ITEM_PRECOND - Academic Item Precondition

- SSR_PE_VAL_PLANNER - My Education Plan Validate Planner

If active, this event executes when a user clicks the Audit/Validate button on the student self-service My Education Plan component. The validation process acts on the Planning node selected in the component. All rules for the planning node and its child items are invoked if they are of a rule type that is valid for this event. Only rule types with an *Active* status are executed. The following rule types are tied to this event:

- SSR_ACE - AIR Connector Engine
- SSR_PE_COURSE_REQ - Course Requisite
- SSR_PE_ITEM_PRECOND - Academic Item Precondition

- SSR_PE_AUD_SCHD - Schedule Builder Audit

If active, this event executes when a user clicks the Audit button on the student self-service Schedule Builder component. The Audit button invokes validation logic (including Rules Engine Validation) and return messages to the user if error conditions are found. Only those rule types with a status of *Active* are executed. The following rule types are tied to this event:

- SSR_ACE - AIR Connector Engine
- SSR_PE_COURSE_REQ - Course Requisite

- SSR_PE_ENRL_SCHD - Schedule Builder-Enroll in Classes

If active, this event executes when a user clicks the Enroll in Classes button on the student self-service Schedule Builder component. The Enroll in Classes button saves class selections and invokes validation logic (including Rules Engine Validation) for the current (enrollment) term node and takes

the user to the next step of the enrollment process. *The rule invocation applies to all APT items for the term node, meaning that any rules attached to non-course items can be invoked.*

- If no errors or warnings are returned, the user is transferred to a confirmation page where they can confirm their class selections before submitting.
- If errors or warnings are returned, the user is first transferred to a results page, where errors and warnings are listed by item.
- If at least one class selection is error free (that is, the associated APT course item or parent item passed validation) a continue button is available and the user can proceed to the confirmation step: *Class selections where the validation for the associated APT course item (or parent items) failed is not included on the confirmation page.*

Only those rule types with a status of Active are executed. The following rule types are tied to this event:

- SSR_ACE - AIR Connector Engine
- SSR_PE_COURSE_REQ - Course Requisite
- SSR_PE_ITEM_PRECOND - Academic Item Precondition
- SSR_PE_ENRL_SCHD_CAL - Schedule Builder Calendar view-Enroll in Classes

If active, this event executes when a user clicks the Enroll in Classes button on the student self-service Schedule Builder Weekly Calendar view page. Although rule types for this event can be configured differently, the behavior associated with it mimics that for the Schedule Builder Enroll in Classes button (see above). Only those rule types with a status of Active are executed. The following rule types are tied to this event:

- SSR_ACE - AIR Connector Engine
- SSR_PE_COURSE_REQ - Course Requisite
- SSR_PE_ITEM_PRECOND - Academic Item Precondition

Setting Up Program Formats

This section provides an overview of program formats and discusses how to define program formats.

Understanding Program Formats

Program Format determines the structure of a Program of Study. In AIR, program format applies specifically to an academic item that has a type of Program of Study (PRG).

The inherent flexibility of the AIR structure means that different institutions define their program hierarchies in different ways. You must therefore define frameworks to assign to the programs for your particular institution. The system then uses that framework to impose a template on a PRG academic item.

The Program Format:

- Identifies those levels (or nodes) of a program that equate to a year of program (or level, stage).
- Identifies the levels that equate to term (STRM) value for enrollment purposes.
- Provides the basis for a template for building a program of study.

See [Building Programs by Format](#)

Page Used to Set Up Program Formats

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Program Format	SSR_PROG_FORMAT	Set Up SACR > Product Related > Student Records > Program Enrollment > Program Format > Program Format	Define program formats.

Defining Program Formats

Program Format definitions are created by Institution, with a user defined Format ID. The program format is created by assigning a tree node ID to the academic items that are used to build a program of study. Because this format represents the structure or framework of a program of study, it uses only those academic items that have been identified as Program Format Tree Nodes.

Note: If you built out Program Formats in your environment before January 2012, you must adjust your Program Format definitions after you apply the January 2012 updates. In order to use the APT Activation process, you must enter a Planning Node Item Type value here on the Program Format page. (See the description of the Planning Node Item Type field for further information.)

If you built out Program Formats in your environment before October 2012 using the *add session level property*, you must adjust your Program Format definitions after you apply the October 2012 updates.

Access the Program Format page (Set Up SACR > Product Related > Student Records > Program Enrollment > Program Format > Program Format).

***Node ID**

Academic Item Type PRG Program of Study

***Description**

Save and RefreshTree

The Planning Node Item Type, Year of Program Item Type, and Equates to Term Item Type fields all prompt against the Item Type Matrix (SSR_ITEM_CHILD) table for item types for which the Program Format Tree Node check box is selected in the Academic Item setup component.

See [Identifying Child Item Types and Syncing Entities](#)

See [Setting Up Academic Item Types](#)

Item Type Usage

Planning Node

Enter a value to indicate which node of the Program Format definition should be used for APT Activation purposes. If, for example, the Planning Node Item Type is Phase, this indicates that a student is allowed to plan and enroll by Phase—the Activate icon is available at the Phase level in APT as the student progresses through a program. If a Planning Node Item Type is not entered, the entire program is available for planning and enrollment.

See [Managing APT Items](#)

Year of Program

Enter a value to identify this item type as the one that is used to map to Year Of Program in the Program Format tree, where the program is constructed of a number of units which are completed in a number of years. You cannot select PRG item type for this field.

Equates to Term

Enter a value to indicate that the node is used to map to a Campus Solutions Term (STRM) value for enrollment purposes. This flag is used for Enrollment Cohort purposes. You cannot select PRG item type for this field.

See [Setting Up Enrollment Cohorts](#)

See [Managing APT Items](#)

Add Session Level

If you select this check box, you are prompted to enter a session academic item. Enrollment cohorts attached to this program format can be mapped to term and session combinations, using the Session field on the Program Enrollment Cohort page.

Note: If you use session level, the Equates to Term Item Type must be mapped to a term and session combination.

See [Setting Up Enrollment Cohorts](#)

See [Managing APT Items](#)

Session

Enter a value for an academic item type that represents a Campus Solutions Session in your program format. This might be used if you have configured your Campus Solutions Term values to represent an academic year within which Campus Solutions Sessions represent your actual terms, semesters or some other component of an academic year.

Date Controls

The Date Controls setup is used in student self service.

Student Planning

When you add a new program format definition, you must specify whether Student Planning is controlled by the *Academic Period Table* or the *Term/Session Table*.

Note: When the item type values in the Planning Node and Equates to Term fields are the same, the system sets the Student Planning period value to *Term/Session Table* and grays the field. When these values are not the same, users can select *Academic Period Table* or *Term/Session Table*, but this value cannot be changed after the component is saved.

- *Academic Period Table:* Student planning is subject to the start and end dates of an Academic Period for which the Period Type is *Planning Period*. When you select this option, the Planning Period field is available on the Enrollment Cohort page for those cohorts based on this on this program format.

See [Defining Academic Periods](#)

See [Setting Up Enrollment Cohorts](#)

- *Term/Session Table:* Student planning is subject to the dates in the Display in Self-Service group box on the Term Table page. If the program format includes session level, planning is subject to the dates in the Program Enrollment Controls group box on the Session Table page.

See "Defining Terms, Sessions, and Session Time Periods" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Tree View

The tree view provides a tree representation of the node structure that you enter at the Node ID scroll level—see the example page above. Each node in the tree links to the node definition that it represents.

Node ID

Enter a node ID. The lowest Node ID value must have an Academic Item Type value of PRG. Node IDs for successive (child) nodes must increment. For example, a Program Format with three nodes, such as Program, Stage and Study Period could use 10 for Program, and then numbers starting at 1000 for the Stage nodes - for example 1000, 2000 and 3000. The child Study Period nodes could then number within each range (for example 1100, 1200 for Study Periods within the first stage).

Parent Node ID

Enter a parent node ID. The value that you enter here must already exist as a node ID. For example, if you previously added a Node ID of 100 for Academic Item Type PRG, then if you enter a Node ID of 200 for Academic Item Type STAGE, you can assign it a Parent Node ID of 100 to indicate that 200 (STAGE) is a child node of 100 (PRG).

Academic Item Type

Select an academic item type. This field prompts against a view of the Item Type Matrix table (SSR_ITEM_CHILD) for items that are defined as Program Format Tree Nodes.

See [Identifying Child Item Types and Syncing Entities](#)

See [Setting Up Academic Item Types](#)

Node IDs that have the same parent node ID must share the same academic item type: the value appears by default in the field and is not available for edit when this is true. For example, if you add Node ID 200 for Academic Item Type STAGE with a Parent Node ID 100 (PRG), then, when you add Node ID 300 with a Parent Node ID of 100, the Academic Item Type of STAGE is automatically assigned to Node ID 300.

Setting Up AIR Administrator Security

It is useful to read this section in the context of these other sections in the document:

- [Setting Up Program Formats](#) (earlier in document).
- [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#) (later in document).
- [Building Programs by Format](#) (later in document).

A Program Format definition provides a framework for building academic requirements in the Academic Item Registry. Program Format provides a template for building programs in a prescribed way, using the Build Program by Format component. This component is the main tool for defining programs of study using academic items that are defined in the Academic Item Registry.

The majority of users will use the Academic Item Registry component primarily to build the content that is compiled into a program of study using the Build Program by Format component. For this reason, the use of Program Format node academic items is restricted in the Academic Item Registry component, so that most users can assign only non-Program Format Tree node items as children of other items. This prevents deviation from authorized program structures.

Exceptions to program formats can be made only by users who are authorized as Academic Item Registry Administrators.

Warning! We recommend that any exceptions be given careful consideration and testing as an exception to an established hierarchy may not be supported in the various processes and user interfaces that use the program format definition for validation and formatting purposes.

Page Used to Set Up AIR Administrator Security

Page Name	Definition Name	Navigation	Usage
Academic Item Registry Admin	SSR_AIR_OPR_SCRTY	Set Up SACR > Secure Student Administration > User ID > Academic Item Registry Admin	Set up AIR administrator security.

Setting Up AIR Administrator Security

Access the Academic Item Registry Admin page (Set Up SACR > Secure Student Administration > User ID > Academic Item Registry Admin).

Image: Academic Item Registry Admin page

This example illustrates the fields and controls on the Academic Item Registry Admin page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Academic Item Registry Admin' page. At the top, it displays 'User ID: PS' and 'Locherty, Betty'. Below this is a table with a header '*Academic Institution'. The table contains two rows of data:

*Academic Institution			
PSUNV	<input type="text"/>	PeopleSoft University	<input type="button" value="+"/> <input type="button" value="-"/>
GLAKE	<input type="text"/>	Great Lakes University	<input type="button" value="+"/> <input type="button" value="-"/>

AIR Administrator security is based on User ID.

Academic Institution Select the institution to grant administrator privileges for this user ID.

AIR Administrator privileges apply to the Academic Item Registry component only. When User ID: PS adds child items to an Academic Item in the Academic Item Registry component the prompt shows all authorized child items, including those items identified as Program Format tree nodes.

See [Setting Up Program Formats](#)

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

See [Building Programs by Format](#)

Setting Up Enrollment Cohorts

This section provides an overview of enrollment cohorts and discusses how to define program enrollment cohorts.

Understanding Enrollment Cohorts

The AIR feature allows you to define programs without regard to term, using stages or years for example. For enrollment purposes, the requirements that a student must take for a phase, year, or stage (or whatever type of item designation might be used) must be mapped to a Campus Solutions term (STRM). The Enrollment Cohort feature provides this link, attaching a student to a list of terms (beginning at the student's admit term) that follows the outline of the student's program of study. The Enrollment Cohort uses the Program Format definition to produce a term-based enrollment map for a cohort of students (based on admit term) and is assigned to a student on matriculation.

Page Used to Set Up Enrollment Cohorts

Page Name	Definition Name	Navigation	Usage
Program Enrollment Cohort	SSR_PE_COHORT	Set Up SACR > Foundation Tables > Term Set Up > Enrollment Cohort > Program Enrollment Cohort	Define enrollment cohorts

Defining Enrollment Cohorts

Access the Program Enrollment Cohort page (Set Up SACR > Foundation Tables > Term Set Up > Enrollment Cohort > Program Enrollment Cohort).

Image: Enrollment Cohort page

This example illustrates the fields and controls on the Enrollment Cohort page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Enrollment Cohort' page with the following details:

- Academic Institution:** PeopleSoft University
- Academic Career:** Undergraduate
- Format ID:** UG_3YR_PHASE (UG 3 Year - Part 1 and 2)
- *Description:** UG 3YR I & II Fall
- Term Categories to Include:** A table with one row: 1 Regular Term.
- Refresh Term Prompts:** A yellow button.
- *Academic Load:** Full-Time
- Cohort Tag:** FALL-ADMITS
- *Cohort Term:** 0630 2009 Fall
- Generate:** A yellow button.
- Table of Cohorts:**

*Seg Nbr	*Node ID	Node Description	*Term	Term Description	Planning Period	Description
100	110	Year 1 - Semester 1	0630	2009 Fall	999999999999	Always Open
200	120	Year 1 - Semester 2	0640	2010 Spring	P1-0630	Fall 2009 Admits - Phase I
300	210	Year 2 - Semester 1	0650	2010 Fall	P2-0630	Fall 2009 Admits - Phase II
400	220	Year 2 - Semester 2	0660	2011 Spring	P2-0630	Fall 2009 Admits - Phase II
500	310	Year 3 - Semester 1	0670	2011 Fall	P2-0630	Fall 2009 Admits - Phase II
600	320	Year 3 - Semester 2	0680	2012 Spring	P2-0630	Fall 2009 Admits - Phase II

Enrollment Cohort definitions are created by Institution, Career, which enables prompting for term values (because terms are created by Institution and Career) and Program Format ID.

Term Category

The Term Category values that you select here determine which terms are available for use by the Generate function. See information about the Generate function later in this section.

Academic Load

Enrollment cohorts are assigned by academic load. You must enter at least one Acad Load value. The same enrollment cohort can be used for different academic loads. For example if a 3 year program is completed over six terms, and the requirements for a part-time version of that program can be easily distributed over more terms, for example, twelve, you could use the

same enrollment cohort. However, if the enrollment pattern is markedly different depending on a student's approved academic load, it would be more practical to create distinct program formats and enrollment cohorts for each possible academic load configuration.

Cohort Tag

Use this field to assign different versions of the same Academic Load/Cohort Term to different students.

This feature might be used when an institution uses a Term value to represent an academic year, and the terms or semesters that constitute the academic year are represented as sessions on the Session Table. A Cohort Tag could be assigned for each session to which students are admitted.

The values available here are defined on the Academic Cohort Table page for the Institution/Career combination.

See "Defining Academic Cohorts for Program Enrollment" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Cohort Term

The value that you select here represents the first term of enrollment for this particular cohort. For example a cohort admitted for a 3 year program beginning Fall 2010 would have a Cohort Term equal to the term value Fall 2010, 0670.

Generate

The generate function provides a quick way of assigning term values to a particular program format framework. The process works as follows:

- Selects all Node IDs that are attached to a Program Format ID where the Equates to Term field on the Program Format page indicates that the node will be used to map to a Campus Solutions Term value for enrollment purposes.
- Using the Cohort Term value, selects all Term (STRM) values from the TERM_TBL (using the Institution and Academic Career values). If Term Categories have been entered, the selection is narrowed to include only those terms that meet the criteria.
- The number of terms selected depends on the number of Equates to Term nodes in the Program Format definition.
- Inserts a row in the grid for each Equates to Term node, where the first node term value equals the Cohort Term value.
- The term value for each subsequent row is the next highest term value from the previously selected list of TERM_TBL. STRM values.
- When no terms match the term categories selected, you receive an error message and the Term grid is not populated.

This message (Message Catalog entry 14731, 95) is delivered with a severity of *Error*. If the installation chooses to change this to *Warning* the message is displayed and the grid is populated with the Program Format Tree Nodes.

See [Managing APT Items](#)

Seq Nbr (sequence number)

Enter a user defined sequence number for ordering the term rows.

Node ID

Select a node ID to map to a term. The values available are based on the Node IDs that you set up on the Program Format page.

A node can be mapped to one or more terms.

Multiple nodes can be mapped to the same term.

Session

This field is available if the Add Session Level check box is selected and a Session academic item type has been entered on the Program Format page.

Planning Period

This field is available when the Program Format (on which the Enrollment Cohort is based) uses the Academic Period Table for Student Planning Date Controls.

See [Setting Up Program Formats](#)

The default value is *Always Open*. To display other values, the system uses the Institution/Career of the enrollment cohort and lists all academic periods with a type of Student Planning for which the academic period end date is greater than the system date.

Setting Up Enrollment Categories for Program Requirements

This section provides an overview of enrollment categories and discusses how to define enrollment categories.

Understanding Enrollment Categories

Enrollment Categories are user defined codes that determine how academic items (courses or other items) are represented and seeded in a student APT record. In student self-service, Enrollment Category also determines the actions that students can take in relation to an individual course, such as whether can they can add or remove it from their schedule builder or whether they can drop once enrolled.

Page Used to Set Up Enrollment Categories for Program Requirements

Page Name	Definition Name	Navigation	Usage
Enrollment Category	SSR_ENRL_CAT	Set Up SACR > Product Related > Student Records > Program Enrollment > Enrollment Category > Enrollment Category	Define enrollment categories.

Defining Enrollment Categories

Access the Enrollment Category page ((Set Up SACR > Product Related > Student Records > Program Enrollment > Enrollment Category > Enrollment Category).

Image: Enrollment Category page

This example illustrates the fields and controls on the Enrollment Category page. You can find definitions for the fields and controls later on this page.

Automatically move to APT

If you select this check box, academic items with this enrollment category are moved to a student’s APT instance during the APT seeding process.

See [Managing APT Items](#)

Auto-request Cart/Enrollment

If you select this check box, courses with this enrollment category are available for selection by the process which builds enrollment requests/schedule builder entries for groups of students.

Student Self Service Access

Select check boxes to allow students to perform various enrollment functions in Self Service.

See "Using Program Enrollment Self-Service Features" (PeopleSoft Campus Solutions 9.2: Self Service)

Setting Up Result Types

Due to the flexible nature of AIR based program requirements, you must define the level at which you track unit and credit totals for example, and also, the type of data that you want to track at those levels. The Result Types feature provides you with the means to build these student data profiles, to define the type of data to be tracked (for example, Total Enrolled Credits, Total Completed Credits) and the format of that data.

This section discusses how to define result types.

Note: The Result Type design is still being finalized and some components of this feature are planned for the future.

Page Used to Set Up Result Types

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Result Type	SSR_RESULT_TYPE	Set Up SACR > Product Related > Student Records > Grading > Result Type.	Define result types.

Defining Result Types

Access the Result Type page (Set Up SACR > Product Related > Student Records > Grading > Result Type).

Image: Result Type page

This example illustrates the fields and controls on the Result Type page. You can find definitions for the fields and controls later on this page.

Result Type
Result Type STAGE_WGHT_AVG

Find | View All First 1 of 1 Last

*Effective Date 01/01/1900 *Status Active

*Description Weighted Average for Stage of Program

*Short Description W. Average - Stage System Data

*Result Value Field Type Free-form Text

Associated Academic Institutions

*Institution
PeopleSoft University

Add Institution

Show in Student Self-service
 Print in Transcript

Item Type Usage

*Academic Item Type	Calculation Rule ID	Rule Name	Auto-create in AIR
Stage of Program	SCC_RULE_ID_20140401143152	Calculate Stage Weighted Average	<input type="checkbox"/>

Add Academic Item Type

Content Type Usage

*Content Definition	*Academic Content Type	Auto-create in AM
		<input type="checkbox"/>

Add Content Type

Result Types are defined by Institution.

System Data

For future use.

Result Value Field Type

Determines which fields are available for entry on the page, and, when the Result Type is applied to an APT attempt, which fields are available for entry in APT.

See [Using Item Attributes to Extend AIR Data Elements](#)

Values are:

- *Free-form Text*: A 50 character description field. This is the default value.
- *List of Valid Values*: The Valid values for this Result Type grid becomes available.
- *Numeric*: The Integer Positions and Decimal Positions fields become available.

- *Result Scale*: Enables the Result Scale field in the Associated Academic Institutions grid. Use the Result Scale table (SSR_RES_MAP_TBL) to define the rules for a set of scores or results for use in Activity Management and for use with a Result Type in APT. The result scale can specify a valid range/format, and map scores/marks to a grade.

See [Setting Up an Activity Management Framework](#)

- *Table Validation*: The Record (Table) Name field becomes available.
- *Translate Table Validation*: The Field Name field becomes available.

Valid values for this Result Type

Available when the Result Value Field Type is *List of Values*.

Result Value: The values that you define here appear in the Result prompt in an APT attempt.

See [Managing APT Items](#)

Integer Positions

Available when the Result Value Field Type is *Numeric*.

Controls the number of digits before the decimal for Numeric attribute types.

Decimal Positions

Available when the Result Value Field Type is *Numeric*.

Controls the number of decimal places available for Numeric attribute types.

Record (Table) Name

Available when the Result Value Field Type is *Table Validation*.

Prompts against a view listing all tables where there is:

- A single key or
- Records with two keys where the second key is Effective Date (EFFDT) or
- Records with two keys where the first key is either INSTITUTION or SETID or
- Records with three keys where the first key is either INSTITUTION or SETID and the third is EFFDT.

Field Name

Available when the Result Value Field Type is *Translate Table Validation*.

Prompts against the PSXLATTABLE.

Updated by Activity Management, Display in Self Service and Print in Transcript fields are planned for future use.

Associated Academic Institutions

Use the Associated Academic Institutions grid to enable a result type for one or more institutions and to assign a result scale if the Result Value Field Type is *Result Scale*. When an Institution and Result Scale combination is defined, the specified result scale is used to validate entries for this result type.

Institution	Select an institution.
Result Scale	If the Result Value Field Type value is <i>Result Scale</i> , the Result Scale field is available and lists all active result scales for this institution.
Default	You must select a default result scale if more than one result scale is entered for the same institution. The default is used when a result (for this result type) is manually entered on the Academic Progress Tracker component.

Item Type Usage

Academic Item Type	Select the academic item types to which this result type can be attached in AIR.
Calculation Rule ID	<p>Select a Calculation Rule ID to be used for the select item type. The prompt returns rules that meet the following criteria:</p> <ul style="list-style-type: none"> The rule must be associated with a rule type for which the APT Usage is <i>Result Calculation</i>. Note that rules are associated with a rule type based on their rule group. <p>See Setting Up Rules for Program Enrollment</p> <ul style="list-style-type: none"> The rule type must also be attached (again, via the rule group) with the delivered Rule Category <i>APT Functions</i>. <p>In My Oracle Support (ID 1400723.1), see:</p> <ul style="list-style-type: none"> Using the Rules Engine for Program Enrollment Student Self-Service: System/Example Data Using the Rules and Engine for Program Enrollment Calculation and Evaluation: System/Example Data

Auto-create in AIR	When you select this check box, an AIR Result Type row is created each time that a user adds a new academic item of this type in AIR.
---------------------------	---

Content Type Usage

Content Definition	Currently <i>Coursework</i> is the only delivered Content Definition.
Academic Content Type	Select the academic content type to which this result type can be attached in Activity Management.

Auto-Create in AM

This check box is planned for future use.

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

See [Setting Up an Activity Management Framework](#)

Setting Up Academic Item Registry Entries, Item Details, and Item Security

This section provides an overview of AIR entries and discusses how to:

- Access the AIR component: AIR Search.
- Define AIR entries.
- Use item attributes to extend AIR data elements.
- Use item attributes in AIR.
- Assign item attributes to child academic items.
- Define academic item details.
- Assign rules and result types to academic items.
- Maintain AIR rich text fields.
- Define academic item security.
- Manage Special Edits in AIR for COURSE, COURSEGROUP, and COURSELIST Academic Items.
- Use the Academic Item Registry Copy Function.

Understanding AIR Entries

Use the Academic Item Registry (AIR) component (SSR_PE_AIR) to define Academic Item Registry entries, item details, and security.

The Academic Item Registry allows you to define all the various parts of a program offering—courses, lists of courses, milestones, years, stages—and to connect those parts into an overall program template. The data defined in this template is then available to all types of users, from prospective students, applicants, and students, to advisors, faculty, and administrators. Hierarchies are built using parent/child relationships. Within the hierarchies, each item can have its own parameters (for example, total number of credits, minimum result) that define how any child items are used in determining an outcome/result for the item.

Note: To prevent deviation from authorized program structures, most users can assign only non-Program Format Tree node items as children of other items in AIR. Exceptions to program formats can be made only by users who are authorized as Academic Item Registry Administrators.

See [Setting Up AIR Administrator Security](#)

Effective Dates in AIR

The academic item elements (child academic items) of an academic item must have an effective date that is less than or equal to the item itself. For example, you set up 3 COURSE items with the following effective dates:

- Course 1: 01/01/1900
- Course 2: 01/01/2000
- Course 3: Today's date

A STUDYPERIOD item with an effective date of 01/01/1900 can use only Course 1 as a child item.

A STUDYPERIOD item with an effective date of today's date can use all three courses as child items.

Course Academic Items

You can create course academic items here in the AIR component. Alternatively, you can use the SSR_CRSE_AIR batch process in the Create Course Academic Item component to create academic items for multiple courses at the same time. You can then use the AIR component or the Course Academic Item (SSR_CRSECAT_AIR) component to add individual courses as needed.

See [Creating Academic Items for Courses](#)

Pages Used to Set Up Academic Item Registry Entries, Item Details, and Item Security

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
AIR Search	SSR_AIR_SRCH_MAIN	Curriculum Management > Academic Item Registry > Academic Item Registry (AIR) > Search	Access the Academic Item Registry.
Find References	SSR_AIR_SRCH_REFS	Curriculum Management > Academic Item Registry > Academic Item Registry (AIR) > Find References	Find out where a particular academic item ID is being used in the Academic Item Registry.
Academic Item Registry	SSR_AIR	Access this page from the AIR Search component.	Define AIR entries.
Item Details	SSR_AIR_DTL	Access this page from the AIR Search component.	Define academic item type details
Element Parameters	SSR_AIR_ENPARAM_SEC	Click the Element Parameters link on the Item Details page.	View and update parameters
Rules / Results	SSR_AIR_RULE	Access this page from the AIR Search component.	Assign rules and result types to academic items.

Page Name	Definition Name	Navigation	Usage
Rich Text Fields	SSR_AIR_DESCR	<p>Access this page from the AIR Search component or:</p> <p>Click the Report Description link on the Academic Item Registry page.</p> <p>Click the Instructions link on the Item Details page.</p> <p>Click the Rule Report Description link on the Rules / Results page.</p>	Maintain AIR Rich Text enabled fields.
Security	SSR_AIR_SCRTY	Access this page from the AIR Search component.	Define academic item security.

Accessing the Academic Item Registry Component - AIR Search

A custom search component is used to access the AIR component (Curriculum Management, Academic Item Registry, Academic Item Registry (AIR)). You can perform targeted searches to retrieve existing items and also use the Find References feature to see whether a particular academic item is referenced by another item. For delivered academic item types, item type specific fields are provided for additional search criteria. The following example shows fields available for item type COURSE.

Access the AIR Search page (Curriculum Management > Academic Item Registry > Academic Item Registry (AIR) > Search).

Image: Academic Item Registry Search page

This example illustrates the fields and controls on the Academic Item Registry Search page. You can find definitions for the fields and controls later on this page.

The screenshot shows the Academic Item Registry Search page with the following elements:

- Navigation tabs: "Add a New Value", "Find an Existing Value", and "Find References".
- Search fields:
 - *Academic Institution: PSUNV (with a magnifying glass icon and "PeopleSoft University" text to the right)
 - Academic Item Type: COURSE (with a magnifying glass icon)
 - Academic Item ID: (with a magnifying glass icon)
 - Description: (empty text box)
 - Academic Item Attribute: (dropdown menu)
 - Academic Organization: (with a magnifying glass icon)
 - Subject: ECON (with a magnifying glass icon)
 - Catalog Nbr: (empty text box)
 - Course ID: (empty text box)
 - Course Offering Nbr: (empty text box)
 - Topic ID: (empty text box)
- Buttons: "Search", "Reset", "Add New Item", and "Save".
- Save Search As: (text box) followed by the "Save" button.

- Saved Search** Prompts against saved searches for the user.
- Delete** Deletes the saved search selected in the Saved Search field.
- Academic Institution** Select the institution value for the search or to add a new academic item.
- Academic Item Type** Select the academic item type for the search or to add a new academic item.
- Academic Item ID** Select an academic item ID.
- Description** Enter all or part of an academic item description. The system uses this value to search against the AIR description field.
- Academic Item Attribute** Enter an academic attribute to search by. The system uses this value to search against academic item attributes attached to academic items.

Academic Organization	Enter an academic organization. The system uses this value to search against the academic organization values attached to academic items.
Format ID and Available to Assign	This field and check box are available when the search Academic Item Type value is PRG (Program).
Subject and Catalog Nbr	These fields are available when the search Academic Item Type value is COURSE.
Course Group ID	This field is available when the search Academic Item Type value is COURSEGROUP.
Course ID Course Offering Nbr and Course Topic ID	These fields are available when the search Academic Item Type value is COURSE.
Course Component	This field is available when the search Academic Item Type is COMPONENT.
Milestone	This field is available when the search Academic Item Type is MILESTONE.
Search	Launches a search against the Academic Item Registry using the specified criteria.
Reset	Clears the search criteria.
Add New Item	Academic items are created by Institution and Academic Item Type. You must enter these values on the search page to add a new item.
Save Search As	Provide a name for the search criteria. The system saves these criteria to the database under the User ID of the user.

Search Results

Image: Academic Item Registry Search Results example

The system returns a list of academic items matching the search criteria. The results grid can be used to retrieve a selected item in the Academic Item Registry component or to search for references for that item by other academic items.

Personalize Find View All  			
			First  1-20 of 73  Last
	Item ID	Description	Find References
1	00000000614	LAW 620: Econ Anly Law	
2	00000000567	ECON 110: International Economics	
3	00000000559	ECON 100: Macroeconomic Analysis	
4	00000000545	ECON 312: Intership Applied Economics	
5	00000000544	ECON 311: Independent Study

Item ID Click this link to access the Academic Item Registry component.

Find References Click this icon to access the Find References page of the search component.

Using the Find References Page

Use the Find References page to find out where a particular academic item ID is being used in the Academic Item Registry.

Image: Academic Item Registry Find References page

This example illustrates the fields and controls on the Academic Item Registry Find References page. You can find definitions for the fields and controls later on this page.

Parent Item ID	Parent Item Type	Reference Hierarchy
1 00000001757	STUDYPERIOD	{PRG - 00000001753}B.A. Economics > {PHASE - 00000001754} B.A. Economics Part I > {STAGE - 00000001755} BA Econ - Year 1 > {STUDYPERIOD - 00000001757} BA Econ - Year 1 - Semester 2
2 00000001804	STUDYPERIOD	{STUDYPERIOD - 00000001804}BA Econ - Year 1 - Semester 2

Parent Item ID

Click this link to view the AIR item for which the selected item is an immediate child item.

Parent Item Type

The Academic Item Type value of the parent item.

Reference Hierarchy

Displays a representation of the AIR based *tree* in which the Parent Item ID exists. The system displays the data as follows: {Academic Item Type/Academic Item ID} Academic Item description.

Accessing an Existing Item in the Academic Item Registry

Existing academic items in the AIR component are always retrieved using search results. When an item is retrieved, your page security determines the mode in which you access the component. For example if you have Update/Display access only, you cannot access historical rows. Once you are in the Academic Item Registry component, you can:

- Click OK to save changes and return to the Search component.
- Click Cancel to return to the Search component without saving changes.
- Click Apply to save changes and continue working with the same academic item in the Academic Item Registry component.

Adding a New Item to the Academic Item Registry

As described in the previous documentation, you add a new item by entering an Institution and Academic Item Type value and clicking Add New Item on the Search page. Once you are in the AIR component, the OK, Cancel, and Apply controls are available.

Defining AIR Entries

AIR entries are created by Institution and Academic Item Type.

The Academic Item Type definition determines which fields are available in the component.

Academic Item Type prompts against the Academic Item Type Definition table (SSR_ITEM_TYPE) for the installation.

Access the Academic Item Registry page (access this page from the AIR Search component).

Image: Academic Item Registry (PRG) page

Here is an example of the Academic Item Registry page for Academic Item Type: Program of Study.

The screenshot displays the 'Academic Item Registry' page with the following details:

- Academic Institution:** PeopleSoft University
- Academic Item ID:** 00000002138
- Academic Item Type:** Program of Study

The main form area includes the following fields and options:

- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** B.A. Business Management
- Report Description:** (Empty text area)
- Degree:** BA
- Requires Approval:**
- Available to Assign:**
- Last Prospect Date:** (Empty date field)
- Last Admit Date:** (Empty date field)
- Format ID:** UG_4YR_REG
- Program Name:** UG 4 Year Program

The **Report Template Mapping** section contains:

- *Report Name:** SSR_APT_RPT (APT Data Report)
- *Template ID:** SSR_APT_RPT_1 (APT Data Template)
- Component Name:** SSR_APT_DAT_RPT_CM (APT Data Report Component)
- Process Name:** (Empty field)

The **Item Attributes** section includes:

- *Attribute:** (Empty dropdown menu)
- Show in Student Self-service:**

Image: Academic Item Registry (COURSE) page

Here is an example of the Academic Item Registry page for Academic Item Type: Course.

The screenshot displays the Academic Item Registry page for a Course. At the top, there are navigation tabs: Academic Item Registry, Item Details, Rules / Results, Rich Text Fields, and Security. Below these, the page shows the following information:

- Academic Institution: PeopleSoft University
- Academic Item ID: 0000000388
- Academic Item Type: Course

The main form area includes the following fields and options:

- *Effective Date: 01/01/1900
- *Status: Active
- *Course ID: 666669 (with a search icon and a link to [Macroeconomic Principles](#))
- Course Offering Nbr: 1
- Subject / Catalog: ECON 2
- Course Topic ID: (empty)
- *Description: ECON 2: Macroeconomic Principles

Below the description, there is a 'Report Description' section with the text: "Introduction to macroeconomic analysis, focusing on income, employment, and pricing. Evaluation and formulation of economic policy using macroeconomic theory." There is also a checkbox for 'Requires Approval' which is currently unchecked.

The 'Item Attributes' section at the bottom includes:

- *Attribute: Cluster Code (dropdown menu)
- CLUSTER A (with a search icon and the text 'Cluster A')
- Show in Student Self-service

Some fields appear on this page only when a particular extension record is used. You associate extension records with academic item types on the Attributes page (Set Up SACR, Foundation Tables, Academic Structure, Academic Item Type, Attributes).

See [Defining Academic Item Type Attributes](#)

The Course ID, Course Offering Nbr, and Course Topic ID fields are available when the extension record SSR_AIR_H_CRSE is used (associated with the delivered item type of COURSE). Course Offering Nbr and Course Topic ID may or may not be required depending on the way that you have configured the extension record for the COURSE academic item type.

Academic Item ID

A system generated identifier.

Course ID

Click on the related link to access the Course Catalog component for the Course ID. Click OK or Cancel to return to this page.

Course Component

This field is available when the extension record SSR_AIR_H_CMPNT is used—you can define components within AIR that can be used as child items of courses.

Course Group ID	This field is available when the extension record SSR_AIR_H_CGRP is used (associated with the delivered item type of COURSEGROUP). Click on the related link to access the Course Group component for the Course Group ID.
Milestone	This field is available when the extension record SSR_AIR_H_MLSTN is used (associated with the delivered item type of MILESTONE). Click on the related link to access the Milestone Table component for the Milestone ID.
Report Description	Click this link to move to the Rich Text Fields page of this component where Rich Text Editor features are available for this for this description field. See Maintaining AIR Rich Text Fields
Degree	This field is available if the Degree check box is selected on the Attributes setup page for an academic item type. The Degree attribute is typically used for a Program of Study item that leads to a degree/certificate award. Note: Currently this field is informational only.
Credits	This field is available if the Credits check box is selected on the Attributes setup page for the academic item type. Enter a credit value.
Requires Approval	Note: This check box is planned for future use.
Available to Assign	This check box appears only for Program of Study academic item types. The check box is selected by default, indicating that the program of study can be assigned to students. Clear the check box if you want to build a program but not make it available to be assigned to students.
Last Prospect Date	This field is available only for Program of Study academic item types. Enter the last date that this PRG item can be used for a prospect. Note: Currently this field is informational only.
Last Admit Date	This field is available only for Program of Study academic item types. Enter the last date that this PRG item can be used for an applicant. Note: Currently this field is informational only.
Format ID	This field is available and required only for Program of Study academic item types.
Add to New Activity Registry and Add to Existing Activity Registry	When the Academic Item Type is Course, this page displays links to Activity Management. Click the Add to New Activity Registry link to access the Activity Registry component (SSR_AC_REGISTRY) in Add mode and create a new Activity Registry entry.

Click the Add to Existing Activity Registry link to access the Maintain Course Content Cross Reference component and add the course to an existing Activity Registry entry.

See [Setting Up an Activity Management Framework](#)

See [Understanding Activity Management](#)

Report Template Mapping

The Report Template Mapping fields appear on the page only for Program item types.

The flexible nature of the Academic Item Registry requires that users have a way to define reports that can interpret and illustrate their user defined program structures. This is particularly important in the area of student results and outcomes, where user defined result types can allow an institution to hold and report student results (grades, scores, credits and so on) and statistics at any point in a program tree. For this reason, we have delivered a self-service component that can be populated with HTML via a Peoplesoft BI Publisher Report Definition. This feature allows users to create a Results page referencing their user defined program structures and result/statistics profile. The AIR Report Template Mapping feature allows users to map a specific BI Report to specific program. The same report can also be shared by different programs with the same program format and result profile.

Currently the Report Template Mapping feature is used solely to attach a user defined BI report definition to the student self-service results component. The steps for associating a report to the self-service results component are:

- In BI Publisher:
 - Create a data source/upload a sample data file.
 - Design and define a report definition.
- In AIR: Associate the report with the self-service Results component using Report Template Mapping.

A sample report has been delivered with the April 2014 updates.

See the following document in My Oracle Support (ID 1400723.1): [Using BI Publisher and the XMLP Results Template to Display Students' Results and Outcomes in Program Enrollment Self Service: Sample Template.](#)

See *PeopleTools: BI Publisher for PeopleSoft*

Report Name	Prompts against a view of active BI reports defined with a type of 'XML' (XML File) or 'XMD' (XML Doc Object).
Template ID	Prompts against valid templates for the selected Report Name.
Component Name	Currently prompts against a view that returns components enabled for the program enrollment student self-service XML menu (currently the delivered SSR_APT_DAT_RPT_CM component).
Process Name	Planned for the future.

Item Attributes

The Item Attributes area is available when a Common Attribute(s) has been associated with an academic item type entity. Associate item attributes and academic item types on the Common Attributes – Record Context page. See the following section “Using Item Attributes to Extend AIR Data Elements”.

Using Item Attributes to Extend AIR Data Elements

The Common Attribute Framework allows you to extend the delivered AIR functionality without customizations, by enabling you to add different types of data elements to your program structures. An item attribute can be associated with one or more academic item types, and after it is linked to an academic item type, that attribute can be assigned to all academic items of that type. You can link to the attribute at the academic item level itself, or when the attribute is added as a child academic item of another academic item.

Note: Any existing academic item attributes (created prior to Additional Features July 2012) must be recreated using the Common Attribute Framework.

The Common Attribute Framework allows you to associate attributes with a functional area by a *Record Context*. Common Attributes have been enabled for the Academic Item Registry at the Academic Item and Child Element levels, each with its own Common Attribute Record Context and Attribute Record.

Academic Item

- Record Context: SSR_AIR_HDR
- Attribute Record: SSR_AIR_ADD

Attributes associated with this Record Context/Attribute Record combination are attached to an academic item and can be assigned on the Academic Item Registry page of the AIR component.

Child Element

- Record Context: SSR_AIR_ELEM
- Attribute Record: SSR_AIR_ELEM_AD

Attributes associated with this Record Context/Attribute Record combination are attached to child academic items (that is, they exist as an attribute of an academic item in the context of a parent academic item) and can be assigned using the Element Attributes link on the Academic Item Elements grid in the AIR component.

See "Understanding Common Attribute Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Steps for Creating Common Attributes for AIR

To create common attributes for AIR:

1. Define the attribute using the Common Attribute component (Set Up SACR, Common Definitions, Common Attributes Setup, Common Attribute).
2. Attach that attribute to the Academic Item (SSR_AIR_HDR) and/or Child Element (SSR_AIR_ELEM) Record Contexts (Set Up SACR, Common Definitions, Common Attributes Setup, Record Context).
3. Associate the attribute with one or more Academic Item Entities, using the Entities Association field in the Record Context component. Entity Association controls usage in the AIR component. An attribute without an entity association can be used with any item type.

Note: If you implemented Program Enrollment before April 2013, you must run the processes listed here after you apply the April 2013 updates.

4. Item Type Matrix Sync Entities

Navigate to the Item Type Matrix component (Set Up SACR, Product Related, Student Records, Program Enrollment, Item Type Matrix) and run the SSR_PE_SYNC process. The sync process ensures that the newly added attribute(s) are recognized as valid properties of the designated AIR Entities (or all AIR Entities if specific entities were not specified):

- Click the Sync Entities button. This initiates the SSR_PE_SYNC process.
- Check the Process Monitor to ensure that the process completes successfully.

This process can be scheduled using the process scheduler.

5. Entity Property Sync

Navigate to the Entity Property Sync page (SACR, System Administration, Entity, Entity Property Sync) and:

- Click the Sync All Entities button.
- Check the Process Monitor to ensure that the process completes successfully.

6. Wipe Entity Cache

Remain on the Entity Property Sync page and:

- After the Sync All Entity Properties process has completed successfully, click the Wipe Entity Cache button.
- Check the Process Monitor to ensure that the process completes successfully.

See [Identifying Child Item Types and Syncing Entities](#)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Setting Up Entity Registry" (PeopleSoft Campus Solutions 9.2: Campus Community)

Defining Attributes for Academic Items and Child Elements

Note that because attributes each have their own specific Record Context, you must associate attributes that can be used at both levels under each context. For example if the Common Attribute ‘Course Level’ can be assigned to a COURSE academic item and then overridden at the child element level (that is, when the course is a child of another item) you must associate the Course Level attribute to the SSR_AID_HDR record context and the SSR_AIR_ELEM record context. Attributes can be copied from one Common Attribute Framework Record Context to another.

Using Item Attributes in AIR

As explained above:

- The selections that you make in the Entity Associations field in the Record Context component determine which types of academic items those attributes can be applied to in AIR.
- The Attribute Type determines the type of data that you can enter in the Item Attributes grid in AIR.
- An Attribute can be required when associated with a particular record context (the Required check box is selected on the Record Context page in Common Attributes setup). If an attribute associated with the SSR_AIR_HDR context is set to required, the attribute is added automatically when a user creates a new academic item, and a value is required to save the component (if a default has not been assigned in the attribute definition).

Note: Users must provide a value even if they add a non-required attribute.

- Attributes can also be repeatable if this property is enabled in the Record Context definition (the Repeatable check box is selected on the Record Context page in Common Attributes setup).

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

However, despite these variations, you always use the same process to add attributes in AIR: select the Attribute and then enter or select a Value—for example, date, text, numeric value, or a code where the code is a member of the List of Values defined for the attribute, a Table value, or XLAT value.

An academic item:

- Can have multiple item attributes, at the academic item level itself or as a child item of another academic item (see Child Academic Items below).
- Can have multiple rows for the same item attribute as long as the attribute Value is different (for example Attribute A, with Value 1, Attribute A with Value 2).

Image: Academic Item Registry page Item Attributes example

When attributes have been assigned to the SSR_AIR_HDR context, the Item Attributes scroll area is available on the Academic Item Registry page.

The screenshot displays the 'Academic Item Registry' page with the following details:

- Academic Institution:** PeopleSoft University
- Academic Item ID:** 00000001757
- Academic Item Type:** Study Period

The main form area includes:

- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** BA Econ - Year 1 - Semester 2
- Report Description:** BA Econ - Year 1 - Semester 2 - Study Period is made up of 3 mandatory courses as well as the opportunity to select electives.
- Requires Approval:**

The **Item Attributes** section shows:

- *Attribute:** Cluster Code
- Value:** CLUSTER A
- Show in Student Self-service:**

Attribute

The name of the attribute. This value comes from the description entered for the attribute on the Common Attribute component.

Value

This field changes depending on the type of attribute. This could be a numeric, date, time or text field. Alternatively, the field could prompt against a list of values if one has been defined for the attribute.

Show in Student Self-service

If you select this check box, the attribute is displayed in the filter results in Course Groups component.

Wider use of this check box is planned for the future.

See [Defining Filters](#)

See [Setting Up Academic Item Registry Entries](#), [Item Details](#), and [Item Security](#)

Assigning Item Attributes to Child Academic Items

As mentioned previously, item attributes can be assigned to child academic items, allowing you to assign attributes to academic items in the context of a parent item. For example, an item that represents a course CHEM 399 might have a requirement for minimum score, but only when the course is taken at a certain point in certain program (for example, semester 3 of the Nursing program). This could be coded as a

numeric attribute (applicable to the COURSE item type) that can be applied to CHEM 399 as a child of the item representing semester 3 of the nursing program.

Note: An element attribute can override or add to any and all attributes attached to that item at the header level.

Access the Element Attributes (SSR_AIR_ENATTR_SEC) page (click the Element Attributes link in the Attributes tab, Academic Item Elements grid on the Item Details page in AIR).

Image: Item Details example page

Here is an example of the AIR Item Details page from which you access the Element Attributes page:

The screenshot displays the 'Item Details' page in the Academic Item Registry. At the top, there are navigation tabs: 'Academic Item Registry', 'Item Details', 'Rules / Results', 'Rich Text Fields', and 'Security'. The page shows the following information:

- Academic Institution:** PeopleSoft University
- Academic Item ID:** 00000001757
- Academic Item Type:** Study Period

Below this is a summary section with the following details:

- Effective Date:** 01/01/1900
- Status:** Active
- Description:** BA Econ - Year 1 - Semester 2
- Instructions:** Each of the Mandatory courses for BA Economics - Year 1 - Semester 2 will automatically be placed in your Schedule Builder. Carefully review the options below for elective courses.

The 'Academic Item Parameters' section contains a table with the following data:

*Academic Load	Enrollment Category	Minimum Credits	Maximum Credits	Minimum Number of Courses	Maximum Number of Courses
		0.00	0.00	0.00	0.00

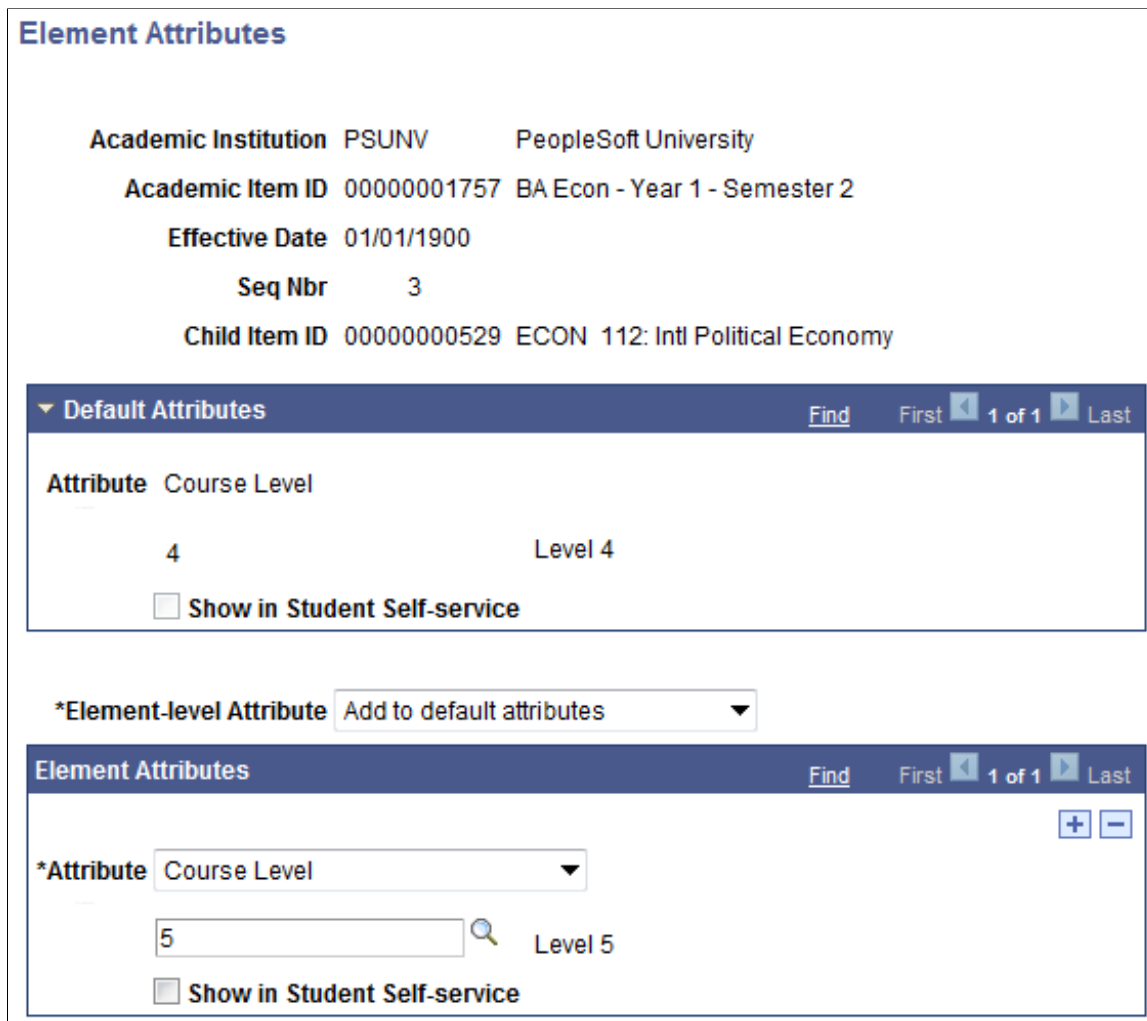

The 'Academic Item Elements' section contains a table with the following data:

Description	*Element-level Attribute	Element Attributes
ECON 1001B: Economic Principles II	Use default item attributes	Element Attributes
ECON 1004B: Economic Methods II	Use default item attributes	Element Attributes
ECON 112: Intl Political Economy	Use default item attributes	Element Attributes
Economics Year 1 Options	Use default item attributes	Element Attributes

The Element-level Attribute value selected on the Attributes tab carries over to the Element Attributes page but can be changed:

Image: Element Attributes page

This example illustrates the fields and controls on the Element Attributes page. You can find definitions for the fields and controls later on this page.

Default Attributes

All attributes linked to this academic item (ECON 112 in the example) at the item header level are displayed. This attribute is associated with the Record Context SSR_AIR_HDR and stored in the SSR_AIR_ADD table.

Element-level Attribute

The value selected in the Attributes tab (on the Item Details page) appears by default but can be changed. Values are:

- *Use default item attributes:* The user cannot enter new values.
- *Add to default attributes:* The Attribute and Value fields in the Elements Attributes group box are available. Any value that is added is used *in addition to* the default value(s). In the example above, ECON 112 would have two attributes when used as child of BA Econ – Year 1 – Semester 2: Level 2 *and* Level 3.

- *Override default attributes:* The Attribute and Value fields are available in the Element Attributes group box. Any value that is added is used *instead of* the default value(s). In the example above, ECON 112 would have an attribute of Level 3 rather than Level 2 when used as child of BA Econ – Year 1 – Semester 2.

See [Defining Academic Item Details](#)

Attribute

Select an attribute. The values available here are based on the attributes that are associated with the Child Element (SSR_AIR_ELEM) context.

Value

This field becomes available when you select an attribute.

For information about the Item Details page, see [Defining Academic Item Type Details](#) later in this section.

Defining Academic Item Details

Access the Item Details page (access this page from the AIR Search component.)

Image: Item Details page (1 of 2)

This example illustrates the fields and controls on the Item Details page (1 of 2). You can find definitions for the fields and controls later on this page.

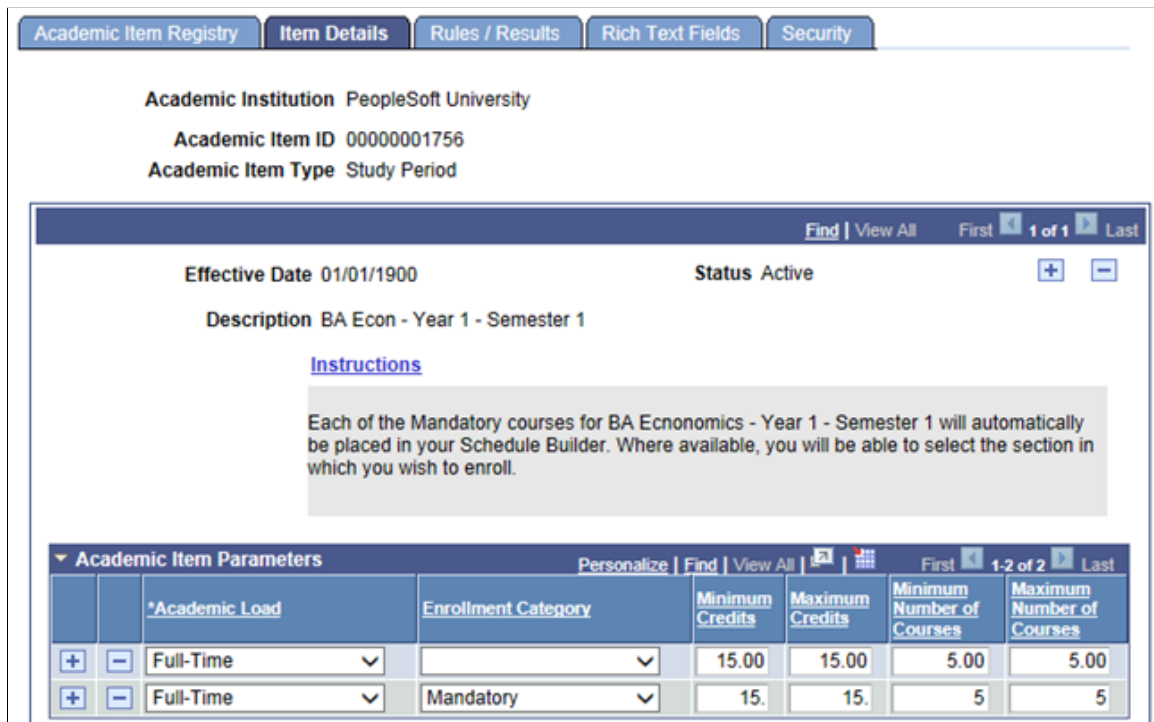

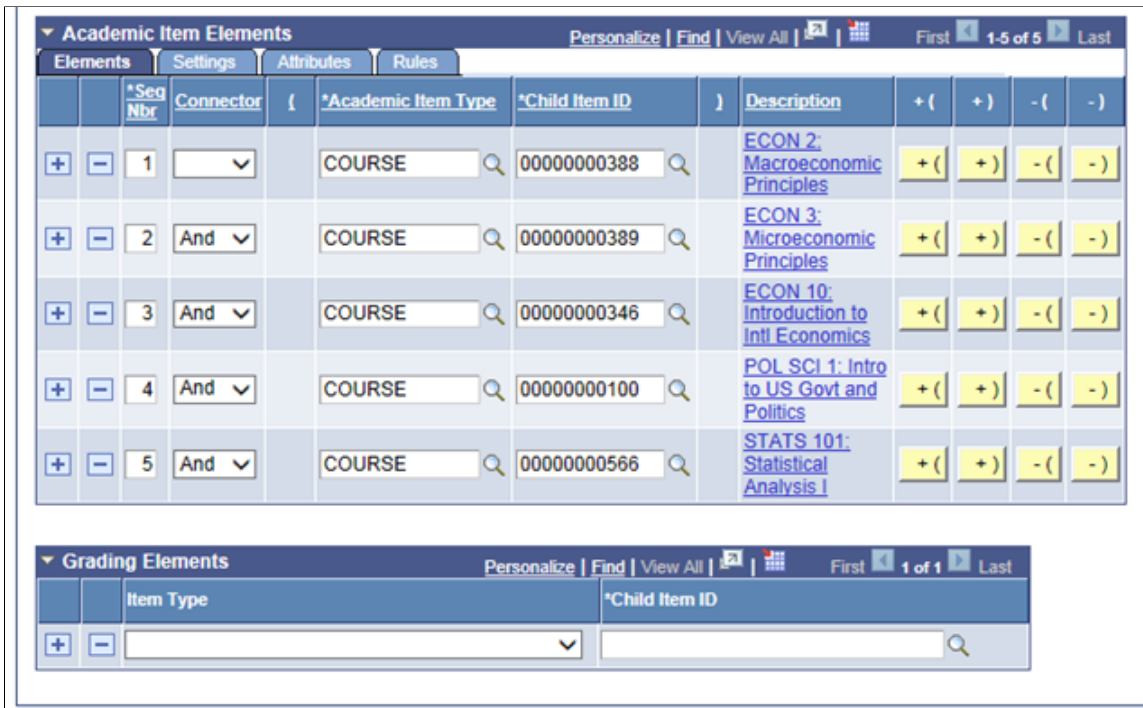

Image: Item Details page (2 of 2)

This example illustrates the fields and controls on the Item Details page (2 of 2). You can find definitions for the fields and controls later on this page.

Instructions

This field is available if the Instructions check box is selected on the Attributes page in Academic Item Type setup. Click the Instructions link to access the AIR Rich Text Fields page and enter instructions for self-service users.

See [Maintaining AIR Rich Text Fields](#)

Academic Item Parameters

This grid is available if the Item Parameters check box is selected on the Attributes page in the Academic Item Type setup.

Enter parameter data by load and enrollment category, to be used in Self Service (planned for the future).

Parameters can be overridden at the child item level.

Enrollment Category

When a value is not selected in the Enrollment Category field, the values in the Minimum/Maximum fields represent overall totals. Enrollment Category values are defined on the Enrollment Category (SSR_ENRL_CAT) page.

See [Setting Up Enrollment Categories for Program Requirements](#)

Minimal Credits

Enter the minimum credits that a student must achieve for the child items of this item in order to pass the item, if applicable. Note: Currently this field is informational only.

Maximum Credits	Enter the maximum credits allowed for child items of this item, if applicable. Note: Currently this field is informational only.
Minimum Number of Courses	Enter the minimum number of child courses that a student must pass in order to pass this item, if applicable. Note: Currently this field is informational only.
Maximum Number of Courses	Enter the maximum number of child courses that can be taken for this item, if applicable. Note: Currently this field is informational only.

Academic Item Elements

This grid is available if the Child Academic Items check box is selected on the Attributes setup page for an academic item type.

Academic Item Elements establish the relationship between one academic item and one or more other academic items, where one or more items are connected as *children* of another item. Child elements typically represent all of the items that a student must complete in order to satisfy the requirements for a particular academic item. For example a Program of Study academic item might have a number of child elements that are Year or Stage academic items, and the student might need to successfully complete each of those stages in order to complete the program.

Elements Tab:

Connector This field is available if the Show Connectors check box is selected on the Attributes page for an academic item type. The *And* option is selected by default, except for COURSELIST items—when child COURSE items are added, the Connector default option is *Or*.

Special processing applies when a child item with an academic item type identified as a Program Format Tree Node is used - the child item connector attribute is limited to *And*. An error message is returned on save if the Academic Item Elements grid contains one or more items that are identified as Program Format Tree Nodes and there is one row in which the connector is *Or*.

See [Setting Up Academic Item Types](#)

Academic Item Type Select a child academic item type based on the values that you set up in the Item Type Matrix component. Only items identified in the Item Type Matrix as valid child items of this AIR item are available for selection.

See [Using the Item Type Matrix](#)

Available values are also dependent on the AIR security of the user. Academic Item Types defined as Program Format tree nodes are excluded from the prompt unless the user has been authorized as an AIR administrator.

SeenSetting Up AIR Administrator Security

Child Item ID

Select a child item ID. The values that are available here are based on the Academic Item ID value (system generated) that appears on the Academic Item Registry page for the academic item type.

Description

Displays the description for the Child Academic Item ID. Click the link to view the item definition for the child item.

Use the Parentheses buttons to add or delete left or right parentheses. Parentheses are used to group items for AND/OR constructs. For example: (course 1 and course 2) or (course 3 and course 4).

Settings Tab:

Image: Item Details page: Settings tab

This example illustrates the fields and controls on the Item Details page: Settings tab. You can find definitions for the fields and controls later on this page.

Academic Item Elements								
		Personalize Find View All 1-5 of 5 First Last						
		Elements Settings Attributes Rules						
		Description	Minimum Units	Maximum Units	Enrollment Category	Description	Weight	Number of Attempts Allowed
<input type="checkbox"/>	<input type="checkbox"/>	ECON 2: Macroeconomic Principles	3.00	3.00	MAND <input type="checkbox"/>	Mandatory	<input type="text" value="1"/>	<input type="text" value="1"/>
<input type="checkbox"/>	<input type="checkbox"/>	ECON 3: Microeconomic Principles	3.00	3.00	MAND <input type="checkbox"/>	Mandatory	<input type="text" value="1"/>	<input type="text" value="1"/>
<input type="checkbox"/>	<input type="checkbox"/>	ECON 10: Introduction to Intl Economics	3.00	3.00	MAND <input type="checkbox"/>	Mandatory	<input type="text" value="1"/>	<input type="text" value="1"/>
<input type="checkbox"/>	<input type="checkbox"/>	POL SCI 1: Intro to US Govt and Politics	3.00	3.00	MAND <input type="checkbox"/>	Mandatory	<input type="text" value="1"/>	<input type="text" value="1"/>
<input type="checkbox"/>	<input type="checkbox"/>	STATS 101: Statistical Analysis I	3.00	3.00	MAND <input type="checkbox"/>	Mandatory	<input type="text" value="1"/>	<input type="text" value="1"/>

In order to show all fields on this tab, the example Settings tab is for a different academic item – Study Period - than the one used in the example of the Elements tab – Stage of Program.

Minimum Units and Maximum Units values are displayed if the child academic item is a Course.

Enrollment Category

The Enrollment Category column appears only if the Requires Enrollment Category check box has been selected for the child academic item type.

See Defining Academic Item Type Attributes

Weight

Enter a numeric value to determine the weight given to the child item in calculating the overall result/score for an item. The default is 1 and the value can be set to 0. Note: Currently this field is informational only.

Number of Attempts Allowed

Enter a numeric value to indicate the maximum number of times that this child element can be attempted for this academic item.

For example, you might indicate that a Course can be attempted only once within a Study Period.

This value is used by the APT Request process when creating new attempts for a planning node.

Attributes Tab:

Image: Item Details page: Attributes tab

This example illustrates the fields and controls on the Item Details page: Attributes tab.

Academic Item Elements				
Elements		Settings	Attributes	Rules
		Description	*Element-level Attribute	Element Attributes
+	-	ECON 2: Macroeconomic Principles	Use default item attributes	Element Attributes
+	-	ECON 3: Microeconomic Principles	Use default item attributes	Element Attributes
+	-	ECON 10: Introduction to Intl Economics	Use default item attributes	Element Attributes
+	-	POL SCI 1: Intro to US Govt and Politics	Use default item attributes	Element Attributes
+	-	STATS 101: Statistical Analysis I	Use default item attributes	Element Attributes

Element-level Attribute

Determines how attributes that are linked to the child element are to be used in the context of the parent item. The values are:

Use default item attributes: Any attributes linked to this element at the item header level apply in the context of the parent. For example if ECON 2 has attribute ‘Level’ with a value of ‘2’, this value applies when the course is used as a child of this item (for example, a semester or study period).

Override default attributes: Any attributes linked to this element at the item header level are to be ignored in favor of attributes that are applied to this item in the context of the parent (see Element Attributes below).

Add to default attributes: Any attributes linked to this element at the item header level are used in addition to Element attributes defined at this level (see Element Attributes below).

Element Attributes

Click this link to access the Element Attributes page to view, override or add attributes.

See [Assigning Item Attributes to Child Academic Items](#)

Parameters Tab:

Image: Item Details page: Parameters tab

This example illustrates the fields and controls on the Item Details page: Parameters tab.

Academic Item Elements				
Elements		Settings	Attributes	Parameters
		Description	*Element-level Parameters	Element Parameters
+ -		BA Econ - Year 1 - Semester 1	Use default item parameters	Element Parameters
+ -		BA Econ - Year 1 - Semester 2	Use default item parameters	Element Parameters

This tab is available only if the Item Parameters check box is selected on the Attributes page in the Academic Item Type setup.

To add to or override the data in the Academic Item Parameters grid, select *Add to default parameters* or *Override default parameters* and then click the Element Parameters link to access the Element Parameters page and update the data.

Viewing and Updating Parameters

Access the Element Parameters page (click the Element Parameters link on the Item Details page).

Image: Element Parameters page

This example illustrates the fields and controls on the Element Parameters page.

Academic Institution PSUNV PeopleSoft University
 Academic Item ID 00000001755 BA Econ - Year 1
 Effective Date 01/01/1900
 Seq Nbr 1
 Child Item ID 00000001756 BA Econ - Year 1 - Semester 1

Default Parameters					
Academic Load	Enrollment Category	Minimum Credits	Maximum Credits	Minimum Number of Courses	Maximum Number of Courses
Full-Time		15.00	12.00	4.00	4.00
Full-Time	Mandatory	12.00	12.00	4.00	4.00

*Element-level Parameters **Add to default parameters**

Element-Level Parameters					
*Academic Load	Enrollment Category	Minimum Credits	Maximum Credits	Minimum Number of Courses	Maximum Number of Courses
		0.00	0.00	0.00	0.00

Use the Element Parameters page to view the parameters defined for this item. You can also override the parameters or make additions to them. This allows the overridden (or additional) values to be used for display purposes when an item is accessed in the context of its parent.

Grading Elements

Item Type

Select a grading academic item type. Only those academic item types for which the Grading Item Type check box has been selected on the Attributes setup page are available here.

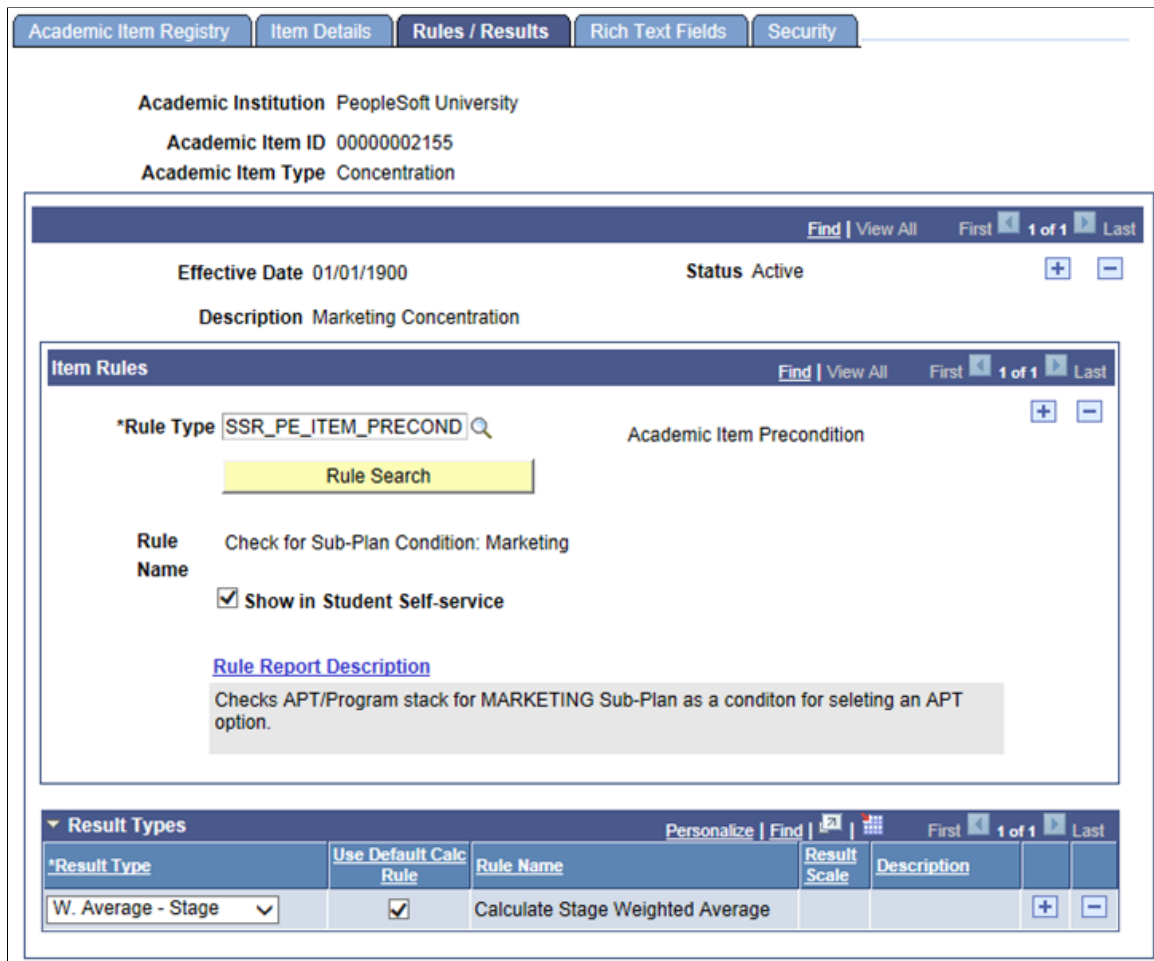

See [Defining Academic Item Type Attributes](#)

Assigning Rules and Result Types to Academic Items

Access the Rules / Results page (access this page from the AIR Search component.)

Image: Rules / Results page

This example illustrates the fields and controls on the Rules / Results page. You can find definitions for the fields and controls later on this page.

The Rules / Results page is available if an item is configured to have Rules and/or Result Types attached to it as explained in the following documentation.

Item Rules

The Item Rules section is available only if the academic item type (of the item) is associated with at least one rule type on the Rule Type Table page.

See [Setting Up Rules for Program Enrollment](#)

You can assign multiple rules to an academic item but each rule must be of a different rule type.

The rules that you assign here are available for use in User Interfaces and batch processing.

Rule Type Select a rule type from those defined on the Program Enrollment - Rule Type Table page.

Rule Search Click to launch the standard Rules Engine search:

- The Rule Group Name associated with the rule type on the Program Enrollment - Rules Type Table is passed to the search criteria and cannot be changed.
- Rule Category is required.
- Rule Engine Search is used to return rules with the passed group name as well as any criteria that you add.

See "Understanding the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Setting Up the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community)

Show in Student Self-service When this check box is selected, the Rule Name and associated description appear on the self-service Item Details page.

Rule Report Description When a rule is returned from the search, the Rules Engine Long Description is used as a default but you can edit it by clicking the Rule Report Description link and accessing the Rich Text fields page.

Result Types

The Result Types grid is available only if the academic item type (of the item) is associated with at least one result type on the Result Type page.

Note: Any result type, for which the Auto-create in AIR check box is selected (by academic item type) on the Result Type setup component, is inserted into the Result Types grid when a new academic item is created. Calculation rules associated to the result type are also inserted in the grid.

Result Type The result types available here are those attached to the academic item type in the Item Type Usage grid on the Result Type page.

Use Default Calc Rule If this check box is selected, the default calc rule associated with this item type/result type combination on the Result Type setup component is used and cannot be changed. If the check box is deselected, the Rule Name field is available and the prompt can be used to select a valid rule.

See [Setting Up Result Types](#)

The result types assigned to an item are moved to APT when the item is added for a student.

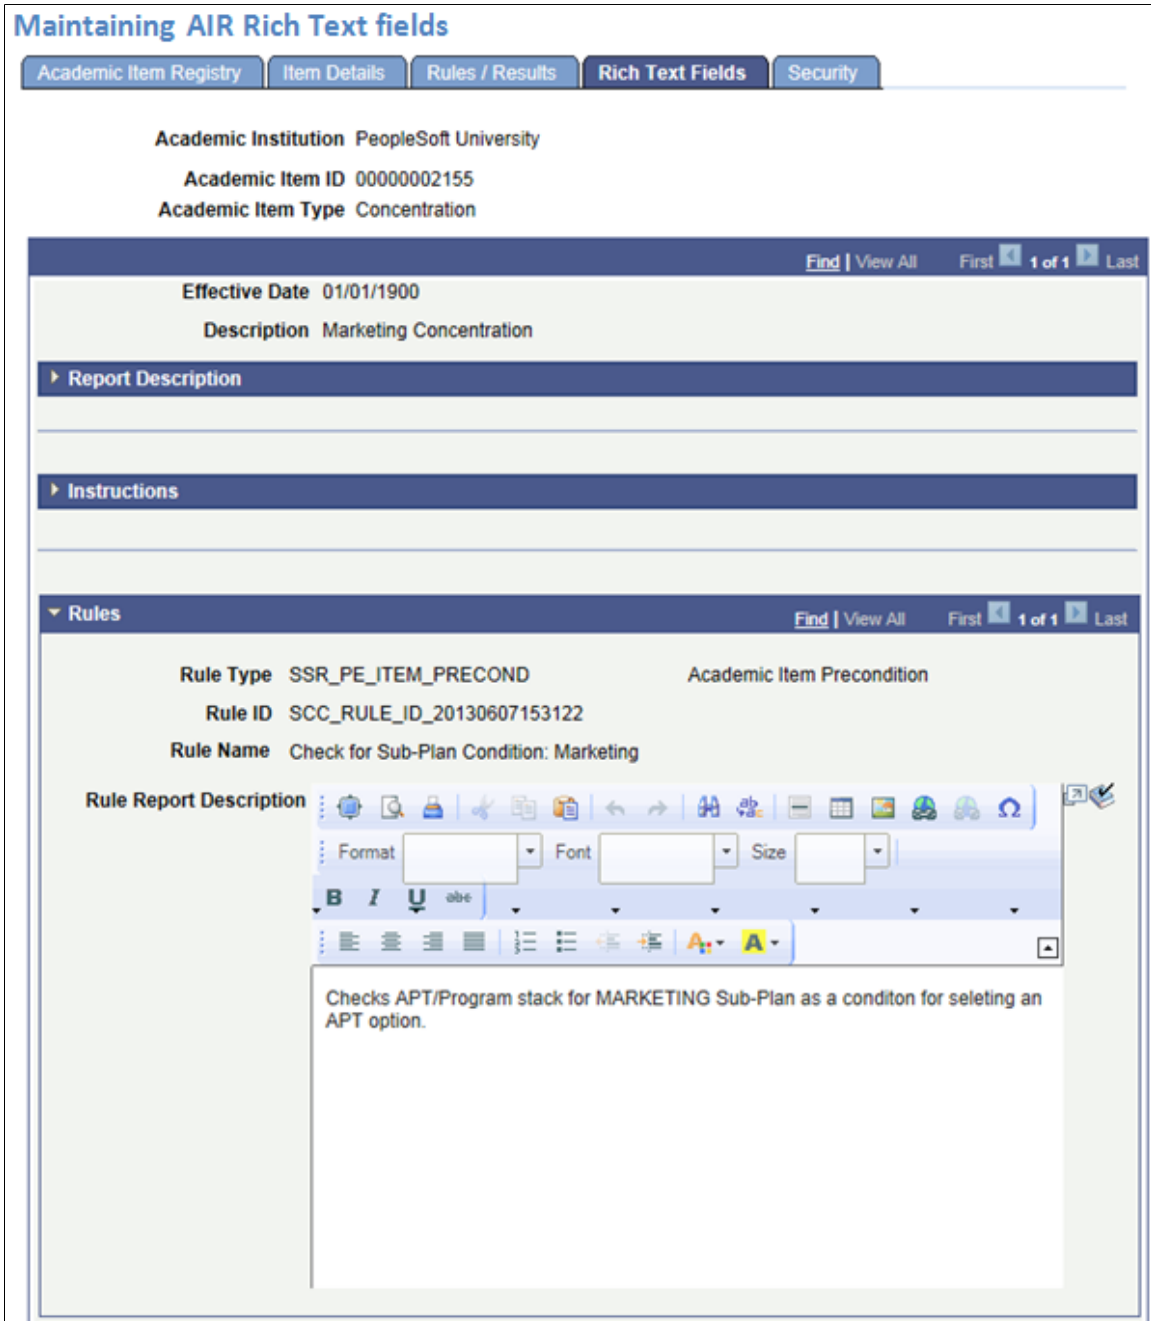

See [Creating and Managing APT Instances Using the Academic Progress Tracker Component](#)

Maintaining AIR Rich Text Fields

Access the Rich Text Fields page (click the Report Description link on the Academic Item Registry page).

Image: Rich Text Fields page

This example illustrates the fields and controls on the Rich Text Fields page.

The Rich Text fields page allows you to maintain all three AIR Rich Text enabled fields in one place. A rich text field is available for Report Description and Instructions. Each Rule associated with this item can also have its own rich text enabled description.

See [Defining AIR Entries](#)

See [Defining Academic Item Details](#)

See [Assigning Rules and Result Types to Academic Items](#)

Defining Academic Item Security

Access the Security page (Click the Item ID link or Add New Item button on the AIR Search page).

Image: AIR Security page

This example illustrates the fields and controls on the AIR Security page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Security' page for an academic item. The navigation bar includes 'Academic Item Registry', 'Item Details', 'Rules / Results', 'Rich Text Fields', and 'Security'. The page displays the following information:

- Academic Institution: PeopleSoft University
- Academic Item ID: 00000001757
- Academic Item Type: Study Period

Field	Value	Control
Effective Date	01/01/1900	
Status	Active	+ -
Description	BA Econ - Year 1 - Semester 2	

Security Access

- Available to all academic organizations
- Grant access to selected academic organizations

Security for AIR Entries

AIR items are secured using the existing User ID based Campus Solutions Academic Organization security. A user's academic organization privileges (as defined under Academic Organization Security (SACR, Security, Secure Student Administration, User ID, Academic Org Security) determine whether a user has update or read only access to a particular academic item.

See "Securing Academic Organizations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

- Updating or viewing an existing academic item:

When a user retrieves an AIR entry, the system compares the entries in the AIR security table (SSR_AIR_SCRTY) to the user's academic organization security profile (SCRTY_TBL_ACAD). If the security option is *Grant access to selected academic organizations* and a matching academic organization row is found (or if *Available to all academic organizations* is selected), the user has update access to the item. If no match is found, the user has read only access to the component.

- Adding a child academic item:

A user can select any academic item, however the same edit (as explained above) is performed to determine if the child item is accessible (once added to the grid) in update or read-only mode.

- Course Academic Items:

When a user creates a new course item, the *Grant access to selected academic organizations* option is selected by default and not available for edit. If the user specifies a course offering, the system also displays the relevant academic organization. If the user does not specify a course offering, the system retrieves the academic organizations for *all* offerings of the course when the component is saved. Only users with access to the organizations listed on the Security page can maintain the course.

Managing Special Edits in AIR for COURSE, COURSEGROUP, and COURSELIST Academic Items

Academic items with the delivered item type of COURSE, COURSEGROUP, and COURSELIST are subject to a series of edits and restrictions:

- Course Item (Academic Item Type = COURSE):
 - Only one instance of a Course ID/Offer Number/Topic ID combination is allowed in AIR. When a COURSE academic item type is saved, an edit is performed to check for a match on Course ID, Course Offer Nbr, and Topic ID. If you try to create an academic item with the following attributes: Course ID: 007125, Course Offer Nbr: 1 (ECON 198), Course Topic ID: 1, and a match is found, you receive an error message pointing to the existing academic item. The same edit applies for offerings for which no course topics are defined - only one academic item is allowed for the course offering.
 - When a COURSE item is added as a child of another academic item other than COURSELIST (see the following information about COURSELIST items), the COURSE item must have an Enrollment Category.
- Course List Item (Academic Item Type = COURSELIST):
 - Only COURSE item types can be assigned as child items.
 - When a COURSELIST item is added as a child of another academic item the COURSELIST item must have an Enrollment Category.
- Course Group Item (Academic Item Type = COURSEGROUP):

When a COURSEGROUP item is added as a child of another academic item the COURSEGROUP item must have an Enrollment Category.

Using the Academic Item Registry Copy Function

A copy function is available when you create a new AIR item. This allows you to clone a previously created item of the same type (and all of the related children etc.) and make adjustments to it for another use. For example a generic year 1 or foundation year stage could be defined and then copied and adjusted to suit the needs of different types of programs.

Note that when you copy an item that has child items, the cloned item and the original item share the same child items.

In Add mode on the Academic Item Registry page, the Copy from AIR button is available. Click the button to access a look up page.

Academic Institution Displays the value of the Institution that you entered when adding the new academic item.

Academic Item Type Displays the Item Type that you entered for the new academic item.

After you select an item, the data is copied and can be edited.

Course List Copy Function

For Course List academic items, in Add mode, the Copy AA Course List button is available in addition to the Copy from AIR button. If you select the Copy AA Course List option, only those rows in the AA course list that do not have a wild card indicator are copied. Click the button to access a look up page:

- AA Academic structure fields are available for searching, in addition to Course List.
- When an item is selected, all course list rows that do *not* have wild card indicator rows are copied over: that is any row from CLST_DETL_TBL where WILDCARD_ID = Y is excluded.

Creating Academic Items for Courses

Program Enrollment, as delivered, allows you to create academic items that point to a course ID, course offering, course topic, or course offering/topic.

Use the Course Academic Item (SSR_CRSECAT_AIR) component to create academic items for individual courses or the Create Course Academic Item (SSR_RC_CRSEAIR) component batch process to create academic items for multiple courses.

This section discusses how to:

- Create academic items for an individual course.
- View academic item details for courses.
- Create academic items for multiple courses.

Pages Used to Create Academic Items for Courses

Page Name	Definition Name	Navigation	Usage
Course Academic Item	SSR_CRSECAT_AIR	Curriculum Management > Academic Item Registry > Course Academic Item	Create academic items for an individual course.
Course Academic Items Details	SSR_CRSE_AIR_DTL	Click the Details link on the Course Academic Item page.	View course academic item details.
Create Course Academic Item	SSR_RC_CRSEAIR	Curriculum Management > Academic Item Registry > Create Course Academic Item	Create academic items for multiple courses.

Creating Academic Items for an Individual Course

Access the Course Academic Item page (Curriculum Management > Academic Item Registry > Course Academic Item).

Click the link next to the Course ID to access the Course Catalog (CRSE_CATALOG) component.

See [Creating Course Offerings](#)

Effective Date

This is the maximum effective dated row (less than or equal to the system date) for the course from the Course Catalog (the Course Academic Item search page prompts are the same as those for the Course Catalog search page but only the maximum effective dated row is returned).

Course Catalog, Course Offer, Course Catalog Topic, and Course Offer Topic

Data appears based on the data in the Course Catalog – for example, if no topic exists in the Course Catalog, the Select check box is not available for edit for the Course Catalog Topic.

Select

Use this check box to indicate that you want to create an academic item for a course, offering, topic, or offering/topic.

Item ID

This link appears if an academic item already exists in the Academic Item Registry component - click the link to access the component.

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

Description

View the description for an existing academic item. If no academic item exists, the Course Description appears here by default and you can edit it.

Note: The Description field for entries under Course Offer and Course Offer Topic is populated with the Subject and Catalog Number values for the offering as well as the Course Description. For example a course with the Description *Intro Spanish*, with an offering with a subject of *SPAN* and a Catalog Number of *100*, appears as *SPAN 100: Intro Spanish*.

Select All and Clear All

Click these buttons to select or clear all the check boxes in the Select column.

Create Academic Item

Click this button to create academic items in the AIR component for the course, offering, topic, and offering/topic for which the Select check box is selected. When an academic item is created:

- The Item ID link appears here on the Course Academic Item page.
- The Course Academic Item link appears on the Offerings page in the Course Catalog component. Click the link to access the Course Academic Item page.

See [Creating Course Offerings](#)

Details

Click this link to access the Course Academic Item Details page and view a summary of the course academic items that have been created.

Item Attributes

Any attributes that have been defined as required for the Academic Item record context (SSR_AIR_HDR)—the Required check box is selected on the Record Context page in the Common Attribute setup—and associated with the COURSE item type entity ('AIR Course') defaults into the Item Attributes scroll area. These attributes cannot be deleted and you must select a value in order to create an academic item.

See [Setting Up Academic Item Registry Entries, Item Details, and Item Security](#)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Viewing Academic Item Details for Courses

Access the Course Academic Item Details page (click the Details link on the Course Academic Item page).

Image: Course Academic Item Details page

This example illustrates the fields and controls on the Course Academic Item Details page . You can find definitions for the fields and controls later on this page.

Course Academic Item Details

Academic Institution	PSUNV	Effective Date	01/01/1900

*Attribute: + -

Run Control Options

Course Catalog

This check box is selected by default. The SSR_CRSE_AIR process creates an academic item for the course for the selected institution.

Course Catalog Topic

If this check box is selected, the process creates an academic item for each course topic that exists for the course ID.

Course Offer

If this check box is selected, the process creates an academic item for each course offering that exists for the course ID.

*Course Offer Topic

If this check box is selected, the process creates an academic item for each course offering and topic combination that exists for the course ID.

Population Selection

The Population Selection group box is a standard group box that appears on run control pages when the Population Selection process is available or required for the transaction. Selection tools are available based on the selection tools that your institution selected in the setup of the Population Selection process for the application process and on your user security. Fields in the group box appear based on the selection tool that you select. The fields behave the same way from within the group box on all run control pages and application processes. If your institution uses a specific delivered selection tool to identify IDs for a specific transaction, you must use it.

Select the Population Selection check box to use the Population Selection process to select the courses for which you want to create academic items. When you select this check box, the Selection Tool and Query Name fields become available.

Selection Tool

Select *External File* or *PS Query*.

Query Name

The following queries are delivered:

- *SSR_POP_CRSEAIR_ACADGROUP*: Select courses by institution and academic group.
- *SSR_POP_CRSEAIR_ACADORG*: Select courses by institution and academic organization.
- *SSR_POP_CRSEAIR_BYDATE*: Select courses by creation date using institution, operator id and date/time when the course was added.
- *SSR_POP_CRSEAIR_SUBJECT*: Select courses by institution and course subject.

If you create queries, you must use the bind record *SSR_CRSECAT_BND*.

See "Understanding Population Selection" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Using the Population Selection Process" (PeopleSoft Campus Solutions 9.2: Campus Community)

Manual Selection

Use Course Select

If this check box is selected, you can manually select the courses for which you want to create academic items.

Clear List

Click this button to remove all Course ID rows and clear the Course ID field.

Item Attributes

Any attributes that have been defined in the Common Attribute setup as required for the Academic Item record context (*SSR_AIR_HDR*) and associated with the *COURSE* item type entity ('AIR Course') default into the Item Attributes scroll area. These attributes cannot be deleted and you must select a value in order to run the process.

See [Using Item Attributes to Extend AIR Data Elements](#)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)"Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Running the Create Course Academic Items Process

Run

Click to run the SSR_CRSE_AIR process and create course academic items in AIR.

When an academic item is created:

- The Item ID link appears on the Course Academic Item page.
- The Course Academic Item link appears on the Offerings page in the Course Catalog component. Click the link to access the Course Academic Item page.

See [Creating Course Offerings](#)

Building Programs by Format

This section provides an overview of building programs by format and discusses how to:

- Use the Build Program by Format component in Add mode.
- Use the Build Program by Format component in Update/Display mode.

Understanding How to Build Programs by Format

The Academic Item Registry component allows you to create program elements and to establish links between those elements. However, because no intrinsic program hierarchy is built into the structure, you cannot use the component to build a program in 'top-down' fashion. That is, the program and its parts cannot be built and assembled in a single task flow. The Build Program by Format component provides this single task flow user experience by using the Program Format structure to establish a framework—and therefore a program hierarchy—upon which you can assemble a program of study. This single task flow streamlines the program building process, allowing you to chart your progress towards completion. When data entry is complete you can easily access a complete view of the program.

See [Setting Up Program Formats](#)

Note: Build Program by Format always obeys the Program format. Therefore, a user cannot insert an unauthorized tree node (even if the user is an AIR administrator).

See [Setting Up AIR Administrator Security](#)

The task is accomplished in three steps:

- You provide a Program Format ID.
- The component renders the Program Format Tree structure.

- You follow the tree guideline to build the elements of the program by adding new academic items or using previously built academic items.

All program items are audited against their program format definition when the program academic item is retrieved in the Build Program by Format or Program Template components.

Note: The Build Program by Format component restricts the type of items that can be assigned within a program tree:

When you assign an item to a tree node, you must create or use an academic item of the same type that was used in the program format definition.

Child Items: Only items with an item type that is not defined as a Program format tree node can be assigned as a child to an item that you create or update in this component.

Page Used to Build Programs by Format

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Build Program by Format	SSR_PROG_BUILDER	Curriculum Management > Academic Item Registry > Build Program by Format > Build Program by Format	Build programs by format.
Build Program by Format (select mode)	SSR_PRG_BLDR_SEL	Click the link for any item type in the tree other than PRG.	Specify how you want to assign the item for the node.

Using the Build Program by Format Component in Add Mode

To build a program by format in Add mode:

1. Add the program by selecting an Institution and Program Format.

Image: Build Program by Format step 1 example page

This example illustrates step 1 in the Build Program by Format (Add mode) process.

The screenshot displays the 'Build Program by Format' interface. At the top, there are two buttons: 'Find an Existing Value' and 'Add a New Value'. Below these, there are three input fields with labels and search icons:

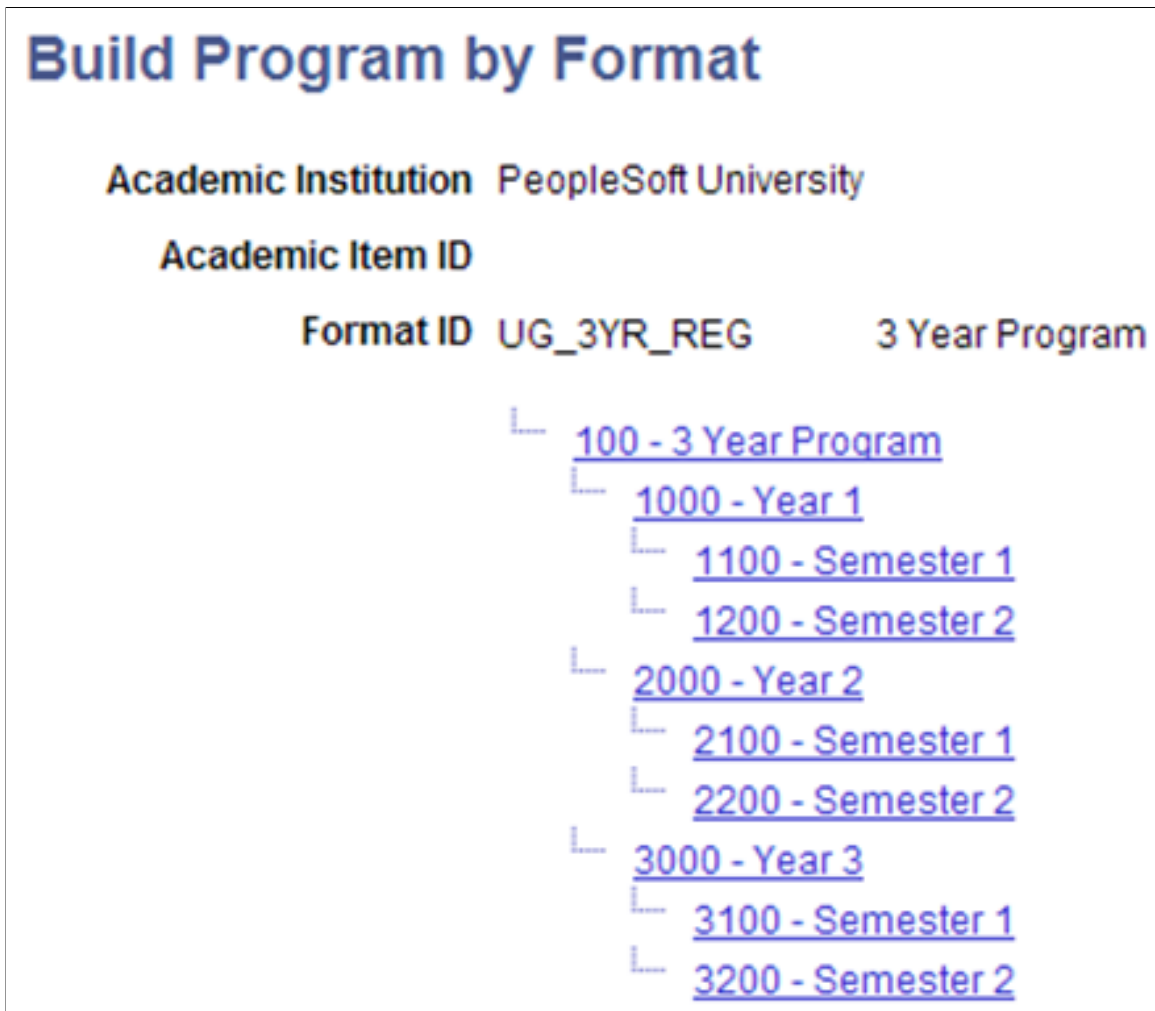

- Academic Institution:** PSUNV
- Format ID:** UG_3YR_REG
- Academic Item ID:** 000000000000

At the bottom left, there is a yellow 'Add' button.

2. The Program Format appears in a Tree view when the component opens:

Image: Build Program by Format step 2 example page

This example illustrates step 2 in the Build Program by Format (Add mode) process.

Each node of the tree is a link/prompt for you to:

Build a new academic item for the node or

Associate an existing item with the node or

Clone an existing item to create a new item for the node.

You must assemble the program in accordance with the tree structure. Begin at the root (program) node. If you click any other link you receive a message instructing you to assign the item for the Parent node. The message returns the node ID that should be used (in this example it would be 100). This same message is returned if you skip a level in the tree. In this example if you assign the item for node 100, but then click the link for 1100, the error message instructs you to first assign the item for the parent (1000).

3. Program (Node Academic Item Type = PRG):

Click the link for the root node that represents the Program of Study: you are transferred to the AIR component where you create a new academic item for the Program node.

Image: Academic Item Registry Program Node example page

This example illustrates step 3 in the Build Program by Format (Add mode) process.

The Institution and Academic Item Type (Program of Study) appear by default and cannot be changed. All of the features of the AIR component are available. You can:

Save and return to the Build Program by Format page by clicking OK.

Discard any changes and return by clicking Cancel.

Save any changes and remain on the AIR component by clicking Apply.

When you click OK, the item is saved, an academic item ID is assigned, and you are returned to the Build Program by Format main page:

Image: Build Program by Format (Add Mode) After AIR Save

This example illustrates the Build Program by Format main page after you save the AIR component.

Build Program by Format

Academic Institution Great Lakes University
 Academic Item ID 00000001469
 Format ID UG_3YR_REG 3 Year Program

- └─ 100 - 00000001469
 - └─ 1000 - Year 1
 - └─ 1100 - Semester 1
 - └─ 1200 - Semester 2
 - └─ 2000 - Year 2
 - └─ 2100 - Semester 1
 - └─ 2200 - Semester 2
 - └─ 3000 - Year 3
 - └─ 3100 - Semester 1
 - └─ 3200 - Semester 2

Item Description	Item Type	Item ID	Format Node
BS Chemistry	Program of Study	00000001469	100 - 3 Year Program

The tree node where the item was assigned is highlighted and inactivated. The Program Structure tab opens and the academic item (and any child items) that was assigned to the node is listed.

If updates are required, use the Item ID link to access the item.

Any Other Item Type (other than PRG) in the Tree

When you click the link for any other item type in the tree, you are transferred to the Build Program by Format - Select Mode (SSR_PRG_BLDR_SEL) page where you specify how you want to assign the item for this node. By default, the Item Type value is the item type of the node and cannot be changed.

Image: Build Program by Format (select mode) page

This example illustrates the fields and controls on the Build Program by Format (select mode) page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web form titled "Build Program by Format". At the top, it displays "Institution PeopleSoft University" and "Format ID UG_3YR_REG 3 Year Program". Below this is a "Select Mode" section with three radio button options: "Create New Item" (which is selected), "Use Existing Item", and "Clone Existing Item". At the bottom, it shows "Item Type STAGE".

Create New Item

When you select this option, you are transferred to the AIR component. Institution and Academic Item Type values appear by default and cannot be changed. After you create the item in AIR and click OK, you are returned to the Build Program by Format main page and the node is inserted in the program structure.

Use Existing Item

When you select this option, the Academic Item ID field becomes available (the Item Type value is the item type of the node and cannot be changed). The academic items that are available match the Institution, Item Type, and *Effective Date* of the Program Node. If you select an existing item, you are returned to the Build Program by Format main page and the node is inserted in the program structure.

Clone Existing Item

If you select this option, the academic items that are available match the Institution, Item Type, and *Effective Date* of the Program Node. If you select an existing item, you are transferred to the AIR component. The Effective Date is, by default, the Effective Date of the Program Node and cannot be changed. After you clone the item, you are returned to the Program by Format main page and the node is inserted in the program structure.

Note that when you copy an item that has child items, the cloned item and the original item share the same child items.

Using the Program Structure Tab

When academic items are assigned to the tree nodes, the program structure is tracked in the Program Structure tab on the Build Program by Format page. The display is updated as academic items are created/assigned to tree nodes. Rows are inserted for each assigned item as well as any child items entered for the item (or child items that were attached to an existing item).

Image: Build Program by Format page (Program Structure tab)

This example illustrates the fields and controls on the Build Program by Format page (Program Structure tab). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Build Program by Format' page for PeopleSoft University. It displays a tree structure of academic items under the format 'UG_3YR_REG' (3 Year Program). The tree includes nodes for Year 1, Year 2, and Year 3, with specific semester and course identifiers. Below the tree is a table with the following columns: Expand/Collapse, Item Description, Item Type, Item ID, and Format Node.

Expand / Collapse	Item Description	Item Type	Item ID	Format Node
[-]	B.S. Economics	Program of Study	00000001715	100 - 3 Year Program
[-]	[-] B.S. Economics - Year 1	Stage	00000001687	1000 - Year 1
[-]	[-] [-] Y1-Sem 1 - B.S. Economics	Study Period	00000001688	1100 - Semester 1
[-]	[-] [-] [-] ECON 2: Macroeconomic Principles	Course	0000000405	
[-]	[-] [-] [-] and ECON 3: Microeconomic Principles	Course	0000000406	
[-]	[-] [-] [-] and ECON 10: Introduction to Intl Economics	Course	0000000407	
[-]	[-] [-] [-] and ACCT 1001: Introduction to Accounting	Course	0000000303	
[-]	[-] [-] [-] and COMM 3: Public Communication	Course	0000000002	
[-]	[-] [-] [-] and Y1-Sem 2 - B.S. Economics	Study Period	00000001689	1200 - Semester 2
[-]	[-] [-] [-] [-] ECON 213: Money and Banking	Course	0000000172	
[-]	[-] [-] [-] [-] and ECON 112: Intl Political Economy	Course	0000000163

[-]	[-] [-] [-] [-] [-] [-] and ECON 167: Econ and Social Challenges	Course	0000000166	
[-]	[-] [-] [-] [-] [-] [-] and ECON 176: Economic Themes in Film	Course	0000000167	
[-]	[-] [-] [-] [-] [-] [-] and ECON 183: The Middle East	Course	0000000168	
[-]	[-] [-] [-] [-] [-] or BS Economics Year 1 - Finance	Course List	00000001706	

Expand/Collapse

You can expand or collapse any related child data.

Item ID

Click this link to transfer to the AIR component.

Format Node

The value that appears here is based on the setup on the Program Format (SSR_PROG_FORMAT) page.

Using the Build Program by Format Component in Update/Display Mode

You can use the Build Program by Format component to retrieve and update an existing program. Items can be assigned to tree nodes and existing items can be maintained. The search record is restricted to academic items with an academic item type of PRG.

Viewing Program Format Audit Messages

Image: Build Program by Format page (Audit Messages)

When you retrieve a program, the Program Format audit is run and missing tree nodes (and missing child nodes) are identified and listed on the page in the Program Format Audit Messages grid:

The screenshot shows the 'Build Program by Format' interface. At the top, it displays 'Academic Institution PeopleSoft University' and 'Academic Item ID 00000001715'. Below this, it shows 'Format ID UG_3YR_REG' and '3 Year Program'. A tree structure is visible with nodes for '100 - 3 Year Program', '1000 - Year 1', '1100 - Semester 1', '1200 - Semester 2', '2000 - Year 2', '2100 - Semester 1', '2200 - Semester 2', '3000 - Year 3', '3100 - Semester 1', and '3200 - Semester 2'. Below the tree is a 'Program Structure' table with columns for 'Expand / Collapse', 'Item Description', 'Item Type', 'Item ID', and 'Format Node'. The table lists 'B.S. Economics' as a 'Program of Study' with item ID '00000001715' under the '100 - 3 Year Program' node. It also lists 'B.S. Economics - Year 1' as a 'Stage' with item ID '00000001687' under '1000 - Year 1', and 'B.S. Economics - Year 2' as a 'Stage' with item ID '00000001690' under '2000 - Year 2'. Further down, it lists 'Y2-Sem 1 - B.S. Economics' as a 'Study Period' with item ID '00000001691' under '2100 - Semester 1', and 'and Y2-Sem 2 - B.S. Economics' as a 'Study Period' with item ID '00000001692' under '2200 - Semester 2'. At the bottom, there is a 'Program Format Audit Messages' table with a 'Description' column. It contains three messages: '1 Missing Stage item (Node 3000) under parent Academic Item ID 00000001715.', '2 Missing Study Period item (Node 3100) under parent node 3000.', and '3 Missing Study Period item (Node 3200) under parent node 3000.'

The audit occurs each time that you retrieve a program using the Build Program by Format component— if a program is left unfinished, the audit messages appear the next time that a program is retrieved.

When an item has not been assigned to a node in a particular branch of a tree, a message is returned in the following format: Missing <Item Type Description> item (Node <Tree node ID of child>) under parent Academic Item ID <Academic Item ID assigned to the PRG node>.

In the example above an academic item has not been assigned for the tree node 3000 – Year 3:

Error message sequence 1 identifies the item type and the ID for the missing node, with a reference to the item ID of the parent program node.

Error messages 2 and 3 (for the missing study periods) refer to the parent only by the node ID, because an academic item has not been assigned.

Using the Messages Tab

Select the Build Program by Format page, Messages tab.

Image: Build Program by Format page (Messages tab)

This example illustrates the fields and controls on the Build Program by Format page (Messages tab).

The screenshot shows the 'Build Program by Format' page for 'Academic Institution PeopleSoft University' and 'Academic Item ID 0000001715'. The 'Format ID' is 'UG_3YR_REG' and the program is a '3 Year Program'. A tree view shows the structure: 100 - 3 Year Program, 1000 - Year 1, 1100 - Semester 1, 1200 - Semester 2, 2000 - Year 2, 2100 - Semester 1, 2200 - Semester 2, 3000 - Year 3, 3100 - Semester 1, and 3200 - Semester 2. Below the tree is a table with tabs for 'Program Structure' and 'Messages'. The 'Messages' tab is active, showing a table with columns: Expand / Collapse, Item Description, Item Type, and Messages.

Expand / Collapse	Item Description	Item Type	Messages
[-]	B.S. Economics	Program of Study	
[+]	[-] B.S. Economics - Year 1	Stage	
[-]	[-] and B.S. Economics - Year 2	Stage	
	[-] [-] Y2-Sem 1 - B.S. Economics	Study Period	
	[-] [-] and Y2-Sem 2 - B.S. Economics	Study Period	
[-]	[-] and L1 - Year 1 - BAE	Year	Invalid accumulator item. This item type is not in the program format definition.
[-]	[-] [-] S1 - Semester 1 - BAE	Study Period	Invalid accumulator item. This item type is not in the program format definition.

In addition to the program format audit messages, the Build Program by Format component also displays messages when an invalid Program Format Tree Node item has been inserted in a program tree. This could occur if you retrieved an item associated with a tree node in the Academic Item Registry component, because this action is prevented on the Build Program by Format component. The error is detected by the audit process and an error message is displayed on the Errors tab on the Build Program by Format page. When messages are present, the Errors tab appears as the Messages tab.

Messages

The message identifies the invalid node. This item type is not attached to a node in the tree branch.

Generating and Viewing Program Templates

This section provides an overview of program templates and discusses how to:

- Generate and view an AIR based program template.
- View the Template – Long page.

Understanding Program Templates

Use the program template to generate and view a program of study (or any other academic item) in its entirety. On the page, the academic item and its children appear in a composed view that displays all the levels within that item. You can use links to view detailed information and make changes at any level in the template.

Pages Used to Generate and View Program Templates

Page Name	Definition Name	Navigation	Usage
Template	SSR_AIR_TEMPLATE	Curriculum Management > Academic Item Registry > Program Template > Template	Generate and view a program of study or other academic item in its entirety.
Template – Long	SSR_AIR_TMPLT1	Curriculum Management > Academic Item Registry > Program Template > Template – Long	View the long display of the AIR Report description for the selected academic item.

Generating and Viewing an AIR Based Program Template

Access the Template page (Curriculum Management > Academic Item Registry > Program Template > Template).

Image: Template page

This example illustrates the fields and controls on the Template page. You can find definitions for the fields and controls later on this page.

Expand / Collapse	Item Description	Enrollment Category	Item Type	Item ID
<input type="checkbox"/>	BSc (Eng) in Mechanical Engineering		Program of Study	0000001103
<input type="checkbox"/>	┆ BSc Mechanical Engineering First Year of Study		Year	0000001099
<input type="checkbox"/>	┆ and BSc Mechanical Engineering Second Year of Study		Year	0000001100
<input type="checkbox"/>	┆ and BSc Mechanical Engineering Third Year of Study		Year	0000001101
<input type="checkbox"/>	┆ and BSc Mechanical Engineering Fourth Year of Study		Year	0000001102

Image: Template page (expanded)

Here is an example of the page with the items expanded:

The screenshot shows a web interface for a program template. At the top, there are tabs for 'Template' and 'Template - Long'. Below the tabs, the following information is displayed:

- Academic Institution: PeopleSoft University UK
- Academic Item ID: 00000001103 BSc (Eng) in Mechanical Engineering
- Academic Item Type: Program of Study

Below this information, there is a date field 'As of Date' set to '19/03/2013', a 'Generate' button, and a 'Program Format Structure View' button.

The main part of the screenshot is a table with the following columns: 'Expand / Collapse', 'Item Description', 'Enrollment Category', 'Item Type', and 'Item ID'. The table lists the following items:

Expand / Collapse	Item Description	Enrollment Category	Item Type	Item ID
[-]	BSc (Eng) in Mechanical Engineering		Program of Study	00000001103
[+]	- BSc Mechanical Engineering First Year of Study		Year	00000001099

	[-] and MENG 2022S: Thermofluids I	Core	Course	00000001036
	[-] and MENG 2023F: Dynamics I	Core	Course	00000001037

As of Date

The system uses the date that you enter to retrieve the correct effective dated row for the select item and related child items.

Generate

Click this button to retrieve the definition for the selected academic item, and all child items attached to it.

When the template is generated, the item and any related child items are displayed in the collapsed form, as shown in the first page example above. Items can be expanded using the Expand/Collapse button. After an item has been expanded, the Program Format Structure View button becomes available and can be used to collapse all items, as shown in the second page example.

Expand/Collapse

Expand or collapse any related child data.

Item Description

The Description from the Academic Item header is displayed (SSR_AIR_HDR.DESCR50).

Enrollment Category

The description for the Enrollment category of the item (SSR_AIR_ENRL.SSR_ENRL_CAT) is displayed.

Item Type

The item type description is displayed for the academic item.

Item ID

Click the link to access the Academic Item Registry component for the selected ID. You can make and save changes in that component before you return to the Program Template component.

Note: When a Program item is accessed from the Template view, the Program Format structure is enforced and academic item types that are identified as Program Format Tree Nodes cannot be added or deleted.

See [Setting Up Academic Item Types](#)

See [Setting Up Program Formats](#)

Viewing the Template – Long Page

Access the Template – Long page (Curriculum Management > Academic Item Registry > Program Template > Template – Long).

Image: Template Long page

This example illustrates the fields and controls on the Template Long page.

Academic Institution PeopleSoft University UK
 Academic Item ID 0000001103 BSc (Eng) in Mechanical Engineering
 Academic Item Type Program of Study

As of Date 10/04/2012

Item Description	Enrollment Category	Item Type	Item ID
DEPARTMENTS			
Mechanical Engineering			
BSc (Eng) in Mechanical Engineering			
The Mechanical Engineering degree provides students with a solid understanding and appreciation of the materials and forces of nature. The undergraduate programme is structured around the study of mathematics, physics, chemistry, materials, basic electrical engineering, the design process and management studies. Exciting careers, requiring the talents of mechanical engineers for the design, development and manufacture of technologies, products and processes, include automotive, aircraft and space industries, air conditioning and refrigeration, food and packaging industry, biomechanical research and development, energy and power utilisation, and the environmental industry, to name a few. Many of our graduates have followed successful career paths and are now captains of industry.		Program of Study	0000001103
This programme concentrates on instruction in the areas of solid mechanics, dynamics and thermofluids, accompanied by experimental verification. Communication skills are addressed through expert instruction and application in reports of experimentation and design. Design is made central to the curriculum where team skills and, finally, individual skills are developed. Curriculum flexibility in the final year of study allows students to select courses that can provide an introduction to a career in Mechanical Engineering.			
<ul style="list-style-type: none"> The first year of study contains Common First Year Core Courses equating to 144 credits, and a Practical Training Course. Students should attempt and complete all Core Courses and the Practical Training Course. 		Year	0000001099
<ul style="list-style-type: none"> Bachelor of Science in Engineering in Electro-Mechanical Engineering (EB010) Bachelor of Science in Engineering in Mechanical Engineering (EB005) 			
The undergraduate Bachelor of Science in Engineering degree programmes in Electro-Mechanical Engineering and Mechanical Engineering have a common first and second year Curriculum.	Core	Course List	0000001078
<i>Students should complete and pass all Core Courses in the list below:</i>			
<ul style="list-style-type: none"> • CHEM 1008FA: Chemistry for Engineers • and MATHS 1017F: Engineering Mathematics A • and MATHS 1018F: Engineering Mathematics B • and MATHS 1042S: Engineering Statistics • and MENC 1002W: Engineering Drawing 	Core	Course	0000001022
	Core	Course	0000001023
	Core	Course	0000001024
	Core	Course	0000001025
	Core	Course	0000001026

The Template - Long page includes the long display of the AIR Report description for the selected academic item (that is, the highest item node).

Setting Up Course Groups

This section provides an overview of course groups and discusses how to:

- Define course groups.
- Define course group details.
- View test output.
- Define filters.
- Copy course groups.

Understanding Course Groups

The AIR feature provides the ability to define simple or complex lists of courses (Course ID, Course Offering, Course Topics), but the structure cannot accommodate the commonly used (in academic requirements) wild card course option, where, for example, the student is instructed to take *one 200 level course from the Economics Department*.

Use the Course Group feature in conjunction with the academic item type COURSEGROUP. A Course Group consists of one or more sets of wild card criteria that can be used to build a loosely defined list of courses.

Pages Used to Set Up Course Groups

Page Name	Definition Name	Navigation	Usage
Course Group Header	SSR_CRS_GRP_HDR	Curriculum Management > Academic Item Registry > Course Groups > Course Group Header	Define course groups.
Course Group Detail	SSR_CRS_GRP_DTL	Curriculum Management > Academic Item Registry > Course Groups > Course Group Detail	Define course group details.
Test Output	SSR_CRS_GRP_OUT	Curriculum Management > Academic Item Registry > Course Groups > Test Output	View test output.
Filters	SSR_CRS_GRP_FILTER	Curriculum Management > Academic Item Registry > Course Groups > Filters	Define a subset of the available Course Group criteria fields as filters for use in student self-service.

Defining Course Groups

Access the Course Group Header page (Curriculum Management > Academic Item Registry > Course Groups > Course Group Header).

Image: Course Group Header page

This example illustrates the fields and controls on the Course Group Header page. You can find definitions for the fields and controls later on this page.

Course Group Header | Course Group Detail | Test Output | Filters

Academic Institution PeopleSoft University
Course Group ID 000000001

Find | View All | First 1 of 1 Last

*Effective Date 01/01/1900 *Status Active
*Description Modern European Languages - Intro Level

[Report Description](#)

SQL Where Clause where INSTITUTION=:1 and ((SUBJECT='DUTCH' and CATALOG_NBR like '1__') or (SUBJECT='FREN' and CATALOG_NBR like '1__') or (SUBJECT='GERMAN' and CATALOG_NBR like '1__') or (SUBJECT='SPAN' and CATALOG_NBR like '1__'))

Test

Automatically Execute

Academic Item Registry Entries | Find | View All | First 1 of 1 Last

Item ID	Description
0000001697	Modern European Languages - Intro Level

Add AIR Entry for this Course Group

Course Groups are defined by Institution and a system generated ID number.

Report Description

Click this link to access a new window in which Rich Text Editor features are available. The HTML output for the formatted text appears as display only in the Report Description field.

Automatically Execute

When this check box is selected, the list of courses defined by this Course Group is returned directly to the self-service UI (My Education Plan); otherwise, the results are accessed on a secondary page.

See "Using Program Enrollment Self-Service Features" (PeopleSoft Campus Solutions 9.2: Self Service)

SQL Where Clause

On save, the system connects all of the Course Group Detail lines and generates and displays a SQL where clause using the criteria from each detail row.

Test

Click to initiate a SQL count statement which returns the number of course offering (CRSE_OFFER) rows that meet the criteria in the Course Group Detail line(s):

The row count is returned in a modal message, with an option to view the results.

To address performance concerns, you receive a warning when over 300 rows are returned, giving you the option to refine the search or continue to view the results.

Add AIR Entry for this Course Group

Click this button to create an academic item for this Course Group definition. The button creates a new item for this course group and transfers the user to the Academic Item Registry component.

Defining Course Group Details

Access the Course Group Detail page (Curriculum Management > Academic Item Registry > Course Groups > Course Group Detail).

Image: Course Group Detail page

This example illustrates the fields and controls on the Course Group Detail page. You can find definitions for the fields and controls later on this page.

Sequence Number

Enter a user defined sequence number.

Description

Enter a description for the Group Detail row.

Catalog Nbr

Enter % to match one or more characters—for example, 20% retrieves all catalog numbers where the first two characters are 2 and 0.

Enter _ (underscore) to match a single character.

Enter # to match any single numeric character.

Academic Career, Academic Group, Academic Organization, Campus, Requirement Designation, Course Attribute, and Course Attribute Value Enter valid values in these fields to further refine the selection criteria for the Course List against the Course Catalog.

Academic Item Attribute Enter an academic item attribute to further refine the selection criteria. The system uses this to select criteria against the academic item registry.

Value When an Attribute is used, you can enter a Value—a prompt is available if the Academic Item Attribute has an Attribute Type of *LOV*, *Table*, or *Translate*.

Refer to the previous documentation for the Course Group Header page for descriptions of SQL Where Clause and Test.

Viewing Test Output

Access the Test Output page (Curriculum Management > Academic Item Registry > Course Groups > Test Output).

Image: Test Output page

This example illustrates the fields and controls on the Test Output page. You can find definitions for the fields and controls later on this page.

Course Group Header		Course Group Detail		Test Output		Filters	
Academic Institution PeopleSoft University

When you click the Test button on the Course Group Header or Course Group Detail page and click OK to view the results, you are transferred to the Test Output page where the results appear in a grid that you can scroll through (the Tools zoom feature is available).

Defining Filters

Access the Filters page (Curriculum Management > Academic Item Registry > Course Groups > Filters).

Image: Filters page

This example illustrates the fields and controls on the Filters page. You can find definitions for the fields and controls later on this page.

Course Group Header | Course Group Detail | Test Output | **Filters**

Academic Institution PeopleSoft University
Course Group ID 00000018

Find | View All | First 1 of 1 Last

Effective Date 01/01/1900 Status Active

Description Liberal Arts Upper Division

SQL Where Clause where INSTITUTION=:1 and ((CATALOG_NBR like '3____' and ACAD_GROUP='LBART') or (SUBJECT='MGMT' and CATALOG_NBR like '3____'))

Automatically Execute

Select filters for student self service

- Subject
- Career
- Campus
- Academic Organization
- Academic Group
- Academic Item Attribute

Refresh

Matching values for selected filter fields:

Field / Attribute	Description
SUBJECT	Subject Area

Field Value	Description
1 ECON	Economics
2 FINANCE	Finance
3 MGMT	Management

Field / Attribute	Description
ACAD_GROUP	Academic Group

Field Value	Description
1 LBART	College of Liberal Arts

Field / Attribute	Description
INSTRUCTION LANGUAGE	Language of Instruction

Field Value	Description
1 ENGLISH	English
2 SPANISH	Spanish

Use this page to define a subset of the Course Group criteria fields as filters for use in Student Self Service. Because the filters are to be used only when a course group definition returns a large result set, the *Select filters for student self service* options are available only if the course group is *not* set up to

automatically return results in the user interface (the Automatically Execute check box is not selected on the Course Group Header page).

Select Filters for student self service The options are: Subject, Career, Campus, Academic Organization, Academic Group, Academic Item Attribute.

If an option is selected, then when you save or refresh the page, the system creates a list of distinct values (with descriptions) for the filter field, using the entire result set for the Course Group. For example, if the result set for a Course Group is 100 courses and Subject and Academic Group are the filters, then a list of distinct Subject values and Academic Group values are displayed. Because the filter values are saved to the database, use the Refresh button if changes have been made to the filter options or if changes have occurred in the Course Catalog or Academic Item Registry that could have affected the result set.

Matching values for selected filter fields:

For each filter that is selected, a value field is generated with a Field/Attribute, Description format. This format accommodates the use of Common Attribute Framework based attributes. Only those attributes for which the Show in Student Self-service check box is selected on the Academic Item Registry page can be used as filters. For example, if the result set includes three distinct attributes but only one is set to Show in Student Self-service, then only that attribute is displayed in the filter results.

See [Using Item Attributes in AIR](#)

See "Using Program Enrollment Self-Service Features" (PeopleSoft Campus Solutions 9.2: Self Service)

Copying Course Groups

When you add a new Course Group, two copy options are available on the Course Group Header page:

Copy AA Course List

Copy an existing Academic Advisement course list that uses a Wild Card indicator. When you select this option, the copy process copies only those rows in the AA course list where the wild card indicator = Y.

Copy Course Group

Copy previously created course groups.

Image: Course Group Header example page

This is an example of the Course Group Header page with the two copy options.

Copy AA Course List

When you click the Copy AA Course List button:

- You are transferred to the Copy Academic Advisement Course List look up page.
- You select a Course List for the Institution of the new Course Group.
- The Course List look-up prompts against a view of the Course List Detail table, for Course Lists that have a Wild Card Indicator (CLST_DETL_TBL where WILDCARD_IND = 'Y').
- If the selected Course List has detail rows within it where the wild card indicator = N, those rows are not copied.

Copy Course Group

When you click the Copy Course Group button:

- You are transferred to the Copy Course Group look up page.
- You select a Course Group ID from a list of existing Course Groups for the Institution of the new Course Group.
- You are transferred back to the Course Group component and all eligible data is copied. You can then make adjustments as needed.

Setting Up for the Academic Progress Tracker

The program data that you define in the Academic Item Registry is ultimately stored at the student level in the Academic Progress Tracker (APT). The APT record for a student is keyed by an *instance* which also provides a link to the academic program of the student.

See [Understanding the Academic Progress Tracker](#)

This section discusses how to:

- Enable program enrollment.
- Map Campus Solutions academic programs, plans and subplans to AIR based programs of study.

Note: As of April 2012, the option to hold the APT Instance at the Academic Plan level is no longer available. The APT Instance is held at the Academic Program level only.

Pages Used to Set Up for the Academic Progress Tracker

Page Name	Definition Name	Navigation	Usage
Academic Institution 9	SSR_INST_PE	Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 9	Enable Program Enrollment.
Program Enrollment Mapping	SSR_PROG_PE	Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Program Enrollment Mapping	Map Campus Solutions academic programs, plans and subplans to AIR based programs of study.

Enabling Program Enrollment

Your institution must enable Program Enrollment at the Academic Structure level in order to define academic program/plan/subplan mapping and to enable the tracking of an *APT instance* on the Admissions and Student Records program stacks.

See "Enabling Program Enrollment and Activity Management Defaults" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

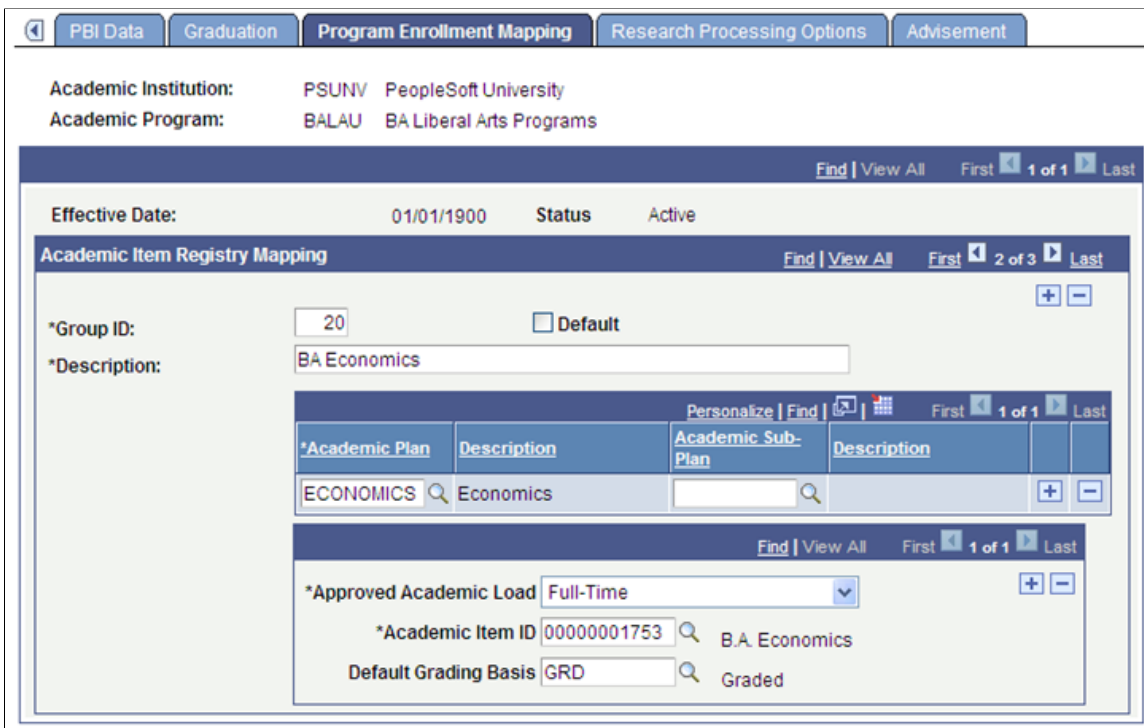

Mapping Campus Solutions Academic Programs, Plans and SubPlans to AIR Based Programs of Study

Admission applications, admission, matriculation, and core student program management continue to use Campus Solutions academic program structures. Institutions that want to use AIR based programs for tracking student programs and enrollment must map the Campus Solutions academic structure attributes of those offerings - the programs, plans, and subplans - to AIR program of study academic items. A mapping table is provided at the Academic Program Table level for this purpose.

Access the Program Enrollment Mapping page (Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Program Enrollment Mapping).

Image: Program Enrollment Mapping page

This example illustrates the fields and controls on the Program Enrollment Mapping page. You can find definitions for the fields and controls later on this page.

Use this page to create rules that map an academic program and one or more plan combinations to AIR Program of Study academic items.

This page is available only if the Enable Program Enrollment check box is selected on the Academic Institution 9 page.

Academic Item Registry Mapping

- Group ID** Enter a number to be used as an identifier for a group of plans and subplans.
- Default** Select this check box to indicate which Group ID is the default. When you select this check box, the Academic Plan/Academic Sub-Plan grid is not available because the default is a catch-all for a program with any unmapped plan/subplan combination.
- Academic Plan** Enter one or more academic plans per Group ID.
- Academic Sub-Plan** Enter one or more subplan values associated with the plan. You must enter a new row of Academic Plan for each subplan that you enter.
- Approved Academic Load and Academic Item ID** Enter at least one Approved Academic Load value and one Academic Item ID value per Group ID.

Edits

A Plan cannot be used with a null subplan value and an actual subplan value within the same group. A combination like the following is invalid:

Group ID: *10*

- Academic Plan: *PSYCH*
- Academic Sub-Plan: *AI*
- Academic Plan: *PSYCH*
- Academic Sub-Plan: *null*

This mapping combination is not allowed because it is contradictory - with subplan equals *AI* and subplan equals *any plan*. This condition returns an error message for incorrect definition, referencing the group number.

Setting Up APT Action Security

Use the APT Action Security page to determine the actions that a user can select on the APT Administrative Roster page, based on User ID security. For example, a user may be able to add a course academic item to a student's Academic Progress Tracker (APT) but not remove it. Be careful when granting users access to APT actions such as remove items, because a user can remove planning nodes and even the program if no action has been taken on the item or any of its children.

Note: When setting up security for the APT Action *Add Item*, add the parent item as well as the academic item. For example, if you set up an APT Action *Add Item* for *Course* academic item and the course is to be added to a parent semester, you must also set up the APT Action *Add Item* for *Semester* academic item.

If security is not granted for a specific academic item and action, the user cannot select the academic item on the search pages and prompts on the APT Administrative Roster page.

See [Managing the APT Administrative Roster](#)

Setting Up APT Reason Codes

Your institution can use the APT Reason Code Table page to set up reason codes to be used in the Academic Item Attempt Results section of the APT Items page. For example, a student may be granted a higher result and compensation due to ill-health or other mitigating circumstances; a result may be excluded due to plagiarism. You can set up reasons to be added to a specific result. A reason code can be stored for each result row in the APT Items page if required. You can also add the reason code when you enter results on the APT Administrative Roster page.

See [Managing APT Items](#)

See [Managing the APT Administrative Roster](#)

Show in Student Self Service

Planned for the future.

Using the Common Attribute Framework to Extend Class Associations for Program Enrollment

The Common Attribute Framework (CAF) can be used with Program Enrollment Self-Service to associate a student with specific sections of a class. There are two configuration options: Required Match and Filter Default. An example of a Required Match is where a student’s attribute value, e.g. Student Language French, matches only those classes with the same value. Filter Default automatically selects classes based on the student’s attribute value, but students can deselect the filter and select another student language

attribute value (for example, English). Institutions can define the values they want to use within the Common Attribute Framework to be able to associate students with specific classes.

Related Links

[Using the Common Attribute Framework to Extend Class Associations](#)

Setting Up Common Attribute Framework to Extend Class Associations for Program Enrollment

1. Add the common attributes you want to use to associate students with specific classes.
 - a. Go to Set Up SACR >Common Definitions >Common Attribute Setup >Record Context).
 - b. In Record (Table) Name, make sure you select *ACAD_PROG*.
 - c. In the Attributes region, specify the common attributes you want to use. The following images show examples of adding Student Language and Student Shift as the common attributes.

Image: Example 1: Adding common attribute "Student Language" to filter classes

This example illustrates adding common attribute "Student Language" to filter classes.

Image: Example 2: Adding common attribute "Shift" to filter classes

This example illustrates adding common attribute "Shift" to filter classes.

The screenshot shows a web-based configuration interface with two tabs: "Record Context" and "Secondary Page Options". The "Record Context" tab is selected. The interface contains several input fields and checkboxes:

- Record (Table) Name:** ACAD_PROG
- *Description:** Student Program attributes
- *Attribute Record:** SSR_PROG_CAF
- Override Prompt Table:** (empty)
- Entity Name:** Attribute Student Program attr
- Attribute Filter Class:** (empty)
- Attribute Display Type:** Radio buttons for "Inline Subpage" (selected) and "Secondary Page".
- Copy Attributes from:** (empty)
- Attributes Section:**
 - *Attribute Sequence: 2
 - Status: Active
 - *Common Attribute: SHIFT
 - Checkboxes for "Required" and "Repeatable" (both unchecked).
 - A button for "Entity Associations".

- d. Click Save.
- e. Access the Record Context page again (Set Up SACR >Common Definitions >Common Attribute Setup >Record Context).
- f. In Record (Table) Name, select *CLASS_ASSOC*.

Image: Example 3: Adding common attribute to Record Name CLASS_ASSOC

This illustrates adding a common attribute to Record Name CLASS_ASSOC. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Record Context' configuration page for the record name CLASS_ASSOC. The page is divided into several sections:

- Record Context:** Contains fields for Record (Table) Name (CLASS_ASSOC), Description (CAF for CLASS_ASSOC Record), Attribute Record (SSR_ASSOC_CAF), Override Prompt Table, Entity Name (ClassAssocAttribute), and Attribute Filter Class. A 'Delete Record Context' button is present.
- Attribute Display Type:** Includes radio buttons for 'Inline Subpage' (selected) and 'Secondary Page'.
- Copy Attributes from:** Includes a search field and a 'Copy' button.
- Attributes:** Includes fields for *Attribute Sequence (1), *Common Attribute (STUDENT LANGUAGE), and checkboxes for 'Required' and 'Repeatabe' (checked). A 'Status' dropdown is set to 'Active'.
- Entity Associations:** Includes a table with one entry for *Entity Name.

- g. Add the same attributes you added to ACAD_PROG so that you can select these attributes on the Associated Class Attributes page (step 3), and then click Save.
2. Configure class search to use the common attribute.

Message Text Use the class section links to access additional class detail

Filters

Use Search Result Filters

Sequence Number	Use Common Attribute	Criteria	Common Attribute	Match
1	<input checked="" type="checkbox"/>		Student Shift	Required Match
2	<input checked="" type="checkbox"/>		Student Language	Required Match

- Go to Set Up SACR >Product Related >Student Records >Curriculum Management >Class Search Configuration.
- In Class Search Profile, click SSAPT.
This profile allows you to match students to specific classes based on certain filters.
- Click Class Result Options.
- In the Filters group box, select *Use Search Filter Results* if there are a number of class attributes so that students can use these as filters when searching for classes.
- In the Filters group box, select *Use Common Attribute* to add the attributes you created.
- In the Match column, you can select:

Required Match, which requires an exact match on the Student Program and Class Association attributes. If there is only one class attribute that matches the Student Program attribute, the class section appears by default in My Schedule Builder. If there are multiple classes that match the Student Program attribute, then all classes are displayed. If you select *Use Search Results Filters* on the Class Result Options page, the student cannot deselect the filter for the attribute that is set as a 'Required Match' in My Schedule Builder. For example, there may be classes taught in French and Flemish. The Student Program attribute is 'Flemish'. In the class table, there are two Flemish courses and one French course. The student cannot deselect the matching language Flemish classes, but can view, and (optionally) select the other French class.

Filter Default, which does not require a match between the Student Program and Class Association attributes. For example, there may be multiple classes for the attribute Shift (Shift 1, Shift 2, and so on). The Student Program attribute is Shift 2. Because Filter Default does not require a match, the attribute for Shift 1 is also displayed and can be selected. Although Shift 2 is

selected as the default (because it matches the Student Program value), the student can deselect Shift 2 and then select Shift 1. The classes that appear in the search results are based on the initial default. It is also possible to select both attributes.

For more information about the Class Result Options page, see [Defining Class Search Result Options](#).

3. Link the attribute to classes:
 - a. Go to Curriculum Management >Schedule of Classes >Maintain Schedule of Classes.
 - b. Click Associated Class Attributes.
 - c. From the Associated Class Attributes region, add the attribute and assign a value.

Image: Linking common attributes to a class

This illustrates how to linking common attributes to a class.

The screenshot shows the 'Associated Class Attributes' interface. At the top, there is a table of class details:

Course ID:	666670	Course Offering Nbr:	1	
Academic Institution:	PSUNV	PeopleSoft University	Class Section:	2
Term:	0770	2016 Fall	Session:	Regular
Subject Area:	ECON	Economics	Associated Class:	2
Catalog Nbr:	3	Microeconomic Principles		

Below the table is a section titled 'Associated Class Attributes' with a search bar and navigation controls. It contains two attribute entries:

- *Attribute: Student Shift (dropdown menu) with value 2 (input field) and label Second Shift.
- *Attribute: Student Language (dropdown menu) with value FL (input field) and label Flemish.

- d. When you are done adding attributes and assigning values, click OK.
 - e. If there are other sections to which you want to link attributes, go to the next section in the list, then repeat steps b to d.
 - f. Click Save.
4. Link the attributes and values to the student's Program/Plan record.
 - a. Go to Records and Enrollment >Career and Program Information >Student Program/Plan.
 - b. Click Additional Information.

This tab appears when you set up the attribute for the Record Name ACAD_PROG.

- c. In the Program Data region, add a program attribute and assign a value.
- d. Make sure you select Show in Student SS.

This example shows program attributes set for Student Shift = 2, and Student Language = FL.

Image: Example of linking common attributes to a student's program plan

This shows an example of linking common attributes to a student's program plan.

The screenshot displays a web interface for a student's program data. At the top, there are navigation tabs: Student Program, Student Plan, Student Sub-Plan, Additional Information, Student Attributes, and Student Degrees. Below these, the student's name 'Wendy Smarthouse' and ID '0099' are shown. The 'Academic Career' is 'Career Requirement Term' and 'Student Career Nbr' is '0'. The main section is titled 'Program Data' and shows 'Academic Program BALAU BA Liberal Arts Programs'. Under 'Program Attributes', two attributes are listed: 'Student Language' with value 'FL' (Flemish) and 'Student Shift' with value '2' (Second Shift). Both have 'Show in Student SS' checked. Below this is the 'Academic Plan' section for 'BUSNMGMT Business Management', which has a 'Plan Attributes' section with one attribute and 'Show in Student SS' checked.

To check your setup, log in as a student:

1. Go to Self Service >My Education Plan.
2. Click Build Schedule.

The first example shows classes that have a 'Required Match'. The student cannot deselect the attribute that is required (Flemish). The classes initially displayed are based on the required attribute.

Image: Example of class search results when filtered by Student Language

Chapter 8

Setting Up Instructor Workload

Understanding Instructor Workload

Higher-education institutions, particularly community colleges, need to set maximum limits on the workload that is assigned to faculty and other individuals. These institutions also need to track and report actual workload assignments. To accommodate these needs, Student Records has a feature called Instructor Workload, which performs full-time equivalency tracking.

The Instructor Workload feature enables you to monitor the instructional and non-instructional workload for selected faculty, instructors, and staff. This feature enables you to define workload limits for groups or individuals. In addition, you can define multiple types of instructional and non-instructional work assignments, using different workload standards for each type of assignment. You can have separate workload upper limits for part-time and full-time individuals and can set automated controls that prevent workload assignments beyond those limits.

If you use the Instructor Workload feature, the system automatically updates full-time equivalency workload values when you enter data on the class scheduling pages. You can also use a background process to copy workload data from one term to another, to update term workload records, or to produce a simple report.

Note: The term *instructor* predominates in this product documentation and in field names on pages, but it can include any individual with an employee ID at the institution. Advisors, teaching assistants, and even students can be tracked using this feature. This information is entirely user-defined.

The formulas described in the following sections are the two primary calculations that the Instructor Workload feature performs to update an individual's total term full-time equivalency percentage. Refer to these formulas for clarification when you are familiar with all of the setup pages.

Course Component Workload Hours Formula

The Instructor Workload feature uses the following formula to calculate the default workload hours of a course component on the Meetings page:

$$[(\text{academic progress units} \times \text{assigned percent}) + (\text{component workload hours} \times \text{assigned percentage})] \\ \times (\text{subject/component multiplier}) \times (\text{instructor term multiplier}) \times (\text{load factor})$$

Note: The system supplies the multiplier values to 100 percent by default if the user does not specify them.

At the academic institution level (Academic Institution 4 page), workload hours for courses are a combination of *academic progress units* and *component workload hours* (for example, 0 percent academic progress units and 100 percent component workload hours). Workload hours for noncourses are entered directly on the Term Workload page.

The Academic Subject Table has a *subject/component multiplier* specific to both the subject and component (for example, math laboratory component multiplier 80 percent, math lecture component 110 percent, math independent study component 50 percent, and so on).

The Term Workload page has an *instructor term multiplier* that is supplied by default from the Instructor Assignment Class table.

To divide one course component into more than one assignment, you can use a load factor. Inserting multiple rows per course component and assigning each one a load factor (percentage) enables you to divide a component into different assignment types, divide a component among instructors, or both. For example, you might assign instructor A to teach 30 percent of the lecture component, and instructor B to teach 70 percent of the lecture component. The user is responsible to set the load factor. The total load factor for one course component should equal 100 percent.

Note: You must manually enter workload hours for all assignments that are made directly on the Term Workload page. In other words, the system does not supply these types of manual noncourse-based assignments by default using the previous calculation.

In the following example, instructor A is sharing the teaching load for Math 200 with another instructor. This is why you set the load factor to 50 percent. This causes the default workload hours to change from 5 to 2.5 and the assignment full-time equivalency percent to change from 33.33 percent to 16.67 percent. Notice that instructor B, who is sharing the load with instructor A to teach Math 200, somehow earns an assigned full-time equivalent (FTE) of 33.33 percent. In addition, the default workload hours read 5, rather than 2.5, as they do for instructor A. This is because you assigned a multiplier of 200 percent to instructor B for this term. All class components to which you assign instructor B count double for this term. Also, notice that instructor A is supervising an independent study course, Physics 499. This subject and component are set to be multiplied by only 50 percent. This is so that whoever teaches physics with a component of independent study earns half credit for the task. Because of this, even though the component workload hours of 3 are 10 percent of the 100 percent weekly workload hours for this assignment type, the subject component multiplier halves this value so that the instructor earns an assigned FTE of 5 percent. This process also causes the default workload hours to differ from those set on the Class Associations - Class Components page (halved from 3 to 1.5).

Instructor	Assignment	Class Associations - Class Component Page: Workload Hours	Subject / Component Multiplier	Assignment Type / 100% Weekly Workload Hours	Load Factor	Meetings Page: Default Workload Hours	Assign FTE
Instructor A Term Multiplier = 100%	Math 200	5	Math Lecture/ 100%	RegLec/ 15	50%	2.5	16.67%
	Physics 201	5	Phys Lecture/ 100%	RegLec/15	100%	5	33.33%
	Physics 499	3	Phys Ind Study/50%	IndStudy/30	100%	1.5	5%

<i>Instructor</i>	<i>Assignment</i>	<i>Class Associations</i> - <i>Class Component Page:</i> <i>Workload Hours</i>	<i>Subject / Component</i> <i>Multiplier</i>	<i>Assignment Type /</i> <i>100% Weekly Workload Hours</i>	<i>Load Factor</i>	<i>Meetings Page:</i> <i>Default Workload Hours</i>	<i>Assign FTE</i>
							Total Term FTE% = 55%
Instructor B Term Multiplier = 200%	Math 200	5	Math Lecture/ 100%	RegLec/ 15	50%	5	33.33%
						Total Term FTE% = 33.33%	Total Term FTE% = 33.33%

Instructor Assignment Percentage Formulas

The Instructor Workload feature uses three formulas to calculate an individual's assignment full-time equivalency percentage. The system uses one of two formulas to calculate assignment FTE for regular classes and for open entry and open exit (OEE) classes. It uses another formula to calculate assignment FTE for assignments made directly to the Term Workload page.

