# 1. Preface

## 1.1 Introduction

This manual is designed to help you quickly get acquainted with the Core Services module of Oracle Banking Trade finance.

This user manual is a supplement to the Common Core - Core Entities and Services User Manual and contains only specific functionalities and information related to Oracle Core Entities and Services. Hence, this document should be read in conjunction with the Common Core - Core Entities and Services User Manual from the perspective of completeness inflow and understanding.

## 1.2 Audience

This manual is intended for the following User/User Roles:

**Table 1.1: Function and Role**

Role	Function
Bank Office Clerk	Input functions for contracts
Back office managers/officers	Authorization functions
Product Managers	Product definition and authorization
End of day operators	Processing during end of day/ beginning of day
Financial Controller/Product Managers	Generation of reports

## 1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## 1.4 List of Topics

The manual is organized as follows:

**Table 1.2: Topics**

Topics	Description
Core Maintenance	Explains the maintenance of various basic details about your bank

## 1.5 Related Documents

- Procedures User Manual
- Settlements User Manual

- 
- Common Core - Entities and Services

## 2. Core Maintenance

As part of enabling and using the Instruments Inventory Tracking (IV) module of Oracle Trade Finance, there are several maintenances to be performed. These maintenances have been elaborated upon in the sections given below. This topic contains the following sub-topics:

### 1) *Bank Parameters Maintenance*

## 2.1 Bank Parameters Maintenance

This topic describes the systematic instructions to maintain Bank Parameters Maintenance.

#### CONTEXT:

In the **Bank Core Parameters** screen, you maintain basic information about your bank such as its name, head office, account number structure, local currency and so on. The details that you maintain in this screen will be made applicable to all branches of your bank. For instance, the account number structure that you define in this screen will be a common format for customer accounts in all branches of your bank.

#### PREREQUISITE:

Specify **User ID** and **Password**, and login to **Homescreen**.

- From **Homescreen**, specify **STDCRBNK** in the text box, and click next arrow.

STEP RESULT: **Bank Core Parameters Maintenance** screen is displayed.

**Figure 2.1: Bank Core Parameters Maintenance**

- On **Bank Core Parameters Maintenance** screen, specify the fields. For more information on fields,

**Table 2.1: Bank Core Parameters Maintenance**

Field	Description
Branch Code and Branch Description	Specify the field. This field is mandatory.

Field	Description
<b>Bank Code and Bank Name</b>	Specify the bank code maintained in the Bank Core Parameters Maintenance (STDCRBNK) screen.
<b>No of Days to Forget Customer</b>	Specify the field.

## 2.2 Trade Finance Branch Parameters Maintenance

To enable data transfer between Oracle Banking Trade Finance, you need to set certain options at bank parameter level.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On **Home screen**, specify **STDTFBRN** in the text box, and click next arrow.

**STEP RESULT:** **Trade Finance Branch Parameters Maintenance** screen is displayed.

**Figure 2.2: Trade Finance Branch Parameters Maintenance**

- On **Trade Finance Branch Parameters Maintenance** screen, specify the fields.

For more information on fields, refer [Table 2.2: Trade Finance Branch Parameters Maintenance - Field Description](#)

Table 2.2: Trade Finance Branch Parameters Maintenance - Field Description

Field	Description
<b>Branch Code</b>	Specify the branch code maintained in Branch Core Parameter Maintenance screen. <b>Field is Mandatory.</b>
<b>Parent Branch</b>	This is the name of the office or branch, the code of which is input. Enter the name using a maximum of 35 characters, alphanumeric
<b>Customer Identity</b>	Maintain the Customer Identity of the Branch
<b>Branch Name and Description</b>	Specify the Branch name you want to specify.
<b>Preferences</b>	We can maintain the branch preference under this.
<b>Netting Suspense General Ledger</b>	The net amount of the settlement is transferred through the Nostro accounts. For instance, let us take the following two outstanding contracts entered into by bank A; both settling on January 10, 1998: Bought from bank B 1 Million USD in exchange for 35 Million INR Sold to bank B 1/2 million USD in exchange for 18 million INR The above contracts can be settled in either of the two ways given below, on the settlement date: Settle both contracts separately Net the settlements of the two contracts
<b>Internal Swap Customer</b>	specify an internal swap customer for processing internal swaps. The names of all the customers of your bank will be displayed in the option-list provided. This will be a unique customer meant for processing internal swaps.
<b>Back Value Days</b>	If you enable the Back Value Check Required option, you must indicate the number of calendar days up to which back-valued transactions can be allowed. During transaction processing you will be allowed to post back-valued transactions up to the specified date in the past (no check will be done). Further, if the option is checked but you have not maintained the Back Value Days' (maintained as NULL), the system will interpret it to be 'Zero' days allowed (for back valued transactions). The restriction for the maximum period up to which back valued posting can be allowed, will be made on transactions processed in following modules:
<b>Payment Messages</b>	Specify the required Payment Message.
<b>Current Cycle</b>	Specify the Current Cycle
<b>Current Period</b>	Specify the Current Period.
<b>Track Previous Year Profit and Loss Adjustment</b>	Specify the previous year track and loss adjustment.
<b>Alert for special rate on charge/commission</b>	Select the check box to enable the alert on discount or a special rate for charge/commission is applicable.

Field	Description
<b>Back value Check Required</b>	Specify Back Value and required check.
<b>Default Bank Operation Code</b>	Specify the field.
<b>Force Block</b>	Select the check box to enable the force block. The OBTF system resends the ECA request by enabling force block automatically on receiving error response from FCUBS system due to insufficient balance of the account.
<b>Credit Decision</b>	By default the field is set as 'No Credit Decision'.

3. On **Trade Finance Branch Maintenance** screen, click **LCY Message Preference**.

STEP RESULT: **Branch Parameters LCY Message Preferences** screen displays

**Figure 2.3: Branch Parameters LCY Message Preferences**

4. On **Branch Parameters LCY Message Preferences** screen, specify the fields.

**Table 2.3: Branch Parameters LCY Message Preferences - Field Description**

Filed	Description
<b>Branch and Description</b>	Specify Branch Parameter for you wish to define a topic.
<b>Module and Module Description</b>	Specify a Module for which you wish to define a topic.

Filed	Description
<b>Local Currency Message Type</b>	Click the local currency message drop-down list, to select the list of options: <ul style="list-style-type: none"> <li>• Suppress LCY</li> <li>• Generate LCY Message Thru SWIFT</li> <li>• General Local Payments</li> </ul>

## 2.3 ECA Force Block

This screen is used to maintain the limit amount of ECA block request for the source and currency combination.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Home** screen.

1. On Home screen, specify **TFDECAFB** in the text box, and click next arrow.

STEP RESULT: **ECA Force Block** screen is displayed.

**Figure 2.4: ECA Force Block**

2. On **ECA Force Block** screen, specify the fields. For more information on fields, refer [ECA Force Block - Field Description](#)

### ECA Force Block - Field Description

Field	Description
<b>Host Code</b>	This field displays the value of the logged in host by default.
<b>Source</b>	This field lists the valid source code defined for the Host Code.
<b>Limit Currency</b>	This field lists the valid currencies are listed including *.*

Field	Description
<b>Limit Amount</b>	<p>The maximum transaction debit amount, allowed for force block request during ECA id.</p> <p><b>NOTE:</b> Separate Records are to be maintained for each source code and transaction currency. For example, records are maintained for</p> <p>Source code FCUBS and currency USD</p> <p>Source code FCUBS and currency EUR</p> <p>In this case, force block will be applicable only if debit is done to USD / EUR account for an amount less than or equal to the maintained limit for the Source code FCUBS. Force block will not be applied for transactions with other debit currencies and sources.</p>
<b>Customer No</b>	The list of valid customers are displayed along with ALL.

## 2.4 Period Code Maintenance

Banks, like all business houses compute their profits and losses and assess their financial position at the end of each financial year, which typically extends to 12 months -- from January to December or from March to April. However, this could be changed, depending upon the Bank's policies and regulatory requirements. For interim reporting needs, the financial year is further divided into accounting periods, the duration of which is again determined by the bank's accounting requirements. For example, your bank's Board of Directors meets once a month therefore, you would divide the financial cycle into monthly periods. The financial year and the accounting periods are referred to in the Oracle Trade Finance system as the 'Financial Cycle' and the 'Financial Periods' respectively and are maintained at the bank level by your Head Office branch. At the end of each financial period and financial cycle you can generate profit and loss statement and a balance sheet. The system also offers you the flexibility of keeping a financial period/financial cycle open, allowing you to post adjustments to it and obtain a revised profit or loss statement/balance sheet. You can maintain these details in the 'Period Code Maintenance' screen.

This topic contains the following sub-topic

- 1) [Maintain Period Code](#)

### 2.4.1 Maintain Period Code

This topic describes the systematic instruction to Maintain Period Code.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Home screen, specify **STDTFPRC** in the text box, and click next arrow.

**STEP RESULT:** **Trade Finance Period Code Maintenance** screen is displayed.

**Figure 2.5: Trade Finance Period Code Maintenance**

The screenshot shows the 'Trade Finance Period Code Maintenance' window. It features a 'Financial Cycle' section with mandatory fields for 'Financial Cycle \*', 'Start Date \*', and 'End Date \*', all in YYYY-MM-DD format. A 'Description' field is also present. Below this is the 'Period Group' section, which contains a table with columns for 'Period Code \*', 'Start Date', and 'End Date \*'. The bottom of the window has a status bar with fields for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', 'Authorization Status', and an 'Exit' button.

2. On **Trade Finance Period Code Maintenance** screen, specify the fields. For more information on fields, refer [Table 2.4: Trade Finance Period Code Maintenance - Field Description](#)
- The financial cycle of your bank giving the start date and end date of each financial year.
- The period group - financial periods into which each financial cycle is to be divided.

**Table 2.4: Trade Finance Period Code Maintenance - Field Description**

Field	Description
<b>Financial Cycle</b>	For each financial cycle you maintain the following parameters: The field is mandatory.
<b>Description</b>	This describes the financial cycle. Enter description using a maximum of 35 characters, alphanumeric. Taking the above example, you could enter Financial Year - 1996-97.
<b>Start Date</b>	This is the first day of this Financial Cycle The field is mandatory.
<b>End Date</b>	This is the last day of this Financial Cycle The field is mandatory.
<b>Period Code</b>	This code identifies the accounting period. Enter a code using a maximum of 3 characters, alphanumeric. For example, if your period length is a quarter you can enter - Q1 for the first period; Q2 for the second; Q3 for the third and so on. If your period length is a bimonthly you can enter BM1, BM2. If your period length coincides with a month you can input M1, M2. The field is mandatory.
<b>Start Date</b>	This is the first day of the corresponding period.

