1. Preface

1.1 Introduction

This manual is designed to help acquaint you with the interface between Oracle FLEXCUBE and the Firm Banking system.

This manual provides you extensive explanations about the various maintenances required for the smooth exchange of data between Oracle FLEXCUBE and the applicable systems through the interface. It also gives you an insight into the processes involved in the actual exchange of data.

1.2 <u>Audience</u>

This manual is intended for the following User/User Roles.

Role	Function
Back office clerk	Input functions for contracts
Back office managers/officers	Authorization functions
Product Managers	Product definition and authorization
End of day operators	Processing during end of day/ beginning of day
Financial Controller / Product Manag- ers	Generation of reports

1.3 **Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.4 Organization

This manual is organized as follows:

Chapter 1	About this Manual gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	<i>Firm Banking Interface</i> explains the facility provided to corporates to check account balances of the accounts maintained in more than one bank simultaneously using Firm Banking.
Chapter 3	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.5 <u>Abbreviations</u>

Abbreviation	Description
System	Unless and otherwise specified, it shall always refer to Oracle FLEX- CUBE system
EOD	End Of Day
CMS	Card Management System
DD	Direct Debit

1.6 Glossary of Icons

This User Manual may refer to all or some of the following icons.

lcons	Function
×	Exit
+	Add row
I	Delete row
	Option List

1.7 Related Documents

- IF ANSER User Manual
- IF Direct Debit User Manual

2. Firm Banking Interface

2.1 Introduction

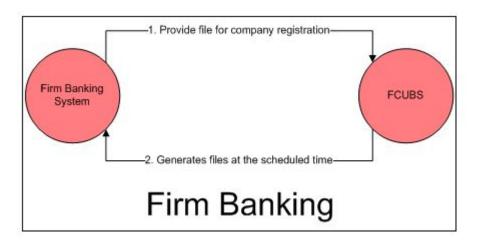

Oracle FLEXCUBE provides a facility to the corporates to check account balances of their accounts maintained in more than one bank simultaneously using Firm Banking. The corporates can also use Firm Banking to view the transactions of various accounts at a single place.

Following are the processes to be followed for Firm Banking interface:

- Company Registration
- File Generation Registration
- Outgoing File Generation

2.2 Process Flow

The following diagram depicts the working of the Firm Banking Interface:

2.3 Company Registration

To register a company, following are the procedures to be followed:

- 1. Create an incoming interface for company registration file with specified path, and along with relevant parameters
- 2. Firm Banking system places 'Company Registration' file in the specified path
- 3. System picks up the file at the specified time from the path
- 4. In this file only the PID will be validated.
- 5. The flag "Firm Banking" is updated in STDCIF and STDCUSAC/STDCUSTD.

2.4 File Generation Registration

To register file generation, following are the procedures to be followed:

1. Create an incoming interface for file generation preferences registration with specified path, and along with relevant parameters

- 2. Firm Banking system places file generation preferences in a file for the customer account in the specified path
- 3. System should pick up the file at the specified time from the path
- 4. System re-registers all the earlier registered file generation preferences for the customer account and re-register the details available in the file (this is applicable only for Balance file, All Transactions file and Furikomi File).

Note

If you select the Firm Banking check box, you cannot change it based on the subsequent file received. On subsequent file received on next day if the file contains new list of customer accounts, the outgoing file generated will include the customer accounts for which Firm banking is already enabled.

- 5. The system generates the output data for a particular account (All transactions, Balance, or the Furikomi transactions) based on the selection made.
- 6. While registering Savings and Current Accounts for a customer, the system registers only the default account, account per customer per account type (per PID per account type). If any other account other than the default account is available in the incoming file for the same type of account for a customer, the system rejects the record with the reason for rejection as 'For one PID only Default Savings/Current account can be registered'.
- 7. While TD accounts, the system registers the very first account number. Other deposit accounts are rejected with reason for rejection as '*Only One TD Account can be Registered for a PID*'.

2.5 Outgoing File Generation

The system does not resend the transactions previously sent. Only the incremental transactions are sent. Outgoing Interface for Balance File, Furikomi File, All Transaction File, and PID registration file is created with specified path with relevant parameters.