Note: The Use Term/Session Weeks in Calc check box on the Academic Institution 4 page enables you to exclude the assigned number of weeks—in the session—and the total weeks in a term from the workload calculation formulas.

Regular Assignment FTE Formula

The system uses the following formula to calculate an individual's assignment full-time equivalency percentage for a regular scheduled class (non-OEE):

$$(\text{assignment workload hours} \times \text{assigned number of weeks} \times 100) / (100 \text{ percent weekly workload hours} \times \text{total weeks in term}).$$

assignment workload hours

The number of workload hours that are assigned to the instructor.

assigned number of weeks

The total number of weeks in the session for which the instructor is teaching. This number is derived from the session table.

100 percent weekly workload hours

The standard number of weekly hours that are required (for example, 15 hours). This number is derived from the assignment type table.

total weeks in term

Derived from the term/session table.

Open Entry and Open Exit Assignment FTE Formula

The system uses the following formula to calculate an individual's assignment full-time equivalency percentage for an OEE class:

$$(\text{assignment workload hours} \times \text{assigned number of weeks} \times 100) / (100 \text{ percent OEE workload hours} \times \text{total weeks in term})$$

assignment workload hours	The number of workload hours that are assigned to the instructor.
assigned number of weeks	The total number of weeks in the session for which the instructor is teaching. This number is derived from the session table.
100 percent OEE workload hours	The standard number of term hours that are required (for example, 225 hours). This number is derived from the assignment type table.

The formula that the Instructor Workload feature uses to calculate an individual's assignment full-time equivalency percentage from an assignment that is made directly to the Term Workload page is:

$$(\text{assignment workload hours} \times 100) / (100 \text{ percent weekly workload hours})$$

assignment workload hours	The number of workload hours that is assigned to the instructor.
100 percent weekly workload hours	The standard that is required (for example, 15 hours). This number is derived from the assignment type table.

Examples of FTE Percent Formulas

The following example shows instructor C's assignments. The Biology 100 lecture is quite straightforward. Three workload hours, compared to a 100 percent weekly workload hours value of 15, result in the Biology 100 course totaling 20 percent of the instructor's workload (3 hours is 20 percent of 15 hours). The Biology 100 lab, however, is associated with an assignment type of *NotIncl/0* (do not include). This results in zero workload hours, therefore contributing no assignment FTE percentage.

In addition, instructor C teaches Biology 105 over the internet, with an assignment type of *Internet*. Notice that this assignment type has a 100 percent weekly workload hours value of 6, which means that 6 hours taught on the internet is 100 percent of an individual's workload. This course assignment creates an assignment FTE of 50 percent (3 hours is 50 percent of 6).

Finally, instructor C advises the Pre-Med Club. This assignment has a workload hours value of 9, which translates into 30 percent of the instructor's assignments (9 is 30 percent of 30).

Instructor D is a good example of how an individual can earn a total term FTE of 100 percent, while assigned only to advising (no class instruction). All types of assignments can contribute to total term FTE percentage.

Instructor E shows how OEE classes can effect FTE. This instructor teaches Psych (psychology) 210, with a workload hours value of 60. Because this section of Psych 210 is an OEE class, multiply the workload hours by the total weeks in the session, and then multiply by 100 ($60 \times 15 \times 100 = 90000$). Divide the result by the 100 percent OEE workload hours (225), times the total weeks in the session (15), and you get an FTE of 26.67 percent for this class.

Instructor	Assignment	Component	Class Component Workload Hours / OEE Workload Hours	Assign Type/ 100% Weekly Workload Hours or 100% OEE Wkld Hrs	Assignment FTE %
Instructor C	Biology 100	Lecture	3	RegLec/15	20%
	Biology 100	Laboratory	1	NotIncl/0	0
	Biology 105	Lecture (Internet)	3	Internet/6	50%
	Advise Pre-Med Club	N/A	9	Student Club Advisor/ 30	30%
					Total Term FTE% = 100%
Instructor D	Advise Math Club	N/A	15	Student Club Advisor/ 30	50%
	Advise Math Honor Society	N/A	15	Student Club Advisor/ 30	50%
					Total Term FTE% = 100%
Instructor E	Psych 210	OEE Lecture	[60]	[RegLec/225 (15 weeks)]	26.67%
	Psych 378	OEE Lecture	[90]	[RegLec/225 (15 weeks)]	40%
	Psych 378	Lecture	3	RegLec/15	26.67%
	Advise Psych Club	N/A	1	Student Club Advisor/9	11.11%
					Total Term FTE% = 104.45%

Prerequisite for Setting Up Instructor Workload

Before you can track instructor workload, Student Records setup tables must be fully operational so that the faculty workload pages can retrieve complete and accurate data.

[Student Records Business Processes](#)

[Student Records Implementation](#)

Implementing Instructor Workload Setup Tables

To set up instructor workload, use the Assignment Type component (ASSIGNMENT_TYPE) and the Instructor Assignment Class component (INSTRUCTOR_CLASS).

Here is a high-level overview of how to set up instructor workload:

1. Create assignment types.
2. Create instructor assignment classes.
3. Activate the Instructor Workload feature by selecting the Calculate Workload check box and updating required fields.
4. Update Academic Subject table with component multiplier percentage.
5. Update the Course Catalog - Components page with workload hours, as necessary.
6. Adjust workload hours on the Class Components page, as necessary.
7. (Optional) Update the Term Workload page with instructor assignment class value and other data.

This task is optional because assignments that are made on the Meetings page automatically create a Term Workload record for the individual if none exists for the term that you are assigning. However, this process uses default values to specify a full-time equivalency percentage for the individual.

8. Schedule a new course, assign an instructor, and enter workload hours, if needed.
9. Update workload hours after you schedule a course or manually create a noncourse assignment on the Term Workload page.
10. Return to the Term Workload page so that you can view the instructor's updated workload.

Pages Used to Implement Instructor Workload Setup Tables

Page Name	Definition Name	Navigation	Usage
Assignment Type	ASSIGNMENT_TYPE	Curriculum Management > Instructor/Advisor Information > Assignment Type > Assignment Type	Establish new assignment type values that can be associated with course components or other noncourse-based instructor assignments.
Instructor Assignment Class	INSTRUCTOR_CLASS	Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Instructor Assignment Class	Establish new instructor assignment class values and defaults that the system can reference on both the Term Workload page and the Academic Institution 4 page. Enter an alphanumeric code (one to six characters in length) for the instructor assignment class. Each instructor assignment class value is associated with only one academic institution.
Academic Institution 4	INSTITUTION_TABLE4	Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 4	Activate the Instructor Workload feature to establish high-level limits, workload preferences, and default values for instructor workload at your institution. Before you access the Academic Institution page, create an assignment type and an instructor assignment class.
Subject Workload	SUBJ_WORKLD_TBL	Set Up SACR > Foundation Tables > Academic Structure > Academic Subject Table > Subject Workload	Specify the weight of each component in each subject.
Components	CRSE_CATALOG_CMPNT	Curriculum Management > Course Catalog > Course Catalog > Components	Enter workload hour data that serve as a default value that the system uses to populate the same components on the Class Components page when you schedule a class.
Class Components	CLASS_ASSOC_CMPNT	Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Components	Use the Workload Hours field to enter or update workload hours data for each scheduled class component of a course.

Creating Assignment Types

Access the Assignment Type page (Curriculum Management > Instructor/Advisor Information > Assignment Type > Assignment Type).

Image: Assignment Type page

This example illustrates the fields and controls on the Assignment Type page. You can find definitions for the fields and controls later on this page.

The assignment type affects how the system calculates the assignment full-time equivalency percentage when you assign an instructor to a course component (on the Meetings page) or to any other type of manual assignment (on the Term Workload page).

Note: To use the Instructor Workload feature, an Assignment Type with ASSIGN_TYPE = 'NON' must exist (hard-coded) for each academic institution in your database. This value is automatically created when you activate the feature on the Academic Institution 4 page. You cannot delete or inactivate these values for any academic institution for which you have activated the Instructor Workload feature.

Assignment types might include *standard lecture class*, *standard lecture Internet*, *standard lab*, *overload*, *unpaid*, *academic counseling*, *thesis supervision*, and so on. For example, a course that is taught on the internet might weigh differently than a course that is taught in a classroom. You can create different assignment types to represent this variation. In addition, some assignment types (such as academic counseling) might not be applicable for association with a course. In these instances, you can specify assignment type options that disable this value as a choice on the Meetings page.

Effective Date

Enter an effective date for the assignment type value that you establish on this page.

Note: You can use only those assignment types with effective dates that are earlier than or equal to the effective date of the Academic Institution table as academic institution defaults on the Academic Institution 4 page.

Assignment types with effective dates later than the effective date of the Academic Institution table can still be used throughout the system; they cannot be set up as academic institution default values.

Status

Select a status for the assignment type value. Select *Active* when adding a new assignment type. Select *Inactive* only if your institution no longer uses the listed values. In particular, you cannot inactivate assignment type values (set on the Academic Institution 4 page) that the system references. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Short Description

Enter the short description to associate with the assignment type value. This description appears in the grid on the Meetings page and on the Term Workload page. Be sure to use a short value that clearly describes the assignment type value. For example, you might want to describe an assignment type of Standard 15-Hour Assignment with a short description of *Std15*. In that case, the grid prompt value also appears as *Std15*. The short description is to the first ten characters of the description.

View on Schedule of Classes

Select if you want the assignment type to be an available drop-down choice on the Meetings page. This check box does not control whether the assignment type appears on the Schedule of Classes report; it just determines whether the assignment type can be associated with a course component. Leave this check box cleared if you do not want the assignment type available for pairing with components. For example, an assignment type of *academic counseling* or *student club advisor* might not be something that you want associated with a course component.

It is an assignment type that is created specifically for use on the Term Workload page. In this case, do not select this check box. However, an assignment type of *In-person lecture* might be something that you want available on the Meetings page. In this case, do select this check box.

Include Assignment in Workload

Select if you want components with this assignment type to be included in the instructor's total term full-time equivalency percentage.

100% Weekly Workload Hours

Enter the 100 percent weekly workload hours value that specifies the normal weekly workload for this assignment type.

This field enables you to assign different weekly full-time hours for different assignment types. For example, the standard class lecture full-time hours might be 15 per week, the standard

internet lecture full-time hours might be 20 per week, and academic counseling full-time hours might be 35 per week.

100% OEE Workload Hours

If this assignment type can be affiliated with classes that are offered in an open entry and exit format, enter a 100 percent OEE workload hours value that represents the full-time load for an entire term. For example, if you have a 100 percent weekly workload hours value of 15 for this assignment type, you can multiply this value by the number of weeks in the term to which this assignment type belongs (100 percent weekly workload hours [15] × number of weeks in a term [15] = 100 percent OEE workload hours [225]).

Creating Instructor Assignment Classes

Access the Instructor Assignment Class page (Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Instructor Assignment Class).

Image: Instructor Assignment Class page

This example illustrates the fields and controls on the Instructor Assignment Class page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Instructor Assignment Class' page with the following fields and controls:

- Instructor Assignment Class:** FULL
- Academic Institution:** PSUNV PeopleSoft University
- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** Full-time
- *Full/Part Time:** Full-Time
- Calculate Workload:**
- Limit Workload:**
- *Assigned FTE %:** 120.00
- *Instructor Multiplier %:** 100

Instructor assignment class values cluster different types of individuals with similar workload requirements. For individuals in a particular instructor assignment class, the default settings that you establish here can be modified on the Term Workload page.

Effective Date

Enter an effective date for the instructor assignment class that you establish on this page.

Note: Only those active instructor assignment classes with effective dates less than or equal to the effective date of the Academic Institution table can be used as academic institution defaults on the Academic Institution 4 page.

Instructor assignment classes with effective dates greater than the effective date of the Academic Institution table can still be used throughout the system, but they cannot be set up as academic institution default values.

Status

Select a status for the instructor assignment class. Select *Active* when adding a new instructor assignment class. Select *Inactive* only if your institution no longer uses the value listed.

In particular, you cannot inactivate an instructor assignment class that the system references on the Academic Institution 4 page. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Description

Enter the description to associate with the instructor assignment class value. All alphanumeric characters are valid. This description appears in a related display on the Term Workload and Academic Institution 4 pages.

Full/Part Time

Select a full-time or part-time value to indicate the traditional status of instructors who are assigned to this instructor assignment class. The default is *Full-Time*. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Calculate Workload

Select to apply the Instructor Workload feature to instructors in this assignment class by default. This selection determines whether the system creates term detail records at all. This selection alone does *not* control whether the Instructor Workload feature produces a limit warning. You must select the Limit Workload check box in conjunction with this check box for warnings to appear. If you want to set up an instructor assignment class specifically for those instructors who never have load calculations performed, set up a separate instructor assignment class and do not select this check box. The value selected here is used to populate the Calculate Workload check box on the Term Workload page as a default value. You can change this setting on an individual and term-by-term basis on the Term Workload page.

Limit Workload

Select to apply the limits to instructors in this instructor assignment class by default. This feature controls whether the system produces error messages or warnings when assignments cause an individual's total term FTE percent to exceed either the individual's assigned FTE percent or the academic institution warning limits, whichever comes first. If you select the

Calculate Workload check box, this check box is available.

The value selected here is used to populate the Limit Workload check box on the Term Workload page as a default value. You can change this setting on an individual and term-by-term basis on the Term Workload page.

Assigned FTE % (assigned full-time equivalent percent)

Enter the assigned FTE percentage to indicate the traditional assignment of instructors assigned to this instructor assignment class. This value represents the percentage of the institution-wide standard to assign to instructors in this class. For example, a field value of *100.00* enables you to make assignments for instructors in this instructor assignment class up to a total term FTE percent of 100. If you want to hold instructors in this instructor assignment class to only 80 percent of the institution-wide standard, then you might set the value to *80.00*. Finally, if you often overbook full-time instructors in a particular instructor assignment class (perhaps to ultimately drop them from an assignment at the beginning of the term), then you might want to set this value to *120.00*. This field's default value corresponds to the full-time and part-time value that you select. The value entered here is used to populate the Term Workload page as a default value for individuals in this instructor assignment class.

You can change this setting on an individual and term-by-term basis on the Term Workload page.

Instructor Multiplier %

Enter the instructor multiplier percent to associate with this instructor assignment class. This value contributes to the default workload hours formula for courses that are assigned on the Meetings page for individuals in this instructor assignment class. For example, if you want to give a certain group of instructors double credit for the course components to which they are assigned, set this value to *200*. However, if you want instructors to get only half credit for their course assignments, you might assign them to a different instructor assignment class with this field set to *50*. This multiplier does not apply to noncourse-based assignments that are made directly to the Term Workload page. By default, this field displays *100* when you are in Add mode. The value that is entered here is used to populate the Term Workload page as a default value. You can change this setting on an individual and term-by-term basis on the Term Workload page.

Defining Instructor Workload Preferences for Your Institution

Access the Academic Institution 4 page (Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 4).

Image: Academic Institution 4 page

This example illustrates the fields and controls on the Academic Institution 4 page. You can find definitions for the fields and controls later on this page.

Calculate Workload

Select to activate the workload feature for your institution and to display related fields. Before you select this check box, you may want to insert a new effective-dated row on the Academic Institution 1 page.

Full-Time Warning Limit %

Enter the full-time warning limit percent for the Instructor Workload feature to reference at all times across the institution. This value indicates the institution-wide setting for those individuals who are assigned to an instructor class that is *full-time*. If an assignment is made that causes a full-time individual's total term FTE percentage to exceed this value, the system issues a soft warning. The system produces the soft warning only if the individual's Limit Workload check box is selected on the Term Workload page.

Part-Time Warning Limit %

Enter the part-time warning limit percent for the Instructor Workload feature to reference at all times across the academic institution. This value indicates the institution-wide setting for those individuals who are assigned to an instructor class that is *part-time*. If an assignment is made which causes a part-time individual's total term FTE percentage to exceed this value, a soft warning is issued. The system issues the warning only if the individual's Limit Workload check box is selected on the Term Workload page.

Use Term/Session Weeks in Calc (use term/session weeks in calculation)

Select this check box to include the assigned number of weeks—in the session—and the total weeks in the term within the workload assignment FTE calculation. Clear this check box to

exclude the assigned number of weeks—in the session—and the total weeks in the term within the workload assignment FTE calculation.

Choosing How to Sum Workload Hours

Course Component Workload Hrs % (course component workload hours percent) Enter a percentage to specify your institution standard for compiling course workload. For example, you might want to calculate workload hours based solely on the defined workload hours that are associated with the course component. In this instance, set the Course Component Workload Hrs% field to *100* and the Academic Progress Units % field to *0* (or leave the second field cleared). When these two fields are set this way, any time that you assign an instructor to teach a course component at the specified academic institution, the course component workload hours calculation uses only the course component workload hours value (and not the progress units) for the course. In addition, if you want to sum workload hours based on both fields, you can do this by setting each of the fields to the appropriate percentages. In this instance, ensure that the two values total 100.

Academic Progress Units % Enter a percentage to specify your institution standard for compiling course workload. For example, you might want to calculate workload hours at your institution based solely on the academic progress units that are associated with the course component. In this instance, set the Course Component Workload Hrs% field to *0* (or leave this second field cleared) and the Academic Progress Units % field to *100*. When these two fields are set this way, any time that you assign an instructor to teach a course component at the specified academic institution, the course component workload hours calculation uses only the academic progress units for the overall course as set on the Class Associations page (and not the course component workload hours). This causes any component of the course (lecture, laboratory, and so on) to be calculated based on the academic progress units for the overall course as set on the Class Associations page. In addition, if you want to sum workload hours based on both fields, you can do this by setting each of the fields to the appropriate percentages. In this instance, ensure that the two values total 100.

Note: The preceding field values apply only to assignments that are made on the Meetings page. Although not required by the system, these two fields should total 100.

Note: Workload hours for assignments (which are not course-based) that are made directly to the Term Workload page do not reference either the Course Component Workload Hrs% or Academic Progress Units % fields. Instead, the user enters the assignment workload hours manually. For example, an assignment that is made directly to the Term Workload page for *advising the math club* might have a manually assigned workload entry of 3 to represent the number of hours per week that this assignment requires.

Assigning Workload Hours to Courses and Class Components

Workload for courses can comprise academic progress units and course component workload hours. If your Academic Institution 4 page setting specifies that some percentage (1-100) of workload comprises course component workload hours, specify course workload hours in the course catalog. In addition, you might want to specify or update these hours for each component on the Class Associations - Class Components page.

Specifying Default Values for Your Institution

Full-Time Assigned FTE % (full-time assigned full-time equivalent percent)

Enter the full-time assigned FTE percent to appear in the Assigned FTE % field on the Instructor Assignment Class page when a value of *Full-Time* is selected for the Full/Part Time field on that page. This is only a default value, and you can change it on the Instructor Assignment Class page.

Part-Time Assigned FTE % (part-time assigned full-time equivalent percent)

Enter the part-time assigned FTE percent to appear in the Assigned FTE % field on the Instructor Assignment Class page when a value of *Part-Time* is selected for the Full/Part Time field on that page. This is only a default value, and you can change it on the Instructor Assignment Class page.

Assignment Type

Enter the assignment type to appear on the Meetings page each time that the system assigns a course component. This setting is only a default value, and you can change it on the Meetings page.

Instructor Assignment Class

Enter the instructor assignment class to appear on the Term Workload page. This setting is only a default value, and you can change it on a case-by-case basis on the Term Workload page.

Note: You cannot inactivate or delete the assignment type and instructor assignment class that are referenced on the Academic Institution 4 page.

Related Links

"Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining Subject and Component Multipliers

Access the Subject Workload page (Set Up SACR > Foundation Tables > Academic Structure > Academic Subject Table > Subject Workload).

Image: Subject Workload page

This example illustrates the fields and controls on the Subject Workload page. You can find definitions for the fields and controls later on this page.

The system uses these values as part of the course component workload hours formula to calculate the assignment FTE percentage on the Meetings page. You do not need to enter values for course components that are multiplied by 100 percent.

Course Component

Select a course component to associate with courses in the academic institution and subject area that you specify. Values for this field are delivered with your system as translate values. You can modify these values. The course component value indicates the parts of the course offering, for example, *Lecture*, *Laboratory*, *Ind Study* (independent study), and so on.

One subject area can have multiple components.

See [Defining Course Components](#).

Component Multiplier %

Enter a component multiplier percentage value that represents the weight of this type of component. By default, this field displays *100*. The system uses this value as part of the course component workload hours formula to calculate default workload hours on the Meetings page. You do not need to enter values for course components that are multiplied by 100 percent unless you prefer to store this data for documentation.

As noted in the workload hours formula, multiplier values are 100 percent by default if they are not found.

See [Course Component Workload Hours Formula](#).

Linking Workload Hours to Courses

You can use the Workload Hours field and the OEE Workload Hours (open entry and exit workload hours) field on the Course Catalog - Components page to enter workload hour data. The value that you specify in each of these fields serves as a default value that the system uses to populate the same components on the Class Components page when you schedule a class. In other words, if you set the lecture Workload Hours field to 3 on the Course Catalog - Component page, then whenever you schedule a lecture for this course, the lecture component Workload Hours field has a default value of 3 workload hours on the Class Components page for this component. Similarly, if you set the lecture OEE Workload Hours (open entry and exit workload hours) field to 45 on the Course Catalog - Component page, then whenever you schedule a lecture for this course in an open entry and open exit session, the lecture component OEE Workload Hours (open entry and exit workload hours) field has a default value of 45 workload hours on the Class Components page. If necessary, you should modify the component values on the Class Components page.

Chapter 9

Setting Up Transfer Credit Processing

Understanding the Transfer Credit Business Process

This section lists prerequisites and discusses the transfer credit business process.

Prerequisites

Before you set up transfer credit rules and process transfer credit, complete all other setup for Student Records. You must define academic careers, academic programs, academic plans, the course catalog, grading bases, terms, and sessions. It is helpful to write out the rules for accepting transfer credit before you enter the rules in the system.

Transfer Credit Business Process

Setting up the Transfer Credit feature is complicated but can save you a lot of time in the future.

Setting up for processing transfer credit involves defining the external organizations from which you accept transfer credit and defining all of the subject areas and courses that the external organization can transfer. A key aid to completing the setup for the Transfer Credit feature is to point any external organization or internal institution to any other external organization's or internal institution's catalog of courses. It is thus possible to create one group of external courses that a number of external organizations share. Sharing course information saves time because you do not have to duplicate your data entry effort if one or more organizations have the same or similar courses. It is especially helpful when dealing with a large transfer population from schools where courses are virtually the same or catalogs are shared. For instance, if your academic institution receives many transfer students from a state college system, you can create one catalog of external courses for the state college system where all state colleges in that system can point to for these courses.

Transfer equivalency rules that you create are the foundation of the Transfer Credit process. After you define external organizations, you create equivalency rules for courses and tests, then attach these equivalency rules to specific academic programs and academic plans. You also attach an equivalency rule to an external organization or internal institution.

After you complete the setup, you are ready to process transfer credit. Transfer credit processing is based on a concept of modeling various scenarios of transfer credit articulation. You set up model scenarios for an individual, dependent on the individual's chosen academic program and plan to demonstrate different options of transferring credit. Based on your setup, you have the ability to model as many transfer credit scenarios as you want for prospects, applicants, and current students. You also have the flexibility to articulate models based on predefined rules or rules that you create manually.

Important! Much of this organizational setup is shared with PeopleSoft Campus Community and PeopleSoft Recruiting and Admissions. Therefore, you should coordinate your efforts.

Defining External Organizations

Before you can use transfer credit processing, use the Organization Table (ORGANIZATIONS) component to define external organizations. As you define external organizations, specify their locations, contacts, departments, and characteristics. Also, specify whether the organization is a vendor.

As part of the external organization setup within this component, transfer credit processing requires that you:

- Select the Offers Courses check box on the School Data page in the Organization School Data (SCC_EXT_ORG_ADM) component to identify the external organization as one that offers courses.

You can also access this page via a link on the Organization Table page. This page enables you to create external courses to be used in transfer credit articulation rules.

- Enter the data that applies to the external organizations that offer courses on the School Data page.

When forming transfer credit rules, the system uses the values that you define for the external organization in the Career, Term Type, and Unit Type fields and the Catalog Information group box as system default values. Furthermore, if you indicate that an external organization has a shared catalog with another external organization, the system uses the catalog organization that you specify as the default value on the Course Transfer Rule page.

Defining external organizations functionality is shared with Campus Community and Recruiting and Admissions.

Related Links

"Understanding Organizations" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Creating Organization Records" (PeopleSoft Campus Solutions 9.2: Campus Community)

Setting Up External Subjects

You define subject categories for external organizations on the External Subject Table page. Then, you link these subjects to external organizations and the courses they offer. The subject area that you enter on the External Subject Table page can be tied to specific external organizations on the School Subject Maintenance page. For every external organization from which you anticipate receiving academic work for transfer articulation, define all subject areas on this page.

Setting Up External School Subjects

To set up external school subjects, use the School Subject Maintenance (SCHOOL_SUBJECTS) component.

This section discusses how to link external subjects to external organizations.

Page Used to Set Up External School Subjects

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
School Subject Maintenance	SCHOOL_SUBJECTS	Set Up SACR > Common Definitions > External Education > School Subject Maintenance > School Subject Maintenance	Link external subjects to specific external organizations, specifying the subject areas that your institution accepts as transfer credit from the external organization. You use these subject areas to build external courses.

Linking External Subjects to External Organizations

Access the School Subject Maintenance page (Set Up SACR > Common Definitions > External Education > School Subject Maintenance > School Subject Maintenance).

Important! The catalog of courses for one external organization can be used by multiple institutions. Plan carefully before you use this page to enter every subject area for every institution from which you might receive transfer credit.

School Subject

Enter a school subject for the external organization. This field contains no edits and, thus, enables you to enter any value. Only the values in the prompt box display a description.

External Subject Area

Enter the external subject area that corresponds to the school subject. This field is useful when an external organization has a number of school subjects that are the same but have different names, such as *ENGL* and *English*. You can associate both school subjects with each other, for example, by tying each school subject to the external subject area of *ENGL*.

Entering External Courses

To set up external courses, use the School Course Classification (SCHOOL_COURSES) component.

This section discusses how to record external courses.

Page Used to Enter External Courses

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
School Course Classification	SCHOOL_COURSES	Set Up SACR > Common Definitions > External Education > School Course Classification > School Course Classification	Record the specific course offerings for each subject area of an external organization. You use these course classifications when you create course transfer rules.

Recording External Courses

Access the School Course Classification page ((Set Up SACR > Common Definitions > External Education > School Course Classification > School Course Classification).

Image: School Course Classification page

This example illustrates the fields and controls on the School Course Classification page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'School Course Classification' page for Cornell College. The page title is 'School Course Classification'. Below the title, the 'Org ID' is 000010133 and the 'School Subject' is ENGL. The main form is titled 'School Course Number' and contains the following fields:

- *School Course Number: 210
- *Effective Date: 01/01/1990
- *Status: Active
- *Description: English Literature to 1800
- Short Description: Lit 1800
- *External Subject Area: ENGL (English)
- *Career: Undergrad
- External Course Type: Course
- Course Level: Regular
- External Units: 3.00

Note: If you want to inactivate an external course, you must enter a status of inactive *and* remove the external course from your course equivalency rules.

School Course Number	Enter the course number at the specified external organization for the course that you are classifying. This value is usually the catalog number of the external course.
External Subject Area	Enter the external subject area for this course at the specified external organization. This field is where school subjects that are the same but have different names can both be represented by the single external subject area that you enter.
Career	Enter the career for this course at the specified external organization. Values for this field are delivered with your system as translate values. You can modify these values.
External Course Type	Enter the external course type for this course at the specified external organization. Values for this field are delivered with your system as translate values. You can modify these values.
Course Level	Enter the level for this course at the specified external organization. Values for this field are delivered with your system as translate values. You can modify these values.
External Units	Enter the number of external units that this course is worth at the specified external organization.

Note: External courses are converted to the unit type of your academic institution based on the rules on the External Term Table page.

Setting Up External Terms

Define external terms on the External Term page. When tracking information about external institutions for a prospect, applicant, or student, you may want to know the specific term to which that information is related. For example, if you are entering external transfer credit information, you want to record the term to which the transfer credit information pertains. Because external institutions use various term structures, use this page to define all external terms. You can also set up how you want external terms converted to your term structure on this page.

Note: The system uses the conversion multipliers on the Unit Conversion Table page when calculating internal transfer credit (for instance, transferring between academic careers).

"Entering Codes for External Organizations" (PeopleSoft Campus Solutions 9.2: Campus Community)

Setting Up Test and Component Information

To create test credit transfer rules, define your test components and test codes:

- Use the Test Component page to set up test components used in your rules for test credit equivalencies.

Example test components include English Composition and Essay, German Language and Listening, and so forth.

- Use the Test Tables page to set up test codes and to link test components to them.

Note: Minimum scores are also defined for test transfer equivalency rules.

Setting Transcript and Statistics Defaults

Use the Organization Affiliation page to enter details about the affiliation of your institution with specific external organizations. The only relevant fields for transfer credit processing that contain the default values for printed transcripts are in the Transfer Credit Transcript Print group box on this page. You can override the default values for specific transcript types on the Transfer/Test/Other Credits page of the Transcript Type (TSCRPT_TYPE) component.

Level of Detail

Enter a value to indicate the transfer credit level of detail to print on transcripts for a student transferring credit from this external organization:

Summary: Enter this value to print a student's total transferred units and grade point average (GPA) from this external organization on the student's transcript. Enter this value if you use the Historical Course Enrollment page for your conversion process.

Detail: Enter this value to print what you selected in the Details to Print field.

Details to Print

If you enter *Detail* in the Level of Detail field, use this field to enter the details to print on the transcript: *None*, *External Courses*, *External and Internal*, or *Internal Equivalent Courses*.

Include Transfer Credit in GPA

Select this check box if you want the transfer credit from this organization to be included in the student's GPA. If you clear this check box, the system does not include transfer credit grade points in the student's GPA.

Defining Study Agreements

To set up study agreements, use the Student Agreement Table (STUDY_AGREEMNT_TBL) component.

You can attach study agreements to individual student records on the External Study page of the Term Activation (STDNT_ACTIVATION) component. Study agreement codes are normally used to represent study abroad, exchange, and visiting programs.

This section lists the page used to define study agreements.

Page Used to Define Study Agreements

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Study Agreement Table	STUDY_AGREEMNT_TBL	Set Up SACR > Common Definitions > Study Agreement Table > Study Agreement Table	Create study agreements for use with external organizations.

Creating Course Transfer Equivalency Rules

To set up course transfer equivalency rules, use the Transfer Subject Area (TRNSFR_SUBJ_AREA) component and the Course Transfer Rules (TRNSFR_RULE) component.

This section provides an overview of course transfer equivalency rules and discusses how to:

- Define component subject areas.
- Define subject area elements.
- Review and adjust incoming course information.
- Define course transfer rules.

Understanding Course Transfer Equivalency Rules

After you set up all of the tables discussed in the previous topics, you can begin to create your course transfer equivalency rules. The Transfer Credit process enables you to articulate course credit manually or with predefined course transfer equivalency rules. Most likely, you will create predefined rules for external organizations or internal academic institutions from which you receive the majority of your transfer students. You can create manual rules for those organizations from which you infrequently receive transfer students.

In this section, we review how to create the predefined course equivalency transfer rules for modeling transfer articulations for a prospect, applicant, or student. An equivalency rule is attached to an external organization or internal academic institution and can contain numerous transfer components. You might even decide to define more than one course transfer equivalency rule for an external organization or internal academic institution to account for academic program and academic plan differences in articulation rules.

The term *component* is used in documentation about the Transfer Credit process and should be distinguished from the same term used in PeopleSoft PeopleTools, where it refers to a page or a group of pages under a menu item. In the Transfer Credit feature, a component ties each incoming course and its internal equivalents together. Thus, for each incoming course and its matched equivalent, a corresponding component exists. Together, these data elements represent a line or sequence within the overall course transfer rule. Thus, a course transfer rule is generally made up of hundreds, possibly thousands, of components, each of which contains a number of data elements, including the transfer priority number, the incoming courses, and the internal equivalents. For simplicity, we refer to components related to transfer credit as *transfer components*.

To manage this large volume of transfer components, group them into distinct component subject areas for each external organization or internal academic institution by using the Transfer Subject Area component. Because component subject areas are user-defined and not enforced by the Subject table of your academic institution, you can define a component subject area with a value that you can later associate with a given course transfer equivalency rule. For example, you can create a component subject area called Mathematics for an external organization and define all of the incoming math and statistics courses and their internal equivalent courses within this component subject area. Alternatively, you can define one component subject area for math courses and one component subject area for statistics courses.

After you define component subject areas, use the Course Transfer Rules component to assign component subject areas to the course transfer rules that you create for each external organization or internal academic institution.

The system stores the data for each component subject area in intermediary tables (TRNSFR_RULE and TRNSFR_RSUB) that are independent of the course-transfer equivalency rule tables (TRNSFR_SUBJ, TRNSFR_COMP, TRNSFR_FROM, TRNSFR_TO). All of these tables are associated with each other through parent-and-child relationships in the table structure.

Articulating Variable Unit Courses

To ease the articulation of variable unit courses, Campus Solutions can determine transfer unit values in one of three ways:

1. By the units of the internal equivalent course as they appear in the course catalog.
2. By a fixed value, determined by the institution.
3. By the units of the incoming course, whether a set or variable value, with the option of setting a maximum limit.

Rather than having the transfer model determine the transfer units for an incoming course based on the units of the internal equivalent course in the course catalog as they appeared at the time that you set up the transfer rule, which can cause the system to get out of synchronization, you can determine the units by the internal equivalent course or by a fixed value. See the examples at the end of this section for more information.

Excess Credit Courses

You can award excess credit to a specified course. For example, if a student took MATH 1A for four units, but the internal equivalent was only worth three units, then you can set up an excess credit course and award the excess units to that course. See the examples at the end of this section for more information.

Note: The PeopleSoft Academic Advisement application treats the excess credit course as another transfer course, bringing in the course ID, grade, and requirement designation as it does for the internal equivalent course. Like the internal equivalent, the excess credit course is also coded as "TR" on the degree audit. If your business practice is to use one particular course ID to collect excess credit for a variety of incoming courses, be aware that each instance of the course will appear on the advising report.

Transfer Status: Rejected

The system automatically rejects courses for any of these reasons:

- The Transfer Course check box is cleared on the Subject Area Elements page for the applicable rule.

- The enrollment date of the incoming course is not entered or the system is unable to calculate it.

When no date is entered, the system automatically calculates a date like this:

- If no term year is entered, the system uses the year 1900 as the year that the class was taken.
- If no external term is entered, the system uses January 1 as the month and day that the class was taken.
- If an external term is entered without a term year, the system finds the appropriate month from the external term table (for instance, fall may be month 8) and calculates the rest.

In this instance, the date that the class was taken would be August 1, 1900.

- The official grade is blank.

Pages Used to Create Course Transfer Equivalency Rules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Transfer Subject Area	TRNSFR_SUBJECT	Records and Enrollment > Transfer Credit Rules > Transfer Subject Area > Transfer Subject Area	Describe component subject areas for a transfer credit source, otherwise known as an external organization or internal academic institution. Also set up incoming course default information for the transfer components that you define within this component subject area. The system applies these defaults to each incoming course that you specify on the Subject Area Elements page of this component.
Subject Area Elements	TRNSFR_DETAIL	Records and Enrollment > Transfer Credit Rules > Transfer Subject Area > Subject Area Elements	Define the transfer components of the component subject area.
Incoming Course Information	TRNSFR_FR_SEC	Click the Incoming Course Information link on the Subject Area Elements page.	Adjust the default information for a particular incoming course within the component subject area. Default information for incoming courses of a particular component subject area is defined on the Transfer Subject Area page.

Page Name	Definition Name	Navigation	Usage
Course Transfer Rules	TRNSFR_RULE	Records and Enrollment > Transfer Credit Rules > Course Transfer Rules > Course Transfer Rules	Define course transfer equivalency rules for external organizations or internal academic institutions.

Defining Component Subject Areas

Access the Transfer Subject Area page (Records and Enrollment > Transfer Credit Rules > Transfer Subject Area > Transfer Subject Area).

Image: Transfer Subject Area page

This example illustrates the fields and controls on the Transfer Subject Area page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Transfer Subject Area' page with the following details:

- Academic Institution:** PSUNV (PeopleSoft University)
- Source ID:** 000010143 (Fresno City College)
- Component Subject Area:** FCC-ENGLISH
- Effective Date:** 01/01/1980
- Status:** Active
- Description:** English Courses
- Catalog Org Type:** External
- Catalog Organization:** 000010143 (Fresno City College)
- Component Defaults:**
 - Min / Max Units: 1.00 to 99.00
 - Min / Max Grade Pts per Unit: 1.000 to 4.500
 - Internal Equiv Course Value: Specify Fixed Units
 - Term Type: Quarter
- Excess Credit Defaults:**
 - Course ID: [Searchable field]
 - Requirement Designation: [Searchable field]

General Fields

Catalog Org Type (catalog organization type)

Designates the table from which you select a catalog organization for the component subject area of the specified source.

External: The system prompts you with external organizations in your system. Define external organizations on the Organization Table page.

Internal: The system prompts you with academic institutions in your system. Define academic institutions on the Academic Institution Table page.

Catalog Organization

Enter the catalog organization for this component subject area of the specified source. By default, the system displays the specified source as the catalog organization, but you can override this value. The system prompts you with values based on the value that you entered in the Catalog Org Type field.

When defining course equivalencies for the component subject area of the specified source on the Subject Area Elements page, the system prompts you with incoming courses based on the catalog organization value that you enter here.

You can use any external organization or internal academic institution as the catalog organization to define course equivalencies for this component subject area of the specified source. However, after you define a course equivalency on the Subject Area Elements page, the Catalog Org Type and Catalog Organization fields become unavailable.

Component Defaults

Use the fields in the Component Defaults group box to define default information for incoming courses that you select for this component subject area of specified source on the Subject Area Elements page. Later, you can override these default values for an individual incoming course by clicking the Incoming Course Information link for the incoming course to change on the Subject Area Elements page.

Min/Max Units (minimum and maximum units)

Enter the default minimum and maximum units for all incoming courses that you define for this component subject area of the specified source.

Term Type

Enter the default term type for all incoming courses that you define for this component subject area of the specified source.

By default, the system displays the term type defined on the School Data page in the Organization School Data component.

Values for this field are delivered with your system as translate values. You can modify these values.

Min/Max Grade Pts Per Unit
(minimum and maximum grade points per unit)

Enter the default minimum and maximum grade points per unit for all incoming courses that you define for this component subject area of the specified source.

Internal Equiv Course Value
(internal equivalent course value)

Enter a default value for this component subject area. Select from these options:

Use Catalog Units: The system determines the number of units that the student obtains for the incoming course based on the unit setting for the internal equivalent course in the course catalog.

Specify Maximum Units: The system uses the units of the incoming course but does not exceed the maximum units that you enter in the Max Units to Transfer field.

Specify Fixed Units: The system awards the student the number of units that you enter in the Units field.

Excess Credit Defaults

Course ID

If you want to create excess credit courses, enter a default for this component subject area. The system places excess units into this course when a student has taken more units for the incoming course than is allowed in the internal equivalent course. See the Course ID field description in the following section: Defining Subject Area Elements.

Requirement Designation

If you want to assign a requirement designation to your excess credit courses, enter a default for this component subject area. Requirement designations further define the type of transfer credit being received. Requirement designation values are defined on the Requirement Designation Table page.

[Understanding Requirement Designations](#)

Defining Subject Area Elements

Access the Subject Area Elements page (Records and Enrollment > Transfer Credit Rules > Transfer Subject Area > Subject Area Elements).

Image: Subject Area Elements page (1 of 2)

This example illustrates the fields and controls on the Subject Area Elements page (1 of 2). You can find definitions for the fields and controls later on this page.

Transfer Subject Area		Subject Area Elements	
Academic Institution:	PSUNV	PeopleSoft University	
Source ID:	000010143	Fresno City College	
Component Subject Area:	FCC-ENGLISH		Review History
Effective Date:	01/01/1980	Status:	Active
Description:	English Courses		
Subject Area Elements			
*Sequence Number:	0001		
*Description:	Reading and Composition		
*Term Type:	Quarter		
Transfer Course:	<input checked="" type="checkbox"/>		
*Transfer Priority:	1	*Internal Equiv Course Value:	Specify Fixed Units
Contingent Credit:	<input checked="" type="checkbox"/>	Save Excess Units to a Course:	<input type="checkbox"/>

Image: Subject Area Elements page (2 of 2)

This example illustrates the fields and controls on the Subject Area Elements page (2 of 2). You can find definitions for the fields and controls later on this page.

Incoming Course	Internal Equivalent
*Seq#: <input type="text" value="1"/> + - WildCard: <input type="checkbox"/> *Subject: <input type="text" value="ENGL"/> English Course Number: <input type="text" value="10"/> Reading and Composition Incoming Course Information	*Course ID: <input type="text" value="003271"/> ENGLCOMP10 + - *Offer Number: <input type="text" value="1"/> Reading Comp I Units: <input type="text" value="3.00"/> *Default Grade: <input type="text" value="By Incoming Course"/> *Course: <input type="text" value="Seq 1: ENGL 10"/>
*Seq#: <input type="text" value="2"/> + - WildCard: <input type="checkbox"/> *Subject: <input type="text" value="ENGL"/> English Course Number: <input type="text" value="11"/> Freshman Composition Incoming Course Information	*Course ID: <input type="text" value="003273"/> ENGLCOMP12 + - *Offer Number: <input type="text" value="1"/> Reading Comp II Units: <input type="text" value="3.00"/> *Default Grade: <input type="text" value="By Transfer Equivalency Setup"/>

Within each transfer component, you define the incoming courses and internal equivalent courses. For each transfer component, you define the term type of the incoming course, the transfer priority in relation to other transfer components within the component subject area, and some general information.

General Fields

Sequence Number

The sequence number is the numeric counter that distinguishes each transfer component of the component subject area from other transfer components. By default, the system populates the first sequence number of the component subject area with *0001* and increases the number by one as you add transfer components.

Description

This field describes the transfer component of the component subject area. By default, the system displays the description from the Transfer Subject Area page. You can override this default value.

Term Type

Enter the term type for this transfer component of the component subject area. By default, the system displays the term type from the Transfer Subject Area page. Values for this field are delivered with your system as translate values. You can modify these values.

Transfer Course

Select to have the incoming courses on this transfer component of the component subject area transfer to your academic institution, provided that the student's incoming course meets all conditions of the course transfer rule.

Clear to have the Transfer Credit process reject the incoming courses that you enter on this row of the component subject area. A course evaluated in this way has a status of *rejected* on the Transfer Course Details page of the Course Credits component.

Transfer Priority

Enter the transfer priority number for this transfer component.

The Transfer Credit process evaluates the courses within the component subject area according to the transfer priority of each transfer component. The transfer component that has the highest priority takes precedence. If an individual's incoming course meets all conditions of the course transfer rule to which this component subject area is assigned, the Transfer Credit process uses the equivalent course as defined on the transfer component that has the highest transfer priority. If the individual's incoming course does not meet the conditions of the course transfer rule to which this component subject area is assigned, the Transfer Credit process evaluates the incoming course against the transfer component with the next highest transfer priority.

For example, if you have a rule where a student can receive credit based on the grade or the number of units that the student completes, you set up two separate components using a different transfer priority for each. If a student takes math 101 for two units or gets an A, the internal equivalent is Math 102; and if a student takes math 101 for three units or gets a C, the internal equivalent is Math 99.

Contingent Credit

Select to have the incoming courses transfer to your academic institution as contingent credit, provided that the individual's incoming course meets all conditions of the course transfer rule to which this component subject area is assigned. A course evaluated in this way has a status of *contingent* on the Transfer Course Details page of the Course Credits (TRNS_CRSE) component. You can manually change the status of the incoming course from *contingent* to *accepted* after the individual meets the contingency.

For example, Education 310 at UC Santa Cruz is equivalent to Education 312 at PSUNV, provided that the student also has submitted verification of an internship. Select the Contingent Credit check box for this incoming course. During the Transfer Credit process, the course credit transfers but the incoming course has a status of *contingent* on the Transfer Course Details page.

Internal Equiv Course Value (internal equivalent course value)

Enter a value to indicate how you want the system to determine the number of units the student receives from the incoming course. Select from the following:

- *Use Catalog Unit:* The system determines the number of units the student gets for the incoming course based on the unit setting for the internal equivalent course in the course catalog.

To determine the units in the course catalog, the system compares the start date of the articulation term to the effective date in the course catalog.

- *Specify Maximum Units:* With two internal equivalents, the system adds the values of the incoming courses to determine the total amount that is available to transfer, up to the maximum specified, and uses the rest for the excess course when the Save Excess Units to a Course check box is selected.

Note: Entering this value precludes the user from having two internal equivalents without selecting the Save Excess Units to a Course check box. To use a many-to-many or one-to-many rule, select *Specify Fixed Units* or *Use Catalog Units*.

- *Specify Fixed Units:* The system uses the number of units that you enter in the Units field, which appears in the Internal Equivalent group box when you select this option.

By default, the system populates the Units field with the course catalog unit value of the internal equivalent when the transfer rule is set up. You can change this value.

Note: If the unit value or effective date in the course catalog changes, the Units field on this page does not change.

Save Excess Units to a Course

Select if you want to save excess units from the incoming course to a specified internal course. For example, if the incoming course was taken for four units, and the internal equivalent course is worth only three units, the extra unit can be credited to a second internal course, most likely an elective course.

Note: Only one excess unit course can be assigned per transfer equivalency rule. Also, you cannot save excess units to a course when there is more than one internal equivalent.

Incoming Course

Use the Incoming Course group box to define the external course information for a specific transfer component. The incoming courses and internal equivalent courses that you define are the transfer components of the component subject area.

Seq# (sequence number)

The system automatically assigns a sequential number to each incoming course to identify unique transfer component records within the data table. These sequence numbers have no programming significance.

W (wildcard)

Select to use the # wildcard character at the end of the *Course Number* field value for the incoming course. If you clear this check box, the system requires you to use a complete course number.

Subject

Enter the subject area of the incoming course. For incoming courses from external organizations, define subject values on the

School Subject Maintenance page. For incoming courses from internal academic institutions, subject areas are tied to courses in that academic institution's course catalog.

Course Number

Enter the course number for the incoming course. If you are using an external organization for the catalog organization (as defined on the Transfer Subject Area page), the system prompts you with courses that you associated with the external organization on the School Course Classification page. If you are using an internal academic institution for the catalog organization, the system prompts you with courses defined for that academic institution in the Course Catalog (CRSE_CATALOG) component.

If you selected the W check box, you can substitute the # wildcard character for the last character of the course number so that you can map a series of incoming courses to one internal equivalent course. For example, you can enter *1#* to map course numbers 10 through 19 to a specific internal equivalent course, you can enter *10#* to map course numbers 100 through 109 to specific internal equivalent course, or you can enter *1##* to map all 100 level courses to a specific internal equivalent course.

Otherwise, the system prompts you with values from the School Course Classification Table page.

Incoming Course Information

Click to access the Incoming Course Information page, where you can enter detail information about this incoming course.

Internal Equivalent

Use the Internal Equivalent group box to define the internal course that is equivalent to the incoming course for this transfer component.

Course ID

Enter the course that is equivalent to the incoming course for this transfer component.

Offer Number

Defaults to the offer number of the course that you entered, as defined in your academic institution's course catalog. You can override this value.

Max Units to Transfer (maximum units to transfer)

This field appears when you enter *Specify Maximum Units* in the Internal Equiv Course Value field. Enter the maximum number of units that a student can transfer for this incoming course. For example, if the incoming course is a variable unit course that can be taken for one to five units, and you want the system to use the incoming units to populate the internal equivalent units, but you want to accept only up to three units for this course, you could enter 3 in this field. However, if you want the system to use the units of the incoming course, but do not want to impose a maximum, accept the default of 99.

Units

This field appears when you enter *Specify Fixed Units* in the Internal Equiv Course Value field. Enter the number of units that

you want the internal equivalent to be worth, regardless of the number of units the incoming course is worth. For example, if you enter 3 in this field, a student can take the course for one unit, two units, or seven units, but still receives three units for the internal equivalent. Defaults to the value are defined in the course catalog. You can change this value. This value does not change when you change the units in the course catalog.

Default Grade

Enter a value in this field to indicate how you want the Transfer Credit process to determine the grades for internal equivalent courses.

The *By Grade Order* value is available only for many-to-one and many-to-many equivalency rules. When you enter this value, the Grade Order field becomes available. The value that you enter in this field determines which incoming grade the Transfer Credit process uses. For example, if the rule is that two incoming courses—ENG101 with a grade of A and ENG102 with a grade of B—can be transferred as the internal equivalent ENGL1301, and you enter a grade order of *2nd Highest*, the Transfer Credit process transfers the B grade to the internal equivalent course.

Note: The Transfer Credit process copies the grade from the incoming course to the equivalent course if the grade is a valid value for the grading scheme and the grading basis of the student's academic program.

Enter the value of *Incoming Course* in the Default Grade field if you want the Transfer Credit process to copy the grade from the incoming course to the internal equivalent course. When you enter this value, the Course field becomes available. For many-to-one and many-to-many equivalency rules, enter a value in the Course field to indicate which course you want the transfer credit process to use. In a many-to-many rule, each internal equivalent can use a different incoming course to determine the grade.

Note: The Transfer Credit process copies the grade from the incoming course to the equivalent course if the grade is a valid value for the grading scheme and the grading basis of the student's academic program.

Enter the value of *By Transfer Equivalency Setup* in the Default Grade field if you want the Transfer Credit process to use the transfer grade value defined on the Academic Program Table (ACADEMIC_PROG_TBL) component for the academic program specified on the transfer credit model.

Excess Credit Group Box

This group box appears when you select the Save Excess Units to a Course check box.

Course ID

Enter an excess credit course for this transfer equivalency rule. If a student earns more units for an incoming course than the internal equivalency rule allows, the system awards the student units in the course that you enter here. The course should be an elective course for which repeat checking is not activated.

Note: Each time that a student is awarded excess units in a course, the articulation of units appears as a separate instance of the class. Therefore, you should select the Repeat for Credit check box on the Catalog Data page in the course catalog for the course that you enter. Also, you should set the Units Allowed for the course to 999 and the Total Completions Allowed to 99 on the Catalog Data page.

Offer Nbr (offer number)

By default, the system displays the offering number of the course that you entered according to the definition of that course in your academic institution's course catalog. You can override this value.

Max Units to Transfer (maximum units to transfer)

Enter the maximum number of excess units that you want to award students. If you do not want to set a maximum, accept the default value of 99.

Requirement Designation

Enter a requirement designation if you want to define the type of transfer credit being received. This value appears by default from the course catalog.

Min / Max Grade Pts per Unit:	<input type="text" value="1.000"/>	<input type="text" value="4.500"/>	

Begin / End Date

By default, the system populates the begin and end date of the incoming course with *01/01/1900* and *12/31/9999*. You can override these default values. These dates inform the Transfer Credit process when this incoming course is valid for the course transfer equivalency rule to which you attach this component subject area.

Min / Max Units (minimum and maximum units)

The system displays the default minimum and maximum units for incoming courses within this component subject area. You can override these default values.

For example, you might want to specify the same incoming course twice but differentiate each specification by how many units are earned. In this case, specify the same incoming course multiple times but with different minimum and maximum unit ranges.

Min/Max Grade Pts Per Unit (minimum and maximum grade points per unit)

The system displays the default minimum and maximum grade points per unit for incoming courses within this component subject area. You can override these default values.

Maximum Age

This field defines the maximum age in years of the incoming course. This prevents an individual from transferring credit for this course to your academic institution when the individual took the course more years ago than the number that you specify here. By default, the system sets the maximum age of an incoming course to *99* years, but you can override this default value. For instance, you might want restrict individuals from receiving transfer credit for a course when an individual has taken the course more than *4* years previous to the date your institution processes that individual's transfer credit.

Defining Course Transfer Rules

Access the Course Transfer Rules page (Records and Enrollment > Transfer Credit Rules > Course Transfer Rules > Course Transfer Rules).

Image: Course Transfer Rules page

This example illustrates the fields and controls on the Course Transfer Rules page. You can find definitions for the fields and controls later on this page.

Course Transfer Rules

***Effective Date:** 01/01/1990 ***Status:** Active

***Description:** Santa Monica College - LAU/FAU

Transfer Subject Area

Transfer Subject Area	Description
SMCC-ARTS	Art Courses
SMCC-ENGLISH	English Courses
SMCC-HISTORY	History Courses
SMCC-LANGUAGES	Foreign Languages
SMCC-MATH	Math Courses

For each transfer equivalency rule, attach component subject areas that you have defined for the source in the Transfer Subject Area (TRNSFR_SUBJ_AREA) component. You can define multiple course transfer equivalency rules for a single source. For example, you might define multiple rules to account for academic program and academic plan differences in equivalency rules. The effective date functionality enables you to add and delete component subject areas that are no longer valid for the equivalency rule.

When adding a new transfer equivalency rule, you must also specify the credit source type of either *external organization* or *internal academic institution*. The credit source type instructs the system from which table you will select your source ID. By selecting *external organization*, the system prompts you with the source IDs of external organizations in your system. By selecting *institution*, the system prompts you with source IDs of academic institutions in your system.

Transfer Subject Area

Enter the component subject areas to tie to the course transfer equivalency rule. Each component subject area defines the incoming courses, their internal equivalent courses, and detail about how the Transfer Credit process must function. The Transfer Credit process uses the transfer component data for component subject areas to determine an individual's transfer credit.

Reviewing Examples of Course Equivalencies

This section provides examples of the following course equivalencies:

- Many-to-one.
- Many-to-many.
- Course rejection.
- Multiple equivalencies for the same course.
- Excess credit.

These examples demonstrate some of the ways that you can set up the Subject Area Elements page for course equivalencies.

Example of a Many-to-One Course Equivalency

Image: Example of many-to-one course equivalency

This example illustrates a many-to-one course equivalency:

When the Transfer Credit process applies this rule, it uses the transfer grade value defined on the Academic Program Table component for the academic program specified on the transfer credit model.

Example of a Many-to-Many Course Equivalency

Image: Example of many-to-many course equivalency

This example illustrates a many-to-many course equivalency:

The screenshot displays a configuration window for a 'Subject Area Element'. At the top, it shows institutional details: 'Academic Institution: PSUNV PeopleSoft University', 'Source ID: 000010147 Santa Monica City College', and 'Component Subject Area: SMCC-MATH'. The 'Effective Date' is 01/01/1982 and the 'Status' is Active. The 'Description' is 'Math Courses'. Below this, the 'Subject Area Elements' section shows a 'Sequence Number' of 0011 and a 'Term Type' of Quarter. The 'Transfer Course' checkbox is checked, and the 'Transfer Priority' is 1. The 'Internal Equiv Course Value' is set to 'Specify Fixed Units'. The 'Incoming Course' section contains two entries: one for 'MATH 14 Intermediate Algebra' (Seq#: 1) and another for 'MATH 15 Algebra & Trigonometry' (Seq#: 2). The 'Internal Equivalent' section lists 'MATH 10 Remedial Algebra' (Course ID: 001003, Offer Number: 1, Units: 3.00) and 'MATH 101 College Algebra' (Course ID: 001001, Offer Number: 1, Units: 3.00). Both equivalent courses have a 'Default Grade' of 'By Incoming Course' and are linked to their respective incoming courses (Seq 1: MATH 14 and Seq 2: MATH 15).

When the Transfer Credit process applies this rule, it uses the transfer grade for MATH 14 for one course and the transfer grade for MATH 15 for the other course.

Example of a Course Rejection Equivalency

To reject a course, clear the Transfer Course check box. The Internal Equivalent group box fields become unavailable.

Image: Example of a course rejection equivalency

This example illustrates a course rejection equivalency:

Example of Multiple Equivalencies for the Same Course

The following examples show multiple equivalencies for the same course.

For Santa Monica City College, the student's transfer course articulates to different math courses at PSUNV, depending on the number of units that a student takes for Math 20. In this example, there are two component rules—one for Math 20 taken between one and two units and another for Math 20 taken between three and four units.

Image: Example of multiple equivalencies for the same course (1 of 4)

This example illustrates the one to two unit equivalency:

The incoming course maps to *Pre-calculus*.

Image: Example of multiple equivalencies for the same course (2 of 4)

This example illustrates the Incoming Course Information page for the one-to-two unit equivalency:

The minimum and maximum units are *1.00* and *2.00*, respectively.

Image: Example of multiple equivalencies for the same course (3 of 4)

This example illustrates the three-to-four unit equivalency:

The incoming course maps to a *Calculus 1* instead of *Pre-calculus*.

Image: Example of multiple equivalencies for the same course (4 of 4)

This example illustrates the Incoming Course Information page for the three-to-four unit equivalency:

The minimum and maximum units are 3.00 and 4.00, respectively.

Example of an Excess Credit Course Equivalency

Excess credit occurs when the external course is worth more units than the internal equivalent course. Identify an existing course or create a new course to manage excess credit.

Image: Example of an excess credit course equivalency

This example illustrates an excess credit course equivalency:

Converting Existing Transfer Components into Component Subject Areas

If you are upgrading your Student Records system and you have existing transfer component data in your application tables, run the delivered upgrade script, UPG_SR. This upgrade script moves your existing transfer component data from the former application-data table structure into the current application-data table structure. It assigns all transfer components within an existing course transfer equivalency rule to a single component subject area that is named after the original rule in which the transfer component resides. After you run the upgrade script, use the Transfer Subject Area component to access each of the component subject areas that the upgrade script creates, just as you would any other component subject area that you manually define. The data for all component subject areas, regardless of how they were created, are stored in the same table (EXT_TRNSFR_SUBJECT).

Next, you must go to the Course Transfer Rules page and create your course transfer equivalency rules, attaching the component subject area to rules, as appropriate. The system writes course transfer equivalency rule data to the EXT_TRNSFR_RULE_SUBJ table. You can continue course transfer credit processing using predefined rules, as usual.

Copying Transfer Components Between Component Subject Areas

This section discusses how to copy transfer components between component subject areas.

Page Used to Copy Transfer Components Between Component Subject Areas

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Subject Area Copy Function	RUNCNTL_TRNSFR_CPY	Records and Enrollment > Transfer Credit Rules > Copy Subject Areas > Subject Area Copy Function	As necessary and as time permits, copy transfer components from larger, more general component subject areas into new, smaller component subject areas.

Copying Transfer Components Between Component Subject Areas

Access the Subject Area Copy Function page (Records and Enrollment > Transfer Credit Rules > Copy Subject Areas > Subject Area Copy Function).

Image: Subject Area Copy Function page

This example illustrates the fields and controls on the Subject Area Copy Function page. You can find definitions for the fields and controls later on this page.

The copying functionality is intended primarily for academic institutions that receive a large number of transfer credit courses from a single source. On this page, you select the component subject area from which you want to retrieve transfer components, define the basics of the new component subject area to create, then retrieve the transfer components from the existing component subject area based on your parameters. Sort through the list of results to select the transfer components to include in the new transfer subject area, then run the Transfer Rule Subject Area Copy COBOL/SQL process (SRPCCARX) to create the new, smaller component subject area and to copy the selected components into it. After you run the process, you can edit the newly created component subject area in the Transfer Subject Area component. Attach this new component subject area to course transfer equivalency rules in the Course Transfer Rules (TRNSFR_RULE) component and resume course transfer credit processing as usual.

Important! If you are copying a large component subject area, you should either use the Incoming Subject field or the Break by Incoming Subject check box to separate the large component subject area into smaller ones based on incoming subject. Alternatively, use the From Component Seq# and To Component Seq# fields to copy blocks of 500 transfer components at a time into smaller component subject areas based on transfer component sequence numbers. You are not required to copy transfer components by subject area—it is just a logical breaking point for large component subject areas.

Refresh

Click to refresh the page.

From Seq # (from sequence number)	The sequence number is the numeric counter that distinguishes each row of the process request apart from other rows. By default, the system sets the first sequence number to 1 and increases the number by one as you add rows.
Description	Enter a description for this row of the process request.
Academic Institution	Enter the academic institution to which the component subject area to copy belongs.
Source ID	Enter the identification code of the source to which the component subject area to copy belongs.
Component Subject Area	Enter the component subject area to copy. The system displays values based on the academic institution and source that you specified for this process request.
Effective Date	Enter the effective date of the specified component subject area. The effective date indicates the row to copy within the specified component subject area.
Incoming Subject	Enter an incoming subject to filter by subject through all transfer components of the specified transfer component subject area. When you click the Fetch button, the system retrieves only the transfer components with this incoming subject and automatically selects to copy them into the new, smaller component subject area during processing. This field prompts against the external subject table for the specified external organization. If you use this field, the Break by Incoming Subject check box becomes unavailable for entry. Note that you can assign the To Component Subject Area field and its related Description field the same name as the incoming subject because component subject areas are keyed by source ID. Alternatively, you can assign these fields unique values.
Break by Incoming Subject	Select to break by incoming subject all the transfer components of the specified component subject area. If you select this check box, the Incoming Subject field, To Component Subject Area field, and its related Description field become unavailable for entry. When you click the Fetch button, the system retrieves all transfer components, separates them by incoming subject into unique rows on the run control page, assigns each row a sequence number, and automatically selects to copy all transfer components into new, smaller component subject areas during processing. For example, LBCC has eight different incoming subjects in their component subject area, so the system creates eight rows for eight new component subject areas. In addition, the system automatically populates the Incoming Subject field, the To Incoming Subject Area field, and its related Description field for each row. The Incoming Subject field

	remains unavailable for edit, but you can edit the other two fields.
From Component Seq# (from component sequence number)	Indicate the first transfer component to retrieve from the specified component subject area. By default, the system sets the value of this field to <i>0001</i> . You can override this default value.
To Component Seq# (to component sequence number)	Indicate the last transfer component to retrieve from the specified component subject area. When you click the Fetch button to retrieve transfer components, the system displays all transfer components within the specified range. By default, the system sets the value of this field to <i>9999</i> . You can override this default value.
To Component Subject Area	Enter the identification code of the new component subject area to create based on the preexisting component subject area that you specified.
Description	Enter a description of the new component subject area.
Effective Date To	Enter the effective date of the new component subject area to create based on the preexisting component subject area that you specified to copy.
Fetch	Click to retrieve the transfer components from the preexisting component subject area that you specified to copy.
Sequence # (sequence number)	The system displays the sequence number of the transfer component from the preexisting component subject area that you specified to copy.
Description	The system displays the description of the transfer component from the preexisting component subject area that you specified to copy.
Incoming Course	The system displays the subject, course number, and description for the incoming course of the transfer component.
Equivalent Course	The system displays the course ID, offering number, and description for the internal equivalent course of the transfer component.
Select All or Deselect All	Click to select or clear all of the transfer components in the list at the bottom of the page. This functionality is useful when you are splitting a component subject area with a large amount of transfer components. For example, you have a math component subject area with 300 transfer components and you want to group 250 within a new, higher math component subject area and the remaining 50 within a new, lower math component subject area. To create the higher math component subject area, retrieve all of the transfer components from the math component subject area,

click the Select All button, and then clear the check boxes for the 50 excluded components. When you create the lower math component subject area, select all of the 50 included transfer components.

Filter

Click to filter the list of transfer components that appear at the bottom of this page. The system displays only the transfer components that you have checked. The checked transfer components are the only ones that the Subject Area Copy Function process uses when creating the new component subject area.

Unfilter

The system displays this button whenever you have filtered the list of transfer components that appear at the bottom of the page. Click this button to reset the list back to its original number of transfer components.

Defining Course Equivalencies for Academic Programs and Plans

This section provides an overview of course equivalencies for academic programs and plans and discusses how to:

- Set up basic academic program and plan data.
- Set equivalency rules.

Understanding Course Equivalencies for Academic Programs and Plans

To set up course equivalencies for academic programs and plans, use the Program/Source Equivalency (EXT_EQUIV) component.

After you set up your course transfer equivalency rules, you must use the Program/Source Equivalency component to select the academic programs and plans within your academic institution to which you want to assign these rules.

If you have multiple equivalency rules for a given external organization or internal academic institution, you can attach these rules to various academic program and academic plan combinations. For instance, if you create two course transfer equivalency rules for an external organization, then you can link one rule to the Liberal Arts program and the other rule to the Liberal Arts program and English plan. The English equivalency rule includes English course-specific equivalencies that are different from the liberal arts equivalencies.

Note: The Basic page enables you to attach course transfer equivalency rules to a specific academic program or academic plan. The system requires that you attach the rule to an academic program, but attaching the rule to an academic plan is optional.

Example of How the System Uses Effective Dating

The Transfer Credit Setup tables use effective dating to determine the correct row of data to use when determining the correct rule to be used at articulation.

You are articulating a student in Term 0370 - Fall 1999. The begin date for Fall 1999 is September 1, 1999. The system determines the correct row of data to use using this procedure:

1. The system accesses the Program/Source Equivalency page and finds the row that is less than or equal to September 1, 1999.

The date of this row is January 1, 1900.

2. The system accesses the Course Transfer Rules and finds the row that is less than or equal to January 1, 1900.

The date for this row is January 1, 1990.

3. The system locates the rules for the row that is less than or equal to January 1, 1900, and uses that rule.

Pages Used to Define Course Equivalencies for Academic Programs and Plans

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Program/Source Equivalency - Basic	EXT_TRNSFR	Records and Enrollment > Transfer Credit Rules > Program/Source Equivalency > Basic	Set up basic parameters, such as grading basis and transfer grade, for processing transfer credit within a specified academic program or plan.
Rules Specification	EXT_TRNSFR_EQUIV	Records and Enrollment > Transfer Credit Rules > Program/Source Equivalency > Rules Specification	Set the course equivalency rules for academic programs or academic plans. The system uses these rules to evaluate transfer credit from the specified institution. On this page, like the external course catalog, you have the flexibility to point to any organization's ID to use as the source ID for course equivalency rules.

Setting Up Basic Academic Program/Plan Data

Access the Program/Source Equivalency - Basic page (Records and Enrollment > Transfer Credit Rules > Program/Source Equivalency > Basic).

Image: Program/Source Equivalency - Basic page

This example illustrates the fields and controls on the Program/Source Equivalency - Basic page. You can find definitions for the fields and controls later on this page.

Institution:	PSUNV	PeopleSoft University
Academic Program:	LAU	Liberal Arts Undergraduate Santa Monica City College
Academic Plan:		
Source ID:	000010147	Santa Monica City College

Find | View All First 1 of 1 Last

*Effective Date: 02/01/1990 *Status: Active

*Description: SMCC - LAU

*Grading Scheme: UGD Undergraduate Grading Scheme

*Grading Basis: GRD Graded

*Transfer Grade: T Transfer

Transfer HS Courses:

When accessing this page in Add mode, enter the credit source type from which you select your source ID. By entering *external organization*, the system prompts you with the source IDs of external organizations in your system. You define external organizations on the Organization Table page. By entering *institution*, the system prompts you with source IDs of academic institutions in your system. You define institutions on the Academic Institution Table page.

Effective Date

In addition to the common definition of this element, the system uses the effective date in conjunction with the articulation term on the Transfer Course Detail page to determine the validity of equivalency rules.

Grading Scheme

By default, the system displays the grading scheme of the specified academic program. Define grading schemes for academic programs on the Academic Program page in the Academic Program Table component. Define grading schemes for academic careers on the Academic Career Table page. You can override this default value now, and you can override this value later for individual transfer courses that you process.

This grading scheme defines all of the valid grading bases from which you can select a default transfer grade for this academic program/plan and source combination.

Grading Basis

By default, the system displays the grading basis default for transfer credit according to the specified academic program.

Define grading-basis defaults for transfer-credit values on the Academic Program page in the Academic Program Table component for academic programs. Define grading-basis defaults for transfer-credit values on the Academic Career Table page for academic careers. You can override this default value now, and you can override this value later for individual transfer courses that you process. This grading basis defines all of the valid grades from which you can select a default transfer

grade for this academic program, academic plan, and source combination.

Transfer Grade

By default, the system displays the default transfer grade of the specified academic program. Define default transfer grades for academic programs on the Academic Program page in the Academic Program Table component. Define default transfer grades for academic careers on the Academic Career Table page. You can override this default value now, and you can override this value later for individual transfer courses that you process. This transfer grade defines the grade that an individual receives for courses that articulate into the specified academic program or academic plan.

Transfer HS Courses (transfer high school courses)

To include any course taken during high school in an individual's transfer credit for this academic program, academic plan, and source combination, select this check box. Clear this check box to exclude courses taken during high school.

Setting Equivalency Rules

Access the Rules Specification page (Records and Enrollment > Transfer Credit Rules > Program/Source Equivalency > Rules Specification).

Image: Rules Specification page

This example illustrates the fields and controls on the Rules Specification page. You can find definitions for the fields and controls later on this page.

You must specify the credit source type from which you will select your source ID. If you enter *external organization*, the system prompts you with the source IDs of external organizations in your system. If you enter *institution*, the system prompts you with source IDs of academic institutions that you defined in your system.

All of the following group boxes have Agreement, Override, and Default fields. Each identically named field functions as a row of data to define a course equivalency rule. Each of these fields is documented once, following the group box definitions. As the Transfer Credit process evaluates courses, it uses the rules in this order: agreement, override, default.

Rule Source Type

Use the fields in this group box to select the table from which you will select each of your course equivalency rules for this academic program/plan and source combination. Select from the following choices.

- External Org** (external organization) The system prompts you with the external organization source IDs in your system. Because external organizations and internal academic institutions can share the same course catalog, you might want to point to a different source ID for the course catalog.
- Institution** The system prompts you with institution source IDs in your system.

Rule Source ID

Use the fields in this group box to select the source ID for the course transfer equivalency rule for this academic program/plan and source combination. You can point to any sources rules.

Course Equivalency Rule

Use the fields in this group box to select the specific course transfer equivalency rules for this academic program, academic plan, and source combination.

Common Course Equivalency Rule Fields

- Agreement** The Transfer Credit process uses the course equivalency rule that you specify on this row first. If the transfer course meets the criteria of the rule specified on this row, the process applies the rule to the transfer course and evaluates the course no further. If you did not specify a rule for this row, or if the transfer course does not meet the criteria of the rule, the process then evaluates the course equivalency rule that you specify on the Override row.
- Override** The Transfer Credit process uses the course equivalency rule that you specify on this row next. If the transfer course meets the criteria of the rule specified on this row, the process applies the rule to the transfer course and evaluates the course no further. If you did not specify a rule for this row, or if the transfer course does not meet the criteria of the rule, the process then evaluates the course equivalency rule that you specify on the Default row.
- Default** The Transfer Credit process uses the course equivalency rule that you specify on this row last. If the transfer course meets the criteria of the rule specified on this row, the process applies the

rule to the transfer course and evaluates the course no further. If you did not specify a rule for this row, or if the transfer course does not meet the criteria of the rule, the process will not articulate the course. In this case, the transfer course appears on the Transfer Course Details page with a status of *no rule*.

Note: If you have only one rule for this source, you must enter it in Course Equivalency Rule field in the Default row. The Default row is the only row on the page that requires a course equivalency rule.

Creating Test Transfer Equivalency Rules

To set up test transfer equivalency rules, use the Test Transfer Rules component (TEST_RULES).

This section discusses how to define test transfer equivalency rules.

Page Used to Create Test Transfer Equivalency Rules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Test Credit Rule/Component	TEST_CREDIT_COMP	Records and Enrollment > Transfer Credit Rules > Test Transfer Rules > Test Credit Rule/Component	Define sets of test transfer equivalency rules.

Defining Test Transfer Equivalency Rules

Access the Test Credit Rule/Component page ((Records and Enrollment > Transfer Credit Rules > Test Transfer Rules > Test Credit Rule/Component).

Image: Test Credit Rule/Component page

This example illustrates the fields and controls on the Test Credit Rule/Component page. You can find definitions for the fields and controls later on this page.

Setting up test transfer equivalency rules is similar to setting up course credit transfer equivalency rules. For each test equivalency rule that you define, describe the rule, select the test and test component for the rule, and specify course equivalencies for the test component.

Test ID

Enter the identification number of the test for which you are defining this test equivalency rule.

Test Component

Enter the component of the test for which you are defining this test equivalency rule.

Equiv. Component (equivalent component)

The equivalency component number is the numeric counter that distinguishes each row of the test equivalency rule apart from other rows. By default, the system enters the first equivalency component of the test equivalency rule as *0001* and increases the number by one as you add rows.

Description (lower)

This field describes the row of the equivalency test rule. By default, the system displays the description of the test component according to the description on the Test Component Table page. You can override this default value.

Transfer Priority

Enter the transfer priority number for this row of the test equivalency rule. The Transfer Credit process evaluates the rows within the test equivalency rule according to the transfer priority

of each row. The test component within the row that has the highest value takes priority. If an individual's transfer test meets all conditions of the test equivalency rule, then the Transfer Credit process uses the equivalent course as defined on the row with the highest transfer priority. However, if the individual's transfer test does not meet the conditions of the test equivalency rule, then the Transfer Credit process evaluates the row with the next highest transfer priority.

Min/Max Score (minimum and maximum score)

Enter the minimum and maximum score of applicable transfer tests for this row of the test equivalency rule, or enter the minimum percentile.

Minimum Percentile

Enter the minimum percentile of the applicable transfer tests for this row of the test equivalency rule, or enter the minimum and maximum score.

Begin/End Date

By default, the system sets the begin and end date of the transfer test to *01/01/1900* and *12/31/9999*. You can override these default values. These dates inform the Transfer Credit process when the applicable transfer test must be taken for this row of the test equivalency rule.

Maximum Age

This field defines, in years, the maximum age of the transfer tests for this row of the test equivalency rule. This prevents an individual from transferring test credit into your academic institution if the individual took the test more years ago than the number of years that you specify here. By default, the system sets the maximum age of a transfer test to *99*, but you can override this default value. For instance, you might want restrict an individual from receiving transfer credit for a test if the individual took the test more than *4* years prior to the date that your institution processes the individual's transfer credit.

Course ID

Enter the course to which the given test component is equivalent. The system prompts you with courses from your academic institution's course catalog. You can add rows to create a one-to-many test equivalency rule.

You are prompted from your course catalog. The system automatically populates the Course Offering Number and Units Taken fields with values from the course catalog definition. You can enter a different offering number and enter different units.

Course Offering Number

By default, the system displays the course offering number of the specified course according to the value in your academic institution's course catalog. You can override this default value.

Units Taken

By default, the system displays the units taken value of the specified course according to the value in your academic institution's course catalog. You can override this default value.

Defining Test Equivalencies for Academic Programs and Plans

To set up test equivalencies for programs and plans, use the Program/Test Equivalency (TEST_EQUIV) component.

This section discusses how to set test equivalencies for academic programs and plans.

Page Used to Define Test Equivalencies for Academic Programs and Plans

Page Name	Definition Name	Navigation	Usage
Test Credit Equivalency	TEST_CREDIT_EQUIV	Records and Enrollment > Transfer Credit Rules > Program/Test Equivalency > Test Credit Equivalency	Set the test transfer equivalency rules that the Transfer Credit process uses to evaluate transfer test credit for specific academic programs and academic plans.

Setting Test Equivalencies for Academic Programs and Plans

Access the Test Credit Equivalency page (Records and Enrollment > Transfer Credit Rules > Program/Test Equivalency > Test Credit Equivalency).

Image: Test Credit Equivalency page

This example illustrates the fields and controls on the Test Credit Equivalency page. You can find definitions for the fields and controls later on this page.

Institution: PSUNV PeopleSoft University

Academic Program: LAU Liberal Arts Undergraduate

Academic Plan:

***Effective Date:** 01/01/1900 BT ***Status:** Active ▼

***Description:** SAT Test Results - LAU

***Grading Scheme:** UGD 🔍 Undergraduate Grading Scheme

***Grading Basis:** GRD 🔍 Graded

***Transfer Grade:** T 🔍 Transfer

Test Equivalency Rules

***Default:** SATI 🔍 SAT Test Rules - LAU

Override: 🔍

General Fields

Grading Scheme

By default, the system displays the grading scheme of the specified academic program. Define grading schemes for academic programs on the Academic Program page in the Academic Program Table component. Define grading schemes for academic careers on the Academic Career Table page. You can override this default value now, and you can override this value later for individual transfer tests that you process. This grading scheme defines all of the valid grading bases from which you can select a default transfer grade for this academic program or academic plan.

Grading Basis

By default, the system displays the grading basis default for transfer credit according to the specified academic program. Define grading-basis default for transfer-credit values for academic programs on the Academic Program page in the Academic Program Table component. Define grading-basis default for transfer-credit values for academic careers on the Academic Career Table page. You can override this default value now, and you can later override this value for individual transfer tests that you process. This grading basis defines all of the valid grades from which you can select a default transfer grade for this academic program or academic plan.

Transfer Grade

By default, the system displays the default transfer grade of the specified academic program. Define default transfer grades for academic programs on the Academic Program page in the Academic Program Table component. Define default transfer grades for academic careers on the Academic Career Table page. You can override this default value now, and you can override this value later for individual transfer tests that you process. This transfer grade defines the grade an individual receives for tests that articulate into the specified academic program or academic plan.

Test Equivalency Rule

Use the fields in this group box to select the specific test transfer equivalency rules for this academic program or academic plan. As the Transfer Credit process evaluates test credit, it applies the rules in this order: Override, Default.

Default

The Transfer Credit process uses the test equivalency rule that you specify on this row last. If the transfer test meets the criteria of the rule specified on this row, the process applies the rule to the transfer test and evaluates the test no further. If you did not specify a rule for this row, or if the transfer test does not meet the criteria of the rule, the process does not articulate the test. In this case, the transfer test appears on the on the Test Credit Details page with a status of *no rule*.

Note: If you have only one rule for this academic program or academic plan, you must enter it in the Default field. The Default field is the only required field on the page.

Override

The Transfer Credit process uses the test equivalency rule that you specify on this row first. If the transfer test meets the criteria of the rule specified on this row, the process applies the rule to the transfer test and evaluates the test no further. If you did not specify a rule for this row, or if the transfer test does not meet the criteria of the rule, the process then evaluates the test equivalency rule that you specify on the Default row.

For example, you might have a general test equivalency rule for the Undergraduate Liberal Arts program but have a different rule for the English plan within this academic program. You would create two test transfer equivalency rules, enter the Liberal Arts program equivalency rule in the Default field, and then enter the English plan equivalency rule in the Override field.

Setting Up Attendance Tracking

Prerequisites for Setting Up Attendance Tracking

Before you can generate class attendance rosters or record student attendance, you must:

1. Define attendance type translate values in PeopleSoft Application Designer.
2. Set a default attendance type for each academic institution in your system.
3. Define courses in the course catalog.
4. Define all possible instruction modes, attendance types, and attendance type data for each course component in the course catalog.
5. (Optional) Set the attendance tracking generation flag for each class in the schedule of classes.

Setting Up Attendance Tracking Data

This section discusses how to:

- Define attendance type translate values.
- Select a default class meeting attendance type.
- Define attendance tracking options for course components.
- Indicate attendance roster generation for a class.

Pages Used to Set Up Attendance Tracking

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Academic Institution Table 3	INSTITUTION_TABLE3	Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 3	Specify a default class meeting attendance type for each institution.
Course Catalog - Components	CRSE_CATALOG_CMPNT	Curriculum Management > Course Catalog > Course Catalog > Components	Set catalog-level defaults for both batch attendance roster generation and instruction mode.

Page Name	Definition Name	Navigation	Usage
Schedule of Classes - Basic Data	CLASS_ENTRY	<ul style="list-style-type: none"> Curriculum Management > Schedule of Classes > Schedule New Class > Basic Data Curriculum Management > Schedule of Classes > Maintain Schedule of Classes > Basic Data 	Modify the Generate Class Mtg Attendance (generate class meeting attendance) check box and instruction mode values that appear by default from the Course Catalog - Components page.

Defining Attendance Type Translate Values

PeopleSoft Application Designer delivers the following attendance type translate values: Conference, Instructor Consultation, Field Trip, Class Meeting, and Study Group. Use PeopleSoft Application Designer to modify or add to these values. The field name is CLASS_ATTEND_TYP. However, be careful to not delete a value that is in use.

Selecting a Default Class Meeting Attendance Type

Use the Academic Institution Table 3 page to specify a default class meeting attendance type for each institution. In background processing mode, the system generates only one roster per class (even if you specified multiple attendance types on the Components page), so the value that you specify applies to all classes. The system uses the default attendance type value that you specify to determine the correct attendance type row and related attendance type detail for each class. Each class should have at least one row on the Course Catalog - Components page, with the same attendance type as the default attendance type.

Setting Up Academic Standing

To set up academic standing, use the Academic Standing Table component (ACAD_STDNG_TBL) and the Academic Standing Rule component (ACAD_STDNG_RULE).

With academic standing action codes and rules, you can create sets of guidelines for every academic career within your institution. You can then use these codes and rules to assign academic standing to students, either by running the Acad Standing/Honors Awards process (SRPCEASD) through the Academic Standing/Honors and Awards page to evaluate students' academic standing, or by entering academic standing codes directly onto a student's term history record through the Academic Standing page.

This section discusses how to:

- Define academic standing action codes.
- Create academic standing rules.
- Link academic standing, honors, and award rules to academic programs.

Related Links

[Tracking Academic Standing](#)

Pages Used to Set Up Academic Standing

Page Name	Definition Name	Navigation	Usage
Academic Standing Table	ACAD_STDNG_TBL	Set Up SACR > Product Related > Student Records > Student Standing and Awards > Academic Standing Table > Academic Standing Table	Define academic standing action codes for every academic career within your institution.
Academic Standing Rule	ACAD_STDNG_RULE	Set Up SACR > Product Related > Student Records > Student Standing and Awards > Academic Standing Rule > Academic Standing Rule	Create academic standing rules. Academic standing rules are keyed by academic career, so define a broad description for an academic standing rule (such as <i>Undergraduate Rules</i> or <i>Graduate Rules</i>). Within each rule, you create detail lines that correspond with academic standing action codes that you define.
Standing/Honors	ACAD_PROG_STDG_TBL	Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Standing/Honors	Link academic standing rules to academic programs.

Defining Academic Standing Action Codes

Access the Academic Standing Table page (Set Up SACR > Product Related > Student Records > Student Standing and Awards > Academic Standing Table > Academic Standing Table).

Image: Academic Standing Table page

This example illustrates the fields and controls on the Academic Standing Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Academic Standing Table' page. At the top, it displays 'Academic Institution: PSUNV PeopleSoft University' and 'Academic Career: UGRD Undergraduate'. Below this is a search bar with 'Find | View All' and '1 of 1'. The main form contains the following fields:

- *Effective Date: 01/01/1900
- *Status: Active
- *Academic Standing Action: DIS1
- *Description: Dismissal 1
- Short Description: Dismissal
- *Academic Standing Status: Dismissed
- *Formal Description: Dismissed
- *Internal Description: Dismissed
- *Transcript Level: Official

 The bottom of the form has a search bar with 'Find | View All' and '1 of 8'.

Creating academic standing action codes is a precursor to defining academic standing rules. Therefore, to define academic standing action codes, you must think about how they can be used in the rule sets for the academic standing process.

For example, suppose that students at your institution receive two warnings before being placed on probation and the warnings are of different degrees. That is, if students receive a second warning it is more severe. In this case you would define two different academic standing action codes for warnings because you want to distinguish them. Later, you define rule details for these codes, and for all other academic standing action codes defined on this page.

Note: If you want to inactivate an academic standing action code that is attached to an academic standing rule, delete the code where it is attached to the rule on the Academic Standing Rule page and enter a status of *Inactive* on the Academic Standing Table page.

Academic Standing Action

Enter an academic standing action code.

Academic Standing Status

Select an academic standing status. Values for this field are delivered with your system as translate values. You can modify these values. The delivered values are *Dismissed*, *Good Standing*, *Probation*, and *Subject to Dismissal*.

You can have many academic standing action codes that contain the same academic standing status. For example, *DIS1*, *DIS2*, and *DIS3* can all contain a status of *Dismissed*.

Formal Description

Enter a formal description. If you choose to have the academic standing action appear on a student's transcript, the system displays the formal description.

Internal Description

Enter a description to be used for internal purposes only.

Transcript Level

Select the transcript level on which you want the academic stranding to print. Values for this field are delivered with your system as translate values. These translate values can be modified. The delivered values are *Deg Prog* (degree progress), *Not Print*, *Official*, *Stdnt Life* (student life), and *Unofficial*.

Current Term GPA:	LT	2.000	And/Or:	
Cumulative Units Passed:				
Current Units Passed:				
Cumulative Units Attempted:				
Current Units Attempted:				
Academic Year GPA:				

Exclude No GPA Attempted Units

Image: Academic Standing Rule page (2 of 2)

This example illustrates the fields and controls on the Academic Standing Rule page (2 of 2). You can find definitions for the fields and controls later on this page.

Academic Standing Rule

Enter an alphanumeric code that identifies this academic standing rule code.

Effective Term

Select the effective term of the rule. When the system uses the rules that you define here in the Academic Standing process, it verifies that the rule is effective within the term for which the process is running.

Seq No (sequence number)

Enter the sequence number order in which the system evaluates the rule. Sequence your rules from the most severe academic standing action to the least severe. After a student's academic standing matches one academic standing rule, the Academic Standing process applies the academic standing action code to the student's record and moves on to the next student.

Academic Standing Action

Enter the academic standing action code that you want the system to post to students' records if the rule is satisfied. The system populates the Academic Standing page with the appropriate code once you run the academic standing process.

Cumulative GPA, Current Term GPA, Cumulative Units Passed, Current Units Passed, Cumulative Units Attempted, Current Units Attempted, and Academic Year GPA

These criteria form your rules. For each criterion that you choose to use in this rule, select a qualifier: *Greater Than*, *Greater Than or Equal To*, *Less Than*, or *Less Than or Equal To*. Do not modify these values. Then, enter the numeric value for each criterion. In the preceding example, the cumulative grade point average must be less than 2.000 *and* the current grade point average must be less than 2.000.

Use the last prompt box to add the connector for the rule: *And*, *Or*, and blank for none.

You can skip any criteria and only enter information in the criteria pertinent for your rule. See the examples to understand the sequencing of rules.

Note: For the Academic Year GPA field, the system looks at the term for which academic standing is being processed, determines the academic year in which the term falls based on the value in the Term/Session Table component, determines the student's statistics from all terms in that academic year, calculates the student's grade point average, then compares the student's grade point average against the value that you enter on this page.

Exclude No GPA Attempted Units	Select this check box in order to exclude from reporting all classes that were attempted, but are not included in the student's GPA (for example, Pass/No Pass courses, W grades, and so on). The grade's corresponding Include in GPA check box on the Grading Scheme Table page must be cleared (not selected) in order for the system to exclude it from processing. Clear this check box in order to include in your report all attempted coursework, regardless of the assigned grade.
Any Academic Standing Set	Select if it does not matter what academic standing action codes students can have on their records prior to this rule evaluation. The other fields on the page become unavailable for input.
No Academic Standing Set	Select if the student's record should possess no academic standing action code.
Prior Term Academic Standing	Select any academic standing code that the student must possess in a prior term to satisfy the rule. For example, in the preceding page shot, the student must possess the <i>PRBI</i> (probation 1) code in addition to meeting the grade point average requirements.

Note: By selecting the No Academic Standing Set check box and selecting prior academic standing values, the academic standing rule reads as an OR statement. For this rule to apply, the student's record must either possess the academic standing values for the prior term that you select, possess no academic standing action code, or have no prior term for comparison.

Example of an Academic Standing Rule

Suppose that you defined seven different academic standing action codes for undergraduates. Because you want to use all of these codes in the Academic Standing process, you have eight rule detail lines in your academic standing rule, each line numbered from sequence number *10* (being the most severe academic standing action code) to sequence number *90* (being the least severe academic standing action code).

The following examples demonstrate some ways to set up academic standing rules.

The Sequencing of Rule Details

Image: Example of academic standing rules (1 of 4)

This example illustrates the Academic Standing Rule page for the *Dismissal 2* action:

Academic Standing Rule

Academic Career: UGRD Undergraduate PeopleSoft University

*Academic Standing Rule	*Effective Term	Term	Description	Short Description
UGRD	0290	1997 Fall	Academic rules for undergrads	AS-Ugrd

Find | View All 1 of 1

Any Academic Standing Set No Academic Standing Set

Prior Term Academic Standing:

PRB1 Probation 1 PRB2 Probation 2

PRB3 Probation 3

On this page:

- The system evaluates this rule second because the sequence number is 20, and one other rule detail line with a lower sequence number exists.
- The cumulative grade point average and current grade point average requirements are higher than that of the sequence number 10 rule, but can be the same or less than that of subsequent rules.

You can have the same grade point average requirement, for instance, for probation and dismissal. Differentiate these actions by the prior academic standing codes students must possess.
- Students must possess one of the academic standing action codes listed in the Prior Term Academic Standing Value field in addition to satisfying the grade point average rules, to satisfy the *Dismissal 2* rule detail.

Image: Example of academic standing rules (2 of 4)

This example illustrates the Academic Standing Rule page for the *Probation 2* academic standing action code:

Academic Standing Rule

Academic Career: UGRD Undergraduate PeopleSoft University

Any Academic Standing Set No Academic Standing Set

Prior Term Academic Standing:

WRN1 Warning - may be placed on PRB WRN2 Warning-may be placed on prbn

On this page:

- The rule detail line is evaluated fourth by the system because the sequence number is 40, and three other detail lines with lower sequence numbers precede it.
- The system posts the *Probation 2* academic standing action code on student records when they possess a current term grade point average less than 2.000 in conjunction with one of the academic standing action codes selected.
- Students must possess one of the academic standing action codes listed in the Prior Term Academic Standing Value field in addition to satisfying the grade point average rules, to satisfy the *Probation 2* rule detail.

Least Severe Rule Detail

Image: Example of academic standing rules (3 of 4)

In your rules, the least severe rule detail line is one for *Warning-may be placed on prbn* (warning-may be placed on probation).

This example illustrates the Academic Standing Rule for this rule:

Academic Standing Rule

Academic Career: UGRD Undergraduate PeopleSoft University

*Academic Standing Rule	*Effective Term	Term	Description	Short Description
UGRD	0290	1997 Fall	Academic rules for undergrads	AS-Ugrd

Academic Standing

Academic Standing Rule

Select the academic standing rule for this academic program.

Calculate in Batch Only

Select to calculate academic standing through a background process using the Academic Standing/Honors Awards page.

If you select this check box, the system does not calculate academic standing dynamically, such as when you post grades.

Clear to have the system call the academic standing process when posting or changing a grade on the Quick Enrollment or Enrollment Request pages, and when posting a grade on the Grade Roster page. The academic standing process inserts an updated academic standing row, viewable on the Academic Standing page of the Term History component, except when a student's class is graded with a grade that count towards GPA

and then later changed to a non-GPA grade. In such a scenario, you must manually update the student's academic standing on the Academic Standing page.

Obey Fully Graded Date

Select to calculate academic standing only when grades are posted on or later than the fully graded date. The system does not calculate academic standing if this check box is selected and grades are posted before the student's fully graded date.

You define the default fully graded date on the Academic Term Calendar 3 page in the Academic Calendar component and an individual student's fully graded date on Term Control Dates page in the Term Activation component.

Associate with Academic Prog (associate with academic program)

Select to associate the academic standing rule only with students in this academic program. This is especially useful for students who might be in multiple academic programs; you might want to apply different academic standing rules with different academic programs. If you do not select this check box, the system associates the academic standing rule with the student's academic career.

Exclude Term Category 1, Exclude Term Category 2, and Exclude Term Category 3

Select the terms in which the system does not calculate academic standing. Values for this field are delivered with your system as translate values. You can modify these values.

Honors/Awards

Honor Award Rule

Select the honor award rule for this academic program.

Calculate in Batch Only

Select to calculate the honors and awards in batch through the Academic Standing/Honors Awards page. If you select this check box, the system does not calculate honors and awards dynamically, such as when you post grades.

Obey Fully Graded Date

Select to calculate honors and awards only when grades are posted on or later than the fully graded date. The system does not calculate honors and awards if the Obey Fully Graded Date check box is selected and grades are posted before the student's fully graded date. You define the default fully graded date on the Academic Term Calendar 3 page in the Academic Calendar component and an individual student's fully graded date on Term Control Dates page in the Term Activation component.

Associate with Academic Prog (associate with academic program)

Select to associate the honor/award rule only with students in this academic program. This is especially useful for students who might be in multiple academic programs; you might want to apply different honor/award rules with different academic programs. If you do not select this check box, the system associates the honor/award rule with the student's academic career.

Exclude Term Category 1, Exclude Term Category 2, and Exclude Term Category 3

Select the terms in which the system does not calculate honors/awards. Values for this field are delivered with your system as translate values. You can modify these values.

Honor and Award Date Flag

Select the date type that the system posts to students' records for their honors and awards. Values for this field are delivered with your system as translate values. You can modify these values with some programming effort. Values are *System Date* and *Fully Graded Date*.

Setting Up Honors and Awards

To set up honors and awards, use the Honors/Awards Table component (SA_HONORS_AWARDS) and the Honors/Awards Rule component (HONOR_AWRD_RULE).

Honors and awards include internal and external awards that you want to record for students. With honor and award codes and rules, you can create sets of guidelines for every academic career within your institution. You can then use these codes and rules to assign honors and awards to students, either by running the Acad Standing/Honors Awards process (SRPCEASD) through the Academic Standing/Honors and Awards page to evaluate students' honors and awards, or by entering honor/award codes directly onto a student's record through the Honors and Awards page.

This section discusses how to:

- Define honor/award codes.
- Create honor and award rules.

Standing/Honors	ACAD_PROG_STDG_TBL	Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Standing/Honors	Select honor and award rules and parameters for this academic program.

Defining Honor/Award Codes

Access the Honors/Awards Table page (Set Up SACR > Product Related > Student Records > Student Standing and Awards > Honors/Awards Table > Honors/Awards Table).

Internal/External

Indicate whether the honor or award relates to an external organization or your internal institution.

Grantor

Enter the grantor of the honor or award.

Transcript Level

Select the transcript level on which you want the honor or award to print. Values for this field are delivered with your system as translate values. These translate values can be modified. The delivered values are *Degr Prog* (degree progress), *Not Print*, *Official*, *Stdnt Life* (student life), and *Unofficial*.

Creating Honor Award Rules

Access the Honors and Awards Rule page ((Set Up SACR > Product Related > Student Records > Student Standing and Awards > Honors/Awards Rule > Honors and Awards Rule).

Image: Honors and Awards Rule page

This example illustrates the fields and controls on the Honors and Awards Rule page. You can find definitions for the fields and controls later on this page.

Honor/Award Group: 01 **Seq. No:** 20

Honor/Award: DEANLS Dean's List

Any Academic Standing Set **No Academic Standing Set**

Current Term Academic Standing:

Define rules for every honor and award code that you want to use in the Honors/Awards process. Honor and award rules are keyed by academic career; therefore, create a broad description for your honor and award rules (such as *Undergraduate Rules* or *Graduate Rules*). To define honor and award rules, name the rule, define parameters for the rule, and select the academic standing codes that a student must currently possess in order for the rule detail line to be satisfied. Every rule detail line can have current academic-standing code requirements. For instance, you can require that in addition to other criteria you defined, the student possesses the academic standing code of *GOOD* to meet the requirements for the *Highest Freshman GPA Award*.

Honor Award Rule

Enter an alphanumeric code that identifies this honor and award rule code.

Effective Term

Select the effective term for the rule. When the system uses the rules in the Honor/Award process, it verifies that the rule is effective within the term for which the process is run.

Honor/Award Group

The default honor and award group number is 01. Group awards together that are mutually exclusive, because the system processes honors and awards by group, and within a group by sequence number.

For example, the President's Award and the Dean's List honors are mutually exclusive. If students are granted one award they are not granted the other. By grouping the awards together, you prevent the system from granting a student both awards.

Seq No (sequence number)

Enter the sequence in which the system evaluates the rule. Sequence your rules from the most restrictive to the least restrictive.

In our example, the President's Award has a sequence number of 10 and the Dean's List honor has a sequence number of 20.

The President's Award is more restrictive than the Dean's List honor, so it is sequenced first. The Dean's List honor is slightly less selective, so it is sequenced second.

Honor/Award

Select the honor and award code that the system posts to students' records if they satisfy the rule. Define honor and award codes on the Honors/Awards Table page. The system populates the student Honors and Awards page with the appropriate code when you run the Honors/Awards process.

Cumulative GPA, Current Term GPA, Cumulative Units Passed, Current Units Passed, Cumulative Units Attempted, Current Units Attempted, and Academic Year GPA

These criteria form your rules. For each criterion that you choose to use in this rule, select a qualifier: *Greater Than*, *Greater Than or Equal To*, *Less Than*, or *Less Than or Equal To*. Do not modify these values. Then, enter the numeric value for each criterion. In the preceding example, the cumulative grade point average must be greater than or equal to 3.750 *and* the current grade point average must be greater than or equal to 3.750.

Use the last prompt box to add the connector for the rule: *And*, *Or*, and blank for none.

You can skip any criteria and only enter information in the criteria pertinent for your rule.

Note: For the Academic Year GPA field, the system looks at the term for which academic standing is being processed, determines which academic year the term falls in based on the value in the Term/Session Table component, determines the student's statistics from all terms in that academic year, calculates the student's grade point average, then compares the student's grade point average against the value that you enter on the page.

Any Academic Standing Set

Select if the student would be eligible for this honor or award no matter what his or her academic standing.

No Academic Standing Set

Select if the student would be eligible for this honor or award only if he or she was not assigned an academic standing code.

Current Academic Standing Values

Select the academic standing values a student must possess to satisfy this rule. Define academic standing values on the

Academic Standing Table page. In the preceding example, the student must possess the academic standing code of GOOD to satisfy the rule. Define academic standing values on the Academic Standing Table page.

Setting Up Special Grade Point Averages

To set up special grade point averages, use the Student Special GPA component (SPECIAL_GPA_TYPE).

Every institution has its own unique way of calculating grade point averages. Special grade point averages are averages that you define for your institution that differ from the cumulative grade point average. You can enter special grade point averages for a student's academic program, academic plan, or academic subplan. You can then use these special grade point averages to meet your institution's analysis and reporting needs.

This section lists the page used to set up special grade point averages.

Reviewing Committees and Committee Members

Use committees to indicate advisory roles. Committees can be faculty standing committees, dissertation committees, thesis committees, and so on. Because committees are discussed in more detail in the PeopleSoft Campus Community documentation, we only review them briefly here.

To use committees and committee members:

1. Define committee types and the roles of committee members on the Committee Table page.
2. Assign specific committees to the committee types that you defined on the Committee Table page.
3. Assign committee members to specific committees on the Committee Members page.

Setting Up Milestones

To set up milestones, use the Milestone Table component (MILESTONE_TBL) and Milestone Template component (MILESTONE_TMPL).

Milestones are non-course related but vital requirements that a student must complete toward degree progress to graduate. You might be able to relate milestones most easily to graduate student progress, but your institution might also use milestones for undergraduates as well. After you define milestones, you can assign milestones and advisors to a student, as well as record the student's completions of milestones and attempts to fulfill them, by using the Student Milestones component.

This section discusses how to:

- Define milestone codes.
- Create milestone templates.

Note: To inactivate a milestone code, remove that code from every milestone template in addition to entering a status of Inactive on this page.

Calculate Required Date and Calculate Anticipated Date

If you enter a value, for example *Expected Grad Term Start Date*, the date/term is calculated when you add a milestone for a student on the Student Milestone page or when you run the Process Milestone process.

Print Milestone Detail

Select a print milestone detail to indicate whether the milestone detail information appears on the transcript. Milestone detail information includes the details on the Student Milestones page.

Attempts Allowed	Enter the number of attempts students can make at completing the milestone. This field is a default data entry and tracking aid. You can override the attempts allowed on individual student records.
Grading Scheme	Select a grading scheme for the milestone. When you enter the milestone on a student's record, you can override the grading scheme.
Grading Basis	Select a grading basis for the milestone. Link grading bases to grading schemes on the Grading Scheme Table page. You can override this value on individual student records.

Self-Service Availability

Allow Student Self-Service	Select the check box to allow students to access information about the milestone in Self Service. If the check box is selected, the milestone appears in the Milestone section on the Student Center page. Students click the details link to access the Student Milestones Details self-service page (SS_SR_MILESTON_SEC).
Allow Advisor Self-Service	Select the check box to allow advisors to access information about the milestone in Self Service. If the check box is selected, advisors can access the Student Milestones Details self-service page through the Advisor Center.
Allow Student Attachment and Allow Advisor Attachment	Select the check box to allow students and advisors to add attachments — for example, an advisor might attach instruction or reference materials for students to use.
Information for Students	The information that you enter here can be viewed by students in Self Service.

See "Setting Up a Self-Service Student Center" (PeopleSoft Campus Solutions 9.2: Self Service).

"Understanding Self-Service Student Center" (PeopleSoft Campus Solutions 9.2: Self Service)"Using Self-Service Student Center" (PeopleSoft Campus Solutions 9.2: Self Service)

Enter Milestone Levels Here

Milestone Level	Enter an alphanumeric code that identifies this milestone level code. You use milestone levels for detailing the progress of a milestone and for informational purposes. For example, you might define a milestone of <i>Written Comprehensive Exams</i> for doctoral students and have four levels within that milestone to designate the four sets of comprehensives required.
------------------------	--

(NZL) Defining Milestones for Unit Standards

When you define a milestone for New Zealand institutions, use the NQF Detail group box to enter a Milestone Type of *U* and link NQF codes to the milestone.

If you link a milestone template to only an academic institution and academic career, it can be used as a template for any academic program or plan. If you want a milestone template to be restricted to a specific academic program or plan, enter the program and plan in the search dialog box. When you link milestones to academic programs you are making a template, not a permanent link. This information appears in the Student Milestones component when you copy the template to the student's record.

For information about the fields on this page:

See [Defining Milestone Codes](#).

[Tracking Milestones](#)

Setting Up Extracurricular Activities

To set up extracurricular activities, use the Extracurricular Activity Table component (EXTRA_ACTIVITY_TBL).

You can track both internal and external extracurricular activities for individuals.

This section discusses how to set up extracurricular activity codes for this purpose. You later use the Extracurricular Activity page to link these codes to students.

Page Used to Set Up Extracurricular Activities

Page Name	Definition Name	Navigation	Usage
Extracurricular Activity Table	EXTRA_ACTIVITY_TBL	Set Up SACR > Product Related > Campus Community > Define Campus Community > Setup > Extracurricular Activity Table > Extracurricular Activity Table	Set up extracurricular activity codes, and define the primacy of the extracurricular activities for your setID.

Setting up Extracurricular Activity Codes

Access the Extracurricular Activity Table page ((Set Up SACR > Product Related > Campus Community > Define Campus Community > Setup > Extracurricular Activity Table > Extracurricular Activity Table).

Activity Type

Select the type of activity that you are entering. Values for this field are delivered with your system as translate values. You can modify these values. The delivered values are *Athletics*, *Club*, *Employment*, *Music*, *Other*, *Publications*, *Student Government*, *Theater*, and *Volunteer*.

Internal and External

Select this option to indicate that this extracurricular activity exists at your institution as well as at external institutions.

Internal

Select this option to indicate that this extracurricular activity exists at your institution only.

External

Select this option to indicate that this extracurricular activity exists at external institutions only.

Extra Activity Primacy

Enter the primacy number for this extracurricular activity. When you run the Consolidate Academic Statistics process it searches students' extracurricular activity records for only the *athlete* extracurricular activity. The *athlete* extracurricular activity is delivered with your system. It should not be modified in any way because it has code attached to it. If the Consolidate Academic Statistics process finds multiple *athlete* records for a

student, it writes the one with the lowest primacy number to the student's consolidated statistics record.

Related Links

[Understanding Consolidated Statistics Processes](#)

[Understanding Consolidate Academic Statistics Process Calculations](#)

Managing Student Groups

Student groups enable you to set up groups (such as *Athlete* or *Freshman*) and assign these groups to individuals. Then you can perform actions (such as run reports and processes) on a group, which affects all of the individuals in the group.

This section lists the page used to manage student groups. You later use the Student Groups page to assign student groups to students.

Page Used to Manage Student Groups

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Student Groups	STDNT_GROUPS	Student Recruiting > Maintain Prospects > Academic Information > Student Groups > Student Groups	Set up student groups (such as <i>Athletes</i> and <i>Resident Assistants</i>) by entering the effective date, status, and description of each student group.

Setting Up Student Attributes

To set up student attributes, use the Student Attribute Table component (STDNT_ATTR_TBL).

This section provides an overview of student attributes and discusses how to:

- Define student attribute codes.
- Define student attribute values.

Related Links

[Tracking Student Attributes](#)

Understanding Student Attributes

Although student groups enable you track attributes such as participation in clubs, sports, and student government, you might need an additional, more flexible structure that lets you track the attributes of your students based on their career and program. To meet this need, use the Student Attributes feature.

The Student Attributes feature enables you to assign all sorts of attributes to a student within an academic career or program and group together the students with similar student attributes. You can then track and report on the student attribute data. For instance, you can track students that begin their education at the same time as a single cohort by creating a student attribute for undergraduate incoming freshmen and attaching the attribute to the records of these students. You can then use the data for federal reporting and also for institutional research purposes to gain information about the type of students that you have in a particular cohort, such as a student's typical course load or how long it takes a student to complete his or her program and graduate.

You can create multiple attributes and multiple attribute values within a single attribute. Then when you assign these attributes to students, you can attach to their records multiple attributes and multiple values within each student attribute. With this flexibility, your students can belong to as many cohorts as necessary to meet your tracking and reporting needs. You can assign these attributes to students at any time, even during the recruiting and admissions processes because the attributes roll from PeopleSoft Recruiting and Admissions to Student Records as part of the student's academic career and academic program.

Use the Student Attribute Table component to define different student attributes and student attribute values. You can create broad student attributes for entire academic careers, then attach single student attribute values to each of those careers. For example, you can create a student attribute for undergraduate students called *Student Cohort*. You can then create different values for *Student Cohort* on the Student Attribute Value Table page (such as *Fall 2005 Entry Class*, *Fall 2006 Entry Class*, and *Fall 2007 Entry Class*). In addition, you can create smaller student attributes for individual academic programs. You can also define student attribute values for plans and subplans and group them under a specific academic program.

After you define all your student attributes and student attribute values, use the Student Attributes page to attach these attributes and attribute values to individual students and build reports on the data so you can track statistics such as how many students in a particular cohort graduated in three years, four years, and five years, and how heavy their course load was. The system also reports a primary student attribute as part of the Consolidate Academic Statistics process.

Pages Used to Set Up Student Attributes

Page Name	Definition Name	Navigation	Usage
Student Attributes Table	STDNT_ATTR_TBL	Set Up SACR > Product Related > Student Records > Student Standing and Awards > Student Attribute Table > Student Attributes Table	Define the various student attributes your institution uses for tracking and reporting on different cohorts.
Student Attribute Value Table	STDNT_ATTR_VAL_TBL	Set Up SACR > Product Related > Student Records > Student Standing and Awards > Student Attribute Table > Student Attribute Value Table	Define the values associated with a particular student attribute.

Defining Student Attribute Codes

Access the Student Attributes Table page (Set Up SACR > Product Related > Student Records > Student Standing and Awards > Student Attribute Table > Student Attributes Table).

Academic Career	(Optional) Select the academic career to which the student attribute is linked.
Academic Program	(Optional) Select the academic program to which the student attribute is linked.

Defining Student Attribute Values

Access the Student Attribute Value Table page (Set Up SACR > Product Related > Student Records > Student Standing and Awards > Student Attribute Table > Student Attribute Value Table).

Student Attribute Value	Enter an alphanumeric code that identifies this student attribute value.
Primacy	Enter the primacy number for the student attribute. The system uses the number to determine the primary student attribute value it uses when you extract data to report on cohorts. This primacy value has no relation to Financial Aid primacy. The lowest number takes precedence.

Note: Always assign the lowest primacy number to the student attribute value that you want to use for federal reporting of this student attribute.

Chapter 12

Setting Up Grading

Understanding Grade Preparation

Student Records provides a variety of grade-related features. From institution and career-based rules to repeat schemes, grade rosters, grade change audits, and midterm deficiency analysis, you can use the different grade-related components to set up and manage grading processes.

Grade bases comprise individual grades, and grade schemes comprise grade bases. Typically, grade schemes are unique for each career in your institution. Grade schemes are not manually assigned to individual classes. Instead, the system dynamically matches grade schemes that are assigned to one career with classes of the same career.

Before you can grade students, you must define all possible grading schemes for all careers. You can have different grading schemes for different careers. Within each grading scheme, you define all valid grade bases, grades, and grade-related detail.

In addition, the system enables you to convert grades from one grading scheme to another. We call this grade-basis mapping feature our *intelligent grade basis exception table*. For example, when an undergraduate student enrolls in a graduate course (and the graduate course is associated with a graduate grading scheme), you might not want to grade the student according to the graduate grade scheme. Rather, you set up exception rules so that the system reroutes the student's grade scheme to the appropriate undergraduate grade scheme. On the Grading Basis Exception Rule page, you define all possible exception scenarios that the system must handle. For example, you can set up a rule that requires the system to convert a graduate grading scheme into an undergraduate grading scheme. This way, you ensure that grade schemes are appropriate for the student, based on the student's career (rather than the career of the class). Setting up exception rules is optional.

Finally, when all of your grade data is set up and instructors are ready to enter grades, you must generate the grade rosters. You can generate rosters on an individual class basis or in batch. Generating the rosters is a required, final step in making the rosters available for grade entry.

Setting Up Your System for Grading

To set up your system for grading, use the Grading Scheme Table component (GRADE_SCHEME) and the Grading Basis Exception Rule component (GRD_BASE_EXCEPTION).

This section provides an overview of grading setup and discusses how to:

- Define grading schemes.
- Define grading basis exception rules.
- Run the Grade Basis Exception report.

- Create grade rosters for a single class.
- Create grade rosters for multiple classes.

Understanding Grading Setup

Complete these steps to set up grading:

1. Define grade basis values:
 - a. Select PeopleTools, Utilities, Translate Values to add or change translate values.
 - b. Search on the GRADING_BASIS field name, which takes you to the table where you define grade basis values.
2. Define grading schemes on the Grading Scheme Table page.
3. (Optional) Define grade basis exceptions on the Grading Basis Exception Rule page.
4. (Optional) Run the Grade Basis Exception Report to review active grade basis exception mapping rules and their details.
5. Generate grade rosters on either the Grade Roster Type page or the Create Grade Rosters page.

Pages Used to Set Up Your System for Grading

Page Name	Definition Name	Navigation	Usage
Grading Scheme Table	GRADING_SCHEME_TBL	Set Up SACR > Foundation Tables > Academic Structure > Grading Scheme Table > Grading Scheme Table	Define all valid grading schemes. Enter each grading scheme and the associated grades on this page.
Grading Basis Exception Rule	GRD_BASE_EXCEPTION	Set Up SACR > Product Related > Student Records > Grading > Grading Basis Exception Rule > Grading Basis Exception Rule	Map typical student-requested grade bases to existing grading basis rules.
Grade Basis Exception	RUNCTL_SRGBEXCPT	Set Up SACR > Product Related > Student Records > Reports > Grade Basis Exception > Grade Basis Exception	Run reports that display active grade basis exception mapping rules and their details.

Page Name	Definition Name	Navigation	Usage
Grade Roster Type	GRADE_ROSTER_TYPE	Curriculum Management > Grading > Grade Roster > Grade Roster Type	Define grade rosters on a class-by-class basis. To print the grade roster, use the Grade Roster Print page. Prerequisite: If you want to use blind grading for this class, select the Use Blind Grading check box on the Class Associations page or select the Use Blind Grading check box on the Course Catalog Offerings page. Then, the system populates the Use Blind Grading check box each time that you create a class association.
Create Grade Rosters	RUNCTL_GRD_ROSTER	Curriculum Management > Grading > Create Grade Rosters > Create Grade Rosters	Create grade rosters for each term and session by subject area or by academic organization. To print the grade rosters, use the Grade Roster Print page. If you want to use blind grading for this class, select the Use Blind Grading check box on the Class Associations page or select the Use Blind Grading check box on the Course Catalog Offerings page so that the system uses blind grading each time that you schedule the class. The system then populates the Use Blind Grading check box each time that you create a class association.
Complete Grade Flag	SSR_GRADE_FLAG_TBL	Set Up SACR > Product Related > Student Records > Grading > Complete Grade Flag > Complete Grade Flag	Define complete grade flag values to be used on the Grading Scheme Table page. In New Zealand, these values are used for reporting purposes.

Defining Grading Schemes

Access the Grading Scheme Table page (Set Up SACR > Foundation Tables > Academic Structure > Grading Scheme Table > Grading Scheme Table).

Image: Grading Scheme Table page

This example illustrates the fields and controls on the Grading Scheme Table page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Grading Scheme Table' page with the following sections and fields:

- SetID:** PSUNV
- Grading Scheme:** UGD
- Effective Date:** 01/01/1900
- Status:** Active
- Description:** Undergraduate Grading Scheme
- Short Desc:** Undergrad
- Grade Basis:**

- Drop/Withdraw Penalty Grades:**
 - Drop with Penalty: W (Withdraw)
 - Withdraw with Penalty: W (Withdraw)
 - Drop with Greater Penalty: W (Withdraw)
 - Withdraw with Greater Penalty: W (Withdraw)

Grading schemes are linked to academic careers and academic programs.

- Status** Enter a status for this grading scheme. Enter *Active* when adding a new grading scheme. Enter *Inactive* only if your institution no longer uses this grading scheme.
- Description** Enter a description for the grading scheme.
- Short Desc** (short description) Enter a short description for the grading scheme.
- Grade Basis** Enter a grade basis. Grade basis values are entered into your system as translate values, which you can modify.
- A Grade Basis of NON (Non-Graded) is required for each grading scheme. This value is assigned for non-graded sections, such as labs associated with a lecture. To activate this grading basis, do not select any of the check boxes and do not enter any grades.
- Formal Description** Enter a formal description of the grading basis.

Grade Basis Convert	Enter a grade basis convert value to use grades that are associated with another grading basis. If you enter a value in this field, the Grade Input group box becomes unavailable because the grade basis references the grade input data of another grade basis.
Grade Basis Choice Default	If you select the Elective Grade Basis check box, you can enter a grade basis choice default to specify the default grade basis for this grading scheme. In addition, you can enter all of the possible grading basis choices in the fields that become available in the bottom third of the page. The system uses the default value during enrollment. If students have the option to select other grade bases, they can do so at enrollment time.
Include in GPA (include in grade point average)	Select to include grades from this grading scheme in grade point average (GPA) calculations.
Grade Required	Select to specify this grade basis as required, for the purposes of the Grade Review - Transcript Release process. When you evaluate students using the Grade Review process, those classes in which the students are enrolled with a <i>required</i> grade basis must have all of their grades; otherwise, a transcript is not generated for the student. Selecting this option can prevent transcripts from printing until all of a student's term grades are posted. See Processing Batch Transcripts (Application Engine) .
Elective Grade Basis	Select to enter the grading bases from which the student may select during enrollment.
Print on Transcript	Select to display, on the transcript, classes that are graded with this grade basis. If you do not select this option, all class data for courses that have grades that are from this grade basis do <i>not</i> appear on the transcript.
Print Grade Basis Desc (print grade basis description)	Select to have the formal description of the grade basis appear on the transcript.
Audit Grade Basis	Select to indicate that the grading scheme is audit-only. If you select this check box, the following check boxes in the Grade Input group box become unavailable: In Progress Grade, Include in GPA, and Earn Credit.
Grade Input	If you enter a grade basis and clear the Elective Grade Basis check box, or if you do not enter a value in the Grade Basis Convert field, the Grade Input field becomes available. Enter all of the valid grade values for the grading scheme in the Grade Input field. Add rows as necessary.
Convert To Grade	When you post grades, the system converts the originally entered grade to the convert to grade if a value exists in the Convert to Grade field. This field is optional. The convert to

grade must be within the grading scheme that you are currently defining.

Description	Enter a description for the grade input.
Short Desc (short description)	Enter a short description for the grade input.
Exclude Progress Units	Select to have the system exclude this grade from progress units. For example, you would select this check box for a <i>W</i> or withdrawal grade.
Grade Points	Enter the grade points for the grade input. The system uses these grade points, in conjunction with the units attempted for the class, when it calculates GPA.
Complete	This field is user-defined. Define complete values on the Complete Grade Flag page. In New Zealand, this field is used for reporting purposes.
Grade Category	<p>Use this field to give a grade additional identity. You can assign a grade category to a particular grade or a group of grades, and then use these assignments for advanced advising analysis purposes, such as requisite checking or academic advising limits. By default, the system populates the Grade Category field with <i>None</i>.</p> <p>A typical example of a grade category is <i>Pass</i> or <i>Transfer Pass</i>. You can use academic advising to limit the number of classes with grade categories of <i>Transfer Pass</i> that count toward degree requirements. Select from a list of grade categories that are defined by your institution.</p> <p>Grade categories are defined on the Grade Category Table page.</p> <p>See "Setting Up Grade Category Values" (PeopleSoft Campus Solutions 9.2: Academic Advisement).</p>
In Progress Grade	Select to indicate that this is an in-progress type of grade. A typical example of an in-progress grade would be an incomplete grade.
Include in GPA (include in grade point average)	Select to include the grade that you specify in GPA calculations. An example of when you would <i>not</i> select this check box is for a <i>Pass</i> grade.
Earn Credit	Select to specify that the grade can be counted toward course and academic advising credit.
Valid Attempt	Select to mark each grade value as representing a valid course attempt. PeopleSoft Academic Advisement uses this setting to distinguish between grades for valid course attempts (A, B, C, D, F, and so forth) and grades for invalid course attempts (AU, W, and so forth).

If you select this check box, Academic Advisement can distinguish between valid and invalid course attempts when the values in the Units Attempted, Earned Credit, and GPA fields are the same.

Include in Self Service

Select to enable the grade input value to be assigned and edited on the Faculty Center Grade roster. If you clear this check box, instructors cannot assign or edit this grade on the self-service grade roster. A typical example is to clear the check box for a *W*, an administrative withdrawal grade.

Repeat Checking Option

Select an option to indicate whether a class with this grade should be counted as a repeat candidate and whether the class should be processed by the Repeat Checking process. Values are:

- 1) *Count = Y Process = Y*: If you select this option, any class with this grade is counted in the pool of repeat attempts and is selected and processed when the Repeat Checking process is run.
- 2) *Count = Y Process = N*: If you select this option, any class with this grade is counted in the pool of repeat attempts, but is not selected and processed when the Repeat Checking process is run.
- 3) *Count = N Process = Y*: If you select this option, any class with this grade is not counted in the pool of repeat attempts, but is selected and processed when the Repeat Checking process is run.
- 4) *Count = N Process = N*: If you select this option, any class with this grade is not counted in the pool of repeat attempts, nor is it selected and processed when the Repeat Checking process is run.

This table shows an example:

Course	Grade	Units Attempted	Earned Credit	GPA	Valid Attempt
English 101	W (user defined)	3.00	0.00	0.00	No
English 101	F	3.00	0.00	0.00	Yes

Note: The PeopleSoft Academic Advisement application considers class attempts that have no grade as valid attempts.

Drop/Withdraw Penalty Grades

When processing drops during the penalty periods, the enrollment engine uses the penalty grades specific to the student's grading basis, as defined on the Grading Scheme Table page. If you do not define penalty grades for the student's grading basis, the enrollment engine instead uses the grading bases and grades that you define on the Session Calendar1 page (for withdraw grades) and the Session Calendar 2 page

(for drop grades). We strongly suggest that you define penalty grades at the grade basis level to ensure that students receive penalty grades specific to their intended grade basis for the class, and not the penalty grade that is assigned to all students in the session, regardless of whether the penalty grade is from the student's original grade basis.

For example, when you drop a student from a class for which the `stdnt_enrl.grading_basis_enrl = AUD` during Drop With Greater Penalty and a drop with greater penalty grade exists in the `GRADE_TBL` for AUD, the system assigns the drop with greater penalty grade to the student. If no drop with greater penalty grade exists at the grade table level for an AUD grade basis, the system instead uses the grading basis and grade from the `ACAD_CALSES_TBL`, as defined on the Session Calendar2 page.

See "Setting Up Session Cancellation and Withdrawal Dates" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

See "Setting Up Session Drop Dates" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Drop with Penalty

Enter the penalty grade that students who are enrolled with this grade basis receive for a class if they drop the class *after* the drop-and-retain-record deadline but *on or before* the drop-with-penalty deadline. The grade for the class appears on students' transcripts and affect their GPA accordingly. Grade values are defined on the Grading Scheme Table page.

Drop with Greater Penalty

Enter the grade that students who are enrolled with this grade basis receive for a class if they drop the class *after* the drop-with-penalty deadline but *on or before* the drop-with-greater-penalty deadline. The grade for the class appears on students' transcripts and affect their GPA accordingly. Grade values are defined on the Grading Scheme Table page.

Withdraw with Penalty

Enter the grade that students who are enrolled with this grade basis receive for a class if they withdraw after the withdraw-without-penalty deadline but on or before the withdraw-with-penalty deadline. The grade for the class appears on students' transcripts and affect their GPA accordingly. Grade values are defined on the Grading Scheme Table page.

Withdraw with Greater Penalty

Enter the grade that students who are enrolled with this grade basis receive for a class if they withdraw after the withdraw-with-penalty deadline but on or before the withdraw-with-greater-penalty deadline. The grade for the class appears on students' transcripts and affect their GPA accordingly. Grade values are defined on the Grading Scheme Table page.

Grade Scheme Example: Using an Elective Grading Basis

Image: Example of elective grade basis, Grading Scheme Table page

Select the Elective Grade Basis check box for grade bases that permit students to choose different modes of grading for a class. Before you select this check box, define all of your grading basis choices

Audit Grade Basis

On this page, select the grade basis value in the Grade Basis Convert field. All courses that have a grade basis of *SUS* convert to a grade basis of *PNP*.

Grade Scheme Example: Setting Up a Requirement That References a Grade Category

At PSUNV, the maximum number of pass grades that can apply towards a Bachelor's degree is 24 units. From these 24 units, no more than six units can be from another institution. To establish this academic advising limit on pass grades, create two grade categories on the Grade Category Table page: *PASS* for Internal Pass and *TXFR* for Transfer Pass. Then, on the Grading Scheme Table page, assign to the grade *P* the grade category of *PASS* and assign to the grade *T* the grade category of *TXFR*.

In PeopleSoft Academic Advisement, create an academic requirement that is a global limit. Its first requirement line points to a derived list of all courses on a student's transcript with a grade that has a grade category of *PASS unioned* with a derived list of all courses on a student's transcript with a grade category of *TXFR*. The requirement line limit allows a maximum of 24 units and maximum of 999 courses (the system enforces the lower of these). Create a second requirement line (in the same academic requirement) that is also a global limit. It points to a derived list of all courses on a student's transcript with a grade that has a grade category of *TXFR*. The requirement line limit allows a maximum of six units. Attach this academic requirement to a requirement group at the career level, with a low reporting sequence number, so that the degree audit system evaluates it first during an advising evaluation. Any courses over the limit of allowed credits are excluded from the evaluation and are not counted towards the remaining career, program, plan, or subplan degree requirements.

PNP	P/INP	<input type="checkbox"/> Grading Basis is Invalid	PNP	P/INP	+ -
SUS	Sat/Unsat	<input type="checkbox"/> Grading Basis is Invalid	PNP	P/INP	+ -
TRN	Transfer	<input checked="" type="checkbox"/> Grading Basis is Invalid			+ -

If grade bases are variable at your institution, you should define grade basis mapping rules. When students in one academic program or career enroll in classes in another program or career (that have a different grade basis), the system uses your grade basis mapping rules to convert grade basis values to those that are appropriate for the students' careers and programs.

Grading basis rules designate any and all schemes for grading, including the grade points for each grade.

You link grading basis exception rules to career pointer exception rules. Career pointer exceptions are linked to academic programs.

Grading basis exception rules are keyed by academic institution.

Effective Date

Enter an effective date for this mapping rule.

Status

Enter a status for this mapping rule. Enter *Active* when adding a new mapping rule. Enter *Inactive* only if your institution no longer uses the mapping rule.

Note: If you inactivate the grading basis mapping rule, you must also remove it from the Career Pointer Exception page.

Description

Enter a description for the mapping rule.

Short Description

Enter a short description for the mapping rule.

Grading Basis for Requested Class

The grading basis from which you are mapping. Grading basis values are defined on the Grading Scheme Table page.

Warning! If a student attempts to enroll in a mapped cross-career course and the student selects a grade basis that you did not specify in the Grading Basis for Requested Class field as eligible for remapping, then the system considers their request invalid and denies the enrollment request.

Grading Basis is Invalid

Select to invalidate the grading basis. In the preceding example, the *Transfer* grading basis is invalid. Students cannot select the *Transfer* grading basis for classes with this mapping rule.

Grading Basis Mapped for Student

The grading basis to which you are mapping. In our example, when an undergraduate student enrolls in a graduate class with a grading basis of *Satisfactory/Unsatisfactory*, the system converts their grade basis to *Pass/No Pass*. Grading basis values are defined on the Grading Scheme Table page.

Note: When a student enrolls, the mapped values appear prior to posting the enrollment, regardless of whether the student is using Campus Solutions Enrollment Request, Enrollment, Quick Enroll, or Student Self Service Enrollment.

Grade Basis Mapping Example

To understand how the enrollment engine determines the grade basis for a particular enrollment, look at how the system determines whether a student can enroll in a class that is not in the student's career. For example, Michael Holt, an undergraduate, wants to enroll in Marketing 500 in the Graduate Business career.

Michael's Career and Program	Requested Class	Course's Career	Grading Basis of Course	Expected Grading Basis
Undergraduate/liberal arts undergraduate (LAU) program	Marketing 500	Graduate Business	Satisfactory/Unsatisfactory (SUS)	Pass/No Pass (PNP)

Image: Viewing career pointer exception rules on the Academic Program page (ACADEMIC_PROG_TBL)

When Michael tries to enroll in Marketing 500, the system first looks at the Career Pointer Exception Rule field on the Academic Program page for Michael's academic program (LAU).

Academic Program		Standing/Honors	Taxonomy/Campus	Repeat/Incomplete	Enrollment
Academic Institution:	PSUNV PeopleSoft University				
Academic Program:	LAU				
Find View All First 1 of 1 Last					
*Effective Date:	01/01/1900	*Status:	Active		
*Description:	Liberal Arts Undergraduate				
*Short Description:	Lib Arts	First Term Valid:	0000	Begin Term	
*Academic Career:	UGRD	Undergraduate			
Grading Scheme:	UGD	Undergraduate Grading Scheme			
GB Default for Transfer Credit:	GRD	Graded			
Default Grade- Transfer Credit:	T	Transfer			
*Academic Group:	LBART	College of Liberal Arts			
*Academic Level Rule:	UGRD	Undergraduate			
*Academic Calendar:	USEM	Undergraduate Semester Cal			
Dual Academic Program:					
Default Academic Plan:	UNDECL-UG	Undeclared Undergraduate			
Default Campus:	WALCR	Walnut Creek Campus			
*Transcript Level:	Official				
Career Pointer Exception Rule:	LIBARTS	Liberal Arts Exceptions			
	<input checked="" type="checkbox"/> Only if Outside Career				

If the field is cleared, grading basis mapping does not occur. Instead, the system looks at the Academic Career Pointers page to determine whether the student is eligible to enroll in the class. If enrollment is allowed, the system pulls from the course grading scheme as determined by the academic career that is noted on the Course Catalog - Offerings page. However, in our example, *LIBARTS* is selected in the Career Pointer Exception Rule field. Therefore, the system uses the *LIBARTS* exception rule on the Career Pointer Exception Rule page.

Image: Viewing grading basis mapping rules on the Career Pointer Exception Rule page (CAR_PTR_EXCEPTIONS)

This example illustrates the Career Pointer Exception Rule page as explained above.

Career Pointer Exception Rule

Academic Institution: PSUNV PeopleSoft University

Career Pointer Exception Rule: LIBARTS

***Effective Date:** 01/01/1900 ***Status:** Active

***Description:** Liberal Arts Exceptions

***Short Description:** Lib Arts

Course Requested				
Find First 1-2 of 2 Last				
*Academic Group	Subject Area	Catalog Nbr	*Allow Enrollment	Grading Basis Mapping Rule
LBART	MATH	300	Yes	UGRAD
LBART	MATH	400	Permission	UGRAD

The system searches the Course Requested group box for rows that match the class in which the student is enrolling. In our example, Michael Holt is trying to enroll in Marketing 500. The system looks at the Academic Group, Subject Area, and Catalog Nbr (catalog number) fields. The catalog number of the requested course must be equal to or greater than the catalog number on this page. Because Marketing 500 is in the *MGMT* academic group and the *Marketing* subject area, and it is greater than or equal to 500, the system allows Michael to enroll in the class with permission. The system then maps the grading basis to the student's career or program using the value in the Grading Basis Mapping Rule field (*UGRAD*). Grading basis mapping rules are defined on the Grading Basis Exception Rule page.

Image: Viewing grading basis mapping rules on the Grading Basis Exception Rule page (GRD_BASE_EXCEPTION)

This example illustrates the Grading Basis Exception Rule page as explained above.

Grading Basis Exception Rule

Find | View All First 1 of 1 Last

Academic Institution: PSUNV PeopleSoft University

Grading Basis Mapping Rule: UGRAD

***Effective Date:** 01/01/1900 ***Status:** Active

***Description:** Undergraduate Mappings

***Short Description:** Undergradu

Grading Basis Mapping			
Find First 1-6 of 6 Last			
*Grading Basis for Requested Class		Grading Basis Mapped for Student	
CNC	Crd/No Crd	<input type="checkbox"/> Grading Basis is Invalid	PNP P/NP
GRD	Graded	<input type="checkbox"/> Grading Basis is Invalid	GRD Graded
PNP	P/NP	<input type="checkbox"/> Grading Basis is Invalid	PNP P/NP
SUS	Sat/Unsat	<input type="checkbox"/> Grading Basis is Invalid	PNP P/NP
TRN	Transfer	<input checked="" type="checkbox"/> Grading Basis is Invalid	PNP P/NP

The system uses the values on this page to determine how to map each grading basis. Because the grading basis for the requested class is *SUS* (satisfied/unsatisfied), the system maps to *PNP* (pass/no pass). Therefore, Michael's grading basis appears as *PNP* on enrollment pages.

The system maps the grading basis when you exit the Class Input field.

Special Note About the Elective Grading Basis

When a student attempts to enroll in a class outside of the student's career and the class is offered with a grade basis for which the Elective Grade Basis check box is selected, the system presents the student with the student's grading basis choice and a corresponding *grade basis convert to* value. Each of the pre-mapped choices is set up in the Grade Scheme table under the career of the class and under the elective grade basis. Because students in this cross-career enrollment situation can be exposed to grade bases that are outside of their career, it is essential that you set up remapping rules that accommodate each of the possible grade bases from which a student may choose. Insert rows to accommodate all possibilities in the grading basis for the Requested Class field on the Grading Basis Exception Rules page. You do *not* need to insert rows for grade bases that are invalid, but you can do so. In these situations, select the Grading Basis is Invalid check box. For elective grading bases, you *must* add a row for the elective basis (for example, if *OPT*, then convert to *OPT*), for individual grade bases that make up the elective (*OPT*) grading basis (for example, if *SUS*, then convert to *PNP*), and so on.

Running the Grade Basis Exception Report

Access the Grade Basis Exception page (Set Up SACR > Product Related > Student Records > Reports > Grade Basis Exception > Grade Basis Exception).

Academic Institution

The academic institution for which you are reporting. The system populates this field. You can change the value.

As Of Date

Enter an as of date to report on all grade basis exception rules that are active as of this date. Normally, you enter a date that is the start of the term or term enrollment period.

Creating Grade Rosters for a Single Class

Access the Grade Roster Type page (Curriculum Management > Grading > Grade Roster > Grade Roster Type).

Image: Grade Roster Type page

This example illustrates the fields and controls on the Grade Roster Type page. You can find definitions for the fields and controls later on this page.

Grade Roster Type		Grade Roster						
Course ID:	001276	Foundations of Higher Math	Offer Nbr: 1					
Catalog:	MATH	100	Class Section: 1					
<input type="checkbox"/> Use Blind Grading			Class Nbr: 1192					
			PeopleSoft University					
			2006 Fall					
			Regular Academic Session					
*Grade Roster Type	*Description	Approval Status	Final Roster Grading Status	Override	Partial Post			
1	Mid-Term Grade	Not Reviewed		<input type="checkbox"/>		Create		+ -
2	Final Grade	Not Reviewed	Grade Input Allowed	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Create	Post	+ -

Grade Roster Type	Enter the type of grade roster that you want to generate. Grade roster type values are delivered with your system as translate values. While you should not change the <i>Final Grade</i> value, you can add as many nonfinal grade values as you want.
Description	The system provides the grade roster type description, taking it from the translate table. You can change this value.
Approval Status	<p>Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require substantial programming. Values for approval status are <i>Not Reviewed</i>, <i>Ready for Review</i>, and <i>Approved</i>.</p> <p>The system does not permit you to post grade rosters that have an approval status of <i>Not Reviewed</i> or <i>Ready for Review</i> unless you select the Partial Post check box.</p> <hr/> <p>Note: You can save the data and make changes to the grades. After you approve and post, however, you must make any grade revisions on a student-by-student basis using one of the enrollment pages.</p> <hr/>
Final Roster Grading Status	The system populates the Final Roster Grading Status field based on the approval status for the class.
Override	Select this check box and click the Create button to delete the previous grade roster and generate a new one for the class. If you do not select this check box and just click the Create button, the system appends any new students to the existing grade roster.
Partial Post	Select to manually enter and post grades for a class section, save it, and return later to finish entering and posting grades.
	<hr/> <p>Note: Although you cannot approve the entire grade roster until you enter all grades, if you select the Partial Post check box, the system posts all grades that you entered to those students' records.</p> <hr/>
Posting Date	The system displays the posting date when the grade roster post process finishes.
Create	Click to create the grade roster. Go to the Grade Roster page to enter grades.
Post	Click to post the final grades to the grade roster after you enter them. The system changes the status on the Grade Roster 1 page to <i>Posted</i> . The system does not permit you to post grade rosters that have an approval status of <i>Not Reviewed</i> or <i>Ready for Review</i> unless you select the Partial Post check box.

Creating Grade Rosters for Multiple Classes

Access the Create Grade Rosters page (Curriculum Management > Grading > Create Grade Rosters).

Image: Create Grade Rosters

This example illustrates the fields and controls on the Create Grade Rosters. You can find definitions for the fields and controls later on this page.

Session	Class End Date From	Class End Date To	Academic Organization	*Grade Roster	*Override Existing Grade Roster	*Total
Twelve Wk	02/06/2009	03/20/2009	LIBARTS	Final Grade	No	1

Academic Institution

Enter the academic institution for the grade roster process. This value controls the type of data that is available in the remaining fields.

Term

Enter the term for the grade roster. Term values are defined on the Term Table page.

Session

Enter the session for the grade roster. The session value is optional. Use it to limit your roster production to a single session within the specified term. Session values are defined on the Session Table page.

Class End Date From and Class End Date To

Select the class end date from and to dates. The system selects rosters to create for classes with an end date that is greater than or equal to the value in the Class End Date From field and less than or equal to the value in the Class End Date To field. Both fields are optional and one may be entered without the other.

Academic Organization and Subject Area

Enter the academic organization or subject area for which to produce the rosters. You can enter the academic organization or subject area, but not both. If you enter an academic organization, the Subject Area field is unavailable for entry. Conversely, if you enter a subject area, the Academic Organization field is unavailable for entry. Academic organization values are defined on the Academic Organization Table page. Subject area values are defined on the Academic Subject Table page.

Grade Roster

Enter the type of grade roster that you want to generate. Grade roster values are delivered with your system as translate values. While you should not change the *Final Grade* value, you can add as many nonfinal grade values as you want.

Override Existing Grade Roster

Available values are:

Yes: Enter to delete and override any preexisting grade rosters when you run the Create Grade Roster process, regardless of whether you selected the Override Grade Roster check box on the Grade Roster Type page.

No: Enter to retain all prior grade rosters when you run the Create Grade Roster process, regardless of whether you selected the Override Grade Roster check box on the Grade Roster Type page. The system produces rosters only for those classes for which rosters have not yet been generated and appends any currently enrolled students who are not on the original roster.

Total

If you selected a grade roster type of *MidTerm*, this field becomes available. The system enables you to create as many rosters as you need for each class, as long as it is not a *Final Grade* roster type. Enter the total number of non-final grade rosters that are needed for each class in the Total field.

Run the PSJob SRPCGPR. Results of the Create Grade Rosters process appear on the Grade Roster page.

Chapter 13

Setting Up Degrees and Honors

Setting Up Degrees and Degree Honors

To set up degrees and degree honors, use the Degree Table component (SA_DEGREE_TABLE) and the Degree Honors Table component (DEGREE_HONORS_TBL).

The process of graduating students requires you to set up degrees and degree honors, to update student program records, and, if necessary, to report and audit degree changes. This section discusses the first of these requirements in detail. You should also familiarize yourself with the PeopleSoft Academic Advisement application, an important and automated precursor to approving students for graduation.

This section discusses how to:

- Define degrees.
- Attach degrees to academic plans.
- Define degree honors.

Status

Select a status for this degree. Select *Active* when the degree is valid for your institution. You can keep all degrees in the

database for historical purposes by setting any degrees that you no longer award to *Inactive*.

Description, Short Description, and Formal Description

Enter descriptions of the degree. Later, you can identify which description appears on the transcript.

Internal Degree

Select to indicate that the degree is internal to your institution and that it does not represent a degree from another organization.

Years of Education

No programming is tied to this field; use it for informational purposes only.

Educational Level

No programming is tied to this field; use it for informational purposes only. Values for this field are delivered with your system as translate values. You can modify these values.

(NZL) **NZVCC Qualificatn Degree Code** (New Zealand Vice Chancellors Committee qualification degree code)

Enter the NZVCC qualification code for this degree. The system uses this value when generating the Graduate Destinations Survey report.

This field is available only when you select the NSI and SDR Personal Data, SDR Degree check box on the SA Features page on the Installation table.

(NZL) **Prospectus Code**

Enter the Ministry of Education (MoE) identifier. The system uses this value when generating the Qualification Completion file.

This field is available only when you select the NSI and SDR Personal Data, SDR Degree check box on the SA Features page on the Installation table.

(NZL) **Qualification Award Category**

(Optional) No programming is tied to this field; use it for informational purposes only. Values for this field are delivered with your system as translate values. You can modify these values.

This field is available only when you select the NSI and SDR Personal Data, SDR Degree check box on the SA Features page on the Installation table.