Field	Description
<b>End Date</b>	<p>This is the last date of the corresponding period. 'End date' of a period should always end on a month end. Please note:</p> <ul style="list-style-type: none"> <li>The period codes could be of varying lengths but no gaps should be left between periods</li> <li>The duration of two periods should not overlap</li> <li>You can modify the period code of the current or a future period; however, a past period cannot be modified even if it has not been closed</li> <li>All details maintained in the '<b>Period Code Screen</b>' will automatically apply to any new branch opened by you in the Branch Parameters Screen</li> <li>The current financial cycle code and the current period code are displayed in the 'Branch Parameters Screen'</li> </ul> <p>The field is mandatory.</p>

## 2.5 Trade Finance Bank Preference Maintenance

This screen is used to capture bank preference specific to Trade Finance.

PREREQUISITE:

Specify **User ID** and **Password**, and login to **Home** screen.

- From **Home** screen, specify **STDTFBNK** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Bank Preference Maintenance** screen is displayed.

**Figure 2.6: Trade Finance Bank Preference Maintenance**

- On **Trade Finance Bank Preference Maintenance** screen, specify the fields. For more information on fields,

Table 2.5: Trade Finance Bank Preference Maintenance

Field	Description
<b>Bank Code</b>	This field displays the bank code.
<b>Bank Name</b>	This field displays the bank name.
<b><u>Head Office Branch</u></b>	Specify the Head Office branch details.
<b>Branch Code</b>	This field displays the Head Office branch code.
<b>Branch Description</b>	This field displays the Head Office branch description.
<b>Support - Islamic Trade Finance</b>	Select this option to indicate support for Islamic Trade Finance. Option will be unchecked by default and the same can be enabled.
<b>Share Revenue with Correspondent Banks</b>	Specify whether revenue has to be shared with the correspondent banks.
<b>Intermediary GL for Revenue Sharing</b>	GL used to pass on the Revenue to the correspondent banks account.
<b>Non-Discrepant Import LC Drawing Advice</b>	This field denotes type (MT752/MT799/Blank) of Non-Discrepant Import LC Drawing Advice.
<b>Maximum Events Display Count</b>	Specify the maximum number of events to be displayed for a contract. Once the specified limit is reached, the system stops displaying additional events.
<b>Release Amount Block</b>	Select this option to indicate support for Release amount block. Option will be unchecked by default and Same can be enabled.
<b>Release ELCM Earmarking</b>	Select this option to indicate support for Release ELCM Earmarking. Option will be unchecked by default and Same can be enabled.
<b>Use Transfer Product</b>	Flag denotes whether child LC has to be created in Transfer type product or in parent product code.
<b><u>MT798 - Bank to Corporate Preferences - Suppress</u></b>	Specify the Bank to Corporate Preferences - Suppress details.
<b>Sender to Receiver Information</b>	This flag denotes whether the Sender to Receiver Information tag needs to be suppressed in MT798 detail and extension messages.
<b>Special Payment Conditions for Bank Only</b>	This flag denotes whether the Special Payment Conditions for Bank Only tag needs to be suppressed in MT798 detail and extension messages.
<b>Instructions to the Paying/Accepting/Negotiating Bank</b>	This flag denotes whether the Instructions to the Paying/Accepting/Negotiating Bank tag needs to be suppressed in MT798 detail and extension messages.
<b>File Identification</b>	This flag denotes whether the File Identification tag needs to be suppressed in MT798 detail and extension messages.

## 2.6 Maintain Mandatory Information

As part of capturing customer related information in Oracle Trade Finance you need to maintain Customer Information Files (CIF records) for each entity who is a customer of your bank. Apart from creating CIF records for each entity you need to maintain certain mandatory information. These details have been discussed in the preceding sections.

This topic contains following sub-topic:

- 1) [Maintain Location Details](#)

### 2.6.1 Maintain Location Details

This topic describes the systematic instructions to maintain location details.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Home** screen.

1. From **Home** screen, specify **STDTFLOC** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Location Maintenance** screen is displayed.

**Figure 2.7: Trade Finance Location Maintenance**

Fields					
Maker	Date Time:	Mod No	Record Status		
Checker	Date Time:		Authorization Status		

2. On **Trade Finance Location Maintenance** screen, specify the fields.

For more information on fields, refer to [Table 2.6: Trade Finance Location Maintenance - Field Description](#)

**Table 2.6: Trade Finance Location Maintenance - Field Description**

Field	Description
<b>Location</b>	<p>Specify the fields. This field is mandatory. You can capture a unique three-character code to identify the locality where the customer resides.</p> <p><b>NOTE:</b> While maintaining customer information details and associating a location code with a Customer and Country Code combination, a list of all the valid location codes you have maintained in this screen will be available in the option list for the Location Code field. You can select the appropriate code.</p> <p>The field is populated only when a new customer is created. It is a mandatory field and is amendable at trade finance customer.</p>
<b>Description</b>	<p>You can also associate a brief description with the location code. This description is for information purposes only and will not be printed on any customer correspondence.</p> <p><b>NOTE:</b> While maintaining the Customer Short Name in the 'CIF Details' screen the system automatically appends the Location code to the customer short name when you associate the appropriate Location Code with the Customer Code.</p>

## 2.7 Maintain Customer Information Files

In the Customer Maintenance screen, you maintain various personal and business details of the customers of your bank. The CIF details are maintained at the branch level by the sign-on branch. These details can be accessed by all branches and therefore a duplicate customer record for a customer in two different branches need not be maintained.

This topic contains following sub-topic:

- 1) [Process Trade Finance Customer Maintenance Screen](#)

### 2.7.1 Process Trade Finance Customer Maintenance Screen

This topic describes the systematic instructions to process Maintenance screen.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On **Home screen**, specify **STDTCIF** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Customer Maintenance** screen displays.

2. On Trade Finance Customer Maintenance screen, specify the fields.
- For more information on fields, refer to [Table 2.7: Trade Finance Customer Maintenance - Field Description](#)

**Table 2.7: Trade Finance Customer Maintenance - Field Description**

Field	Description
<b>Customer No</b>	Specify a customer code for the customer. The customer code is assigned to identify a customer. It is also referred to as the customer CIF Number. This code should be unique across branches. It can be 9-characters long For example, Assign a code using a maximum of 9 characters, alphanumeric. For example, assume your customer is DOW Corporation, US. You can assign him a code, which could either, be a number representing the customer's serial number or an alphabetic code like DowCorp or an alphanumeric code like Dow1000US or DowUS1000 / 1000DowUS, if he is the 1000th customer to approach your bank. The field is mandatory.
<b>Customer Name</b>	Indicates the name of the Customer.
<b>Customer Category</b>	Specify the Customer Category. The field is mandatory.
<b>Email Address</b>	Specify the email address of the customer.
<b>Eligible for AR-AP Tracking</b>	Click the check box, as per requirement.
<b>Customer Dispatch</b>	Customer Dispatch at Trade finance customer maintenance screen can be enabled for those customers, who can dispatch the documents directly to the importer's bank.
<b>Trade Finance Portal</b>	Checkbox can be checked if customer is subscribed to OBDX, OBTF.
<b>Joint Venture</b>	Select the check box if you have a joint venture.
<b>Tax Group</b>	To Indicate the tax group of the customer for whom you wish to define tax free allowance limit. Select from the option list provided.
<b>Location</b>	Specify the customer location. The field is mandatory.
<b>Charge Group</b>	To Indicate valid charge group of the customer. The adjoining option list displays all valid charge groups maintained in the system.
<b>Sanction Check Required at Transaction Level</b>	Specify the field.
<b>Trade Collateral Margin</b>	Indicate the trade collateral margin.
<b>Revenue Sharing Percentage</b>	Percentage of Revenue that has to be shared with correspondent banks.
<b>Joint Venture Tab</b>	Through this screen, you can maintain the joint venture details.
<b>Change Log Tab</b>	This button invokes the Change Log screen where you can capture the audit history details for the operations performed on that customer and the account

On co-deployment,

- CUST\_DATA\_RETRIEVAL has been introduced in trade finance job browser screen to add/modified customer data from customer maintenance screen to trade finance customer maintenance screen.
- The fields, change group, tax group are amendable at trade finance customer and not populated from customer maintenance as these fields have specific trade finance customer data.
- The field location is populated only when a new customer is created as it is a mandatory field and is amendable at trade finance customer.

## 2.7.2 Joint Venture

You can maintain the joint venture details for a customer on 'Joint Venture Details' screen.

3. On **Trade Finance Customer Maintenance** screen, click **Joint Venture** button.

STEP RESULT: **Joint Venture Details** screen displays.

**Figure 2.9: Joint Venture Details**

4. On **Joint Venture Details** screen, specify the fields.  
For more information on fields, refer to [Table 2.8: Joint Venture Details - Field Description](#)

**Table 2.8: Joint Venture Details - Field Description**

Field	Description
<b>Party ID</b>	Specify the party ID.
<b>Party Name</b>	The system displays the party name.
<b>Ratio</b>	Specify the ratio between the participants on share.

## 2.8 Customer Accounts

You can define customer accounts for all the customers of your bank through the Customer Accounts Maintenance screen. Each account that you define is identified with an account number. The structure of the account number is

based on the Account Mask you have maintained through the Account Parameters sub-screen of the Bank-wide Parameters screen. The Account Number can be combination of the CIF Number, the Account Class, Currency, and any other alphabet/s or number/s of the account or currency as defined. For an account number, you also need to define (in this screen) other parameters like: the account class; the type of account - joint or single; the reporting lines for the account; the currency in which transactions can be passed to this account; the customer's account limit; the check book/passbook/ATM facility, the various statuses applicable to the account and so on. Every account created or modified in Trade Finance needs to be authorized to become effective. Whenever a new customer account is created or an existing record is modified, the system generates a notification message on the record authorization. This notification message can be sent to any external system if required.

This topic contains the following sub-topic:

1) [Maintain Address Code](#)

## 2.8.1 Maintain Address Code

This topic describes the systematic instructions to Maintain Address Code.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On **Homescreen**, specify **STDTFADM** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Address Code Maintenance** screen is displayed.

**Figure 2.10: Trade Finance Address Code Maintenance**

- On **Trade Finance Address Code Maintenance** screen, specify the fields.  
For more information on fields, refer to [Table 2.9: Trade Finance Address Code Maintenance](#)

**Table 2.9: Trade Finance Address Code Maintenance**

Field	Description
<b>Address Code</b>	Specify the address code from the adjoining option list. Field is Mandatory.

Field	Description
<b>Address Line 1 - 4</b>	Specify the mailing address of the customer.
<b>Pin-code</b>	Specify pin code of the mailing address specified.
<b>Country</b>	Specify the country as given in the address of correspondence of the customer. You can select the appropriate country from the adjoining option list.

## 2.9 Maintain Parameters for Integrated Liquidity Management

This topic contains the following sub-topic:

### 1) [Maintain Customer Spreads](#)

#### 2.9.1 Maintain Customer Spreads

This topic describes the systematic instructions to maintain customer spreads.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On Homescreen, specify **CYDTFCSP** in the text box, and click next arrow.

