1.5.1	<i>Startup Script Modification .....</i>	<i>1-78</i>

# 1. Setting Up Plug-Ins

## 1.1 Introduction

You need to carry out certain tasks manually before Oracle FLEXCUBE deployment. This document details out the pre-deployment tasks based on the on the selected plug-ins.

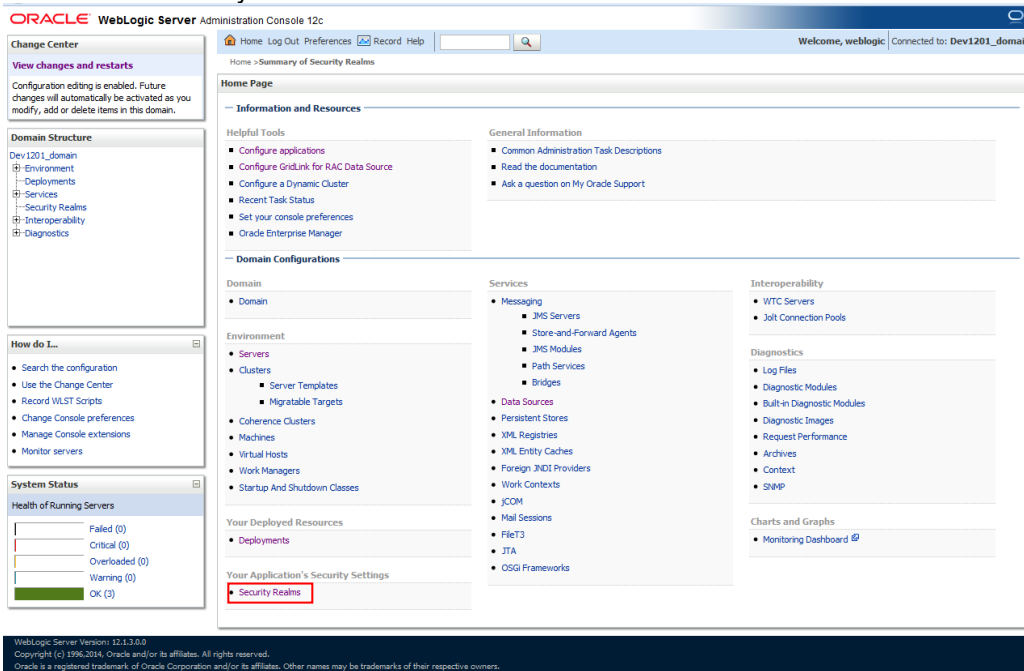

## 1.2 Integrating Oracle FLEXCUBE UBS and BPEL

If you have created the EAR file with BPEL as a plug-in, then along with the Oracle FLEXCUBE UBS EAR file, the Installer creates 'FCJJPSPProvider.jar' file inside the folder 'BPELbuild' created along. You need to complete the following tasks before deploying Oracle FLEXCUBE UBS EAR file.

### 1.2.1 Custom Provider Configuration

FCUBS Custom Authenticator Provider configuration has to be done from the Weblogic console of SOA or manually update the config.xml of the SOA domain. Below steps needs to be followed to setup Custom Authentication Provider:

1. Along with FCUBS Ear file, Installer creates FCUBSAuthenticationProvider.jar file inside the BPELbuild folder.
  - a. Copy this file to the following path on the application server host  
**<ORACLE\_HOME>\wlserver\server\lib\mbeantypes .**
2. Restart the Admin Server.
3. Login to the Console.
4. Click on Security Realms.

5. Click on myrealm.

**ORACLE WebLogic Server Administration Console 12c**

Home > Summary of Security Realms

**Summary of Security Realms**

A security realm is a container for the mechanisms—including users, groups, security roles, security policies, and security providers—that are used to protect WebLogic resources. You can have multiple security realms in a WebLogic Server domain, but only one can be set as the default (active) realm.

This Security Realms page lists each security realm that has been configured in this WebLogic Server domain. Click the name of the realm to explore and configure that realm.

**Customize this table**

**Realms (Filtered - More Columns Exist)**

Name	Default Realm
myrealm	true

WebLogic Server Version: 12.1.3.0.0  
Copyright (c) 1996-2016, Oracle and/or its affiliates. All rights reserved.  
Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

6. Click on Providers tab and click on new button to create new authentication provider.

**ORACLE WebLogic Server Administration Console 12c**

Home > Summary of Security Realms > myrealm > Providers

**Settings for myrealm**

Configuration Users and Groups Roles and Policies Credential Mappings **Providers** Migration

Authentication Password Validation Authorization Adjudication Role Mapping Auditing Credential Mapping Certification Path

An Authentication provider allows WebLogic Server to establish trust by validating a user. You must have one Authentication provider in a security realm, and you can configure multiple Authentication providers in a security realm. Different types of Authentication providers are designed to access different data stores, such as LDAP servers or DBMS.

**Customize this table**

**Authentication Providers**

Name	Description	Version
FCJCustomProvider	Authentication provider for FLEXCUBE users	FCUBS 12.2
Trust Service Identity Asserter	Trust Service Identity Assertion Provider	1.0
DefaultAuthenticator	WebLogic Authentication Provider	1.0
DefaultIdentityAsserter	WebLogic Identity Assertion provider	1.0

WebLogic Server Version: 12.2.1.2.0  
Copyright (c) 1996-2016, Oracle and/or its affiliates. All rights reserved.  
Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

7. Give Provider name as FCJCustomProvider and type as FCUBSUserAuthenticator.

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are panels for 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The main area displays the 'Create a New Authentication Provider' dialog box. The dialog has a title bar and a close button. Below the title bar, it says 'Create a new Authentication Provider' and 'The following properties will be used to identify your new Authentication Provider.' There are two input fields: '\* Name:' with the value 'FCJCustomProvider' and 'Type:' with a dropdown menu set to 'FCUBSUserAuthenticator'. At the bottom of the dialog are 'OK' and 'Cancel' buttons.

8. Click Reorder to bring the newly created provider to first of all providers and click OK.

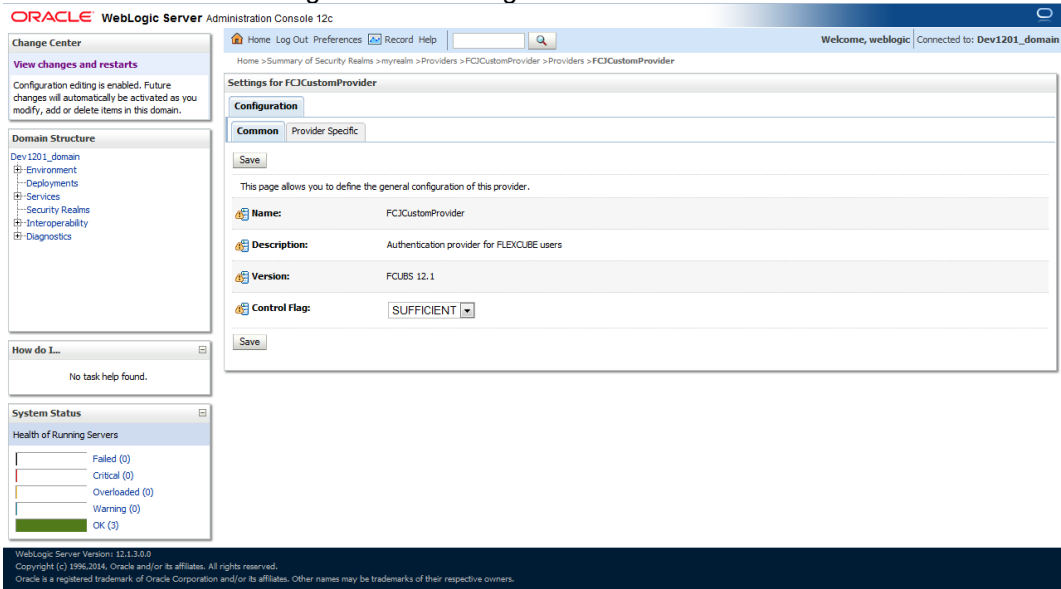

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are panels for 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The main area displays the 'Settings for myrealm' page, specifically the 'Providers' tab. Below the navigation tabs, there is a table titled 'Authentication Providers'. The table has columns for 'Name', 'Description', and 'Version'. The first row is 'FCJCustomProvider', which is highlighted. Below the table, there are buttons for 'New', 'Delete', and 'Reorder'. The 'Reorder' button is circled in red. The table also shows 'Showing 1 to 4 of 4' and 'Previous | Next' links.

Name	Description	Version
FCJCustomProvider	Authentication provider for FLEXCLUBE users	FCUBS 12.1
Trust Service Identity Asserter	Trust Service Identity Asserter Provider	1.0
DefaultAuthenticator	WebLogic Authentication Provider	1.0
DefaultIdentityAsserter	WebLogic Identity Asserter provider	1.0

9. Click on FCJCustomProvider.

10. In Common tab change the control flag to "SUFFICIENT".

11. In Provider Specific tab

- Set JNDIName as Flexcube JNDI Name.
- If external authentications are used in FCUBS then Fill the Ldap/MSAD related fields.

12. For manually editing the config.xml go to the below path and open the config.xml file  
 <ORACLE\_HOME>\Middleware\user\_projects\domains\base\_domain\config\  
 The following codes need to be added at proper locations in the config.xml.  
 a) Search for < realm> tag and add the following code between <realm> and </ realm> tags. This should be the first child of the realm Node.

```
<sec:authentication-provider xmlns:n1="http://fcubs.ofss.com/security"
xsi:type="n1:fcubs-user-authenticatorType">
  <sec:name>FCJCustomProvider</sec:name>
  <sec:control-flag>SUFFICIENT</sec:control-flag>
  <n1:msad-or-ldap-login-required>true</n1:msad-or-ldap-login-required>
  <n1:external-password-required>true</n1:external-password-required>
  <n1:authentication-type>MSAD</n1:authentication-type>
  <n1:ldap-server-ip-and-port>LDAP://localhost:389</n1:ldap-server-ip-and-port>
  <n1:ldap-ssl-enabled>true</n1:ldap-ssl-enabled>
  <n1:security-authentication-type>simple</n1:security-authentication-type>
  <n1:ldap-domain-name>OFSS.COM</n1:ldap-domain-name>
  <n1:ldap-server-time-out-duration>0</n1:ldap-server-time-out-duration>
</sec:authentication-provider>
```

- b) Make sure tag values matches the value given during Property file creation.

## 1.2.2 Configuring libovd for single Entity

You need to configure the libovd details. Follow the steps given below:

1. Along with the Oracle FLEXCUBE UBS EAR file, the Installer creates 'FCJJSPProvider.jar' file inside the BPELbuild folder under SOURCE directory.
2. On the application server host, create a folder by name 'classes' at the location '<MIDDLEWARE\_HOME>soa\soa\modules\oracle.soa.ext\_11.1.x'.
3. Extract the file 'FCJJSPProvider.jar' and from the extracted content, copy the folder 'com' to: '<MIDDLEWARE\_HOME>soa\soa\modules\oracle.soa.ext\_11.1.x\classes'.

4. Navigate to the location  
'<MIDDLEWARE\_HOME>soa\soa\modules\oracle.soa.ext\_11.1.x\classes\com\ofss\fcc\bpel\cac'. Edit the properties file 'CISProperties.properties' and update 'JNDI.name' with the JNDI name same as Entity Name given in Multi Entity Names screen while creating property file 'fcubs.properties', e.g. 'jdbc/fcjdevDS'.
5. Copy 'FCJJSPProvider.jar' to  
'<MIDDLEWARE\_HOME>/user\_projects/domains/<domain\_name>/config/fmwconfig/ovd/plugins/lib'. Create the directory structure if it does not exist.
6. Copy the fcubs\_adapter.xml from this word doc to  
'<MIDDLEWARE\_HOME>/oracle\_common/modules/oracle.ovd/templates/

fcubs\_adapter.xml

7. Search for param name="DataSource" in fcubs\_adapter.xml and update its value with FCUBS Datasource name, e.g. updated parameter would look like  
<param\_name="DataSource" value="jdbc/fcjdevDS"/>.
8. Set environment variables in the command prompt, e.g. for linux shell,  

```
export ORACLE_HOME=/scratch/app/bpm12212(setting ORACLE_HOME)
export WL_HOME=/scratch/app/bpm12212/wlserver(setting WL_HOME)
export JAVA_HOME=/scratch/work_area/DBA/jdk1.8.0_144 (setting JAVA_HOME)
```
9. Execute "libovdadapterconfig" script which is present in  
'<MIDDLEWARE\_HOME>/oracle\_common/bin' with below parameters. Provide the below arguments with values for admin server host name or ip ,admin server port ,weblogic user id, domain home and fcubs datasource.  

```
./libovdadapterconfig.sh -adapterName fcubsadapter -adapterTemplate fcubs_adapter.xml -host
<ADMIN_SERVER_HOST> -port <ADMIN_PORT> -userName <WEBLOGIC_USERID> -domainPath
<DOMAIN_HOME> -dataStore DB -root ou=fcubs,dc=oracle,dc=com -contextName default -
dataSourceJNDIName <FCUBS_DATASOURCE_JNDI>
```
10. Once the above steps are completed, i.e. "Adapter created successfully: fcubsAdapter" message is displayed, restart the server.

### 1.2.3 **Configuring libovd for MultiEntity**

1. Continue step 1 to step5 from 1.2.2 section.
2. In the following steps replace the <EntityId> tag with the proper Entity name.
3. Copy the fcubs\_adapter\_<EntityId>.xml to  
'<MIDDLEWARE\_HOME>/oracle\_common/modules/oracle.ovd/templates/

fcubs\_adapter\_<EntityId>.xml

4. Search for <FCUBSDATASOURCE> in fcubs\_adapter\_< EntityId>.xml and update it with fcubs Datasource with the mapped Datasource for the entity in the property file.

