This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable.

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

12.3.3	<i>Viewing Migration Export Objects</i>	217
12.3.4	<i>Exporting Migration Objects</i>	218
12.3.5	<i>Editing Migration Export Definitions</i>	218
12.3.6	<i>Deleting Migration Export Objects Definition</i>	219
12.4	Object Import Summary	219
12.4.1	<i>Navigating Migration Object Import Summary Page</i>	220
12.4.2	<i>Creating Migration Import Object Definitions</i>	221
12.4.3	<i>Viewing Migration Import Objects</i>	223
12.4.4	<i>Importing Migration Objects</i>	225
12.4.5	<i>Editing Migration Import Definitions</i>	225
12.4.6	<i>Deleting Migration Import Objects Definition</i>	226
13	Model Catalog	227
13.1	Model Objective	227
13.1.1	<i>Adding a Model Objective</i>	228
13.1.2	<i>View a Model Objective</i>	229
13.1.3	<i>Delete a Model Objective</i>	235
13.2	Model Library	236
13.2.1	<i>Edit a Model Library</i>	238
13.2.2	<i>Delete a Model Library</i>	239
13.3	Model Technique	239
13.3.1	<i>Edit a Model Technique</i>	241
13.3.2	<i>Delete a Model Technique</i>	241
14	Appendix -I	243

15 Appendix - II..... 247

1 Preface

This preface provides information for the Oracle Financial Services Model Management and Governance application (OFS MMG) User Guide.

1.1 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit:

- <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info>
- <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

1.2 Audience

This document is intended for the system administrators and users configuring the workspace and models in OFS MMG.

1.3 What is New in This Release

1. Workspace

- Tool tips added in Workspace Code name, Datasource name, Hive details, Test Connection, Wallet Alias, and Table owner.
- Support to an Audit trail of start and stop of `mmg-ui` and `mmg-service`.
- Global Audit trail has been added.
- Workspace Delete now additionally purges underlying objects such as Datasets and Scheduler service.
- Execution History option has been added in the View Workspace.
- Test Connection has been now enabled in View Workspace.
- Notification feature integration in MMG.(currently only data population).

2. UI/UX Enhancements

- Improved UI messages and logging.
- Standardized layouts and controls on all the screens.
- UI/UX improvements in line with the Redwood design.

3. Model Pipelines

- Introduced Spectra Pack diagram builder for Pipeline Canvas and Execution History. This is a replacement for the old canvas. Unlike the previous design

where each node is placed on X and Y coordinates, the Spectra Pack diagram is based on row and column positioning.

- Added new tasks to support Kafka in the Pipeline Canvas screen. The Kafka feature is fully enabled now and moved out of the Beta phase.
- Improvements on Session Management.
- Node details display Studio Paragraph in an inline frame (iframe).
- Support to select an interpreter while adding Paragraphs in the Model Pipelines.
- Improved Re-order Action links or icons and Script template has been added in the Action icon drop-down.
- Introduced Conditional Nodes in Pipeline Canvas. The Conditional node is used to determine which node will be executed next, based on a given condition, and are alternative to conditional links. Currently, only the If node, which will have true/false links is implemented.
- Ability to Stop execution when a pipeline is running.
- You can now select Interpreters of various types for the API widget.

4. Scheduler Service

- Support for email notification.
- Introduced Scheduler Include Jobs.
- Pause option for Schedules has been introduced.

5. Identity Management

- JIT sync of username/email Id

6. Model Catalog

- UI/UX improvements

7. Performance Improvements

- Responsiveness of Data Studio.
- Loading for Dataset's Entity selection.
- Configurable performance parameters for Data Studio.
- HTTP/2 protocol support
 - Reduces response size in every request.
 - HTTP connection multiplexing.

8. Dataset

- Hive Schema Table Fetching.
- Audit trail for Datasets has been introduced.
- Support to select mmg python oracle connection module from cx-Oracle to oracledb.

- PLS Approvals for mmg lib packages and update in mmg lib.
- Widgets such as Feature selection, and Feature Importance has been introduced.
- Data Lineage feature has been introduced.
- Enhancements to Data Profiler.
- UI/UX improvements.

9. Support for CONDA

- UI for registering and provisioning CONDA environments from MMG.
- Execution of models through registered CONDA environments which are attached to the Workspaces.
- Promoting Models with runtime python as CONDA environment python.

10. Data Studio

- Data Studio has been upgraded to 22.4.3 version.

11. Enhancements to Installer and Utility

- Additional support to approve the models from Model Import Utility.
- Metadata Manager for migrating Model objects from 81x MMG setups.

12. Miscellaneous

- API versioning
 - Support different versions of MMG REST API endpoints based on the release versions.

1.4 Additional Resources

This section identifies additional resources for the OFS MMG Application Pack. You can access the online documentation for the OFS MMG 8.1.2.4.0 from the [Oracle Help Center \(OHC\)](#).

- OFS Model Management and Governance Release Notes
- OFS Model Management and Governance Installation Guide

To find additional information about how Oracle Financial Services solves real business problems, see our website at www.oracle.com/financialservices.

1.5 Conventions Used

The following table lists the conventions used in this guide.

Table 1: Conventions Used in this Guide

Convention	Meaning
<i>Italics</i>	<ul style="list-style-type: none"> Names of books, chapters, and sections as references Emphasis
Bold	<ul style="list-style-type: none"> The object of an action (menu names, field names, options, button names) in a step-by-step procedure Commands typed at a prompt User input
Monospace	<ul style="list-style-type: none"> Directories and subdirectories File names and extensions Process names Code sample, including keywords and variables within the text and as separate paragraphs, and user-defined program elements within the text
Hyperlink	Hyperlink type indicates the links to external websites, internal document links to sections.

1.6 Acronyms Used

The following table lists the acronyms used in this guide.

Table 2: Acronyms Used in this Guide

Conventions	Description
BA	Business Analysts
Infodom	Information Domain
Navigation Tree Menu or Navigation Menu	Left-hand side menu
OFS AAI	Oracle Financial Services Analytical Application Infrastructure
OFSAA	Oracle Financial Services Analytical Applications
OFS MMG	Oracle Financial Services Model Management and Governance
Production Workspace	Production Information Domain
Sandbox Workspace	Sandbox Information Domain
SA	System Administrator
URL	Uniform Resource Locator
UI	User Interface
PGX	Parallel Graph AnalytiX

2 Getting Started

This section gives an introduction to OFS Model Management and Governance and the requirements to use the application.

2.1 About this Guide

This guide has information about configuring and publishing workspaces using the OFS Model Management and Governance application. The further sections in this guide provide information for the creation and deployment of models into production. Use it for information about workspace and model management or help with the processes in the application.

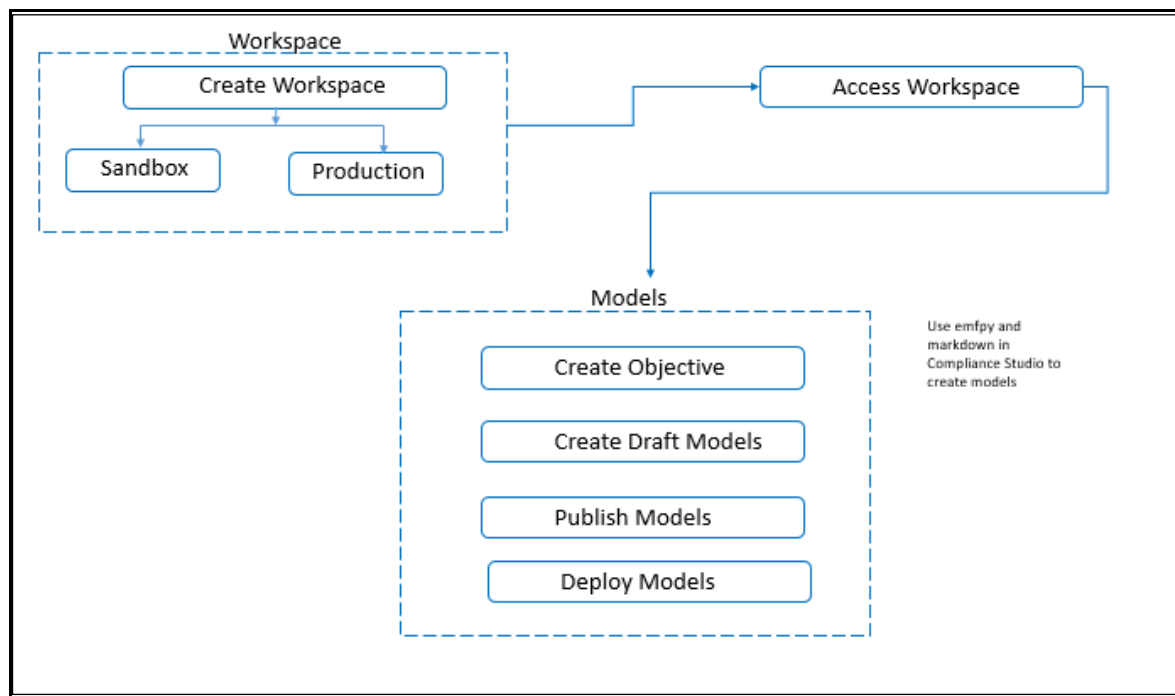

2.2 About Oracle Financial Services Model Management and Governance

Financial institutions require models that work on traditional statistical techniques, modern machine-learning methods, computational and simulation models. Oracle Financial Services Model Management and Governance leverage the Data Studio environment to develop, deploy, and manage models at the enterprise level.

The OFS Model Management and Governance application enables institutions to implement their IT policies while providing flexibility and freedom that Data Scientists and Statistical Modelers desire. OFS MMG's design facilitates financial institutions to manage external regulatory and internal governance policies by building testing models in a workspace environment. A workspace is provisioned and authorized for use (usually by an administrator) before making it available to modelers. Administrative users grant analysts and modelers access to workspaces along with a subset of production data to build models. Validated and approved models can then be promoted from workspaces to the enterprise model repository. Models in the repository can then be woven into analytical application flows crafted by mixing data management tasks, model execution, and deterministic business logic.

2.3 Oracle Financial Services Model Management and Governance Workflow

The workflow involves the creation of workspaces and the creation of Models mapped to the Workspaces. Models are then configured as training models that you can use to perform model visualizations and test for the outcomes. You can then publish a model into production and make it available to users after you have determined that the models and the parameters used to construct the models meet the requirements of your business logic.

Figure 1: Oracle Financial Services Model Management and Governance Workflow

2.4 Components of Oracle Financial Services Model Management and Governance

The following are the components of Oracle Financial Services Model Management and Governance application:

- Workspace Management
- Model Management
- Dataset
- Model Pipelines
- Model Actions
- Graphs
- Scheduler Service
- Audit Trail
- Data Studio Options
- Object Migration
- Model Training

2.4.1 Workspaces

Workspace Management is where the workspace Administrators define datasets and make them available to modelers in Oracle Financial Services Model Management and Governance. It is an environment where the data is prepared for modelers to use in their modeling creation activity.

Workspaces are provisioned with the data required for modeling by administrators, who configure workspaces with subsets of production data. The data in the workspace is made available to modelers using datasets, who then build models with the dataset without any exposure being provided to the physical data tables and columns in the database. In effect, the data is ready for the modelers, and they do not have to undergo the arduous task of accessing and querying the database. See the [Using Workspaces](#) section for information on how to use Workspace Management in the application.

2.4.2 Dataset

Datasets allow for the creation of a dataframe, a data structure that captures the logic that organizes data into a 2-dimensional table of rows and columns. Datasets allow for the reuse of these dataframes across models, as well as the features derived from the data source(s).

The Dataset allows you to manage the entire operation related to data set. You can perform the following two things using the Dataset window:

- Define a metadata on how you want to create a dataset
- In addition, a mechanism where you can take a snapshot of real time data and store it. So, it can be used later in the pipeline.

For more information, see the [Dataset](#) section.

2.4.3 Model Pipelines

Modeling refers to the process of designing a prototype based on a structured data model, for statistical analysis and to simulate real events and processes. Models in a workspace can be created or modified by a user with access to the workspace. Model versions are preserved in the workspace along with execution and output histories. Once a model has been validated in the workspace and considered fit for use, modelers can request to push the model into the production environment.

See the [Using Model Pipeline](#) section to create models from pre-defined models to predict business trends and validate the existing models.

2.4.4 Model Actions

The Model Actions window allows you to view the list of models for which the Workflow action has been taken which requires review or approve across the workspace.

For more information, see the [Model Actions](#) section.

2.4.5 Graphs

Unlike traditional relational database management systems, the Graph Pipeline feature allows you to view the data relationships in a graphical format.

This feature uses the latest technology to harness the power of Graph Analytics to give Financial Institutions the ability to monitor the data financial institutions effectively. The data is organized as nodes, relationships, and properties (property data is stored on the nodes or relationships). The results of analytics algorithms are stored as transient properties of nodes and edges in the Graph.

For more information, see the [Graph Pipeline](#) section.

2.4.6 Scheduler Service

The Scheduler Service is a service in the Infrastructure system that automates behind-the-scenes work that is necessary to sustain various enterprise applications and functionalities. This automation helps the applications to control unattended background jobs program execution.

The Scheduler Service contains a graphical user interface and a single point of control for the definition and monitoring of background executions.

For more information, see the [Scheduler Service](#) section.

2.4.7 Audit Trail

The Audit Trail window provides the complete details of model. This shows the information such as, when Model was created, who created the Model, workflow of Model, for example when this Model became champion or deployed, and so on.

For more information, see the [Audit Trail](#) section.

2.4.8 Data Studio Options

MMG contains an underlying Notebook Server which has the following configurable options:

- Interpreters
- Tasks
- Permissions
- Credentials
- Templates

For more information, see the [Data Studio Options](#) section.

2.4.9 Object Migration

Object Migration is the process of migrating or moving objects between environments.

You may want to migrate objects for several reasons such as managing global deployments on multiple environments or creating multiple environments so that you can separate the development, testing, and production processes.

For more information, see the [Object Migration](#) section.

2.4.10 Model Catalog

The Model Catalog page allows you to add and manage the Model Technique, Model Library, and Model Objectives.

For more information, see the [Model Catalog](#) section.

2.5 Mapping User Groups

Users must be mapped to User Groups that are mapped to access OFS MMG. The following subsections provide information about the user groups and roles required in addition to the information about configuring the user groups.

2.5.1 User Groups

The following table gives details about the User Groups in the Oracle Financial Services Model Management and Governance application.

Table 3: User Groups

User Group Name	User Group Description
IDNTYADMN	Identity Administrator group
IDNTYAUTH	Identity Authorizer group
MDLREV	The Modeling Reviewer Group. Users mapped to this group have access to the menu items in the OFS MMG application that are related to model review activities.
MDLAPPR	The Modeling Approver Group. Users mapped to this group have the rights to approve models created by the users.
MDLBATCHUSR	The Modeling Batch User. Scheduler can use this Group for executing batches.
WKSPADMIN	The Workspace Administrator Group. Users mapped to this group have access to create and populate workspaces. For viewing the MMG landing page this group is required.
MDLUSR	The Modeling User Group. Users mapped to this group have access to all the menu items in the OFS MMG application that is related to model creation.
DSUSRGRP	Data Studio User Group This User Group provide access to modify Interpreter configurations.

User Group Name	User Group Description
DSREDACTGRP	Roles for applying redaction in graph. This group will be applicable to only those users for whom graph redaction is required.
OBJMIGADMIN	Users mapped to this group have access to Object Migration links and UI to perform import or export of objects.

NOTE

At the first-time login, User Group mappings are initialized from AAI/IDCS for the newly provisioned users. These will be reflected in MMG Admin Console in next MMG login.

If User Group mappings are deleted in AAI/IDCS, it would not delete in MMG Admin Console. Admin needs to delete this in MMG Identity screens too.

Only the group with MDLSUMM role will be displayed in the Workspace provisioning steps.

MDLSUMM function is mapped to the MDLACCESS role.

2.5.2 User Group - Role Mapping

Map the user groups in the application to the roles in the following table to enable access to the OFS MMG application.

Table 4: User Group to Role Mapping

Group Name	Role Name
DSREDACTGRP	DSREDACT
IDNTYADMN	Batch Advance Role
IDNTYADMN	Batch Write Role
IDNTYADMN	Admin Link Role
IDNTYADMN	User Advanced Role
IDNTYADMN	Group Advanced Role
IDNTYADMN	Role Advanced Role
IDNTYADMN	Function Advanced Role
IDNTYAUTH	Group Authorize Role
IDNTYAUTH	User Authorize Role
IDNTYAUTH	Group Read Role
IDNTYAUTH	Admin Link Role
IDNTYAUTH	Function Read Role

Group Name	Role Name
IDNTYAUTH	Role Read Role
IDNTYAUTH	Role Authorize Role
MDLAPPR	DSINTER
MDLAPPR	Model Authorize
MDLAPPR	Model Deployment
MDLAPPR	Workspace Read
MDLAPPR	Model Read
MDLAPPR	Model Access
MDLAPPR	Workspace Access
MDLAPPR	DSAPPROVER
MDLBATCHUSR	DSBATCH
MDLREV	Workspace Read
MDLREV	Model Review
MDLREV	Model Access
MDLREV	Workspace Access
MDLREV	DSUSER
MDLREV	Model Read
MDLUSR	Model Advanced
MDLUSR	Model Write
MDLUSR	Model Read
MDLUSR	Batch Advance Role
MDLUSR	Model Execute
MDLUSR	DSUSER
MDLUSR	Model Access
MDLUSR	Workspace Access
MDLUSR	Workspace Read
MDLUSR	Datasource Access
MDLUSR	Datasource Write
MDLUSR	Datasource Read
WKSPADMIN	Workspace Access
WKSPADMIN	DSADMIN
WKSPADMIN	Identity MGMT advanced
WKSPADMIN	Workspace Authorize

Group Name	Role Name
WKSPADMIN	Workspace Read
WKSPADMIN	Workspace Write
DSUSRGRP	DSADMIN
GRAPHUSER	Graph Administrator
GRAPHUSER	Graph Read Role
GRAPHUSER	Graph Read Role
GRAPHUSER	Graph Execute Role
GRAPHADMINISTRATOR	Graph Administrator Role

2.5.3 Functions and Roles required to perform CRUD operations for Conda

The following table provides details about the Functions and Roles required to perform CRUD operations for Conda in the Oracle Financial Services Model Management and Governance application.

For more information, see the [Conda Environments](#) section.

Table 5: Functions and Roles

Function	Role	Groups Mapped	Access
CONDAENVSUMM	CONDAENVACCESS	<ul style="list-style-type: none"> MDLUSR MDLREV MDLAPPR 	Summary view
CONDAENVVIEW	CONDAENVREAD	<ul style="list-style-type: none"> MDLUSR MDLREV MDLAPPR 	Read
CONDAENVEXP	CONDAENVREAD	<ul style="list-style-type: none"> MDLUSR MDLREV MDLAPPR 	Export yml file
CONDAENVEXP	CONDAENVWRITE	<ul style="list-style-type: none"> MDLREV MDLAPPR 	Export yml file
CONDAENVDEL	CONDAENVWRITE	<ul style="list-style-type: none"> MDLREV MDLAPPR 	Delete a registered Conda environment
CONDAENVEDIT	CONDAENVWRITE	<ul style="list-style-type: none"> MDLREV MDLAPPR 	Edit a Conda environment
CONDAENVADD	CONDAENVWRITE	<ul style="list-style-type: none"> MDLREV MDLAPPR 	Add a Conda environment

2.6 Signing into the Oracle Financial Services Model Management and Governance Application

After the application is installed and configured, you can access the Oracle Financial Services Model Management and Governance application.

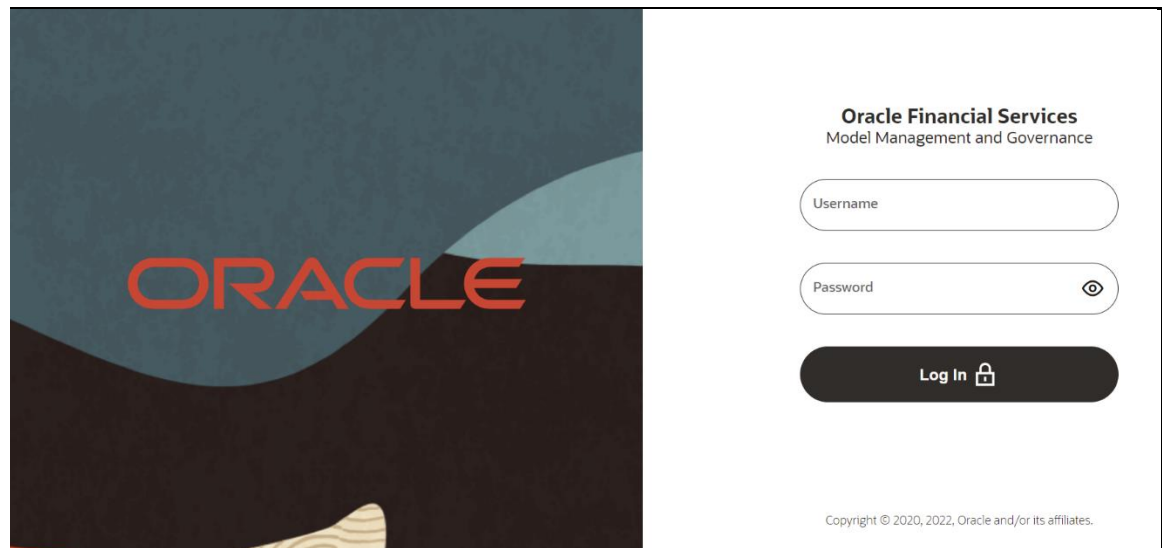

To access Oracle Financial Services Model Management and Governance, follow these steps:

1. Enter the application URL in your browser.

The **Login** page is displayed.

NOTE The below screen is an example of AAI type login. The log in page is different for saml type based on the configuration.