(NZL) **Report to MoE - SDR** (report to Ministry of Education - Single Data Return)

Select to include students awarded this degree in the Qualification Completions file.

This field is available only when you select the NSI and SDR Personal Data, SDR Degree check box on the SA Features page on the Installation table.

[Processing SDR Extracts](#)

Attaching Degrees to Academic Plans

Access the Academic Plan Table page (Set Up SACR > Foundation Tables > Academic Structure > Academic Plan Table > Academic Plan Table).

A student who is active in a program with more than one plan can potentially receive more than one degree when you set the student's degree checkout status to *Approved* and click the Update Degrees button on the Student Degrees page. Conversely, if a student has multiple plans under one program, and each of those plans is associated with the *same* degree, then the student receives only one degree when you set the degree checkout status to *Approved* and click the Update Degrees button on the Student Degrees page.

This is important to consider when you are setting up degrees for plans that are linked to the same program and in which students may have two or more of such plans under a single program at a given time. This is also important to consider when setting up double majors. For example, if you have a particular double major combination, for which you want only one degree, you may want to create two separate plans to represent each major but tie the double major degree to only one of the plans. Or you may want to create one plan that represents the double major. For students who attempt a degree with only one of these two majors, you would assign a different plan to them, with a slightly different degree. For example, instead of a bachelor of science degree in architecture and engineering, you might also create a degree that is a bachelor of arts in architecture, a degree that is a bachelor of science in architecture, and yet another degree that is a bachelor of science in engineering. Of course, you must also consider the effect that plan assignment has on your academic advisement setup and the way that you define plan- or program-based requirements.

Related Links

"Defining Academic Plans" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining Degree Honors

Access the Degree Honors Table page (Set Up SACR > Product Related > Student Records > Student Standing and Awards > Degree Honors Table > Degree Honors Table).

Note: The Degree Honors Table page differs from the Honors/Awards Table page in that it relates to only internal degrees, plans, and subplans.

Honor Type

The type of honor and where it appears on the transcript.

For example, an honors type of *Degree Plan Suffix* indicates that the honor appears on the transcript *after* the degree plan.

Honor type choices are *Degree Prefix*, *Degree Suffix*, *Degree Honors*, *Degree Plan Prefix*, *Degree Plan Suffix*, *Degree Sub-Plan Prefix*, and *Degree Sub-Plan Suffix*. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Status

Select a status for the degree honor. Select *Active* when adding a new degree honor. Select *Inactive* only if your institution will no longer use this degree honor.

Formal Description

You can set up your transcript type so that the formal description prints on the diploma and transcript.

Print on Diploma

No programming is tied to this field; use for informational purposes only.

Print on Transcript

Select this check box to display the formal description of the degree honor on the transcript.

Setting Up Transcripts

Understanding Transcript Levels

Important! The COBOL transcript process is a deprecated product. Support will be maintained for this product, but no new development will be produced for the COBOL transcript process. It is strongly recommended that you use the Application Engine transcript process instead. For more information on the Application Engine transcript process, see [Understanding Transcript-Related Processes](#).

On various pages throughout your Student Administration system, you are prompted to select the transcript level for which you want to print information. The transcript level you select determines the type of transcript on which the information appears. Transcript levels are hierarchically based on the two-digit numeric code in the value column of the translate table for the field TRANSCRIPT_LEVEL. The following table lists the transcript levels and their values in the translate table, and describes each one.

Note: Information in the table about the Advising Report applies only if you set up for COBOL based transcripts, using the Transcript Type component (TSCRPT_TYPE).

<i>Transcript Level</i>	<i>Value</i>	<i>Description</i>
Not Print	00	Do not print the information on any transcript.
Official	20	Print the information on the official transcript, the unofficial transcript, and the student life transcript. Includes all information that is flagged throughout the system as Official, Unofficial, Student Life, and Degree Progress. Can include an Advising Report if you select the Advising Report or Special Advising Report check box.
Unofficial	40	Print the information on the unofficial transcript and the student life transcript. Includes all information that is flagged throughout the system as Unofficial, Student Life, and Degree Progress. Can include an Advising Report if you select the Advising Report or Special Advising Report check box.

<i>Transcript Level</i>	<i>Value</i>	<i>Description</i>
Stdnt Life (student life)	60	<p>Print the information on the student life transcript.</p> <p>Includes all information that is flagged throughout the system as Student Life and Degree Progress. Can include an Advising Report if you select the Advising Report or Special Advising Report check box.</p>
Degr Prog (degree progress)	80	<p>Print the information on the degree progress transcript, which can include academic advisement information in addition to a transcript.</p> <p>Does not include a transcript. Includes an Advising Report only if you select the Advising Report or Special Advising Report check box. The advising report is ordered and evaluated for each student by career.</p>

When you generate transcripts, the system includes the applicable information for all transcripts types with a value on the translate table greater than or equal to the transcript level you select. For example, if you select Official, the system includes the applicable information on all transcript types. However, if you select Stdnt Life, the system only includes the applicable information on student life transcripts and degree progress transcripts.

Transcript level values are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Defining Transcript Type Security

You can assign different levels of transcript type security to each user in your organization. Transcript type security authorizes users who have access to the transcript request pages to create transcript requests only for those transcript types for which they have security.

Related Links

"Setting Security for Transcript Types" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Creating Transcript Notes

To set up transcript notes, use the Transcript Notes Table component (TSCRPT_NOTES_TBL).

Use the Transcript Notes Table page to define transcript notes that can appear alongside a particular student enrollment record. Transcript notes only print on a student's transcript when you both attach the predefined note to an individual student's enrollment record and process a transcript type for which the Print Transcript Note check box is selected. Typically, transcript notes are generic enough that they can be reused for multiple students' enrollment records. You can attach notes to a student's enrollment record

using either the Transcript Note link on the Enrollment Request page or the Transcript Note fields on the Student Enrollment 3 page.

Related Links

[Understanding Class Enrollment Processing](#)

Page Used to Create Transcript Notes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Transcript Notes Table	TSCRPT_NOTES_TBL	Set Up SACR > Product Related > Student Records > Transcript > Transcript Notes Table > Transcript Notes Table	Define transcript notes.

Defining Transcript Notes

Access the Transcript Notes Table page (Set Up SACR > Product Related > Student Records > Transcript > Transcript Notes Table > Transcript Notes Table).

Effective Date	Enter an effective date for this transcript note. The effective date defines when the status you select is valid.
Status	Select a status for this transcript note. Select <i>Active</i> when adding a new transcript note. The <i>Inactive</i> option should only be used if your institution will no longer use this transcript note.
Description	The description is used for system related display purposes only. The description does not appear in the transcript.
Short Description	The short description is used for system-related display purposes only. The short description does not appear in the transcript.
Transcript Note Sequence Nbr (transcript note sequence number)	The transcript note sequence number enables you to create multiple note lines under one note ID. When you select a transcript note to appear on a transcript, all notes under the note ID appear.
Transcript Note	Enter the transcript note in the free-form text field. This text appears on the student's transcript when you both attach the note to a student's enrollment record and process a transcript type for which the Print Transcript Note check box is selected.

Creating Transcript Text

Important! The COBOL transcript process is a deprecated product. Support will be maintained for this product, but no new development will be produced for the COBOL transcript process. It is strongly recommended that you use the Application Engine transcript process instead. For more information on the Application Engine transcript process, see [Understanding Transcript-Related Processes](#).

Use the Transcript Text page to define transcript text for a specific student. Unlike transcript notes, which are predefined and attached to students on the enrollment request pages, transcript text is created for a specific student and is not necessarily associated with a specific enrollment record. After you create transcript text for a student, it always appears on transcripts with the transcript type you specify, or on a transcript that is at or above the transcript level you specify. No options at the transcript type setup level enable you to inactivate or hide transcript text. You can limit when and how the transcript text appears by using the filtering options on the Transcript Text page to specify valid transcript types, levels, and relative positions for the transcript text.

Page Used to Create Transcript Text

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Transcript Text	TRANSCRIPT_TEXT	Records and Enrollment > Transcripts > Transcript Text > Transcript Text	Define transcript text for a specific student.

Defining Transcript Text

Access the Transcript Text page (Records and Enrollment > Transcripts > Transcript Text > Transcript Text).

Image: Transcript Text page

This example illustrates the fields and controls on the Transcript Text page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Transcript Text' page. At the top, the user 'David Losholl' and record ID 'SRTS0001' are displayed. Below this, the 'Academic Career' is set to 'UGRD Undergraduate'. A table with one row is shown, with columns for '*Print Loc Seq' (1), '*Relative Position' (After), and '*Print Location' (Academic Program). Below the table, there are fields for '*Institution' (PSUNV PeopleSoft University) and '*Text Seq Nbr' (1). There are also sections for 'Transcript Report' and 'Transcript Report COBOL', each with a 'Transcript Type' search field and a 'Transcript Text' text area.

Print Loc Seq (print location sequence)

Enter the print location sequence to identify the order in which notes appear within a print location. The default is 1, and each additional row increases by one.

Relative Position

Select the relative position of the note within the chosen print location. You are prompted from the translate table. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Values include:

After: Select this value if you want the transcript text to appear immediately after the specified print location sequence.

Before: Select this value if you want the transcript text to appear immediately before the specified print location sequence.

Print Location

Enter the print location of the text. Print location values are delivered with your system and you can view them on the Print Area Table page. Modifying these values requires programming

effort. The system uses this value in conjunction with the relative position value to determine where to print the transcript text. If the Transcript Type or Transcript Level that you specify is associated with a transcript type that has the Print Location set to *Do Not Display*, then the transcript text does not appear on the transcript. The transcript type setup is the overriding rule. Print Location values are: *Academic Program*, *Academic Standing*, *Cumulative Stats*, *Degrees - External*, *Degrees - Local*, *Enrollment*, *Milestones*, *Student Personal Data*, *Term Honors*, *Term Statistics*, *Transcript Print Date*, *Transcript Recipient*, *Transcript Request Reason*, *Transcript Requester*, *Transfer Credit - Courses*, *Transfer Credit - Others*, *Transfer Credit - Tests*, and *Withdrawal Info*.

Note: Transcript text associated with a print location of *Academic Program* appears on the transcript only if the associated transcript type is configured such that the academic program prints in the Transcript Header. To review a particular transcript type's setup data, access the Transcript Type - Program page.

Note: Transcript text associated with a print location of *Institution Data* appears differently on transcripts printed through Crystal than it does on transcripts you view online. Transcripts printed through Crystal always display institution data in a reserved area in the header of the transcript (upper left corner). This reserved area has a limited number of lines of text. For this reason, we have inactivated the *Institution Data* value. Any transcript text created with a print location of *Institution Data* prior to PeopleSoft Student Administration 8 remains in the database, and print as always. However, no new entries with a print location of *Institution Data* can be made. To review the setup data for a particular transcript type, access the Transcript Type - General page.

Note: Transcript text associated with a print location of *Student Personal Data* does not appear as expected for transcript types for which student personal data is set to print in the page header. This is because the page header has a limited number of text lines available for printing. Therefore, transcript text associated with student personal data and a transcript type with student personal data printing in the page header, will instead print the transcript text in the first lines of text in the body of the transcript. To review the setup data for a particular transcript type, access the Transcript Type - General page.

Note: Transcript text for all types of *Transfer Credit* must be associated with a transfer model. Because the model can be applied to multiple articulation terms, the effect on printing associated with transcript text is significant. Therefore, transcript text associated with a transfer credit model can be printed successfully only when the transfer credit is configured to print in the transcript header or transcript trailer. Transfer credit that is configured to print in the enrollment detail or enrollment trailer does not display any associated transcript text. To review the setup data for a particular transcript type, access the Transcript Type - Transfer/Test/Other Credits page.

Institution

Enter the institution for which you want to create the transcript text. The institution value determines which transcript types are available in the Transcript Type field.

Model Nbr (model number)

Based on the print location you select, the system prompts you for additional information. For instance, if you select a print location of *Transfer Credit - Courses*, the Model Number field appears. If you select a print location of *Milestones*, the Milestone Number field appears, and so on.

Text Seq Nbr (text sequence number)

The system populates the text sequence number to 1 by default. You can insert text rows and increase the text sequence number. The sequence number determines the order of printing on the student's transcript before or after a print location.

Transcript Level

Select either a transcript level or a transcript type, but not both. Select a transcript level to determine the types of transcripts on which the system includes this transcript text.

Depending on the transcript level you select, the system prints the transcript text on transcript types set to the same level, and all other greater numbered transcript types on the translate table. For example, if you select *Official* for your transcript level (which has a level value of 20 in the translate table), the system prints the transcript text on all transcript types that have transcript levels of 20 to 80. However, if you select *Stdnt Life* for your transcript level (which has a level value of 60 in the translate table), the system prints the transcript text only on those transcript types where the transcript level is set to *Stdnt Life* or *Degr Prog* (degree progress), levels 60 - 80. The only exception to this rule is *Not Print*.

If you select *Not Print*, the transcript text never prints.

Transcript Type and Transcript Text

Use the Transcript Report group box for XML transcripts or the Transcript Report COBOL group box for COBOL transcripts.

Transcript Type

Select either a transcript level or a transcript type, not both.

Enter a transcript type if you want the text to appear only on the type you specify.

Transcript Text

Enter your free-form text in the Transcript Text field. This text appears on the student's transcript.

For XML transcripts, this field is 1000 characters.

Note: If you use the Historical Course Enrollment page for conversion purposes, and want to display term statistics for those enrollments, use transcript text for those statistics. Otherwise, display summary statistics that you converted using the transfer credit process.

"Understanding Data Conversion" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

"Performing Data Conversion" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Reviewing Transcript Print Areas

To set up transcript print areas, use the Transcript Print Area Table component (TSCRPT_PRT_AREA).

Transcript print areas are associated with codes that define areas of the transcript on which various types of transcript data appear. Print area values are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Page Used to Review Transcript Print Areas

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Transcript Print Area Table	PRINT_AREA_TABLE	Set Up SACR > Product Related > Student Records > Transcript > Transcript Print Area Table > Transcript Print Area Table	Review delivered transcript print areas.

Reviewing the Transcript Print Area Table

Access the Transcript Print Area Table page (Set Up SACR > Product Related > Student Records > Transcript > Transcript Print Area Table > Transcript Print Area Table).

Image: Transcript Print Area Table page

This example illustrates the fields and controls on the Transcript Print Area Table page. You can find definitions for the fields and controls later on this page.

Transcript Print Area Table						
*Print Area Code	Sort Print Area	Secondary Print Area	*Description	Short Desc		
ED	5	3	Enrollment Detail	Enrol Dtl	+	-
EH	5	1	Enrollment Header	Enrol Hdr	+	-
ET	5	5	Enrollment Trailer	Enrol Trl	+	-
ND	ND		Do Not Display	No Display	+	-
PH	1		Page Header	Page Hdr	+	-
TH	3		Transcript Header	Tscrpt Hdr	+	-
TT	9		Transcript Trailer	Tscrpt Trl	+	-

Print Area Code

An acronym that defines the transcript print area.

Sort Print Area, Secondary Print Area

The values in these fields determine how the system sorts the print areas on the transcript.

Description

Text used on the Define Transcript Type component to determine print detail.

Short Desc (short description)

Value used internally by system processes. Not visible on any pages.

Note: The values on the Transcript Print Area Table page are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort.

Defining Transcript Types

Important! The COBOL transcript process is a deprecated product. Support will be maintained for this product, but no new development will be produced for the COBOL transcript process. It is strongly recommended that you use the Application Engine transcript process instead. For more information on the Application Engine transcript process, see [Understanding Transcript-Related Processes](#).

To set up transcript types, use the Define Transcript Type component (SSR_TSCRPT_TYPE).

This component enables you to define various types of transcripts for your institution, each type with its own unique purpose, design, and formality level.

Note: The pages of the Transcript Type component (TSCRPT_TYPE) still exist in the system: TSCRPT_TYPE, TSCRPT_CARS, TSCRPT_TYPE_GEN, TSCRPT_TYPE_LOCDGR, TSCRPT_TYPE_ENRL, TSCRPT_TYPE_TRNSFR, and TSCRPT_TYPE_SORT. Use this component to set up COBOL-based transcripts.

Prerequisites

Before you can create transcript types, you must create academic careers. In addition, if you want to create an academic advisement report that references a special requirement usage (one other than standard), you must create requirement usage values.

Pages Used to Define Transcript Types

Page Name	Definition Name	Navigation	Usage
Basic Data	SSR_TSCRPT_TYPE	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Basic Data	Define transcript types, associate service indicators, specify transcript levels, define self-service availability. Typical transcript types include official, unofficial, graduate, undergraduate, NCAA, and continuing education.
Careers	SSR_TSCRPT_CARS	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Careers	For transcript types with a Detail Organization value of <i>by Career</i> , define all possible careers that this transcript type can report. When you run the transcript request process for this transcript type, the system generates transcripts. Transcripts are processed for each career specified, that matches a career of the student.
General	SSR_TSTYPE_GEN	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > General	Define the print areas and details about appearance for types of information such as institution, student, print date, and reason.
Degrees/Program	SSR_TSTYPE_LOCDGR	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Degrees/Program	Define the print areas and details about appearance for academic program related elements.
Enrollment/Statistics	SSR_TSTYPE_ENRL	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Enrollment/Statistics	Define the print areas and details about appearance for enrollment information.
Transfer/Test/Other Credits	SSR_TSTYPE_TRNSFR	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Transfer/Test/Other Credits	Define the print areas and details about appearance for transfer, test, and other credits.

Page Name	Definition Name	Navigation	Usage
Test Scores	SSR_TSTYPE_TEST	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Test Scores	Define the print areas and details about appearance for test scores.
Special GPA	SSR_TSTYPE_SGPA	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Special GPA	Define the print areas and details about appearance of Special GPAs.
View Sort	SSR_TSTYPE_SORT	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > View Sort	Display the sorting order for how the transcript type information appears.
Fee Setup	SSR_TSTYPE_FEES	Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Fee Setup	Set up transcript fees for official transcript requests through Fluid user interface.

Defining Transcript Type Basic Data

Access the Basic Data page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Basic Data).

Image: Basic Data page

This example illustrates the fields and controls on the Basic Data page. You can find definitions for the fields and controls later on this page.

Enter an Academic Institution and an alphanumeric Transcript Type code (one to five characters in length).

You should not define a Transcript Type of *ALL* because this value is used on the Transcript Type Security page to grant users access to all transcript types.

See "Setting Security for Transcript Types" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Effective Date

Enter the effective date that determines when this transcript type is available on the batch and online transcript request pages.

Description

Enter a description. This information does not appear on the transcript. It is for related display purposes.

Formal Description

Enter a formal description. This information appears at the beginning of the transcript.

Transcript Level

Enter the transcript level that you want to associate with this transcript type. Transcript level is hierarchical and based on the two-position numeric code in the value column of the translate table. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires substantial programming effort.

See [Understanding Transcript Levels](#).

Detail Organization

Select how the system sorts information on the transcript.

Values are:

by Career: Select this value to sort information by the student's academic career, and then by term. For instance, if the student has an undergraduate and graduate record, the system first displays all of the academic career information that matches one academic career, and then all of the academic career information that matches the other career. Within each academic career grouping, information is ordered by term. The system determines the order in which academic career records appear on the transcript by referencing the sequence number of each academic career on the Careers page. Those academic careers with the lowest sequence numbers print first, and so on. The system only seeks and evaluates the academic careers on the Careers page that match the student. Be sure to enter all possible academic careers that you want to capture and report with this transcript type.

Chrono: Select this value to sort information chronologically. For example, all academic careers in which the student has been active (that are also listed on the Careers page) print in chronological order, by term.

Note: If you set up for COBOL based transcripts, using the Transcript Type component (TSCRPT_TYPE), the *Chrono* setting is *not* intended for use with the advising check boxes. Advising reports *always* print by academic career.

Transcript Fee Required

If you select:

- *Yes*, you require a transcript fee to be assessed when students request an official transcript through Fluid user interface.

You must set how the transcript fee is assessed on the Fee Setup page. See [Setting up Transcript Fees](#).

- *No*, you do not require a transcript fee to be assessed. By default, this field is set to this value. If you do not select a value, the system also treats it as *No*.

Term Activated Careers Only

Select this check box to exclude career data from printing on the transcript for which a student has no academic history, such as those careers added to students for prospect records.

The following warning applies if you set up for COBOL based transcripts, using the Transcript Type component (TSCRPT_TYPE):

Warning! If your institution produces Academic Advisement reports for students who are not term-activated (for example, for prospective transfer students), this check box should be cleared for the transcript types associated with these report types.

Allow XML Output File

Use this check box to create your own XML file for testing.

If you select the Allow XML Output File check box, the Output XML File and Output File Path fields appear on the Process Transcripts page when you select a value of *Generate and Print Transcript*, *Print Transcript*, or *Request, Generate and Print* in the Process Action field on that page.

Report Definition ID and Template ID

Select the template to be used with this transcript type. First, select the Report Definition ID then one of the Template IDs associated with that Report Definition. If these fields are left blank, the default template from the Report Definition of SSR_TSRPT is used. The transcript type defined report definition and template can be overridden on the Process Transcripts component. If not overridden, the process uses the report definition and template ID as defined on the transcript type.

FERPA Information

The message that you define in this field prints in the header of the transcript when the FERPA check box is selected for a student on the FERPA page (Campus Community > Personal Information (Student) > Biographical (Student) > Student FERPA > FERPA).

If the field is left blank, nothing prints on the transcript for FERPA.

Check Service Indicators

Select this check box to have the transcript process identify indicators (holds or positive services) that you specify in the Service Impacts fields.

Service Impacts

Select the service impacts that the system evaluates in the transcript process. If the system finds on a student's record a service indicator with any one of the up to three service impacts you list, the system does not generate a transcript for the student. Instead, the system generates an error message in

the transcript output. Service impact values are defined on the Service Impact Table page.

Allow Student Self-Service

If you select this check box and the transcript level is *Official*, the system generates a request for this transcript type on the Request Official Transcript self-service page. Select this check box for only one transcript type per institution.

If you select this check box and the transcript level is *Unofficial*, the system displays this transcript type on the Unofficial Transcript self-service page. You can select this check box for multiple transcript types.

If you select this check box and the transcript level is *Degree Progress*, the system displays this transcript type on the View Degree Progress Report self-service page, and the Evaluate Transfer Credit - Process a Degree Progress Report page. You can select this check box for multiple transcript types.

Allow Advisor Self-Service

If you select this check box and the transcript level is *Unofficial*, the system displays this transcript type on the View Advisee Information self-service page (unofficial transcript). You can select this check box for multiple transcript types.

If you select this check box and the transcript level is *Degree Progress*, the system displays this transcript type on the View Advisee Information self-service page (degree progress report). You can select this check box for multiple transcript types.

This check box does not have any use with a transcript level of *Not Print* and *Stdnt Life* (student life).

Information for Students

This free-form text appears to students for the respective transcript type on the View Degree Progress Report self-service page.

Linking Academic Careers to Transcript Types

Access the Careers page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Careers).

Image: Careers page

This example illustrates the fields and controls on the Careers page. You can find definitions for the fields and controls later on this page.

Basic Data		
Academic Institution:	PSUNV	PeopleSoft University
Transcript Type:	ALLOF	Official Transcripts - All
Effective Date:	07/19/1997	
Career		
*Seq Nbr:	<input type="text" value="1"/>	<input type="button" value="+"/> <input type="button" value="-"/>
*Academic Career:	<input type="text" value="Continuing Education"/>	
Formal Description:	<input type="text" value="Official Transcripts"/>	
*Seq Nbr:	<input type="text" value="2"/>	<input type="button" value="+"/> <input type="button" value="-"/>
*Academic Career:	<input type="text" value="Graduate Business"/>	
Formal Description:	<input type="text" value="Official Transcripts"/>	

Note: If the Detail Organization field on the Basic Data page is set to *Chrono*, no fields appear on the Careers page. All student information, regardless of career, prints chronologically by term.

Seq Nbr (sequence number)

The system populates this field for the first row with a value of 1 and increments each additional row by one. Sequence number indicates a unique row of information and the order in which academic career information appears on the transcript.

For example, if a student is active in two academic careers (Undergraduate and Graduate), the transcript type setup such as that shown in the exhibit would produce a transcript where the student's Undergraduate (Seq Nbr 1) transcript or degree audit appears first, then a section break, then the student's Graduate (Seq Nbr 2) transcript or degree audit appears. The order in which a student becomes active in a career has no effect on transcript print order. Career print order is always specified by the transcript type sequence.

Academic Career

Enter all possible careers that this transcript type can report. Use multiple rows as necessary. When you run the transcript request process for this transcript type, the system generates individual enrollment detail or degree audits for each career in which the evaluated student is active. For example, if you have ten careers specified for a single transcript type, and you run the transcript type for a student who has one career that matches one of the careers specified, and another career which does not match, only enrollment detail associated with the matching career appears.

The other non-matching career's enrollment detail or degree audit information does not appear. Academic career values are set up as translate values and are defined on the Academic Career Table page.

Formal Description

The system populates the formal description by default. You can change this value. This description appears on the transcript.

If you set up for COBOL based transcripts, using the Transcript Type component (TSCRPT_TYPE): Advising reports are processed for each career in which the student has a current program action of *activate, data change, plan change, program change, or readmit*. A transcript type can have multiple academic careers linked to it.

Designating Student and Institutional Information

Access the General page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > General).

Image: General page

This example illustrates the fields and controls on the General page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'General' page of a system interface. At the top, there are tabs for 'General', 'Degrees/Program', 'Enrollment/Statistics', 'Transfer/Test/Other Credits', 'Test Scores', and 'Special GPA'. Below the tabs, there are search and navigation options: 'Find | View All', 'First', '1 of 2', and 'Last'. The main content area is divided into several sections:

- Academic Institution:** PSUNV PeopleSoft University
- Transcript Type:** ALLOF Official Transcripts - All
- Effective Date:** 07/19/1997
- Institution Data:**
 - 'Print Area': Page Header
 - Print Seq: 10
 - Print Institution Address
 - Print Institution ID
 - Institution ID: 123456
- Student Personal Data:**
 - Name Usage: NAME USG 5 Oth, Ftr, Deg, Pri, Mdn, Mtr
 - 'Print Area': Page Header
 - Print Seq: 30
 - Print Student SSN
 - Print Student Sex
 - Print Student Birthday
 - Print Campus ID
 - Print Student Address
 - Address Usage: SLCT ORD 1 Home, Mailing, Permanent, Work
 - Print Student Phone
- Print Date:**
 - 'Print Area': Page Header
 - Print Seq: 20
- Requester:**
 - 'Print Area': Do Not Display
- Reason:**
 - 'Print Area': Do Not Display
- Recipient:**
 - 'Print Area': Do Not Display
- Basis of Admission:**
 - 'Print Area': Do Not Display

Note: Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.

Institution Data Print Area	Select the print area in order to indicate where the system displays academic institution data. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> .
Institution Data Print Seq (institution data print sequence)	The system populates the print sequence by default. The print sequence determines the order in which institution data information appears within the print area. You can change the value. In the example, both student and institution data prints in the page header area. However, the institution data prints first and the student data second because of the print sequence numbers.
Print Institution Address	Displays the institution address in the area specified.
Print Institution ID	Displays the institution ID in the area specified.
Student Personal Data Name Usage	Specify the logic that the system uses to select the name printed on the transcript.
Student Personal Data Print Area	Select the print area in order to indicate where the system displays student personal data. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> .
Student Personal Data Print Seq (student personal data print sequence)	The print sequence determines the order in which student personal data appears within the print area. The system populates the print sequence by default. You can change the value.
Print Student SSN (print student social security number)	Displays the student's social security number in the area specified.
Print Student Birthday	Displays the student's date of birth in the area specified.
Print Student Address	Displays the student's address that corresponds with the setting in the Home Address Type field on the Names/Addresses Page.
Address Usage	Specify the logic that the system uses to select the address printed on the transcript.
Print Student Sex	Displays the student's gender in the area specified.
Print Campus ID	Displays the student's campus ID in the area specified.
Print Date Print Area	The date on which the transcript is generated (and not necessarily printed). Select the print area in order to indicate where the system displays print date information. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> .
Print Date Print Seq (print date print sequence)	The print sequence determines the order in which print date information appears within the print area. The system populates the print sequence by default. You can change the value.
Requester Print Area	The last name, first name of the user who created the transcript request. Select the print area to indicate where the system

displays requester information. Values are *Do Not Display*, *Transcript Header*, and *Page Header*.

Requester Print Seq (requester print sequence)	The print sequence determines the order in which requester information appears within the print area. The system populates the print sequence by default. You can change the value.
Reason Print Area	The reason for the transcript request as specified in the Request Reason field on the Request Header page. Select the print area to indicate where the system displays request reason information. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> .
Reason Print Seq (reason print sequence)	The print sequence determines the order in which request reason information appears within the print area. The system populates the print sequence by default. You can change the value.
Recipient Print Area	Recipient is the name of the institution, department, or individual that receives the transcript. You must enter send to information during the transcript request process in order to specify this. Select the print area to indicate where the system displays recipient name information. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> .
Recipient Print Seq (recipient print sequence)	The print sequence determines the order in which recipient information appears within the print area. The system populates the print sequence by default. You can change the value.
Basis of Admission Print Area	Select the print area to indicate where the system displays basis of admission information. Values are <i>Do Not Display</i> , <i>Transcript Header</i> , and <i>Page Header</i> . If you select <i>Transcript Header</i> or <i>Page Header</i> , the system displays basis of admission information for students who have the Include in Transcript check box selected on the Basis of Admission page.
Basis of Admission Print Seq (basis of admission print sequence)	The print sequence determines the order in which basis of admission information appears within the print area. The system populates the print sequence by default. You can change the value.

Designating Degree and Program Data

Access the Degrees/Program page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Degrees/Program).

Image: Degrees/Program page (1 of 2)

This example illustrates the fields and controls on the Degrees/Program page (1 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Degrees/Program' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Transcript Type:** ALLOF Official Transcripts - All
- Effective Date:** 07/19/1997
- Academic Program:**
 - *Print Area: Transcript Header
 - Print Seq: 90
 - Print Plans with Program
 - Print Subplans
 - What to Print:**
 - Active Program for Term
 - All Plan Changes
 - Changes in Program Status
 - Program Status to Include:**
 - Active
 - Completed
 - LOA
 - Discontnd
 - Suspended
 - Dismissed
 - Admitted
 - Applicant
 - Cancelled
 - Waitlisted
 - Prematric
 - Deceased
- Local Degrees:**
 - *Print Area: Enrollment Header
 - Print Seq: 10
 - Print Degree GPA
 - Print Degree Rank
 - Print Degree Honors
 - Print Degree Plan GPA
 - Print Degree Plan Rank
 - Print Degree Sub-Plan
- Other Institutions Attended:**
 - *Print Area: Transcript Header
 - Print Seq: 30

Image: Degrees/Program page (2 of 2)

This example illustrates the fields and controls on the Degrees/Program page (2 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the following settings for the second page:

- External Degrees:**
 - *Print Area: Transcript Header
 - Print Seq: 70
 - Print Honors
- Milestones:**
 - *Print Area: Transcript Trailer
 - Print Seq: 10
 - Sort Milestones by Program
- Scholarships and Grants:**
 - *Print Area: Do Not Display
- Academic Project:**
 - *Print Area: Do Not Display
- Thesis:**
 - *Print Area: Do Not Display

Academic Program Print Area

Select the print area to indicate where the system displays academic program information. Values are *Enrollment Header*, *Enrollment Trailer*, *Transcript Header*, and *Do Not Display*. Print area values are delivered with your system on the Print

Area Table page. Any modification to these values requires programming effort. Depending on which print area you select, the system selects an option in the What to Print group box.

Academic Program Print Seq

The print sequence determines the order in which academic program information appears within the print area. The system populates the print sequence by default. You can change the value.

Print Plans with Program

Select this check box to display all the academic plans associated with each of the student's reported programs.

Print Subplans

Select this check box to display all the subplans associated with each of the student's reported programs.

What to Print

The system selects a What to Print option and a Program Status to Include check box based on your choice of academic program print area. You cannot override these defaults.

If you select *Enrollment Header*, the system selects the Active Program for Term option and the value of *Active* for the Program Status to Include field.

If you select *Enrollment Trailer*, the system selects the Changes in Program Status option and the appropriate academic program status values become available for selection in the Program Status to Include group box. Select the appropriate academic program status values.

If you select *Transcript Header*, the What to Print group box becomes available for entry, and you can select which information to print. In addition, the Program Status to Include group box becomes available for entry. Select the appropriate academic program status values.

Program Status to Include

Select the appropriate check boxes to indicate the program statuses that the system includes. Values are *Active*, *Discontnd* (discontinued), *Admitted*, *Waitlisted*, *Completed*, *Suspended*, *Applicant*, *Prematric*, *LOA* (leave of absence), *Dismissed*, *Cancelled*, and *Deceased*.

Local Degree Print Area

Local degrees are degrees that a student obtains at your institution. Select the print area to indicate where the system displays local degree information. Values are *Enrollment Header*, *Enrollment Trailer*, *Transcript Header*, *Transcript Trailer*, and *Do Not Display*. Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.

Note: If you configure Local Degrees to print on the transcript, the system displays all degrees for the student across all of the student's careers, regardless of whether or not the degrees were earned in association with the specific career for which the transcript is reporting.

Local Degree Print Seq

The print sequence determines the order in which local degree information appears within the print area. The system populates the print sequence by default. You can change the value.

Other Institution Attended Print Area

The system extracts information for other institutions attended from the student's education component. Select the print area to indicate where the system displays other institutions attended. Values are *Transcript Header*, *Transcript Trailer* and *Do Not Display*. Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.

Other Institution Attended Print Seq

The print sequence determines the order in which other institution attended information appears within the print area. The system populates the print sequence by default. You can change the value.

External Degree Print Area

The system extracts external degree information from the student's education component. Select the print area to indicate where the system displays external degree information. Values are *Transcript Header*, *Transcript Trailer*, and *Do Not Display*. Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.

External Degree Print Seq

The print sequence determines the order in which external degree information appears within the print area. The system populates the print sequence by default. You can change the value.

Print Honors

Select this check box to display honors that the student received from other institutions.

Milestones Print Area

Select the print area in order to indicate where the system displays milestone information. Values are *Do Not Display* and *Transcript Trailer*. Print area values are delivered with your system on the print area Table page. Any modification to these values requires programming effort.

Milestones Print Seq

The print sequence determines the order in which milestone information appears within the print area. The system populates the print sequence by default. You can change the value.

See [Setting Up Milestones](#).

Print Honors	Select this check box to display any student honors on the transcript.
Sort Milestones by Program	Select this check box to sort and display milestones by academic program on the transcript.
Scholarships and Grants Print Area	Select the print area to indicate where the system displays scholarship and grant information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are <i>Transcript Header</i> , <i>Transcript Trailer</i> , and <i>Do Not Display</i> . The system extracts other institution-attended information from the student's admissions record.
Academic Project Print Area	Select the print area to indicate where the system displays Academic Project information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are <i>Transcript Header</i> , <i>Transcript Trailer</i> , and <i>Do Not Display</i> .
Thesis Print Area	Select the print area to indicate where the system displays thesis information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are <i>Transcript Header</i> , <i>Transcript Trailer</i> , and <i>Do Not Display</i> .

Designating Enrollment and Statistics Data

Access the Enrollment/Statistics page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Enrollment/Statistics).

Image: Enrollment/Statistics page

This example illustrates the fields and controls on the Enrollment/Statistics page. You can find definitions for the fields and controls later on this page.

Enrollment Print Area

Select the print area in order to indicate where the system displays enrollment information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires substantial programming effort. Values are *Enrollment Detail* and *Do Not Display*.

Enrollment Print Seq (enrollment print sequence)

The print sequence determines the sequence in which enrollment information appears within the print area. The system populates the print sequence by default. You can change this value.

Term Title to Use

Select the type of term title that you want to appear on the transcript. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values requires a substantial programming effort. Values are *Long Description* and *Short Description*.

Course List Sort Order	Select the course list sort order in which the system displays courses within a term. You can select to sort by <i>Session Number and Subject Area</i> or <i>Subject Area and Course Catalog Number</i> .
Session Title to Use	If you select a course list sort order of <i>Session Number and Subject Area</i> , the Session Title to Use field becomes available for entry. Select the <i>Long Description</i> or <i>Short Description</i> of the session title that you want to appear on the transcript.
Include Historical Enrollment	Select this check box for the system to display historical enrollment information that was entered into the Historical Course Enrollment page and its corresponding table. This information is separate from the usual student enrollment data. See Creating Historical Enrollment Records .

Note: If you select the Include Historical Enrollment check box, be sure that you set the Last Term for Historical Enrollment field to the latest term possible for historical enrollment records on the Academic Career Table page.

Also note that term *0000* does not allow historical enrollment data to print on a transcript. If you want historical enrollment data to print on a student's transcript, you must select a term value other than *0000*.

See "Describing Academic Career Parameters" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Print Course Topic	Displays course topics associated with specific courses.
Print Course Attributes	Displays the course attributes associated with specific courses.
Print Contact Hours	Displays the instructor's contact hours.
Print Instructor Name	Displays the instructor name for each class.
Print Transcript Notes	Displays the transcript notes attached to student enrollment records.
Print Class Dates	Displays the class begin and end dates if set on the term/session table.
Print OEE Class Dates (print open entry/exit class dates)	Displays the student's unique begin date for each Open Entry/ Open Exit class taken.
Obey Enrllmnt on Transcript Dt (obey enrollment on transcript date)	Select this check box for the system to display all enrollment information that is <i>fully enrolled</i> as of the transcript create date. The fully enrolled date is defined on the Academic Term Calendar 3 page. The date is set by default to the student's term activation record during term activation. You can manually change the date on a per student basis. The transcript process looks at the date on the student's term activation record. If you do not select this check box, all enrollment information that

exists at the time that the transcript is processed appears on the transcript.

Obey Fully Graded Date

If you do not select this check box, partially graded terms and sessions print on the transcript.

Select this check box for the system to only display classes with fully graded dates less than or equal to the run date.

The fully graded date is defined on the Academic Term Calendar 3 page. The date is set by default to the student's term activation record during term activation. You can manually change the date on a per student basis. The transcript process looks at the date on the student's term activation record.

Withdrawal Information Print Area

Select the print area to indicate where the system displays withdrawal information. Values are *Enrollment Detail* and *Do Not Display*.

Withdrawal Information Print Seq (withdrawal information print sequence)

The print sequence determines the order in which withdrawal information appears within the print area. The system populates the print sequence by default. You can change the value.

In the example, the enrollment information appears before the withdrawal information because both types of information have a print area of enrollment detail, and the print sequence for withdrawal information is greater than the print sequence enrollment information.

Term Statistics Print Area

Select the print area to indicate where the system displays term statistics information. Values are *Enrollment Header*, *Enrollment Trailer*, and *Do Not Display*. The system calculates statistics when you run the grade posting process. Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.

Term Statistics Print Seq (term statistics print sequence)

The print sequence determines the order in which term statistics information appears within the print area. The system populates the print sequence by default. You can change the value. In the example, term statistics, term honors, and academic standing print in the Enrollment Trailer area. Term statistics print first because the print sequence is less than both term honors and academic standing print sequence values.

Print Transfer Credit Stats (print transfer credit statistics)

Select this check box for the system to include transfer credit statistics in the display.

When this check box is selected, transfer credit statistics appear separately from enrollment statistics wherever the term and cumulative statistics have been selected to print. In addition, when this check box is selected, the transfer credit is added into the combined statistics for both the term and the cumulative.

Obey Show Stats on Tscript Dt (obey show statistics on transcript date)	Select this check box for the system to display statistics only if the transcript process date is greater than or equal to the show statistics on transcript date value. The show statistics on transcript date value is defined on the Academic Calendar 3 page. The date is set by default to the student's term activation record during term activation. You can manually change the date on a per student basis. The transcript process looks at the date on the student's term activation record. If you do not select this check box, the system displays the statistics as of the last term.
Cumulative Statistics	The Cumulative Statistics group box enables you to determine where the system displays statistics. You can select the Print Cums at Change of Pgm (print cumulatives at change of program) check box. You can also select the Print Cums at End of Tscript (print cumulatives at end of transcript) check box on its own or in combination with the other check box.
Term Honors Print Area	Select the print area in order to indicate where the system displays term honors information. Values are <i>Enrollment Header</i> , <i>Enrollment Trailer</i> , and <i>Do Not Display</i> . Print area values are delivered with your system on the Print Area Table page. Any modification to these values requires programming effort.
Term Honors Print Seq (term honors print sequence)	The print sequence determines the order in which term honors information appears within the print area. The system populates the print sequence by default. You can change the value.
Academic Standing Print Area	Select the print area in order to indicate where the system displays academic standing information. Values are <i>Enrollment Header</i> , <i>Enrollment Trailer</i> , and <i>Do Not Display</i> . Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires a substantial programming effort.
Academic Standing Print Seq (academic standing print sequence)	The print sequence determines the order in which academic standing information appears within the print area. The system populates the print sequence by default. You can change the value.

Designating Transfer/Test/Other Data

Access the Transfer/Test/Other Credits page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Transfer/Test/Other Credits).

Image: Transfer/Test/Other Credits page

This example illustrates the fields and controls on the Transfer/Test/Other Credits page. You can find definitions for the fields and controls later on this page.

Transfer Credits

Print Area

Select the print area to indicate where the system displays Transfer Credit information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires substantial programming effort. Values are *Enrollment Detail*, *Enrollment Trailer*, *Transcript Header*, *Transcript Trailer*, and *Do Not Display*.

Note: If you select a value of *Enrollment Detail* with a Level of Detail field value of *Detail*, then the system populates by default and makes the following fields unavailable for entry: Print Posted Models Only: *Selected*; Inter-Career Transfer (Detail to Print): *Internal Equivalent Course*; Inter-Institution Transfer (Detail to Print): *Internal Equivalent Course*; and External Organization Transfer: *Internal Equivalent Course*.

Print Seq (print sequence)

The print sequence determines the order in which transfer credit information appears within the print area. The system populates the print sequence by default. You can change the value.

Print Posted Models Only

If you select any print area other than *Enrollment Detail*, the Print Posted Models Only check box is available for entry. Select the Print Posted Models Only check box to display transfer credit from posted models only.

If this check box is available and you do not select it, transfer credit from all models (posted, completed, and not posted) appears.

Transfer credit print details are organized in three categories: Inter-Career, Inter-Institution, and External Organization transfers.

Inter-Career Transfer

Transfers from academic career to academic career (or academic program to academic program, same academic career) in your institution. The source of data is the student's enrollment record at your institution.

Inter-Institution Transfer

Transfer between an external institution with which your institution shares a database. The source of data is the student's enrollment record at the external institution, but with a shared database you can bypass the data entry of external courses.

Level of Detail

Select the level of detail to print for each type of transfer. Values are:

Summary: The system only displays total units transferred.

Detail: The system displays the course details, depending upon your selection in the Detail to Print field.

Detail to Print

If you select *Detail* in the Level of Detail field, the Detail to Print field becomes available for entry. Values are *External and Internal*, *External Courses*, and *Internal Equivalent Course*.

External Organization Transfer

Most transfers fall into this category. Transfers between an external institution and your institution. The source of data is the external organization and is entered as external course work.

Obey External Org Params (obey external organization parameters)

Select this check box to obey the external organization transfer credit parameters on the Organization Affiliation page. Usually, you select this check box in order for official transcripts to follow the defaults set for printing external transfer information.

Test Credits**Print Area**

Select the print area to indicate where the system displays test credit information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires a substantial programming effort. Values are *Enrollment Detail*, *Transcript Header*, *Transcript Trailer*, and *Do Not Display*.

Print Seq	The print sequence determines the order in which test credit information appears within the print area. The system populates the print sequence by default. You can change the value.
Level of Detail	Select the level of detail to print for test credit. Values are: <i>Summary:</i> The system displays only total test credit units. <i>Detail:</i> The system displays the test credit details, depending upon your selection in the Details field.
Details	If you select <i>Enrollment Detail</i> as the print area and a level of detail value of <i>Detail</i> , the system populates the Details field with <i>Internal Equivalent Course</i> . You cannot alter the details value. If you select <i>Transcript Header</i> or <i>Transcript Trailer</i> as the print area, and a level of detail value of <i>Detail</i> , you can select which details to print. Values are <i>Internal Equivalent Course</i> , <i>Test and Internal Equivalents</i> , and <i>Test Credits</i> . <hr/> Note: If you select a level of detail of <i>Summary</i> , regardless of the print area you select, the Details field is unavailable for entry. <hr/>
Print Posted Models Only	If you select any print area other than enrollment detail, the Print Posted Models Only check box becomes available for entry. Select the Print Posted Models Only check box to display only test credit from posted models. If this check box is available but you do not select it, test credit from all models (posted and not posted) appears.
Other Credits	
Print Area	Select the print area where other credit information is printed. Print area values are delivered with your system in the Print Area Table page. Any modification to these values requires programming effort. Values are <i>Enrollment Detail</i> , <i>Transcript Header</i> , <i>Transcript Trailer</i> , and <i>Do Not Display</i> .
Print Seq	The system populates the print sequence by default. The print sequence determines the order in which other credit information appears within the print area. You can change the value.
Level of Detail	Select the level of detail to print for other credit. Values are: <i>Summary:</i> The system only displays the cumulative total of other credit units. <i>Detail:</i> The system displays the other credit details, depending upon your selection in the Details field.
Details	If you select <i>Enrollment Detail</i> as the print area and a level of detail value of <i>Detail</i> , the system populates the Details field

with *Internal Equivalent Course*. You cannot alter the details value.

If you select *Transcript Header* or *Transcript Trailer* as the print area, and a level of detail value of *Detail*, you can select which details to print. Values are *Internal Equivalent Course*, *Other Credit and Internal Equivalents*, and *Other Credits*.

Note: If you select a level of detail of *Summary*, regardless of the print area you select, the Details field is unavailable for entry.

Print Posted Models Only

If you select any print area value other than *Enrollment Detail*, the Print Posted Models Only check box becomes available. Select the Print Posted Models Only check box for the system to display other credit from posted models only. If this check box is available and you do not select it, other credit from all models (posted and not posted) appears.

Designating Transcript Type Test Scores

Access the Test Scores page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Test Scores).

Image: Test Scores page

This example illustrates the fields and controls on the Test Scores page. You can find definitions for the fields and controls later on this page.

*Test ID	*Test Component	Data Source
MCAT	Verbal Reasoning	School

Test Scores Print Area

Select the print area to indicate where the system displays test score information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires substantial programming effort. Values are *Transcript Header*, *Transcript Trailer*, and *Do Not Display*.

Test Scores Print Seq

The print sequence determines the order in which test score information appears within the print area. The system populates the print sequence by default. You can change the value.

Latest Test Only

Select this check box to only include the student's latest test scores on file in the system.

Test ID

Select the identification number of the tests to be displayed.

Test Component

Select the component of the tests to be displayed.

Data Source

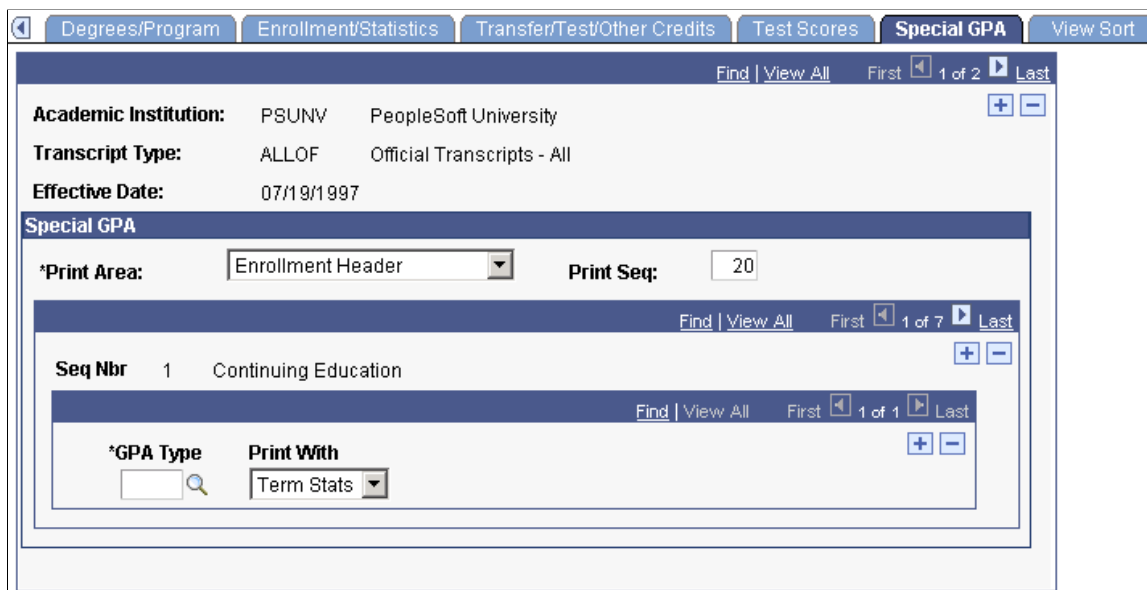

Select the data source of the tests to be displayed.

Designating Special GPA Information

Access the Special GPA page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Special GPA).

Image: Special GPA page

This example illustrates the fields and controls on the Special GPA page. You can find definitions for the fields and controls later on this page.

Special GPA Print Area

Select the print area to indicate where the system displays GPA information. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modification to these values requires substantial programming effort. Values are *Transcript Header*, *Transcript Trailer*, and *Do Not Display*.

Special GPA Print Seq (special GPA print sequence)

The print sequence determines the order in which GPA information appears within the print area. The system populates the print sequence by default. You can change the value.

GPA Type

Special GPAs are defined by academic career. Select the special GPAs to be displayed.

Print With

This field identifies whether the special GPA represents a GPA for one term or represents a cumulative GPA. This setup determines where the special GPA prints, with term statistics or with the cumulative statistics.

Defining Data Sorting Order

Access the View Sort page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > View Sort).

Image: View Sort page (1 of 2)

This example illustrates the fields and controls on the View Sort page (1 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'View Sort' page with the following details:

- Navigation Tabs:** Enrollment/Statistics, Transfer/Test/Other Credits, Test Scores, Special GPA, **View Sort**
- Academic Institution:** PSUNV PeopleSoft University
- Transcript Type:** ALLOF Official Transcripts - All
- Effective Date:** 07/19/1997
- Page and Transcript Header Table:**

Print Area	Row Type	Sort
Page Header	Institution Data	10
Page Header	Print Date	20
Transcript Header	Admissions	10
Transcript Header	Attendance Dates	20
Transcript Header	External Institutions	30
Transcript Header	External Degrees	70
Transcript Header	Program	90
Transcript Header	Test Scores	100
- Enrollment Table:**

Print Area	Row Type	Sort
Enrollment Header	Local Degrees	10
Enrollment Header	Special GPA	20
Enrollment Detail	Withdrawal	20
Enrollment Detail	Enrollment	30
Enrollment Detail	Transfer Credits	40
Enrollment Trailer	Term Statistics	40
Enrollment Trailer	Term Honors	50
Enrollment Trailer	Academic Standing	60

Image: View Sort page (2 of 2)

This example illustrates the fields and controls on the View Sort page (2 of 2). You can find definitions for the fields and controls later on this page.

Page and Transcript Header

View the rows that the system displays on the header portion of the transcript, and the order in which they are set to appear.

Enrollment

View the rows that the system displays in the enrollment portion of the transcript, and the order in which they are set to appear.

Transcript Trailer

View the rows that the system displays in the trailer portion of the transcript, and the order in which they are set to appear.

Do Not Display

View the rows that the system does not display in the transcript.

Setting up Transcript Fees

Access the Fee Setup page (Set Up SACR > Product Related > Student Records > Transcript > Define Transcript Type > Fee Setup).

Image: Fee Setup page

This example illustrates the fields and controls on the Fee Setup page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Fee Setup' page with the following details:

- Navigation:** Enrollment/Statistics, Transfer/Test/Other Credits, Test Scores, Special GPA, View Sort, Fee Setup
- Details:** Find | View All, First, 1 of 1, Last
- Academic Institution:** PSUNV PeopleSoft University
- Transcript Type:** DEMO Official Transcript Demo
- Effective Date:** 01/01/1900
- Transcript Fee Item Types:**
 - Payment Required? Yes No
 - Post to GL from Transcript App
 - Charge Item Type: 810000000200 (Transcript Fees)
 - SF Merchant ID: EPMTCRCRD (ePayment Credit Card)
 - Credit Card Item Type: 310000000150 (Credit Card - Direct to GL)
 - SF eCheck Merchant ID: EPMTCHECK (ePayment Check)
 - eCheck Item Type: 310000000525 (eCheck - Direct to GL)
- Transcript Fee:** Flat Amount: 25.00 USD
- Transcript Fee Rule:** Rule Name: [] Rule Search

Use the Fee Setup page to set up the fee structure for official transcript requests made through Fluid user interface.

You can edit this page only when the following conditions are set on the Basic Data page:

- Transcript Level = Print on Official
- Allow Student Self Service is selected
- Transcript Fee Required = Yes

Transcript Fee Item Types

Use this region to specify the item types related to the transcript fee.

Payment Required

If you select:

- *Yes*, you require payment for official transcript requests. The fields for item types and financial merchants appear on the page.

You must specify one merchant ID and its corresponding item type.

- *No*, you do not require payment for official transcript requests.

If you do not select a value, the system also treats it as *No*.

If you set Transcript Fee Required to “Yes” on the Basic Data page and Payment Required is set to “No,” you can still define transcript fees — either a flat amount or an amount calculated through the rules engine. You can also define delivery methods and fees. The fee is calculated and stored in the transcript table. Your institution can extract the total fee and then collect the payment outside of Campus Solutions, or manually post the total fee to the student’s account.

Post to GL from Transcript App

If Payment Required is set to “Yes,” then this field is automatically selected and you are not able to modify it.

Charge Item Type

Select a value. This field is required for Direct to GL.

This field is required as well as one payment type. Make sure you already set up the GL chart of accounts for accurate general ledger transactions.

SF Merchant ID

Select a value. This field is used for hosted payment framework.

Credit Card Item Type

Select a value. This field is used for Direct to GL.

SF eCheck Merchant ID

Select a value. This field is used for hosted payment framework.

eCheck Item Type

Select a value. This field is used for Direct to GL.

Transcript Fee

Use this region to define the fee you want to charge for an official transcript. You can edit the values in this region whether or not you require payment for a transcript. However, if you set Payment Required = “Yes,” you must specify at least one amount: a flat amount, an amount calculated using rules engine, or a delivery fee.

Flat Amount

Set the transcript fee amount. The amount you specify here is multiplied by the quantity the student requests.

Rule ID

Select the rule you want to use to calculate the transcript fee.

Your institution can create its own rule for assessing transcript fees. Campus Solutions provides a sample transcript fee rule:

Transcript Fee Calculation Sample. The sample rule calculates a discount if a student requests three or more transcripts.

See also "Library of System-Delivered Rules Engine Objects" (PeopleSoft Campus Solutions 9.2: Campus Community).

Setting Up Delivery Methods

Use the Define Delivery Method component to set up various delivery methods and delivery fees when students request an official transcript using PeopleSoft Fluid User Interface.

To add a delivery method, and then set it up:

1. Go to Set Up SACR >Product Related > Student Records > Transcript > Define Delivery Methods CS.
2. Click Add a New Value.
3. Select an academic institution, and then define a delivery method.
4. In Delivery Method, specify a four-character code for the delivery method.
5. Click Add.
6. Locate the delivery method you added, and then select it to access the Define Delivery Methods page.

Pages Used to Set Up Delivery Methods

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Define Delivery Methods	SSR_DELIVER_TBL	Set Up SACR >Product Related > Student Records > Transcript > Define Delivery Methods CS	Set up various delivery methods and fees.

Defining Delivery Methods and Fees

Access the Define Delivery Methods page (Set Up SACR >SSR_DELIVER_TBL Product Related > Student Records > Transcript > Define Delivery Methods CS).

Image: Define Delivery Methods page

This example illustrates the fields and controls on the Define Delivery Methods page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Define Delivery Methods' page. At the top, there's a title bar with 'Define Delivery Methods' and navigation options like 'Find | View All', 'First', '1 of 1', and 'Last'. Below that is a 'Details' section. The main form has the following fields and values:

- *Academic Institution: PSUNV
- *Delivery Method: INTL (with a 'Default' checkbox)
- *Description: International Federal Express
- Delivery Charge: 35.00
- Currency Code: USD

Below the main form is a section titled 'Display Notes to Student' which includes a checkbox for 'Display in Self Service' and a large text area for 'Notes'.

Default

Select if you want this method to be the default delivery method that appears when students request transcripts using Fluid user interface.

Description

Enter a description of the delivery method. This appears in Self Service Fluid user interface.

Delivery Charge

(Optional) Enter the fee for the delivery method.

Base Currency

This value is derived from Set Up Common Objects >Install >Installation Table >Settings and Defaults.

Display Notes to Student**Display in Self Service**

Select if you want to display a message to students when they request an official transcript in Self Service Fluid user interface.

Notes

Enter the message you want to display in Self Service Fluid user interface.

Setting Up Electronic Transcript Processing

To set up electronic transcript processing, use the TS130/TS131 Setup component (TS130_CONTROL).

This section discusses how to:

- Define TS130 and TS131 controls.

- Define reporting codes and email information.
- Define TS130 contacts.
- Set up data maps for TS130 outbound processing.

Pages Used to Set Up Electronic Transcript Processing

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
TS130/TS131 Setup	TS130_CONTROL	Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130/TS131 Setup	Define codes and values that are reported in the TS130 and TS131 files.
TS130 Setup	TS130_CONTROL2	Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130 Setup	Define reporting code formats and information about the email message the system generates, such as the subject line and the sender email address.
TS130 Contacts	TS130_CONTROL_COM	Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130 Contacts	Specify the contact information for your organization that you want included in the outbound file.

Defining TS130 and TS131 Controls

Access the TS130/131 Setup page (Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130/TS131 Setup).

Image: TS130/131 Setup page

This example illustrates the fields and controls on the TS130/131 Setup page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'TS130/131 Setup' page with the following fields and values:

- Academic Institution:** PSUNV PeopleSoft University
- *Effective Date:** 01/01/1900
- *Status:** Active
- *Separator:** *
- *End of Line:** ~
- *Sub-element Separator:** ^
- *Institution Code to Report:** Mutually Defined
- *Sending Institution Code:** 123456789012345
- *Sending Status:** Test Data
- Acknowledgement Requested
- *Receive Institution Code (ISA):** FICE Code
- *Send Institution Code (N1):** ATP Code
- *Sending Institution Code (N1):** 54231
- *Receive Institution Code (N1):** FICE Code
- Using TS130

Separator	Insert a character that separates values in the output file.
End of Line	Insert a character that ends a line in the output file. This value must be different from the separator value.
Sub-element Separator	Insert a character that the system uses to separate component data structure. This character must be different from the separator and end of line delimiters.
Institution Code to Report	Choose the type of code that you report on the ISA segment (Interchange Control Header Data Element Summary) as the Interchange ID Qualifier for the Interchange Sender ID. The values are <i>ACT Code</i> , <i>ATP Code</i> , <i>FICE Code</i> , <i>IPEDS Code</i> , <i>Mutually Defined</i> , <i>Stat Canada College Student</i> , <i>Stat Canada Postsecondary</i> , and <i>Stat Canada Uni Student Inst</i> .
Sending Institution Code	Enter your institution's appropriate code, as determined by the value you select in the Institution Code to Report field.
Sending Status	Select <i>Test Data</i> while the institution is sending test files to trading partners. Select <i>Production Data</i> after testing is complete and TS130 outbound transactions are official.

Acknowledgement Request	Select to request the receiving institution to respond with a TS997 Functional Acknowledgement.
Received Institution Code (ISA)	Choose the type of code that you report on the ISA segment (Interchange Control Header Data Element Summary) as the Interchange ID Qualifier for the Interchange Receiver ID. Values are <i>ACT Code</i> , <i>ATP Code</i> , <i>FICE Code</i> , and <i>IPEDS Code</i> . These values are defined on the Organization Table page for each institution.
Send Institution Code (N1)	Choose the type of code that you report on the N1 segment (Name [Sending/Receiving Institution]) as the identification code qualifier. Values are <i>ACT Code</i> , <i>ATP Code</i> , <i>College Board and ACT</i> , <i>FICE Code</i> , <i>IPEDS Code</i> , <i>Statistics Canada College</i> , and <i>Statistics Canada University</i> .
Sending Institution Code (N1)	Enter the appropriate code for your institution, as determined by the value entered in the Send Institution Code field.
Receive Institution Code (N1)	Select the appropriate code that the institution reports as the recipient in the N1 segment. Values are <i>ACT Code</i> , <i>ATP Code</i> , <i>FICE Code</i> , and <i>IPEDS Code</i> . These values are defined on the Organization Table page for each institution.
Using TS130	Select if you process TS130 outbound transactions for this institution.

Note: If the characters you enter in the Separator, End of Line or Sub-element Separator fields appear within any text that is included in the output file, the receiving institution recognizes the character and inappropriately separates a field or ends a line. Select characters that are *not* found in any fields or text that is part of the output file.

Defining Reporting Codes and Email Information

Access the TS130 Setup page (Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130 Setup).

Image: TS130 Setup page

This example illustrates the fields and controls on the TS130 Setup page. You can find definitions for the fields and controls later on this page.

External Institution Code

Select the type of code that the institution reports for students' previously attended institutions that are reported for other institutions attended. Values are *ACT Code*, *ATP Code*, *FICE Code*, and *IPEDS Code*. These values are defined on the Organization Table page for each institution.

Course/Field of Study Code

Select the type of course or field of study code that the institution reports. Values are *CIP Code* and *HEGIS Code*. Course codes are defined on the Offerings page of the Course Catalog component and field of study codes are defined on the Academic Plan Taxonomy page.

Lowest Possible GPA

Enter the numeric value for the lowest possible GPA at this institution to be reported in the SUM (Academic Summary) segment.

Highest Possible GPA	Enter the numeric value for the highest possible GPA at this institution to be reported in the SUM (Academic Summary) segment.
Historic Enrol Grade Qualifier	Enter the academic grade qualifier code that you report with historical course enrollments. The codes are based on the American Medical Colleges Admissions Services (AMCAS) grade scale. Please refer to Appendix B of the American National Standards Institute Accredited Standards Committee (ANSI ASC) X12 Version 4.0 Implementation Guide dated April 1998.
TS130 E-Mail Subject	Enter a free form text that the system uses as the subject line in the email that delivers the TS130.
Email Address	Enter free form text that the system uses as the sender of the TS130 email.
File Name	Enter the file name that you want the system to use for each TS130 file when the system creates the file. The system inserts the control number before the file extension to identify unique files.
Default Path for Output File	Enter the default path to which the system writes the TS130 file at the time it is generated.

Note: Users must have write permission for this specified directory to prevent runtime errors. Also, you must enter the final slash in the file path.

Defining TS130 Contacts

Access the TS130 Contacts page (Set Up SACR > Common Definitions > TS130/TS131 Setup > TS130 Contacts).

Contact Function Code	Select the function code, which identifies the major responsibilities of the person or office to which the system directs administrative communications about the TS130.
Name	Enter a free form name for the contact.
Communication Type	Select the type of communication that defines the communication number. You can add up to three communication types.
Communication Number	Enter a free form communication number, such as a telephone number.

Setting Up Data Maps for TS130 Outbound Processing

To report the correct standardized codes in the TS130 output file, users must map their internal values to the correct standard code. For instance, because the Degree table is a user-defined table, users must map an internal value of *BA* to a standard code of 2.4.

The system uses the Conversion Data Profile found within the EDI Manager to define these values. If you are currently using the TS130 Inbound process, you have already mapped several tables and fields. The TS130 Outbound process uses some of the same profiles, but it requires additional ones.

To set up data maps for TS130 Outbound processing, navigate to the EDI_CONV conversion data profile. Go to PeopleTools > EDI Manager > Convert EDI/PeopleSoft Code > Conversion Date Profile. Enter *EDI_CONV* in the EC Convert Profile ID field on the search page.

While mapping your internal values to external codes, you might find that you have a many-to-one mapping situation, where multiple internal values could be used to map to the same external code. In this situation, the process picks up the codes for which you selected the Int Deflt (internal default) check box.

We deliver the following convert type IDs, however, users must define the internal and external values for each type:

Convert Type IDs	Internal Values	Maps To
ACAD_CAR: TS130 Course Level per Career	ACAD_DEGREE.DEGREE AND EXT_DEGREE.DEGREE	DEG01
DEGR_HONOR: TS130 Degree Honors	ACAD_DEGR_HONS.HONORS_CODE	DEG05
FOS_LEVEL: TS130 Field of Study Level	ACAD_PLAN_TBL.ACAD_PLAN_TYPE	FOS01
GRADE_BAS: EDI TS130/TS189 Grade Basis	STDNT_ENRL.GRADING_BASIS_ENRL	CRS05
MILESTONE: TS130 Student Milestone	STDNT_CAR_MLSTN.MILESTONE	ATV02
STDNT_AWRD: EDI TS130 Student Award	HONOR_AWARD_CS.AWARD_CODE	ATV02
TERM_CATEG: EDI TS130 Term Category	TERM_TBL.TERM_CATEGORY	SES02

Mapping Transcript Type to TS130 Files

While several segments and elements are required with the TS130 file, users can define the overall content that the system reports in the electronic transcript. Depending on the transcript type associated with the electronic transcript request, you can choose what student information gets reported. If a piece of information is set to print as defined by the transcript type, and there is a corresponding functional segment available on the TS130, then the system reports it on the TS130, disregarding the exact print sequence and print area.

Exceptions to the previous rule include:

- Transcript text is not currently included in the output file.

- For transfer credit (course, test, and other) to be reported, the level of detail must include the internal equivalent.

Chapter 15

Setting Up Activity Management

Prerequisites for Setting Up Activity Management

In order to gain the highest value from this documentation, we suggest that readers be familiar with the following items:

- Basic PeopleSoft Tree Structure, vocabulary, and components.
 - Campus Solutions Academic Structure.
 - Campus Solutions Course Catalog.
 - Campus Solutions Schedule of Classes.
 - Campus Solutions Instructor/Advisor Table.
 - Campus Solutions Grading Setup.
 - Basic Academic Structure Security.
-

Setting Up an Activity Management Framework

This section discusses how to:

- Define content categories.
- Define content devices.
- Define exam types.
- Define forms of identification.
- Define a result scale.
- Define content messages.
- Define academic periods.
- Define extenuating circumstances.
- Define inclusion types.
- Review date sources.
- Define date settings.
- Define action dates.

- Define result dates.

Understanding Activity and Result Dates for Self Service

The Date Sources, Date Settings, Action Dates, and Result Dates components comprise a structure that allows schools to establish self-service controls for students and instructional staff (faculty and exam staff). This feature is designed to be a one-time setup using delivered date sources, negating the need to set up these controls on a term-by-term basis.

You must select a date source to control when to begin and end specific access for actions and results. Similar to the dynamic date feature, you have the ability to indicate how many days before or after this date the controls should begin or end.

For students, you must define when optional activities can be selected. For example, students may have a choice of submitting either a written report or presenting an oral report. You must define the range of dates, using the delivered date sources, that a student has to make that choice. For instance, your institution may want students to begin their selection of an optional assessment item on the session start date, but complete this selection five days before the assessment item due date. Define these dates on the Action Dates component. These can be defined down to the academic program level. If your institution does not allow optional selections of activities, you do not need to set up Action Dates.

You must also define when students can view their course activities results. Set this up on the Result Dates component using the *Student Self Service View* Release Type. Again, you can define these down to the academic program level, but you can also restrict the view of results to specific result statuses.

For instructional staff, you must define when to display the result rosters in the Activity Management WorkCenter and whether they can manually enter results (grades) and calculate results. Using the Result Dates component with the *Faculty Self Service Update* Release Type, your institution can define dates for specific academic organizations and which result access – calculate or grade – can be performed.

See the following sections for more details about defining activity and result dates for self service:

- Reviewing date sources.
- Defining date settings.
- Defining action dates.
- Defining result dates.

Pages Used to Set Up an Activity Management Framework

Page Name	Definition Name	Navigation	Usage
Content Categories	SSR_AC_TYPE_TBL	Curriculum Management > Activity Management > Setup > Content Categories	Set up content categories used in activity management.
Content Devices	SSR_AC_DEVICES_TBL	Curriculum Management > Activity Management > Setup > Content Devices	Set up content devices used in activity management.
Exam Types	SSR_AC_EXAMTYP_TBL	Curriculum Management > Activity Management > Setup > Exam Types	Set up exam types used in activity management.

Page Name	Definition Name	Navigation	Usage
Forms of Identification	SSR_AC_ID_REQ_TBL	Curriculum Management > Activity Management > Setup > Forms of Identification	Set up forms of ID accepted by your institution as part of activity management.
Result Scale Table	SSR_GRADE_MAP_TBL	Set Up SACR > Product Related > Student Records > Grading > Result Scale	Define a result scale that is attached to the various content types of a course.
Content Messages	SSR_AC_MESSAGES	Curriculum Management > Activity Management > Setup > Content Messages	Set up messaging that is used in activity management.
Academic Period Table	SSR_PERIOD_TBL	Set Up SACR > Foundation Tables > Term Setup > Academic Periods	Set up academic periods used as part of activity management.
Activity Extenuating Circumstances	SSR_AC_ITEMTYPE	Curriculum Management > Activity Management > Setup > Extenuating Circumstances	Define reason codes specific to an activity or a result.
Inclusion Types	SSR_AC_INCLTYPE	Curriculum Management > Activity Management > Setup > Inclusion Types	Activate inclusion types to be used in the Activity Definition.
Date Sources	SSR_ADC_SETUP	Curriculum Management > Activity Management > Setup > Date Sources	Indicates the available records when setting activity dates.
Date Settings	SSR_ADC_MAPPNG	Curriculum Management > Activity Management > Setup > Date Settings	Set date sources for actions and results.
Action Dates	SSR_ADC_ACTN_CTRL	Curriculum Management > Activity Management > Setup > Action Dates	Set parameters for when students can select optional activities.
Result Dates	SSR_ADC_RSLT_CTRL	Curriculum Management > Activity Management > Setup > Result Dates	Set parameters for when instructional staff can grade activities.

Defining Content Categories

Access the Content Categories page (Curriculum Management > Activity Management > Setup > Content Categories.).

You should define content categories if categories are utilized as a content type in your activity content tree. Content categories are used to group individual content items into a category that has meaning to your institution. This setup is optional, but provides the ability to set calculation rules against a given category, if necessary, the ability to group assignments for display purposes, or both. Categories are child items to courses and components in the content tree structure. They can also be children to conditions. Additional examples of categories include reading assignments, quizzes, in-class tests, research, and homework.

Defining Content Devices

Access the Content Devices page (Curriculum Management > Activity Management > Setup > Content Devices).

A content device is any item that a student is allowed to utilize during an examination or required for a course or to complete a piece of coursework. Devices are associated with specific content items in the activity registry. Content devices are optional. Additional examples of content devices include dictionary, thesaurus, textbook, digital camera, and paint brushes.

Defining Exam Types

Access the Exam Types page (Curriculum Management > Activity Management > Setup > Exam Types).

Exam types are required for course-level examinations and are a means to further define the nature of an exam; they are associated with an exam content item on the activity registry. Additional examples of exam types include open-book, closed-book, oral, and final.

Note: If you are using resit functionality and there are multiple examinations within a course, each exam must have a different exam type.

Defining Forms of Identification

Access the Forms of Identification page (Curriculum Management > Activity Management > Setup > Forms of Identification.).

Forms of identification are any items that a student may be required to provide prior to entrance into an examination at your institution. This setup is optional. Forms of identification are associated with a specific exam content item in the activity registry. Additional examples of forms of identification include examination entry form, campus ID, and waiver form. Forms of Identification can be established at the Academic Institution, Career, or Organization level and can be applied automatically to course activity registries.

Defining a Result Scale

Access the Result Scale Table page (Set Up SACR > Product Related > Student Records > Grading > Result Scale).

Image: Result Scale Table page (1 of 2)

This example illustrates the fields and controls on the Result Scale Table page (1 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Result Scale Table' page for 'Peoplesoft University'. The 'Result Scale' is named '100 Point Scale - Undergraduate'. Key configuration options include:

- Scale Options:**
 - Mandatory Pass Result Scale
 - Enable Score
 - Enable Mark
 - Integer Positions: 3
 - Decimal Positions: 2
 - Decimal Option: Rounded
 - To: 0
 - Decimal(s): Apply to Course Mark Only
 - Minimum Mark: 0.00
 - Maximum Mark: 100.00
 - Display Mark Range
 - Enable Description
 - Enable Grade
 - Enable Outcome
- Mandatory Pass Calculation Options:**
 - Use Course Result Scale
 - Use Mandatory Pass Result Scale
 - Mandatory Pass Result Scale:

Image: Result Scale Table page (2 of 2)

This example illustrates the fields and controls on the Result Scale Table page (2 of 2). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Scales' page with the following configuration:

- Grading Scheme:** UGD (Undergraduate Grading Scheme)
- Grading Basis:** GRD (Graded)
- Buttons:** Fetch Grades, Copy To

Mark	Maximum Mark	Exclude Mark	Default Mark	Grade	Grade Description	Outcome	Resit Eligible	Mandatory Fail		
90.00	100.00			A	Excellent	Pass	<input type="checkbox"/>			
80.00	89.99		<input checked="" type="checkbox"/>	B	Good	Pass	<input type="checkbox"/>			
80.00	89.99			X	Transfer Pass	Pass	<input type="checkbox"/>			
70.00	79.99			C	Average	Pass	<input type="checkbox"/>			
65.00	69.99			D	Poor	Pass	<input type="checkbox"/>			
60.00	64.99			D	Poor	Pass	<input checked="" type="checkbox"/>			
59.99	59.99			F	Fail	Fail	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		
0.00	59.98	<input type="checkbox"/>		F	Fail	Fail	<input checked="" type="checkbox"/>			
		<input checked="" type="checkbox"/>		I	Incomplete	Incomplete	<input type="checkbox"/>			
		<input checked="" type="checkbox"/>		W	Withdrawn	Withdrawn	<input type="checkbox"/>			

On this page you establish how scores and marks map to grades and outcomes. If using program enrollment, users can define which of these fields, calculated at the activity level, they want to update to a student's Academic Progress Tracker (APT). The Grade In/Official value can also populate the Student Enroll record (STDNT_ENRL), in much the same way as the system currently does in the Student Records core grading process. A Result Scale can be established at the Academic Institution, Career, or Organization level and can be applied automatically to course activity registries.

Scale Options

The options you select in this group box determine the appearance of the Scales group box below.

Mandatory Pass Result Scale Select this check box to tag the scale as a scale that can be used for Mandatory Pass Calculation.

Mandatory Pass Calculation Options These options are available only if the Mandatory Pass Result Scale option is not selected. The following two options are available if mandatory fail is detected during calculation:

- **Use Course Result Scale:** Select this option to set the mark to zero and use the scale defined in the course activity if a mandatory fail is detected during calculation.
- **Use Mandatory Pass Result Scale:** Select this option and also specify a Mandatory Pass Result Scale to use if mandatory fail is detected during calculation. When this happens, the actual calculated mark will be saved with the set grade and outcome using the provided Mandatory Pass Result Scale.

When you select the Use Mandatory Pass Result Scale option, the Use Mandatory Pass Result Scale options are not displayed.

When you select the Use Mandatory Pass Result Scale option, a message is displayed if the scale is currently in use my Activity Registry, Activity Manager, or Individual Activity Manager (IAM). If you click OK in the message box, another message informs you that any values in Mandatory Fail and Result Eligible columns will be removed.

Enable Score Select this check box to display the Score column below, and define the field as either Character or Numeric. If you enable the Score column, users can enter a value that can be translated to a Mark. This check box is cleared by default. The score is an optional result field that can be used to map a value that is not used in calculation to a mark that is used in calculation.

Score Value Field Type This field appears when you select the Enable Score check box. Specify whether the free-form Score is entered as a *Character* or *Numeric* value.

Integer Positions, Decimal Positions These fields appear when the Score Value Field Type is *Numeric*. Specify the position that the integer and decimal fields can use.

Enable Mark Select this check box to display the Mark column below. Marks are required for those scales where result values require calculation. This check box is selected by default.

Integer Positions, Decimal Positions	These fields appear when the Enable Mark check box is selected. Specify the position the integer and decimal fields can use. The default value is 0; you must define the position values.
Decimal Option, To __ Decimals	Indicate how to round or truncate the decimal position for an entered or calculated mark on a student's record.
Minimum Mark, Maximum Mark	These fields appear when the Enable Mark check box is selected. Together, they indicate the numerical range of the scale; that range is used to validate entered marks against a student's record. During the grading process if an entered mark falls outside the range of these minimum and maximum values, the user receives an error.
Display Mark Range	This field appears when the Enable Mark check box is selected. Select the check box to allow users to view the upper end of the range for each mark entered. The upper end of the range appears in the Maximum Mark column of the Scale grid below. This check box is cleared by default.
Enable Description	Select this check box to display the Score/Mark Description column below. This check box is cleared by default.
Enable Grade	Select this check box to display the Grade and Grade Description columns below. If you select this check box, the Grading Scheme and Grading Basis fields also appear. This check box is selected by default.
<hr/>	
	Note: Currently, to enter results on the Individual Activity Manager (IAM) a result scale must possess a student's enrollment grading scheme/grade basis.
<hr/>	
Enable Outcome	Select this check box to display the Outcome column below, where you can define the outcome of a score/mark/grade combination. This check box is selected by default.
Scales	
Grading Scheme	Identify the grading scheme from which the grade basis and grade are mapped. A result scale can have multiple grading schemes and grade bases, but the course to which the result ID is associated must have one of the grading scheme and grade bases combinations defined here.
Grading Basis	Identify the grade basis from which the grade is mapped.
Fetch Grades	You can click this button after a grading scheme and basis have been entered. The system displays all grades defined on the grade table for the given grading scheme and grading basis. The system then displays a message when grades are fetched and displays them here.

Note that you can delete any grade from the scale after the fetch process is complete.

Copy From

You can click this button if the Enable Grade check box is selected. To use Copy From, a previously saved scale within this result scale must exist. To execute the copy, insert a new row; enter the Grading Scheme and Grading Basis, then select Copy From.

Copy To

You can click this button if the Enable Grade check box is selected and a previously saved scale exists.

Score

This column appears if the Enable Score check box is selected above. Use this field if the initial result provided to the student differs from the corresponding mark or grade field. The value entered here maps to the specific mark value.

If you use this column, the Display Mark Range and Maximum Mark fields are disabled.

Mark

This column appears if the Enable Mark check box is selected above. The system maps marks in one of two ways:

- If you enter a score here, the system maps it directly to a mark and disables the Display Mark Range and Maximum Mark fields.
- If you do not enter a score, the system treats the mark as a range. The value entered here becomes the lowest value of the range used by the system to map to a grade and outcome. For example, the system grants an A grade for students receiving any mark from 90.00 to 97.99. A student receiving a 98.00 to 100.00 receives an A+.

Use this field, in combination with the Maximum Mark field, to indicate the range of each row.

Maximum Mark

This column appears if the Display Mark Range check box is selected above. Use this field, in combination with the Mark field, to show the full range of a specific row. The value that appears here is derived from the actual values entered in the Mark column.

Apply to Course Mark Only

Select this check box to apply the rounding off or truncating the calculated marks at only the course level.

Exclude Mark

This check box appears when the Mark value of a row is zero (0.00). Select this check box when a mark should not be used in a calculation.

Rows containing grade outcomes such as Incomplete and Withdrawn are the most likely candidates to be excluded.

Default Mark

This check box appears when there is duplication in the Mark column. When duplication occurs, select which mark the system should use for calculation purposes.

In the above example, a student who earns a mark between 60.00 and 69.99 receives a grade of *D / Poor* by default; faculty and administrative users have the ability to override and change the grade to *P / Pass* or *X / Transfer Pass* where necessary for individual students.

Grade

The values in this column are retrieved from the Grade Table when you select the Fetch button; you can also enter them manually. You can delete any fetched grade values.

Outcome

Select *Passed*, *Failed*, *Withdrawn*, *Audit*, or *Incomplete*.

The Outcome (SSR_RESULTS_STATUS) is populated based on the following logic when the grade field is populated:

1. Grades with In Progress Grade flag = Y tagged as Incomplete.
2. Grades with Earn Credit flag = Y and Grade Points > 0, tagged as Passed.
3. Any Convert To grade pointing to a grade identified in step 2, tagged as Passed.
4. Any grade <=> steps 1, 2 or 3 and Include in GPA = Y, tagged as Failed.
5. Any Convert To grade pointing to a grade identified in step 4, tagged as Failed.
6. Any grades <=> 1, 2, 3, 4 or 5 left blank.

Note: Any values added to SSR_RESULTS_STATUS must also be set up on SSR_IAM_OUTCOME.

Resit Eligible

Indicate which mark, grade, and outcome combinations are eligible for reassessment. This field works in conjunction with the Resit Inclusion defined on the Activity Registry page and maintained on the Activity Manager page.

Mandatory Fail

This feature is used with the Mandatory Pass feature set up in the Activity Registry or the Activity Manager. It allows schools to indicate that if a particular activity of a course is failed, then the student fails the overall course. If an activity is noted as a Mandatory Pass and the student fails it, the system populates the mark indicated here as the Mandatory Fail result on the course result.

In the example above—a student who fails an activity required as Mandatory Pass—the system inserts a course result row with a mark of 59.99, the grade of F, and the outcome of Fail. Any

mark/grade/outcome combination can be set as the Mandatory Fail row. Another common setting for this the result row may be 0.00 / F / Fail.

Defining Content Messages

Access the Content Messages page (Curriculum Management > Activity Management > Setup > Content Messages).

Image: Content Messages page

This example illustrates the fields and controls on the Content Messages page. You can find definitions for the fields and controls later on this page.

Content Messages

Academic Institution: PSUNV
 Message ID: BIOL-ADV

Message Detail Find | View All First 1 of 1 Last

Effective Date: 01/01/1900
 *Status: Active
 Description: Biology Major Advising Requirement
 Message Usage: General Content Comments

Search Attributes

Subject Area: BIOLOGY
 Course ID:
 Offer Nbr:
 Course Topic ID:

Message

All Biology majors enrolling in this course must obtain written approval from their advisor.

Content messages that you create here can be used within the activity registry. You can also enter free-form messages directly into the activity registry. Content messages are created as either *General Content Comments* or *Staff Instructions*. General content comments are directives for students and staff and are associated with content types in the activity. Staff instructions are associated with examination staff in the activity registry. Staff instructions are only visible to staff members assigned to a given exam.

Message Usage

Select either *General Content Comments* or *Staff Instructions*. General content comments are prompted as content notes in

the activity registry for each content type. Staff instructions are prompted as administrative instructions in the Staffing Requirements section in the activity registry for exam content types.

Subject Area, Course ID, Offer Nbr
(number), **Course Topic ID**

These fields serve as search filters in the activity registry and activity manager for content notes and administrative instructions. Add subject, course ID, offering number, or course topic to aid in searching on the activity registry or activity manager.

Message

Enter text here to populate the Message ID prompt in content notes or administrative instructions (based on message usage) in the activity registry.

Defining Academic Periods

Access the Academic Period Table page (Set Up SACR > Foundation Tables > Term Setup > Academic Periods).

Image: Academic Period table page

This example illustrates the fields and controls on the Academic Period table page. You can find definitions for the fields and controls later on this page.

Academic Period Table

Academic Institution: PSUNV
Academic Period ID: 2014 FALL EP

***Career:** Undergraduate + -
Acad Year:
Term: 2014 Fall
Session:
Acad Org:

Academic periods are institutionally defined time periods that can be created to support exams in Activity Management. The Period Type of *Exam Period* is delivered for this purpose. Exam periods will be associated with exams in the Activity Generator, Activity Manager, and the Section Manager. The Program Enrollment feature also utilizes Academic Periods but with a different Period Type.

Period Type

Select *Exam Period* for Activity Management. Additional period types are delivered with Program Enrollment.

This field indicates the type of academic period. When the Period Type is *Exam Period*, the Academic Period Attributes section becomes available.

Last Section Number

This field indicates the most recent section number associated with an exam section in the Section Manager.

Start Date	The beginning date of the academic period being defined.
Start Time	The beginning time of the academic period being defined.
End Date	The final date of the academic period being defined.
End Time	The final time of the academic period being defined.
Max EOC Program Date (maximum exam only course program date)	The maximum date that an Exam Only Course (EOC) can be created. If this field is left as null then start date is used as the maximum EOC program date.
Related Period ID	For future use.
Career	Enter the career(s) for which this academic period is applicable. When associating an exam period with a course exam, the career entered here must match the career associated with the course.
Academic Year	For future use. This attribute is used at a later date to associate an academic period with an academic year.
Term	Enter a term to associate it with the academic period. This association is used as follows: <ul style="list-style-type: none"> • It controls which academic periods are available to students who are enrolled in a particular term. • It is <i>required</i> for schools utilizing both the Exam Only Course and the Program Enrollment features by informing the system into which academic period a student should be enrolled when the enrollment is processed by the IAM Batch Generator.
Session	Enter a session to associate it with the academic period. This association is used as follows: it controls which academic periods are available to students who are enrolled in a particular term/session combination.
Acad Org	For future use. This attribute is used at a later date to restrict processing.
Academic Period Attributes Section	<p>This section appears when the Period Type is <i>Exam Period</i> and allows users to define values for delivered common attributes. The record context used for the Academic Period Table is the Period Table Attributes (SSR_PERIOD_TBL) record. The entity names used for the Activity Registry are prefixed by 'SSR'.</p> <p>The delivered attributes are <i>Exam Period Type</i>, <i>Enrollment Start Date</i>, <i>Enrollment End Date</i>, <i>Fully Graded Date</i>, <i>Late Enrollment Date</i>, and <i>Service Indicator</i>. Of these, <i>Exam Period Type</i>, <i>Enrollment Start Date</i> and <i>Enrollment End Date</i> are required.</p> <p>See "Understanding Common Attribute Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)</p>

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

Exam Period Type

Select *Regular* or *Resit*.

When the period type is exam period, indicate if the period is designed to be a regular exam period or an exam period designated for resits only. The period type is analyzed during the reassessment evaluation process (see Resit Period Limit Assignment).

Enrollment Start Date

Use this field to indicate the first date that students are able to select an exam activity during this academic period.

Enrollment End Date

Use this field to indicate the last date that students are able to select an exam activity during this academic period.

Fully Graded Date

Use this field to identify the date for an exam period where activities would be considered completely graded.

Late Enrollment Date

Use this field to indicate the first date that begins the late enrollment period to select an exam activity during this academic period.

Service Impact

Use this field to enter the service impact that would prohibit a student from selecting an exam activity in this academic period.

Defining Extenuating Circumstances

Access Activity Extenuating Circumstances page (Curriculum Management > Activity Management > Setup > Extenuating Circumstances).

Image: Activity Extenuating Circumstances page

This example illustrates the fields and controls on the Activity Extenuating Circumstances page. You can find definitions for the fields and controls later on this page.

Content Type	Description		
2000	Component	+	-
4500	Exam Section	+	-
5000	Attendance	+	-
6000	Assessment Item	+	-

This component allows administrative users to define *reason codes* specific to an activity, a result, or both. The extenuating circumstance is stored and can be used to drive further processing. For instance, if a student is sick on the day of the exam, users can record this against the exam activity. With future processing the system will know to defer the student's attempt to a later exam period (Rules Engine would be incorporated into this processing).

Content Definition

Indicate to which Activity Definition the extenuating circumstance is applicable. Currently for Activity Management the only value is *Coursework*.

Extenuating Circumstance

User-defined code to identify the extenuating circumstance.

Long Description

Long description field to explain the extenuating circumstance. In the future, this information can be provided to students and faculty in self service.

Show in Faculty Self Service

Select this check box to display the extenuating circumstances prompt in faculty self service.

Show in Student Self Service

Select this check box to display the chosen extenuating circumstance to students in student self service.

Valid for Activity Status

Indicates whether the extenuating circumstance is applicable to student’s activity status. For example, if the student missed an assignment due to illness this extenuating circumstance can be recorded against the student's assignment activity on the IAM component.

Valid for Result Status

Indicates whether the extenuating circumstance is applicable to student’s result status. For example, if a student sat for an exam but was ill, this extenuating circumstance can be recorded against the exam result to explain a poor result. This would be recorded on the Result Roster component or the IAM Result for an individual student.

Applicable Contents

Indicates to which content types the extenuating circumstance is applicable.

Defining Inclusion Types

Access the Inclusion Types page (Curriculum Management > Activity Management > Setup > Inclusion Types).

Image: Inclusion Types page

This example illustrates the fields and controls on the Inclusion Types page. You can find definitions for the fields and controls later on this page.

Inclusion Types							
Sort Sequence	Inclusion Type	Status	Description	Created By	Created	Updated By	Last Update DateTime
1	05-GEN	Active	General	PS	26/06/2013 2:14:20PM	PS	26/06/2013 2:32:27PM

TermEndDt	Term End Date	TERM_TBL	TERM_END_DT			<input checked="" type="checkbox"/>	Validate Source

This component defines which dates in the system can be used as landmarks to control when students are allowed to select optional activities and review results in self service. Users also select from these dates when the result roster becomes available to instructional staff in the Activity Management WorkCenter and which actions can be performed. Eighteen date sources are delivered as system data and can be used when setting date controls for actions (students) and results (students and instructional staff). In most cases, no action is required on this page.

An Ad Hoc date source is provided that allows users to enter a specific date and time for activity actions and results. Keep in mind that unlike the other delivered date sources, an ad hoc date would need to be updated on a regular basis.

Users can also add new date sources if needed, but depending on the record keys this could require modifications to the SSR_ACTIVITY:UTIL app package.

Content Definition

The delivered content definition value for Activity Management is *Coursework*.

Date Type

This indicates if the dates listed are for actions or results. Two date types are delivered: *Action Control* and *Result Control*. Action controls are specific to students being able to select optional activities in self service. Result controls are used

to display results to students and to open the result roster to instructional staff for grading purposes.

System Data

An indicator showing that system data exists on this page.

Date Source ID

A unique identifier that stores the details of the date and time for each date source.

Date Field CAF Attribute

The Common Attribute Framework date field referenced.

System Data

Indicates whether the data is delivered as system data.

Validate Sources

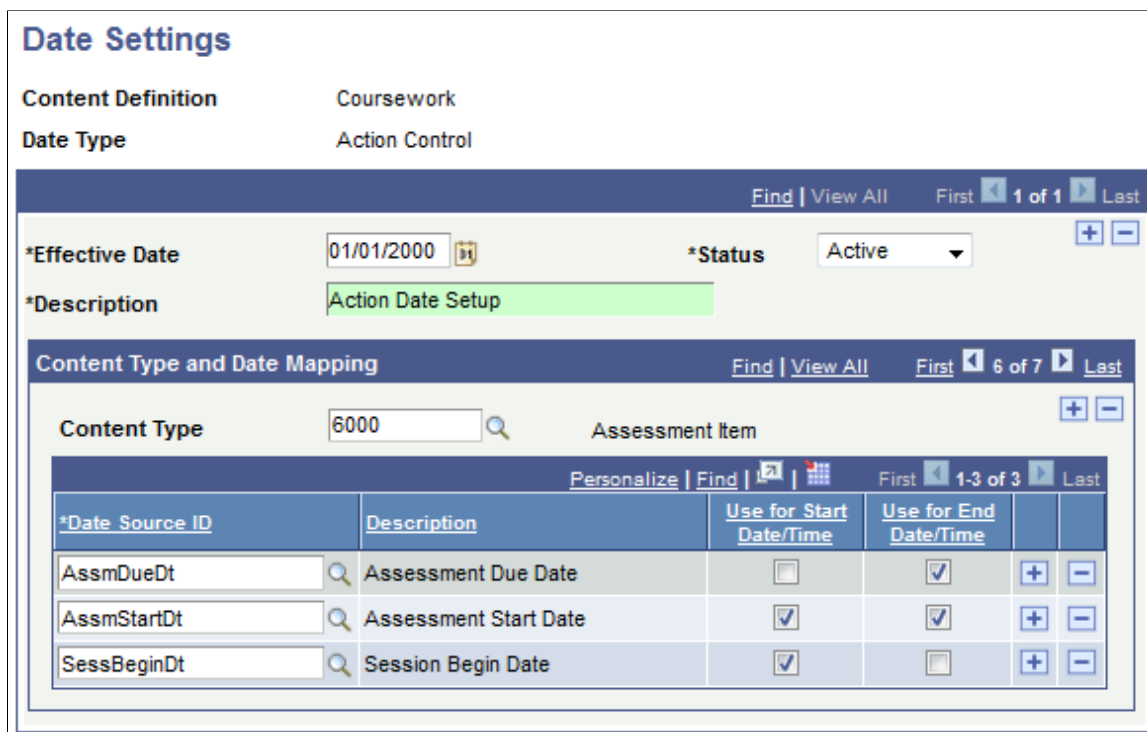

Select to review any restrictions for the specific Date Source on the Date Source Validation secondary page.

Defining Date Settings

Access the Date Settings page (Curriculum Management > Activity Management > Setup > Date Settings).

Image: Date Settings page

This example illustrates the fields and controls on the Date Settings page. You can find definitions for the fields and controls later on this page.

This page is used to define the date sources to be used for each content type of the activity management structure. Date sources are specified as either *Action Control* or *Result Control*. Only establish date settings for action control if your school utilizes optional activities. If activities are always defined as mandatory, it is not necessary to define a date setting structure for the action control date type.

Regardless of the date type selected, you will define for each available content type all the applicable start and end date sources to be used. In the above example, one start date and two end dates are identified for the action control for the course content type. When creating *Action Date IDs* on the Action Date page, the *Session Start Date* is available for selection as the start date and the *Assessment Start Date* and *Assessment Due Date* are available for selection as the end date.

Note: For the date type *Action Control*, the content type *Component* is not available for selection. Component selection is based on enrollment and is not available in the activity management structure as an optional activity. However, *Course* is listed to support Exam Only Course selection, although that feature is not yet functional.

Content Definition	The delivered content definition value for Activity Management is <i>Coursework</i> .
Date Type	This indicates if the dates listed are for activity actions or activity results. Two date types are delivered: <i>Action Control</i> and <i>Result Control</i> . Action controls are specific to students being able to select optional activities in self service. Result controls are used to display results to students and to open the result roster to instructional staff for grading purposes.
Content Type	Enter a row for each content type for which you enter an action date or an result date.
Date Source ID	Enter the date source ID you use as either a start or end date for the given content type.
Use for Start Date/Time	Select to indicate if the date source is used as a start date source.
Use for End Date/Time	Select to indicate if the date source is used as an end date source.

Defining Action Dates

Access the Action Dates page (Curriculum Management > Activity Management > Setup > Action Dates).

Image: Action Dates page

This example illustrates the fields and controls on the Action Dates page. You can find definitions for the fields and controls later on this page.

This component controls when students can perform certain actions for optional content types in self service.

Content Definition

The delivered content definition value for Activity Management is *Coursework*.

Activity Action ID

Add a unique identifier when adding a new Action Date ID.

Valid Institution Days

Indicate the valid days of the week to count when using the Adjust Start Date and Adjust End Date fields below.

Holiday Schedule

Indicate which holiday schedule to use when using the Adjust Start Date and Adjust End Date fields below.

Institution

Enter the academic institution to which the Action Date ID applies. A blank value applies to all academic institutions.

Career

Enter the academic career to which the Action Date ID applies. A blank value applies to all academic careers of the institution.

Program

Enter the academic program to which the Action Date ID applies. A blank value applies to all academic programs of the career.

Exam Only Option

(for future use) Three options are available: *Include* to have the Action Date ID apply to Exam Only Courses, as well as regular courses; *Exclude* to not have the Action Date ID apply to exam only courses, or *Exam Only* to have the Action Date ID only apply to exam only courses. If different action dates exist for exam only and non-exam only courses, create different Action Date IDs.

Content Type	Enter a row for each content type for which the Action Date ID applies. You are not able to enter <i>Component</i> as this is not an optional content type.
Action Type	Select all applicable action types for the content type. <i>Select</i> and <i>Remove</i> are applicable actions for all content types. The exam section also has actions of <i>Confirm</i> and <i>Unconfirm</i> . The exam also includes <i>Resit Selection</i> and <i>Resit Remove</i> options.
Start Date Source	Select the appropriate date source. You only see those sources defined for the specific content type that were defined on the Date Setting component as an action control start date source.
Adjust Start Date	Enter the number of days before or after the source date for which the action should be allowed. For instance, if selections can be performed starting three days after the session start date, enter 3.
Use Time from Start Source	Select to automatically use the start time associated with this source date. This field is only visible when the date source is <i>AcadPerStartDttm</i> or <i>AcadPerEndDttm</i> . Set up the academic period start time on the Academic Period Table.
Start Time	Enter a specific time the action should be allowed to start. A blank value default schedules the action to begin at 12:00AM.
End Date Source	Select the appropriate date source. You only see those sources defined for the specific content type that were defined on the Date Setting component as an action control end date source.
Adjust End Date	Enter the number of days before or after the source date for which the action should be ended. For instance, if selections should end one day prior to the assessment start date, enter -1.
Use Time from End Source	Select to automatically use the end time associated with this source date. This field is only visible when the date source is <i>AcadPerStartDttm</i> or <i>AcadPerEndDttm</i> . Set up the academic period end time on the Academic Period Table.
End Time	Enter a specific time the action should end. A blank value ends the action at 11:59PM by default.

Defining Result Dates

Access the Result Dates page (Curriculum Management > Activity Management > Setup > Result Dates).

Image: Result Dates page — Student View

This example illustrates the fields and controls on the Result Dates page — Student View. You can find definitions for the fields and controls later on this page.

Result Dates

Content Definition: Coursework
 Release Type: Student Self Service View
 Result Date ID: PSUNV UGRD STDNT

*Effective Date: 01/01/2001 *Status: Active

*Description: PSUNV UGRD Student Results

Valid Institution Days: Mon Tues Wed Thurs Fri Sat Sun

Holiday Schedule: P55 Academic Holiday Schedule

Seq Nbr	Institution	Description	Career	Acad Prog	Result Status	Include Lower Result Status	Exam Only Option

Grade	SessBeginDt	Session Begin Date		8:00AM	AcadCalFullGrdDt	Acad Calendar Fully Grade Date	999	11:59PM

This component controls release of results to students and roster access for instructional staff. Student result dates should be created using the Release Type *Student Self Service View*, while staff result dates should use the Release Type *Faculty Self Service Update*.

Content Definition

The delivered content definition value for Activity Management is *Coursework*.

Release Type

Two release types are delivered: *Student Self Service Update* which is designed to only display results, and *Faculty Self Service Update* which is designed with calculate, grade and display options.

Result Date ID This is a unique identifier you create when adding a new Result Date ID.

Note: For Exam-Only Courses (EOC), make sure you use a different Result Date ID from the regular courses, and use the academic period as the date source.

Valid Days Indicate the valid days of the week to count when using the Adjust Start Date and Adjust End Date fields below.

Holiday Schedule Indicate which holiday schedule to use when using the Adjust Start Date and Adjust End Date fields below.

The following fields are valid for the Student Self Service View:

Institution Enter the academic institution to which the Result Date ID applies. A blank value applies to all academic institutions.

Career Enter the academic career to which the Result Date ID applies. A blank value applies to all academic careers of the institution.

Program Enter the academic program to which the Result Date ID applies. A blank value applies to all academic programs of the career.

Result Status Enter the result status to display for the Result Date ID. A blank value will display all applicable result statuses.

Include Lower Result Status Select to display the indicated result status and all other result statuses with a lower number. For example, if you select Result Status *10-Calculated* and then select this check box, the *07-Imported*, *05-Manual*, and *00-Undetermined* statuses are also displayed.

Exam Only Option Three options are available: *Include* to have the Result Date ID apply to Exam Only Courses, as well as regular courses; *Exclude* to not have the Result Date ID apply to Exam Only Courses, or *Exam Only* to have the Result Date ID only apply to Exam Only Courses. If different result dates exist for exam only and non-exam only courses, create different Result Date IDs.

Note: For Exam-Only Courses (EOC), make sure you use a different Result Date ID from the regular courses, and use the academic period as the date source.

The following fields are valid for the Faculty Self Service Update:

Institution Enter the academic institution to which the Result Date ID applies. A blank value applies to all academic institutions.

Organization Enter the academic organization to which the Result Date ID applies. A blank value applies to all academic organizations of the institution.

Instructor Type	Enter the instructor type to which the Result Date ID applies. The instructor type is associated to instructors on the Meetings tab of the Class Schedule. A blank value applies to all instructor types associated to the class.
Staff Type	Enter the staff type to which the Result Date ID applies. The staff type is associated with exam staff in the Section Manager. A blank value applies to all staff types associated to the exam section.
Exam Only Option	Three options are available: <i>Include</i> to have the Result Date ID apply to exam only courses, as well as regular courses; <i>Exclude</i> to not have the Result Date ID apply to exam only courses, or <i>Exam Only</i> to have the Result Date ID only apply to exam only courses. If different result dates exist for exam only and non-exam only courses, create different Result Date IDs.
Content Type	Enter a row for each content type for which the Result Date ID applies. The following additional system settings must also be in place for results to display: the specified Result Type must be selected to <i>Show in Student Self-Service</i> (Result Type Table) and the activity must be identified as <i>Accessible</i> (Activity Manager).
Result Access	<p>This value defaults to <i>Display</i> when the release type is Student Self Service View.</p> <p>When using the Faculty Self Service Update release type the values are:</p> <ul style="list-style-type: none"> • <i>Calculate</i> – allows instructional staff to calculate results to parent activities for those activities which were manually entered (grade). This setting controls the calculate function found on the Activity Management WorkCenter Manage Rosters page. The Allow Calculation (WorkCenter) field on the Institution Table, Institution Table 9 page must also be selected for calculations to be enabled in the Activity Management WorkCenter. • <i>Grade</i> – allows instructional staff to manually enter results onto the result roster found on the Activity Management WorkCenter. • <i>Display</i> - allows instructional staff to view (no edit) their result rosters prior to the calculate and grading result access start dates or after the calculate and grading result access dates have expired. This also controls when the result roster icon is visible in the Activity Management WorkCenter, Manage Rosters page. Students must also be associated to the activity for the icon to display

When you set up instructional staff to be able to *only*:

- calculate, they are also able to grade *and* view result rosters.

- grade, they are able to grade and view result rosters, but *not* calculate.
- view results, they will not be able to calculate nor grade.

Start Date Source

Select the appropriate date source. You only see those sources defined for the specific content type that were defined on the Date Setting component as a result control start date source.

Adjust Start Date

Enter the number of days before or after the source date for which the result action should be allowed. For instance, if results can be viewed starting two days after the assessment item due date, enter *2*.

Use Time from Start Source

Select to automatically use the start time associated with this source date. This field is only visible when the date source is *AcadPerStartDttm* or *AcadPerEndDttm*. Set up the academic period start time on the Academic Period Table.

Start Time

Enter a specific time the action should be allowed to start. A blank value default schedules the action to begin at *12:00AM*.

End Date Source

Select the appropriate date source. You only see those sources defined for the specific content type that were defined on the Date Setting component as a result control end date source.

Adjust End Date

Enter the number of days before or after the source date for which the action should be ended. For instance, if results can be viewed forever, enter *999*.

Use Time from End Source

Select to automatically use the end time associated with this source date. This field is only visible when the date source is *AcadPerStartDttm* or *AcadPerEndDttm*. The setup of the academic period end time is done on the Academic Period Table.

End Time

Enter a specific time the action should end. A blank value by default ends the action at *11:59PM*.

Setting Up an Activity Definition

This section provides an overview of activity definition setup and discusses how to:

- Define activity definitions.
- Review content inclusions.

Understanding Activity Definition Setup

The content definition Coursework is the delivered activity definition to support the Marks and Exam initiative. This definition establishes the content types and the attributes that are applicable to a

coursework structure specific to a course. The coursework structure is built in the Activity Registry and references this Coursework content definition. The Activity and Section Managers, Activity Management WorkCenter, and IAM also reference this definition. Limited adjustments can be made within this definition to meet the particular needs of an institution.

Pages Used to Set Up an Activity Definition

Page Name	Definition Name	Navigation	Usage
Activity Definition	SSR_AC_ITEMTYPE	Curriculum Management > Activity Management > Setup > Activity Definition	Define all aspects of activities used by your institution.
Inclusion Options	SSR_AC_INCLUSIONS	Click the Content Inclusions link on the Activity Definition General Settings tab.	Select the inclusions associated with each coursework definition content type.

Defining Activity Definitions

Access the Activity Definition page (Curriculum Management > Activity Management > Setup > Activity Definition).

Image: Activity Definition page: General Settings tab

This example illustrates the fields and controls on the Activity Definition page: General Settings tab. You can find definitions for the fields and controls later on this page.

Content Control Record

The extension record entered here controls the prompts for the course control record on the activity registry. This value should not be changed for the Coursework content definition.

Sync Entities

This button builds/syncs the entities by running the SSR_AM_ESYNC program on the Process Scheduler. The sync process should only be run in the following circumstances:

- When adding or removing a Content Type from the structure (not recommended).
- When adding, removing or changing an extension record (not recommended).
- When selecting or deselecting the Valid content type check box.

- When adding or removing a Parent Type or Child Type for a 9000 level content type.
- When activating or deactivating an inclusion type.

Note: Altering a Content Type or an Extension Record from the structure requires technical intervention and is considered a major customization.

General Settings

The content types of the Coursework definition make up the learning content of a course structure. The structure is built in the Activity Registry and can be edited in the Activity Manager. Adding or deleting a content type is considered a major customization. The eight delivered content types are:

- Course - this serves as the root of the coursework hierarchy and is the only required content type.
- Component - this is equivalent to the course component defined in the course catalog.
- Category - this can be used to group items for calculation and/or display purposes.
- Exam - this is used to define a course level examination.
- Exam Section - this is used to schedule an examination.
- Attendance - this is used to define an attendance requirement.
- Assessment Item - this is used to define all other course requirements.
- Condition - this is used to place a condition in the content tree, which would allow a student option to select a certain number of the child items, for example Lab Assignments - Select 2.

Each content type has attributes and marking rules that can be defined using the Inclusion Options and the Extension Record. Inclusion Options can be turned on or off to meet the particular needs of an institution for a given content type.

Note: Institutions should use the delivered content types for the Coursework definition, rather than add new content types into the structure, as added content types are not supported. The Content Type and Description fields appear on all tabs of this page.

Content Type

Delivered sequential number identifying the content type. It indicates the standard order for the content tree in the activity registry. A content type can have a parent greater than itself; for example, an exam can have a parent that is a category, a component, or a course. The exception to this is any 9000-level content type that uses the Parent Types and Child Types links to identify how the content item can be placed in the coursework hierarchy.

Description

This field describes the eight delivered content types for the coursework definition. These values appear in the Activity Registry and are used to create the coursework hierarchy. The labels can be changed in this definition to reflect a value that has

more specific meaning to an institution. For instance, a school may prefer to change the *Assessment Item* label to *Assignment*.

Item Order

Defines the sort order of the content type.

Content Active

Select this check box to indicate that the content type is available for use in the activity registry.

System Data

This noneditable field indicates that there is delivered programming code that sets specific functionality for this content type.

Content Root

This noneditable field indicates which content type is the root of the activity registry content tree. For the coursework definition, the content root is *Course*.

Child Content

This noneditable field indicates that the content type can have children content items in the coursework hierarchy.

Restricted

This noneditable field indicates that this content item is restricted to its immediate parent content type.

Self-Referenced Allow

This noneditable field indicates that the content type can have child items of the same content type in the content tree; for example, an assessment item can have a child of assessment item.

Content Inclusions

Click to access the Inclusion Options page.

Content inclusions are records that contain attributes that can be applied to content types. Content inclusion options are associated with multiple content types. Inclusion options include the following: *Insufficient Mark Options*, *General Options*, *Attendance Tracking Options*, *Resit Options*, *Content Capping Options*, *Scheduling Options*, *Staffing Requirements*, *Content Devices*, *Forms of Identification*, *Late Content Penalty Options*, *Anonymous ID Options*, and *Dates and Durations*.

Inclusion types must be set to *Active* on the Inclusion Types setup page to be visible here.

See [Reviewing Content Inclusions](#)

Parent Types

This link is applicable to 9000-level content types. It indicates which content types can be valid parents to the specific 9000-level content type.

Child Types

This link is applicable to 9000-level content types. It indicates which content types can be valid children to the specific 9000-level content type.

Registry Settings

Valid

This noneditable flag indicates the content type is valid for the Activity Registry. To eliminate a content type from the coursework hierarchy, clear the Content Active check box on the General Settings tab.

Extension Record

Extension records are delivered and specific to a content type. For example, a *Category* content type requires users to indicate which content category is being defined.

Entity ID

This field is used to associate the entity record used by the record context definition with the content type.

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entity Name

This field identifies the name of the Entity ID.

Activity Manager Settings

Valid

This noneditable flag indicates the content type is valid for the Activity Manager.

Allow Structural Updates

Select this check box to indicate what can be updated on the content tree in the Activity Manager component. This check box is selected by default for all content types.

If selected, the system allows users to copy, move, or delete content types from the tree. You can override a selection here to *No* on the Activity Registry.

If cleared, the system does not allow users to copy, move, or delete content types from the tree. Users cannot override this selection on the Activity Registry. However, child content types can be added in the Activity Manager if those child items do have the Allow Structural Updates check box selected.

Entity ID

This field is used to associate the entity record used by the record context definition with the content type.

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entity Name

This field identifies the name of the Entity ID.

Activity Management WorkCenter Settings

Allow Structural Updates

Select this check box to indicate what can be updated on the content tree on the Activity Management WorkCenter component. This check box is selected by default for Category, Attendance, Assessment Item and Condition content types.

When selected, the system allows users to copy, move, or delete content types from the tree. You can override a selection here to *No* on the Activity Registry.

If cleared, the system does not allow users to copy, move, or delete content types from the tree. Users cannot override this selection on the Activity Registry. However, child content types can be added in the Activity Management WorkCenter if those child items do have the Allow Structural Updates check box selected.

Updateable Inclusions

Select this link to identify which inclusions can be edited in the Activity Management WorkCenter. The inclusions available for edit are dependent on the content type.

Selected inclusions allow users to edit values on the inclusion record. Non-selected inclusions appear to the user as display-only.

Individual Activity Manager Settings

Valid

This noneditable flag indicates the content type is valid for the IAM.

Activity Actions

This field indicates which content types can have actions defined on the Activity Actions Setup page. Activity actions control which action types are available to students in self service and when those actions can be performed. You can apply these settings to all non-component/course activity types designated as selectable or confirmable.

Activity actions are planned for future use.

Extension Record

Extension records are delivered and specific to a content type. For example, a Category content type requires users to indicate which content category is being defined.

Entity ID

This field is used to associate the entity record used by the record context definition with the content type.

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entity Name

This field identifies the name of the Entity ID.

Self-Service Message Controls

The links in this tab allow users to indicate, by content type, whether inclusion data messages should appear to self-service users when the source of the data is the Activity Registry, the Activity Manager, or the IAM.

The source of data that a self-service user is able to view depends on whether they are viewing course data (the source is the Activity Registry), class data prior to enrollment (Activity Manager), or enrolled

class data (IAM). For instance, if you want to only inform enrolled students about the specific late penalties for assessment items, then select the IAM, but deselect the Activity Registry and Activity Manager. These values can be overridden on the Activity Registry for a specific registry.

Click the Self-Service Messages Control link to access the Self-Service Messages Control page, where you can select the messages to appear in self service for each content type, for each listed inclusion based on the source of information. This setup applies to both student and administrative/faculty self service. The Scheduling and Staffing Requirements Options are not visible to students.

See [Reviewing Self-Service Message Controls](#)

On the Self-Service Messages Control page, the source of information in student self service is determined by the role of the individual accessing the information. If the person is enrolled in the class and has an IAM, the IAM is the source. If the person is enrolled but no IAM exists, the source is the Activity Manager. If the person is not enrolled but is drilling into the activities at the class level (where a term exists), the source is the Activity Manager. If the person is not enrolled and is drilling into the information from the course catalog level (where no term exists), the source is the Activity Registry.

Likewise, the source of information for administrative/faculty messages is determined from where access is gained, either course (Activity Registry) or class (Activity Manager). However, if reviewing a specific student, then the message source would be the student's IAM.

The Message Set Number for Activity Management is 14740 with the self-service message numbers ranging from 2000 to 2054. The values defined in the Activity Definition apply by default to the Activity Registry where they can be overridden for a specific course root.

Reviewing Content Inclusions

Access the Content Inclusions page (click the Content Inclusions link on the Registry Header page, General Settings tab).

Image: Content Inclusions page (for Exam content type)

This example illustrates the fields and controls on the Content Inclusions page (for Exam content type). You can find definitions for the fields and controls later on this page.

Content Inclusions (Exam)	
Description	Active
General	<input checked="" type="checkbox"/>
Insufficient Mark Options	<input checked="" type="checkbox"/>
Resit Options	<input checked="" type="checkbox"/>
Capping Options	<input type="checkbox"/>
Scheduling Options	<input checked="" type="checkbox"/>
Staffing Requirements	<input checked="" type="checkbox"/>
Devices	<input checked="" type="checkbox"/>
Forms of Identification	<input checked="" type="checkbox"/>
Attendance Tracking Options	<input type="checkbox"/>

Specific inclusion options have been associated with each coursework definition content type. When an inclusion option is selected, a data entry section appears for that content type on the Activity Registry. For instance, if the *Insufficient Mark Options* check box is selected here for the content type exam, then the data entry section for Insufficient Marks appears in the Activity Registry when an exam content type is entered into the structure.

Note: *Content Capping Options* is delivered turned off.

The Anonymous ID Options check box is:

- Selected by default for the Course Root content type. You can't disable this option. You can configure non-course content types to use anonymous IDs. This means that anonymous IDs appear for the non-course content types you select; it doesn't mean that anonymous IDs are generated.
- Deselected by default for components that were not previously set up to use anonymous grading.

The Exam Section content type derives the Anonymous ID Options setting from the Exam content type. You can override this setting for Exam Section in the Activity Manager before IAM generation.

Setting Up the Activity Registry

This section provides an overview of the activity registry and discusses how to:

- Define a registry header.
- Review self-service message controls.
- Define copy content.
- Define registry details.
- Define content notes.
- Establish common attributes.
- Review coursework item dates.
- Define staff instructions.
- Review the content tree.

Understanding the Activity Registry

The activity registry enables users to define the grading hierarchy of a course by establishing content types and setting details against the appropriate inclusion and extension records. The generic content tree structure can be applied to one or many courses.

Pages Used to Set Up the Activity Registry

Page Name	Definition Name	Navigation	Usage
Registry Header	SSR_AC_REG_HDR	Curriculum Management > Activity Management > Activity Registry > Activity Registry	Define the activity registry ID, set a course control record against which the activity registry ID references, and reviews the Activity Manager update capabilities.
Content Inclusions	SSR_AC_INCL_FAC2	Click the Updateable Inclusions link on the Registry Header page, Activity Manager WorkCenter Settings tab.	View or update inclusion settings defined as part of the Activity Definition.
Self-Service Messages Control	SSR_INCL_FAC2_NEW	Click the Self-Service Messages Control link on the Registry Header page, Self-Service Messages Controls tab.	View or update the inclusion message settings for the Activity Registry, Activity Manager, and IAM.
Copy Content	SSR_AC_CONT_CPY	Click the Copy Content button on the Registry Header page.	Copy content details from one Activity Registry ID to another. The system copies all content details, which can then be edited as needed. Part of the copy process is to identify a Course Control Record for the new activity registry ID.
Registry Detail	SSR_AC_REG_DTL	Curriculum Management > Activity Management > Activity Registry > Activity Registry > Registry Detail	Establish the content structure and content item details. Your institution can create a hierarchy of content items representing the coursework structure. The representation appears in a tree structure.
Content Notes	SSR_AC_CONT_MSGS	Click the Content Notes link on the Registry Detail page.	Select an existing content message or enter free-form text that should be displayed for a content item.
Attributes	SCC_CAF_DYN_SEC	Click the Attributes link on the Registry Detail page. Select to access common attribute fields that were defined on the Record Context page for Activity Registry Items.	Set up common attributes in the Activity Registry.

Page Name	Definition Name	Navigation	Usage
Review Content Item Dates	SSR_AC_COMP_DATES	Click the Review Dates link on the Registry Detail page.	View the dates that would be assigned for assessment items based on the Day values assigned in the Dates and Duration group box. You can view the dates that would be assigned for a given class section with a specific start date in a term or session.
Staff Instructions	SSR_AC_STAFF_MSGS	Click the Staff Instructions link on the Registry Detail page.	Define staffing content messages.
Content Tree	SSR_AC_REG_CONN	Curriculum Management > Activity Management > Activity Registry > Activity Registry > Content Tree	Build a content tree.

Defining a Registry Header

Access the Registry Header page (Curriculum Management > Activity Management > Activity Registry > Activity Registry).

Image: Registry Header page: Activity Manager tab

This example illustrates the fields and controls on the Registry Header page: Activity Manager tab. You can find definitions for the fields and controls later on this page.

Image: Registry Header page: Self-Service Message Controls tab

This example illustrates the fields and controls on the Registry Header page: Self-Service Message Controls tab. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Registry Header' page with the 'Self-Service Message Controls' tab selected. The page is divided into several sections:

- Registry Header:** Activity Registry ID: C-00000000002; Institution: PSUNV PeopleSoft University.
- Registry Header Definition:** *Effective Date: 01/01/1990; *Status: Active; *Content Definition: Coursework; *Description: English Literature. Includes a 'Copy Content' button and a 'Related Courses' link.
- Course Control Record:** *Course ID: 001245 Fiction Writing I; *Offer Nbr: 1; *Subject Area: ENGLLIT; *Catalog Nbr: 134; *Topic ID: 0. Includes an 'Exam Only Course' checkbox.
- Activity Content Control Overrides:** A table listing overrides for various activity types, all set to 'Self-Service Messages Control'.

Description	Self-Service Messages Control
1 Course	Self-Service Messages Control
2 Component	Self-Service Messages Control
3 Category	Self-Service Messages Control
4 Exam	Self-Service Messages Control
5 Exam Section	Self-Service Messages Control
6 Attendance	Self-Service Messages Control
7 Assessment Item	Self-Service Messages Control
8 Condition	Self-Service Messages Control

Activity Registry ID

The system sequentially assigns this value to indicate a unique activity registry. The prefix used for the number can be set and the last ID assigned can be viewed on the Student Admin Installation page.

Copy Content

You can copy an entire content tree from one activity registry ID to another. Click this button to access the Copy Content page, where you enter an activity registry ID to copy as well as to define the course control record for the new ID.

Content Definition

The delivered content definition value for the Marks and Exams initiative is *Coursework*.

Related Courses

Click this link to access the Related Courses page, which displays the courses that have been associated with this registry.

You can add additional courses on either the Maintain Course Content XRef or Manage Content to Courses components.

Course Control Record

This section is created based upon the extension record defined for the Coursework Activity Definition. The course identified here is considered the control course for this activity registry and is automatically associated with the registry. The system prompts for this course when determining the course catalog structure and ownership. This becomes particularly significant when multiple courses are associated with one activity registry.

Course ID	Identify the course ID of the course control record.
Offer Nbr (number)	Identify the course offer number of the course control record.
Associate All Offerings	This field appears in Add mode. If the course has multiple offerings but all offering have the same content item requirements then this check box associates the Registry ID to all offerings. However, if the content item requirements differ among the course offerings, clear this flag and create unique Activity Registry IDs for each course offering.
Topic ID	(Optional) Identify the course topic of the course control record. If a topic exists at the class section level but no Topic ID is entered here, the registry is applicable to all sections regardless of topic. However if content item requirements differ within a course topic course, then create unique Activity Registry IDs for each course topic.
Exam Only Course	This check box is set to <i>Yes</i> by default when it is set to Yes on the CRSE_CATALOG_OFFER page of the Course Catalog. Exam-only courses (EOCs) are those for which no class sections are scheduled and no student class enrollment occurs; the student receives credit for the course only by sitting and successfully completing the course exam. When this flag is set to Yes, the Component content type is not available on the Registry Details page.

Activity Manager Structural Update Overrides

This section enables users to view and/or override the settings that control what users can update on the content tree in the Activity Manager.

Content Type and Description	These two display-only fields indicate the sequential number of the content type and its description.
Allow Structural Updates	This check box indicates whether the content type was set up to allow updates in the Activity Manger. This setup occurs on the Activity Definition page.
Override	If the content type was set up to allow structural updates for a specific activity registry, this check box appears. Select the

check box to enable users to change a content value only from *Yes* to *No*.

Activity Management WorkCenter Structural Update Overrides

This section enables users to view and/or override the settings that control what faculty and exam staff users can update on the coursework tree in the Activity Management WorkCenter.

Content Type and Description

These two display-only fields indicate the sequential number of the content type and its description.

Allow Structural Updates

This check box indicates whether the content type was set up to allow updates in the Activity Management WorkCenter. This setup occurs on the Activity Definition page.

Override

If the content type was set up to allow structural updates for a specific activity registry, this check box appears. Select the check box to enable users to change a content value only from *Yes* to *No*.

Updateable Inclusions

Select this link to access the Inclusion Options secondary page where you can review or override the inclusion settings that were defined in the Activity Definition. In the Activity Management WorkCenter, faculty and exam staff users are only able to edit those inclusions set to *Yes*. Select the check box to enable users to change a content value only from *Yes* to *No*.

Self-Service Message Controls

Configure which messages the system should display in self service, based on the source of the data, the Activity Registry, the Activity Manager, or the IAM. The selections are populated by the Activity Definition, but can be overridden here for a specific registry.

Reviewing Self-Service Message Controls

Click the Self-Service Messages Control link on the Registry Header page, Self-Service Message Controls tab.

Image: Self-Service Messages Control page (for exam content type)

This example illustrates the fields and controls on the Self-Service Messages Control page (for exam content type). You can find definitions for the fields and controls later on this page.

Scheduling Options	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Staffing Requirements	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Devices	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Forms of Identification	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Image: Self-Service Messages Control page (for assessment item content type)

This example illustrates the fields and controls on the Self-Service Messages Control page (for assessment item content type). You can find definitions for the fields and controls later on this page.

Description	Show Message in Registry	Show Message in Manager	Show Message in IAM
General	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Insufficient Mark Options	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Late Penalty Options	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Resit Options	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Dates and Durations	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

The values on this page appear by default from the Activity Definition. To change these values, select the Override field.

In the example above, if an individual is reviewing activity detail that comes from the Activity Registry, he does not see any information concerning Forms of Identification that would be required for an examination. However if the source of the data is the Activity Manager (overridden in this example) or the IAM, he sees the Forms of Identification information.

Defining Copy Content

Access the Copy Content page (click the Copy button on the Registry Header page).

Image: Copy Content page

This example illustrates the fields and controls on the Copy Content page. You can find definitions for the fields and controls later on this page.

Copy Content

Copy From

Institution: PSUNV

***As Of Date:** 01/01/2000 

***Activity Registry ID:** C-00000000002  English Literature

Copy To (Course Control Rec)

***Course ID:** 003702  General Biology II

***Offer Nbr:** 1  **Subject Area:** BIOLOGY **Catalog Nbr:** 102

Topic ID: 0 

As Of Date

The effective date from which to copy the activity registry id. The effective dated row matching this date is copied.

Activity Registry ID

Enter the activity registry ID from which to copy all content detail.

Course ID and Offer Nbr (number)

Identify the course ID and offer number of the course control record.

Topic ID

(Optional) Identify the course topic of the course control record. If a Topic ID exists but it not entered, the system applies the registry to all sections of the Course ID/Offer Nbr/Topic ID combination.

Defining Registry Details

Access the Registry Detail page (Curriculum Management > Activity Management > Activity Registry > Activity Registry > Registry Detail).

Image: Registry Detail page

This example illustrates the fields and controls on the Registry Detail page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Registry Detail' page with the following sections and fields:

- Registry Header:** Activity Registry ID: C-0000000002, Institution: PSUNV PeopleSoft University.
- Registry Header Definition:** Effective Date: 01/01/1990, Status: Active, Content Definition: Coursework, Description: English Literature.
- Content Item Auto-Sequencing Options:** Content Item Step: 0010, Last Sequence Number: 000000050, with a 'Reset' button.
- Registry Content Detail:** *Content Item ID: ITX-000010, *Content Code: CRSE, Parent ID: (empty), *Content Type: 1000-Course, *Description: Course. Includes checkboxes for 'Insert Child Item' and 'Root', and a 'Content Notes' link.
- Content Options:** *Result Scale: 100 PT, Passing Mark/Grade: 70.000, Service Impact: GRADE, Workload (hours): (empty), (minutes): (empty). Includes checkboxes for 'Show in Student SS', 'Calculate Mark Average', 'Calculate Mark Rank', 'Anonymous Grading', and 'Calculate Standardized Units'.
- Insufficient Mark Options:** Mark Option: Blank Mark - Exclude.
- Content Devices:** A table with columns: Device ID, Description, Required. Row: FLDICT, Foreign Language Dictionary, [checked].

The following group boxes always appear on this page:

- Registry Header Definition
- Content Item Auto-Sequencing Options
- Registry Content Detail
- Content Options

The system displays all other group boxes based on the extension and inclusion records (Activity Definition) associated with the content type being defined.

Content Item Auto-Sequencing Options

Content Item Step

The Content Item Step numbers the content item ID. When you create a content item in the Activity Registry the system assigns a content item ID (prefix + step number sequence). A value of 0010 indicates that content item ID numbers are sequenced by 10. You can change this value from the creation of one content item ID to the next.

Note: The prefix and default content item step are initially established on the Student Admin Installation table.

Last Sequence Number

This field records the last content item ID generated. It can be altered if there is a need to insert a new row into the content structure.

To insert a new row, go to the row where the insert should be placed, and change the last sequence number to that content item ID. Then alter the content item step with the sequence number of the new row and then add the new row.

For example, two rows are created: ITX-000010 and ITX-000020. You then need to insert a row between these two content items. On the ITX-000010 row, change the Last Sequence Number to *00000010* and change the Content Item Step to *0005*. Then insert a new row. The system assigns the new row as ITX-000015. Next, select the Reset button to reset the Last Sequence Number back to the highest assigned: *00000020*.

Reset

Select this button to reset the Last Sequence Number to the highest number assigned in this Activity Registry ID.

Registry Content Details

It is within this section that you build the content tree structure using the content types defined on the coursework activity definition. Based on the content type entered, you are presented with attributes and grading options selections. Users should utilize the Insert Child/Insert Sibling options to ensure that valid parent/child relationships exist throughout the structure.

Note: Many of the elements entered in this section imply a calculation requirement. The calculation process is under construction and will be delivered fully functional in a later release.

Content Item ID

The system assigns this ID based on the Content Item Prefix and the Content Item Step. You can override this number or manually assign it.

Parent ID

The system populates this field when inserting child or sibling items with the parent content item ID of that particular content item ID. You can override this number or manually assign it.

Copy/Paste Icons

Click the icons to copy and paste detail from one content item to another. First select the copy icon, then select the Insert a Row icon, and then select the paste icon. Then, you can adjust different values on the new row.

Content Type

The values in this field are concatenated from the Content Type and Description fields on the Activity Definition page. On the Activity Definition page, the Content Types must be *Active* to appear here. The root content type (Course for the Coursework definition) automatically defaults in add mode. You cannot delete this row. At the Course level, only children content items can be inserted. At all other levels, the Insert Sibling check box appears.

Under the root level, you can add children and sibling content items. The children and sibling options available are dependent on the Item Order, the Child Item flag, and the Self-Reference Allowed flag defined on the Activity Definition page. Children and sibling items can only be added if the Item Order is \leq to the current content type and the child item and self-reference allowed settings are appropriate. The exception to this is the 9000-Condition type, which can be placed into the content tree based upon the defined parent and child types defined in the Activity Definition.

If a course was identified as an EOC, the 2000-Component value is disabled.

Description

The system displays this description in the content tree and in self-service user interfaces.

Content Code

Enter a short description of the coursework item.

Insert Child Item

Select this check box to allow insertion of a child item to this content item ID. The Parent Item ID carries forward to the new row.

Insert Sibling Item

Select this check box to allow insertion of a sibling item to this content item ID. The Parent Item ID carries forward to the new row. This field is hidden when the content type is *Course*.

Root

This flag indicates whether the current content item ID is the content root. This check box is selected when the content type is *Course*.

Content Notes

Click this link to access the Content Notes page where you can select a content message ID or enter free form text. Information entered here pertains to the specific content item ID.

Content Options

These options are applicable to all content types, although some specific considerations are taken when the Content Type is *Course*.

Result Scale

Result scales that were defined on the Result Scale setup page appear here. This field value is required for the root content item and is inherited by all the children of the root. However, it can be overridden at any level. If different result scales exist in the course root, the primary result scale calculation can convert result scales and results. You can view the setup for the result scale conversion on the Academic Institution 9 page.

Users can predefine this value using the Activity Management Default setup on the Academic Institution.

For information, see:

- Calculation of Overall Course Results using Multiple Result Scales on My Oracle Support (Doc ID 1400723.1)
- "Enabling Program Enrollment and Activity Management Defaults" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Override

The Result scale for all content items, except the root, is inherited from its parent. Select this check box to allow users to change the Result Scale.

Weighting Multiplier

Indicate what weighting is given to this content item in the calculation of its parent result. Percentages can be represented using less than whole numbers.

Assessed

Select this check box to indicate that the item is required to have a result and is to be used in a calculation. Clear this check box if the content item is for display purposes only.

Include in Calc

This check box is greyed out if Weighting Multiplier is greater than 0.00. If Weighting Multiplier is 0.00, you can modify this check box by deselecting it. This allows for a zero weighted item to be excluded from calculation.

Passing Mark/Grade

Enter the minimum passing mark and/or the minimum passing grade for the specific content item.

Users can predefine these values using the Activity Management Default setup on the Academic Institution.

Service Impact

Indicate which service impact disallows the view of results in student self service. This field value is inherited by all the children of the content item against which it is set. However, you can override it at any level.

Users can predefine this value using the Activity Management Default set up on the Academic Institution component.

Workload (hours) / (mins)

Enter the estimated hours and minutes that a student needs to allocate to complete this content item. This field is informational for students and is not used in any calculation.

Attributes	This link appears when a Common Attribute has been added to a content type entity on the Common Attribute Record Context page. See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)
Show in Student SS (Self Service)	Select this check box to indicate that the content item details are available for display in self service. This flag must also be selected on parent items for the content item to appear. This field is selected by default.
Calculate Mark Average	Select this check box to indicate that a mark average across all students should be calculated for this content item.
Calculate Mark Rank	Select this check box to indicate that student ranks should be calculated for this content item.
Mandatory Pass Required	Select this check box to indicate that this content item is required to be passed to achieve an overall passed result for the course. When the system performs the primary course calculation, it analyzes this setting. For those items where this field is selected, the system reviews the corresponding result scale. For the mandatory pass processing to run, the result scale must use the Outcome field (it identifies a failed result) and must have the Mandatory Fail flag set. If these two items do not exist on the associated Result Scale, the system does not apply the mandatory pass processing.
Override	Select this check box to indicate that you want to override the default setting for anonymous grading for this content. The current settings are displayed next to the check box.
Calculate Standardized Units	Select this check box to indicate that standardized units should be assessed when the student achieves a passing mark for this content item.
Standardized Units	This field appears when the Calculate Standardized Units check box is selected. Enter any standardized units for this content item. For example, this field can be used to store European Credit Transfer and Accumulation System (ECTS) units.

Extension Records

Additional group boxes appear on this page based on the Content Type selected. Extension records allow you to refine the functional properties of content types by assigning additional relevant attributes to them. These extension record definitions are set for specific content types on the Activity Definitions page.

Course	A course serves as the root of a coursework content tree. It is the only required content type that must be used in the content structure. The extension record for the course content type
---------------	---

Component

populates the course control record that appears on the Registry Header page of the activity registry.

When the Content Type is *Component*, the Component Options group box appears.

In the Course Component field, the system displays components that are specific to the course that was defined as the Course Control Record.

The component used in Activity Management is SSR_COMPONENT; the same field is used in the course catalog structure. The valid values that appear are from the Course Control Record defined on the Activity Header page.

Component results are calculated from their children, but can be overridden. Component results are also used to calculate their parents' result (course).

Components are not required to be built into the coursework structure. When creating a content structure, consider the following when determining if a component should be added to the structure:

- Add component(s) if a result is required for that component.
- Add component(s) if there is a need for the content structure to match the course catalog structure.
- Add component(s) if there is a need to display components to students in self service.

Category

When the Content Type is *Category*, the Category Options group box appears.

In the Content Category field, the system displays categories that were defined on the Content Category setup page.

A category is an optional level that can be added to the content structure to assist with grouping for display and/or calculation purposes. When calculated, category results are computed from their children, but can be overridden. Category results are also used to calculate their parents' result (component or course).

Exam

When the Content Type is *Exam*, the Exam Options group box appears.

In the Exam Type field, the system displays types that were defined on the Exam Type setup page. In addition, set the Exam Duration (in hours and minutes).

Note: If multiple exams are created for the course, and if the resit functionality is used, then each exam must have a different exam type.

This content type should be used for any examination that requires its own rules and attributes, is scheduled outside of a class construct, and has special enrollment considerations.

Do not use exams for class section-specific tests (in class or a final that is section specific); define these as assessment items.

An exam can have a child item of itself if it makes sense for an institution to create an exam in a hierarchical structure.

Examination results are entered manually and are used to calculate their parents' result (exam, category, component, or course).

Attendance

There is no delivered extension record for the content type *Attendance*.

Enter an *Attendance* content type into the content tree when your institution wants to store an attendance result and use it in a calculation for a parent result; however, there is no specific extension record for this content type. The attendance details are captured as part of the Attendance inclusion record.

Users can track attendance without inserting the *Attendance* content type. You can select the attendance content inclusion for the other content types and record a result; however the system does not use this result in the primary course calculation. To use an attendance result in the primary course calculation, you must insert the *Attendance* content type into the content tree.

Users can predefine these values using the Activity Management Default setup on the Academic Institution component.

Assessment Item

When the Content Type is *Assessment Item*, the Assessment Item Options group box appears.

Select the Extra Credit check box if the given assignment is undertaken for extra credit. The extra credit assignment can be added to all or individual students in the IAM. The system adds the points attained to the calculation for the overall category, component, or course result as applicable.

Select the Question check box if the given assessment item is being created as part of an exam and you want to identify it as a question on the exam.

An assessment item can have a child item of itself if it makes sense for an institution to create assessment items in a hierarchical structure. Assessment item results are entered manually and are used to calculate their parents' result (assessment item, attendance, exam, category, component, or course).

Condition

When the Content Type is *Condition*, the Condition Options group box appears.

Use a condition to inject an option for students. When you use a condition you indicate how many of the following child items a student must select and complete. The system applies the label *Select nbr* to the condition in the content tree. The child items of the condition have the *Or* condition inserted into the content tree. Conditions can be used to create varying And/Or scenarios. Below are a number of examples.

Example 1: AND/OR/AND

Each student must complete either HW1 *AND* HW2 *OR* Oral Presentation 1 *AND* Oral Presentation 2. A *condition* (Options – Select 1) is created as the parent of two *categories* (Option 1 – Homework and Option 2 – Oral Reports). Each category has two *assessment items*.

Example 2: Option within an option

Each student must complete either Option 1 (HW1 and HW2) *OR* Option 2 (either Report 1 *OR* Report 2). A *condition* is created as a parent to a *category* (Option 1 – Homework) and a *condition* (Option 2 – Report).

Example 3: OR/AND/OR

Each student must complete a homework assignment from both Option 1 and Option 2. A *condition* is created for each selection. Thus, it reads HW1 *OR* HW2 *AND* HW3 *OR* HW4.

Inclusion Options

The following sections appear on the page based on the inclusion options defined for each content type on the Activity Definitions page. Include or exclude these options based upon your institution's needs.

General Options

Mandatory

Select this check box to indicate that this content item is required. When a content item is required the system automatically assigns it to a student when the student enrolls in the class or the EOC. When an item is not marked as mandatory it is considered optional. Optional items can be placed in a condition that allow a student to choose between several options. This field is selected by default.

Required by Institution

Select this check box to indicate that this content item is required by the institution and cannot be deleted by a faculty or administrative user.

Allow Override or Substitution

Select this check box to indicate that for a student this content item can be overridden or substituted with a different content item.

Topic Approval Required

Select this check box to indicate that a specific topic approval is required for this content item. For instance, a research project

topic may require approval before students can begin the project.

Include for Mid Term Grade

Select this check box to indicate that this content item mark is used to calculate a midterm result.

Insufficient Mark Options

This group box applies to all content types, but can be turned off for any content type on the Activity Definition. Use these fields to define what should occur when there is an insufficient mark in the student record for a given content item.

Mark Option

During the calculation process, if no mark has been entered for an assigned content item, and if applicable, the Late Content Penalty Rule has expired, the system uses the value selected here to determine how to calculate the content item. Valid values are:

- *Blank Mark - Include*
 - Calculate the item mark as zero (0) or
 - Enter a Minimum Mark Value to calculate for a missing content item mark
- *Blank Mark – Exclude*: the content item (if blank) is excluded from the calculation.

You can also use this feature to eliminate a result from a calculation.

- *Below Threshold – Exclude*: exclude a mark from calculation.
- The content item mark is excluded from the calculation if the mark is less than or equal to the Insufficient Mark Threshold.

Minimum Mark Value

This field appears when the *Blank Mark – Include* value is selected as the Mark Option.

This indicates that even though there is no mark entered for the content item, this value will be used in calculation. If this field is left blank, a zero is used in the calculation.

Insufficient Mark Threshold

This field displays when the *Below Threshold – Exclude* is selected as the Mark Option.

This indicates that the content item is excluded from the calculation when it is less than or equal to the mark indicated here.

Attendance Tracking Options

This group box applies to all content types, except Exam Section. It is delivered as active only for the *Attendance* content type, but that can be adjusted on the Coursework Activity Definition. Users can predefine these values using the Activity Management Default setup on the Academic Institution.

Track Using	Define the requirement for attendance as a <i>Number of Classes Attended</i> , <i>Percentage of Classes Attended</i> , or <i>Number of Allowed Absences</i> .
Required Attendance	This field appears when the Track Using field is set to <i>Number of Classes Attended</i> or <i>Percentage of Classes Attended</i> . Indicate the number or percentage of classes that a student must meet to pass the attendance requirement.
Allowed Absences	This field appears when the Track Using field is set to <i>Number of Allowed Absences</i> . Indicate the number of absences allowed.
Result	This check box appears when the attendance tracking inclusion is being used with a non-Attendance content type. The field should be selected to track an attendance result (it cannot be calculated) for any content item except Attendance.

Late Content Penalty Options

This group box applies to *Assessment Item* content types. Late penalties can be automatically calculated by setting one of five late penalty options. Both the earned mark and the penalized mark are stored but only the penalized mark is used in calculation. A late penalty is assessed for this content item when the student submits the assignment after the due date or the extended due date (if an extended due date exists).