EX:<param name="DataSource" value="<FCUBSDATASOURCE>"/>

5. Search for UserIdPattern Parameter and Update the value for OU to the entity name in lower case.

EX: <param name="UserIdPattern" value="cn=%USERID%,ou=< EntityId>,dc=oracle,dc=com"/>

6. Search for MultiEntityEnabled element and update the value to true.

EX: <param name="MultiEntityEnabled" value="true"/>

7. Search for EntityId element and update the value with the entity name in lower case which we have created.

EX:<param name="EntityId" value=" < EntityId >"/>

8. Search for ou=fcubs and update with entity id in lower case.

EX : ou= EntityId

9. Execute "libovdadapterconfig" script which is present in '<MIDDLEWARE\_HOME>/oracle\_common/bin' with below parameters. Update the admin server host name or ip ,admin server port ,weblogic user id, domain home ,root and fcubs datasource

libovdadapterconfig.sh -adapterName fcubsAdapter -adapterTemplate fcubs\_adapter\_< EntityId >.xml -host <ADMIN\_SERVER\_HOST> -port <ADMIN\_PORT> -userName <WEBLOGIC\_USERID> -domainPath <DOMAIN\_HOME> -dataStore DB -root ou=<EntityId>,dc=oracle,dc=com -contextName default -dataSourceJNDIName <FCUBSDATASOURCE name which we mapped in step4>

10. Repeat from step2 to step7 for each entity creation

11. Once the above steps are completed, restart the server.

Note:- for any misconfiguration in libovd

We can delete the existing fcubsAdapter and re run the ./libovdadapterconfig.sh

For deleting fcubsAdapter use the below command:

Log in to the WSLT console by running the WLST script.For example:

MW\_HOME/oracle\_common/common/bin/wlst.sh

(UNIX)MW\_HOME\oracle\_common\common\bin\wlst.cmd (Windows)

Connect to your Administration Server using the following syntax:

connect ('<WLS admin user name>','<WLS admin password>','t3://<admin server host>:<admin server port>')

For example:connect('weblogic','weblogic','t3://myserver:7001')

Delete the misconfigured adapter using the following syntax:

deleteAdapter(adapterName='fcubsAdapter')

Note the following:

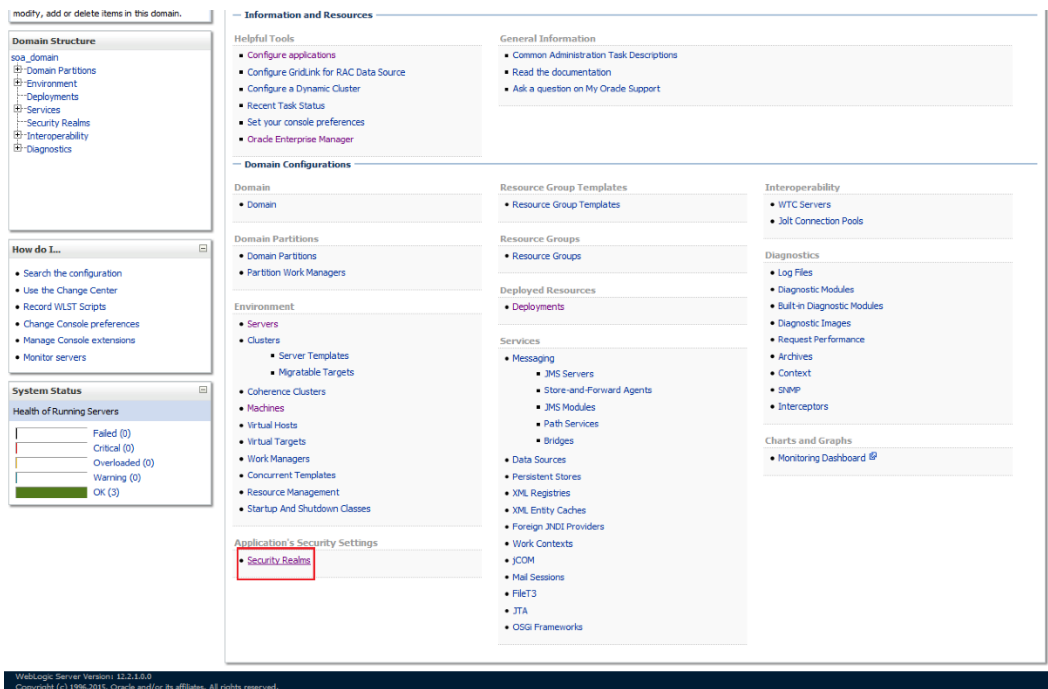

- In case of Multi Entity, all data sources must be created separately for each entity. The JNDI name will be differentiated by suffixing entity name.

Examples: If Data source is 'jdbc/fcjDevDs' then jdbc/fcjDevDs+entity name will be lookup the application. (jdbc/fcjDevDs+entity name) jndi should be presented in application server.

- For multi tenant deployment BPMN support will be available only for the logged entity.

### 1.2.4 Configuring for Multiple Providers for Multiple Entities

1. Login to the Adminserver.
2. Click on security Realms.

3. Click on myrealms.

**ORACLE WebLogic Server Administration Console 12c**

Welcome, weblogic | Connected to: soa\_doma

Home > Summary of Servers > Summary of Security Realms > myrealm > Providers > FCUBS > Summary of Security Realms > myrealm > Summary of Security Realms > myrealm > Summary of Security Realms

### Summary of Security Realms

A security realm is a container for the mechanisms—including users, groups, security roles, security policies, and security providers—that are used to protect WebLogic resources. You can have multiple active security realms in a WebLogic Server domain, but only one can be set as the default security realm, which is reserved for domain administrative purposes.

This Security Realms page lists each security realm that has been configured in this WebLogic Server domain. Click the name of the realm to explore and configure that realm.

**Customize this table**

Realms (Filtered - More Columns Exist)

Name	Default Realm
myrealm	true

Showing 1 to 1 of 1 Previous | Next

Save

Use this page to configure the general behavior of this security realm.

Note: If you are implementing security using JACC (Java Authorization Contract for Containers as defined in JSR 115), you must use the DD Only security model. Other WebLogic Server models are not available and the security functions for Web applications and EJBs in the Administration Console are disabled.

**Name:** myrealm The name of this security realm. [More Info...](#)

**Security Model Default:** DD Only Specifies the default security model for Web applications or EJBs that are secured by this security realm. You can override this default during deployment. [More Info...](#)

**Combined Role Mapping Enabled** Determines how the role mappings in the Enterprise Application, Web application, and EJB containers interact. This setting is valid only for Web applications and EJBs that use the Advanced security model and that initialize roles from deployment descriptors. [More Info...](#)

**Use Authorization Providers to Protect JMX Access** Configures the WebLogic Server MBean servers to use the security realm's Authorization providers to determine whether a JMX client has permission to access an MBean attribute or invoke an MBean operation. [More Info...](#)

**Automatically Restart After Non-Dynamic Changes** Specifies whether the Realm will be auto-restarted if non-dynamic changes are made to the realm or providers within the realm. [More Info...](#)

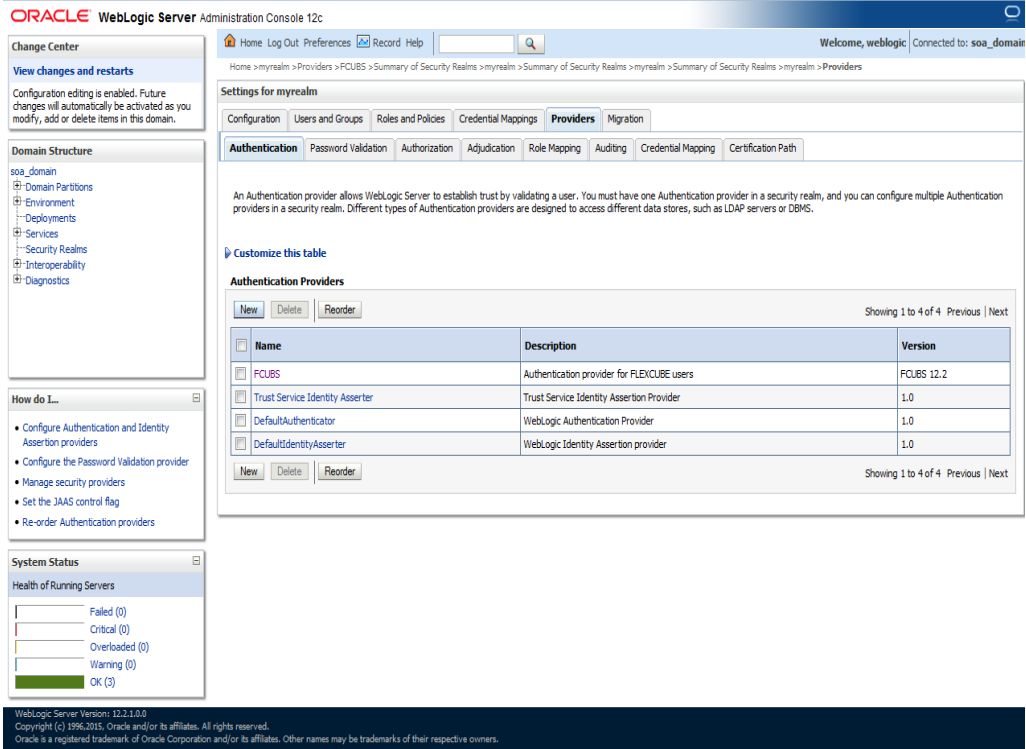

**Retire Timeout:** 60 Specifies the retire timeout for a realm that is restarted. The old realm will be shutdown after the specified timeout period has elapsed. [More Info...](#)

11. Change the JNDI name to the Datasource JNDI name which have mapped to the entity in the property file level and check the multi entity enabled checkbox.

12. Enter the EntityId with the Entity name which we created in the property file level and click on save

13. Create the new datasource for each entity with the JNDI name which we mapped in the property file.
14. Restart the Admin server
15. Continue the step1 to step15 for each provider creation in multientity scenario.

## 1.2.5 Configuring DBAdapter

In order to configure DBAdapter, follow the steps given below.

1. Log in to 'Weblogic Console' and click 'Deployment' under 'Domain Structure'.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The main content area is titled 'Summary of Deployments' and contains a table of applications. The table has columns for Name, State, Health, Type, Targets, and Deployment Order. The 'DBAdapter' application is highlighted in red, indicating it is the focus of the configuration step.

Name	State	Health	Type	Targets	Deployment Order
AQAdapter	Active	OK	Resource Adapter	soa_server1	324
mqb2bui	Active	OK	Enterprise Application	soa_server1	313
BamComposer	New		Enterprise Application	bam_server1	500
BamCQService	New		Enterprise Application	bam_server1	300
BamServer	New		Enterprise Application	bam_server1	400
BPMComposer	Active	OK	Enterprise Application	soa_server1	385
coherence-transaction-rar	Active	OK	Resource Adapter	AdminServer, bam_server1, soa_server1	100
CoherenceAdapter	Installed		Resource Adapter		331
<b>DBAdapter</b>	Active	OK	Resource Adapter	soa_server1	322
DefaultToDoTaskFlow	Active	OK	Enterprise Application	soa_server1	314
DMS Application (12.1.3.0.0)	Active	OK	Web Application	AdminServer, bam_server1, soa_server1	5
em	Active	OK	Enterprise Application	AdminServer	400
FCUBSApp (12.1.0.0)	Prepared	OK	Enterprise Application	soa_server1	500

- In the Deployments table, select 'DbAdapter'. You will be navigated to 'Settings for DbAdapter'.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The main content area displays the 'Settings for DbAdapter' page, specifically the 'Configuration' tab and the 'Outbound Connection Pools' sub-tab. A table titled 'Outbound Connection Pool Configuration Table' is visible, showing a single entry for 'javax.resource.cci.ConnectionFactory' under the 'Groups and Instances' section. The 'Connection Factory Interface' column also shows 'javax.resource.cci.ConnectionFactory'. The interface includes a navigation menu on the left with options like 'Change Center', 'Domain Structure', 'How do I...', and 'System Status'. The top of the console shows the user 'weblogic' is logged in and connected to the 'Dev1201\_domain'.

- Click 'Configuration' tab and select 'Outbound Connection Pools' under it.
- Under 'Groups and Instances', click and expand 'javax.resource.cci.ConnectionFactory'.
- Click 'New' and select 'javax.resource.cci.ConnectionFactory' in Outbound Connection Group.
- Define 'JNDI Name' as 'eis/DB/FCCDEV' and click on 'Finish'.

The 'jndi name' should be the same as the one in 'Dbutility sub-process'.

- Click 'DbAdapter' again. Click 'Configuration' tab and select 'Outbound Connection Pools'.
- Under 'Groups and Instances', click and expand 'javax.resource.cci.ConnectionFactory'.
- The new JNDI name is listed.
- Click on the hyperlink 'eis/DB/FCCDEV'.

11. Click the 'Property Value' field for the 'DataSourceName' and update the application JNDI reference (given in 'fcubs.properties' file) and then press 'Enter' key.
12. Save and restart the Admin server.

## 1.2.6 Configuring JMS Adapter

1. Login in to console → Click on JMS Servers→New

The screenshot shows the Oracle WebLogic Server Administration Console 12c Home Page. The left sidebar contains navigation panels for Change Center, Domain Structure, How do I..., and System Status. The main content area is titled 'Home Page' and includes sections for Information and Resources, Domain Configurations, Environment, Services, Interoperability, Diagnostics, and Charts and Graphs. The 'Services' section is expanded, and the 'JMS Servers' link is circled in red.

The screenshot shows the Oracle WebLogic Server Administration Console 12c Summary of JMS Servers page. The page provides an overview of JMS servers and includes a table of existing servers. A 'New' button is circled in red in the table's header row.

JMS servers act as management containers for the queues and topics in JMS modules that are targeted to them. This page summarizes the JMS servers that have been created in the current WebLogic Server domain.

**Customize this table**

**JMS Servers (Filtered - More Columns Exist)**

Name	Persistent Store	Target	Current Target	Health

Summary of JMS Servers

JMS servers act as management containers for the queues and topics in JMS modules that are targeted to them. This page summarizes the JMS servers that have been created in the current WebLogic Server domain.

Customize this table

JMS Servers (Filtered - More Columns Exist)

Name	Persistent Store	Target	Current Target	Health

The screenshot shows the Oracle WebLogic Server Administration Console 12c interface. The main content area displays the 'Summary of JMS Modules' page. A table titled 'JMS Modules' lists several system modules, with the 'New' button at the top left of the table highlighted with a red circle. The table has columns for 'Name' and 'Type'. The 'Name' column is currently empty, and the 'Type' column shows 'System' for all listed modules.

Name	Type
BamAlertEngineJmsSystemModule	System
BamCQServiceJmsSystemResource_BAMServer	System
BamReportCacheJmsSystemModule	System
BamServerJmsSystemResource	System
BPMJmsModule	System
SOAJmsModule	System
UMSAQJmsSystemResource	System
UMSJmsSystemResource	System

5. Create a JMS Module with the Name, FCUBSJMSModule. Click on Next→Select the target as SOA Server→Finish

The screenshot shows the 'Create JMS System Module' wizard in the Oracle WebLogic Server Administration Console 12c. The wizard is at the 'Name' step, where the 'Name' field is filled with 'FCUBSJMSModule'. The 'Descriptor File Name' and 'Location In Domain' fields are empty. The 'Next' button is highlighted.

The following properties will be used to identify your new module.

JMS system resources are configured and stored as modules similar to standard J2EE modules. Such resources include queues, topics, connection factories, templates, destination keys, quota, distributed queues, distributed topics, foreign servers, and JMS store-and-forward (SAF) parameters. You can administratively configure and manage JMS system modules as global system resources.

\* Indicates required fields

What would you like to name your System Module?

\* Name:

What would you like to name the descriptor file name? If you do not provide a name, a default will be assigned.