STEP RESULT: **Trade Customer Currency Spread Maintenance** screen is displayed.

**Figure 2.11: Trade Customer Currency Spread Maintenance**

- On **Trade Customer Currency Spread Maintenance** screen, specify the fields. In this screen, for a customer and currency pair, you can maintain buy and sell spreads for different tenors. You need to maintain customer spreads in each branch. Transactions initiated in a branch will pick up the spread(s) maintained for that branch.

**NOTE:** Funds Transfer, Loans and Deposit contracts have tenor = 0 (zero). Therefore, you need to maintain Customer Spreads for zero tenor also.

The tenor is specified in days

**Table 2.10: Trade Customer Currency Spread Maintenance - Field Description**

Field	Description
<b>Branch Code</b>	Specify the field
<b>Currency Code 1, 2</b>	Specify the field. The field is mandatory
<b>Spread Definition</b>	Specify the field.
<b>Specify Spread Details</b>	<p>When processing an FX deal involving a customer (for whom you have maintained spread details), the system picks up the customer spread corresponding to the tenor of the deal and builds it into the exchange rate. If spread details are unavailable for a specific tenor, the system picks up the spread defined for the nearest lower tenor. For example, assume for a customer and currency pair you maintain spread details for the following tenors: '3', '5', and '10' days. When processing a deal with a tenor of '4' days (involving the customer and the currency pair), the system picks up the spread details defined for a tenor of three days. This is because spread details for a '4' day tenor is unavailable for the customer and currency pair.</p> <p><b>NOTE:</b> You can also maintain customer spreads for the wildcard entry – ALL. If spread details for a specific counterparty (for the currency pair) are unavailable, the System looks for the customer spread maintained for the wildcard ALL entry. If even that is not available, then the customer spread defaults to zero.</p>

Field	Description
<b>Computing Buy and Sell Spreads</b>	<p>Using percentage system -- suppose the bank wants to make a profit of 5% over and above the mid rate quoted. Suppose the dealing currencies are USD and AUD. 1USD = 1.4166 AUD for Standard rate type. (Mid rate being 1.4166). Now to arrive at the spread the bank will use the following formula:</p> $\text{Spread} = 5 / 100 \times \text{Mid rate (1.4166)} = 0.07083$ <p>Using the points system -- suppose the point quoted by the bank is 708.3. The points multiplier in this case would be 0.0001 (depends on the decimal points that the mid rate extends to. Usually it is 4 decimal places).</p> $\text{Spread} = \text{Points (708.3)} \times \text{Points Multiplier (0.0001)}$ <p>Now coming to the buy and sale rate computing, there are two ways of computing the buy and sale rates -- Direct and Indirect. Depending upon the quotation method you have specified in the Currency pair screen, the system computes the spreads.</p> <p>In the Direct method, the buy and sell rates are calculated as follows:</p> $\text{Buy Rate} = \text{Mid-Rate} - \text{Buy Spread}$ $\text{Sell Rate} = \text{Mid-Rate} + \text{Sell Spread}$ <p>For cross currency contracts, the rate for the currency pair is:</p> $1 \text{ unit of Ccy 1} = \text{Rate} \times 1 \text{ unit of Ccy 2}$ <p>In the Indirect method, the buy and sell rates are calculated as follows:</p> $\text{Buy Rate} = \text{Mid-Rate} + \text{Buy Spread}$ $\text{Sell Rate} = \text{Mid-Rate} - \text{Sell Spread}$ <p>For cross currency contracts, the rate for the currency pair is:</p> $1 \text{ unit of Ccy 2} = \text{Rate} \times 1 \text{ unit of Ccy 1}$ <p>The method of spread definition – percentage or points – that you have maintained for the currency pair is displayed on this screen.</p>

## 2.10 Customer Spread Maintenance

This topic describes the systematic instructions to maintain customer spread.

### CONTEXT:

For each customer of your bank you can define buy and sell margins for a specific currency. This spread is applied to floating interest components that involve the customer and currency combination. The margin that you define will be appropriately picked up and applied to arrive at the final rate that is applied to floating components of contracts that involve the customer - currency combination. The buy and sell margins that you define are for a customer and currency combination. You can select the customer and currency combination from the option lists available. For the selected currency – customer combination, you can define amount slabs and specify a Borrow and Lend margin for each slab. To add a slab to the list click add icon and enter the slab details. To remove a slab from the list, highlight it and click delete icon. Whenever you enter a contract in Oracle Trade Finance that involves the customer and currency combination, the appropriate spread is applied to arrive at the floating rate to be charged. The slab is

selected based on the contract amount and depending on the nature of the contract, the Borrow or Lend spread is applied.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On **Homescreen**, specify **CFDTFCSM** in the text box, and click next arrow.

STEP RESULT: **Customer Spread Maintenance** screen is displayed.

**Figure 2.12: Customer Spread Maintenance**

2. On **Customer Spread Maintenance** screen, specify the fields.

For more information on fields, refer to [2.10 Customer Spread Maintenance](#)

**Table 2.11: Customer Spread Maintenance**

Field	Description
<b>Customer</b>	Specify the fields. The field is mandatory.
<b>Currency</b>	Specify the fields. The field is mandatory.

## 2.11 Trade Finance Other Party Details

This topic describes the systematic instructions to maintain other party details.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On **Homescreen**, specify **TFDOPMNT** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Other Party Maintenance** screen is displays.

2. On **Trade Finance Other Party Maintenance** screen, specify the fields.

For more information on fields, refer [Table 2.12: Trade Finance Other Party Maintenance](#)

**Table 2.12: Trade Finance Other Party Maintenance**

Field	Description
<b>Other Party ID</b>	The system generates and displays a unique identification code for the other party. This auto-generated ID is a seven digit serial number prefixed by the alphabets 'OP'.
<b>Customer ID</b>	Select a customer ID from the option list. The option list displays all valid Customer IDs that are not attached to any existing record.
<b>Party Name</b>	If you have selected the customer ID, then based on that the system displays the name of the other party. You cannot edit the name displayed by the system. If you have not specified a customer ID, then you can manually enter the name of the party. The field is Mandatory.
<b>Country</b>	Specify the country of the other party. The option list displays all valid country codes maintained in the system. Choose the appropriate one. The field is Mandatory.
<b>Currency</b>	The system displays the currency code of the local branch. However, you can edit this currency and specify a different currency code.
<b>Overall Limit Amount</b>	Specify the maximum exposure amount for the selected party across all the counter parties. The overall limit amount should always be a positive value. Negative values are not allowed.

Field	Description
<b>Available Amount</b>	<p>The system displays the available amount. This amount is revised if a utilization of the other party overall limits happens during the contract booking, amendment, finance or col lateralization batch. This is applicable when the option 'Other Party Limit Check' is checked. Here, Available amount = Overall limit amount - Utilization amount</p> <p><b>NOTE:</b> If the overall limit amount is amended and if the available limit amount becomes negative due to that amendment, then the system will display an override.</p> <p>Modification of other party limit is not allowed, if the contract is pending for authorization.</p>
<b>Collateral CAP on Bill Amount</b>	<p>Specify the maximum amount in a bill which can be considered for collateral. If the bill amount less margin is greater than the Cap amount, then Collateral cap amount will be considered as Collateral value and override 'Collateral value reduced to Collateral cap amount' will occurs on save.</p>
<b>Address 1</b>	<p>Specify the address of the party. The field is Mandatory.</p>
<b>Address 2</b>	Specify the address of the party.
<b>Address 3</b>	Specify the address of the party.
<b>Address 4</b>	<p>Specify the address of the party.</p> <p><b>NOTE:</b> If the Other party is a customer of bank, then the address maintained at customer level will be defaulted as other party address.</p>
<b>Branch Code</b>	<p>The system displays the branch code of the branch to which you are currently logged in. You cannot change this.</p>
<b>Number of Protests or Dishonours</b>	<p>The system displays the number of protests and dishonors. Whenever a contract is dishonored or protested, the system will increase the count by one against the other party in that contract and display the total value in this field. If a contract is dishonored once and then protested at a later stage, then the system will count the dishonor event only. There will not be any change in the number of protests/dishonors during the protest event.</p>

Field	Description
<b>Defaulter</b>	<p>If the number of protests or dishonors by the party is more than or equal to the number of protest or dishonors for default maintained in 'Branch Parameters Maintenance' screen, then the system displays the status of the box as checked. Otherwise, the status is displayed as unchecked. You can modify this (check/Uncheck) if required. If the status is checked, which indicates that the party is a defaulter and you manually Uncheck this box, then the system will reset the number of protests or dishonor in 'Other Party Maintenance' to zero.</p> <p><b>NOTE:</b> This check box cannot be checked during new operation. If you try to check this option for a new operation, then when you try to save the record, the system will display the error message 'Defaulter flag cannot be checked in case of new other party'.</p> <p>The system checks this box automatically when the maximum count of dishonour and protest is reached.</p> <p>You can manually uncheck this box. If the other party is a defaulter, then when you book a bill with finance/collateral, the system will display the error message 'Other Party is a Defaulter'.</p>
<b>Remarks</b>	<p>Specify your remarks on the transaction</p> <p>Click 'Fields' button to capture the user defined fields.</p> <p>Once you have specified the above details, click 'Save' button to save the maintenance</p>

## 2.12 Third Party Maintenance

This topic describes the systematic instruction to maintain Third Party Maintenance.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **TFDTPMNT** in the text box, and click next arrow.

**STEP RESULT:** **Third party Maintenance** screen is displayed.

## 2.12.1 UI Error Codes

Table 2.15: Error Code and Messages

Function ID	Error Condition	Message
TF-INCLOSE	Third party should not close if that third party id used in any existing contract which is not closed.	The \$3 \$1 is already being used in \$2. So cannot be closed
TF-TPM01	If the third party name is user for other third party	Third Party Name \$1 is already in use
TF-TPM02	Modification of Third Party is not allowed, If contract on this party are pending authorization	Modification of Third Party is not allowed as one or more contract on this party are pending authorization

## 2.13 Define MIS Heads

Each accounting entry that is generated can be linked to an MIS Head. An MIS Head indicates the manner in which the type of entry should be considered for profitability reporting purposes.

This chapter contains the following sub-topic:

- 1) [Trade Finance MIS Head Maintenance](#)

### 2.13.1 Trade Finance MIS Head Maintenance

This topic describes the systematic instructions to maintain Head maintenance.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **MIDTFHED** in the text box, and click next arrow.

STEP RESULT: **Trade Finance MIS Head Maintenance screen** is displayed.

**Figure 2.15: Trade Finance MIS Head Maintenance**

2. On **Trade Finance MIS Head Maintenance** screen, specify the fields. If you are calling an MIS Head that has already been defined, double-click an MIS Head from the summary screen.

For more information on fields, refer to [2.10 Customer Spread Maintenance](#)

**Table 2.16: Trade Finance MIS Head Maintenance**

Field	Description
<b>Head</b>	Specify the fields. The field is mandatory.
<b>Description</b>	Specify the description.

