1 Preface

This section provides information about the Oracle Financial Services Cash Flow Engine (OFS CFE) Application Pack.

You can find the latest copy of this document in the [OHC Documentation Library](#), which includes all the recent additions or revisions (if any) done to date.

Before you begin the installation, ensure that you have access to [Oracle Support](#) with the required login credentials to quickly notify us of any issues at any stage.

Topics:

- [Intended Audience](#)
- [How this Guide is Organized](#)
- [Access to Oracle Support](#)
- [Related Information Sources](#)
- [Conventions](#)
- [Abbreviations](#)

1.1 Audience

OFS CFE Application Pack Installation and Configuration Guide is intended for administrators and implementation consultants who handle installing and maintaining the application pack components.

This document assumes that you have experience in installing Enterprise components and basic knowledge about the following:

- OFS CFE pack components
- OFSAA Architecture
- UNIX Commands
- Database Concepts
- Web server or web application server

1.2 How this Guide is Organized

The Installation Guide is organized into the following sections:

- [Introduction](#): This section contains an introduction to the OFSAAI and its components, introduction to the OFS CFE Application Pack, and installation scenarios that the current release supports.
- [Complete Installation Checklist](#): This section has the complete list of tasks that you must perform to install the OFS CFE Application Pack installation.

- [Pre-installation](#): This section contains the pre-installation requirements to install the OFS CFE Application Pack and the hardware and base software environment required.
- [Installation](#): This section details the steps to install the OFS CFE Application Pack installation.
- [Post-installation](#): This section details the steps that are you must performed after a successful installation of the OFS CFE Application Pack. This section also contains the additional configuration.
- [Post Deployment Configurations](#): This section details the deployment steps to be followed after the OFS CFE Application Pack installation.
- [Frequently Asked Questions \(FAQs\) and Error Dictionary](#): This section contains a list of FAQs and installation error-related information.

1.3 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

1.4 Related Documents

We strive to keep this and all other related documents updated regularly; visit the [OHC Documentation Library](#) to download the latest version available there. The list of related documents is provided here.

[OHC Documentation Library](#) for OFS CFE Application Pack Release 8.1.2.0.0:

- *Oracle Financial Services Cash Flow Engine User Guide*
- *Oracle Financial Services Cash Flow Engine Data Dictionary Guide*

[OHC Documentation Library](#) for OFS AAI Application Pack:

- *OFSAAI Application Security Guide*
- *Oracle Financial Services Analytical Applications Technology Matrix*
- *Oracle Financial Services Analytical Applications Infrastructure Environment Check Utility Guide*
- *Oracle Financial Services Analytical Applications Infrastructure Cloning Guide*

1.5 Conventions

The following text conventions are used in this document.

Table 1: Document Conventions

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, file names, text that appears on the screen, or text that you enter.
Hyperlink	Hyperlink type indicates the links to external websites and internal document links.

1.6 Abbreviations

The following table lists the abbreviations used in this document.

Table 2: Abbreviations

Abbreviation	Meaning
BDP	Big Data Processing
DBA	Database Administrator
DDL	Data Definition Language
DEFQ	Data Entry Forms and Queries
DML	Data Manipulation Language
EAR	Enterprise Archive
EJB	Enterprise JavaBean
ERM	Enterprise Resource Management
FTP	File Transfer Protocol
HDFS	Hadoop Distributed File System
HTTPS	Hypertext Transfer Protocol Secure
J2C	J2EE Connector
J2EE	Java 2 Enterprise Edition

Abbreviation	Meaning
JCE	Java Cryptography Extension
JDBC	Java Database Connectivity
JDK	Java Development Kit
JNDI	Java Naming and Directory Interface
JRE	Java Runtime Environment
JVM	Java Virtual Machine
LDAP	Lightweight Directory Access Protocol
LHS	Left Hand Side
MFA	Multi-Factor Authentication
MOS	My Oracle Support
OFSAA	Oracle Financial Services Analytical Applications
OFSAAI	Oracle Financial Services Analytical Application Infrastructure
OFSAAAI	Oracle Financial Services Advanced Analytical Applications Infrastructure Application Pack
OHC	Oracle Help Center
OLAP	On-Line Analytical Processing
OLH	Oracle Loader for Hadoop
ORAAH	Oracle R Advanced Analytics for Hadoop
OS	Operating System
RAM	Random Access Memory
RDBMS	Relational Database Management System
RHEL	Red Hat Enterprise Linux
SFTP	Secure File Transfer Protocol
SID	System Identifier
SSL	Secure Sockets Layer
TNS	Transparent Network Substrate
URL	Uniform Resource Locator
VM	Virtual Machine

Abbreviation	Meaning
WAR	Web Archive
XML	Extensible Markup Language

2 Introduction

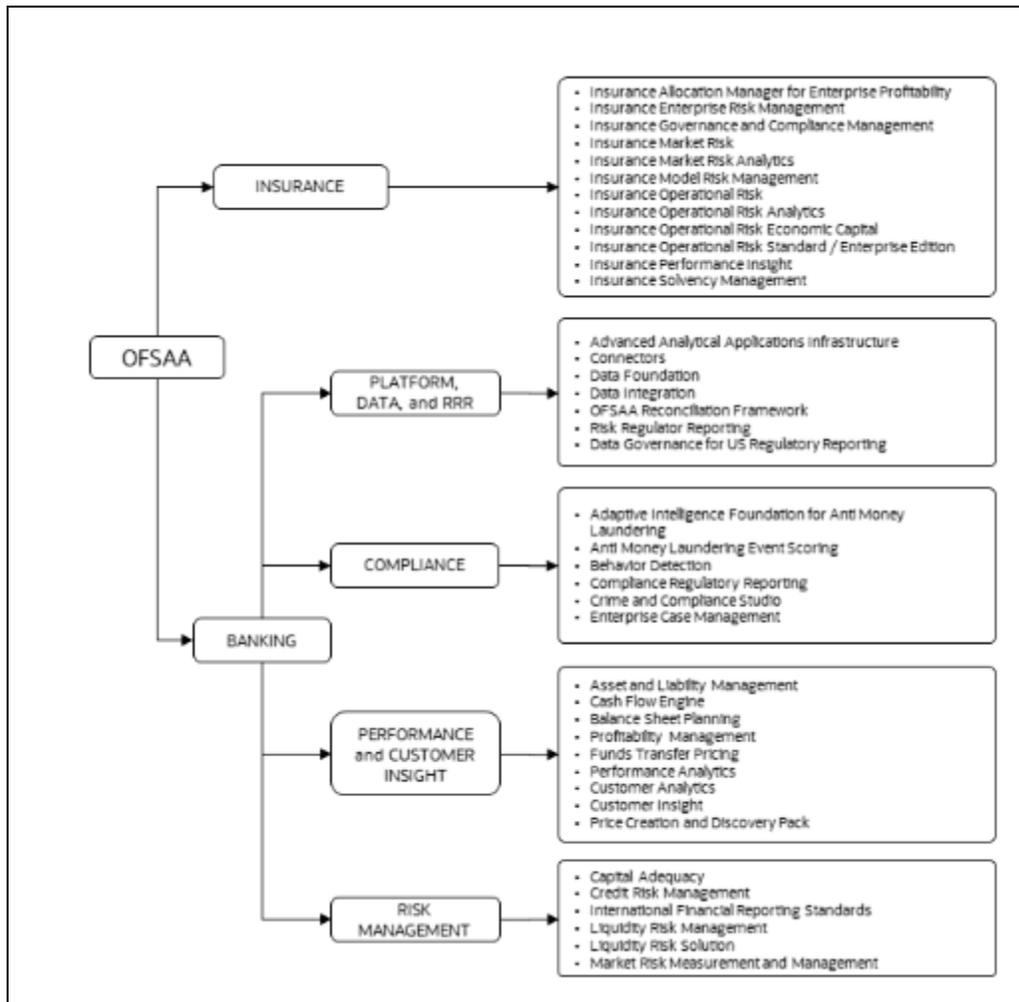

In today's turbulent markets, financial institutions require a better understanding of their risk-return, while strengthening competitive advantage and enhancing long-term customer value. Oracle Financial Services Analytical Applications (OFSAA) enable financial institutions to measure and meet risk-adjusted performance objectives, cultivate a risk management culture through transparency, lower the costs of compliance and regulation, and improve insight into customer behavior.

OFSAA uses industry-leading analytical methods, shared data models, and applications architecture to enable integrated risk management, performance management, customer insight, and compliance management. OFSAA actively incorporates risk into decision making, enables to achieve a consistent view of performance, promote a transparent risk management culture, and provide pervasive intelligence.

Oracle Financial Services Analytical Applications delivers a comprehensive, integrated suite of financial services analytical applications for both banking and insurance domains.

The following figure depicts the various application packs that are available across the OFSAA Banking and Insurance domains.

Figure 1: Application Packs of OFSAA

Description of Application Packs of OFSAA as follows

Topics:

- [Oracle Financial Services Analytical Applications Infrastructure \(OFSAAI\)](#)
- [About the Oracle Financial Services Cash Flow Engine Application Pack](#)
- [Installation Scenarios](#)

2.1 Oracle Financial Services Analytical Applications Infrastructure (OFSAAI)

Oracle Financial Services Analytical Applications Infrastructure (OFSAAI) powers the Oracle Financial Services Analytical Applications family of products to perform the processing, categorizing, selection and manipulation of data and information required to analyze, understand and report on specific performance, risk, compliance and customer

insight issues by providing a strong foundation for the entire family of Oracle Financial Services Analytical Applications across the domains of Risk, Performance, Compliance and Customer Insight.

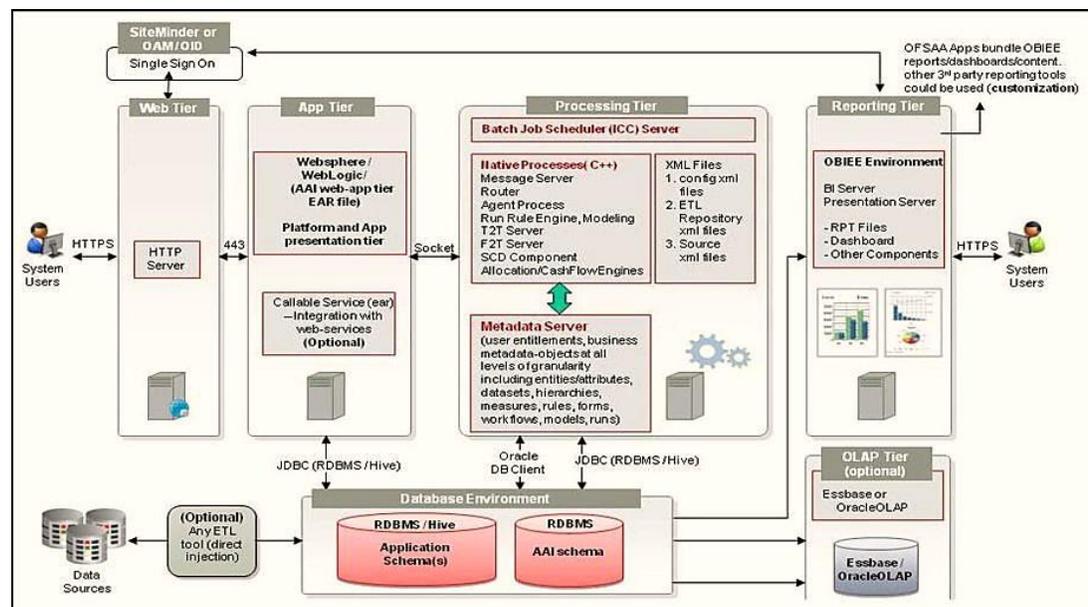

2.1.1 Components of OFSAAI

The OFSAA Infrastructure includes frameworks that operate on and with the Oracle Financial Services Analytical Applications Data Model and forms the array of components within the Infrastructure.

The OFSAA Infrastructure components or frameworks are installed as two layers; primarily, the metadata server and Infrastructure services run on one layer, while the UI and presentation layer is deployed on any of the supported J2EE Servers.

The following figure depicts the various frameworks and capabilities that make up the OFSAA Infrastructure.

Figure 2: Components of OFSAAI

Description of Components of OFSAAI as follows

2.1.2 OFSAA Infrastructure High Availability

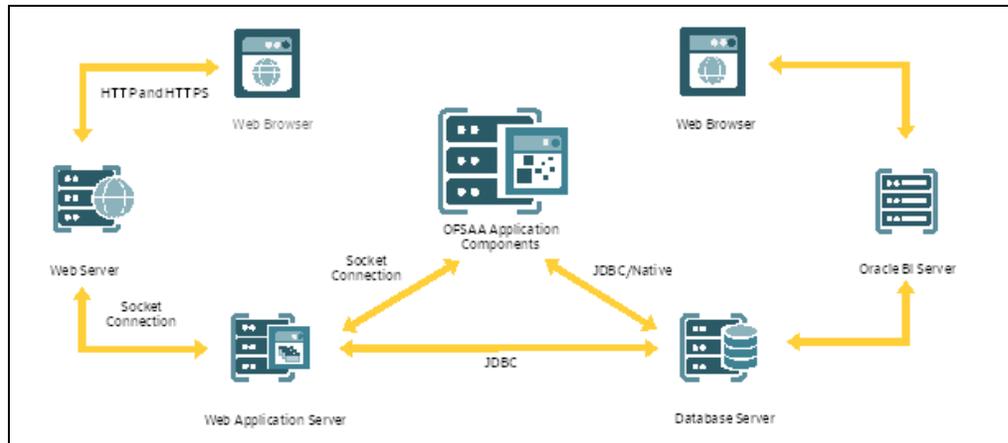

The current release of the OFSAA Infrastructure supports only the *Single Instance* installation for the Infrastructure components. However, the High Availability (HA) for the Database Server and (or) the Web application server clustering and deployment are supported in this release.

This release supports the Active-Passive model of implementation for OFSAAI components. For more information, see the [Oracle Financial Services Analytical Applications Configuration for High Availability Best Practices Guide](#).