Descriptor File Name:

Where would like to place the descriptor for this System Module, relative to the jms configuration sub-directory of your domain?

Location In Domain:

**Configuration** Subdeployments Targets Security Notes

This page displays general information about a JMS system module and its resources. It also allows you to configure new resources and access existing resources.

**Name:** FCUBSJMSModule The name of this JMS system module. [More Info...](#)

**Descriptor File Name:** jms/FCUBSJMSModule-jms.xml The name of the JMS module descriptor file. [More Info...](#)

This page summarizes the JMS resources that have been created for this JMS system module, including queue and topic destinations, connection factories, JMS templates, destination sort keys, destination quota, distributed destinations, foreign servers, and store-and-forward parameters.

**Summary of Resources**

Name	Type	JNDI Name	Subdeployment	Targets
FCUBSConnectionFactory	Connection Factory	jndi/FCUBSConnectionFactory	FCUBS	FCUBSJMSServer

9. Go back to console → Click on JMS Modules → New → check on Queue → next

Use these pages to create resources in a JMS system module, such as queues, topics, templates, and connection factories.

Depending on the type of resource you select, you are prompted to enter basic information for creating the resource. For targetable resources, like stand-alone queues and topics, connection factories, distributed queues and topics, foreign servers, and JMS SAF destinations, you can also proceed to targeting pages for selecting appropriate server targets. You can also associate targetable resources with subdeployments, which is an advanced mechanism for grouping JMS module resources and the members to server resources.

- Connection Factory** Defines a set of connection configuration parameters that are used to create connections for JMS clients. [More Info...](#)
- Queue** Defines a point-to-point destination type, which are used for asynchronous peer communications. A message delivered to a queue is distributed to only one consumer. [More Info...](#)
- Topic** Defines a publish/subscribe destination type, which are used for asynchronous peer communications. A message delivered to a topic is distributed to all topic consumers. [More Info...](#)
- Distributed Queue** Defines a set of queues that are distributed on multiple JMS servers, but which are accessible as a single, logical queue to JMS clients. [More Info...](#)
- Distributed Topic** Defines a set of topics that are distributed on multiple JMS servers, but which are accessible as a single, logical topic to JMS clients. [More Info...](#)
- Foreign Server** Defines foreign messaging providers or remote WebLogic Server instances that are not part of the current domain. [More Info...](#)
- Quota** Controls the allotment of system resources available to destinations. [More Info...](#)
- Destination Sort Key** Defines a unique sort order that destinations can apply to arriving messages. [More Info...](#)
- JMS Template** Defines a set of default configuration settings for multiple destinations. [More Info...](#)
- SAF Imported Destinations** Defines a collection of imported store-and-forward (SAF) destinations. A SAF destination is a representation of a queue or topic in a remote server instance or cluster that is imported into the local cluster or server instance, so that the local server instance or cluster can send messages to the remote server instance or cluster. [More Info...](#)
- Remote SAF Context** Defines the URL of the remote server instance or cluster where a JMS destination is exported from. It also contains the security credentials to be authenticated and authorized in the remote cluster or server. [More Info...](#)
- SAF Error Handling** Defines the action to take when the SAF service fails to forward messages to remote destinations. [More Info...](#)

[Back](#) [Next](#) [Finish](#) [Cancel](#)

### Settings for JmsAdapter

Overview | Deployment Plan | **Configuration** | Security | Targets | Control | Testing | Monitoring | Notes

General | Properties | **Outbound Connection Pools** | Admin Objects | Workload | Instrumentation

This page displays a table of Outbound Connection Pool groups and instances for this resource adapter. The top level entries in the table represent Outbound Connection Pool groups. Groups are listed by connection factory interface and the instances are listed by their JNDI names. Expand a group to obtain configuration information for a Connection Pool instance within an Outbound Connection Pool group. Click the name of a group or instance to configure it. Automatically generated Connection Pools are not displayed in the table below.

13. Click on the Outbound connection pool with **eis/Queue/Notif** and enter the connection factory location as **jndi/FCUBSConnectionFactory** → press Enter and Save

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Settings for oracle.tip.adapter.jms.DmsConnectionFactory". It has tabs for General, Properties, Transaction, Authentication, Connection Pool, and Logging. The "Properties" tab is active, displaying a table of configuration properties. The "ConnectionFactoryLocation" property is highlighted, and its value is being edited to "jndi/FCUBSConnectionFactory".

Property Name	Property Type	Property Value	Supports Dynamic Updates
AcknowledgeMode	java.lang.String	AUTO_ACKNOWLEDGE	false
ConnectionFactoryLocation	java.lang.String	jndi/FCUBSConnec	false
FactoryProperties	java.lang.String		false
IsTopic	java.lang.Boolean	false	false
IsTransacted	java.lang.Boolean	false	false
Password	java.lang.String		false
Username	java.lang.String		false

The screenshot shows the Oracle WebLogic Server Administration Console after the configuration changes. The "ConnectionFactoryLocation" property in the table is now "jndi/FCUBSConnectionFactory". Above the table, a message states: "All changes have been activated. No restarts are necessary." and "Deployment plan has been successfully updated." The "System Status" section shows 2 OK servers.

Property Name	Property Type	Property Value	Supports Dynamic Updates
AcknowledgeMode	java.lang.String	AUTO_ACKNOWLEDGE	false
ConnectionFactoryLocation	java.lang.String	jndi/FCUBSConnectionFactory	false
FactoryProperties	java.lang.String		false
IsTopic	java.lang.Boolean	false	false
IsTransacted	java.lang.Boolean	false	false
Password	java.lang.String		false
Username	java.lang.String		false

14. Go to console → Deployments → JMS adapter → Update → Next → Next → finish

DMS Application (12.1.3.0.0)	Active	OK	Web Application	AdminServer, BAMServer, SOAServer	5

15. Create the out bound connection pool with the **eis/wls/Queue** name in the Deployments using connection factory **jndi/FCUBSConnectionFactory**.

## 1.2.7 Configuring FTP Adapter

1. Login to console → Deployments → FTP Adapter → Configuration → Outbound Connection Pool → New

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Settings for FtpAdapter" and has several tabs: Overview, Deployment Plan, Configuration, Security, Targets, Control, Testing, Monitoring, and Notes. The "Configuration" tab is active, and within it, the "Outbound Connection Pools" sub-tab is selected. Below the tabs, there is a descriptive paragraph and a table titled "Outbound Connection Pool Configuration Table".

Groups and Instances	Connection Factory Interface
javax.resource.cd.ConnectionFactory	javax.resource.cd.ConnectionFactory
eis/ftp/CoherenceHftpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapterLcl	javax.resource.cd.ConnectionFactory
eis/ftp/FtpAdapter_VMS	javax.resource.cd.ConnectionFactory
eis/ftp/FtpsAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapter	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapterDB2	javax.resource.cd.ConnectionFactory
eis/ftp/HftpAdapterMSSQL	javax.resource.cd.ConnectionFactory
eis/ftp/LocalTransactionFtpAdapter	javax.resource.cd.ConnectionFactory

The screenshot shows the "Create a New Outbound Connection" form in the Oracle WebLogic Server Administration Console. The form has a "Back", "Next", "Finish", and "Cancel" button bar at the top. Below this, there is a section titled "JNDI name for Outbound Connection Instance" with a text input field containing "eis/ftp/FtpAdapterLcl". There are also "Back", "Next", "Finish", and "Cancel" buttons at the bottom of the form.

2. Add JNDI name as eis/ftp/FtpAdapterLcl
3. Click finish and save.

### 1.2.7.1 BIP Interactive reports configuration

The Following set of instructions can be followed if the BPEL needs to be configured with BIP interactive reports

1. Login to the BIP domain console, `http/s:<hostname>:<port>/console`.
2. Follow the step 1.2.1 to add the “FCJCustomProvider”.

After adding, Navigate to security realms >myrealm > Users and Groups and check if the users from the schema are displayed in Users tab, and Roles from the schema are displayed under the Groups Tab.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The main content area is titled 'Settings for myrealm' and has tabs for 'Configuration', 'Users and Groups', 'Roles and Policies', 'Credential Mappings', 'Providers', and 'Migration'. The 'Users and Groups' tab is active, and the 'Users' sub-tab is selected. A table lists users with columns for Name, Description, and Provider. The 'Security Realms' menu item in the left navigation pane is highlighted.

Name	Description	Provider
000ANT_1	Default Admin User 1	FCJCustomProvider
11111RM_3	Siveta	FCJCustomProvider
11111RM_4	RM	FCJCustomProvider
112233	Default Admin User 10	FCJCustomProvider
121212	Default Admin User 10	FCJCustomProvider
123456	SANKER GS	FCJCustomProvider
141414	Default Admin User 10	FCJCustomProvider
15259A03	Kumar	FCJCustomProvider
1M20862	BALA	FCJCustomProvider
20862A1	Bala	FCJCustomProvider

3. Login to the Enterprise Manager (em) `http/s:<hostname>:<port>/em`
  - Right click on the domain(in which BI suite is installed) under the weblogic domain
  - Go to security and then navigate to application roles

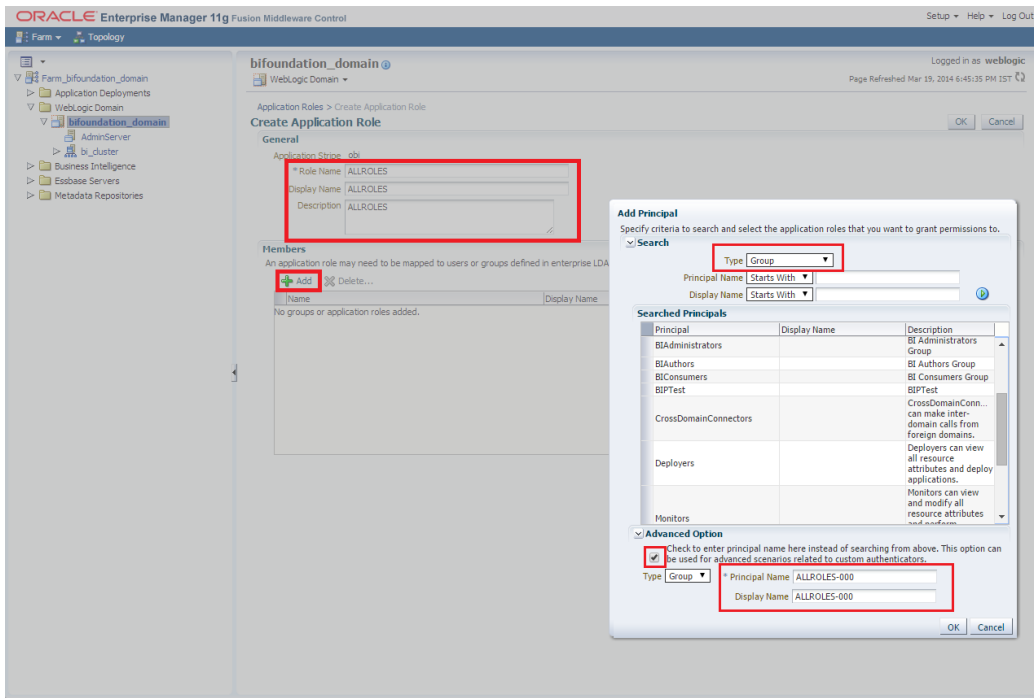

4. After navigating to next screen as in below screenshot,

- Select application stripe as obi
- Click on the search button
- Click on create button to add a role

5. After navigating to next screen as in below screenshot,
  - Enter the role name(mandatory), display name(optional), description(optional)
  - Click on the Add button
  - In the Add Principal pop up select type as “Group”
  - In the advanced option check the checkbox and again select the type as “Group” below
    - Click on the Search button, if the roles are listed then select the roles like ALLROLES-000, ADMINROLE-000 from the list.
    - or
    - Enter the Principal Name (mandatory), which is actually the role present in the FCUBS (ex: ALLROLES-000, ADMINROLE-000), Display Name (optional).
  - After completing click on OK button in pop up window and also in the screen.

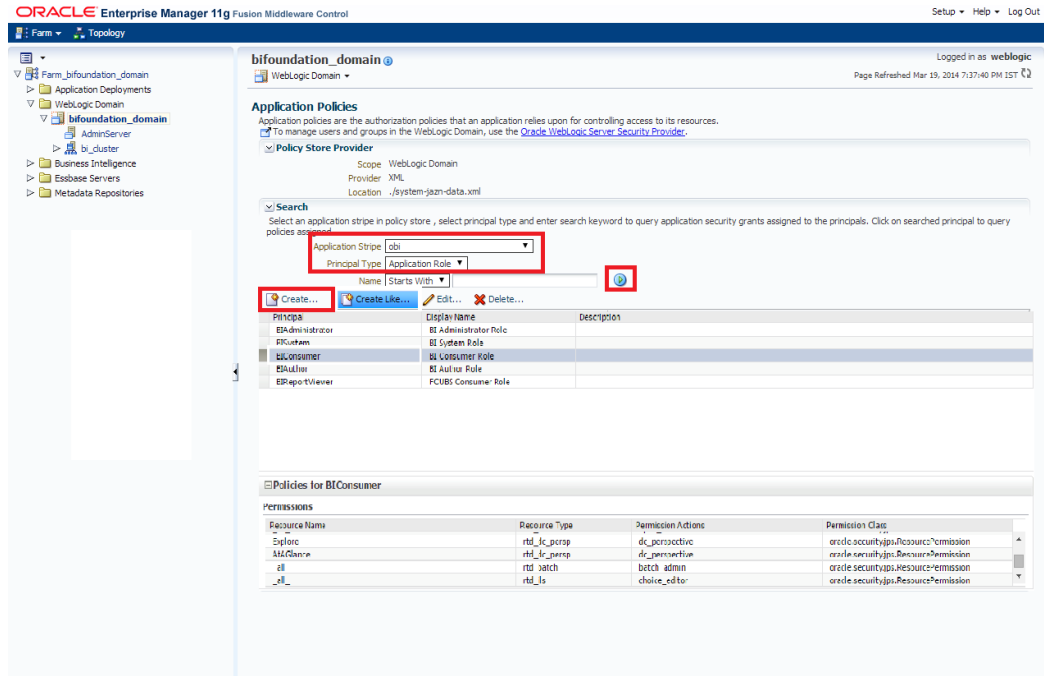

6. After getting information message like “A new role added successfully”, then again
  - Right click on the domain(in which BI suite is installed) under the weblogic domain
  - Go to security and then navigate to application polices

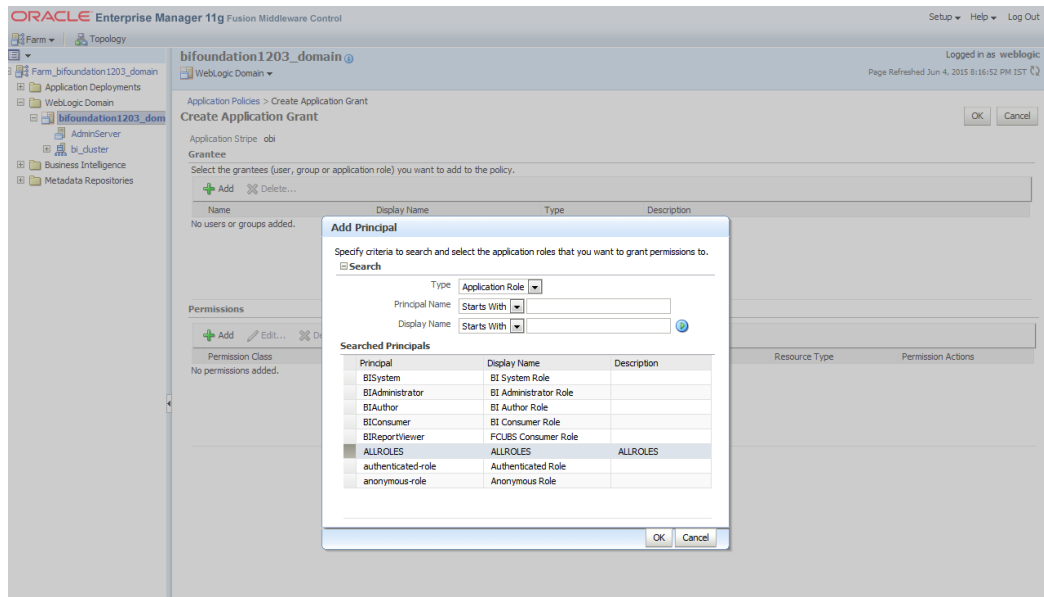

7. After navigating to next screen as per screen shot,

- Select the application stripe as obi, principal type as “Application Role”
- Click on the search button
- Select BIConsumer(it should be highlighted) from the list and click on the create like button.