Field	Description
<b>Category</b>	<p>The field is Mandatory.</p> <p>The MIS Head Category classification indicates the method in which the accounting entry will be reported in the profitability report. It could be one of the following:</p> <ul style="list-style-type: none"> <li>• Balance</li> <li>• Income</li> <li>• Expense</li> <li>• Contingent</li> </ul> <p><b>Balance</b> Indicates that the accounting entry should be considered for calculating the Cumulative Average Balance. Typically, an asset entry would be classified under the balance type MIS Head. The GL entry leg of a loan disbursement transaction, would typically be classified under a Balance type of MIS Head.</p> <p><b>Income</b> Indicates that the accounting entry should be considered as an income for the purpose of profitability reporting. Clearly, any interest or charge income would be classified under an Income type of MIS Head.</p> <p><b>Expense</b> Indicates that the accounting entry should be considered as an expense for the purpose of profitability reporting. Any interest, or tax expense would be classified under an expense type of MIS Head.</p> <p><b>Contingent</b> Indicates that the accounting entry should be considered as a contingent entry for the purpose of profitability reporting. The issue of an import Letter of Credit, etc., are examples of contingent type of entries. You can generate a report that gives the balances due to such contingent type of entries. Under each type of MIS Head, you may define additional MIS Heads, as per your reporting requirement. For example, you can have an MIS Head for each loan product, so that you can have the cumulative average balance due to all the loans disbursed under the product.</p>
<b>Refinance</b>	<p>The 'Refinance' option is provided for marking MIS Heads for refinancing. For MIS Heads that are marked for refinancing, the refinancing income or expense would be calculated, on the cumulative average balance, for the reporting period. You would typically mark a balance type of MIS Head for refinancing. This option is provided because not all the balance type of entries would come under the umbrella of refinancing. To enable this option select the check box beside 'Refinance'.</p>

## 2.14 Trade Finance MIS Code Restriction Maintenance

You can maintain Trade Finance MIS Code restriction maintenance for MIS Class, Product or Account Class, and Branch. This section contains the following topic:

- 1) [Maintain Allowed List of MIS Codes](#)

### 2.14.1 Maintain Allowed List of MIS Codes

This topic describes the systematic instructions to maintain allowed list of MIS Codes.

#### CONTEXT:

You can maintain a list of allowed MIS codes for a given MIS class, product or account class combination for a branch in the 'MIS Code Allowed For MIS Class and Product/Account Class' screen. The MIS call forms would pick only the MIS codes that are allowed for the product or account class and MIS class combination.

#### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **MIDTFPRD** in the text box, and click next arrow.

STEP RESULT: **Trade Finance MIS Code Restriction Maintenance** screen is displayed.

**Figure 2.16: Trade Finance MIS Code Restriction Maintenance**

2. On **Trade Finance MIS Code Restriction Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.17: Trade Finance MIS Code Restriction Maintenance](#) (p. 32)

**Table 2.17: Trade Finance MIS Code Restriction Maintenance**

Field	Description
<b>Branch Code</b>	Specify the branch code. Alternatively, you can select the branch code from the option list. The list displays all the branch code for which the MIS code restrictions are maintained. The field is Mandatory.

Field	Description
<b>Branch Name</b>	The system displays the name of the branch maintained in the system.
<b>MIS Class</b>	Specify the MIS class for which the allowed list of MIS codes are maintained. Alternatively, you can select the class code from the option list. The list displays all the MIS classes maintained in the system. The customer MIS classes are not part of the list. The field is Mandatory.
<b>MIS Class Description</b>	The system displays the MIS class description maintained in the system.
<b>Product Code</b>	Specify the product code or account class code for which the allowed lists are maintained. Alternatively, you can select the code from the option list. The list displays all the products or account class code maintained in the system. The field is Mandatory.
<b>Product Description</b>	The system displays the product or account class description respectively maintained in the system.
<b>MIS Code</b>	Specify the MIS code maintained. Alternatively, you can select the MIS code from the option list. The list displays all the MIS codes maintained in the system.
<b>MIS Code Description</b>	The system displays the MIS code description maintained in the system.
<b>Allowed</b>	Check this box to allow the MIS code for a given MIS class, product or account class combination for a branch.  <b>NOTE:</b> The MIS call forms attached to a transaction input or an account creation screen populates the MIS codes that are allowed for a given MIS class, product or account class combination for a branch. If you do not perform maintenance for a given branch, account class/product code and MIS class combination, then all MIS Classes linked to the account class/product code will be available.

## 2.15 Trade Finance Product Group Maintenance

This topic describes the systematic instruction to maintain product groups.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **STDTFPRG** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Product Group Maintenance** screen is displayed.

**Figure 2.17: Trade Finance Product Group Maintenance**

- On **Trade Finance Product Group Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.18: Trade Finance Product Group Maintenance](#) (p. 34)

**Table 2.18: Trade Finance Product Group Maintenance**

Field	Description
<b>Group ID</b>	Specify a group ID for the product group that you are defining The field is Mandatory.
<b>Description</b>	Enter a brief description of the product group that you are defining

## 2.16 Maintain Transaction Limits

This topic describes the systematic instructions to maintain transaction limits.

Every time a transaction entered in Oracle Trade Finance exceeds a certain limit in a specified currency, an override is automatically generated. This feature is referred to as the Currency-wise Transaction Limits facility. Only a user with dual authorization rights (a user other than the one who authorized the transaction which led to this override) will be allowed to authorize the override.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Home** screen.

- On **Homescreen**, specify **CSDTFPLM** in the text box, and click next arrow.

**STEP RESULT:** **Trade Finance Product Transaction Limit Maintenance** screen is displayed.

**Figure 2.18: Trade Finance Product Transaction Limit Maintenance**

The screenshot shows the 'Trade Finance Product Transaction Limits Maintenance' window. It includes input fields for Module Identification, Source Code, Module Description, Transaction Limit Currency, Product Code, Customer Type, and Product Description. There are also checkboxes for Role Based Authorization and Follow Sequence. Below these are two tables: 'Product Transaction Limit Details' and 'Authorization Role Mapping'. The bottom section contains fields for Maker, Checker, Date Time, Mod No, Record Status, and Authorization Status, along with an 'Exit' button.

2. On **Trade Finance Product Transaction Limit Maintenance** screen, specify the fields.  
For more information on fields, refer to [Table 2.19: Trade Finance Product Transaction Limit Maintenance - Field Description](#)

**Table 2.19: Trade Finance Product Transaction Limit Maintenance - Field Description**

Field	Description
<b>Module and Product</b>	<p>Every module in Oracle Trade Finance is identified by a code. First, you have to identify the module for which the currency-wise transaction limit is to be maintained. A list of all the modules of Oracle Trade Finance operational at your bank will be displayed in the available list. Choose the appropriate module code. The description associated with the module will be defaulted in the adjacent field. Each module contains a number of products within it. After you identify the module, indicate the product within the module for which you would like to maintain a currency-wise transactional limit.</p> <p><b>NOTE:</b> Since, we do not define products for Journal Entry transactions, if you are maintaining currency-wise transaction limits for the Journal Entry transactions, your entries in the respective fields should be as follows.</p>

Field	Description
<b>Transaction Amount Limit and the Limit Currency</b>	The transaction limit currency is the currency for which you would like to maintain the amount limit. Every time you process a transaction in the specified Module-Product Code-Currency combination, the system checks whether the transaction exceeds the defined amount limit. If a transaction exceeds the amount limit, the system displays an override message while saving the transaction. Since overrides and transactions are authorized separately, authorization has to be handled by a user with dual authorization rights.
<b>Module Identification</b>	Specify the fields. The field is Mandatory.
<b>Product Code and Description</b>	Specify the Product Code and description.
<b>Source Code</b>	Specify the source code.
<b>Transaction Limit Currency</b>	Specify the Transaction Limit Currency.
<b>Customer Type</b>	Select the Customer Type.
<b>Customer Group</b>	Select the Customer Group from the drop-down list.

## 2.17 User limit Maintenance

This topic describes the systematic instructions to maintain user limits.

User limit maintenance is used to set the User level limits for authorization.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Home** screen.

1. On **Homescreen**, specify **STDTFULM** in the text box, and click next arrow.

STEP RESULT: **Trade Finance User limit Maintenance** screen is displayed.

**Figure 2.19: Trade Finance User limit Maintenance**

2. On **Trade Finance User limit Maintenance** screen, specify the fields.

For more information on fields, refer to [Table 2.20: Trade Finance User limit Maintenance - Field Description](#)

**Table 2.20: Trade Finance User limit Maintenance - Field Description**

Field	Description
<b>User Id</b>	Select the user id to whom you are going to set the authorization limit.
<b>User Name</b>	Based on user id input value, user name will get populated.
<b>User Limit</b>	Flag value is 'Y' then the user limit validation will be done at the time of authorization else it wont do any validations.
<b>Module</b>	Select the module to which module you want to set the authorization limit.
<b>Limit Currency</b>	Specify the Transaction Limit Currency.
<b>Authorization limit</b>	Specify the Authorization limit.

## 2.18 Sequence Generation

Every contract in OBTF is identified by a unique Contract Reference Number that is generated internally by the system. User is not allowed to modify this number. In addition, a contract is also identified by a unique User Refer-

ence Number. By default, the Contract Reference Number will be taken as the User Reference Number. But user has the option to change the User Ref Number.

OBTF also provides the facility to generate the user reference number in a specific format. To maintain a specific format, identify the various components that would be part of the user reference number including details such as the length, order, value etc. of each component.

User can maintain a unique format through the 'Trade Finance Sequence Generation Input' screen.

#### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Home** screen.

1. On **Home** screen, specify **CSDTFSQG** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Sequence Generation Input** screen is displayed.

**Figure 2.20: Trade Finance Sequence Generation Input**

2. On **Trade Finance Sequence Generation Input** screen, specify the fields.

For more information on fields, refer to [Table 2.21: Trade Finance Sequence Generation Input Restriction - Field Description](#) (p. 38)

**Table 2.21: Trade Finance Sequence Generation Input Restriction - Field Description**

Field	Description
<b>Sequence Code</b>	Specify the sequence code. Each sequence format is identified by a unique sequence code. User can devise a code comprising a maximum of 20 alphanumeric characters.
<b>Branch Code</b> and <b>Module Code</b>	User can maintain the format for a specific branch and module combination. Select the branch code and the module code from the option-list. All authorized and active records will be displayed in the list. Alternatively, user can maintain a sequence format that will be applicable to all the branches (ALL) and all the modules (AL) available in bank.