2.1.3 Deployment Topology

The following figure shows the Deployment Topology for the OFSAA Infrastructure.

Figure 3: The logical architecture implemented for OFSAAI Application Pack

Description of The logical architecture implemented for OFSAAI Application Pack as follows

2.2 Oracle Financial Services Cash Flow Engine (OFS CFE) Application Pack

OFS CFE Application Pack includes the following applications:

- Oracle Financial Services Analytical Applications Infrastructure (OFS AAI):** powers the Oracle Financial Services Analytical Applications family of products to perform the processing, categorizing, selection and manipulation of data and information required to analyze, understand and report on specific performance, risk, compliance and customer insight issues by providing a strong foundation for the entire family of Oracle Financial Services Analytical Applications across the domains of Risk, Performance, Compliance and Customer Insight.
- Oracle Financial Services Cash Flow Engine (OFS CFE):** Cash flow calculation is an integral part of finance and risk solutions. Oracle Financial Services Cash Flow Engine (OFSCFE) is designed to help institutions to take a fresh and granular look at their cash inflows and outflows. It allows you to calculate cash flows of their Assets, Liabilities, and Off-Balance Sheet products at instrument level. The application measures and models every loan, deposit, and off-balance sheet instrument individually, using deterministic methods. This helps gain a better insight into the granularity of cash inflows and outflows to be utilized for multiple non-regulatory

and regulatory purposes. Due to its generic nature OFSCFE is suitable for both financial and non-financial institutions with exposure to financial securities/instruments.

2.3 OFS AAI Extension Pack

The Oracle Financial Services Analytical Applications Infrastructure Extension (OFS AAIE) Pack adds a set of new advanced features for 8.1.2.0.0 Release across OFSAA applications. This pack can be installed on an OFSAA instance having one or more OFSAA application packs.

The Oracle Financial Services Analytical Applications Infrastructure Extension Pack includes the following advanced features and functionalities:

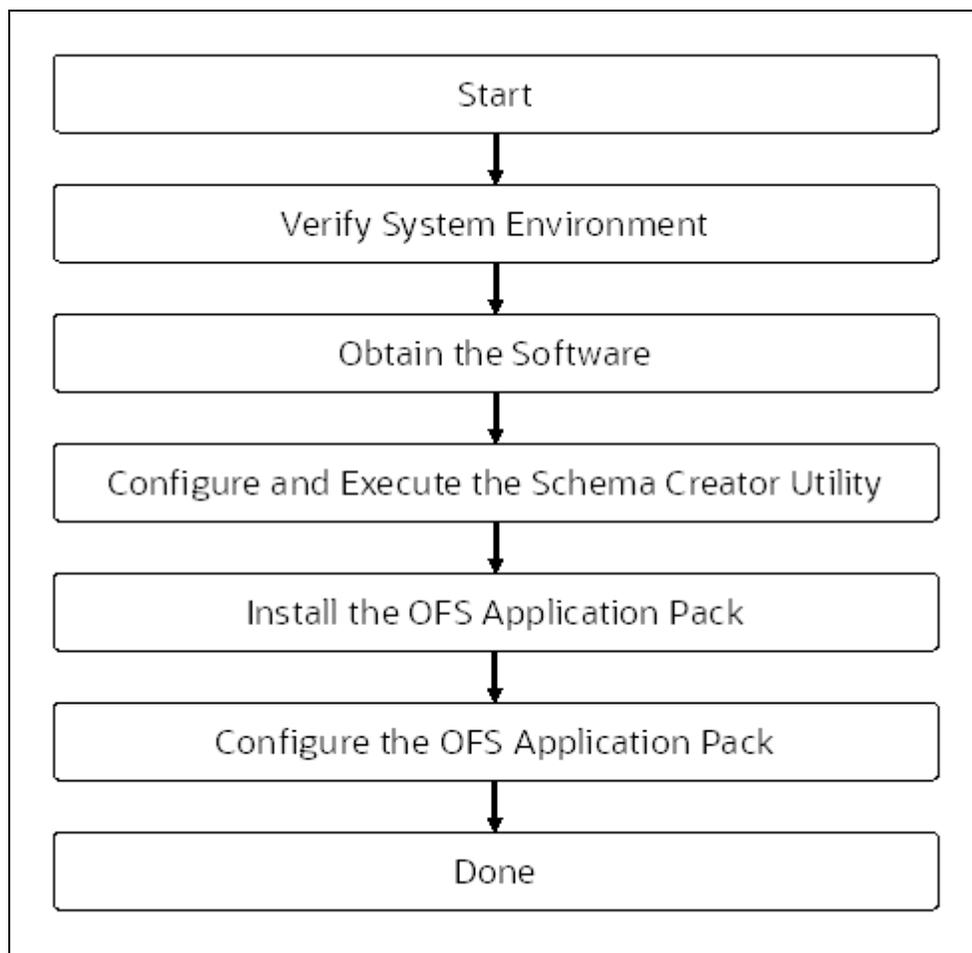

- Distributed Processing Capabilities
- Analytic Pipeline and Process models
- Attribution Analysis
- Content Management Interoperability Services

NOTE:

The pack is enabled by procurement of an additional license. For more information, see the OFS AAIE Release Notes and Installation Guide on the [OHC](#).

2.4 Installation Overview

The following illustration shows the sequence of steps you need to follow to perform the installation.

Description of Installation Overview as follows

2.5 Installation and Upgrade Scenarios

Release 8.1.2.0.0 of OFS CFE supports various installation scenarios. A high-level overview of the possible scenarios is provided in the following table. Detailed procedural steps are provided in the succeeding sections of this document.

Table 3: Release 8.1.2.0.0 Installation Scenarios

Scenario	Installation and Upgrade Instructions

Scenario	Installation and Upgrade Instructions
Installation Instructions	
<p>Install OFS CFE Application Pack v8.1.2.0.0</p>	<ol style="list-style-type: none"> 1. Update the OFS_CFE_PACK.xml. 2. Update OFSAAI_InstallConfig.xml. 3. Configure the Schema Creator utility. Update OFS_CFE_SCHEMA_IN.xml file. 4. Run the Schema Creator utility. 5. Configure Manifest.xml (optional). 6. Update the Silent.props file present in the Release 8.1.2.0.0 pack for OFS CFE Application Pack. 7. Trigger the installation.
<p>Install OFS CFE Application Pack v8.1.2.0.0 on an existing OFSAA Instance</p> <p>You have already installed an application pack from release 8.1.2.0.0 and now you want to install another application pack from Release 8.1.2.0.0.</p> <p>Example: OFS ALM Pack is already installed and now you want to install OFS CFE Pack.</p>	<ol style="list-style-type: none"> 1. Update the OFS_CFE_PACK.xml file for the newly licensed OFS CFE Application Pack. 2. Run the Schema Creator utility ONLY for the newly licensed OFS CFE Application Pack. 3. Update the Silent.props file of the newly licensed OFS CFE Application Pack. 4. Trigger the installation.
Upgrade Scenarios	
<p>Upgrade CFE Application Pack from v8.1.1.0.0 to CFE Application Pack v8.1.2.0.0</p> <p>Example: You are using an application pack in release 8.1.1.0.0 and now want to upgrade it to Release 8.1.2.0.0.</p>	<ol style="list-style-type: none"> 1. Run the Environment Check Utility tool and ensure that the hardware and software requirements are installed as per the Tech Matrix. 2. Clone your existing environment to the v8.1.2.0.0 Tech Matrix. 3. Run the Environment Check Utility tool and ensure that the hardware and software requirements are installed as per the Tech Matrix. 4. Update the OFS_CFE_PACK.xml file to enable ONLY the existing installed applications. 5. Update the Silent.props file present in the OFS CFE v8.1.2.0.0 installer pack. 6. Trigger the Release 8.1.2.0.0 installation

3 Pre-installation

This section contains the pre-installation requirements to install the OFS CFE application.

Topics

- [Pre-installation Checklist](#)
- [Hardware and Software Requirements and Specifications](#)
- [License Information](#)
- [Verify System Environment](#)
- [Install Oracle R distribution and Oracle R Enterprise \(ORE\)](#)
- [Preparing for Installation](#)

3.1 Pre-installation Checklist

You can use this checklist to have a quick glance at everything that you will be doing prior to installing this application. The link provided in each step takes you to a section either within this document or to another referenced document.

Table 4: Pre installation Checklist

Sl. No.	Pre installation Activity
1	Install all the prerequisite <i>hardware and software</i> given in the Tech Matrix .
2	License Information
3	Verify the System Environment using the Environment Check Utility.
4	Configure the Database Instance settings.
5	Install and configure the web application server.
6	Configure the HTTP settings on the web server.
7	Configure the following Operating System and File System settings: <ul style="list-style-type: none"> • File Descriptor • Total number of processes • Port (or Ports) • <code>.profile</code> file permissions • Set up the SFTP Private Key
8	Update the following Environment Settings required for the installation in the <code>.profile</code> file:

Sl. No.	Pre installation Activity
	Java Settings <ul style="list-style-type: none"> • Oracle Database Server and Client Settings • Add TNS entries in the <code>TNSNAMES.ORA</code> file • Oracle Essbase Settings • Time Zone Settings
9	(Optional) Install and configure Oracle R or Oracle R Enterprise.
10	Prepare for Installation <ul style="list-style-type: none"> • Download the OFS CFE Application Pack installer kit • Prerequisites for Installation • Create the Installation, Download, and Metadata Repository Directories • Compatibility Matrix
11	Extract the installer kit.

3.2 Hardware and Software Requirements

For a list of all the hardware and software requirements including operating systems, database, web servers, and web application server versions for which this release of the Oracle Financial Services Cash Flow Engine Application Pack is qualified can be found in the [Technology Matrix](#)

Table 6: Recommended Software Combination

Operating System	Database	Web Application Server	Web Server
Oracle Linux	Oracle Database	Oracle WebLogic Server or Apache Tomcat Server	Oracle HTTP Server or Apache HTTP Server

3.3 License Information

For details of the third-party software tools used, see the [OFSAALicensing Information User Manual Release 8.1.2.0.0](#).

3.4 Verify System Environment

To verify your system environment meets the minimum requirements for the installation, a Pre-install Check utility is available within the Install Kit archive file. This utility can also be obtained separately by contacting [My Oracle Support](#).

Though the system environment verification is an integral and automated part of the installation of this software product, Oracle strongly recommends running this utility before beginning the installation as part of your organization's "Installation Readiness Verification Process".

For information on downloading and using this utility, see the [Oracle Financial Services Analytical Applications Infrastructure Environment Check Utility Guide](#).

3.5 Install Oracle R distribution and Oracle R Enterprise (ORE)

This is an optional step and required only if you intend to use Oracle R scripting in the Oracle Financial Services Enterprise Modeling Application.

Install Oracle R Distribution and Oracle R Enterprise (Server Components) on the Oracle Database server. See the [Oracle R Enterprise Installation and Administration Guide for Linux at Oracle R Enterprise Documentation Library](#). For supported versions of ORD and ORE, see the [Tech Matrix](#).

NOTE:

If you use ORE 1.4.1 with Oracle Financial Services Enterprise Modeling, you must set the session time zone in the `R_HOME/etc/Rprofile.site` file on the database server, where `R_HOME` is the home directory of the R instance on which ORE server packages are installed. Alternatively, you can set the session time zone in scripts registered within OFS EM by using the `Sys.env(TZ=<time zone>)` R function.

3.6 Preparing for Installation

This section describes how to download the installer and the mandatory prerequisites you must ensure installing the OFS CFE Application Pack.

3.7 Download the OFS CFE Application Pack Installer and Mandatory Patches

To download the OFS CFE Application Pack Installer Release v8.1.2.0.0, follow these steps:

1. Log in to My Oracle Support and search for **33573277** under the Patches & Updates tab.
2. Download the installer archive and copy (in Binary mode) to the download directory that exists in the OFS CFE installation setup.

3. Before proceeding with the domain creation, download and install the required one-off Patch or the latest WLS PSU for 14.1.1 from [My oracle Support](#) (Doc ID 2806740.2). For more information, refer to **Configure WebLogic for Application Deployment** in [AAI installation guide](#).

NOTE:

You can download the OFS CFE ERWIN data model patch 32606505 from [My Oracle Support](#).

3.7.2 Prerequisites for Installation

Before beginning the installation, ensure that:

- You have executed the `.profile` file.
- The FICServer is up and running. For information on restarting the services, see the *Start the Infrastructure Services* section in the [OFS Advanced Analytical Applications Infrastructure Release 8.12.0.0 Installation and Configuration Guide](#) for more information.

3.7.3 Create the Installation, Download and Metadata Directories

To install the OFS CFE Application Pack, create the following directories:

- **OFS CFE Download Directory (Optional):** Create a download directory and copy the OFS CFE Application Pack Installer File (archive). This is the directory where the downloaded installer or patches can be copied. Assign 755 permission to this directory.
- **OFSAA Installation Directory (Mandatory):** Create an installation directory where the product binaries are installed. Assign 755 user permission to the installation directory. FIC_HOME variable to be set in the `.profile` pointing to this OFSAA Installation Directory.
- **OFSAA Staging or Metadata Repository Directory (Mandatory):** A directory to hold the application metadata artifacts and additionally act as the staging area for the flat files. This directory is also referred to as "FTP SHARE". Create a Staging or Metadata Repository Directory to copy data files, save data extracts, and so on.

NOTE:

Assign 755 user permission to the installation directory.

Assign 775 user permission to the staging directory.

Ensure the OFSAA staging directory is not set to the same path as the OFSAA installation directory and is not a sub-folder inside the OFSAA installation directory.

3.7.4 Compatibility Matrix

This table lists the applications or app-combinations that must not be installed on a single infodomain.