Penalty Type	Select the method to apply late penalties. Valid values include: <i>Capped</i> – students can earn no higher than the specified value; <i>Daily</i> – students have points deducted for each day the item is late <i>Fixed</i> – students automatically earn this mark <i>One Time</i> – students have this value deducted <i>Weekly</i> – students have points deducted for each week the item is late. <i>No Penalty</i> is the delivered default.
Late Penalty	This field appears when you select a Penalty Type of <i>Daily</i> , <i>One Time</i> , or <i>Weekly</i> . When you select <i>Daily</i> or <i>Weekly</i> , the Penalty Max field also appears.
Penalty Mark	This field appears when you select a Penalty Type of <i>Capped</i> or <i>Fixed</i> . The system enters this value for the student when the item is submitted late.

- Penalty Max** This field appears when you select a Penalty Type of *Daily* or *Weekly*. Enter the maximum number of points that an assessment item can be penalized.
- Grade Expires to Zero in ___ Days** Select this check box if, at some point, the mark should be marked as zero.
- Then, enter the number of days that will pass before the assessment item turns to zero.

Dates and Durations

This group box applies to *Assessment Item* content types. In this section you define landmark days for the content item as well as the number of days from a date trigger the landmark dates should fall. When the content tree for the course is associated with a scheduled class, the landmark dates are populated based on these rules. The Review Dates page serves as a visual tool for a given term to see how the dates might populate.

- Date Trigger** Select which trigger date option to use to determine the landmark dates. The choices are to use the *Term Start Date*, the *Session Start Date*, or the *Class Start Date*.
- Start Days** Enter the number of days from the Date Trigger when this content item can be started.
- Due Days** Enter the number of days from the Date Trigger when this content item is due. The system dispenses late penalties against this content item beginning one day after this date unless an extended due date exists for an individual student.
- Grading Days** Enter the number of days from the Date Trigger when this content item is to be graded.
- Review Dates** Click this link to access the Review Content Item Dates page where you can view estimated dates for a given term, session, or class start date.

Resit Options

This group box can be applied to *Category*, *Exam*, and *Assessment Item* content types. Use this section to support reassessment (resit) rules. Resit rules pertain to both standard reassessment (resitting the same activity) and supplemental resits (substituting the original activity with a different activity).

- Resits Allowed** Select this check box to indicate that this content type is allowed to be reassessed. When selected, the Supplemental Resit field, the Resit Period Option, and the Attempt Limit sections are displayed.
- Supplemental Resit** Select this check box to indicate if this content item is to be used as a supplemental resit content item. This content item is only used when a student must be reassessed. For instance, initially students may be assessed on a particular assessment item or exam. Students who fail this assessment item or exam, however,

may be given an opportunity to be reassessed, but not on the same assessment item or exam. This secondary item should be noted as a supplemental resit. After indicating this item is a supplemental resit, it must be added as a Supplemental Resit Item on the initial content item.

If several items can be used as a supplemental resit to an original attempt, the supplemental items should be created as a child of a category and the Supplemental Resit flag should be placed at the category level. Use a category if multiple supplemental items are to be used for reassessment.

Calculation Option

Indicate how to calculate a Resit in relation to the previous mark:

- *Average All Marks* – calculate the average mark across all attempts.
- *Highest Mark* – count the highest mark among all previous attempts.
- *Most Recent Mark* – count the most recent mark among all previous marks.

Supplemental Resit Item

This field is available when the Resits Allowed check box is selected. It should be used when the current content item is to be reassessed with a supplemental content item. The content item to be used as the supplemental item must already be created in the hierarchy and selected as a supplemental resit.

Resit Period Assignment

This grid is available when the Resits Allowed check box is selected. When the resit item is an exam, users can define how to assign the academic period for the resit exam. Values include *Next Exam Period*, *Next Exam Regular Period*, and *Next Exam Resit Period*. The Regular and Resit Period types are defined on the Academic Period Table.

The automatic assignment of the academic period for these values occurs when running the IAM Resit Evaluation process.

An additional value, *Student Selection*, allows students to select the academic period through self service on the Resit Exam Selection page. This page appears only when the student is eligible for this selection.

Nbr Periods to Display

This field is available when the Resit Period Assignment is *Student Selection*. You indicate the number of future academic periods that is available for the student to select.

It is critical that you set up the number of future academic periods as well as scheduled exams during these periods.

Otherwise, students are presented with the message: *No Future Periods*.

Regular Exam

This field is available when the Resit Period Assignment is *Student Selection*. Select if the student is allowed to select period of a regular exam for their resit.

Resit Exam

This field is available when the Resit Period Assignment is *Student Selection*. Select if the student is allowed to select period of a resit exam for their resit.

Attempt Time Period

Select the time periods against which reassessment limits are applied. This field works in conjunction with the Allowed Attempts field. Delivered time periods are: *Academic Year*, *Academic Career*, and *Academic Program*.

Allowed Attempts

Enter the number of allowed attempts for the activity for the period selected.

This value indicates total attempts at the activity, including the original. If an activity can be reassessed just once, the value entered should be 2 for the original attempt and the resit attempt.

A supplemental exam cannot be reassessed and therefore the number of attempts is limited to 2 for the original content item.

Scheduling Options

This group box applies to *Exam* content types. Use these fields to define exam scheduling requirements. You can override these requirements when the exam is scheduled in the Section Manager.

Schedule Activity

Select this check box to indicate that an exam section should be scheduled in the Section Manager.

Number of Sections to Schedule

Indicate the number of exam sections to schedule in the Section Manager. Users cannot insert the Exam Section content type into the Activity Registry. By selecting the Schedule Activity check box and indicating the number of exams to schedule for the exam, the system automatically inserts the exam section row (s) into the content tree at the section level. The sections appear initially in the Activity Generator.

Connector Type

This field appears when the Number of Sections to Schedule is two or more. The connector type allows users to indicate whether students should be assigned to each of the scheduled exam sections (*And*) or if the students need to choose between multiple sections (*Or*). The system inserts Or connectors into the content tree in the Activity Generator when the exam sections are inserted.

Calculated Result

Select this check box to indicate that this particular exam level does not have a mark entered directly against it, but will have a calculated result based upon the calculation of child items.

Confirmation Required	Select this check box to indicate that a student must confirm his/her attendance in the assigned exam section.
Use 3rd Party Scheduler	Select to indicate you will find an alternative solution for scheduling exams.

Note: Exam sections inherit the exam type of the exam content type (its parent). If multiple scheduled sections require different exam types, users should create an exam for each type in the coursework hierarchy.

Staffing Requirements

This group box applies to *Exam* content types. Users can use these fields to define staffing requirements. You can override these requirements when the exam is scheduled.

Staff Instructions	Click this link to access the Staff Instructions page where you can add staff instruction content messages.
Staff Type	Select an examination staff type. Staff Types are delivered as translate values. Delivered values include: <i>Chief Examiner</i> , <i>Examiner</i> , <i>Invigilator</i> , and <i>Proctor</i> . Additional staff types can be added to the translate field SSR_CW_EX_STF_TYPE.
Minimum Required	Enter the number required for each staff type. You can enter a flat number, or use the field in conjunction with the Student/Staff Ratio field by indicating the number of staff in this field per the number of students identified in the Student/Staff Ratio field.
Student/Staff Ratio	Use with the Minimum Required field to establish a staff (minimum required)-to-student ratio. For example, there could be requirement that two proctors are required for every 30 students.

Content Devices

This group box applies to all content types, but can be turned off for any content type on the Activity Definition. Users can indicate devices that are allowed or required for a content item. You can override these devices when a class or an exam is scheduled.

Device ID	Indicate devices that may be required for a course, could be used during an examination, or are needed to complete an assessment item. The devices are setup on the Content Devices page.
Required	Select this check box to indicate whether students are required to have this device type for a content item. Otherwise, this device type is considered acceptable, but optional.

Forms of Identification

This group box applies to Exam content types. Users can use these fields to define acceptable forms of identification. You can override these requirements when the exam is scheduled. Users can predefine these values using the Activity Management Default setup on the Academic Institution.

Form of Identification

Indicate which documents or identification a student is required to show for entrance into the examination.

Required

Select this check box to indicate if the form of ID is required for entrance into the examination. Otherwise, this form of ID is considered acceptable, but optional.

Defining Content Notes

Access the Content Notes page (click the Content Notes link on the Registry Detail page).

Image: Content Notes page

This example illustrates the fields and controls on the Content Notes page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface titled "Content Notes". At the top, it displays "Content Item ID: ITX-000010". Below this is a "Note Text" section with a search bar and navigation controls. The search bar contains "*Message Seq: 1" and "Message ID: ENGLIT - 23". There is a search icon and a checkbox labeled "Administrative Use Only" which is currently unchecked. The note text below reads: "Inform your faculty member if you plan to pursue Research Option 1, which includes an oral presentation or Research Option 2."

The Message ID options available here are defined during Content Message setup. Only those messages defined as General Content Messages appear. This message appears to students, faculty, and administrative users unless the Administrative Use Only check box is selected. If selected, students do not see the message.

Message Seq (sequence)

The system assigns the sequential number.

Message

If you enter a Message ID, that message appears; otherwise you can enter a free-form message.

Establishing Common Attributes

Access the Attributes page (click the Attributes link on the Registry Detail page). Select to access common attribute fields that were defined on the Record Context page for Activity Registry Items)

Image: Attributes page

This example illustrates the fields and controls on the Attributes page. You can find definitions for the fields and controls later on this page.

Attributes	
Registry ID:	English Literature
Institution:	PSUNV PeopleSoft University
Eff Date:	1990-01-01
Content Type:	1000-Course
Item ID:	ITX-000010
Description:	Course
Course Level:	<input type="text" value="LEVEL 1"/>  Level 1
Language of Instruction:	<input type="text" value="SPANISH"/>  Spanish

The screenshot above provides an example of common attributes set up for the course content item in the Activity Registry.

The fields that appear on the Attributes page are customer-specific and are defined on the Common Attributes and Record Context pages. The record context used for the Activity Registry is the Content Item Attributes (SSR_AC_CONT_ITM) record. The entity names used for the Activity Registry are prefixed by 'ACR'.

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Reviewing Coursework Item Dates

Access the Review Content Item Dates page (click the Review Dates link on the Registry Detail page).

Image: Review Content Item Dates page

This example illustrates the fields and controls on the Review Content Item Dates page. You can find definitions for the fields and controls later on this page.

Review Content Item Dates

Estimate Assignment Landmarks

Term Start Date

Session Start Date

Class Start Date

Estimate Dates From Date

Institution: PeopleSoft University

Career: Undergraduate

Term: 2013 Fall

Session:

Estimate Dates From Date:

Estimated Dates from Duration

		Estimate		Estimate
Start Days: <input type="text" value="15"/>		09/13/2013	Grading Days: <input type="text" value="35"/>	10/03/2013
Due Days: <input type="text" value="30"/>		09/28/2013		

Note: This page is designed to provide a visual estimate when originally defining the Activity Registry ID. These values are not stored.

Estimate Assignment Landmarks

Term Start Date, Session Start Date, Select the trigger date to use to determine the landmark dates.
or Class Start Date

Estimate Dates from Date Enter a class start date.

Estimated Dates from Duration

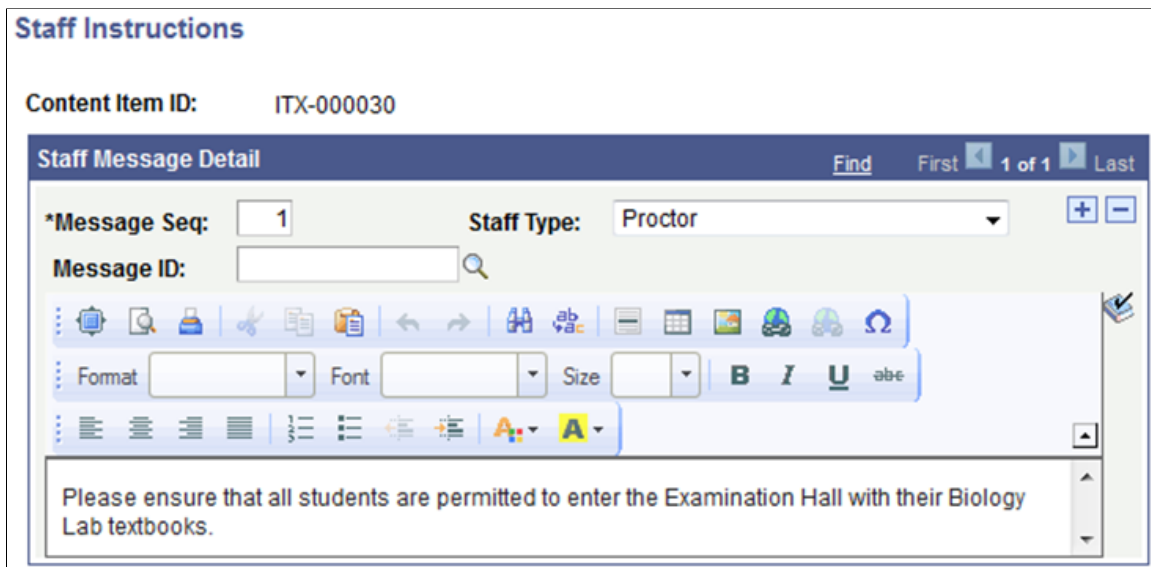

Based on the days entered in the fields of this group box, the system populates a date estimate.

Defining Staff Instructions

Access the Staff Instructions page (click the Staff Instructions link on the Registry Detail page).

Image: Staff Instructions page

This example illustrates the fields and controls on the Staff Instructions page. You can find definitions for the fields and controls later on this page.

This page applies to *Exam* content types. The Message ID options available here are defined during Content Message setup. Only those messages defined as Staff Instructions appear. These requirements can be overridden when the exam is scheduled.

Message Seq (sequence)

The system assigns the sequential number.

Message ID

If you enter a Message ID, that message appears; otherwise you can enter a free-form message.

Staff Type

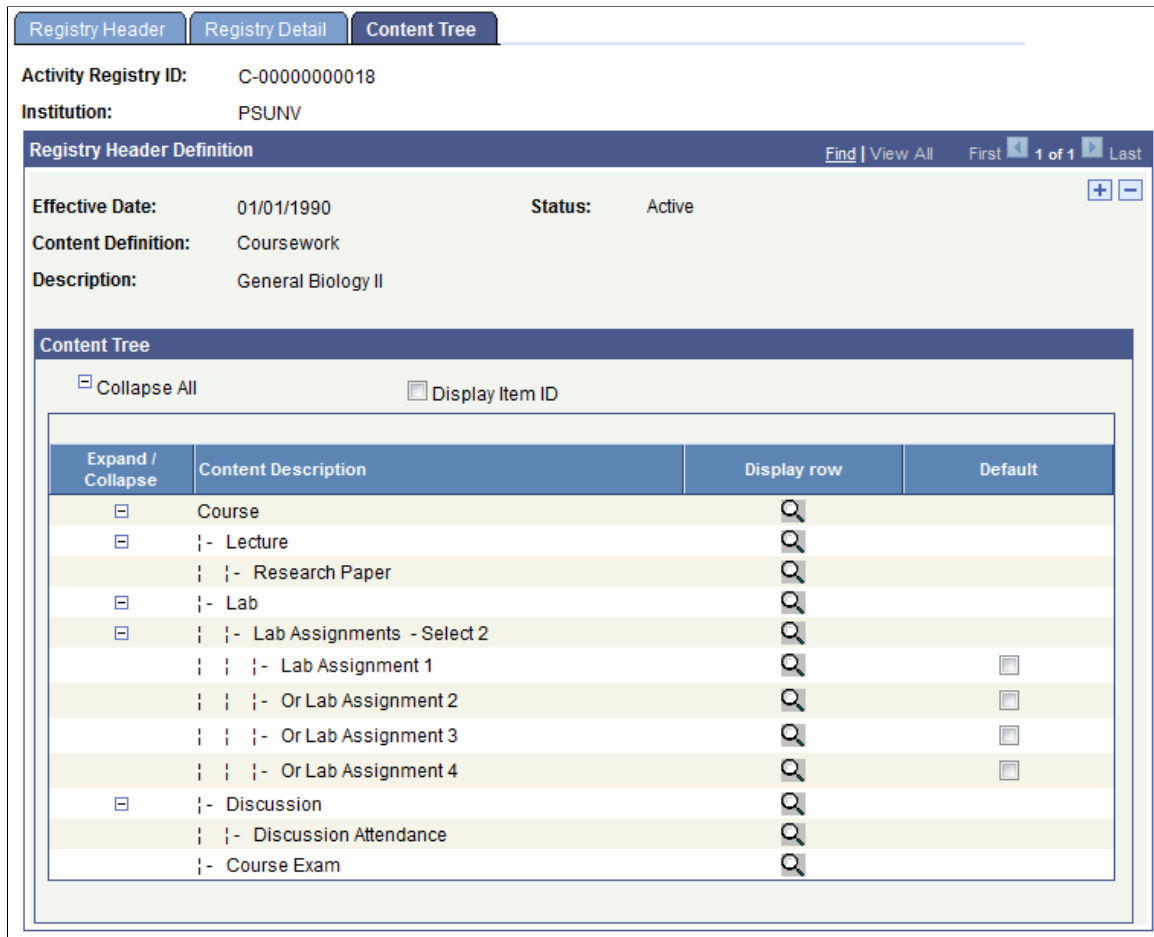

Indicate to which staff type this instruction is applicable.

Reviewing the Content Tree

Access the Content Tree page (Curriculum Management > Activity Management > Activity Registry > Activity Registry > Content Tree).

Image: Content Tree page

This example illustrates the fields and controls on the Content Tree page. You can find definitions for the fields and controls later on this page.

The system builds the content tree as you save content types and can be viewed on the Content Conditions page. If a condition was established on the Registry Detail page you see it with the Select Nbr appended to the description and the Or conditions inserted into the condition children. In the above example the condition *Lab* was inserted as a parent to *Lab Assignments 1, 2, 3 and 4*. The condition was built indicating that the student must select and complete two of the lab assignments. Exam sections—the number defined on the Exam content type—is inserted on the Activity Generator component.

Display Item ID

Select this check box to display the Content Item ID in the content tree.

Item Details Icon

Select the Items Detail icon to transfer to the corresponding row on the Registry Content Detail page.

Default

This check box appears on the child items of a condition. Indicate whether students should automatically be assigned certain conditional items. If items are indicated as the default(s) then these items carry an assigned status on the student's IAM. Students, though, have the option to change these assigned values in self service.

Setting Up Anonymous Grading

Before going through this section, make sure:

- You run the Entity Sync process whenever you make changes to entities. For information about running this process, see *Maintaining Campus Solutions Entities on MOS (Doc ID 1546057.1)*.
- You run the data manipulation scripts (DMS) before you use anonymous grading for the first time. For information on using DMS, see *upd939729_details.pdf* in the *upd939729_install* folder of the release image.

Pages Used to Set Up Anonymous Grading

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Academic Institution 9	SSR_INST_PE	Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 9	<p>Enable anonymous grading at the academic institution level. You can configure the display options for Activity Roster, AM Workcenter, and Individual Activity Manager.</p> <p>The academic institution default settings are also used for academic career and academic organization unless you override the settings at the career and organization level.</p> <p>See "Enabling Program Enrollment and Activity Management Defaults" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>
Installation Student Admin	INSTALLATION_SA	Set Up SACR > Install > Student Admin Installation > Installation Student Admin	<p>Enable anonymous grading, and set the length of the anonymous ID.</p> <p>See "Selecting Student Administration Installation Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>
Inclusion Types	SSR_AC_INCLTYPE	Curriculum Management > Activity Management > Setup > Inclusion Types	<p>Activate inclusion types to be used in the anonymous grading. The setting of anonymous grading on this page determines whether it is used and displayed in Activity Management.</p> <p>See Defining Inclusion Types.</p>

Page Name	Definition Name	Navigation	Usage
Activity Definition	SSR_AC_ITEMTYPE	Curriculum Management > Activity Management > Setup > Activity Definition	Set which content types can use anonymous grading. See Defining Activity Definitions .
Registry Detail	SSR_AC_REG_DTL	Curriculum Management > Activity Management > Activity Registry > Activity Registry > Registry Detail	Override the anonymous grading defaults for the activity registry. The activity registry inherits the anonymous grading settings from the Academic Institution, Academic Career, or Academic Organization. See Defining Registry Details .
Activity Manager	SSR_ACM_MAIN	Curriculum Management > Activity Management > Organize and Manage > Activity Manager	Configure settings for anonymous grading at the activity level. See Managing Content Tree Activities .
Anonymous ID Security	SSR_ANID_SCRTY_PG	Set Up SACR > Security > Secure Student Administration > User ID > Anonymous ID Security	Configure access to anonymous IDs. See Configuring Access to Anonymous IDs .
Anonymous ID Search	—	Records and Enrollment > Individual Activity Manager > Anonymous ID Search	Validate the anonymous IDs of students against the student ID and name.

[Generating Anonymous IDs](#)

Configuring Access to Anonymous IDs

Access Anonymous ID Security page (Set Up SACR > Security > Secure Student Administration > User ID > Anonymous ID Security).

Image: Anonymous ID Security page

This example illustrates the fields and controls on the Anonymous ID Security page.

Use this page to determine the level of access to anonymous IDs that a particular user is allowed. For example, you can allow an instructor to access only anonymous IDs but not the student ID or name in Workcenter or Activity Roster.

The access you set up on this page is not a requirement to be able to use the anonymous grading feature. Oracle recommends to limit access to anonymous IDs to only a system administrator or super user.

Validating Anonymous IDs

Access the Anonymous ID Search page (Records and Enrollment > Individual Activity Manager > Anonymous ID Search).

Use this page to check the anonymous IDs of students against their student ID and name. This page displays the anonymous IDs assigned to each student per activity.

ID	Enter or search for the student ID against which you want to validate the anonymous ID.
Anonymous ID	Enter the anonymous ID of the course against which you want to validate a student ID or name.
Anonymous ID Type	Select the anonymous ID type: course or resit.
Exam Only Course	Select to limit your search to exam-only courses.

Setting Up Activity Management Throughout Campus Solutions

Additional academic structure setup — throughout core Campus Solutions — is necessary to support Activity Management. This section discusses how to:

- Define various Activity Management installation options.
- Enable Activity Management and set up activity management defaults.
- Set up EOCs.

Define Various Activity Management Installation Options

Use the Installation Student Administration page to define activity and result roster item settings.

See "Selecting Student Administration Installation Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Enabling Activity Management and Setting Up Activity Management Defaults

Use the Academic Institution 9 page to enable Activity Management and set up default values.

When entering results in the Individual Activity Manager, Activity Roster and the Activity Management Workcenter, it is now possible to control whether or not results can be deleted in IAM, and whether or not the results can be updated in IAM, Roster and Workcenter. The control is based on the type of result entered or calculated.

- Non Calculated Result (manually entered result)
- Late Penalty Calculated Result
- Resit Calculated Result
- Other Calculated Result
- Result Scale Conversion Options

See "Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up EOCs

Use the Offerings page to define EOC requirements on the course catalog.

See [Creating Course Offerings](#)

Chapter 16

Setting Up Research Tracking

Setting Up Research Tracking

This section discusses how to:

- Set up Student Administration options.
- Set up research tracking options for academic programs.
- Set up research tracking options for academic plans.
- Set up research status codes.
- Set up demographic data usage.
- Set up consumption load.
- Set up consumption actions for program actions.
- Use Common Attribute Framework for research tracking.

Pages Used to Set Up Research Tracking

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Installation Student Admin	INSTALLATION_SA	Set Up SACR > Install > Student Admin Installation > Installation Student Administration	Specify the optional consumption model to use and monitor and, if necessary, update the Last Candidate Number and Last Service Request Number settings.
Academic Program – Research Processing Options	SSR_RS_PROG_SETUP	Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Research Processing Options	Identify an academic program as research-enabled and specify other information about such programs.
Academic Plan – Research Processing Options	SSR_RS_PLAN_SETUP	Set Up SACR > Foundation Tables > Academic Structure > Academic Plan Table > Research Processing Options	Identify an academic plan as research-enabled and specify other information about such plans.
Process Status Codes	SSR_RS_STATUS_TYPE	Set Up SACR > Product Related > Student Records > Research Management > Process Status Codes	Set up status codes.

Page Name	Definition Name	Navigation	Usage
Demographic Data Use	SSR_RS_DEMSETUP	Set Up SACR > Product Related > Student Records > Research Management > Demographic Data Use > Demographic Data Use	Set up the address, email, and telephone usage to be associated with the Research module.
Research Consumption Load Setup	SSR_RS_CONSLOAD	Set Up SACR > Product Related > Student Records > Research Management > Research Consumption Load > Research Consumption Load Setup	Set up consumption load.
Program Action Process Setup	SSR_PRGRSN_DTL	Set Up SACR > Product Related > Student Records > Program Action > Program Action Process Setup	Set up automatic insertion of consumption rows for program action/action reasons entered in Student Program/Plan.

Setting Up Student Administration Options

Access the Installation Student Admin page (Set Up SACR > Install > Student Admin Installation > Installation Student Administration).

See "Selecting Student Administration Installation Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Setting Up Research Tracking Options for Academic Programs

Access the Academic Program – Research Processing Options page (Set Up SACR > Foundation Tables > Academic Structure > Academic Program Table > Research Processing Options).

Image: Academic Program – Research Processing Options page

This example illustrates the fields and controls on the Academic Program – Research Processing Options page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Research Processing Options' page for an academic program. At the top, there are navigation tabs: 'Home Campus NLD', 'Graduation', 'Program Enrollment Mapping', 'Research Processing Options' (selected), and 'Advisement'. Below the tabs, the 'Academic Institution' is 'PSUNV' (PeopleSoft University) and the 'Academic Program' is 'MEDRF' (Medical Research Field). The 'Effective Date' is '05/09/1900' and the 'Status' is 'Active'. A checkbox for 'Use Research Processing' is checked. The 'Consumption Controls' section includes a 'Consumption Model' with 'None' selected and 'Days' unselected, a 'Consumption Load' of 'HALF' (Half Time), and a 'Consumption Rate' of '0.50'. The 'Early Submission %' is set to '100'. The 'Thesis Examination Controls' section includes 'Evaluation Category' (THESIS), 'Evaluation Code' (MEDTHESIS), 'Minimum Examiners' (2), 'Intent to Submit Required' (unchecked), 'Exam Certificate Required' (unchecked), 'Transcript Level' (Print on Degree Progress), '*Submit Notice Offset (Days)' (30), 'Exam Return Default (Days)' (0), 'Maximum Internal Examiners' (5), and '*Maximum Number of Submissions' (3).

The system automatically identifies research candidates based on applying for admission into, or being active in, a research-enabled academic program or academic plan. This section and the following section discuss how this is set up.

Use Research Processing

Select this check box to identify the academic program as being research-enabled. All processing rules that determine if a research candidate is eligible based on the academic program are determined by this field. In addition, if the check box is selected, the other fields on the page can be edited. If the check box is deselected, all the settings on the page are reset.

Consumption Controls

This setup determines what appears on the Candidature Details page in Admissions and on the Consumption and Submission page in the Candidate Management component.

See:

- [Updating Candidate Management Data Using Admissions Components](#)
- [Tracking Consumption and Submission](#)

Consumption Model

The option that was selected on the Installation Student Admin page appears here by default but you can change it.

See [Setting Up Student Administration Options](#).

Candidacy Duration

Use this group box to indicate the maximum amount of time that a candidate is assigned to submit a thesis for review. The Days field is available only if the Consumption Model option is *Days*.

Consumption Load

Select a Consumption Load value. The related value then appears in the Consumption Rate field.

Values are defined on the Research Consumption Load Setup page.

See [Setting Up Consumption Load](#).

Early Submission % (early submission percentage)

Enter a percentage (of the time allocated to complete the thesis) to indicate when a candidate can first submit his or her thesis for evaluation (Early Submission Date).

Thesis Examination Controls**Evaluation Category**

An Evaluation Management attribute which is used when Student Evaluation records are created for candidates for thesis evaluation.

See:

- "Understanding Evaluation Management" (PeopleSoft Campus Solutions 9.2: Campus Community)
- "Defining Evaluation Categories" (PeopleSoft Campus Solutions 9.2: Campus Community)

Evaluation Code

The Evaluation Code field can be updated only after the Evaluation Category field is selected.

This value identifies the thesis evaluation code (effectively the *evaluation scheme*) to be applied to this program, so that all candidates in this program are evaluated against the same collection of various rating schemes and components specified in this scheme when their Student Evaluation instance is created. This field prompts only on evaluation codes associated with the Evaluation Category value.

Intent to Submit Required

Indicates that candidates are required to formally notify the university of their intention to submit their theses for examination by lodging a *Notice Of Intention To Submit* form prior to submission. The check box is selected by default.

The Exam Initiated check box on the Thesis Submission - Evaluation page can be selected only if the Intent to Submit Required check box is selected here.

See [Entering Thesis Evaluation](#).

Submit Notice Offset (Days)

This field defines when communications are sent to the candidate, supervisor, and any other interested parties to inform them that the candidature will soon end and that the candidate is required to submit the thesis. If the Intent to Submit Required check box has been selected, then the request for the submission of this notice is also sent.

The value of the field is an integer between 0 and 999. Though no process checks the value in this field, generally you would use this value to alert the candidate, supervisor, and research administrator that the thesis submission deadline is imminent using a 3Cs Communication email. The default value for this field is 90 (approximately three months).

Exam Return Default (Days)

This information-only field indicates how long (number of days) after the thesis has been submitted for examination and sent to an examiner that the examiner's report is due. The value can include integers from 1 to 999.

Minimum Examiners

Enter the minimum number of examiners that must examine the thesis for the examination to be deemed valid. Valid values are whole numbers 2 through 9. This field is information-only and has no default value. You must specify a value.

Maximum Internal Examiners

Enter the maximum number of internal examiners permitted to examine a thesis for the examination to be deemed valid. The field can contain a single digit, and a value of 0 indicates that no internal examiners are permitted. The field must contain a value and defaults to 0 if no value is present when the page is saved.

Maximum Number of Submissions

Enter the maximum number of submissions that are allowed for a thesis. When a user clicks the Resubmit Thesis button on the Thesis Management page, the value that is entered here is used to determine if the maximum has been exceeded.

See [Entering Thesis Details](#).

Exam Certificate Required

Select this check box to indicate that an examination certificate is required. If this check box is selected, users must enter a value in the Exam Supervisor Approval and Certificate Final Approval fields on the Thesis Management – Evaluation page.

See [Entering Thesis Evaluation](#).

Transcript Level

Select the Transcript Level at which you want the Thesis Examination information to be published.

"Defining Academic Plans" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up Research Status Codes

Access the Process Status Codes page (Set Up SACR > Product Related > Student Records > Research Management > Process Status Codes).

Image: Process Status Codes page

This example illustrates the fields and controls on the Process Status Codes page. You can find definitions for the fields and controls later on this page.

User-defined status codes are used in the Candidate Management, Thesis Management, Service Request, Candidate Center, and the Academic Project Management components to track the state of the different business elements: the research topic, supervisor selection, consumption and submission dates, thesis processing, user-defined business assignments, and service requests. Use this setup component to define all status values that a school uses to manage its business processes.

Description Enter the description of the set of status codes you are creating.

System Usage

This setting is used by the system to identify the page in the Candidate Management component, the Thesis Management component, the Service Requests self-service components for students and administrators, the Candidate Center or the Student Project Management component on which the set of status code values are used. The field can contain one of the following values:

System Usage Value	Pages Used
Topic	Candidate Management, Research Topic page Admissions: Add/Maintain Applications page Candidate Center, Topic Details page

System Usage Value	Pages Used
Supervisor	Candidate Management, Supervisors page Admissions: Add/Maintain Applications page Student Project Management, Additional Details page (Supervisors group box) Candidate Center, Supervisor Details page
Consumption	Candidate Management, Consumption and Submission page Admissions: Add/Maintain Applications page Candidate Center, Consumption/Submission Details page
Assignment	Candidate Management, Other Assignments page Admissions: Add/Maintain Applications page Student Project Management, Additional Details page (Supervisors group box) Candidate Center, Assignment Details page
Thesis	Thesis Management, Thesis Submission page Candidate Center, Thesis Details page
Requests	Service Request Management page Self Service, Requests, My Service Requests page (for students) Service Request Dashboard (Service Requests pagelet for administrators)
Project	Student Project Management, Project Management page

Status Codes

Status

Use this value to track the business process. The field is alphanumeric and is required.

Note: You can assign a status code to trigger a 3C communication event from the Candidate Management and Thesis Management components. 3C Engine PeopleCode function calls have been added to these components to trigger online communication events. Adding the field `SSR_RS_STATUS` from the Edit Table `SSR_RS_STATUS_D` to the Trigger Prompt Table setup allows this functionality.

See "Defining 3C Engine Triggers" (PeopleSoft Campus Solutions 9.2: Campus Community).

Description

Enter the status description that is displayed on the Service Requests self-service component pages for administrator.

Self Service Description

Enter the status description that is displayed on the Candidate Center and Service Requests self-service component pages for students. This allows for a more student-friendly description than the internal value used by administrators.

Status Level

A numeric value that ranks the status code values. The greater the number, the higher the ranking of the code. The default value is 0. These status level codes are used to manage student update thresholds in Research Service Requests, and to determine whether to update candidate and thesis data from the Candidate Center.

Related Links

"Creating and Updating Service Requests (Candidates)" (PeopleSoft Campus Solutions 9.2: Self Service)

"Administering Service Requests (Administrators)" (PeopleSoft Campus Solutions 9.2: Self Service)

Setting Up Demographic Data Usage

Access the Demographic Data Use page (Set Up SACR > Product Related > Student Records > Research Management > Demographic Data Use > Demographic Data Use).

Use this page to set up how a person's address, email, and telephone information are to be handled by the research module. Currently, the Research Topic Setup - Contact information uses this setup, but additional research features will be added as they are developed.

See [Associating Organizations and Contacts with Research Topics](#).

Related Links

"Establishing Address Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Establishing Phone Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

Setting Up Consumption Load

Access the Research Consumption Load Setup page (Set Up SACR > Product Related > Student Records > Research Management > Research Consumption Load > Research Consumption Load Setup).

Image: Research Consumption Load Setup page

This example illustrates the fields and controls on the Research Consumption Load Setup page. You can find definitions for the fields and controls later on this page.

Research Consumption Load Setup

Academic Institution: PSUNV PeopleSoft University
Consumption Load: FULL

Find	View All	First	1 of 1	Last
*Effective Date:	01/01/1900	*Effective Status:	Active	
*Description:	Full Time			
*Short Description:	Full			
*Consumption Rate:	1.00			

Use this page to set up the valid consumption load values at the institution. Consumption load defines the rate at which a candidate conducts his or her research. This is similar to the principle of academic load, but is not based on enrollment. A consumption rate of 1.0 implies that 100 percent of the candidate's time is spent performing research and related activities. The consumption rate directly impacts the length of time a candidate is projected to complete the research and submit the thesis for evaluation. The values that you set up here are used on the Research Processing Options page in the Academic Program Table and Academic Plan Table components, as well as in the Candidature Details page in Admissions and in the Candidate Management component.

See:

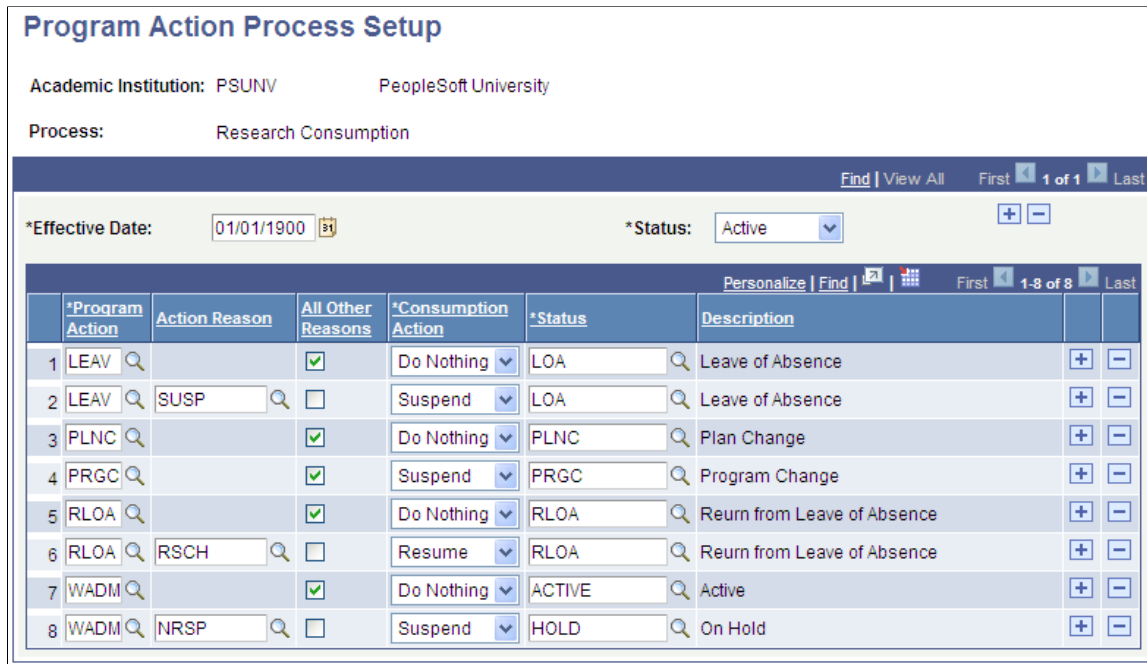

- [Setting Up Research Tracking Options for Academic Programs](#)
- [Setting Up Research Tracking Options for Academic Plans](#)

Setting Up Consumption Actions for Program Actions

Access the Program Action Process Setup page (Set Up SACR > Product Related > Student Records > Program Action > Program Action Process Setup).

Image: Program Action Process Setup page

This example illustrates the fields and controls on the Program Action Process Setup page. You can find definitions for the fields and controls later on this page.

Use this page to define Program Action/Action Reason combinations which can trigger an update of the student’s candidate information from the Student Program/Plan component.

Enter a Consumption Action and Status for a Program Action/Action Reason. When the Program Action/Action Reason combination is saved in the Student Program Plan component, the related Consumption Action and Status values are automatically inserted in the SSR_RS_CONSMPTN record (Consumption and Submission page in the Candidate Management component).

You can use this feature to automatically suspend and resume the consumption process. This action is performed only if the Days consumption model has been selected for the candidate.

Note: This is an optional feature and should be carefully implemented after an analysis of your business requirements.

Program Action

You must select a value. Values are defined on the Program Action Table page.

Action Reason

The available values are those defined on the Program Action Reason Table page.

All Other Reasons

Select this check box to identify how Program Action / Action Reason values other than those specifically defined should be treated.

Consumption Action

Indicates how the consumption calculation process is affected by the Program Action and Action Reason. The available values are: *Suspend* (the calculation), *Resume* (from a previously suspended state), and *Do Nothing* (no effect).

Status The available values are the Status Codes defined for the System Usage Value of *Consumption* on the Process Status Codes page.

See [Tracking Consumption and Submission](#).

Using Common Attribute Framework for Research Tracking

The Common Attribute Framework enables you to define a common attribute and add the common attribute as a data field to any Campus Solutions page. A user can then enter a value on the page for the data field.

Use the Common Attribute Framework to create attributes for the Research Tracking feature. Create attributes using the Common Attribute component (Set Up SACR, Common Definitions, Common Attributes Setup, Common Attribute) and then use the Record Context component (Set Up SACR, Common Definitions, Common Attributes Setup, Record Context) to associate attributes with a particular record.

See:

- "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)
- "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

This table lists the delivered record contexts for Research Tracking, the attributes, and the pages with which the record contexts are associated.

Record Context	Attribute	Page
SSR_RS_TPCSETUP	Topic Setup Attributes	Research Topic Setup - Additional Information
SSR_RS_TOPIC	Research Topic Attributes	Candidate Management – Research Topic
SSR_RS_SUPRVSR	Supervisor Attributes	Candidate Management – Supervisors
SSR_RS_CONSMPTN	Consumption Attributes	Candidate Management - Consumption and Submission
SSR_RS_OTHRQDTL	Other Assignments Attributes	Candidate Management - Other Assignments
SSR_RS_THESIS	Thesis Attributes	Thesis Management – Additional Information
SSR_ADMN_DTL	Administrator Attributes	Administrator Profile Management

The pages are discussed in later topics related to setting up Research Tracking or in topics related to managing Research Tracking.

Note: Attributes defined for the Thesis Management, Supervisors, and Other Assignments pages are the same Common Attribute Framework records used in the Student Project Management component. Any attributes that you add appear in both the Student Project and Research Management areas. To configure attributes to be used exclusively for either the Research or Academic Project pages, use the Common Attribute Framework attribute filter class (SSR_RS_RESEARCH:CAF_Filters:ResearchAttributeFilter) and work entities (ResearchManagement, AcademicProject) to configure the attributes in the Common Attribute Framework Record Context setup page.

Setting Up Research Topics

This section discusses how to:

- Define research topic categories.
- Define research topics.
- Review available research supervisors.
- Associate organizations and contacts with research topics.
- Enter additional information.
- Enter Attachments.
- Set up self-service research topic search.

Pages Used to Define Research Topics

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Research Topic Category	SSR_RS_TOPICCAT	Set Up SACR > Product Related > Student Records > Research Management > Research Topic Categories > Research Topic Category	Create research topic categories for assignment to research topics.
Topic Setup	SSR_RS_TOPIC_SETUP	Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Topic Setup	Create the research topics that are offered at the institution. Provide information about research topics, including a description and the academic programs and plans to which they are associated.
Research Topic Setup – Available Supervisors	SSR_RS_TOPIC_SUP	Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Available Supervisors	View all available research supervisors who have academic programs or academic plans that match the research topic.

Page Name	Definition Name	Navigation	Usage
Research Topic Setup – Organization and Contacts	SSR_RS_ORG_CONTACT	Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Organization and Contacts	Associate one or more academic or external organization(s) with the research topic and set up contacts for a research topic.
Research Topic Setup – Add Organization	SSR_RS_TPC_ORG	Click the Add Organization button on the Organization and Contacts page.	Select organizations to associate with a research topic.
Research Topic Setup – Academic Organization Details	SSR_RS_TPC_ACADORG	Click the View Details link on the Organization and Contacts page.	View details about academic organizations that are associated with a research topic.
Research Topic Setup – External Organization Details	SSR_RS_TPC_EXTORG	Click the View Details link on the Organization and Contacts page.	View details about external organizations that are associated with a research topic.
Research Topic Setup – Add Contact	SSR_RS_TPC_ADDCNCT	Click the Add Contact button on the Organization and Contacts page.	Select contacts to associate with a research topic.
Research Topic Setup – Contact Details	SSR_RS_TPC_CNCT	Click the Contact Details link on the Organization and Contacts page.	View details about contacts that are associated with a research topic.
Research Topic Setup - Additional Information	SSR_RS_TOPICST_CA	Set Up SACR >Product Related >Student Records > Research Management > Research Topic Setup >Additional Information	Enter and review Common Attribute fields associated with the research topic. This page appears only if Common Attribute fields have been created using the Common Attribute Framework.
Research Topic Setup – Attachments	SSR_RS_TOPICST_ATT	Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Attachments	Add one or more attachments for a research topic.

Defining Research Topic Categories

Access the Research Topic Category page (Set Up SACR > Product Related > Student Records > Research Management > Research Topic Categories > Research Topic Category).

Research topic categories are user-defined attributes that can be assigned to research topics. For example, you can create a category to group research topics that belong to a common organization or funding source.

Status

Select *Active* to make the topic category available for use in the Topic Setup page.

Display in Self Service

If you select this check box:

- The Category Name can be used as search criteria on the Search for Research Topics self-service page. Enter a name for the category on the Topic Setup page.
- Category data (defined on the Topic Setup page) displays in the self-service page for the topic if the Display check box is selected for CATEGORY on the Fields Setup page.

See [Setting Up Self-Service Research Topic Search](#)

See [Defining Research Topics](#)

Defining Research Topics

Access the Research Topic Setup – Topic Setup page (Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Topic Setup).

Image: Research Topic Setup page

This example illustrates the fields and controls on the Research Topic Setup page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Topic Setup' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Topic Code:** CR0001
- Effective Date:** 07/12/2000
- Status:** Active
- Display in Self Service:**
- Description:** Increasing the efficiency of radio waves.
- Academic Program:** ELECE Electrical Engineering
- Academic Plan:** (Empty)
- Academic Sub-Plan:** (Empty)
- Long Description:** Increasing the efficiency of radio waves. Part of the Cancer Research Project.
- Number of Positions:** 5
- Number of Applicants:** 12

Category Information Table:

*Category	Description	Display in Self Service	Category Name
1 PJ	Project	<input type="checkbox"/>	Cancer Project 334455
2 SP	Sub Project	<input type="checkbox"/>	334455.1

Facilities Table:

*Facility ID	Description	Facility Type	Location Code	Address	Display in Self Service
1 ANGE0125A	Angel 125A	Laboratory	PSCSHCDA		<input checked="" type="checkbox"/>

Display in Self Service Select if you want the system to display this topic on the Search for Research Topics self-service page.

The Academic Program, Academic Plan, and Academic Sub-Plan fields on the Topic Setup page are used to control whether a topic is available to a research candidate. Because of the defined relationships between the fields, the page validates entries to prevent an invalid combination of values. A research topic can be defined as valid for:

- An academic program only.
- An academic program and academic plan combination.
- An academic plan and academic sub-plan combination.
- An academic program, academic plan, and academic sub-plan combination.

Academic Program Select the academic program to which the research topic belongs.

Academic Plan and Academic Sub-Plan Select the academic plan and sub-plan (if any) to which the research topic belongs.

Long Description Enter a description of the research topic.

Number of Positions and Number of Applicants Enter the total number of available positions and maximum number of applicants for the research topic. These fields are informational only.

Category Information

Category The Category Code assigned to the topic. The Category value is optional.

Display in Self Service This check box is display-only on the Topic Setup page.

Use the Display in Self Service check box on the Research Topic Category page to indicate whether category information should display on the Search for Research Topics self-service page.

See [Defining Research Topic Categories](#)

See [Setting Up Self-Service Research Topic Search](#)

Category Name Use this optional field to provide additional information to identify the assigned category.

Facilities

Set up information about the location and facilities used for this research.

See:

- [Defining Buildings, Rooms, and Classroom Facilities](#)

- "Setting Up Locations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Display in Self Service

If the Display check box is selected for FACILITY on the Fields Setup page, and you select this check box, data displays for the topic on the Search for Research Topics self-service page.

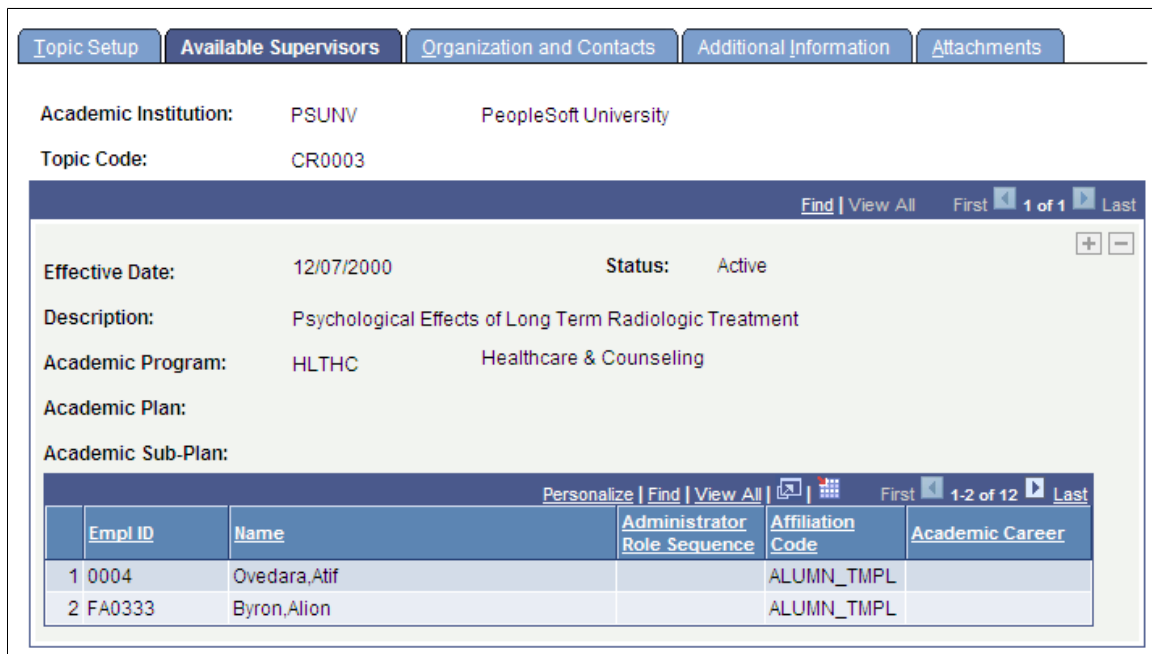

See [Setting Up Self-Service Research Topic Search](#)

Reviewing Available Research Supervisors

Access the Research Topic Setup - Available Supervisors page (Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Available Supervisors).

Image: Research Topic Setup - Available Supervisors page

This example illustrates the fields and controls on the Research Topic Setup - Available Supervisors page. You can find definitions for the fields and controls later on this page.

The Available Supervisors page is display-only.

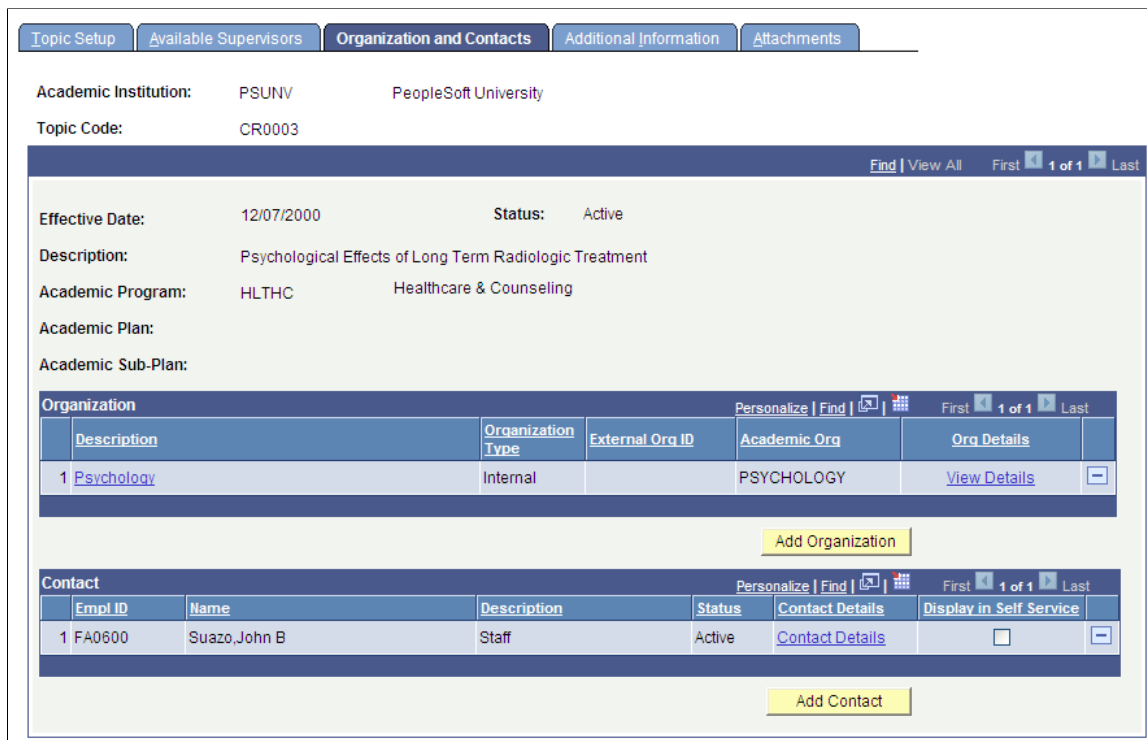

See [Setting Up Research Administrators](#)

Associating Organizations and Contacts with Research Topics

Access the Research Topic Setup - Organizations and Contacts page (Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Organization and Contacts).

Image: Research Topic Setup - Organizations and Contacts page

This example illustrates the fields and controls on the Research Topic Setup - Organizations and Contacts page . You can find definitions for the fields and controls later on this page.

Organization

You can associate external organizations or academic organizations with a research topic.

External organizations are defined in the Organization Table (Campus Community, Organization, Create/Maintain Organizations, Organization Table).

See "Understanding Organizations" (PeopleSoft Campus Solutions 9.2: Campus Community).

Academic organizations are defined in the Academic Organization Table (Setup SACR, Foundation Tables, Academic Structure, Academic Organization Table).

See "Defining Academic Organizations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Description

Click this link to access the Organization Table (EXT_ORG_TABLE) page or the Academic Organization Table (ACADEMIC_ORG_TBL) page. The link is available only for users who are authorized to access the relevant component.

View Details

Click this link to access a display only page (External Organization Details page or Academic Organization Details page). This link allows users who do not have security access to the Organization Table or Academic Organization Table components to view the relevant organization data.

See "Securing Academic Organizations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Add Organization

When you click the Add Organization button, you are taken to the Add Organization (SSR_RS_TPC_ORG) page:

Depending on the option that you select, the External Organization or Academic Organization field appears and you can select the organization with which to associate the research topic.

Contact

You can also associate contacts with a research topic. Contacts must have an EmplID in the system.

Contact Details

Click this link to access the Contact Details (SSR_RS_TPC_CNCT) page and view address, email, and phone details for the contact. The Demographic Data Usage settings determine the contact details to display.

Display in Self Service

If the Display check box is selected for CONTACT, CONTACTEMAIL and CONTACTPHNBR on the Fields Setup page and you select this check box, then the contact name, email and phone data displays for the topic on the Search for Research Topics self-service page.

See [Setting Up Self-Service Research Topic Search](#)

Display in Self Service

Select this check box to indicate that candidates can view contact details in the Research Topic Search self-service page.

Add Contact

When you click the Add Contact button, you are taken to the Add Contact (SSR_RS_TPC_ADDCNCT) page:

ID

When you select an ID, the address, phone, and email details appear here based on the address, phone, and email types that have been set up on the Demographic Data Use page.

See [Setting Up Demographic Data Usage](#)

Active

Use the Active check box to indicate whether the contact is active or inactive.

Entering Additional Information

Access the Research Topic Setup – Additional Information page (Set Up SACR >Product Related >Student Records > Research Management > Research Topic Setup >Additional Information).

Image: Research Topic Setup – Additional Information page

This example illustrates the fields and controls on the Research Topic Setup – Additional Information page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Additional Information' tab of the Research Topic Setup page. At the top, there are navigation tabs: 'Topic Setup', 'Available Supervisors', 'Organization and Contacts', 'Additional Information' (selected), and 'Attachments'. Below the tabs, the following information is displayed:

- Academic Institution:** PSUNV (PeopleSoft University)
- Topic Code:** CR0003
- Effective Date:** 12/07/2000
- Status:** Active
- Description:** Psychological Effects of Long Term Radiologic Treatment
- Academic Program:** HLTHC (Healthcare & Counseling)
- Academic Plan:**
- Academic Sub-Plan:**

Below these fields is a 'Local Attributes' section with a search bar and navigation controls. The attribute selected is '*Attribute' with a value of 'EU Project ID' in a dropdown menu and '334455.3' in a text input field.

Use this page to enter and review Common Attribute fields associated with the research topic.

This page appears only if common attributes have been created for the research topic setup using the Common Attribute Framework.

See [Using Common Attribute Framework for Research Tracking](#)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entering Attachments

Access the Research Topic Setup – Attachments page (Set Up SACR > Product Related > Student Records > Research Management > Research Topic Setup > Attachments). These attachments are made available for viewing in the Research Topic Search self-service page.

Visible to Student

Select to set whether or not the attachment is visible to students through the Research Topic Search self-service page. By default, attachments added to administrator pages are not visible to students.

Setting Up Self-Service Research Topic Search

The Search for Research Topics page is available in Self Service if you select the Display in Self Service check box on the Topic Setup page.

Here is an example of the Search for Research Topics page:

Image: Search for Research Topics page example

This example illustrates the fields and controls on the Search for Research Topics page example. You can find definitions for the fields and controls later on this page.

Fields Setup is a Research Management component (SCC_FIELD_SETUP) that is used by Research Tracking to control the display of sections and fields on the Search For Research Topic self-service page. The self-service display settings are provided. Search for Page = Research Topic.

See "Configuring Tasks" (PeopleSoft Campus Solutions 9.2: Campus Community)

Here is an example of the Fields Setup page for Research Topic (Set Up SACR >Product Related >Student Records >Research Management >Fields Setup):

Image: Fields Setup page example for Research Topic

This example illustrates the fields and controls on the Fields Setup page example for Research Topic. You can find definitions for the fields and controls later on this page.

Fields Setup

Page: Research Topic

Field Name: SSR_RS_NO_APPL

***Description:**

Display

If the Display check box is selected on the Fields Setup page, the section (for example Supervisors) or field (for example Applicants) is displayed on the Search for Research Topic page for *all* topics that are available in Self Service.

Except for a few sections on the self-service page, data (defined in the Topic Setup component) is automatically displayed. If no data exists in Topic Setup, this message is displayed: *There is no Data setup for this Topic.*

You can control the display of data for the Categories, Contacts and Facilities sections at the *individual topic* level. For example, if the Display check box is selected for FACILITY in Fields Setup, but the Display in Self Service check box is not selected in the Facilities section of the Topic Setup page for topic RT0001, Facilities data does not display for RT001 on the self-service page. *There is no Data setup for this Topic* is displayed.

Note: For categories, the Display in Self Service check box is display-only on the Topic Setup page and the display of self-service data is controlled on the Research Topic Category page.

Note: For contacts, the Display in Self Service check box on the Topic Setup—Organization and Contacts page controls the display of the contact name, phone and email address in Self Service. If Display is selected for CONTACT (section), CONTACTEMAIL and CONTACTPHONENBR in Fields Setup and Display in Self Service is selected in Topic Setup for topic RT002, then the contact name, email address and phone number all display in Self Service for RT0002.

See:

- "Searching for Research Topics" (PeopleSoft Campus Solutions 9.2: Self Service)
- [Defining Research Topics](#)
- [Defining Research Topic Categories](#)

Setting Up Research Administrators

This section discusses how to:

- Define administrators.
- Define and manage administrator profiles.
- Define supervisor roles.
- Define additional business assignments.

Support is provided to define the following administrator roles:

- Research supervisor
- Thesis evaluator
- Project Supervisor

Pages Used to Set Up Research Administrators

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Definition	SCC_AFL_TBL	Set Up SACR > Common Definitions > Affiliations > Affiliation Setup > Definition	Define affiliation codes and the hierarchical structure of those codes.
Trigger	SCC_AFL_TRGR	Set Up SACR > Common Definitions > Affiliations > Affiliation Setup > Trigger	Define simple events that trigger the system to determine whether to assign or remove an affiliation.
Academic Institution 10	SSR_ADMN_TYPAFL	Setup SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 10	Map affiliation codes to administrator roles.
Administrator Profile Management	SSR_ADMN_DTL	Records and Enrollment > Graduate Research Management > Administrator Profile > Administrator Profile Management	Enter and track administrators. The qualifications of the administrator and approval of the qualifications can be tracked. Academic areas of participation and availability of the administrator is also managed.
Supervisor Roles	SSR_RS_SUPR_TYP	Set Up SACR > Product Related > Student Records > Research Management > Supervisor Roles > Supervisor Roles	Define the valid supervisor roles for the institution.

Page Name	Definition Name	Navigation	Usage
Assignment Type Options	SSR_RS_REQTYP_STUP	Set Up SACR > Product Related > Student Records > Research Management > Assignment Types > Assignment Type Options	Define additional business requirements that can be assigned to research candidates.

Defining Administrators

Use the Affiliation Setup component and the Academic Institution 10 page to define administrators for Research Tracking.

Setting up Affiliation Codes for Research Tracking

The first step in defining administrators (supervisors and evaluators) is to use the Affiliation Setup component to set up affiliations, which can include child affiliations. Select the Root Indicator check box to indicate that the Affiliation Code is at the highest level of the affiliation hierarchy.

For example, you might set up an Affiliation Code of *Supervisor*; select the Root Indicator check box, then select the Children Indicator check box and set up Child Affiliations such as *Internal Supervisor* and *External Supervisor*.

Later you map the *root affiliations* to Supervisor and Evaluator roles on the Academic Institution 10 page.

A sample affiliation is provided for setting up supervisors:

SUPRV_TMPL: PSUNV Research Supervisor: Research Supervisor root affiliation code with child affiliation code PROF_TMPL. PROF_TMPL: PeopleSoft University Professor (Application Class Package ID: SSR_RS_RESEARCH and Trigger: SSR_ADMN_AFFL_DATA_SYNC).

Note: Before you can set up or use Affiliations functionality, your institution must enable Constituent Web Services.

See "Defining Affiliations" (PeopleSoft Campus Solutions 9.2: Campus Community)

See [Setting Up Integration Broker For Research Administrator Profile Affiliations](#)

Mapping Affiliation Codes to Administrator Roles

After you set up your Affiliation codes, map the root affiliations to Supervisor and Evaluator roles on the Academic Institution 10 page (Setup SACR, Foundation Tables, Academic Structure, Academic Institution Table, Academic Institution 10).

See "Mapping Affiliation Codes to Administrator Roles" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining and Managing Administrator Profiles

Access the Administrator Profile Management page (Records and Enrollment > Graduate Research Management > Administrator Profile > Administrator Profile Management).

Image: Administrator Profile Management page

This example illustrates the fields and controls on the Administrator Profile Management page. You can find definitions for the fields and controls later on this page.

Transfer To: Go

Use this page to enter and track detailed information about administrators.

Research supervisors for whom a profile exists in the Administrator Profile component can be assigned to individual research candidates in the Candidate Management component (and similarly project supervisors in the Project Management component).

See [Assigning Candidate Supervisors](#)

See [Creating and Managing a Student Academic Project](#)

Evaluators for whom a profile exists in the Administrator Profile component can be assigned to committees for use by the Student Evaluation feature during thesis evaluation. A view

(SSR_ADMIN_EVALVW) is used in the Committee Type/Role setup – the view selects evaluators for whom data has been entered in the Approval Date and Approver fields on the Administrator Profile Management page.

See "Understanding Evaluation Management" (PeopleSoft Campus Solutions 9.2: Campus Community)

For information about the Send Notification button,

See [Using Online Notifications](#)

Administrator Role

Define all the roles available for an administrator.

Select Select an administrator role for which to enter and view details in the Administrator Details section. By default, the first role is selected.

Add Click to add a role to the administrator's profile.

The values available in the Affiliation Code field on the Add Administrator Role page are the child affiliation codes (of root affiliation codes) or the root affiliation codes (if no children exist) that are mapped to an administrator role of Research Supervisor, Project Supervisor or Evaluator on the Academic Institution 10 page.

See "Mapping Affiliation Codes to Administrator Roles" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Copy When you click Add and enter a value in the Administrator Role field, the Copy button becomes available and you can copy settings from an existing administrator role to the new role.

Note: After you select an Administrator Role, enter the required Administrator Details data and save the page, an affiliation is associated with the person on the Add/Update Affiliations page.

If you change the Administrator Details Status to *Inactive*, the End Date field is populated on the Add/Update Affiliations page.

For these updates to the Affiliations page to occur, you must set up the appropriate Affiliations service operations through integration broker.

See [Setting Up Integration Broker For Research Administrator Profile Affiliations](#)

See "Understanding Affiliations" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Defining Affiliations" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Adding and Updating Affiliations" (PeopleSoft Campus Solutions 9.2: Campus Community)

Administrator Details

Academic Organization and External Organization	You must select an academic organization or an external organization.
Approval Date and Approver	Indicates that the administrator has met the qualifications to be assigned as a research supervisor or evaluator.
Unrestricted	Select this check box if the administrator can participate in all academic careers. Deselect this check box if participation is restricted to a specific academic career or to a specific academic career, program, plan, subplan combination. When you deselect the check box, the Academic Career, Academic Program, Academic Plan, Academic Sub-Plan, Supervision Maximum, and Percent of Appointment fields appear.
Academic Career	The academic career in which the supervisor can participate. This field is required for supervisors if you have deselected the Unrestricted check box.
Supervision Maximum	The maximum number of candidates that the supervisor can be assigned to supervise. This field is available for edit only if you have deselected the Unrestricted check box.
Percent of Appointment	Indicates the supervisor's availability to the role. This value cannot exceed 100; if it does, an error message is displayed. This field is available for edit only if you have deselected the Unrestricted check box.

Use the Transfer To field to go to other components and enter qualifications of the administrator.

Affiliation Code

Add affiliation codes to an administrator role.

Defining Supervisor Roles

Access the Supervisor Roles page (Set Up SACR > Product Related > Student Records > Research Management > Supervisor Roles > Supervisor Roles).

Image: Supervisor Roles page

This example illustrates the fields and controls on the Supervisor Roles page . You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Supervisor Roles' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Supervisor Role:** RSUP
- *Effective Date:** 01/01/1900 (with a calendar icon)
- *Effective Status:** Active (with a dropdown arrow and +/- buttons)
- *Description:** Research Supervisor

At the top of the form area, there is a navigation bar with 'Find | View All' and 'First 1 of 1 Last'.

Use this page to define the role of the supervisor for a particular research candidature. Supervisor roles are also used for the Student Academic Projects feature.

Note: It is recommended that you use affiliation codes and the Administrator Profile Management structure to define supervisors.

The values that you define here are available in the Supervisor Role field on the Supervisors page in the Candidate Management component and in the Candidature Details page in Admissions.

See [Assigning Candidate Supervisors](#).

Defining Additional Business Assignments

Access the Assignment Type Options page (Set Up SACR > Product Related > Student Records > Research Management > Assignment Types > Assignment Type Options).

Image: Assignment Type Options page

This example illustrates the fields and controls on the Assignment Type Options page. You can find definitions for the fields and controls later on this page.

Assignment Type Options

Academic Institution: PSUNV PeopleSoft University

Setting Up Research Service Requests

This section provides an overview of Research Service Requests and discusses how to:

- Use the Notifications framework for service request notifications.
- Use the Notifications framework for service item notifications.
- Set up research service request categories.
- Set up research service request types.
- Set up self-service research service requests.
- Set up service request assignments.

Understanding Research Service Requests

Students can request services from their department such as a leave of absence, change of program, and extra time to complete a thesis. Administrators use the Service Request Management page to submit

service requests on behalf of students. Alternatively, students can use self-service to submit service requests. After a student uses the self-service page to submit a service request, the administrator uses the Service Request Management page to take action on the submitted service request.

An administrator can also use the Service Request Dashboard self-service page to update the service requests assigned to him or her. For example, the administrator can use the dashboard to add comments to the assigned requests. The key difference between dashboard and Service Request Management page is that when an administrator signs into Campus Solutions, he or she can view all the service requests assigned to all the administrators (including himself or herself) on the Service Request Management page while the dashboard displays only the service requests assigned to the signed-in administrator. Another key difference is that an administrator cannot create a service request using the dashboard. To create a new service request, an administrator should use the Service Request Management page.

Service requests can be broadly classified under service request categories. Each service request category has different service request types. Each service request type may have subtypes. For example, an institution can define a service category *Applicant*. The Applicant category may have different types such as *Research Application* and *Request for Research Application Information*. The Research Application type may have different subtypes such as *Submit Offer Letter for Acceptance* and *Defer Application to a Future Term*.

When a student creates a service request from the My Service Requests page, the student first selects the service request category, then the type for the category, then the subtype for the type (if subtypes have been defined for the request type) and finally enters the request details such as a description of the service request. When an administrator creates a service request on the Service Request Management page, the administrator must provide the request category, request type for the request category, and the subtype for the request type (if defined). Once a service request has been entered, the request is automatically assigned to an administrator to review. Students can monitor the status of their requests using their self service page, or can be notified directly by the administrator. Service requests can also be created from the Candidate Center.

See:

- "Using Research Tracking Self Service" (PeopleSoft Campus Solutions 9.2: Self Service)
- [Managing Service Requests](#)
- "Creating and Updating Service Requests (Candidates)" (PeopleSoft Campus Solutions 9.2: Self Service)
- "Administering Service Requests (Administrators)" (PeopleSoft Campus Solutions 9.2: Self Service)

To set up service requests, use the Service Request Categories page to set up request categories. Then, for each request category, use the Service Request Type page to set up request types. Optionally, set up request subtypes for a request type on the Service Request Type page.

Additionally, use the Research Defaults Setup page to configure service request self service for students. Use the Service Request Assignment Setup page to control how service requests are assigned.

Pages Used to Set Up Research Service Requests

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Service Request Categories	SSR_RS_REQSTCAT	Set Up SACR > Product Related > Student Records > Research Management > Service Request Categories	Set up service request categories for research applicants and candidates.
Service Request Type	SSR_RS_REQSTTYP	Set Up SACR > Product Related > Student Records > Research Management > Service Request Types > Service Request Type	Set up service request types for each service request category.
Research Defaults Setup	SSR_SS_REQSETUP	Set Up SACR > Product Related > Student Records > Research Management > Research Defaults Setup	Configure additional service request settings for self-service as well as default settings for Research Tracking.
Service Request Assignment Setup	SSR_RS_ASGN_SETUP	Set Up SACR > Product Related > Student Records > Research Management > Service Request Assignment > Service Request Assignment Setup	Set up the assignment of service requests.

Using the Notifications Framework for Service Request Notifications

Use the Notifications framework to set up service request notifications so that when a service request is created or reassigned, the system automatically sends a notification to the administrator to whom the request has been assigned/reassigned.

The Notification Consumer ID: SCC_NTF_CON_20130211040026 Service Request Notifications is delivered:

Image: Notification Consumer Setup page example for Service Requests

This example illustrates the fields and controls on the Notification Consumer Setup page example for Service Requests. You can find definitions for the fields and controls later on this page.

Notification Consumer Setup

Notification Consumer ID: SCC_NTF_CON_20130211040026

***Consumer Name:**

Status:

Description:

Notification Templates				
*Template Name		*Application Class		
1	SSR_SR_CREATE	SSR_RS_RESEARCH:NOTIFIC	View Template Name	+ -
2	SSR_SR_REASSIGN	H.NOTIFICATION:SRNotification	View Template Name	+ -

Delivered settings for Service Request Notifications:

Notification Trigger	Template Name	Generic Template	Application Classes	Notes
Entry of a new Service Request by a student or administrator from the Service Request pages.	SSR_RS_CREATE	SSR_RS_CREATE	SSR_RS_RESEARCH:NOTIFICATION:SRCreateTemplate Provider	<p>You must use the delivered template name. You can change the notification to use a different notification channel instead of email.</p> <p>Use the sample generic template as an example for creating your own notification content. The sample template defines the available field variables that can be used in the notification message content.</p>
Reassignment of an existing service request from the administrator Service Request pages.	SSR_RS_REASSIGN	SSR_RS_REASSIGN	SSR_RS_RESEARCH:NOTIFICATION:SRReassignTemplate Provider	See Notes in the row above.

Field variables provide context data that can be used when creating notification text. Following is a list of variables that are delivered with the SSR_RS_CREATE and SSR_RS_REASSIGN templates. To modify templates, go to PeopleTools, Workflow, Notifications, Generic Templates.

Value	Description
%1	Recipient Name
%2	Recipient EmplID
%3	Service Request EmplID
%4	Student Name
%5	Institution
%6	Service Request ID
%7	Service Request Sequence
%8	Request Category
%9	Request Type
%10	Request Subtype
%11	Comment
%12	Status
%13	URL
%14	Research Candidate Number
%15	Request Date
%16	Approver ID
%17	Approver Name
%18	Service Request Assigned to EmplID
%19	Assigned to Name
%20	Action Date
%21	As of Date
%22	Request Number

Note: The list of variables contained in each message is delivered with your system and require extensive coding effort to be modified.

See "Setting Up and Consuming the Notifications Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

Defining Notifications By Service Request Type

Request type-specific notifications are supported. When a service request is entered or reassigned and a notification has been set up for the request type, that specific notification is sent instead of the common notifications described above. In addition, a notification can be sent to the assigned administrator if the service request is updated by another person.

On the Notification Consumer Setup page, update the delivered Consumer Notification ID: SCC_NTF_CON_20130211040026 Service Request Notifications with any additional request type-specific notifications. For these templates, you must use the SSR_RS_RESEARCH:NOTIFICATION:SRTemplateProvider application class.

Then, on the Service Request Type page, add your templates to the service request types for which notification is required.

<i>Notification Trigger</i>	<i>Template Name</i>	<i>Generic Template</i>	<i>Application Classes</i>	<i>Notes</i>
When a service request has been created, reassigned, or updated by someone other than the request owner, the assigned administrator receives a notification. Select the required trigger value on the Service Request Type page.	User Defined	User Defined	SSR_RS_RESEARCH:NOTIFICATION:SRTemplateProvider	These notifications use the same field variables as the SSR_RS_CREATE and SSR_RS_REASSIGN generic templates.

See "Setting Up and Consuming the Notifications Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

Setting Up Research Service Request Categories

Access the Service Request Categories page (Set Up SACR > Product Related > Student Records > Research Management > Service Request Categories).

Image: Service Request Categories page

This example illustrates the fields and controls on the Service Request Categories page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Service Request Categories' page. At the top, the title 'Service Request Categories' is shown in blue. Below the title, the 'Academic Institution' is set to 'PSNLD PeopleSoft University - NLD' and the 'Service Request Category' is 'APPLICANT'. A navigation bar includes 'Find | View All', 'First 1 of 1', and 'Last'. The main form contains several fields: '*Effective Date' (01/01/1900), '*Effective Status' (Active), '*Description' (Admission process related), '*Request Assigned To' (FA0800 Wrench, Julia), 'Order Number' (0), 'Message Set Number' (14751), 'Message Number' (531), and 'Message Text' (User this category to create requests related to Admissions).

Request Assigned To

Select any EmplID from the system. The selected ID is the designated administrator of last resort. When a service request is created and the system is unable to determine the appropriate administrator to whom to assign the request, this ID is used as the default.

Order Number

This field controls the sorting order of the category in the Select a Request Category self-service page. The system performs the sorting in ascending order. Default is 0.

Message Set Number, Message Number and Message Text

The message text that you select here appears when the mouse cursor is moved over the category in the Select a Request Category self-service page.

You can configure the message using the PeopleTools Message Catalog component (PeopleTools, Utilities, Administration, Message Catalog).

Setting Up Research Service Request Types

Access the Service Request Type page (Set Up SACR > Product Related > Student Records > Research Management > Service Request Types > Service Request Type).

Image: Service Request Type page

This example illustrates the fields and controls on the Service Request Type page. You can find definitions for the fields and controls later on this page.

Service Request Type

Academic Institution: PSUNV PeopleSoft University
Service Request Type: LOA

The Service Request Type values that you set up here are available in the Service Request Management component for administrators as well as the Service Request Assignment Setup component. You can choose whether or not to make the Service Request Type available in self service for students.

See [Managing Service Requests](#)

See "Administering Service Requests (Administrators)" (PeopleSoft Campus Solutions 9.2: Self Service)

See "Creating and Updating Service Requests (Candidates)" (PeopleSoft Campus Solutions 9.2: Self Service)

Request Category Select the category to which the type belongs.

Approval Required The check box is informational-only.

Use in Self Service	Select if you want the type (and its subtypes) to be made available in the Select a Request Type self-service page.
Order Number	This field controls the sorting order of the type in the Select a Request Type self-service page. The system performs the sorting in ascending order. Default is 0.
Message Set Number, Message Number and Message Text	<p>The message text that you select here appears when the mouse cursor is moved over the type in the Select a Request Type self-service page.</p> <p>You can configure the message using the PeopleTools Message Catalog component.</p>

Request Subtypes

Subtypes enable users to be more specific in the definition of the request (for example, Request type: Notice of intent to submit and Subtype: Request to extend submission date).

The fields for subtype are similar to the fields for the request type

Use of subtypes is optional. If you do not define a subtype, the Select a Request Subtype self-service page does not appear for the student (after the student selects a request type).

Notifications

Use this setup to define optional notifications by service request type. The administrator assigned to the service request receives the notification.

Trigger	<p>Select the action that initiates the corresponding notification template:</p> <ul style="list-style-type: none"> • <i>Created</i>: A new service request is created. • <i>Reassigned</i>: An existing service request is reassigned to another administrator. • <i>Updated</i>: The service request record has been updated by another user.
----------------	--

Notification Template ID	The notification template ID prompts the templates setup for the Service Request Notifications consumer ID. Only templates associated with the SSR_RS_RESEARCH:NOTIFICATION:SRTemplateProvider application class can be used.
---------------------------------	---

See [Using the Notifications Framework for Service Request Notifications](#)

Setting Up Self-Service Research Service Requests

Access the Research Defaults Setup page (Set Up SACR > Product Related > Student Records > Research Management > Research Defaults Setup).

Image: Research Defaults Setup page

This example illustrates the fields and controls on the Research Defaults Setup page. You can find definitions for the fields and controls later on this page.

Service Request Defaults

Default status on creation by student Select the status which the system assigns to the new service request row when the student creates a new service request from self-service pages. This field prompts you with request status codes (System Usage = Request) from the Process Status Codes page.

Default status on updates by student Select the default status code to be used when students update an existing service request.

Student Update Threshold Select a status code level value. These values are defined on the Process Status Codes page. The status code level value here indicates the maximum status code level at which a student can update a service request using My Service Requests. For example, a student cannot update a service request from the self-service page if the threshold here is set at 30, and the student's service request status code level value is greater than or equal to 30.

Note: Students can view service requests that they can no longer update.

Display Administrator Name Select this check box if you want the student's My Request Detail self-service page to display the administrator's name. If you do not select this check box, the My Request Detail page displays the text *Staff* instead of the administrator name to insure anonymity.

Other Defaults

Default Consumption Status

Select to assign an initial consumption status when the candidate record is created for the first time from a process that does not allow the user to manually set the value. The impacted processes are: Quick Admit, Student Program/Plan updates, and Program Addition.

Note: The impacted processes display an error message for any new candidate records until this setting is completed.

Setting Up Service Request Assignments

Access the Service Request Assignment Setup page (Set Up SACR > Product Related > Student Records > Research Management > Service Request Assignment > Service Request Assignment Setup).

Image: Service Request Assignment Setup page

This example illustrates the fields and controls on the Service Request Assignment Setup page. You can find definitions for the fields and controls later on this page.

	*Request Type	Request Subtype	Advisor Type Option	*Default ID	Name		
1	APPT	ADV	Supervisor	0006	Asanuma, Maeve	+	-
2	LOA			KU0007	Locherty, Betty	+	-
3	LOA	REQ	Advisor	SA0034	Hurley, Sean Michael	+	-
4	RLOA	CAN	Supervisor	SA0034	Hurley, Sean Michael	+	-

Use this page to define how a service request is assigned to an administrator for review.

When a service request is entered, the system uses the service request type and subtype values to find matching values in the setup.

If a matching row is found and if the Advisor Type Option is set, the system tries to find the student's academic advisor or research primary supervisor. If found, the system identifies the advisor and assigns the service request. If the advisor is not found (or if the Advisor Type Option was not set), the system assigns the Default ID as the administrator.

If a matching row is *not* found, the system searches for a row with a matching request type value and a blank request subtype and follows the same assignment logic if a match is found. If the system still does

not find a match based on the preceding criteria, it then identifies the category of the service request and assigns the request to the administrator defined in that request category setup.

Beginning with April 2014, the Rules Engine performs the service request assignment functionality, with the rule following the parameters as previously described. If you require additional flexibility in how service requests need to be assigned in your institution, you can update the rule with your own business logic. The delivered rule is:

- Rule ID: SCC_RULE_ID_20140205065106
- Rule Name: "Service Request AssignedTo : Rule Trigger"
- Rule Category Name: Service Requests

For more information about the Rules Engine, see "Understanding the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community).

Request Type and Request Subtype Select a value from those defined on the Service Request Type page.

See [Setting Up Self-Service Research Service Requests](#).

Advisor Type Option

Select Advisor, Supervisor or leave the field blank. If you select Advisor, the system assigns service requests of this type/subtype to the candidate's Academic Advisor, as indicated on the Student Advisor page.

See [Assigning Academic Advisors to Students](#).

If you select Research Supervisor, the system assigns service requests of this type/subtype to the candidate's primary Supervisor as indicated on the Candidate Management - Supervisors page (the Supervisor record with the Primary Supervisor check box selected).

See [Assigning Candidate Supervisors](#)

Default ID

If you do not select an Advisor Type Option, the system assigns service requests of this type/subtype to the person that you select as the Default ID.

Setting Up Candidate Center

This section discusses how to:

- Set up the My Research Projects region.
- Configure a Status Detail page.
- Set up the My Service Items region.
- Configure a service item.

- Set up the service item fields.

Pages Used to Set Up Candidate Center

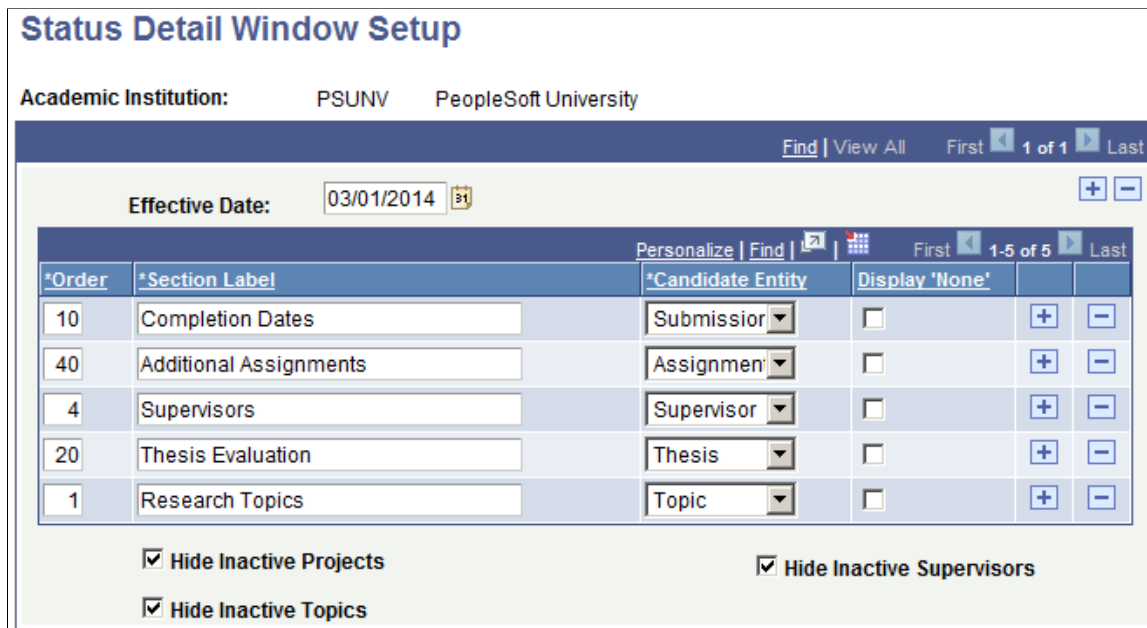

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Status Detail Window Setup	SSR_RS_CANDSS_STUP	Setup SACR >Product Related >Student Records >Research Management >Status Detail Window Setup	Set up the My Research Projects region in Candidate Center.
Status Field Setup	SSR_RS_POP_FLDSTP	Setup SACR >Product Related >Student Records >Research Management>Status Field Setup	Configure the information that appears in the various Status Detail pages from the My Research Projects region.
Service Window Setup	SSR_RS_TSKTABS	Setup SACR >Product Related >Student Records >Research Management >Service Window Setup	Set up the tabs that appear in the My Service Items region.
Service Item Setup	SSR_RS_TASK_SETUP	Setup SACR >Product Related >Student Records >Research Management >Service Item Setup	Create and configure service items.

Setting Up the My Research Projects Region

Access the Status Detail Window Setup page (Setup SACR >Product Related >Student Records >Research Management >Status Detail Window Setup).

Image: Status Detail Window Setup Page

This example illustrates the fields and controls on the Status Detail Window Setup Page. You can find definitions for the fields and controls later on this page.

When candidates select a project in the My Research Projects region, information about the project appears. Use the Status Detail Window Setup page to identify the research entities that appear in the My Research Projects region.

Order Indicates the order in which the research entities appear in the window.

Section Label Assign the label to identify the content.

Candidate Entity Set the corresponding entity to the section label. Each entity corresponds to candidate information displayed in the Candidate Management and Thesis Management components. The data from the selected entity is used for the section. The list of values are: Assignment, Submission, Supervisor, Thesis, Topic.

Display 'None' Select to display 'None' next to the section label if data does not exist for the entity. If you do not select this option, the section label is hidden if data does not exist.

Hide Inactive Projects ,Hide Inactive Supervisors , and Hide Inactive Topics Select to hide inactive records in the My Research Projects region.

The Hide Inactive Projects option displays *only* research project records where the project's 'Assigned' status is set (visible in the Candidate Management Override page). The Hide Inactive Supervisors option displays *only* assigned supervisors where their current effective status is 'Active'. The Hide Inactive Topics option displays *only* assigned topics where their current effective status is 'Active'.

Configuring a Status Detail Page

When candidates click any link that appears in the My Research Projects region, a status detail page appears and displays current information about the selected link. Candidates could use this information to determine their current status, and whether any action may be required.

The following image shows an example of fields that are visible to candidates when they select an assignment link from the My Research Projects region.

Image: Status Field Setup for Assignments Status Detail Page (example)

This example illustrates the fields and controls on the Status Field Setup page for the Assignments Status Detail page (example). You can find definitions for the fields and controls later on this page.

COMMENTS	Comments

Setting Up the My Service Items Region

Access the Service Window Setup page (Setup SACR >Product Related >Student Records >Research Management >Service Window Setup).

Image: Service Window Setup Page

This example illustrates the fields and controls on the Service Window Setup Page. You can find definitions for the fields and controls later on this page.

Service Window Setup

Academic Institution: PSUNV PeopleSoft University

Find | View All First 1 of 1 Last

Effective Date: 02/25/2014

*Tab Order	*Tab Label	*Tab Message		
1	Admissions Application	Please select an item to proceed	+	-
2	Research Tasks	Select an item to proceed	+	-
3	Other Tasks	Other, non-specific service items you can choose...	+	-
4	Access Requests	Select the appropriate item to proceed	+	-

*Window Message: Choose a service item to initiate and we will get busy on it!

Use the Service Window Setup page to add or remove the tabs that appear in the My Service Items region. At least one page tab must be defined. Use the page tabs to logically group service items. The tab labels should help candidates find the appropriate service item. You can create as many tabs as appropriate as well as the define the order in which the tabs appear. When a service item is created, administrators must indicate in which tab the service item appears.

Tab Message

Define the introductory text that appears in each tab.

Window Message

Define the introductory text that appears in the My Service Items region.

Configuring a Service Item

The My Service Items region enables research candidates to initiate a service item transaction. Service items can be:

- Research service items. These are transactions that allow candidates to directly update their candidature information without administrator intervention.
- Research service requests. These are requests that are assigned and processed by an administrator.

You use the Service Item Setup page to create both types of transactions that can be initiated by candidates in the Candidate Center. However, make sure you set up the service request categories, types, and subtypes before you configure service items for use in the Candidate Center. Also, exercise care when you configure research service items because these items allow candidates to update their candidature information.

Configuring a Research Service Item

Access the Service Item Setup page (Setup SACR >Product Related >Student Records >Research Management >Service Item Setup).

Image: Service Item Setup for Research Service Item - General page

This example illustrates the fields and controls on the Service Item Setup for Research Service Item - General page. You can find definitions for the fields and controls later on this page.

Use the Service Item Setup — General page to configure the settings of a service item.

Service ID

You enter this value when you add a service item.

Ready for Use

Select if you want the service item to be available in the My Service Items region.

Use during

A service item appears in the My Service Items region based on a student’s enrollment status.

To display a service item accordingly, select one or more of the following conditions:

- *Pre-applicant* if a candidate record does *not* exist for the selected student regardless of whether the student is active in other non-research programs.
- *Admissions applicant* if a candidate record exists for the selected student and a matching ACAD_PROG record for the candidate number does not exist, but a matching record is found in ADM_APPL_PROG.
- *Post matriculation* if a candidate record exists for the selected student *and* a matching record for the candidate number is found in ACAD_PROG.

User

Select to assign a user. Candidate Center uses *only* service items whose users are set to Candidate.

Service Tab	Select to indicate the tab where the service item should appear.
Service Label	Set the name of the link label for the service item.
Item Order	This field controls the order in which the service item appears under the service tab. Service items are displayed in ascending order.
Status Group	Select so you can set the proper status code. Choices are filtered based on the Entity value.
Status	Sets the default value that is assigned when candidate records are updated. The values you can select depend on the Status Group you set.
Status Level	Use to prevent the candidate from updating their candidate and thesis information. Every research status code has an associated status level value. The status code level of the target entity must be less than this value, otherwise the service item cannot be submitted.
Entity	Select the research candidate entity that the service item should update. Select any one of the following: <ul style="list-style-type: none"> • Topic • Supervisor • Submission (Consumption) • Assignment • Thesis • Service Request. If you select this option, rather than update the student's candidate records, a new service request record is created for the student.
Message Set Number, Message Number	Select the help text that appears when candidates hover over the Service Label in the My Service Items region.
Notification Template	Select the notification template to be sent to the designated recipient of the service item. Add your notification templates in the Notification Consumer Setup page, Consumer ID: SCC_NTF_CON_20140110095615 Candidate Self Service Notifications.
Notification Recipient	If a rule is not used, this is the primary recipient of the notification generated by the creation of the research service item. If a custom rule is used to determine the notification recipient, this ID is used if the rule cannot determine a recipient. Note that the recipient must grant notification permissions for email and SMS.

Rule

Shows the optional Rules Engine rule that can be used to determine the notification recipient. A sample rule exists that attempts to send the notification to the student’s primary research supervisor. Use the Search and Clear buttons to manage the setting.

Sample Rule:

- Rule ID: SCC_RULE_ID_20140115033240
- Rule Name: Research Std SS task notification recipient
- Rule Category Name: Research Self Service Task

For information, see "Understanding the Rules Engine" (PeopleSoft Campus Solutions 9.2: Campus Community).

Configuring a Research Service Request

If a service item is configured to create a service request, the notification fields on the page (Status Group, Status, Status Level, Notification Template, Notification Recipient, and Rule) are hidden and two new fields appear (Service Request Type, Service Request Subtype). This is because service requests have their own status and notification settings, and the new fields indicate the appropriate service request settings to use. In addition, the Fields page is hidden. This is because a common service request entry form is used and does not require configuration. This is triggered when Entity is set to *Service Request*.

Access the Service Item Setup page (Setup SACR >Product Related >Student Records >Research Management >Service Item Setup).

Image: Service Item Setup for Research Service Request - General page

This example illustrates the fields and controls on the Service Item Setup for Research Service Request - General page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'General' tab of the Service Item Setup page. At the top, the 'Academic Institution' is set to 'PSUNV PeopleSoft University'. The 'Service ID' is 'LEAVE_REQ' and the '*Description' is 'Request a LOA service request'. Below this is a table of configuration options:

Effective Date:	01/01/1900	<input checked="" type="checkbox"/> Ready for Use	Use during
*User:	Candidate	*Item Order:	<input type="checkbox"/> Pre-applicant <input type="checkbox"/> Admissions applicant <input checked="" type="checkbox"/> Post matriculation
*Entity:	Service Request		
*Service Tab:	Other		
*Service Label:	Process Leave of Absence		
Message Set Number:	14751	Message Number:	603
Message Text:	A leave of absence from your research activities		
Service Request Type:	LOA	Leave of Absence	
Service Request Subtype:	REQ	Request leave	

The fields on the Service Item Setup for Research Service Request - General page are similar to the setup page for research service items except for the following:

Service Request Type This field appears when the Entity is 'Service Request'. Select the appropriate service request type for the service item.

Service Request Subtype This field appears when the Entity is 'Service Request'. Select the appropriate subtype (if any) for the service item.

"Using Research Tracking Self Service" (PeopleSoft Campus Solutions 9.2: Self Service)

[Setting Up Research Service Requests](#)

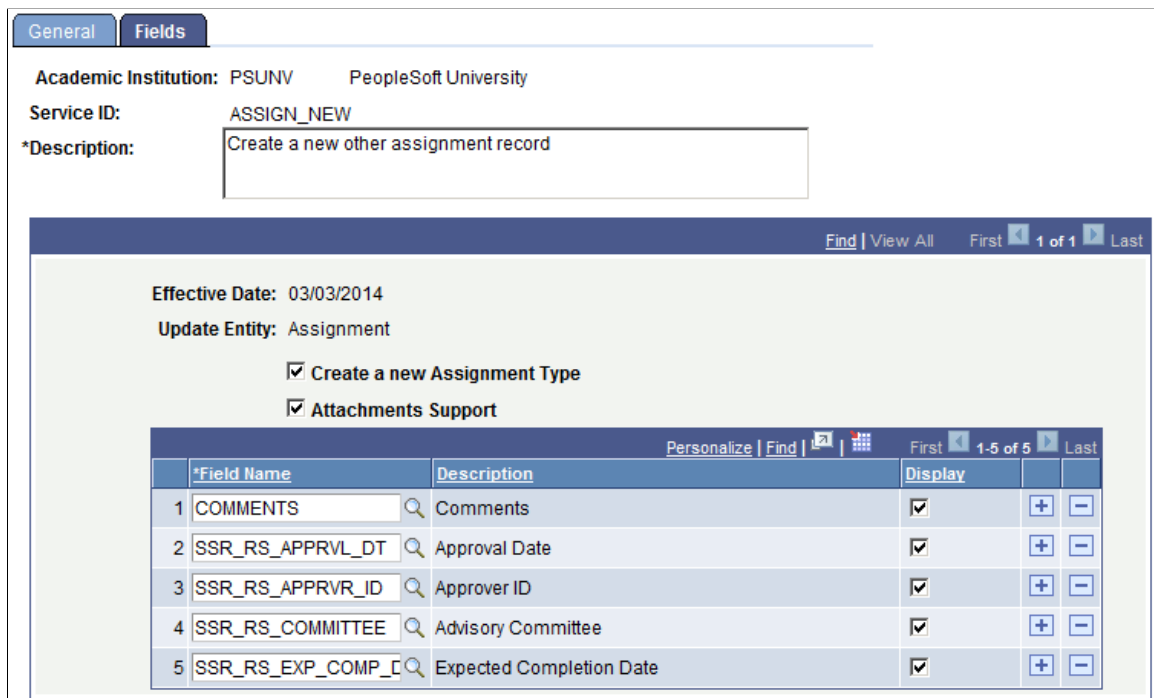

[Managing Service Requests](#)

Setting Up the Service Item Fields

Access the Service Item Setup — Fields page (Setup SACR >Product Related >Student Records >Research Management >Service Item Setup >Fields).

Image: Service Item Setup — Fields Page

This example illustrates the fields and controls on the Service Item Setup — Fields Page. You can find definitions for the fields and controls later on this page.

Use the Service Item Setup — Fields Page to identify which fields and options are available to candidates when they initiate a service item. Depending on the value of the service item entity, additional options may be available.

Display Select to display the field in the service item status detail page.

You can enable these fields and options for the following service items:

Research Topic Optional Fields

Field	Description	Notes
Check box	Create a new Topic Sequence	If selected, this creates a new topic sequence. If deselected, the user is required to select an existing research topic record to update.
Check box	Use Topic Search	Enables the Topic Search functionality. Generally used in conjunction with the Create a New Topic Sequence option.
Check box	Attachments Support	Enables the attachment functionality.
SSR_RS_RSRCH_TOPIC	Research Topic	If selected, this field appears in the data entry page.
SSR_RS_DESCRLONG	Topic Description	If selected, this field appears in the data entry page.
SSR_RS_THESIS_TITL	Thesis Title	If selected, this field appears in the data entry page.
SSR_RS_TPCCMNT	Comments	If selected, this field appears in the data entry page.

Supervisor Optional Fields

Field	Description	Notes
Check box	Create a new Supervisor Sequence	If selected, a new supervisor sequence is created. Otherwise, the user is required to select an existing supervisor record to update.
Check box	Use Supervisor Search	Enables the supervisor search functionality. Generally used in conjunction with the Create a New Supervisor Sequence option. This records the EmplID of the supervisor.
Check box	Attachments Support	Enables the attachment functionality.
SSR_RS_BEGIN_DT	Supervision Begin Date	If selected, this field appears in the data entry page.
SSR_RS_END_DT	Supervision End Date	If selected, this field appears in the data entry page.

Field	Description	Notes
SSR_RS_SUPER_PRCNT	Supervision Percentage	If selected, this field appears in the data entry page.
SSR_RS_SUPER_TYPE	Supervisor Role	If selected, this field appears in the data entry page.
SSR_RS_PRI_SUPR	Primary Supervisor	If selected, this field appears in the data entry page.
COMMENTS	Comments	If selected, this field appears in the data entry page.

Thesis Optional Fields

Field	Description	Notes
Check box	Attachments (Support)	Enables the attachment functionality.
SSR_RS_THESIS_TITL	Thesis Title	If selected, this field appears in the data entry page.
SSR_RS_INTD_SUB_DT	Intended Submission Date	If selected, this field appears in the data entry page.
SSR_RS_ACT_SUB_DT	Actual submission Date	If selected, this field appears in the data entry page.
SSR_RS_NBR_SUBMIT	Number of Copies Submitted	If selected, this field appears in the data entry page.
SSR_RS_NOITS_APRVL	Intent to Submit for Approval	If selected, this field appears in the data entry page.
SSR_RS_DECLARE_FLG	Details Declared Correct	If selected, this field appears in the data entry page.
SSR_RS_COMPSEM_FLG	Ready for Completion Seminar	If selected, this field appears in the data entry page.
SSR_RS_RETURN_FLG	Return of Thesis Requested	If selected, this field appears in the data entry page.
SSR_RS_EMBARGO_TYP	Embargo Type	If selected, this field appears in the data entry page.
SSR_RS_EMB_STRT_DT	Embargo Start Date	If selected, this field appears in the data entry page.

Field	Description	Notes
SSR_RS_EMB_END_DT	Embargo End Date	If selected, this field appears in the data entry page.
SSR_PROJ_DATE	Oral Defense Date	If selected, this field appears in the data entry page.
COMMENTS	Comments	If selected, this field appears in the data entry page.

Consumption and Submission Date Optional Fields

Field	Description	Notes
Check box	Attachments Support	Enables the attachment functionality.
SSR_RS_BEGIN_DT	Begin Date	If selected, this field appears in the data entry page.
SSR_RS_LOAD	Consumption Load	If selected, this field appears in the data entry page.
SSR_RS_SUB_DT_MIN	Early Submission Date	If selected, this field appears in the data entry page.
SSR_RS_SUB_DT_MAX	Final Submission Date	If selected, this field appears in the data entry page.
COMMENTS	Comments	If selected, this field appears in the data entry page.

Assignments Optional Fields

Field	Description	Notes
Check box	Create a new Assignment Type	Select to allow any self-service-enabled assignment type to be used in creating a new assignment record. If not selected, the user is prompted to select an existing assignment record to update.
Check box	Attachments Support	Enables the attachment functionality.
SSR_RS_EXP_COMP_DT	Expected Completion Date	If selected, this field appears in the data entry page.
SSR_RS_APPRVL_ID	Approver ID	If selected, this field appears in the data entry page.

Field	Description	Notes
SSR_RS_COMMITTEE	Advisory Committee	If selected, this field appears in the data entry page.
SSR_RS_APPRVL_DT	Approval Date	If selected, this field appears in the data entry page.
COMMENTS	Comments	If selected, this field appears in the data entry page.

Setting Up Rules for Online Edits

The Rules Engine has been integrated for use in the Candidate Management, Thesis Management, and Academic Project Management components to support local business policies. Rules can be written to perform online editing of a student's project and display a warning message to administrator. A sample rule has been provided.

This section discusses how to:

- Set up rule types.
- Associate rule types with execution events.

Pages Used to Set Up Rules for Research Tracking

Page	Definition Name	Navigation	Usage
Rule Type Table	SSR_RS_RULE_TYPE	Set Up SACR >Product Related >Student Records >Research Management > Rule Types	Set up rule types.
Execution Event Rule Types	SSR_RS_EXEC_EVENT	Set Up SACR >Product Related >Student Records >Research Management > Execution Event Rules	Associate rule types with execution events.

Setting Up Rule Types

The Rule Type Table provides a link between Research Tracking-related features and the Rules Engine.

Access the Rule Type Table page (Set Up SACR >Product Related >Student Records >Research Management > Rule Types).

Image: Rule Type Table

This example illustrates the fields and controls on the Rule Type Table. You can find definitions for the fields and controls later on this page.

Rule Type and Description

Enter a Rule Type code (20 character limit) and a Description (30 character limit). For the research tracking and student academic project features, the rule groups used for on-line event triggers are predefined. New rules should be added to the appropriate rule group.

System Data

If a rule type is delivered as system data, this check box is selected and is not available for edit.

Rule Group ID, Search, Rule Group Name, and Rule Category Name

A Rule Type must be associated with a single Rule Group. When adding a new rule type, click the Search button to launch a search using a standard Rules Engine search utility. When you select a Rule Group ID, the Rule Group Name and Rule Category Name are displayed.

Copy

This button is available only when you add a new rule type. The copy feature provides a prompt against all rule types defined in the system, including those for which the System Data check box is selected (delivered rule types).

Delete

When a rule type is saved successfully, a Delete button is available. Delete is not available for rule types for which the System Data check box is selected.

Delivered Rule Types and Sample Rules

The delivered rule types for online edits are:

- PROJ_CAND — Project Candidate

- RSCH_CAND — Research Candidate
- RSCH_CONS — Research Consumption
- RSCH_OTHR — Research Assignments
- RSCH_SUP — Research Supervisor
- RSCH_THES — Research Thesis
- RSCH_TOPC — Research Topic

The following rules are provided as samples to help you create your own rules. These sample rules are not intended for actual use.

Rule	Conditions
<ul style="list-style-type: none"> • Rule ID: SCC_RULE_ID_20140120084414 • Rule Name: Candidate has no available research Supervisors • Rule Category Name: Research Candidates • Rule Type: RSCH_CAND • Component: Candidate Management • PeopleCode Event: Component Post Build 	<p>When any of the following conditions are <i>not</i> met, a message about the supervisor's ineligibility appears:</p> <ul style="list-style-type: none"> • Administrator profile record of the supervisor is active. • If the unrestricted check box is not selected, and the academic program <i>or</i> academic plan in the administrator profile matches the candidate header. • The current date is no longer within the supervisor's availability dates defined in the administrator profile page. <p>Message: <i>One of the candidate's supervisors is no longer eligible to provide supervision (14751, 260).</i></p>
<ul style="list-style-type: none"> • Rule ID: SCC_RULE_ID_20140121001258 • Rule Name: Candidate has no available Project Supervisors • Rule Category Name: Research Candidates • Rule Type: PROJ_CAND • Component: Academic Project Management • PeopleCode Event: Component Post Build 	<p>When any of the following conditions are <i>not</i> met, a message about the supervisor's ineligibility appears:</p> <ul style="list-style-type: none"> • Administrator profile record of the supervisor is active. • If the unrestricted check box is not selected, and the academic program <i>or</i> academic plan in the administrator profile matches the candidate header. • The current date is no longer within the supervisor's availability dates defined in the administrator profile page. <p>Message: <i>One of the candidate's supervisors is no longer eligible to provide supervision (14751, 260).</i></p>

Rule	Conditions
<ul style="list-style-type: none"> • Rule ID: SCC_RULE_ID_20140116235214 • Rule Name: Candidate has no active supervisors • Rule Category Name: Research Candidates • Rule Type: RSCH_CAND • Component: Candidate Management • PeopleCode Event: Component Post Build 	<p>A message appears when no record exists of at least one active supervisor record for the candidate.</p> <p>Message: <i>The candidate does not have an active supervisor (14751,263).</i></p>
<ul style="list-style-type: none"> • Rule ID: SCC_RULE_ID_20140206012715 • Rule Name: Compare Thesis Title • Rule Category Name: Research Candidates • Rule Type: RSCH_THES • Component: Thesis Management • PeopleCode Event: Component Post Build 	<p>A warning appears when the following conditions are met:</p> <ul style="list-style-type: none"> • The topic <i>and</i> thesis record thesis title fields are not blank. • The current research topic status is equal to 'TF' - Title Finalized. <p>Message: <i>Warning: Thesis Title doesn't match the Topic Title (14751,270)</i></p>

Associating Rule Types with Execution Events

Execution Event rule types determine how and when the Rules Engine is invoked in Research Tracking by tying rule types to a specific action that a user might take. The PeopleCode event referenced in the Execution Event definition is a pointer to the code that invokes the Rules Engine when the action occurs, such as user clicking a button in the system. Each event in turn can invoke certain rule types, each of which can be set to active or inactive.

Access the Execution Event Rule Types page (Set Up SACR >Product Related >Student Records >Research Management > Execution Event Rules).

Image: Execution Event Rule Types Page

This example illustrates the fields and controls on the Execution Event Rule Types Page. You can find definitions for the fields and controls later on this page.

Execution Event Rule Types

Execution Event RSCH_CAND_POSTBUILD System Data

*Status Active

*Description Candidate Management PostBuild

Event Description Rules to be executed from Candidate Management Component PostBuild

PeopleCode Event ComponentPostBuild

Menu Name SSR_RESEARCH_MGMT Research Management

Component Name SSR_RS_RSRCH_CAND Research Management

Page Name

Record (Table) Name

Field Name

Run All Rules

Rule Type	Description	*Rule Execution Error Handling	*Status	System Data
1 RSCH_CAND	Research Candidate	Obey	Active	<input checked="" type="checkbox"/>

Add row

System Data

This check box displays for Execution Event Rule Types definitions delivered by Campus Solutions Development.

Status

Campus Solutions Development events are delivered as *Inactive*. Events must be *Active* for Rules Engine invocation to occur.

Copy

This button is available only when you add a new execution event. The copy feature provides a prompt against all execution events defined in the system, including those for which the System Data check box is selected.

Delete

When an execution event is saved successfully, a Delete button is available. Delete is not available for execution events for which the System Data check box is selected.

PeopleCode Event

Select a value: *ComponentPostBuild*, *Field Change*, *Field Edit*, *Save Edit*, *SavePostChange*, or *Save Pre-Change*. The event selected here documents where the trigger PeopleCode that invokes the Rules Engine is called from by the component processor.

Menu Name, Component Name, Page Name and Field Name These fields are used to document the actual page/field location where the execution event will occur.

For the research tracking and student academic project features, the components that have been configured to support execution events are:

- Menu: SSR_RESEARCH_MGMT (Research Management)
- Components: SSR_RS_CAND (Candidate Management) and SSR_RS_THESIS (Thesis Management)
- Menu: SSR_PROJECT_MGMT (Academic Project Management)
- Component: SSR_PROJ_MGMT (Project Management)

Run All Rules

When this check box is deselected, rule execution stops when the first error is encountered. For example, if a student adds three courses to their planner in self-service and each of those courses has a Course Requisite rule attached to them, and the student fails the first requisite, an error is returned for the first requisite but the other two requisite rules are not checked. If the Run All Rules check box is selected, all three rules are executed.

Setting Up Online Notifications

The Online Notifications feature uses the Notifications framework to allow administrators to send notifications from select administrator pages to any person defined in the Campus Solutions database. Notification Consumer IDs and templates (sample and generic) are delivered. You must use the delivered Application Class.

Component/Navigation	Notification Consumer ID / Consumer Name	Sample Template	Sample Generic Template	Application Class
Service Request Management (Records and Enrollment, Graduate Research Management, Service Request Management)	SCC_NTF_CON_20130925005259 Service Request Online Notifications	SCC_NTF_TMP_20130925003014 - Review Service Request	SSR_ONLINE_SREQ_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider

Component/ Navigation	Notification Consumer ID / Consumer Name	Sample Template	Sample Generic Template	Application Class
Administrator Service Request (Self Service page) (Records and Enrollment, Graduate Research Management, Service Request Dashboard)	SCC_NTF_CON_20130925010307 Admin SS Online Notifications	SCC_NTF_TMP_20130925004359 - Review Service Request SS	SSR_ONLINE_ADMNSS_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider
Candidate Management (Records and Enrollment, Graduate Research Management, Candidate Management)	SCC_NTF_CON_20130925005929 Candidate Mgmt Online Notifications	SCC_NTF_TMP_20130925003917 - Review Request	SSR_ONLINE_CAND_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider
Candidate Management Override (Records and Enrollment, Graduate Research Management, Candidate Management Override)	SCC_NTF_CON_20130925005745 Candidate Mgmt Override Online Notifications	SCC_NTF_TMP_20130925003704 - Review Request	SSR_ONLINE_OVRD_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider
Administrator Profile (Records and Enrollment, Graduate Research Management, Administrator Profile) (Records and Enrollment, Academic Projects, Administrator Profile)	SCC_NTF_CON_20130925010053 Admin Profile Online Notifications	SCC_NTF_TMP_20130925004112 - Review Admin Details	SSR_ONLINE_ADPRF_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider
Thesis Management (Records and Enrollment, Graduate Research Management, Thesis Management)	SCC_NTF_CON_20130925005440 Thesis Mgmt Online Notifications	SCC_NTF_TMP_20130925003223 - Thesis Review Request	SSR_ONLINE_THESIS_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider
Student Project Management (Records and Enrollment, Academic Projects, Student Project Management)	SCC_NTF_CON_20130925005546 Project Mgmt Online Notifications	SCC_NTF_TMP_20130925003433 - Project Review Request	SSR_ONLINE_PROJ_EMAIL	SCC_COMMON: NOTIFICATION: BaseParameterProvider

See "Setting Up and Consuming the Notifications Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

The Send Notification button which launches the Create Notification page appears on the various pages in Research Tracking and Student Academic Project components (listed in the earlier table) only if the Notification Consumer ID defined for the component is set to *Active*. The Notification Consumer IDs are set to *Inactive* on delivery and need to be activated once the templates to be used have been set up.

Use the delivered sample templates and generic templates as examples for setting up your own notifications. We recommend that you use a naming convention that uniquely identifies online notifications from others defined in the Notification Framework setup. The generic template lists the available field variables that can be used to create your own notifications. These variables are values derived from the component from which the notification originates. All notification channels are supported. The template status must be set to *Active* in order to be selected in the Create Notification page.

See [Creating Online Notifications](#).

Following is a list of the variables that are delivered with each generic template. Each set of variables is intended for use in a designated component.

Include these variables in the Template Variables section of the generic template to create context-specific online notifications. To modify templates, go to PeopleTools, Workflow, Notifications, Generic Templates.

Template variables for Service Request Management notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name
%5	Status
%11	Comments
%28	Request Type
%29	Request Subtype
%50	Additional Comments / Free text

Template variables for Administrator Service Request notifications (accessed from the Service Request dashboard):

Value	Description
%1	Student ID
%2	Sender Name

Value	Description
%3	Student Name
%4	Recipient Name
%5	Status
%11	Comments
%28	Request Type
%29	Request Subtype
%50	Additional Comments / Free text

Template variables for Candidate Management notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name
%7	Candidate Number
%8	Academic Program
%9	Academic Plan
%13	Academic Career
%50	Additional Comments / Free text

Template variables for Candidate Management Override notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name
%7	Candidate Number
%8	Academic Program

Value	Description
%9	Academic Plan
%14	Candidate Career
%15	Candidate Program
%16	Candidate Plan
%17	Program Status
%18	Admission (Application) Program
%19	Admission (Application) Plan
%20	Admission Status
%21	Review Required
%22	Messages
%50	Additional Comments / Free text

Template variables for Administrator Profile notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name
%26	Administrator Type
%27	Administrator Role
%50	Additional Comments / Free text

Template variables for Thesis Management notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name

Value	Description
%5	Thesis Status
%6	Thesis Title
%7	Candidate Number
%8	Academic Program
%9	Academic Plan
%10	Submission Number
%11	Comments
%12	Evaluation Status
%50	Additional Comments / Free text

Template variables for Student Project Management notifications:

Value	Description
%1	Student ID
%2	Sender Name
%3	Student Name
%4	Recipient Name
%5	Project Status
%6	Project Title
%7	Project Number
%8	Academic Program
%9	Academic Plan
%10	Submission Number
%11	Comments
%12	Evaluation Status
%23	Term
%24	Session
%25	Class Number

Value	Description
%50	Additional Comments / Free text

Note: The list of variables contained in each message is delivered with your system and require extensive coding effort to be modified.

See "Setting Up and Consuming the Notifications Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entering Ad Hoc Comments on the Create Notification Page

Besides providing template variables to include information on the originating page, online notifications also support the capture and sending of ad hoc text entered by the user. The %50 template variable performs this function. If used in a template, the Create Notification page automatically renders a comment box. The text entered by the user is then used in the notification like a regular template variable. We recommend using this feature only in the message body and not in the message Subject line.

See [Creating Online Notifications](#).

Setting Up Integration Broker For Research Administrator Profile Affiliations

The configuration steps outlined here are specific to administrators created using the Administrator Profile Management component used for Research Tracking (or Student Academic Projects) and cannot be extended for any other Campus Solutions feature.

It is assumed that basic Integration Broker setup is complete and working. For example, you have already set up your Integration Gateway.

See the product documentation for *PeopleTools: Integration Broker*

Note: Setting up Integration Broker is a technical task. Functional users should not perform this task.

Integration Broker Setup for Research Administrator Profile Affiliations

Complete the following Integration Broker steps to ensure that Research Supervisor functionality works as expected.

Note: This setup is a requirement for the Student Academic Projects feature.

1. Integration Broker Message:

PeopleTools > Integration Broker > Integration Setup > Messages > Message Definition

Image: Message Definition page

A Message Definition is delivered for processing affiliations created through the Administrative Profile Management component. This is a rowset-based message. Verify that the message `SSR_ADMN_AFFL_DATA_SYNC` is available in your database and that schema exists for the message. Refer to the following example:

The screenshot displays the 'Message Definition' page for the message `SSR_ADMN_AFFL_DATA_SYNC`. The configuration includes the following details:

- Message:** `SSR_ADMN_AFFL_DATA_SYNC`
- Version:** `VERSION_1`
- Description:** Admin Affiliation Data Sync
- Owner ID:** Student Records
- Comments:** Message to publish Administrative Affiliation data. Administrative Affiliation data can contain Instructor/Advisor or Supervisor information
- Schema Exists:** Yes
- Message Type:** Rowset-based (selected)

Additional options on the right include checkboxes for 'Part Message', 'Exclude Description in Schema', 'Single Level 0 Row', 'Include Namespace', and 'Suppress Empty XML Tags'. Below the configuration, there are links for 'Service Operation References', 'View Records Only', 'View Included Fields Only', and 'Add Record to Root'. The bottom section shows a tree view of the message structure:

- SSR_ADMN_AFFL_DATA_SYNC
 - HCR_PERSON_I
 - EMPLID
 - BIRTHDATE
 - BIRTHPLACE
 - BIRTHCOUNTRY
 - BIRTHSTATE
 - DT OF DEATH
 - SSR_ADMN_HDR

Note: If the Schema does not exist, generate the schema using the Message Schema Builder.

2. Integration Broker Service:

PeopleTools > Integration Broker > Integration Setup > Services

Image: Services page

An Integration Broker Service definition is created to communicate with the Affiliation framework. Verify that the Service definition SSR_ADMN_AFFL_DATA_SYNC is available in your database.

Services

Service: SSR_ADMN_AFFL_DATA_SYNC REST Service Type

'Description: Admin Affiliation Data Sync

Comments: Service to publish the Administrative affiliation data entity changes

Service Alias: [Empty]

Owner ID: Student Records

'Namespace: http://xmlns.oracle.com/Enterprise/HCM/services

[Link Existing Operations](#) [View WSDL](#)

Service Operations

Service Operation: [Empty]

Operation Type: [Empty]

Existing Operations Personalize | Find | View All | [Grid Icon] | [Filter Icon] | First | 1 of 1 | Last

Operation	Message Links	
Operation.Default Version	Description	Active
SSR_ADMN_AFFL_DATA_SYNC.v1	SSR_ADMN_AFFL_DATA_SYNC.v1	<input checked="" type="checkbox"/>
		Asynch

3. Integration Broker Service Operation:

PeopleTools > Integration Broker > Integration Setup > Service Operations > General

Image: General (SSR_ADMN_AFFL_DATA_SYNC) page

An Integration Broker Service Operation is created to communicate with the Affiliation framework. Verify that the Service Operation definition SSR_ADMN_AFFL_DATA_SYNC is available in your database.

Select the Active check box.

The screenshot displays the configuration page for the service operation SSR_ADMN_AFFL_DATA_SYNC. The 'General' tab is active, showing the following details:

- Service Operation:** SSR_ADMN_AFFL_DATA_SYNC
- Operation Type:** Asynchronous - One Way
- *Operation Description:** Admin Affiliation data Sync
- Operation Comments:** Asynchronous Service Operation to publish Administrative Affiliation data
- Owner ID:** Student Records
- Operation Alias:** (empty)
- Security:** User/Password Required, *Req Verification: None

The **Default Service Operation Version** section is expanded for version v1:

- *Version:** v1
- Version Description:** SSR_ADMN_AFFL_DATA_SYNC.v1
- Version Comments:** The first Version of Asynchronous Service Operation to publish Administrative Affiliation data
- Default:** **Active:**
- Routing Status:**

Any-to-Local:	Does not exist
Local-to-Local:	Does not exist
Local-to-Atom:	Does not exist.
- Routing Actions Upon Save:**
 - Generate Any-to-Local
 - Generate Local-to-Local
- Other Options:** Non-Repudiation, Runtime Schema Validation

After the Service Operation is Active, perform the following steps:

1. Generate Local-to-Local routing.

When you select the Generate Local-to-Local check box the Local-to-Local value appears. Additionally, system generated Routing information is populated on the Routings page.

2. Set up Security.

Click the Service Operation Security link to access the Web Service Access page and assign one or more permission lists to the service operation.

Image: Web Service Access page

This example illustrates the Web Service Access page as explained above.

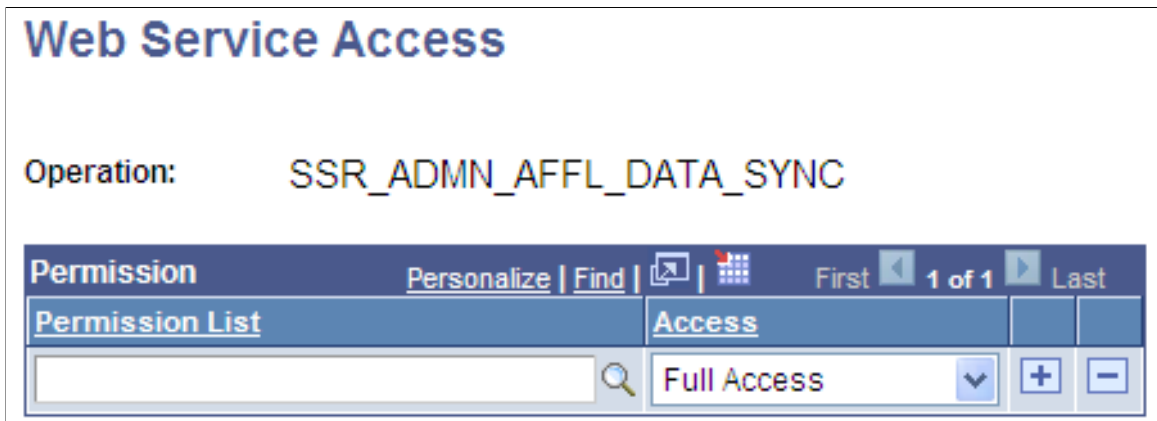

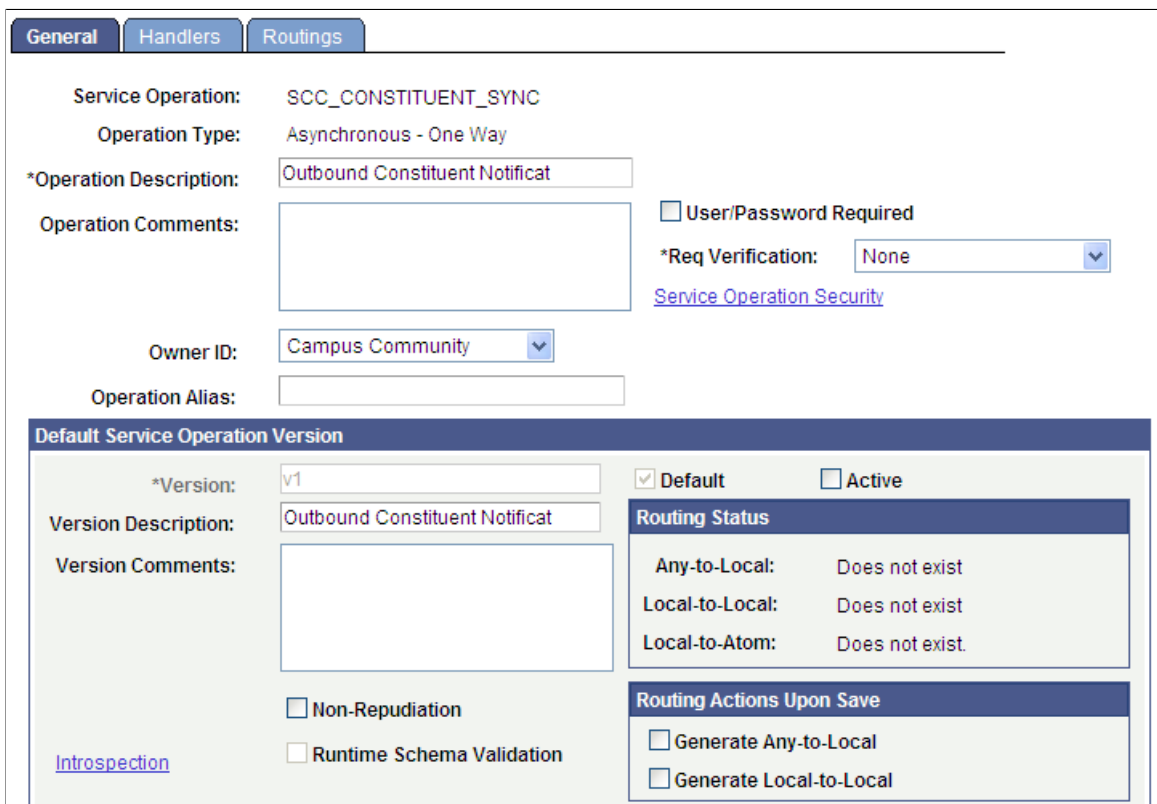

Image: General (SCC_CONSTITUENT_SYNC) page

Additionally, ensure that the following Service Operation which is available in your database (SCC_CONSTITUENT_SYNC) is also Active and Service Operation Security has been set up.

4. Integration Broker Service Operation Handler

PeopleTools > Integration Broker > Integration Setup > Service Operations > Handlers

Image: Handlers (SSR_ADMN_AFFL_DATA_SYNC) page

An Integration Broker Service Operation Handler is delivered to support integration with the Affiliation framework. Verify that the following handler definition is available in your database.

Set the status to Active.

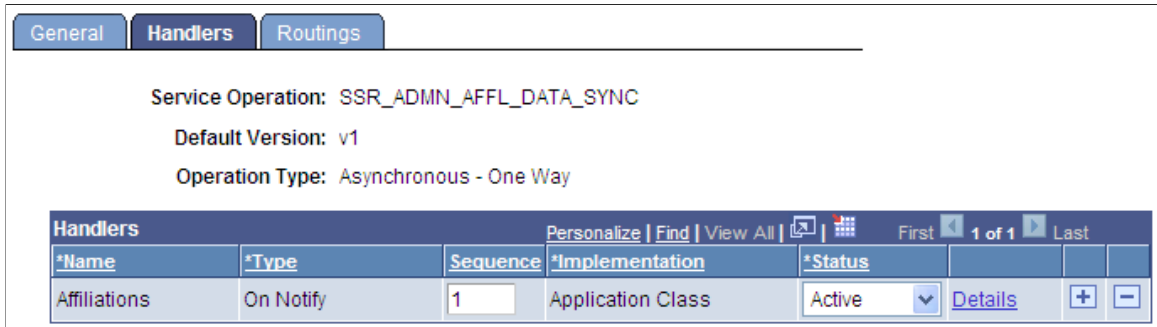

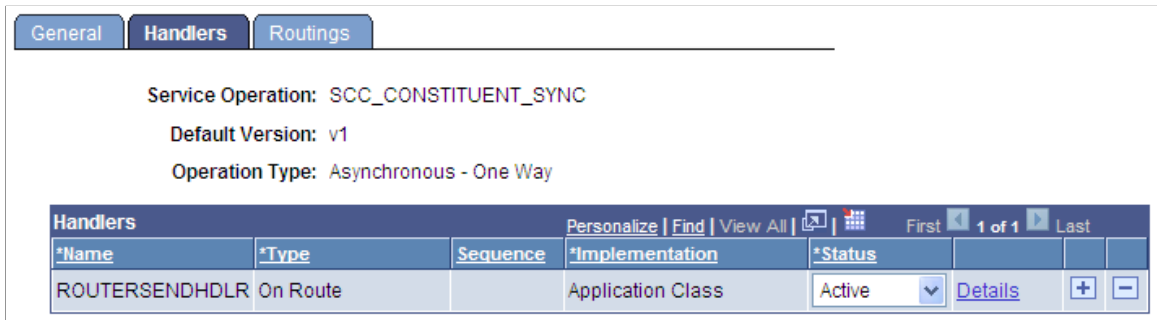

Image: Handlers (SCC_CONSTITUENT_SYNC) page

Additionally, set the following Integration Broker Service Operation Handler to Active:

5. Service Operation Routing

Image: Routings (SSR_ADMN_AFFL_DATA_SYNC) page

Review the Service operation routing and note the local routing that was automatically generated when you saved the operation.

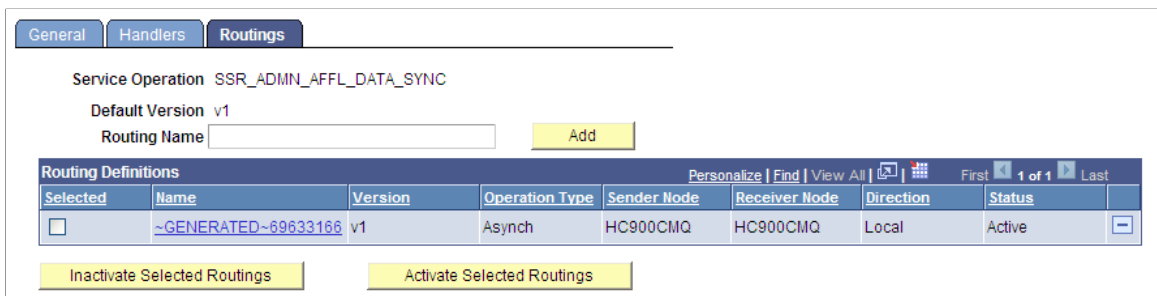

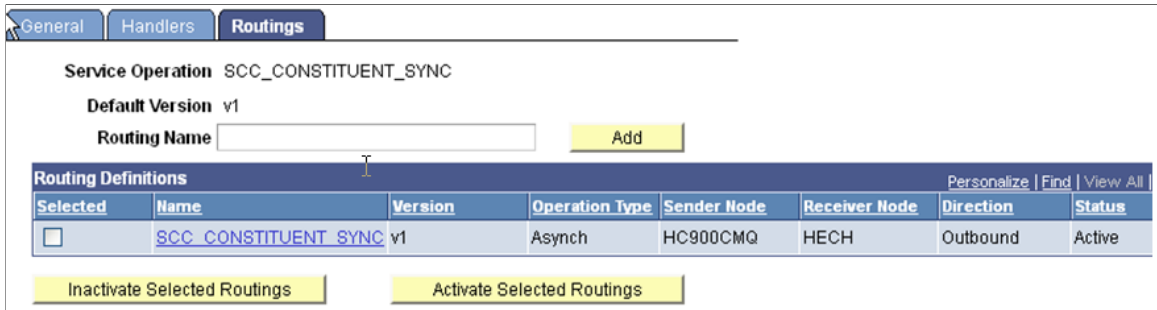

Image: Routings (SCC_CONSTITUENT_SYNC) page

Additionally, review the Service operation routing and note the local routing that was automatically generated when you saved the operation for SCC_CONSTITUENT_SYNC.

6. Service Operation Queue Definition

Image: Queue Definition (SSR_ADMN_AFFL_DATA_SYNC) page

A queue definition is delivered to support integration with the Affiliation framework. Verify that the following handler definition is available in your database.

Set the Queue Status to Run.

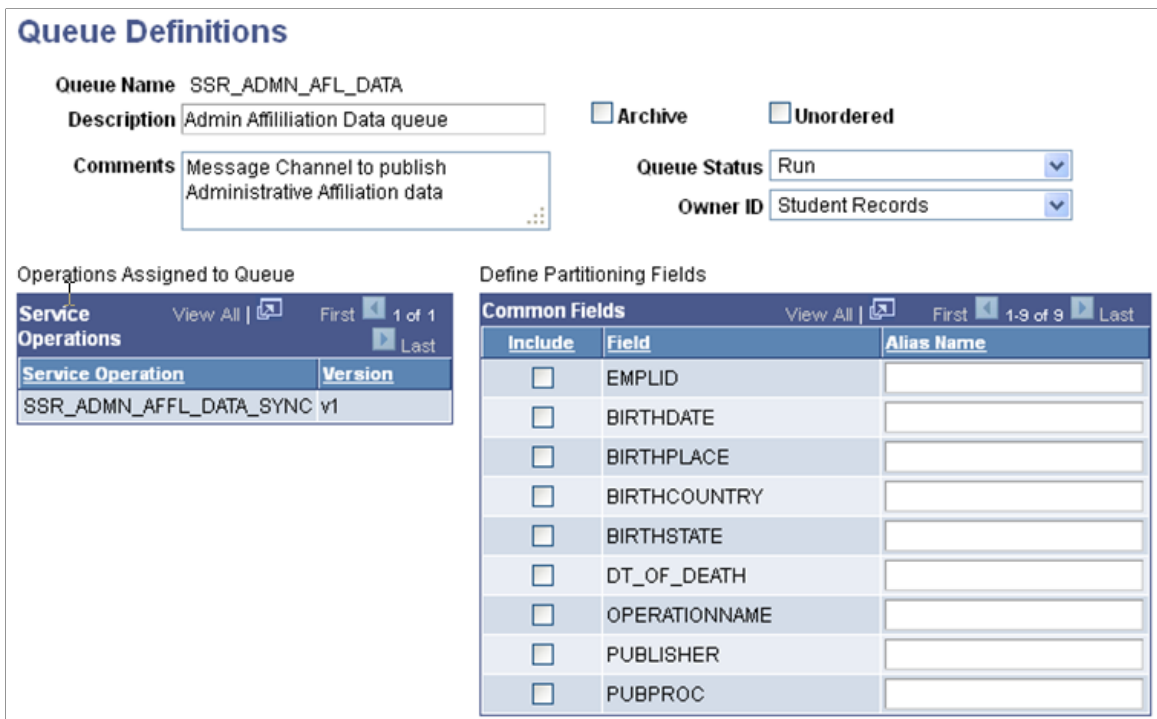

Image: Queue Definition (PERSON_DATA) page

Additionally, set the Queue Status to Run for the following queue definition (PERSON_DATA):

Queue Definitions

Queue Name: PERSON_DATA

Description: Archive Unordered

Comments: Queue Status: Owner ID:

Operations Assigned to Queue

Service Operations	Version
CS_ADM_APPL_DATA_FULLSYNC	VERSION_1
CS_ADM_PRSPCT_DATA_FULLSYNC	VERSION_1
CS_TEST_SCORES_FULLSYNC	VERSION_1
HCR_ADD_JOB	VERSION_1
HCR_ADD_JOB_ACK	VERSION_1
HCR_ADD_PERSON	VERSION_1
HCR_ADD_PERSON_ACK	VERSION_1
HCR_CAN_JOB	VERSION_1
PERSON_ACCOMP_FULLSYNC	VERSION_1
PERSON_ACCOMP_SYNC	VERSION_1

Define Partitioning Fields

Include	Field	Alias Name
<input type="checkbox"/>	OPERATIONNAME	<input type="text"/>
<input type="checkbox"/>	PUBLISHER	<input type="text"/>
<input type="checkbox"/>	PUBPROC	<input type="text"/>

7. Constituent Event Registry

Setup SACR > System Administration > Utilities > Constituent Management > Constituent Event Registration

Image: Constituent Event Registration page

A Constituent Event (SSR_ADMN_AFFL_DATA_SYNC) is registered to support integration with the Affiliation framework. Verify that following entry is available in your database.

Constituent Event Registration

***Event Name:** 

Description:

Details:

Implementation Class

***Root Package ID:** 

***Qualified Package/Class Path** 

***Application Class ID** 

8. SOA Framework Event Registry

Setup SACR > System Administration > Integrations > Event Register

Image: Event Registry page

An event is registered in Campus Solutions SOA Framework to support integration with the Affiliation framework. Verify that following entry is available in your database and is Active.

Event Registry

Service Operation: Active

Description:

Long Description:

Owner ID: ▼

Batch Replay Chunk Size:

Event Replay Support Effective Dated Filtering

Application Class

Package Name: 🔍

Path: 🔍

Application Class ID: 🔍

See "Understanding Constituent Web Services" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Outbound and Inbound Services" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Configuring Constituent Event Triggers" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Configuring Notification Handlers" (PeopleSoft Campus Solutions 9.2: Campus Community)

Chapter 17

Setting Up Student Academic Projects

Understanding Student Academic Projects

The Student Academic Project feature supports student projects that result in either a written thesis or dissertation. The feature supports an evaluation by committee, that utilizes the Evaluation Management feature.

Characteristics of the Student Academic Project feature:

- Participating students are already admitted and matriculated.
- The student projects result in a thesis, dissertation, or a similar deliverable.
- Institution can associate projects with a term, term session, or with a particular course offered in a specific term and session.
- Projects may be assigned by the instructor or proposed by the student(s).
- The completed project may be evaluated by a committee of evaluators, or by an individual evaluator. A final grade for the project is recorded.
- The institution may associate a job or internship placement with the project.

Setting Up Academic Project Types

This section discusses how to set up academic project types.

Page Used to Set Up Academic Project Types

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Academic Project Types	SSR_PROJ_TYPE	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Types	Define the type of projects. Examples of academic project type include: thesis, dissertation, case study, and internship.

Defining Academic Project Types

Access the Academic Project Types page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Types).

Image: Academic Project Types page

This example illustrates the fields and controls on the Academic Project Types page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Academic Project Types' page. At the top, the title 'Academic Project Types' is displayed in blue. Below the title, the 'Academic Institution' is set to 'PSUNV PeopleSoft University' and the 'Project Type' is 'HON'. A table below these fields contains the following information:

Find View All		First	1 of 1	Last
*Effective Date:	01/01/1900	*Effective Status:	Active	
*Description:	Honors Project			
*Group Code:	HON	Honors Project		

Group Code

Select a group code. The available values are those defined on the Process Status Codes page with a System Usage of *Project*. The process status codes defined for the group code are used to manage academic projects of this type.

See [Setting Up Research Status Codes](#)

Setting Up Process Status Codes

Use the Process Status Codes page (Set Up SACR, Product Related, Student Records, Research Management, Process Status Codes) to set up status codes that are used for managing the student academic project.

See [Setting Up Research Status Codes](#)

Using Common Attribute Framework for Student Academic Projects

The Common Attribute Framework enables you to define a common attribute and add the common attribute as a data field to any Campus Solutions page. A user can then enter a value on the page for the data field.

Use the Common Attribute Framework to create attributes for the Student Academic Projects feature. Create attributes using the Common Attribute component (Set Up SACR, Common Definitions, Common Attributes Setup, Common Attribute) and then use the Record Context component (Set Up SACR, Common Definitions, Common Attributes Setup, Record Context) to associate attributes with a particular record.

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

The Student Project Management component pages are enabled for Common Attribute Framework. The Common Attribute Framework Record Name and Attribute Records for Student Project Management component are:

Common Attribute Framework Record Name	Attribute Record	How Common Attribute Framework Record is Accessed
SSR_RS_THESIS	SSR_RS_THESISCA	SSR_RS_THESIS: Student Project Management, Project Management page, Additional Information link
SSR_RS_SUPRVRS	SSR_RS_SUPRS_CA	SSR_RS_SUPRVRS: Student Project Management, Additional Details page, Supervisors section, Additional Information link
SSR_RS_OTHRQDTL	SSR_RS_OTREQ_CA	SSR_RS_OTHRQDTL: Student Project Management, Additional Details page, Assignments section, Additional Information link

Note: These are the same Common Attribute Framework records used in the Research Management feature's Candidate Management and Thesis Management components. By default, attributes added for these records appear in both the Student Project and Research Management areas. You can configure attributes exclusively for either the research or academic project pages using Common Attribute Framework attribute filter class (SSR_RS_RESEARCH:CAF_Filters:ResearchAttributeFilter) and work entities (ResearchManagement, AcademicProject) on the Common Attribute Framework Record Context setup page.

For information about the Student Project Management component, see [Creating and Managing a Student Academic Project](#)

The Common Attribute Framework Record Name and Attribute Record for Academic Project Topic Setup component are:

Common Attribute Framework Record Name	Attribute Record	How Common Attribute Framework Record is Accessed
SSR_RS_TPCSETUP	SSR_RS_TPCST_CA	Academic Project Topics, Additional Details page

For information about the Academic Project Topic Setup component, see [Setting Up Academic Project Topics](#)

Related Links

[Using Common Attribute Framework for Research Tracking](#)

Setting Up Demographic Data Usage

Use the Demographic Data Use page (Set Up SACR, Product Related, Student Records, Research Management, Demographic Data Use) to set up the address, email, and telephone usage to be associated with the Student Academic Projects module. Currently, the Academic Project Topics Setup - Contact information uses this setup.

Related Links

"Establishing Address Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Establishing Phone Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

Defining Student Academic Project Topic Categories

Use the Research Topic Category page (Set Up SACR, Product Related, Student Records, Research Management, Research Topic Categories, Research Topic Category) to create research topic categories for assignment to Student Academic Project topics.

Note that the Display in Self Service check box is not applicable for Student Academic Project topics.

See [Defining Research Topic Categories](#)

Setting Up Academic Project Topics

This section discusses how to:

- Define academic project topics.
- Review available academic project supervisors.
- Associate organizations and contacts with academic project topics.
- Enter additional information.
- Enter attachments.

Page Used to Set Up Academic Project Topics

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Academic Project Topics – Topic Setup	SSR_RS_TOPIC_SETUP	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Topic Setup	Create the project topics that are offered at the institution. Provide information about the topics, including a description and the academic programs and plans to which they are associated.