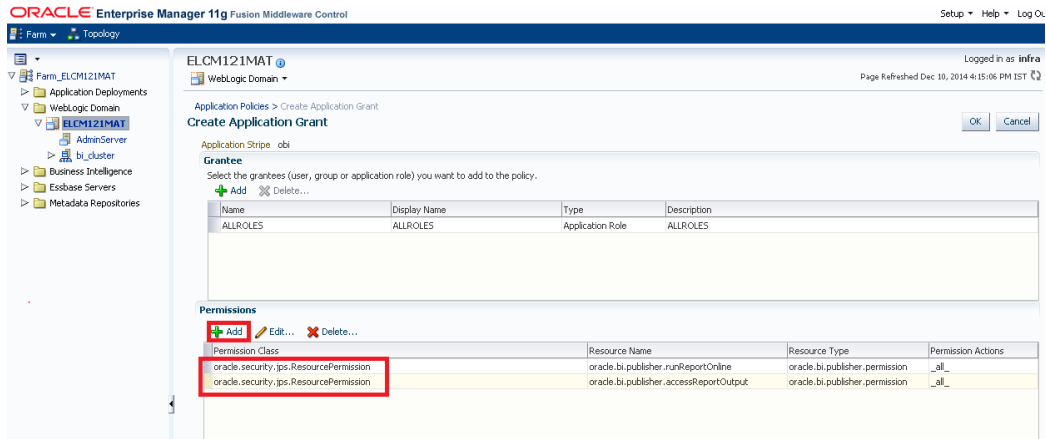

8. After navigating to next screen as per the screen shot,

- Click on Add button , a new window “Add Principal” will be launched.
- Select Type as “Application Role” and click on the search button
- From the list select the role that has been created earlier in application role screen and click on OK button in pop up window and screen.

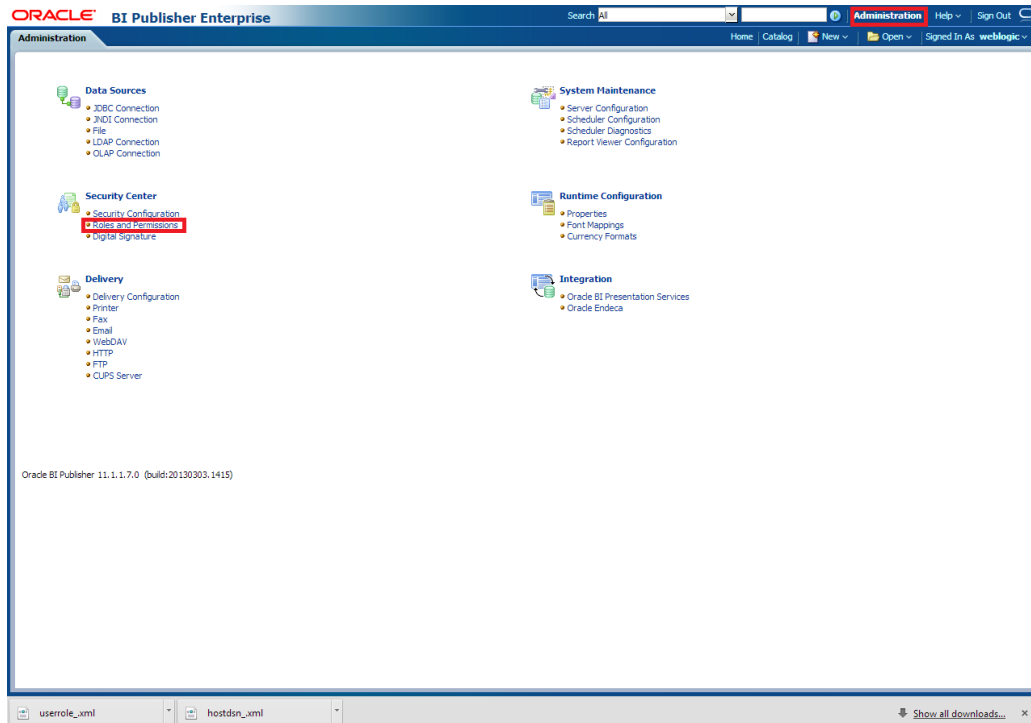

- Click Add button under Permissions and add the two permissions one by one as mentioned below.

- oracle.bi.publisher.runReportOnline
- oracle.bi.publisher.accessReportOutput

9. After getting information message like “A security added successfully”,

- Login into the BIPublisher , [http/s:<hostname>:<port>/xmlpserver](http://s:<hostname>:<port>/xmlpserver)
- Click on the Administration .
- Click on the Roles and Permission under Security center and check if the added role(in em) is displayed, If not restart the servers.

10. Then click on the Catalog , then on the folder that has been created , and then on permissions

11. After clicking on the permissions, a new window will pop up, delete all the roles if any present on click of permissions, then click on Add button, and then click on search button in “Add Roles” window that is launched newly and select the role that has been created and click on move button and click on OK.

12. Finally, the role will be added and select the options that has to be provided for the particular role and check if the permissions is only to items within the folder if necessary.

Now the reports in the folder will be accessed accordingly based on the roles.

**Note:**

In the similar way we can set the permissions at report level also for particular role.

13. Please login in to Bi Publisher <http://server:port/xmlpserver>.

14. Click on Administration→ JDBC connection→Add Data Source

Add Data Source | Previous | 1-10 of 16 | Next 6

15. Please create the data source with data source name as **FCSOA** and use soa schema details to create the same.

The screenshot shows the Oracle BI Publisher Enterprise Administration console. The breadcrumb navigation is Administration > JDBC > Add Data Source. The page title is 'Add Data Source'. There are 'Apply' and 'Cancel' buttons at the top right. The 'General' section contains the following fields:

- Data Source Name: FCSOA
- Driver Type: Oracle 11g
- Database Driver Class: oracle.jdbc.OracleDriver
- Connection String: jdbc:oracle:thin:@//ofss222783.in.oracle.com:1521/FCUBSDEV121
- Use System User:
- Username: DEV12C\_SOAINFRA
- Password: [masked]
- Pre Process Function: [empty]
- Post Process Function: [empty]
- Use Proxy Authentication:
- Test Connection button

The 'Backup Data Source' section contains:

- Use Backup Data Source:
- Connection String: [empty]
- Username: [empty]
- Password: [empty]
- Test Connection button

16. Add the fcubs roles to allowed Roles under security

The screenshot shows the Oracle BI Publisher Enterprise Administration console. The breadcrumb navigation is Administration > Security > Add Data Source. The page title is 'Add Data Source'. The 'Security' section contains the following fields:

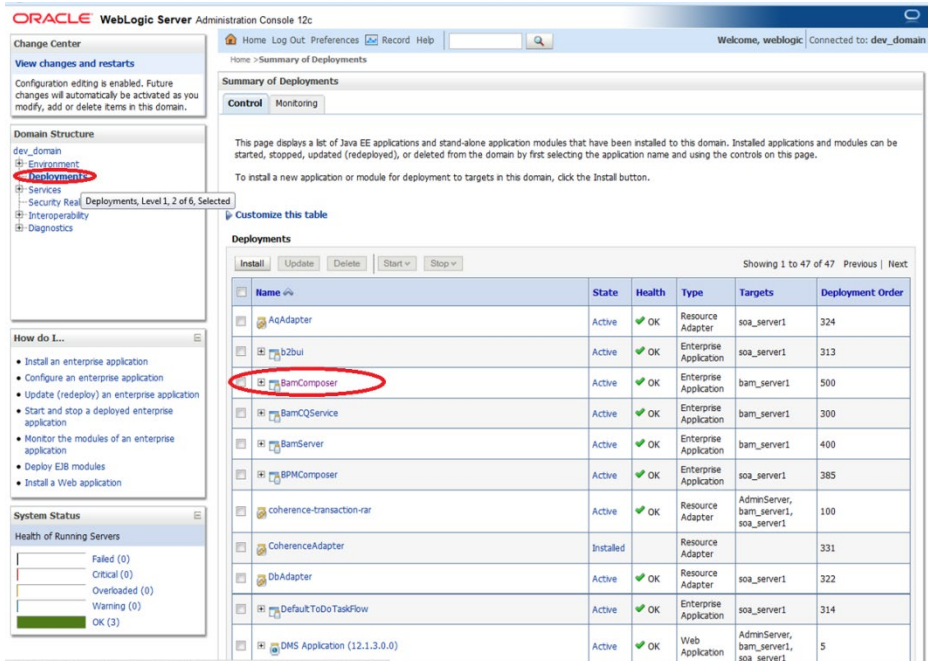

- Allow Guest Access:
- Available Roles: BI Administrator Role, BI Author Role, BI Consumer Role, BI System Role, FCUBS Consumer Role
- Allowed Roles: ALLROLES
- Move button
- Move All button
- Remove button
- Remove All button

17. Click on test connection .once the connection is established succesfully .Click on Apply.

18. Please follow the steps 15 to 17 to create data source for FCUBS Schema and give the name as FCBIPBPEL

## 1.2.8 **BAM Report Configuration settings**

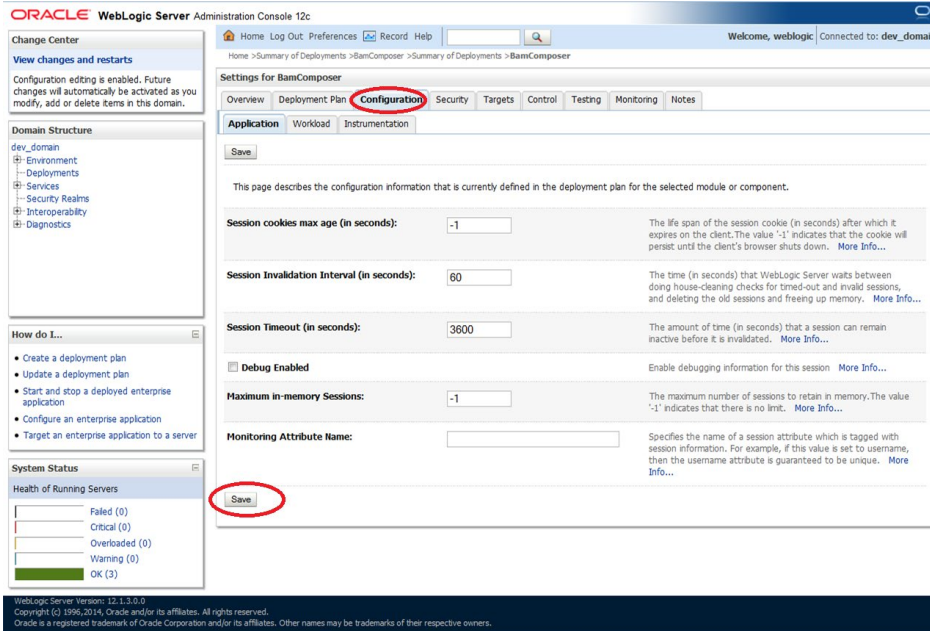

1. The Following set of instructions can be followed if the BPEL need to be configured with BAM reportsGenerate a deployment plan for BAM Composer Application.
2. Login in to console <http://hostname:port/console>
3. Click on Deployments→click on BAM Composer

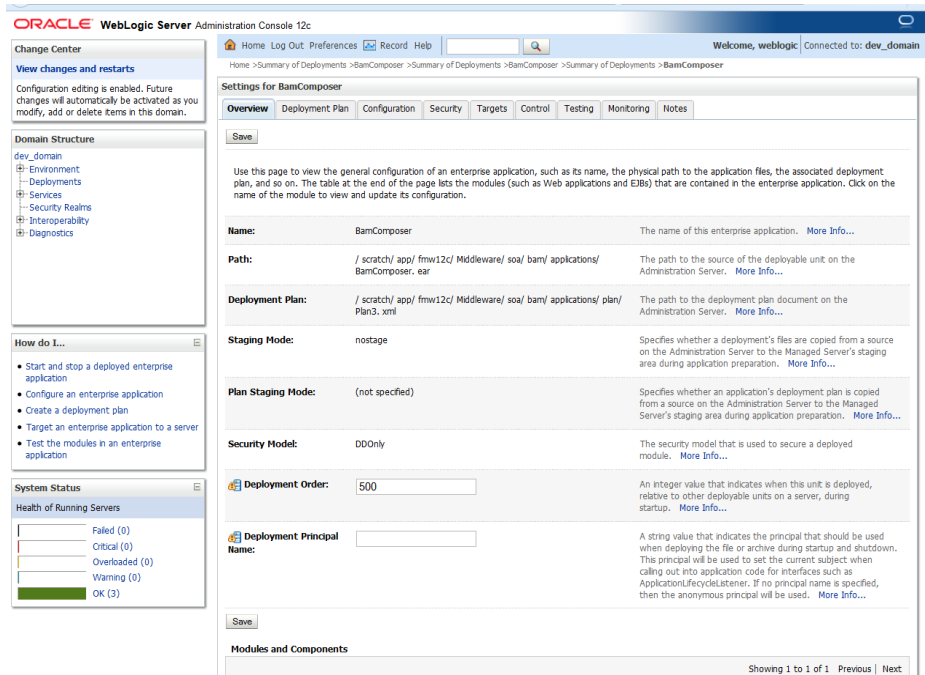

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area displays the 'Summary of Deployments' page. On the left sidebar, the 'Domain Structure' tree is visible, with 'Deployments' highlighted. The main table lists various deployed applications. The 'BAMComposer' application is circled in red in the original image. Below the table, there are buttons for 'Install', 'Update', 'Delete', 'Start', and 'Stop'.