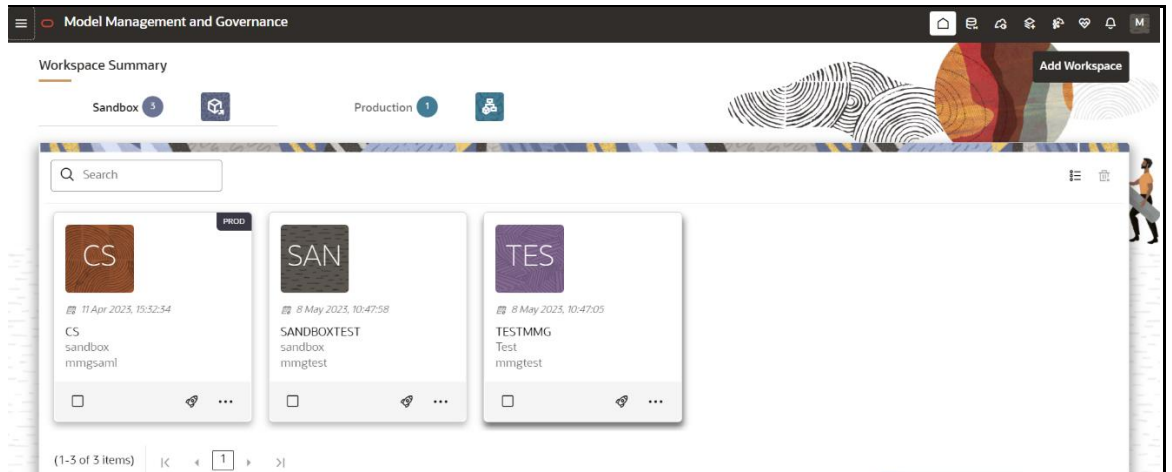

Figure 2: OFS Model Management and Governance Application Login Page

2. Enter your **Username** and **Password**.
3. Click **Log in**.

The **Home Page** is displayed.

Figure 3: Home Page

3 Using the Application UI Features

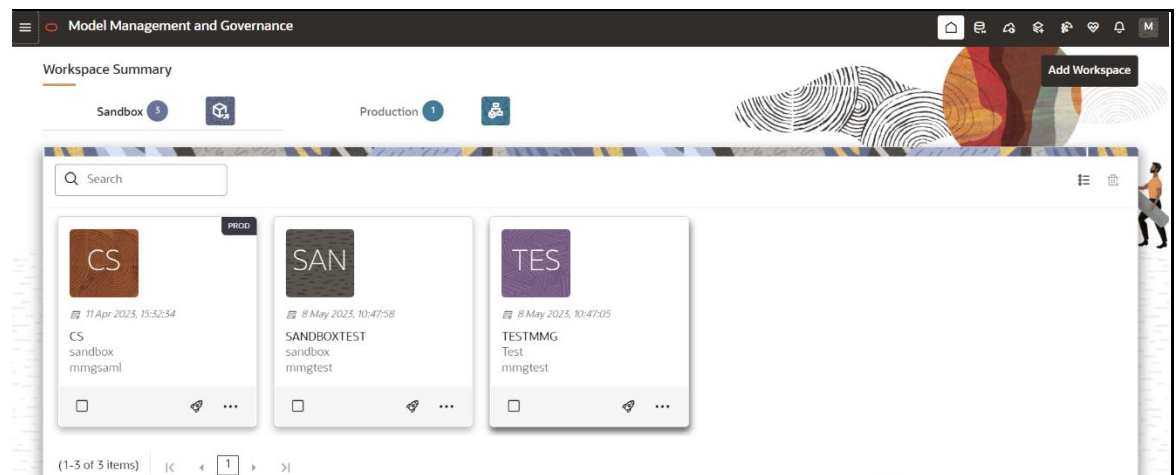

This section describes the user-interface of the Oracle Financial Services Model Management application. These are the common features that are found across the modules of Oracle Financial Services Model Management. It describes the organization of the user interface and provides step-by-step instructions for navigating through the application.

3.1 Home Page Components

The Home page contains the following sections:

- Navigation Menu
- Home
- Data Source Summary
- API Configurations
- Conda Environments
- Kafka Topics
- Health
- Notification
- Profile

Figure 4: Home page

3.1.1 Navigation Menu

Launch a Workspace, click **Navigation Menu**  icon to navigate to Dashboard, Dataset, Advance Options, and other sections of MMG application.

3.1.2 Home

Click **Home**  icon to navigate to **Workspace Summary** page from any other window in MMG application. You can add and manage Workspaces from this page

3.1.3 Data Source Summary

Click **Data Source Summary**  icon to navigate to **Data Source Summary** page from any other window in MMG application. You can add and manage Data Sources from this page.

3.1.4 API Configurations

Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application. You can configure and manage APIs from this page.

3.1.5 Conda Environments

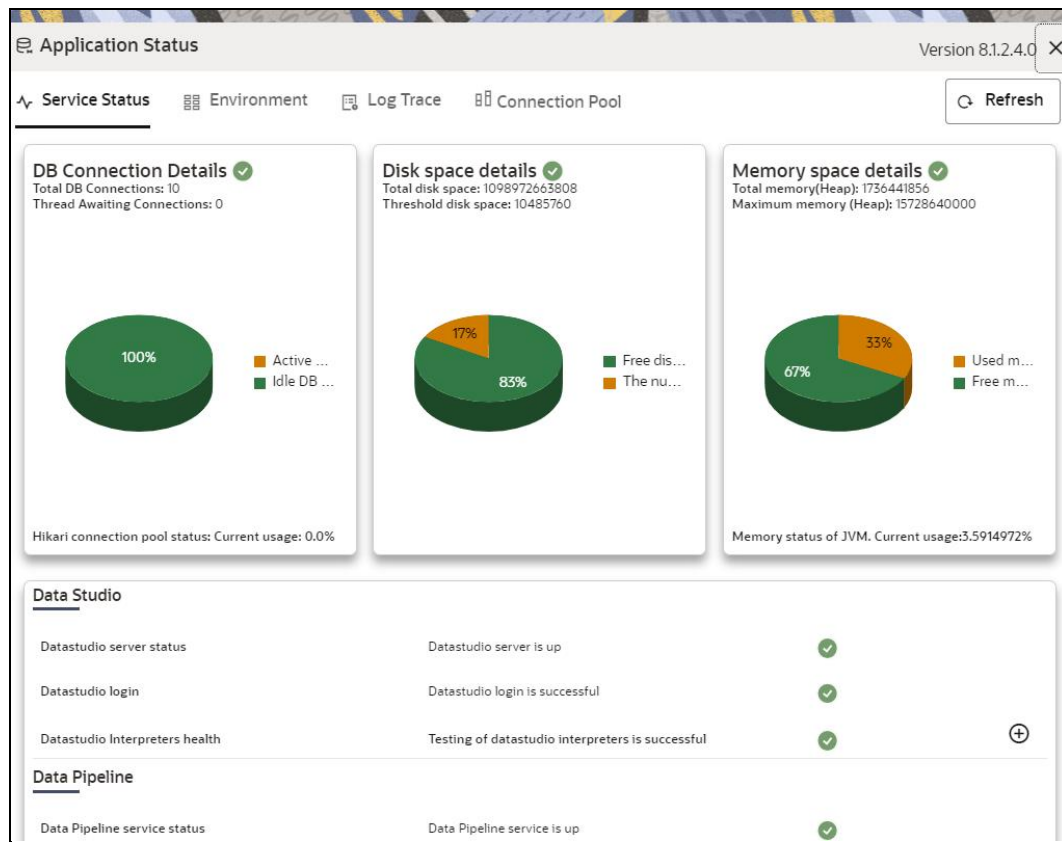

Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application. You can configure and manage Conda environments from this page.

3.1.6 Kafka Topics

Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application. You can configure and manage Kafka topics and clusters from this page.

3.1.7 Health

Click **Health**  icon to view the application status and version details. The Health page consists of four tabs:

- **Service Status:** Provides the status information on the services that are running such as Data Studio, Data Pipeline, and Graph Services.
- **Environment:** Provides information on the System and Application properties.
- **Log Trace:** Provides the logs which will help during analysis and debugging.

NOTE Access logs are available in the following location for UI and Services.

\$LOG_HOME/services/access/mmg-ui-access.log

\$LOG_HOME/services/access/mmg-service-access.log

- **Connection Pool:** Provides the information of connections used for the data source. Select the data source from the drop-down list to view the connections and the maximum capacity. This will help you in monitoring the connections of the specific data source.

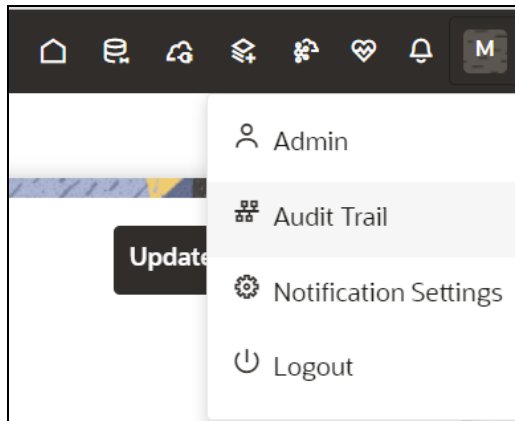

Clicking on the **Refresh**  icon will refresh the application status details.

3.1.8 Notification

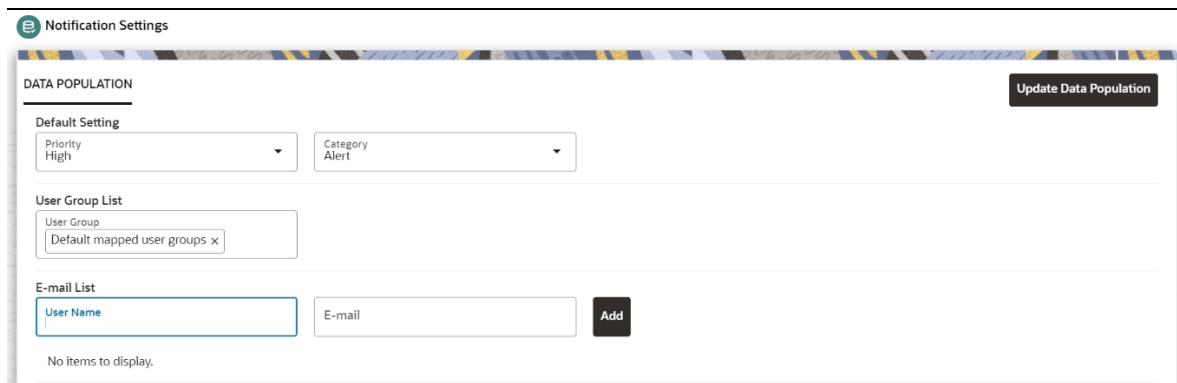

Click **Notification**  icon to display the notifications from the application. In the current release, only data population related notifications are displayed. You can delete the notifications by clicking on the **Delete** icon when no longer needed.

To add or modify the notification details, perform the following:

1. In the header of the home page, click on the **Profile** icon next to **Notifications** icon and select **Notification Settings** option.

2. Select the required options from the **Notification Settings** page and click **Update Data Population**. If you select the User group, they will be notified via User Interface with the alerts under Notification icon and if you want to get the notifications in email, add the user name and email ID so that whenever a data population is triggered, an email notification is shared to the user.

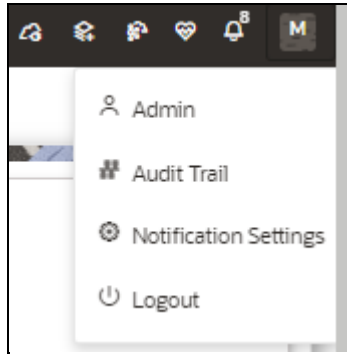

The notification alerts details are updated.

NOTE

An email notification is sent to the default email id added in AAICL_SMS_USER_PROFILE present in the config schema.

3.1.9 Profile

The Header displays icons, buttons, and text for generic information and access to the OFSAA application's features. The following user-interface elements are displayed.

- **User Name:** Displays the first letter of the logged-in user name. Hover over to view the complete name of the user. Click this to select from the following options in the drop-down list:
 - **Admin:** Navigates to IDCS page.
 - **Audit Trail:** The Audit Trail window provides the information such as start and stop of UI and Service, add or delete of datasource, API configuration, Kafka topics, Conda Environments and so on are displayed. Click on **Audit Timeline View** to display the sequence of actions performed is listed in the table view and the timeline view (graphical representation).
 - **Notification Settings:** Select to add or modify the notifications alerts details.
 - **Logout:** Select to log out of the application.

3.1.10 Workspace Summary

Shows the list of Workspaces. Select the checkbox next to the Workspace that you want to View, Edit, Copy, or Delete. Click **Add Workspace** to create a new Workspace. You can search a Workspace using Workspace Code, Owner, Creation Date, or Workspace Type fields. The search list shows the Workspace details with Workspace Code, Owner, Creation Date, and Type.

3.2 Using the OFS MMG Application

The OFS MMG application displays windows and pages that are interconnected to the OFS AAI. Primarily, you will create Workspace. Within these Workspaces, you will create models, compare them for the best fit, and promote one to production.

Use the information in the following topics to create the workspaces and models:

- [Using Workspaces](#)
- [Using Model Pipelines](#)

The prerequisites for Workspace are as follows:

- To create a workspace, your user profile must be mapped to the Workspace Administrator role. For more information, see the [User Groups](#) section.
- To use a workspace to create models, your user profile must be mapped to the Model User role (such as a modeler). For more information, see the [User Group - Role Mapping](#) section.

3.3 Access the Workspace Dashboard Window

The Workspace Dashboard window allows you to view the models of launched workspace.

To access the Dashboard window, follow these steps:

1. Navigate to **Workspace Summary** page.

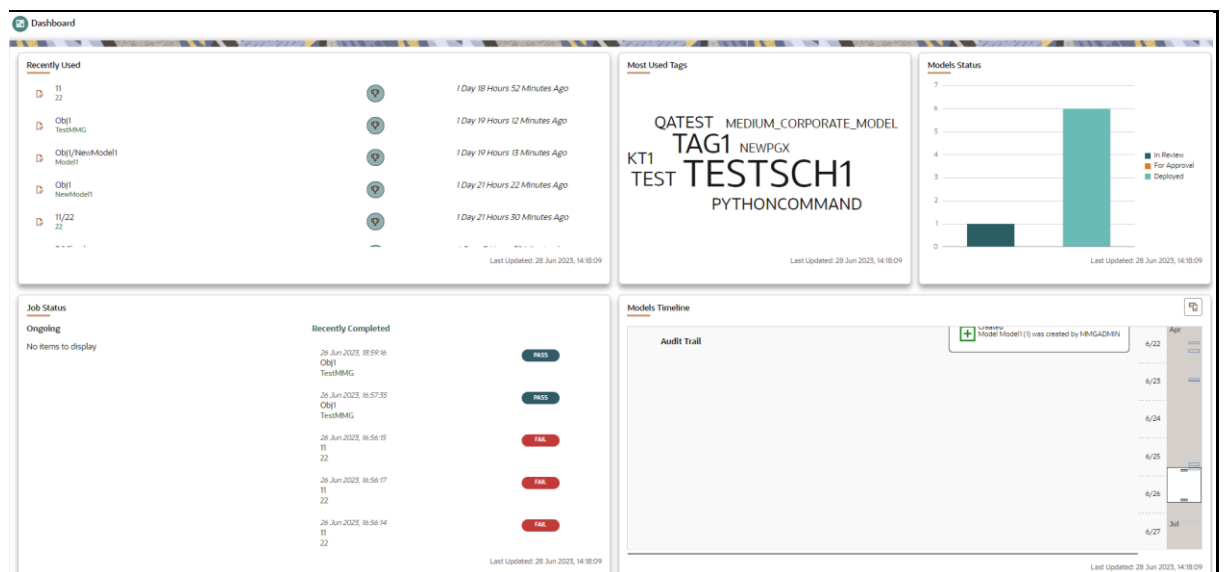

The page displays workspace records in a tile format.

2. Click  next to corresponding Workspace to Launch Workspace.

The MMG **Dashboard** window is displayed with application configuration and model creation menu.

The Workspace Dashboard shows the following details of a launched workspace:

- Recently Used
- Most Used Tags
- Models Status
- Job Status
- Models Timeline

3.4 Executing the Production Workspace Models from Analytical Applications Infrastructure

Prerequisites

- To execute the MMG Production Workspace Models from AAI, log in to [My Oracle Support](#), and search for **35250055** patch under the **Patches & Updates** tab, download and apply it on the OFSAAI sever.
- Ensure the AAI Infodom and MMG Workspace names are same before you execute the Production Workspace Models.

To execute the MMG Production Workspace Models from the AAI application, perform the following steps:

1. In the AAI configuration schema, update the value for `MMG_SERVICE_URL` in the `nextgenemf_config` table with the values in the MMG installation.

Example:

```
MMG_SERVICE_URL :<FQDN/IP>:<mmg_be_port>/<mmg_context_name>
```

NOTE

If the target MMG is using secured connection, import the target server certificate to the AAI application java keystore and restart the services.

2. Restart the AAI services.

A new component `STUDIOMODEL` will be available in ICC, RRF, and PMF modules for selecting the Production Workspace Models of MMG.

For more details, refer to the *Component: STUDIOMODEL* section of [AAI User Guide](#).

3.5 Accessing the MMG application from Analytical Applications Infrastructure

You can now access the MMG application and its features from AAI.

Prerequisite

- To access the MMG application from AAI, log in to [My Oracle Support](#), and search for **35250055** patch under the **Patches & Updates** tab, download and apply it.
- A valid MMG setup should be up and running.

To access the MMG application, perform the following steps:

1. In the AAI configuration schema, update the value for `MMG_UI_URL`, and `MMG_SERVICE_URL` in the `nextgenemf_config` table with the values in the MMG installation.

Example:

- `MMG_UI_URL:http(s)://<FQDN/IP>:<mmg_ui_port>/<mmg_context_name>/home`

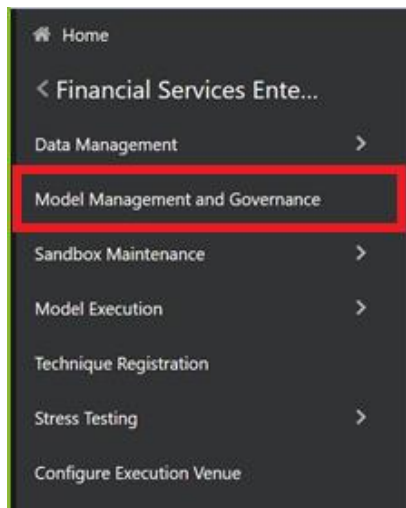

- `MMG_SERVICE_URL :<FQDN/IP>:<mmg_be_port>/<mmg_context_name>`

NOTE

If the target MMG is using secured connection, import the target server certificate to the AAI application java keystore and restart the services.

2. You must map the **MMGACCR** role to the required user. In addition, **MMGACCGRP** group is preseeded with the above role.
3. You must map the `OFS_MMG_HOME Menu ID` to the desired Parent ID in the `AAI_MENU_TREE` table in the AAI Configuration Schema.
4. Restart the AAI services.

After successful login to the AAI application, a menu named **Model Management and Governance** is displayed. Based on your menu tree configuration, the left pane is displayed as shown below.

5. When you click on Model Management and Governance, the MMG Login page is displayed, enter the credentials to access the MMG application.

4 Using Workspaces

Workspace management allows you to create and manage workspaces in the Financial Services Model Management and Governance application.

Workspace can be in the production environment (deployed), or they can exist in a separate instance on their own (on local for testing purposes) with a copy of data that comes from the desired data source (production or external data source).

You can view the following details on Workspace Summary page:

- Number of Sandbox Workspaces
- Number of Production Workspaces

4.1 Accessing the Workspace Summary Page

The Workspace Summary page gives access to the various workspace functions such as create and delete.

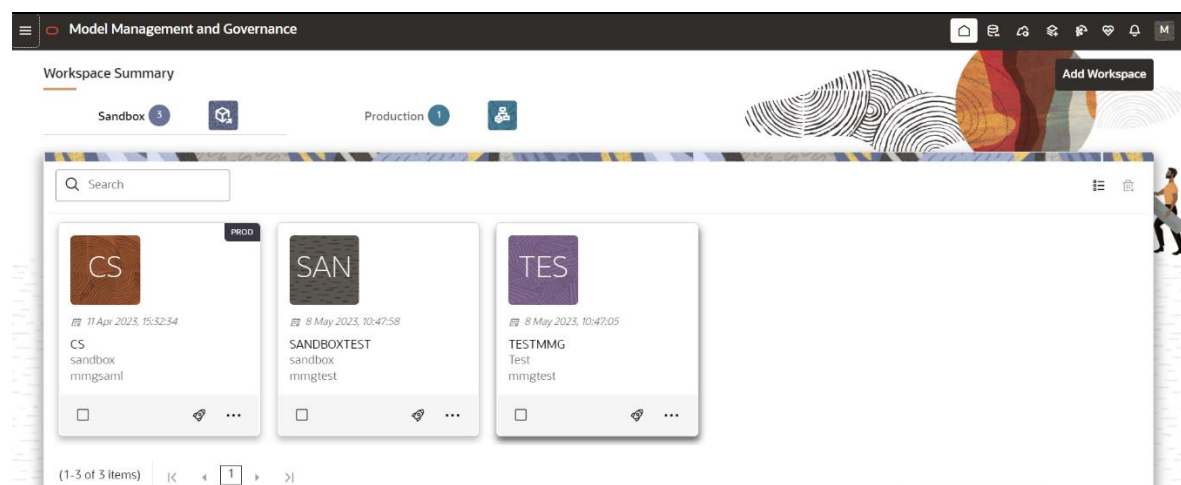

NOTE

Users must be mapped to the Workspace Admin Group to access the Workspace Summary page.

To access the Workspace Summary page, follow these steps:

After login to **Financial Services Model Management and Governance** application, the **Workspace Summary** page is displayed. The page displays workspace records in a table or card view. You can launch a workspace using the launch option or double clicking on it.

Figure 5: Workspace Summary Page

The following table provides descriptions for the fields and icons on the **Workspace Summary** page.

Field or Icon	Description
Search	<p>The field to search for Workspace.</p> <p>Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.</p> <p>You can search a Workspace using Workspace Code, Owner, Creation Date, or Workspace Type fields.</p> <p>The search list shows the Workspace details with Workspace Code, Owner, Creation Date and time, and Type.</p>
Card and Grid View	<p>Click the Card View  or Grid View  on the top-right corner of this pane to view the workspace as a block or a table, respectively.</p>
Delete	<p>Click Delete  to delete the Workspaces.</p>
Workspace Code	<p>The code of the Workspace.</p> <p>NOTE: Use up to 20 characters consisting of alphanumeric and space characters only. Do not use "ALL" as a workspace code.</p>
Description	The description for the Workspace.
Owner	The owner of the Workspace.
Creation Date	The date and time on which the Workspace was created.
Data Source Type	Shows the type of the Data Source.
Add Workspace	<p>Click Add Workspace to create a new Workspace. See the Create a Workspace section for more information.</p>
Launch Workspace	<p>Click Launch  next to corresponding workspace to display the Workspace Dashboard with application configuration and model creation menu. See the Launch a Workspace section for more information.</p>
View Workspace	<p>Click Action  next to corresponding Workspace and select View  to view the workspace with dataset data. See the View a Workspace section for more information.</p>
Populate Workspace	<p>Click Action  next to corresponding Workspace and select Populate  to populate the workspace with dataset data. See the Populate a Workspace section for more information.</p>
Edit Workspace	<p>Click Action  next to corresponding Workspace and select Edit  to edit the Workspace.</p>

Field or Icon	Description
Delete Workspace	Click Action  next to corresponding Workspace and select Delete  to delete the Workspace. See the Delete a Workspace section for more information.
Download Workspace	Click Action  next to corresponding Workspace and select Download  to download the Workspace. See the Download a Workspace section for more information. The file is downloaded in .cfg format.