Page Name	Definition Name	Navigation	Usage
Academic Project Topics – Available Supervisors	SSR_RS_TOPIC_SUP	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Available Supervisors	View all available supervisors who have academic programs or academic plans that match the topic.
Academic Project Topics – Organization and Contacts	SSR_RS_ORG_CONTACT	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Organization and Contacts	Associate one or more academic or external organization(s) with the project topic and set up contacts for the project topic.
Academic Project Topics – Additional Information	SSR_RS_TOPICST_CA	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Additional Information	Enter and review Common Attribute fields associated with the topic. This page appears only if Common Attribute fields have been created using the Common Attribute Framework.
Academic Project Topics – Attachments	SSR_RS_TOPICST_ATT	Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Attachments	Add one or more attachments for a topic.

Defining Academic Project Topics

Access the Academic Project Topics – Topic Setup page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Topic Setup).

This page is similar to the Research Topic Setup – Topic Setup page but the Display in Self Service check box is not functional here.

See [Defining Research Topics](#).

Reviewing Available Academic Project Supervisors

Access the Academic Project Topics – Available Supervisors page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Available Supervisors).

This page is similar to the Research Topic Setup – Available Supervisors page.

The page displays eligible project supervisors who can be assigned to the project topic. Eligibility is based on the supervisor's ability to participate in the same academic program and academic plan as the topic. Eligible persons are defined as project supervisors in the Administrator Profile component.

See [Reviewing Available Research Supervisors](#).

Associating Organizations and Contacts with Academic Project Topics

Access the Academic Project Topics – Organization and Contacts page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Organization and Contacts).

This page is similar to the Research Topic Setup – Organizations and Contacts page, but the Display in Self Service check box is not functional here.

See [Associating Organizations and Contacts with Research Topics](#).

Entering Additional Information

Access the Academic Project Topics – Additional Information page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Additional Information).

This page is similar to the Research Topic Setup – Additional Information page and is used to enter data for school-defined fields using the Common Attribute Framework.

See [Entering Additional Information](#).

Entering Attachments

Access the Academic Project Topics – Attachments page (Set Up SACR > Product Related > Student Records > Student Projects Setup > Academic Project Topics > Attachments).

Use this page, which is similar to the Research Topic Setup – Attachments page, to store project related documents. This information is currently not accessible to students in self service.

See [Entering Attachments](#).

Setting Up Project Supervisors

This section discusses how to set up the *project supervisor* administrator role. It discusses how to:

- Define administrators.
- Set up Integration Broker for profile affiliations.
- Define and manage administrator profiles.
- Define supervisor roles.

Defining Administrators

Use the Affiliation Setup component and the Academic Institution 10 page to define administrators (project supervisors) for Student Academic Project.

See [Defining Administrators](#)

Setting Up Integration Broker For Profile Affiliations

This is a technical task not for functional users.

See [Setting Up Integration Broker For Research Administrator Profile Affiliations](#)

Defining and Managing Administrator Profiles

Use the Administrator Profile Management page (Records and Enrollment, Academic Projects, Administrator Profile, Administrator Profile Management) to enter and track administrators who can participate as project supervisors. On this page, you can track the qualifications of the administrator and the approval of those qualifications. Also, manage academic areas of participation and availability of the administrator.

This page can also be accessed by selecting Records and Enrollment, Graduate Research Management, Administrator Profile, Administrator Profile Management.

See [Defining and Managing Administrator Profiles](#)

Defining Supervisor Roles

Use the Supervisor Roles page (Set Up SACR, Product Related, Student Records, Research Management, Supervisor Roles, Supervisor Roles) to define the valid supervisor roles for the institution.

The values that you define here are available in the Supervisor Role field on the Additional Details page in the Student Project Management component.

See [Creating and Managing a Student Academic Project](#)

See [Setting Up Research Administrators](#)

Defining Additional Business Assignments

Use the Assignment Type Options page (Set Up SACR, Product Related, Student Records, Research Management, Assignment Types, Assignment Type Options) to define additional business requirements that can be assigned to projects.

These assignments can be maintained in the Student Project Management component on the Additional Details page.

See [Defining Additional Business Assignments](#)

Defining Online Edits Using the Rules Engine

The Rules Engine has been integrated for use in the Academic Project Management component to support local business policies. Rules can be written to perform online editing of a student's project and display a warning message to administrator. A sample rule has been provided. To define rules about online edits, see [Setting Up Rules for Online Edits](#).

Setting Up Online Notifications for Student Projects

You can set up online notification capability for the Student Project Management and Administrator Profile pages.

See [Setting Up Online Notifications](#)

See [Using Online Notifications](#)

Setting Up Evaluation Management for Student Projects

To evaluate and score student projects, complete the Evaluation Management System setup.

- Evaluation categories, evaluation codes, and evaluation schemes necessary to create the evaluation must be set up.
- Committees of evaluators must be defined to support evaluations performed by committee.
- Additional setup as required by Evaluation Management System based on additional functionality desired.

See "Setting Up Evaluation Codes" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Defining Evaluation Categories" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Defining Committees for Evaluation Management" (PeopleSoft Campus Solutions 9.2: Campus Community)"Defining Individual Evaluator Schemes" (PeopleSoft Campus Solutions 9.2: Campus Community)

Preparing to Consolidate and Report Academic Statistics

Prerequisites for Preparing to Consolidate and Report Academic Statistics

Before you can consolidate academic statistics and use them for reporting, you must perform prerequisite setup tasks. After you complete the prerequisites, you can run the Consolidate Academic Statistics process (SRPCCONP) to generate consolidated statistics data on students and then create reports based on this data.

Set up the following items for reporting:

1. Academic Institution. See [Setting Up Academic Institutions for Reporting](#)
2. Academic careers and programs. [Setting Up Academic Careers and Academic Programs for Reporting](#)
3. Academic level and load rules. [Setting Up Academic Level and Load Rules for Reporting](#)
4. Student attributes. [Setting Up Student Attributes for Reporting](#)
5. Extracurricular activities. [Setting Up Extracurricular Activities for Reporting](#)
6. National Student Clearinghouse (NSC) branch codes. [Setting Up Branch Codes for NSC Reporting](#)
7. Statistic period types. [Setting Up Statistic Period Types](#)
8. Academic statistics periods. [Setting Up Academic Statistics Periods](#)
9. NSC program level. [Setting Up For NSC Program Level Reporting](#)

Setting Up Academic Institutions for Reporting

Use the Academic Institution 3 page to set up the default student attribute for cohort that your academic institution uses for cohort reporting. Use this page also to define NSC reporting options, such as the default Federal Interagency Committee on Education (FICE) code for your academic institution, and how the NSC Extract process calculates each student's anticipated graduation date.

Related Links

"Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up Academic Careers and Academic Programs for Reporting

Complete the following setup tasks for academic careers and programs:

- Define primacy for academic careers on the Academic Career Table 2 page and for programs on the Academic Program page.

Because reporting agencies require that you report a student at a given point in time under one academic career and one academic program, define primacy for all academic careers and programs. When the Consolidate Academic Statistics process (SRPCCONP) encounters a student who is active in multiple academic careers or academic programs for an academic statistics period, the process locates the student's primary academic career and program, based on the student's academic career and program that have the lowest primacy number at the academic institution. The process consolidates all of the student's academic career, program, level, load, and other academic statistic information into one record for reporting. For example, a student might be actively enrolled in a JD program and an MA program. These academic programs might be within different academic careers. At any point in time, the student might be enrolled part-time in the JD program and part-time in the MA program. By defining primacy, the Consolidate Academic Statistics process can calculate a student's level and load under one primary academic career and program, using *all* the level and load elements on a student's record. If the JD program has the lower primacy number at the academic institution, the student is reported full-time under the JD program. The process uses the institutional-level primacy rather than the student-level primacy so that the reports always coincide with your institution's financial aid processing.

- Indicate, on the Academic Career Table 2 page, whether an academic career qualifies as graduate level for reporting purposes.
- Indicate, on the Academic Program page, whether students in an academic program are eligible for financial aid.

The Consolidate Academic Statistics process excludes from its process calculations the academic programs in which students are not eligible for financial aid.

Related Links

"Setting Additional Academic Career Parameters" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

"Describing Academic Programs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up Academic Level and Load Rules for Reporting

Use the Level/Load Rules component to define academic level and load rules for *every* academic career. The Consolidate Academic Statistics process (SRPCCONP) uses the defined rules to locate a student's academic level and load.

Related Links

"Defining Academic Level and Load Rules" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up Student Attributes for Reporting

Use the Student Attributes page to assign student attribute and student attribute values to a student, and to indicate the primacy of each one. The Consolidate Academic Statistics process (SRPCCONP) locates a student's primary cohort based on the data on this page. You can then use students' primary cohort data for reporting and analysis.

Related Links

[Tracking Student Attributes](#)

Setting Up Extracurricular Activities for Reporting

Use the Extracurricular Activity Table page to define extracurricular activity codes and to define the primacy of the extracurricular activities for your setID. Before you can track extracurricular activities for students, set up these extracurricular activity codes. After you set up the codes, you can use the Extracurricular Activity page in Student Records or PeopleSoft Recruiting and Admissions to track extracurricular activities for individuals.

Related Links

[Tracking Extracurricular Activities](#)

Setting Up Branch Codes for NSC Reporting

To set up branch codes, use the NSC Branch Table component (NSLC_BRANCH_TBL).

This section discusses how to define NSC branch codes for NSC reporting.

Page Used to Set Up NSC Branch Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
NSC Branch Table (National Student Clearinghouse branch table)	NSLC_BRANCH_TBL	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > NSC Branch Table > NSC Branch Table	Define the branch codes that your academic institution uses when reporting enrollment status to the NSC.

Defining NSC Branch Codes for Reporting

Access the NSC Branch Table page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > NSC Branch Table > NSC Branch Table).

Image: NSC Branch Table page

This example illustrates the fields and controls on the NSC Branch Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'NSC Branch Table' page. At the top, there are search and navigation controls: 'Find | View All' and '1 of 1'. Below this, the 'Academic Institution' is set to 'PSUNV PeopleSoft University'. The form includes fields for:

- *Branch Code: 81
- *Effective Date: 01/01/1900
- Status: Active
- *Description: PSUNV
- Short Description: PSUNV

 Below the form is a table with columns: Acad Prog, Campus, and Career. The table contains four rows:

Acad Prog	Campus	Career
MED	Medicine	
		Law
		Medical
	WALCR Walnut Creek Campus	D.V.M.

The NSC requires that your institution defines a branch code for each group of students that has its own reporting time line. For example, if you have multiple campuses at your academic institution, and you are reporting each of these campuses separately to the NSC at different times of the year, you might use a different branch code for each campus.

Another example is if your institution has academic programs that are running on different calendars. For instance, your institution has a law program, a medical program, an undergraduate program, and a graduate program. Whereas the undergraduate and graduate programs might run on a semester term type, the law and medical programs might run on quarter term type. In such a case, your institution might use different branch codes for the semester programs and the quarter programs.

- Academic Institution** Select the academic institution for which you are defining the branch code.
- Branch Code** Enter the branch code for the academic institution according to the NSC contractual agreement.
- Acad Prog (academic program)** (Optional) Select the academic program associated with this branch code so that when you run the NSC Extract process, it reports data for only these students.
- Campus** (Optional) Select the campus associated with this branch code so that when you run the NSC Extract process, it reports data for only these students.
- Career** (Optional) Select the academic career associated with this branch code so that when you run the NSC Extract process, it reports data for only these students.

Setting Up Statistic Period Types

To set up statistic period types, use the Academic Statistics Type component (ACAD_STAT_TYPE).

This section discusses how to define statistic period types.

Page Used to Set Up Statistic Period Types

Page Name	Definition Name	Navigation	Usage
Academic Statistics Type	ACAD_STAT_TYPE	Records and Enrollment > Enrollment Reporting > Consolidated Statistics > Define Statistics Type > Academic Statistics Type	Define statistics period types.

Defining Statistics Period Types

Access the Academic Statistics Type page ((Records and Enrollment > Enrollment Reporting > Consolidated Statistics > Define Statistics Type > Academic Statistics Type).

Image: Academic Statistics Type page

This example illustrates the fields and controls on the Academic Statistics Type page. You can find definitions for the fields and controls later on this page.

Academic Statistics Type

Statistics Period Type: N

Effective Date: 01/01/1900 Status: Active

*Description: NSLC

Short Description: NSLC

Enforce FA Eligibility IPEDS Report NSC Report

Include the Following Program Statuses			
Academic Program Status	Include if Term Activated		
1 Active in Program		+	-
2 Completed Program		+	-
3 Discontinued	<input checked="" type="checkbox"/>	+	-
4 Deceased	<input checked="" type="checkbox"/>	+	-
5 Dismissed	<input checked="" type="checkbox"/>	+	-
6 Leave of Absence	<input checked="" type="checkbox"/>	+	-
7 Suspended	<input checked="" type="checkbox"/>	+	-

Year CIP Code Published: 2010

Exclude Withdrawal Grades					
*SetID	*Grading Scheme		*Grading Basis		*Grade Input
PSUNV	UGD	Undergrad	GRD	Graded	WF
PSUNV	GRA	Graduate	GRD	Graded	WF

Statistics period types are descriptors of an academic statistics period, helping to identify the type of reporting requirement that relates to a particular academic statistics period. For example, you might define the statistics period type *IP* for IPEDS reporting, *N* for NSC reporting, and *SR* for the Student Record Census report. You can later attach statistics period types to academic statistics periods on the Academic Statistics Period page.

Enforce FA Eligibility (enforce financial aid eligibility)

Select to have the Consolidate Academic Statistics process (SRPCCONP) use the value of the Financial Aid Eligible check box on the Academic Program page for this statistics period type.

Clear this check box to have the Consolidate Academic Statistics process disregard the value of the Financial Aid Eligible check box on the Academic Program page for this statistics period type. The Consolidate Academic Statistics process will retrieve all students that meet its processing parameters, regardless of the financial aid eligibility of the student's academic program.

For example, you would clear this check box for any statistics period type in which you need to report statistics for all students regardless of their financial aid eligibility.

IPEDS Report

Select to identify an academic statistics type as being used for IPEDS reporting purposes. This field is available only when the installation country (INSTALLATION.COUNTRY) = USA.

When attached to an academic statistics period, an IPEDS Report statistics type identifies the statistics period as an IPEDS reporting period, which enables the Consolidate Academic Statistics process (SRPCCONP) to report a student's ethnicity according to the IPEDS reporting requirements.

NSC Report

Select to identify the statistics type to be used for NSC Reporting. When you select the check box, the Year CIP Code Published field and the Exclude Withdrawal Grades grid become available.

Note: For information about excluding grades from academic load calculation for NSC Reporting, see [Understanding Consolidated Statistics Processes](#).

Academic Program Status

Select the students' academic program status for the Consolidate Academic Statistics process to consider and include in its results. For an academic statistics period to which this statistics period type is attached, the Consolidate Academic Statistics process includes in its results only the students with the academic program statuses specified here. Thus, you can define various statistics period types for different reporting needs.

For example, you can define a statistics period type for NSC reporting that includes all of the academic program statuses that your institution is required to report to the NSC.

Include if Term Activated

This check box is available for all Academic Program Status values other than *Active in Program* and *Completed Program* (because the Consolidate Academic Statistics process always selects these values).

When the check box is selected, the process includes students with a non-active status, if they are term activated in the reporting term. For example, you select the Include if Term Activated check box for the program status of *Leave of Absence* for a particular statistics period type. You then run the process for a statistics period, with the updated statistics period type, and a date of 09/15/2007. The reporting term is Fall 2007 (8/30/2007 – 12/12/2007). A student has a program status of *Leave of Absence*, with an effective dated row of 07/15/2007 – the student's program is therefore not active at the begin date of the reporting term. However, if the student is term activated for Fall 2007, the Consolidate Academic Statistics process includes this student's record.

Year CIP Code Published (Year Classification of Instructional Program Code Published)

This field is available when the NSC Report check box is selected. The value that you enter here is used by in the NSC extract process to provide the program CIP Year value. You can update the year to 2020 once you're ready to begin reporting CIP 2020 codes for NSLDS.

See [Understanding Consolidate Academic Statistics Process Calculations](#)

Exclude Withdrawal Grades

Use this grid to identify the grades that are to be excluded when calculating academic load for a statistics period with this statistics type. When a grade is listed in the Grade Input field, the Consolidated Statistics process (SRPCCONP) excludes the units associated with any student enrollment record that includes that grade. Using the page example above, if a student has a total of 12 units for a statistics period, and 3 of those units are graded with a WF, the process uses only the remaining 9 units to calculate the student's academic load.

Note: For information about excluding grades from academic load calculation for NSC Reporting,

See [Understanding Consolidated Statistics Processes](#).

Setting Up Academic Statistics Periods

To set up academic statistics periods, use the Academic Statistics Period component (ACAD_STATS_PERIOD).

This section provides an overview of academic statistic periods and discusses how to define them.

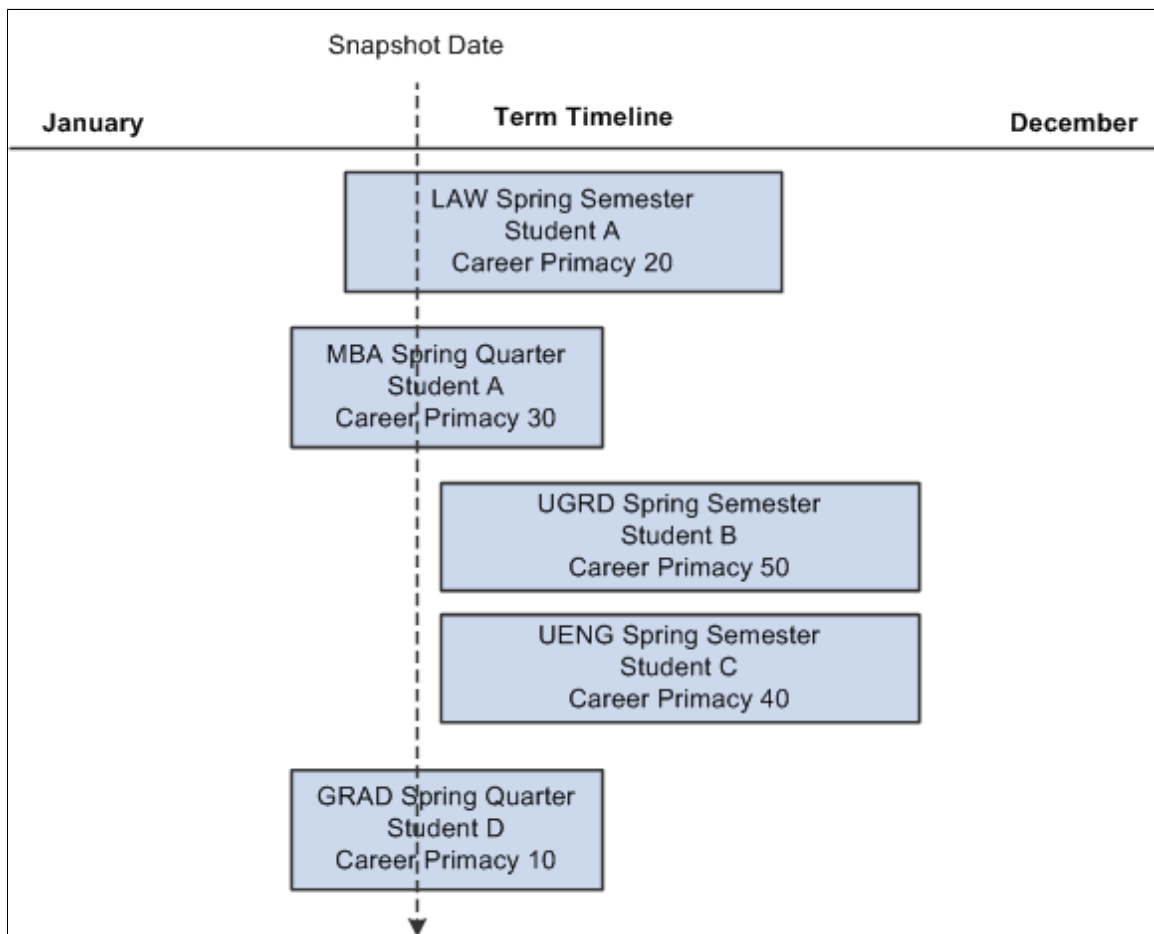

Understanding Academic Statistics Periods

An academic statistics period is the rule that the Consolidate Academic Statistics process (SRPCCONP) uses to control exactly when and how it functions. An academic statistics period defines the valid academic career and term combinations that the Consolidate Academic Statistics process uses to collect various academic statistics for students. An academic statistics period also defines the academic level and load rules and the statistics period type that the process uses.

The Consolidate Academic Statistics process locates the valid academic career and term combinations, based on the snapshot date for the academic statistics period. Valid academic career and term combinations can overlap each other and start and end independently yet can also roll up into one academic statistics period. You can even roll up different term values, such as semesters and quarters, into one academic statistics period.

Image: Example of an academic statistics period across terms

In the following diagram, the semester and quarter terms from different academic careers roll up into one academic statistics period:

The vertical line defines the valid academic career and term combinations for the academic statistics period. The Consolidate Academic Statistics process gathers data for students in all academic career and term combinations that the line passes through. If a student has only one academic career in these terms, the process calculation is straightforward. However, if a student has multiple academic careers in these terms, such as how Student A has LAW and MBA academic careers, the process uses the academic career with the lowest primacy number to calculate the student's academic statistics. In this scenario, the process

uses LAW as the primary academic career for Student A and converts the student's MBA units from quarter units to semester units.

For information about NSC program level reporting, see [Setting Up For NSC Program Level Reporting](#).

Page Used to Set Up Academic Statistics Periods

Page Name	Definition Name	Navigation	Usage
Academic Statistics Period	ACAD_STATS_PERIOD	Records and Enrollment > Enrollment Reporting > Consolidated Statistics > Define Statistics Period > Academic Statistics Period	Describe an academic statistics period, including the statistics period type, academic load rule, consolidation trigger, and snapshot date.

UGRD	0720	2014 Spr	Semester

Setting Up Academic Statistics Periods

Description and Short Description

Enter a description and short description for this academic statistics period. The system uses these descriptions on various pages to identify this academic statistics period.

The system also uses these descriptions for the header record of the NSC Extract report. The NSC requires that the header record of the extract include the academic term for the reported data, such as spring 2012 or fall 2012. Be sure to include this

information in the descriptions as necessary. For NSC academic statistics periods, use descriptions such as *Fall 2012-1st NSC Run*, *Fall 2012-2nd NSC Run*, and *Fall 2012-3rd NSC Run* so that your institution can distinguish between the numerous runs of the NSC Extract report. The detailed descriptions are especially useful if you are running the NSC Extract process multiple times within the same reporting period. By specifying, on the Consolidated Statistics page, the academic statistics period used as the source for the previous NSC extract, you can easily distinguish between the statistics of the previous NSC extract and the next NSC extract.

Statistics Period Type

Select a statistics period type, which is a descriptor of an academic statistics period. The statistics period type identifies the type of reporting requirement for which you are using this academic statistics period. For example, you might have defined the statistics period type *IP* for IPEDS reporting, *N* for NSC reporting, and *SR* for the Student Record Census report. Because the statistics period type can affect the results of the Consolidate Academic Statistic process and the reports derived from these results, be sure that you select a statistics period type that meets your reporting needs.

Academic Load Rule

Select the academic load rule for the system to use when consolidating academic statistics. The Consolidate Academic Statistics process (SRPCCONP) uses your selection to calculate each student's academic load: full-time, half-time, part-time.

Term Load Rule Applies: When you run the Consolidate Academic Statistics process for an academic statistics period in which you have set this field to *Term Load Rule Applies* and the Load Determination field on the Level/Load Rules Table page to *Units*, the Consolidate Academic Statistics process uses the defined academic load rules from the Academic Level Table page to calculate a student's academic load, NSC academic load, and financial aid load. If you have set the Load Determination field on the Level/Load Rules Table page to *manual* or *default*, the Consolidate Academic Statistics process uses the student's career-term record or the value you enter in the Default Academic Load field, respectively, to calculate the student's academic loads, regardless of the setting for this field.

Contiguous Terms: Contiguous terms are consecutive terms in which you combine academic load information. Use this option for your academic load rule when you are combining student career-term records for consecutive terms. When you run the Consolidate Academic Statistics process for an academic statistics period in which you have set this field to *Contiguous Terms*, the Consolidate Academic Statistics process uses the defined contiguous-term academic load rules from the Statistics Period Load page to calculate a student's academic load, NSC academic load, and financial aid load. Thus, the process is

able to accurately reflect each student's academic load for the combined terms.

For example, if 12 units equals a full-time academic load for an individual-term academic load rule, but you want to combine two consecutive terms during the Consolidate Academic statistics process, indicate on the Statistics Period Load page that 24 units equals a full-time academic load. If you do not define contiguous-term academic load rules, the Consolidate Academic Statistics process reports anyone with 12 or more units as full-time for that academic statistics period, which might not accurately reflect your data.

Consolidation Trigger

Select from the following choices the consolidation trigger to instruct the Consolidate Academic Statistics process which snapshot date to use. The snapshot date is the date that the process uses to locate the valid academic career and term combinations for this academic statistics period.

Note: If you select a consolidation trigger of *As of Date* or *As of Today*, the Consolidate Academic Statistics process takes the class start and end dates for all classes in which the student is actively enrolled and compares it to the snapshot date to determine if a student's class units should count towards her or his academic level and load calculation.

- *As of Date:* Select to have the Consolidate Academic Statistics process base the snapshot date on the date in the As of Date field.
- *As of Today:* Select to have the Consolidate Academic Statistics process base the snapshot date on the current system date when you run the process.
- *Consolidation Date:* Select to have the Consolidate Academic Statistics process generate the statistics based on values retrieved from the term statistics instead of the calculating the values based on the student's enrollment on a specific date. Depending on which consolidation option you use, the consolidation date is used slightly different.

When you select this option, a grid in the lower portion of the page appears for you to specify multiple academic career and terms combinations for each individual snapshot date for the consolidation. When this option is selected, you must run either the Take Term Statistics Snapshot process (SRPCCONA) or the Recurring Term Snapshot process (SRPCCONU) before running the Consolidated Academic Statistics process. Both SRPCCONA and SRPCCONU retrieve PS_STDNT_CAR_TERM information for each student active in the specified academic career and term combination for the corresponding row in the grid and

stores the values in a temporary holding table, PS_STDNT_CARTRM_PD.

If a consolidation is needed for the term, you should run the SRPCCONA process. This process consolidates enrollment by term using statistics from PS_STDNT_CAR_TERM.

The snapshot date in this case is used for effective date processing when retrieving data from the setup tables.

This process can also be rerun as often as needed, allowing for new students to be brought into the consolidation as well as updating the data for students who have had academic history changes since the previous run. This type of reporting is appropriate for processes like National Student Clearinghouse processing, where the units for the term are important, not the date when the snapshot of the data occurs.

If you want to take a snapshot of the student's term statistics on a specific date, you enter the appropriate date as the snapshot date in the consolidation details and run the SRPCCONU process.

Note: You must run the process on the snapshot date for it to return data.

The snapshot date is also used for effective date processing when retrieving data from the setup tables. Once run, the snapshot process cannot be rerun and trying to do so results in the process failing. If the data must be regenerated, either the existing data must be deleted from PS_STDNT_CARTRM_PD table or a new statistics type period must be created. This type of processing would be appropriate for census date reporting and consolidating units across multiple terms to be reported in a larger unit, such as an academic year.

After running the Consolidation Date process for all the rows listed in the grid, you must then run the Consolidate Academic Statistics process (SRPCCONP). This process uses the date in the As of Date field as the effective date for all effective dated processes used in the consolidation of the data. For a student to be present in the consolidation, the student must have a *valid program status as defined for this statistics type* for the specified academic career / term combinations defined and have records in the temporary holding table (PS_STDNT_CARTRM_PD).

Note: The Consolidated Academic Statistics process derives NSC program level data only if the Consolidation Trigger of *Consolidation Date* is selected (and the NSC Report check box is selected on the Academic Statistics Type page).

See:

[Setting Up For NSC Program Level Reporting](#)

[Understanding Consolidate Academic Statistics Process Calculations](#)

As of Date

This field becomes available when you select *As of Date* or *Consolidation Date* in the Consolidation Trigger field. If you select *As of Date* as your consolidation trigger, the Consolidate Academic Statistics process uses this date as the snapshot date. If you select *Consolidation Date* as your consolidation trigger, the Consolidate Academic Statistics process uses the date in this field as the effective date for all records that it generates. The date in this field must be after the latest snapshot date in the grid in the lower portion of this page. This ensures that the academic statistics for all of the academic career and term combinations have been gathered and stored in the temporary holding table prior to consolidation.

Aid Year

This field is available when the NSC Report check box is selected for the statistics period type on the Academic Statistics Type page. The value that you enter here is used to retrieve Credential Level Cross Reference and Title IV Weeks values from Financial Aid setup data.

See [Setting Up For NSC Program Level Reporting](#)

Defining Valid Academic Career, Term, and Snapshot Date Combinations

When you define an academic statistics period to have *Consolidation Date* for its *consolidation trigger*, the system displays a grid in the lower portion of that page for you to enter the specific academic career, term, and snapshot date combinations to include in this academic statistics period. When you run the Take Recurring Term Snapshot process, it accepts as valid only the combinations on this grid for the given academic statistics period. The process gathers the most current statistics on students active in these academic career and term combinations as of the run date, then stores this data in a temporary holding table (PS_STDNT_CARTRM_PD) for future consolidation through the Consolidate Academic Statistics process.

To gather statistics that reflect different times of the year, you must run the Take Recurring Term Snapshot process on a regular basis because the statistics themselves are based on the run date, not the snapshot date.

For example, perhaps you have a fall semester and a spring semester for each of your academic careers and you want to combine the historic academic statistics for all of these academic career and term combinations so that you have year-long academic statistics for your entire academic institution.

In the grid, indicate that you want to take one snapshot in the fall term and one snapshot in the spring term for each academic career. Set the academic statistics period to a consolidation mode of *insert* so that you

do not overwrite the data in the temporary holding table on subsequent runs of the Take Recurring Term Snapshot process.

On or shortly following each snapshot date for all of the academic career and term combinations listed for the academic statistics period, run the Take Recurring Term Snapshot process (through the Consolidated Statistics page) to capture the data current as of the run date for these academic career and term combinations. The process writes the data to the temporary holding table.

After running the Recurring Term Snapshot process for all of the academic career and term combinations listed for the academic statistics period, run the Consolidate Academic Statistics process to consolidate the academic statistics for this academic statistics period. The process consolidates each student's academic statistics for all applicable rows in the temporary holding table.

Academic Career	Select the academic career that the Take Recurring Term Snapshot process will consider as part of a valid combination for this academic statistics period.
Term	Select the term within the academic career that the Take Recurring Term Snapshot process will consider as part of a valid combination for this academic statistics period.
Snapshot Date	Select the date that the Take Recurring Term Snapshot process should be run for this academic career and term combination. For the process to consider this academic career and term combination valid, the term must be in progress as of the specified date.

Note: If you select a consolidation trigger of *As of Date* or *As of Today*, the Consolidate Academic Statistics process takes the class start and end dates for all classes in which the student is actively enrolled and compares it to the snapshot date to determine if a student's class units should count towards her or his academic level and load calculation.

[Understanding Consolidate Academic Statistics Process Calculations](#)

"Defining Academic Level and Load Rules" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Setting Up For NSC Program Level Reporting

As of July 2014, institutions must report program level data for students enrolled in eligible programs, in addition to overall enrollment status and status effective date data. This means that if a student is pursuing multiple programs, an institution must report enrollment data by program in addition to overall (per student) enrollment status-related data. Within the single row of data per student required by NSC, columns are available to report up to six sets of program level data (enrollment status, program start date and so on) per student.

In Campus Solutions, as of January 2015, the requirement to report program level data is managed as follows:

- The Consolidated Statistics process reports all of a student's eligible Academic Plans. A plan is identified as an eligible NSC program using an attribute in the Academic Plan Table.
- The process reports a maximum of six NSC programs across all of a student's academic careers for the specified Consolidated Statistics reporting period. The career consolidation logic that determines career primacy and program/plan primacy within each career has not changed.

Steps for Implementing NSC Program Level Reporting

1. Academic Plan Table: You must identify the academic plans that should be reported as NSC programs, as well as define related NSC data. NSC program level data is sourced from the Academic Plan Table (Set Up SACR >Foundation Tables >Academic Structure >Academic Plan Table).

See "Setting Up Taxonomy" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

2. Financial Aid Set Up: Work with your Financial Aid office to ensure that the SULA Credential Level Cross Reference page is populated and that Title IV Weeks of Instruction data is available for students (by Aid Year).

Credential Level values are entered on the SULA Credential Level Cross Reference page which maps Academic Plan Table NSC Classification values to SULA Credential Level values (Set Up SACR >Product Related >Financial Aid >Loans >SULA >Credential Cross Reference).

See:"Setting Up 150 Percent Direct Subsidized Loan Limit (SULA)" (PeopleSoft Campus Solutions 9.2: Financial Aid)

The Title IV Weeks of Instruction field is required when reporting program data where the published program length is measured in weeks or months. Financial Aid Academic Base Weeks is used to populate this field and the value is determined according to an established hierarchy.

See:

Understanding Consolidate Academic Statistics Process Calculations

"Establishing Defaults" (PeopleSoft Campus Solutions 9.2: Financial Aid)

3. Statistics Type: Update (or create) your NSC Statistics Type: Enter a Year CIP Code Published value.

See Setting Up Statistic Period Types

4. Statistics Period(s): Create Academic Statistics Period(s) for NSC Reporting. The statistics period must use a Consolidation Trigger of *Consolidation Date* and you must assign an Aid Year value so that the process can access Financial Aid set up data.

See Setting Up Academic Statistics Periods

Chapter 19

(AUS) Setting Up Government Reporting

Understanding Australian Government Reporting

This section discusses the government departments that require higher education reporting.

Prerequisites

In order to generate required government reports, in addition to the setup covered in the topics specific to Australian government reporting, you must set up these tables:

- Field of Study AUS
- Field of Education AUS
- Discipline Group Table AUS
- AOU Code Table AUS

See "(AUS) Setting Up Australian Academic Programs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

The Government Departments That Require Higher Education Reporting

The Australia Department of Industry, Innovation, Science, Research and Tertiary Education (DIISRTE) requires all institutions in Australia that receive funding from the Commonwealth government to provide statistical reports about programs offered, student enrollments and academic load, student liabilities under the Higher Education Loan Program (HELP), Commonwealth scholarships, enrollment and program completions, and application data.

The Australian Tax Office (ATO) also requires institutions to provide information about students and their HELP debts that are to be recovered through the taxation system. In a simple process for institutions, all returns are forwarded to DIISRTE, which forwards the necessary information to the ATO.

Centrelink, an Australian Government Statutory Agency, requires institutions to provide continuous reporting about a student's study circumstances for all students in receipt of a Centrelink Payment.

Note: The use of the "DIISRTE" acronym throughout the topics related to Australian government reporting largely replaces the "DEST" and "DEEWR" acronyms. However, there are still some page names, field labels, and system object names that use "DEST" and "DEEWR". When you see instances of "DEST" and "DEEWR" in the system, you can assume these refer to functionality related to the Australian Department of Industry, Innovation, Science, Research and Tertiary Education (DIISRTE). "DEST" and "DEEWR" are acronyms of predecessor agencies of DIISRTE.

Setting Up DIISRTE Reporting Codes

This section provides an overview of DIISRTE reporting codes and discusses how to:

- Set up institution codes.
- Set up DIISRTE country codes.
- Map country codes to DIISRTE country codes.
- Set up DIISRTE language codes.
- Map language codes to DIISRTE language codes.
- Set up DIISRTE citizenship and residency codes.
- Set up DIISRTE citizenship and residency mapping.
- Set up DIISRTE processing.
- Set up level of education codes.
- Identify CS locations for TCSI.
- Map types of impairment with disability codes.
- Map program actions and reasons to completion codes.

Understanding DIISRTE Reporting Codes

To comply with the DIISRTE reporting requirements, you use special DIISRTE codes when reporting data. You map these codes to the codes used in the PeopleSoft Campus Solutions system. In most cases, you need to set up the DIISRTE codes only once. If DIISRTE codes change, you must change the setup to reflect those changes.

In some cases, the DIISRTE codes are delivered as translate values for fields. It is important that you do not change these translate values unless there is a change in the DIISRTE code.

Pages Used to Set Up DIISRTE Reporting Codes

Page Name	Definition Name	Navigation	Usage
Institution Code	SSR_INST_DEST	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Institution Code > Institution Code	Define Higher Education Provider (HEP) codes for DIISRTE reporting.
Country Code Table	SSR_CNTRY_TB2_DEST	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Country Code Table > Country Code Table	Use the Standard Australian Classification of Countries (SACC) to define country codes. This is required for DIISRTE reporting.
Country Table	SSR_CNTRY_TBL_DEST	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Country Table > Country Table	Map PeopleSoft country codes to DIISRTE country codes for DIISRTE reporting.
Language Code Table	SSR_LANG2_DEST	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Language Code Table > Language Code Table	Define language codes for DIISRTE element 348.
Language Table	SSR_LANG_DEST	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Language Table > Language Table	Map PeopleSoft language codes to DIISRTE language codes defined for element 348.
Unit Status Indicator	SSR_DEST_ELEM_355	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Unit Status Indicator > Unit Status Indicator	Define unit of study completion status codes for DIISRTE element 355.
Unit Status Mapping	SSR_MAP_355	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Unit Status Mapping	Map grades to unit of study completion status codes.

Page Name	Definition Name	Navigation	Usage
Citizen/Res Indicator	SSR_DEST_ELEM_358	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Citizen/Res Indicator > Citizen/Res Indicator	Define the DIISRTE Citizen/Res Indicator codes for element 358. The system includes these codes in the Student Help files.
Citizen/Resident Mapping	SSR_MAP_358	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Citizen/Resident Mapping > Citizen/Resident Mapping	Map citizenship status codes to DIISRTE citizen/resident codes for element 358. The system assigns the mapped citizenship status codes to the imported person data.
Reporting Setup	SSR_DEST_SETUP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Reporting Setup > Reporting Setup	Allocate address usages for reporting address elements to DIISRTE and assign reporting years to the institution for DIISRTE submissions. This allows the system to track the submission number for half-year reporting.
Level of Education VET	SSR_DEST_ELEM_563	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Level of Education VET > Level of Education VET	Define level of education codes.
Campus Location	SSR_HM_CAMP_LOC	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Campus Location	Identify CS locations that should be considered a campus for TCSI and identify the provider type.
Disability Mapping	SSR_DISABILITY_MAP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Disability Mapping	Map types of impairment with E615 disability codes.
E599 Completion Code Mapping	SSR_HEIMS_PCC_MAP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > E599 Completion Code Mapping	Map program actions and action reasons to E599 program completion codes.

Setting Up Institution Codes

Access the Institution Code page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Institution Code > Institution Code).

Image: Institution Code page

This example illustrates the fields and controls on the Institution Code page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Institution Code' page with the following fields and values:

- Undergraduate Institution Code:** 1004
- *Effective Date:** 01/01/1900
- *Status:** Active
- *Description:** University of Adelaide
- Short Description:** University
- HEIMS HEP Code:**
- Credit Basis:** (empty)
- Provider Type VET:** (empty)

These codes are provided by DIISRTE. Set up codes for all your institutions, and for institutions from which you receive transfer students.

Credit Basis

Enter the value to be reported for DIISRTE Element 561 Credit-Basis, if the institution code is assigned to manual course credits processed for a student.

This field appears only if the DEST, HECS, Centrelink, TAC check box is selected on the SA Features page.

Provider Type VET

Enter the value to be reported for DIISRTE Element 564 Provider Type, if the institution code is assigned to manual course credits processed for a student.

This field is optional. If the institution does not offer VET related study, you do not have to enter a value.

This field appears only if the DEST, HECS, Centrelink, TAC check box is selected on the SA Features page.

Setting Up DIISRTE Country Codes

Access the Country Code Table page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Country Code Table > Country Code Table).

Setting up the country codes for DIISRTE reporting requires that you enter the DIISRTE country codes into your system, then map each DIISRTE country code to the appropriate country code defined in the system. Map country codes to DIISRTE country codes on the Country Table page.

Mapping Country Codes to DIISRTE Country Codes

Access the Country Table page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Country Table > Country Table).

Image: Country Table page

This example illustrates the fields and controls on the Country Table page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Country Table' interface. At the top, it displays 'Effective Date: 01/01/2000'. Below this is a table with columns for 'Country', 'DEST Country Code', and search controls. The table lists various countries and their corresponding codes, such as Aruba (8403), Afghanistan (7201), and Australia (1100). Each row includes a search icon and expand/collapse buttons (+/-).

Country	DEST Country Code
ABW Aruba	8403
AFG Afghanistan	7201
AGO Angola	9201
AIA Anguilla	8401
ALB Albania	3201
AND Andorra	3101
ANT Netherlands Antilles	8418
ARE United Arab Emirates	4216
ARM Armenia	7202
ATA Antarctica	1600
ATG Antigua and Barbuda	8402
AUS Australia	1100
AUT Austria	2301
AZE Azerbaijan	7203

Note: Set up DIISRTE country code values on the Country Code Table page.

- Country** Select a PeopleSoft defined country code.
- DEST Country Code** Enter the equivalent DIISRTE defined country code.

Setting Up DIISRTE Language Codes

Access the Language Code Table page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Language Code Table > Language Code Table).

Setting up the language codes for DIISRTE reporting requires that you enter the DIISRTE language codes into your system, then map each DIISRTE language code with the appropriate language code in the system. Map language codes to DIISRTE language codes on the Language Table page.

Mapping Language Codes to DIISRTE Language Codes

Access the Language Table page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Language Table > Language Table).

Image: Language Table page

This example illustrates the fields and controls on the Language Table page. You can find definitions for the fields and controls later on this page.

Language Code	Language Code	Language Code	Language Code		
BO	Bengali	5201	Bengali	+	-
CM	Chinese (Mandarin)	7104	Mandarin	+	-
EN	English	0001	English	+	-
FR	French	2101	French	+	-
KI	Kiswahili	0003	African languages nec	+	-
KO	Korean	7301	Korean	+	-
PO	Portuguese	0060	Portuguese	+	-
RU	Russian	3402	Russian	+	-
SI	Swahili	5202	Gujarati	+	-

Note: Set up DIISRTE language code values on the Language Code Table page.

Language Code (on left.) Select a PeopleSoft defined language code.

Language Code (on right.) Enter the equivalent DIISRTE language code.

Setting Up DIISRTE Citizenship and Residency Codes

Access the Citizen/Res Indicator page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Citizen/Res Indicator > Citizen/Res Indicator).

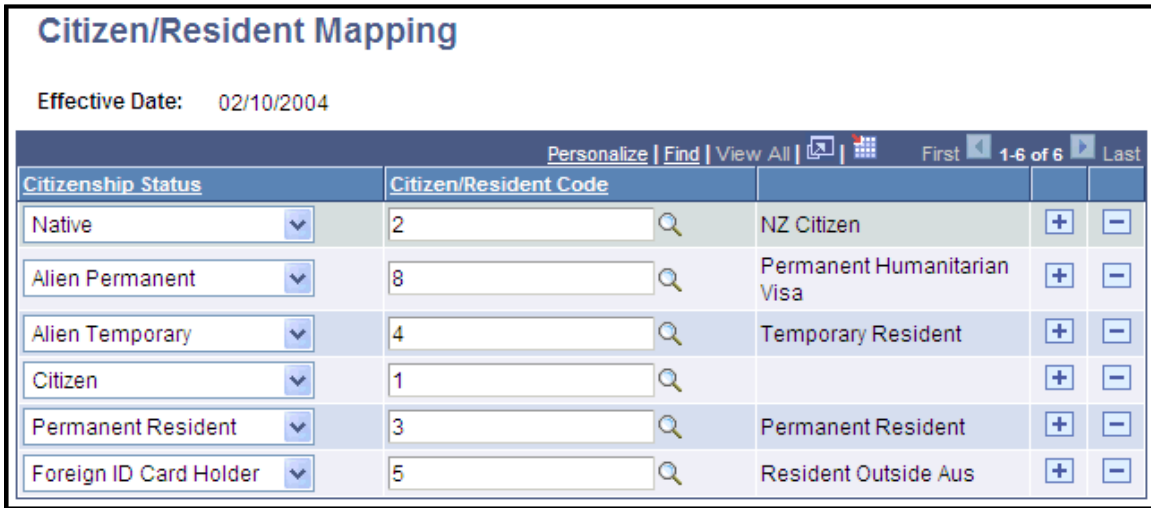

DIISRTE citizenship and residency codes are provided by DIISRTE. Map citizenship codes to DIISRTE citizen/resident codes on the Citizen/Resident Mapping page.

Setting Up DIISRTE Citizenship and Residency Mapping

Access the Citizen/Resident Mapping page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Citizen/Resident Mapping > Citizen/Resident Mapping).

Image: Citizen/Resident Mapping page

This example illustrates the fields and controls on the Citizen/Resident Mapping page. You can find definitions for the fields and controls later on this page.

Note: Set up DIISRTE citizenship and resident code values on the Citizen/Res Indicator page.

- Citizenship Status** Select a PeopleSoft defined citizenship status code.
- Citizen/Resident Code** Enter the equivalent DIISRTE citizen/resident code.

Setting Up DIISRTE Processing

Access the Reporting Setup page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Reporting Setup > Reporting Setup).

Note: For each new collection year, you must access this page and enter a new reference year row.

Image: Reporting Setup page

This example illustrates the fields and controls on the Reporting Setup page. You can find definitions for the fields and controls later on this page.

Reporting Setup

<hr/>	
Second Half Year	
Enrollment Submission Nbr:	1
Scholarship Submission Nbr:	1
OS - Help Submission Nbr:	1
SA - HELP Submission Nbr:	1

University Code

Enter your institution's DIISRTE university code.
 This code is used in the file name for your submissions.

ID

Enter the ID for your institution's DIISRTE contact.

Note: Make sure this individual has a BUSN and FAX phone number entered in his or her contact record. The individual's name, phone, and fax numbers are reported on the Due file (DU) in the second registration identity record in elements 424 (contact name), 425 (contact telephone), and 426 (contact facsimile number).

Address Usages

Postal Address

Select a value to determine the data for address elements 406, 407, 409, 466, 467, 468, 728.

DIISRTE AO, DU, RD and CS Extracts report one or more of these elements.

Permanent Address

Select a value to determine the data for address elements 320, 410, 411, 413, 469, 470 and 471.

DIISRTE AO, EN, DU and RD Extracts report one or more of these elements.

Term Address

Select a value to determine the data for address element 319.

DIISRTE EN Extract reports this element.

DIISRTE Reference Year

Reference year

Enter the collection year.

First Half Year and Second Half Year

Enrollment Submission Nbr, Scholarships Submission Nbr, SA-HELP Submission Nbr, and OS – Help Submission Nbr indicate the number of times the institution has submitted the enrollments, scholarship, SA-HELP, and OS-HELP records to DIISRTE.

The Past Course Completion Nbr indicates how many files have been submitted to DIISRTE for the reference year. The system increments this number each time the DIISRTE Submission Processing Extract runs for past course completions.

Note: The Past Course Completion Nbr field appears as a First Half Year submission only.

The DIISRTE Submission process, which stamps records as submitted, increments these numbers by one each time that it runs.

The submission numbers are used to generate file extensions for the DIISRTE reports (for example, HX4888EN.A11). The first digit of the .A11 extension is the half year, so this is one or two. The second digit is the submission number, which can go from

one to nine as multiple submissions are made during the half year period.

Setting Up Level of Education Codes

Access the Level of Education VET page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Level of Education VET > Level of Education VET).

Image: Level of Education VET page

This example illustrates the fields and controls on the Level of Education VET page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Level of Education VET' page. At the top, it displays 'Level of Education Code: 411'. Below this is a table with one row. The table has a header row with 'Level of Education Code' and navigation controls: 'Find | View All', 'First', '1 of 1', and 'Last'. The data row contains the following fields:

Level of Education Code	Find View All	First	1 of 1	Last
Effective Date: <input type="text" value="07/01/2007"/> Status: <input type="text" value="Active"/>				
*Description: <input type="text" value="Advanced Diploma"/>				
Short Description: <input type="text" value="AdvDiploma"/>				

Use this page to enter values for DEST Element 563 – Level of Education for Prior VET Study.

These values are then available in the Level of Education field on the Transfer Course Entry page, if the school type assigned to the credit has a DEST Credit Basis of 0200 Credit Offered for Prior VET Study.

Identifying CS Locations for TCSI

Access the Campus Location page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Campus Location).

Image: Campus Location page

This example illustrates the fields and controls on the Campus Location page.

Campus Location			
Academic Institution PSAUS PeopleSoft Australia University			
Locations		Personalize Find View All [Print] [Grid]	First 1-5 of 15 Last
Location	Description	*Provider Type	Status
1 BALLARAT	Ballarat Campus	Higher Education Provider	Active
2 BALLARAT	Ballarat Campus	Vocational Education&Training	Active
3 BENDIGO	BENDIGO	Higher Education Provider	Active
4 CARLTON	CARLTON	Higher Education Provider	Inactive
5 GABALONG	GABALONG CAMPUS	Vocational Education&Training	Active

Use this page to identify which locations should be considered a campus for TCSI, and associate a provider type. If a location is both a HEP and VET campus, you should have two entries.

Map Types of Impairment With Disability Codes

Access the Disability Mapping page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Disability Mapping).

Image: Disability Mapping page

This example illustrates the fields and controls on the Disability Mapping page.

Disability Mapping			
Effective Date 01/01/2010			
Mapping		Personalize Find [Print] [Grid]	First 1-6 of 6 Last
Type of Impairment	Disability Code E615		
20 Hearing Disability	11 Hard of hearing/Deaf		
30 Learning Disability	14 Specific learning disability		
40 Mobility Disability	12 Physical disability		
50 Vision Disability	17 Low vision/blindness		
60 Medical Disability	18 Medical condition		
70 Other Disability	19 Other		

Use this page to map the types of impairment with E615 disability codes.

The type of impairment should be unique for an effective date. You can map multiple types of impairment to a disability code.

Map Program Actions and Reasons to Program Completion Codes

Access the E599 Completion Code Mapping page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > E599 Completion Code Mapping).

Image: E599 Completion Code Mapping page

This example illustrates the fields and controls on the E599 Completion Code Mapping page.

*Program Action	Description	Action Reason	Description	*Program Completion Code E599	Description
1 COMP	Completion of Program			1	Completed
2 WADM	Administrative Withdrawal			2	Withdrawn

Use this page to map program actions and action reasons to a program completion code. You can map multiple program action and action reason to the same completion code.

Setting Up for Collecting Applications and Offers Data

This section provides an overview of Applications and Offers Data Collection and discusses how to:

- Set up an Applications and Offers profile.
- Set up Applications and Offers element mapping.
- Set up Applications and Offers element defaults.
- Set up funding source codes.
- Set up Element 702 mapping.

Understanding Applications and Offers Data Collection

To meet the DIISRTE Applications and Offers Data Collection requirements, you use the Applications and Offers (SSR_DEEWR_AO) process.

The process generates three files— Applications Details, Preference Details, and Offer Details.

An applicant is included in the data collection only if an admissions application exists for the applicant. The Preference Details file includes a record for each program within collection scope for which an applicant has applied. The Offer Details file includes only those programs for which an applicant has been made an offer—it can therefore contain zero records.

The scope of Applications and Offers Collection Data requirements excludes certain categories of application, for example:

- Cancelled by an institution as duplicates, or because the applicant is known to be deceased or has falsified documentation, or for other administrative reasons.
- Registrations for non-commencing students following periods of lapsed enrollment, leave of absence, or deferment.

See [Generating the Applications and Offers Files](#).

Pages Used to Set Up Applications and Offers Profile Parameters

Page Name	Definition Name	Navigation	Usage
Profile	SSR_DEEWR_AO_PRFL	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Profile	Define key parameters to determine the selection of applicants to be included in the Applications & Offers data collection.
Element Mapping	SSR_DEEWR_AO_ELEMP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Element Mapping	Define program action and reason combinations to define the scope of each of the files in the Applications & Offers data collection and assist in determining the value to report for elements 723 and 701. Element 710 is reported by identifying the test ID and component that captures an International Baccalaureate score.
Element Defaults	SSR_DEEWR_AO_ELEDF	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Element Defaults	Specify either a constant or default value for a subset of elements in the Applications and Offers data collection. Where applicable, a constant value is reported for all records in the file. A default value is reported if there is no data found.
Funding Source	SSR_DEEWR_FUND_SRC	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Funding Source > Funding Source	Define funding source codes that can be assigned to the applicant or student to record the type of place that the applicant is offered or for which the student is currently enrolled.
Element 702 Mapping	SSR_DEEWR_E702_MAP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Element 702 Map > Element 702 Mapping	Map the year 12 result type codes for Element 702 to the applicable state code.

Setting Up an Applications and Offers Profile

Access the Profile page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Profile).

Image: Profile page

This example illustrates the fields and controls on the Profile page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Profile' page with the following details:

- Academic Institution:** PSAUS PeopleSoft Australia Uni
- Profile:** AO_CD1
- AO Profile:**
 - Effective Date:** 07/01/2009
 - Status:** Active
 - Description:** CSP UGRD Domestic
 - Description:** CSP UGRD Domestic Applicants
- Application Center:** ADMS, Central Student Admissions
- Admit Type:** (Empty)
- Application Method:** WWW, Web Application
- Citizenship:** 1, Australian Citizen
- Course Of Study Type Code:** 08, Bachelor's Graduate Entry

Use this page to define key selection parameters relevant to the data collection.

Application Center, Admit Type, and Application Method Select a value in these fields if applicants included within the scope of the data collection are identifiable by an application centre, admit type, or application method on the admissions application.

Citizenship and Course of Study Type Code The Applications and Offers Data Collection requirements include specific citizenship and course of study type values within scope. You must select all the required values for DIIS RTE Citizenship Element 358 and DIIS RTE Course of Study Type Element 310 that are applicable to the scope of the collection.

Setting Up Applications and Offers Element Mapping

Access the Element Mapping page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Element Mapping).

Image: Element Mapping page

This example illustrates the fields and controls on the Element Mapping page. You can find definitions for the fields and controls later on this page.

Profile | **Element Mapping** | Element Defaults

Academic Institution: PSAUS PeopleSoft Australia Uni

Profile: AO_CD1

Use this page to determine the value of a number of elements that must be reported and to further refine the scope of the collection by excluding a subset of applicants and distinguishing between preferences and offers.

File Scope Mapping

Here are examples of the Program Action and Application Status tabs:

Image: Element Mapping page: File Scope Mapping, Program Action tab

This example illustrates the fields and controls on the Element Mapping page: File Scope Mapping, Program Action tab. You can find definitions for the fields and controls later on this page.

File Scope Mapping					
Program Action		Application Status			
	*Program Action	Description	Action Reason	Description	
1	ADMT	Admit			+ -
2	DISC	Discontinuation	DEAT	Deceased	+ -
3	RECN	Reconsideration			+ -
4	WADM	Administrative Withdrawal			+ -

Image: Element Mapping page: File Scope Mapping, Application Status tab

This example illustrates the fields and controls on the Element Mapping page: File Scope Mapping, Application Status tab. You can find definitions for the fields and controls later on this page.

File Scope Mapping					
Program Action		Application Status			
	*Application Status	Description			
1	OF	Offered			+ -
2	EX	Excluded			+ -
3	NO	Not Offered			+ -
4	EX	Excluded			+ -

Use these tabs to set up combinations of program action and reason(s) that affect:

- Whether the applicant is included in or excluded from the data collection.
- If included, whether the applicant is reported in Application Details and Preference Details file but not in the Offer Details file.

Enter an Application Status value only for program actions and (optional) reasons that are relevant to the collection scope.

An example of a program action that does not require a mapping is DATA (Data Change). A program action of DATA is typically used to change an attribute on the application or program that is not relevant to the scope of the collection.

Application Status

Values are:

EX: Excluded

OF: Offered

NO: Not Offered

CO: Conditional

An example of mappings is:

- Discontinued/Deceased–Excluded

- Admit–Offered
- Reconsideration–Not Offered
- Conditional–Conditional

When you run the Applications and Offers (SSR_DEEWR_AO) process from the Applications and Offers File page, the process uses the file scope mapping as follows:

1. The process selects an application based on the criteria on the Profile setup page and the admit term(s) that you enter on the Applications and Offers File run control page.
2. The process uses program action and reason data from either the admissions application (if not matriculated) or the academic program/plan stack and tries to map to the program action and reason data in the File Scope Mapping group box.

The process searches in descending effective date and sequence order, as at the reference date on the run control page.

The process checks each effective dated row until a match is found, at which point it stops searching, or until all rows are processed.

3. If the applicant's program action and reason maps to a program action and reason in the File Scope Mapping group box (first tab), the process uses the application status (second tab) to determine whether the data is included or excluded from scope, and if included, whether the data for that program is output to the Offer Details file.

If no mapping is found between the applicant's program data and the data in the File Scope Mapping group box, the applicant is considered in scope for the Application Details and Preference Details files (because the applicant has an admissions application) but not the Offers Details file.

If you enter a program action without an action reason, all applicants with the specified program action are associated with the mapped application status, regardless of reason.

Note: Because the Applications and Offers process uses descending effective date order, any program action that rescinds an offer must be mapped to an application status of *NO* (Not Offered) to ensure the program is not included in the offer file. An example is the *RECN* (Reconsidered)–*NO* (Not Offered) row in the example page.

The *CO* (Conditional) application status in the example page has an equivalent meaning to *NO*. You do not have to enter a row for a conditional offer unless it might rescind a previous offer row. You can map the action reason(s) used for conditional offer to either *NO* or *CO*. The *CO* value is for transparency only.

Here are some examples of how the Applications and Offers process matches and reports data, using the data that appears in the Element Mapping page example:

Applicant Data	What is Reported
01 Jul 2009 APPL	<p>An application exists and therefore the applicant is considered in scope and is reported in the Applicant Details and Preference Details files.</p> <p>No APPL row exists in the file scope mapping: because no match is found, the applicant is not reported in the Offer Details file.</p>

Applicant Data	What is Reported
01 Jul 2009 APPL 02 Jul 2009 ADMT/29 03 Jul 2009 DEIN 05 Jul 2009 MATR 15 Jul 2009 PLNC 16 Jul 2009 DATA	Working backwards from 16 Jul, no match exists until the ADMT row. The process stops searching when it finds this match. Action reason 29 is irrelevant because, in the file scope mapping, ADMT has no related action reason. In file scope mapping, program action ADMT has an OF application status: the applicant is therefore reported in the Applicant Details, Preference Details, and Offer Details files.
01 Jul 2009 APPL 02 Jul 2009 ADMT/29 03 Jul 2009 MATR 15 Jul 2009 DISC/DEAT	Working backwards from 15 Jul, the process finds a match on the 15 Jul row and stops searching. In the file scope mapping, DISC/DEAT has an application status of EX: the applicant is <i>not</i> reported in any file.

Element 723 Mapping

Here are examples of the Program Action and E723 Response Code tabs:

Image: Element Mapping page: Element 723 Mapping, Program Action tab

This example illustrates the fields and controls on the Element Mapping page: Element 723 Mapping, Program Action tab. You can find definitions for the fields and controls later on this page.

Element 723 Mapping				
Program Action		E723 Response Code		
	*Program Action	Description	Action Reason	Description
1	DEFR	Defer Enrollment		
2	DEIN	Intention to Matriculate		
3	WAPP	Applicant Withdrawal		

Image: Element Mapping page: Element 723 Mapping, E723 Response Code tab

This example illustrates the fields and controls on the Element Mapping page: Element 723 Mapping, E723 Response Code tab. You can find definitions for the fields and controls later on this page.

Element 723 Mapping				
Program Action		E723 Response Code		
	*E723 Response Code	Description		
1	3	Deferred the offer		
2	1	Accepted the offer		
3	2	Rejected the offer		

That data that you set up here determines the value that is reported for Element 723 if the applicant is not enrolled in the reported program.

If the applicant is enrolled, a value of 1 (Accepted the offer) is reported regardless of the setup.

If no mapping is found, a value of 6 (Response unknown/not recorded) is reported.

If you do not enter an action reason for a program action, the process assumes all reasons for the program action.

Element 701 Mapping

Here are examples of the Program Action and the E701 Application Status tabs:

Image: Element Mapping page: Element 701 Mapping, Program Action tab

This example illustrates the fields and controls on the Element Mapping page: Element 701 Mapping, Program Action tab. You can find definitions for the fields and controls later on this page.

Image: Element Mapping page: Element 701 Mapping, E701 Application Status tab

This example illustrates the fields and controls on the Element Mapping page: Element 701 Mapping, E701 Application Status tab. You can find definitions for the fields and controls later on this page.

The data that you set up here determines the value that is reported for Element 701.

The minimum recommended setup is for 2 (Applicant Withdrawn), but you can identify values for every program action. If set up a status of 2 only, all other program actions assume the reporting value of 1 (Current Application).

Note: A distinction exists between an applicant withdrawn for the purpose of element 701 and applications that are excluded from data collection. Programs with an E701 status of application withdrawn must be reported. To exclude applicants from all 3 files, assign the relevant program action/reason combinations in the File Scope Mapping group box not in the Element 701 group box.

International Baccalaureate Score

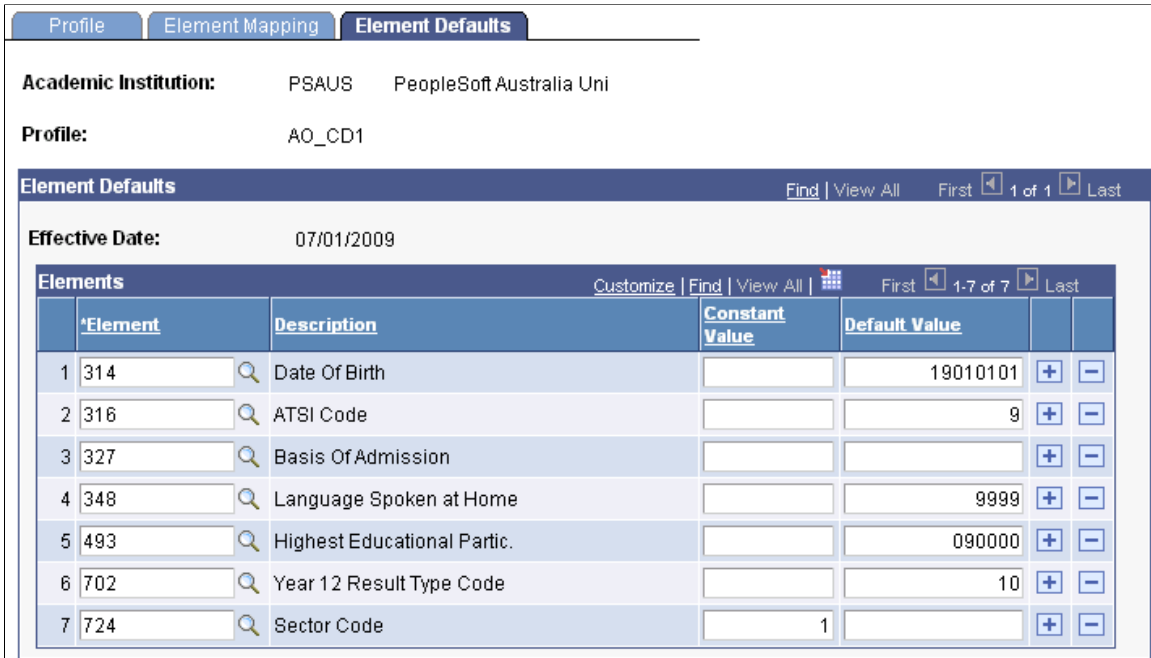

This mapping determines the test score and component relevant to the IB Aggregate score reported at Element 710.

Setting Up Applications and Offers Element Defaults

Access the Element Defaults page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Applications & Offers Profile > Element Defaults).

Image: Element Defaults page

This example illustrates the fields and controls on the Element Defaults page. You can find definitions for the fields and controls later on this page.

Defaults are used to assist in the value of some elements that are reported in the Applications and Offers Data Collection. Only a subset of elements can be assigned either a default or constant value, because the concept is not applicable to all elements in the collection.

If you assign a constant value, all records in the data extracts are reported with the same value. If you assign a default value, the value is reported only if no data is found for the student for that particular element. You can assign a default value of blank—a blank value is output to file, highlighting the missing data.

Note: The only element that acknowledges a constant value is E724 Sector Code. For all elements except Element 724, use the Default Value field to assign a default value to be reported if no data is sourced for the applicant.

This table lists the DIISRTE Equivalent values where relevant:

<i>Element</i>	<i>DIISRTE Equivalent</i>
314: Date of Birth	19010101
316: Aboriginal & Torres Strait Islander Code	9
348: Language Spoken at Home	9999
493: Highest Educational Participation Prior to Commencement	090000
702: Year 12 Result Type Code	10

Element 724

Release 9.0 customers can assign either a constant value or a default value if no funding source is assigned to the applicant with a mapping to Sector Code.

Release 8.9 customers must assign a constant value to the profile.

Setting Up Funding Source Codes

Access the Funding Source page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Funding Source > Funding Source).

Image: Funding Source page

This example illustrates the fields and controls on the Funding Source page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Funding Source' page with the following details:

- Funding Source:** CSP
- Effective Date:** 01/01/2008 (with a calendar icon)
- Effective Status:** Active (with a dropdown arrow)
- Description:** Commonwealth Supported Place
- Formal Description:** Commonwealth Supported Place
- Sector Code:** 1 (with a search icon and the text 'Commonwealth Supported')

At the top right of the form area, there are navigation controls: 'Find | View All', 'First', '1 of 1', and 'Last'.

Use this page to define funding source codes that can be assigned to the applicant or student to record the type of place that the applicant is offered or for which the student is currently enrolled.

Funding Source

This user-defined code indicates the category of the place that the student is offered.

The Funding Source field appears on the AUS Student Program, Application Regional, Program Addition, and Quick Admit-Program/Plan pages.

Sector Code

The sector code represents DIISRTE Element 724. If the funding source is relevant to the Applications and Offers data collection, enter a value in this field. If not, the field can be blank. You can map multiple funding source values to a single sector code for reporting purposes.

Setting up Element 702 Mapping

Access the Element 702 page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Element 702 Map > Element 702 Mapping).

Image: Element 702 Mapping page

This example illustrates the fields and controls on the Element 702 Mapping page. You can find definitions for the fields and controls later on this page.

Element 702 Mapping							
Element 702 Mapping							
Customize Find View All First 1-8 of 8 Last							
*Element 702 Code	Description	*Country	Description	*State	Description		
01	ACT Year 12 Certificate	AUS	Australia	ACT	Austl. Cap. Terr.	+	-
02	New South Wales HSC	AUS	Australia	NSW	New South Wales	+	-
03	QLD Certificate of Education	AUS	Australia	QLD	Queensland	+	-
04	SA/NT Certificate of Education	AUS	Australia	SA	South Australia	+	-
04	SA/NT Certificate of Education	AUS	Australia	NT	Northern Territory	+	-
05	TAS Certificate of Education	AUS	Australia	TAS	Tasmania	+	-
06	VIC Certificate of Education	AUS	Australia	VIC	Victoria	+	-
07	WA Certificate of Education	AUS	Australia	WA	Western Australia	+	-

Use this page to map the year 12 result type codes for Element 702 to the applicable state codes.

The Applications and Offers process uses this mapping to report the state in which a student completed or is completing year 12.

Element 702 Code

Enter the Australian Year 12 result type code values for DIISRTE Element 702 and map each value to the relevant state.

You do not have to enter codes for values that are not directly attributable to a State, for example, International Baccalaureate.

The Element 702 code that is reported to DIISRTE is based on the value in the State field on the CHESSN Year 12 page, if the student attended year 12 in the year that is designated as *current* for the DIISRTE Applications and Offers Data collection—the year immediately prior to the reference year for which you run the Applications and Offers process.

See [Generating the Applications and Offers Files](#).

Setting Up HECS Liability in Student Records

This section provides an overview of HECS liability in Student Records and discusses how to:

- Define cohort year.
- Set up HECS band IDs.
- Map liability status codes.
- Map work experience to HECS liability codes.
- Set up aggregated EFTSL values.

Understanding HECS Liability in Student Records

The HECS is an equitable way of ensuring that students contribute to the cost of their higher education. HECS provides a loan to students that is interest free, with deferred income contingent repayment. The purpose of HECS in the system is to determine how much of the tuition a student should pay, and then to collect the payments. To do this, HECS Band IDs must be associated with courses so that when students enroll, the system can calculate their contributions based on the HECS Band and their level/load (EFTSL). HECS Band IDs are associated with academic subjects, but you can override them at the course catalog level. All of the HECS processing (tuition calculation) occurs in the Student Financials application.

Pages Used to Set Up HECS Liability

Page Name	Definition Name	Navigation	Usage
Cohort Year	SSR_COHORT_YR_AUS	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Cohort Year > Cohort Year	Define the cohort years that your institution uses to create cohorts of students commencing a program in a specific year.
HECS Band ID Setup	SSR_HECS_BAND_AUS	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > HECS Band ID Setup > HECS Band ID Setup	Set up the HECS Band IDs.
Map Liability Status	SSR_HECS_MAP_TO	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Map Liability Status > Map Liability Status	Map pre-2005 liability status codes to post -2005 student status codes. The system uses this mapping when you term-activate a student who was active before 2005.
Map Work Exp to Liability (map work experience to liability)	SSR_WORK_EXP_MAP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Map Work Exp to Liability > Map Work Exp to Liability	Define liability status mappings for work experience in industry class enrollments.
Aggregated EFTSL AUS	SSR_EFTSU_AGG	Set Up SACR > Foundation Tables > Reporting Codes > Aggregated EFTSL AUS > Aggregated EFTSL AUS > Aggregated EFTSL AUS	Define the aggregated EFSTL values that are available on the Academic Program Australia page.

Defining Cohort Years

Access the Cohort Year page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Cohort Year > Cohort Year).

Image: Cohort Year page

This example illustrates the fields and controls on the Cohort Year page. You can find definitions for the fields and controls later on this page.

Cohort Year				
Customize Find View All First 1-3 of 3 Last				
*Cohort Year	*Description	Short Description		
2004	Cohort 2004	2004	+	-
2005	Cohort 2005	2005	+	-
2006	Cohort 2006	2006	+	-

A cohort year designates a group of students that all begin a particular course of study the same year.

Setting up cohort years enables your institution to specify the student contribution amounts and tuition fees for the student cohorts according to the guidelines in the Higher Education Support Act of 2003.

Cohort Year

Enter the years in which your institution wants to group students.

[Adding or Updating Quick Enrollment Requests](#)

Setting Up HECS Band IDs

Access the HECS Band ID Setup page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > HECS Band ID Setup > HECS Band ID Setup).

Note: Fixed HECS is used for students who enrolled before January 1, 1997, and are charged a single rate for all their subject areas.

The HECS Band ID determines the amount of tuition that an institution can charge per course.

DIISRTE sets up guidelines as to which band a subject should be placed. You associate HECS Band IDs with academic subjects. Courses that fall under that academic subject are automatically assigned the HECS Band ID of the academic subject; however, you can override the HECS Band ID for individual courses if required.

Mapping Liability Status Codes

Access the Map Liability Status page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Map Liability Status > Map Liability Status).

Image: Map Liability Status page

This example illustrates the fields and controls on the Map Liability Status page. You can find definitions for the fields and controls later on this page.

Map Liability Status					
Customize Find View All First 1-4 of 4 Last					
*Liability Status	Description	*Map to New Liability Status	Description		
10	Deferred all/part of liability	110	HECS-HELP Deferred pre2005	+	-
11	Paid full liability w discount	111	HECS-HELP Paid w/disc. pre2005	+	-
12	Paid full liability w/o discount	112	Paid full w/o discount pre2005	+	-
22	Fee-paying overseas student	311	Fee-paying overseas Sponsored	+	-

A liability status defines a student's payment options (for example, deferred or pay up front) and is assigned to each student in the term activation component.

The liability status codes are defined by DIISRTE. In 2005, the codes were changed from two-digit to three-digit codes. For historical purposes, your system must maintain the two-digit codes.

Liability Status Select the two-digit liability status code.

Map to New Liability Status Select the equivalent three-digit liability status code.

Mapping Work Experience to HECS Liability Codes

Access the Map Work Exp to Liability page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > Map Work Exp to Liability > Map Work Exp to Liability).

Image: Map Work Exp to Liability page

This example illustrates the fields and controls on the Map Work Exp to Liability page. You can find definitions for the fields and controls later on this page.

Map Work Exp to Liability					
Work Experience Indicator:		Wholly Work Exp - Exempt			
Customize Find View All First 1-3 of 3 Last					
*Liability Status	Description	*Map to New Liability Status	Description		
201	HECS-HELP Deferred.	262	Work Experience in Industry		
202	Paid full liability w/discount	262	Work Experience in Industry		
230	FEE-HELP Def Award/Enabling	271	WEI -- No charge for fees.		

WEI is work that is done as a part of, or in connection with, a course of study undertaken with a higher education provider (HEP) and the purpose of which is to obtain work experience relevant to the course of study.

The work experience can be a unit of study that is directed or supported by your institution for which the student pays a contribution amount or tuition fees, or it can be work experience not directed or supported by an institution for which the student pays no contribution or fees.

Work Experience Indicator

When setting up a new indicator, select the appropriate value.

The work experience indicators are:

- *Not Wholly Work Experience:* The HEP directs the learning and performance of the student. The work experience is treated as a normal unit, and the student is charged appropriately.
- *Wholly Work Exp - Exempt:* The HEP does not provide direction or support for the work experience, and the unit of study is exempt from student contributions and tuition fees.
- *Wholly Work Exp with Charge:* The HEP supports the learning and performance of the student and may charge the student contribution amounts and tuition fees.

Liability Status

Select a liability status that your institution has entered as a default status for a course.

Map to New Liability Status

Select the equivalent liability status for students who have enrolled in the course for WEI.

Setting Up Aggregated EFTSL Values

This section provides an overview of EFTSL Calculation and discusses how to set up Aggregated EFTSL values.

Understanding EFTSL Calculation

EFTSL is a measure of the study load, for one year, of a student undertaking a course of study on a full time basis.

To enable DIISRTE to make accurate comparisons between institutions, student loads must be universally expressed in EFTSL values. One EFTSL is the amount of study that a full time student is expected to take in one year.

DIISRTE requires that institutions report EFTSL values for each student, each year. A student's total EFTSL for a year is equal to the sum of EFTSL values for each term for which the student is enrolled in that year. The student's total EFTSL value for each term is the sum of the EFTSL for each class in which the student is enrolled in that term. The EFTSL value for each class is determined by dividing the number of units for each class in which the student is enrolled that term by the total annual units for that program of study.

This example illustrates the calculation of EFTSL values for a student for two terms:

Example Class	Term	Units
Accounting 101	1	15
Economics 101	1	15
English 201	1	15
Music 105	1	15
		Total term units: 60
Engineering 201	2	30
Economics 102	2	15
Laws 201	2	15
		Total term units: 60
		Total annual units for program of study: 120

To calculate the EFTSL for each class, the number of units for each class is divided by the annual units for the program of study:

$$\text{Accounting 101 EFTSL} = [15 \text{ units for the class}] / [120 \text{ units for the annual program of study}] = 0.125$$

$$\text{Engineering 501 EFTSL} = [30 \text{ units for the class}] / [120 \text{ units for the annual program of study}] = 0.25$$

This table lists the EFTSL for each class in the example:

Class	EFTSL
Accounting 101	0.125
Economics 101	0.125
English 201	0.125
Music 105	0.125
Engineering 201	0.25
Economics 102	0.125
Laws 201	0.125
<i>Total Annual EFTSL</i>	<i>1.00</i>

Note: For classes that are offered on an annual basis, the EFTSL value must be split so that it represents the load attributed to the class in each term. For example, an annual class that is assigned 30 units might have an EFTSL of 0.25. The term EFTSL for the class would be 0.125 for a two-term year. The term total units do not need to be equal for each term. For example, if the annual load is 120, you could have 75 units from the first term and 45 units for the second term.

Setting Up Aggregated EFTSL Values

Access the Aggregated EFTSL AUS page (Set Up SACR > Foundation Tables > Reporting Codes > Aggregated EFTSL AUS > Aggregated EFTSL AUS > Aggregated EFTSL AUS).

Image: Aggregated EFTSL AUS page

This example illustrates the fields and controls on the Aggregated EFTSL AUS page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Aggregated EFTSL AUS' page. At the top, it displays 'Aggregated EFTSL: 30'. Below this is a navigation bar with 'Find | View All | First | 1 of 1 | Last'. The main form area contains the following fields and controls:

- Effective Date:** A text input field containing '01/01/1900' with a calendar icon to its right.
- Status:** A dropdown menu currently set to 'Active', with '+' and '-' buttons to its right.
- *Description:** A text input field containing '3 Years'.
- Short Description:** A text input field containing '3 Years'.

DIISRTE requires that institutions report EFTSL values for each student, each year. A student's total EFTSL for a year is equal to the sum of EFTSL values for each term for which he or she is enrolled in that year. The student's total EFTSL value for each term is the sum of the EFTSL for each class in which the student is enrolled in that term. The EFTSL value for each class is determined by dividing the number of units for each class in which the student is enrolled that term by the total annual units for that program of study.

Aggregated EFTSL values are the total number of EFTSL values that a student accumulates while completing a program of study. This value is used to derive the element 350 Course of Study Load on the Course of Study file.

DIISRTE provides the codes for aggregated EFTSL. You must enter the codes (in tenths) into the system so that you can show the equivalent course of study load (program load). For example, the program value of 30 is equal to 3 years EFTSL.

You assign an aggregated EFTSL to each of your programs on the Academic Program AUS page.

Setting Up Centrelink Reporting

This section discusses how to

- Set up Centrelink.
- Set up the load search/match parameters for CART.
- Set up the Last Cart Request ID.

Pages Used to Set up Centrelink Reporting

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Centrelink Setup	SSR_CART_SETUP	Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > CART Setup > Centrelink Setup	Set up the academic institution(s) for the response file data to be reported to Centrelink. Additionally, set up the fixed attributes for the response header record.
Search/Match Rule	HCR_SM_RULE	Set Up SACR > System Administration > Utilities > Search/Match > Search/Match Rules	For the CART Request file, define sets of fields to search for and identify how to search for them.
Search Parameters	HCR_SM_PARM	Set Up SACR > System Administration > Utilities > Search/Match > Search/Match Parameters > Search Parameters	For the CART Request file, combine and order search rules. The combination (called the search parameter) is what the users select prior to performing a search to determine the search fields that they are permitted to search on.
SA Features	SCC_INSTALL_SA2	Set Up SACR > Install > Student Admin Installation > SA Features	If required, reset the last CART request ID.

Setting up Centrelink

Access the Centrelink Setup page (Set Up SACR > Product Related > Student Records > Enrollment Reporting Codes > AUS Regulatory Report Setup > CART Setup > Centrelink Setup).

Image: Centrelink Setup page

This example illustrates the fields and controls on the Centrelink Setup page. You can find definitions for the fields and controls later on this page.

The screenshot shows a form titled "Centrelink Setup" with the following fields and values:

Academic Institution:	PSAUS	PeopleSoft Australia Uni
*System Code:	<input type="text" value="CART"/>	
*ABN:	<input type="text" value="1234567890"/>	
*Centrelink User ID:	<input type="text" value="ABC-00"/>	

System Code	Enter the value CART. The system includes this value in the CART Response File Header for the field name System Code.
ABN (Australian Business Number)	Enter the ABN for your academic institution. The system includes this value in the CART Response File Header for the field name Institution ABN.
Centrelink User ID	Enter the User ID that Centrelink allocates for file exchange. The system reports this value in the CART Response File Header for field name User ID.

Setting up the Load Search/Match Parameters for CART

Define search/match rules to verify whether the data in the CART Request file contains a student ID or has an invalid student ID. Define search/match rules to verify whether the student's personal data in the request file is valid.

See "Setting Up Search/Match" (PeopleSoft Campus Solutions 9.2: Campus Community)

Setting up the Last Cart Request ID

The Last CART Request ID field on the SA Features page displays the last CART Request ID that the system assigned to a CART request file. Each request file has a unique request ID. The system automatically increments the Last CART Request ID each time the CART Request File process loads a request file.

If required, reset the Last CART Request ID number. Set a number so that automatic numbering does not create numbers that already exist in the data.

This field appears only if you select the DEST, HECS, Centrelink, TAC check box on the SA Features page.

(CAN) Setting Up Government Reporting

Understanding the Canadian Government Reporting Process

All postsecondary schools in Canada are required to report specific information to the federal and provincial governments. The Campus Solutions Canadian Government Reporting feature enables users to generate files in formats specified by the government. Using the Campus Solutions Canadian Government Reporting feature, you can extract reports in the following file formats:

- PSIS - Postsecondary Student Information System.
- USISE - University Student Information System Enrollment Reporting.
- CIS - Common Information System.
- MET - Ministry of Education and Training Financial Reporting.
- OUAC - Ontario Universities' Application Center Reporting.

You must complete a series of setup steps for each of the reports. Some of the steps include setting up very basic data (for example, country codes), and the system provides the data for you. Other steps are user defined, and you must closely follow the setup steps to ensure that your system is ready for reporting.

After you complete the setup steps, you can populate a table with students who are eligible for reporting.

The flat file generation process is a separate step that you can initiate after you run the extract program. You are then responsible for running the flat file through the government edits. If you find any errors and would like to make edits, you can do so without overwriting source data.

In addition, you can freeze a reporting period so that the system does not add students or modify them as of a specified date. The reporting extract process can be rerun as often as you require. When the data in the flat file is correct, you can archive the report extract tables.

Finally, all government elements are defined by element class and mapping classes. The element class determines what type of calculation or conversion needs to take place in order for the system to report the information in a code the government specifies. The five element classifications are listed in the following table:

<i>Element Classification Type</i>	<i>Description</i>
Classification Mapping (CM)	Use when there is a direct mapping of the data, but you would only report this element in certain circumstances. For example, you may have to report the student's maiden name. You would specify the mapping field of Maiden_Name on the Names table where the Name_type is equal to a particular value (in this case it would be 'MDN' for maiden). Note that the selection criteria field must be on the same record as the mapped field.

Element Classification Type	Description
Direct Mapping (DM)	Use when there is a direct mapping of the data. Conversion from application values to government code is not required. The application record and field names are entered in the Direct Mapping table for these elements.
Master Mapping (MM)	Use when there is a direct mapping of the data, but you must convert the application value to the Government Reporting Value. You must enter conversion codes in the Master Mapping Table in order for the system to report the government values.
Separate Mapping (SM)	Similar to Master Mapping, except the number of values to be mapped is greater than 15. The application provides a separate conversion table that holds the converted values.
Rules Based Mapping (RB)	<p>This classification applies to elements that:</p> <ul style="list-style-type: none"> • Cannot be derived directly from the database. • Require a separate mapping for each government code value. • Require complex institution-specific calculations. <p>All rules based elements are identified by report type with a unique procedure number. The reports extract program uses this number to execute the associated logic. Each report type procedure number starts at 1, except MET reporting, which starts at 201. You cannot duplicate procedure numbers within a report type. Any changes to the rule based mapping procedure values require a modification of the reports.</p>

Note: If you decide that a mapping change is required, you must ensure that the key structure of the new table allows the retrieval of a unique record. If a key field is required, then you must provide the field name and value for every student on the Student List page.

Defining Canadian Reporting Business Units

To set up Canadian reporting business units, use the Business Unit Table component (BUS_UNIT_TBL_RP).

This section discusses how to:

- Define Canadian reporting business unit descriptions.
- Define Canadian reporting business unit defaults.
- Define Canadian reporting business unit career usage values.

Pages Used to Define Canadian Business Units

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
General	BUS_UNIT_TBL_RP	Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > General	PSIS: Define business unit descriptions.
Unit Defaults	BUS_UNIT_TBL_RP2	Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > Unit Defaults	PSIS: Define business unit defaults.
Career Usage	CAREER_USAGE_TBL	Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > Career Usage	PSIS: Define career usage values.

Defining Canadian Reporting Business Unit Descriptions

Access the General page (Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > General).

Institution	Enter the institution for which you want to define the reporting business unit.
Institution Cd (institution code)	Enter the institution's reporting code.
Province	Enter the province in which the reporting institution is located. This entry controls the view of the provincial codes on all of the pages (for this business unit) that are keyed by province.
Type of Student ID	Enter the type of ID that the reporting institution uses to identify students.
Sending Inst Type of Code (sending institution type of code)	Enter the sending institution's type of program or course code that it uses to identify transfer credits.
Receiving Inst Type of Code (receiving institution type of code)	Enter the receiving institution's type of program or course code that it uses to identify transfer credits.
Institution has Honour Roll	Select to indicate that the institution tracks academic excellence. You must select this check box in order for the extract program to generate a value other than the default value for Element 5140.

Defining Canadian Reporting Business Unit Defaults

Access the Unit Defaults page ((Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > Unit Defaults).

Image: Unit Defaults page

This example illustrates the fields and controls on the Unit Defaults page. You can find definitions for the fields and controls later on this page.

General	Unit Defaults	Career Usage
Business Unit:	PSUNV	PeopleSoft University
Program Duration Units:	Weeks	
Program Credit Units:	Credits	
Man. Paid OJT Duration Units:	Weeks	
Opt. Paid OJT Duration Units:	Weeks	
Man. Unpaid OJT Duration Units:	Weeks	
Optional Unpaid OJT Dur Units:	Weeks	
Course Duration Units:	Hours	
Course Credit Units:	Contct Hrs	
Lab Duration Units:	Hours	
Course OJT Duration Units:	Hours	

Program Duration Units

Enter the unit of measure that defines the normal time that a full-time student requires to complete the program.

Program Credit Units

Enter the unit of measure that defines the number of credits or units of academic achievement that a full-time student requires to graduate from or complete the program.

Man. Paid OJT Duration Units (mandatory paid on the job training duration units)

Enter the unit of measure that defines the duration of mandatory paid on-the-job training.

Opt. Paid OJT Duration Units (optional paid on the job training duration units)

Enter the unit of measure that defines the duration of optional paid on-the-job training.

Man. Unpaid OJT Duration Units (mandatory unpaid on the job training duration units)

Enter the unit of measure that defines the duration of mandatory unpaid on-the-job training.

Optional Unpaid OJT Dur Units (optional unpaid on the job training duration units)

Enter the unit of measure that defines the duration of optional unpaid on-the-job training.

Course Duration Units

Enter the unit of measure that defines the normal time a full-time student requires to complete the course by way of traditional course delivery.

Course Credit Units	Enter the unit of measure that defines the number of credits or units typically awarded for successful completion of the course.
Lab Duration Units	Enter the unit of measure that defines the number of credits or units a full-time student requires to complete the laboratory or shop training included in the course.
Course OJT Duration Units (course on the job training duration units)	Enter the unit of measure that defines the duration of on the job training activities that are a regular part of the course.

Defining Canadian Reporting Business Unit Career Usage Values

Access the Career Usage page (Records and Enrollment > Government Reporting Canada > Definitions > Business Unit Table > Career Usage).

Career Order No (career order number)	Enter a career order number for the corresponding academic career. This number determines the order in which the system processes careers when it looks to report start and end dates on the Institution Description file. The Institution Description file is an PSIS report.
Academic Career	Enter rows for all careers that you want to report.

Reviewing Delivered Report Types and Element Numbers

To set up report types, use the Define Report Type component (CAN_RPT_TYPE) and the Define Govt Element component (CAN_GOV_ELEM).

This section discusses how to:

- Review delivered government report types.
- Review delivered government elements.

Pages Used to Review Delivered Codes

Page Name	Definition Name	Navigation	Usage
Report Type	CAN_RPT_TYPE	Records and Enrollment > Government Reporting Canada > Definitions > Define Report Type > Report Type	All (Delivered by Campus Solutions): Review report type values.
Government Element	CAN_GOV_ELEMENT	Records and Enrollment > Government Reporting Canada > Definitions > Define Govt Element > Government Element	All (Delivered by Campus Solutions): Review government element values.

Reviewing Delivered Government Report Types

Access the Report Type page (Records and Enrollment > Government Reporting Canada > Definitions > Define Report Type > Report Type).

- Description** The report type description.
- Short Description** The report type short description.

Reviewing Delivered Government Elements

Access the Government Element page (Records and Enrollment > Government Reporting Canada > Definitions > Define Govt Element > Government Element).

- Element Number** The element number specified in the government documentation.
- Element Default** The element default value specified in the government documentation.

Defining Element Classifications

To set up element classifications, use the Define Element Class component (CAN_RPT_ELEM_CL).

This section discusses how to define element classification types.

Page Used to Define Element Classification Types

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Element Class	CAN_RPT_ELEM_CLASS	Records and Enrollment > Government Reporting Canada > Definitions > Define Element Class > Element Class	All (Delivered by Campus Solutions for PSUNV): Define element classification types for your institution. Copy the values delivered with the Campus Solutions system.

Defining Element Classification Types

Access the Element Class page (Records and Enrollment > Government Reporting Canada > Definitions > Define Element Class > Element Class).

Image: Element Class page

This example illustrates the fields and controls on the Element Class page. You can find definitions for the fields and controls later on this page.

Element Classification

Copying the values delivered with *PSUNV*, enter the reporting classification for the element. Values are CM (classification mapping), DM (direct mapping), MM (master mapping), RB (rules based), and SM (separate mapping).

RB Procedure Nbr (rules based procedure number)

Copying the values delivered with *PSUNV*, for rules based elements only, enter a procedure number. This number defines the procedure number that the extract program executes. You cannot create duplicate procedure numbers within a report type. MET procedure numbers *must* be numbered in the 200 series. Changes and additions to the values delivered with *PSUNV* require modification.

Panel Navigation

Enter the panel navigation to define the location where users enter the data. This field is informational only and has no programming tied to it.

Defining Report Periods

To set up report periods, use the Define Report Period component (CAN_RPT_PERIOD).

This section discusses how to define report periods.

Page Used to Define Report Periods

Page Name	Definition Name	Navigation	Usage
Report Period	CAN_RPT_PERIOD	Records and Enrollment > Government Reporting Canada > Definitions > Define Report Period > Report Period	All: Define reporting periods.

Defining Report Periods

Access the Report Period page (Records and Enrollment > Government Reporting Canada > Definitions > Define Report Period > Report Period).

Image: Report Period page

This example illustrates the fields and controls on the Report Period page. You can find definitions for the fields and controls later on this page.

Report Period

Institution: PSUNV PeopleSoft University

Report Type: PSIS Postsecondary Student Info Sys

Report Period: 200910 **Student ID Freeze Date:**

***Description:**

Short Description:

Report Due Date: 

PSIS Report Type: 

PSIS Start Year:

PSIS Period Start: 

PSIS Period End: 

Institution

Enter the institution for which you will run the report.

Report Type

Enter the report type to which the reporting period pertains.

Report Period

Enter a unique reporting submission period for your report type.

Report Due Date

Enter the date upon which you must report data. The system uses this date to perform effective date checking. This enables you to process data after the report date, and as long as the changes have an effective date, the system does not pick them up for reporting. If you need to make corrections to reporting

data, you must ensure that the data has an effective date that is less than or equal to this report due date.

Student ID Freeze Date The date that the student list, for the selected reporting period, is frozen.

The following fields are available for entry if you specify a report type of *PSIS*.

PSIS Report Type Enter the type of report to be run.
PSIS Start Year Enter the year in which the current reporting period begins.
PSIS Period Start Enter the start date of the reporting period.
PSIS Period End Enter the end date of the report period.

The following fields are available for entry if you specify a report type of *USISE*.

REPDAY (report day) Enter a value for the report date.

The following fields are available for entry if you specify a report type of *CIS*.

Submission Type Enter the reporting submission type.
Academic Year Enter the academic year for the reporting type.

The following fields are available for entry if you specify a report type of *MET*.

REPDAY (report day) Enter a value for the report date.

Term Enroll Prd (term enrollment period) Select *Fall* to report the QUALIF value mapped from the plan mapping table or the program mapping table. If you select *Winter*, *Spring*, or *Summer*, the system reports the FIN_QUALIF value.

Note: For Ontario schools that report OUAC elements in the Fall, ensure that the Fall reporting period that you set up for MET reporting is *identical* to the reporting period for OUAC. If the reporting period for MET and OUAC differ, the flat file process cannot combine the reporting files.

Reviewing Delivered Government Element Codes

To set up government element codes, use the Define Forpos Code component (CAN_RPT_FORPOS), Define Quacod Code component (CAN_RPT_QUACOD), Define Qualif Code component (CAN_RPT_QUALIF), Define Seshun Code component (CAN_RPT_SESHUN), and the Define Spemaj Code component (CAN_RPT_SPEMAJ).

This section lists the pages used to review delivered government element codes.

Pages Used to Review Delivered Government Element Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Forpos Code (formula program of study code)	CAN_RPT_FORPOS	Records and Enrollment > Government Reporting Canada > Definitions > Define Forpos Code > Forpos code	USISE, MET: Review delivered FORPOS codes.
Quacod Code (coded title of qualification code)	CAN_RPT_QUACOD	Records and Enrollment > Government Reporting Canada > Definitions > Define Quacod Code > Quacod Code	USISE, MET: Review delivered QUACOD codes.
Qualif Code (qualification code)	CAN_RPT_QUALIF	Records and Enrollment > Government Reporting Canada > Definitions > Define Qualif Code > Qualif Code	USISE, MET: Review delivered QUALIF codes.
Seshun Code (session code)	CAN_RPT_SESHUN	Records and Enrollment > Government Reporting Canada > Definitions > Define Seshun Code > Seshun Code	USISE, MET: Review delivered SESHUN codes.
Spemaj Code (specialization of major field of study code)	CAN_RPT_SPEMAJ	Records and Enrollment > Government Reporting Canada > Definitions > Define Spemaj Code > Spemaj Code	USISE, MET: Review delivered SPEMAJ codes.

Reviewing Delivered County and Country Codes

To set up county and country codes, use the Define Country Codes component (CAN_GOV_COUNTY).

This section lists the pages used to review delivered county and country codes.

Pages Used to Review Delivered County and Country Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
County Code	CAN_GOV_COUNTY	Records and Enrollment > Government Reporting Canada > Definitions > Define County Codes > Country Code	PSIS, USISE, MET: Review delivered county codes.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Country Code	CAN_GOV_COUNTRY	Records and Enrollment > Government Reporting Canada > Definitions > Define Country Codes > Country Code	PSIS, USISE, MET: Review delivered country codes.

Reviewing Delivered Language, School, and CIS Language Codes

To set up language, school, and CIS language codes, use the Define Language Codes component (CAN_GOV_LANG), Define School Codes component (CAN_GOV_SCHOOL), and the Define CIS Language Code component (CAN_CIS_LANGUAGE).

This section lists the pages used to review delivered language, school, and CIS language codes.

Pages Used to Review Delivered Language, School, and CIS Language Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Language Code	CAN_GOV_LANG	Records and Enrollment > Government Reporting Canada > Definitions > Define Language Codes > Language Code	PSIS, USISE, MET: Review delivered language codes.
School Code	CAN_GOV_SCHOOL	Records and Enrollment > Government Reporting Canada > Definitions > Define School Codes > School Code	PSIS, CIS: Review delivered school codes.
CIS Language Code	CAN_CIS_LANGUAGE	Records and Enrollment > Government Reporting Canada > Definitions > Define CIS Language Code > CIS Language code	CIS: Review delivered CIS language codes.

Defining Provincial Codes

To set up provincial codes, use the Prov Approval Codes component (CAN_PROV_APPR_TBL), Prov Course Funding Codes component (CAN_PROV_FNDCRS), Prov Funding by Citizen component (CAN_PROV_CITZ), Prov Major Field of Study component (CAN_PROV_MAJOR), Prov Program Codes component (CAN_PROV_PROG), and the Prov Prog Funding Codes component (CAN_PROV_FUND).

This section discusses how to:

- Define program funding approval codes.

- Define provincial course funding codes.
- Define provincial citizen funding codes.
- Define provincial major field of study codes.
- Define provincial program codes.
- Define provincial program funding codes.
- Define provincial special initiative codes.

Pages Used to Define Provincial Codes

Page Name	Definition Name	Navigation	Usage
Prov Approval Codes (provincial approval codes)	CAN_PROV_APPR_TBL	Records and Enrollment > Government Reporting Canada > Definitions > Prov Approval Codes > Prov Approval Codes	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The Program and Plan Mapping tables prompt against the approval codes you define.
Prov Course Fund Code (provincial course funding code)	CAN_PROV_FNDCRS	Records and Enrollment > Government Reporting Canada > Definitions > Prov Course Funding Codes > Prov Course Fund Code	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The Cdn PSIS Course Data table prompts against the course funding codes you define.
Prov Citizenship Fund Class (provincial citizenship funding classification)	CAN_PROV_CITZ	Records and Enrollment > Government Reporting Canada > Definitions > Prov Funding by Citizen > Prov Citizenship Fund Class	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The PSIS Student Data table prompts against the classification funding codes you define.
Prov Major Code (provincial major code)	CAN_PROV_MAJOR	Records and Enrollment > Government Reporting Canada > Definitions > Prov Major Field of Study > Prov Major Code	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The program and plan mapping tables prompt against the major codes you define.
Prov Program Code (provincial program code)	CAN_PROV_PROG	Records and Enrollment > Government Reporting Canada > Definitions > Prov Program Codes > Prov Program Code	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The program and plan mapping tables prompt against the program codes you define.

Page Name	Definition Name	Navigation	Usage
Prov Prog Funding Code (provincial program funding code)	CAN_PROV_FUND	Records and Enrollment > Government Reporting Canada > Definitions > Prov Prog Funding Codes > Prov Prog Funding code	PSIS: Populate this page if your institution reports this information to the Provincial Ministry. The program and plan mapping tables prompt against the province program funding code.

Defining Program Funding Approval Codes

Access the Prov Approval Codes page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Approval Codes > Prov Approval Codes).

Province	The system populates the province field to the value defined for your business unit.
Approval Code	Enter the provincial code that defines whether the student is approved for funding in the program.
Description and Short Description	Enter the descriptions for the code.

Defining Provincial Course Funding Codes

Access the Prov Course Fund Code page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Course Funding Codes > Prov Course Fund Code).

Province	The system populates the province field by default to the value defined for your business unit.
Crse Fund Cd (course funding code)	Enter the provincial code that defines the course funding code.

Defining Provincial Citizen Funding Codes

Access the Prov Citizenship Fund Class page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Funding by Citizen > Prov Citizenship Fund Class).

Province	The system populates the province field by default to the value defined for your business unit.
Funding Class by Citiz (funding classification by citizen)	Enter the provincial code that classifies the student for grant purposes.

Defining Provincial Major Field of Study Codes

Access the Prov Major Code page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Major Field of Study > Prov Major Code.).

Province	The system populates the province field by default to the value defined for your business unit.
Prov Major (province major)	Enter the provincial code that classifies students' major field of study.

Defining Provincial Program Codes

Access the Prov Program Code page ((Records and Enrollment > Government Reporting Canada > Definitions > Prov Program Codes > Prov Program Code).

Province	The system populates the province field by default to the value defined for your business unit.
Prog Category (program category)	Enter the provincial code that defines the program category.

Defining Provincial Program Funding Codes

Access the Prov Prog Funding Code page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Prog Funding Codes > Prov Prog Funding code).

Province	The system populates the province field by default to the value defined for your business unit.
Prov Fund Cd (province funding code)	Enter the provincial code that classifies whether the student has been approved for funding in the program.

Defining Provincial Special Initiative Codes

Access the Prov Special Initiative Code page (Records and Enrollment > Government Reporting Canada > Definitions > Prov Special Initiative Code).

Province	The system populates the province field by default to the value defined for your business unit.
Special Init Cd (special initiative code page)	Enter the provincial special initiative code that associates with students in the program.

Defining General Mapping Tables

To set up general mapping tables, use the Language Mapping component (CAN_RPT_TONGUE), Province Mapping component (CAN_RPT_PROV), Reporting Sequence Mapping component (CAN_RPT_SEQ), Term Group Mapping component (CAN_RPT_TERM_GRP), OUAC Applno Mapping component (CAN_RPT_APPLNO), Classification Mapping component (CAN_RPT_CM), Direct Mapping component (CAN_RPT_DM), Master Mapping component (CAN_RPT_MM), and the Separate Mapping component (CAN_RPT_SM).

This section discusses how to:

- Define mapping language codes.
- Review delivered province codes.
- Map Canadian reporting sequence.
- Map terms and sessions to reporting periods.
- Review delivered OUAC application numbers.
- Define the classification mapping tables.
- Define the direct mapping table.
- Define the master mapping table.
- Define the separate mapping table.

Pages Used to Define General Mapping Tables

Page Name	Definition Name	Navigation	Usage
Language Mapping	CAN_RPT_TONGUE	Records and Enrollment > Government Reporting Canada > Mapping > Language Mapping > Language Mapping	CIS, PSIS, MET, USISE: Map language codes.
Province Mapping	CAN_RPT_PROV	Records and Enrollment > Government Reporting Canada > Mapping > Province Mapping > Province Mapping	CIS, MET, USISE: Review Campus Solutions delivered province codes.
Reporting Sequence Mapping	CAN_RPT_SEQ	Records and Enrollment > Government Reporting Canada > Mapping > Reporting Sequence Mapping > Reporting Sequence Mapping	USISE (Optional): Define a record and reporting sequence for the USISE report type. Populate this page to limit your USIS Enrollment file to only one record per student from the CAN_STDNT_LST table.
Term Group Mapping	CAN_RPT_TERM_GRP	Records and Enrollment > Government Reporting Canada > Mapping > Term Group Mapping > Term Group Mapping	ALL: For each report type, report period, and career, map the applicable terms and sessions that you want to report.
OUAC Applno Mapping (OUAC application number mapping)	CAN_RPT_APPLNO	Records and Enrollment > Government Reporting Canada > Mapping > OUAC Applno Mapping > OUAC Applno Mapping	OUAC: Review delivered OUAC application numbers.

Page Name	Definition Name	Navigation	Usage
Classification Mapping	CAN_RPT_CM	Records and Enrollment > Government Reporting Canada > Mapping > Classification Mapping Table > Classification Mapping	PSIS: Define classification mapping values.
Direct Mapping	CAN_RPT_DM	Records and Enrollment > Government Reporting Canada > Mapping > Direct Mapping Table > Direct Mapping	CIS, PSIS, USISE: Define direct mapping values.
Master Mapping	CAN_RPT_MM	Records and Enrollment > Government Reporting Canada > Mapping > Master Mapping Table > Master Mapping	CIS, PSIS, USISE, OUAC: Define master mapping values.
Separate Mapping	CAN_RPT_SM	Records and Enrollment > Government Reporting Canada > Mapping > Separate Mapping Table > Separate Mapping	CIS, PSIS, OUAC, USISE: Define separate mapping values.

Defining Mapping Language Codes

Access the Language Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Language Mapping > Language Mapping).

Language Code

Enter the PeopleSoft language code that you want to map.

CIS Tongue

Enter the corresponding CIS value for the language code. Map this field if your institution performs CIS reporting. This field prompts against the CAN_CIS_LANG record.

Tongue

Enter the corresponding USISE value for the language code. Map this field if your institution performs USISE or MET reporting.

PSIS Language

Enter the corresponding PSIS value for the language code. Map this field if your institution performs PSIS reporting. This field prompts against the CAN_GOV_LANG record.

Reviewing Delivered Province Codes

Access the Province Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Province Mapping > Province Mapping).

Province

The PeopleSoft province value that you want to map.

Province Number

The province code as defined by Statistics Canada.

Mapping Canadian Reporting Sequence

Access the Reporting Sequence Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Reporting Sequence Mapping > Reporting Sequence Mapping).

Record	Enter the Campus Solutions record name that determines reporting sequence for this report type. For example, <i>STDNT_CAR_TERM</i> .
Field Name	Enter the Campus Solutions field name that determines reporting sequence for this report type. For example, <i>ACAD_CAREER</i> .
Reporting Sequence	Enter the sequence or priority number that relates to the PeopleSoft value for the field you specify. At runtime, you specify which value that you want the system to select for processing in the event that the selection process finds multiple records for a student. For example, <i>05</i> .
PeopleSoft Value	Enter the codes for the field name you specify. For example, <i>GRAD</i> .

Mapping Terms and Sessions to Reporting Periods

Access the Term Group Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Term Group Mapping > Term Group Mapping).

Image: Term Group Mapping page

This example illustrates the fields and controls on the Term Group Mapping page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Term Group Mapping' page with the following fields and values:

- Institution:** PSUNV (PeopleSoft University)
- Report Type:** PSIS (Postsecondary Student Info Sys)
- Report Period:** 200910 (PSIS Test Report)
- Academic Career:** UGRD (Undergraduate)

Below these fields is a table with the following columns and data:

Term	*Session	Report Type	Withdrawal Date
0630 2009 Fall	Regular Academic Session	Prelim Rpt	12/31/2009

The table includes navigation controls like 'Customize', 'Find', 'First', '1 of 1', and 'Last'.

Institution	Enter the reporting institution.
Report Type	Enter the report type.
Report Period	Enter a reporting period for the report type.
Academic Career	Enter the academic career that you want to include for the reporting period.
Term	Enter the term for the career and report period.

Session Enter the institution session for the term and report period.

The following fields are available for entry if you specify a report type of *CIS*.

CIS Session Enter the appropriate CIS session value for the term and session you specify.

The following fields are available for entry if you specify a report type of *PSIS*.

Report Type Select the report in which you want to include the term and session data. Values are:

Prelim Report (preliminary report): Select to include the term and session data in the Preliminary Report and the Final Report.

Final Report: Select to include the term and session data in the Final Report only.

Withdrawal Date Enter the last date in the term and session that a student can withdraw from a course without academic penalty.

The following fields are available for entry if you specify a report type of *USISE* or *MET*.

Seshun Value (session value) Enter the appropriate USIS Enrolment Seshun value for the term and session specified.

Reviewing Delivered OUAC Application Numbers

Access the OUAC Applno page (Records and Enrollment > Government Reporting Canada > Mapping > OUAC Applno Mapping > OUAC Applno Mapping).

OUAC Appl Nbr (OUAC application number) Enter the two-digit OUAC application number (APPLNO).

OUAC APPLN (OUAC application number) Enter the converted one digit application number (CNVAPL).

Defining the Classification Mapping Table

Access the Classification Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Classification Mapping Table > Classification Mapping).

Image: Classification Mapping page

This example illustrates the fields and controls on the Classification Mapping page. You can find definitions for the fields and controls later on this page.

Classification Mapping

Institution: PSUNV PeopleSoft University
 Report Type: PSIS Postsecondary Student Info Sys
 Can Govt Elem: CLASSROOM Classroom Instruction Course

Find | View All First 1 of 1 Last

Element Number: 6110

*Effective Date: 01/01/1900 *Status: Active

*Record: CRSE_ATTENDANCE *Field Name: INSTRUCTION_MODE

*Selection Field: INSTRUCTION_MODE

Selection Field Value

Find First 1 of 1 Last

Values for the Record, Field Name, and Selection Field fields are delivered and defined for all applicable elements for PSUNV. Set up the same values for your institution if you perform PSIS reporting.

Record

Enter the PeopleSoft record name that the system uses to report the specified element.

Field Name

Enter the PeopleSoft field name that the system uses to report the specified element. The system prompt table displays all valid fields for the record, but does not edit your input against the list. This enables you to enter a field name that is in a subrecord.

Selection Field

Enter the PeopleSoft selection field that applies to the element. This field must be on the record you specify. This field may be the same as or different from the Field Name value.

Selection Field Value

Enter the PeopleSoft selection field values that relate to the selection field that you want to report. You can enter more than one value.

Defining the Direct Mapping Table

Access the Direct Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Direct Mapping Table > Direct Mapping).

Values for the Record, Field Name, and Selection Field fields are delivered and defined for all applicable elements for PSUNV. Set up the same values for your institution if you perform PSIS reporting.

Record

Enter the PeopleSoft record name that the system uses to report the specified element.

Field Name Enter the PeopleSoft field name that the system uses to report the specified element. The prompt table displays all valid fields for the record, but does not edit your input against the list. This enables you to enter a field name that is in a subrecord.

Defining the Master Mapping Table

Access the Master Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Master Mapping Table > Master Mapping).

Values for the Record, Field Name, and Selection Field fields are delivered and defined for all applicable elements for PSUNV. Set up the same values for the report types that are applicable to your institution.

Record Enter the PeopleSoft record name that the system uses to report the specified element.

Field Name Enter the PeopleSoft field name that the system uses to report the specified element. The prompt table displays all valid fields for the record, but does not edit your input against the list. This enables you to enter a field name that is in a subrecord.

PeopleSoft Value Enter the delivered or user-defined values for the field name.

Government Value Enter the government code that corresponds to the PeopleSoft value.

Defining the Separate Mapping Table

Access the Separate Mapping page (Records and Enrollment > Government Reporting Canada > Mapping > Separate Mapping Table > Separate Mapping).

Values for the Record, Field Name, and Selection Field fields are delivered and defined for all applicable elements for PSUNV. Set up the same values for the report types that are applicable to your institution.

Record Enter the PeopleSoft record name that the system uses to report the specified element.

Field Name Enter the PeopleSoft field name that the system uses to report the specified element. The prompt table displays all valid fields for the record, but does not edit your input against the list. This enables you to enter a field name that is in a subrecord.

Gov't Record (government record) Enter the PeopleSoft record that houses the translate codes.

Gov't Field Name (government field name) Enter the Campus Solutions field that contains the government codes that correspond to the values in the field name.

Defining School Reporting Classifications

To set up school reporting classifications, use the School Type Table component (LS_SCHL_TYPE_TABLE).

Prerequisites

To see the Canadian field on the School Type table you must select the Government Reporting check box on the SA Features page.

Page Used to Define School Reporting Classifications

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
School Type Table	SCHOOL_TYPE_TABLE	Set Up SACR > Common Definitions > External Education > School Type Table > School Type Table	CIS, PSIS, MET, USISE: Define school reporting classifications. See "Setting Up School Types" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions).

Defining Address and Phone Usage Values for Canadian Government Reporting

This section discusses how to:

- Define address usage values.
- Define email address usage values.
- Define phone usage values.

Related Links

"Establishing Address Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Establishing Phone Usages" (PeopleSoft Campus Solutions 9.2: Campus Community)

Pages Used to Define Address and Phone Usage Table Entries for Canadian Government Reporting

Page Name	Definition Name	Navigation	Usage
Address Usage	ADDR_USAGE_TABLE	Set Up SACR > Product Related > Campus Community > Establish People Processing > Setup > Address Usage Table > Address Usage	PSIS: Define Canadian reporting address usage values.
Phone Usage	PHONE_USAGE_TABLE	Set Up SACR > Product Related > Campus Community > Establish People Processing > Setup > Phone Usage Table > Phone Usage	PSIS: Define Canadian reporting phone usage values.

Defining Address Usage Values

Access the Address Usage page (Set Up SACR > Product Related > Campus Community > Establish People Processing > Setup > Address Usage Table > Address Usage).

To create an address usage for PSIS Current address reporting:

1. Access the Address Usage Table page.
2. Add an address usage of *RPT_ADDR*.
3. In the Description field, enter *Address Priority for Cdn Rpts*.
4. In the Short Description field, enter *Cdn Reports*.
5. Using the Usage Order, Usage Type, and Address Type fields, insert rows for all of your address types.

Defining Email Address Usage Values

Access the Address Usage page (Set Up SACR > Product Related > Campus Community > Establish People Processing > Setup > Address Usage Table > Address Usage).

To create an address usage for PSIS Current email address reporting:

1. Access the Address Usage Table page.
2. Add an address usage of *RPT_EMAIL*.
3. In the Description field, enter *E-mail Priority for Cdn Rpts*.
4. In the Short Description field, enter *Cdn Reports*.
5. Using the Usage Order, Usage Type, and Email Type fields, insert rows for all of your email address types.

Defining Phone Usage Values

Access the Phone Usage page (Set Up SACR > Product Related > Campus Community > Establish People Processing > Setup > Phone Usage Table > Phone Usage).

To create a phone usage for PSIS Current phone reporting:

1. Access the Phone Usage page.
2. Add a phone usage of *RPT_PHONE*.
3. In the Description field, enter *Phone Priority for Cdn Rpts*.
4. In the Short Description field, enter *Cdn Reports*.
5. Using the Usage Order and Phone Type fields, insert rows for all of your phone usage types.

Mapping Program Values for PSIS, USISE, MET, and OUAC

To set up program values for PSIS, USISE, MET, and OUAC, use the PSIS Program Table component (CAN_ESIS_PROG), and the Academic Program Table CDN component (CAN_RPT_PROG).

This section discusses how to:

- Define PSIS program mapping values.
- Define USISE program mapping values.
- Define MET and OUAC program mapping values.

Pages Used to Define PSIS, USISE, MET, and OUAC Program Mapping Values

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
PSIS Program Mapping 1	CAN_RPT_PROG3	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 1	PSIS: Define PSIS program mapping values.
PSIS Program Mapping 2	CAN_RPT_PROG4	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 2	PSIS: Define additional PSIS program mapping values.

Page Name	Definition Name	Navigation	Usage
PSIS Program Mapping 3	CAN_RPT_PROG5	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 3	PSIS: Define additional PSIS program mapping values.
PSIS Program Mapping 4	CAN_RPT_PROG6	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 4	PSIS: Define additional PSIS program mapping values.
USISE Program Mapping	CAN_RPT_PROG	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Program Table CDN > USISE Program Mapping	USISE: Define USISE program mapping values.
MET/OUAC Program Mapping	CAN_RPT_PROG2	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Program Table CDN > MET/OUAC Program Mapping	MET, OUAC: Define MET and OUAC program mapping values.

Defining PSIS Program Mapping 1 Values

Access the PSIS Program Mapping 1 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 1).

Image: PSIS Program Mapping 1 page

This example illustrates the fields and controls on the PSIS Program Mapping 1 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the PSIS Program Mapping 1 page with the following fields and values:

- Academic Institution: PSUNV PeopleSoft University
- Academic Program: LAU Liberal Arts Undergraduate
- *Effective Date: 01/01/1900
- *Status: Active
- Credential Type: Degree
- Joint Credential Type: N/A
- Program Type: Bach Degr
- Joint Program Type: CollegeTsf
- Program Duration: 8.00
- Duration Units: Semesters
- Duration in Hrs: 200
- Continuing Education: No
- Prov Prog Cat: PRVCT1 Alberta Prov Prog Cat 1
- Prov Fund Cd: FNDCCD1 AB Funding Code 1

Credential Type	Enter the type of credential awarded to students for successful completion of the program.
Joint Credential Type	Enter the joint or second credential for joint program in which a student typically receives two credentials.
Program Type	Enter the program type.
Joint Program Type	Enter the type of joint credential awarded to students for successful completion of the program.
Prog Duration (program duration)	Enter the normal time to complete the program for a full-time student who takes courses through traditional delivery.
Duration Units	Enter the unit of measure for the program duration. The system populates this field by default from the Business Unit Table page.
Duration in Hrs (duration in hours)	Enter the sum of the hours of instruction to complete the program for a full-time student who takes courses through traditional delivery.
Prov Prog Cat (province program category)	Enter the program category as defined by the Provincial Ministry. This field prompts against the CAN_PROV_PROG record.
Prov Fund Cd (province funding code)	Enter the provincial funding code as defined by the Provincial Ministry. This field prompts against the CAN_PROV_FUND record.

Defining PSIS Program Mapping 2 Values

Access the PSIS Program Mapping 2 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 2).

Image: PSIS Program Mapping 2 page

This example illustrates the fields and controls on the PSIS Program Mapping 2 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'PSIS Program Mapping 2' page with the following details:

- Academic Institution: PSUNV PeopleSoft University
- Academic Program: LAU Liberal Arts Undergraduate
- Effective Date: 01/01/1900
- Status: Active
- Credits Needed: 100.00
- Credit Units: Credits
- Full/Part Time: FT/PT
- Delivered Under Contract: Yes
- Enrollment Limit: Instit Lim
- Capacity: 200
- Entrance Rqmt: No Ent Req
- Legal Rqmt: No
- Medical Rqmt: N/A (A)
- Aptitude Rqmt: Yes (A)
- Experience Rqmt: No (A)
- Other Rqmt: No

Credits Needed

Enter the number of credits or units of academic achievement required to complete the program.

Credit Units

Enter the type of units used in the Credits Needed field. The system populates this field by default from the Business Unit Table.

Full/Part Time

Indicate the way in which the program is offered.

Delivered Under Contract

Indicate whether the program is delivered under contract by the institution to an outside party. Values are *N/A*, *No*, *Unknown*, and *Yes*.

Enrollment Limit

Indicate whether the program is limited, either by an internally or externally imposed quota.

Capacity

If the program has limited enrollment, enter the maximum number of new students that can be admitted to the program during a report period.

Entrance Rqmt (entrance requirement)

Enter the educational entrance requirements to begin the program.

Legal Rqmt (legal requirement)

Indicate whether any legal requirements exist for the program. Your choices are *N/A*, *No*, *Unknown*, and *Yes*.

- Medical Rqmt** (medical requirement) Indicate whether any medical or psychological entrance requirements exist for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Aptitude Rqmt** (aptitude requirement) Indicate whether successful completion of an aptitude and proficiency test (or interview) is an entrance requirement for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Experience Rqmt** (experience requirement) Indicate whether previous related experience is an entrance requirement for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Other Rqmt** (other requirement) Indicate whether any other entrance requirements are required for entry into the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

Defining PSIS Program Mapping 3 Values

Access the PSIS Program Mapping 3 page ((Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 3).

Image: PSIS Program Mapping 3 page

This example illustrates the fields and controls on the PSIS Program Mapping 3 page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface for 'PSIS Program Mapping 3'. At the top, there are four tabs: 'PSIS Program Mapping 1', 'PSIS Program Mapping 2', 'PSIS Program Mapping 3' (which is selected), and 'PSIS Program Mapping 4'. Below the tabs, the 'Academic Institution' is 'PSUNV PeopleSoft University' and the 'Academic Program' is 'LAU Liberal Arts Undergraduate'. A search bar at the top right contains 'Find | View All' and a pagination control showing 'First 1 of 1 Last'. The main form area contains several fields: 'Effective Date' (01/01/1900), 'Status' (Active), 'Mandatory Paid OJT Duration' (333.00), 'Man Paid Units' (Hours), 'Optional Paid OJT Duration' (222.00), 'Opt Paid Units' (Hours), 'Mandatory Unpaid OJT Duration' (555.00), 'Man Unpaid OJT Units' (Hours), 'Optional Unpaid OJT Duration' (444.00), 'Opt Unpaid OJT Units' (Hours), 'Prov Major Field of Study' (MAJOR1), and 'Prov Approval Code' (ABAPR1). Each field has a search icon next to it.

Mandatory Paid OJT Duration (mandatory paid on the job training duration) Enter the duration of mandatory paid on the job training (OJT) activities that are a regular part of the program.

Man Paid Units (mandatory paid units) Enter the unit type for the Man Paid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Optional Paid OJT Duration
(optional paid on the job training duration)

Enter the duration of optional paid on the job training activities that are a regular part of the program.

Opt Paid Units (optional paid units)

Enter the unit type for the Optional Paid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Mandatory Unpaid OJT Duration
(mandatory unpaid on the job training duration)

Enter the duration of mandatory unpaid on the job training activities that are a regular part of the program.

Man Unpaid OJT Units (mandatory unpaid on the job training units)

Enter the unit type for the Mandatory Unpaid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Optional Unpaid OJT Duration
(optional unpaid on the job training duration)

Enter the duration of optional unpaid on the job training activities that are a regular part of the program.

Opt Unpaid OJT Units (optional unpaid on the job training units)

Enter the unit type for the Optional Unpaid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Defining PSIS Program Mapping 4 Values

Access the PSIS Program Mapping 4 page ((Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Program Table > PSIS Program Mapping 4).

Image: PSIS Program Mapping 4 page

This example illustrates the fields and controls on the PSIS Program Mapping 4 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'PSIS Program Mapping 4' page. At the top, there are four tabs: 'PSIS Program Mapping 1', 'PSIS Program Mapping 2', 'PSIS Program Mapping 3', and 'PSIS Program Mapping 4'. Below the tabs, the page displays the following information:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Program:** LAU Liberal Arts Undergraduate
- Effective Date:** 01/01/1900
- Status:** Active

Below this information is a 'Program Defaults' section with several dropdown menus:

- Cost Recovery Program:** Yes
- Articulated Program:** Yes
- Co-op Program:** Yes
- Brokered Program:** Sponsor
- Collaborative Program:** Yes

At the top right of the 'Program Defaults' section, there are navigation controls: 'Find | View All', 'First 1 of 1 Last', and '+' '-' buttons.

Cost Recovery Program

Indicate whether the program is a cost recovery program.

Articulated Program

Indicate whether, on completion of the credits for the program, the student is entitled to advanced standing in a target program in another institution with which the reporting institution has an articulation agreement.

Co-op Program

Indicate whether this is a co-op program.

Brokered Program

Indicate whether this is a brokered program.

Collaborative Program

Indicate whether the program is offered under a collaborative agreement, whereby two or more institutions share ownership or responsibility for the program and each delivers part of the program.

Defining USISE Program Mapping Values

Access the USISE Program Mapping page ((Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Program Table CDN > USISE Program Mapping).

Image: USISE Program Mapping page

This example illustrates the fields and controls on the USISE Program Mapping page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'USISE Program Mapping' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Program:** FAU Fine Arts Undergraduate
- *Effective Date:** 01/01/1900
- *Status:** Active
- *QUALIF:** 13 UG-BA Degr
- *FIN QUALIF:** 23 UG-Upgrd
- *AWABOD:** Degree
- *HONIND:** Single Hon
- *QUACOD:** 081 Agricultur
- *SESTYP:** Semester
- *SPEMAJ:** 50399 Othe Agric
- *SESTOT:** 08
- *NORMCR:** 0200

QUALIF

Enter the government code for qualification being sought. This field prompts against the Can Report QUALIF table. The system reports this value in the Fall submission.

FIN QUALIF

Enter the government code for qualification being sought. This field prompts against the Can Report QUALIF table. FIN QUALIF values are reported in all submissions excluding the one in the Fall.

AWABOD	Enter the government code that represents the body awarding the diploma or certificate.
HONIND	Enter the government code that represents the honors program indicator.
QUACOD	Enter the government code for coded title of qualification. This field prompts against the Can Report QUACOD table.
SESTYP	Enter the government code that represents the type of session.
SPEMAJ	Enter the government code for specialization or major field of study. This field prompts against the Can Report SPEMAJ table.
SESTOT	Enter the government code that represents the total number of sessions required to complete the program.
NORMCR	Enter the government code that represents the normal credit/course/unit requirements.

Defining MET and OUAC Program Mapping Values

Access the MET/OUAC Program Mapping page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Program Table CDN > MET/OUAC Program Mapping).

Image: MET/OUAC Program Mapping page

This example illustrates the fields and controls on the MET/OUAC Program Mapping page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'MET/OUAC Program Mapping' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Program:** FAU Fine Arts Undergraduate
- Effective Date:** 01/01/1900
- Status:** Active
- MET Reporting:**
 - FORPOS:** 101 U-Agriculture
 - FT Load:** [Empty field]
 - Term Weight:** [Empty field]
 - Min BIU:** [Empty field]
- OUAC Reporting:**
 - UPREG:** FAU
 - Annual Weight:** [Empty field]
 - MET Form Fee:** [Empty field]
 - Max BIU:** [Empty field]
 - Ineligible BIU**

FORPOS (formula program of study) Enter the government code that represents the formula program of study.

UPREG (university and program registration)	Enter the government code that represent the university and program in which applicants register.
FT Load	Enter the full time load for an academic program and plan as the institution defines it.
Annual Weight	Established by MET and based on the FORPOS code. Weight varies for diploma and degree programs. Weights also differ from one institution to another for institution specific FORPOS codes.
Term Weight	Enter a value that the system uses when calculating the annual business income unit (BIU) for graduate levels.
MET Form Fee	Established by MET, based on the FORPOS code.
Min BIU (minimum business income unit)	Enter the minimum BIU that a graduate student can generate for an institution. This is independent of the actual number of years that the individual requires to complete his or her program of study.
Max BIU (maximum business income unit)	Enter the maximum BIU that a graduate student can generate for an institution. This is independent of the actual number of years that the individual requires to complete his or her program of study.
Ineligible BIU (ineligible business income unit)	Select this check box to indicate the academic program and plan is ineligible and the system should therefore not include it in the calculation of FTE (full time equivalency).

Mapping Plan Values for PSIS, USISE, MET, and OUAC

To set up plan values for PSIS, USISE, MET, and OUAC, use the PSIS Plan Table component (CAN_ESIS_PLAN) and the Academic Plan Table CDN component (CAN_RPT_PLAN).

This section discusses how to:

- Define PSIS plan mapping values.
- Define USISE plan mapping values.
- Define MET/OUAC plan mapping values.

Pages Used to Map PSIS, USISE, MET, and OUAC Plan Values

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
PSIS Plan Mapping 1	CAN_RPT_PLAN3	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 1	PSIS: Define PSIS plan mapping values.
PSIS Plan Mapping 2	CAN_RPT_PLAN4	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 2	PSIS: Define additional PSIS plan mapping values.
PSIS Plan Mapping 3	CAN_RPT_PLAN5	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 3	PSIS: Define additional PSIS plan mapping values.
PSIS Plan Mapping 4	CAN_RPT_PLAN6	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 4	PSIS: Define additional PSIS plan mapping values.
USISE Plan Mapping	CAN_RPT_PLAN	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Plan Table CDN > USISE Plan Mapping	USISE: Define USISE plan mapping values.
MET/OUAC Plan Mapping	CAN_RPT_PLAN2	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Plan Table CDN > MET/OUAC Plan Mapping	MET/OUAC: Define MET and OUAC plan mapping values.

Defining PSIS Plan Mapping 1 Values

Access the PSIS Plan Mapping 1 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 1).

Image: PSIS Plan Mapping 1 page

This example illustrates the fields and controls on the PSIS Plan Mapping 1 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the PSIS Plan Mapping 1 page with the following fields and values:

PSIS Plan Mapping 1		PSIS Plan Mapping 2	PSIS Plan Mapping 3	PSIS Plan Mapping 4
Academic Institution:	PSUNV	PeopleSoft University		
Academic Plan:	PSYCH	Psychology		
Find View All First 1 of 1 Last				
*Effective Date:	01/01/1900	*Status:	Active	
Credential Type:	Degree	Joint Credential Type:	N/A	
Program Type:	Bach Degr	Joint Program Type:	(Invalid Val	
Program Duration:	6.00	Duration Units:	Semesters	
Duration in Hrs:	150	Continuing Education		
Prov Prog Cat:	PRVCT1	Alberta Prov Prog Cat 1		
Prov Fund Cd:	FNDCD1	AB Funding Code 1		

Credential Type

Enter the type of credential the institution awards for successful completion of the program.

Joint Credential Type

Enter the joint or second credential for joint programs in which a student typically receives two credentials.

Program Type

Enter the program type.

Joint Program Type

Enter the type of joint credential the institution awards for successful completion of the program.

Program Duration

Enter the normal time to complete the entire program for a full-time student through traditional program delivery.

Duration Units

Enter the type of time unit you used to calculate program duration. Values are *Acad Years*, *Half - Semes*, *Months*, *NA*, *Semesters*, *Weeks*, and *Years*.

Duration in Hrs (duration in hours)

Enter the sum of the hours of instruction of courses normally required to complete the entire program through traditional delivery.

Defining PSIS Plan Mapping 2 Values

Access the PSIS Plan Mapping 2 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 2).

Image: PSIS Plan Mapping 2 page

This example illustrates the fields and controls on the PSIS Plan Mapping 2 page. You can find definitions for the fields and controls later on this page.

PSIS Plan Mapping 1		PSIS Plan Mapping 2		PSIS Plan Mapping 3		PSIS Plan Mapping 4	
Academic Institution:	PSUNV	PeopleSoft University					
Academic Plan:	PSYCH	Psychology					
Find View All First 1 of 1 Last							
Effective Date:	01/01/1900	Status:	Active				
Credits Needed:	75.00	Credit Units:	Credits				
Full/Part Time:	Full Time	Delivered Under Contract:	Yes				
Enrollment Limit:	Instit Lim	Capacity:	150				
Entrance Rqmt:	No Ent Req	Legal Rqmt:	Yes				
Medical Rqmt:	No	Aptitude Rqmt:	Yes				
Experience Rqmt:	No	Other Rqmt:	No				

Credits Needed

Enter the number of credits or units of academic achievement required to complete the program.

Credit Units

Enter the type of units used in the Credits Needed field. The system populates this field by default from the Business Unit table.

Full/Part Time

Indicate whether the program is offered on a full-time basis (FT), part-time basis (PT), or at the student's option (FT/PT).

Delivered Under Contract

Indicate whether the program is delivered under contract by the institution to an outside party. Values are *N/A*, *No*, *Unknown*, and *Yes*.

Enrollment Limit

Indicate whether the program is limited, either by an internally or externally imposed quota. Values are *Govt Limit*, *Instit Lim*, *N/A*, *No*, *Prof Org*, and *Unknown*.

Capacity

If the program has limited enrollment, enter the maximum number of new students that can be admitted to the program during a report period.

Entrance Rqmt (entrance requirement)

Enter the educational entrance requirements to begin the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

Legal Rqmt (legal requirement)

Indicate whether any legal requirements exist for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Medical Rqmt** (medical requirement) Indicate whether any medical or psychological entrance requirements exist for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Aptitude Rqmt** (aptitude requirement) Indicate whether successful completion of an aptitude and proficiency test (or interview) is an entrance requirement for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Experience Rqmt** (experience requirement) Indicate whether previous related experience is an entrance requirement for the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

- Other Rqmt** (other requirement) Indicate whether any other entrance requirements are required for entry into the program. Values are *N/A*, *No*, *Unknown*, and *Yes*.

Defining PSIS Plan Mapping 3 Values

Access the PSIS Plan Mapping 3 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 3).

Image: PSIS Plan Mapping 3 page

This example illustrates the fields and controls on the PSIS Plan Mapping 3 page. You can find definitions for the fields and controls later on this page.

Mandatory Paid OJT Duration (mandatory paid on the job training duration) Enter the duration of mandatory paid on the job training (OJT) activities that are a regular part of the program.

Man Paid Units (mandatory paid units) Enter the unit type for the Man Paid OJT Duration field. The system populates this field by default from the Business Unit

table. The system populates a value of *N/A* if you do not enter a duration value.

Optional Paid OJT Duration
(optional paid on the job training duration)

Enter the duration of optional paid on the job training (OJT) activities that are a regular part of the program.

Opt Paid Units (optional paid units)

Enter the unit type for the Optional Paid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Mandatory Unpaid OJT Duration
(mandatory unpaid on the job training duration)

Enter the duration of mandatory unpaid on the job training (OJT) activities that are a regular part of the program.

Man Unpaid OJT Units (mandatory unpaid on the job training units)

Enter the unit type for the Mandatory Unpaid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Optional Unpaid OJT Duration
(optional unpaid on the job training duration)

Enter the duration of optional unpaid on the job training (OJT) activities that are a regular part of the program.

Opt Unpaid OJT Units (optional unpaid on the job training units)

Enter the unit type for the Optional Unpaid OJT Duration field. The system populates this field by default from the Business Unit table. The system populates a value of *N/A* if you do not enter a duration value.

Defining PSIS Plan Mapping 4 Values

Access the PSIS Plan Mapping 4 page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Plan Table > PSIS Plan Mapping 4).

Image: PSIS Plan Mapping 4 page

This example illustrates the fields and controls on the PSIS Plan Mapping 4 page. You can find definitions for the fields and controls later on this page.

The screenshot shows the PSIS Plan Mapping 4 page with the following details:

- Academic Institution:** PSUNV (PeopleSoft University)
- Academic Plan:** PSYCH (Psychology)
- Effective Date:** 01/01/1900
- Status:** Active
- Program Defaults:**
 - Cost Recovery Program: Yes
 - Articulated Program: Yes
 - Co-op Program: Yes
 - Brokered Program: Sponsor
 - Collaborative Program: Yes

Cost Recovery Program

Indicate whether the program is a cost recovery program.

Articulated Program

Indicate whether, on completion of the credits for the program, the student is entitled to advanced standing in a target program in another institution with which the reporting institution has an articulation agreement.

Co-op Program

Indicate whether this is a co-op program.

Brokered Program

Indicate whether the program is a brokered program.

Collaborative Program

Indicate whether the program is offered under a collaborative agreement, whereby two or more institutions share ownership or responsibility for the program and each delivers part of the program.

Defining USISE Plan Mapping Values

Access the USISE Plan Mapping page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Plan Table CDN > USISE Plan Mapping).

Image: USISE Plan Mapping page

This example illustrates the fields and controls on the USISE Plan Mapping page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'USISE Plan Mapping' page with the following details:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Plan:** CNED-QTGR General CE Grad Quarter Cal
- Effective Date:** 01/01/1900
- *Status:** Active
- *QUALIF:** 03 UG-Prelim
- FIN QUALIF:** 03 UG-Prelim
- AWABOD:** Degree
- *HONIND:** Single Hon
- *QUACOD:** 081 Agricultur
- SESTYP:** Cal Year
- SPEMAJ:** 00000 Gen Arts&S
- *SESTOT:** 01
- *NORMCR:** 0002

QUALIF

Enter the government code for qualification being sought. This field prompts against the Can Report QUALIF table. The system reports this value in the Fall submission.

FIN QUALIF

Enter the government code for qualification being sought. This field prompts against the Can Report QUALIF table. FIN QUALIF values are reported in all submissions excluding the one in the Fall.

AWABOD

Enter the government code that represents the body awarding diploma or certificate.

HONIND

Enter the government code that represents the honors program indicator.

QUACOD

Enter the government code for coded title of qualification. This field prompts against the Can Report QUACOD table.

SESTYP

Enter the government code that represents the type of session.

SPEMAJ

Enter the government code for specialization or major field of study. This field prompts against the Can Report SPEMAJ table.

SESTOT

Enter the government code that represents the total number of sessions required to compete the program.

NORMCR

Enter the government code that represents the normal credit/course/unit requirements.

Defining MET/OUAC Plan Mapping Values

Access the MET/OUAC Plan Mapping page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > Academic Plan Table CDN > MET/OUAC Plan Mapping).

Image: MET/OUAC Plan Mapping page

This example illustrates the fields and controls on the MET/OUAC Plan Mapping page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'MET/OUAC Plan Mapping' page. At the top, there are two tabs: 'USISE Plan Mapping' and 'MET/OUAC Plan Mapping'. Below the tabs, the following information is displayed:

- Academic Institution:** PSUNV PeopleSoft University
- Academic Plan:** CNED-QTGR General CE Grad Quarter Cal

Navigation controls include 'Find | View All', 'First', '1 of 1', and 'Last'. Below this, the 'Effective Date' is 01/01/1900 and the 'Status' is Active. There are two tabs: 'MET Reporting' and 'OUAC Reporting'. The 'OUAC Reporting' tab is active, showing the following fields:

- FORPOS:** 101 U-Agriculture
- UPREG:** 4
- FT Load:** 5.000
- Annual Weight:** 06.000
- Term Weight:** 7.000
- MET Form Fee:** 0008
- Min BIU:** 1.000
- Max BIU:** 9.000
- Ineligible BIU

FORPOS (formula program of study) Enter the government code that represents the formula program of study.

UPREG (university and program registration) Enter the government code that represents the university and program in which the applicant registers.

FT Load Enter the full time load for an academic program and plan as the institution defines it.

Annual Weight Established by MET and based on the FORPOS code. Weight varies for diploma and degree programs. Weights also differ from one institution to another for institution specific FORPOS codes.

Term Weight Enter a value that the system uses when calculating the annual business income unit (BIU) for graduate levels.

Met Form Fee Established by MET, based on the FORPOS code.

Min BIU (minimum business income unit) Enter the minimum BIU that a graduate student can generate for an institution. This is independent of the actual number of years that the individual requires to complete his or her program of study.

Max BIU (maximum business income unit) Enter the maximum BIU that a graduate student can generate for an institution. This is independent of the actual number of years

that the individual requires to complete his or her program of study.

Ineligible BIU (ineligible business income unit)

Select this check box to indicate the academic program and plan is ineligible and the system should therefore not include it in the calculation of FTE (full time equivalency).

Defining CIS Program, Plan, and Subplan Tables

To set up CIS program, plan, and subplan tables, use the CIS Program Table component (CAN_CIS_PROG), CIS Plan Table component (CAN_CIS_PLAN), and the CIS Subplan Table component (CAN_CIS_SUBPLAN).

This section discusses how to:

- Define the CIS program table.
- Define the CIS plan table.
- Define the CIS subplan table.

Pages Used to Define CIS Program, Plan and Subplan Values

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
CIS Program Table	CAN_CIS_PROG	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Program Table > CIS Program Table	CIS: Define the CIS program table.
CIS Plan Table	CAN_CIS_PLAN	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Plan Table > CIS Plan Table	CIS: Define the CIS plan table.
CIS Subplan Table	CAN_CIS_SUBPLAN	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Subplan Table > CIS Subplan Table	CIS: Define the CIS subplan table.

Defining the CIS Program Table

Access the CIS Program Table page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Program Table > CIS Program Table).

CIS Program ID	Enter the nine-digit CIS program ID. This is a unique and permanent identifier for the specified institution and program.
Major Field 1	Enter the description of the major field of study.

Defining the CIS Plan Table

Access the CIS Plan Table page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Plan Table > CIS Plan Table).

CIS Program ID	Enter the nine-digit CIS program ID. This is a unique and permanent identifier for the specified institution, program and plan.
Major Field 1	Enter the description of the major field of study.

Defining the CIS Subplan Table

Access the CIS Subplan Table page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > CIS Subplan Table > CIS Subplan Table).

CIS Program ID	Enter the nine-digit CIS Program ID. This is a unique and permanent identifier for the specified institution, program, plan, and subplan.
Major Field 2	Enter the description of the minor field of study.

Defining PSIS Course Data

To set up PSIS course data, use the PSIS Course Data component (CAN_RPT_CRSE).

This section discusses how to define PSIS course data.

Page Used to Define PSIS Course Data

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
PSIS Course Data	CAN_RPT_CRSE	Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Course Data > PSIS Course Data	PSIS: Define PSIS course data.

Defining PSIS Course Data

Access the PSIS Course Data page (Records and Enrollment > Government Reporting Canada > Academic Structure Tables > PSIS Course Data > PSIS Course Data).

Delivered Under Contract	Indicate whether the course is created and delivered under contract by the institution to an outside party. Values are <i>N/A</i> , <i>No</i> , <i>Unknown</i> , and <i>Yes</i> .
Brokered Course	Indicate whether the course is brokered.
Retraining/Skills Upgrade	Indicate whether the course is for workplace retraining or skills upgrade.
Cost Recovery	Indicate whether this is a cost recovery course.
Province	Enter the province that corresponds to the province course funding code. This field controls the view of the CAN_PROV_FNDCRS record.
Prov Fund Cd (province funding code)	Enter the provincial code that indicates the course funding code.

Mapping Canadian School Codes to External Organizations

To set up Canadian school code mapping, use the External School Table component (CAN_GOV_SCHOOL).

This section discusses how to map Canadian school codes to external organizations.