Name	State	Health	Type	Targets	Deployment Order
AGAdapter	Active	OK	Resource Adapter	soa_server1	324
b2bui	Active	OK	Enterprise Application	soa_server1	313
<b>BAMComposer</b>	Active	OK	Enterprise Application	bam_server1	500
BAMCQService	Active	OK	Enterprise Application	bam_server1	300
BAMServer	Active	OK	Enterprise Application	bam_server1	400
BPMComposer	Active	OK	Enterprise Application	soa_server1	385
coherence-transaction-var	Active	OK	Resource Adapter	AdminServer, bam_server1, soa_server1	100
CoherenceAdapter	Installed		Resource Adapter		331
DBAdapter	Active	OK	Resource Adapter	soa_server1	322
DefaultToDoTaskFlow	Active	OK	Enterprise Application	soa_server1	314
DMS Application (12.1.3.0.0)	Active	OK	Web Application	AdminServer, bam_server1, soa_server1	5

4. click on Configuration Configuration →Save

5. Click on Overview→check the deployment plan location

6. Add variable and variable assignment as below to the Plan.xml in <module-name>BamComposerWeb.war</module-name> and for reference please find plan.xml file.

```

<variable>
  <name>oracle.adf.view.rich.security.FRAME_BUSTING</name>
  <value>never</value>
</variable>

```

```

<module-descriptor external="true">
  <root-element>web-app</root-element>
  <uri>WEB-INF/web.xml</uri>
  <variable-assignment>
    <name>oracle.adf.view.rich.security.FRAME_BUSTING</name>
    <xpath>/web-app/context-param/[param-
name="oracle.adf.view.rich.security.FRAME_BUSTING"]/param-value</xpath>
    <origin>planbased</origin>
  </variable-assignment> </module-descriptor>

```

Plan3.xml

7. Stop the BAM composer application in console.

The screenshot shows the Oracle WebLogic Console interface. On the left, there are navigation tabs for Services, Security Realms, Interoperability, and Diagnostics. Below these are sections for 'How do I...' (listing tasks like installing and configuring applications) and 'System Status' (showing health of running servers). The main area displays a 'Deployments' table with columns for Name, Health, Type, Targets, and Deployment Order. The 'BAMComposer' application is highlighted with a red circle. A context menu is open over it, with 'Force Stop Now' selected. Other applications listed include AaAdapter, b2bul, BamCQService, BamServer, BPMComposer, coherence-transaction-car, CoherenceAdapter, DBAdapter, DefaultToDoTaskFlow, DMS Application (12.1.3.0.0), em, FOUBSAppJUT (12.1.0.0.0), FOUBSAppSoaEmb (12.1.0.0.0), FileAdapter, fevo, and EtnAdapter.

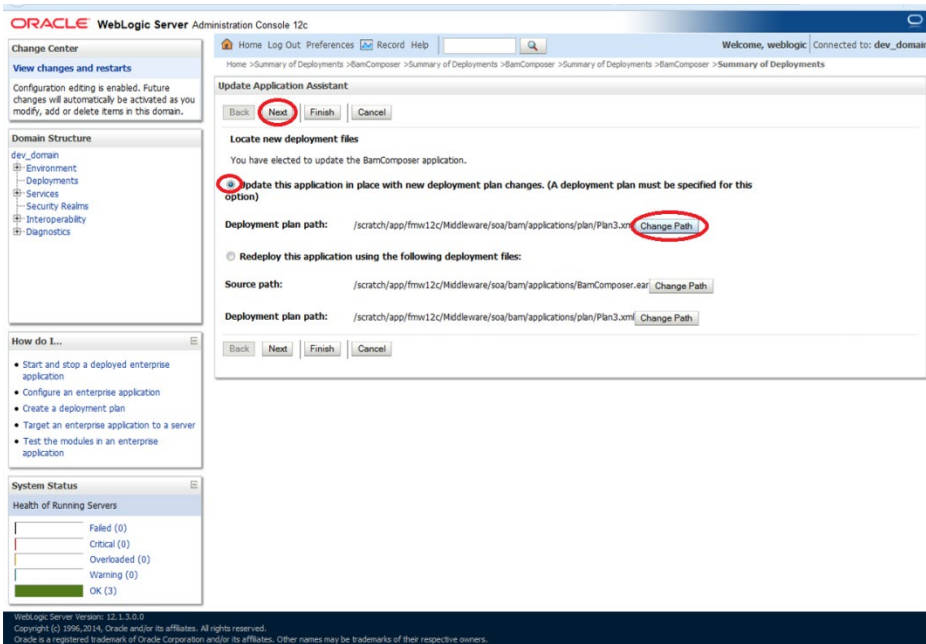

Name	Health	Type	Targets	Deployment Order
AaAdapter	OK	Resource Adapter	soa_server1	324
b2bul	OK	Enterprise Application	soa_server1	313
BAMComposer	OK	Enterprise Application	bam_server1	500
BamCQService	OK	Enterprise Application	bam_server1	300
BamServer	OK	Enterprise Application	bam_server1	400
BPMComposer	OK	Enterprise Application	soa_server1	385
coherence-transaction-car	OK	Resource Adapter	AdminServer, bam_server1, soa_server1	100
CoherenceAdapter	Installed	Resource Adapter		331
DBAdapter	OK	Resource Adapter	soa_server1	322
DefaultToDoTaskFlow	OK	Enterprise Application	soa_server1	314
DMS Application (12.1.3.0.0)	OK	Web Application	AdminServer, bam_server1, soa_server1	5
em	OK	Enterprise Application	AdminServer	400
FOUBSAppJUT (12.1.0.0.0)	Warning	Enterprise Application	soa_server1	600
FOUBSAppSoaEmb (12.1.0.0.0)	Prepared	Enterprise Application	soa_server1	601
FileAdapter	OK	Resource Adapter	soa_server1	321
fevo	Installed	Enterprise Application		100
EtnAdapter	OK	Resource	soa_server1	325

8. Update the deployment plan.

9. Click on deployments → click on BAM Composer checkbox → Click on update

10. Select the Update this application in place with new deployment plan changes and click on change path button.

11. Select the latest plan.xml in the in the path→next→next→Finish

**Update Application Assistant**

Select a deployment plan.

Select or enter a deployment plan for this app. The file must exist and have a .xml extension.

**Path:** /scratch/app/fmw12c/Middleware/soa/bam/applications/plan/Plan3.xml

**Recently Used Paths:**

- /scratch/app/fmw12c/Middleware/soa/bam/applications/plan
- /scratch/app/fmw12c/Middleware/soa/bam/applications
- /scratch/app/fmw12c/Middleware/soa/bam
- /scratch/work\_area/DEV/ear\_staging

**Current Location:** ofs221222 / scratch / app / fmw12c / Middleware / soa / bam / applications / plan

12. Restart the BAM Composer application in the console

13. Login in to em console <http://hostname:port/em>

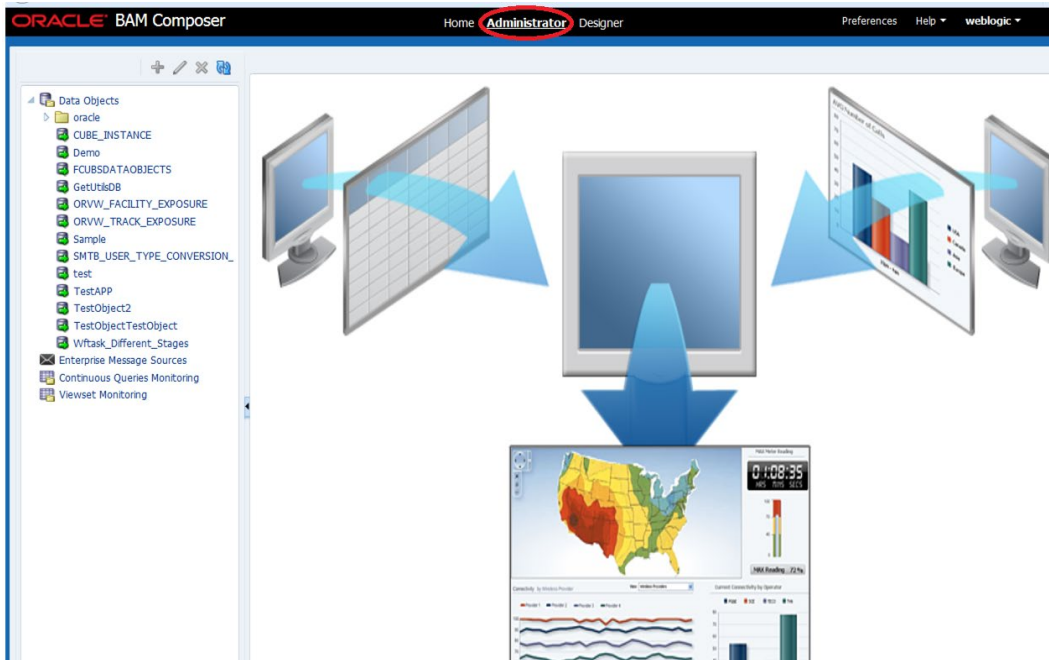

14. Right Click on BAM Server → Security → Application Roles

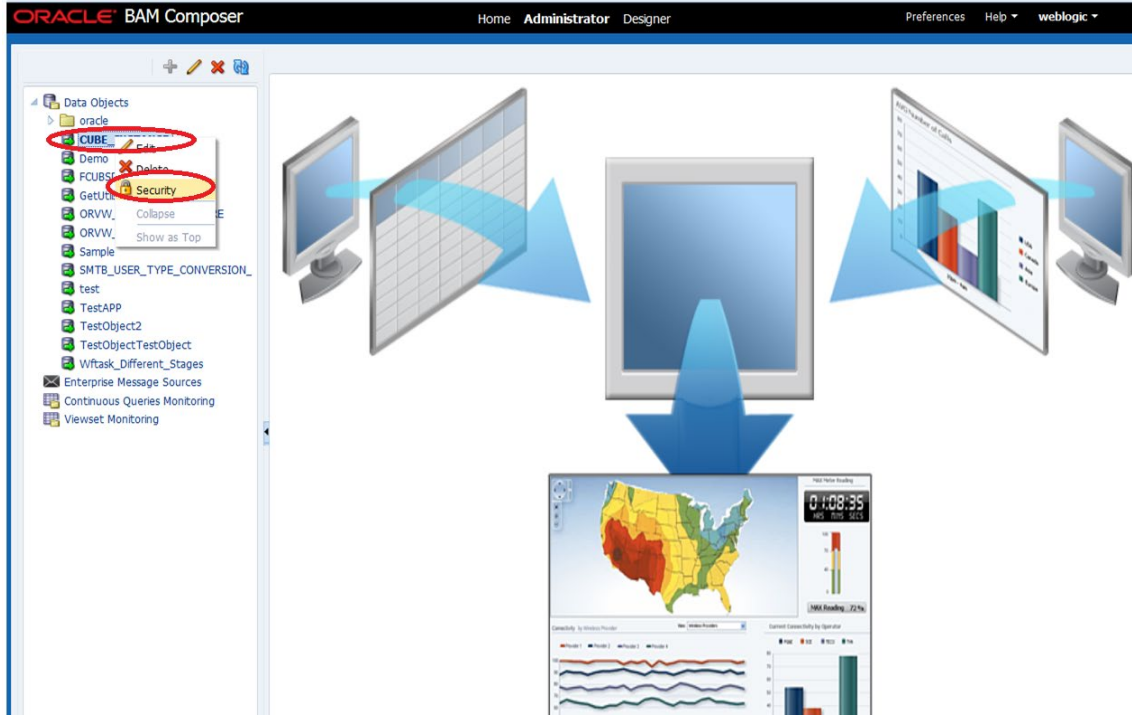

15. Click on Create → create application role with ALL ROLES-000 → Click on ADD button in the Members

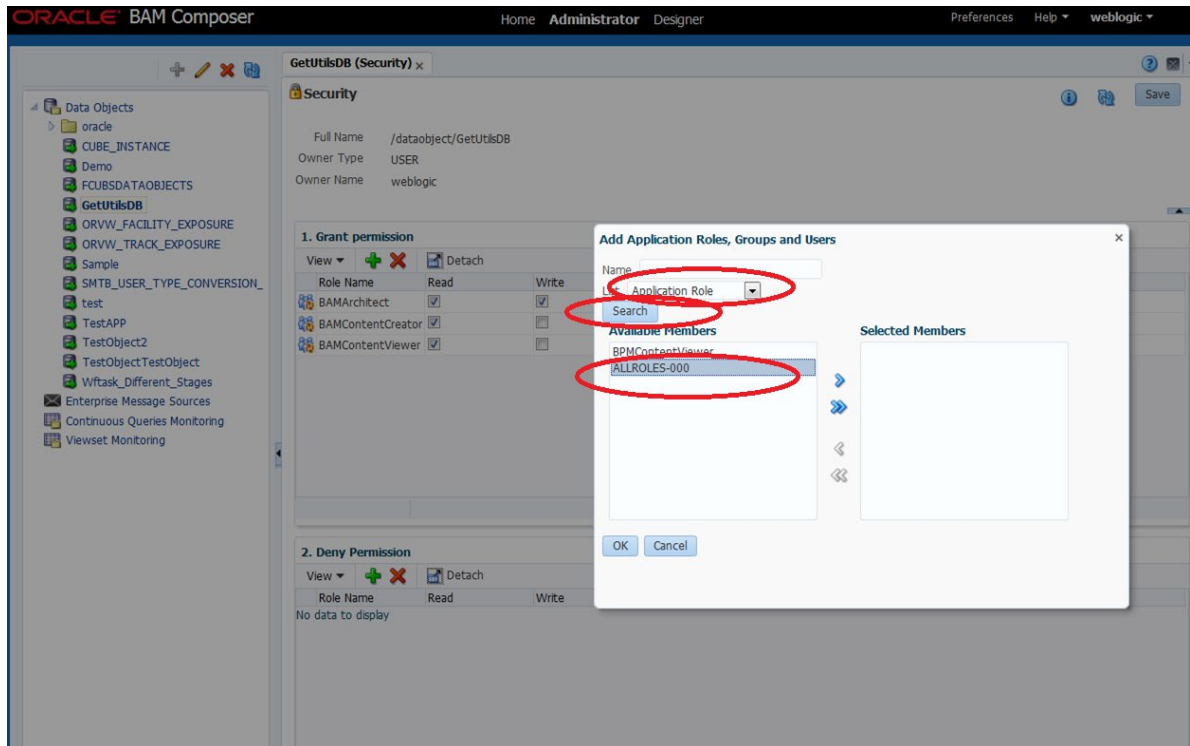

16. Select the Type as Group and add principle details be referring the below screen shot.
17. Login to BAM Composer → <http://hostname:port/bam/composer-->> Click on Administrator.