Field	Description
<b>Reset Frequency</b>	<p>User needs to specify the frequency at which the system will drop and recreate the sequence numbers once again. At the reset frequency, all sequence numbers of the sequence format will be dropped and recreated again during the End of Day processing.</p> <p>The options available are:</p> <ol style="list-style-type: none"> <li>1) None</li> <li>2) Daily</li> <li>3) Monthly</li> <li>4) Yearly</li> </ol> <p>For example, let us assume that the running number in the sequence format is 4 characters long (starting from 0001) and the reset frequency is Monthly. Further, let us assume that the sequence number of the last contract processed on the last day of the month is 0199. At EOD of the last day of the month, the sequence numbers generated till date will be dropped and the system will begin regeneration starting from 0001 once again for all subsequent contracts..</p>
<b>Range</b>	<p>User can specify a range of sequential reference numbers. If range is specified, then no additional details need be specified. If not, user can specify additional details specific to each component of the sequence format.</p>
<b>Sequence Details</b>	
<b>Component Order</b>	<p>Each component is assigned an order number based on which they would appear in the user reference number. The component order is automatically generated by the system and is non-editable.</p>

Field	Description
<b>Component</b>	<p>Each component in the sequence format is identified as one of the following:</p> <ol style="list-style-type: none"> <li>1) An Oracle FLEXCUBE Component – If sequence format uses an OBTF column directly, user can specify it as an Oracle FLEXCUBE Component. For instance, user may want to include the product group associated with the product code involved in a contract, as a component in sequence number generation. To achieve this, user will use the Oracle FLEXCUBE column PRODUCT_GROUP (available in the table CSTM_TF_PRODUCT) as an Oracle FLEXCUBE Component.</li> <li>2) A User Component – User may want the first two characters of bank's name to be part of all the user reference numbers generated at bank. It can be defined as a user component. In addition, if user wants to use the manipulated value of an Oracle FLEXCUBE Column in the sequence format, they can specify it as a User Component. For eg, if they want to include ONLY the first four characters of the product group in the sequence number. In this case, the component would be defined as a User Component.</li> <li>3) A Separator – To separate the various components from one another, component known as the separator can be used. Eg: a back slash, a hyphen etc.</li> <li>4) A Running Number – Each contract is identified by a unique sequence number. It is mandatory to maintain a running number as a component in the sequence format. If not included, user will not be allowed to save the details of the format. A running number is internally generated by the system.</li> </ol>
<b>Component Type</b>	<p>User needs to identify the type of each component in the sequence format. A component can be constant through out or change for every contract processed at your bank. User can associate a component with one of the following types:</p> <ol style="list-style-type: none"> <li>1) Static – To include any hard coded component in the sequence format, specify the type to be static. For instance, user may want the first two characters of bank's name to be part of all the user reference numbers generated at bank. The component type would be static in this case.</li> <li>2) Dynamic – Specify the component to be of the dynamic type if its value is picked up from the OBTF table. Eg: Product Group. A running number would always be dynamic in nature.</li> </ol>
<b>Use in Sequence Generation</b>	<p>User needs to indicate whether the component being defined should be used in sequence generation or not. Specify 'YES' or 'NO' as per choice. One can also choose to display the reference number in the advices that are generated for a contract.</p>

Field	Description
<b>Component Length</b>	Specify the length of each component in the sequence format. The component value is dependent on the component length maintained. For instance, if you specify 2 as the component length, the value should comprise of only two characters. .
<b>Component Value</b>	As stated earlier, the component value is dependent on the component length. Based on the length, user can specify a value comprising of as many characters as specified in the Component Length field. However, this field is used only if the value of the component is required to be constant (static type) in all the user reference numbers generated at customer's bank. If the component value is changing constantly (Dynamic type) for every contract, the system will automatically pick up the value from the OBTF table based on the SQL query that you maintain for the purpose.
<b>Component Column and Component Table</b>	<p>If the component is of the dynamic type, mention the name of the OBTF column from where the system will pick up the component value. Further, if one wishes to include a manipulated column value in sequence generation, include 'SUBSTR' as well in the column name. For eg, to include only the first four characters of the product group associated with the product code involved in a contract, specify the following in the Component Column field:</p> <p>SUBSTR (PRODUCT_GROUP, 1, 4)</p> <p>You need to mention the table name also, if the component type is dynamic. The following table names are available in the option-list provided.</p> <ol style="list-style-type: none"> <li>1) DUAL</li> <li>2) STTM_CORE_BANK</li> <li>3) STTM_CORE_BRANCH</li> <li>4) STTM_DATES</li> <li>5) CSTM_TF_PRODUCT</li> </ol>
<b>Component Where Clause</b>	<p>The condition or the 'where clause' of the SQL code is specified here. In the example discussed above, the system will pick up the appropriate product group depending on the product code involved in the contract being processed. User can specify the following where clause as an extension of the SQL statement specified earlier:</p> <p>WHERE PRODUCT_CODE = SUBSTR (P_CRN, 3, 4);</p> <p>Click add icon to define each subsequent component in the format. Use the navigating icons to move between the various components of a sequence format.</p>

## 2.19 Trade Finance Product Restrictions

This topic describes the systematic instructions to maintain product restrictions.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **CSDTFPDR** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Product Restrictions** screen is displayed.

**Figure 2.21: Trade Finance Product Restrictions**

Trade Finance Product Restrictions

New Enter Query

2. On **Trade Finance Product Restriction** screen, specify the fields.

For more information on fields, refer to [Table 2.19: Trade Finance Product Transaction Limit Maintenance - Field Description](#)

**Table 2.22: Trade Finance Product Restriction - Field Description**

Field	Description
<b>Product Code</b>	Specify the product code. Alternatively, you can select the product code from the option list. The list displays all valid product codes maintained in the system. The field is Mandatory.
<b>Product Description</b>	The system displays the product description based on the product code selected.
<b>Branch Restriction List</b>	The system displays the branch list as Allowed or Disallowed based on the maintenance in the corresponding Product definition screen.
<b>Class Code</b>	Specify the class code. Alternatively, you can select the class code from the option list. The list displays all valid options based on the restrictions maintained.
<b>Description</b>	The system displays the description.
<b>Branch Code</b>	Specify the branch code. Alternatively, you can select the branch code from the option list. The list displays all valid branch codes maintained in the system.
<b>Branch Name</b>	The system displays the branch name based on the branch code selected.
<b>Currency Restrictions List</b>	The system displays the currency restrictions as Allowed or Disallowed based on the maintenance in the corresponding Product definition screen.
<b>Currency Code</b>	Specify the currency code. Alternatively, you can select the currency code from the option list. The list displays all valid codes maintained in the system.
<b>Currency Name</b>	The system displays the currency name based on the currency code selected.

3. On **Trade Finance Product Restriction**, click **Customer Restriction**.

STEP RESULT: **Customer Restriction** tab is displayed.

**Figure 2.22: Customer Restriction**

The screenshot shows the 'Trade Finance Product Restrictions' window with the 'Customer Restriction' tab selected. The window contains several input fields: 'Product Code \*' (with a red asterisk), 'Product Description', 'Branch Restriction' (set to 'Customer Restriction'), 'Category Restriction List' (a dropdown menu), 'Class Code', and 'Description'. There is a 'Default From Class' button next to the 'Class Code' field. Below these fields are two data grids. The 'Category' grid has columns for 'Code' and 'Description'. The 'Exempted Customers' grid has columns for 'Customer Id' and 'Customer Name'. Both grids show '1 Of 1' records. At the bottom, there is a 'Change Log' section with columns for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', and 'Authorization Status'. An 'Exit' button is located in the bottom right corner.

4. On **Customer Restriction** tab, specify the fields.

For more information on fields, refer to [Table 2.23: Customer Restriction - Field Description](#)

**Table 2.23: Customer Restriction - Field Description**

Field	Description
<b>Categories Restriction List</b>	The system displays the categories list based on the maintenance in the corresponding product screen.
<b>Class Code</b>	Specify the class code. Alternatively, you can select the class code from the option list. The list displays all valid options based on the restrictions maintained.
<b>Description</b>	The system displays the description.
<b>Code</b>	Specify the code. Alternatively, you can select the code from the option list. The list displays all valid options maintained in the system.
<b>Description</b>	The system displays the description based on the code selected.
<b>Customer ID</b>	Specify the customer ID. Alternatively, you can select the customer ID from the option list. The list displays all valid customer IDs maintained in the system.
<b>Customer Name</b>	The system displays the customer name.
<b>Restriction Type</b>	You can select the restriction type as 'Allowed' or 'Disallowed'. If a customer category restriction is maintained as 'Disallowed' and if one of the customer in that disallowed customer category has restriction type maintained as 'Allowed', then the system considers individual customer's restriction type for further processing. This is applicable vice-versa also. Click 'Change Log' button to view the details of values that are modified.

## 2.20 Trade Finance Status Code Maintenance

This topic describes the systematic instructions to maintain status code.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **STDTFSCD** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Status Code Maintenance** screen is displays.

**Figure 2.23: Trade Finance Status Code Maintenance**

Fields					
Maker	Date Time:	Mod No	Record Status		
Checker	Date Time:		Authorization Status		

2. On **Trade Finance Status Code Maintenance** screen, specify the fields.

For more information on fields, refer to

- A unique code for the status
- A brief description for the status
- A sequence number for the status
- The type of status – Indicate whether the status codes are maintained for an 'Account' or for a 'Contract', or for 'Both'

The type of status you choose depends on the status processing basis for your branch, which is defined in the Branch Parameters Preferences maintenance. If status processing basis is at individual account / contract level, you can choose the applicable status types as 'Account' or 'Contract'. The status codes that have been maintained of type 'Account' are available for association in the Account maintenance and those maintained with type 'Contract' can be associated with contracts. If status processing basis is at Group / CIF level, you can only maintain status codes of type 'Both' (that is, applicable for both accounts and contracts). In such a case, you must associate the statuses at both the Account maintenance as well as for contracts.

**NOTE:** It is mandatory to maintain the status code 'NORM' (Normal) with the sequence number as '0', for all the status types. The sequence number must not be repeated for a status type. The sequence number associated with the status will be used for determining the hierarchy of statuses, i.e., higher the number, worst the status and this will be unique for the status codes.

## 2.21 Trade Finance Group Code Maintenance

This topic describes the systematic instructions to maintain Group Code.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **STDTFGCM** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Group Code Maintenance** screen is displays.

**Figure 2.24: Trade Finance Group Code Maintenance**

2. On **Trade Finance Group Code Maintenance** screen, specify the fields.

Each group code that you define is associated with an appropriate exposure category that must be used to track exposure due to loans issued to customers in the group, as well as customer accounts with outstanding overdrafts. The exposure category for a group is either derived from the logic maintained in the Exposure Type Category Linkage maintenance for the group type, or explicitly specified. If it is derived, it is displayed in this screen, by the End of Day batch program. The type of the group indicates the type of customers that belong to the group – retail, corporate, Charge Clearing or Tax. If no logic has been maintained in the Exposure Type Category Linkage for the group type, you can indicate the applicable exposure category for the group.

**Table 2.24: Trade Finance group Code Maintenance - Field Description**

Field	Description
<b>Group Code</b>	When you maintain CIF details for customers, in the Customer Information Maintenance screen, you can specify the customer group to which the customer belongs, for provisioning and status processing. You must specify a group code defined for a group type that is the same as the customer type, for instance, if the customer is a retail customer, you must specify a group defined for retail customers. The field is mandatory.
<b>Description</b>	Specify the description
<b>Since</b>	Specify the field.

Field	Description
Group Type	Select the Group Type check box, as per the requirements.

## 2.22 Trade Finance External Service Maintenance

This topic describes the systematic instruction to maintain external service.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On **Homescreen**, specify **IFDTFXSE** in the text box, and click next arrow.

STEP RESULT: **Trade Finance External Service Maintenance** screen displays.

**Figure 2.25: Trade Finance External Service Maintenance**

- On **Trade Finance External Service Maintenance** screen, specify the fields.

For more information on fields, refer to [Table 2.25: Trade Finance External Service Maintenance](#).

**Table 2.25: Trade Finance External Service Maintenance**

Field	Description
<b>External System</b>	Specify the external system, Alternatively, you can select the external system from the option list. The list displays all valid values maintained in the system. The field is Mandatory
<b>Description</b>	The system displays the description based on the external system selected.

Field	Description
<b>External User</b>	Specify the external user. The field is Mandatory
<b>Maximum Retry Count</b>	Specify the field.
<b>Read Time Out (In Seconds)</b>	Specify the read time out.
<b>Connection Time Out (In Seconds)</b>	Specify the connection time out.
<b>External System Application ID</b>	Specify the field.
<b>External System Type</b>	Select the external system type. The options are: <ul style="list-style-type: none"> <li>• Default</li> <li>• OBMA</li> <li>• OBRH</li> <li>• Pricing</li> </ul>
<b>Type</b>	Select the type from the drop-down list.
<b>Service Name</b>	Specify the service name. Alternatively, you can select the service name from the option list. The list displays all valid service name maintained in the system.
<b>WS Endpoint URL</b>	Provide WS endpoint URL.
<b>Rest Service Context</b>	The system displays the rest service context.
<b>Rest Service IP</b>	The system displays the rest service IP.
<b>Rest Service Pattern</b>	The system displays the rest service pattern.
<b>Rest Service Port</b>	The system displays the rest service port.

## 2.23 Trade Finance Core Entity Error Queue

This topic describes the systematic instructions to process Core Entity Error Queue.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **IFSTFERQ** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Core Entity Error Queue** screen displays.

**Figure 2.26: Trade Finance Core Entity Error Queue**

2. On **Trade Finance Core Entity Error Queue**, specify the fields.  
 For more information on fields, refer to [Table 2.26: Trade Finance Core Entity Error Queue - Field Description](#)  
 Core entity request is moved to Timed out status based on the time out parameter maintained. If no response is received from the external system within the given time, status is marked as timed out.

**Table 2.26: Trade Finance Core Entity Error Queue - Field Description**

Field	Description
<b>Branch Code</b>	Specify the branch Id
<b>Message Identification</b>	Specify the message identification number of a contract.
<b>Key ID</b>	Specify the Key ID
<b>Process Sequence Number</b>	Specify the Process Sequence Number.
<b>External Status</b>	Specify the External Status.
<b>Process Reference</b>	Specify the contract reference number of a transaction.

Field	Description
	<p>By default all error records shall be displayed.</p> <p>Select any or all of the above parameters for a query and click <b>Search</b> button. The system displays the following records meeting the selected criteria:</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Message Identification</li> <li>• Key Id</li> <li>• Process Sequence Number</li> <li>• Service Code</li> <li>• External Status</li> <li>• Function</li> <li>• Customer No</li> <li>• Destination Source</li> <li>• Process</li> <li>• Authorization Status</li> <li>• Request Type</li> <li>• Reference Number</li> <li>• Simulation</li> <li>• Time</li> <li>• Communication Mode</li> <li>• Checker ID</li> <li>• Checker Date Stamp</li> <li>• Maker Id</li> <li>• Release Time</li> <li>• Source Sequence No</li> <li>• Process Reference</li> </ul> <p>You can click 'Resubmit' and 'Reject' buttons in the bottom of the screen to process the error records. External status field will display the type of error like Time out, Failed etc.</p> <p>You can submit the record for processing again by selecting single or All records and clicking 'Resubmit' button. If the record fails, then the error details can be viewed by clicking 'Error Messages' button.</p>

## 2.24 Notification Process

The notification process is in two layers. In the first layer the notification process as part of jobs in FCJ scheduler sends minimal data required for notification to an internal JMS queue. In the second layer the notification process

---

as part of an MDB that listens on internal JMS queue builds final notifications and sends them to their intended destinations. The Notification Process in Oracle Trade Finance using the jobs scheduler is as follows:

- 1) The trigger on the base table inserts key details into a static notification log table instead of Oracle AQ.
- 2) Once Job is triggered, a request is sent to EJB layer from job execution class and the notification log table is polled for unprocessed records.
- 3) Each unprocessed record is locked.
- 4) The record is verified against the notification maintenance and checked whether notification is to be sent or not.
- 5) If notification is to be sent, pre notification message xml is built and it is sent to internal notify\_queue (JMS queue).
- 6) The job is then rescheduled to fire next time based on the previous execution.

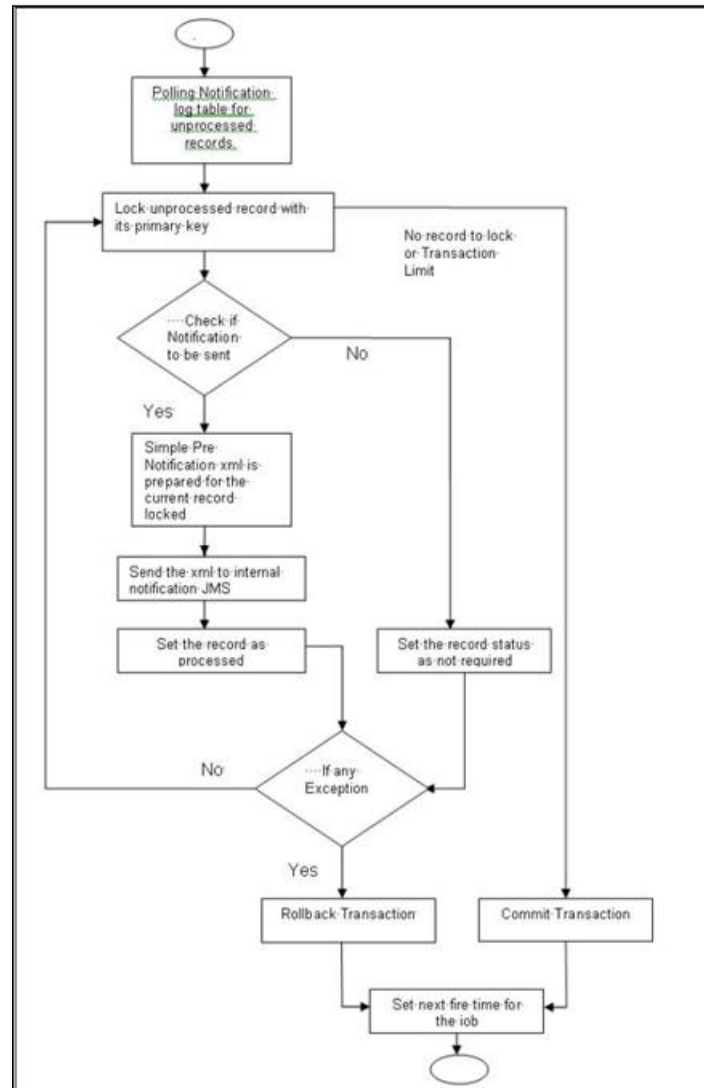

The notification process in MDB is as follows:

- 1) The Notification MDB listens on the internal notify JMS queue.
- 2) On any message received, the MDB identifies which schema to connect using the JNDI name being present as part of the message xml.
- 3) Gateway notification processing package is called from MDB in order to build the actual notifications.
- 4) In MDB the notifications built is processed and sent to the destination specified in corresponding notification.
- 5) In case of any exception the whole transaction is rolled back.

6) If all notifications are successfully processed then transaction is committed.

The flow chart of notification process in scheduler:

The flow chart for notification process in MDB:

## 2.24.1 Process Notification Parameters

This topic describes the systematic instructions to process Notification Process.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **TFDNOTIF** in the text box, and click next arrow.

STEP RESULT: **Trade Gateway notification Maintenance** displays.

**Figure 2.27: Trade Gateway Notification Maintenance**

2. On **Trade Gateway Notification Maintenance** screen, specify the fields.  
 For more information on fields, refer to [Table 2.27: Trade Gateway Notification Maintenance - Field Description](#)

**Table 2.27: Trade Gateway Notification Maintenance - Field Description**

Field	Description
<b>Notification Code</b>	The system displays a unique code to identify a notification.
<b>Description</b>	The system displays a brief description of the notification. However, you can modify the description in this screen.
<b>Operation</b>	Select the type of operation for the notification from the following. Insert - to indicate a new operation of notification function Update - To indicate a modification operation of notification
<b>Gateway Operation</b>	Specify the gateway operation name to execute query for the mentioned service.
<b>Gateway Service</b>	Specify the gateway service to be used to get the full screen response.
<b>Request Node</b>	Specify the gateway IO request node to be used in querying operation.
<b>Specific Notification</b>	Check this box to indicate the system to send specific notification. The system handles any deviation from generic notification process by creating specific triggers once you check this field.
<b>Full Screen Reply</b>	Check this box to indicate that the full screen notification response has to be sent. Otherwise, the primary key response notification is sent.
<b>Head Office</b>	Check this box to send notification only from head office.

## 2.25 Process Notifications Enroute

This topic describes the systematic instructions to Process Notifications Enroute.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **TFDNTFEN** in the text box, and click next arrow.

STEP RESULT: **Trade Notification Enroute Maintenance** displays.

2. On **Trade Notification Enroute Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.28: Trade Notification Enroute Maintenance - Field Description](#)

**Table 2.28: Trade Notification Enroute Maintenance - Field Description**

Field	Description
<b>Branch Code and Description</b>	Specify a branch for which you wish to define a topic. If you want to use a single topic for all branches and for a given notification code, you can use a wildcard '***'. Once you select a Branch Code, the corresponding description is displayed.
<b>Notification Code and Notification Description</b>	Select a notification code from the list of notification codes provided. You can indicate a wildcard '***' if a single topic needs to be used for all notifications in a branch.
<b>Destination Name</b>	Specify the destination name. Once you have captured the details, save the maintenance.

## 2.26 Process Notification Messages

This topic describes the systematic instructions to process notification messages.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **TFDNTFIN** in the text box, and click next arrow.

STEP RESULT: **Trade Notifications Installed Maintenance** screen displays.