Page Used to Map Canadian School Codes to External Organizations

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Canadian External School	CAN_EXT_SCHOOL	Records and Enrollment > Government Reporting Canada > Definitions > External School Table > Canadian External School	CIS, PSIS: Map Canadian school codes to external organizations. In add mode, specify an External Org ID and Report Type.

Mapping Canadian School Codes to External Organizations

Access the Canadian External School page (Records and Enrollment > Government Reporting Canada > Definitions > External School Table > Canadian External School).

Institution Code	Enter the institution code to which you want to map the external organization ID and school type.
-------------------------	---

Defining PSIS Student Data

This section discusses how to:

- Define PSIS previous education external data.
- Define PSIS student program data.
- Define PSIS student enrollment data.

Comp. Man. Paid OJT:		<input type="text"/>		Comp. Opt. Unpaid OJT:		<input type="text"/>		Comp. Man. Unpaid OJT:		<input type="text"/>	
Met Norm Entrance Reqmt:		<input type="text"/>		Special Initiative Code:		<input type="text"/>					

Cost Recovery Prog (cost recovery program) Indicate whether the student is taking the program on a cost recovery basis.

Brokered Program Indicate whether the student is taking the program under a brokering agreement or study agreement whereby the institution that owns the program contracts the delivery of all or part of the program to a host institution.

Co-op Program Indicate whether the student is classified as a co-op student in this program.

Collaborative Program Indicate whether the student is taking the program under a collaborative agreement, whereby two or more institutions share ownership or responsibility for the program and each delivers parts of the program.

Articulated Program Indicate whether, on completion of the credits for the program, the student is entitled to advanced standing in a target program in another institution with which the reporting institution has an articulated transfer agreement.

Comp. Opt. Paid OJT (completed optional paid on the job training) Indicate whether the student has completed the optional paid OJT requirements for the program.

Comp. Man. Paid OJT (completed mandatory paid on the job training) Indicate whether the student has completed the mandatory paid OJT requirements for the program.

Comp. Opt. Unpaid OJT (completed optional unpaid on the job training) Indicate whether the student has completed the optional unpaid OJT requirements for the program.

Comp. Man. Unpaid OJT
(completed mandatory unpaid on the job training)

Indicate whether the student has completed the mandatory unpaid OJT requirements for the program.

Met Norm Entrance Reqmt (met normal entrance requirement)

Indicate whether the student met the normal entrance requirements of the program.

Special Initiative Code

Indicate the special initiative code associated with the student in the program as specified by the provincial ministry, institution, or other agency. This field prompts against the CAN_PROV_SP_INT record.

Defining PSIS Student Enrollment Data

Access the Cdn Student Enrollment page (Records and Enrollment > Enroll Students > Enrollment > Cdn Student Enrollment).

Image: Cdn Student Enrollment page

This example illustrates the fields and controls on the Cdn Student Enrollment page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface for 'Cdn Student Enrollment'. At the top, there are navigation tabs: 'Student Enrollment 3', 'Student Enrollment 4', 'Last Enrollment Action', 'Cdn Student Enrollment' (selected), and 'NLD Student Paper'. Below the tabs, the student's name 'Kimberly Adams' and ID 'AA0001' are displayed. A star icon is next to the ID. Below this, the 'Term' is '2003 Fall', 'Career' is 'Undergrad', and 'Institution' is 'PeopleSoft University'. A search bar contains 'Find | View All' and a pagination indicator shows '1 of 1' with 'First' and 'Last' buttons. The main form area includes fields for 'Class Nbr:', 'Subject:', 'Catalog Nbr:', 'Class Section:', 'Academic Group:', and 'Session:'. Below these are two dropdown menus: 'Cost Recovery Course:' set to 'Unknown' and 'Brokered Course:' set to 'Yes-Host'. A section titled 'Delivery to Student' contains a grid of dropdown menus: 'Dist. Ed.', 'Class:', 'TV:', 'Internet:' (set to 'Unknown'), 'Correspondence:', 'Radio:', 'Video Conf.:', 'Audio Conf.:', and 'Other:'.

Cost Recovery Course

Indicate whether the student took the course on a cost recovery basis. The system populates this field by default to the CAN_RPT_CRSE record.

Brokered Course

Indicate whether the student is taking the course under a brokering agreement, whereby the institution that owns the course contracts the delivery of the course to a host institution. The system populates this field by default to the CAN_RPT_CRSE record.

Dist. Ed. (distance education)

Indicate whether the student's course section or class is considered by the institution to be a distance education course. Mapping needs to be completed at this level only if the student

received instruction for the course in a manner different from the course delivery mode.

Class	Indicate whether the student received instruction in this course in whole or in part by classroom instruction (including labs), in which the instructor was physically located in the same room or lecture hall as the student. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
TV (television)	Indicate whether the student received instruction in this course in whole or in part by television. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Internet	Indicate whether the student received instruction in this course in whole or in part on the internet, including email and internet conferencing. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Correspondence	Indicate whether the student received instruction in this course in whole or in part by postal correspondence, including tapes and CDs sent by mail. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Radio	Indicate whether the student received instruction in this course in whole or in part by radio. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Video Conf. (video conference)	Indicate whether the student received instruction in this course in whole or in part by video conferencing, excluding conferencing on the internet. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Audio Conf. (audio conference)	Indicate whether the student received instruction in this course in whole or in part by audio conferencing. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.
Other	Indicate whether the student received instruction in this course in whole or in part by some other method of instruction. Mapping needs to be completed at this level only if the student received instruction for the course in a manner different from the course delivery mode.

Loading the Student ID Table

This section discusses how to load the student data.

Page Used to Load the Student ID Table

Page Name	Definition Name	Navigation	Usage
Student List	CAN_STDNT_LST	Records and Enrollment > Government Reporting Canada > Suspense Tables > Student List > Student List	All: Load student data to prepare for the extract process.

Loading Student Data

Access the Student List page (Records and Enrollment > Government Reporting Canada > Suspense Tables > Student List > Student List).

Each institution's business practices and interpretation of the published government rules result in different criteria for selecting students for reporting. To initiate the reporting process, you must populate (either manually or through a user-defined process) the PeopleSoft provided Student List component with the eligible students you want to report. The Student List component contains the fields listed below. You must populate each field for *every* row in this component; otherwise the reports extract process excludes the row and the process may fail.

Institution	Enter the institution for which you want to report.
Report Type	Enter the report type you want to use.
Report Period	Enter the report period.
Student ID	Enter the student ID for the student you want to report.
Acad Career (academic career)	Enter the academic career you want to report for the student. You can insert an additional row to report multiple careers, programs, or plans.
Acad Program (academic program)	Enter the academic program you want to report for the student.
Acad Plan (academic plan)	Enter the academic plan you want to report for the student.
Select	Select this check box to identify a subset of students for whom you want to run the extract and flat file process. The extract process adds or replaces reporting data for these students. The system clears this check box after you run the extract process for this report. At runtime, you can specify to run the process for only those students who have the Select option selected.
Field Name	Enter a row for each field name that you need for this report. For example, STDNT_CAR_NBR. This is the key data referred to in the following Loading the Student Key Data subtopic.
Field Value	Enter a field value that corresponds to each field name value. The report extract process uses this data. For example, 0.

The system calculates elements for each row of the table. There is a one to one relationship between a row on the Student List page and a row on any one of the tables that enable you to view the information calculated by the extract program. If a student has more than one row on the Student List page, the system treats each row as if it is for a new student when retrieving the element values for the row.

Loading the Student Key Data

In addition to entering data in all of the header fields, different government reports require that you also enter various types of key data. Use the following table to determine which fields and corresponding field values you must populate before you run the extract process:

Field Name	Required by Report Type
ACAD_CAREER	ALL
ACAD_PROG	ALL

Field Name	Required by Report Type
ACAD_PLAN	ALL
ACAD_SUB_PLAN	CIS
ADM_APPL_NBR	OUAC
AID_YEAR	CIS, PSIS
APPL_PROG_NBR	OUAC
EFFECTIVE_TERM	CIS, PSIS, MET, USISE
EFFSEQ	OUAC
SESSION_CODE	CIS, MET, OUAC, USISE
STDNT_CAR_NBR	ALL
STRM	ALL

Note: Enter the latest STRM value for the student for the applicable report type and report period. For example, if the report includes terms for Spring 99 and Fall 99, enter the term representing Fall 99 as the STRM value, assuming that the student was enrolled in both terms.

(NZL) Setting Up Government Reporting

Understanding New Zealand Government Reporting

This section discusses:

- SDR reporting.
- NZQA reporting.
- NZVCC reporting.

SDR Reporting

The SDR is a set of data elements that tertiary institutions in New Zealand must provide to the New Zealand Ministry of Education (MoE). The SDR includes all information that is required by the MoE for funding students and for statistical reporting.

The SDR business process flows like this:

1. You use the Campus Solutions system to enter and store the SDR data on students, courses, and course enrollments.
2. You use the SDR Extract component to extract the necessary data that is required by the MoE into five separate text files: student, course enrollment, web-based system register, qualifications, and course completion.
3. The MoE provides institutions with a program that validates the text files that you produced through the SDR Extract component.
4. After you send the validated text files to the MoE, the MoE processes the files and calculates the appropriate level of funding based on the files that your institution provides them.

A key part of the SDR reporting process is the reporting of data that is required by the EFTS (Equivalent Full Time Student) Funding System, through which the MoE provides funding grants for tertiary education providers. The funding, or bulk grant, that an institution receives is determined by a funding formula based on an EFTS unit, whereby 1.0 EFTS unit is defined as the student workload that would normally be carried by a full-time student in a single academic year.

To comply with the EFTS system requirements, institutions must assign an EFTS factor to all eligible courses. This factor identifies the proportion of a normal full-time year's study that the course is deemed to represent. The EFTS factor also depends on the type of course according to ministry guidelines. When students enroll in courses, they generate EFTS units that are equivalent to the factor that is defined for the course. These units, usually based on course characteristics, program characteristics, or both must also be coded using the New Zealand Standard Classification of Education for SDR reporting purposes.

NZQA Reporting

The NZQA is a government body that is responsible for the coordination of national examinations and the National Qualification Framework (NQF). Qualifications are registered at 10 levels, from year 11 of schooling or vocational entry to postgraduate. Educational institutions, primarily polytechnic colleges, need to equate their study offerings to the NQF unit standards. Progression in these unit standards must be recorded and institutions must award students grades not only in their course offerings, but also in these unit standards.

You set up unit standards in your system as milestones. Milestones are then linked to the courses that are offered by your institution. You can link more than one unit standard to a course or one unit standard to many courses. As students enroll in the courses that are linked to the milestones, they are simultaneously enrolled in the unit standard through the enrollment engine.

After enrollments are processed, you can run three different reports to send to the NZQA:

- Hook-on Request report: This report provides a listing of all students who have not previously been registered with NQF and have paid the hook-on fee.
- Unit Standard Results report: This report includes Unit Standard results (complete or not completed) for students who have paid the per credit fees.
- NZ Diploma in Business Results report: This report provides paid NZQA exam results for the NZ Diploma in Business and for advanced vocational awards.

NZVCC Reporting

The NZVCC was established by the Universities Act (1961), which replaced the Federal University of New Zealand with separate institutions. Today, the committee represents the interests of New Zealand's seven institutions: Auckland, Waikato, Massey, Victoria, Canterbury, Lincoln, and Otago.

The NZVCC requests the above seven institutions to provide a data file on destinations of those persons who became eligible to graduate from the New Zealand University system. This information is produced at the end of the year (31 December) or year-end for the institution and is used by the NZVCC in creating a University Graduate Destinations Survey. The University Graduate Destinations Survey includes names and details of all students who completed a qualification in the specified year at the institution. When a student has completed a degree, your institution manually inserts a row in the Student Degrees component.

Ethnicity information is included in the University Graduate Destinations Survey report. Ethnicity codes should already be set up and mapped in your system because this is required for the SDR report.

Before you can generate the University Graduate Destinations Survey report file, you must also enter a valid address type for a student's address and residency data. Valid address types are listed in the Addresses group box on the Campus Community Installation - Names/Addresses page.

Prerequisites

In addition to the setup that is described in these topics, your institution must also set up the following tables for New Zealand functionality:

- Academic Institution 6 page.
- Institution Table New Zealand page.

- Academic Prog (NZL) (academic program [New Zealand]) page.
- Acad Plan (NZL) (academic plan [New Zealand]) page.
- Degree Table page.
- Complete Grade Flag page.
- Grade Scheme Table page.
- Ethnicity NZL page.
- Ethnicity Map NZL page.

See "(NZL) Mapping Statistics New Zealand Ethnic Codes to PeopleSoft Ethnic Groups" (PeopleSoft Campus Solutions 9.2: Campus Community).

Preparing for SDR Reporting

This section discusses how to:

- Define funding categories.
- Define course classifications.
- Define MoE subject codes.
- Set up field of study codes.

Pages Used to Prepare for SDR Reporting

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Funding Category NZL	SSR_FUND_CAT_NZL	Set Up SACR > Foundation Tables > Reporting Codes > Funding Category NZL > Funding Category NZL	Define funding category codes and their amounts.

Page Name	Definition Name	Navigation	Usage
Course Classification NZL	SSR_CRS_CLSF_FNDC	Set Up SACR > Foundation Tables > Reporting Codes > Course Classification NZL > Course Classification NZL	Define course and program classifications and associate them with funding categories.
MoE Subject NZL	SSR_MOE_SUBJECT	Set Up SACR > Foundation Tables > Reporting Codes > MoE Subject NZL > MoE Subject NZL	Define MoE subject codes.
NZSCED Field of Study	SSR_NZSCED_BRD	Set Up SACR > Product Related > Student Records > Curriculum Management > NZSCED Field of Study NZL > NZSCED Field of Study	Set up the NZSCED (New Zealand Standard Classification of Education) field of study codes by defining the broad, narrow, and detail codes that you attach to courses for use in SDR Course and Course Register files.

Defining Funding Categories

Access the Funding Category NZL page ((Set Up SACR > Foundation Tables > Reporting Codes > Funding Category NZL > Funding Category NZL).

Image: Funding Category NZL page

This example illustrates the fields and controls on the Funding Category NZL page. You can find definitions for the fields and controls later on this page.

Funding Category NZL

Funding Category: A2

Find | View All
First ◀ 1 of 1 ▶ Last

***Effective Date:** BT

***Description:**

Funding Amount:

***Status:** + -

Funding Category

When setting up your funding categories, enter the two-digit alphanumeric code for the funding category.

The first digit is the academic category (A-Z) and the second digit is the degree status (1-5). The degree status variations are:

- 1: Non-Degree
- 2: Degree
- 3: Post Graduate
- 4: Research

- 5: Foreign Research

Funding Amount

Enter the MoE funding amount for this funding category.

"(NZL) Setting Up New Zealand Academic Programs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining Course Classifications

Access the Course Classification NZL page (Set Up SACR > Foundation Tables > Reporting Codes > Course Classification NZL > Course Classification NZL).

Image: Course Classification NZL page

This example illustrates the fields and controls on the Course Classification NZL page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Course Classification NZL' page. At the top, it displays 'Course Classification: 02'. Below this is a navigation bar with 'Find | View All' and 'First 1 of 1 Last'. The main form area contains several fields:

- *Effective Date: 01/01/1900 (with a calendar icon)
- *Status: Active (dropdown menu)
- *Classification Type: Course (dropdown menu)
- *Description: Architecture; Quantity Surveying
- *Long Description: Architecture; Quantity Surveying

 Below the main form is a table of funding categories:

Find		First	1-2 of 2	Last
*Funding Category:	A1	Arts & Soc Sci - Non-Degree		
*Funding Category:	B1	Science & Enginrg - Non-Degree		

Course Classification

When setting up your classification codes, enter the MoE course classification code.

Classification Type

Select *Course* or *Programme*.

Funding Category

Enter the funding category for this course classification. You can enter as many funding categories as needed for each classification.

Note: You must assign at least one funding category to each course classification.

Related Links

"(NZL) Setting Up New Zealand Academic Programs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining MoE Subject Codes

Access the MoE Subject NZL page (Set Up SACR > Foundation Tables > Reporting Codes > MoE Subject NZL > MoE Subject NZL).

Link these subject codes to your institution's plan offerings on the Academic Plan page.

See "(NZL) Setting Up New Zealand Academic Plans" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Setting Up Field of Study Codes

Access the NZSCED Field of Study page (Set Up SACR > Product Related > Student Records > Curriculum Management > NZSCED Field of Study NZL > NZSCED Field of Study).

Important! The NZSCED broad, narrow, and detail codes are defined by the MoE.

Image: NZSCED Field of Study page

This example illustrates the fields and controls on the NZSCED Field of Study page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'NZSCED Field of Study' page with three main sections:

- NZSCED Broad Code:** Shows an effective date of 01/01/1900, a status of 'Active', and a description of 'Natural and Physical Sciences'.
- NZSCED Narrow Code:** Shows a narrow code of 01 and a description of 'Mathematical Sciences'.
- Table of Detail Codes:** A table with columns for Detail Code, Description, and Full Code. It lists two rows:

	*Detail Code	*Description	Full Code		
1	01	Mathematical Sciences	010101	+	-
2	03	Statistics	010103	+	-

NZSCED Broad Code

When setting up the field of study codes, enter the NZSCED broad code for this field of study.

NZSCED Narrow Code

Enter the NZSCED narrow codes for the broad code.

Insert rows to enter all of the narrow codes for this broad code.

Detail Code

Enter the NZSCED detail codes for the narrow code.

Insert rows in the grid to enter all of the detail codes for this narrow code.

Note: You attach the combination of broad, narrow, and detail code to a course at the catalog level. For example, the code 010103 is the NZSCED code for Statistics.

[\(NZL\) Setting Up Government Reporting Data](#)

Preparing for NZQA Reporting

The NZQA (New Zealand Qualifications Authority) framework consists of fields, subfields, and domains. The codes identify a particular unit standard within the overall framework. You associate milestones with a unit standard using these codes.

This section discusses how to:

- Define NQF fields, subfields, and domains.
- Define unit standards.
- Link NQF codes to milestones.

Pages Used to Prepare for NZQA Reporting

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
NQF Field/Subfield Domain	SSR_NQF_FIELD	Set Up SACR > Product Related > Student Records > Curriculum Management > NQF Field/Subfield Domain NZL > NQF Field/Subfield Domain	Set up NZQA defined field codes, subfields, and domains in the system.
Milestone Table	MILESTONE_TBL	Set Up SACR > Product Related > Student Records > Enrollment > Milestone Table > Milestone Table	Define NQF unit standards as milestones using the milestone type of <i>U</i> and link NQF codes to milestones.

Defining NQF Fields, Subfields, and Domains

Access the NQF Field/Subfield Domain page (Set Up SACR > Product Related > Student Records > Curriculum Management > NQF Field/Subfield Domain NZL > NQF Field/Subfield Domain).

Image: NQF Field/Subfield Domain page

This example illustrates the fields and controls on the NQF Field/Subfield Domain page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'NQF Field/Subfield Domain' page. At the top, the 'Field Code' is set to 'BUS'. Below this, there are two main sections. The first section has fields for '*Effective Date:' (01/01/1900), '*Status:' (Active), and '*Description:' (Business). The second section has fields for '*Subfield Code:' (ACC) and '*Description:' (Accounting). At the bottom, there is a table with two columns: '*Domain Code' and '*Description'. The table contains two rows: 1 ACG Accounting - Generic and 2 ACM Accounting - Mid-Level. Each row has '+' and '-' buttons to its right.

- Field Code** When setting up a new field, enter an NZQA defined field code.
- Subfield Code** Enter an NZQA-defined subfield code.
You can enter as many subfield codes as needed for this field.
- Domain Code** Enter an NZQA-defined domain code.
You can enter as many domain codes as needed for each subfield.

Defining Unit Standards

Access the Milestone Table page (Set Up SACR > Product Related > Student Records > Enrollment > Milestone Table > Milestone Table).

In the NQF Detail group box, enter the milestone type *U* (unit standard).

See [Defining Milestone Codes](#).

Linking NQF Codes to Milestones

Access the Milestone Table page (Set Up SACR > Product Related > Student Records > Enrollment > Milestone Table > Milestone Table).

NQF Detail

Unit Standard Version	Enter the version as defined by the NZQA for this unit standard.
Unit Standard Field Code	Select the appropriate field code. Only the field codes that are entered on the Field/Subfield Domain page are available for selection.
Unit Standard Subfield Code	Select the appropriate subfield code. Only the subfield codes that are entered on the Field/Subfield Domain page are available for selection.
Unit Standard Domain Code	Select the appropriate domain code. Only the domain codes that are entered on the Field/Subfield Domain page are available for selection.
Unit Standard Language	Select the language in which the unit standard is taught.
NQF Credit	Enter the number of NQF credits for this unit standard as provided in the National Qualifications Framework.

[\(NZL\) Setting Up Government Reporting Data](#)

Preparing for NZVCC Reporting

Enter subject and qualification codes defined by the NZVCC (New Zealand Vice Chancellors Committee) into your Campus Solutions system, and then link the subject codes to your academic plans and the qualification codes to degree codes.

This section discusses how to:

- Enter NZVCC subject codes.
- Enter NZVCC qualification codes.

Pages Used to Prepare for NZVCC Reporting

Page Name	Definition Name	Navigation	Usage
NZVCC Subject Codes NZL	SSR_NZVCC_SUBJECT	Set Up SACR > Foundation Tables > Reporting Codes > NZVCC Subject Codes NZL > NZVCC Subject Codes NZL	Define NZVCC Subject codes to attach to academic plans.

Page Name	Definition Name	Navigation	Usage
NZVCC Qualification Codes NZL	SSR_NZVCC_DEGREE	Set Up SACR > Foundation Tables > Reporting Codes > NZVCC Qualification Codes NZL > NZVCC Qualification Codes NZL	Define NZVCC qualification codes to attach to degrees.

Entering NZVCC Subject Codes

Access the NZVCC Subject Codes NZL page (Set Up SACR > Foundation Tables > Reporting Codes > NZVCC Subject Codes NZL > NZVCC Subject Codes NZL).

Enter the subject codes that are provided by the NZVCC. After you have set up all of the codes, you can link the codes to an academic plan on the Acad Plan NZL (academic plan New Zealand) page.

See "(NZL) Setting Up New Zealand Academic Plans" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Entering NZVCC Qualification Codes

Access the NZVCC Qualification Codes NZL page (Set Up SACR > Foundation Tables > Reporting Codes > NZVCC Qualification Codes NZL > NZVCC Qualification Codes NZL).

Enter the qualification codes that are provided by the NZVCC. After you have set up all of the codes, you can link the codes to a degree on the Degree Table page.

See [Defining Degrees](#).

Chapter 22

(NLD) Managing the BRON-HO Interface

Understanding BRON-HO

Documentation for setting up and managing BRON-HO is not available in Online Help. For BRON-HO documentation, see PeopleSoft Campus Solutions Selected PeopleBook Chapters for the Netherlands (NLD) in My Oracle Support (Doc ID 2052493.1).

The documentation in My Oracle Support includes these topics:

- Setting up BRON-HO
- Managing BRON-HO student data
- Sending and receiving BRON-HO messages
- Reviewing BRON-HO transactions
- Managing approval and suspense processing

(NLD) Setting Up Test Administration

Understanding Test Administration Setup

The Test Administration functionality enables institutions to create a catalog of tests, similar to the course catalog. The test catalog consists of tests and calculated results. Calculated results either are the end result of a test or can be used to calculate the average result of multiple tests. Tests can be repeated and the repeat rules that are set for a calculated result tell the system which result to use for calculation. The calculation results can be run by individual student, by program, or by student group.

Common Elements Used to Set Up Test Administration

Academic Career	<p>Enter the appropriate academic career for the test or calculated result offering, test list, or requisite.</p> <p>Define careers on the Academic Career Table.</p> <p>See "Defining Academic Careers" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>
Academic Institution	<p>Enter the appropriate academic institution for the test or calculated result offering, test tree, test list, or requisite.</p> <p>Define institutions on the Academic Institution Table.</p> <p>See "Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>
Academic Organization	<p>The system populates this field from the academic organization that is linked to the subject entered in the Subject Area field. You can override the value.</p> <p>See "Defining Academic Organizations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>
Subject Area	<p>Enter the subject area of the test or calculated result offering, test list, or requisite. Subject area values are defined on the Academic Subject Table page.</p> <p>See "Defining Subject Areas" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).</p>

Activating Test Administration

Using Test Administration is optional. Activate the functionality on the Installation table.

Page Used to Activate Test Administration

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
SA Features	SCC_INSTALL_SA2	Set Up SACR > Install > Student Admin Installation > SA Features	Activate the Test Administration functionality and enter the last test ID numbers used.

Activating Test Administration

Access the SA Features page (Set Up SACR > Install > Student Admin Installation > SA Features).

Test Administration

Select to activate the Test Administration functionality.

Last Test ID Assigned, Last Test List ID Assigned, and Last Requirement ID Assigned

These fields are visible only when the Test Administration check box is selected.

When you activate Test Administration, enter the number prior to the number with which you want to begin the ID counting for these fields. For example, if you enter 99 in each of these fields, the system begins assigning the ID for each at 100.

After activation, these fields display the last test, test list, and requirement ID numbers that are assigned by the system.

Note: If you leave these fields blank, the system begins counting for each of these IDs with 1.

Related Links

"Selecting Student Administration Installation Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Defining Tests and Calculated Results in the Catalog

In the test catalog, define all of the tests to be used in test programs. Also define calculated results, which link tests and other calculated results together with calculation rules for the system to use to calculate final test grades for students.

Calculated results can also be linked to the course catalog so that completed grades can be written to the student enrollment record.

This section discusses how to:

- Define tests.
- Define test offerings.
- Define a test set for calculated results.
- Link a course to the test.

Pages Used to Define Tests and Calculated Results in the Catalog

Page Name	Definition Name	Navigation	Usage
Test Catalog	SSR_TST_CAT_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Test Catalog	Create, view, or update tests or calculated results.
Test Catalog - Offering	SSR_TST_CAT_OF_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Offering	Define the academic institution, group, catalog number, career, and subject for the test or calculated result.
Test Catalog - Test Set	SSR_TST_CAL_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Test Set	This page appears when <i>Calculated Result</i> is entered in the Test Type field on the Test Catalog page. Link the calculated result to tests and other calculated results from which the grade is calculated, and enter information about the calculated result.
Course Link	SSR_TST_CRS_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Course Link	This page appears when <i>Calculated Result</i> is entered in the Test Type field on the Test Catalog page. Link the calculated result to a course.

Defining Tests

Access the Test Catalog page ((Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Test Catalog).

Image: Test Catalog page

This example illustrates the fields and controls on the Test Catalog page. You can find definitions for the fields and controls later on this page.

The screenshot shows a web interface for the Test Catalog. At the top, there are tabs for 'Test Catalog', 'Offering', 'Test Set', and 'Course Link'. Below the tabs, the 'Test ID' is 00000088. A search bar contains 'Find | View All' and navigation buttons for 'First', '1 of 1', and 'Last'. The main form includes the following fields:

- *Effective Date:** 01-08-2003 (with a calendar icon)
- *Status:** Active (dropdown menu)
- Test Type:** Calculated Result
- Exam Type:** Combination Grade (dropdown menu)
- *Description:** Combination Grade Havo Vavo
- Long Title:** Combination Grade Havo Vavo
- Grading Basis:** TSC (dropdown menu)
- Units 1:** (empty text box)
- Units 2:** (empty text box)
- Test Level:** A level (dropdown menu)
- *Grade Valid:** Years After Term End (dropdown menu)
- Years Valid:** 10

Test Type

When entering a new value in the catalog, select whether you are creating a *Test* or a *Calculated Result*.

When you save the test or calculated result, this field becomes view only.

Exam Type

Select the exam type for this calculated result. Values are *Central End Exam*, *Combination Grade*, *End Exam*, *Partial Qualification*, *Qualification*, and *School Exam*.

The exam type affects Test Administration grade calculation processing.

If you select an Exam Type of *Combination Grade* for a calculated result, the grade calculation process looks for underlying student results where the Combination Grade check box on the Student VAVO Course Details page is selected. If the Combination Grade check box is selected, the underlying grade counts towards the overall Combination Grade. If the check box is cleared, the underlying result is managed in a way similar to a course exemption—the underlying results are exempted and the Student Grade table results Grade Attribute field is updated with the grade attribute *Exempt Combination Grade*.

See [Maintaining VAVO Course Options](#).

Grading Basis

Select the grading basis to be used with this test or calculated result.

Units 1 and Units 2

Enter the number of credited units the student gets after completing the test or calculated result.

These fields are used in the evaluation process based on how each individual institution needs to use them.

Test Level

Select the level of difficulty of the test or calculated result. Values are *A level, B level, C level, and D level.*

These levels are used for reporting purposes only and are not part of the calculation process.

Grade Valid

Select the period for which the grade is valid. Values are *Unlimited* and *Years After Term End*. If you select *Years After Term End*, the Years Valid field appears.

Years Valid

Enter the number of years that the grade assigned to a student for this test or calculated result is valid. This field appears if you select *Years After Term End* in the Grade Valid field.

Defining Test Offerings

Access the Test Catalog - Offering page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Offering).

Image: Test Catalog - Offering page

This example illustrates the fields and controls on the Test Catalog - Offering page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Offering' tab in a web application. At the top, there are navigation tabs: 'Test Catalog', 'Offering' (selected), 'Test Set', and 'Course Link'. Below the tabs, the 'Test ID' is 00000008. A navigation bar includes 'Find | View All', 'First', '1 of 1', and 'Last'. The main form contains the following fields and values:

- Effective Date:** 01/01/1900
- Status:** Active
- Description:** CAL02.1.3 Sports
- *Academic Institution:** PSNLD (PeopleSoft University - NLD)
- *Catalog Nbr:** 4330CAL021
- *Academic Group:** 00001 (Standard)
- *Subject Area:** ECONO (Economics)
- *Academic Organization:** ECONOMCS (Economics)
- *Academic Career:** BOL (Vocational Training (NLD))
- *Approved:** Approved (dropdown menu)
- HEGIS Code:** (empty field)
- Long Description:** SP

Catalog Nbr (catalog number)

Enter the catalog number for this test or calculated result.

This field is 10 digits. The system reserves the 4 left digits exclusively for numeric characters, and the right 6 digits for

both alpha and numeric characters. A field edit enforces this programming.

See [Defining Course Offerings](#).

Academic Group

Enter the academic group to which this test or calculated result offering belongs. Academic group values are defined on the Academic Group Table page.

See "Defining Academic Groups" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

HEGIS Code

Enter the CREBO code that is associated with the test.

Approved

Select the test or calculated result approved status. Values for this field are delivered with the system as translate values.

Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Select *Pending* or *Denied* to prevent anyone from scheduling the test or calculated result. Select *Approved* to enable scheduling of the test or calculated result offering.

Long Description

Enter a long description of the test.

Defining a Test Set for Calculated Results

Access the Test Catalog - Test Set page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Test Set).

Image: Test Catalog - Test Set page

This example illustrates the fields and controls on the Test Catalog - Test Set page. You can find definitions for the fields and controls later on this page.

Test Catalog		Offering		Test Set		Course Link			
Test ID:	00000008								
Find View All First ◀ 1 of 1 ▶ Last									
Effective Date:	01/01/1900			Status:	Active				
Description:	CAL02.1.3 Sports								
*Representation:	Truncate ▼								
*Decimals:	1 ▼								
*Handle Insufficient Grades:	Exclude from Calculation ▼								
<input type="checkbox"/> Use Only Grades within Term <input type="checkbox"/> Sum Grades									
Customize Find View All First ◀ 1-3 of 3 ▶ Last									
*Seq Nbr	Weight	*Child Test ID	Description	Test Type	Operators	Minimum Value	Repeat		
10	03	00000003	CAL02.1.3.3 Sports	Test	= ▼	89.00	Highest ▼	+	-
20	01	00000006	CAL02.1.3.2 Sports	Test	▼		Highest ▼	+	-
30	01	00000007	CAL02.1.3.1 Sports	Test	▼		Highest ▼	+	-

Representation

Select whether to *Round* or *Truncate* the calculated result.

Decimals

Select the number of decimals to which the calculated result must be rounded or truncated. Values are *0*, *1*, and *2*.

Handle Insufficient Grades

Indicate how you want the calculation process to handle empty grades and grades that do not meet the minimal value. Values are:

Conditional: Only grades that satisfy the minimum value are used in the calculation process.

Do Not Calculate: If grades exist that do not meet the minimum value or if required grades do not exist, the result is not calculated.

Exclude from Calculation: If no grade exists, the grade is not used in the calculation process. If the grade is below the minimum value, the grade is used in the calculation process.

Include in Calculation: If no grade exists, the minimal value from the corresponding grade table is used in the calculation process.

For all values except *Do Not Calculate*, if all requirements are met and all required grades exist, the grade is calculated with the status *Complete*, otherwise, with the status *Incomplete*.

Use Only Grades within Term	Select if only the tests taken within the same term will be included in the result.
Sum Grades	Select if the calculated result of all underlying tests will be a sum of the tests instead of an average.
<hr/>	
Note: The calculation process calculates an average of all test grades if this check box is cleared.	
<hr/>	
Seq Nbr (sequence number)	When you add a new row, the system increments this field by 10; however, you can change the value to any number to change the order of the rows.
Weight	Enter the weight of the test compared to the other tests in the grid.
Child Test ID	Enter the test ID or other calculated result ID that you want in the test set of the calculated result.
Operators	Select an operator to determine the minimum grade that a student must earn in a test for it to be used in the calculation process. Values are = (equal to), > (greater than), and >= (greater than or equal to).
Minimum Value	Enter the minimum grade that a student must earn in a test for it to be used in the calculation process.
Repeat	Indicate which test result must be considered if a student has repeated the test. Values are <i>Average</i> , <i>Highest</i> , and <i>Latest</i> .

Linking a Course to the Test

Access the Test Catalog - Course Link page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Catalog > Course Link).

Course ID	Enter the course ID, from the Course Catalog, of the course to which this test or calculated result will be linked.
Course Offering Nbr (course offering number)	Enter the course offering number to which this test or calculated result will be linked.

Create/Update Student Enroll

Create	Select to have the calculation process create a new row on the Student Enroll table.
Update Existing Only	Select to have the calculation process update the existing row on the Student Enrollment table.

Creating Test Trees in Tree Manager

The Create Test Tree process creates test trees based on the information that you enter in the Test Catalog. The system then uses the structure of a test tree to calculate test grades for students.

This section discusses how to:

- Create a test tree.
- Validate test trees.

See the product documentation for *PeopleTools: PeopleSoft Tree Manager*

Pages Used to Create Test Trees

Page Name	Definition Name	Navigation	Usage
Create Test Tree	SSR_CRE_TRE_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Create Test Tree > Create Test Tree	Run the Create Test Tree SQR process (SRCRTRNL) to create a test tree. Note: Create and update test trees using only this process. Do not create new test trees or add nodes to existing test trees through Tree Manager.
Validate Test Tree	SSR_VALID_TRE_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Validate Test Tree > Validate Test Tree	Run the Test Tree Validation SQR process (SRVALDNL) to validate the test tree. A test tree is valid when the structure of the tree in Tree Manager matches the structure of the tree in the Test Catalog.
View Tree Validation Results	SSR_TEST_TREE_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > View Tree Validation Results > View Tree Validation Results	View test tree validation results.

Creating a Test Tree

Access the Create Test Tree page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Create Test Tree > Create Test Tree).

Test ID

Enter the calculated result that will be the root node of the tree. The system creates the tree using the tests and other calculated results that you linked to this calculated result on the Test Set page.

Only those test IDs for which a user has access based on academic organization security are available.

Effective Date

Enter the effective date of the test tree. Assigning the test tree an effective date enables the user to record different versions of calculated results.

Tree Structure ID

The test structure TEST_ADMIN is delivered with the product. If you create additional tree structures, they must be set up exactly like the TEST_ADMIN structure.

Tree Name

Enter a name for the test tree.

Validating Test Trees

Access the Validate Test Tree page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Validate Test Tree > Validate Test Tree).

Tree Name

Enter the name of the test tree for the system to validate.

Effective Date of Tree

Enter the effective date of the tree. Test trees can have multiple effective dates to accommodate several versions of the same test tree.

Linking Test Trees to Programs

Link test trees to programs to automate the process of linking students to test trees. When an applicant is matriculated, the system looks at the combination of institution, career, program, campus, load, and term for the individual and automatically links the student to the test tree with the same combination.

Page Used to Link Test Trees to Programs

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Link Test Tree to Program	SSR_PROG_TREE_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Link Test Tree to Program > Link Test Tree to Program	Link test trees to academic programs.

Linking the Test Tree to a Program

Access the Link Test Tree to Program page ((Records and Enrollment > Test Administration NLD > Set Up Test Administration > Link Test Tree to Program > Link Test Tree to Program).

Image: Link Test Tree to Program page

This example illustrates the fields and controls on the Link Test Tree to Program page. You can find definitions for the fields and controls later on this page.

Campus

Enter the campus for this test tree.

See "Setting Up Campuses" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Academic Load

Select the academic load for this test tree.

See "Defining Academic Level and Load Rules" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Term

Enter the term for this test tree. Linking the test to a term enables the system to automatically link students to a test tree when they are matriculated.

See "Defining Terms, Sessions, and Session Time Periods" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Tree Name

Enter the test tree for this academic program, campus, academic load, and term combination.

Tree EffDt

Enter the effective date of the tree. Test trees can have multiple effective dates to accommodate several versions of the same tests.

Default

Select whether this test tree should be used as the default for this academic program.

Setting up Default VAVO Combination Grade Courses

This section discusses how to:

- Add Combination Grade Course defaults.

- Run the Combination Grade Process.

Pages Used to Set Up Default VAVO Combination Grade Courses

Page Name	Definition Name	Navigation	Usage
VAVO Combination Grade Courses	SSR_BR_VAVO_CTBL	Records and Enrollment > Test Administration NLD > Set Up Test Administration > VAVO Combination Grade Courses > VAVO Combination Grade Courses	Add one or more Combination Grade Test defaults per institution, career, term, tree name, and tree effective date.
VAVO Combination Grade Process	SSR_VAVO_COMB_GRD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > VAVO Combination Grade Process > VAVO Combination Grd Process	Run this process to find default Combination Grade Courses set up for institution, career, term, tree and tree effective date and assign these to students linked to this same tree and tree effective date.

Adding Combination Grade Course Defaults

Access the VAVO Combination Grade Courses page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > VAVO Combination Grade Courses > VAVO Combination Grade Courses).

Image: VAVO Combination Grade Courses page

This example illustrates the fields and controls on the VAVO Combination Grade Courses page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'VAVO Combination Grade Courses' page. It includes the following fields and controls:

- Institution:** PSNLD (PeopleSoft University - NLD)
- Career:** VAVO (Advanced General Educ. (NLD))
- Term:** 2070 (Acad year 2007-2008)
- Required Combination Grades for Tree:** A section with a search bar and navigation controls (Find, View All, First, 1 of 1, Last).
- *Tree Name:** EDU-HAVO-NEWSTYLE
- *Tree EffDt:** 08/01/2003
- Table of Required Grades:**

Test ID	Description	HEGIS Code	Education Level
1 00002278	Fa12	400323	

Tree Name

Select a validated Test Administration Test Tree value.

Tree EffDt (tree effective date)	Select a validated Test Administration Tree effective date.
Test ID	Test ID values contain EN test level tests from the values that you select in the Tree Name and Tree EffDt fields.

Running the Combination Grade Process

Access the VAVO Combination Grd Process page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > VAVO Combination Grade Process > VAVO Combination Grd Process).

As Of Date	The system date appears by default each time that you access the page, whether or not a date value already exists in the field. You can enter a different date before you run the process.
-------------------	--

Creating Test Lists

Test lists are used for two purposes:

- To enroll students in multiple tests at one time during the enrollment process.
- During the evaluation process.

This section discusses how to:

- Create a tree list.
- Add tests to a test list.

Pages Used to Create Test Lists

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Test List Information	SSR_TST_LIST_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Lists > Test List Information	Enter test list information, such as subject area, academic organization, and course ID.
Test List - Tests	SSR_TST_LISTLN_NLD	Records and Enrollment > Test Administration NLD > Test Lists > Tests	Add tests to the list, either individually or by test tree.
Copy Tests	SSR_SEL_COPY_TESTS	Click the Copy Tests button on the Test Lists - Tests page.	Select the test list that you want to copy for this test list.

Creating a Test List

Access the Test List Information page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Test Lists > Test List Information).

Image: Test List Information page

This example illustrates the fields and controls on the Test List Information page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Test List Information' page with the following fields and values:

- Test List ID:** 00000007
- *Effective Date:** 02/10/2005
- *Status:** Active
- *Description:** TA Test List
- Short Description:** TA List
- *Academic Institution:** PSNLD (PeopleSoft University - NLD)
- *Academic Career:** BAC (Bachelor (NLD))
- *Subject Area:** AGRIC (Agriculture)
- *Academic Organization:** AGRIC (Agriculture)
- *Test List Use:** Both
- Course ID:** (empty)

Test List ID

When you create a new test list, this number is be all zeros. When you save the test list, the system assigns the next sequential number from the Next Test ID field on the Installation table.

Test List Use

A test list can be used to enroll students in tests or in the evaluation process. Values are:

Both: Enables this test list to be used during the evaluation process and to enroll students into the tests on the list.

Evaluation: Enables this test list to be used during the evaluation process only.

Place: Enables this test list to be used to enroll students into the tests on the list only.

Course ID

Select a course ID to link this test list to a course.

Adding Tests to a Test List

Access the Test List - Tests page (Records and Enrollment > Test Administration NLD > Test Lists > Tests).

Copy Tests

Click to add tests by copying the tests in another test list. The Copy Tests page appears, where you can select a test list ID.

Tree Name

Enter a test tree to add tests to the list by tree.

Tree EffDt (tree effective date)	Enter the effective date of the tree that you want to use to add tests to the list. Only valid effective dates for the tree that you select are available.
Fetch Data	Click to populate the grid with the tests and calculated results that make up the test tree.
Sequence	The system increments this number by 1 for each row. Change the order of the rows by changing the sequence number.
Test ID	Enter a test ID to add to this test list. This field is automatically populated when you click the Fetch Data button if you entered a test tree ID and effective date.

Defining Evaluation Rules

Before you can use the Evaluate Students process to determine whether students have passed all of the requirements for a course, a test or calculated result of a test, or for graduation, you must define the evaluation rules, or requisites. The requirements for the evaluation are linked to test trees.

When the system evaluates students, the Evaluate Students SQR process (SREVAENL) uses the evaluation requisites that are defined for a student's academic career, subject, academic organization, and academic program.

This section discusses how to:

- Define evaluation requisites.
- Define evaluation rule details.

Pages Used to Define Evaluation Rules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Requisites	SSR_REQUISITE_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Requisites > Requisites	Define evaluation requirement by institution, career, program, subject area, academic organization, test tree, and test effective date.
Requisites Lines	SSR_REQUIS_LN_NLD	Records and Enrollment > Test Administration NLD > Set Up Test Administration > Requisites > Requisites Lines	Define the requisite lines for an evaluation requirement.
Copy Requisite Lines	SSR_SEL_COPY_REQ	Click the Copy Requisite Lines button on the Requisite Lines page.	Select a requisite ID from which to copy lines into this requisite.

Defining Evaluation Requisites

Access the Requisites page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Requisites > Requisites).

Image: Requisites page

This example illustrates the fields and controls on the Requisites page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Requisites' page with the following fields and values:

- Requisite ID:** 00000001
- *Effective Date:** 08/01/2004
- *Status:** Active
- *Description:** Atheneum N&T
- *Academic Institution:** PSNLD (PeopleSoft University - NLD)
- *Academic Career:** VAVO (Advanced General Educ. (NLD))
- Academic Program:** R004 (Atheneum N&T)
- *Subject Area:** EDU (Education)
- *Academic Organization:** EDUCATN (Education)
- Release Restriction:** Release
- Evaluation Type:** End
- Tree Name:** PROGRAM HAVO
- Tree EffDt:** 08/01/2004

Academic Program

Enter the academic program to which this requirement applies.

Release Restriction

Indicate whether the grades that are used to satisfy this requisite and that are also restricted can be used in other requisites.

Values are:

Keep: Grades used in this requisite that are restricted cannot be used in other requisites.

Release: Restrictions from this requisite are released, so grades used in this requisite can also be used in other requisites.

Evaluation Type

Select the evaluation type of this requisite. Values are:

End: The requisite applies to an end of term evaluation.

In Between: The requisite applies to evaluation milestones during the term.

This field is informational only and is not used in any processing.

Tree Name

Enter the test tree for this requisite. Students who are linked to this test tree are evaluated based on the requisites defined here when you run the Evaluate Students process.

Tree EffDt (tree effective date)

Enter the effective date of the test tree for which you are defining evaluation requisites.

Defining Evaluation Rule Details

Access the Requisites Lines page (Records and Enrollment > Test Administration NLD > Set Up Test Administration > Requisites > Requisites Lines).

Image: Requisites Lines page

This example illustrates the fields and controls on the Requisites Lines page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Requisites Lines' page for Requisite ID 00000001. It includes fields for Effective Date (08/01/2004), Status (Active), and Description (Atheneum N&T). A 'Copy Requisite Lines' button is visible. Below is a table of requisites:

Seq Nbr	Operators	(Not	Type	*Item ID	Show Tests	Description	Operators	Value		
10			<input type="checkbox"/>	Test List	00000003	<input checked="" type="checkbox"/>	All courses Atheneum N&T	<=>	3.00	+	-
20	AND		<input type="checkbox"/>	Test List	00000003	<input checked="" type="checkbox"/>	All courses Atheneum N&T	<=>	4.00	+	-
30	AND		<input type="checkbox"/>	Test List	00000003	<input checked="" type="checkbox"/>	All courses Atheneum N&T	<=>	5.00	+	-
40	AND		<input type="checkbox"/>	Test List	00000004	<input checked="" type="checkbox"/>	Profile courses Ath N&T	<=>	5.00	+	-
100	AND		<input type="checkbox"/>	Calc Res	00000032	<input checked="" type="checkbox"/>	End Dutch			+	-
110	AND		<input type="checkbox"/>	Test List	00000005	<input checked="" type="checkbox"/>	Foreign Language 1			+	-
300	AND		<input type="checkbox"/>	Calc Res	00000079	<input checked="" type="checkbox"/>	End Mathematics B1,2			+	-
310	AND		<input type="checkbox"/>	Calc Res	00000064	<input checked="" type="checkbox"/>	End Science 1,2			+	-
320	AND		<input type="checkbox"/>	Calc Res	00000053	<input checked="" type="checkbox"/>	End Chemistry			+	-

Copy Requisite Lines

Click to select an already-created requisite to copy. The Copy Requisite Lines page appears.

Requisite Lines Tab

Seq Nbr (sequence number)

The system increments the sequence numbers by 10 for each line added. The Evaluate Students process evaluates the lines in this requisite in the order established by the sequence numbers.

To change the order of the lines, change the sequence numbers.

Operators

If needed, select a Boolean operator to group requirements. The options are *AND*, *AND NOT*, *OR*, and *OR NOT*.

- ((open parenthesis)** Use parentheses to group requirements. You can use up to three levels.
- Not** Select if this line must *not* be true.
- Type** Indicate whether this requisite line pertains to a *Calc Res* (calculated result), *Req* (requisite), *Test*, or *Test List*. You can create a line that pertains to another requisite because you can have nested requirements.
- Item ID** Enter a calculated result, test ID, requisite ID, or test list ID, depending on what you selected in the Type field.
- Description** The description of the calculated result, test, requisite, or test list.
- Operators** Operators enable the system to evaluate grades on a minimum or maximum condition to determine insufficient grades.

For test lists, values are < (less than), <= (less than or equal to), = (equal to), >= (greater than or equal to), and > (greater than).

For calculated results, requisites, and tests, values are > (greater than), = (equal to), and >= (greater than or equal to).
- Value** Enter the minimum or maximum value of a grade.

Details Tab

Access the Requisites Lines page: Details tab.

Image: Requisites Lines page: Details tab

This example illustrates the fields and controls on the Requisites Lines page: Details tab. You can find definitions for the fields and controls later on this page.

Seq Nbr	Operators	(Not	Type	*Item ID	Function	Minimum Value	Maximum Value	Restrict			
10			<input type="checkbox"/>	Test List	00000003	In List						+ -
20	AND		<input type="checkbox"/>	Test List	00000003	In List		1.00				+ -
30	AND		<input type="checkbox"/>	Test List	00000003	In List		2.00				+ -
40	AND		<input type="checkbox"/>	Test List	00000004	In List		1.00				+ -
100	AND		<input type="checkbox"/>	Calc Res	00000032							+ -
110	AND		<input type="checkbox"/>	Test List	00000005	In List	1.00	2.00				+ -
300	AND		<input type="checkbox"/>	Calc Res	00000079							+ -
310	AND		<input type="checkbox"/>	Calc Res	00000064							+ -
320	AND		<input type="checkbox"/>	Calc Res	00000053							+ -

Function

Functions are used with test lists, and together with the minimum and maximum values enable you to link conditions to a group of courses, tests, or calculated results such as a minimum or maximum number of tests that a student must pass, or a minimum or maximum number with a specific calculated result.

Values are:

Average: The average of the tests or courses in the list

List: The number of tests or courses that must be in the list.

Sum 1: The sum of Units 1.

Sum 2: The sum of Units 2.

Minimum Value

Enter the minimum number for the selected function.

Maximum Value

Enter the maximum number for the selected function.

Restrict

Designate whether the grades that are used to satisfy this line can be used to satisfy other lines in other requisites. If the grades can be used to satisfy other lines in this requisite, leave the field blank.

Select *All Result* if the grade used to satisfy this line cannot be used to satisfy other lines. The test or calculated result in this line is blocked for further evaluation within this requisite.

Select *Restricted* if the grade used to satisfy this line cannot be used to satisfy other lines within this requisite, but can be used to satisfy lines in other requisites. The test or calculated result in this line is blocked for further evaluation within the requisite.

) (close parenthesis)

Select to close group of lines.

Comments tab

Access the Comments tab.

Image: Requisites Lines page: Comments tab

This example illustrates the fields and controls on the Requisites Lines page: Comments tab. You can find definitions for the fields and controls later on this page.

Requisites Lines

Chapter 24

(NLD) Managing Student Higher Education Information

Tracking Student Higher Education Information

Institutions of higher education must supply information about enrollments and academic progress to Base Register Education (*Basis Register Onderwijs* or BRON). Use the Academic Prog Higher Education page and the Administer Student Higher Education page to register student data that are related to a program and academic year and are required by governmental regulations. You enter the data during the admissions process and during the students' enrollment for a program. Some information is populated automatically during the admissions process and by the matriculation process. Some data—such as form of study and funding applies—are part of the data exchange for BRON.

Pages Used to Manage Student Higher Education Information

Page Name	Definition Name	Navigation	Usage
Academic Prog Higher Education	SSR_STD_PRG_NLD	Records and Enrollment > Higher Education NLD > Student Records Higher Edu NLD > Academic Prog Higher Education	Enter academic program for higher education information for a student.
Administer Student Higher Education	SSR_STUDENT_NLD	Records and Enrollment > Higher Education NLD > Student Higher Education NLD > Administer Student Higher Education	Enter higher education information for a student.
Higher Education Inquiry	SSR_HE_PRG_ENQ_NLD	Records and Enrollment > Higher Education NLD > Higher Education Inquiry NLD > Higher Education Inquiry	View higher education information for a student.

Entering Academic Program Higher Education Information for a Student

Access the Academic Prog Higher Education page (Records and Enrollment > Higher Education NLD > Student Records Higher Edu NLD > Academic Prog Higher Education).

Effective Sequence

Enter the sequence number for this effective-dated row.

Progr Action Higher Education
(program action higher education)

The program action for higher education appears by default from the Application table during the matriculation process. A

change to the program action higher education adds a new row with a new effective date or effective sequence.

Form of Study Higher Education	Enter the student's form of study. Options are <i>Auditor</i> , <i>Coop/Dual</i> , <i>Extraneous</i> , <i>Participant</i> , and <i>Student</i> .
Acad Level Higher Education (academic level higher education)	Enter the student's academic level.
Funding Applies	Select this check box if funding rules apply to this student. This is part of the data set for BRON.
Program Units Apply	Select this check box if program unit rules apply to this student. This is part of the data set for BRON.
Academic Year	Enter the academic year for which this information applies.
Form of Payment	Select the form of the payment, such as cash, check, or loan. This field becomes available when the Progr Action Higher Education field is <i>PAYM</i> .
Authorized for Payment	If students have authorized a third-party, such as a parent or guardian, to make their tuition payment for them, enter that person's name here.

Managing Student Higher Information

Access the Administer Student Higher Education page (Records and Enrollment > Higher Education NLD > Student Higher Education NLD > Administer Student Higher Education),

Student Details

First Year Higher Education	Enter the year a student was enrolled for the first time for higher education in The Netherlands regardless of the institution.
First Year Financial Aid	Enter the first year the student began receiving financial aid.
Regime	Enter the regulation that applies to this student. Your options are <i>T</i> (Tempo Scholarship) or <i>P</i> (Performance Scholarship).
GBA Status (Gemeentelijke Basis Administratie status)	Enter the student's current GBA status.
GBA Year of Birth	Enter the student's year of birth according to GBA.
GBA Month of Birth	Enter the student's month of birth according to GBA.
Student BRINcode	
BRINcode	Enter a BRINcode for the student.
First Year of BRINcode	Enter the first year that this BRINcode applied to the student.

First Year Funded Enter the first year that the student received funding.

Progress Academic Year

Update this section every year to reflect the student's progress. Add a row for each academic career.

Academic Year Enter the current academic year.

Individual Norm Units Enter the units a student has earned for a certain program in a specified academic year.

Total Number of Units Enter the student's total number of registered units for this academic year.

Study Progress Select this check box if these units are currently in progress.

Add/Update Person Click this link to access this student's personal data.

See "Adding an Individual to Your Database" (PeopleSoft Campus Solutions 9.2: Campus Community)

Viewing Higher Education Information for a Student

Access the Higher Education Inquiry page (Records and Enrollment > Higher Education NLD > Higher Education Inquiry NLD > Higher Education Inquiry).

Academic Year Enter an academic year to populate data for that year.

Chapter 25

(NLD) Managing Test Administration

Common Elements Used to Manage Test Administration

Academic Career	Enter the appropriate academic career. See "Defining Academic Careers" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
Academic Institution	Enter the appropriate academic institution. See "Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
Campus	Enter the appropriate campus. See "Setting Up Campuses" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
Session	Select the type of academic session. See "Defining Sessions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).
Term	Enter the appropriate term. See "Defining Terms" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Creating Test Sessions

With the Test Administration functionality, create the test sessions and enroll students in the tests with the same process. Create a test session with a test date, start time and end time, session, section, exam session, facility, and instructor.

This section discusses how to:

- Select test session criteria.
- Insert test sessions and students.

Pages Used to Create Test Sessions

Page Name	Definition Name	Navigation	Usage
Create Test Sessions - Selection	SSR_CRE_TST_NLD	Records and Enrollment > Test Administration NLD > Create Test Sessions > Selection	Define the test session and select the method for enrolling students.
Insert Test Sessions/Students	SSR_CRE_TST1_NLD	Records and Enrollment > Test Administration NLD > Create Test Sessions > Insert Test Sessions/Students	Enter tests and calculated results in the test session and select the students for enrollment.

Selecting Test Session Criteria

Access the Create Test Sessions - Selection page ((Records and Enrollment > Test Administration NLD > Create Test Sessions > Selection).

Image: Create Test Sessions - Selection page

This example illustrates the fields and controls on the Create Test Sessions - Selection page. You can find definitions for the fields and controls later on this page.

The Create Test Session SQR process (SRCRESNL) creates the test sessions and enrolls the students based on the criteria that you select on the Create Test Sessions - Selection and Insert Test Sessions/ Student pages.

Basis

Select how the system enrolls students. Values are:

Enrollment in Classes: Select to enroll students who are enrolled in the selected classes into the test sessions.

Student Enrollment Blocks: Select to enroll students into test sessions from an enrollment block.

Student Groups: Select to enroll students into test sessions from a student group.

Course ID

Enter a course ID to select classes by course.

This field is available only when you select *Enrollment in Classes* in the Basis field.

Report Only

Select to do a test run to determine whether the enrollment will be successful. You are able to view and correct any errors that occur with the your defined criteria before processing the actual enrollment.

Process Grade Attributes

Select to process students that have an exempt grade for the test.

Process Repeats

Select to process repeated sessions.

Minimum Value

Enter the minimum grade value that is allowed for repeats.

Maximum Repeats

Enter the maximum number of repeats that are allowed.

Enrollment Basis

Block

Enter the enrollment block from which to enroll students. You can insert as many rows as needed.

This field is available only when you select *Student Enrollment Blocks* in the Basis field.

Class

Enter the class from which you want to enroll students. You can insert as many rows as needed.

This field is available only when you select *Enrollment in Classes* in the Basis field.

Group

Enter the student group from which you want to enroll students. You can insert as many rows as needed.

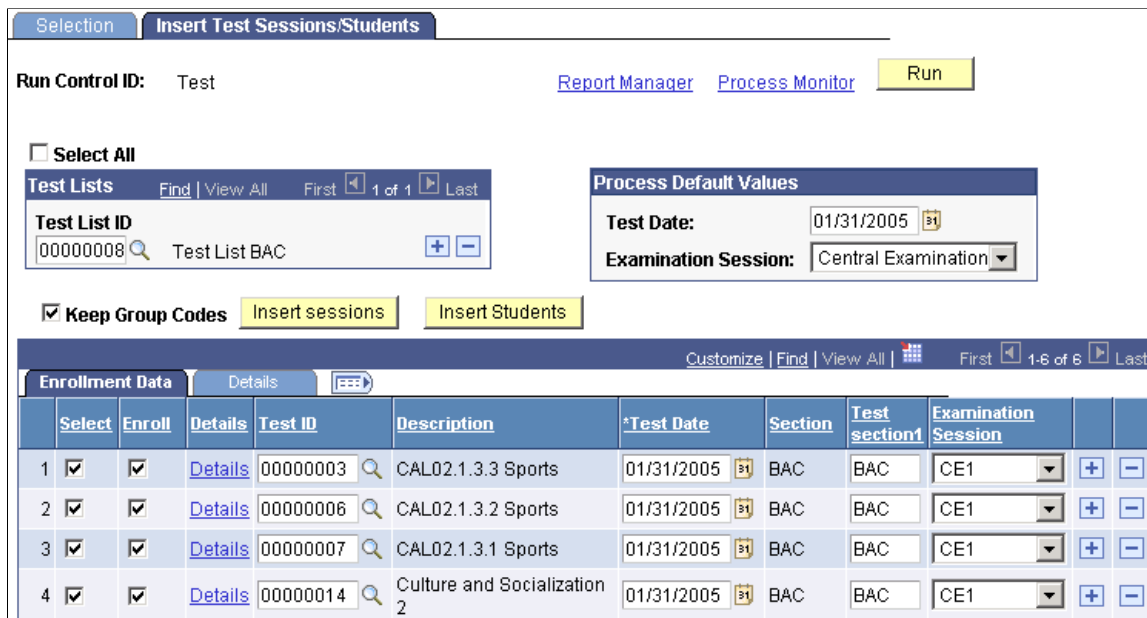

This field is available only when you select *Student Groups* in the Basis field.

Inserting Test Sessions and Students

Access the Insert Test Sessions/Students page (Records and Enrollment > Test Administration NLD > Create Test Sessions > Insert Test Sessions/Students).

Image: Insert Test Sessions/Students page

This example illustrates the fields and controls on the Insert Test Sessions/Students page. You can find definitions for the fields and controls later on this page.

Select All

Select to choose from all test lists that are created for the academic institution and career combination. If this check box is cleared, you can choose only from the test lists that are associated with the course ID entered on the Selection page.

This check box is available only if you selected *Enrollment in Classes* as the enrollment basis on the Selection page.

Test List ID

Enter a test list to generate test sessions for the tests in the list. You can add more than one test list.

You can enroll students into test lists if you selected *Place* or *Both* in the Test List Use field on the Test List Information page.

Keep Group Codes

Select to create test sessions for each test in the test list for every class, group, or block that you entered on the Create Test Sessions - Selection page. For example, if you entered two classes and the test list contains four tests, selecting this check box would generate eight test sessions. If you clear this check box, the system creates one test session for each test in the test list and calls the session *TOT*.

Insert Session

Click to insert test sessions from the test list that you selected.

Insert Students

Click to enroll students from the basis on the Selection page.

Test ID

Enter a test or calculated result ID.

Test Date

Enter a default test date for the test sessions.

Examination Session

Select a default examination session for the test sessions that you create. The values are *Central Examination 1*, *Central Examination 2*, *End Examination 1*, *End Examination 2*, and *School Examination*.

Enrollment Data

Select the Enrollment Data tab.

Select

Select to include this row in the Create Test Sessions process.

Enroll

Select to have the Create Test Sessions process enroll students from this row.

Details

Click to view, add, or delete students from the session, and to view messages about the students' enrollment in the session. The Enroll Student in Tests page appears.

Test ID

When you click the Insert Tests button, the system loads the tests from the test list and supplies the test ID. You can add or delete tests by adding or deleting rows.

Description

The description of the test appears.

Test Date

The test date that is entered in the Process Default Values group box appears. You can change this date here.

Section

This comes from the selection page and is based on the selection in the Enrollment Basis grid.

Test Section1

If the Keep Group Codes check box is selected, the system populates this field with the description of the enrollment basis. If the Keep Group Codes check box is cleared, the system names the section *TOT*; however, you can change it. This value appears in the Test Session pages.

Examination Session

The examination session that is entered in the Process Default Values group box appears. You can change the session if needed. The values are *CE1*, *CE2*, *EN1*, *EN2*, and *SCE*.

Details

Select the Details tab.

Instructor ID

Enter an instructor for the test session.

Facility ID

Enter a facility for the test session.

Meeting Start Time

Enter the time that the meeting is planned to start.

Meeting End Time

Enter the time that the meeting is planned to end.

Maintaining Test Sessions

When you run the Create Test Session process, the system populates the Test Session table. Use the pages in the Test Session component to make any necessary changes to the test sessions details, enroll additional students, and enter grades and comments.

You can also manually create test sessions using the pages in the Test Session component.

This section discusses how to:

- Maintain test session details.
- Enroll additional students.
- Enter grades.
- Enter grade comments.

Pages Used to Maintain Test Sessions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Test Session	SSR_TST_SES1_NLD	Records and Enrollment > Test Administration NLD > Test Sessions > Test Session	View test sessions, or create new sessions. To create a session, select a test ID from the search dialogue page.
Test Sessions - Enroll Students	SSR_TST_SES2_NLD	Records and Enrollment > Test Administration NLD > Test Sessions > Enroll Students	Add students to the test session.
Test Sessions - Grades	SSR_TST_SES3_NLD	Records and Enrollment > Test Administration NLD > Test Sessions > Grades	Enter student grade details.
Test Sessions - Comments	SSR_TST_SES4_NLD	Records and Enrollment > Test Administration NLD > Test Sessions > Comments	Enter comments about the student grades.

Maintaining Test Session Details

Access the Test Session page (Records and Enrollment > Test Administration NLD > Test Sessions > Test Session).

Image: Test Session page

This example illustrates the fields and controls on the Test Session page. You can find definitions for the fields and controls later on this page.

Test Section Enter the test section code. This field is alphanumeric and can be up to 5 characters long.

Test Date Enter the date of the test session.

Examination Session Select the examination type.

Meeting Start Time and Meeting End Time Enter the start and end times for the test session.

Facility ID Enter a facility ID. Facility IDs are defined on the Facility Table page.

See [Defining Buildings, Rooms, and Classroom Facilities](#).

Instructor ID Enter the ID for the instructor facilitating the test session.

Enrolling Additional Students

Access the Test Sessions - Enroll Students page (Records and Enrollment > Test Administration NLD > Test Sessions > Enroll Students).

Basis Select how to enroll students. Values are *Enrollment in Classes*, *Student Enrollment Blocks*, and *Student Groups*.

Class, Block, or Group Enter the enrollment block, class, or student group from which to enroll students for this session.

The name of this field depends on the selection in the Basis field.

Add Students	Click to add students to the test section.
ID	Enter the ID of a student to enroll in the test session.
Grading Basis	Enter the grading basis for this student.

Entering Grades

Access the Test Sessions - Grades page (Records and Enrollment > Test Administration NLD > Test Sessions > Grades).

Present	The system automatically selects this check box.
Official Grade	Enter the grade for the student. Grade values are defined for each grading basis on the Grading Scheme table. See Setting Up Your System for Grading
Grade Attribute	Select a grade attribute. Values are: <i>Diff Qual</i> (different qualification): This grade is received from another institution. <i>Ex Calc</i> (exclude from calculation): This is an exemption without a grade. This grade is not used in the calculation process. <i>Exemption</i> : This grade is based on an exemption. <i>Ex Com Grd</i> (exemption combination grade): Exemption with a specific distinction of Combination Grade. It is managed the same as a grade with an attribute type of <i>Exemption</i> .
No Calculation	Enter a reason for the grade not being used in the calculation process. Values are: <ul style="list-style-type: none"> • <i>No Qual</i> (no qualification or diploma). • <i>Not Rel</i> (not relevant). • <i>Ref Term</i> (reference to other term). • <i>Withdrawn</i>.

Entering Grade Details

Access the Test Sessions - Grades page: Details tab.

Test Score	Enter the score that the student received for the test.
-------------------	---

Units 1 and Units 2	If the grade is sufficient for the student to earn credit, the system populates this field with the credit value that is entered in the course catalog.
Valid Through	If the grade is valid for only a limited amount of time, the system populates this field with the appropriate date based on what is entered in the Grade Valid and Years Valid fields in the test catalog.
School Type	Select whether the school is <i>Day</i> or <i>Night</i> .

Entering Grade Comments

Access the Test Sessions - Comments page (Records and Enrollment > Test Administration NLD > Test Sessions > Comments).

Consolidated	This is selected if the student has completed the program. All grades that are linked to the program through the linked test tree are set to consolidated and you cannot delete or change anything on these grade records.
Complete	This is automatically selected when a grade is entered, when a calculated result is manually entered with a grade attribute, and when a calculated result that satisfies all the requisites is entered by the calculation process. If a grade for a calculated result is entered without an attribute or if a calculated result that does not meet all of the requisites is entered by the calculation process, the check box is cleared.
Frozen	Select this check box if you do not want the calculated result to be removed during the calculation process.
Comments and Additional Comments	Free form text fields exist that can print on reports used by your institution.

Maintaining Test Sessions by Session

The pages in the Maintain Test Session per Sessions component (SSR_TST_PSES_NLD) are the same as in the Test Session component (SSR_TST_SES_NLD) except that the Maintain Test Session per Session component does not have the Session page.

This section discusses how to:

- Enroll students by test session.
- Enter grades.
- Enter comments.

Pages Used to Maintain Test Sessions by Session

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Test Session per Session - Enroll Students	SSR_TST_PSES2_NLD	Records and Enrollment > Test Administration NLD > Test Sessions per Session > Enroll Students	Enroll additional students in the test session.
Test Session per Session - Grades	SSR_TST_PSES3_NLD	Records and Enrollment > Test Administration NLD > Test Sessions per Session > Grades	Enter grade details for each student.
Test Session per Session - Comments	SSR_TST_PSES4_NLD	Records and Enrollment > Test Administration NLD > Test Sessions per Session > Comments	Enter additional grade details and comments for each student.

Enrolling Students by Test Session

Access the Test Sessions per Session - Enroll Students page (Records and Enrollment > Test Administration NLD > Test Sessions per Session > Enroll Students).

The fields on this page are the same as those on the Test Sessions - Enroll Students page.

See [Enrolling Additional Students](#).

Entering Grades

Access the Test Sessions per Session - Grades page (Records and Enrollment > Test Administration NLD > Test Sessions per Session > Grades).

The fields on this page are the same as those on the Test Sessions - Grades page.

See [Enrolling Additional Students](#).

Entering Comments

Access the Test Sessions per Session - Comments page (Records and Enrollment > Test Administration NLD > Test Sessions per Session > Comments).

The fields on this page are the same as those on the Test Sessions - Comments page.

See [Entering Grade Comments](#).

Maintaining Test Sessions by Student

Grades for test sessions can also be entered and viewed by student.

This section discusses how to:

- Maintain test sessions by student.
- Maintain session grades per student.

Pages Used to Maintain Test Sessions by Student

Page Name	Definition Name	Navigation	Usage
Test Sessions per Student	SSR_ST_SES_ADD_NLD	Records and Enrollment > Test Administration NLD > Test Sessions Per Student > Test Sessions per Student	Add test session or enter test session grades for a student.
Student Grades - Test Session	SSR_STD_GRD1_NLD	Records and Enrollment > Test Administration NLD > Student Grades > Test Session	View session enrollment information for a student.
Student Grades - Grade	SSR_STD_GRD2_NLD	Records and Enrollment > Test Administration NLD > Student Grades > Grade	View, add, alter, or delete grades per student.
Student Grades - Comments	SSR_STD_GRD3_NLD	Records and Enrollment > Test Administration NLD > Student Grades > Comments	View, add, alter, or delete grade comments per student.

Maintaining Test Sessions by Student

Access the Test Sessions per Student page (Records and Enrollment > Test Administration NLD > Test Sessions Per Student > Test Sessions per Student).

Image: Test Sessions per Student page

This example illustrates the fields and controls on the Test Sessions per Student page. You can find definitions for the fields and controls later on this page.

Test Sessions per Student

00000001	Social Cultural Education	<input checked="" type="checkbox"/>	GRD <input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>	02/10/2005 <input type="text"/>

Test ID	Enter the test ID in which to enroll the student.
Examination Session	Select an exam session.
Test Date	Enter a test date.
Test Section	Enter a test section.
Search	Click to search for valid test sessions based on any combination of criteria entered in the Add Test Session group box. The Search Test Session page appears.
Add Test Sessions	Click to add the selected test session to the student's list.

Enrollment Data Tab

Access the Test Sessions per Student page - Enrollment Data tab.

The fields on the Enrollment Data tab are the same as those on the Test Sessions - Grades page: Enrollment Data tab.

See [Entering Grades](#).

Details Tab

Access the Test Sessions per Student page: Details tab.

The fields on the Details tab are the same as those on the Test Sessions - Grades page: Details tab and the Test Sessions - Comments page.

See [Entering Grades](#).

See [Entering Grade Comments](#).

Maintaining Session Grades per Student

The pages in the Student Grades component (SSR_STD_GRD_NLD) are similar to the pages that are used to enter grades and comments in the Test Session component (SSR_TST_SES_NLD). The Student Grades component does not have the Enroll Student page, and the fields on the Test Session page are view only.

Linking Test Trees to Students

When an applicant is matriculated, the test trees that are linked to the program are assigned to the student. After a student has been matriculated, you can link additional test trees to the student.

Page Used to Link Test Trees to Students

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Student Test Tree	SSR_STPRG_TREE_NLD	Records and Enrollment > Test Administration NLD > Student Test Tree > Student Test Tree	Link test trees to students.

Linking Test Trees to Students

Access the Student Test Tree page (Records and Enrollment > Test Administration NLD > Student Test Tree > Student Test Tree).

Tree Name Select the tree ID to which the student will be linked.

Tree EffDt (tree effective date) Enter the effective date of the tree.

Maintaining VAVO Course Options

Use the VAVO Course Per Student (SSR_TSTVAVO_NLD) component to specify whether VAVO courses are combination grades or taken at a higher level.

Combination grades are set up as a calculated result for which all possible underlying combination grades have been allocated. However, student exceptions can occur. Use the Student VAVO Course Details page to indicate which courses are part of the overall combination grade calculation for a particular student.

Administrators can also assign higher level course substitutions on this page. Higher level course substitutions offer students the possibility to achieve higher-level course results for specified courses, allowing these students to excel in particular course subjects.

Page Used to Maintain VAVO Course Options

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Student VAVO Course Details	SSR_TSTVAVO_NLD	Records and Enrollment > Test Administration NLD > VAVO Course per Student > Student VAVO Course Details	Enter combination grade courses and/or substitution higher level courses.

Maintaining VAVO Course Options

Access the Student VAVO Course Details page (Records and Enrollment > Test Administration NLD > VAVO Course per Student > Student VAVO Course Details).

Image: Student VAVO Course Details page: Combination Grade or Replaced TST ID tab

This example illustrates the fields and controls on the Student VAVO Course Details page: Combination Grade or Replaced TST ID tab. You can find definitions for the fields and controls later on this page.

3	<input type="text" value="00002171"/> <input type="button" value="Q"/>	430051	VWO	French Lang 1	<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>
4	<input type="text" value="00002278"/> <input type="button" value="Q"/>	400323			<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>
5	<input type="text" value="00002283"/> <input type="button" value="Q"/>	420260	HA	Music	<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>
6	<input type="text" value="00002284"/> <input type="button" value="Q"/>	400341	HA	Science 1	<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>
7	<input type="text" value="00002287"/> <input type="button" value="Q"/>	420181	HA	Chemistry	<input checked="" type="checkbox"/>	<input type="button" value="+"/>	<input type="button" value="-"/>

Test ID Select a test ID for which you want to add a combination grade indication or a higher level substitution course.

Combination Grade Select to indicate that the test ID should count towards an overall combination grade calculated result. If you select this check box, the Calculation process uses the combination grade test result and counts it towards the overall combination grade calculated result set up through the Test Catalog.

Education Level Displays the course education level. Education level is set up for each HEGIS Code that is related to a course (Set up SACR , Foundation Tables, Reporting Codes, HEGIS Code Table).

Select the Enter Higher Level Substitution Courses here tab.

Test ID Higher Level Select a test ID to indicate the substitution course for the combination grade or the replaced test ID. If you select a test ID, the Calculation process uses the grade test result from this test ID and counts it towards the overall calculated result in which this test ID is included. This can be done whether or not the Combination Grade check box is selected for the course.

Calculating Grades and Evaluating Students

After all grades for tests have been entered, the system can calculate the results by student or by program. The calculation process uses a test tree to retrieve test grades, weight values, and attributes.

Evaluations are also run by student or program. Based on information in the Requisite table, the system determines whether the student has passed or not passed. All of the requisites that are linked to the student's assigned test tree are evaluated, and the results per requisite and per requisite line are written to the Results table.

This section provides an overview of the Calculation process and discusses how to:

- Calculate grades per student.
- Calculate grades per program.
- Evaluate results per student.
- Evaluate results per program.

Understanding the Calculation Process

The calculation process:

1. Selects students for whom to calculate grades.
2. Determines whether the student is active in a program.
3. Selects the test tree that is linked to the student and determines whether the tree is valid.
4. Starts the actual calculation process starting with the nodes at the lowest level of the test tree.
5. For each node on the test tree, selects the underlying tests and calculated results.
6. For each node, selects the information from the calculated results with the latest effective date.
7. Determines whether the calculated results already exist for the student. If the calculated result already exists, and *calculate within term only* is not selected, the existing calculated result is deleted.
8. Writes the results to the Results table.

Pages Used to Calculate Cumulative Grades and Evaluate Students

Page Name	Definition Name	Navigation	Usage
Cumulative Grades per Student	SSR_RUNTSTEMPL_NLD	Records and Enrollment > Test Administration NLD > Cumulative Grades per Student > Cumulative Grades per Student	Start the Cumulative Grades per Student SQR process (SRCEMPNL) for specific students.

Basis	Select how the system selects students for the calculation process. The values are <i>Enrollment in Classes</i> , <i>Student Enrollment Blocks</i> , and <i>Student Groups</i> .
Block, Class, and Group	Enter the enrollment block, class, or student group for the system to calculate grades.
Calculate Inactive Student	Select to have the system consider grades for students who are no longer active in the academic career in the calculation process.

Calculating Grades per Program

Access the Cumulative Grades per Program page (Records and Enrollment > Test Administration NLD > Cumulative Grades per Program > Cumulative Grades per Program).

Academic Program	Enter the academic program for the system to calculate grades.
-------------------------	--

Evaluating Results per Student

Access the Evaluation per Student page (Records and Enrollment > Test Administration NLD > Evaluation per Student > Evaluation per Student).

Delete All Students	Click to clear all student rows from this page.
Basis	Select how the system selects students for the evaluation process. The values are <i>Enrollment in Classes</i> , <i>Student Enrollment Blocks</i> , and <i>Student Groups</i> .
Block, Class, and Group	Enter the enrollment block, class, or student group for the system to run the evaluation process.
Add Students	Click to have the system list the students from the selected basis on this page.

Evaluating Results per Program

Access the Evaluation per Program page (Records and Enrollment > Test Administration NLD > Evaluation per Program > Evaluation per Program).

Academic Program	Enter the academic program for the system to run the evaluation process.
-------------------------	--

Viewing and Adjusting Evaluation Results

When the evaluation process is run, the system populates the Adjust Evaluation Results component (SSR_STPRGTR_CR_NLD). Evaluation results can be corrected or changed in this component if necessary.

This section discusses how to:

- View additional details of student evaluation results.
- Approve adjustments.
- Adjust evaluation results.

Pages Used to View and Adjust Evaluation Results

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Result Determination	SSR_STPRG_APPR_NLD	Records and Enrollment > Test Administration NLD > View Evaluation Results > Result Determination	View student evaluation results.
Details Determination	SSR_STDPRAPTST_NLD	Records and Enrollment > Test Administration NLD > View Evaluation Results > Details Determination	View additional details of student evaluation results.
Adjust Approval	SSR_STPRGAPCR_NLD	Records and Enrollment > Test Administration NLD > Adjust Evaluation Results > Adjust Approval	Manually override the outcome of the evaluation process.
Adjust Result	SSR_STDPRAPTCR_NLD	Records and Enrollment > Test Administration NLD > Adjust Evaluation Results > Adjust Result	Indicate whether a correction needs to be made to a requisite line.

Viewing Additional Details of Student Evaluation Results

Access the Details Determination page (Records and Enrollment > Test Administration NLD > View Evaluation Results > Details Determination).

Test ID HigLvl (Test ID Higher Level) Displays the higher level test ID if the lower level test ID has been substituted.

Education Level Displays the education level from the HEGIS code linked to the test ID in the Test Catalog.

Approving Adjustments

Access the Adjust Approval page (Records and Enrollment > Test Administration NLD > Adjust Evaluation Results > Adjust Approval).

Requisite ID The requisite ID for which the student has been evaluated.

Requisites are defined on the Requisites table.

See [Defining Evaluation Rules](#).

Approval Result

If necessary, change the result to either *Passed* or *Not Passed*.

Result Date

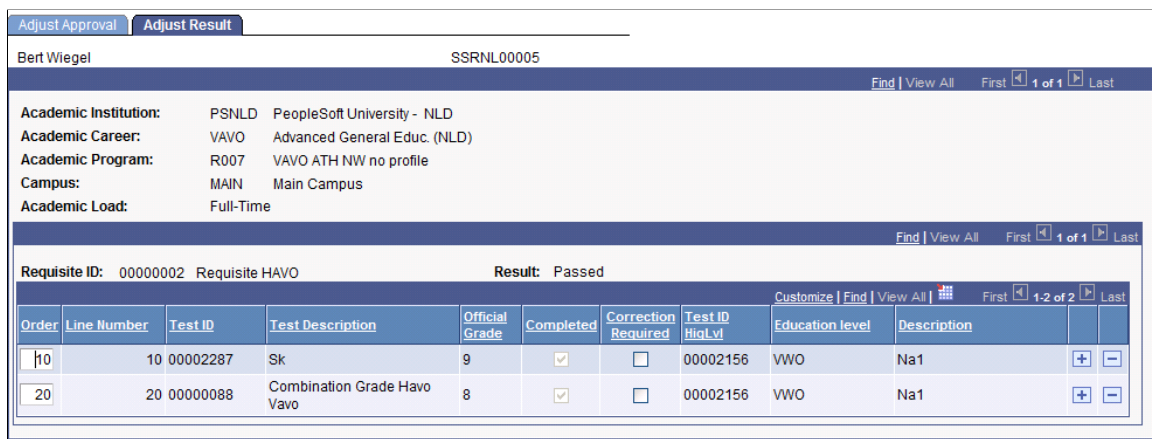

The system populates this field with the date on which the Evaluation process is run.

Adjusting Evaluation Results

Access the Adjust Result page (Records and Enrollment > Test Administration NLD > Adjust Evaluation Results > Adjust Result).

Image: Adjust Result page

This example illustrates the fields and controls on the Adjust Result page. You can find definitions for the fields and controls later on this page.

Order

Enter the requisite line number.

Correction Required

Select if the test ID, official grade, or test ID higher level on this line can be replaced by another test ID.

Reporting Evaluation Data

Evaluation data is used to print diplomas and grade lists. The data is also used as a basis for official reporting to the Dutch government.

This section discusses how to run the appraisal report process.

Page Used to Report Evaluation Data

Page Name	Definition Name	Navigation	Usage
Appraisal Reporting	SSR_RUNAPPRREP_NLD	Records and Enrollment > Test Administration NLD > Appraisal Reporting > Appraisal Reporting	Start the Evaluation Reporting SQR process (SREVRPNL).

Running the Appraisal Report Process

Access the Appraisal Reporting page (Records and Enrollment > Test Administration NLD > Appraisal Reporting > Appraisal Reporting).

ID	Enter the ID for the student.
Academic Program	Enter the academic program.
Tree Name	Enter the name of the test tree name where the evaluation results are stored.
Tree EffDt (tree effective date)	Enter the effective date of the tree.
From Date and To Date	Enter the from and to dates for which the evaluation process was run.
Run Date	The system populates with the date on which the reporting process is run.

Loading and Viewing Grade Data in Test Trees

Load grade data in test trees either by student or by program, and then view the grades within the tree structure.

This section discusses how to:

- Load grade data into test trees by student.
- Load grade data into test trees by program.

Pages Used to Load and View Grade Data in Trees

Page Name	Definition Name	Navigation	Usage
Grades in Tree per Student	SSR_RUNTSTEMPL_NLD	Records and Enrollment > Test Administration NLD > Grades in Tree per Student > Grades in Tree per Student	Select students and run the Grades in Tree per Student SQR process (SRGITENL).
Grades in Tree per Program	SSR_RUN_CALTST_NLD	Records and Enrollment > Test Administration NLD > Grades in Tree per Program > Grades in Tree per Program	Select programs and run the Grades in Tree per Program SQR process (SRGITPNL).
Study Program - Test	SSR_STPRG_TREE_NLD	Records and Enrollment > Test Administration NLD > View Grades in Tree > Study Program - Test	View the test trees that are linked to the student.

Page Name	Definition Name	Navigation	Usage
Grades in Tree	SSR_STTRGRD_NLD	Records and Enrollment > Test Administration NLD > View Grades in Tree > Grades in Tree	View the individual test grades for the student.

Loading Grade Data into Test Trees by Student

Access the Grades in Tree per Student page (Records and Enrollment > Test Administration NLD > Grades in Tree per Student > Grades in Tree per Student).

The fields on this page are the same as the fields on the Cumulative Grades per Student page.

See [Calculating Grades per Student](#).

Loading Grade Data into Test Trees by Program

Access the Grades in Tree per Program page (Records and Enrollment > Test Administration NLD > Grades in Tree per Program > Grades in Tree per Program).

The fields on this page are the same as the fields on the Cumulative Grades per Program page.

See [Calculating Grades per Program](#).

Performing Repeat Checking

Understanding the Three Repeat Checking Methods

The Student Records Repeat Rule Checking process is flexible and robust. Much of repeat checking occurs automatically, without the user seeing it. However, Student Records also enables you to run the Repeat Rule Checking process in batch and manually.

Automatic Repeat Checking

Automatic repeat-checking processing occurs when you:

- Post enrollment requests.
- Post grades using the Enrollment Request page or the Quick Enrollment page.

Repeat checking does *not* occur when you post grades using the Student Enrollment page or the grade roster.

- Post transfer credit.

With automatic repeat-checking processing, you do not have to run a process through the process scheduler to check for repeats (although that is an option). After you perform a little setup, the system runs the process automatically.

Note the slight differences between the automatic repeat-checking processing through enrollment request grade posting and the automatic repeat-checking batch processing following grade posting and transfer credit posting.

When a student attempts to enroll in classes, the Repeat Rule Checking process scans the student's course history for a course ID or equivalent course ID that matches the requested course ID. If the process finds a matching pair, it can do one of three things: issue a warning that repeat codes might apply and that the enrollment might not count towards the student's degree, prevent the enrollment, or ignore the match. Note that the process does not assign repeat codes to the repeated course at this stage.

When you post grades (using the Enrollment Request page) and transfer credit, the Repeat Rule Checking process likewise scans the student's course history for a course ID or equivalent course ID that matches the ID of the course for which you are posting the grade or transfer credit. If the process finds a matching pair, it evaluates each course of the pair based on the repeat rules that you have created. Because the process can no longer prevent enrollment because the student has already taken the class, it assigns a repeat code. The process assigns a violation repeat code to the repeated course when the repeated course causes the student to exceed the total units allowed or total attempts allowed (as defined first on the Repeat Rule 2 page and later for each rule on the Repeat Rule Detail 1 page). Or the process assigns a repeat code to both courses in the matched pair when the repeated course is in violation of a particular repeat rule.

For example, you can set up a rule for the undergraduate career that allows students to repeat twice those courses in which they receive a failing grade. The Repeat Rule Checking process scans the student's

history to identify other instances of this particular course ID or equivalent course ID. When the process finds a repeat and establishes the matched pair, it evaluates the current course to see if it violates the repeat rule's total attempts allowed and total units allowed. If either maximum has been exceeded, the Repeat Rule Checking process assigns a violation repeat code to only the current course in the matched pair. However, if the process determines that the repeat violates any of the established rules, it assigns repeat codes to the matched pair of courses.

Because automatic repeat checking during peak enrollment and grade-posting periods can negatively impact the performance of your system, you can temporarily suspend automatic repeat checking for the entire academic institution on the Academic Institution 5 page, for an academic career on the Repeat Checking page (Academic Career Table component), and for academic programs on the Taxonomy/Campus page (Academic Program Table component).

Automatic repeat checking is optional when processing transfer credit. You set this repeat checking control on the Academic Institution 5 page.

Repeat Checking in Batch

Run the Repeat Rule Checking process in batch through the Repeat Checking page or set up the Process Scheduler to run the process automatically. After grades are posted, you can run repeat checking in batch whenever you want in the term. However, you should not run the batch process more than once per term because codes that have been set in the first run can be inadvertently changed in subsequent runs.

When you use the grade roster to post grades, you must run the batch process to check courses against your repeat rules. The automatic Repeat Rule Checking process runs only when grades are posted using the Enrollment Request page. Therefore, one way to use the repeat checking in batch functionality is to run the batch process after most of your grades have been posted on the grade roster. Then, you can run repeat checking on grade input for individual students whose grades are posted after the batch process has been run.

You can run repeat checking in batch for all students in an entire academic career, for an academic program within an academic career, or for individual students. Repeat checking in batch can also be term-driven, running from a specific term and moving back in time.

Assigning Repeat Codes Manually

You can manually assign repeat codes to a student's record. For special individual cases, you can go into the student's record through the Student Enrollment page, the Quick Enrollment page, or the Enrollment Request page, depending on your security access, and select a value for the Repeat Code field. You can also use this method to change the repeat codes that the automatic process assigned. Assigning repeat codes manually affects academic statistics just as it would if the repeat codes were assigned using the Repeat Rule Checking process.

In addition, repeat rules contain certain exemption conditions. You can set up exemption codes on the Repeat Rule 2 page and manually assign these codes to a specific class on the Student Enrollment 1, Enrollment Request, or Quick Enrollment page. When the Repeat Rule Checking process finds a repeat, and the repeat rule specifies that an exemption exists, the process looks to see whether the repeat code that is exempted is assigned to the student's record.

For example, a repeat rule might demand that a repeat be approved by petition. Thus, an *Approved via Petition* repeat code would be listed as an exemption so that when a student received the approval, you could assign the appropriate repeat code to the student's enrollment record. The Repeat Rule Checking process would identify the enrollment as a repeat, but when it found the exempted repeat code on the current class, it would allow the enrollment. Exemption codes function for both front-end and back-

end repeat check processing, allowing overrides to the total attempts allowed and total units allowed maximums that are established on the Repeat Rule 2 page.

[Understanding Repeat Checking Functionality](#)

Running the Repeat Rule Checking Process in Batch

This section discusses how to run the Repeat Rule Checking process (SRPCERPT) in batch.

Page Used to Run the Repeat Rule Checking Process in Batch

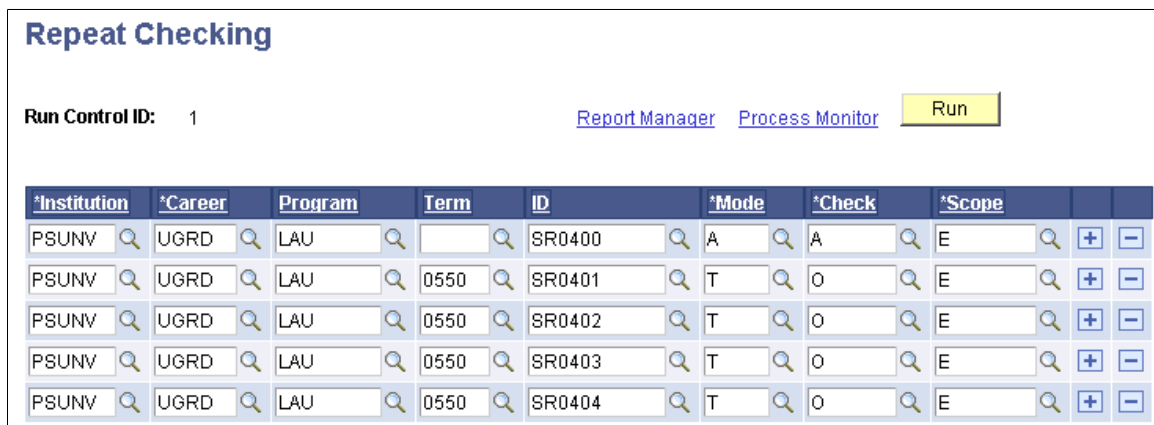

Page Name	Definition Name	Navigation	Usage
Repeat Checking	RUNCTL_SR_RPTRULE	Records and Enrollment > Term Processing > End of Term Processing > Repeat Checking > Repeat Checking	Run the Repeat Rule Checking COBOL/SQL process (SRPCERPT) in batch, or set up the process scheduler to run the process automatically.

Running the Repeat Rule Checking Process in Batch

Access the Repeat Checking page (Records and Enrollment > Term Processing > End of Term Processing > Repeat Checking > Repeat Checking).

Image: Repeat Checking page

This example illustrates the fields and controls on the Repeat Checking page. You can find definitions for the fields and controls later on this page.

Institution Select the academic institution for which you want to run the process.

Career Select the academic career within the academic institution, or the academic career for a particular student, for which you want to run the process. If you do not select an academic program

and ID, the process checks for repeats for every student in this academic career (you can also narrow the search by term).

Program

Select the academic program for which you want to run the process. If you do not select an ID, the process checks for repeats for every student in this primary academic program (you can also narrow the search by term).

Term

Select the term for which you want to run the process. The system uses the start date of the term as the effective date and uses repeat rules that are valid for the term.

ID

If you want to check for repeats for particular students, select an ID. If you do not specify an ID, the process runs on all students in the academic career, primary academic program, and term that you selected.

Mode

From the following choices, select the mode for the repeat process. The system uses the aspect of the student's record that you select.

All/Entire Record: The Repeat Rule Checking process starts at the beginning of the student's record and progresses forward to the current term, considering all courses within the student's record. This mode is ideal for processing over many terms that have never been processed for repeat checking, for example, after converting student data. You should not specify values for the Term field when you run the Repeat Rule Checking process in the *All/Entire Record* mode.

Entire Term: The Repeat Rule Checking process checks for repeats against *only* the student enrollment records within the term that you specify in the Term field. The process starts with the specified term and progresses back in time looking *only* for matches of classes that were taken within the specified term.

The Term field is required when you are running the process in this mode. This is the standard mode to use when running repeat checking in batch at the end of each term.

Note: Keep in mind that when you run the process in the All/Entire Record mode, any previous set repeat codes are subject to be changed.

Check

From the following choices, select which aspects of the student's enrollment records (STDNT_ENRL) the process should check.

All Courses: The process analyzes all student enrollment records within the mode and scope that you select.

Only Repeat Candidates: The process analyzes only those courses in the selected process term for which the repeat

candidate flag on the STDNT_ENRL table is set to *Y*. Courses in prior terms can contain either a *Y* or *N* value.

Scope

From the following choices, select the scope of the process.

All Work for Term: The process considers all of the course work on the student's enrollment records, including course transfer credit.

Student Enrollments Only: The process considers only courses for which the student enrolled through the internal academic institution. Credit received by transfer is not considered.

Transfer/Test Credit: The process considers only course transfer credit.

If you select *All Work for Term* or *Transfer/Test Credit*, the Repeat Checking process assigns repeat codes to transfer credit, whether or not the Process on Transfer Credit check box on the Academic Institution 5 page is selected.

Managing the Schedule of Classes

Understanding the Schedule of Classes

When you first set up your Student Records system, you schedule new courses for the first time. From then on, it is likely that you will roll classes from term to term, add any new courses to your schedule, and if necessary, revise classes that are already scheduled.

Note: After you set up your course schedule for the first time, you can set parameters along the way that command the system to roll, or copy, certain courses from term to term, and you can request that certain verifications are made against a student's record at enrollment request time. After you copy a prior term schedule to a new term, you can use the scheduling feature to move existing courses from time period to time period, to add sections, and so on.

The scheduling features in the Student Records application include the following four components:

1. Schedule of Classes
2. Schedule New Course
3. Schedule Class Meetings
4. Update Sections of a Class

The difference between these components is the view of the classes that you see:

- The Schedule of Classes component displays only those courses that have already been scheduled for a term.

Instead of having to search through the list of all available courses, you can use the schedule of classes component to view just those courses that you have already scheduled.

- The Schedule New Course component displays all courses available to schedule.
- The Schedule Class Meetings component displays individual class sections that have been scheduled.
- The Update Sections of a Class component displays a snapshot summary of section information for a class.

You can use this component to view and make changes to individual class sections so that when you save any changes to a section the system performs the save process faster.

Other features of the class schedule function that we discuss in this section include how you create class associations and student permissions for enrollment. We also move through the "combined sections" functionality so that you get an introduction of the power of the tools, and we review instructor schedules and class meeting patterns. Finally, we explore the facility search capabilities, producing the schedule of classes report, and copying classes from term to term.

Particular setup is required if you use the Classroom Scheduling Interface with a third party scheduling system. Refer to the PeopleSoft Student Records Classroom Scheduling Technical Notes in My Oracle Support (ID 704634.1).

Scheduling New Classes

This section provides an overview of new class scheduling, lists prerequisites, and discusses how to:

- Define basic data for class sections.
- Add class association attributes using the Schedule of Classes component.
- Enter class fee information.
- Define class meeting patterns.
- Define auto enroll options and capacity.
- Define class reserve capacity.
- Link class notes to sections.
- Link exam times to classes.
- Define learning management system (LMS) data for classes.
- Define textbooks for classes.
- Interface class sections with the general ledger.

Understanding New Class Scheduling

Student Records possesses a great feature for easing your data entry in the schedule of classes. The four primary components are: Schedule New Course, Schedule of Classes, Schedule Class Meetings, and Update Sections of a Class. The components are identical, except that their search mechanisms differ.

In the Schedule New Course component you can view *all* courses from the course catalog that can be scheduled. In the Schedule of Classes component you can view *only* those courses that have been scheduled for a term. In the Schedule Class Meetings component you can view the Meetings page, the Enrollment Cntrl (enrollment control) page, and the Exam page, and make edits without accessing the entire class and all of its sections in the schedule of classes. In the Update Sections of a Class component you can view *only* individual class sections of a course that have been scheduled for a term.

We review the Schedule New Course component first, because it is where you begin.

To schedule a class:

1. Define sections, special class fees, topics, attributes, and course administrator information on the Basic Data page.
2. Enter class meeting times, days, facilities, instructors, and room characteristics on the Meetings page.

3. Define class status, capacity, auto enroll, and resection to section numbers on the Enrollment Cntrl page.
4. Define reserve capacity and enrollment requisites on the Reserve Cap (reserve capacity) page.
5. Link notes to class sections on the Notes page.
6. If you are manually scheduling exams for class sections, enter exam information on the Exam page.
7. Define textbook assignments for each class section on the Textbook page.
8. Assign classes (class item types) to specific general ledger accounts on the GL Interface page.

Prerequisites

Before you can schedule a new class, you must:

- Define your academic calendar, repeat rules, and course catalog.
- Define your facility IDs, topic IDs, and your instructor workload assignment types (if applicable).
- Define your reserve capacity enrollment requirement groups (if applicable).
- Define your note numbers (if applicable).
- Define your exam time codes and exam types (if applicable).
- Define your course material type values.
- Define your GL values.

Pages Used to Schedule a Class

Defining Basic Data for Class Sections

Access the Schedule of Classes - Basic Data page (Curriculum Management > Schedule of Classes > Schedule New Course > Basic Data).

Image: Schedule of Classes - Basic Data page

This example illustrates the fields and controls on the Schedule of Classes - Basic Data page. You can find definitions for the fields and controls later on this page.

Auto Create Component

If you click this button, the system automatically creates one component for each of the components that you selected to auto create on the Course Catalog - Components page. The system

populates the pages in the schedule of classes with the required data for each component. This saves you data entry and ensures that one section for each component is scheduled. If you have multiple class sections for each component type, you must still define the remaining class sections manually.

Class Section

For each component that the system creates automatically, enter the class section number. The system defaults into the Class Schedule Entry page the field values of the preexisting class section.

Note: If you have begun to schedule sections of a course and you then click the Auto Create Component button, the process only creates a section for those components that are set to *Auto Create* on the course catalog and have not yet been scheduled.

Session

Enter the type of session to which the class sections of this course offering belong. If you want to schedule open entry/exit class sections, you must define them within an *OEE* session.

Session values are delivered with your system as translate values. You can modify the codes and descriptions of these values except for *OEE*, where you can modify the descriptions only. Any modification to this code requires a substantial programming effort. In order for students to enroll in the *OEE* class sections that you define, you must either define the *OEE* Dynamic Date rule for each class section on the Dynamic Class Dates page or the Course Catalog - Offerings page.

Class Nbr (class number)

The system creates a unique class number identifier that students can use when they enroll in a class. The class number appears on the Schedule of Classes report. The system increments this number automatically, based on the number that you specify on the Term Value page.

Class Section

Enter the class section. It must be unique within course offering and session.

Start/End Date

The system populates this field by default to the start and end dates of the session (as specified on the Session Table page).

You can override the dates for an individual class. The schedule of classes start and end dates can extend beyond the boundaries of the session begin and end dates.

Component

The system populates this field by default to the graded component on the Catalog Data page (such as *Lecture*, *Laboratory*, *Discussion*, and so on) of the course. You can have multiple components and sections within a course offering.

Class Type

The class type of *Enrollment* indicates which section is the primary section at enrollment time. The class type of *Non-Enrollment* is used to indicate that the section choice is the student's secondary enrollment option, or that the section is used

in auto-enrollment. Within a class, only one component can possess the class type of *Enrollment*.

For example, at PSUNV Microbiology 240 has *Lecture*, *Laboratory*, and *Discussion* components. There are 5 lecture, 10 laboratory, and 15 discussion sections. We might select the discussion sections as the *Enrollment* sections, the lecture sections as the *Non-Enrollment* section using auto-enrollment, and the laboratory sections as *Non-Enrollment* sections with a student choice of lab section at enrollment time.

Associated Class

Select an associated class number from the list box, or enter an associated class value of your own. By using associated class numbers, you link class sections that constitute a single course offering. For instance, in our previous example, we'd gather a certain number of lecture, lab, and discussion sections into one associated class number to indicate that the three components are related to one another. If you are scheduling a new section, the system populates the Associated Class field to *1* by default.

When you schedule the first section of a course offering and use the prompt box, the system only displays this default value. You can use a prompt value, or you can manually enter any new one- to four-digit number into the field. Upon saving the page, the system extracts the necessary course data from the course catalog, creates a row in the Class Associations component for this class association number, and populates the row with the appropriate course catalog data. When a student enrolls in a class, the system verifies that the student has enrolled in a section with all required components of the course from within the same associated class number.

If you add a new class associations value to a scheduled class, and you want to make changes to the class association data that the system extracts from the course catalog, you must make your changes on the Class Associations component.

A special associated class number, *9999*, enables you to associate a section with any other section. However, you can only use this associated class number for nongraded components.

Associated Class Attributes

Click to access the Associated Class Attributes page and add class associations attributes.

See [Adding Class Association Attributes Using the Schedule of Classes Component](#)

See [Defining Class Associations](#)

Units

The units value is a related display based on the unit range defined on Class Associations component. When first scheduling a course, the system populates the Associated Class

field to 1 by default. Once the section is saved, the unit value is defaulted from the Course Catalog to the Associated Class and is displayed on the Schedule of Classes. If the class association unit range is modified, the assigned unit value is accurately reflected on the Schedule of Classes.

On subsequent pages within the Schedule of Classes, the unit range is displayed within the Class Sections group box.

Campus

The system populates the Campus field by default from the Course Catalog - Offerings page, indicating the campus that offers the course. You cannot revise this default. If a specific campus was not identified in the course catalog and does not default, then you can, on a section-by-section basis, schedule classes at various campuses.

Note: Because you cannot revise the campus value if one was provided on the course catalog level, it is best if you do not identify a specific campus on the Course Catalog - Offerings page unless absolutely necessary.

Location

Enter the location of the campus. Location values are linked to campuses on the Campus Table page. A campus must be specified before you select a location.

Course Administrator

Select the course administrator ID of the person in charge of the course (usually the primary instructor). This field is informational only.

Academic Organization

The system populates the academic organization by default from the Course Catalog - Offerings page. The academic organization refers to the organization that offers the class. You can override this value.

Academic Group

The system populates the academic group by default from the Course Catalog - Offerings page.

Note: You can define global notes by academic group, which can appear on the Schedule of Classes report. In addition, academic group controls the valid meeting pattern values and their corresponding normal class duration values.

Instruction Mode

The system populates this field by default to *In Person*, but you can override the value. The instruction mode indicates whether the class is taught *In Person* or using *Interactive TV*, *World Wide Web*, *Correspondence*, and so on. Instruction mode values are defined on the Instruction Mode page.

Important! You can generate attendance rosters for only those classes with an instruction mode value of *P*.

Primary Instr Section (primary instructional section)

Enter the primary instructional section number if applicable. This field is specifically used for distance learning classes. You can use this field to indicate in which section the instructor resides. This field is for informational purposes only.

Schedule Print

The setting of this check box populates by default to the setting on the Course Catalog - Offerings page. Select this check box to display the class in the schedule of classes. If you clear this check box, the section does not display in student or visitor class search when accessed through PeopleSoft Campus Self Service. Students can enroll in these classes, but only if they enter the exact class number (without using the class search feature).

Student Specific Permissions

Select this check box to set up student-specific class permissions.

Student-specific permissions enable instructors or administrators to control section enrollment by granting advance add permission to individual students.

Note: This applies only to add permissions. Drop permissions are always student specific, whether or not the check box is selected.

Include in Dynamic Date Calc (include in dynamic date calculation)

Select this check box to include this component of the class section in the Dynamic Class Dates process. The value that you select here populates by default from the corresponding field for the course offering component on the Course Catalog - Components page. For nonprimary components of a course offering, this check box is optional. You can override the default value on a section-by-section basis. For primary components, however, the system automatically selects and makes unavailable this check box because the Dynamic Class Dates process always uses the scheduled class section of the primary component to calculate the landmark dates on a dynamic academic calendar. The process uses for the primary component the value as defined on the Class Associations - Class Components page. If you decide to include additional components of the class section in the Dynamic Class Dates process calculations, the process includes in its calculations the meeting times that fall within the start date and end date range of the primary component.

For example, the lecture section is the primary component. The start and end dates for the lecture are 10 weeks apart, with the lecture meeting every Monday. For the dynamic class date rule, you use a rule scheme for drop dates that is based on the number of class meetings, and that each subsequent class meeting defines the next level drop deadline. If you include only the lecture in the Dynamic Class Date process calculations, the first drop deadline would be the second lecture, the second drop deadline would be the third lecture, and so on. However, you

may also have a discussion component that meets once every Thursday for 10 weeks, starting the same week as the lecture. If you select to also include the discussion in the calculations, the first drop deadline would be the first discussion because it is the second class meeting. The second drop deadline would be the second lecture, the third drop deadline the second discussion, and the final drop deadline the third lecture.

Dynamic Date Calc Required
(dynamic date calculation required)

The system automatically selects this check box whenever you make a change to the class meeting pattern or class dates of a class section within a dynamically dated session because these changes can potentially impact the Dynamic Class Date process calculations. When you run the Dynamic Class Dates process using the Process Scheduler (Dynamic Class Dates page), you have the option to use this field as a parameter.

You can thus, for example, recalculate the landmark academic calendar dates for only the classes in which the class meeting pattern has been changed.

See "Understanding Dynamic Academic Calendars" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See "Creating Dynamic Class Date Rules" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See "Creating Dynamic Academic Calendars by Term" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Generate Class Mtg Attendance
(generate class meeting attendance)

Select this check box to indicate that you want the system to always generate attendance rosters for this class. This value defaults from the Course Catalog - Components page each time that you schedule a new course. By selecting this check box, you flag the class so that when you generate attendance rosters through the Attendance Roster Generator page and you select the Obey Generate Class Mtg Attendance check box, the generator creates attendance rosters only for classes that have this flag selected and that meet your processing criteria. If you clear this check box on the Attendance Roster Generator page, the system generates attendance rosters for all classes that meet your processing criteria, regardless of the check box setting on the Basic Data page. You can generate attendance rosters through the Class Attendance page regardless of this check box value.

GL Interface Required

Select this check box to include this class in the GL Interface process. If you select this check box, you must enter the necessary data into the GL Interface page of this component.

Add Fee

To add a class section fee, you must click the Add Fee button for each new class section.

Class Topic

Course Topic ID

Enter a course topic ID to link course topics to class sections. Select a topic ID for the section. Topic ID values are defined on the Catalog Data page. Additionally, you can also attach topics to specific class meeting patterns.

Print Topic in Schedule

If you enter a topic ID, this check box becomes available for entry. The system selects this check box by default. You can change the setting.

Note: In order for the topic to appear on the transcript, you must select the Print Course Topic check box on the Transcript Type - Enrollment/Statistics page.

Equivalent Course Group

Course Equivalent Course Group

If the course is linked to an equivalent course group on the Catalog Data page, the system displays that information in this field and the Override Equivalent Course check box becomes available for entry.

Override Equivalent Course

Select to override the Catalog Data setting for this class section.

Class Equivalent Course Group

Enter another equivalent course group for the class section in this field.

Class Attributes

Course Attributes and Course Attribute Value

Use the Course Attributes field to link attributes to class sections. The system populates this field and the related course attribute values from the course catalog. You can override or amend these values. Values for course attributes are defined on the Catalog Data page.

Note: Course attributes are used primarily for institutional research and reporting purposes and to print repetitive text in the course catalog and schedule of classes. Course attributes are not used by the Academic Advisement application.

Adding Class Association Attributes Using the Schedule of Classes Component

Access the Associated Class Attributes page (click the Associated Class Attributes link on the Basic Data page).

Image: Associated Class Attributes page

This example illustrates the fields and controls on the Associated Class Attributes page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Associated Class Attributes' page. At the top, there is a summary of course information:

Course ID:	666880	Course Offering Nbr:	1	
Academic Institution:	PSUNV	PeopleSoft University	Class Section:	2
Term:	0690	2012 Fall	Session:	Regular
Subject Area:	ECON	Economics	Associated Class:	2
Catalog Nbr:	113	Latin America		

Below this is a table with the following columns: Find, First, 1-2 of 2, Last. The table contains two rows of attributes:

*Attribute	Value	Description
Student Language	SP	Spanish
Student Shift	1	First Shift

Use this page to add Class Association attributes as you add new class sections or maintain existing class sections.

Attribute

The name of the attribute. This value comes from the description of the attribute on the Common Attribute component.

Value

This field changes depending on the type of attribute. This could be a numeric, date, time or text field. Alternatively, the field could prompt against a list of values if one has been defined for the attribute.

See [Defining Class Associations](#)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entering Class Fee Information

Access the Class Fees Modal page (click the Add Fee button on the Schedule of Classes - Basic Data page).

Enter the charge method for the component of the class. These values are set up in PeopleSoft Student Financials tables.

The check box options enable you to specify when the system charges fees.

Class Sub Fees Modal

Access the Class Sub Fees Modal page (click the Add Fee button on the Schedule of Classes - Basic Data page).

Enter the details of the course fee in this page. You are prompted from tables set up in the Student Financials application.

See "Defining Class Fees" (PeopleSoft Campus Solutions 9.2: Student Financials).

Defining Class Meeting Patterns

Access the Schedule of Classes - Meetings page (Curriculum Management > Schedule of Classes > Schedule New Course > Meetings).

Image: Schedule of Classes - Meetings page

This example illustrates the fields and controls on the Schedule of Classes - Meetings page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Schedule of Classes - Meetings' page with the following sections and data:

- Course Information:** Course ID: 003300, Academic Institution: PeopleSoft University, Term: 2014 Spring, Subject Area: ENGLIT, Catalog Nbr: 263, Course Offering Nbr: 1, Undergrad, English Literature, Lit and History.
- Class Sections:** Session: 1, Regular Academic Session, Class Nbr: 1095, Class Section: 1, Component: Lecture, Event ID: , Associated Class: 1, Units: 3.00.
- Meeting Pattern:** Facility ID: KING100, Capacity: 50, Pat: TR, Mtg Start: 8:00AM, Mtg End: 9:20AM, M: [], T: [x], W: [x], T: [], F: [], S: [], S: [], *Start/End Date: 24/01/2014 to 08/05/2014. Includes fields for Topic ID, Free Format Topic, and Print Topic On Transcript.
- Instructors For Meeting Pattern:** Table with columns: ID, Name, *Instructor Role, Print, Access, Contact, Empl Rcd#, Job Code. Row: SR12101, Litman, Edward, Prim Ins, [x], Post, [], 0, 420025.
- Room Characteristics:** Table with columns: *Room Characteristic, *Quantity. Row: [], 1.
- Academic Shift:** Table with columns: Academic Shift. Row: EVENING, Evening Shift.

Note: For institutions that schedule large numbers of sections of a class and have facility conflict check activated, use the Schedule Class Meetings component to schedule facility and meeting pattern information. Because the system only performs edit checks on an individual class section (rather than for all the sections of the class), you benefit from faster performance. To use the Schedule Class Meetings component to schedule facility and meeting pattern information, enter all information for the class, except facility and meeting pattern in the Schedule of Classes or Schedule New Course components. Then go to the Schedule Class Meetings component, enter the subject and catalog number for the class, select the first section, and then update the facility/meeting pattern information one section at a time, using the Next in List button on the tool bar to scroll through all the sections for the course. Multiple views of this page are available by clicking the tabs in the scroll area. We document fields common to all views first.

Common Page Information

Event ID	The system creates a unique event ID record in the Event table when you schedule a class with a meeting pattern and facility ID. The Event table is used to record class and non-class events for room scheduling.
Facility ID	Enter a facility ID for the class. Facility values are defined on the Facility Table page.
Capacity	The system populates this field by default to the setting on the Facility Table page.
Pat (pattern)	Enter the class meeting pattern. Meeting patterns associated with the academic group for the class are available. Meeting pattern values are defined on the Academic Group Table - Standard Meeting Pattern page.

Note: It is important that you enter the most important meeting pattern first. In some places in the system when viewing classes you can only see the meeting pattern which was entered first. Also, the system assigns a final exam code based on the first class meeting pattern.

Mtg Start (meeting start) and Mtg End (meeting end)	Enter the class meeting start and end times. The system defaults an end time after you enter a start time, based on the default Normal Class Duration set on the Academic Group table - Standard Meeting Pattern page.
M (Monday), T (Tuesday), W (Wednesday), T (Thursday), F (Friday), S (Saturday), and S (Sunday)	The system populates the meetings days by default based on what you enter in the Pat field.
Start/End Date	For the first meeting, the system populates these fields to the start and end date from the Session table. For all subsequent meetings you add, the system populates this field to the start and end dates on the Basic Data page. The meeting start and end dates must be assigned within the start and end date range assigned to the class on the Basic Data page.

Topic ID	Select a class topic ID for this class meeting pattern. For example, at PSUNV, ENGLLIT 299 meets on MWF and TTH. The MWF class covers "The Mystery Genre," while the TTH class covers "British Influence on US Writers." You can also link class topics to entire classes on the Basic Data page. Topic IDs are defined on the Catalog Data page.
Free Format Topic	Enter a free format topic if a predefined topic ID is not suitable. For example, if a professor wants to teach ENGLLIT 299 as "19 th Century Novelists," but the topic had not been set up as a topic ID, you could enter it as a free format topic. You can only link free format topics to class meeting patterns.
	<hr/> Note: You cannot assign class meeting pattern topic IDs to combined sections. This would cause data integrity problems. For this reason, after sections are combined, the system makes the Topic ID field unavailable on the Meetings page. Instead, only assign free format topics to combined sections. In addition, if you combine sections that already have class meeting pattern topic IDs assigned to them, the system deletes the topic IDs. <hr/>
	See Creating Combined Sections .
Print Topic On Transcript	Select this check box to allow course topics to appear on the advisement report. Course topics defined at the class meeting pattern must have this check box selected, as well as the Display Topics in AA Reports check box on the Transcript Type - Basic Data page, for the class meeting topic to appear. See Designating Enrollment and Statistics Data .
	<hr/> Note: Selecting this check box allows the class meeting pattern topic to be printed on both transcripts and advisement reports. To allow the topic to print on only one of the reports, correctly set the option to print topics on the transcript type for each report type. <hr/>
Contact Hours	Click to access the Instructor Contact Hours page, where you can review total course contact hours, weeks of instruction, and other contact hours information.
Course Contact Hours	Derived from the course catalog.
Weeks of Instruction	Derived from the Session table.
Total	Equals the course contact hours multiplied by the weeks of instruction.
Total Course Contact Hours (Actual)	Calculated from the class meeting pattern. Equals the sum of the end time minus the start time for every meeting date, excluding

holidays. The system only calculates this value for the graded component if a facility is booked for the class.

Combined Section

Click to access the Combined Section Detail page, where you can view all of the classes in the combined section. This link only appears for combined classes.

Note: After you combine classes, you must perform updates to meeting pattern and instructor information through the Schedule Class Meetings - Meetings page. Within the Schedule of Classes and Schedule New Course components, the facility/meeting pattern and instructor information is unavailable for entry for combined sections.

Assignments Tab

See the Meetings page exhibit for a view of this tab.

ID

Enter the ID of the instructor for the course. The system prompts you from the Personal Data view or one of seven Instructor/Advisor views. The prompt values depend on:

- The Edit Instructor Against option and the Assign Instructor By check box that your institution selects on the Academic Organization Table page for the academic organization to which this class belongs.
- The Edit Instructor Against option and the Assign Instructor By check box that your institution selects on the Academic Organization Table page for the academic organization to which this class belongs.

You can associate one or more instructors with each meeting pattern. The system carries forward the instructor ID from the previous meeting pattern when you add a new meeting pattern. Override the instructor ID if necessary.

Note: In order to accommodate the Instructor Workload feature, a single instructor may be assigned to more than one row, although this may not be common practice. For example, you may want to assign instructor A to teach 50 percent load factor with an assignment type of Internet, and another 50 percent load factor with an assignment type of *In Class Lecture*.

See [Walking Through Instructor Workload](#)

Instructor Role

Enter the instructor role for the corresponding ID number.

Values for this field are delivered with your system as translate values. You can modify these values. Insert rows to add multiple instructors and their corresponding instructor roles.

Note: For independent study courses for which the student can select one of several instructors, assign multiple instructors the *Primary* instructor role. If you select an Instructor Edit field value of *Class Instructor Edit* on the Class Associations page, only the primary instructors defined for the class on the Meetings page display on the Enrollment Request page during enrollment.

Print

Select to display the instructor's name on the Schedule of Classes report. The system populates this check box by default to the setting on the Course Catalog - Offerings page.

Access

Enter the grade roster access for this instructor. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. The values work in hierarchical fashion:

Approve: Instructor can enter grades and approve the grade roster.

Grade: Instructor can only enter grades for the class.

Post: Instructor can enter grades, approve the roster, and post the grades.

Contact

The values you enter in this field have no impact elsewhere in the system. The Contact field on this page has no programming tied to it, and does not relate to the delivered Instructor Workload feature in any way.

Empl Rcd# (employee record number)

Relates job information to instructors for reporting purposes. In addition, the system displays a warning message if the FULL_PART_TIME value on the job does not coincide with the same field value on the instructor assignment class record related to the instructor assignment class on the Term Workload page.

Job Code

Displays the value specified on the Accommodations page for a particular employee record.

Workload Tab

Select the Workload tab.

Assign Type (assignment type)

Appears on this page if the Calculate Workload check box is selected on the Academic Institution 4 page. The system populates the field by default from the Academic Institution 4 page and can be overridden. Only those assignment types current as of the term begin date and with the View on Schedule of Classes check box selected are available.

App Load (apply load)

Appears on this page if the Calculate Workload check box is selected on the Academic Institution 4 page. The check box

indicates whether the assignment counts toward an individual's total term full time equivalent (FTE) percentage. The field corresponds to the Include Assignment in Workload check box on the Assignment Type page and cannot be overridden. The only way to change the setting of this check box is to select a different assignment type.

Load Factor

If desired, you can use this field to divide one course component into multiple assignments across instructors. Inserting multiple rows per course component and assigning each one a load factor (percent) enables you to divide a component into different assignment types among instructors. For example, you can assign instructor A to teach 30 percent of the lecture component, and instructor B to teach 70 percent of the lecture component. It is your responsibility to set the load factor. The total load factor on one course component should equal 100 percent. The system displays a soft warning message if the total does not equal 100 percent.

Work Load

In order to provide maximum ease in assigning workload hours to individuals, the system auto calculates default workload hours when you schedule classes. The system bases calculations on the academic progress units or course component workload hours for the class (set up on the class association and class component pages), multipliers both per subject/component and per instructor, and load factor. The Work Load field stores the resultant workload hours.

Manual modifications to work load hours are enabled and effect the Assigned FTE%.

See [Course Component Workload Hours Formula](#).

Auto Calc (automatic calculation)

Appears on this page if the Calculate Workload check box is selected on the Academic Institution 4 page. Select this check box if you want to have the workload value recalculated any time the user manually updates assignment type or load factor. The default is selected.

Note: Manually entering a value in the Work Load field clears the Auto Calc check box so that the manual entry is not overridden automatically if you change the assignment type or load factor. You can select the Auto Calc check box again; however, doing so recalculates workload.

Assignment FTE% (assignment full time equivalency percentage)

Appears on this page if the Calculate Workload check box is selected on the Academic Institution 4 page. This value represents the particular assignment's weight based on the 100 percent weekly workload hours or the 100 percent OEE workload hours for the assignment type. For example, if the assignment type *Lecture* has 100% weekly workload hours set to 15, and you assign an instructor to teach a 3 hour lecture

component with an assignment type of Lecture, the assignment FTE % is 20 (because 3 hours out of 15 makes 20%).

It is calculated and cannot be modified by the user.

Room Characteristics

Room Characteristic and Quantity Use the Room Characteristic field to link room characteristics to classes. The system populates the Room Characteristic field and the Quantity field from the Course Catalog - Components page. You can override these values. The Room Characteristic field is used for interfacing to the Universal Algorithm's product, Schedule25. The maximum quantity of room characteristics for Schedule25 is 96. Therefore, be sure that you select values between 01 and 96.

Academic Shift

Academic Shift Select an academic shift (for example, Evening Shift) for a class section.

See [Defining Class Search Result Options](#)

See "Defining Academic Shifts" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See "Setting Additional Institution Defaults and Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See [Maintaining Student Academic Programs](#)

Defining Auto Enroll Options and Capacity

Access the Schedule of Classes - Enrollment Cntrl page (Curriculum Management > Schedule of Classes > Schedule New Course > Enrollment Cntrl).

Image: Schedule of Classes - Enrollment Cntrl page

This example illustrates the fields and controls on the Schedule of Classes - Enrollment Cntrl page. You can find definitions for the fields and controls later on this page.

Basic Data	Meetings	Enrollment Cntrl	Reserve Cap	Notes	Exam	LMS Data	Textbook	GL Interface
Course ID:	007129	Course Offering Nbr:	1					
Academic Institution:	PeopleSoft University							
Term:	2010 Spring	Undergrad						
Subject Area:	HISTORY	History						
Catalog Nbr:	100	Perspectives on the Present						
Enrollment Control Find View All First 1 of 3 Last								
Session:	1	Regular Academic Session	Class Nbr:	2774				
Class Section:	1	Component: Lecture	Event ID:	000021918				
Associated Class:	1	Units: 3.00						
Class Status:	Active <input type="button" value="Cancel Class"/>							
Class Type:	Enrollment	Enrollment Status:	Open					
Add Consent:	No Consent <input type="button" value="Cancel Class"/>	Requested Room Capacity:	35	Total				
Drop Consent:	No Consent <input type="button" value="Cancel Class"/>	Enrollment Capacity:	35	0				
1st Auto Enroll Section:	<input type="text"/>	Wait List Capacity:	<input type="text"/>	0				
2nd Auto Enroll Section:	<input type="text"/>	Minimum Enrollment Nbr:	<input type="text"/>					
Resection to Section:	<input type="text"/>							
<input checked="" type="checkbox"/> Auto Enroll from Wait List		<input type="checkbox"/> Cancel if Student Enrolled						

Class Status

The system populates this field to *Active* by default. Class status values are delivered with your system as translate values. You can override the status to indicate *Stop Further Enrollment*, *Cancelled Section*, or *Tentative Section*. The Schedule of Classes report enables you to select class status, so that you can print only *Active* classes, or only *Inactive* classes, and so on.

Note: When you select *Stop Further Enrollment*, *Cancelled Section*, or *Tentative Section*, the system sets enrollment status to closed. Classes with class statuses of *Stop Further Enrollment*, *Cancelled Section*, or *Tentative Section* do not appear in class search.

The class status of *Active* has coding attached to it and should not be deleted from the translate table. You can add as many new class status values to the translate table as you want, but they will not have coding attached to them.

Cancel Class

Click to cancel the class in view. The class status must be *Canceled Section*. The button processes one section cancellation at a time. If you want to cancel multiple sections, you must post your request for each section that you want to cancel.

Warning! If you want to cancel the section regardless of whether students are enrolled, you must select the Cancel if Student Enrolled check box. Doing so, however, drops any students who are enrolled in the section and requires that you recalculate tuition for those students.

Add Consent and Drop Consent

Values default from the Catalog Data page and indicate the type of consent, if any, that is required to enroll in or drop the class. You can override these values.

If you select *Instructor* or *Department*, consent is granted either by a permission number or a student specific permission. (Drop permissions are always student specific). The consent requirement can also be overridden during the enrollment process, by selecting the permission override.

Auto Enroll from Wait List

This check box is unavailable for open entry - open exit (OEE) classes (classes tied to an OEE session). Select to enable the COBOL/SQL Wait List process (SRCPWAIT) to move students from the wait list to enrolled status when a space opens up in the section. Spaces become available through enrollment drops or an enrollment capacity increase. Generally, when spaces become available in a section, the class status opens, allowing students to enroll. However, selecting this check box keeps the status closed so that you have time to move students from the wait list into the class by running the wait list process (before other students enroll).

If you do not select the Auto Enroll from Wait List check box and you have students on the wait list for the class, when the class status changes to open you cannot use the wait list process to move students from the wait list into the class.

You have to move wait listed students into the class manually, and students that are not on the wait list can enroll in the class.

See [Moving Students from Wait Lists to Enrollment](#).

Note: "Enrollment" sections can only auto-enroll "non-enrollment" sections.

1st Auto Enroll Section and 2nd Auto Enroll Section

Enter a section within the same associated class number in which the system should automatically enroll students into the 1st Auto Enroll Section and 2nd Auto Enroll section. The auto enroll section must have a different component from the parent section.

Resection to Section

Enter the alternative section in which the system automatically enrolls a student if the primary section is full.

The component of the primary section and the resection to section class must be the same. For instance, when Section

1 Lecture is filled, the system enrolls students in Section 3 Lecture.

Cancel if Student Enrolled

Select for the system to process a request for a canceled class section regardless of whether students have already enrolled in the section. If you do not select this check box and you attempt to cancel a section in which students have enrolled, the system prevents you from posting the change, keeping the class status active. Thus, by leaving the box cleared you prevent inadvertently canceling a section in which students are enrolled.

Requested Room Capacity

Enter the requested room capacity for the class. Your room capacity can be different than your enrollment capacity. Because the system stores two separate capacity values, this field enables you to manipulate the enrollment capacity without affecting room scheduling. The system populates the Requested Room Capacity field by default from the default section size on the Course Catalog - Components page. This field is useful for you especially if you use Universal Algorithm's Schedule25 software.

For more information about the interface between Universal Algorithm's Schedule25 software and PeopleSoft Campus Solutions, see your Schedule25 documentation.

Enrollment Capacity

The system populates the enrollment capacity by default from the default section size on the Course Catalog - Components page.

Wait List Capacity

Enter the wait list capacity for the section to indicate the maximum number of students you want to allow to wait list for the class.

Minimum Enrollment Nbr
(minimum enrollment number)

Enter the minimum enrollment number in order for the section to be offered. If the minimum enrollment number is not realized you might decide to cancel the section. This field is for informational purposes only.

Total

The system displays the current total of students enrolled and on the wait list for the section.

Combined Section

Click to access the Combined Section Detail page, where you can view all of the classes in the combined section. This link only appears for combined classes.

Note: After you combine classes, you must perform updates to meeting pattern and instructor information through the Schedule Class Meetings - Meetings page. Within the Schedule of Classes and Schedule New Course components, the facility/meeting pattern and instructor information is unavailable for entry for combined sections.

Defining Class Reserve Capacity

Access the Reserve Cap page (Curriculum Management > Schedule of Classes > Schedule New Course > Reserve Cap).

Image: Schedule of Classes – Reserve Cap page

This example illustrates the fields and controls on the Schedule of Classes – Reserve Cap page. You can find definitions for the fields and controls later on this page.

Reserve Capacity Sequence

The system creates the reserve capacity sequence number indicating the order in which it evaluates the sets of requirement groups during enrollment. You can change this number. If you want to set up more than one requirement group for more than one start date, you must set up each one under its own sequence number. This is important to note because the system does not combine total cap enrollment values within the same reserve capacity sequence. Instead, the system selects and uses only one requirement group per reserve capacity sequence—the one that has the most current effective date.

Enrollment Total

The total number of students enrolled as part of the reserve capacity sequence.

Start Date and Requirement Group

Enter the effective date for your reserve capacity. This date determines when the enrollment capacity requirement group becomes active. If you enter a subsequent row within the same reserve capacity sequence number, the system references the row with the current effective date and this row overrides all others within the sequence.

Select the requirement group for the reserve capacity. Values for requirement groups are defined through the Enrollment Requirement Group component. Students who attempt to enroll in the class and who satisfy the reserve capacity requirement group that you specify can enroll in the class up to the Cap

Enrl value, (as long as the enrollment does not exceed the total enrollment capacity that you specify on the Enrollment Control page).

In order to set various enrollment capacities, or to discontinue the reserve capacity as of a certain date, you can add rows for the same requirement group with a later effective date. For example, if you want to change a reserve capacity for a class on a specific date, you can add a second row to the sequence with a Start Date value equal to the expiration date, and enter a new enrollment capacity for the row.

You can also use this method to *expire* reserve capacities (instead of deleting the reserve capacity sequence and losing your historical data). Under the same reserve capacity sequence, insert a new effective-dated row with the date that you want the reserve capacity to expire, then enter the same requirement group number and set the enrollment capacity to 0.

Warning! If you expire (set to 0) the Cap Enrl field value for any reserve capacity sequence row within the section, the system inactivates all reserve capacity sequence values for the section.

Cap Enrl (capacity enrollment)

The maximum number of seats that you want to reserve for students who satisfy the requirement group parameters. The system combines the values of the most recent row of each requirement group.

The system does not combine this value with other capacity enrollment values within the same sequence number unless the requirement group is different. Otherwise, the system only combines the most current row for each reserve capacity sequence.

Related Links

[Understanding Enrollment Requisite Setup and Maintenance](#)

[Defining Enrollment Requirement Groups](#)

Linking Class Notes to Sections

Access the Schedule of Classes - Notes page (Curriculum Management > Schedule of Classes > Schedule New Course > Notes).

Sequence Number

The system creates a class notes sequence number. The number determines the display order of the class notes for a section if multiple notes exist. You can override this number.

Print Location

Enter the print location of the note, either *Before* the class listing, or *After* it.

Even if Class Not in Schedule

This check box has no programming tied to it.

Note Number

Enter a note number to reference a preexisting note. The note's description appears adjacent to the note number. Note number values are defined on the Class Notes Table page.

Free Format Text

Enter a free format text note.

Copy Note

Click to copy the note number text to the free format text. The note can then be modified to accommodate the class section. This eliminates the note number and note text.

Clear Note

Click to clear the free format text.

Related Links

[Defining Class Notes](#)

Linking Exam Times to Classes

Access the Exam page (Curriculum Management > Schedule of Classes > Schedule New Course > Exam).

Image: Schedule of Classes – Exam page

This example illustrates the fields and controls on the Schedule of Classes – Exam page. You can find definitions for the fields and controls later on this page.

Exam Seat Spacing

If you indicate that a final exam will occur on the Course Catalog - Components page, the system populates the Exam Seat Spacing field by default from that page. It indicates the number of seats between students during the final exam and is for informational purposes only. You can override this number.

Exam Time Code

By entering a predefined exam time code, you save yourself some data entry time for the exam date, time, and facility values. Exam time values are defined on the Exam Code Table page.

Combined Exam

Select to indicate that this exam can share a facility with another exam.

Note: Time and facility conflicts with other events, such as regular class meetings, are not permitted—the system performs conflict checking for these.

If you do not select the Combined Exam check box, the system verifies that no conflicts exist in room and time period scheduling. The stated room and time period is used for only one class exam.

Exam Date, Exam Start, Exam End, Class Exam Type, and Facility ID

If you do not select an exam time code, you can enter values in the Exam Date, Exam Start, Exam End, Class Exam Type, and Facility ID fields. The system performs facility conflict checking when you save the page.

Defining LMS Data for Classes

Access the LMS Data page ((Curriculum Management > Schedule of Classes > Schedule New Course > LMS Data).

Image: Schedule of Classes – LMS Data page

This example illustrates the fields and controls on the Schedule of Classes – LMS Data page. You can find definitions for the fields and controls later on this page.

Provider for Authentication

If your institution utilizes the learning management systems feature with self-service user authentication, enter the LMS Authentication Provider. The provider for authentication appears by default according to the provider assigned on the Components page in the Course Catalog component. For instances in which the Components page has no Provider for Authentication, the system uses the setting on the Academic Institution 3 page. The LMS Authentication is designed to be used with the XML V1.1 LMS Extract File Type. Providers are defined on LMS Provider Setup page.

PeopleSoft Campus Self Service provides a direct link for enrolled students and the instructor to the third-party web site for classes assigned an LMS Authentication Provider.

LMS Extract File Type (learning management system file type)

If your institution utilizes the learning management systems feature, enter the LMS file type that you use as your interface. The file type defaults according to the LMS file type on the Course Catalog - Components page. In instances where the Course Catalog - Components page has no LMS File Type, the system uses the setting on the Academic Institution 3 page.

Values are *XML V1.1*, *Blackboard CourseInfo 4*, and *API Input Format*. WebCT Campus Edition and Vista both support XML V1.1.

LMS Extract Group ID (learning management system group ID)

When you select an LMS file type, the LMS Group ID field populates automatically to academic institution, subject area, catalog number, and section number. For the XML file type, values are separated by dashes, such as TERM-INSTITUTION-SUBJECT-CATALOG NBR-SEC#. For authentication to work as designed, do not edit this entry. For XML extracts, at runtime, the system always appends "term-" to the beginning of the string and "-class number" at the end of the string.

LMS URL (learning management system URL)

If you are using a provider for authentication, do not enter an LMS URL. If you do not want to use LMS authentication, but want to link students enrolled in a class to a designated URL such as an instructor's website, you can specify the website in the LMS URL field. The URL must be preceded by the http:// designation.

Last LMS Class Extract Datetm (class extract date/time)

This field is empty when you first schedule a class, and it automatically populates with a date and time when you extract class data. In addition, the LMS extract process uses this field to distinguish between *Snapshot* and *Update* data. Presence of this date means that a class is "ignored" by the extract process if run in update mode and the record is not new or no changes to the class have taken place. No date means that the class is extracted for the LMS update extract and the date is updated to the run date.

Last LMS Enrol Extract Datetm
(enrollment extract date/time)

This field is empty when you first schedule a class, and it automatically populates with a date and time value when you extract membership data. In addition, the LMS extract process uses this field to distinguish between *Snapshot* and *Update* data. Presence of this date means that enrollment data is "ignored" by the extract process if run in update mode, and the record is not new or no changes have taken place to enrollment status, grading basis, or grade. No date means that enrollment data is extracted for the LMS update extract and the date is updated to the run date.

Note: Currently, the system passes all classes individually to the LMS at the component level, including those that comprise a combined section. Combined section data is provided within the XML extract.

Defining Textbooks for Classes

Access the Schedule of Classes – Textbook page (Curriculum Management > Schedule of Classes > Schedule New Course > Textbook).

Image: Schedule of Classes – Textbook page

This example illustrates the fields and controls on the Schedule of Classes – Textbook page. You can find definitions for the fields and controls later on this page.

Special Instructions
Additional articles will be assigned throughout the term and will be available in the History dept office

Note: Course materials entered on this page appear on the Class Detail page and on the Faculty and Student Textbook Summary pages. When the Textbook Assignment Status is *Pending*, the data is available only on administrative, Instructor and Advisor pages. Students and visitors receive a message: *Textbooks to be determined*. When the Textbook Assignment Status is *Textbook entry complete*, the data is then available to students and visitors.

Textbook Assignment Status

Select Pending to indicate that the textbook data that you are entering for the class is not final.

The system displays pending textbook information to administrators, instructors and advisors only. Students and visitors cannot view pending textbook information. They receive a message: *Textbooks to be determined*.

Pending is selected by default.

Select Textbook entry complete after you complete entering textbook assignments. This option indicates that the textbook data is final. When you select this option, the textbook data is available to all users, including students and visitors.

No textbooks assigned to class

Select this check box if no textbooks are to be assigned to the class section, for example, no textbooks are required for MUSIC 398, Individual Instruction. The Textbook Assignment Status must be set to Textbook entry complete, in order for students to view the message: *No textbooks required for this class*.

Copy Textbooks

Click this button to copy the textbook and special instructions from another class to the current class. The copied assignments replace any existing assignments and special instructions for the current class.

Course Materials

Select the Course Materials tab (view this tab in the previous example of the Textbook page).

Course Material Type

For each course material assignment, enter the course material type. Valid values are defined on the Course Material Type table. Examples include textbook, article, and other course materials.

See [Defining Course Material Types](#).

Course Material Status

Enter the course material status. Values for this field are delivered with your system as translate values. The values are *Required* and *Recommended*. You can modify these values.

ISBN

No edits are performed on the ISBN field.

Details

Select the Details tab.

The values in the Course Material Type, Course Material Status, and Title fields are carried forward from the Course Materials tab.

Year Published

Enter the year that the course material edition was published.

Price

Enter the recommended retail price.

Currency Code

Enter the currency code. The base currency code defined on the Installation Table (Setting Up Common Objects >Install >Installation Table >Settings and Defaults) is selected by default.

See:

- "Understanding CS-to-HCM Integration" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)
- "Selecting General Installation Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Notes

Select the Notes tab.

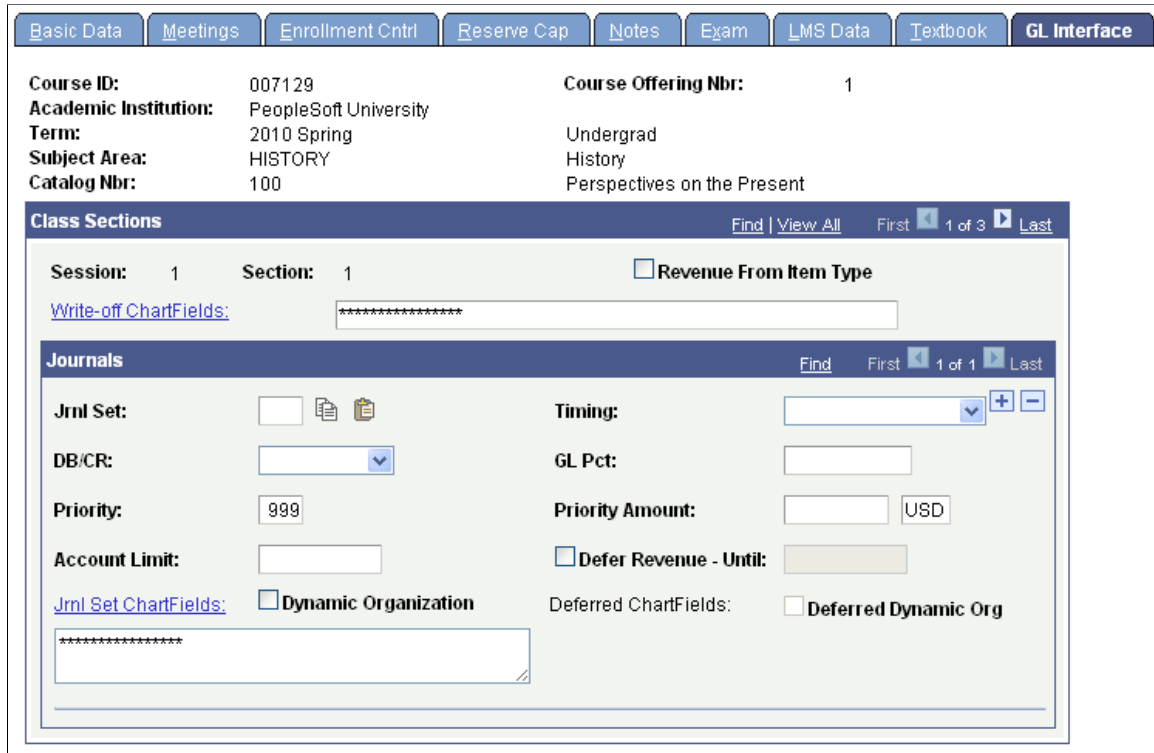

The values in the Course Material Type, Course Material Status, and Title fields are carried forward from the Course Materials tab.

Interfacing Class Sections with the General Ledger

Access the GL Interface page (Curriculum Management > Schedule of Classes > Schedule New Course > GL Interface).

Image: Schedule of Classes - GL Interface page

This example illustrates the fields and controls on the Schedule of Classes - GL Interface page. You can find definitions for the fields and controls later on this page.