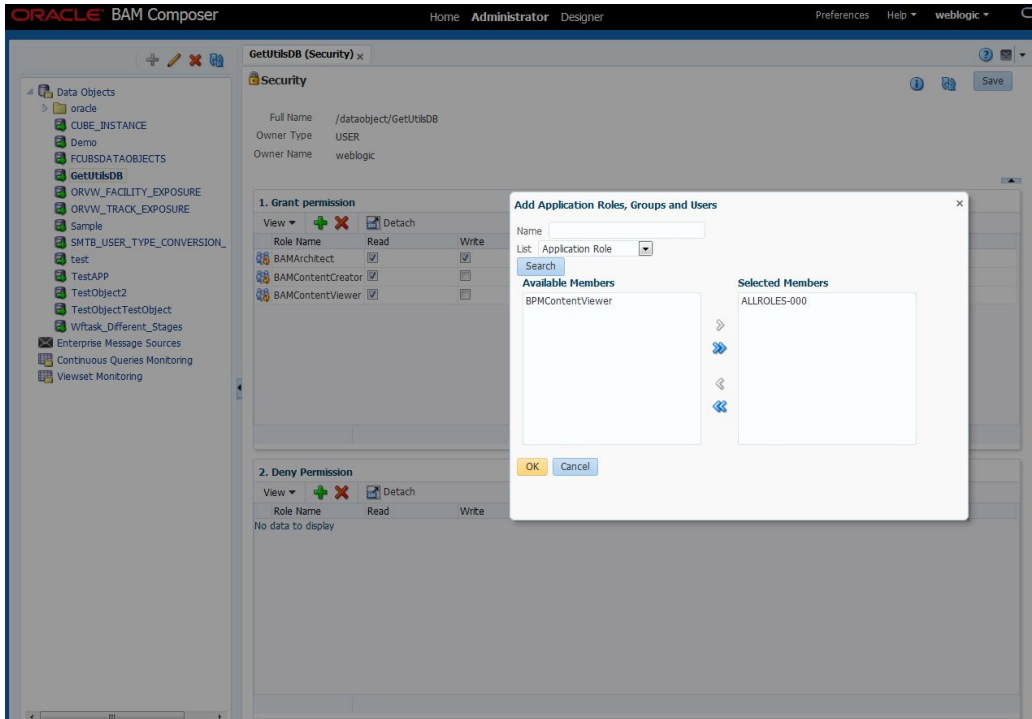

18. Go to Data Object→Right Click on CUBE\_INSTANCE→Security

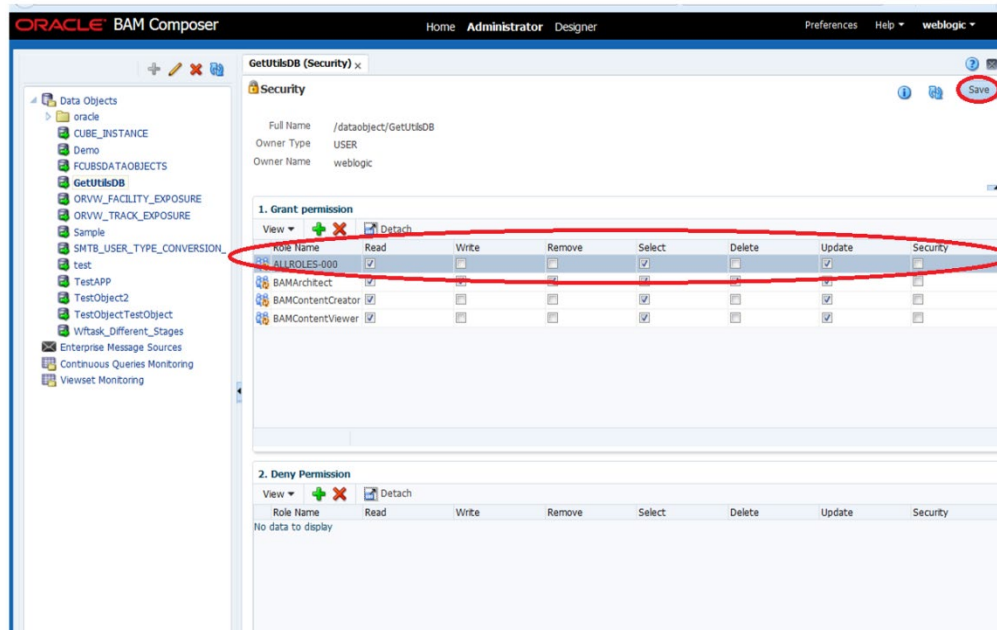

19. Click on Add button under Grant permission and search the list based on the Application Role

20. Move the ALLROLES-000 to Selected members.

21. Click on read, select and Update check boxes → Click on Save.

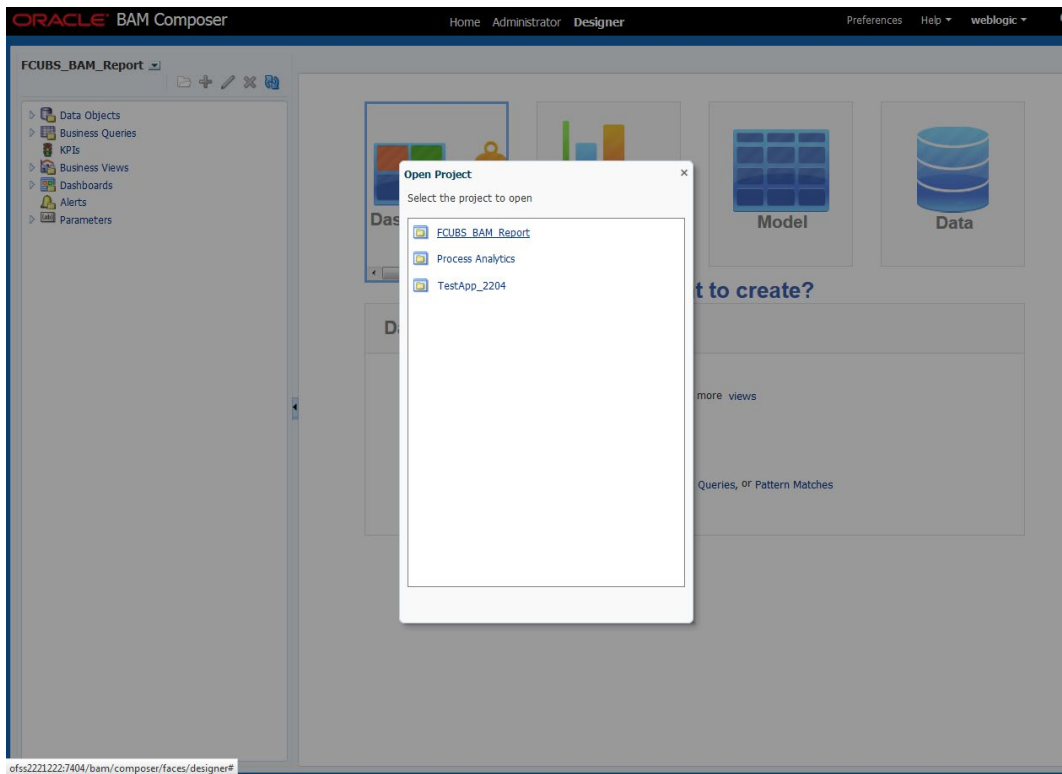

22. Follow the step 17 to 21 for other Data objects also.(cube\_instance,wftask\_different\_stages, ORVW\_TRACK\_EXPOSURE, ORVW\_FACILITY\_EXPOSURE, GetUtilsDB, SMTB\_USER\_TYPE\_CONVERSION\_VIEW, FCUBSDATAOBJECTS).