Trade Notifications Installed Maintenance			
New Enter Query			
Branch Code *		Branch Name	
Notification Code *		Notification Description	
Fields			
Maker	Date Time:	Mod No	Record Status
Checker	Date Time:		Authorization Status
			Exit

2. On **Trade Notifications Installed Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.29: Trade Notifications Installed Maintenance - Field Description](#)

**Table 2.29: Trade Notifications Installed Maintenance - Field Description**

Field	Description
<b>Branch Code</b>	Select a branch code for which you wish to assign a notification code. Once you select the branch code, the corresponding description is displayed. The field is Mandatory.
<b>Branch Name</b>	Specify the Name of the Branch
<b>Notification Code</b>	From the list of values, select a notification code you wish to link with the branch. This will be used to generate notifications for the entire branch. Once you select the notification code, the corresponding description is displayed. In addition to maintaining a notification code for a given branch, you can also specify a topic or a queue to which the notification messages should be sent. You can define a topic/queue for a given branch and notification code in the 'Notifications Enroute' screen. The field is Mandatory.
<b>Notification Description</b>	Specify the Notification Description

## 2.27 Process ECA Block Details

This topic describes the systematic instruction to process ECA Block Details.

### CONTEXT:

The system creates an ECA amount block on an account when an ECA request is approved. This blocked amount is used for ECA debit and will be active till the approved amount is debited or ECA request is cancelled. The interface 'CreateEcablk' will perform the ECA block request. You can view the ECA Block details in ECA blockscreen. The system allows you to only query the details in this screen. Other operations are not allowed in this screen.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **TFDECABL** in the text box, and click next arrow.

STEP RESULT: **Trade Finance ECA Block** screen displays.

2. On **Trade Finance ECA Block Details** screen, specify the fields.

For more information on fields, refer [Table 2.30: Trade Finance ECA Block Details - Field Description](#)

**Table 2.30: Trade Finance ECA Block Details - Field Description**

Field	Description
<b>Branch</b>	The system displays the current branch code.
<b>Source Code</b>	The system displays the source code passed in the request.
<b>External Reference</b>	Specify the external reference number.
<b>External Credit Approval Reference</b>	Specify the ECA reference number.
<b>Effective Date</b>	The system displays the effective date.
<b>Referral Allowed</b>	Select this option to specify Referral Allowed.

Field	Description
<b>Mark as Error</b>	If 'Mark as Error' is enabled then the complete ECA request will be rejected even if one account fails in the validation.
<b>External Credit Approval Details</b>	<p>The following ECA details are displayed based on the query:</p> <ul style="list-style-type: none"> <li>• Account Branch</li> <li>• Account Number</li> <li>• Account Currency</li> <li>• Requested Amount</li> <li>• Approved Amount</li> <li>• Outstanding Amount</li> <li>• Status</li> <li>• Remarks</li> <li>• Partial Block Required</li> <li>• Instrument Code</li> <li>• Block type</li> <li>• Force Block</li> </ul>

## 2.28 Process Feature

This topic describes the systematic instructions to process Feature.

PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **CSDTFFTM** in the text box, and click next arrow.

STEP RESULT: **Trade Feature Maintenance** screen displays.

**Figure 2.28: Trade Feature Maintenance**

Trade Feature Maintenance

New Enter Query

Feature \*

☒ Applicable

Fields

Maker	Date Time:	Mod No	Record Status
Checker	Date Time:	Authorization Status	Exit

- On **Trade Feature Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.31: Trade Feature Maintenance - Field Description](#)

**Table 2.31: Trade Feature Maintenance - Field Description**

Field	Description
<b>Feature</b>	Specify the feature that you need to query. Field is mandatory.
<b>Applicable</b>	The system defaults this check box when you execute the query with the feature name.

## 2.29 Maintain Feature ID

This topic describe the systematic instruction to maintain Function ID.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On Homescreen, specify **CSDTFFEM** in the text box, and click next arrow.

STEP RESULT: **Trade Feature ID Maintenance** screen is displayed.

**Figure 2.29: Trade Feature ID Maintenance**

- On **Trade Feature ID Maintenance** screen, specify the fields.  
For more information on fields, refer [Table 2.32: Trade Feature ID Maintenance - Field Description](#)

**Table 2.32: Trade Feature ID Maintenance - Field Description**

Field	Description
<b>Branch Code</b>	Specify the branch where the feature needs to be installed. The adjoining option list displays all valid branch codes maintained in the system. You can select the appropriate one. The field is Mandatory.
<b>Branch Name</b>	The branch name is displayed here based on the chosen branch code.
<b>Feature Id</b>	Specify the feature that should be installed in the branch.
<b>Installed</b>	Specify the field.

## 2.30

### 2.31 Maintain Document Checklist Details

This topic describes the systematic instruction to maintain document checklist details.

#### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

- On **Homescreen**, specify **CSDTFSNP** in the text box, and click next.

**STEP RESULT:** **Trade Finance Sanction Check Branch Parameter Maintenance** screen displays.

**Figure 2.30: Trade Finance Sanction Check Branch Parameter Maintenance**

Trade Finance Sanction Check Branch Parameter Maintenance

New Enter Query

Branch Code \* Branch Name

Sanction Check Required

Sanction Checks System Description

Retry Days

Maker Date Time: Mod No Record Status

Checker Date Time: Authorization Status

Exit

2. On **Trade Finance Sanction Check Branch Parameter Maintenance** screen, specify the fields. For more information on fields, refer [Table 2.33: Trade Finance Sanction Check Branch Parameter Maintenance - Field Description](#)

**Table 2.33: Trade Finance Sanction Check Branch Parameter Maintenance - Field Description**

Field	Description
<b>Branch Code</b>	Specify the branch code. Alternatively, you can select the branch code from the option list. The list displays all valid options. The field is Mandatory.
<b>Branch Name</b>	The system displays the name of the branch.
<b>Sanction Check Required</b>	Check this box to indicate that sanction checks validation for the transactions of particular customer should be done with external system. If 'Sanction Check Required' flag is selected then it is mandatory to provide 'Sanction Check System'.
<b>Sanction Check System</b>	Specify the external system for the sanction check. Alternatively, you can select the sanction check system from the option list. The list displays all active and authorized sanction check systems maintained in the system.
<b>Description</b>	The system displays the description for the selected sanction check system.
<b>Retry Days</b>	Specify the retry days to identify the days after which re-screening can be allowed for sanction check. By default the value for retry days will be zero, which means sanction check request will be sent on every modification of the transaction without checking previous sanction check date.

## 2.32 Maintain Sanction Check System Details

This topic describes the systematic instructions to maintain sanction check system details.

### CONTEXT:

You can maintain sanction check systems for the modules in 'Sanction Check System Maintenance' screen from head office branch. You can also maintain details of the request queue and response queue for the sanction check using the queue related fields. Request queue is used for posting the request from FCUBS and response queue is used for fetching the response from the external system. Validations to check the accuracy of details provided in the queue has to be operationally controlled.

### PREREQUISITE:

Specify **User Id** and **Password**, and login to **Homescreen**.

1. On Homescreen, specify **CSDTFSNM** in the text box, and click next arrow.

STEP RESULT: **Trade Finance Sanction Check System Maintenance** screen displays

**Figure 2.31: Trade Finance Sanction Check System Maintenance**

2. On **Trade Finance Sanction Check System Maintenance** screen, specify the fields.

For more information on fields, refer [Table 2.34: Trade Finance Sanction Check System Maintenance](#)

**Table 2.34: Trade Finance Sanction Check System Maintenance**

Field	Description
<b>Sanction Check System</b>	Specify the external system for the sanction check. Alternatively, you can select the sanction check system from the option list. The list displays all active and authorized sanction check systems maintained in the system. The Field is Mandatory
<b>Description</b>	The system displays the description for the selected sanction check system The Field is Mandatory
<b>Communication Method</b>	Specify the field.
<b>Mode</b>	Select the Mode from drop-down list.

Field	Description
<b>Time Out in Seconds</b>	Specify the Time Out in Seconds.
<b>Preferences</b>	Specify the Preferences.
<b>Inqueue JNDI Name</b>	Specify the Inqueue JNDI Name.
<b>Outqueue JNDI Name</b>	Specify the Outqueue JNDI Name.
<b>Initial Contact Factory Class</b>	Specify the Initial Contact Factory Class details.
<b>Context Provider URL</b>	Specify the Context Provider URL details.
<b>Queue Factory JNDI</b>	Specify the Queue Factory JNDI details.
<b>Queue Authentication</b>	Specify the Queue Authentication details.
<b>Queue Authentication Required</b>	Specify the Queue Authentication Required details.
<b>User ID</b>	Specify the User Id
<b>Password</b>	Specify the Password

### 3. Trade 360 Degree

As part of Trade 360 Degree, a corporate customer can view different Trade finance transactions. A single screen will be provided to view different Trade transactions of a single customer across branch in different perspective, say Documentary Credit, Documentary Collection, Guarantees, Stand-by-LCs, Trade Loans and Limits transactions and outstanding balance. There will also be a summary to provide the bird's eye view.

This section contains following topics.

- 1) Summary
- 2) Documentary Credit
- 3) Documentary Collection
- 4) Guarantee Stand By LCs
- 5) Trade Loan
- 6) Limits

1. From **Home** screen, specify **STDTRDVW** in the text box, and click next arrow.

**STEP RESULT:** The **Trade 360 Degree View** screen is displayed.

**Figure 3.1: Trade 360 Degree View**

2. On **Trade 360 Degree**, specify the Customer Number. For more information on fields,

**Table 3.1: Trade 360 Degree View**

Field	Description
<b>Customer Number</b>	Specify the customer number for which the trade summary is to be viewed.
<b>Short Name</b>	The system displays the short name of the customer.
<b>Currency</b>	The system displays the currency.
<b>Full Name</b>	The system displays the full name of the customer.

The details that can be viewed in the Trade 360 Degree View can be classified into the following tabs.

Field	Description
<b>Documentary Credits</b>	You can view the LC / BC transactions which are part of Documentary Credit when the relevant option is selected from the list. Options could be LC Issued, LC Advised, Import Bills Financed, Import Bills in Collection, Export Bills Financed and Export Bills in Collection.
<b>Documentary Collection</b>	You can view the BC transactions here when the relevant option is selected from the list. Options could be Import Bills Financed, Import Bills in Other Collection, Import Overdue Bills, Export Bills Financed, Export Bills in Other Collection and Overdue of Export Bills
<b>Guarantees/Stand-by-LCS</b>	You can view the Bank Guarantee, Shipping Guarantee and Stand-by-LC's transactions when relevant option is selected from the list. Options could be BG against Customer Request, BG against Counter Guarantee, SG issued, Stand-by-LCs issued, BG advised and Stand-by-LC's advised.
<b>Trade Loan</b>	You can view Loan transactions when relevant option is selected from the list. Options could be Import Loan, Packing Credit Loan, Guarantee Loans and Link To Loan.
<b>Limits</b>	You can view the limits and collateral details of the customer here.

### 3.1 Summary Tab

The following details can be viewed in this tab:

#### Documentary Credit

The Import and Export Documentary credit outstanding balances in local currency will be displayed in various heads.

#### Documentary Collection

The Import and Export Documentary Collection outstanding balances in local currency will be displayed in various heads.

#### Guarantees and Stand by LCs

Issued and Advised Guarantee/Shipping Guarantee/Stand-by-LCs outstanding balances in local currency will be displayed in various heads.

#### Trade Loan

Import and Export Trade Loan outstanding balances in local currency will be displayed in various heads.

## 3.2 Documentary Credit Tab

3. On Trade 360 Degree View screen, click Documentary Credit tab.

STEP RESULT: The Documentary Credit tab displays.

**Figure 3.2: Documentary Credit tab**

4. On **Trade 360 Degree View** screen, under **Documentary Credit** tab, specify the fields. For more information on the fields, refer to the below Field Description table.

**Table 3.2: Documentary Credit - Field Description**

Field	Description
<b>Contract Details</b>	<p>Select the Contract Type from the drop down list and click 'Populate' button to view the details. The options are:</p> <ul style="list-style-type: none"> <li>• <b>Import LC</b> - Displays the Import LC contracts pertaining to the customer (counterparty) in LC details section</li> <li>• <b>Import Bills Advanced</b> - Displays the Import Bills advanced contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• <b>Import Bills in Collection</b> - Displays the Import Bills in Collection, ACC and PAY operation contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• <b>Export LC</b> - Displays the Export LC contracts pertaining to the customer (counterparty) in LC details section</li> <li>• <b>Export Bills Financed</b> - Displays the Export Bills financed contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• <b>Export Bills in Collection</b> - Displays the Export Bills in Collection, ACC and PAY operation contracts pertaining to the customer (counterparty) in Bills Details section</li> </ul>
<b>Customer Number</b>	Specify the LC customer name.

Field	Description
<b>LC Details</b>	<p>Following details are displayed in this section.</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Product Code</li> <li>• Product Description</li> <li>• Contract Reference Number</li> <li>• Currency</li> <li>• Contract Amount</li> <li>• Current Available Amount</li> <li>• Issue Date</li> <li>• Tenor</li> <li>• Expiry Date</li> <li>• Customer</li> </ul> <p>Select a record and click <b>Details</b> button to view the contract details in view mode.</p>
<b>Bill Details</b>	<p>Following details are displayed in this section.</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Product Code</li> <li>• Product Description</li> <li>• Contract Reference</li> <li>• Bill Currency</li> <li>• Bill Amount</li> <li>• Booking Date</li> <li>• Maturity Date</li> <li>• Outstanding Amount</li> <li>• Our Letter of Credit Reference</li> </ul> <p>Select a record and click Details button to view the contract details in view mode.</p>

### 3.3 Documentary Collection Tab

- On the Trade 360 Degree View screen, click **Documentary Collection** tab.

STEP RESULT: **Documentary Collection** screen is displayed.

## 4. Islamic Trade 360 Degree

As part of Trade 360 Degree, a corporate customer can view different Trade finance transactions. A single screen will be provided to view different Trade transactions of a single customer across branch in different perspective, say Documentary Credit, Documentary Collection, Guarantees, Stand-by-LCs, Trade Loans and Limits transactions and outstanding balance. There will also be a summary to provide the bird's eye view.

This section contains following topics.

- 1) Summary
  - 2) Is-Documentary Credit
  - 3) Is-Documentary Collection
  - 4) Is-Guarantee Stand By and LCs
  - 5) Limits
1. From **Home** screen, specify **STDISTVW** in the text box, and click next arrow.

**STEP RESULT:** The **Islamic Trade 360 Degree View** screen is displayed.

**Figure 4.1: Islamic Trade 360 Degree View**

2. On **Islamic Trade 360 Degree**, specify the Customer Number. For more information on fields,

**Table 4.1: Islamic Trade 360 Degree View**

Field	Description
<b>Customer Number</b>	Specify the customer number for which the trade summary is to be viewed.
<b>Short Name</b>	The system displays the short name of the customer.
<b>Currency</b>	The system displays the currency.
<b>Full Name</b>	The system displays the full name of the customer.

## 4.1 Summary Tab

The following details can be viewed in this tab:

### Is-Documentary Credit

The Import and Export Documentary credit outstanding balances in local currency will be displayed in various heads.

### Is-Documentary Collection

The Import and Export Documentary Collection outstanding balances in local currency will be displayed in various heads.

### Is-Guarantees and Stand by LCs

Issued and Advised Guarantee/Shipping Guarantee/Stand-by-LCs outstanding balances in local currency will be displayed in various heads.

## 4.2 Is-Documentary Credit Tab

1. On **Islamic Trade 360 Degree View** screen, click **Is-Documentary Credit** tab.

STEP RESULT: The **Is-Documentary Credit** tab displays.

**Figure 4.2: Is-Documentary Credit tab**

The screenshot displays the 'Islamic Trade 360 Degree View' interface. At the top, there is a header bar with the title 'Islamic Trade 360 Degree View'. Below the header, there is a search bar labeled 'Enter Query'. The main area is divided into several sections. On the left, there is a 'Summary' section with tabs for 'Is-Documentary Credit' (selected), 'Is-Documentary Collection', 'Is-Guarantee and Standby LCs', and 'Limits'. Below the tabs, there are input fields for 'Customer Number \*', 'Short Name', and 'Full Name', along with a 'Reports' button. The 'Is-Documentary Credit' section contains a 'Contract Details' dropdown menu set to 'Import LC' and a 'Populate' button. Below this, there is a table titled 'Islamic LC Details' with columns: Branch Code, Product Code, Product Description, Contract Reference Number, Currency, Contract Amount, Current Available Amount, Issue Date, Tenor, and Expiry Date. The table shows 1 of 1 records. Below the table, there is a 'Details' button. At the bottom, there is another table titled 'Islamic Bills Details' with columns: Branch Code, Product, Product Description, Contract Reference, Bill Currency, Bill Amount, Booking Date, Maturity Date, Tenor, and Outstanding Amount. The table shows 1 of 1 records. An 'Exit' button is located at the bottom right of the screen.

2. On **Islamic Trade 360 Degree View** screen, under **Is-Documentary Credit** tab, specify the fields. For more information on the fields, refer to the below Field Description table.

**Table 4.2: Is-Documentary Credit - Field Description**

Field	Description
<b>Contract Details</b>	<p>Select the Contract Type from the drop down list and click 'Populate' button to view the details. The options are:</p> <ul style="list-style-type: none"> <li>• Import LC - Displays the Import LC contracts pertaining to the customer (counterparty) in LC details section</li> <li>• Import Bills Advanced - Displays the Import Bills advanced contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• Import Bills in Collection - Displays the Import Bills in Collection operation contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• Export LC - Displays the Export LC contracts pertaining to the customer (counterparty) in LC details section</li> <li>• Export Bills Financed - Displays the Export Bills financed contracts pertaining to the customer (counterparty) in Bills Details section</li> <li>• Export Bills in Collection - Displays the Export Bills in Collection operation contracts pertaining to the customer (counterparty) in Bills Details section</li> </ul>
<b>Customer Number</b>	Specify the LC customer name.
<b>Islamic LC Details</b>	<p>Following details are displayed in this section.</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Product Code</li> <li>• Product Description</li> <li>• Contract Reference Number</li> <li>• Currency</li> <li>• Contract Amount</li> <li>• Current Available Amount</li> <li>• Issue Date</li> <li>• Tenor</li> <li>• Expiry Date</li> <li>• Customer</li> </ul>

Field	Description
<b>Islamic Bill Details</b>	<p>Following details are displayed in this section.</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Product Code</li> <li>• Product Description</li> <li>• Contract Reference</li> <li>• Bill Currency</li> <li>• Bill Amount</li> <li>• Booking Date</li> <li>• Maturity Date</li> <li>• Outstanding Amount</li> <li>• Our Letter of Credit Reference</li> </ul> <p>Select a record and click Details button to view the contract details in view mode.</p>

### 4.3 Is-Documentary Collection Tab

3. On the **Islamic Trade 360 Degree View** screen, click **Is-Documentary Collection** tab.

STEP RESULT: **Is-Documentary Collection** screen is displayed.

**Figure 4.3: Is-Documentary Collection**

The screenshot displays the 'Islamic Trade 360 Degree View' application window. At the top, there is a search bar labeled 'Enter Query' and a 'Reports' button. Below this, a navigation bar includes tabs for 'Summary', 'Documentary Credit', 'Documentary Collection' (which is highlighted in red), 'Guarantee and Stand By LCs', 'Trade Loan', and 'Limits'. Under the 'Documentary Collection' tab, there is a 'Contract Details' section with a dropdown menu set to 'Import Bills Advanced' and a 'Populate' button. The main area is titled 'Bills Detail' and contains a table with the following columns: Branch Code, Product, Product Description, Contract Reference, Bill Currency, Bill Amount, Booking Date, Maturity Date, and Outstanding Amount. The table is currently empty. At the bottom right of the window, there is an 'Exit' button.

4. On **Islamic Trade 360 Degree View** screen, under **Is-Documentary Collection** tab, specify the fields. For more information on the fields, refer to the below Field Description table.

**Table 4.3: Is-Documentary Collection - Field Description**

Field	Description
<b>Contract Details</b>	<p>Select the product type from the drop down list and click <b>Populate</b> button to view the details. The options are:</p> <p>Import Bills Advanced - Bills which are advanced pertaining to the customer (counterparty) will be displayed in Islamic Bills details section.</p> <p>Import Bills Other Collections - Import Bills which are not in Advanced operation pertaining to the customer (counterparty) will be displayed in Islamic Bills details section.</p> <p>Import Bills Over Due - Import Bills which are matured, active and authorized contracts will be displayed pertaining to the customer (counterparty) in Islamic Bills Section</p> <p>Export Bills Financed - Export Bills which are financed pertaining to the customer (counterparty) will be displayed in Islamic Bills details section.</p> <p>Export Bills Other Collections - Export Bills which are not in Financed operation pertaining to the customer (counterparty) will be displayed in Islamic Bills details section.</p> <p>Export Bills Over Due - Export Bills which are matured but outstanding, active and authorized contracts will be displayed pertaining to the customer (counterparty) in Islamic Bills Details section.</p>
<b>Islamic Bill Details</b>	<p>Following details are displayed in this section.</p> <ul style="list-style-type: none"> <li>• Branch Code</li> <li>• Product Code</li> <li>• Product Description</li> <li>• Contract Reference</li> <li>• Bill Currency</li> <li>• Bill Amount</li> <li>• Booking Date</li> <li>• Maturity Date</li> <li>• Outstanding Amount</li> </ul> <p>Select a record and click Details button to view the contract details in view mode.</p>