On this page, next to the Jrnl Set field, copy and paste icons are available. Use the copy icon to copy the setup for the row, which can then be pasted to the new, or any proceeding row.

Revenue From Item Type

Select if you do not want to track revenue by class. The system allocates revenue based on the credit entry defined for the tuition item type. In this case, you do not populate ChartField information.

The system automatically tracks receivables for a class based on the debit entry defined for the tuition item type (on the Item Types - GL Interface page). If you want to track revenue by class, you must select the GL Interface Required check box on Schedule of Classes - Basic Data page and then enter a credit entry for the class by completing the ChartFields on this page.

Jrnl Set ChartFields (journal set ChartFields)

Click the link to enter additional information on the Journal Set ChartFields page.

To input all areas for the ChartFields, abbreviated display fields have been added. The number of delimiters displayed is based on the number of ChartFields.

The abbreviated display fields are used to view the ChartField set up as a string, add or update the ChartField string. All ChartField edits set up on the SF Installation page are adhered to within the display field.

Modifying Scheduled Classes

Use the Schedule of Classes component when you want to modify or maintain data for classes that have been scheduled. The functionality of the pages in this component are identical to the Schedule New Course component, but the view of classes offered to you is limited to scheduled classes only.

For institutions that schedule large numbers of sections of a class and have facility conflict check activated, use the Schedule Class Meetings component to edit facility and meeting pattern information for scheduled classes. Because the system performs edit checks only on an individual class section (rather than for all the sections of the class), you benefit from faster performance.

Note: To use the Schedule Class Meetings component to schedule facility and meeting pattern information, enter all information for the class, except facility and meeting pattern in the Schedule of Classes or Schedule New Course components. Then go to the Schedule Class Meetings component, enter the subject and catalog number for the class, select the first section, and update the facility/meeting pattern information one section at a time, using the Next in List button on the tool bar to scroll through all the sections for the course.

Modifying Scheduled Class Meetings

This section provides an overview of modifications to scheduled class meetings and discusses how to:

- Update meetings information.
- Update enrollment control information.
- Update exam information.

Understanding Modifications to Scheduled Class Meetings

Use the Schedule Class Meetings component when you want to modify or maintain data for an individual class section that has been scheduled. This component contains three pages—the Meetings page, the Enrollment Cntrl page, and the Exam page. These pages are the same as those in the Schedule New Course and Schedule of Classes component.

For example, if you have a course that has 20 scheduled sections for a term and you want to make changes to only two of those 20 sections, you can use the Schedule Class Meetings component to make the necessary changes to each of those two sections individually. Because the system has to run edit checks only on the individual class section rather than all 20 class sections, you benefit from the system's faster performance.

To modify a scheduled class meeting:

1. Update meeting times, facility reservations, and instructor assignments on the Schedule Class Meetings - Meetings page.
2. Update class size, wait list limits, class status, and consent on the Schedule Class Meetings - Enrollment Cntrl page.
3. Link exams and edit exam facility information on the Schedule Class Meetings - Exam page.

Pages Used to Modify Class Meeting Information

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Schedule Class Meetings - Meetings	CLASS_MTG_PAT_SCTN	Curriculum Management > Schedule of Classes > Schedule Class Meetings > Meetings	Update meeting times, facilities, and instructors for one class section at a time.
Schedule Class Meetings - Enrollment Cntrl (enrollment control)	CLASS_ENRL_CN_SCTN	Curriculum Management > Schedule of Classes > Schedule Class Meetings > Enrollment Cntrl	Update class status values.
Schedule Class Meetings - Exam	CLASS_EXAM_SCTN	Curriculum Management > Schedule of Classes > Schedule Class Meetings > Exam	Link exams to one class section at a time and to edit facility information.

Updating Meetings Information

Use the Schedule Class Meetings - Meetings page to update meeting times, facilities, and instructors for one class section at a time.

Associated Class Attributes

Click this link to access the Associated Class Attributes page and add class association attributes.

See [Defining Class Associations](#)

See [Adding Class Association Attributes Using the Schedule of Classes Component](#)

For information about other fields on this page:

Related Links

[Defining Class Meeting Patterns](#)

Updating Enrollment Control Information

Use the Schedule Class Meetings - Enrollment Cntrl page to easily update class status values. In particular, when you need to cancel a class that has multiple sections, it is more efficient to use this component than to cancel the section through the Schedule of Classes component. Most fields on this page are display only because the primary reason for accessing this class meeting is to update the class status value.

Related Links[Defining Auto Enroll Options and Capacity](#)**Updating Exam Information**

Use the Schedule Class Meetings - Exam page to link exams to one class section at a time and to edit facility information.

Related Links[Linking Exam Times to Classes](#)**Viewing and Updating Class Sections**

This section lists a prerequisite and discusses how to review class sections.

Review or update a class section as follows:

1. Access the Update Sections of a Class page.
2. Modify data for the specific class sections that you want to update.

Prerequisite

You must first schedule the class.

Related Links[Scheduling New Classes](#)**Page Used to View and Update Class Sections**

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Update Sections of a Class	CLASS_CONTROL	Curriculum Management > Schedule of Classes > Update Sections of a Class > Update Sections of a Class	Review or modify a snapshot summary of section information for a class. The page displays one row for each section scheduled for a course offering during a term.

Reviewing Class Sections

Access the Update Sections of a Class page (Curriculum Management > Schedule of Classes > Update Sections of a Class > Update Sections of a Class).

Subject Area: ANTHRO Anthropology
Catalog Nbr: 101 Introduction to Anthropology

Class Sections Customize | Find | View All | First 1-2 of 2 | Last

Class Status
Class Enrollment Limits

Session	Section	Class Nbr	Component	Enrollment Status	*Class Type	*Class Stat	*Assoc	Auto Enrl 1	Auto Enrl 2	Resection	*Add Consent	*Drop Consent	Schd Print
Regular	1	1023	Lecture	Closed	E <input type="text"/>	A <input type="text"/>	1 <input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	D <input type="text"/>	N <input type="text"/>	<input checked="" type="checkbox"/>
Regular	100	1321	Lecture	Closed	E <input type="text"/>	A <input type="text"/>	1 <input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	N <input type="text"/>	I <input type="text"/>	<input checked="" type="checkbox"/>

Note: Multiple views of this page are available by selecting the tabs in the scroll area.

Class Status Tab

Class Type

The class type of *E* (enrollment) indicates which section is the primary section at enrollment time. The class type of *N* (non-enrollment) is used to indicate that the section choice is the student's secondary enrollment option, or that the section is used in auto-enrollment. Within a class, only one component can possess the class type of *E*.

Class Stat (class status)

The system populates the Class Stat field to *A* (active) by default. Class status values are delivered with your system as translate values. You can override the status to indicate *Stop Further Enrollment*, *Cancelled Section*, or *Tentative Section*.

The Schedule of Classes report enables you to select on class status, so that you can print only *Active* classes, or only *Inactive* classes, and so on.

Note: The class status of *Active* has coding attached to it and should not be deleted from the translate table. You can add as many new class status values to the translate table as you want, but these do not have coding attached to them.

Assoc (associated class number)

The system displays the associated class number. You can edit this field if no students have yet enrolled in the section.

Auto Enrl 1 (auto enroll 1)

For classes that have associated auto enroll sections, you can view or edit the first auto enroll section.

Auto Enrl 2 (auto enroll 2)

For classes that have associated auto enroll sections, you can view or edit the second auto enroll section.

Resection

Enter the alternative section in which the system automatically enrolls a student if the primary section is full.

The component of the primary section and the resection to section class must be the same. For instance, when Section 1 Lecture is filled, the system enrolls students in Section 3 Lecture.

Add Consent and Drop Consent

Values default from the Enrollment Cntrl page and indicate the type of consent, if any, that is required to enroll in or drop the class. You can change these values.

If you select *Instructor* or *Department*, consent is granted either by a permission number or student-specific permission. (For drop permissions, consent is granted on a student-specific basis only.) The consent requirement can also be overridden during the enrollment process, by using the permission override.

Schd Print (schedule print)

The system populates this check box by default from the Schedule Print check box on the Basic Data page. Select this check box to display the class in the schedule of classes. If you clear this check box, the section does not display in the Schedule of Classes - Class Search function if accessed through Campus Self Service. Similarly, if you clear this check box, students using the self-service enrollment feature do not see this class in their class search results. They can enroll in the class, but only if they enter the exact class number (without using the class search feature).

Note: Section numbering is important because the system sorts by section number on this page and in the schedule of classes report.

Class Enrollment Limits Tab

Access the Class Enrollment Limits tab.

Use the Class Enrollment Limits tab to view summary enrollment information for a class. The page displays one row for each section scheduled for a course offering.

Cap Enrol (capacity enrollment)	The system populates this field by default to the Enrollment Capacity field on the Enrollment Cntrl page.
Tot Enrl (total enrollment)	The system displays the current total of students enrolled in the class section.
Wait Cap (wait list capacity)	The system displays the current total of students wait listed for the class section.
Wait Tot (wait list total)	The system populates this field by default to the Wait List Total field as displayed on the Enrollment Cntrl page.
Min Enrl (minimum enrollment)	The system populates this field by default to the Minimum Enrollment Nbr field on the Enrollment Cntrl page.

Combined Section

Click to access the Combined Section Detail page, where you can view all of the classes in the combined section. This link only appears for combined classes.

Note: After you combine classes, you must perform updates to meeting pattern and instructor information through the Schedule Class Meetings - Meetings page. Within the Schedule of Classes and Schedule New Course components, the facility/meeting pattern and instructor information is unavailable for entry for combined sections.

Rolling Data from the Course Catalog to the Schedule of Classes

This section discusses how to run the Course Roll process.

Update the schedule of classes with changes that you have made to a course offering in the course catalog after you have scheduled a class or enrolled students.

To copy data from the course catalog to the schedule of classes:

1. Access the Course Roll page and specify the course offering that has recent changes.
2. Compare the information on the top of the page with the information for each section.
3. If the information differs, click the Course Roll button to copy the catalog information down to the individual class sections.

Prerequisite

You must first create your catalog and schedule of classes.

Page Used to Roll Data from the Course Catalog to the Schedule of Classes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Course Roll	CRSE_ROLL	Curriculum Management > Roll Curriculum Data Forward > Course Roll > Course Roll	Upon entering the page, the system prompts you to select a course offering from a list of courses already in the schedule of classes for a given term and session.

Running the Course Roll Process

Access the Course Roll page (Curriculum Management > Roll Curriculum Data Forward > Course Roll > Course Roll).

The system displays the course offering information for the term and session in the upper portion of the page, and displays all of the related class sections that have been scheduled for that term and session of the course on each detail line in the Class Sections area.

On the lower portion of the page, compare the Institution, Career, Term, Session, Academic Group, Class Nbr (class number), Subject, Catalog, Sect (section), and Description (course title) values for the scheduled class sections with the values for the related course catalog offering (on the upper part of the page).

If these values are different, click the Course Roll button to synchronize the scheduled class sections with the latest course catalog offering information. The system rolls the course catalog data down to the schedule of classes for each class section that is scheduled for the course during the term and session you specify. The system processes the request and immediately displays the *prospective* changes to the schedule of classes results in the Class Sections area. This is your opportunity to review the results of the roll process. If you are not satisfied with the results, do not save the page. Exit the page, and no update to the schedule of classes occurs. Alternatively, if you are satisfied with the results of the roll process, save the page to confirm and update the schedule of classes.

Note: On the Course Catalog - Offerings page, if you have changed the institution where the course is scheduled and students are already enrolled in the class sections, the system does not process the rolling of the data to the schedule of classes for those class sections.

[Creating Course Offerings](#)

Defining Class Associations

This section provides an overview of class associations, an overview of how to use the Common Attribute Framework to extend class associations, lists a prerequisite, and discusses how to:

- Adjust units.
- Modify class components.
- Modify requisites.

Understanding Class Associations

Class association numbers link all class sections that constitute a single offering. With a common association number, you can control not only the sections of classes in which a student must enroll, but you can also control elements of the sections including units, components, and requisites.

Use the class associations component when you have scheduled classes and an administrative or academic change dictates that you must add or modify class components, or adjust units within associated sections.

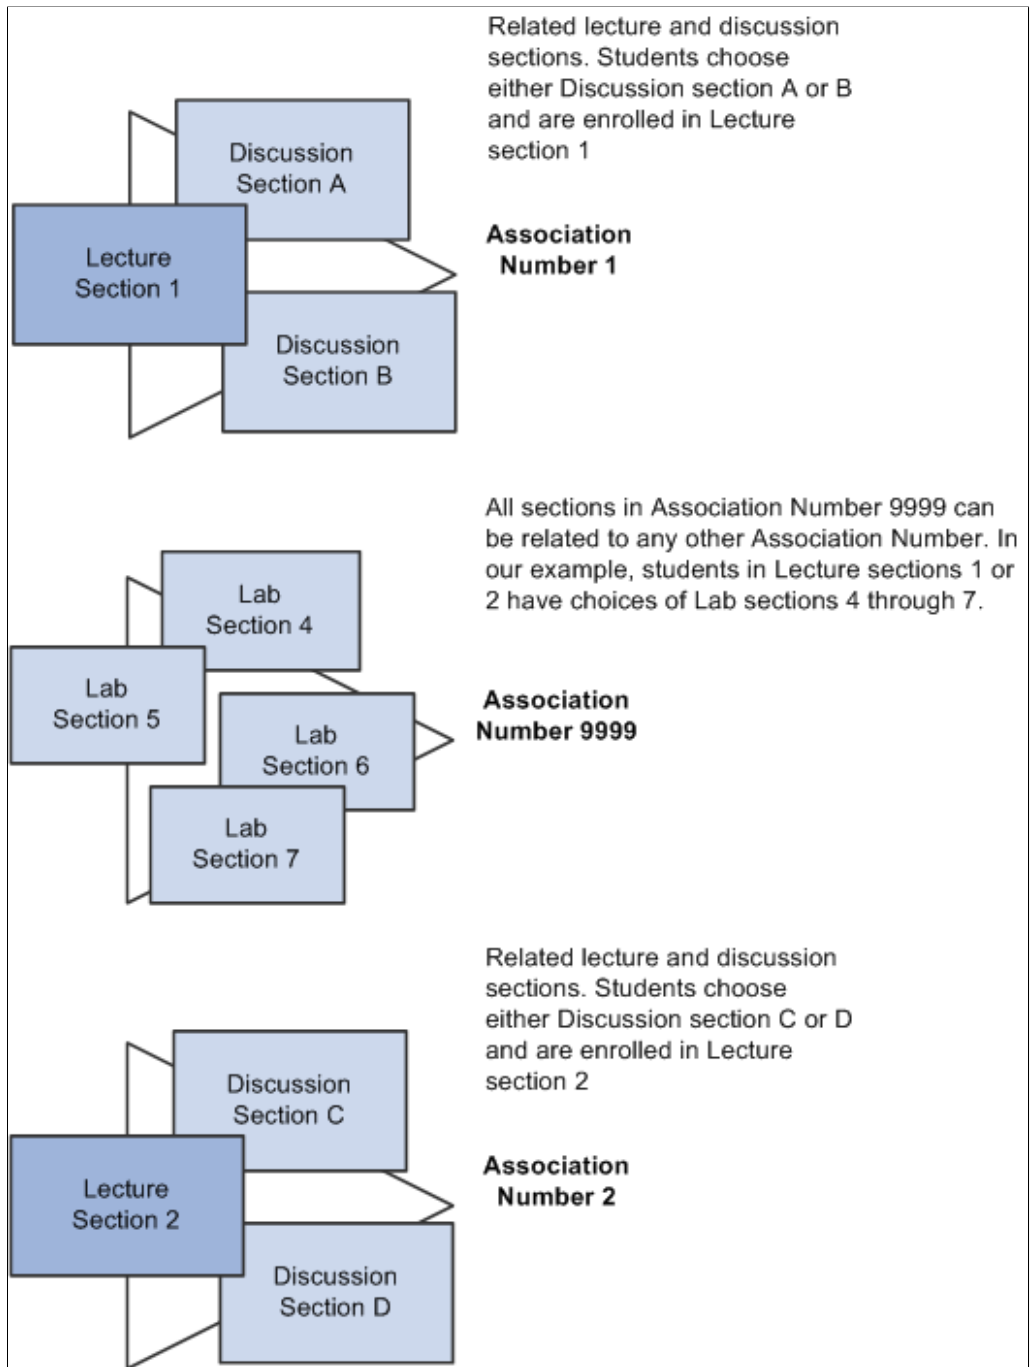

Regardless of how many components a course offering has (lecture, lab, discussion), always use a unique class association number to identify it. This includes offerings that have just a single component, such as a lecture. Because each section is in its own group, a student can be enrolled in one section and on the wait list for a second more desirable section.

In addition, if you assign a unique class association number, you can vary the units, requisites, and components of individual sections when you have a single component course.

Warning! If you do not indicate a unique association number for each section of a single component course, students cannot wait list for multiple sections.

Image: An illustration of the class association number concept

A visual representation of the class association concept might look like the following image. The course has two lecture sections, four discussion sections, and four lab sections. Student in lecture section 1 can only be in discussion sections A or B, and students in lecture section 2 can only be in discussion sections C or D. All students must enroll in a lab section, but can choose any lab section.

Discussion sections A, B, C, or D are set up with a class type of Enrollment in the Schedule of Classes. Students select to enroll in one of these sections. Lecture sections are set up with a class type of Non-

Enrollment and the auto-enroll option selected. Students are automatically enrolled in a lecture section dependent upon the discussion section chosen. Lab sections are set up with association number 9999 because students have an option of enrolling in any of these.

Use the class associations component after you schedule your classes for a term. In this component you can maintain the data of a group of classes which form a single course offering.

The data in the class associations component is created after you schedule classes. Use this component only if you want to override defaults that are set in the course catalog.

Note: After you create the schedule of classes, if you amend the course catalog those changes are not reflected in the schedule of classes. Use the Class Associations component if you must make changes to classes already scheduled, such as adjusting units, modifying components, or modifying requisites. You can also use the Course Roll page to make changes to classes that are already scheduled.

[Rolling Data from the Course Catalog to the Schedule of Classes](#)

Using the Common Attribute Framework to Extend Class Associations

This section provides an overview of how to extend the Class Associations structure by defining attributes for use with class associations using the Common Attribute Framework.

Attributes are associated with a functional area by a Record Context. Common Attributes have been enabled for Class Associations as follows:

- Record Context: CLASS_ASSOC
- Attribute Record: SSR_ASSOC_CAF

Attributes attached to this Record Context/Attribute Record combination are available for use with class associations and can be assigned on the Class Components page, or by linking to the Associated Class Attributes page from the Basic Data or the Schedule Class Meetings - Meetings pages.

Steps for Creating Common Attributes for Class Associations

To create common attributes for use with class associations:

1. Define the attribute using the Common Attribute component.
2. Attach that attribute to the Class Association (CLASS_ASSOC) Record Context.

Warning! The Record Context allows you to set certain properties for a particular attribute in that context, including whether an attribute is repeatable or required. However, we strongly recommend that you do not make CLASS_ASSOC attributes *required* because then that attribute is required for all sections of every class that you schedule.

"Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

"Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

[Modifying Class Components](#)

Adding Class Association Attributes Using the Schedule of Classes Component
Modifying Scheduled Class Meetings

Prerequisite

You must first schedule the class.

Pages Used to Define Class Associations

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Class Associations	CLASS_ASSOC	Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Associations	Adjust units, change instructor edit views, and select the blind grading option after you schedule a class. All data on the page defaults from the Course Catalog component. All of the data elements can be changed for a class association.
Class Components	CLASS_ASSOC_CMPNT	Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Components	Modify aspects of class components such as grading basis, course components, and requirement designations. Display all related sections for the class association. For convenience, the system also displays any class sections with class association 9999. Add class association attributes.
Class Requisites	CLASS_ASSOC_RQS	Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Requisites	Modify, and, if appropriate, add more requisites to a class.

Adjusting Units

Access the Class Associations page (Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Associations).

Image: Class Associations page

This example illustrates the fields and controls on the Class Associations page. You can find definitions for the fields and controls later on this page.

The system creates the record here when you enter and save the schedule of classes. The associated class number links all class sections that constitute a single course offering. For example, all lab and discussion sections plus the associated lecture sessions have the same associated class number. The system populates all of these fields by default from the course catalog.

Note: Association number 9999 can be associated with any other associated class number. When a student enrolls in a class, the system verifies that the student has enrolled in a section with all required components of the course (such as lecture, lab and discussion) from within the same associated class group (or from group 9999). You can only assign association number 9999 to nongraded components.

Minimum Units and Maximum Units

The system populates the Minimum Units and Maximum Units fields by default from the course catalog. You can override these values.

Academic Progress Units and FA Units (financial aid units)

The system populates these fields by default from the course catalog. You can override these values. The fields are unavailable for entry for variable unit courses.

Course Count

The system populates this field by default from the course catalog. The course count indicates the worth, or count, of the course towards an advising requirement. Some institutions count courses, as well as units, towards degree requirements. You can override this value.

Course Contact Hours

The system populates this field by default from the course catalog. Course contact hours may be used for manual workload analysis. You can override this value, which you initially define

on the Catalog Data page. Use this field only if you want to report contact hours manually.

The Instructor Workload feature does not reference this free-form field.

See [Walking Through Instructor Workload](#)

If you track contact hours manually and therefore use the Course Contact Hours field, the course contact hours should equal the instructor contact hours. If you are overriding the value of the Course Contact Hours field, then to maintain consistency—and therefore increase clarity—you should update the instructor contact hours using the Meetings page. The system itself performs no cross-reference verification to ensure that the corresponding values match.

Billing Factor

The system populates this field to 1 by default. The billing factor regulates billing units, which the system uses to calculate per unit fees. When you establish fees for terms, courses, and classes, you can assess a per unit fee which is derived from the billing units on the student's enrollment record. Billing units are equal to the billing factor times academic progress units ($BU = BF \times APU$). So if billing factor is set to 1 and academic progress units is set to 3, billing units would be 3. Alternatively, if the billing factor is set to 2, and academic progress units is set to 3, billing units would be 6. Because billing factor defaults to 1, billing units are usually equal to academic progress units.

The Student Enrollment 1 page is the only place where you can override billing units for an individual enrollment. The only time that billing units and academic progress units would differ is when the billing factor is set to anything other than 1, or if either of these values were changed on the Student Enrollment 1 page.

Instructor Edit

Select how you want the system to prompt for instructor IDs during class scheduling and enrollment. This option determines the availability of the Instructor ID field during enrollment, for courses for which the student has the option to select the instructor, such as independent study courses. The system populates the value for the Instructor Edit field by default from the Catalog Data page. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are:

No Choice: If you select this option, the Instructor ID field is unavailable on the Enrollment Request and Quick Enroll pages and is hidden on the Self Service Enrollment pages. The system automatically assigns the instructor who is scheduled to teach the class, as indicated on the Schedule of Classes -

Meetings page: Assignment tab. Thus the student has no choice of instructor.

Class Instructor Edit: If you select this option, the system makes the Instructor ID field on the Enrollment Request, Quick Enroll, and Self Service Enrollment pages available and prompts the user with only the Primary Instructors for the class, as defined on the Meetings page.

Use this option for independent study courses or the like, for which the student can select one of several primary instructors.

Instructor/Advisor Edit: If you select this option, the system makes the Instructor ID field available on the Enrollment Request, Quick Enroll, Enrollment and Self Service Enrollment pages. The system prompts the user with only the instructors available to teach this course, as defined on the Instructor/Advisor Table page.

Note: To activate the instructor/advisor edit your institution must first select, on the Academic Organization Table page, to edit instructors against instructor/advisor for the academic organization to which this class belongs.

The *Instructor/Advisor Edit* option should be used only for courses that belong to academic organizations for which the Instructor Advisor option is selected (on the Academic Organization Table page). This ensures that instructor selection is controlled by the academic organization settings.

See [Designating Approved Instructors and Advisors](#).

See "Defining Academic Organizations" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Tuition Group

Regardless of the tuition group that you enter on this page, all students are charged tuition based on their own tuition group.

Use this field to designate a specific group of students that you want to charge additional course fees for the course.

This field is optional.

See "Setting Up Tuition Groups" (PeopleSoft Campus Solutions 9.2: Student Financials).

Use Blind Grading

Select this check box to enable grade rosters for blind grading.

The system populates this field by default from the Course Catalog - Offerings page.

When you generate grade rosters for a course that invokes blind grading, instead of student names on the roster, the system generates random numbers.

Class Roll

If the class is scheduled and students are enrolled, and you make changes to the fields in the Class Associations component, in

most cases this affects student enrollment. You therefore need to update the enrollment records of each student in the class.

To do so, click the Class Roll button for all rows on the page. The system creates enrollment maintenance transactions through a COBOL process and displays for you an enroll request ID related to these transactions. We suggest that you write down the enrollment request ID numbers for use on the Block Enrollment page.

The COBOL process considers the following fields when updating student records:

- Minimum Units.
- Academic Progress Units (when minimum and maximum units are the same).
- Financial Aid Units (when minimum and maximum units are the same).
- Course Count (if set to Course Count Enrollment on the Academic Program - Course page).
- Billing Factor.
- Tuition Group.
- Grading Basis.
- Requirement Designation.

Note: To update the students' records, you must navigate to the Block Enrollment page and run the block enrollment process using this enroll request ID. The system uses the enrollment maintenance transactions grouped within this enroll request ID to update the student enrollment records that your changes have affected.

Modifying Class Components

Access the Class Components page (Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Components.).

Image: Class Components page

This example illustrates the fields and controls on the Class Components page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Class Components' page with the following sections and data:

- Course Information:** Course ID 000037, Course Offering Nbr 1, Academic Institution PeopleSoft Australia Uni, Term 2020 Semester 1, Undergrad, Subject Area ACCT, Accounting, Catalog Nbr 101, Introduction to Accounting A, Session 1, Regular Academic Session.
- Class Association Components:** Associated Class 1, *Grading Basis GRD, Graded, Graded Component Lecture, *Grade Roster Print Component, Requirement Designation, Primary Component LEC.
- Associated Class Attributes:** *Attribute (dropdown).
- Class Components Table:**

*Course Component	Contact	Optional	Workload Hours	*Final Exam	Auto Create
Lecture		<input type="checkbox"/>		Yes	<input type="checkbox"/>
Tutorial		<input type="checkbox"/>		No	<input checked="" type="checkbox"/>
- Class Sections Table:**

Section	Class Nbr	Component	Class Type	Class Status
001	1002	Lecture	Enrollment Section	Active
- Class Association 9999 Table:**

Section	Class Nbr	Component	Class Type	Class Status
1				

The system creates the record here when you enter and save the schedule of classes. The associated class number links all class sections that constitute a single course offering. For example, all lab and discussion sections plus the associated lecture sessions have the same associated class number.

The system populates all of these fields by default from the course catalog.

See [Creating Course Offerings](#).

Note: Association number 9999 can be associated with any other associated class number. When a student enrolls in a class, the system verifies that the student has enrolled in a section with all required components of the course (such as lecture, lab and discussion) from within the same associated class group (or from group 9999). You can only assign association number 9999 to nongraded components.

Grading Basis

The system populates this field by default from the course catalog. Select the grading basis to use for the class. Grading basis values are linked to grading schemes on the Grading Scheme Table page.

Grade Roster Print

Enter the type of grade roster that you want to print for this associated class (as processed through the Grade Roster Print page). Values for this field are delivered with your system as

translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values for grade roster print are:

By Student: Grade rosters print for each student. Each student has a distinct grade roster, separated by a page break.

Component: Grade rosters print for the graded component of the class. The graded component is specified on the Course Catalog - Components page.

Instructor: Grade rosters print for the graded component of the class. The graded component is specified on the Course Catalog - Components page. A copy of the grade roster prints for each instructor, primary or otherwise. The number of copies that print is equal to the number of instructors for the class (primary or otherwise).

None: No grade roster prints for the class.

Graded Component

The system populates this field by default to the component on the Components page that has the Graded Component check box selected. You can override this value. Select the graded component, indicating the component with which the course grade is associated.

After students enroll in a component within the class association, this field is unavailable for entry.

Requirement Designation

Enter a requirement designation for the class. A requirement designation can be extra work that has to be done for a course, such as Design Credit, or a requirement designation can specify a special type of a course to use in a course list for the Academic Advisement application. Requirement designation values are defined on the Requirement Designation Table page, and default from the Catalog Data page. Example requirement designation values are *Design Credit*, *Thesis Choice*, and so on.

Requirement designations feed into the Academic Advisement application.

See [Defining Requirement Designations](#).

Primary Component

If you are using the Dynamic Class Dates feature, it is mandatory that you enter a primary component for the class, even if you only have one component. The Dynamic Class Dates process uses the scheduled class section of the primary component to calculate the landmark dates on a dynamic academic calendar. The process uses the primary component value as defined in this field. You can select to include other components of the class in Dynamic Class Dates process calculations on the Schedule of Classes - Basic Data page.

After students enroll in a component within the Class Association, this field is unavailable for entry.

Associated Class Attributes

Use the Associated Class Attributes scroll area to insert rows for Attribute/Value combinations. If you insert a row and specify an attribute, you must also provide a value in order to save the component.

Attribute	The name of the attribute. This value comes from the description of the attribute on the Common Attribute component.
Value	This field changes depending on the type of attribute. This could be a numeric, date, time or text field. Alternatively, the field could prompt against a list of values if one has been defined for the attribute.

See [Using the Common Attribute Framework to Extend Class Associations](#)

Class Components

Course Component	Enter a course component for the class association. The system populates this field by default from the Course Catalog - Components page. Values for this field are delivered with your system as translate values. You can modify these values. The course component indicates the parts of the course offering (<i>lecture, laboratory, seminar, and so on</i>). One course offering can have multiple components.
Contact	Enter the contact hours you want to record for the instructors teaching this component of the course. The Instructor Workload feature does <i>not</i> reference this free form field. Use this field only if you want to report contact hours manually.

Note: Modifying the course components and the contact hours for each component creates inconsistency between this page and the Meetings page. Although you can edit the corresponding fields on the Meetings page, with no impact elsewhere in the system, you should, for clarity, maintain consistency between these two pages. The system itself performs no cross-reference verification to ensure that the corresponding values match. Thus, to maintain consistency you should verify that the course component contact hours on this page equal the instructor contact hours on the Meetings page.

Optional	If you select this check box, enrollment in the component is optional for this associated class.
Workload Hrs (workload hours) and OEE Workload Hrs (open entry/exit workload hours)	If you select the Calculate Workload check box on the Academic Institution 4 page, thereby activating the automated Instructor Workload feature, the Workload Hrs field appears on the Class Components page. The Workload Hrs or OEE Workload Hrs field defaults to the workload hours specified on the Course Catalog - Components page. In other words, if you set the lecture to three workload hours on the Course Catalog - Component page, then whenever a lecture for this course is

scheduled, the lecture component defaults to three workload hours on the Class Components page. Similarly, if you set the laboratory component to 1 workload hour on the Course Catalog - Components page, then whenever a laboratory for this course is scheduled, the laboratory component defaults to one workload hour on the Class Association - Class Components page. The user can modify the component values on the Class Association - Class Components page if necessary. This field is optional.

The workload hours specified here can be used by the default workload hours formula as specified by the Course Component Workload Hours% field on the Academic Institution 4 page.

Final Exam

Enter a value to indicate whether a final exam is given in the course. The value defaults from the Course Catalog - Components page. Final exam values are delivered with your system as translate values. Add as many values to the translate table for the final exam as needed. The only value that you must not remove from the translate table is *Yes*, which has coding attached to it. Values are:

Yes: The *Yes* value enables block final exam scheduling.

No: Indicates that this component has no final exam. Entering *No* eliminates this component from the block exam scheduling process.

Last Class: Indicates that a final exam is taken in the last regularly scheduled class (as opposed to during final examination week). Entering *Last Class* eliminates this component from the block exam scheduling process.

Class Sections

Displays all related sections for the class association.

Class Association 9999

For convenience, displays any related class section with class association 9999.

Note: No class association records are created for 9999 sections.

Modifying Requisites

Access the Class Requisites page (Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Requisites).

Detail

Click to access the Requirement Group Summary page, where you can review the enrollment requisites for both the course and class.

Also Use Catalog Requisite

Select to command the system to use the course catalog requisite as well as the class requisite in the enrollment process.

Note: If you have prerequisites in the course catalog and you do not want to use them for the class offering, clear the Also Use Catalog Requisite check box.

Requirement Group

Enter the class requisite requirement group. Requirement group values are created through the Enrollment Requirement Group component.

Long Description

The system populates this field by default to the long description of the enrollment requirement group.

Defining Class Permissions

This section provides an overview of class permissions, lists prerequisites and common elements, and discusses how to:

- Create add permissions for classes.
- Create drop permissions for classes.
- Generate add permissions for a subject area.

Understanding Class Permissions

Class permissions are numbers or authorizations that you can associate with a class and assign to students to use at enrollment time. You can create *general* or *student-specific* add permissions. You can also generate add permission numbers for an entire subject area. You can create only *student-specific* drop permissions.

Class permissions can override conditions such as requisites and limits. Permissions allow a student to add or drop a class, as long as the student uses the permission by the expiration date and does not violate overall student limitation rules (such as maximum number of units).

Prerequisites

Before you can define class permissions, you must:

- Schedule a class.
- Select the Student Specific Permissions check box on the Basic Data page (for student-specific permissions).

This option applies to add permissions only.

- Clear the Student Specific Permissions check box on the Basic Data page (for general class permissions).

This option applies to add permissions only.

Common Elements Used in This Section

Instructor

View class instructor data. Because there can be multiple instructors for a class, name data for each employee ID appears.

Expiration Date

In the Defaults group box, this is the default expire date. You can change this date. When you create permissions for a class, the system populates the Expire Date column with the default date value. The system retrieves the value for the Default Date field from the SESS_TIME_PEROD table or the SESSION_TABLE based on the following criteria:

If the value of the add/drop action for the TIME_PERIOD field on the SESS_TIME_PEROD table is 140 and an end date value exists for this field, the system retrieves this end date value as the default date.

If the end date for the TIME_PERIOD field on the SESS_TIME_PEROD table does not exist, the system retrieves the end date for the term as the default date. The system retrieves this value from the SESSION_TBL_END_DT field on the SESSION_TABLE page.

In the Class Permission Data group box, the expiration date defaults from the date in the Defaults group box. You can change this date.

Sequence Number

The system generates a sequence number and assigns it to each permission based on the order you create the permissions.

Permission Use Date

The system populates this field with a value of *Not Used*. by default. When the student successfully uses the add or drop permission, this field is populated with the use date.

Comments

Add comments for individual permission rows.

Pages Used to Create Class Permissions

Page Name	Definition Name	Navigation	Usage
Permission to Add	CLASS_PERMISSION	Records and Enrollment > Term Processing > Class Permissions > Class Permissions > Permission to Add	Create student-specific permissions or general permission numbers for adding classes.
Permission to Drop	CLASS_PERMISSION2	Records and Enrollment > Term Processing > Class Permissions > Class Permissions > Permission to Drop	Create student-specific permission numbers for dropping classes.

Page Name	Definition Name	Navigation	Usage
Generate Add Permissions	RUNCTL_SRSPRMSN	Records and Enrollment > Term Processing > Class Permissions > Generate Add Permissions > Generate Add Permissions	Generate general add permission numbers for an entire term and subject area. Before you access the Generate Add Permissions page, the Consent field on the Enrollment Cntrl page for all classes within the subject you specify, must be set to <i>Department</i> or <i>Instructor</i> .

Creating Add Permissions for Classes

Access the Permission to Add page (Records and Enrollment > Term Processing > Class Permissions > Class Permissions > Permission to Add).

Image: Permission to Add page

This example illustrates the fields and controls on the Permission to Add page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Permission to Add' page. At the top, there are tabs for 'Permission to Add' and 'Permission to Drop'. Below this, course information is shown: Course ID: 001239, Academic Institution: PeopleSoft University, Term: 2007 Fall, Subject Area: ECON, Catalog Nbr: 140. Course Offering Nbr: 1, Undergrad, Economics, Macroeconomics.

Class Section Data is shown below: Session: 1 Regular Academic Session, Class Nbr: 2428, Class Status: Active, Class Section: 001, Class Type: Enrollment Section, Component: Lecture, Instructor: [blank].

There is a checkbox for 'Student Specific Permissions' which is currently unchecked. Below this is a 'Defaults' section with an 'Expiration Date' field set to 12/12/2007. A 'Permission Valid For' table has five columns: Closed Class, Requisites Not Met, Consent Required, Career Restriction, and Permission Time Period, all with checked checkboxes.

At the bottom, there is an 'Assign More Permissions' section with a 'Generate' button and a 'Set All Permissions to Issued' checkbox. Below this is a 'Class Permission Data' table with columns: Seq #, Number, ID, Issued, Issued By, Issued Date, Status, Permission Use Date, and Expiration Date. The table contains three rows of data.

Seq #	Number	ID	Issued	Issued By	Issued Date	Status	Permission Use Date	Expiration Date
1	256172	SR13435	<input type="checkbox"/>	Swift,Joshua		Used	06/13/2007	12/12/2007
2	724509	SR13592	<input type="checkbox"/>	Ochoa,Graciella		Used then Dropped	06/13/2007	12/12/2007
3	950865	SR13433	<input type="checkbox"/>	Carollan,Sian		Used but Waitlisted	06/13/2007	12/12/2007

Student Specific Permissions

The status of this check box defaults from the Basic Data page.

Permission Time Period

Select this check box to allow a student to enroll in the class during the enroll with permission time period. This time period

is determined by a user's enrollment security access ID and by the time period end dates that are defined in the Session Time Period table.

See "Setting Up Enrollment Access IDs" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

See "Defining Terms, Sessions, and Session Time Periods" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

The Permission Valid For check boxes are used to specify the conditions that a class permission overrides:

Closed Class	Select to allow students to enroll in a class that is full. This type of permission also allows students to enroll in a closed combined section, or in a class where all available seats are subject to reserve capacity requirements that they might not meet.
Requisites Not Met	Select to allow students to enroll in a class for which they do not meet the prerequisites.
Consent Required	Select to allow students to enroll in a class that requires instructor or department consent to add, as indicated by the Add Consent field on the Enrollment Cntrl page.
Career Restriction	Select to allow students to enroll in a class that is outside their career.
Permission Time Period	Select to allow students to enroll in a class during the enroll with permission time period. This time period is determined by a user's enrollment security access ID and by the time period end dates that are defined in the Session Time Period table.
Assign More Permissions	This field is available only if the Student Specific Permissions check box is not selected. Enter the number of permissions you want to create. When you click Generate, the requested number of rows appear in the Class Permission Data group box.
Set All Permissions to Issued	If you select this check box, all the cleared Issued check boxes in the Class Permission Data group box are selected. The Issued By and Issued Date fields are populated when you save the page.

Class Permission Data

The information that appears in this group box changes, depending on whether you create student-specific or general add permissions.

General Info

Select the General Info (general information) tab.

Number	The value that appears is a random number generated for general class permissions.
ID	For student-specific permissions, enter the ID for which you want to create the permission. For general class permissions, this field is populated with the student's ID when the student successfully uses the add permission. When the permission is used, the field is display only.
Issued	Select this check box to indicate that a general permission has been issued to a student. Select the Set all Permissions to Issued check box to select the check boxes in all rows.
Issued By and Issued Date	If the Issued check box is selected, these fields are populated when you save the page. The system displays the operator's user ID in the Issued By field.
Status	View the status of the permission. Values include: <i>Used but Wait Listed:</i> Appears when a student is placed on the wait list for a class for which the student has a permission number or student specific permission. The wait list process can therefore use the permission number or student specific permission to allow the student to enroll, without meeting conditions such as requisites. <i>Used:</i> In the example of a student who is placed on the wait list for a class, this value appears when the student is moved from the wait list and enrolled in the class. <i>Used then Dropped:</i> Appears when a student uses a permission to add a class and subsequently drops the class.

Permission

Select the Permission tab.

The permission conditions, such as Closed Class, default to the values selected in the Defaults group box. You can select different values for each permission row. When the permission is used, the check boxes become unavailable.

Creating Drop Permissions for Classes

Access the Permission to Drop page (Records and Enrollment > Term Processing > Class Permissions > Class Permissions > Permission to Drop).

Image: Permission to Drop page

This example illustrates the fields and controls on the Permission to Drop page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Permission to Drop' page. At the top, there are two tabs: 'Permission to Add' and 'Permission to Drop'. Below the tabs, course information is listed: Course ID: 003276, Academic Institution: PeopleSoft University, Term: 2007 Fall, Subject Area: ENGLIT, Catalog Nbr: 102. Course Offering Nbr: 1, Undergrad, English Literature, Survey of American Literature. The 'Class Section Data' section shows Session: 1, Regular Academic Session, Class Nbr: 1210, Class Status: Active, Class Section: 1, Class Type: Enrollment Section, Component: Lecture, and Instructor: (blank). The 'Defaults' section includes an 'Expiration Date' field set to 12/12/2007. Below this are three checkboxes under 'Permission Valid For': 'Requisites Not Met' (checked), 'Consent Required' (checked), and 'Permission Time Period' (checked). There is a 'Generate' button and two radio buttons: 'From Student Enrollment' (selected) and 'From Permission to Add'. The 'Class Permission Data' section has a table with columns: Seq #, ID, Name, Status, Permission Use Date, Expiration Date. The table contains one row: Seq # 1, ID SR0446, Name Benson, Tara, Status Not Used, Permission Use Date (blank), Expiration Date 12/12/2007.

Drop permissions can be used even if the class does not use add permissions. Drop permissions are always student specific.

You can create drop permissions on a student-specific basis only.

The Permission Valid For check boxes are used to specify the conditions that a class permission overrides:

Requisites Not Met

Select to allow students to drop a class even if it is being used as a corequisite for another class. For example, a student is enrolled in Class A and Class B. Class B requires concurrent enrollment in Class A. If the Requisites Not Met check box is selected, the student can drop Class A without also dropping Class B.

Consent Required

Select to allow students to drop a class where instructor or department consent is required to drop, as indicated by the Drop Consent field on the Enrollment Cntrl page.

Permission Time Period

Select to allow students to drop a class during the drop with permission session time period. This time period is determined by a user's enrollment security access ID and by the time period end dates that are defined in the Session Time Period table.

Note: The drop permission has no impact on the consequence of the drop, for example, drop without penalty. This is still determined by the academic calendar dates.

From Student Enrollment

Click this button, and then click Generate to create drop permissions for students who are enrolled in the class. You receive an error message if no eligible rows exist.

From Permission to Add

Click this button, and then click Generate to create drop permissions for students who have been granted add permissions on the Permission to Add page. You receive an error message if no eligible rows exist. Eligible rows only exist if add permissions were created on a student-specific basis. Rows are generated whether or not the student has enrolled in the class.

Class Permission Data

View and update details and add comments for drop permissions.

General Info

Select the General Info tab.

ID

Enter the ID for which you want to create a drop permission. When the permission is used, the field becomes unavailable for edit.

Status

View the status of the permission. Values are *Used* and *Not Used*.

Permission

Select the Permission tab.

Image: Permission to Drop page: Permission tab

This example illustrates the fields and controls on the Permission to Drop page: Permission tab. You can find definitions for the fields and controls later on this page.

Seq #	ID	Requisites Not Met	Consent Required	Permission Time Period		
1	SR0446	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

The permission conditions, such as Requisites Not Met, default to the values selected in the Defaults group box. You can select different values for each permission row. When the permission is used, the check boxes become unavailable.

Generating Add Permissions for a Subject Area

Access the Generate Add Permissions page (Records and Enrollment > Term Processing > Class Permissions > Generate Add Permissions > Generate Add Permissions).

Image: Generate Add Permissions page

This example illustrates the fields and controls on the Generate Add Permissions page. You can find definitions for the fields and controls later on this page.

Generate Add Permissions

Run Control ID: class_perm [Report Manager](#) [Process Monitor](#)

*Academic Institution: PSUNV PeopleSoft University

Find View All		First	1 of 1	Last
Academic Group:	LBART College of Liberal Arts			
*Term:	0570 2006 Fall			
Subject Area:	HISTORY History			
Percent of Enrollment Capacity:	0.10			
Minimum of Permission Assign:	10			
Commit Frequency:	1			
Permission Expire Date:	12/12/2006			
Permission Valid For:				

Closed Class	Requisites Not Met	Consent Required	Override Career	Permission Time Period
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Generate add permissions for a subject area for a particular term.

Academic Group

Enter the academic group for which you want to generate add permissions. Academic group values are defined on the Academic Group Table page.

Term

Enter the term for which you want to generate add permissions. Term values are defined on the Term Table page.

Subject Area

Enter the subject area for which you want to generate add permissions. When you run the process based on subject, the system references the Add Consent field on the Enrollment Cntrl page. Subject area values are defined on the Academic Subject Table page.

Percent of Enrollment Capacity

Enter the percent of enrollment capacity the system should use to calculate the number of permissions to create. In the example shown in the page above, the system creates general permissions for 10 percent of the enrollment capacity for every class in the College of Liberal Arts for Fall 2006.

Minimum of Permission Assign

Enter the minimum number of general permissions that you want the system to assign for each class. In the example shown in the page above, the system would always assign a minimum of 10 permission numbers for each class, regardless of enrollment capacity.

Commit Frequency

Defaults to *I*. The lower the commit frequency, the better concurrence of data. Even though a higher commit frequency enables faster processing of the job, the job could conflict with another one. You should leave the commit frequency at *I*.

Permission Expire Date

If a student does not use the permission before the expiration date, the student no longer has permission to enroll in the class.

The system pulls the value of the Permission Expire Date field from the TERM_TABLE and SESS_TIME_PEROD tables for each section that exists based on the following criteria:

If the value of the add/drop action for the TIME_PERIOD field on the SESS_TIME_PEROD table is 140 and an end date value exists for this field, the system retrieves this end date value as the default date.

If the end date for the TIME_PERIOD field on the SESS_TIME_PEROD table does not exist, the system retrieves the end date for the term as the Default Date. The system retrieves this value from the TERM_TBL_END_DT field on the TERM_TABLE page.

Permission Valid For

All check boxes default to selected. You can select particular check boxes for each academic group, term, and subject combination.

Creating Combined Sections

This section provides an overview of combined sections and discusses how to:

- Define a combined section ID.
- Link classes to a combined section ID.

Understanding Combined Sections

If you need to offer two or more separate classes as one class offering, you can combine sections. For example, you may have a course that is offered by the Economics Department (ECON 101) that is identical to a course that is offered by the Business School (BUSN 111). Perhaps you want to offer each class every semester (so students can pick and chose when they take the course), but there is only a maximum of 30 students total each semester who request the two classes, so it just is not economical. To offer both courses in the schedule of classes each semester, yet have the courses be taught as a single class (with one professor, one location, one meeting pattern, and so on), you can combine sections. Students who enroll in the Economics department version can use one class number to enroll, and students who enroll in the Business Department's version can use a different class number to enroll. Yet, all of the students participate in a single class environment. In this case, the combined sections share an event ID. If you want to combine classes that have different meeting patterns and/or instructor information, you can select the Skip Meeting Pattern and Instructor Edit check box, thereby disabling the edit and eliminating the propagation of data across the sections. You can combine sections permanently or for a

single class occurrence. You can also combine sections within or across subjects. The enrollment and wait list capacities are controlled both at the section level and at the sections combined level.

To create combined sections:

1. Define a combined sections ID on the Combined Sections Table page.
2. Link classes to the combined sections ID and choose a combination type on the Combined Sections page.

Before you combine sections be sure that a facility ID (if one was entered) exists for only one of the classes you are combining.

Pages Used to Create Combined Sections

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Combined Sections Table	SCTN_CMBND_TBL	Curriculum Management > Combined Sections > Combined Sections Table > Combined Sections Table	Create combined section IDs for each term and session at your institution.
Identify Combined Sections	SCTN_CMBND	Curriculum Management > Combined Sections > Identify Combined Sections > Identify Combined Sections	After you create a combined section ID, use this page to link classes to the ID, define the combination type, and indicate whether or not to enforce or skip the meeting pattern and instructor edit. If the edit is disabled (skipped), then meeting pattern and instructor data can be entered on any of the Schedule of Classes components. If the edit is enforced, then after you combine classes, you must perform all updates to the meeting pattern and instructor information through the Schedule Class Meetings - Meetings page. When you edit this information for a combined section, it is automatically propagated to all of the other combined sections within the same combined sections ID. Within the Schedule of Classes and Schedule New Course components, the facility/meeting pattern and instructor information is unavailable for combined sections.

Defining a Combined Section ID

Access the Combined Sections Table page (Curriculum Management > Combined Sections > Combined Sections Table > Combined Sections Table).

Combined Sections ID

The system generates a combined sections ID, providing a unique identifier for each combined sections record.

Description and Short Description

Enter a description and a short description for the combined sections ID. We suggest that these names have some descriptive value to the administrator who assigns these IDs to classes. The descriptions are not visible by students.

View Combined Sections

Click to access the Combined Sections Table page, where you can view classes that are linked to a specific combined section ID.

Linking Classes to a Combined Section ID

Access the Identify Combined Sections page (Curriculum Management > Combined Sections > Identify Combined Sections > Identify Combined Sections).

Image: Identify Combined Sections page

This example illustrates the fields and controls on the Identify Combined Sections page. You can find definitions for the fields and controls later on this page.

Identify Combined Sections

Academic Institution: PSUNV PeopleSoft University

Term: 0505 2003 Fall

Session: 1 Regular Academic Session

Combined Sections ID: 0002 Statistics-Section 1

***Combination Type:** Cross Subject

Permanent Combination

Skip Mtg Pattern & Instr Edit
*Warning: Mtg Pattern & Instr information will not be shared within the combined section.

Combined Capacities

Requested Room Capacity:	30	Enrollment Capacity:	30	Total	0
		Wait List Capacity:	10		0

Customize | Find | View All
First 1-2 of 2 Last

Class Nbr	Subject	Catalog Nbr	Section	Status	Req Room Cap	Enrl Cap	Enrl Tot	Wait Cap	Wait Tot	Acad Group		
1681	PSYCH	235	1	Open	35	35	0	0	0	LBART	+	-
1682	STATS	115	1	Open	30	30	0	10	0	LBART	+	-

Note: Multiple views of this page are available by clicking the tabs in the scroll area. We document fields common to all views first.

Combination Type

Enter the combination type. You combine sections *Within Subject*, *Cross Subject*, or *Both*. Values for this field are delivered with your system as translate values. There is no programming associated with this field.

Permanent Combination

Select this check box to command the system to roll the combination when you perform the prior term copy process. If you clear this check box, the system assumes that the combination is a temporary arrangement for the current term.

Skip Mtg Pattern & Instr Edit (skip meeting pattern and instructor edit)

Select this check box to combine sections with different meeting patterns and instructor information. In this case, you enter the meeting pattern and instructor information directly in the Schedule of Classes, but the updated data is *not* propagated across the sections. The system considers instructor workload for each of the sections, and does not combine hours. If necessary, instructor workload hours can be adjusted on the Meetings page.

Requested Room Capacity

Enter the requested room capacity for the combined section. The room capacity can be different than the enrollment capacity. The requested room capacity is used with Universal Algorithm's Schedule25 software.

Note: Requested room capacity of combined sections is used for informational purposes only. The system only enforces individual section requested room capacities.

Enrollment Capacity and Wait List Capacity

Enter the enrollment capacity and the wait list capacity for the combined section. The system updates the total as enrollments are processed. The system uses the lower of the individual section and combined section values. The system uses these values to determine the combined section's virtual status. See the Status field description for more information on virtual statuses.

View Combined Sections Table

Click to access the Combined Sections Table page, where you can view or edit the section combined IDs.

Class Number

Enter the class numbers of sections to combine. If the instructor, meeting pattern, session begin and end date, or weeks of instruction are not identical to previously selected class numbers, an error occurs (unless you select the Skip Mtg Ptn & Instr Edit check box).

Note: If you combine sections that have class meeting pattern topic IDs assigned to them, the system deletes the topic IDs. This is to prevent possible data integrity problems. Combined sections share meeting pattern information and the sections within the combination may be different courses with their own topic IDs and descriptions. For the same reason, you cannot assign class meeting pattern topic IDs to combined sections. However, you can assign free format topics.

See [Defining Class Meeting Patterns](#).

Note: When you remove a class from a combined section, the system deletes all meeting patterns and instructor data from the section that is removed, unless the Skip Meeting Pattern & Instr Edit check box is selected.

Status

The combined section's virtual status appears here. If a class's enrollment status is closed the class's virtual status is closed.

If the class's enrollment status is open, the system determines the virtual status by comparing the total number of students enrolled with the combined enrollment capacity. For example, if the combined enrollment capacity was set to 9 and there were 5 students enrolled in PSYCH 235 and 4 in STATS 115 the virtual status would be closed. Thus, when a person conducts a class search, PSYCH 235 and STATS 115 would appear as closed, even though in the schedule of classes (CLASS_TBL) the sections would show statuses of open.

The system also displays the combined section's virtual status on the Combined Section Detail page.

See [Searching for Classes](#).

Scheduling Examinations

This section provides an overview of exam scheduling, lists prerequisites, and discusses how to:

- Schedule exams for individual classes.
- Run the Exam Scheduling process.
- Troubleshoot the Exam Scheduling process.

Understanding Exam Scheduling

You can schedule exams on a class-by-class basis or in large blocks. The block exam scheduling process is useful if you want to schedule exams in the same facility as the primary meeting for the class.

To schedule an exam for a single class (in a facility other than the regular class for the primary meeting):

1. Access the Schedule Class Meetings - Exam page.
2. Enter your reservation.

To schedule exams in large blocks:

1. Access the Exam Scheduling page and specify your processing parameters.
2. Run the Exam Scheduling process.

Prerequisites

Before you run the Exam Scheduling process, you must:

- Set the Final Exam field on the Course Catalog - Components page to *Yes*.
- Define exam codes on the Exam Code Table page.

See [Defining Exam Codes](#).

Pages Used to Schedule Exams

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Schedule Class Meetings - Exam	CLASS_EXAM	Curriculum Management > Schedule of Classes > Schedule Class Meetings > Exam	Link exams to one class section at a time and edit facility information.
Generate Exam Schedule	RUNCTL_SREXSCHD	Curriculum Management > Schedule of Classes > Generate Exam Schedule > Generate Exam Schedule	Run the Exam Scheduling process to schedule exams in batch, and reserve the regularly scheduled facility.

Scheduling Exams for Individual Classes

To schedule exams by individual section, use the Schedule Class Meetings component.

Related Links

[Modifying Scheduled Class Meetings](#)

Running the Exam Scheduling Process

Access the Generate Exam Schedule page (Curriculum Management > Schedule of Classes > Generate Exam Schedule > Generate Exam Schedule).

Academic Institution	Enter the academic institution for which you want to schedule exams.
Term	Enter the term for which you want to schedule exams.
Academic Group and Session	Enter the academic group and session for which you want to schedule exams. Academic group values are defined on the Academic Group Table page. Session values are defined on the Session Table page.
Assign to Scheduled Facility	Select this check box to command the system to assign exams the same facilities in which the class is scheduled for the term. If you clear this check box, exams are scheduled without a facility.

Note: When scheduling exams for class sections with multiple meeting patterns, the Exam Scheduling process assigns final exam codes based on the class meeting pattern entered first on the Meetings page.

Troubleshooting the Exam Scheduling Process

Setup issues that can cause the Exam Scheduling SQR to not schedule exams include the following:

- Exam Code table not set up correctly to correspond with all possible class meeting patterns.
- Exam Code table not set up for the specified term and session.
- Exam Scheduling page must have the correct academic group.
- Exam Scheduling page must have the correct session code.
- Class must be set up on the Class Associations - Class Components page with a Final Exam value of *Yes*.
- Class meeting patterns are not set up for the class.
- Facility is not reserved if you run the process where the Assign to Scheduled Facility check box is not selected.
- Facility is not reserved if you run the process where the Assign to Scheduled Facility check box is selected, but the facility is already in use by another event during the exam time.

Modifying Course Events

This section lists a prerequisite and discusses how to define course events.

Prerequisite

You must first have an event ID record in your system.

Page Used to Modify Course Events

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Class Event Table	COURSE_EVENT	Curriculum Management > Schedule of Classes > Class Event Table > Class Event Table	Review a class section's facility reservations, and modify or delete facility reservations by date.

Defining Class Events

Access the Class Event Table page (Curriculum Management > Schedule of Classes > Class Event Table > Class Event Table).

Image: Class Event Table page

This example illustrates the fields and controls on the Class Event Table page. You can find definitions for the fields and controls later on this page.

Class Event Table

Event ID: 000021813

Description:

Academic Institution: PeopleSoft University

Event Type: Course

Class Sections				
Term	Subject	Catalog Nbr	Section	Class Nbr
0530	CHEM	102	1	1432

Campus Meetings							
Facility ID	Building	Room	Day of Week	Start Time	End Time	Contact Minutes	Date
ANGE102	Angel	102	Monday	9:00AM	9:50AM	50	08/30/2004
ANGE102	Angel	102	Wednesday	9:00AM	9:50AM	50	09/01/2004
ANGE102	Angel	102	Friday	9:00AM	9:50AM	50	09/03/2004

ANGE102	Angel	102	Wednesday	9:00AM	9:50AM	50	09/08/2004
ANGE102	Angel	102	Friday	9:00AM	9:50AM	50	09/10/2004
ANGE102	Angel	102	Monday	9:00AM	9:50AM	50	09/13/2004

Description

The description of the course event. This is the course description.

Contact Minutes

Modify contact minutes for individual classes if necessary. The system bases the contact minutes on the start and end time of the course as defined in the Schedule of Classes. Changing contact minutes for a class meeting has no impact on course contact hours or instructor contact hours. If you have a particular class meeting that you would like additional facility time (perhaps a day for group project presentations, where students need additional time to take down their presentation materials at the end of class), you can increment the contact minutes to your desired reservation time. In addition, you can delete a single meeting facility reservation to make the facility available for another event. Click the Save button to edit the facility reservation. If facility checking is active, the system verifies that your requested reservation is valid before saving the request.

Note: If you are using the PeopleSoft facility conflict checking logic, be sure when you are scheduling classes that you indicate a facility for at least one component of a course. The system does not populate the Class Event Table page unless a facility is booked for at least one component of a course. You indicate facilities for course components on the Meetings page.

Viewing Instructor Schedules

This section discusses how to view instructor schedules.

Page Used to View Instructor Schedules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Instructor Schedule	INSTR_CLASS	Curriculum Management > Instructor/Advisor Information > Instructor Schedule > Instructor Schedule	Review an instructor's class schedule for a term.

Viewing Instructor Schedules

Access the Instructor Schedule page (Curriculum Management > Instructor/Advisor Information > Instructor Schedule > Instructor Schedule).

The system displays all class meetings for an instructor within a term.

Instructor Schedule 2 Tab

Select the Instructor Schedule 2 tab.

The system displays additional detail information for all class meetings for an instructor within a term.

Viewing Instructor Schedules Through Self-Service Pages

If your institution has licensed PeopleSoft Campus Self Service, your instructors can view their class schedule and weekly schedules directly over the web.

Related Links

"Using the Self-Service Faculty Center" (PeopleSoft Campus Solutions 9.2: Self Service)

Viewing Class Facility Usage

This section discusses how to review class facility usage.

Prerequisites

You must first assign events or classes with meeting patterns to a facility.

Page Used to View Class Facility Usage

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Class Facility Usage	CLASS_MTG_PAT_DSPL	Curriculum Management > Facility and Event Information > Class Facility Usage > Class Facility Usage	Review a summary of events for a term, session, and day within a facility.

Reviewing Class Facility Usage

Access the Class Facility Usage page (Curriculum Management > Facility and Event Information > Class Facility Usage > Class Facility Usage).

Term, Session, and Day of the Week Select a term, session, and day of the week for your facility search.

Fetch Class Meetings Click to retrieve all existing event information for the parameters specified.

Searching for an Available Facility

This sections discusses how to:

- Create facility search criteria.
- View facility search results.

Use the Search for a Facility component to search for available facilities when scheduling classes and non-course events, such as faculty meetings.

To search for an available facility:

1. Access the Facility Search Criteria page, and enter search criteria as detailed as necessary.
2. Click the Fetch Facilities button to retrieve your results.
3. Review your results on the Facility Search Results page.

Pages Used to Search for a Facility

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Facility Search Criteria	FACILITY_SRCH	Curriculum Management > Facility and Event Information > Search for a Facility > Facility Search Criteria	Initiate your search for an available facility.
Facility Search Results	FACILITY_SRCH_RSLT	Curriculum Management > Facility and Event Information > Search for a Facility > Facility Search Results	Review the results of your search.

Creating Facility Search Criteria

Access the Facility Search Criteria page (Curriculum Management > Facility and Event Information > Search for a Facility > Facility Search Criteria).

Image: Facility Search Criteria page

This example illustrates the fields and controls on the Facility Search Criteria page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Facility Search Criteria' page. At the top, there are two tabs: 'Facility Search Criteria' (active) and 'Facility Search Results'. Below the tabs, the 'Academic Institution' is set to 'PeopleSoft University'. The 'Meeting Criteria' section contains the following fields and controls:

- *From Date: 11/24/2010
- *End Date: 11/24/2010
- *Meeting Start Time: 8:00AM
- *Meeting End Time: 5:00PM
- Weekly schedule: M (), Tu (), W (checked), Th (), F (), Sa (), Su ()

The 'Facility Criteria' section contains the following fields and controls:

- Facility Type: LCTR (Lecture Room)
- *General Assignment: Ignore Fld
- Room Capacity From: (empty)
- Room Capacity To: 100
- Academic Organization: LIBARTS (College of Liberal Arts)
- Facility Partition: (empty)
- Location Code: (empty)
- Building: (empty)
- Fetch Facilities button

Enter the criteria for your meeting in the Meeting Criteria group box. Enter any specific facility requirements you have in the Facility Criteria group box.

Click the Fetch Facilities button to retrieve a list of facilities that match your request.

Viewing Facility Search Results

Access the Facility Search Results page (Curriculum Management > Facility and Event Information > Search for a Facility > Facility Search Results).

The system lists every facility that matches your criteria. Reserve the room through event scheduling.

"Tracking Event Attendance" (PeopleSoft Campus Solutions 9.2: Campus Community)

Searching for Classes

This section provides an overview of class search and lists the pages used to search for classes.

Related Links

"Searching for Classes Using Classic Self-Service Pages" (PeopleSoft Campus Solutions 9.2: Self Service)

[Setting Up Class Search Profiles](#)

Understanding Class Search

Use the Class Search feature to search or browse for classes within a specific institution and term. The Class Search feature is accessible through the core system and through PeopleSoft Campus Self Service.

Combined Section Statuses in Class Search

When you search for open classes, the system uses a virtual status to determine whether or not a combined section class appears on the Search for Classes - Search Results page. If the class has a virtual status of closed, the class does not appear on the Search for Classes - Search Results page for open classes.

The system calculates a virtual status for combined sections because combined section classes have combined enrollment capacities. A section with an enrollment capacity of 30 would appear in CLASS_TBL as open after only 15 students enroll, but if it is a combined section with a combined enrollment capacity of 30, and both classes have 15 students enrolled—which meets the combined enrollment capacity of 30—the combined section is closed, even though CLASS_TBL shows each section as open. The class search feature knows the combined section is closed because of the virtual status. The system determines the virtual status of the combined section on the Combined Sections page.

The system follows the following rules to determine the virtual status of a combined section class:

- If the enrollment status of a class is closed, the virtual status is closed.
- If the enrollment status of the class is open, the system evaluates whether or not seats are available within the combined section.

If seats are available, the virtual status is open. If no seats are available within the combined section, the virtual status is closed.

Pages Used to Search for Classes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Search for Classes	SSR_CLSRCH_ENTRY	Curriculum Management > Schedule of Classes > Class Search > Search for Classes	Search for classes offered during a specific term. Enter search criteria and retrieve your results.
Search for Classes - Search Results	SSR_CLSRCH_RSLT	Click the Search button on the Search for Classes page.	Review all classes that match your search criteria.
Search for Classes - Class Detail	SSR_CLSRCH_DTL	Click a class section on the Search for Classes - Search Results page.	Review detail for a specific class.

Printing the Schedule of Classes Report

Use the Schedule of Classes Report component to print the schedule of classes report for a term.

This section discusses how to:

- Set Schedule of Classes Report parameters.
- Set Schedule of Classes Report options.

Pages Used to Print the Schedule of Classes Report

Page Name	Definition Name	Navigation	Usage
Print Class Schedule	RUNCTL_SRYSDCHD	Curriculum Management > Schedule of Classes > Print Class Schedule > Print Class Schedule	Specify reporting parameters for the Schedule of Classes.
Report Options	RUNCTL_SRYSDCHD2	Curriculum Management > Schedule of Classes > Print Class Schedule > Report Options	Further specify your Schedule of Classes reporting options.

Setting Schedule of Classes Report Parameters

Access the Print Class Schedule page (Curriculum Management > Schedule of Classes > Print Class Schedule > Print Class Schedule).

Academic Institution

Enter the academic institution for which you want to print the schedule of classes. The system populates the Academic Institution field by default from the User Defaults 1 page. You can change the value. This field is required.

Term

Enter the term for which you want to print the schedule of classes. The system populates the Term field by default from the User Defaults 1 page. You can change the value. This field is required.

Academic Organization Node

Enter the academic organization node for which you want to print the schedule of classes. The report selects all classes whose academic organization (as assigned on the Schedule of Classes - Basic Data page) falls under the academic organization node that you enter here. You can view the hierarchy of academic organizations on the academic organization tree.

See *PeopleTools: Tree Manager*

Session

Enter the session for which you want to print the schedule of classes. If you do not enter a specific session, the system prints the schedule for the term you specify. Session values are defined on the Session Table page.

Schedule Print

Enter the schedule print value. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are:

Yes: All classes with the Schedule Print check box selected on the Basic Data page appear on the report.

No: All classes with the Schedule Print check box cleared on the Basic Data page appear on the report.

All: All classes appear on the report, regardless of the Schedule Print check box setting on the Basic Data page.

Print Instructor in Schedule

Enter a value to determine whether the instructor's name appears on the report. Values for this field are delivered with your system as translate values. Do not modify these values in any way. Any modifications to these values require a substantial programming effort. Values are:

Yes: All instructors with the Print check box selected on the Meetings page appear on the report.

No: All instructors with the Print check box cleared on the Meetings page appear on the report.

All: All instructors appear on the report, regardless of the Print check box setting on the Meetings page.

Class Status

Use the Class Status group box indicate what status of classes to print on the schedule of classes. Values are *Active*, *Cancelled*, *Stop Enrl*, and *Tentative*.

Print By Campus and Campus

Select to print the schedule of classes based on campus rather than by class section number. Select the campus to specify a single campus.

Print By Location and Location Code

Select to print the schedule of classes based on location within campus, rather than by class section number. Select the location code to specify a single location.

Setting Schedule of Classes Report Options

Access the Report Options page (Curriculum Management > Schedule of Classes > Print Class Schedule > Report Options).

Report Options

Set the report options to print the information that you want to display on the schedule of classes report.

Report Only

Clear this check box to specify that you want to create a Schedule of Classes report and send the Schedule of Classes report to your file path location in csv format. Select this check box to create a Schedule of Classes report, without creating a csv file. If you select this check box, the File Path field becomes unavailable.

File Path

In addition to sending report output for this process to a file (through setting preferences in the PeopleSoft Process Monitor),

you can also send any additional output files created by this process to a file directory. To send the extract output to a file directory, enter a valid directory path that maps to a folder with appropriate read/write permission. If you cannot locate such a folder, consult your system administrator.

Copying Classes from One Term to Another

This section lists prerequisites and discusses how to:

- Define criteria for the Prior Term Copy process.
- Select options for the Prior Term Copy process.

Use the Prior Term Copy component to copy the schedule of classes from term to term dependent upon criteria you submit and the roll down options you select.

To run the prior term copy process:

1. Access the Prior term Copy page.
2. Define your processing parameters.

Specifically, define the term from which you want to copy data, and define the term to which you want to copy data.

3. Define additional information such as the academic group and subject area that you want to copy (from and to).
4. Access the Prior Term Copy 2 page.
5. Define detailed options that specify the types of classes that you want to copy.
6. Click Run to run this request. PeopleSoft Process Scheduler runs the RUNCTL_SRROLL process at user-defined intervals.

Prerequisites

You must first define your academic institution and terms. In addition, you need to have a schedule of classes created in a prior term.

Pages Used to Copy Classes from Term to Term

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Copy Prior Term's Schedule	RUNCTL_SRROLL	Curriculum Management > Roll Curriculum Data Forward > Copy Prior Term's Schedule > Copy Prior Term's Schedule	Define the criteria for copying the schedule of classes from term to term.

Page Name	Definition Name	Navigation	Usage
Copy Prior Term's Schedule2	RUNCTL_SRROLL2	Curriculum Management > Roll Curriculum Data Forward > Copy Prior Term's Schedule > Copy Prior Term's Schedule2	Define additional class status and roll options for the process.

Defining Criteria for the Prior Term Copy Process

Access the Copy Prior Term's Schedule page (Curriculum Management > Roll Curriculum Data Forward > Copy Prior Term's Schedule > Copy Prior Term's Schedule).

Image: Copy Prior Term's Schedule page

This example illustrates the fields and controls on the Copy Prior Term's Schedule page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Copy Prior Term's Schedule' page with the following fields and controls:

- Run Control ID:** PS
- Report Manager:** [Report Manager](#)
- Process Monitor:** [Process Monitor](#)
- Run:**
- 'Institution:** PSUNV (PeopleSoft University)
- 'Roll From Term:** 0640 (2010 Spring)
- 'Roll To Term:** 0660 (2011 Spring)
- Sequence:** 1
- Academic Group:**
- Subject Area:** FREN (French)
- Catalog Number From:** 103
- Catalog Number To:** 103
- Campus:**
- Session:**
- Commit Frequency:** 1

Academic Institution

Enter the academic institution for which you want to copy a schedule of classes data.

Roll From Term

The term from which you want to copy classes (the source term).

Roll To Term

The term to which you want to copy classes (the target term).

Sequence

The system populates this field to 1 by default, and increments by 1 for each row that you add. This value is for internal processing purposes only.

Academic Group

Enter an academic group for the classes that you want to copy.

Subject Area, Catalog Number From, and Catalog Number To

Enter a subject area for the classes that you want to copy. If you select a subject area, you have the option of specifying a range of catalog numbers. The system does not require you to select a subject area. If you do not select a subject area, the Catalog Number fields are unavailable for entry.

Campus

Enter a campus for the classes that you want to copy. This field is optional.

Session

Enter a session for the classes that you want to copy. This field is optional.

Commit Frequency

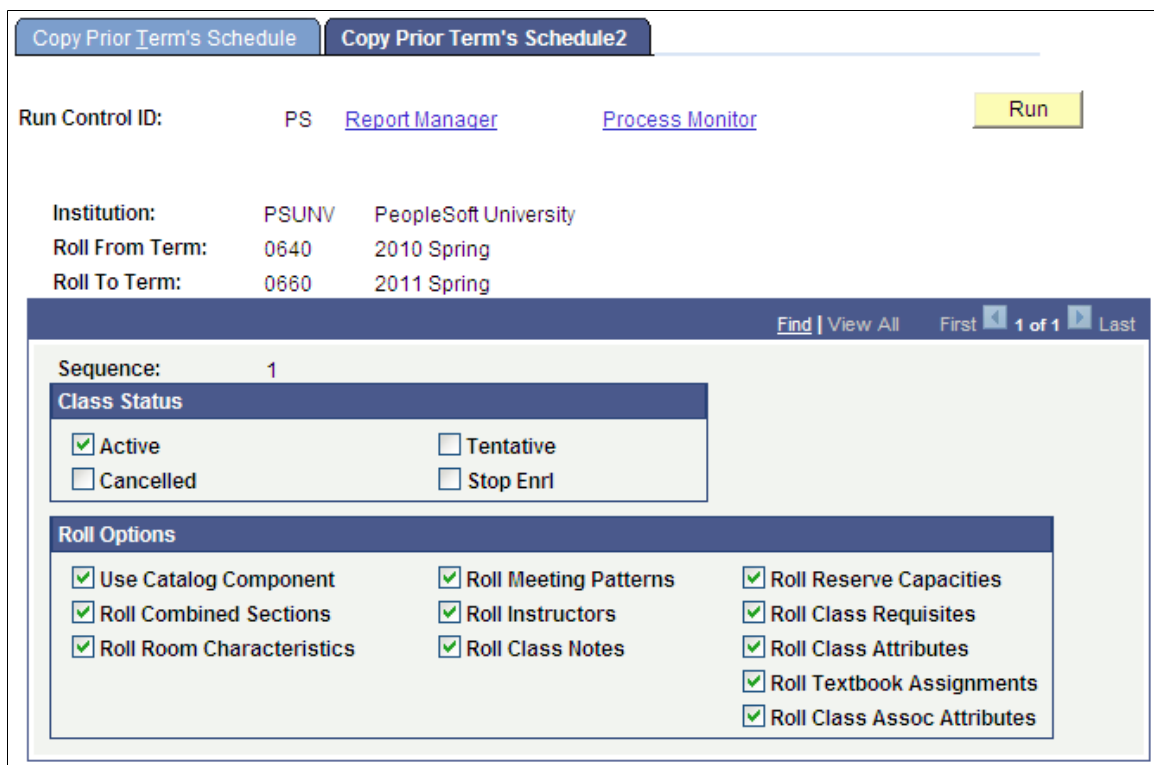

The system populates this field to 1 by default. The lower the commit frequency, the better concurrence of data. While the higher the commit frequency enables faster processing of the job, the job could get tied up with another process. You should leave the commit frequency at 1.

Selecting Options for the Prior Term Copy Process

Access the Copy Prior Term's Schedule2 page ((Curriculum Management > Roll Curriculum Data Forward > Copy Prior Term's Schedule > Copy Prior Term's Schedule2).

Image: Copy Prior Term's Schedule2 page

This example illustrates the fields and controls on the Copy Prior Term's Schedule2 page. You can find definitions for the fields and controls later on this page.

Class Status

Use the Class Status group box to indicate the status for classes that you want to copy. Values are *Active*, *Cancelled*, *Tentative*, and *Stop Enrl*. Each of these values corresponds to the class status value on the Enrollment Cntrl page.

Roll Options

Specify the type of information that you want to copy by selecting the appropriate roll options.

Use Catalog Component

Select this check box to validate against the course catalog and only roll those sections to the new term that are valid components of the course as defined in the course catalog. If you do not select this check box, the system copies all sections to the new term, regardless of the component designation.

Note: If a dynamic class date rule is associated with a class, you can still use the Prior Term Copy process by selecting the Use Catalog Component check box because the rule rolls from the course catalog. However, in order to calculate deadline dates, you must run the Dynamic Class Dates process within the copy to term.

Roll Combined Sections

Select this check box to roll combined sections that are designated as a permanent combination (on the Combined Sections page) to the new term.

Roll Textbook Assignments

Select this check box to roll textbook assignments. All data is carried forward except Textbook Assignment Status, which is set to Pending.

See [Defining Textbooks for Classes](#).

The remaining options are self-evident.

Note: If your institution uses the Instructor Workload feature, you should follow the Prior Term Copy process with the Workload Copy/Update process using the same roll from and roll to terms. This final step ensures that the process creates term workload records for all copied Schedule of Classes data.

Clearing the Resource Queue Table

This section provides an overview of the resource queue table and discusses how to clear the resource queue table.

Understanding the Resource Queue Table

For organizations that schedule classes with facility conflict checking activated, the resource queue table is a useful feature that prevents users from double booking facilities. When a user begins the class scheduling process, the system inserts a row in the resource queue table (via a COBOL program). This row signifies that someone within the organization is currently scheduling facilities. If another user

attempts to reserve a facility, the system presents them with a message that resources are currently being allocated to another process and they must wait.

For example, "The resource you are trying to schedule is currently in use. Try your save again. If after 3 attempts you still cannot save, contact your system administrator."

When the scheduling process finishes, the row is removed from the Resource Queue table.

On occasion, system-wide or local client workstation errors may cause the row to remain in the table, thereby preventing the scheduling of classes. The Resource Queue Cleanup page was designed with this in mind. It is a powerful page, to be used by individuals at the system administrator level. The system administrator can click the Unlock Resource button on the Resource Queue Cleanup page, confirm their selection on the secondary page, and free up the resource.

Page Used to Clear the Resource Queue Table

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Resource Queue Cleanup	RESOURCE_QUEUE	Curriculum Management > Schedule of Classes > Resource Queue Cleanup > Resource Queue Cleanup	Unlock a facility resource.

Clearing the Resource Queue Table

Access the Resource Queue Cleanup page (Curriculum Management > Schedule of Classes > Resource Queue Cleanup > Resource Queue Cleanup).

Unlock Resource

Click to unlock the resource.

Tracking Instructor Workload

Viewing and Updating Term Workload Data

Two primary ways are available to assign workload hours to an individual:

- Assign non-instructional hours (such as advising) on the Term Workload page.
- Assign an instructor to a class on the Meetings page (thereby attaching the class's workload hours to the instructor).

There is a third way of assigning workload to individuals, through the Workload Copy/Update process, where instructor workload assignments are copied in batch from one term to another. The Workload Copy/Update process is described in a later topic.

Related Links

[Understanding Instructor Workload](#)

Prerequisites

Before you can review and update term workload, you must:

- Define instructor assignment class values for your institution on the Instructor Assignment Class page.
- Set the default instructor assignment class value for your institution on the Academic Institution Table - Academic Institution 4 page.

Pages Used to View and Update Term Workload Data

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Term Workload	INSTRUCTOR_TERM	Curriculum Management > Instructor/Advisor Information > Instructor Term Workload > Term Workload	Assign instructor values, view previously assigned term data, or manually update values.
Components	CLASS_ASSOC_CMPNT	Curriculum Management > Course Catalog > Course Catalog > Components	Modify aspects of class components, such as grading basis, course components, and requirement designations.

Page Name	Definition Name	Navigation	Usage
Meetings	CLASS_MTG_PATTERN	<ul style="list-style-type: none"> Curriculum Management > Schedule of Classes > Schedule New Course Curriculum Management > Schedule of Classes > Maintain Schedule of Classes Curriculum Management > Schedule of Classes > Schedule Class Meetings 	<p>Enter or view class specific workload data for instructors.</p> <p>If you assign an individual to a class meeting, and they are not assigned to an instructor assignment class on the Term Workload page for the term, the system uses the default instructor assignment class from the Academic Institution 4 page to create a term workload record.</p>

Viewing and Updating Individual Term Workload Data

Access the Term Workload page ((Curriculum Management > Instructor/Advisor Information > Instructor Term Workload > Term Workload).

Image: Term Workload page: Workload Assignment tab

This example illustrates the fields and controls on the Term Workload page: Workload Assignment tab. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Term Workload' page for user 'Dabbs,Constancio' with ID 'SR0405'. The 'Workload Definition' tab is active, displaying fields for 'Academic Institution' (PSUNV - PeopleSoft University), 'Term' (0550 - 2005 Fall), and 'Instructor Assignment Class' (FULL - Full-time). It also shows 'Calculate Workload' and 'Limit Workload' checkboxes, 'Assigned FTE %' (120.00), and 'Instructor Multiplier %' (100). A 'Total Term FTE%' button is visible. The 'Workload Assignment' tab is also shown, containing a table with columns: *Description, Subject, Catalog Nbr, Section, Class Nbr, Comb Sects ID, *Assign Type, Work Load, App Load, and Assignment FTE %. Two rows are listed for 'Inorg Synthesis and Reactions' with subjects CHEM, catalog numbers 128, and section numbers 010 and 011, both with class numbers 1687 and 1688, and 'Lecture' assignment types. Each row has a checked 'App Load' box and '+'/'-' buttons for 'Assignment FTE %'.

If you want to view an individual's cumulative term full-time equivalent (FTE) percentage data, add non-course-based assignments (such as advising), or manually override a check box setting, you can reference the Term Workload page to do so.

Note: Multiple views of this page are available by selecting the tabs in the scroll area. Fields common to all views are documented here first.

Academic Institution

Displays the institution to which this Term Workload record is attached. Individuals can have separate records for separate academic institutions.

Term	Use to enter new term workload data, or to review an existing term workload record.
Instructor Assignment Class	<p>When you access this page in Add mode and specify a term, this field displays the appropriate effective-dated setting that you specified on the Academic Institution 4 page.</p> <p>Enter an instructor assignment class value for this individual if different from the default. The Calculate Workload, Limit Workload, Assigned FTE %, and Instructor Multiplier % fields display the default settings from the Instructor Assignment Class page. You can change these settings.</p>
Calculate Workload	Select to activate the Instructor Workload feature for this instructor or advisor in the specified term. This selection determines if the system creates term detail records at all. This selection alone does <i>not</i> control whether the feature produces a limit warning. You must select the Limit Workload check box in conjunction with the Calculate Workload check box for warnings to appear. This check box is selected by default if the Calculate Workload check box on the Instructor Assignment Class page is also selected. You can change this setting on a term-by-term basis.
Limit Workload	Select to activate the workload limit for this instructor or advisor in the specified term. This selection determines if errors and warnings are produced when assignments are made that exceed either the individual's assigned FTE percentage or the academic institution warning limits. This selection is available only if the Calculate Workload check box is selected. This check box is selected by default if the Limit Workload check box on the Instructor Assignment Class page is also selected. You can change this setting on a term-by-term basis.
Assigned FTE % (assigned full-time equivalency percentage)	<p>Enter the assigned FTE percentage to indicate the percentage of the institution-wide standard (also known as the 100% Weekly Workload Hours field value on the Assignment Type page) to assign to this individual. By default, the system uses this field to display the same value as that set in the Assigned FTE% field on the Instructor Assignment Class page, but you can change it. For example, a value of <i>100.00</i> enables you to assign weekly workload hours to this instructor up to a total term FTE percent of 100. If you want to hold this instructor to only 80 percent of the institution-wide standard, then set the value to <i>80.00</i>. If you often overbook this instructor (perhaps only to ultimately drop the instructor from an assignment at the beginning of the term), then you could set this value to <i>120.00</i>. Total term FTE percent for an individual can never exceed the value specified in this field. You can change this setting on a term-by-term basis.</p>
Instructor Multiplier %	Enter the instructor multiplier percentage to associate with this individual. By default, this field displays the same value as that set on the Instructor Assignment Class page and contributes

to the default workload hours formula for courses assigned on the Meetings page. In most instances, you will probably set this field value to *100*. However, if you want to give a certain instructor double credit for the courses to which they are assigned, set this field value to *200* for the term. If you want students to receive only half credit for their course assignments, set this field value to *50*. In addition, you can always assign the instructor to a different instructor assignment class where this field is set to a default value of *50*. This multiplier does not apply to noncourse-based assignments made directly to the Term Workload page. You can change this setting on a term-by-term basis.

Total Term FTE % (total term full-time equivalency percentage)

Total term FTE percentage represents an individual's actual term assignment percentage.

This number is the result of the assignment percentage calculation and decreases or increases automatically as you add, delete, or modify various assignments.

Description

This field has three uses: to enter assignment descriptions manually when new rows are inserted, to view a course title that is derived from assignments made on the Meetings page, or to view a combined section header description when a combined section is assigned to an instructor.

Note: You cannot add, delete, or modify assignments made on the Meetings page.

Subject

Displays the academic subject for the course assigned (if applicable). A subject area is derived from the Course Catalog - Offerings page.

Catalog Nbr (catalog number)

Displays the value associated with this class number, if applicable. A catalog number is derived from the Course Catalog - Offerings page.

Sect (section)

Displays the value associated with this class. Section is derived from the Schedule of Classes - Basic Data page.

Class Nbr (class number)

Displays the autogenerated value associated with the course assigned, if applicable. The class number is derived from the Meetings page.

Workload Assignment Tab

See the previous exhibit for a view of this tab.

Comb Sects ID (combined sections ID)

A combined sections ID appears only when those courses assigned to an instructor comprise combined sections. The combined sections value is created on the Sections Combined Table page. The combined ID description is visible in the table

on the Term Workload page, except when the Skip Meeting Pattern & Instructor Edit is selected on the Combined Sections page. In this case, the system considers instructor workload for each of the sections and does not combine hours. If necessary, you can adjust instructor workload hours on the Schedule of Classes - Meetings page.

See [Creating Combined Sections](#).

Assign Type (assignment type)

Use this field in one of two ways. Use it to enter assignment types manually when you insert new rows, or use it to view an assignment type that is derived from assignments made on the Meetings page. All assignment types that are effective as of the term begin date are available.

Work Load

Displays the actual workload hours. Use this field to enter workload hours manually when you insert new rows, or use it to view workload hours derived from assignments made on the Meetings page.

App Load (apply load)

This check box determines whether the assignment counts toward an individual's overall assigned full-time equivalency percentage. The App Load check box setting corresponds to the Include Assignment in Workload check box setting on the related Schedule of Classes component and cannot be changed. For manually entered assignments, it can be changed.

Assignment FTE% (assignment full-time equivalency percentage)

The assignment FTE percentage represents the particular assignment's weight based on the 100 percent weekly workload hours value (or the 100 percent OEE weekly workload hours value) for the assignment type. For example, if the 100% Weekly Workload Hours field is set to *15* on the Assignment Type page, and you assign an instructor to teach a 3-hour lecture component with the same assignment type, the assignment FTE percent equals *20* (because 3 hours out of 15 makes 20 percent). The system calculates this number and the user can not modify it.

Job Code Tab

Select the Job Code tab.

Image: Term Workload page: Job Code tab

This example illustrates the fields and controls on the Term Workload page: Job Code tab. You can find definitions for the fields and controls later on this page.

Term Workload

Dabbs,Constancio ID: SR0405

Workload Definition Find | View All First 1 of 2 Last

Academic Institution: PSUNV PeopleSoft University **Total Term FTE%**

Term: 2005 Fall

Instructor Assignment Class: Full-time

Session

Displays the session name (if applicable) and is derived from the Meetings page. Sessions are a simple way to divide a term into multiple periods for offering courses.

Empl Rcd# (employee record number)

Relates job information to instructors for reporting purposes. The system displays a warning message if the FULL_PART_TIME value on the job does not coincide with that same field value on the instructor assignment class record related to the instructor assignment class on the Term Workload page.

Job Code

Displays the value specified on the Accommodations page for a particular employee record.

Viewing and Updating Workload Values on the Meetings Page

Use the Instructors For Meeting Pattern group box on the Meetings page to enter or view workload data for instructors.

[Defining Class Meeting Patterns](#)

Using the Workload Copy/Update Process

The Workload Copy/Update process generates a report that classifies instructors who fall into one of the following six categories:

1. Reporting full-time instructors with workload over the allowed assignment.

2. Reporting part-time instructors with workload over allowed assignment.
3. Reporting full-time instructors with workload over the warning limit.
4. Reporting part-time instructors with workload over the warning limit.
5. Reporting full-time instructors with workload under the allowed assignment.
6. Reporting part-time instructors with workload under the allowed assignment.

If you run the process with the Report Only check box selected, the process does not update any term workload values. It just produces a report for the target term.

If you run the process with the Report Only check box cleared, all schedule of classes data from one term rolls over to another term. However, the Term Copy process alone does not roll forward term workload values. Instead, you must run the Workload Copy/Update process immediately following the Term Copy process to finish the task. This final step ensures that the process creates term workload records for all copied schedule of classes data.

Prerequisites

Term workload records must exist for the Roll From term.

Page Used to Report and Update Workload Values

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Workload Copy/Update	RUNCTL_WORKLD	Curriculum Management > Roll Curriculum Data Forward > Copy/Update Workload Process > Workload Copy/Update	Enter report and process parameters.

Reporting and Updating Workload Values

Access the Workload Copy/Update page (Curriculum Management > Roll Curriculum Data Forward > Copy/Update Workload Process > Workload Copy/Update).

Academic Institution

The institution for which you are running the process. Academic institution values are defined on the Academic Institution Table page. This field is required.

Report Only

Select to report on instructor workload and not update any values.

Report Term

Use to specify the term for which you want to report. When you select the Report Only check box, the Report Term field appears and all other fields disappear.

When you do not select the Report Only check box, the process updates or creates term workload values, or it does both.

Roll From Term

Select the term to reference as the original or source term. This should match the Roll From Term field value on the Term Copy page for the Term Copy process that you run immediately prior to the Workload Copy/Update process. When this field appears, it is required.

Roll To Term

Select the term to reference as the new or target term. This should match the Roll To Term field value on the Term Copy page for the Term Copy process that you run immediately prior to the Workload Copy/Update process. When this field appears, it is required.

For example, if your institution uses both the Term Copy and Instructor Workload features, you run the Term Copy process from term *X* to term *Y*. Then you run the Workload Copy/Update process from the same term *X* to the same term *Y*. At the conclusion of this process, you can view the report to identify any individuals who might need manual adjustments.

In addition, you can run the Workload Copy/Update process both from and to the same term if needed. For example, you might originally run the Workload Copy/Update process from term *X* to term *Y*. Then, at a later date, you determine that you need to adjust some setup values that relate to the Instructor Workload feature for term *Y* (for example, assignment type, instructor class, or number of weeks in term or session.) You can change this data wherever necessary and then rerun the Workload Copy/Update process from term *Y* to term *Y*. This recalculates your term *Y* values (assignment FTE percent totals) with the newly adjusted setup values. As always, you have a newly generated report to view.

Note: The process of creating or updating To Term records references effective-dated information as of the report date (current date).

In addition, the assignment FTE percent values are not copied but are dynamically calculated according to the To Term parameters.

See [Copying Classes from One Term to Another](#).

Copy Non-Course Assignments

Select to include assignments made directly to the Term Workload page for the specified Roll From Term field value.

Note: Should you need to run the Update Workload process more than once with the same value in the Roll to Term field, be aware of the Copy Non-Course Assignments check box and its usage. If left selected each time that the process is run to the same term, non-course-based assignments are copied. For example, if you run the Update Workload process from fall 1999 to fall 2000, and in fall 1999, instructor A was assigned, on the Term Workload page, to advise the math club for 3 hours and, on the Schedule of Classes - Meetings page, to teach Math 100 for 3 hours, then both the 3-hour non-course advising assignment and the Math 100 course assignment correctly roll forward to fall 2000 as 3 workload hours each. However, if you run the Update Workload process a second time from fall 1999 to fall 2000 (with the Copy Non-Course Assignments check box still selected), you add another 3-hour advising assignment to the individual's term workload record. This gives the individual a total of two advising assignments and one class assignment for a total of 9 workload hours. To prevent this type of noncourse assignment copying, during any postprimary runs of the process, clear the Copy Non-Course Assignments check box.

Begin with ID and End with ID

To identify a subset of individuals to process, you might want to specify begin-with-ID and end-with-ID parameters. Both of these fields are optional. These fields are not available when you select the Report Only check box. The report always displays all applicable IDs (which might include more than the range of IDs processed).

Walking Through Instructor Workload

Now that you have familiarized yourself with all of the setup pages, walk through the following simple scenarios to help you visualize how everything is integrated. If possible, actually perform this walk through in a sample or test database. The exercise begins with references to the setup table located in the Implementing Instructor Workload Setup Tables documentation.

See [Implementing Instructor Workload Setup Tables](#)

Warning! Although the conclusion of this exercise includes data clean up, there is one Term Workload record that you cannot delete. If you do not have access to a sample or test database, then use the steps below as a reference when you finally implement the feature. Do not perform this walk through in your production database.

To track instructor workload:

Define Assignment Types

First, create assignment types for at least two types of assignments, beginning with lecture and advising.

1. Select Curriculum Management > Instructor/Advisor Information > Assignment Type > Add a New Value.
2. Enter an Assignment Type of *LEC* and then the code for your institution.
3. Click Add.
4. Enter the following effective date: *01/01/1900*.
5. Enter the following status: *Active*.

6. Enter the following description: *Lecture Assignment Type*.

7. Enter the following short description: *Lecture*.

This description appears in the grid on the Meetings and Term Workload pages.

8. Select the View on Schedule of Classes check box.

This causes the assignment type to be an available choice on all of the Meetings pages.

9. Select the Include Assignment in Workload check box.

10. Enter 9 in the 100% Weekly Workload Hours field.

This causes a 3-hour assignment to be converted to 30 percent of an individual's term workload, or, this causes a 9-hour assignment to be converted to 100 percent of an individual's term workload.

11. Enter 0 in the 100% OEE Workload Hours field.

12. Save.

13. Select Curriculum Management > Instructor/Advisor Information > Assignment Type > Add a New Value.

14. Enter an assignment type of *ADV*, and then the code for your institution.

15. Click Add.

16. Enter the following effective date: *01/01/1900*.

17. Enter the following status: *Active*.

18. Enter the following description: *Advising Assignment Type*.

19. Enter the following short description: *Advising*.

This appears in the grid *only* on the Term Workload page because you set the next field to *OFF*.)

20. Clear the View on Schedule of Classes check box.

This ensures that an assignment type of *ADV* can never be assigned on the Meetings page. Instead, you want to reserve this assignment type for association with assignments made directly on the Term Workload page.

21. Select the Include Assignment in Workload check box.

22. Enter 9 in the 100% Weekly Workload Hours field.

This value means that if you want to give an instructor one course credit for advising, then give them 3 workload hours (or whatever the institution common course count is) for advising in a given term.

23. Enter 0 in the 100% OEE Workload Hours field.

24. Save.

Define Instructor Assignment Classes

To create instructor assignment class values and their corresponding defaults for two types of employees (beginning with full time and part time):

1. Select Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Add a New Value.
2. Enter an Instructor Assignment Class of *FT*, and then the code for your institution.
3. Click Add.
4. Enter the following effective date: *01/01/1900*.
5. Enter the following status: *Active*.
6. Enter the following description: *Full-Time*.
7. Select *Full Time* in the Full/Part Time field.
8. Select the Calculate Workload check box.
9. Select the Limit Workload check box.
10. Enter *120.00* in the Assigned FTE % field.
11. Enter *100* in the Instructor Multiplier field.
12. Save.
13. Select Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Add a New Value.
14. Enter an Instructor Assignment Class of *PT*, and then the code for your institution.
15. Click Add.
16. Enter the following effective date: *01/01/1900*.
17. Enter the following status: *Active*.
18. Enter the following description: *Part-Time*.
19. Select *Part Time* in the Full/Part Time field.
20. Select the Calculate Workload check box.
21. Select the Limit Workload check box.
22. Enter *60.00* in the Assigned FTE % field.
23. Enter *100* in the Instructor Multiplier field.
24. Save.

Activate Workload Feature and Specify Defaults

To activate the workload feature for your institution:

1. Select Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table.
2. Specify your institution, select Correct History, and select Search.
3. Insert an effective-dated row with today's date.
4. Select the Academic Institution 4 tab.
5. Select the Calculate Workload check box.
6. Enter *100.00* in the Full-Time Warning Limit % field.
7. Enter *50.00* in the Part-Time Warning Limit % field.
8. Enter *100* in the Course Component Workload Hours% field.
9. Leave the Academic Progress Units % field blank.
10. Enter *120.00* in the Full-Time Assigned FTE % field.
11. Enter *60.00* in the Part-Time Assigned FTE % field.
12. Enter the following assignment type: *LEC*.
13. Enter the following instructor class: *FT*.
14. Save.

Define Academic Subject Component Percentages

Normally, you must enter only component percentages for academic subjects at your institution that you would like multiplied as other than 100. However, just to familiarize you with the page, update the subject of *MATH* with a lecture value of 100.

To define academic subject component percentages:

1. Select Set Up SACR > Foundation Tables > Academic Structure > Academic Subject Table.
2. Specify your academic institution and a subject area of *MATH*; select Correct History and then select Search.
3. Select the Subject/Workload tab.
4. Enter the following course component: *Lecture*.
5. Enter the following component multiplier: *100*.
6. Save.

Define Course Catalog Workload Hours Information

To specify workload hours for a course:

1. Select Curriculum Management > Course Catalog > Course Catalog.
2. Specify your academic institution and a subject area of *MATH* if possible, select Correct History, and select Search.

3. Select a course from the search results.
4. Select the Components tab.
5. Verify that a component of *lecture* exists and has a workload hours value of 3. If not, update appropriately and Save.

Note any changes that you make to this course for cleanup later.

6. Note the following data:
 - Course ID _____.
 - Course Component _____.
7. View Class Component Workload Hours Information.
8. Make sure that you have the course scheduled and that you have specified values correctly in the Workload Hrs (workload hours) field on the Class Components page.
9. Select Curriculum Management > Schedule of Classes > Adjust Class Associations.
10. Specify your academic institution, a future, or current term (if you are using a PeopleSoft sample data database, enter *0460*), and the Course ID noted above.
11. Select Correct History and then select Search.
12. Select the Class Components tab.
13. Note the following data for the component:
 - Term _____.
 - Associated Class Nbr _____.
14. Verify that the lecture component exist, and that the corresponding workload hours read.

With regularly scheduled classes, this defaults from the catalog. If this is not a newly scheduled class, enter a value of 3 in the Workload Hours field.
15. Save the page.
16. Now take a look at another place that you can go to view or update Workload Hours data.

Use the following optional menu path after a component has been scheduled for a term but later needs to be accessed for review or minor updates. The performance opening these pages is ideal because only the meeting that you need for viewing or updating is loaded.
17. Select Curriculum Management > Schedule of Classes > Schedule New Class > Meetings.
18. Enter your institution, term, and course ID.
19. Click Search.
20. Notice that this component is much smaller than that of the regular schedule of classes (only three pages).

Because you are loading less data, the pages open more quickly. Note that on this page, you can make changes to the workload hours for the meeting and the assignments themselves.

21. Do not make any additional changes.

Define an Individual's Term Workload Information

To define an individual's term workload information:

1. Select Curriculum Management > Instructor/Advisor Information > Instructor Term Workload.
2. Enter an ID (*Instructor A*) and code for your institution.
3. Click Search.
4. Note the following data: ID_____.
5. Insert a row for the same term that you used previously for the class component.
6. Change the instructor assignment class to *PT* from Academic Institution Page 4 default of *FT* and exit the field.

Notice that all of the PT defaults autopopulate the check boxes and Assigned FTE % (assigned full-time equivalency percent) field. This is to show you how the check boxes and fields populate their default values. Now set your Instructor Assignment Class back to *FT*.

7. Select the Calculate Workload check box.
8. Accept the default of selected in the Limit Workload check box from the Instructor Assignment Class page.
9. Change the value in the Assigned FTE % field to *100.00*.

This ensures that you never assign the instructor to more than 100 percent of the full-time standard workload (9 workload hours in this example). If you wanted some slack, for give and take during scheduling, leave this at *120.00*, or even increase it.

10. Change the value in the Instructor Multiplier field to *200*.

Note that this does not double count assignments made directly to the Term Workload page.

11. Save.

Do *not* exit the page.

12. Assign Noncourse Based Assignments.
13. Manually assign a noncourse assignment of Advising to the previous ID (*Instructor A*).
14. Place cursor in Description field on the Workload Assignment tab and type "Advising the Math Club."
15. Enter the following assignment type: *Advising*.
16. Enter the following workload: *3*.
17. Save.

18. Notice that the Assignment FTE % (assignment full-time equivalency percent) field on the Workload Assignment tab autogenerates a percentage value of 33.33 percent.

This is using the formula for instructor assignments made directly to the Term Workload page. Remember, our 100 percent weekly workload hours for this assignment type are 9; therefore, 3 workload hours make up 33.33 percent of the instructor's total term FTE. Also notice that this value contributes to the overall Total Term FTE percent value for instructor A. Exit this page for now. You will return to it later.

Assign Course Based Assignments

To assign instructor A to a course using the Schedule of Classes - Meetings page:

1. Select Curriculum Management > Schedule of Classes > Maintain Schedule of Classes.
2. Enter the same term and course ID that you used in the steps above.
3. Click Search.
4. Select the Meetings tab.
5. On the Meetings - Assignment page, enter the ID for instructor A in the ID field, and exit the field.
6. Select the Workload tab.
7. Look at the Assignment Type field and notice that you do *not* see *ADV* as a choice. (because when setting up *ADV* as an assignment type, you cleared the view on Schedule of Classes check box).
8. Set the assignment type to *Lecture*.
9. Notice that workload hours read 6.

This is because you set the instructor multiplier to 200 percent, so every 3-hour assignment in this term counts as double workload hours. The 3 becomes a 6.

10. Notice that the Assignment FTE % (assignment full-time equivalency percent) field populates and represents that this course is worth double.
11. Save.

View an Instructor's Term Workload Summary

To return to Term Workload page to view instructor A's new workload information.

1. Select Curriculum Management > Instructor/Advisor Information > Instructor Term Workload.
2. Enter same ID for instructor A and code for your institution, and click Search.
3. Scroll to the term you used in steps above.
4. Looking at the page, you can now see both assignments: one made on the Term Workload page and another made on the Meetings page.

Notice that the course assigned on the Meetings page is actually counting double toward FTE. This is because you set the default Instructor Multiplier for this instructor to 200 percent.

Assign Workload for One Class Component to Two Instructors

To allow two instructors to share the responsibility of teaching the math class:

1. Return to the math class on the Schedule of Classes - Meetings page to update the assignments.
2. Select Curriculum Management > Schedule of Classes > Maintain Schedule of Classes.
3. Enter the same term, subject, and course you used in the previous steps, and click Search.
4. Select the Meetings tab.
5. Go to the Instructors For Meeting Pattern group box, select the Workload tab, and change the existing load factor for instructor A from *100.00* to *50.0*.

Notice changes in workload hours and assignment FTE percent.

6. Insert another row on the Workload tab and add another instructor.

Refer to this second instructor as *Instructor B*. Alter instructor B's load factor to *50*. Remember, it is the user's responsibility to set load factor, and it is also the user's responsibility to ensure that the combined load factor for a course component equals 100, if that is what you want. In some rare instances, you might want them to equal more than 100, but this is not recommended.

Therefore, in looking at the grid, you have now specified that instructor A shall teach 50 percent of the class, and instructor B shall teach the other 50 percent.

7. Save.

View an Instructor's Updated Term Workload Summary

Now return to the Term Workload page for instructor A. Because you have altered the instructor's load factor to 50 percent for the math course, you should notice an overall decrease in the total term FTE percent.

To view an instructor's updated term workload summary:

1. Select Curriculum Management > Instructor/Advisor Information > Instructor Term Workload.
2. Enter an ID for instructor A and a code for your institution, and click Search.
3. Scroll to the term that you used in the previous steps.
4. Notice that updates made to the Meetings page automatically update the Term Workload record.

In addition, notice on this page that you cannot edit anything created on the Meetings page. If you want to change anything associated with an assignment made on the Meetings page, you must return to the Meetings page and make the change. The only assignments that you can modify on the Term Workload page are the non-course-based assignments.

5. Do not cancel the page.

Review Warning Limits

On the Term Workload Page, let us try some of the soft and hard warnings that you created. You set up institution-wide soft warning limits and some default FTE percentage hard warning and error limits on

the Academic Institution 4 page. Keep the Term Workload page open and open the Academic Institution 4 page in a new window to review your earlier work.

To test the warnings that you set up:

1. Select Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table.
2. Specify your institution, select Correct History, and select Search.
3. Select the Academic Institution 4 tab.
4. Verify the following values in the listed fields:
5. Select the Academic Institution 4 tab.

The page should have the following values in the listed fields:

- Institution Wide *Soft* Warnings (which apply to all individuals where their Term Workload page has the Calculate Workload check box selected): Full-Time Warning Limit %: *100.00*; Part-Time Warning Limit %: *50.00*.
- Default FTE % Values/*Hard* Warnings (which serve as defaults on the Instr Assign Class page): Full-Time Assigned FTE %: *120.00*; Part-Time Assigned FTE %: *60.00*.

You can change these each time that you create a new Instructor Assignment Class. However, in order to minimize this type of change, pay special attention to the values that you enter. Try to make them as accurate as possible so that you can take full advantage of the data entry benefit this default provides

6. Look back at instructor A's Term Workload record.

Notice that the instructor already has an assigned FTE percent value for the term. Because of this, the default full-time assigned FTE percent value on the Academic Institution 4 page can *not* be used because instructor A does not need to rely on default FTE percent values for this term. Instead, instructor A has an assigned FTE percent value of *100*. This means that instructor A can never be assigned to more than 100 percent of the full-time standard (set up as 9 hours on the Assignment Type page for both *ADV* and *LEC*).

Test the Workload Limits

Close the Academic Institution 4 page, leaving just the Term Workload page open.

To test workload limits:

1. In the same term that you have been using, manually assign instructor A to a second advising assignment worth 4 workload hours.

This takes instructor A over the assigned FTE percent of *100* (or 9 hours in this example). Exit the workload hours field, attempt to save the page, and notice the hard warning or error that appears.

2. If you want to override this and save the assignment, you must increase the assigned FTE percent.

Set the percentage to *120*, and try the assignment again. On second attempt, you should receive only institution soft warnings.

3. Save the page.

- Before you move on to the next test, delete the second advising row that you just inserted, and set the assigned FTE percent to *110*.

Instructor A should now have two rows on the Term Workload page for this term: one for advising the Math Club and another for the math course. The total term FTE percent should be 66.66 percent.

- Save.

Limits Elicited by Using the Meetings Page

Select Curriculum Management > Schedule of Classes > Maintain Schedule of Classes.

- Enter the same term, subject, and course that you used in the previous steps, and click Search.
- Select the Meetings tab.
- On the Meetings page Workload tab, go to the row in the grid for instructor A and manually enter a workload hour value of *6.5* for this math course, exit the field, and try to save.

You should get a soft warning that this creates a workload over the institution-wide preference, but you can save because you are not exceeding instructor A's individual assigned FTE percentage for the term.

- Save but do not exit the page.
- Return to the workload field and change the *6.5* to *7*, exit the field, and try to save.

Notice that you get the hard warning and error that this exceeds instructor A's allowable assignment FTE percentage. The system does not permit you to save. The only way to override this and continue would be to navigate back to the Term Workload page for this individual and increase his or her assigned FTE percentage for the term.

- Exit the page without saving.

Limits Viewed by Using the Workload Copy Report

Running the Workload Copy/Update process disregards error and warning limits so that the overall process runs successfully and completely. However, there is a follow-up report that tells you which individuals were assigned and whether either their individual assigned FTE percentages or institution-wide warning limits were exceeded.

Because you know that, in the previous example, instructor A has a total term FTE percentage in excess of the institution-wide warning standard, let's run the report and see how this instructor appears on the report.

- Select Curriculum Management > Roll Curriculum Data Forward > Workload Copy/Update.
- Enter a run control.
Select Add a New value.
- Select the Report Only check box and enter the term that you have been using.
- Save.
- Click the Run button, select your process scheduler parameters, and click the OK button.

6. Allow the process to complete, then click the Report Manager link.
7. Enter a process type of *SQR Report*, then click the Refresh button.

The Workload Copy and Recalc (workload copy and recalculate) report should appear in the report list.

8. Click the View link to view the report.
9. Select the SRWRKLD.PDF file to view the report.

In viewing the report, you can see that the instructor A appears under the Reporting Full-Time Instructors with Workload over Warning Limit (100 percent) heading.

At this point, you wonder why you have sections entitled Reporting Instructors with Workload over Allowed Assignment.

If there is a hard warning in the system, how could individuals ever get in this predicament? Remember what happens when you run the Workload Copy/Update process from one term to another. The process can assign workload that exceeds limits if setup values differ between terms. This is why it is imperative that you always view this report after you run the Workload Copy/Update process. If you find that any individuals have exceeded their assigned FTE percentages for the term, you can easily identify them and modify their term workload records. You can also make adjustments on the Meetings page.

10. Because you will not run the Workload Copy/Update process at this time, close the report and exit the Update Workload page.

Walk Through Cleanup

Even though you are now in a test database, before you complete this exercise, you might want to clean up all of the data that you have just entered. To do so, follow these steps:

1. Remove Instructors A and B From the Math Course.
2. Select Curriculum Management > Schedule of Classes > Maintain Schedule of Classes.
3. Enter the same term, subject, and course that you used above.
Click OK.
4. On the Meetings page, delete both rows in the grid for instructors A and B, exit the field, and save.
5. Delete the Term Workload Records for Instructors A and B.
6. Select Curriculum Management > Instructor/Advisor Information > Instructor Term Workload.
7. Enter an ID for instructor A and a code for your institution, and click OK.
8. Delete appropriate term data.
9. Select Curriculum Management > Instructor/Advisor Information > Instructor Term Workload.
10. Enter an ID for instructor B and a code for your institution, and click OK.
11. Delete appropriate term data.

12. Remove Workload Hours for the math course.
13. Select Curriculum Management > Schedule of Classes > Adjust Class Associations > Class Components.
14. Enter the institution, term, and course that you have been using, and click OK.
15. Delete the workload hours of 3 for the lecture component and save.
16. Select Curriculum Management > Course Catalog > Course Catalog > Correction.
17. Enter the institution and course that you have been using, and click OK.
18. Delete the workload hours specified for the lecture component and save.
19. Remove Subject Component Multiplier for the Math Course.
20. Select Set Up SACR > Foundation Tables > Academic Structure > Academic Subject Table > Subject Workload.
21. Enter the code for your institution and the code for the math course, and click OK.
22. Delete the row for lecture and save.
23. Turn off the feature at the institution level.
24. Select Set Up SACR > Foundation Tables > Academic Structure > Academic Institution Table > Academic Institution 4.
25. Enter the code for your institution, and click OK.
26. Go to the row inserted with today's date, delete this row, and save.
27. Delete instructor assignment classes.
28. Select Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Correction.
29. Enter the instructor assignment class of *PT*, and then click OK, Delete, and Save.
30. Select Curriculum Management > Instructor/Advisor Information > Instructor Assignment Class > Correction.
31. Enter the instructor assignment class of *FT*, and then click OK, Delete, and Save.
32. Delete assignment types.
33. Select Set Up SACR > Foundation Tables > Academic Structure > Assignment Type > Correction.
34. Enter an assignment type of *ADV* and the code for your institution, and then click OK, Delete, and Save.
35. Select Set Up SACR > Foundation Tables > Academic Structure > Assignment Type > Correction.
36. Enter an assignment type of *LEC* and the code for your institution, and then click OK, Delete, and Save.

Note: You cannot inactivate or delete the autogenerated *NON* assignment type. Leave this value as delivered.

Managing Student Programs, Plans, and Subplans

Understanding Academic Program and Plan Activation

A student must be active in an academic program and plan to later be activated into a term for that academic program and plan. You can activate students into academic programs and plans by either of the following methods:

- Transmit the student's academic program and plan data through the Activate Applications matriculation process (ABPCPPRC) in Recruiting and Admissions, this being the usual method.
- Enter the student's academic program and plan data manually in the Student Program/Plan component.

The system stores the student's academic program and plan data on rows in the academic program table (ACAD_PROG). Collectively, all of a student's rows in the ACAD_PROG table are called the student's *program stack*. Now the individual is active in an academic program and plan and qualifies for activation into a term.

Related Links

"Updating Applications" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

Understanding Program Actions and Statuses

When you execute program actions to change a student's program data, the corresponding program action status often changes. For your reference, the program actions and program statuses relevant to Student Records are explained in the following table:

Program Action Selected	Explanation	System Updates Program Status To	Additional Steps Required
ACTV (Activate)	A student is ready either to enroll in a term or to be evaluated for transfer credit.	Active in Program	None
WADM (Administrative Withdrawal)	A student is withdrawn for administrative reasons.	Canceled	Post the withdrawal on the student Withdrawal page.
COMP (Completion of Program)	A student has completed the program.	Program Complete	If the student is ready for graduation processing, complete the graduate process on the Student Degrees page.

Program Action Selected	Explanation	System Updates Program Status To	Additional Steps Required
DEFR (Defer Enrollment)	A person has been admitted, and may be active for one admit term, but will actually enroll in a later admit term. This action lets you change the admit term for the applicant and record that they are deferring enrollment.	The last action's program status.	None
DATA (Data Change), PRGC (Program Change), PLNC (Plan Change)	Data relative to a student's program, plan, or career status was changed.	No status effect.	When you change a student's program with one of these program actions and the start date of the new program is after the effective date of the change, the system automatically resets the Form of Study field on the student's career term record to the default value of enrollment (<i>ENRL</i>). Use the Form of Study field on the Term Activation page to specify a value other than the default.
DISM (Dismissal)	A student is dismissed from the academic institution.	Dismissed	Post the withdrawal on the student Withdrawal page.
DISC (Discontinuation)	A student discontinues attendance.	Discontinued	Post the withdrawal on the student Withdrawal page.
LEAV (Leave of Absence)	A student takes a leave of absence from his program.	Leave of Absence	None
RADM (Readmit)	A person has applied to reenter a student career and academic program for which they already have a student record.	Active in Program	When you choose this action, the Career Number field on the Admissions Application Maintenance page becomes editable. On the Application Maintenance page, you must select which student record should be populated with the readmit information if the student enrolls again. Additionally, if you enter this action, the admit type that you enter on the Application Data page must be associated with readmit processing.
RLOA (Return from Leave of Absence)	A student returns from a leave of absence.	Active	Activate the student.

Program Action Selected	Explanation	System Updates Program Status To	Additional Steps Required
REVK (Revoke Degree)	Revoke a student's degree. The system automatically updates the student degree tables. Revoked degrees do not appear on the student transcript.	Active	Activate the student.
SPND (Suspension)	A student is suspended from your academic institution.	Suspended	Post a withdrawal on the student Withdrawal page.
TRAN (Transfer to Other Career)	A student makes an intercareer transfer.	Program Completed	Activate the student in the new academic career.
ADRV (Admission Revocation)	A person was admitted into an academic program, but it was later determined that the person did not qualify for admission.	Cancelled	None
MATR (Matriculation)	A person has completed all necessary steps to become an active student in an academic program.	Active	Activate the student into the academic program.

"Understanding Admissions Program Actions and Statuses" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

Understanding Program Actions Where Future Enrollments Exist

For certain program actions, if you enter the program action but the student is enrolled in classes where the start date of the term is after the effective date of that program action, the system displays a warning message because these are future enrollments. The program actions affected by future enrollments are the following:

Code	Description	Status
ADRV	Admissions Revocation	Cancelled
COMP	Completion of Program	Completed Program
DISC	Discontinuation	Discontinued
DISM	Dismissal	Dismissed
LEAV	Leave of Absence	Leave of Absence
SPND	Suspension	Suspended

Code	Description	Status
TRAN	Transfer to Other Career	Completed Program
VDIS	Voluntarily Discontinued	Discontinued
WADM	Administrative Withdrawal	Cancelled

If you receive the warning message for one of these program actions, then perform the appropriate action on the student's future class enrollments. Because each academic institution has different policies, the warning message alerts so that you can take action based on your institution's policies.

For example, if you enter a program action of *DISM* (Dismissal) and the student has registered and paid tuition for classes in the following term, your institution might require that you drop the student from the courses and issue a full refund.

Or, if you enter a program action of *COMP* (Completion of Program) and the student has registered for classes in the following term, your institution might require that you activate the student in a nondegree-seeking program by changing the student career number to the new academic program on the Term Activation page. This enables the student to continue attending the academic institution.

Understanding Program Actions Where Future Active Terms with No Enrollment Exist

If you enter certain program actions and a student is active in a future term or terms, where the start date of the term is after the effective date of that program action, and the student has no enrollment in the term or terms, the system displays a warning message. The program actions affected by future active terms with no enrollment are:

Code	Description	Status
COMP	Completion of Program	Completed Program
DISC	Discontinuation	Discontinued
DISM	Dismissal	Dismissed
LEAV	Leave of Absence	Leave of Absence
SPND	Suspension	Suspended
TRAN	Transfer to Other Career	Completed Program
VDIS	Voluntarily Discontinued	Discontinued
WADM	Administrative Withdrawal	Cancelled

You can still save the program action change when you receive the warning message.

If you change the severity of the message (Message Catalog entry 14600, 870) to *Error*, you cannot save the change to the program action. To access the Message Catalog, select PeopleTools > Utilities > Administration > Message Catalog.

Maintaining Student Program Stacks

This section discusses how to:

- Maintain student academic programs.
- Select a student's career requirement terms.
- Maintain student academic plans.
- Maintain student academic subplans.
- Maintain student additional information.
- (AUS) Enter Australia-specific student program information.
- (CAN) Enter ESIS student program data.

Pages Used to Manage Student Program Stacks

Page Name	Definition Name	Navigation	Usage
Student Program	STDNT_PROG	Records and Enrollment > Career and Program Information > Student Program/Plan > Student Program	Add an academic program to a student's program stack, maintain the student's academic program record, or execute program actions that update the student's academic program record.
Career Requirement Term	STDNT_CAREER_SP	Click the Career Requirement Term link on the Student Program page.	Select the student's career requirement term.
Student Plan	STDNT_PLAN	Records and Enrollment > Career and Program Information > Student Program/Plan > Student Plan	Add an academic plan to a student's academic program or modify a student's existing academic plan.
Student Sub-Plan	STDNT_SUB_PLAN	Records and Enrollment > Career and Program Information > Student Program/Plan > Student Sub-Plan	Add an academic subplan to a student's academic plan, or modify a student's existing academic subplan.
Additional Information	STDNT_PROG_CAF	Records and Enrollment > Career and Program Information > Student Program/Plan > Additional Information	Enter or update common attributes for student program, plan and subplan.

Page Name	Definition Name	Navigation	Usage
AUS Student Program	SSR_STD_PRG_AUS	Records and Enrollment > Career and Program Information > Student Program/Plan > AUS Student Program	Enter Australia specific information for the student. Note: The fields on this page are available only if the Australian DEST, HECS, Centrelink, TAC check box is selected on the Academic Institution 6 page.
Cdn Student Program (Canadian student program)	CAN_RPT_STD_ENR	Records and Enrollment > Career and Program Information > Student Program/Plan > Cdn Student Program	Note: This page is available only if the Canadian Government Reporting check box is selected on the Academic Institution 6 page. Define ESIS student program data.

Maintaining Student Academic Programs

Access the Student Program page (Records and Enrollment > Career and Program Information > Student Program/Plan > Student Program).

Image: Student Program page

This example illustrates the fields and controls on the Student Program page. You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Student Program' page for Anna Kirby (ADCAF0002). The page is divided into several tabs: Student Program, Student Plan, Student Sub-Plan, Additional Information, Student Attributes, Student Degrees, and AUS Student Program. The main content area displays various fields and controls:

- Academic Career:** Undergraduate
- Career Requirement Term:** (Link)
- Student Career Nbr:** 0
- Status:** Active in Program
- *Effective Date:** 30/08/2013
- Effective Sequence:** 4
- *Program Action:** MATR (Matriculation)
- Action Date:** 30/08/2013
- Action Reason:** (Empty)
- Joint Prog Appr:** (Unchecked)
- *Academic Institution:** PSUNV (PeopleSoft University)
- *Academic Program:** LAU (Liberal Arts Undergraduate)
- *Admit Term:** 0830 (2019 Fall)
- Requirement Term:** 0830 (2019 Fall)
- Expected Grad Term:** (Empty)
- Year of Program:** 01 - First Year
- APT Instance:** (Empty)
- Cohort Tag:** FALL-ADMIT
- Last Updated On:** 30/08/2013 8:36:19AM
- By:** SAD_APL_PRG - PS
- Admissions:**
 - From Application
 - Application Nbr: 00026464
 - Application Program Nbr: 0
- *Campus:** WALCR (Walnut)
- *Academic Load:** Full-Time
- Academic Shift:** day shift
- [HESA Instance](#)
- [CAS Details](#)

Academic Career

The academic career to which the student's academic program belongs. Students can be active in multiple academic careers, either consecutively or concurrently.

Career Requirement Term

Click to access the Career Requirement Term page.

Student Career Number

Differentiates a student's multiple academic programs within the same academic career. The default value is zero. For students with multiple academic careers, you can keep the default value. For students with multiple academic programs within the same academic career, you must select a unique academic career number for each academic program that you add. The lowest career number designates the student's primary academic program within the academic career. A student's primary academic program controls the values of various fields on the student's career term record (STDNT_CAR_TERM).

Status

Indicates the high-level relationship that the student has with the academic program specified on a given row as of the effective date of the row.

Effective Date

Enter the date on which the program action and the other field values on the row becomes effective. If a term has begun and you must update a student's academic program so that a new academic program is the primary one, you must use an effective

date that is prior to the maximum program effective date for that term.

Effective Sequence

Determines the sequencing of changes to a student's program.

The system increments this number whenever you enter new effective-dated changes to a student's academic program data for a given academic career.

Program Action

A change to a student's academic program data. Select the program action that you want to execute.

If a student has future enrollments and you enter certain program actions, the system displays a warning message informing you that the student is enrolled in classes after the effective date of the program action.

If the program change affects the student's primary academic program, the system resets the FA_ELIGIBILITY field on the STDNT_CAR_TERM table to the appropriate value of the newly assigned academic program, as defined in the Financial Aid Eligible field on the Academic Program page. Plus, the system selects the FA_STATS_CALC field on the STDNT_CAR_TERM table. This indicates to Financial Aid that a relevant change has been made to the student's career term record and that the FA Term Build process should be rerun for the student.

Action Date

The date that the program action was executed. It can be different from the effective date. The system records and displays the action date for tracking purposes.

Action Reason

Indicates why a particular program action was taken or offers a further description of the program action. For example, you can record that a student withdrew from an academic program. The reason that you enter could be *Medical Reasons* or *Change of Program*. Select the reason for the program action.

Academic Institution

The system automatically populates the academic institution, which refers to the academic institution that owns the student's academic program.

Academic Program

Select the student's academic program. To change this value as a student changes academic programs, insert a row, select a program action of *PRGC*, and select a new value for this field.

From Application, Program Number, and Admissions Application Number

If the student's information on the ACAD_PROG table was transmitted into the table through the Activate Applications matriculation process (ABPCPPRC), the From Application check box is selected and the system displays the admissions application number and program number.

Joint Program Approved

Select to track that a student is in a dual academic program.

When you select this check box the system activates the Dual Academic Program field, where you must enter the

other academic program in which the student is active for this academic career.

Admit Term

Determines the earliest term in which you can activate a student into a term for this academic career. The field value appears by default according to the value transmitted onto the student's record in the ACAD_PROG table through the Activate Applications matriculation process (ABPCPPRC).

If you have not run the matriculation process and are performing a quick activation for the student, enter the admit term for the academic program. The admit term you enter must be greater than or equal to the first term valid for the specified program (or plan or subplan). Also, the student's admit term must be less than or equal to the last admit term for the program (or plan or subplan). When you run the Term Activation process, it validates the term in which you are activating the student against the admit term. If the admit term occurs after the activation term, you cannot complete the term activation.

Requirement Term

Indicates the term in which academic advisement degree progress requirements apply to the student for this academic program. The field value appears by default according to the value transmitted onto the student's record in the ACAD_PROG table through the Activate Applications matriculation process (ABPCPPRC).

If you have not run the matriculation process and are performing a quick activation for the student, enter the admit term for the academic program.

Campus

Select the campus on which the student will be active in the specified academic program.

Expected Graduation Term

Select the term in which the student expects to graduate from the specified academic program. Expected graduation term is also used in financial aid need analysis.

APT Instance, Year of Program and Cohort Tag

These fields are used for Program Enrollment.

See [Setting Up Enrollment Cohorts](#)

See [Linking an APT Instance to the Student Program](#)

Academic Load

Select the academic load that the student will carry within the specified academic program.

Academic Shift

Indicates the attendance pattern under which a student record was created. The field appears if the Use Shift check box is selected on the Academic Institution 3 page.

The value here is inherited from the Admissions application when the student is matriculated. If Admissions is bypassed, select a value when manually adding and activating a student.

If only the Use Shift check box is selected on Academic Institution 3 page, the Academic Shift field is optional and the values available here are those defined on the Academic Shift page. If the Use Shift by Admit Term check box is also selected, then the values are those defined on the Academic Shift page and then mapped to an admit term on the Academic Shift Mapping page.

See "Setting Additional Institution Defaults and Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See "Defining Academic Shifts" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

See "Mapping Academic Shifts to Admit Terms" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

See "Entering Application Program Data" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

Last Updated On and By

The date on which the page was last updated and the name of the user who updated the page.

(NZL) Funding Source

Select the funding source for this student program.

This is the funding source applicable to the student and reported to the Ministry of Education Single Data Return (SDR). It defaults to the enrollment record. The value is inherited from the Admissions application when the student is matriculated. If admissions is bypassed, select the value during the quick admit or manual program addition process. This field is mandatory.

Note: This field appears only for students in New Zealand institutions.

Action Reason:		Requirement Term:	1998 Fall	
Academic Program:	Lib Arts			
Find View All First 1 of 1 Last				
*Academic Plan:	CLSC-BA	Classics-BA	Major	+ -
*Plan Sequence:	10	Degree:	B.A.	
*Declare Date:	07/25/1998	Degree Checkout Stat:		
*Requirement Term:	0330	1998 Fall	Student Degree Nbr:	
*Advisement Status:	Include	Completion Term:		

Requirement Term

Indicates the term in which academic advisement degree progress requirements apply to the student for the given academic program.

Academic Plan

A valid academic plan is required to activate a student into a term. Select the academic plan for the student. A student can have any number of academic plans within an academic program.

Plan Sequence

The sequence in which degree progress evaluates a student's academic plans. The system increments the plan sequence number each time that you add an academic plan. You can override this value.

Degree

The degree associated with the academic plan.

Declare Date

The date that the student declares the academic plan. The system, by default, displays a date equal to the effective date of the latest program action with a status of *Active in Program*. You can override this value.

Requirement Term

Indicates the term in which academic advisement degree progress requirements apply to the student for this academic plan. Select the requirement term for the academic plan.

Degree Checkout Status

The degree checkout status when you graduate the student.

Student Degree Number	The system displays this number sequentially after you complete the graduation process. This number also indicates the printing order if multiple degrees are conferred on the same date. The system prints degree information associated with the lowest number first.
Completion Term	The term that the degree requirements were met. The system displays the completion term after you complete the graduation process.
Advisement Status	Determines how the advisement engine processes the academic requirements groups that you have linked to the student's program structure. Select an academic advisement status for the student from the following values: <p><i>Include:</i> Ensures that all requirement groups that match this structure are pulled into an audit.</p> <p><i>Not Include:</i> Ensures that all requirement groups that match this structure are not pulled into an audit.</p> <p><i>Optional:</i> Pulls in requirement groups that match this structure, but does <i>not</i> prevent the overall audit from going complete if unsatisfied.</p>

Maintaining Student Academic Subplans

Access the Student Sub-Plan page (Records and Enrollment > Career and Program Information > Student Program/Plan > Student Sub-Plan).

Academic Sub-Plan	Select the academic subplan for the student. A student can have any number of subplans within an academic plan. You can activate students into terms without the student having an academic subplan.
Academic Sub-Plan Type	When you select an academic subplan, the system displays its corresponding type.
Declare Date	The date that the student declares the academic subplan. The system, by default, displays a date equal to the effective date of the latest program action with a status of <i>Active in Program</i> . You can override this value.
Requirement Term	Indicates the term in which academic advisement degree progress requirements apply to the student for this academic subplan. Select the requirement term for the academic subplan.

Maintaining Student Additional Information

Access the Additional Information page (Records and Enrollment > Career and Program Information > Student Program/Plan > Additional Information).

Image: Additional Information page

This example illustrates the fields and controls on the Additional Information page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Additional Information' page for a student. At the top, navigation tabs include 'Student Program', 'Student Plan', 'Student Sub-Plan', 'Additional Information' (selected), 'Student Attributes', and 'Student Degrees'. The student's name 'Anna Kirby' and ID 'ADCAF0002' are shown. Below this, the 'Academic Career' section includes a link for 'Career Requirement Term' and 'Student Career Nbr: 0'. The main content area is titled 'Program Data' and shows 'Academic Program LAU Liberal Arts Undergraduate'. A sub-section 'Program Attributes' lists three attributes:

- *Attribute: StartDate (30/09/2013) with a 'Show in Student SS' checkbox checked.
- *Attribute: Student Language (AR - Arabic) with a 'Show in Student SS' checkbox checked.
- *Attribute: Student Language (CZ - Czech) with a 'Show in Student SS' checkbox checked.

Refer to the documentation about the Admissions Additional Information page before you read the following documentation.

See "Entering or Updating Additional Information" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

The following Record Contexts are delivered:

- ACAD_PROG (Attribute Record: SSR_PROG_CAF)
- ACAD_PLAN (Attribute Record: SSR_PLAN_CAF)
- ACAD_SUBPLAN (Attribute Record: SSR_SUBPLAN_CAF)

The Additional Information page is available only if you associate at least one attribute with one of the record contexts, using the Record Context page (Set UP SACR, Common Definitions, Common Attributes Setup, Record Context).

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Defining Attributes for the Admissions/Student Records Program Stack

The Record Context allows you to set certain properties for a particular attribute in that context, including whether an attribute is repeatable or required.

Note: When an attribute is set to required, then *from that point forward*, a value must be entered to save the component. If a user inserts a new effective dated row (or makes a change in correction mode) to records which pre-date the implementation of the Common Attribute Framework attribute, *the user must enter a value on the current row as well as any historical or future dated rows in order to save the component. For this reason, we strongly recommend that careful consideration be given when determining whether an attribute should be required.*

Additionally if the required attribute is to be used in a web service, a value must be present in the request XML in order for the service to perform without error. For example, if an attribute field is defined as required on the ADM_APPL_PROG Record Context, then in AAWS that field would need to be required in the User Interface to collect a value allowing the SAD_SUBMITAPPL operation to complete successfully.

See "Understanding AAWS" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

For further information about how to set attributes to required or repeatable,

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

If the attributes set up for Admissions also exist on the Student Program/Plan stack, the values carry over during the Matriculation process.

See "Entering or Updating Additional Information" (PeopleSoft Campus Solutions 9.2: Recruiting and Admissions)

(AUS) Entering Australia-Specific Student Program Information

Access the AUS Student Program page (Records and Enrollment > Career and Program Information > Student Program/Plan > AUS Student Program).

Image: AUS Student Program page

This example illustrates the fields and controls on the AUS Student Program page. You can find definitions for the fields and controls later on this page.

Mode of Attendance

Assign a mode of attendance for reporting element 329 to DIISRTE in the Load Liability, Past Course Completions, Offer Details, and Preference Details Files.

Values are:

- *Completed Course - OLAA*
- *External Mode of Attendance*
- *Internal Mode of Attendance*
- *Multi-modal Mode of Attendance*
- *Submission of Original Work*

Total previous RTS EFTSL (total previous research training scheme equivalent full-time student load)

Enter any EFTSL amount for the student from a previous institution. This field is used only for research students who require a prior Research Training Scheme EFTSL to be reported to DIISRTE as element 460 in the student enrollment file.

Separation Status Code

Select the separation status code for higher degree research students.

This code is reported in the DIISRTE Enrollment file as element 465. If the field is blank, element 465 is reported as 9.

Values are:

- *Downgrade Doctorate to Masters*
- *Other*
- *Same level transfer*
- *Upgrade Masters to Doctorate*

Cohort

Select a cohort for the student that the system can use as the default value when you enroll the student. The system populates this value by default on the Australian regional enrollment data and the field is available to tuition calculation for HECS or tuition fees if the Australian Regional Installation Settings are selected.

Funding Source

Select a funding source for the applicant to indicate the type of place being offered. The funding source can be mapped to the code reportable as element 724 in the DIISRTE Applications & Offers Collection.

See [Generating the Applications and Offers Files](#).

See [Defining Cohort Years](#).

Higher Degree by Research

HDR Commencement Date E534

Enter the beginning date for a research student. This date works as an override for the Course of Study commencement date (element 534) in the DIISRTE Load Liability file. If this field is blank, the system determines the date from the admit term begin date.

Thesis Submission Date E591

Enter the date on which the research student submits the thesis (element 591). This date is based on a student's first recorded thesis submission. Leave the field blank for those who are not higher degree by research students.

HDR Research Completion Date E592

Enter the date by which the research student completes the research (element 592). Leave the field blank for those who are not higher degree by research students.

HDR End User Engagement Codes Click to access the Higher Degree by Research page.

Research Scholarships Click to access the Research Scholarships page.

Higher Degree by Research

Image: Higher Degree by Research page

This example illustrates the fields and controls on the Higher Degree by Research page.

The screenshot shows the 'Higher Degree by Research' page. At the top, it displays the user 'Cathy Gable' and the subplan 'SRAUS016'. Below this, it shows 'Academic Career Undergraduate' and 'Student Career Nbr 0'. The main section is titled 'HDR End User Engagement Codes' and includes a search bar with 'Find | View All' and pagination 'First 1 of 1 Last'. The engagement details are as follows:

- Engagement Number: 1
- *HDR User Engagement Code E593: Jointly supervised by end-user
- External Org ID: 2000099 (Ranger Incorporated)
- Supervisor ID: 0008 (Lester Rettin)
- *Start Date: 11/03/2020
- End Date: 19/08/2020
- Comments: Research with Ranger Inc. research division in Wagga Wagga, NSW.

Buttons for 'OK', 'Cancel', and 'Refresh' are located at the bottom.

Use this page to record research engagements.

Research Scholarships

Image: Research Scholarships page

This example illustrates the fields and controls on the Research Scholarships page.

The screenshot shows the 'Research Scholarships' page. At the top, it displays the user 'Cathy Gable' and the subplan 'SRAUS016'. Below this, it shows 'Academic Career Undergraduate' and 'Student Career Nbr 0'. The main section is titled 'Research Scholarships' and includes a search bar with 'Personalize | Find' and pagination 'First 1-2 of 2 Last'. The scholarship records are as follows:

Sequence Number	*Scholarship Type E487	Description	Stipend Amount E623	*Start Date	End Date
1	10	RTP Stipend	14000.00	11/03/2020	19/08/2020
2	09	RTP Fees Offset		11/03/2020	19/03/2020

Buttons for 'OK', 'Cancel', and 'Refresh' are located at the bottom.

Use this page to record research scholarships.

Records of the same scholarship type can't have overlapping start and end dates.

(CAN) Entering ESIS Student Program Data

Access the Cdn Student Program page (Records and Enrollment > Career and Program Information > Student Program/Plan > Cdn Student Program).

See [Defining PSIS Student Program Data](#).

Chapter 30

Managing Activities

Understanding Activity Management

Activity management enables your institution to define student requirements at the course level. The heart of activity management is the activity registry. You define learning content within the registry, in a hierarchical structure, where grading options and exam specifics are associated with content types. Registries can apply to a single course or multiple courses that share the same structure and grading and exam requirements.

When the activity registry is completed, it creates a content tree that is a visual representation of the learning content of a course. The major benefit of defining the course content in a tree structure is that it establishes a calculation structure. The overall course mark is calculated from the bottom up; that is, from the lowest level of the tree, or from the child up to the parent. No matter how many elements or levels you create within a content tree, all components listed under a course can combine to calculate the course mark.

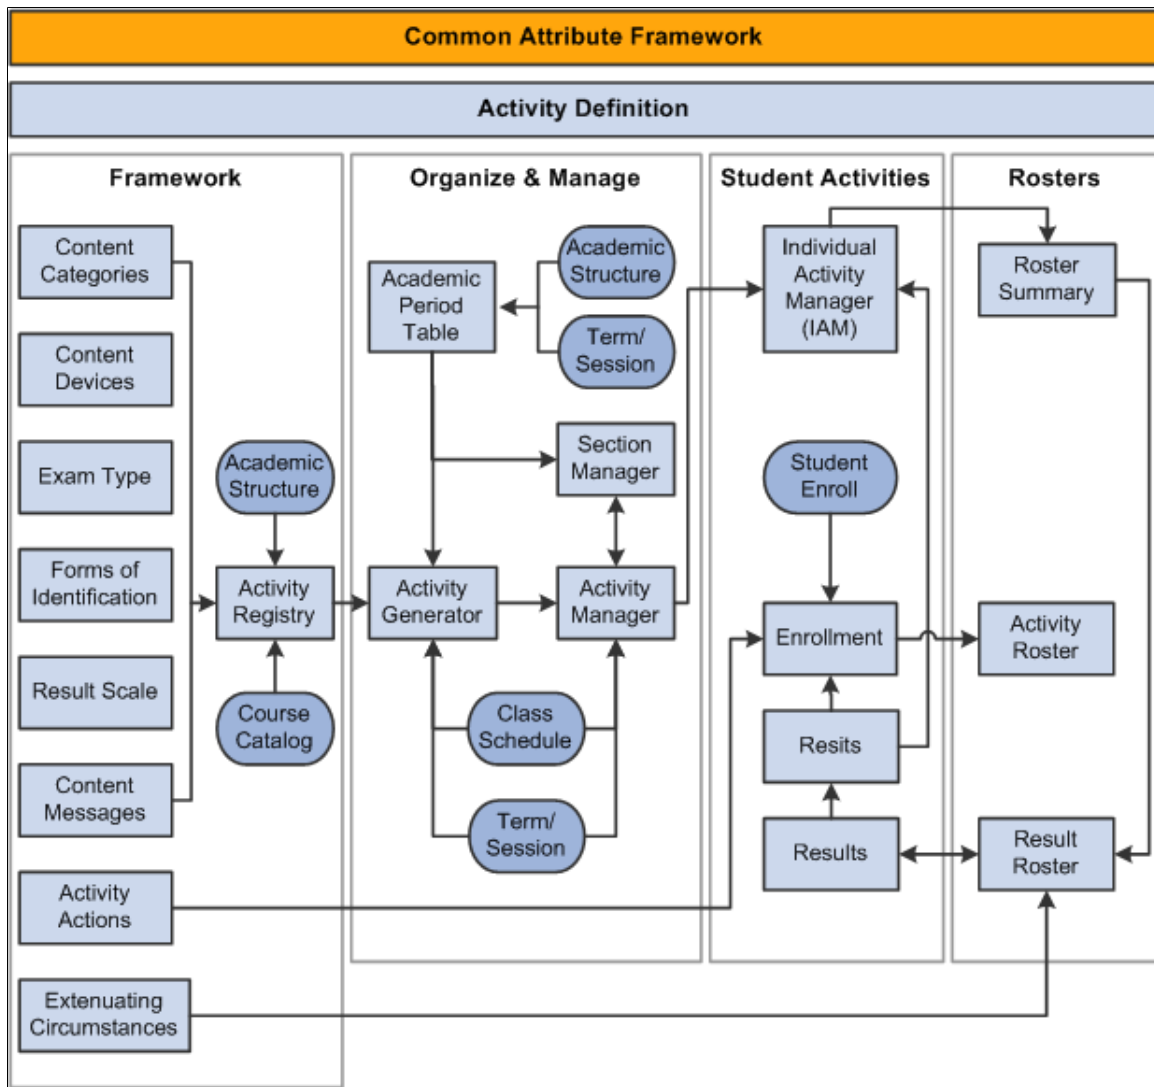

Once this course structure is defined it is accessible on a term basis for scheduled class sections or in an academic period for scheduled course examinations. Within these time constructs, the course structure can be organized (Activity Generator), edited administratively (Activity Manager), and the exams can be scheduled (Section Manager).

As students enroll in classes or exam-only courses (EOCs) an Individual Activity Manager (IAM) is created. This record attaches the course activities to a student and allows results to be assigned to their completed coursework.

Users can use the Activity Roster component to access the list of students for a class or exam. The Activity Roster lists all students associated with a given activity and provides each student's academic information. The Result Roster allows users to manually enter activity results and calculate those results to an overall course result. Course results can then be synchronized to a student's Academic Progress Tracker (APT) and student enrollment record.