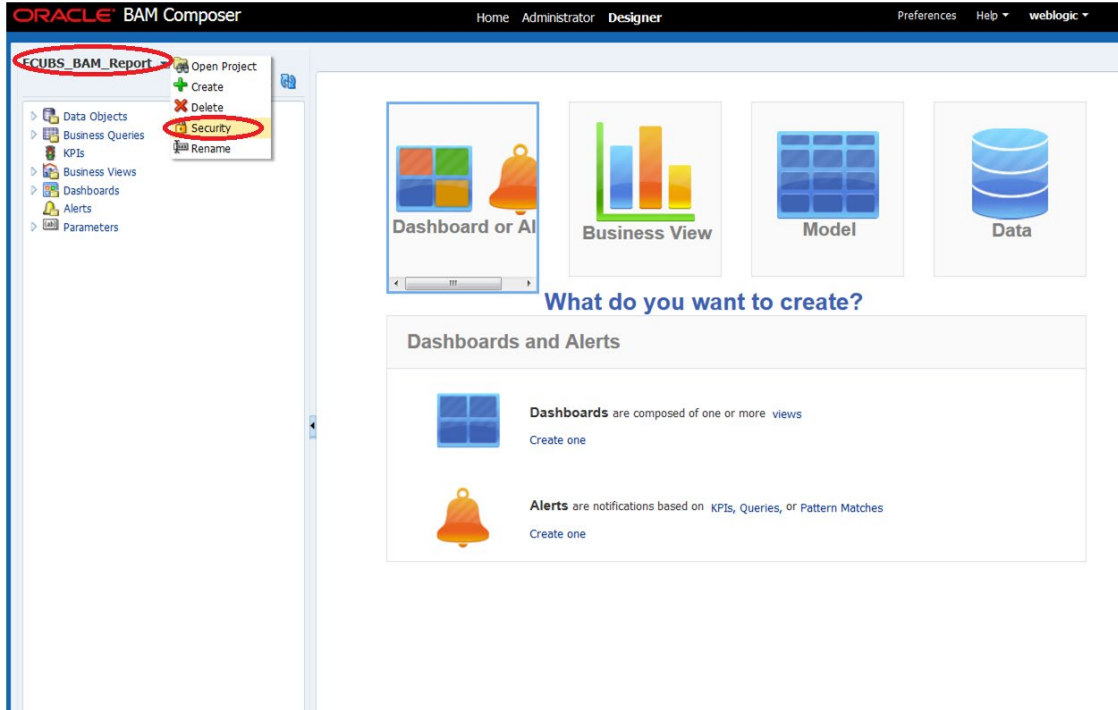

23. Click on Designer →open Project

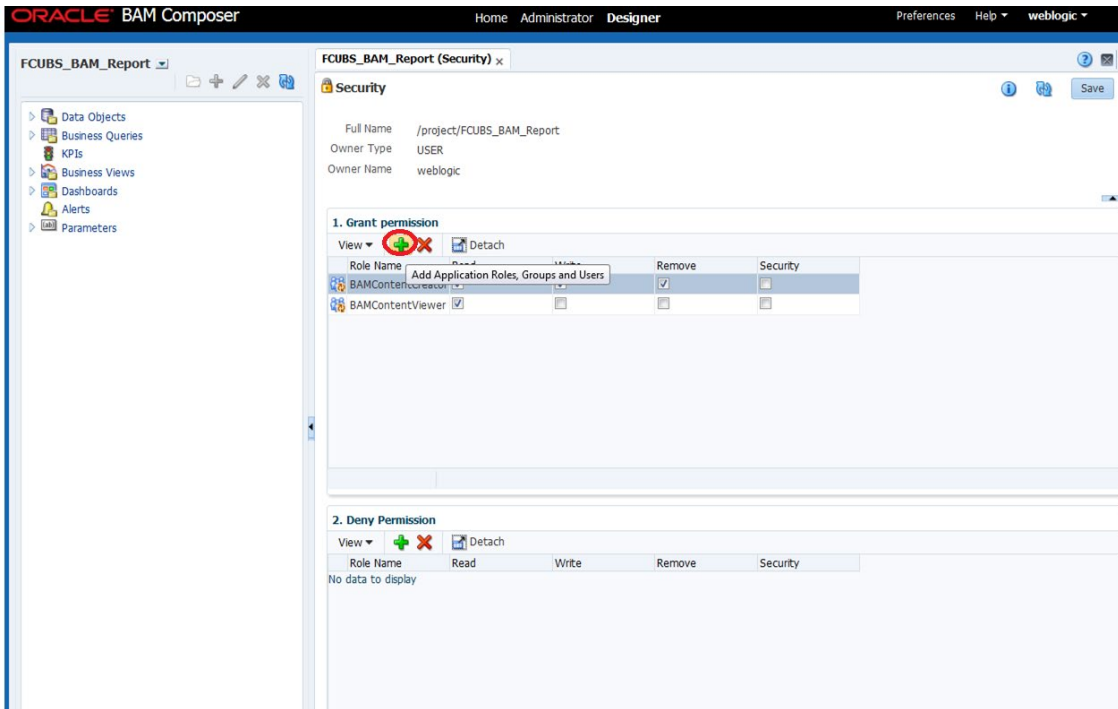

24. Click on FCUBS\_BAM\_report

25. click on FCUBS\_BAM\_Report →Security

26. Click on ADD button Under Grant Permission.

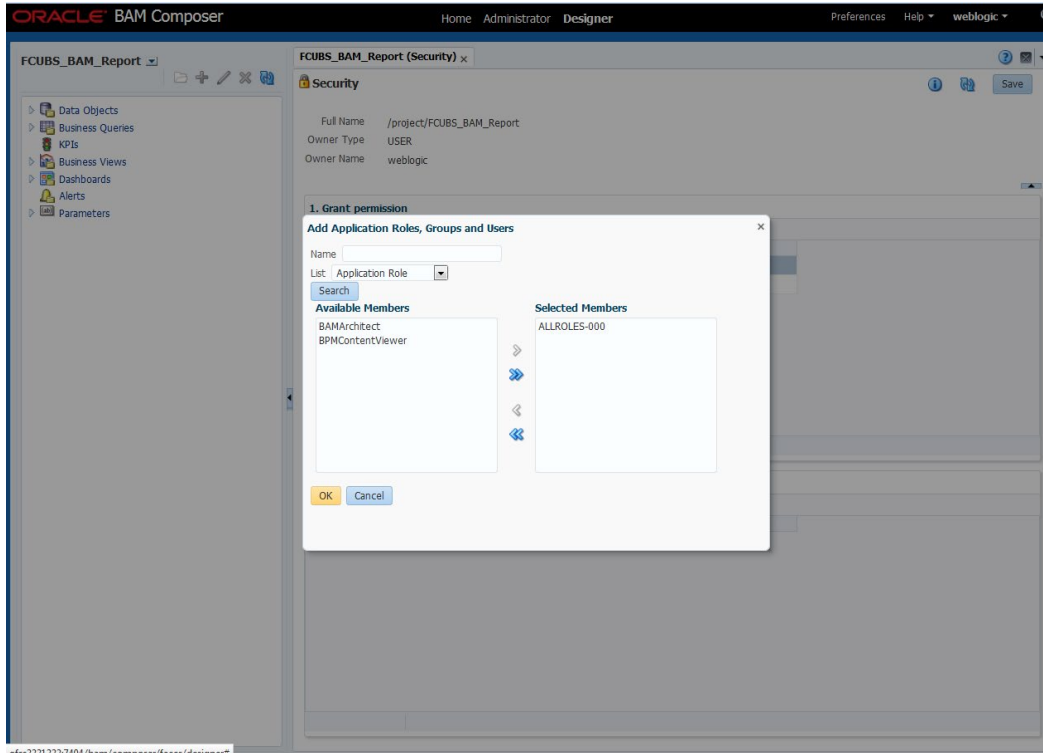

27. Search the List based on the Application Roles and Select the ALLROLES-000

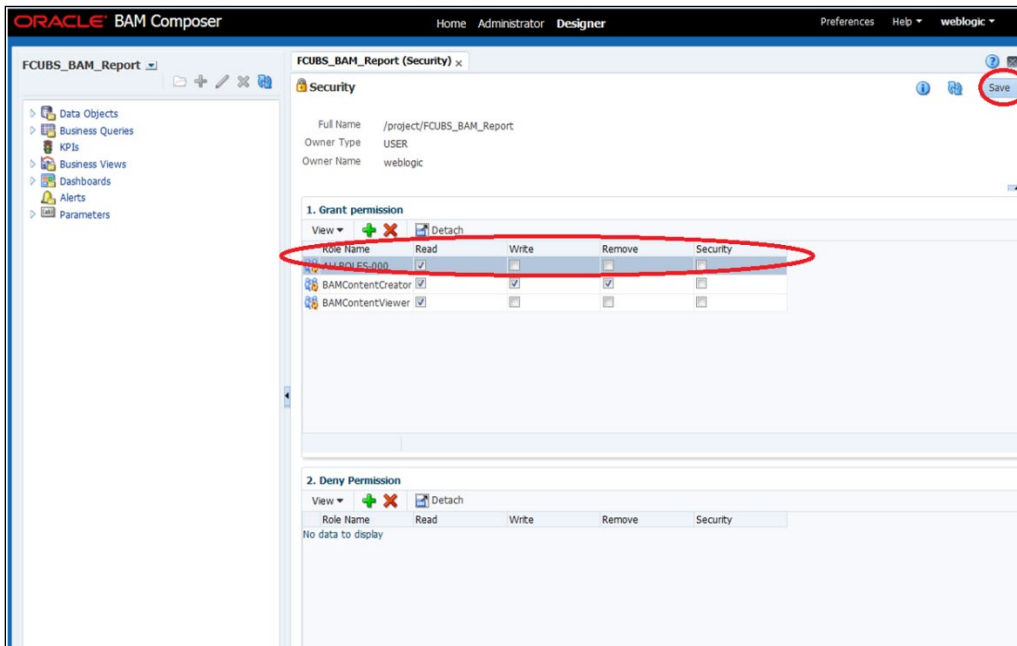

28. Move the ALLROLES-000 to Selected Members and click on ok.

29. Select the Read check box for ALLROLES-000 → Click on Save

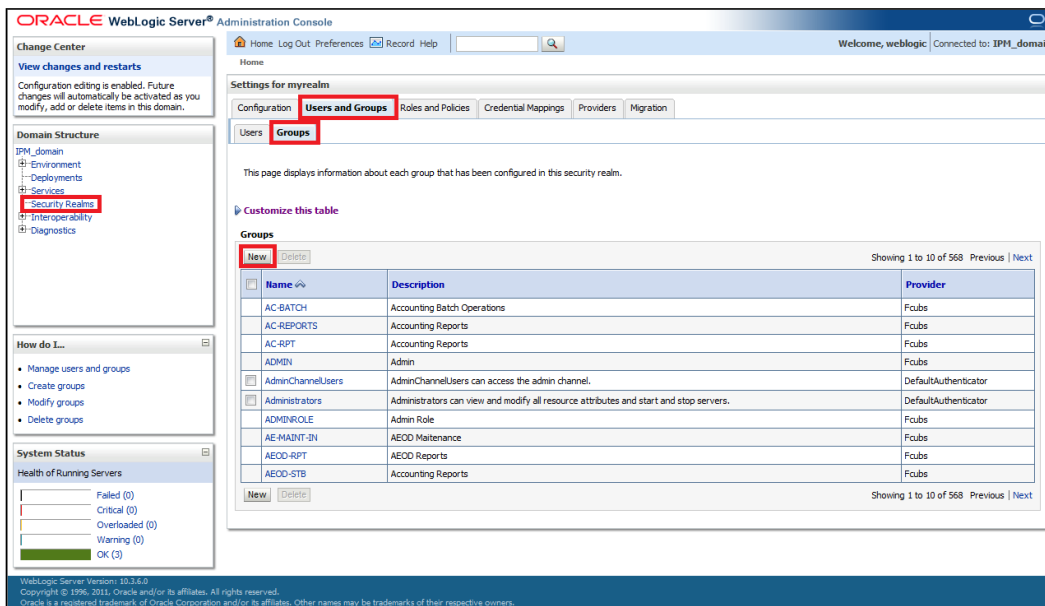

## 1.2.9 IPM configuration to edit the document

The Following set of instructions can be followed if the BPEL need to be configured with IPM configuration

1. Login to the console, `http/s:<hostname>:<port>/console` with admin user
2. Follow the step 1.2.1 to add the “FCJCustomProvider”.

After adding, Navigate to security realms > myrealm > Users and Groups and check if the users from the schema are displayed in Users tab, and Roles from the schema are displayed under the Groups Tab.

3. After adding the custom authenticator,
  - Navigate to security realms >my realm > Users and Groups > Groups.
  - Click on the New button.

The screenshot shows the Oracle WebLogic Server Administration Console interface. The left sidebar contains navigation options like 'Domain Structure' and 'System Status'. The main content area is titled 'Settings for myrealm' and has tabs for 'Users' and 'Groups'. The 'Groups' tab is active, showing a table of configured groups. A red box highlights the 'New' button above the table. The table lists various groups such as 'AC-BATCH', 'AC-REPORTS', 'ADMIN', and 'Administrators'.

Name	Description	Provider
AC-BATCH	Accounting Batch Operations	Fcuhs
AC-REPORTS	Accounting Reports	Fcuhs
AC-RPT	Accounting Reports	Fcuhs
ADMIN	Admin	Fcuhs
AdminChannelUsers	AdminChannelUsers can access the admin channel.	DefaultAuthenticator
Administrators	Administrators can view and modify all resource attributes and start and stop servers.	DefaultAuthenticator
ADMINROLE	Admin Role	Fcuhs
AE-MAINT-IN	AEOD Maintenance	Fcuhs
AEOD-RPT	AEOD Reports	Fcuhs
AEOD-STB	Accounting Reports	Fcuhs

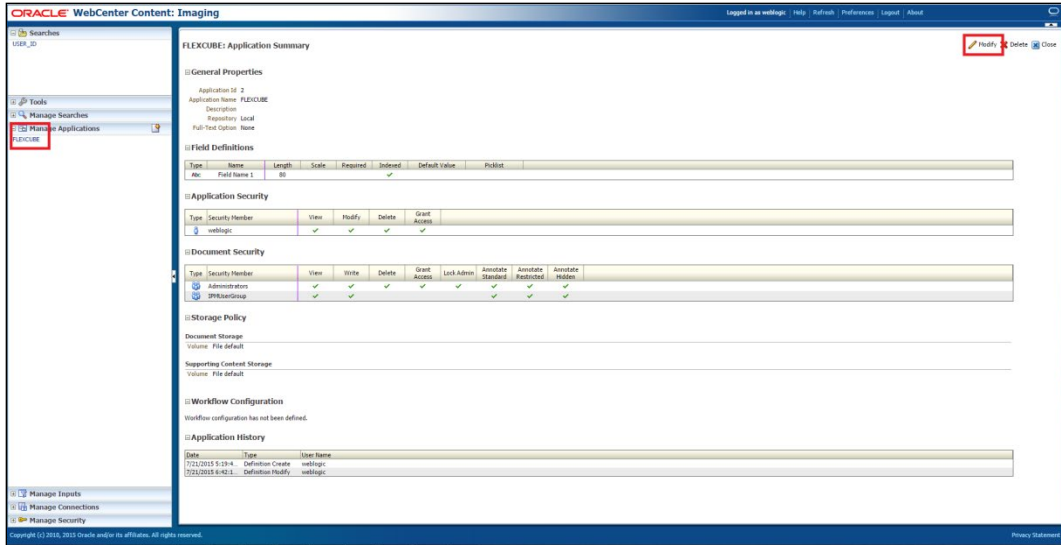

4. After Clicking on the new button,
  - Enter the name as “IPMUserGroup”
  - Description for it (optional)
  - And select the authenticator as “DefaultAuthenticator”
  - And then click “Ok”

5. Login to the Imaging URL <http://s:<hostname>:<port>/imaging> with admin user

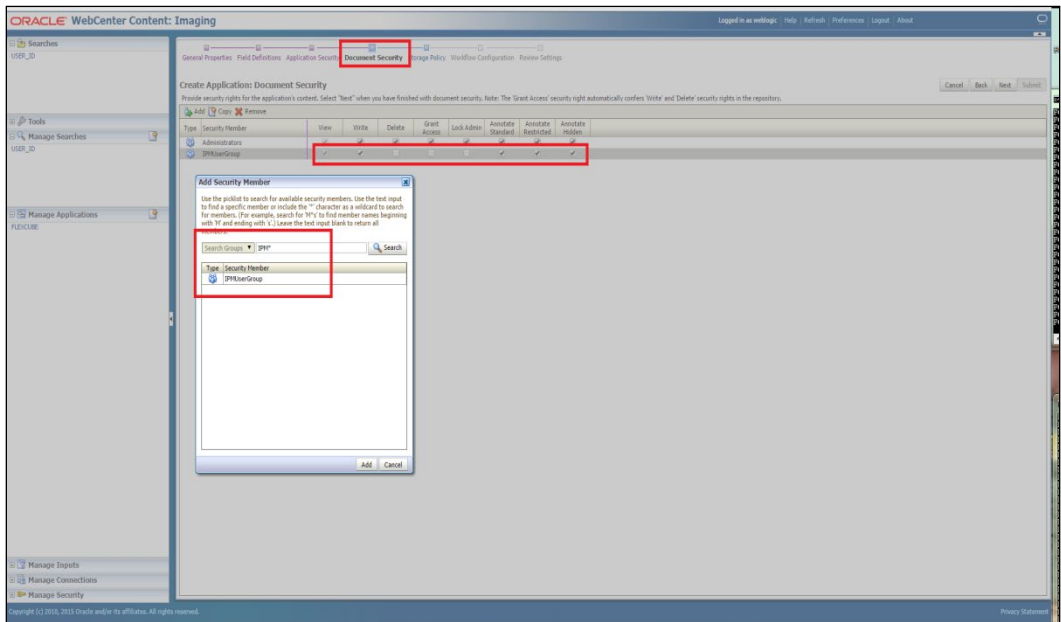

- a. Navigate to Manage Applications
- b. Click on the FLEXCUBE
- c. Then click on the modify on the right pane

6. After clicking on the modify button,

- a. Navigate to Document Security
- b. Click on Add button
- c. Click on Search button in the pop up window
- d. Select the "IPMUserGroup"
- e. Click on Add
- f. IPMUserGroup will be listed in the panel, select view ,write,annotate Standard,Annotate Restricted and Annotate Hidden checkboxes.
- g. Finally click on the submit button on the right corner

7. After clicking on the submit button,
  - a. Navigate to Manage Searches
  - b. Click on the available search (ex: USER\_ID in this doc)
  - c. Click on the modify

The screenshot shows the Oracle WebCenter Content: Imaging interface. The left sidebar contains a 'Tools' menu with 'Manage Searches' highlighted. The main content area displays the 'USER\_ID: Search Summary' page, which includes several sections:

- Properties:** Search Name: USER\_ID, Description, Instructions, Maximum Search Results: 0.
- Results Formatting:** A table with columns: Source Application, DOCID, Document Creation Date, Document Created By, Document Batch Id, Document Id. Two rows are shown: one for 'FLEXCUBE' and one for 'DOCID'.
- Conditions:** Application: FLEXCUBE. A table with columns: Field, Operator, Value, Conjunction. One row is shown: Document Created, Contains, Parameter - Document Created By.
- Parameters:** A table with columns: Parameter Name, Prompt Text, Operator Text, Default Value, Picklist, Required, Read Only. One row is shown: Document Created, Document Created, Contains.
- Security:** A table with columns: Type, Security Member, View, Modify, Delete, Grant Access. Two rows are shown: Administrators and IPMUserGroup, both with checkmarks in the View, Modify, and Delete columns.
- Audit History:** A table with columns: Date, Type, User Name. Five rows are shown, all with a date of 7/4/2014 and a user name of weblogic.

8. After clicking on the modify button,
  - a. Navigate to Document Security
  - b. Click on Add button
  - c. Click on Search button in the pop up window
  - d. Select the "IPMUserGroup"
  - e. Click on Add
  - f. IPMUserGroup will be listed in the panel; don't select any checkbox except the default view checkbox.
  - g. Finally click on the submit button on the right corner

9. Copy the FCJJSPProvider.jar to location

<ORACLE\_HOME >\user\_projects\domains\<domian name>\lib

10. Go to the location – ‘<ORACLE\_HOME>\

user\_projects\domains\<Domain\_created>\config\fmwconfig’

- a. Open ‘jps-config.xml’ file. Search for ‘<serviceProviders>’ tag and add the following code between ‘<serviceProviders>’ and ‘</serviceProviders>’ tags.

```
<serviceProvider class="oracle.security.jps.internal.idstore.generic.GenericIdentityStoreProvider"
name="custom.generic.provider" type="IDENTITY_STORE">
  <description>DB IdentityStore Provider</description>
</serviceProvider>
```

- b. Similarly, Search for ‘<serviceInstances>’ tag and add the following code between ‘<serviceInstances>’ and ‘</serviceInstances>’ tags.

```
<serviceInstance location="dumb" name="idstore.custom" provider="custom.generic.provider">
  <description>Custom Identity Store Service Instance</description>
  <property name="idstore.type" value="CUSTOM"/>
  <property name="ADF_IM_FACTORY_CLASS"
value="com.ofss.fcc.bpel.security.idm.providers.stddb.FCIdentityStoreFactory"/>
  <property name="DATASOURCE_NAME" value="jdbc/fcjdevDS"/>
  <property name="INTERNAL_CONTEXT_REQUIRED" value="true"/>
  <property name="INTERNAL_CONTEXT_NAME" value="internalstore"/>
</serviceInstance>
```

Make sure that the JNDI (jdbc/fcjddevDS) matches the value given during property file creation.