4.2 Create a Workspace

The Workspace creation requires entry of the source of dataset, validation, and deployment. Besides, the OFS MMG application may require users of different function groups to create and approve a Workspace. In other words, a user associated with the modeler function group creates a Workspace and the approval and deployment are done by a user associated with the modeling administrator function group. See the [Mapping User Groups](#) section for more information.

UGDOMMAP function should be mapped to the user performing sandbox creation operation. Otherwise, the create operation will fail.

To create a Workspace, follow these steps:

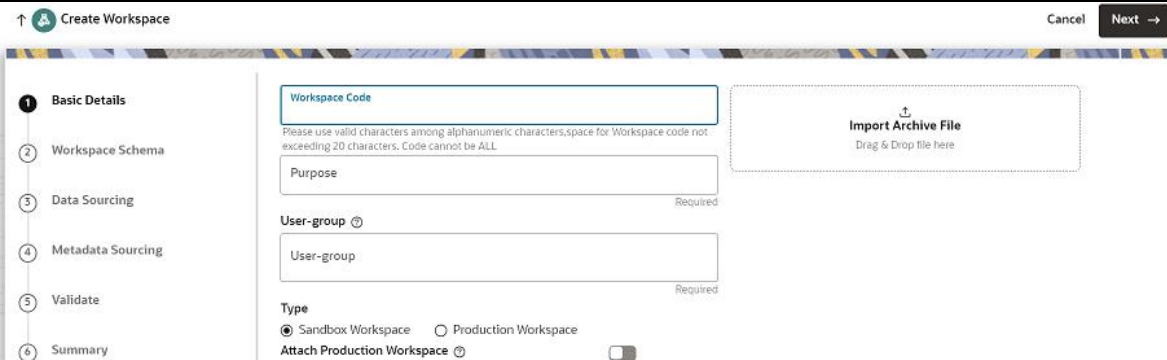

1. Navigate to **Workspace Summary** page.

The page displays workspace records in a table.

2. Click **Add Workspace**.

The **Create Workspace** page is displayed.

Figure 6: Create Workspace

The window displays a progress indicator at the left that indicates the active window where you are entering details. Click **Previous**  to go back a step and click **Next**  to go to the next step.

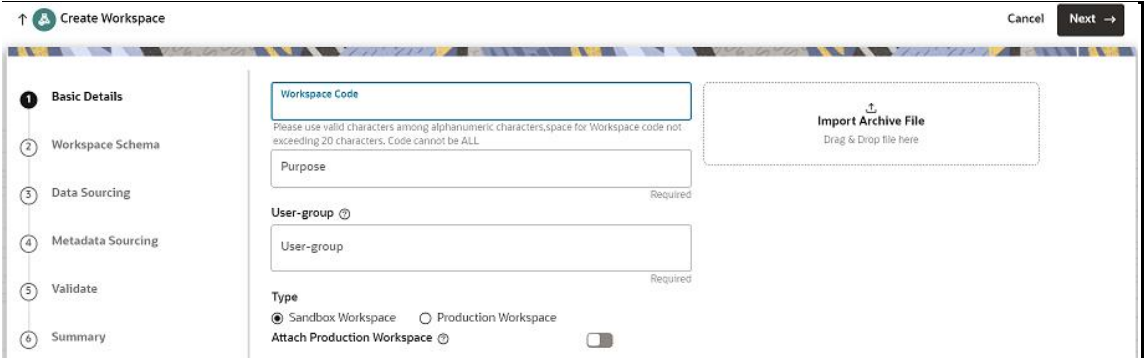

The following steps show the various phases from workspace creation to deployment:

- a. [Basic Details](#)
- b. [Workspace Schema](#)
- c. [Data Sourcing](#)
- d. [Metadata Sourcing](#)
- e. [Validate](#)
- f. [Summary](#)

4.2.1 Configure Basic Details

Enter basic configuration details in this window.

Figure 7: Basic Details

To configure the basic details for the workspace, follow these steps:

1. Enter the required details in the **Basic Details** pane as shown in the following table.

Field	Description
Workspace Code	Enter the code of the workspace. NOTE: Use up to 20 characters consisting of alphanumeric and space characters only. Do not use "ALL" as a workspace code.
Purpose	Enter the purpose of the creation of the Workspace.

Field	Description
User-group	Click on this field to display a list of User-group values. Select the required value. For Example: Modeling Approver, Modeling Reviewer, and so on.
Type	Select the type of Workspace as Sandbox or Production.
Attach Production Workspace	Move the toggle switch to the right to enable this option. Enabling it attaches the production schema, which selects the Workspace being created for automatic model promotion. Based on the selection of the Source Workspace, the model is promoted to the environment.
Import archive file	Enter the archived file to import for basic details. If you use this feature, the other fields described in the preceding rows are auto populated. Click on the box to open the file selector dialog and select the required configuration file or drag the file from its directory and drop it in the box.

2. Click  to go to the next step.

4.2.2 Configure Workspace Schema

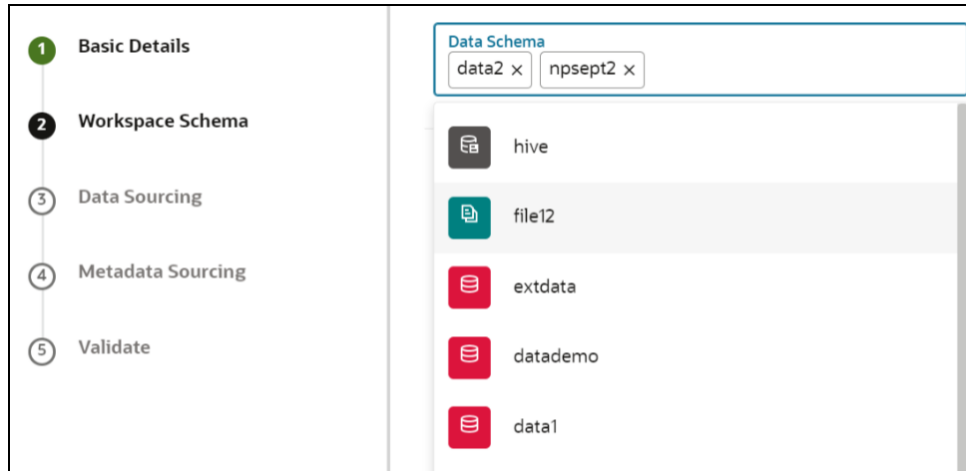

Select the schema operation and enter connection details.

Figure 8: Workspace Schema

To configure the Workspace schema, follow these steps:

1. Select one from the options from the **Meta Schema** drop-down list. Every workspace has a schema to store the meta information such as batch ID and so on. This is used for saving all the definitions and metadata related to models.

2. Select one from the options from the **Data Schema** drop-down list. This is the actual data used for model building. You can use multiple data schemas for one Meta Source. You can select an existing Schema or add a new Schema. The data source options such as Oracle, Hive, and File are displayed.

To add a new data source, follow these steps:

3. Click Create Data Source  icon.

The **Add Data Source** window is displayed.