Image: Activity Management deliverables

The following diagram illustrates Activity Management deliverables:

Understanding Results in Activity Management

With Activity Management you greatly enhance the grading capabilities available at the course level. Each activity can have multiple results allowing you to capture marks, grades, and outcomes for which you record a primary result up the course hierarchical content tree. This gives you the opportunity to capture additional result types, such as competency and midterm results.

A number of components are used to set up, control access to, enter, and calculate results. The two essential setup components are the Result Scale where you map any combination of scores, marks, grades and outcomes; and Result Types, where you define which outcomes to track. At least one result type must exist in Activity Management and be associated with the Academic Institution as the primary result. This is the result that is calculated up the content tree and is stored as the official result of the course. This result is calculated using the delivered primary course result rule. To calculate results you must utilize the Mark value in your result scale setup.

Additional grading criteria are defined in the Activity Registry for specific coursework items. General content items such as the weight of the item, the result scale, the mandatory pass flag — as well as late penalty criteria, assignment due dates, and extra credit — are defined in the Registry and have a significant impact on grading. The delivered AM Primary Course Result and the AM Late Penalty rules use the registry criteria in calculating the primary result for the overall course utilizing the institution's result scale setup.

Activity Management caters to three consumers – administrative staff, instructional staff, and students. Each group has unique needs and times in which to access result data. Four primary components exist to cater to these groups. Administrative users access the Result Roster secured by academic organization and have full grading and calculating capabilities. These users also have access to student results in the IAM.

Instructional users, including both faculty and exam staff, have access to the Result Roster through the AMWC. Instructional user access and capabilities are defined on several levels:

1. User must be associated with an Academic Organization on the Instructor/Advisor Table.
2. User must be assigned as an instructor on the Class Table or as exam staff in the Section Manager.
3. Define result access Result Dates to indicate when instructional staff can access result rosters to perform specific actions. Result access – to view, grade, calculate – is based on the roster access settings on the Class Table and Section Manager (see tables below).
4. Set Allow Calculation flag on the Institution Table.
5. Review Updateable Inclusions on the Activity Manager WorkCenter (AMWC) Settings tab of the Activity Registry component to define which coursework detail can be updated by instructional staff in the AMWC.

Result roster access in the AMWC is based on the roster access defined for Instructors on the Meeting page of the Schedule of Classes or assigned staff on the Section Details page of the Section Manager. Transactional access to the AMWC Result Roster includes the actions to view, grade, and calculate. The following example illustrates how class instructor and exam staff access translates to AMWC actions.

<i>Class Table Roster Access</i>	<i>AMWC Access</i>
Grade	Grade
Approve	Grade and Calculate
Post	Grade and Calculate

Because instructors are assigned at the class level (component in the Activity Management structure) the instructor assigned to the graded component has access to all noncomponent result rosters, meaning that instructor can view and calculate the rosters for the course root, all noncomponent children of the course root, and the exams and exam sections. This provides the instructor of the graded component with the ability to calculate the course primary result.

<i>Section Mgr Roster Access</i>	<i>AMWC Access</i>
View Only	View
Grade	Grade

Section Mgr Roster Access	AMWC Access
Calculate	Calculate

Because exam staff are assigned at the exam section level, roster access to the parent exam (and course root if it is an exam-only course) is provided to exam staff with the maximum access that user is provided at the exam section. For instance, if an exam staffer has view access for one exam section and grade access for another exam section, the staffer has grade access at the parent exam.

For students, you must define when to display results. Define this on the Result Dates component for student self service. Activities must also be set up to be viewable in self service. This is a definable content option on all activities within the Activity Manager and its related components.

Results calculated in Activity Management are designed to post to a student's enrollment record (STDNT_ENRL) and the student's Academic Progress Tracker (APT). You define which results to post on the Institution Table and then run the IAM Result Posting batch process to sync results to the APT and the course grade to the graded component official grade on STDNT_ENRL.

Understanding the Delivered Rules in Activity Management

Three result calculations and one evaluation process are delivered for Activity Management. The calculations support standard result calculation when results are entered on the student's IAM, the administrative result roster, or the Activity Manager WorkCenter (AMWC). The calculations are constructed using a variety of methods: the Rules Engine, Activity Management Entities, and page and component editing. The delivered calculations are:

- late penalty processing
- resit result calculation
- overall calculation of the primary result type

The existence of the *Late Penalty Option Inclusion Record* on any Assessment Item, along with a submission date that is later than a due date, triggers the Rules Engine to run the AM Late Penalty Online Driver Rule. The rule may call additional expert-level rules for additional calculation. The system then inserts a late penalty result into the student's result record SSR_IAM_RESULT. Late penalty rows are used in the primary result type calculation. The late penalty inclusion data is setup on the following components: Activity Definition, Activity Registry, Activity Manager, and the Individual Activity Manager.

An evaluation process, kicked off on the IAM Resit Evaluation component, uses the Rules Engine to determine resit eligibility. The system evaluates whether a student is eligible for a resit attempt based on the student's earned mark. Setup values on the Result Scale and the Resit Options for the original attempt are analyzed and if deemed eligible, a new attempt is to be inserted on the student's IAM. When the resit is for an exam activity, the system also assigns the exam period for which the attempt should be taken.

The resit result calculation is called during the calculation of a re-assessed piece of coursework or when a result is entered. A resit result is calculated for the current attempt from the current and previous attempts based on the resit calculation setting in the Activity Manager. The process calculates and inserts a new result row for the current attempt on SSR_IAM_RESULT, and the earn credit flag is placed on the result to be used in the primary result calculation.

The primary result calculation adds coding to the Activity Management Entities and uses the AM Primary Course Result API to calculate hierarchical results based on multiple inclusion record settings that drive processing. The calculation analyzes result types, result scales, include in calculation settings, extra credit, due dates and extended due dates, mandatory pass settings, and insufficient mark options. The process calculates and inserts a new result row on SSR_IAM_RESULT. This calculation can be run on a student, an entire class, or in batch for an entire term, academic period, or subject.

Late Penalty Processing

The late penalty options defined on the Activity Registry include penalizing based on number of days or weeks late with a minimum limit, or subtracting a one-time penalized mark. Users can indicate that a late mark should be capped or fixed at a specific mark. You can also choose to not calculate a penalty. All penalties allow for a mark to be set to 0.0 after a specified amount of time.

The following diagrams outline the processing that generates the late penalty calculations.

Image: Late Penalty Processing (1 of 4)

Diagram 1 of 4 illustrating late penalty processing:

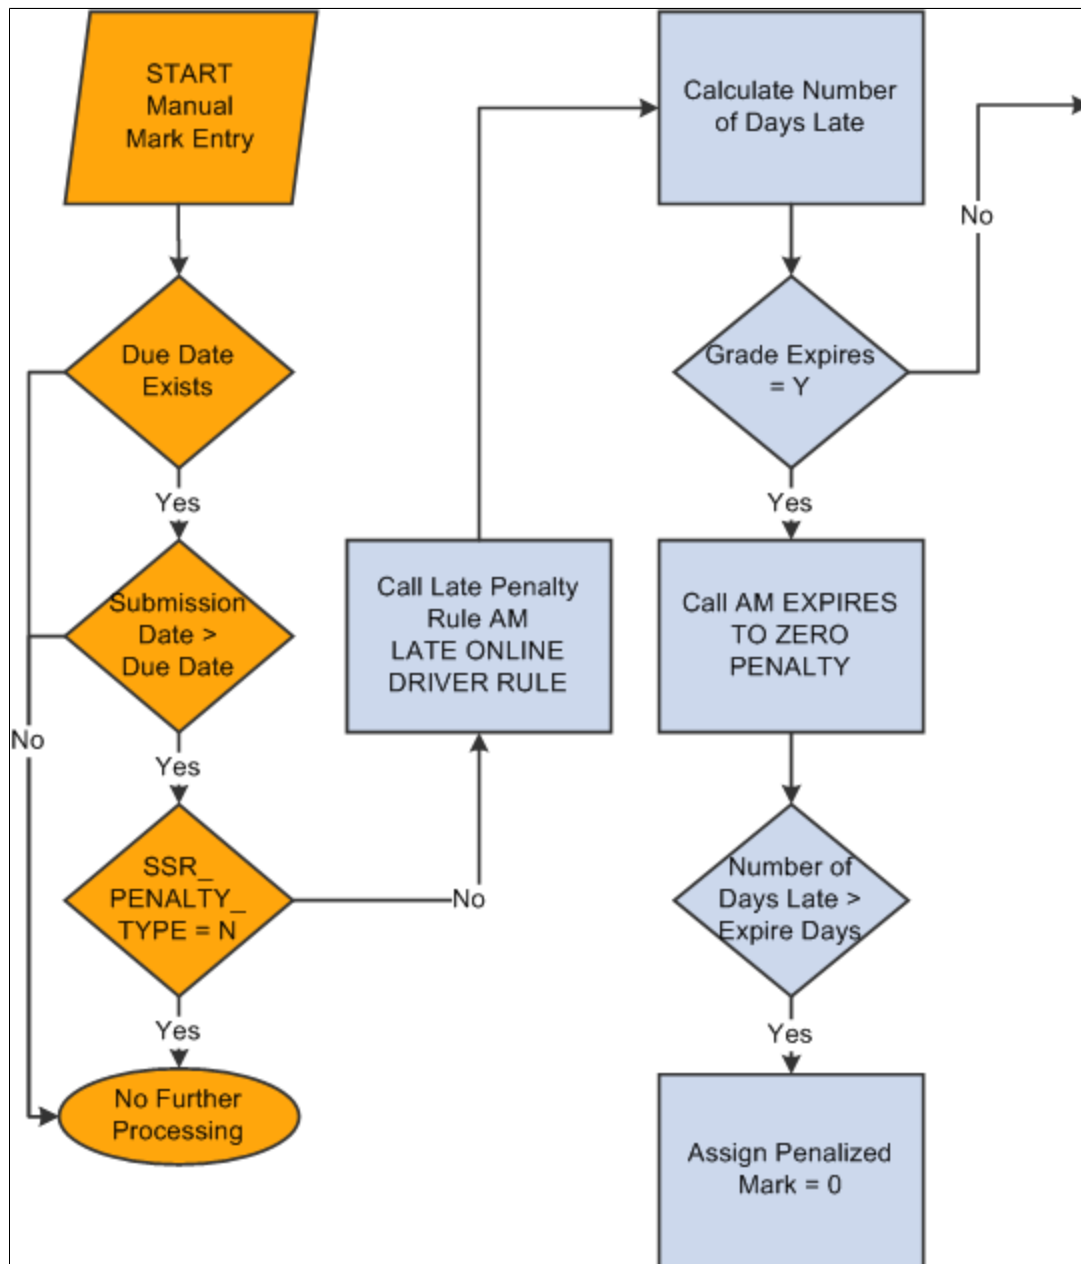

Image: Late Penalty Processing (2 of 4)

Diagram 2 of 4 illustrating late penalty processing:

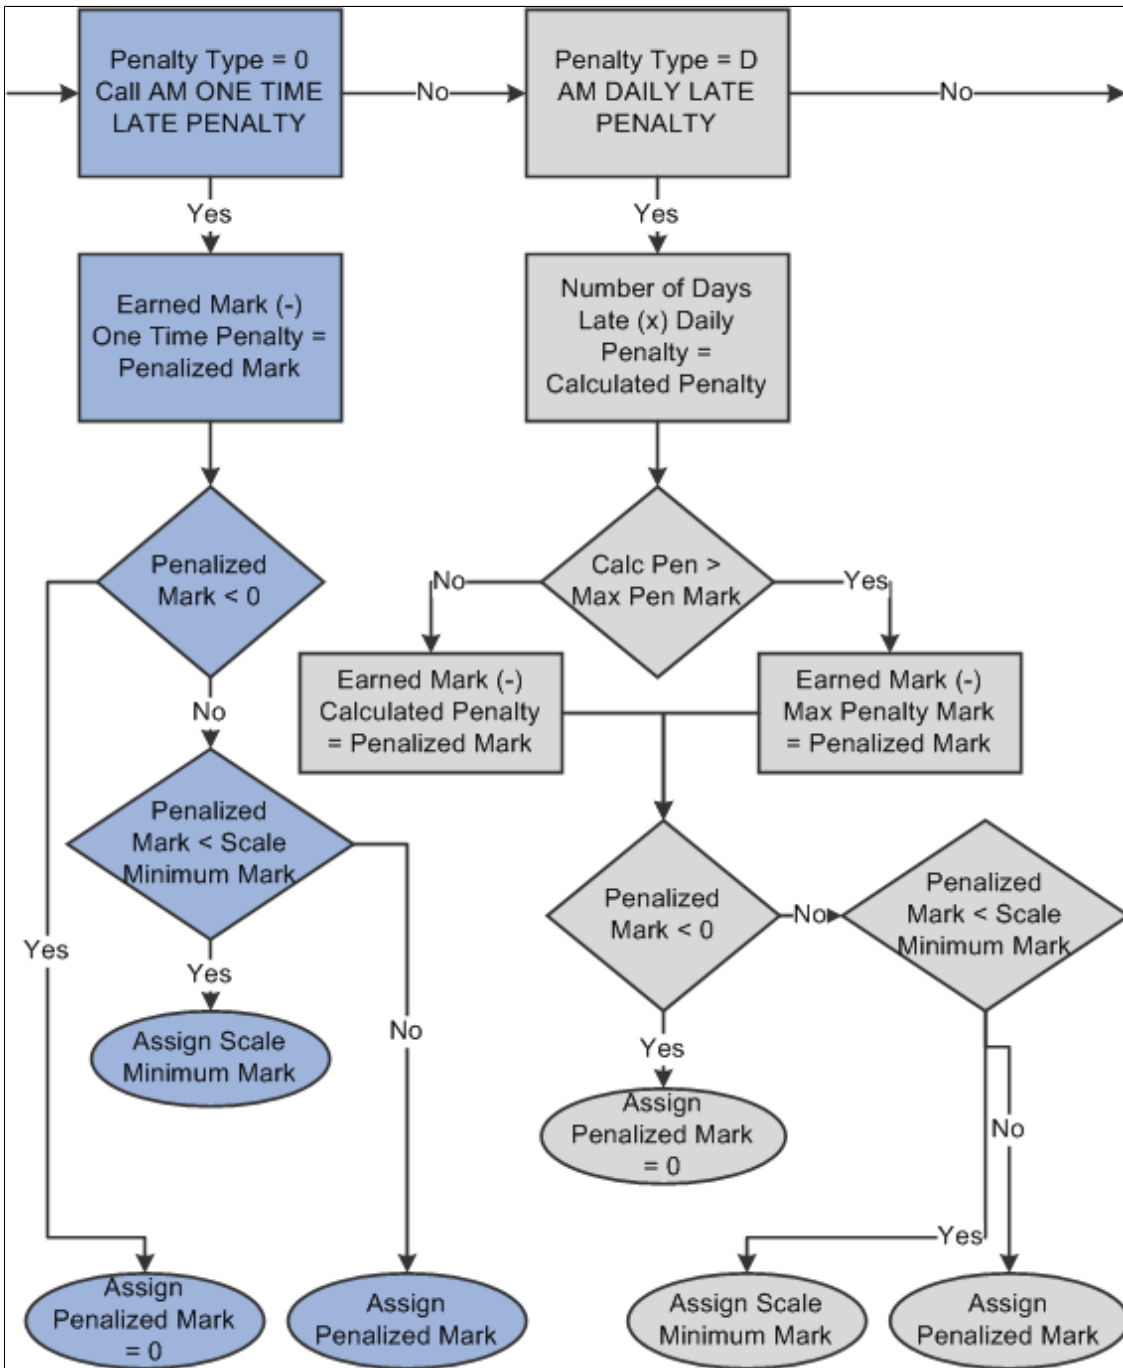

Image: Late Penalty Processing (3 of 4)

Diagram 3 of 4 illustrating late penalty processing:

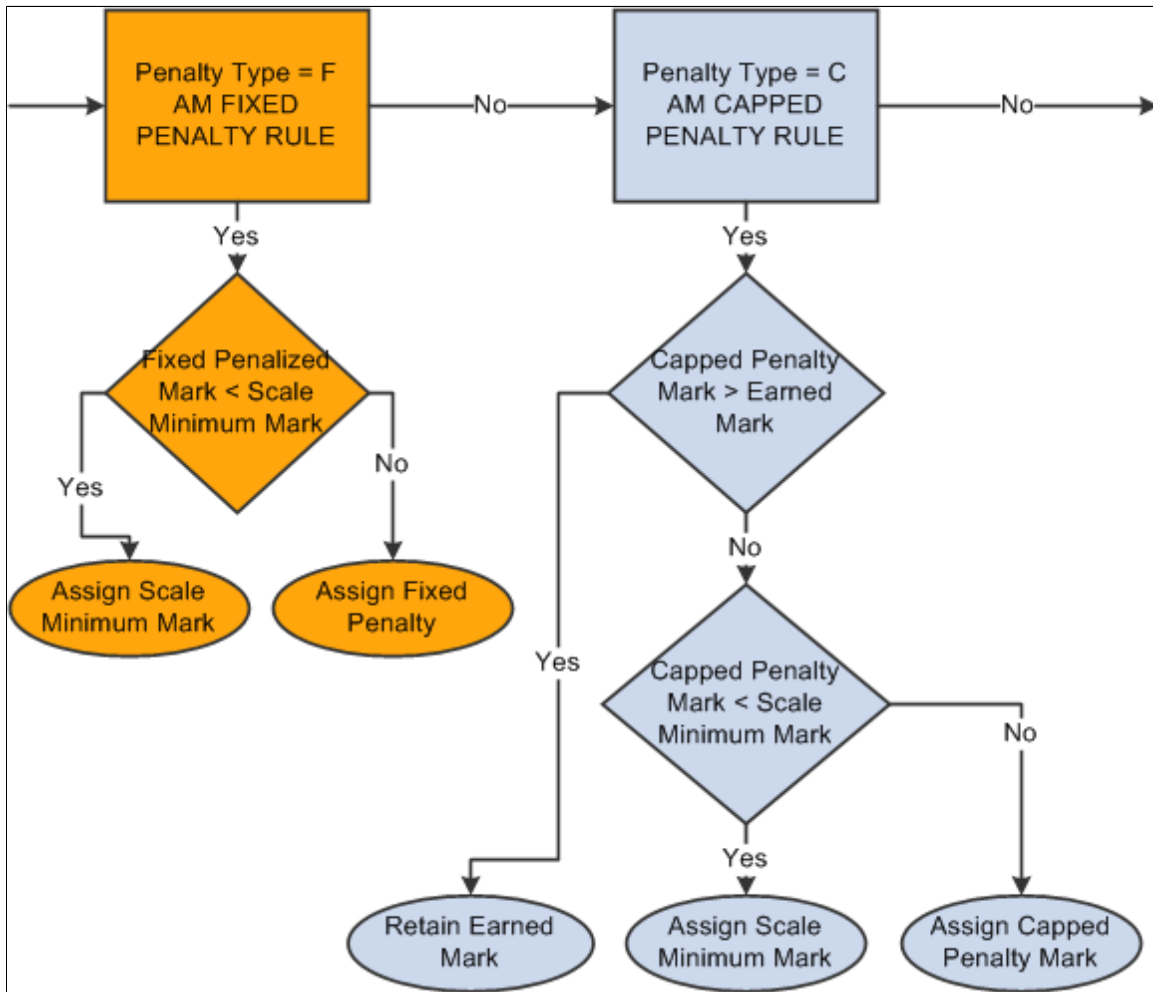

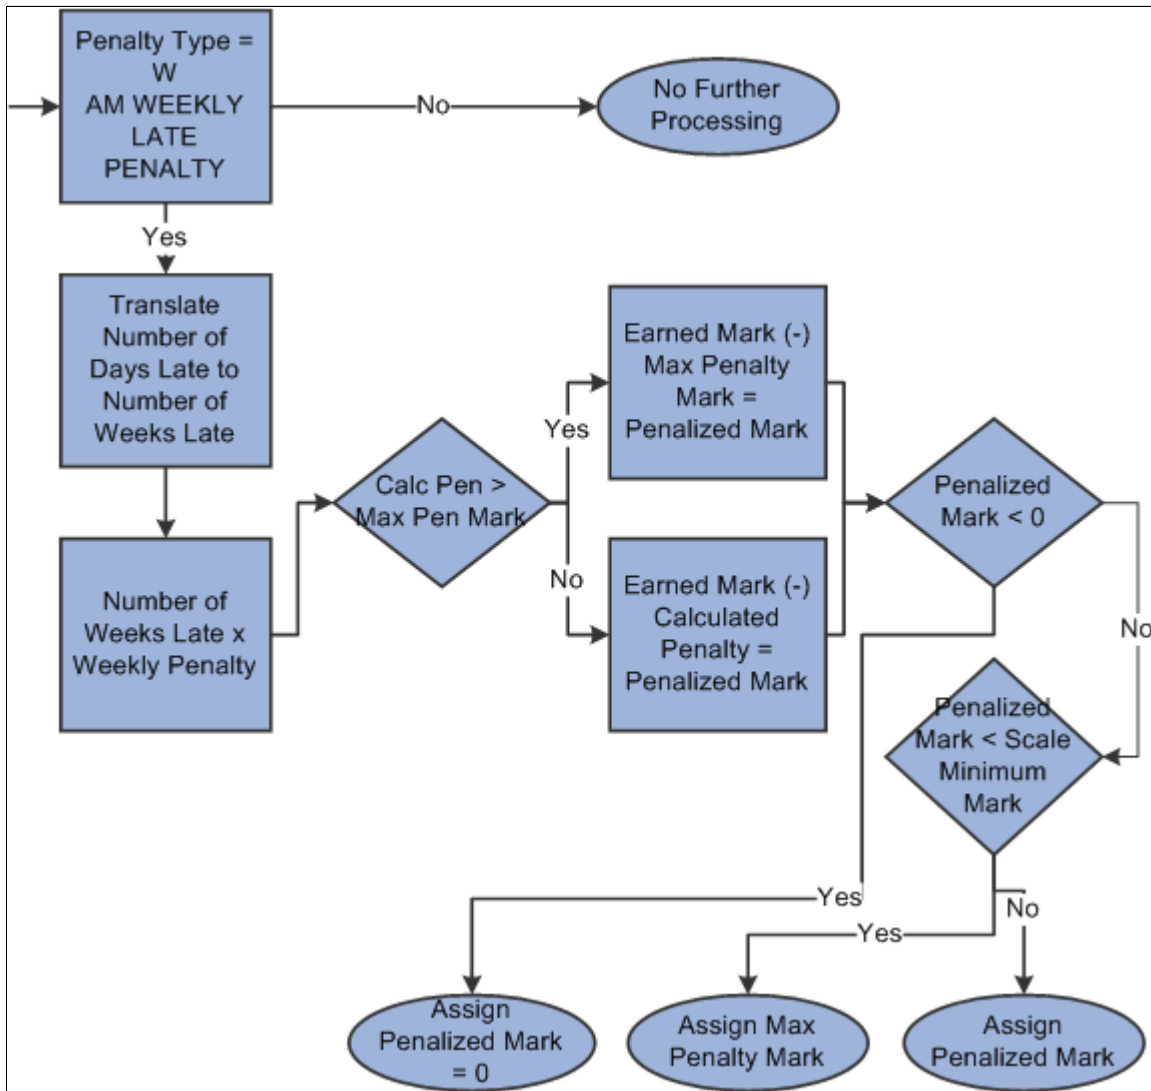

Image: Late Penalty Processing (4 of 4)

Diagram 4 of 4 illustrating late penalty processing:

The calculated late penalty mark is inserted on a new result row with a result subtype of Late Pen. The row is updated with the following data:

SSR_RSLT_SEQ = +1

SSR_RSLT_SUB_TYPE = L

SSR_INCL_IN_CALC = Y

SSR_IAM_RSLT_STAT = 10

SSR_IAM_MARK = Penalty Mark

During the process, the system removes the Include in Calc flag from the original row and inserts it on the new row.

Late Penalty Rules Engine Integration

Below are the triggers and rules defined for late penalties.

Note that to use the rules you must also:

1. Add role security to the Rule Category – AM Calculation Rules.
2. Build the rules (using the Build Rules component).
3. You may also need to run the Wipe and Sync Entity utility.

The delivered Rule Category is AM Calculation Rules - SCC_RULE_CAT_20130425123523.

The delivered Rule Trigger is AM Online Late Penalty Trigger - SCC_RTRIG_20130516132141.

The delivered rules are:

Rule Name	Rule ID
AM Late Penalty Online Driver Rule	SCC_RULE_ID_20130515130457
AM Capped Late Penalty	SCC_RULE_ID_20130521103202
AM Daily Late Penalty	SCC_RULE_ID_20130521095817
AM Expires to Zero Penalty	SCC_RULE_ID_20130516135412
AM Fixed Penalty Rule	SCC_RULE_ID_20130521094603
AM One Time Late Penalty	SCC_RULE_ID_20130508133749
AM Weekly Late Penalty	SCC_RULE_ID_20130515141726

Primary Result Processing

The primary result calculation analyzes result related setup from a variety of sources as well as calls the rules engine to calculate the overall weighted average mark. The data analyzed during the primary result calculation includes:

- Result Scale
 - Mark - grade - outcome mapping.
 - Identifies scales without marks, analyzes mandatory pass setting.
 - Identifies the insufficient mark setting.
 - Identifies resit result settings.
 - Identifies different result scales.

Activity Registry supports the ability to configure different result scales for each activity and the ability to convert the marks from different result scales (parent/child) in primary result calculation.

For detailed information, see *Calculation of Overall Course Results using Multiple Result Scales* on My Oracle Support (Doc ID 1400723.1).

- Result Type
 - Determines the Primary Result Type.
 - Checks result scale security.

- General & Inclusion Options
 - Content Options – result scale, weighting, assessed flag, include in calculation flag
 - Extra credit
 - Insufficient Mark option
 - Mandatory Pass field
 - Dates & Duration
 - Resits

The following diagrams outline the primary result calculation.

Image: Primary Result Type Entity Coding (1 of 3)

Diagram 1 of 3 illustrating primary result calculation:

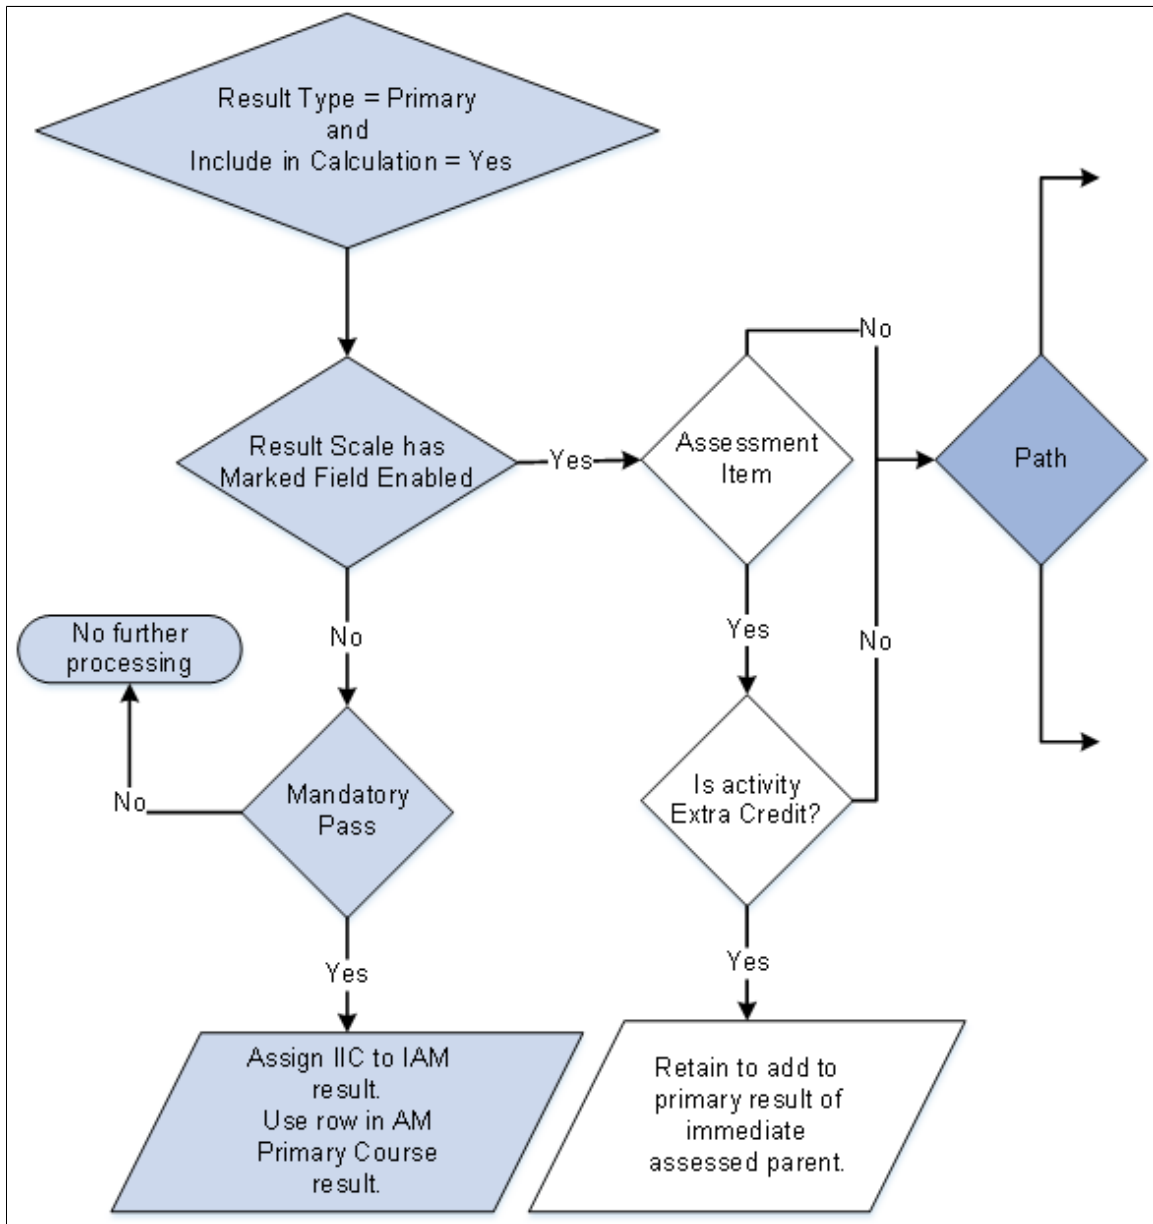

Image: Primary Result Type Entity Coding (2 of 3)

Diagram 2 of 3 illustrating primary result calculation:

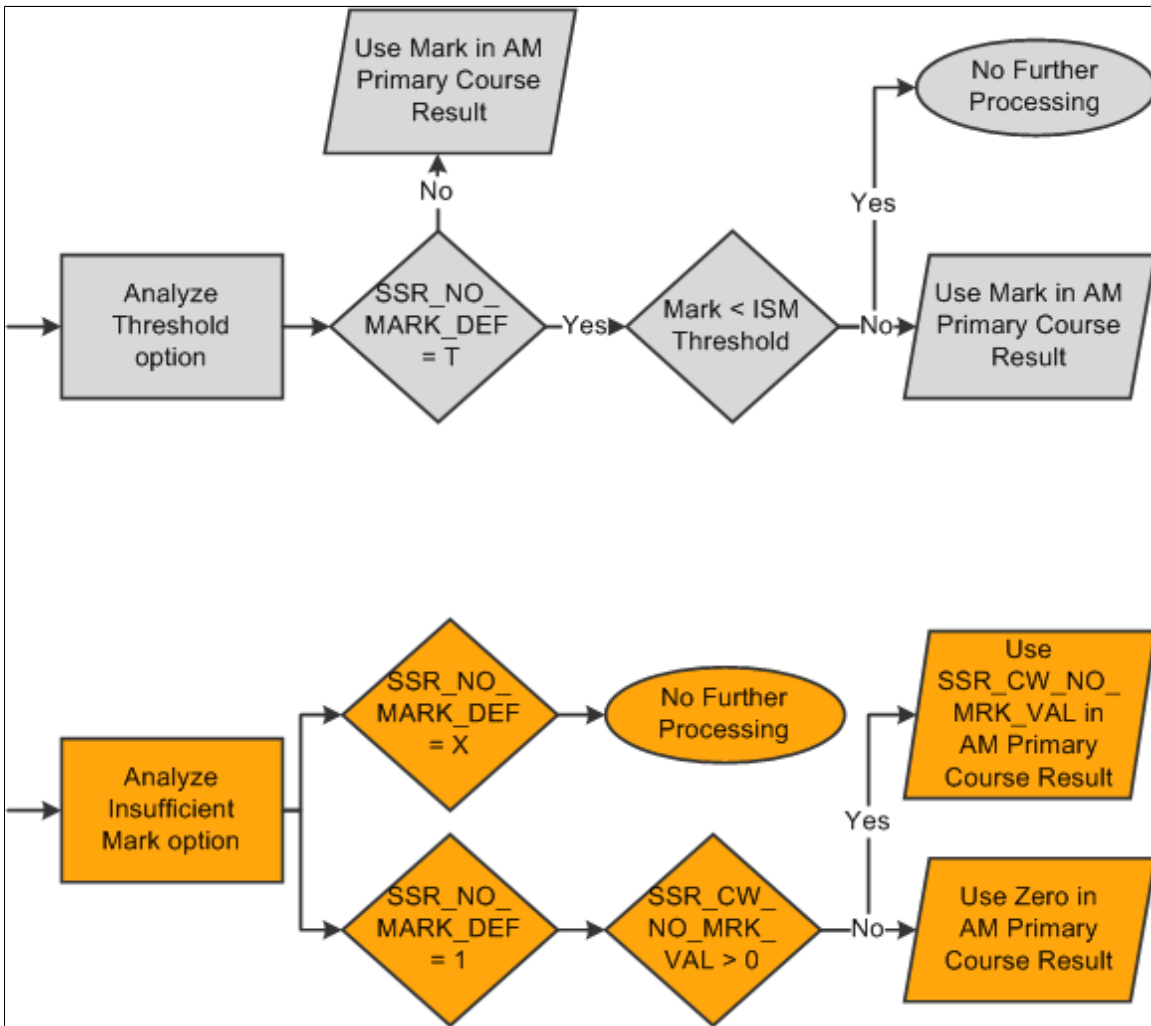

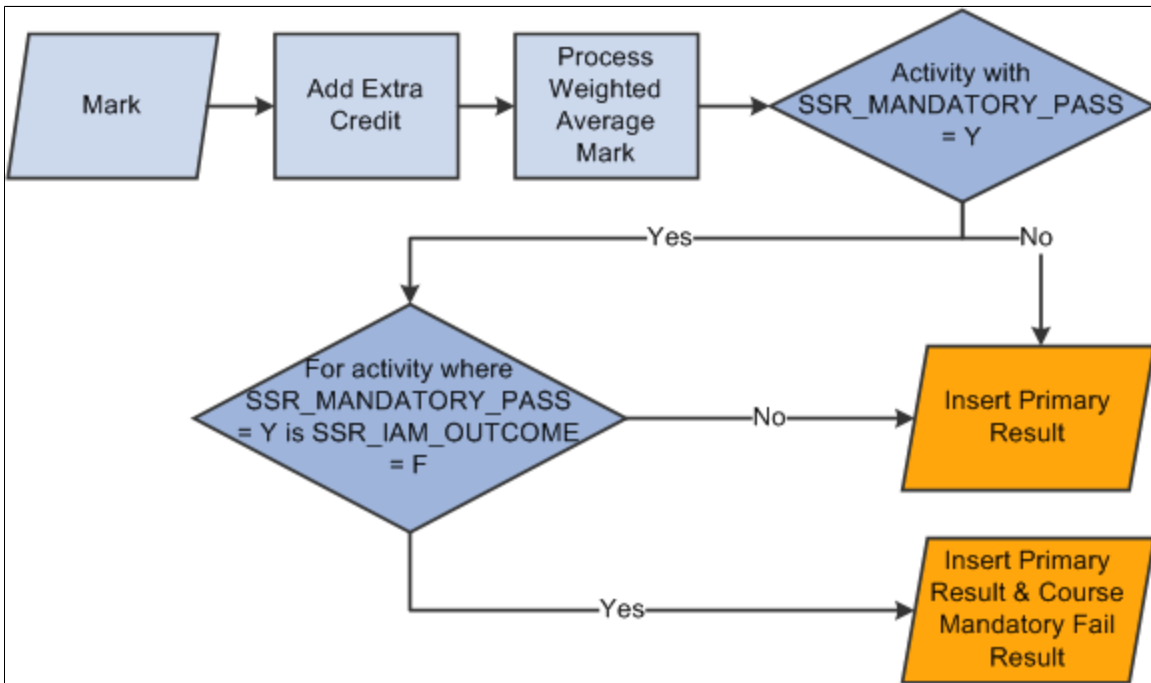

Image: Primary Result Type Entity Coding (3 of 3)

Diagram 3 of 3 illustrating primary result calculation:

Result Calculation:

Summary Page row selected for *Select for Calculation*.

and

Result Detail row has *Include in Calculation* selected

or

Result Detail has the expectation of an *Include in Calculation* row.

The calculation begins by analyzing the associated result type and result scale. It determines whether a result that does not utilize a mark should be included in the calculation in that it is noted as a Mandatory Pass activity (meaning it must be passed to pass the overall course). Then the activity is reviewed to determine if it is extra credit. Next the due or the extended due date is analyzed. From here the value to use in the calculation is determined after analyzing the Insufficient Mark settings. The weighted average marks are calculated and extra credit is added where credible. Lastly, the status is reviewed for any activities used in calculating the course result and if the mandatory fail result is entered for the course as applicable.

Primary Result Rules Engine Integration

The primary result calls the Rules Engine to generate the average weighted mark of an activity based on its child activities.

Highlights of the Activity Management Primary Result	
Rule Category: AM Calculation Rules	SCC_RULE_CAT_20130425123523
Rule: Resit Calculation	SCC_RULE_ID_20140812101105
Rule: Overall Calculation with Multiple Scales 1: Main Rule	SCC_RULE_ID_20160824092103

Understanding Resit Eligibility and Calculation

Activity Management supports the resit (reassessment) functionality. This feature evaluates if a student is eligible for a resit and, if so, performs a calculation to determine the resit result. Schools could set up a number of criteria to support their reassessment policy.

The rules designed to analyze resit eligibility and calculation of a resit result depend on the setup from a variety of sources, including the:

- Result Scale - Resit Eligible flag
- Resit Option - Resits Allowed flag
- Resit Option – Attempt Limits
- Resit Option – Resit Period Assignment
- Resit Calculation Option
- Academic Period
- Result entered on the student IAM

Image: Resit Eligibility Evaluation

This diagram outlines the resit eligibility evaluation process.

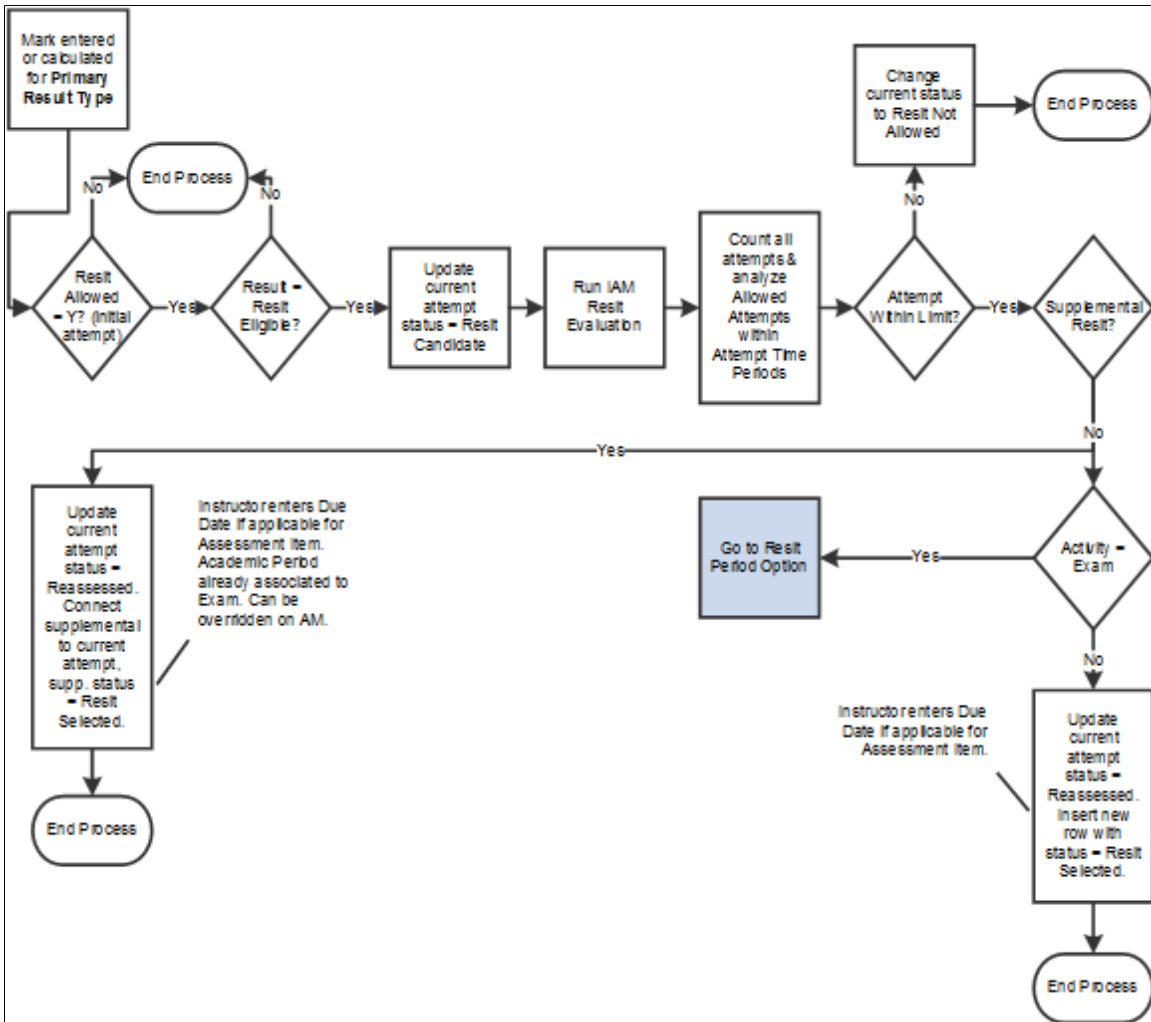

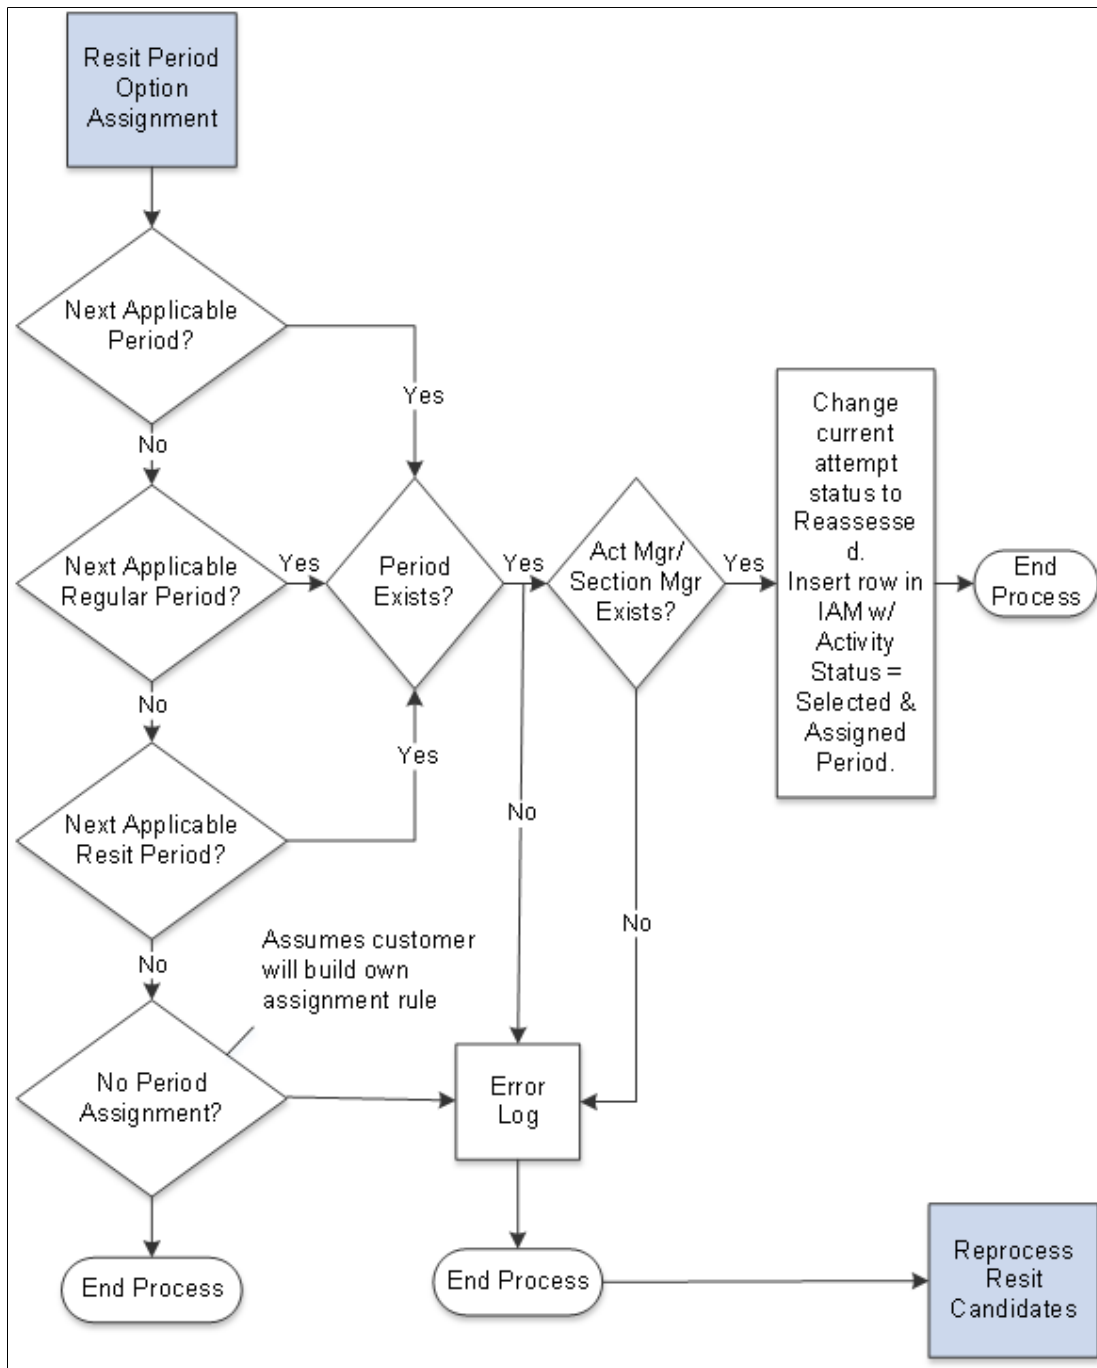

Image: Exam Period Assignment

This diagram outlines the exam period assignment process.

Resit Eligibility Rules Engine Integration

This section lists the entities and rules defined for resit eligibility and calculation. To use the rules, you must also:

1. Add role security to the Rule Category – AM Calculation Rules.
2. Build the rules (using the Build Rules component).

3. You should also run the Wipe and Sync Entity utility.

The delivered Rule Category is AM Calculation Rules - SCC_RULE_CAT_20130425123523.

Prerequisites for Managing Activities

In order to get the highest value from this documentation, we suggest that readers be familiar with the following items:

- Basic Tree Structure, vocabulary, and components.
- Campus Solutions Academic Structure.
- Campus Solutions Course Catalog.
- Campus Solutions Schedule of Classes.
- Campus Solutions Instructor/Advisor Table.
- Campus Solutions Grading Setup.
- Basic Academic Structure Security.

Adding Courses to an Existing Activity Registry

This section provides an overview of how to add courses to an existing activity registry and discusses how to:

- Associate a single course with an activity registry.
- Review associated courses and topics.
- Associate multiple courses with an activity registry.

Understanding How to Add Courses to an Existing Activity Registry

If you want a course to utilize the features of Activity Management, you must associate it with an Activity Registry ID. The Activity Registry ID can be specific to one course or it can be associated with several courses that share the same content structure. A course can be added as the Course Control Record to the Registry ID, either directly in the Activity Registry Header or by copying content detail in Add mode. If the Activity Registry ID is to be associated with multiple courses, there are two additional methods in which you can relate a course to an existing Activity Registry ID – the Maintain Course Content Cross Reference (XRef) and Manage Content to Courses.

Consider the following when relating an Activity Registry ID to multiple courses:

- Courses should belong to the same academic organization.

Access into the majority of Coursework Activity Management components are based on the user's Academic Organization security.

- Courses should share the same administrative user(s) for grading purposes.

This feature supports administrative access for grading. The administrative graders should be the same across all the courses belonging to an Activity Registry ID. This concern relates to administrative access, not instructor access.

- Courses should share the same component structure (as defined in the Course Catalog) with the same graded component.
- Courses should contain the same content item hierarchy.*
- Courses should share the same content details.*

Note: *Courses can be associated with the same registry even if the content items vary slightly. The registry structure defaults to the class section level where slight differences between courses or sections could be overridden. For example, BIOLOGY 100 and BIOLOGY 102 basically share the same structure, but some instructors in BIOLOGY 102 require that students do an oral presentation on their reading assignments instead of writing a paper. That difference can be handled by editing the assessment items at the schedule level as opposed to creating a new Activity Registry ID for BIOLOGY 102.

Pages Used to Add Courses to an Existing Activity Registry

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Maintain Course Content Xref	SSR_AC_CRSE_XREF	Curriculum Management > Activity Management > Activity Registry > Maintain Course Content Xref	Review a Course Activity Registry assignment or to associate a course to an Activity Registry ID. The page is keyed by Course ID.
Content Courses/Topics	SSR_AC_XREF_GRP	Curriculum Management > Activity Management > Activity Registry > Manage Content to Courses	View courses that are associated with an Activity Registry ID.
Update Content Courses/Topics	SSR_AC_XREF_GRPADD	Curriculum Management > Activity Management > Activity Registry > Manage Content to Courses > Update Content Courses/Topics	Add courses to, or delete courses from, the Activity Registry ID via the selected processing mode. You can search for courses, review the search results, and update staged courses to the Activity Registry ID.

Associating a Single Course with an Activity Registry

Access the Maintain Course Content Xref page (Curriculum Management > Activity Management > Activity Registry > Maintain Course Content Xref).

Activity Registry ID Indicate the Activity Registry ID of the course.

Note: All Activity Registry IDs associated with the course can be viewed within this component regardless of effective date and effective status of the activity registry.

Reviewing Associated Courses and Topics

Access the Content Courses/Topics page (Curriculum Management > Activity Management > Activity Registry > Manage Content to Courses).

This page displays the courses that are associated with the Activity Registry ID. Courses can be added or deleted using the Update Content Courses/Topic page. This same view also appears in the Activity Registry under the Related Courses link.

Associating Multiple Courses with an Activity Registry

Access the Update Content Courses/Topics page (Curriculum Management > Activity Management > Activity Registry > Manage Content to Courses > Update Content Courses/Topics).

Image: Update Content Courses/Topics page (1 of 2)

This example illustrates the fields and controls on the Update Content Courses/Topics page (1 of 2). You can find definitions for the fields and controls later on this page.

Staged Updates

Institution	Subject	Catalog Nbr	Campus	Course ID	Offer Nbr	Topic ID	Effective Date	Registry ID
PSUNV	BIOLOGY	115		001030	1	0	11/28/2012	C-00000000018
PSUNV	BIOLOGY	210		003712	1	0	11/28/2012	C-00000000018

This component provides a mechanism to add an existing Activity Registry ID to multiple courses. The process involves accessing an Activity Registry ID, searching for courses to add, identifying courses to add and then adding the courses. This page is keyed by Activity Registry ID. Courses can also be deleted from an Activity Registry ID with this process.

Note: Only current or future dated Activity Registry IDs are accessible in this component.

See [Reviewing Associated Courses and Topics](#)

Processing Mode	Select a value to either Add a course to or Delete a course from the Activity Registry ID.
New Eff Date	Enter the effective date that should be associated with the addition or deletion of the course(s).
Maximum Rows Returned	Enter the maximum number of courses to be displayed in the grid for a given search.

Search Criteria

Use this group box to narrow your search for courses to add to the registry. Those courses meeting the criteria appear in the grid below. When deleting, you do not need to enter any criteria; when you click the Search button, the current courses associated with the Activity Registry ID appear.

Search	Click this button to populate the Search Results grid with courses that match the search criteria.
Clear Criteria	Click this button to clear the entered search criteria.

Search Results

This group box lists all courses that meet the search criteria.

Select All	Select this check box to select all entries in the grid below. Alternately, select the check box(es) next to individual entry rows.
Clear Search Results	Click this button to depopulate the grid.
Topic ID	Indicate if a specific topic is applicable to the Activity Registry ID. Values appear in this field only if topics exist in the Course Catalog. Its Description appears to the right. If one Activity Registry ID is applicable to all topic IDs of the course, this field can be left blank and it gets applied to all topics of the course. However, if only certain topic IDs are to be associated with this Activity Registry ID enter the topic ID and add to the staging result grid one topic at a time.
Registry ID	Information that appears in this field indicates that the course is already related to an existing Activity Registry ID.

Staged Updates

Courses selected appear in this group box for review prior to being related to the Activity Registry ID. Using the staged data allows you to preview intended updates before they are promoted to the Activity Registry.

Stage Selected Courses/Topics	Click this button to move the selected course(s) from the results grid to the staging grid.
Process Staged Entries	Click this button to process the courses in the staging grid. Depending on the process mode (Add or Delete), you receive one of two confirmation messages. The result of the process immediately appears in the display grid on the Content Courses/Topics page.
Clear Staged Entries	Click this button to remove courses from the staging grid.
Effective Date	Indicates the effective date to associate with the course for the Activity Registry ID. This field populates from the setting in the New Eff Date above, but can be overridden at this level.

After the Staged course is processed it appears as a course associated with the Activity Registry ID on the Content Courses/Topics page.

Generating Activity IDs for a Course

This section provides an overview of the activity generation process and discusses how to:

- Use the Activity Generator
- Use the Activity Generator - Advanced
- Review class sections for a term

Understanding the Activity Generation Process

The Activity Management feature allows institutions to manage coursework at the course level and apply it to the section level. To do this, administrators must define course roots in a term for the course. A course root provides a view of the course with all its associated coursework (components, exams and other learning content). While Activity Management uses the CS class schedule, it also provides a method to fuse class sections within a course root to provide a view of coursework that makes sense for an institution.

For example, only one instructor teaches the three sections of Genetics in the spring term; using the features in the Activity Generator, the class sections can be organized so that the instructor can manage the coursework of all three class sections as one by organizing the three sections under one course root. Thus, instead of having to go into three separate sections to alter an attribute for a particular coursework item, the instructor can change it once and the system applies it to all three sections.

The activity generation process provides three options to create course roots: by session, by class associations within a session, and by graded section. It also provides a mechanism to establish exam offerings for the overall course. Exams for the course can be created by term, by session, or by course root. Exams require an association with an Academic Period ID. Academic periods are defined on the Academic Period Table. It should be noted that if there are multiple exams within the course, then each exam *must* have a different exam type if resit functionality is being used.

It is now possible for a student to resit for an examination during the same term and future terms. If resit functionality is being used for exams, the number of resit periods can be specified along with the resit

description. Each resit period along with the initial exam can be assigned a specific academic period indicating when the examination will take place.

Once the course root structure is established and exams are defined, users generate an activity ID for each piece of coursework defined for the course root, including any resit activities identified.

The activity ID level is where administrators and faculty manage the course root and its coursework. Later, the activity IDs are utilized in activity rosters against which results are entered or calculated for individual student coursework. In the case of required exam enrollment, the activity IDs are part of the student's exam enrollment record.

The following components are used to generate activity IDs:

- Activity Generator
- Activity Generator – Advanced
- Batch Activity Generator

When you generate activities, make sure you use only one component: either the online Activity Generator or the Batch Activity Generator, *not* both. If you create activities using the Batch Activity Generator, you will not be able to manage them using the online Activity Generator and vice versa.

Note:

Although users can generate resits and other activities through the online Activity Generator (as well as batch), resits are not displayed on the page once the activities have been generated online. However, the resit activities and the IDs created on the online Activity Generator can be viewed in the Activity Manager. The ability to view generated resit activities on the online Activity Generator page is planned for a future release.

Use the Activity Generator to:

- Determine the number of course roots required for the term.
- Review the number of exam sittings that are defined in the Activity Registry and associate an exam with an academic period.
- Determine the number of resit periods required for an exam and associate an exam with a resit academic period.
- Generate activity IDs for course roots and the each course root's associated coursework (components, categories, exams, exam sections, assessment items, attendance, and conditions). This also includes any identified resit activities.

Although generated resit activities can be viewed in the Activity Manager, they are not immediately synced and displayed in the IAM. Resit activities are only added to IAM if a student is required to undertake a resit of an exam, is resit eligible and satisfies the resit evaluation process requirements.

Some institutions may choose to use the Activity Generator - Advanced component, which provides additional and more complex options.

Whether it is the Activity Generator or Activity Generator - Advanced component, users have the option to aggregate activity IDs when the delivered structures do not quite meet the needs of their institution. In the Activity Generator, courses can be aggregated at the course root level. In the Activity Generator - Advanced, activity IDs can be aggregated at the course root, component, or exam levels.

While the previous methods generate activity IDs for one course at a time, the Batch Activity Generator allows users to generate activity IDs for multiple courses. Within the batch process, users also have the option to either use the Activity Registry structure as the source to generate IDs, or they can point to an existing Activity Manager structure as the source. The latter operates similarly to the Class Copy Prior Term Schedule process, which rolls data from one term to another. See [Generating Activity IDs for Multiple Courses](#).

Pages Used to Generate Activity IDs for a Course

Page Name	Definition Name	Navigation	Usage
Activity Generator	SSR_ACO_CLASS	Curriculum Management > Activity Management > Organize and Manage > Activity Generator	Define the number of course roots required for a course.
Activity Generator -Advanced	SSR_ACO_CLASS	Curriculum Management >Activity Management >Organize and Manage >Activity Generator - Advanced	Use this page to manipulate components within the course root.
Class Sections	SSR_ACO_SECTIONS	Curriculum Management > Activity Management > Organize and Manage > Activity Generator > Class Sections	View data from the class table in a grid for a quick reference to the class sections scheduled for the term.

Using the Activity Generator

Access the Activity Generator page (Curriculum Management >Activity Management >Organize and Manage >Activity Generator).

Image: Activity Generator page (3 of 4)

This example illustrates the fields and controls on the Activity Generator page (3 of 4). You can find definitions for the fields and controls later on this page.

The Activity Generator allows users to define the number of course roots required for the course. A course root is equivalent to a course view. The course root is the level at which administrative and faculty users manage the coursework.

Assign Root Activity by

Select a value to define how to create Activity IDs for the course root. Options are:

Session: When selected, the system creates one course root for each session.

Session & Class Association: When selected, the system creates one course root for each class association within a session. This value is selected by default.

Individual Graded Section: When selected, the system creates a course root for every scheduled section indicated as the graded component. You can select this option even if there is no graded component built into the Activity Registry Content Tree for the course.

This option does not appear if the course was created as an exam-only course (EOC) in the Activity Registry.

Assign Exam Activity by

This field is visible when an exam content type exists in the content tree for the course. Select a value to define how exam sittings are created for the course. It is assumed that for each unique exam activity ID generated an exam sitting is scheduled.

Options are:

Activity Root: A unique exam activity is generated for each course root. Students enrolled in any of the course root class sections are associated with the exams of the corresponding course root.

Session: A unique exam activity is generated for each session which has class sections scheduled. Students enrolled in a class section of a specific session are associated with the exam of the corresponding session.

Term: One exam activity is generated for the entire term. All students enrolled in the course for the term are associated with this exam. Term is selected by default.

In the instance of an EOC (defined as such in the Activity Registry), there is only one course root and exam option, so this option does not appear. You can associate an EOC with an academic period on the search page of the Activity Generator component.

If it was noted in the Activity Registry that the exam should be scheduled for one or more instances, an Exam Section row is inserted into the Content Tree as a child to the exam content type. These exam sections have activity IDs generated and it is against these activity IDs that an exam's scheduled detail is built in the Section Manager.

Apply to all Exam Types

This check box is greyed out and checked unless there are multiple exams within the course, that have different exam types. If there are multiple exams and exam types, the user has the ability to use the same academic period for each exam by selecting Apply to all Exam Types. Deselecting the checkbox allows for a different academic period to be selected for each exam.

Apply to all Sessions

This field is only displayed if the Assign Exam Activity by is *Session*. If selected, this applies the same academic period for exams in all sessions.

Apply to all Activity Roots

This field is only displayed if the Assign Exam Activity by is *Activity Root*. If selected, this applies the same academic period for exams in all activity roots.

Refresh Activity Grid

This button becomes available when you make a change to any field in this group box. It controls the number of course root rows in the Root Content Tree group box below; the system generates Temporary IDs for the Registry Content items based upon the settings in this group box.

Generate Activity

Click this button to generate Activity IDs based on the settings in this group box. The generated Activity ID replaces the Temporary ID previously established.

The system displays generated course root results in the Course Root group box. There is a row for every root created. A more complete display of the root and all associated coursework appears for each course root in the Content Tree Activities section.

Unlock Activity Options

This button appears once Activity IDs are generated. It should be used if there is a need to regenerate the Activity IDs using a different assignment option.

Once any student is associated with an activity ID for the course root, this option is no longer available.

Activity Generation Status

This indicates the current status of activities for this course. The values include Pending and Complete.

Course Root

This group box indicates the results of the activity generator options. The course root rows are determined and displayed within the header of this section. The Content Tree Activities section displays the content as it associates to the course root. As you adjust the generator settings in the Activity Generator group box and refresh the grid, the system assigns a temporary ID so that users can review how Activity IDs would actually be generated. When you are satisfied with the settings and select the Generate Activities button, the temporary ID is replaced with an Activity ID.

Activity Registry ID

This field displays the registry ID for which the course root is associated. The Activity Registry ID for this course was created when the content tree was built in the Activity Registry.

Session

This field displays the session for the particular course root. It appears in the class registry header when the Root Activity is generated.

Class Association

This field displays the class association for the particular course root. It appears in the class registry header when the Root Activity is created by either Session & Class Association or Individual Graded Section.

Section	This field displays the section number of the particular graded component. It appears in the class registry header when the Root Activity is created by Individual Graded Section.
Class Number	This field displays the class number of the particular graded component. It appears in the class registry header when the Root Activity is created by Individual Graded Section.
Content Description	This column displays the content tree that was defined for the course in the Activity Registry.
Academic Period ID	Enter the Academic Period ID for each exam in the course. Academic Period IDs are set up on the Academic Period Table. Only if the careers associated with the academic period and the course are matched, they appear in search results. If the course was designated as an EOC in the Activity Registry, the selection of the Academic Period ID occurs on the search page of the Activity Generator component and appears upon entering this page.
Temporary ID	This field displays the temporary ID of the course, exam, or scheduled component. This pregenerated ID assists users in determining the activity generator settings by placing temporary IDs where Activity IDs would appear after the Generate Activity button is selected. When the Temporary ID is the same across multiple content items, this means these content items share an Activity ID. For instance, if several lecture components are grouped under a specific course root and each Temporary ID is LEC1, they share an Activity ID. In this instance then, if this shared Activity ID is changed by an administrator or faculty member, the change is applied to all the lectures that share the Activity ID.
Activity ID	This ID replaces the temporary ID once the Generate Activity button is selected.
Aggregate To	<p>This field is active when there are multiple course roots for the overall course and before activities are generated. When the delivered generate options do not meet the specific needs of an institution, schools can use this field to further refine the course root structure.</p> <p>This field is available for the content types of Course (on both the standard and advanced option pages), Component, and Exam (on the advanced option page only), when multiples of each are generated based upon the Generate Activity settings.</p> <p>For example, say two sections are scheduled in the Regular session and two sections are schedule in the OEE session and a school wants to manage the regular session sections as one course root but the OEE as separate roots. The school would select the Individual Graded Section option, so that four course roots are originally created in the temporary status, but then they would aggregate one of the regular session sections to the other.</p>

When the activities are generated, three course roots would be generated – one for the regular session (with both sections) and one each for the sections in the OEE session.

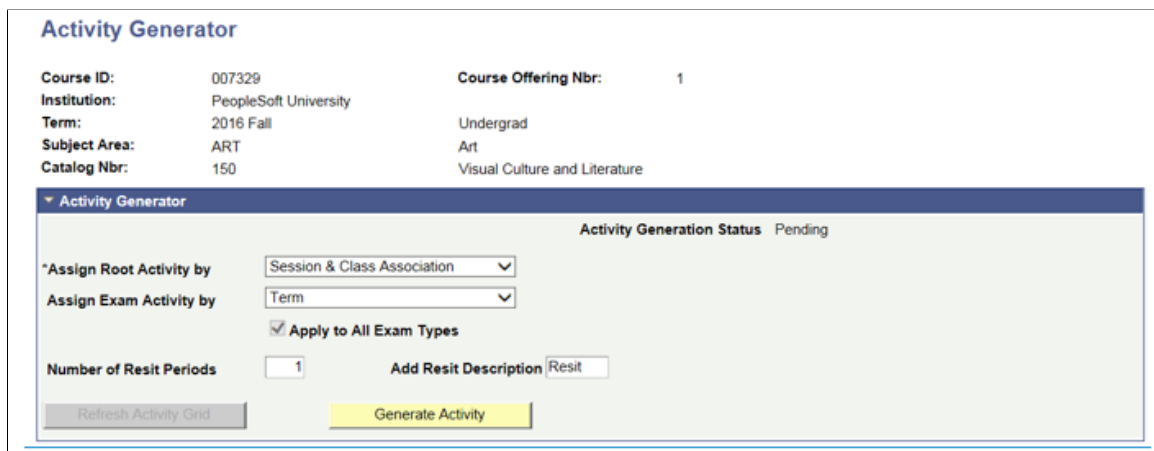

This feature is enabled when two or more components or exams point to one course root. Users scroll to display the various Section, Session, Class Association, Class Number and Temporary or Activity IDs.

Generating Resit Activities

If using resit functionality, and resit options have been configured for an exam activity in the Activity Registry, then resit exam activities can be created when generating IDs in the Activity Generator. The number of resit periods can be specified along with the resit description. A different Academic Period needs to be added to each initial exam(s) and also to the resit period activity(ies).

Image: Activity Generator page (4 of 4 —Part I)

This example illustrates the fields and controls on the Activity Generator page (4 of 4 —Part I). You can find definitions for the fields and controls later on this page.

Apply to all Exam Types

This is greyed out and checked unless there are multiple exams within the course that have different exam types. If there are multiple exams and exam types, the user can select Apply to all exam types to use the same academic period for each exam. Deselecting the checkbox allows for a different academic period to be selected for each exam.

Number of Resit Periods

Enter the number of resit periods permitted for exams for this course. The number of resits selected is displayed in the grid.

Add Resit Description

Add a description for the resit activity or activities that are appended to the activities in the Activity Manager and subsequently in the IAM if the resit activity is utilized.

In the example above only one resit period is selected, and accordingly one resit activity for the exam is displayed. The Resit Activity is clearly identified and the resit academic period is also displayed as seen in the following image.

Image: Activity Generator page (4 of 4 - Part II)

This example illustrates the fields and controls on the Activity Generator page (4 of 4 - Part II).

The screenshot displays the 'Course Root' interface. At the top, it shows 'Activity Registry ID C-0000000089', 'Art 150', 'Session Four Week - Second', and 'Class Association 1'. Below this is a 'Content Tree Activities' table with columns: Expand / Collapse, Content Description, Academic Period ID, Resit Period, Section, Session, Assoc, Class NBR, and Temporary ID. The tree shows a hierarchy: Course (Temporary ID: Course 1) -> Paper 1 -> Course Exam (Temporary ID: Exam 1) -> Course Exam Section -> Course Exam Resit* (Temporary ID: Exam 2) -> Course Exam Section Resit. The 'Resit Period' column has search boxes with 'FALL-2016' and 'FALL-2016RS' and checkboxes. A legend below the table indicates '* Resit Period'.

Though activities generated on the online Activity Generator are not displayed on the page once the activities for resits are generated, the resit activities and IDs are displayed in the Activity Manager. The ability to view generated resit activities on the online Activity Generator page is planned for a future release.

Special Consideration for Topic IDs

Image: Example of Course Root (1 of 4)

This example illustrates the fields and controls on the Example of Course Root (1 of 4). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Course Root' interface with 'Activity Registry ID C-0000000016', 'Opera - Verdi & Wagner', 'Topic ID 1', 'Session Regular Academic Session', and 'Class Association 1'. It includes navigation links like 'Find | View All' and 'First 1 of 4 Last'.

Image: Example of Course Root (2 of 4)

This example illustrates the fields and controls on the Example of Course Root (2 of 4). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Course Root' interface with 'Activity Registry ID C-0000000016', 'Opera - Verdi & Wagner', 'Topic ID 2', 'Session Regular Academic Session', and 'Class Association 1'. It includes navigation links like 'Find | View All' and 'First 2 of 4 Last'.

Image: Example of Course Root (3 of 4)

This example illustrates the fields and controls on the Example of Course Root (3 of 4). You can find definitions for the fields and controls later on this page.

Course Root				Find View All	First	3 of 4	Last
Activity Registry ID	C-00000000017	Opera - Puccini & Mozart	Topic ID			3	
Session	Regular Academic Session	Class Association				1	

Image: Example of Course Root (4 of 4)

This example illustrates the fields and controls on the Example of Course Root (4 of 4). You can find definitions for the fields and controls later on this page.

Course Root				Find View All	First	4 of 4	Last
Activity Registry ID	C-00000000017	Opera - Puccini & Mozart	Topic ID			4	
Session	Regular Academic Session	Class Association				1	

If however, no topic IDs were associated with the Activity Registry for Music 265, then the above scenario would yield only one course root and no topic IDs would display.

Using the Advanced Activity Generator

Some schools may choose to use the Activity Generator - Advanced component, which provides additional (more complex) options to establish Activity IDs for a single course, most specifically for class components. Using the advanced page, users can further extend activity ID generation by:

- Choosing how to organize components (scheduled sections) for a course root.
- Selecting how to handle class associations defined as 9999. Class association numbers link all class sections that constitute a single offering. When a section is given a 9999 class association, it can be related to any other class association.

Access the Activity Generator - Advanced page (Curriculum Management >Activity Management >Organize and Manage >Activity Generator - Advanced).

Image: Activity Generator - Advanced page

This example illustrates the fields and controls on the Activity Generator - Advanced page. You can find definitions for the fields and controls later on this page.

The screenshot displays the 'Activity Generator - Advanced' interface. At the top, there are tabs for 'Activity Generator' and 'Class Sections'. Below the title, course details are listed: Course ID (003702), Institution (PeopleSoft University), Term (2011 Fall), Subject Area (BIOLOGY), and Catalog Nbr (102). Course Offering Nbr is 1, and the level is Undergrad Biology (General Biology II). The 'Activity Generation Status' is 'Complete'. Controls include dropdowns for 'Assign Root Activity by' (Session), 'Assign Component Activity by' (Session & Class Association), and 'Assign Exam Activity by' (Term), along with a checked 'Apply to All Exam Types' checkbox. Buttons for 'Refresh Activity Grid' and 'Generate Activity' are present.

The 'Course Root' section shows 'Activity Registry ID C-0000000018' for 'General Biology II' in a 'Regular Academic Session'. A 'Content Tree Activities' table is displayed below:

Expand / Collapse	Content Description	Academic Period ID	Resit Period	Section	Assoc	Class NBR	Temporary ID	Aggregate To
[-]	Course						Course 1	
[-]	[-] Lecture			1	1	1156	LEC 1	
	[-] [-] Research Paper							
[-]	[-] Lab			1A	1	1201	LAB 1	
	[-] [-] Lab Assignments - Select 2							
	[-] [-] [-] Lab Assignment 1							
	[-] [-] [-] Or Lab Assignment 2							
	[-] [-] [-] Or Lab Assignment 3							
	[-] [-] [-] Or Lab Assignment 4							
[-]	[-] Discussion			1C	1	1203	DIS 1	
	[-] [-] Discussion Attendance							
[-]	[-] Course Exam		FALL-2011				Exam 1	
	[-] [-] Course Exam Section							

The fields on this page are very similar to those in the Activity Generator component. The Class Sections pages are the same in each component.

Note: While an EOC can be accommodated in the Activity Generator - Advanced component, it does not provide additional options than what are available on the standard Activity Generator component.

Assign Component Activity by

Select a value to define how to create Activity IDs for the course root. Options are *Session*, *Session & Class Association*, and *Individual Class Section*.

This field is not available if a component does not exist in the content tree for the course.

When generating Activity IDs in the Activity Generator, the component option is automatic and the same as the course root option. In the Advanced component, users can select which method to use when generating Activity IDs for components.

Using the component methods available here, six possible course root or component combinations are possible:

- Course Root by Session / Component by Session
- Course Root by Session / Component by Session & Class Association
- Course Root by Session / Component by Individual Class Section
- Course Root by Session & Class Association / Component by Session & Class Association
- Course Root by Session & Class Association / Component by Individual Class Section
- Course Root by Individual Graded Section / Component by Individual Class Section

Aggregate 9999 Class Assoc
(associations)

This check box appears only when multiple 9999 sections exist. This check box is selected by default.

When generating Activity IDs in the Activity Generator, the aggregation of 9999 class association sections is automatic. In the Advanced component, users can choose to aggregate these class associations or not. When you select this check box, the system aggregates all 9999 sections within a course root into one Activity ID. When you clear the check box, the system assigns all 9999 sections a unique Activity ID.

Aggregate To

In the Activity Generator, this field is only applicable to the course root. In the Advanced component, aggregating is applicable to course roots, components, and exams.

This field appears when multiple course roots, components, or exams exist for the overall course.

Reviewing Class Sections for a Term

Access the Class Sections page (Curriculum Management > Activity Management > Organize and Manage > Activity Generator > Class Sections).

Image: Class Sections page: Class Status tab

This example illustrates the fields and controls on the Class Sections page: Class Status tab. You can find definitions for the fields and controls later on this page.

Activity Generator		Class Sections	
Class Sections			
Course ID:	003702	Course Offering Nbr:	1
Institution:	PeopleSoft University		
Term:	2011 Fall	Undergrad	
Subject Area:	BIOLOGY	Biology	
Catalog Nbr:	102	General Biology II	
Class Sections			
Class Status			
Session	Section	Class Nbr	Component
Regular	1	1156	Lecture
Regular	1A	1201	Laboratory
Regular	1B	1202	Laboratory
Regular	1C	1203	Discussion
Regular	SR1	1509	Lecture
Regular	SR1A	1514	Laboratory
Regular	SR2A	1515	Discussion

Image: Class Sections page: Class Enrollment Limits tab

This example illustrates the fields and controls on the Class Sections page: Class Enrollment Limits tab. You can find definitions for the fields and controls later on this page.

Class Sections							
Class Enrollment Limits							
Session	Section	Class Nbr	Component	Enroll Status	Class Type	Class Stat	Assoc
Regular	1	1156	Lecture	Open	N	A	1
Regular	1A	1201	Laboratory	Open	E	A	1
Regular	1B	1202	Laboratory	Open	E	A	1
Regular	1C	1203	Discussion	Open	N	A	1
Regular	SR1	1509	Lecture	Open	E	A	2
Regular	SR1A	1514	Laboratory	Open	N	A	2
Regular	SR2A	1515	Discussion	Open	N	A	2

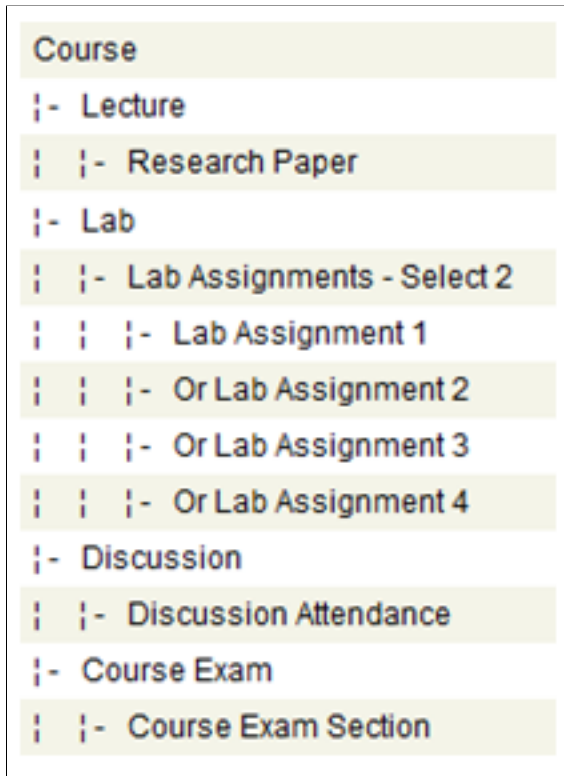

There are two tabs: the Class Status tab provides the session, section and class numbers, the component, the enrollment status, the class type, the class status, the class association, auto enrollment and resection settings (if applicable), consent settings, and schedule of classes print options; the Class Enrollment Limits tab indicates the enrollment and waitlist capacity and totals, as well as the required minimum enrollment.

This tab does not appear for exam-only courses (EOCs).

Activity Generator Example

Image: Content Tree Example

This example illustrates the fields and controls on the Content Tree Example. You can find definitions for the fields and controls later on this page.

For the particular term the class section breakdown is as follows:

Session = One (Regular)

Class Association = Two (1 & 2)

Lectures = Two. This is the 'graded component'. One lecture is assigned to class association 1 and one lecture is assigned to class association 2.

Labs = Three. Two labs are assigned to class association 1 and one lab is assigned to class association 2.

Discussions = Two. One discussion is assigned to class association 1 and one discussion is assigned to class association 2.

This information is verified on the Class Sections page.

Image: Class Sections page: Class Status tab

This example illustrates the fields and controls on the Example of discussion for session setting. You can find definitions for the fields and controls later on this page.

[-] Discussion	1 of 2	1C	1	1203	DIS 1
[-] Discussion	2 of 2	SR2A	2	1515	DIS 1

Note that the Exam was generated by Term, thus only one exam activity ID is generated for the academic period 2011.

For generating resit activities, see the section *Generating Resit Activities*.

Generating Activity IDs for Multiple Courses

This section discusses how to use the Batch Activity Generator to generate activity IDs for multiple courses.

You can use the following sources of data to batch generate IDs; these sources are available on the run control.

- Activity Registry template
- Activity Manager

Page Used to Generate Activity IDs for Multiple Courses

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Batch Activity Generator	SSR_ACO_GEN	Curriculum Management >Activity Management >Organize and Manage >Batch Activity Generator	Batch generate Activity IDs using the Activity Registry as the source of data.

Generating Activity IDs Using Batch Activity Generator

Access the Batch Activity Generator (Curriculum Management >Activity Management >Organize and Manage >Batch Activity Generator).

Image: Batch Activity Generator - Activity Registry as source page

This example illustrates the fields and controls on the Batch Activity Generator - Activity Registry as source page. You can find definitions for the fields and controls later on this page.

Image: Batch Activity Generator - Activity Manager as source page

This example illustrates the fields and controls on the Batch Activity Generator - Activity Manager as source page. You can find definitions for the fields and controls later on this page.

*Academic Period ID	Description	Resit Period	First	1-2 of 2	Last
1 FALL-2016	Fall 2016 Exam Period	<input type="checkbox"/>	+	-	
2 FALL-2016RS	Fall 2016 Fall Resit Period	<input checked="" type="checkbox"/>	+	-	

The batch generation process matches course roots based on matching Course IDs, Offer Nbr, and Topic ID and previous generation settings, as applicable. Various fields may or may not appear depending on the data source you select.

Run Mode

Select the option for the run process. Options include *Generate* or *Remove*. Generate creates a new course root and generates

	Activity IDs for the assigned term/period while Remove deletes existing activity IDs for the selected population.
Overlay if Activity Already Exists	Available when the Run Mode is <i>Generate</i> . Indicates to replace any existing activity IDs with newly generated activity IDs.
Source	Indicate the source from which to generate IDs: <i>Activity Registry</i> (course template) or <i>Activity Manager</i> (term or period specific).
Use Activity Registry if not in Activity Manager	This check box appears when you select Activity Manager as the source. During the process, if an Activity Manager has not been created for the given section, selecting this field still generates activity IDs but the Activity Registry is used as the data source. If this field is not selected <i>and</i> an Activity Manager record does not exist, the section is skipped.
Previous Term	This field appears when you select Activity Manager as the source. Select the term from which to copy Activity Manager data.
Use the most recent available term is not in previous term	This check box appears when you select Activity Manager as the source. Select to copy data from the most recent term to the previous term selected <i>if</i> the previously listed term does not have Activity Manager data.
Activity Root Status	This field appears when you select Activity Manager as the source. Select one or more of the following statuses that are to be copied: <i>Complete</i> , <i>Locked</i> , and <i>Pending</i> . If a match does not exist for the status you selected, the record is not copied.
Existing Aggregate	This field appears when you select Activity Manager as the source. Indicate how aggregated records should be handled by the batch process: <i>Carry existing aggregates</i> to newly generated IDs, <i>Error</i> any aggregated records, or <i>Exclude in selection</i> any aggregated records from the process.
Root & Component Mismatch	This field appears when you select Activity Manager as the source. It is possible that as new sections are added, an Activity Manager record that matches might not exist for use as the source to generate IDs. Use one of the following options to indicate how to handle the situation. Select:

- *Revert to Activity Registry* to generate IDs for any sections without a source record.
- *Error* for sections without a source record.
- *Exclude in selection* any sections without a source.

Exam Only Option

Indicates how to process Exam Only Courses. Options are: *Include* which indicates that exam only courses are processed along with regular courses; *Exam Only* indicates that solely exam only courses are processed; and *Exclude in selection* ignores all exam only courses and does not generate IDs.

Previous Period ID

This field appears when you select Activity Manager as the source.

Enter the period ID from which to source the Exam activity.

Assign Root Activity by

This field appears when you select Activity Registry as the source.

Select a value to define how to create Activity IDs for the course root. Options are:

Session: When selected, the system creates one course root for each session.

Session & Class Association: When selected, the system creates one course root for each class association within a session. This value is selected by default.

Individual Graded Section: When selected, the system creates a course root for every scheduled section indicated as the graded component. You can select this option even if there is no graded component built into the Activity Registry Content Tree for the course.

This option does not appear if the Exam Only Option is *Exam Only*.

Assign Component Activity by

This field appears when you select Activity Registry as the source.

This option is also found in the Advanced Activity Generator component for individual courses. Here users can select which method to use when generating Activity IDs for components. Using the component methods available here, the following course root and component combinations are possible:

- Course Root by Session / Component by Session.
- Course Root by Session / Component by Session & Class Association.

- Course Root by Session / Component by Individual Class Section.
- Course Root by Session & Class Association / Component by Session & Class Association.
- Course Root by Session & Class Association / Component by Individual Class Section.
- Course Root by Individual Graded Section / Component by Individual Class Section.

Aggregate 9999 Class Assoc

This field appears when you select Activity Registry as the source.

This check box appears only when multiple 9999 sections exist. This check box is selected by default.

When generating Activity IDs in the Activity Generator, the aggregation of 9999 class association sections is automatic. In the Advanced component, users can choose to aggregate these class associations or not. When you select this check box, the system aggregates all 9999 sections within a course root into one Activity ID. When you clear the check box, the system assigns all 9999 sections a unique Activity ID.

Assign Exam Activity by

This field appears when you select Activity Registry as the source.

This field is visible when an exam content type exists in the content tree for the course. Select a value to define how exam sittings are created for the course. It is assumed that for each unique exam activity ID generated, an exam sitting is scheduled.

Options are:

Activity Root: A unique exam activity is generated for each course root. Students enrolled in any of the course root class sections are associated with the exam(s) of the corresponding course root.

Session: A unique exam activity is generated for each session which has class sections scheduled. Students enrolled in a class section of a specific session are associated with the exam of the corresponding session.

Term: One exam activity is generated for the entire term. All students enrolled in the course for the term are associated with this exam. Term is selected by default. In the instance of an EOC (defined as such in the Activity Registry), there is only one course root and exam option, so this option does not appear.

New Term

This field appears when you select Activity Registry as the source.

	Select the term for which the course is associated.
Add Resit Description	Enter a description for the resit activity appearing in the Activity Manager and subsequently in the IAM, if the resit activity is used.
Apply to all Exam Types	By default, the checkbox is selected and the academic period applies to all exam types. Deselecting the checkbox allows a different exam type to be chosen for each academic period.
Apply to all Sessions	This field only appears if the Assign Exam Activity by is <i>Session</i> . If selected, the academic period is applied to all sessions. If deselected, a session can be defined for a specific Academic Period.
Apply to all Activity Roots	This field is only displayed when the Assign Exam Activity by is 'Activity Root'. If selected the academic period is applied to all Activity Roots. If deselected an Activity Root can be associated with a specific Academic Period.
Academic Period	<p>If an exam exists in the course, this field appears regardless of the selected source.</p> <p>Enter the Academic Period ID for each exam in the course. Academic Period IDs are set up on the Academic Period Table. The career associated with the academic period must match the career associated with the course to appear in the search results. If the course was designated as an EOC in the Activity Registry, the selection of the Academic Period ID occurs on the search page of the Activity Generator component, and is displayed on this page.</p>
Resit Period	If the Academic Period has an exam period type attribute of Resit Period then this field appears checked, to indicate that this is a resit period.
Log Reporting	For future use.
Population Selection	<p>Population selection is a method for selecting the IDs to process for a specific transaction. The Population Selection group box is a standard group box that appears on run control pages when the Population Selection process is available or required for the transaction. Selection tools are available based on the selection tools that your institution selected in the setup of the Population Selection process for the application process and on your user security. Fields in the group box appear based on the selection tool that you select. The fields behave the same way from within the group box on all run control pages and application processes. If your institution uses a specific delivered selection tool (such as PS Query) to identify IDs for a specific transaction, you must use it.</p> <p>The delivered queries include: <code>SSR_ACO_GEN_BY_COURSE</code> - prompts users to enter the institution, course ID and offering</p>

number; SSR_ACO_GEN_BY_INST - - prompts users to enter the institution; and SSR_ACO_GEN_BY_SUBJECT - prompts users for a subject code.

You can create additional queries as needed.

See "Using the Population Selection Process" (PeopleSoft Campus Solutions 9.2: Campus Community)

Generating Anonymous IDs

This process generates random IDs that are assigned to students per activity. You can specify the minimum and maximum number of digits for your anonymous ID. See "Setting Up Student Administration Options" (PeopleSoft Campus Solutions 9.2: Application Fundamentals).

Pages Used to Generate Anonymous IDs

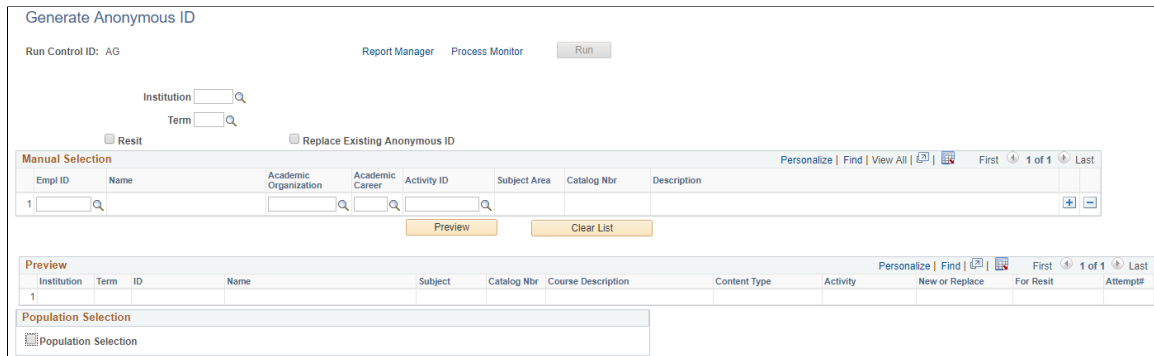

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Generate Anonymous ID	SSR_ANID_GEN_RNCTL	Records and Enrollment >Individual Activity Manager >Generate Anonymous ID	Generate anonymous IDs.
Generate AnonID Exam Only	SSR_ANID_GEN_RNCTL	Records and Enrollment >Individual Activity Manager >Generate AnonID Exam Only	Generate anonymous IDs for exam-only courses.

Generating Anonymous IDs

Access the Generate Anonymous ID page (Records and Enrollment >Individual Activity Manager >Generate Anonymous ID).

Image: Generate Anonymous ID page

This example illustrates the fields and controls on the Generate Anonymous ID page. You can find definitions for the fields and controls later on this page.

Process Monitor

Click to access the Process List page. This page lists the anonymous ID generation process you submitted. Click the Refresh button to update the Run Status and Distribution Status columns. When anonymous ID generation is successful, these columns will display Success and Posted respectively.

Institution

Select the institution for which you want to generate anonymous IDs.

Term

Select the term for which you want to generate anonymous IDs for the student's activity.

Manual Selection

This region appears when the Population Selection check box is not selected.

In this grid, you can manually select the students for whom to generate anonymous IDs. The results appear in the Preview Selection region.

Empl ID (Employee ID)

Select the ID of the student for whom you want to generate anonymous IDs.

Population Selection

Population Selection

Select this check box to generate multiple anonymous IDs for the population you select. By default, this check box is selected.

Selection Tool

Select PS Query.

Query Name

Select one of the following delivered queries:

- *SSR_IAM_ANONID_BY_INST_TERM* to generate anonymous IDs for students by academic institution and term.
- *SSR_IAM_ANONID_BY_CAR_TERM* to generate anonymous IDs for students by academic career and term.

- *SSR_IAM_ANONID_BY_ORG_TERM* to generate anonymous IDs for students by academic organization and term.

For information on population selection, see "Using the Population Selection Process" (PeopleSoft Campus Solutions 9.2: Campus Community).

Generating Anonymous IDs for Exam-Only Courses

Access the Generate AnonID Exam Only page (Records and Enrollment >Individual Activity Manager >Generate AnonID Exam Only).

The fields on this page are similar to the fields on the Generate Anonymous ID page except for the ones discussed in this section.

Academic Period ID Select the academic period for which you want to generate anonymous IDs for the student's activity. This is for exam-only courses.

Population Selection

Population Selection Select this check box to generate multiple anonymous IDs for the population you select. By default, this check box is selected.

Selection Tool Select PS Query.

Query Name Select one of the following delivered queries:

- *SSR_IAM_ANONID_EO_BY_INST_PRD* to generate anonymous IDs for exam-only courses by academic institution and academic period.
- *SSR_IAM_ANONID_EO_BY_CAR_PRD* to generate anonymous IDs for exam-only courses by academic career and academic period.
- *SSR_IAM_ANONID_EO_BY_ORG_PRD* to generate anonymous IDs for exam-only courses by academic organization and academic period.

For information on population selection, see "Using the Population Selection Process" (PeopleSoft Campus Solutions 9.2: Campus Community).

Managing Course Root Activities

This section provides an overview of the Activity Manager and discusses how to:

- Manage content tree activities.
- Redirect class or exam references to Activity IDs.
- Add sibling or child activities.

- Add system references.
- Manage activity details.
- Establish Activity Manager common attributes.

Understanding the Activity Manager

The Activity Manager is the administrative component to access the coursework for a course via the course roots created within the Activity Generator. The course root structure is combined with the detail from each content type defined in the Activity Registry. The Activity Manager page displays the content tree for a course root and the associated Activity IDs. It also displays any resit activities that were generated by the Online or Batch Activity Generator.

Administrators, depending on their access, can alter the content tree structure, and edit content item details that were established in the Activity Registry. Administrators must have the same academic organization access as the course. The ability to edit the content tree structure of a course is tied to settings on the Activity Definition and Activity Registry pages. The ability to change content item details is based on standard PeopleTools page security.

For courses that have class offerings, users can access the component searching by a term. If a course was created as an EOC, users can access the component searching by an academic period ID.

Note: Faculty and exam staff can access the activity manager structure in self service via the Activity Management WorkCenter.

Pages Used to Manage Course Root Activities

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Activity Manager	SSR_ACM_MAIN	Curriculum Management > Activity Management > Organize and Manage > Activity Manager	View and manipulate the content tree structure for a single course root.
Registry Content Tree	SSR_ACM_REG_SBP	Click the View Registry Tree link on the Activity Manager page.	View the content tree as it was defined in the Activity Registry.
Redirect Cross-Reference	SSR_ACM_XREFMOVE	Click the Update References icon on the Activity Manager page.	Move a class or exam associated with a specific Activity ID to another Activity ID within the same content type or create a new Activity ID and associate the class or exam with the new activity.
Create Activity	SSR_AC_ACTYADDSEC	Click the Add Sibling Activity or Add Child Activity icons on the Activity Manager page.	Create a new Activity ID in the system that is associated with a parent ID.

Page Name	Definition Name	Navigation	Usage
Add System References	SSR_ACM_XREFADD	Click the Information icon on the Activity Manager page.	Generate a new Activity ID for the structure and move an existing content item to the new Activity ID.
Activity Detail	SSR_ACM_ACTYDTL	Click an Activity ID link on the Activity Manager page.	Access and edit the content item detail that was created in the Activity Registry.
Attributes	SCC_CAF_DYN_SEC	Click the Attributes link on the Activity Detail page.	Select to access common attribute fields that were defined on the Record Context page for the Activity Manager

Managing Content Tree Activities

Access the Activity Manager page (Curriculum Management > Activity Management > Organize and Manage > Activity Manager).

If resit activities have been generated using the online or batch activity generator they are displayed in the Activity Manager.

Image: Activity Manager page (5 of 5): Resit Activities

This example illustrates the fields and controls on the Activity Manager page (5 of 5): Resit Activities. You can find definitions for the fields and controls later on this page.

Expand / Collapse	Content Description	Section	Session	Assoc	Class Nbr	Activity ID	Update References	Insert Child	Insert Sibling Activity	Move Activity	Copy Activity	Delete
<input checked="" type="checkbox"/>	Course					ACT00003348						
	[-] Paper 1					ACT00003349						
	[-] Paper 2					ACT00003350						
	[-] Paper 3					ACT00003351						
	[-] Paper 4					ACT00003352						
	[-] Paper 5					ACT00003353						
	[-] Paper 6					ACT00003354						
<input checked="" type="checkbox"/>	[-] Course Exam					ACT00003355						
	[-] [-] Course Exam Section					ACT00003356						
<input checked="" type="checkbox"/>	[-] Course Exam Resit *					ACT00003357						
	[-] [-] Course Exam Section Resit					ACT00003358						

Note: Although generated resit activities can be viewed in the Activity Manager, they are not immediately synced or displayed in the IAM. If a student is required to undertake a resit of an exam, is resit eligible, and satisfies the resit evaluation process requirements, then resit activities are added to the student’s IAM.

You can configure the settings for anonymous grading in Activity Manager. You can enable or disable anonymous grading for each content type as well as set up the default display settings for Individual Activity Manager, Workcenter, or Activity Roster. For example, within the same activity you may disable anonymous grading for oral recitation, but enable anonymous grading for exams. However, once you've created the Individual Activity Manager for an activity, you won't be able to update the settings for anonymous grading in Activity Manager.

Course Root

Exam Only Course	This flag appears if the course was created as an EOC.
Activity ID	The activity ID that was generated in the Activity Generator for this course root.
Activity Manager Status	Delivered values are <i>Complete</i> and <i>Pending</i> .
Registry ID	The registry ID that was created in the Activity Registry for this course.
IAM Exists , Enrollments Exist, or Results Exist	<p>This display-only field indicates to the user the status of the course root activity:</p> <ul style="list-style-type: none"> • No students have an IAM for the course root activity (IAM Exists = No) • Students have an IAM, but no result yet exists for the course root activity (Enrollments Exist = Y), and • Students have an IAM and a result exists for the course root activity (Results Exist = Y). <p>Each activity also carries one of these statuses. These can be viewed by selecting the Activity ID in the Content Tree Activities grid. When changes are made to the Activity Manager after students are enrolled and an IAM exists, the system syncs most of these changes to the IAM. For instance, a user may discover the no late penalty was defined for an assessment item. The user can make the add a late penalty in the Activity Manager (or the WorkCenter) and the system then syncs a late penalty to all the enrolled students' IAMs.</p> <p>However, some structural restrictions to editing the AM do exist. For instance, when the status is IAM Exists, a user is restricted from moving activities within the structure. When the status is Enrollments Exist, a user is unable to delete a component from the structure. When the status is Results Exist, users are unable to delete the activity.</p>
View Registry Tree	Click this link to access the Registry Content Tree page and view the content tree that was defined in the Activity Registry.
Session	The session that is associated with this course root.

Class Association	The class association appears if course root was generated using the Session and Class Association option.
Class Section	The class section appears if the course root was generated using the Individual Graded Section option.
Class Number	The class number appears if the course root was generated using the Individual Graded Section option.
Topic ID	The topic ID appears if the course root has an associated topic ID.
Course Root Aggregates	This grid appears when the Aggregate feature was used in the Activity Generator. It indicates which courses were aggregated together.

Content Tree Activities – Activity Management View

Activity ID This ID is generated by the Activity Generator for the given content types. Click an ID link to view and update content details for the activity on the Activity Details page.

Note: You can introduce new activities into the structure using the Add Child, Add Sibling, and Copy icons on this page. When using any of these features, the system generates a new Activity ID. Additional resit activities can be added in the Activity Manager but they are not automatically synced to the IAM, unless a student is eligible to retake the exam.

Update References 

Click this icon to access the Redirect Cross-Reference page, where you can manage system references (class references or exam reference records) for the particular activity. You can create a new activity to associate the class/exam or you can associate the class/exam to an existing activity for the content type. This icon is not available when either the Enrollments Exist or Results Exist fields appear.

Add Child Activity 

Click this icon to access the Create Activity page, where you can add child values to the content item, and then add the details on the Activity Detail page.

This icon appears if the Allow Structural Update check box for this content type is selected in the Activity Registry for this course. If that check box is cleared, the icon also appears when any potential child items of the content item are set to *Yes*.

For example, a Component content type may not be flagged for allowance to update, but because the content assessment item is updateable and can be a child to a component, the system displays the Add Child icon for the component.

Note that the only valid content types that can be added as children are those for which the Allow Structural Update check

box is selected, and the content type being added is valid for the structure.

Click this icon to access the Create Activity page, where you can add sibling values to the content item, and then add the details on the Activity Detail page.

This icon appears if the Allow Structural Update check box for this content type is selected in the Activity Registry for this course.

Note that the only valid content types that can be added as siblings are those for which the Allow Structural Update check box is selected, and the content type being added is valid for the structure.

Click this icon to move an Activity ID within the content tree structure for this course root.

This icon appears if the Allow Structural Update check box for this content type is selected in the Activity Registry for this course.

For example, an Attendance activity is associated with the course as a whole, but for this course root it only needs to be associated with the Lecture component. Use this feature to move the activity from the course to the lecture.

When you select this icon, the Paste to as Child icon appears.

This icon appears in conjunction with the Move Activity and Copy icons. After you select an item to move or copy, this icon appears on all rows that can accept the activity as a child. Click this icon to move the activity from its original location in the tree to the selected location.

Click this icon to copy the content item activity detail and add a new activity to the content tree for this course root.

This icon appears if the Allow Structural Update check box for this content type is selected in the Activity Registry for this course.

When you select this icon, the Paste to as Child icon appears.

Click this icon to delete the content item activity from the content tree for this course root.

This icon appears if the Allow Structural Update check box for this content type is selected in the Activity Registry for this course.

A delete action is not allowed when the item was set to *Required By Institution* in the Activity Registry.

New References Available 

This icon appears on any Component row where a scheduled section exists but is not associated with a course root. Click this icon to access the Add System References page and select an available class section to associate with the existing course root. The system then adds an Activity ID for the component to the course root.

Content Tree Activities – Activity Detail tab

This tab provides a different view of the content tree activities with general information about each activity/content item.

Each content type has its own default settings for anonymous grading as you specified on the Activity Definitions page. See Defining Activity Definitions. On this tab you can select or deselect the anonymous grading setting for the content type. If you’ve disabled anonymous grading at a higher level (for example, at the Academic Institution level), then the anonymous grading fields won’t appear in Activity Manager.

Content Tree Activities – Activity ID Detail tab

This tab provides the same information as the Activity Detail View tab, but is organized by Activity ID.

Redirecting Class or Exam References to Activity IDs

Access the Redirect Cross-Reference page (click the Update References icon on the Activity Manager page).

Image: Redirect Cross-Reference page

This example illustrates the fields and controls on the Redirect Cross-Reference page.

Redirect Cross-Reference												
Activity ID: ACT00000157 Lab												
Activity Class References												
	Course ID	Offer Nbr	Term	Session	Assoc	Topic ID	Section	Class Nbr				
<input type="checkbox"/>	003702	1	0650	1	1		1A	1401				
<input type="checkbox"/>	003702	1	0650	1	1		1B	1403				
Available Target Activities and Actions												
	Activity ID				Course ID	Offer Nbr	Term	Session	Assoc	Topic ID	Section	Class Nbr
<input type="checkbox"/>	XXX00000001	Create a New Activity										
<input type="checkbox"/>		Delete Selected References										

For example, the Lab content item for Course Root ACT00000157 has two class sections that point to the same Activity ID.

Image: Example of Labs that share an Activity ID

Both Sections 1A and 1B point to Activity ID ACT00000157.

Lab	 1 of 2 	1A	1	1	1401	ACT00000157
Lab	 2 of 2 	1B	1	1	1403	ACT00000157

Perhaps for this particular Course Root the school wishes to manage these two sections separately rather than under one Activity ID. The Update References icon can be selected for section 1B and within the Redirect Cross-Reference page, the section can be redirected to a new Activity ID as follows:

Image: Update References page

This example illustrates the Update References page as explained above.

Redirect Cross-Reference

Activity ID: ACT00000157 Lab

Activity Class References								
	Course ID	Offer Nbr	Term	Session	Assoc	Topic ID	Section	Class Nbr
<input type="checkbox"/>	003702		1 0650	1	1		1A	1401
<input checked="" type="checkbox"/>	003702		1 0650	1	1		1B	1403

Available Target Activities and Actions										
	Activity ID		Course ID	Offer Nbr	Term	Session	Assoc	Topic ID	Section	Class Nbr
<input checked="" type="checkbox"/>	XXX00000002	Create a New Activity								
<input type="checkbox"/>		Delete Selected References								

Select OK, and you are taken to the Activity Detail page for the new Activity ID. Appropriate details should be entered and saved.

Adding Sibling or Child Activities

Access the Create Activity page (click the Add Sibling Activity or Add Child Activity icons on the Activity Manager page).

Image: Create Activity page

This example illustrates the fields and controls on the Create Activity page.

Create Activity

Activity Id: XXX00000002

Parent Activity ID: ACT00000117

Parent Content Type: 1000-Course

Content Type:

Once you click OK you are transferred to the Activity Details page where you can enter details about the new activity. Add activity detail and save the component to generate a new Activity ID. With the

exception of the description and content code, the details for 4500 – Exam Section must be entered on the Section Manager component.

Special Consideration for Combined Sections

Combined sections can be setup to be displayed together under the same course root. If a combined section exists, the following page appears when the sibling icon is selected for a component content type.

Image: Create Activity for Combined Sections page

This example illustrates the fields and controls on the Create Activity for Combined Sections page.

Create Activity

Activity Id: XXX00000002
 Parent Activity ID: ACT00000345
 Parent Content Type: 1000-Course
 Content Type: 2000-Component

Activity Creation Options

Create a New Activity
 Associate Combined Sections

Available Activities

Course ID: 001011

 Term: 0650
 Component:

Search Clear Results

Available Combined Section Activities										
		Course ID	Offer Nbr	Session	Assoc	Topic ID	Section	Activity ID	Component	Class Nbr
1	<input checked="" type="checkbox"/>	003852	1	1	1		1	ACT00000340	LEC	2075

The available combined section(s) are displayed. When you select the appropriate class section it is then displayed with its corresponding combined section under the course root. This action should be performed for each course root.

Adding System References

Access the Add System References page (click the Information icon on the Activity Manager page).

Image: Add System References page

This example illustrates the fields and controls on the Add System References page. You can find definitions for the fields and controls later on this page.

Add System References

Activity ID: ACT00000013 Lab

Available System References									
	Course ID	Offer Nbr	Term	Session	Assoc	Topic ID	Section	Class Nbr	Activity ID
<input type="checkbox"/>	002101	1	0650	1	1		9	6650	

If any class sections were scheduled after activities were generated in the Activity Generator, the Information icon appears. Identify against which activity you want to add the class and select the information icon. Once selected, the system transfers you to the Add System References page to see the class(es) that require an Activity ID. Select the appropriate class section(s) and click OK. The class section(s) now reference the existing Activity ID. If it needs to reference its own Activity ID, use the Update Reference icon to create a new Activity ID.

Managing Activity Details

Access the Activity Detail page (click an Activity ID link on the Activity Manager page).

Image: Activity Detail page

This example illustrates the fields and controls on the Activity Detail page. You can find definitions for the fields and controls later on this page.

[Return](#)

The fields on this page are very similar to those in the Activity Registry component. The sections and fields that appear here are dependent on the content type of the item and the detail that was entered in the Activity Registry component. The system populates this page with content item attributes from the Activity Registry page, but you can update, add, or delete them here for a particular Activity ID. Any updates to a course root in the Activity Manager are reflected in downstream processing, meaning that any updates to an Exam or Exam Section made here are used by the Section Manager. When student enrollment exists or results exist for a student in the system, some edits for the given term or academic period may be restricted.

In the Content Options group box, you can set up Activity Roster, AM Workcenter, and Individual Activity Manager to display only anonymous IDs, Student ID and Name only, or both.

See:

- [Setting Up Anonymous Grading](#)

- Generating Anonymous IDs

Note: In the Content Options group box, you cannot edit standardized units defined in the Activity Registry. Any item identified as Required by Institution in the General Options group box cannot be deleted from the structure.

See Setting Up the Activity Registry

Individualized Content

When adding a new content item to the structure, the system displays an additional field in the Content Options group box on. Select the Individualized Content field if this content item is specific to a student or subset of students enrolled in the class. This activity must be assigned to the specified students either manually in the Student IAM or by using the IAM Block Generator.

Image: Example of Content Options group box

This example illustrates the Content Options group box as explained above.

Image: Example of Content Options group box

Establishing Activity Manager Common Attributes

Access the Attributes page (click the Attributes link on the Activity Detail page).

Image: Attributes page

The following screenshot provides an example of common attributes set up for the course content item in the Activity Manager:

Attributes		
Institution:	PSUNV	PeopleSoft University
Activity:	ACT00000491	Course
Language of Instruction:	<input type="text" value="SPANISH"/>	<input type="text" value="Spanish"/>
Course Level:	<input type="text" value="LEVEL 1"/>	<input type="text" value="Level 1"/>

The fields that appear on the Attributes page are customer-specific and are defined on the Common Attributes and Record Context pages. The record context used for the Activity Manager is the Activity Attributes (SSR_ACMCONT_ITM) record. The entity names used for the Activity Manager are prefixed by 'ACM'.

See "Understanding Common Attribute Framework" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Managing Section Activities

This section provides an overview of the Section Manager and discusses how to:

- Manage activity sections.
- Manage section details.
- Manage staff instructions.
- Secure scheduled activities.

Understanding the Section Manager

The Section Manager is the administrative component to manage the scheduling of activities. It is accessed by an Academic Period ID if the associated course is an EOC and by term if the course has scheduled class sections. In its initial release it is designed to support course exam activities. Resit activities also need to be scheduled.

Pages Used to Manage Section Activities

Page Name	Definition Name	Navigation	Usage
Section Manager	SSR_ACM_SCTNMAIN	Curriculum Management >Activity Management >Organize and Manage >Section Manager	Review content items that have scheduled instances created for a course root.
Section Detail	SSR_ACM_SCTNDTL	Click an Activity ID link on the Section Manager page.	View and edit scheduling detail for the exam section.
Staff Instructions – Meeting	SSR_ACM_SCTN_MSGS	Click the Staff Instructions - Meeting link on the Section Detail page.	View and edit staff instructional notes.
Scheduled Activity Security	SSR_SCRTY_EXAM	Set Up SACR > Security > Secure Student Administration > User ID > Scheduled Activity Security	Associate the academic organization for which a user can access course exams.

Managing Activity Sections

Access the Section Manager page (Curriculum Management >Activity Management >Organize and Manage >Section Manager).

Image: Section Manager page: Activity Management View tab

This example illustrates the fields and controls on the Section Manager page: Activity Management View tab. You can find definitions for the fields and controls later on this page.

Scheduled Sections						
Activity Management View		Section Detail View				
Description	Section Status	Current Enrollment	Enrollment Cap	Auto Enrollment	Code	Activity ID
Course Exam					EX	ACT00000346
- Course Exam Section	Scheduled		75	<input type="checkbox"/>	EX	ACT00000347

The Section Manager page displays the content item that has scheduled instances created for a course root. Initially, only exam content items selected as Scheduled in the scheduling option section of the Activity Manager appears. Exam section rows are inserted as child items to the exam based upon the Number of Sections to Schedule entered in the scheduling option section of Activity Manager.

Note: The icons on the Activity Management View tab are the same as those used on the Activity Manager page. For their descriptions and usage, see the "Managing Content Tree Activities" section.

- Exam Only Course** This check box is selected to indicate that the exam and its schedulable sections are part of an EOC.
- Activity ID** This Activity ID represents the content item that has scheduled instances. It also appears as the parent item in the Scheduled Section grid below.
- Exam Type** Indicates the exam type that was associated with this exam content item in the Activity Manager.
- Period ID** Indicates the academic period that the exam content item was associated with in the Activity Generator.
- Content Description** This section of the grid displays the original content item to be scheduled and any scheduled instances that were previously defined in the Activity Registry or Activity Manager.
- Content Options** This section identifies some of the fundamental grading elements for the exam section.
- Section Nbr (number)** The system generates this number when the scheduled section activity ID is generated. It is generated for each section and is ultimately used for enrollment. The Last Section Nbr generated is tracked on the Academic Period Table.
- Facility ID** Displays the facility in which the scheduled section is to be held. This value is updated when Facility ID is entered on the Section Manager Section Detail page.
- Start/End Date** Displays the start and end date of the scheduled section. This value is updated when the Start Date and End Date are entered on the Section Manager Section Detail page.

Start/End Time

Displays the start and end time of the scheduled section. This value is updated when the Start Time and End Time are entered on the Section Manager Section Detail page.

Section Status

Displays the status of the scheduled section. This value is updated when the Section Status is entered on the Section Manager Section Detail page.

Current Enrollment

Displays the current enrollment in the scheduled section.

Enrollment Cap

Displays the enrollment capacity of the scheduled section. This value is updated when the Enrollment Cap is entered on the Section Manager Section Detail page.

Managing Section Details

Access the Section Detail page (click an Activity ID link on the Section Manager page).

Forms of Identification

Form of Identification	Description	Required		
UNIVERSITYID		<input checked="" type="checkbox"/>	+	-

Description

Enter the scheduled activity description.

Content Code

Enter the content code for the scheduled activity. The content code serves as the header on the activity roster.

Content Options

Alter any grading element specific to the section.

Section Status

Select the status of the scheduled section. The delivered values are *Scheduled* and *Unsched* (Unscheduled). The default is *Unsched*.

Exam Duration (hours; mins)

Indicate the exam length in hours and minutes. If this value was set on the Activity Manager, it defaults here and can be overridden if necessary.

Confirmation Required

Select this flag to indicate that students enrolled in this activity must confirm their attendance.

Enrollment Cap

Set the capacity for enrollment into this scheduled activity.

Enrollment

This field populates with the current enrollment into this scheduled activity. (Future)

Restrict Enrollment	Select a student group if this section is restricted to only students assigned to that student group.
Required Rooms	Indicate the number of rooms needed for this scheduled activity. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Enable Time Slotting	Indicate if this section is subject to time slotting. Time slotting is used to support intervals in assigning students to this section. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Students Per Slot	If utilizing time slotting indicate the number of students per time slot. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Slot Duration (hours; mins)	If utilizing time slotting indicate the number of hours and/or minutes per scheduled slot. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Room Characteristics	Indicate the required room characteristics for this scheduled activity. Room characteristics are defined on the Room Characteristics Table. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Quantity	Used in conjunction with the Room Characteristics field, indicate the quantity of the stated room characteristics. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Meeting Status	The status of the requested facility. The delivered values are <i>Final</i> , <i>Pending</i> , and <i>3rd Party</i> . The default is <i>Pending</i> . This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Event ID	The system creates a unique event ID record in the Event table when you schedule a class with a meeting pattern and facility ID. The Event table is used to record class and non-class events for room scheduling.
Facility ID	Enter a facility ID for the class. Facility values are defined on the Facility Table page. This field can be updated manually or by a third-party scheduling system.
Facility Type	This value defaults from the Facility Table based on the Facility ID entered.
Capacity	This value defaults from the Facility Table based on the Facility ID entered.

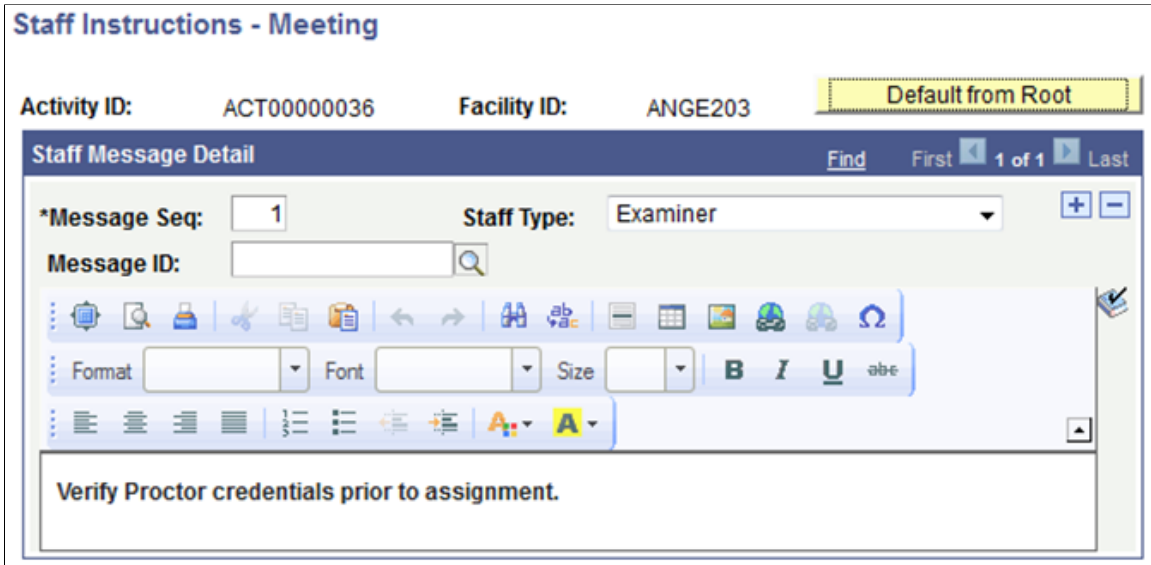

Start/End Date	Indicate the start and end dates of the scheduled activity.
Pat	Indicate the meeting pattern for the scheduled activity.
Room Start/End Time	Indicate the start and end times needed for the facility if the time differs from the actual scheduled activity time.
Facility Type	Indicated the needed facility type. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Requested Cap	Indicate the requested capacity of the facility for this scheduled activity. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Meeting Start/End Time	Indicate the start and end times of the scheduled activity. After entering the start time, the end time is defaulted based on the activity (exam) duration. Adjust as needed.
Seat Spacing	Indicate the number of seats that should separate students in the facility for the scheduled activity. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Student Cap	Enter the capacity for seating within the facility if it differs from the enrollment capacity for the scheduled activity. This field is delivered to interface with a third party scheduling system. There is no internal programming for this field.
Staffing Requirement from Section Root	This grid displays the staffing requirements for the course root. This information is provided for informational purposes only.
Staff Type	Enter the staff type required for the scheduled activity.
EmplID	Enter the EmplID of the person who fulfills the staff type role. This field edits against the Instructor/Advisor Table. The academic organization of the course should be entered for the individual staff member on the Approved Courses page of the Instructor/Advisor Table.
Content Devices	This information displays the content devices for the course root. This information can be overridden as needed for individual scheduled sections.
Forms of Identification	This information displays the forms of identification for the course root. This information can be overridden as needed for individual scheduled sections.

Managing Staff Instructions

Access the Staff Instructions – Meeting page (click the Staff Instructions - Meeting link on the Section Detail page).

Image: Staff Instructions – Meeting page

This example illustrates the fields and controls on the Staff Instructions – Meeting page. You can find definitions for the fields and controls later on this page.

Default from Root

Select this button to default staff instructions from the course root. Other options here include entering a Message ID to convey a previously defined message set up on the Content Messages component or enter free form text. Messages should be associated with a specific staff type.

Securing Scheduled Activities

Access the Scheduled Activity Security page (Set Up SACR > Security > Secure Student Administration > User ID > Scheduled Activity Security).

Image: Scheduled Activity Security page

This example illustrates the fields and controls on the Scheduled Activity Security page. You can find definitions for the fields and controls later on this page.

Access into the Section Manager to create/maintain scheduled activities is based on a user's academic organization (Academic Org Security). To add/update the scheduled activity, the user must possess the same academic organization that is associated with the Course Offering that owns the activity.

Academic Organization

Enter the highest academic organization in the hierarchy that the user ID should be able to access course scheduled activities.

Insert rows to add academic organizations or to restrict access to a particular academic organization lower in the hierarchy.

Scheduled activity security is based on the hierarchy in the academic organization security tree. The academic organization that you identify here must be a node on the academic organization security tree. Granting access to one node of the academic organization tree also provides access to all child nodes for that organization. To restrict access to a child node, select the academic organization that you want to secure and set the access code to No Access.

Managing Student Activities

This section discusses the IAM where the activities for a course are assigned to a student. There are three methods by which an IAM can be created: adding the record manually, creating it in a batch process, or having student enrollment create it automatically. There is also a batch process to assign optional activities to a student when the IAM already exists. This section specifically discusses how to:

- Add an IAM for an individual student.
- Review activity status.
- Review activity detail.
- Establish IAM common attributes for activity details.
- Enter activity results for an individual student.
- Establish IAM common attributes for activity results.
- Understand reassessment.
- Create IAMs automatically.
- Create IAMs in batch using student enrollment.
- Create IAMs in batch using Academic Progress Tracker (APT).
- Create an IAM student block.
- Generate an IAM activity block.
- Use the IAM batch generator.
- Review IAM requests.
- Review the IAM activity request log.

Understanding IAM Creation in Batch

You can create IAMs for groups of students in batch. Two components are delivered to support this creation. The IAM Batch Generator using Student Enrollment page creates IAMs for students based on their enrollment in classes. The IAM Batch Generator using APT (EOC) page creates IAMs for students taking EOCs. Each method provides users multiple mechanisms for generation: population selection, filtered selection, or manual selection.

See [Creating IAMs in Batch Using Student Enrollment](#)

See [Creating IAMs in Batch Using APT](#)

Understanding IAM Block Generation

The IAM Block Generator allows users to mass assign optional activities to multiple students. Three components make up this feature: the IAM Students Block, the IAM Activities Block, and the IAM Batch Generator Using Block Process. The block process is designed to assign optional nonmandatory activities to students who are already assigned to a course root. Nonmandatory activities include optional activities where students have a choice between activities, extra credit activities, and individual content activities.

See [Generating an IAM Student Block](#)

See [Generating an IAM Activity Block](#)

See [Using the IAM Batch Generator](#)

Pages Used to Manage Student Activities

Page Name	Definition Name	Navigation	Usage
Individual Activity Manager	SSR_IAM_ACT_PAGE1	Records and Enrollment > Individual Activity Manager > Individual Activity Manager	Create, review, and update details of a student's enrollment in a course and the associated activities of that course.
Individual Activity Manager - Activity Detail	SSR_IAM_ACT_DTL	Click the Activity ID on the Individual Activity Manager page.	View and edit activity detail populated from the Activity Manager for an individual student.
Attributes	SCC_CAF_DYN_SEC	Click the Attributes link on the Individual Activity Manager - Activity Detail page or the Individual Activity Manager - Activity Result page.	Review common attributes set up in the IAM for either activity details or activity results.
Individual Activity Manager - Activity Result	SSR_IAM_ACT_RESULT	Click the Add Activity Result icon or the Show Activity Results icon on the Individual Activity Manager page.	Manually enter activity results for an individual student.

Page Name	Definition Name	Navigation	Usage
Result Scale Table	SSR_IAM_SCALE_SP	Click the Show Result Scale link on the Individual Activity Manager - Activity Result page.	Review the result scale being used for an activity result.
IAM Batch Generator using Student Enrollment	SSR_IAM_ENR_GEN	Records and Enrollment > Individual Activity Manager > IAM Gen using Student Enroll	Generate IAMs for students based on their class enrollment.
IAM Batch Generator using APT (EOC)	SSR_IAM_APT_GEN	Records and Enrollment > Individual Activity Manager > IAM Gen using APT (EOC)	Generate IAMs for students enrolled in EOCs.
IAM Students Block	SSR_IAM_STDBLK_ID	Records and Enrollment > Individual Activity Manager > IAM Block Generator > IAM Students Block	Create a block of students to whom activities are assigned.
IAM Activities Block	SSR_IAM_ACTBLK_CRS	Records and Enrollment > Individual Activity Manager > IAM Block Generator > IAM Activities Block	Create a block of course roots against which activities are selected.
IAM Batch Generator using Block Process	SSR_IAM_BLK_GEN	Records and Enrollment > Individual Activity Manager > IAM Block Generator > IAM Gen using Block Process	Merge the student and activities blocks and assign the selected activities to students.
IAM Activity Request	SSR_IAM_REQUEST	Records and Enrollment > Individual Activity Manager > IAM Activity Request	Review IAM processing requests generated from the IAM Enrollment Event, the batch IAM jobs, and the AM-to-IAM sync.
IAM Request Message Log	SSR_IAM_REQ_MSGLOG	Click the Messages link on the IAM Activity Request page.	Review any generated messages.
IAM Resit Evaluation	SSR_IAM_RESIT_EVAL	Records and Enrollment > Individual Activity Manager > IAM Resit Evaluation	Select the resit candidate population to evaluate for resit eligibility.

Adding an IAM for an Individual Student

Access the Individual Activity Manager page (Curriculum Management > Activity Management > Individual Activities > Individual Activity Manager).

Image: Individual Activity Manager page – Activity tab

This example illustrates the fields and controls on the Individual Activity Manager page – Activity tab. You can find definitions for the fields and controls later on this page.

The IAM component captures a student's enrollment in a course and the associated activities of that course. This method of creating the IAM is to add the student and select the appropriate root activity based upon the student's class enrollment (STDNT_ENRL) or select from a list of courses designated as an EOC. When the record is added, a status is populated for each mandatory activity. These statuses are

based upon a student's enrollment and upon settings defined in the Activity Registry and organized in the Activity Manager.

Root Status

This status concerns the assignment of the activities to the student. The delivered statuses are *Action Required*, *Completed*, and *Incomplete*. The status remains *Action Required* until all activities achieve an activity status which indicates all activities have been assigned. Once all eligible activities are associated with the student, the status changes to *Completed*. If a student drops or withdraws from the course the status changes to *Inactive*. Once the status is *Inactive*, you can no longer update results for the student.

Calculate

Select this button to calculate the primary result for the activities selected in the grid below. This button calls the IAM Result Entity coding and the rules engine for processing.

At this time, using the calculation process to calculate an exam result does not allow users to manipulate the exam row for resits.

See [Understanding the Delivered Rules in Activity Management](#)

This icon locks the IAM record from further updates.

Display All Attempts

This check box appears when reassessment rows exist in the structure. Reassessment rows normally display within the horizontal scroll. Selecting this check box displays all rows individually.

Create Initial Result Row

This check box appears by default from the Student Admin Installation setup page. If selected, a result row with an undetermined status is automatically inserted for each assessed activity ID assigned to a student. This creates a result row prior to a result being entered or calculated. This row is visible in the IAM.

If not selected, a result row is not created until a result is entered or calculated.

The field can be overridden in the IAM prior to the page being saved.

Activity tab

This tab indicates the status of the activity assignment and is used to select and confirm activities, assign resits, and link to activity and result details.

Valid Attempt

Appears only on reassessed rows; this field is inserted and selected by default. Manually clear it to indicate that the attempt should not be considered a valid attempt.

Anonymous ID

This appears only when you generate an anonymous ID for the student, and depends on the settings in Activity Manager.

See:

- [Setting Up Anonymous Grading](#)
- [Generating Anonymous IDs](#)

Activity ID

The activity assigned to the student links to the Activity Detail page.

Activity Status

When a student is enrolled in a class or an EOC, the system automatically sets a status or an action for the activities in the tree. It sets a status of *Enrolled* or *Assigned* for those activities that do not require any additional action by a student. For those activities that do require action by the student, the system leaves them blank. Once the required action (selection or confirmation) is completed, the system updates the status.

The delivered statuses include: *Assigned*, *Assigned – confirmed*, *Assigned – requires confirmatn*, *Dropped*, *Enrolled*, *Enrolled – Confirmed*, *Enrolled – confirmation req'd*, *Resit Allowed*, *Resit Candidate*, *Resit Not Allowed*, *Reassessed*, *Selected*, *Selected – confirmed*, *Selected by Default*, *Selected as Resit*, *Withdrawn*, and *Waitlisted*.

Select

This check box appears when the user is required to select an optional activity. Users have the selection option when an activity is not mandatory or is associated with a condition. An exam section that requires selection aside from the class or EOC enrollment can also be selected. When you select the check box, the activity status changes to *Selected*.

Confirm

The confirm check box is available for those schedulable activities (exam sections) where the Confirmation Required check box was selected in the Activity Manager or the Section Manager. An activity requiring confirmation has an *Enrolled – Confirmation – Req'd* status. Once confirmed, the status changes to *Enrolled – Confirmed*.

Extenuating Circumstances

Use this field to record institutionally defined circumstances against this activity. These are defined on the Extenuating Circumstances Table. An example of an extenuating circumstance may be a student illness, which indicates why the student was given an extended due date for the activity.

Add Activity Result

Select this icon to add results to the Activity Result page for the given activity.

Show Activity Results

This icon appears when results exist for a given activity. Selecting it transfers the user to the Activity Result page.

Resits Allowed

This field is populated for those activities which have had resit options created. It indicates the maximum number of resits allowed based on the Maximum Resit Limits setup in the Resit

Options. If only one Resit Time Period is indicated, the field is listed as *Max [Nbr]*.

If multiple Resit Time Periods are defined, the link field displays as *Limit Grid*.

If no Maximum Resit Limit is defined the link field displays *No Limit*.

Regardless of the link that appears, select the link to access the Individual Activity Manager – Resit Limit secondary page.

Select for Calculation

This check box indicates at which level you want the primary result calculation to occur.

The check box appears at the parent activity level. When you select the check box, all child items that are eligible to be used in the calculation are also selected. Eligibility for assessment items is based on the due date or the extended due date, whichever is later. Clear any check box for an item that you do not want to use in the calculation.

Consider an example in which all marks are entered for a course except the exam, which has not yet occurred. If you select the Select for Calculation check box for the course activity, all child items are also selected. To exclude the exam, clear the exam activity check box.

After making all your selections, click the Calculate button at the top of the page to begin the calculation process.

See [Understanding the Delivered Rules in Activity Management](#)

This icon locks the activity from further updates.

Lock

Legend

This box appears when any of the items in the content tree are designated as *Extra Credit*, *Individualized Content*, or a *Supplemental Resit*.

Individualized Activity (*) – This symbol appears for an activity when the activity was set up as individualized content in the Activity Manager.

Extra Credit (±) – This symbol appears for an activity when the activity was set up as an extra credit activity.

Supplemental Resit (^) – This symbol appears for an activity when the activity was set up as a supplemental resit.

Class & Exam Info tab

This tab displays the class section, class association, class number of any classes in the content tree, and the academic period and the exam type for any exam.

Credit Info tab

This tab displays the course units and the standardized units of an activity.

Result Info tab

This tab displays the current result row for the activity including the Result Number, Result Type, Result Source, Result Scale, Mark, Grade, and Outcome. Detail result information is available under the Show Activity Results icon. Click the Add Activity Result icon to add new results.

The system displays results on the Result Info tab based on the following order:

1. Displays the row if only one Result row is listed.
2. Displays the row for the Primary Result Type where Include in Calc = Y.
3. Displays the row with the highest Result Nbr with Include in Calc = Y when no row exists for the Primary Result Type.
4. Displays the row for the Primary Result Type with the highest Result Nbr when no Include in Calc = Y row exists.
5. Displays the row with the highest Result Nbr when no row exists for the Primary Result Type and no Include in Calc = Y row exists.

Note: The Primary Result Type is set on the Academic Institution 9 page.

See "Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Reviewing Activity Status

When the IAM is added to the student, based on either class or EOC enrollment, the following occurs:

- Class components and course root activities status are set to *Enrolled*. No further action is required.
- All non component/course activities not requiring a selection or confirmation have a status set to *Assigned*. No further action is required.

Those activities requiring selection or confirmation may not have a status set automatically, but require further action as follows:

- Any activity requiring selection has a check box displayed in the Select column. Once selected, the status is set to *Selected* or *Enrolled* (for exam sections).
- Those activities requiring confirmation have a check box displayed in the Confirm column and the status is set to *Enrolled – Confirmation Req'd*. Once confirmed, the status is set to *Enrolled - Confirmed*.

While administrative and instructional users can select optional activities or confirm exam attendance for students at any point in time, students making the selection for themselves in self service can be restricted to a certain point in time. Define student access on the Action Dates component.

The logic utilized to set the statuses, actions, and restrictions when the IAM is first created is as follows:

Scenario	Initial Status	Action	Restrictions
1. All component activities (based on STDNT_ENRL) and their course root and related component activities 2. Exam Section where only one section exists (or multiple sections with "AND" connector type) under a mandatory parent and Confirmation not required	Enrolled	Not applicable (NA)	Not applicable (NA)
3. All non-course/non-component/non-exam section activities where Mandatory = Yes 4. All child activities of (1 & 3) where no enrollment rule exists	Assigned	NA	NA
5. Conditional activities when there exists an established default	Assigned	Remove/Select	Action Dates control student access
6. Conditional activities (could include exam sections)	[Blank]	Select/Remove	Action Dates control student access
7. Confirmable activities where no selection required	Enrolled – Confirmation Req'd	Confirm/UnConfirm	Action Dates control student access
8. Any activity defined as Individualized Content 9. Any activity defined as Extra Credit	[Blank]	Select/Remove	Selection is restricted to the IAM, Activity Roster, and the AMWC components

This table lists specific statuses that are inserted during the reassessment evaluation.

Status	Description
Reassessed	The status inserted on the attempt being reassessed.
Resit Allowed	A status that can be manually assigned to insert a resit row.
Resit Candidate	The status inserted on the current attempt row when the result entered was resit eligible and the coursework item was identified as a resitable item. This is the status that is picked up and analyzed by the resit evaluation rule.

Status	Description
Resit Not Allowed	This status is automatically inserted by the evaluation rule when the student is no longer eligible for an attempt.
Selected as Resit	This status is automatically inserted by the evaluation rule when the student is eligible for an additional attempt.

Reviewing Activity Detail

Access the Individual Activity Manager - Activity Detail page (click the Activity ID on the Individual Activity Manager page).

Note: Values here are inherited from the Activity Manager. Only those items that can be overridden for an individual student are editable on this page.

Image: Example: Content Type = Assessment Item Detail

This example illustrates the Individual Activity Manager - Activity Detail page (Content Type = Assessment Item Detail).

Activity Detail [Find | View All](#) [First](#) 4 of 11 [Last](#)

Activity ID: ACT00000065

Assignment Options

Extra Credit

General Options

Mandatory Allow Override or Substitution Topic Approval Required

Insufficient Mark Options

No Mark Option: Blank Mark - Include Minimum Mark Value: 0.000

Late Penalty Options

Penalty Type: Daily Penalty Grade Expires to Zero in 5 Days
 Late Penalty: 5.000 Penalty Max: 20.000

Dates and Duration

Start Date: 01/03/2013 Grading Date: 06/03/2013
 Due Date: 04/03/2013 Extended Due Date:

Extended Due Date

This field is available only at the student level. Its' purpose is to override a due date for an individual student. When an extended

due date exists, the system displays it to the student and uses it in late penalty processing.

Establishing IAM Common Attributes for Activity Details

Access the Attributes page (click the Attributes link on the Activity Detail page).

Image: Attributes page (for Activity Details)

This example illustrates the fields and controls on the Attributes page (for Activity Details).

The screenshot shows a form titled "Attributes". It contains the following information:

- Empl ID:** SR0431
- Academic Activity ID:** ACT00000422
- Student Language:** GE (with a dropdown arrow icon)
- Exam:** German

The screenshot above provides an example of common attributes set up for the course content item in the IAM. The fields that appear on the Attributes page are customer-specific and are defined on the Common Attributes and Record Context pages. The record context used for the IAM is the Individual Activities (SSR_IAM_CONTITM) record. The entity names used for the IAM have an “IAM” prefix.

See "Defining a Common Attribute" (PeopleSoft Campus Solutions 9.2: Campus Community)

See "Associating a Common Attribute to a Record" (PeopleSoft Campus Solutions 9.2: Campus Community)

Entering Activity Results for an Individual Student

Access the Individual Activity Manager - Activity Result page (click the Add Activity Result icon or the Show Activity Results icon on the Individual Activity Manager page).

Image: Individual Activity Manager – Activity Result page

This example illustrates the fields and controls on the Individual Activity Manager – Activity Result page. You can find definitions for the fields and controls later on this page.

The screenshot shows the "Individual Activity Manager - Activity Result" page for Sharon Katz (ID SR12200). The page displays details for Activity ID ACT00000310, which is an "Assigned" activity of type "6000 Assessment Item". The content item is "ITX-000031 Lab Assignment 1".

Below the details is a table of results with the following columns:

Result Nbr	Result Type	Result Sub-Type	Result Scale	Show Result Scale	Result Status	Submission Date	Include in Calc	Earned Mark	Maximum Mark	Grade	Outcome	Extenuating Circumstances	Result Notes
1	AM RESULT		100 PT		05-Manual	09/13/2010	<input checked="" type="checkbox"/>	83.00	100.00	B	Pass		

Buttons at the bottom include "Add New Result Type" and "Update Selected Result".

See "Managing Course Rosters" to apply results to all students for an activity.

Select

This column appears after an initial result has been saved. To insert a new value against an existing Result Type, select the check box and then select the Update Selected Result button.

This inserts a new row for the Result Type where values can be updated.

Delete

Use this icon to delete an individual result row.

Additional setup information is available on the Academic Institution table, tab 9, to control whether the Delete icon is available on the IAM.

Result Nbr (number)

This number is incremented for each result entered for the activity.

Result Type

This value defaults from the Primary Result Type on the Academic Institution Table. It can be overridden as necessary.

See "Defining Academic Institutions" (PeopleSoft Campus Solutions 9.2: Application Fundamentals)

Result Sub-Type

This value reflects the type of mark:

Insuff Mark (insufficient mark) – this value is inserted on a calculated row automatically during the primary result calculation when the insufficient rule is invoked. This requires setup of the of insufficient mark option.

Late Pen (late penalty) – this value is inserted on a calculated row automatically when the late penalty rule is invoked. This requires setup of the of late penalty option.

Mand Fail (mandatory fail) – this value is inserted on a calculated row automatically when the mandatory pass rule is invoked. This requires flagging the Mandatory Pass flag and setting up a Mandatory Fail result on the Result scale.

Resit Calc (resit calculation) – this value should be manually inserted on a row that is entered as a resit result. This value is automatically inserted via the rules engine in a future release.

Result Scale

The result scale defaults from the Activity Manager as long as the result scale is represented on the Result Type table. It can be overridden as necessary.

Note: When grades are used in the result scale, the grading basis must match the grading basis associated with the student's enrollment record.

Show Result Scale

Click this link to access the Result Scale Table, which displays the result scale being used for the row.

Result Status

When the Create Initial Result Row is selected, the Result Status defaults to *00-Undetermined*. When the status is changed to a different value the Include in Calc, Earned Mark, Grade, and Outcome fields appear as applicable.

When the Create Initial Result Row option is cleared, the Result Status defaults to *05-Manual*.

The delivered translate (SSR_IAM_RSLT_STAT) values are:

00-Undetermined

05-Manual

07-Imported

10-Calculated

20-Awaiting Approval

30-Approved

40-Overridden

50-Final

Submission Date

For assessment items, the due date appears by default, but you can override it as needed. If the submission date is later than the due date and late penalty criteria is defined on the Activity Manager, then the system automatically calculates and inserts a row with a penalty mark.

See [Understanding the Delivered Rules in Activity Management](#)

Include in Calc

The system automatically inserts this field value based on the scenario:

1. When using Create Initial Row, on the initial Undetermined row Include in Calc = *No*.
2. The scale uses the Mark field, on an insert Include in Calc = *Yes*.
3. The scale does not use the Mark field, but the mandatory pass flag = *Yes* then Include in Calc = *Yes*.
4. The scale does not use the Mark field and the mandatory pass flag = *No* then Include in Calc = *No*. No override.
5. When a new result row is entered following steps 2 through 4, the previous row Include in Calc = *No*.

Earned Mark

Enter the student earned mark for this activity. This mark should be in the range of the minimum and maximum mark defined on the Result Scale.

Maximum Mark

This column appears if the Display Maximum Mark is selected on the Student Admin Installation page. The maximum value defined on the Result Scale is displayed.

Grade	Enter the student grade for this activity. This value is populated automatically based on the Earned Mark (result scale mapping), but can be overridden.
Outcome	Enter the student outcome for this activity. This value is populated automatically based on the Earned Mark (result scale mapping), but can be overridden.
Result Notes	Enter any comments applicable to the activity result.
Add New Result Type	This button inserts a new result row for users to enter a new Result Type.
Update Selected Result	This button inserts a new result row for a selected Result Type. Additional setup information is available on the Academic Institution table— tab 9, to control whether the Update Selected button/link is available on the IAM, Result Roster and the Activity Workcenter.

Establishing IAM Common Attributes for Activity Results

Access the Attributes page (click the Attributes link on the Activity Results page).

Image: Attributes page (for Activity Results)

This example illustrates the fields and controls on the Attributes page (for Activity Results). You can find definitions for the fields and controls later on this page.

The screenshot shows the 'Attributes' page for Activity Results. It contains a table with the following data:

Empl ID:	SR0431	Edward Nolan
Academic Activity ID:	ACT00000422	Exam
Activity ID Sequence Number:	1