- c. Search for '<jpsContexts default="default">' tag and add the following code between '<jpsContexts default="default">' and '</jpsContexts>', preferably after the default 'jpsContext'.

```
<jpsContext name="internalstore">  
  <serviceInstanceRef ref="credstore"/>  
  <serviceInstanceRef ref="keystore"/>  
  <serviceInstanceRef ref="policystore.xml"/>  
  <serviceInstanceRef ref="audit"/>  
</jpsContext>
```

## 1.2.10 Configuring Supervisor Roles in EM

1. Right click on soa-infra. Select security→Application Roles

The screenshot shows the Oracle Enterprise Manager Fusion Middleware Control 12c interface. The 'Target Navigation' pane on the left is expanded to show the 'Security' folder, which contains 'Application Policies' and 'Application Roles'. The 'Application Roles' folder is selected. The main content area displays a table with a 'Description' column. The interface includes the Oracle logo, 'Enterprise Manager Fusion Middleware Control 12c', and a 'WebLogic Domain' dropdown menu. The date and time are shown as 'Mar 21, 2016 12:30:59 PM IST'.

## 2. Search the Application Roles with “Starts with” option.

### Application Roles

Application roles are the roles used by security aware applications that are specific to the application. These roles are seeded by applications in single global policy store when the applications are registered. These are also application roles that are created in the context of end users accessing the application.

To manage users and groups in the WebLogic Domain, use the [Oracle WebLogic Server Security Provider](#).

- Click on the ADD button and provide the Type as Group from drop down.

- Provide the principal name as (EX:ALLROLES-000) Param\_val which is mapped to the OR\_ADMINROLE in the cstb\_param table and search the role. Click on ok.

0.184.133.168:7401/em/faces/as/security/editAppRole?type=oracle\_soainfra&target=/Domain\_soa\_domain/soa\_domain/soa\_server1/soa-infra#

6. Click Ok .

### 1.2.11 Email Driver Configuration

The Following set of instructions can be followed if the BPEL need to be configured with Email Driver configurations

1. Login to EM console
2. Navigate to User Messaging Service
3. Right click usermessagingdriver-email (soa\_server1)
4. Click on Email Driver Properties

5. .Enter the sender Address and default sender address (This id will be used as sender address).
6. .Enter the supported protocols (SMTP)

7. Select the mail access protocol (IMAP) as per the mail server specification

Name	Description	Mandatory	Encoded Credential	Value
E-mail Receiving Protocol	E-mail receiving protocol. The possible values are IMAP and POP3.			IMAP
Connection Retry Limit	This value specifies the number of times to retry connecting to the incoming mail server, if the connection is lost due to some reason. The default value is -1 which means no limit to the number of tries.			-1
Message Cleanup Frequency	The frequency to permanently remove deleted messages. The unit is in seconds and the default value is 600 seconds. A negative value indicates the messages should not be expunged. For the POP3 protocol, the message is expunged after it is processed.			600
	Whether the driver should mark the messages deleted after they have been			

8. Enter the Receive folder in the mailbox (INBOX)

9. Enter the Outgoing mail server hostname or IP

10. Enter the outgoing mail server port

11. Enter the outgoing default from address

12. Enter the Outgoing user name and password if required

Name	Description	Mandatory	Encoded Credential	Value
Outgoing Mail Server	The name of the SMTP server. Mandatory only if e-mail sending is required.			XXXXXX
Outgoing Mail Server Port	Outgoing Mail Server Port			25
Outgoing Mail Server Security	The security used by SMTP server. Possible values are None, TLS and SSL. Default value is None.			None
Default From Address	Deprecated. Use Default Sender Address instead. The default FROM address (if one is not provided in the outgoing message).			xxx@xxx.com
Outgoing Username	The username used for SMTP authentication. Required only if SMTP authentication is supported by the SMTP server.			

13. Navigate to SOA Administration ->Workflow Properties

14. Select the notification mode as Email/ALL and enter the from address Actionable address and reply to Address.

## 1.2.12 TimeOut Settings for BPEL

1. The Following set of instructions has to be configured for BPEL Login in to Console (<http://hostname:port/console>)
2. Click on Deployments

The screenshot displays the Oracle WebLogic Server Administration Console interface. The browser address bar shows the URL `10.184.135.218:7001/console/console.portal?_nfpb=true&_pageLabel=HomePage1`. The page title is "ORACLE WebLogic Server Administration Console 12c". The breadcrumb navigation path is "Home > AlphaDomain > Summary of Servers > AlphaDomain > Summary of Servers > Summary of Deployments > soa-infra > BPELEngineBean".

The interface is divided into several sections:

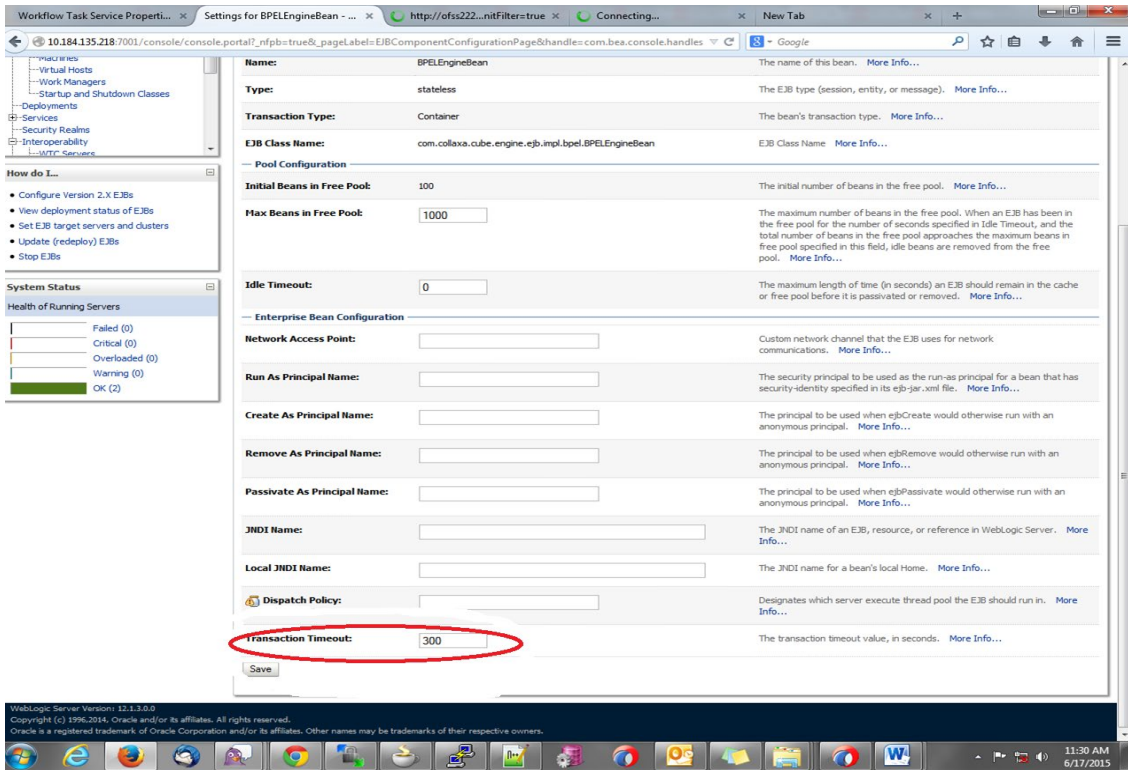

- Change Center:** View changes and restarts. Configuration editing is enabled.
- Domain Structure:** A tree view showing the hierarchy: AlphaDomain > Environment > Servers > Clusters > Coherence Clusters > Machines > Virtual Hosts > Work Managers > Startup and Shutdown Classes > Deployments > Services > Security Realms > Interoperability > WTC Servers.
- How do I...:** Search the configuration, Use the Change Center, Record WLST Scripts, Change Console preferences, Manage Console extensions, Monitor servers.
- System Status:** Health of Running Servers: Failed (0), Critical (0), Overloaded (0), Warning (0).
- Home Page:**
  - Information and Resources:** Helpful Tools (Configure applications, Configure GridLink for RAC Data Source, Configure a Dynamic Cluster, Recent Task Status, Set your console preferences, Oracle Enterprise Manager) and General Information (Common Administration Task Descriptions, Read the documentation, Ask a question on My Oracle Support).
  - Domain Configurations:** Domain, Environment (Servers, Clusters, Server Templates, Migratable Targets, Coherence Clusters, Machines, Virtual Hosts, Work Managers, Startup And Shutdown Classes), Services (Messaging: JMS Servers, Store-and-Forward Agents, JMS Modules, Path Services, Bridges; Data Sources; Persistent Stores; XML Registries; XML Entity Caches; Foreign JNDI Providers; Work Contexts; JCOM; Mail Sessions; FileT3; JTA; OSG Frameworks), Interoperability (WTC Servers, Jolt Connection Pools), Diagnostics (Log Files, Diagnostic Modules, Built-in Diagnostic Modules, Diagnostic Images, Request Performance, Archives, Context, SNMP), and Charts and Graphs (Monitoring Dashboard).
  - Your Deployed Resources:** A list containing "Deployments", which is circled in red.
  - Your Applications & Security Settings:** (partially visible).

3. Click on "soa-infra" application under deployments.

Name	State	Health	Type	Targets	Deployment Order
oracle.wsm.console.core.view(1.0,12.1.3.0)	Active		Library	AdminServer	311
oracle.wsm.seedpolicies(2.0,12.1.3)	Active		Library	AdminServer, BAMServer, SOAServer	100

5. Go to EJBs→BPEL DeliveryBean→ Configuration→set Transaction TimeOut to 300

The screenshot displays the Oracle WebLogic Server console interface. On the left, there are two panels: 'How do I...' with navigation links like 'Configure Version 2.X EJBs' and 'View deployment status of EJBs', and 'System Status' showing the 'Health of Running Servers' with a bar chart indicating 4 OK servers. The main area shows the configuration for an EJB with the following details:

- Type:** stateless
- Transaction Type:** Container
- EJB Class Name:** com.colfaxa.cube.engine.ejb.mpl.bpel.BPELDeliveryBean
- Pool Configuration:**
  - Initial Beans in Free Pool:** 200
  - Max Beans in Free Pool:** 1000
  - Idle Timeout:** 0
- Enterprise Bean Configuration:**
  - Network Access Point:** (empty)
  - Run As Principal Name:** (empty)
  - Create As Principal Name:** (empty)
  - Remove As Principal Name:** (empty)
  - Passivate As Principal Name:** (empty)
  - JNDI Name:** (empty)
  - Local JNDI Name:** (empty)
  - Dispatch Policy:** (empty)
  - Transaction Timeout:** 1800 (highlighted with a red circle)

A 'Save' button is located at the bottom of the configuration panel. The footer of the console shows 'WebLogic Server Version: 12.1.3.0.0'.

6. Login in to Console → JTA
7. Set the JTA timeout according to the below condition. Make sure BPELEngineBean + BPELDeliveryBean is  $\leq$  JTA timeout (e.g.  $300+300 \leq 600$ )

The screenshot displays the Oracle WebLogic Server Administration Console 12c interface. The main content area is titled "Settings for dev\_domain" and shows the "JTA" configuration tab. A red circle highlights the "Timeout Seconds" field, which is set to 3600. Other visible fields include "Abandon Timeout Seconds" (86400), "Before Completion Iteration Limit" (10), "Max Transactions" (10000), "Max Unique Name Statistics" (1000), and "Checkpoint Interval Seconds" (300). The "Write recovery logs when determiners configured" checkbox is unchecked, and the "Forget Heuristics" checkbox is checked.

8. Login in to EM console (<http://host:port/em>)→SOA administration→BPEL Properties→MoreConfigproperties→ SyncMaxWaitTime.Change the SyncMaxWaitTime to 200 secs

## 1.3 **Integrating Oracle FLEXCUBE UBS and Scheduler**

Before deploying the Oracle FLEXCUBE UBS EAR file, you need to carry out the following tasks.

### 1.3.1 **Running Backend Scripts**

You need to compile certain tables pertaining to Scheduler in the schema to which the Application points. The version of Quartz to be used is Latest Qualified Version.

Follow the steps given below:

1. Download Quartz Latest Qualified Version.gz file from the following URL:  
<http://www.quartz-scheduler.org/download/download-catalog.html>
1. Extract the gz file.
2. Open the folder 'Quartz-Latest Qualified Version \docs\dbTables' folder and run 'tables\_oracle.sql' (this is specific to Oracle Database) in the schema.

For details on latest version of the software qualified with Oracle FLEXCUBE, refer to the release certificate.

## 1.4 **Integrating Oracle FLEXCUBE UBS and BIP Reports**

You can integrate Oracle FLEXCUBE UBS and BIP reports. The details are available in the chapter 'BIP Web Service Reports'.

### 1.4.1 **Deploying Application Through Application Server's Admin Console**

#### **Deployment from Weblogic Administration Console**

You can find the details pertaining to the deployment of Application using Weblogic Administration Console in the chapter 'Deploying Oracle FLEXCUBE Application on Weblogic'.

## 1.5 **Integrating Oracle FLEXCUBE UBS and MBean**

In order to integrate Oracle FLEXCUBE UBS and MBean, you need to follow the below steps before deploying the Oracle FLEXCUBE UBS EAR file created with MBean as a Plugin.

### 1.5.1 **Startup Script Modification**

By default, the TopLink used in MBean uses Oracle xml parser internally. However, Weblogic Server has to use JAXPlatform.

To change the system property, follow the steps given below:

1. Go to the Weblogic domain home folder.
  - c) Based on the operating system used, open 'startWeblogic.cmd' or 'startWeblogic.sh' from the folder 'bin'.

- d) Search for 'WLS\_REDIRECT\_LOG'. After '%JAVA\_OPTIONS%' add the following code under 'if' and 'else' conditions.

```
"-Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform"
```

Now, the details will look like this:

```
if "%WLS_REDIRECT_LOG%"==" " (

    echo Starting WLS with line:

    echo %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% %PROXY_SETTINGS% %SERVER_CLASS%

    %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% -
Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform
%PROXY_SETTINGS% %SERVER_CLASS%

) else (

    echo Redirecting output from WLS window to %WLS_REDIRECT_LOG%

    %JAVA_HOME%\bin\java %JAVA_VM% %MEM_ARGS% -
Dweblogic.Name=%SERVER_NAME% -
Djava.security.policy=%WL_HOME%\server\lib\weblogic.policy
%JAVA_OPTIONS% -
Dtoplink.xml.platform=oracle.toplink.platform.xml.jaxp.JAXPPlatform
%PROXY_SETTINGS% %SERVER_CLASS% >"%WLS_REDIRECT_LOG%" 2>&1

)
```

- e) Restart the Weblogic server.

Setting up Plug - Installation