Oracle FLEXCUBE fetches records as per the file generation preferences for the registered customer account. They are:

- All Transactions File: File carries all the transactions posted in the registered account including FP transactions. It is a single FLAT file for all the registered customer account.
- Balance File: File carries balance details of the registered account. It is a single FLAT file for all the registered customer account.
- Furikomi File: File carries funds transfer transactions posted registered account thorough FP. It is a single FLAT file for all the registered customer account.
- PID File: File carries PID and account number of firm banking registered customer account. It is a single FLAT file for all the registered customer account.

The system forms a unique combination based on the PID Number and the Deposit Type. For each of the deposit type the same PID Number can be repeated. This is applicable for Balance file.

Note

- If the customer gets registered for Firm Banking and the account does not register, the system does not generate file. If the account is registered and customer is not registered, the system generates the file as per the file generation preference.
- Hand-off file name should be concatenated with date and time stamp

 If the preference file changes, for example, from 'Balance' to 'All Transactions, the system will send the complete data from the account opening date in the next cycle.
 From the next cycle onwards, the system sends only the delta.

2.6 Specifying Interface Definition Details

You can define the interface details for Firm Banking Interface in the 'Interface Definition' (GIDINTDF) screen.

Enter Query

Specify the following details:

Schedule Details

Schedule

Check this box to initiate scheduling of file pick up.

Start Time

Hour

Select the start time in hours to pick the files for processing from the drop down list. This field is enabled for input only if you select the 'Schedule' check box.

Min

Select the start time in minutes to pick the files for processing. This field is enabled for input only if you select the 'Schedule' check box.

End Time

Hour

Select the end time in hours, till when the files can be picked for processing. This field is enabled for input only if you select the 'Schedule' check box.

Min

Select the end time in minutes, till when the files can be picked for processing. This field is enabled for input only if you select the 'Schedule' check box.

For more information on 'Interface Definition', refer to the section 'Specifying Interface Definition Details' in the chapter 'Generic Interface' in Gateway Interface User Manual.

2.7 <u>Maintaining Customer Accounts</u>

You can capture file generation process in the 'Customer Accounts Maintenance' (STDCUSAC) screen.

Customer Accounts Mainte	enance					_ >
🔁 New 🔄 Enter Query

Specify the following details:

Firm Banking

Firm Banking

The system checks this box if the customer account has opted for Firm Banking. You cannot edit it.

Note

This field is checked by default if the incoming file is received with the account number.

All Transaction File

The system checks this box to indicate the preference for all transaction file generation.

Balance File

The system checks this box to indicate the preference for balance file generation.

Furikomi File

The system checks this box to indicate the preference for Furikomi file generation.

For more information on 'Customer Accounts', refer to the section 'Capturing Auxiliary Details' in the chapter 'Maintaining Customer Accounts' in CASA User Manual.

2.8 <u>Maintaining Customer Information</u>

You can maintain customer information in 'Customer Maintenance' (STDCIF) screen.

Customer Maintenance						_ X

Emperor's Coronation Date

Specify the date of coronation of the current emperor.

Extraction of Balance File, All Transaction File and Furikomi File is based on the year of the reign of the current Emperor. This date will be the date when the current emperor ascends the throne. Based on this date, the YY value of the date is derived. The formula for deriving the year as per Japanese calendar is as follows:

Current Year – Year of Coronation + 1

For more information on 'Bank Level Parameters', refer to the section 'Defining Bank Level Parameters' in the chapter 'Bank Parameters' in Core Services User Manual.

2.11 Furikomi File Formats

Format A is used for the following Furikomi file transactions:

- Future Dated Credit
- Close Out Withdrawal

- Future Dated Transaction
- Payin by Cash
- Redemption Payout by Cash
- Redemption by Cash
- Cash Deposit
- Miscellaneous Customer Credit
- Cash Withdrawal
- Cheque Withdrawal
- Interest redemption by cash

Format B is used for the following Furikomi file transactions when the amount of transaction is >999999999999:

- Future Dated Credit
- Miscellaneous Customer Credit
- Cheque Deposit
- Pay-in by Cheque
- Consolidated Cheque Deposit

2.12 Incoming File Formats

This topic describes the formats of incoming file:
