1. About this Manual

1.1 Purpose

This manual is to help with integration of Oracle Banking Branch product with FLEXCUBE Universal Banking, Oracle Banking Payments, and Oracle Banking Virtual Account Management.

1.2 Audience

This guide is primarily intended for the following user/user roles:

Role	Function
Implementation and IT Staff	Implementation and maintenance of the software

1.3 List of Chapters

Following is the list of chapters in this document:

Role	Function
Chapter 1	Provides information on the intended audience. It also lists the various chapters covered in this manual.
Chapter 2	This chapter helps you to integrate Oracle Banking Branch product with FLEXCUBE Universal Banking.
Chapter 3	This chapter helps you to integrate Oracle Banking Branch product with Oracle Banking Payments.
Chapter 4	This chapter helps you to integrate Oracle Banking Branch product with Oracle Banking Virtual Account Management.

2. FLEXCUBE Universal Banking Integration

2.1 Introduction

You can integrate Oracle Banking Branch with FLEXCUBE Universal Banking. This chapter briefs you about the specific steps needed for integration of these two products and specific maintenances.

2.2 Maintenance for FLEXCUBE Universal Banking

Perform the maintenance in the below mentioned screens to complete the Gateway setup in FLEXCUBE Universal Banking for particular source system (OBTLR).

2.2.1 CODSORCE – Upload Source Maintenance

Figure 1: Upload Source Maintenance

The screenshot shows a window titled "Upload Source Maintenance" with a menu bar containing "New", "Copy", "Close", "Unlock", "Print", and "Enter Query". The main area displays the following information:

- Source Code *** OBTLR
- Source Description** external system for teller
- ☐ Base Data From FLEXCUBE
- ☐ System Authorization Required

The bottom status bar contains the following details:

- Maker** DANNY1
- Checker** DANNY1
- Date Time:** 2020-03-26 07:42:07
- Mod No** 1
- Record Status** Open
- Authorization Status** Authorized
- Exit** button

2.2.2 CODUPLDM – Upload Source Preferences Maintenance

The Upload Source Preference Maintenance is available for the CA, CI, CL, IC, ST, and IA modules.

2.2.3 GWDETSYS – External System Maintenance.

Figure 4: External System Maintenance

The screenshot shows a web application window titled "External System Maintenance". The window has a menu bar with "New", "Copy", "Close", "Unlock", "Print", and "Enter Query". The main content area is divided into several sections:

- External System**: A red asterisk indicates a required field. The "External System" field contains "OBTLR" and the "Description" field contains "EXTSYS".
- Correlation Pattern**: A "Request" dropdown menu is set to "Message ID".
- Message Exchange Pattern**: This section is currently empty.
- External System Queues**: A table with two columns: "In Queue" and "Response Queue". The table has one row with "MDB_QUEUE" in the "In Queue" column and "MDB_QUEUE_RESPOI" in the "Response Queue" column. Both cells have a checkmark in the first column.

At the bottom of the window, there is a "FTP Parameters" section with a "Fields" tab. The fields are:

Maker: DANNY1	Date Time: 2020-03-26 07:34:33	Mod No: 1	Record Status: Open
Checker: DANNY1	Date Time: 2020-03-26 07:34:34	Authorization: Authorized	

An "Exit" button is located in the bottom right corner.

2.3 Maintenance for Oracle Banking Branch

2.3.1 Using Oracle Banking Routing Hub

Oracle Banking Routing Hub enables seamless and standardized integrations between FSGBU Banking Product using configurations provided as part of the product Infrastructure.

Figure 6: Oracle Banking Routing Hub

2.3.1.1 Configurations in Oracle Banking Branch

This section describes the specific configurations needed for Oracle Banking Branch to integrate with Oracle FLEXCUBE using Oracle Banking Routing Hub.

Update the following values:

BRANCHCOMMON.SRV_TM_BC_FUNCTION_INDICATOR set IS_ROUTING_ENABLED = Y for the function codes that are routed via Oracle Banking Routing Hub.

Check if BRANCHCOMMON.SRV_TM_BC_FUNCTION_INDICATOR_ROUTE_DTLS has an entry for the screen's function code.

2.3.1.2 Configurations in Oracle Banking Routing Hub

You can maintain routing configuration of Oracle Banking Routing Hub in common core for OBORN teller transitions to create, update, query or delete host system. A host system can be UBS, OBPM etc.

To process this screen, type **Service Consumer** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**, and select **Service Consumers**.

→ The **Service Consumers** screen is displayed.

Figure 7: Service Consumers

2. Click **Import**.
3. Upload the **OBREMO_TELLER_Consumer.json** file provided in the release (Folder path: \OBBRN_ROUTING_CONFIGURATION), and click **Extract**.

Figure 8: Extract JSON File

4. Select all the extracted service providers and import.

Figure 9: Service Provider Selection

NOTE: A sample screen after Import operation is shown in [Figure 10](#).

Figure 10: Imported Service Consumers

5. Click **OBREMO_TELLER**.

Figure 11: OBREMO_TELLER

6. Click on the individual service provider, and select **Edit**.

Figure 12: Edit Service Provider

7. Specify the **Host** and **Port** as per the host system (UBS/OBPM) installation, and click **Save**.

Figure 13: Edit Implementation

8. Perform the steps 1 thru 7 again for all the listed service providers.

NOTE: The list of consumer services shown in the [Figure 14](#) thru [Figure 19](#) will be imported.

2.3.2 Direct Access

This section describes the specific configurations needed for Oracle Banking Branch to integrate with Oracle FLEXCUBE.

NOTE: The Direct Access feature will be discontinued in the future.

2.3.2.1 Server IP and Port Details

In the SRV_TM_AD_EXT_SYS_DEST_DTLS table, you need to update the server IP and port in column HOST_SERVER for Oracle FLEXCUBE services.

2.3.2.2 Oracle FLEXCUBE Services

The following API services will be called from Oracle Banking Branch during transaction processing and handoff to Oracle FLEXCUBE.

DESTINATION	URL VALUE

2.4 Maintenance for Customer and Account replication

2.4.1 FLEXCUBE Universal Banking to Platocore Replication Service

FLEXCUBE Universal Banking as a Host system that replicates the data to Plato Core. Core entities such as customer and account information will be replicated for mid-office products to work with. The following operations are provided for Customer and Account:

- Create
- Modify
- Open
- Re-open

2.4.1.1 SERVICE-CONSUMER Platocore

The SERVICE-CONSUMER for Customer and Account are described in this sub-section.

Login Screen:

Perform the following steps:

1. Open the URL of the application.

Figure 20: Login Screen

The image shows a login screen for Oracle. It has a dark blue background with the Oracle logo at the top left. Below the logo, the text "Sign In" is displayed. There are two input fields: "User Name *" and "Password *". Below these fields is a green "Sign In" button and a "Cancel" link.

2. Specify the **User Name** and **Password**, and log in to the application.

NOTE: The Service Producers and Consumers are added for Both Customer and Account.

2.4.1.2 Service Consumer

Service Consumer is an Oracle product which will invoke Oracle Banking Routing Hub API. Oracle Banking Routing Hub will analyze, evaluate destination product processor, and transform data into format of the same. It comprises of the source and destination integration details.

To process this screen, type **Service Consumer** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**, and select **Service Consumers**.

→ The **Service Consumers** screen is displayed.

Figure 21: Service Consumers

2.4.1.2.1 Add Service Consumers

User can add a service producers and consumers for Customer and Account. To add a service consumer, perform the following steps:

1. In the **Service Consumers** screen, click **Add** to create a new Oracle Banking Routing Hub template.

Figure 22: Add Service Consumer

- Specify the necessary details, and click **Save** to create template.

Figure 23: Add Service Consumer – Save

- Click **CMC_PLATO**, and select **Import** to import the necessary file.

Figure 24: Import Service Provider

- Click **Import**, and select the json file.

Figure 25: JSON File Selection

- Click **Import** button.