Table 7: List of Applications Not to be Installed in on a Single Infodomain

If you are installing	Do not install
OFS_CFE_PACK	OFS_PFT_INS_PACK OFS_BD_PACK OFS_CRR_PACK
OFS_PFT_INS_PACK	OFS_PFT_PACK OFS_ALM_PACK OFS_BSP_PACK

OFS_BSP_PACK	OFS_PFT_INS_PACK
OFS_PFT_PACK	OFS_PFT_INS_PACK OFS_BD_PACK OFS_CRR_PACK

This table lists the applications or app-combinations that can be installed on a single infodomain. For more information, see the [Install OFS CFE Application Pack v8.1.2.0.0 on an Existing OFSAA Instance](#).

Table 8: List of Applications can be Installed in on a Single Infodomain

If you are installing	Can be installed
OFS_CFE_PACK	PLATFORM PFT FTP ALMBI DIH FTP BASEL_BASIC

If you are installing	Can be installed
	CIRPA CIIPA EFPA BASEL_BASIC OREC BASEL_ANALYTICS BASEL_ADV GL DGSEBA DGS INTF_FCUBS INTF_FAH INTF_OBP INTF_DRM DIH HM LLFP LRM OFSAAAI RP CREC OREC

4 Installation

This section provides detailed steps to install the OFS CFE Application Pack.

Topics:

- [Installation Checklist](#)
- [Extract the OFS CFE Application Pack Software](#)
- [Configure the OFS_CFE_PACK.xml File](#)
- [Configure Schema Creator Utility](#)
- [Execute the Schema Creator Utility](#)
- [Configure the OFSAAI_InstallConfig.xml File](#)
- [Configure the Silent.props file](#)
- [Install the OFS CFE Application](#)
- [Install the OFS CFE Application on Existing OFSAA Instance](#)

4.1 Installation Checklist

You can use this checklist to have a quick glance at everything that you will be doing to install this application. The link provided in each step takes you to a section either within this document or to another referenced document.

Table 5: Installation Checklist

Sl. No.	Installation Activity
1	Configure the OFS_CFE_PACK.xml file.
2	Configure the Schema Creator Utility.
3	Execute the Schema Creator Utility in Offline , Online , or TCPS modes and verify the log file.
4	Configure the OFSAAI_InstallConfig.xml file.
5	Configure the Manifest.xml file.
6	Configure the Silent.props file.
7	Trigger the OFS CFE Application Pack installation.
8	Install CFE Pack on Pack.
9	Verify the installation logs.

4.2 Extract the OFS CFE Application Pack Software

You must be logged in to the UNIX operating system as a non-root user to perform the following steps. To extract the software, follow these steps:

1. If you already have an unzip utility to extract the contents of the downloaded archive, skip this step. Uncompress the unzip installer file with the command:
2. Download the unzip utility (OS-specific) `unzip_<os>.Z` and copy it in Binary mode to the directory that is included in your PATH variable.

```
uncompress unzip_<os>.Z
```

NOTE:

If an error message "*uncompress: not found [No such file or directory]*" is displayed, contact your UNIX administrator.

3. Assign 751 permission to the file using the following command:

```
chmod 751 unzip_<OS>
```

For example `chmod 751 unzip_sparc`

4. Extract the contents of the OFS CFE Application Pack Release 8.1.2.0.0 installer archive file in the download directory using the following command:

```
unzip OFS_CFE_PACK.zip
```

NOTE:

Do not rename the Application Pack installer folder name on extraction from the archive.

5. Navigate to the download directory and assign 750 permission to the installer directory using the following command:

```
chmod -R 750 OFS_CFE_Pack
```

4.3 Configure the OFS_CFE_PACK.xml File

The `OFS_CFE_PACK.xml` file contains details of the various products that are packaged together in the OFS CFE Applications Pack.

To configure the `OFS_CFE_PACK.xml` file, follow these steps:

1. Navigate to the OFS_CFE_PACK/conf directory.
2. Open the OFS_CFE_PACK.xml file in a text editor.
3. Configure the OFS_CFE_PACK.xml file as mentioned in the following table.

Figure 4: Sample OFS_CFE_PACK.xml File

```

<APP_PACK_CONFIG>
  <APP_PACK_ID>OFS_CFE_PACK</APP_PACK_ID>
  <APP_PACK_NAME>Cash Flow Engine</APP_PACK_NAME>
  <APP_PACK_DESCRIPTION>Get insight into projected cash inflows and outflows of your balance sheet</APP_PACK_DESCRIPTION>
  <VERSION> 8.1.2.0.0 </VERSION>

APP_DESCRIPTION	Unique Application or Product Name	Y	Unique Seeded Value. Do not modify this value.
VERSION	Unique release version	Y	Unique Seeded Value. Do not modify this value.

4.4 Configure the Schema Creator Utility

Creating Database Users or Schemas (RDBMS) is one of the primary steps in the complete OFS CFE installation process. The Schema Creator utility enables you to quickly get started with the installation by creating Database User(s) or Schema(s) (RDBMS), assigning the necessary GRANT(s), creating the required entities in the Schemas and so on.

Configure and execute the schema creator utility before installing the OFS CFE Application Pack.

Topics:

- [Prerequisites](#)
- [Configure Schema Creator Utility for RDBMS Installation](#)

4.4.1 Prerequisites

Ensure you have the following before configuring the Schema Creator Utility:

- Oracle User ID or Password with SYSDBA privileges
- JDBC Connection URL for RAC or Non RAC database
- The HOSTNAME or IP of the server on which OFSAA is getting installed

For HIVE installation, you must also have the following:

- HIVE connection credentials (for example, Kerberos connection properties)
- Hostname or IP of the HIVE Server installation

4.4.2 Configure the Schema Creator Utility for RDBMS Installation

If the installation is being performed for RDBMS, provide the Pack specific Schema details in the `OFS_CFE_SCHEMA_IN.xml` file.

You can configure the following types of Schemas:

- **CONFIG:** This Schema contains the entities and other objects required for OFSAA setup configuration information. Only one CONFIG Schema per OFSAA instance is permitted.
- **ATOMIC:** This Schema contains the data model entities. One ATOMIC Schema is attached to one Information Domain. You can have multiple ATOMIC Schemas for a single OFSAA Instance.

4.4.2.1 Configure the OFS_CFE_SCHEMA_IN.xml File

This section describes how to create database schemas, objects within schemas, and assign appropriate grants.

Specify the database schemas required for the installation in the `OFS_CFE_SCHEMA_IN.xml` file. Update the values of the various tags and parameters available in this file before executing the Schema Creator utility.

This file must be configured only if the database is RDBMS.

To configure the `OFS_CFE_SCHEMA_IN.xml` file, follow these steps:

1. Log in to the system as a non-root user.

2. Navigate to the OFS_CFE_PACK/Schema_Creator/conf directory.
3. Edit the OFS_CFE_SCHEMA_IN.xml file using a text editor and configure the values as mentioned in the following table. Save the file.

Figure 5: Sample of OFS_CFE_SCHEMA_IN.xml File

```

<APPACKSCHEMA>
  <APP_PACK_ID=OFS_CFE_PACK/>APP_PACK_ID</APP_PACK_ID>
  <IS_TSPS=FALSE/>IS_TSPS

<SCHEMA TYPE="ATOMIC" NAME="ofsaaatm" PASSWORD="" APP_ID="OFS_AAAI"
DEFAULTTABLESPACE="##OFS_AAI_TBSP_2##" TEMPTABLESPACE="TEMP"
QUOTA="unlimited" INFODOM="OFSAAAIINFO"/>
</SCHEMAS>

```

4.5 Execute the Schema Creator Utility

Depending on the requirement, select the appropriate Schema Creator utility execution option.

Topics:

- [Execute the Schema Creator Utility in Offline Mode](#)
- [Execute the Schema Creator Utility in Online Mode](#)
- [Execute the Schema Creator Utility in TCPS Mode](#)
- [Execute the Schema Creator Utility while Installing Subsequent Applications Pack](#)

NOTE:

For Pack on Pack installation, see the [Install OFS CFE Application Pack v8.1.2.0.0 on an Existing OFSAA Instance](#) section.

After creating the Schema, proceed to [Configure the OFSAAI InstallConfig.xml File](#).

4.5.1 Execute the Schema Creator Utility in Offline Mode

In the Offline mode, the utility generates an SQL script with all the required DDLs for Users, Objects, and Grants. This script must be executed by the DBA on the appropriate database identified for OFSAA usage. If you do not have the SYSDBA privileges, you can execute the Schema Creator Utility in Offline mode and generate the script file that contains the Schemas, Objects, and Grants information. Subsequently, a SYSDBA user can execute the script file manually. To run the OFSAA Application Pack installer in Silent mode, it is mandatory to execute the Schema Creator utility with `-s` option.

To execute the utility in Offline mode, you must have a database user with the following GRANTS (alternatively, you can also connect as a user with SYSDBA privileges):

- SELECT ON DBA_ROLES
- SELECT ON DBA_USERS
- SELECT ON DBA_DIRECTORIES
- SELECT ON DBA_TABLESPACES
- CREATE SESSION

NOTE:

Explicit Grants to the user are required. Grants assigned through Roles are not supported.

To execute the Schema Creator utility in the offline mode, follow these steps:

1. Log in to the system as a non-root user.
2. Navigate to the following path: `OFS_CFE_PACK/Schema_Creator/bin`.
3. Execute the `osc.sh` file using the following command:

```
./osc.sh -s -o
```
4. The following message is displayed:
You have chosen OFFLINE mode. Triggering the utility in OFFLINE mode will generate the script. Do you wish to proceed? (Y/y or N/n).
5. Enter `Y` to proceed.
6. Enter the DB Username with SELECT privileges.
7. Enter the User Password.

Figure 6: Schema Creation in Offline Mode

/scratch/test81/OFS_AAAI_PACK/schema_creator/bin>

```

Description of Schema Creation in Offline Mode Successful as follows

On successful execution of the Schema Creator utility, the console displays the following status message:

Schema Creator executed successfully. Please execute `scratch/ofsaapp/OFS_CFE_PACK/Schema_Creator/sysdba_output_scripts.sql` before proceeding with the installation.

Additionally, if you have configured the <<APP PACK>>_SCHEMA_BIGDATA_IN.xml file, a file called `hive_output_scripts.hql` is also created in the `/scratch/ofsaapp/OFS_AAAI_PACK/Schema_Creator` directory.

NOTE:

If there are any errors during the SQL script execution, reconfigure the `OFS_CFE_SCHEMA_IN.xml` file and repeat steps in this procedure to execute the utility. This regenerates the scripts with the correct information.

10. Navigate to the `OFS_AAAI/Schema_Creator` directory.
11. Log in to SQLPLUS as a user having SYSDBA Privileges.

Figure 9: Schema Creation in Offline Mode – Execute `sysdba_output_scripts.sql`

```

Oracle Database 18c Enterprise Edition Release 18.0.0.0.0 - Production
Version 18.3.0.0.0

SQL> @/scratch/test81/OFS_AAAI_PACK/schema_creator/sysdba_output_scripts.sql
Disconnected from Oracle Database 18c Enterprise Edition Release 18.0.0.0.0 - Production
Version 18.3.0.0.0

```

Description of Schema Creation in Offline Mode – Execute sysdba_output_scripts.sql as follows

- Execute the sysdba_output_scripts.sql file using the following command:

```
SQL>@sysdba_output_scripts.sql
```

Alternatively, you can copy the sysdba_output_scripts.sql file and SQLScripts directory to a remote server and execute the sysdba_output_scripts.sql file, after providing appropriate execute permissions.

- Log in to the Hue Browser with System Administrator privileges. Execute the script mentioned under hive_output_scripts.hql (omitting the slash (/)) in the HIVE Query Editor. For example:

```
CREATE SCHEMA IF NOT EXIST <<HIVE SCHEMA NAME>>
```

NOTE:

See the sysdba_output_scripts.log file for execution status. If there are any errors, contact [My Oracle Support](#). If there are no errors in the execution, the log file is empty.

The OFS_CFE_SCHEMA_OUTPUT.XML file is successfully generated. Do not modify this file.

After creating the Schema, proceed to the [Configure the OFSAAI InstallConfig.xml File](#) section.

4.5.2 Execute the Schema Creator Utility in Online Mode

In Online mode, the utility connects to the database and executes the DDLs for Users, Objects, and Grants. If you have SYSDBA privileges you can execute the Schema Creator Utility in Online mode and thereby create the Users, Objects, and Grants during the execution process. To execute the utility in the Online mode, you must connect as "<User> AS SYSDBA".

If you want to run the OFSAA Application Pack Installer in Online mode, it is mandatory to execute the Schema Creator utility with `-s` option.

To execute the utility with `-s` option in online mode, follow these steps:

1. Edit the file
`OFS_CFE_PACK/Schema_Creator/conf/OFS_CFE_PACK>_SCHEMA_IN.xml` in a text editor. See the [Configure the OFS_CFE_SCHEMA_IN.xml File](#) section for values to modify in the XML file.
2. Execute the utility with `-s` option. For Example: `./osc.sh -s`

Figure 10: Schema Creation in Online Mode

```

/scratch/ofsaapp/AAI81_Kit/OFS_AAAI_PACK/schema_creator/bin>./osh.sh -s

```

Description of Schema Creation in Online Mode –Successful as follows

The result of this task is that the OFS_CFE_SCHEMA_OUTPUT.XML file is generated. Do not modify this file.

4.5.3 Execute the Schema Creator Utility while Installing Subsequent Applications Pack

When executing the Schema Creator utility during the installation of a subsequent Applications Pack, you can choose to install the pack either on the same Information Domain or Atomic Schema of the existing application pack or on a new Information Domain or Atomic Schema. You can execute the Schema Creator utility either in Online or Offline mode.

To execute the Schema Creator utility while installing OFS CFE Application Pack over an existing Application Pack, follow these steps:

1. Edit the file
OFS_CFE_PACK/Schema_Creator/conf/OFS_CFE_SCHEMA_IN.xml in a text editor. See the [Configure OFS_CFE_SCHEMA_IN.xml File](#) section for values you must modify in the XML file.
2. Execute the utility with -s option. For Example: `./osc.sh -s -o`

Figure 14: Execute the Schema Creator Utility to Install Subsequent Applications Pack

```

/scratch/test81/OFS_AAAI_PACK/schema_creator/bin>./osc.sh -s -o

Schema Creator executed Successfully.Please execute /scratch/ofsaadb/OFS_AAAI_PACK/schema_creator/sysdba_output_scripts.sql
before proceeding with the installation.