2.4.2 IFDEXSER – PLATOCORE System Maintenance

Open IFDEXSER screen, and maintain the data for system PLATOCORE. Based on the data created in FLEXCUBE Universal Banking, the quartz scheduler will invoke the Oracle Banking Routing Hub service by using the below details:

3. Oracle Banking Payments Integration

3.1 Introduction

You can integrate Oracle Banking Payments product with Oracle Banking Branch. This chapter briefs you about the specific steps needed for integration of these two products and specific maintenances.

3.2 Maintenance for Oracle Banking Branch

3.2.1 Using Oracle Banking Routing Hub

For information on maintenances using Oracle Banking Routing Hub, refer to section [2.3.1 Using Oracle Banking Routing Hub](#) in this guide.

3.2.2 Direct Access

This section describes the specific configurations needed for Oracle Banking Branch to integrate with Oracle Banking Payments.

NOTE: The Direct Access feature will be discontinued in the future.

3.2.2.1 Server IP and Port Details

In the SRV_TM_AD_EXT_SYS_DEST_DTLS table, you need to update the server IP and port in column HOST_SERVER and GL in column BRIDGE_GL for Oracle Banking Payments services.

3.2.2.2 Oracle Banking Payments Services

Following API service will be called from Oracle Banking Branch during transaction processing and handoff to Oracle Banking Payments.

3.2.2.2.1 Clearing Network

This service is used to fetch Clearing Network Code from Oracle Banking Payments for Outward Clearing transaction. Bridge GL is not applicable. The URL is as follows:

OBPAY_CLG_NETWORK_URL [PMReST/obpmrest/payments/ClearingNetworkQuery]

3.2.2.2.2 Clearing Routing Number

This service is used to fetch the Routing number from Oracle Banking Payments for Outward Clearing transaction. Bridge GL is not applicable. The URL is as follows:

OBPAY_CLG_ROUTINGNUM_URL [PMReST/obpmrest/payments/ClearingRoutingNoQuery]

3.2.2.2.3 Inward Clearing

This service is used to handoff Inward Clearing transaction request to Oracle Banking Payments. The URL is as follows:

OBPAY_INWRDCLG_URL [PMReST/obpmrest/payments/inclg]

3.2.2.2.4 Inward Clearing Return

This service is used to handoff return of Inward Clearing transaction request to Oracle Banking Payments. The URL is as follows:

OBPAY_INWRDCLG_RETURN_URL [PMReST/obpmrest/payments/inclgreturn]

3.2.2.2.5 Duplication

This service is used to issue the duplicate instruments from Oracle Banking Payments. The URL is as follows:

OBPAY_DUPLICATION_URL [PMReST/obpmrest/payments/instrumentduplicate]

3.2.2.2.6 Instrument Enquiry

This service is used to enquire the instrument transactions from Oracle Banking Payments. The URL is as follows:

OBPAY_INSTENQUIRY_URL [PMReST/obpmrest/payments/instrumentinquiry]

3.2.2.2.7 Instrument Issue

This service is used to handoff Instrument Issue request to Oracle Banking Payments. The URL is as follows:

OBPAY_INSTISSUE_URL [PMReST/obpmrest/payments/instrumentissue]

3.2.2.2.8 Instrument Pay

This service is used to handoff Instrument Payment request to Oracle Banking Payments. The URL is as follows:

OBPAY_INSTPAY_URL [PMReST/obpmrest/payments/instrumentpay]

3.2.2.2.9 Revalidation

This service is used to handoff Instrument Revalidate request to Oracle Banking Payments. The URL is as follows:

OBPAY_REVALIDATION_URL [PMReST/obpmrest/payments/instrumentrevalidation]

3.2.2.2.10 Outward Clearing

This service is used to handoff Outward Clearing transaction request to Oracle Banking Payments. The URL is as follows:

OBPAY_OUTCLG_URL [PMReST/obpmrest/payments/outclg]

3.2.2.2.11 Outward Clearing Return

This service is used to handoff Return of Outward Clearing transaction request to Oracle Banking Payments. The URL is as follows:

OBPAY_OUTCLG_RETURN_URL [PMReST/obpmrest/payments/outclgreturn]

3.2.2.2.12 Single Payout

This service is used to handoff Payment transaction request to Oracle Banking Payments. This single service will be used for Book Transfers, In-House Cheque Deposit, Domestic Transfers, and International Transfers. The URL is as follows:

OBPAY_SINGLE_PAYOUT_URL [PMReST/obpmrest/payments/singlepayout]

3.2.2.2.13 Additional Details

The additional details are as follows:

- **Host Code** tag is optional and will be sent as Null from Oracle Banking Branch for all services.
- **Source Code** tag will be populated as OBTLR from Oracle Banking Branch for all services.
- **Network Code** tag for Single Payout service has to be populated as below:
 - **BOOK** for Account Transfer
 - **BOOK** for In-House Cheque Deposit
 - **SWIFT** for International Transfers
- The details of instrument issue service are as follows:
 - For DD, **instrumentCode** tag is passed as **DEMANDFT** and **instrumentType** tag is passed as **DD**
 - For BC, **instrumentCode** tag is passed as **MNGRCHK** and **instrumentType** tag is passed as **MC**
- The details of instrument pay service are as follows:
 - For DD, **instrumentCode** tag is passed as **DEMANDFT**
 - For BC, **instrumentCode** tag is passed as **MNGRCHK**

3.3 Maintenance for Oracle Banking Payments

This section describes the specific maintenances needed for Oracle Banking Branch to integrate the same with Oracle Banking Payments. Perform the maintenance as follows:

1. Update the **Source Maintenance Detailed** screen as shown in [Figure 27](#).

Figure 27: Source Maintenance Detailed (PMDSORCE)

2. The **Source Network Maintenance** is required to maintain for every network code and source code combination. For example, refer to [Figure 28](#).

Figure 28: Source Network Maintenance (PMDSORNW)

Once the Oracle Banking Branch handing off the transactions to Oracle Banking Payments, and after processing the transactions, the Oracle Banking Payments will push back the notification to Oracle Banking Branch based on the below configurations:

1. For call back configuration on Oracle Banking Payments, perform the maintenance in **External Notification Queue Detailed** screen as shown in [Figure 29](#).

Figure 29: External Notification Queue Detailed (PMDEXTNT)

3. Update the **Queue Connection Profile Maintenance Detailed** screen as shown in [Figure 30](#).

Figure 30: Queue Connection Profile Maintenance Detailed (PMDQPROF)

NOTE: The **Profile ID** mentioned in [Figure 30](#) needs to be maintained as the OBREMO **User ID** for the specific branch. The **Profile ID** will be sent as **User ID** in the request header for the call back from Oracle Banking Payments to OBREMO.

4. Oracle Banking Virtual Account Management Integration

4.1 Introduction

You can integrate Oracle Banking Virtual Account Management product with Oracle Banking Branch. This chapter briefs you about the specific steps needed for integration of these two products and specific maintenances.

4.2 Configurations for Oracle Banking Branch

This section describes the specific configurations needed for Oracle Banking Branch to integrate with Oracle Banking Virtual Account Management.

Update the following value:

BRANCHCOMMON.SRV_TM_BC_PARAM_DTLS set PARAM_VALUE = Y where
PARAM_NAME='VAM_INTEGRATED'

4.2.1 Server IP and Port Details

In the SRV_TM_AD_EXT_SYS_DEST_DTLS table, you need to update the server IP and port in column HOST_SERVER and GL in column BRIDGE_GL for Oracle Banking Virtual Account Management services.

4.2.2 Oracle Banking Payments Services

Following API service will be called from Oracle Banking Branch during transaction processing and handoff to Oracle Banking Virtual Account Management.

DESTINATION	URL VALUE
VAM_ACC_URL	/obvam-transaction-journal-services/service/txns

4.3 Maintenance for OBVAM

This section describes the specific maintenances needed for Oracle Banking Virtual Account Management to integrate the same with Oracle Banking Branch. Perform the following steps:

1. Maintain entry in CMC_TM_EXT_SYSTEM table in common core with valid WSDL URL for FCUBSCoreentitiesService web service exposed by Oracle Banking Virtual Account Management.
2. Create a user for Oracle Banking Branch and assign role for user to perform journal transactions in Oracle Banking Virtual Account Management. Share the user to Oracle Banking Branch.

Navigation Route: Security Management > User > Create User