```

Description of Install Subsequent Applications Pack–Select Atomic Schema and Infodom as follows

On successful execution of Schema Creator utility, the console displays the following status message:

Success. Please proceed with the installation.

- See the log file in OFS_CFE_PACK/Schema_Creator/logs directory for the execution status.
- See the log file `sysdba_output_scripts.log` for execution status if executed in offline mode. This log will be empty if there are no errors in the execution.
- If there are any errors, contact [My Oracle Support](#).

4.6 Configure the OFSAAI_InstallConfig.xml File

To configure the OFSAAI_InstallConfig.xml file, follow these steps:

1. Navigate to the OFS_CFE_PACK/OFS_AAI/conf/ directory.
2. Open the OFSAAI_InstallConfig.xml file in a text editor.

- Configure the OFSAAI_InstallConfig.xml file as mentioned in the following table.

You must manually set the **InteractionVariable** parameter values as mentioned in the table. If a value is not applicable, enter NA. Ensure that the value is not entered as NULL.

Figure 18: Sample of OFSAAI_InstallConfig.xml File

Description of Sample of OFSAAI_InstallConfig.xml File as follows

Table 11: OFSAA Infrastructure Installation Tasks and Descriptions

Table 11: OFSAA Infrastructure Installation Tasks and Descriptions

Interaction Variable Name	Significance and Expected Value	Mandatory
<Layer name="GENERAL">		
InteractionGroup name="WebServerType"		
WEBAPPSERVERTYPE	<p>Identifies the web application server on which the OFSAA Infrastructure web components are deployed. Set the following numeric value depending on the type of web application server:</p> <ul style="list-style-type: none"> • Apache Tomcat = 1 • IBM WebSphere Application Server = 2 • Oracle WebLogic Server = 3 <p>For example, <InteractionVariable name="WEBAPPSERVERTYPE">3</InteractionVariable></p>	Yes
InteractionGroup name="OFSAA Infrastructure Server Details"		
DBSERVER_IP	<p>Identifies the host name or IP address of the system on which the Database Engine is hosted.</p> <p>NOTE: For RAC Database, the value must be NA. For example,</p> <pre><InteractionVariable name="DBSERVER_IP"> 14.15.16.17 </InteractionVariable> or <InteractionVariable name="DBSERVER_IP">dbhost.server.com </InteractionVariable></pre>	Yes
InteractionGroup name="Database Details"		

Interaction Variable Name	Significance and Expected Value	Mandatory
ORACLE_SID/SERVICE_NAME	<p>Identifies the Oracle DB Instance SID or SERVICE_NAME</p> <p>NOTE: The Oracle_SID value must be exactly the same as it is mentioned in JDBC_URL.</p> <p>For example,</p> <pre><InteractionVariable name="ORACLE_SID/SERVICE_NAME">ofsaser</InteractionVariable></pre>	Yes
ABS_DRIVER_PATH	<p>Identifies the directory where the JDBC driver (ojdbc<version>.jar) exists.</p> <p>This is typically the \$ORACLE_HOME/jdbc/lib directory.</p> <p>For example, <InteractionVariable name="ABS_DRIVER_PATH">"/oradata6/revwb7/oracle</InteractionVariable></p> <p>NOTE: See Hardware and Software Requirements to identify the correct ojdbc <version>.jar file version to be copied.</p>	Yes
InteractionGroup name="OLAP Detail		
OLAP_SERVER_IMPLEMENTATION	<p>Identifies whether the OFSAA Infrastructure OLAP component must be configured. It depends on whether you intend to use the OLAP feature. The following numeric value must be set depending on your choice:</p> <ul style="list-style-type: none"> • YES: 1 • NO: 0 <p>NOTE: If the value for OLAP_SERVER_IMPLEMENTATION is set to 1, the installer checks if the following environment variables are set in the .profile file:</p> <ul style="list-style-type: none"> • ARBORPATH • HYPERION_HOME 	No

Interaction Variable Name	Significance and Expected Value	Mandatory
	<ul style="list-style-type: none"> • ESSBASEPATH 	
InteractionGroup name="SFTP Details"		
SFTP_ENABLE	<p>Identifies if the SFTP (Secure File Transfer Protocol) feature is to be enabled. The following numeric value must be set depending on your choice:</p> <ul style="list-style-type: none"> • SFTP: 1 • FTP: 0 	Yes
<p>NOTE: The default value for SFTP_ENABLE is 1, which signifies that SFTP is used. Oracle recommends using SFTP instead of FTP because SFTP is more secure. However, you can ignore this recommendation and use FTP by setting SFTP_ENABLE to 0. You can change this selection later from the OFSAAI administration interface.</p> <p>Set SFTP_ENABLE to -1 to configure ftpshare and weblocal path as a local path mounted for the OFSAAI server.</p>		
FILE_TRANSFER_PORT	<p>Identifies the port used for the file transfer service. The default value specified is 22 (SFTP).</p> <p>Specify the value as 21 or any other PORT value if the value for SFTP_ENABLE is 0.</p> <p>For example, <InteractionVariable name="FILE_TRANSFER_PORT">21</InteractionVariable></p>	Yes

Interaction Variable Name	Significance and Expected Value	Mandatory
InteractionGroup name="Locale Detail"		
LOCALE	<p>Identifies the locale information to be used during the installation. This release of the OFSAA Infrastructure supports only US English.</p> <p>For example, <InteractionVariable name="LOCALE">en_US</InteractionVariable></p>	Yes
<p>InteractionGroup name="OFSAA Infrastructure Communicating ports"</p> <p>NOTE: The following ports are used internally by the various OFSAA Infrastructure services. The default values mentioned are set in the installation. If you intend to specify a different value, update the parameter value accordingly, ensure that the port value is in the range 1025 to 65535, and the respective port is enabled.</p>		
JAVAPORT	9999	Yes
NATIVEPORT	6666	Yes
AGENTPORT	6510	Yes
ICCPORT	6507	Yes
ICCNATIVEPORT	6509	Yes

Interaction Variable Name	Significance and Expected Value	Mandatory
OLAPPORT	10101	Yes
MSGPORT	6501	Yes
ROUTERPORT	6500	Yes
AMPORT	6505	Yes
<p>InteractionGroup name="Web Details"</p> <p>NOTE: If the value for HTTPS_ENABLE is set to 1, ensure that you have a valid certificate available from a trusted CA and it is configured on your web application server.</p>		
HTTPS_ENABLE	<p>Identifies whether the UI must be accessed using HTTP or HTTPS scheme. The default value is set to 0. The numeric value must be set depending on the following options:</p> <ul style="list-style-type: none"> • YES: 1 • NO: 0 <p>For example,</p> <pre><InteractionVariable name="HTTPS_ENABLE">0</InteractionVariable></pre>	Yes
WEB_SERVER_IP	<p>Identifies the HTTP Server IP or Host name or Web application server IP or Host name, to be used to access the UI. This IP is typically the HTTP Server IP.</p> <p>If a separate HTTP Server is not available, then the value must be Web application server IP/Host name.</p> <p>For example,</p> <pre><InteractionVariable name="WEB_SERVER_IP">10.11.12.13</InteractionVariable></pre>	No

Interaction Variable Name	Significance and Expected Value	Mandatory
WEB_SERVER_PORT	<p>or</p> <pre><InteractionVariable name="WEB_SERVER_IP"> myweb.server.com</InteractionVariable></pre> <p>Identifies the Web Server Port, which is typically 80 for non-SSL and 443 for SSL. If a separate HTTP Server exists, the port value must be the value configured for the Web Server.</p> <p>Warning: The installer will not accept the port value as:</p> <ul style="list-style-type: none"> • 80, if the HTTPS_ENABLE variable is 1 • 443, if the HTTPS_ENABLE variable is 0 <p>For example,</p> <pre><InteractionVariable name="WEB_SERVER_PORT">80 </InteractionVariable></pre>	No
CONTEXT_NAME	<p>Identifies the web application context name which is used to build the URL to access the OFSAA application. You can identify the context name from the following URL format:</p> <pre><scheme>://<host>:<port> /<context-name>/login.jsp</pre> <p>For example:</p> <pre>https://myweb:443/ofsaadev/login.jsp</pre> <p>For example, <InteractionVariable name="CONTEXT_NAME">ofsaadev </InteractionVariable></p>	Yes
WEBAPP_CONTEXT_PATH	<p>Identifies the absolute path of the exploded EAR file on the web application server.</p> <ul style="list-style-type: none"> • For Tomcat, specify the Tomcat directory path till /webapps. For example, /oradata6/revwb7/tomcat/webapps/. • For WebSphere, specify the WebSphere path as <WebSphere profile directory>/installedApps/ 	Yes

Interaction Variable Name	Significance and Expected Value	Mandatory
	<p><NodeCellName>. For example, /data2/test/ /WebSphere/AppServer/profiles/ <Profile_Name>/installedApps /aiximfNode01Cell, where aix-imf is the Host name.</p> <ul style="list-style-type: none"> • For WebLogic, specify the WebLogic home directory path. <p>For example, /<WebLogic home directory path>/bea/wlserver_10.3</p> <p>NOTE: For WebLogic, the value specified for this attribute is ignored and the value provided against the attribute WEBLOGIC_DOMAIN_HOME is considered.</p>	
WEB_LOCAL_PATH	<p>Identifies the absolute path to any directory on the web application server that can hold temporary files, which are uploaded as part of the usage of the application. Set this in the FTPSHARE location.</p> <p>NOTE: During a clustered deployment, ensure that this path and the directory are the same on all the nodes.</p>	Yes
InteractionGroup name="Weblogic Setup Details"		
WEBLOGIC_DOMAIN_HOME	<p>Identifies the WebLogic Domain Home. For example, <InteractionVariable name="WEBLOGIC_DOMAIN_HOME">/home /weblogic/bea/user_projects /domains/mydomain </InteractionVariable></p>	<p>Yes. Specify the value only if WEBAPPSERVERTYPE is set as 3 (WebLogic)</p>
InteractionGroup name="OFSAAI FTP Details"		

Interaction Variable Name	Significance and Expected Value	Mandatory
OFSAAI_FTPSHARE_PATH	<p>Identifies the absolute path of the directory that is identified as the file system stage area.</p> <p>NOTE: The directory must exist on the same system on which the OFSAA Infrastructure is being installed (can be on a separate mount).</p> <p>The user mentioned in the APP_SFTP_USER_ID parameter in the following example must have RWX permission on the directory.</p> <p>For example,</p> <pre data-bbox="597 699 1089 842"><InteractionVariable name="APP_FTPSHARE_PATH"> "/oradata6/revwb7/ ftpshare</ InteractionVariable></pre>	Yes
OFSAAI_SFTP_USER_ID	<p>Identifies the user who has RWX permissions on the directory identified for the parameter APP_FTPSHARE_PATH.</p>	Yes
OFSAAI_SFTP_PRIVATE_KEY	<p>Identifies the SFTP private key for OFSAAI.</p> <p>For example,</p> <pre data-bbox="597 1203 1089 1335"><InteractionVariable name="OFSAAI_SFTP_PRIVATE_KEY"> /home/ofsaapp/.ssh/id_rsa </InteractionVariable></pre> <p>By default, the value is NA, which indicates that, for authentication, you are prompted to enter the password for the user <OFSAAI_SFTP_USER_ID>.</p> <p>For more information on how to generate an SFTP Private key, see the Set Up SFTP Private Key section.</p>	No
OFSAAI_SFTP_PASSPHRASE	<p>Identifies the passphrase for the SFTP private key for OFSAAI.</p> <p>For example,</p> <pre data-bbox="597 1707 1008 1839">InteractionVariable name ="OFSAAI_SFTP_PASSPHRASE"> enter a pass phrase here </InteractionVariable></pre>	No

Interaction Variable Name	Significance and Expected Value	Mandatory
	<p>By default, the value is NA.</p> <p>If the OFSAAI_SFTP_PRIVATE_KEY value is given and the OFSAAI_SFTP_PASSPHRASE value is NA, then the passphrase is identified as empty.</p>	
<p>InteractionGroup name="Hive Details"</p> <p>The default value set for the interaction variables under this group is NA.</p> <p>NOTE: The following values are required only for Hive Configuration.</p>		
HIVE_SERVER_PORT	<p>Identifies the port used for the file transfer service. The default value is 22 (SFTP). To use this port for FTP, set this value to 21.</p> <p>For example,</p> <pre><InteractionVariable name="HIVE_SERVER_PORT">22</InteractionVariable></pre>	Yes
HIVE_SERVER_FTPDRIVE	<p>Identifies the absolute path to the directory identified as the file system stage area of the HIVE server.</p> <p>For example,</p> <pre><InteractionVariable name="HIVE_SERVER_FTPDRIVE">/scratch/ofsaai/ftpshare</InteractionVariable></pre>	Yes
HIVE_SERVER_FTP_USERID	<p>Identifies the user who has RWX permissions on the directory identified under the parameter HIVE_SERVER_FTPDRIVE.</p> <p>For example,</p> <pre><InteractionVariable name="HIVE_SERVER_FTP_USERID">ofsaai</InteractionVariable></pre>	Yes
HIVE_SERVER_FTP_PROTOCOL	<p>If the HIVE_SERVER_PORT is 21, then set the value to</p>	Yes

Interaction Variable Name	Significance and Expected Value	Mandatory
	<p>FTP. If not, set it to SFTP.</p> <p>For example,</p> <pre><InteractionVariable name="HIVE_SERVER_FTP_PROTOCOL">SFTP </InteractionVariable></pre>	
HIVE_SFTP_PRIVATE_KEY	<p>Identifies the SFTP private key for the HIVE server.</p> <p>For example,</p> <pre><InteractionVariable name= "HIVE_SFTP_PRIVATE_KEY"> /scratch/testuser/.ssh/id_rsa </InteractionVariable></pre> <p>By default, the value is NA, which indicates that, for authentication, you are prompted to enter the password for the user <HIVE_SERVER_FTP_USERID>.</p> <p>For more information on generating SFTP Private key, see the Set Up SFTP Private Key section.</p>	
HIVE_SFTP_PASSPHRASE	<p>Identifies the passphrase for the SFTP private key for HIVE.</p> <p>For example,</p> <pre><InteractionVariable name="HIVE_SFTP_ PASSPHRASE">NA</InteractionVariable></pre> <p>By default, the value is NA.</p> <p>If the HIVE_SFTP_PRIVATE_KEY value is NA, then the passphrase is identified as empty.</p>	

4.6.1 Set Up the SFTP Private Key

Log in to OFSAA UNIX user using the Putty tool, where you plan for installation and generate a pair of authentication keys using the `ssh-keygen` command. If required, set passphrase. Otherwise, the OFSAAI_SFTP_PASSPHRASE tag must be set to NA.

To generate a private key, enter the commands as shown:

```
ssh-keygen -t rsa
```

```
Generating public/private rsa key pair.
```

```
Enter file in which to save the key (/home/ofsaapp/.ssh/id_rsa):
```

```
Created directory '/home/ofsaapp/.ssh'.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /home/ofsaapp/.ssh/id_rsa.
Your public key has been saved in /home/ofsaapp/.ssh/id_rsa.pub.
The key fingerprint is:
3e:4f:05:79:3a:9f:96:7c:3b:ad:e9:58:37:bc:37:e4
ofsaapp@OFSASERVER:~> cat /home/ofsaapp/.ssh/id_rsa.pub >>
/home/ofsaapp/.ssh/authorized_keys
```

Ensure the following permissions exist for the given directories:

- permissions of `.ssh` must be 700
- permissions of `.ssh/authorized_keys` must be 640
- permission of `.ssh/id_rsa` must be 400
- Permission of UNIX User created must be 755

4.7 Manifest.xml File

The `Manifest.xml` file contains details of the various datamodels used during new Installation or Upgrade scenarios.

- If you are using only CFE application standalone, then `OFS_CFE_Datamodel.xml` data model slice will be processed.
- If you are using integrated upload (CFE), then `OFS_CFE_PACK_Datamodel.xml` data model slide will be processed.

Figure 19: Sample Manifest.xml File

```

</DATAMODELS>
<PACK>
  <RDBMS>
    <!--Default entry to upload pack level integrated slice. -->
    <UPLOAD MODEL="OFS_CFE_PACK_Datamodel.xml" seq="1"/>
    <!--App level slice for individual Slice upload. Kindly uncomment the below entries with commenting above entry incase app wise slice to be uploaded.-->

</DATAMODELS>

```

Description of Sample Manifest.xml File as follows

4.8 Configure the Silent.props File

This section is applicable for a new installation of the OFS CFE Application Pack Release 8.1.1.0.0.

4.8.1 Silent.template

To configure the `Silent.props`, follow these steps:

1. Navigate to the installer kit path `OFS_CFE_PACK/ appsLibConfig/conf`
2. Rename the `Silent.template` file to `Silent.props`.
3. Edit the `Silent.props` file and modify only the following parameters.

Figure 20: Sample of Silent.props File

```
#####
### START OF PACK LEVEL_INPUTS #####
#####
# Specify the Infodom Maintenance log path(to be created) for the new Infodom
# Please ignore if you are doing installation on an existing information domain
APPFTP_LOG_PATH=
DBFTP_LOG_PATH=

# Specify wheter you want to perform Model Upload
# 0 = If you have already performed Model Upload and want to skip model upload process
# 1 = If you want to perform Model Upload
UPLOAD_MODEL=

# Specify whether you want to use the released datamodel or customized datamodel for model upload process
# 0 = If you want to upload the released datamodel
# 1 = If you want to upload the customized datamodel
MODEL_TYPE=

# Specify the path(DM_DIRECTORY) and file(DATAMODEL) name for the cutomized datamodel
# Mandatory only if you want to upload the customized datamodel
# i.e you have specified MODEL_TYPE=
DATAMODEL=
DM_DIRECTORY=
#####
### END OF PACK_LEVEL_INPUTS #####
#####

#####
### START OF OFS_CFE #####
#####

# Specify the Cash Flow Engine Segment Code
SEGMENT_1_CODE=

#Please specify if you want create new ETL App/Src pair or use an existing one.
# 0 = If you want to create a new ETL app/src pair
# 1 = If you want to use an existing pair
ETL_APPSRC_TYPE=

# Please give description for the ETL App/Src pair
```

Description of Sample of Silent.props File as follows

Table 12: Parameters for the Silent.props File (Silent.template)

Property Name	Description of Property	Permissible values	Comments
APPFTP_LOG_PATH	Infodom Maintenance log path (to be created) for the new Infodom for applayer	Not Applicable	# Mandatory if this an App Layer Installation and if you want to create a new infodom. # That is, you have specified INSTALL_APP=1 and INFODOM_TYPE=0
DBFTP_LOG_PATH	Infodom Maintenance log path (to be created) for the new Infodom for DBLayer	Not Applicable	# Mandatory if this an App Layer Installation and if you want to create a new infodom. # That is, you have specified INSTALL_APP=1 and INFODOM_TYPE=0

Property Name	Description of Property	Permissible values	Comments
UPLOAD_MODEL	If you want to perform Model Upload	0 = No 1 = yes	Mandatory
MODEL_TYPE	Released data model or Customized data model	0 = released 1 = customized	Mandatory only if you want to upload the data model.
DATAMODEL	Path for the customized data model	Not Applicable	# Mandatory only if you want to upload the customized data model. # That is, you have specified MODEL_TYPE=1
DM_DIRECTORY	File name for the customized data model	Not Applicable	# Mandatory only if you want to upload the customized data model. # That is, you have specified MODEL_TYPE=1
SEGMENT_1_CODE	Segment Code	Not Applicable	Mandatory NOTE: The Segment Code should be in upper case.
ETL_APPSRC_TYPE	Create new ETL App or Src pair or use an existing one	0 = New 1 = Existing	# Mandatory if this an App Layer installation. # That is, you have specified INSTALL_APP=1 # 0 = If you want to create a new ETL app or src pair # 1 = If you want to use an existing pair
ETL_APP_1_DESC	Description for the ETL App	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified ETL_APPSRC_TYPE=0
ETL_SRC_1_DESC	Description for the ETL Staging source description	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified ETL_APPSRC_TYPE=0
FEETL_SRC_2_DESC	Description for the ETL Processing source description	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified

Property Name	Description of Property	Permissible values	Comments
			ETL_APPSRC_TYPE=0
ETL_APP_1_NAME	ETL application name	Not Applicable	This is for App Layer installation.
ETL_SRC_1_NAME	ETL Staging source name	Not Applicable	This Source must be mapped to the above ETL Applications
ETL_SRC_2_NAME	ETL Processing source name	Not Applicable	This Source must be mapped to the above ETL Application.

4.9 Install the OFS CFE Application Pack

ATTENTION:

Before you begin the installation, configure and execute the following files:

1. [Configure the OS File System Settings and Environment Settings in the .profile file](#)
2. [Configure the OFS_CFE_PACK.xml file](#)
3. [Configure the OFS_CFE_SCHEMA_IN.xml file](#)
4. [Configure the OFSAAI InstallConfig.xml file](#)
5. [Execute the Schema Creator Utility](#)
6. [Configure the Manifest.xml file](#)
7. [Configure the Silent.props file](#)

To install the OFS CFE Application Pack, follow these steps:

1. Log in to the system as a non-root user.
2. Identify a directory for installation and set the same in the user `.profile` file as follows:

```
FIC_HOME=<OFSAA Installation Directory>
export FIC_HOME
```

3. Execute the user `.profile` file.

```
.. ./profile
```

- Navigate to the `OFS_CFE_PACK/bin` directory.

ATTENTION:

Do not install the new applications in the same segment if the preinstalled applications use run management.

- Enter the following command in the console to execute the application pack installer with the Silent option.

```
./setup.sh SILENT
```

- The installer proceeds with Pre-installation Checks.

Figure 21: Silent Mode of Installation

OFSAA APPLICATION PACK LICENSE AGREEMENT
*****
* Oracle Financial Services Analytical Applications (OFSAA) application packs are groups of OFSAA products packaged together into a single installer. Each application pack contains OFSAA applications that address specific functional domains.*
* Every application pack also includes the following OFSAA infrastructure application options which are automatically installed by every application pack installer:
1. Oracle Financial Services Analytical Applications Infrastructure
2. Oracle Financial Services Enterprise Modeling
3. Oracle Financial Services Big Data Processing
* Oracle Financial Services Analytical Applications Infrastructure (OFS AAI) is the base infrastructure for all OFSAA applications and is therefore automatically installed and enabled by the application pack installer.*
* The application pack installer always installs Oracle Financial Services Enterprise Modeling, Oracle Financial Services In-line Processing Engine and Oracle Financial Services Big Data Processing application options along with the application pack applications, but enables them only if any application that requires their functionality is enabled.*
* Any OFSAA application that is enabled must be licensed for use. Oracle Financial Services Analytical Applications Infrastructure, Oracle Financial Services Enterprise Modeling, Oracle Financial Services In-line Processing Engine and Oracle Financial Services Big Data Processing are individually licensable application options.*
* Application products once enabled cannot be disabled. Application products not enabled on installation, may later be enabled using the "Manage OFSAA Product License(s)" feature of the platform.*

```

Description of Silent Mode Installation Complete as follows

11. The following message is displayed in the console:
Installation completed...
12. The OFSAA Infrastructure installation performs a post install health check automatically on successful installation of the product.
Congratulations! Your installation is complete.
13. On completion of installation, see the installation log files.

To verify if the release is applied successfully, check the log files mentioned in the [Verifying the Log File Information Section](#).

14. Update `.profile` file to define `$OFSAA_LOG_HOME`

Example of entry:

```
OFSAA_LOG_HOME=/u01/app/FTP SHARE//logs
export OFSAA_LOG_HOME
```

15. Verify FTPSHARE logs directory has 775 permission

```
chmod -R 775 FTPSHARE
```

16. Perform the steps mentioned in the [Post Deployment Configurations](#) section.

17. For enabling Transparent Data Encryption (TDE), see the Configuring TDE, Data Redaction and the Corresponding Settings in [Oracle Financial Services Data Foundation Application Pack Data Protection Implementation Guide](#).

18. For enabling Data Redaction, see the Data Redaction section under the Data Security and Data Privacy chapter in the [Oracle Financial Services Analytical Applications Infrastructure Administration Guide 8.0.7.0.0](#).

4.9.1 Verify the Log File Information

See the following logs files for more information:

- `Pack_Install.log` file located in the `OFS_CFE_PACK/logs/` directory for OFS CFE Application Pack installation logs.
- The `OFS_CFE_installation.err` and `OFS_CFE_installation.log` files in the `OFS_CFE_PACK/OFS_CFE/logs/` directory.
- Log file (or files) located in the `OFS_CFE_PACK/OFS_AAI/logs/` directory for Infrastructure installation logs.
- `OFSAAInfrastructure_Install.log` file located in the `$FIC_HOME` directory for Infrastructure installation logs.

After the installation OFSAAI 8.1.1.0.0 is successful, complete the required [Post-installation](#) steps.

4.10 Install OFS CFE Application Pack v8.1.1.0.0 on an Existing OFSAA Instance

You have already installed an application pack from release 8.1.x.0.0 and now you want to install another application pack from Release 8.1.1.0.0. For example, OFS ALM Pack is already installed and now you want to install OFS CFE Pack.

Download the following mandatory one-off patches from [My Oracle Support](#) into the download directory:

- 32530173
- 32548944

NOTE:

Ignore patch 32530173, if you have already applied this patch as part of other Application pack installation.

4.10.1 Execute the Schema Creator Utility Only for the OFS CFE Application Pack

To execute the Schema Creator, follow these steps:

1. To execute the Schema Creator, follow these steps:

While defining the Schema details for the applications, provide exactly the same Schema details given in the previous installation. The output file (`OFS_CFE_SCHEMA_OUTPUT.xml`) is generated as a result of the Schema creation process.

- a. Edit the file

`OFS_CFE_PACK/Schema_Creator/conf/OFS_CFE_SCHEMA_IN.xml` in a text editor. See the [Configure the OFS_CFE_PACK.xml File](#) section for values to modify in the XML file.

- b. Execute the utility with `-s` option.

For example: `./osc.sh -s`

2. Follow steps given in the section If the Schema Creator Output file (`OFS_CFE_SCHEMA_OUTPUT.xml`) was generated. Configuring the `OFSAAI_InstallConfig.xml` file is not required in this scenario.

4.10.2 Update the `OFS_CFE_PACK.xml` File for the OFS CFE Application Pack

The `OFS_CFE_PACK.xml` file contains details of the various products that are packaged in the OFS CFE Application Pack.

This section details the various tags or parameters available in the file and the values that must be updated. Prior to installing the OFS CFE Pack in SILENT mode, it is mandatory to update this file.

To configure the `OFS_CFE_PACK.xml` file, follow these steps:

3. Navigate to the `OFS_CFE_PACK/conf` directory.
4. Open the `OFS_CFE_PACK.xml` file in a text editor.
5. Configure the `OFS_CFE_PACK.xml` file as mentioned in the [Configuring the OFS_CFE_PACK.xml File](#) section.

4.10.3 Update the Silent.Props File of the OFS CFE Application Pack

Most parameters in the `Silent.props` file for 8.1.1.0.0 have default values. Before triggering the installation, ensure that you review them thoroughly and update as required.

Update the `Silent.props` file in the Release 8.1.x pack ONLY for the newly licensed OFS CFE application pack.

6. Navigate to the `OFS_CFE_PACK/appsLibConfig/conf` directory.
7. Open the `Silent.props` file and edit the parameters as mentioned in the [Configuring the Silent.props File](#) section.

4.10.4 Trigger the Installation

To trigger the installation, follow these steps:

1. Navigate to the `OFS_CFE_PACK/bin` directory.
2. Enter the following command in the console to execute the application pack installer with Silent option.

```
./setup.sh SILENT
```

3. The installer proceeds with Pre-installation Checks.

Figure 27: Silent Mode Installation

Description of Silent Mode Installation Complete as follows

The following message is displayed in the console:

Congratulations! Your installation is complete.

4.10.5 Verify the Log File Information

See the following logs files for more information:

- The Pack_Install.log file in the OFS_CFE_PACK/logs/ directory for OFS CFE Application Pack installation logs.
- The OFS_CFE_installation.err and OFS_CFE_installation.log files in the OFS_CFE_PACK/OFS_CFE/logs/ directory.

- The Log file (or files) in the `OFS_CFE_PACK/OFS_AAI/logs/` directory for Infrastructure installation logs.
- The `OFSAAInfrastructure_Install.log` file in the `$FIC_HOME` directory for Infrastructure installation logs.

NOTE:

Ignore following errors in `OFS_CFE_installation.err` and `OFS_CFE_installation.log` files during the pack on pack installation. These files are located in `OFS_CFE_PACK/OFS_CFE/logs` folder.

1. OBJECT Already Exist error.
2. Error: Table already has a primary key
3. ORA-01430: column being added already exists in table.
4. Error: Table already has a referential constraint with same name

4.10.6 Post-installation Steps

Follow the steps mentioned in the [Post-installation Steps](#) section.

5 Post-installation

After the successful installation of the OFS CFE Applications Pack Release 8.1.2.0.0, follow the post-installation procedures mentioned in [Post-installation Checklist](#).

Topics:

- [Post-installation Checklist](#)
- [Verify the Log File Information](#)
- [Backup the OFS_CFE_SCHEMA_IN.XML file, OFS_BFND_SCHEMA_OUTPUT.xml, and Silent.props Files](#)
- [Adding Atomic Schema Details in the tnsnames.ora File](#)
- [Access the OFSAA Application](#)
- [OFSAA Landing Page](#)
- [Post Deployment Configurations](#)

5.1 Post-installation Checklist

You can use this checklist to have a quick glance at everything that you will be doing post installing this application. The link provided in each step takes you to a section either within this document or to another referenced document.

NOTE:

See the *Post-Installation* section in the [OFS AAI Release 8.1.2.0.0 Installation and Configuration Guide](#) to complete these procedures.

Table 6: Post Installation Checklist

Sl. No.	Post installation Activity
1	Back up the OFS_CFE_SCHEMA_IN.xml, OFS_CFE_SCHEMA_OUTPUT.xml, and Silent.props files.
2	Add Atomic Schema Details in the tnsnames.ora file.
3	Stop the OFSAA Infrastructure services.
4	Create and deploy EAR or WAR files.
5	Build EAR or WAR file once and Deploy Across Multiple OFSAA Instances.

Sl. No.	Post installation Activity
6	Start the OFSAA Infrastructure services.
7	Access the OFSAA Application.
8	OFSAA Landing Page
9	Configure Work Manager in the web application servers.
10	Configure Resource Reference in the web application servers.
11	Excel upload mapping and template.
12	Add TNS entries in the <code>tnsnames.ora</code> file.
13	Configure the <code>excludeURLList.cfg</code> file.
14	Configure Oracle R distribution and Oracle R Enterprise (ORE).
15	Set TDE and Data Redaction in OFSAAI.
16	Implement Data Protection in OFSAA.
17	Post Deployment Configurations <ol style="list-style-type: none"> 1 Configure GDPR 2 Login as System Administrator 4 Create Application Users 5 Map ICC Batch Execution Rights to User 6 Save Post-Load Change Transformations Changes in the <code>.profile</code> file for Solaris Operating System

5.2 Verify the Log File Information

See the following logs files for more information:

- `Pack_Install.log` file located in the `OFS_CFE_PACK/logs/` directory for OFS CFE Application Pack installation logs.
 - Log file(s) located in the `OFS_CFE_PACK/OFS_AAI/logs/` directory for Infrastructure installation logs.
 - The `OFSAAInfrastructure_Install.log` file located in the `$FIC_HOME` directory for Infrastructure installation logs.

5.3 Backup the OFS_CFE_SCHEMA_IN.xml, OFS_CFE_SCHEMA_OUTPUT.xml, and Silent.props Files

Back up the `OFS_CFE_SCHEMA_IN.xml`, `OFS_CFE_SCHEMA_OUTPUT.xml`, and `Silent.props` files for future reuse to upgrade the existing applications or install new applications.

Table 11: Directory of Files to Backup

File Name	Directory
<code>OFS_CFE_SCHEMA_IN.xml</code>	<code>OFS_CFE_PACK/Schema_Creator/conf</code>
<code>OFS_CFE_SCHEMA_OUTPUT.xml</code>	<code>OFS_CFE_PACK/Schema_Creator/</code>
<code>Silent.props</code>	<code>OFS_CFE_PACK/appsLibConfig/conf</code>

5.4 Adding Atomic Schema Details in the `tnsnames.ora` File

Add TNS entries in the `tnsnames.ora` file for every Schema created for the Application Pack.

To add the Atomic Schema in the `tnsnames.ora` file, follow these steps:

1. Log in to the system as a non-root user.
2. Navigate to the `OFS_CFE_PACK/Schema_Creator/conf` directory.
3. Edit the `tnsnames.ora` file using a text editor and add the Atomic Schema as follows and **Save** the file.

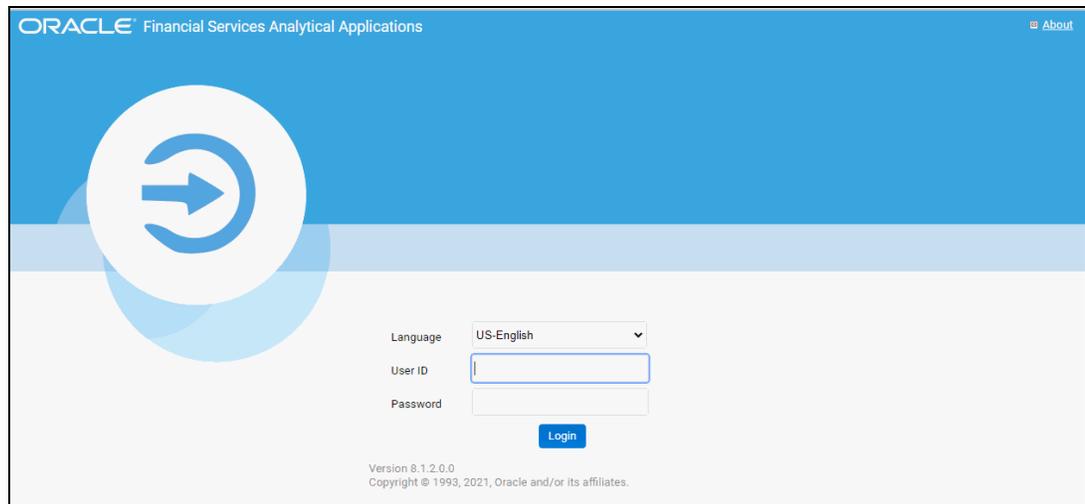

```
<ATOMICSCHEMANAME> =
  (DESCRIPTION =
    (ADDRESS_LIST =
      (ADDRESS = (PROTOCOL = TCP) (HOST = <HOST NAME>) (PORT =
<PORT NUMBER>))
    )
    (CONNECT_DATA =
      (SERVICE_NAME = <SID NAME>)
    )
  )
```

5.5 Access the OFSAA Application

To access the OFSAA application, follow these steps:

1. Open a browser and enter the URL in the following format:
<scheme>://<IP address/ hostname>:<port>/<context-name>/login.jsp
For example, <https://192.0.2.2/ofsa/login.jsp>
The OFSAA Login window is displayed.

Figure 25: OFSAA Login Window

Description of OFSAA Login Window as follows

With the installation of every OFSAA Application Pack, there are two seeded user profiles configured in the system:

- SYSADMN System Administrator
- SYSAUTH System Authorizer

The SYSADMN and SYSAUTH users are configured with a default password, which you will require to log in for the first time. See the [MOS Doc ID: 2691681.1](#) for the password.

2. Log in to the application using the SYSADMN User ID and the default password. After the first login, you are prompted to change the password.

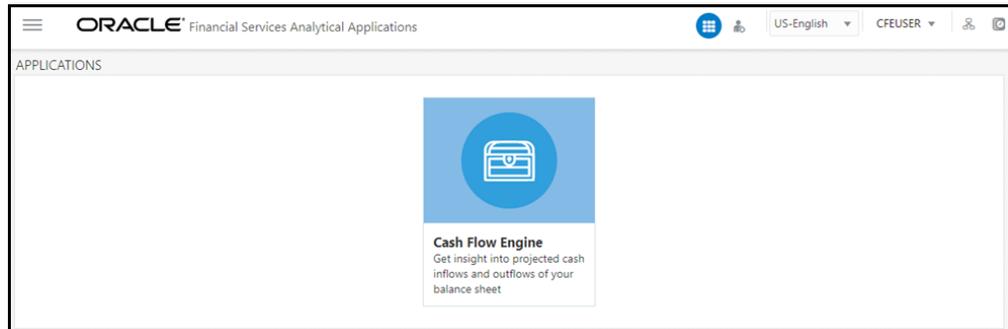

ATTENTION:

The password change is required only for a new installation.

5.6 OFSAA Landing Page

On successful login, the **OFSAA Landing** page is displayed.

Figure 26: OFSAA Landing Page

Description of OFSAA Landing Page as follows

OFSAA Landing page shows the available Applications as tiles, for which a user has access. Click the respective Application tile to launch that particular application. You can change the landing page based on your preference.

5.7 View OFSAA Product Licenses after Installation of Application Pack

In an integrated environment, where you have multiple applications installed on the same domain or infrastructure, OFSAAI allows you to see the other licensed applications through the UI. For more information, see the View OFSAA Product Licenses after Installation of Application Pack in the [OFS Analytical Applications Infrastructure User Guide Release 8.1.2.0.0](#).

5.8 Post Deployment Configurations

This section lists the various configurations to be completed before you use the OFSAA Applications.

Topics:

- [GDPR Configuration](#)
- [Logging as System Administrator](#)
- [Creating Application Users](#)
- [Mapping ICC Batch Execution Rights to User](#)
- [Saving Post- Load Change Transformations](#)

5.8.1 GDPR Configuration

By default, data will be redacted to WebLogic user. If you want to see redacted data (PII data on the PII dashboard) after enabling GDPR, then create WebLogic user in OFSAA application and or any new user in OBIEE and map the user to “Data Security Group” in OFSAA using SMS.

For more information on Data Protection Implementation by OFSAA, see the [Oracle Financial Services Data Foundation User Guide](#).

5.8.2 Logging as System Administrator

Post installation, the first login into Infrastructure is possible only for a System Administrator through user ID **sysadmn**. This ID is created at the time of installation with the password provided during installation. Enter login ID sysadmn and password that was provided during installation. Click **Login**.

For more information, see the [Access the OFSAA Application](#) section,

System Administration refers to a process of managing, configuring, and maintaining confidential data in a multi-user computing environment. System Administration in Security Management involves creating functions, roles, and mapping functions to specific roles. System Administration also involves maintaining segment information, holiday list, and restricted passwords to ensure security within the Infrastructure system.

You can access System Administrator in LHS menu of Security Management. The options available under System Administrator are:

- [Function Maintenance](#)
- [Role Maintenance](#)
- [Function - Role Mapping](#)
- [User Group Role Map](#)
- [Segment Maintenance](#)

5.8.2.1 Function Maintenance

For details, see the *System Administrator* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.2.2 Role Maintenance

For details, see the *System Administrator* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.2.3 Function - Role Mapping

For details, see the *System Administrator* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.2.4 User Group Role Map

For details, see the *User Group Role Map* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.2.5 Segment Maintenance

Segment is used to control access rights on a defined list of objects. It is mapped to an information domain.

Segment Maintenance in the Infrastructure system facilitates you to create segments and assign access rights. You can have different segments for different Information Domains or same segments for different Information Domains.

User scope is controlled by segment or folder types with which the object is associated.

- Objects contained in a public folder will be displayed irrespective of any user.
- Objects contained in a shared folder will be displayed if user belongs to a user group which is mapped to an access type role with the corresponding folder.
- Objects contained in a private folder will be displayed only to the associated owner.

You can access Segment Maintenance by expanding System Administrator section within the tree structure of LHS menu. The Segment Maintenance window displays a list of available segments with details such Domain, Segment Code, Segment Name, Segment Description, Segment/Folder Type, Owner Code, and the number of Users Mapped to the segment. You can view, create, modify, and delete segments within the Segment Maintenance window.

You can also make use of Search and Pagination options to search for a specific role or view the list of existing roles within the system.

5.8.3 Change the ICC Batch Ownership

All the seeded batches in the OFS CFE application are automatically assigned to the SYSADMN user during installation. To see the batches in the Batch Maintenance menu, you must execute the following query in the Config Schema of the database:

```
begin
AAI_OBJECT_ADMIN.TRANSFER_BATCH_OWNERSHIP
('fromUser','toUser','infodom');
end;
OR
begin
AAI_OBJECT_ADMIN.TRANSFER_BATCH_OWNERSHIP ('fromUser','toUser');
end;
```

Where:

- `fromUser` indicates the user who currently owns the batch.
- `toUser` indicates the user to whom the ownership must be transferred.
- `infodom` is an optional parameter. If specified, the ownership of the batches pertaining to that Infodom will be changed.

5.8.4 Creating Application Users

Create the application users in the OFSAA setup prior to use. This step may not be required if you have already setup users in the OFSAA setup.

For more information, see *User Creation* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.5 Mapping Application Users to User Group

With the installation of CFE Application Pack, preconfigured application user groups are seeded. These user groups are unique to every OFSAA Application Pack and have application roles preconfigured.

Map the application user (or users) to the respective Application User Group (or Groups) and subsequently authorize the entitlements by logging in as SYSAUTH (System Authorizer) user.

For more information, see the *Mapping/Unmapping Users* section in the [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

5.8.5.1 CFE Application Specific User Group Mappings

User Groups seeded with the OFS CFE Application are as follows:

UserGroup

- CFE Administrator (CFEADMINGRP)
- CFE Analyst (CFEANALYSTGRP)
- CFE Auditor (CFEAUDITORGRP)

5.8.6 Saving Post-Load Change Transformations

After creating users, Log in to OFS CFE as any user who is mapped to CFE Admin or Analyst group and follow these steps:

1. Navigate to Data Management Framework and select Post Load Changes.

2. A new window is displayed. Click on each Transformation from Transformations List and click on Stored Procedure in the Right Panel, click on Edit in the Top Right Menu and Click on Finish Button in Bottom.

NOTE:

All the Transformation Stored Procedures are required to be edited and saved (Finish Button) once for getting it is available.

6 Additional Configuration

You can use this checklist to have a quick glance at some additional configurations. The link provided in each step takes you to a section either within this document or to another referenced document.

NOTE:

See the *Additional Configuration* section in the [OFS AAI Release 8.1.2.0.0 Installation and Configuration Guide](#) to complete these procedures.

Table 7: Additional Configuration Checklist

Sl. No.	Additional Configuration Activity
1	Configure the web server.
2	Configure Resource Reference in the web servers.
3	Configure Work Manager in the web application servers.
4	Add FTP/SFTP Configuration for File Transfer.
5	Configure the Infrastructure Server Memory.
6	Retrieve the Patch Information.
7	Change IP or Hostname, Ports, Deployed Paths of the OFSAA Instance.
8	Execute the Encryption Changer.
9	Set Infrastructure LDAP Configuration.
10	Configure the OFSAAI web services.
11	Enable Parallel Execution of DML statements.
12	Configure the Message Details in Forms Designer.
13	Configure Password Changes.
14	Configure Java Virtual Machine.
15	Configure Internal Service.
16	<ul style="list-style-type: none"> Configure Dimension and Hierarchy Management Configure Member Deletion

Sl. No.	Additional Configuration Activity
	<ul style="list-style-type: none"> • Configure Attribute Default Date Format • Configure Members Reverse Population • Configure Hierarchy Reverse Population • Configure Maximum Levels allowed in Hierarchies • Configure Node Limit for a Hierarchy Tree_

6.1 Configuration for Dimension and Hierarchy Management

These configuration changes are applicable when Dimension Management features provided in OFSAAI are used. You can open `AMHMConfig.properties` file present in the `$FIC_WEB_HOME/webroot/conf` directory to set the properties explained in the following sections.

Configuration for Dimension and Hierarchy Management must be done only after the application or solution installation is done. The properties specific to Information Domain are:

- `$INFODOM$=<Name of the Information Domain>`
- `$DIMENSION_ID$=<Dimension ID for which the property must be set>`

Topics:

- [Configure Member Deletion](#)
- [Configure Attribute Default Date Format](#)
- [Configure Members Reverse Population](#)
- [Configure Hierarchy Reverse Population](#)
- [Configure Maximum Levels allowed in Hierarchies](#)
- [Configure Node Limit for a Hierarchy Tree](#)

6.2 Configure Member Deletion

This property should be set to allow the user to delete the Members for the Dimension.

Table 14: Configure Member Deletion

Value	Code	Example
# Member Deletion Configuration - VALUE - Y/N	MEMBER_DEL-\$INFODOM\$- \$DIMENSION_ID\$=\$VALUE\$	MEMBER_DEL-ORAFUSION-1=Y

6.3 Configure Attribute Default Date Format

This property should be set to display the Default Date Format for Date Type Attribute in the Attributes window.

Table 15: Configure Attribute Default Date Format

Value	Code	Example
# Attribute Default Date Format - DB_DATE_FORMAT: DD-MON- YYYY	ATTR_DEF_DATE_FORMAT- \$INFODOM\$=\$DB_DATE_FORMAT\$	ATTR_DEF_DATE_FORMAT- ORAFUSION=DD/MON/YYYY

6.4 Configure Members Reverse Population

This property should be set for the reverse population of Members for the Dimensions in required Information Domains.

Table 16: Configure Members Reverse Population

Table 16: Configure Members Reverse Population

Value	Code	Example
# Members Reverse population - VALUE - Y/N	MEMBER_REVERSE_POP- \$INFODOM\$- \$DIMENSION_ID\$=\$VALUE\$	MEMBER_REVERSE_POP- ORAFUSION-1=Y

6.5 Configure Hierarchy Reverse Population

This property should be set for the reverse population of Hierarchies for the Dimensions in required Information Domains.

Table 17: Configure Hierarchy Reverse Population

Value	Code	Example
#Hierarchy Reverse population – VALUE - Y/N	HIERARCHY_REVERSE_POP-\$INFODOM\$-\$DIMENSION_ID\$=\$VALUE\$	HIERARCHY_REVERSE_POP-ORAFUSION-1=Y

6.6 Configure Maximum Levels allowed in Hierarchies

This property is required to set the maximum levels allowed to build the Hierarchies tree structure.

Table 18: Configure Maximum Levels allowed in Hierarchies

Value	Code	Example
#Hierarchy Maximum level allowed for the hierarchy in particular Information Domain - VALUE - Integer number	MAX_DEPTH-\$INFODOM\$=\$VALUE\$	MAX_DEPTH-FUSION=15

Hierarchies greater than 15 levels are not supported within the OFSAA EPM applications (ALM, FTP, PFT, and HM). If the hierarchy data contains more than 15 levels, OFSA_IDT_ROLLUP will not be populated. The number of hierarchy levels allowed for OFSAA EPM key dimensions must be less than or equal to 15.

If the Hierarchy Reverse Population setting is set to Y and more than 15 levels exist in the data, then this alert is displayed: *“The number of levels exceeds the limit”*.

If the maximum level allowed setting is set greater than 15 and Hierarchy Reverse Population is set to Y, then this error is displayed *“Error occurred in Reverse Populating the hierarchy”*.

6.7 Configure Node Limit for a Hierarchy Tree

This property is required to display the Hierarchy as a small or a large hierarchy. If the tree node limit exceeds the set limit, the Hierarchies are treated as large Hierarchy.

Table 19: Configure Node Limit for a Hierarchy Tree

Value	Code	Example
#Tree node limit for the hierarchy - Values is Integer number	TREE_NODE_LIMIT=\$VALUE\$	TREE_NODE_LIMIT=30

7 Upgrade

This section describes about the OFS CFE Application pack upgrade.

Topics:

- [Upgrade Scenarios](#)
- [Prepare for Upgrade](#)
- [Initializing the Upgrade](#)
- [Upgrade CFE Application Pack from v8.1.1.0.0 to CFE Application Pack v8.1.2.0.0](#)

7.1 Upgrade Scenarios

The possible upgrade scenarios and a high-level sequence of steps to complete the upgrade are summarized in this section.

ATTENTION:

Always ensure you run the upgrade installer only on the cloned environment.

Table 3: Release 8.1.2.0.0 Installation Scenarios

Scenario	Installation and Upgrade Instructions
Installation Instructions Install OFS CFE Application Pack v8.1.2.0.0	<ol style="list-style-type: none"> 1. Update the OFS_CFE_PACK.xml. 2. Update OFSAAI_InstallConfig.xml. 3. Configure the Schema Creator utility. Update OFS_CFE_SCHEMA_IN.xml file. 4. Run the Schema Creator utility. 5. Configure Manifest.xml (optional). 6. Update the Silent.props file present in the Release 8.1.2.0.0 pack for OFS CFE Application Pack. 7. Trigger the installation.
Install OFS CFE Application Pack v8.1.2.0.0 on an	<ol style="list-style-type: none"> 1. Update the OFS_CFE_PACK.xml file for the newly licensed OFS CFE Application Pack.

Scenario	Installation and Upgrade Instructions
<p>existing OFSAA Instance</p> <p>You have already installed an application pack from release 8.1.2.0.0 and now you want to install another application pack from Release 8.1.2.0.0.</p> <p>Example: OFS ALM Pack is already installed and now you want to install OFS CFE Pack.</p>	<ol style="list-style-type: none"> 2. Run the Schema Creator utility ONLY for the newly licensed OFS CFE Application Pack. 3. Update the <code>Silent.props</code> file of the newly licensed OFS CFE Application Pack. 4. Trigger the installation.
<p>Upgrade Instructions</p>	
<p>Upgrade CFE Application Pack from v8.1.1.0.0 to CFE Application Pack v8.1.2.0.0</p> <p>Example: You are using an application pack in release 8.1.1.0.0 and now want to upgrade it to Release 8.1.2.0.0.</p>	<ol style="list-style-type: none"> 1. Run the Environment Check Utility tool and ensure that the hardware and software requirements are installed as per the Tech Matrix. 2. Clone your existing environment to the v8.1.2.0.0 Tech Matrix. 3. Run the Environment Check Utility tool and ensure that the hardware and software requirements are installed as per the Tech Matrix. 4. Update the <code>OFS_CFE_PACK.xml</code> file to enable ONLY the existing installed applications. 5. Update the <code>Silent.props</code> file present in the OFS CFE v8.1.2.0.0 installer pack. 6. Trigger the Release 8.1.2.0.0 installation

7.2 Prepare for Upgrade

Before you plan to install or upgrade any of your application packs to Release 8.1.2.0.0, ensure that all the application packs in your current OFSAA instance are available in the Release 8.1.2.0.0 version. Contact [My Oracle Support](#) for more information about the release version details.

ATTENTION:

You must apply the OFS AAI patch **32530173** in case of Pack-on-Pack v8.1.1.0.0 installation. Do not apply this patch, if you have already applied it as part of another application pack's installation.

1. Backup the following environment file from the `OFS_CFE_PACK/conf/` directory the directory:
 - `OFS_CFE_PACK.xml`
2. Backup the following environment files from the `OFS_CFE_PACK/Schema_Creator/conf/` directory:
 - `DBMASTER_SC.xml`

- OFS_CFE_SCHEMA_IN.xml
3. Backup the following environment file from the OFS_CFE_PACK/OFS_AAI/conf/directory:
 - OFSAAI_InstallConfig.xml
 4. Ensure that the following property files are present in the OFS_CFE_PACK/appsLibConfig/conf/ directory and make a backup:
 - Silent_upgrade_to_81.template
 5. See the [Tech Matrix](#) for the hardware and software required to upgrade to the OFS CFE Application Pack Release 8.1.2.0.0.
 6. Enable unlimited cryptographic policy for Java. For more information, see the *Enabling Unlimited Cryptographic Policy* section in the [OFS Analytical Applications Infrastructure Administration Guide](#).
 7. Clone your environment. For more information, see the [OFSAA Cloning Reference Guide](#).
 8. Execute the following SQL query on the Atomic Schema:
update rev_tables_b set version=0 where version is null;
commit;
 9. See the [Compatibility Matrix](#) before upgrading to the OFS CFE Application Pack.

7.3 Initializing the Upgrade

To download and copy the OFS ALM Application Pack v8.1.2.0.0 archive file, see [Downloading and Copying the OFS CFE Applications Pack Installer](#) section.

For Solaris OS, download the mandatory one-off patch 31509494 from [My Oracle Support](#).

The archive files are different for every operating system like AIX, Solaris, and RHEL/Oracle Linux.

1. Log in to the OFSAA Server with user credentials that was used to install OFSAA.
2. Shut down all the OFSAAI Services. For more information, see [the Starting/Stopping Infrastructure Services](#) section.
3. Execute the following command:

```
chmod -R 750 $FIC_HOME
```
4. If you have Unzip utility, skip to the next step. Download the Unzip utility (OS specific) and copy it in Binary mode to the directory that is included in your PATH variable, typically \$HOME path or directory in which you have copied the 8.1.2.0.0 installer.

Uncompress the unzip installer file using the command:

```
uncompress unzip_<os>.Z
```

NOTE: If you notice an error message “*uncompress: not found [No such file or directory]*” when the package is not installed, contact your UNIX administrator.

5. Give EXECUTE permission to the file using the command:

```
chmod 751 OFS_CFE_81200_<OperatingSystem>.zip
```

6. Extract the contents of the Oracle CFE Application Pack installer archive file using the following command:

```
unzip_<os> <name of the file to be unzipped>
```

7. Log in to OFSAA Infrastructure Config Schema and execute the following SQL query:

```
ALTER TABLE CONFIGURATION MODIFY PARAMNAME VARCHAR2  
(100 CHAR);
```

8. Change the mode of OFS_CFE_PACK to 777.

9. Navigate to conf directory.

10. Open the file OFS_CFE_PACK.xml and update the enable value as YES for app id OFS_AAI.

11. Navigate to /OFS_CFE_PACK/appsLibConfig/conf.

12. Copy silent.props and update the log path.

13. Make the value for ETL_APPSRC_TYPE=1

14. Navigate to bin folder.

15. Execute setup.sh file using the following command:

```
./setup.sh SILENT
```

16. For more information on securing your OFSAA Infrastructure, see the Security Guide in [OHC Documentation Library](#).

17. Add umask 0027 in the .profile of the UNIX account that manages the WEB server to ensure restricted access permissions.

18. Restart all the OFSAAI services. For more information, see the [Stop Infrastructure Services](#) and [Start Infrastructure Services](#) section for details.

19. 16. Generate the application EAR or WAR file and redeploy the application onto your configured web application server. For more information on generating and deploying EAR or WAR file, see [Create and Deploy the EAR/WAR Files](#).

20. Verify the log files in the locations mentioned in the section Verifying the Log Files. You can also verify the OFSAAI log files from OFS_CFE_PACK/OFS_AAAI_PACK/logs directory.

21. Follow the steps mentioned in the [Post Installation Steps](#) section.

22. Update the .profile file to define \$OFSAA_LOG_HOME

Example of entry:

```
OFSAA_LOG_HOME=/u01/app/FTP SHARE//logs
```

```
export OFSAA_LOG_HOME
```

23. Execute the `.profile` file.

24. For enabling TDE, see the Configuring TDE in case of Upgrade section in Configuring TDE, Data Redaction and the Corresponding Settings in the [Oracle Financial Services Data Foundation Application Pack Data Protection Implementation Guide](#).

7.4 Upgrade OFS CFE Application pack from v8.1.1.0.0 to OFS CFE v8.1.2.0.0

You are upgrading the OFS CFE Application Pack from Release v8.1.1.0.0 to Release 8.1.2.0.0.

Example: You are using release v8.1.1.0.0 and now want to upgrade to Release 8.1.2.0.0.

7.4.1 Clone Your Existing Environment

Clone your existing environment to the 8.1.2.0.0 [Tech Matrix](#). For more information, see the OFSAA Cloning Reference Guide:

- [OFSAA Cloning Reference Guide for Release 8.1.x](#)

7.4.2 Update the Silent.props File in Release 8.1.2.0.0 Pack

Update the `Silent.props` file present in the Release 8.1.2.0.0 pack.

Most parameters in the `Silent.props` file for v8.1.2.0.0 have default values. Before triggering the installation, ensure that you review them thoroughly and update them as required.

1. Navigate to the `OFS_CFE_PACK/appsLibConfig/conf` directory.
2. Open the `Silent.props` file and edit only the following parameters.

Table 21: Parameters for the Silent.props File (Silent.template)

Property Name	Description of Property	Permissible values	Comments
APPFTP_LOG_PATH	Infodom Maintenance log path (to be created) for the new Infodom for applayer	Not Applicable	# Mandatory if this an App Layer Installation and if you want to create a new infodom. # That is, you have specified INSTALL_APP=1 and

Property Name	Description of Property	Permissible values	Comments
DBFTP_LOG_PATH	Infodom Maintenance log path (to be created) for the new Infodom for DBLayer	Not Applicable	INFODOM_TYPE=0 # Mandatory if this an App Layer Installation and if you want to create a new infodom. # That is, you have specified INSTALL_APP=1 and INFODOM_TYPE=0
UPLOAD_MODEL	If you want to perform Model Upload	0 = No 1 = yes	Mandatory
MODEL_TYPE	Released data model or Customized data model	0 = released 1 = customized	Mandatory only if you want to upload the data model.
DATAMODEL	Path for the customized data model	Not Applicable	# Mandatory only if you want to upload the customized data model. # That is, you have specified MODEL_TYPE=1
DM_DIRECTORY	File name for the customized data model	Not Applicable	# Mandatory only if you want to upload the customized data model. # That is, you have specified MODEL_TYPE=1
SEGMENT_1_CODE	Segment Code	Not Applicable	Mandatory NOTE: The Segment Code should be in upper case.
ETL_APPSRC_TYPE	Create new ETL App or Src pair or use an existing one	0 = New 1 = Existing	# Mandatory if this an App Layer installation. # That is, you have specified INSTALL_APP=1 # 0 = If you want to create a new ETL app or src pair # 1 = If you want to use an existing pair
ETL_APP_1_DESC	Description for the ETL App	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified ETL_APPSRC_TYPE=0
ETL_SRC_1_DESC	Description for the ETL Staging	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified

Property Name	Description of Property	Permissible values	Comments
	source description		ETL_APPSRC_TYPE=0
FEETL_SRC_2_DESC	Description for the ETL Processing source description	Not Applicable	# Mandatory if you want to create new ETL app or src pair. #That is, you have specified ETL_APPSRC_TYPE=0
ETL_APP_1_NAME	ETL application name	Not Applicable	This is for App Layer installation.
ETL_SRC_1_NAME	ETL Staging source name	Not Applicable	This Source must be mapped to the above ETL Application.s
ETL_SRC_2_NAME	ETL Processing source name	Not Applicable	This Source must be mapped to the above ETL Application.

7.4.3 Update the OFS_CFE_PACK.xml File

Update the OFS_CFE_PACK.xml File. Enable only the existing installed applications.

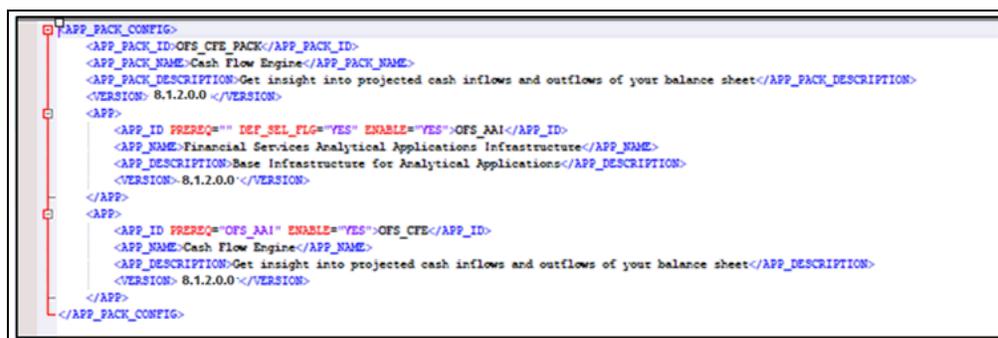

The OFS_CFE_PACK.xml file contains details of the various products that are packaged in the OFS CFE Application Pack.

This section details the various tags or parameters available in the file and the values that must be updated. Prior to installing the OFS CFE in SILENT mode, it is mandatory to update this file.

To configure the OFS_CFE_PACK.xml file, follow these steps:

1. Navigate to the OFS_CFE_PACK/conf directory.
2. Open the OFS_CFE_PACK.xml file in a text editor.
3. Configure the OFS_CFE_PACK.xml file as mentioned in the following table.

Figure 27: Sample OFS_CFE_PACK.xml File

```

<APP_PACK_CONFIG>
  <APP_PACK_ID>OFS_CFE_PACK</APP_PACK_ID>
  <APP_PACK_NAME>Cash Flow Engine</APP_PACK_NAME>
  <APP_PACK_DESCRIPTION>Get insight into projected cash inflows and outflows of your balance sheet</APP_PACK_DESCRIPTION>
  <VERSION> 8.1.2.0.0 </VERSION>
  <APP>
    <APP_ID PREREQ="" DEF_SEL_FLAG="YES" ENABLE="YES">OFS_AAI</APP_ID>
    <APP_NAME>Financial Services Analytical Applications Infrastructure</APP_NAME>
    <APP_DESCRIPTION>Base Infrastructure for Analytical Applications</APP_DESCRIPTION>
    <VERSION> 8.1.2.0.0 </VERSION>
  </APP>
  <APP>
    <APP_ID PREREQ="OFS_AAI" ENABLE="YES">OFS_CFE</APP_ID>
    <APP_NAME>Cash Flow Engine</APP_NAME>
    <APP_DESCRIPTION>Get insight into projected cash inflows and outflows of your balance sheet</APP_DESCRIPTION>
    <VERSION> 8.1.2.0.0 </VERSION>
  </APP>
</APP_PACK_CONFIG>

```

Table 22: OFS_CFE_PACK.xml File Parameters

Tag Name or Attribute Name	Description	Mandatory (Y or N)	Comments
APP_ID	ENABLE	YES for existing applications that you want to upgrade.	Set this attribute-value to YES for every APP_ID which you want to install or upgrade.

7.4.4 Trigger the Installation

To trigger the installation, follow these steps:

1. Navigate to the path OFS_CFE_PACK/bin, and enter the following command in the console to execute the application pack installer with the Silent option.

```
./setup.sh SILENT
```
2. The installer proceeds with the Pre-installation Checks.

Figure 28: Silent Mode of Installation

*****
OFSAA APPLICATION PACK LICENSE AGREEMENT
*****
* Oracle Financial Services Analytical Applications (OFSAA) application packs are groups of OFSAA products packaged together into a single installer. Each application pack contains OFSAA applications that address specific functional domains.*
* Every application pack also includes the following OFSAA infrastructure application options which are automatically installed by every application pack installer:
1. Oracle Financial Services Analytical Applications Infrastructure
2. Oracle Financial Services Enterprise Modeling
3. Oracle Financial Services Big Data Processing
* Oracle Financial Services Analytical Applications Infrastructure (OFS AAI) is the base infrastructure for all OFSAA applications and is therefore automatically installed and enabled by the application pack installer.*
* The application pack installer always installs Oracle Financial Services Enterprise Modeling, Oracle Financial Services In-line Processing Engine and Oracle Financial Services Big Data Processing application options along with the application pack applications, but enables them only if any application that requires their functionality is enabled.*
* Any OFSAA application that is enabled must be licensed for use. Oracle Financial Services Analytical Applications Infrastructure, Oracle Financial Services Enterprise Modeling, Oracle Financial Services In-line Processing Engine and Oracle Financial Services Big Data Processing are individually licensable application options.*
* Application products once enabled cannot be disabled. Application products not enabled on installation, may later be enabled using the "Manage OFSAA Product License(s)" feature of the platform.*
*****
Are you accepting the terms and conditions mentioned above? [Y/N]:
Y
log4j:WARN No appenders could be found for logger (org.apache.commons.vfs2.impl.StandardFileSystemManager).

OFSAAInfrastructure (created with InstallAnywhere)

-----
Installing...

```

Data Model Upload may take several hours to complete. You can check the installation logs in the following location: `OFS_AAAI/OFS_AAAI/logs`

- The OFSAA Infrastructure installation performs a post-install check automatically on the successful installation of the product.

Congratulations! Your installation is complete.

7.4.5 Verify the Log File Information

See the following logs files for more information:

- The `Pack_Install.log` file in the `OFS_CFE_PACK/logs/` directory for OFS CFE Application Pack installation logs.
- The `OFS_CFE_installation.err` and `OFS_CFE_installation.log` files in the `OFS_CFE_PACK/OFS_CFE/logs/` directory.
- The Log file (or files) in the `OFS_CFE_PACK/OFS_AAI/logs/` directory for Infrastructure installation logs.
- The `OFSAAInfrastructure_Install.log` file in the `$FIC_HOME` directory for Infrastructure installation logs.

NOTE:

Ignore following errors in `OFS_CFE_installation.err` and `OFS_CFE_installation.log` files during the pack on pack installation. These files are located in `OFS_CFE_PACK/OFS_CFE/logs` folder.

1. OBJECT Already Exist error.
2. Error: Table already has a primary key
3. ORA-01430: column being added already exists in table.
4. Error: Table already has a referential constraint with same name

7.4.6 Post Installation Steps for Upgrade

Follow the steps mentioned in the [Post Installation Steps](#) section.

Execute the following queries in the Atomic schema.

Query 1:

```
create table AAI_OBJECT_B_BKP as select * from AAI_OBJECT_B;
```

Query 2:

```
MERGE INTO AAI_OBJECT_B x
USING AAI_OBJECT_B_temp y
ON (x.V_OBJ_CODE = y.V_OBJ_CODE and x.V_INFODOM_CODE =
y.V_INFODOM_CODE and x.N_VERSION = y.N_VERSION and x.V_OBJ_ID =
y.V_OBJ_ID)
WHEN MATCHED THEN
UPDATE SET x.F_IS_RECORD_LATEST = y.F_IS_RECORD_LATEST
```

```
WHERE x.V_OBJ_CODE not in (select distinct(V_OBJ_CODE) from
AAI_OBJECT_B where V_OBJ_SUBTYPE_CODE = 'T2T' and V_OBJ_ID not
in(select V_OBJ_ID from AAI_OBJECT_B_temp));
```

NOTE:

Post verification if all the functionalities are working as expected, then the following temporary tables can be dropped:

- AAI_OBJECT_B_temp
- AAI_OBJECT_B_BKP

7.5 Upgrade OFS CFE from Linux 7 to Linux 8

If your OFS CFE instance is on Linux 7 Operating System and you want to install OFS CFE on Linux 8.

To upgrade the OFS AAI environment from Linux 7 to Linux 8, follow these steps:

1. [Clone](#) your existing environment to the Oracle Financial Services Analytical Applications 8.1.2.0.0 Technology Matrix.
2. Run the upgrade installer in the cloned environment. For detailed steps, see sections 8.2 to 8.6.

7.6 View OFSAA Product Licenses after Installation of Application Pack

In an integrated environment, where you have multiple applications installed on the same domain or infrastructure, OFSAAI allows you to see the other licensed applications through the UI. For more information, see the View OFSAA Product Licenses after Installation of Application Pack in the [OFS Analytical Applications Infrastructure User Guide Release 8.1.2.0.0](#) .

8 Remove OFSAA Infrastructure

See the [Remove OFSAA Infrastructure](#) section in the OFS AAI Release 8.1.2.0.0 Installation and Configuration Guide to complete the following procedures:

- Uninstall the OFSAA Infrastructure
- Uninstall the EAR Files
 - Uninstall the EAR Files in WebSphere
 - Uninstall the EAR Files in WebLogic
 - Uninstall the EAR Files in Tomcat
- Clean Up the Environment

9 **Frequently Asked Questions (FAQs) and Error Dictionary**

For FAQs and installation error-related information, see the [Frequently Asked Questions \(FAQs\) and Error Dictionary](#) section in the [OFS AAI Release 8.12.0.0 Installation and Configuration Guide](#).

OFSAA Support

Raise a Service Request (SR) in [My Oracle Support \(MOS\)](#) for queries related to OFSAA applications.

Send Us Your Comments

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, indicate the title and part number of the documentation along with the chapter/section/page number (if available) and contact the Oracle Support.

Before sending us your comments, you might like to ensure that you have the latest version of the document wherein any of your concerns have already been addressed. You can access My Oracle Support site that has all the revised/recently released documents.