Figure 9: Create Data Source with Type File

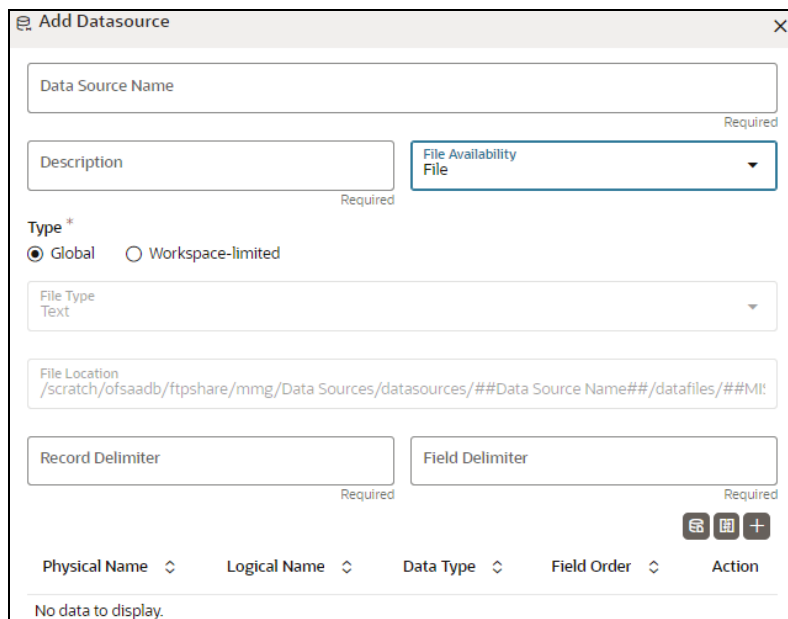

Figure 10: Add Data Source with Oracle Database

The screenshot shows a dialog box titled "Add Datasource" with a close button (X) in the top right corner. It contains the following fields:

- Data Source Name**: A text input field with a "Required" label below it.
- Description**: A text input field with a "Required" label below it.
- Type**: A dropdown menu currently showing "JDBC".
- Database Type**: A dropdown menu currently showing "Oracle".
- Wallet Alias**: A text input field with a "Required" label below it.
- Table Owner**: A text input field with a note below it: "Enter the Oracle Database schema name (optional)."

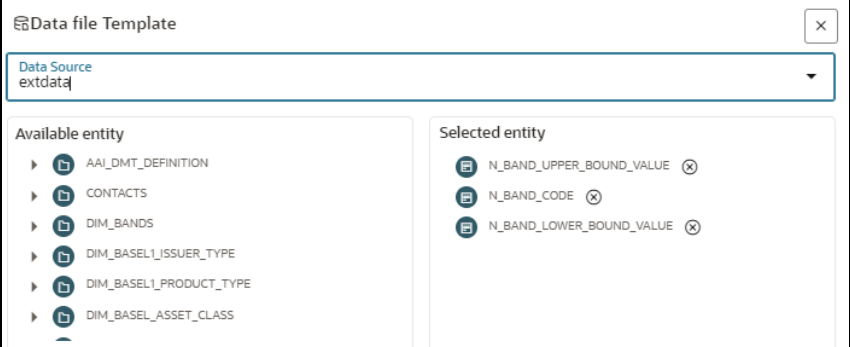

Figure 11: Add Data Source with Hive Database

The screenshot shows a dialog box titled "Add Datasource" with a close button (X) in the top right corner. It contains the following fields:

- Data Source Name**: A text input field with a "Required" label below it.
- Description**: A text input field with a "Required" label below it.
- Type**: A dropdown menu currently showing "JDBC".
- Database Type**: A dropdown menu currently showing "Hive".
- User Name**: A text input field with a "Required" label below it. Below this field is a note: "User Name / Principal is used for Kerberos authentication. E.g. mmg/hostname@ORACLE.COM".
- Table Owner**: A text input field with a "Required" label below it.
- JDBC Connection String**: A text input field with a "Required" label below it.
- JDBC Driver**: A text input field with a "Required" label below it.
- Keytab File Name**: A text input field with a "Required" label below it.
- Realm File Name**: A text input field with a "Required" label below it.

4. Enter the required details as shown in the following table.

Field	Description
Database Source Name	Enter the connection URL to the database for the data schema.
Description	Enter the description of database connection.

Type	<p>Enter the type of the database connection. The supported types are JDBC and File.</p> <ul style="list-style-type: none"> • JDBC : If selected, the Database type options Oracle and Hive are displayed. • File: If selected, (see Figure 9), the following options are displayed. <ul style="list-style-type: none"> ▪ Global: Select this option if you want to fetch the global level datasource details. You need to place the file with the datasource details in JSON format in the following location: /scratch/ofsaadb/ftpshare/mmg/Data Sources/datasources/##Data Source Name##/datafiles/##MISDATE##/* ▪ Workspace-limited: Select this option if you want to fetch the workspace level datasource details. You need to place the file with the datasource details in JSON format in the following location: /scratch/ofsaadb/ftpshare/mmg/##Workspace##/datasources/##Data Source Name##/datafiles/##MISDATE##/* ▪ Record Delimiter: There is a separation of the records using a delimiter character like a comma, semicolon, hyphen, and so on for the rows. Enter the delimiter in the Record Delimiter field. This is a mandatory field and limited to two characters. ▪ Field Delimiter: There is a separation of the records using a delimiter character for the columns. Enter the delimiter in the Field Delimiter field. This is a mandatory field. <p>You can either add the file details using data template or manually. Click Data File Template icon to select the Data Source entities and click Save.</p>  <p>OR</p> <p>Click Add icon to add the details such as Physical Name, Logical Name, Data Type, and Field Order manually and click Save.</p>  <p>Click Reorder Grid option to reorder the field orders.</p>
------	---

Field	Description
Database Type	<p>If the Type field is selected as JDBC, the following options are displayed. Select the Database Type as Oracle or Hive.</p> <p>Note: Selected tables during Hive sourcing should be preexisting in the RDBMS data schema before the workspace population.</p> <p>If you select Database Type as Oracle (see Figure 10), then following additional fields are displayed to enter details:</p> <ul style="list-style-type: none"> • Wallet Alias : Enter the Wallet Alias. This value should be same as configured using Oracle Wallet. For more information, see the Oracle Financial Services Model Management and Governance Installation Guide • Table Owner: Enter the Oracle Database schema name. This is an optional field. <p>If you select Database Type as Hive (see Figure 11), then following additional fields are displayed to enter details:</p> <ul style="list-style-type: none"> • User Name: User Name / Principal is used for Kerberos authentication. Example: mmg/hostname@ORACLE.COM. • Table Owner: Enter the Hive schema. • JDBC Connection String: Enter the JDBC Connection String. Example: jdbc:hive2://hostname:10000/default;principal=hive/hive-service-hostname@ORACLE.COM. • JDBC Driver: Supports org.apache.hive.jdbc.HiveDriver and com.cloudera.hive.jdbc4.HS2Driver. • Keytab File Name: Enter the Name of the keytab file present in conf directory. Example: mmg.keytab • Realm File Name: Enter the Name of the configuration file present in conf directory. Example: krb5.conf <p>NOTE:</p> <ul style="list-style-type: none"> • Schema population for Hive as target is not supported. • This is applicable only for Sandbox Workspace. <p>For more information on setting the environment, see the Oracle Financial Services Model Management and Governance Installation Guide.</p>

5. Click **Create** on **Add Data Source** window.
6. Select the required option from the **Kafka Topics** list. For more details, see [Kafka Topics](#).
7. Select the required option from the **API Configurations** list. For more details, see [API Configurations](#).
8. Select the required option from the **Conda Environments** list. For more details, see [Conda Environments](#).
9. Click  to go to the next step.

OR

Click **Skip** to skip the step.

NOTE Click **Test Connection** to check the connection. A success message is displayed.

4.2.3 Configure Data Sourcing

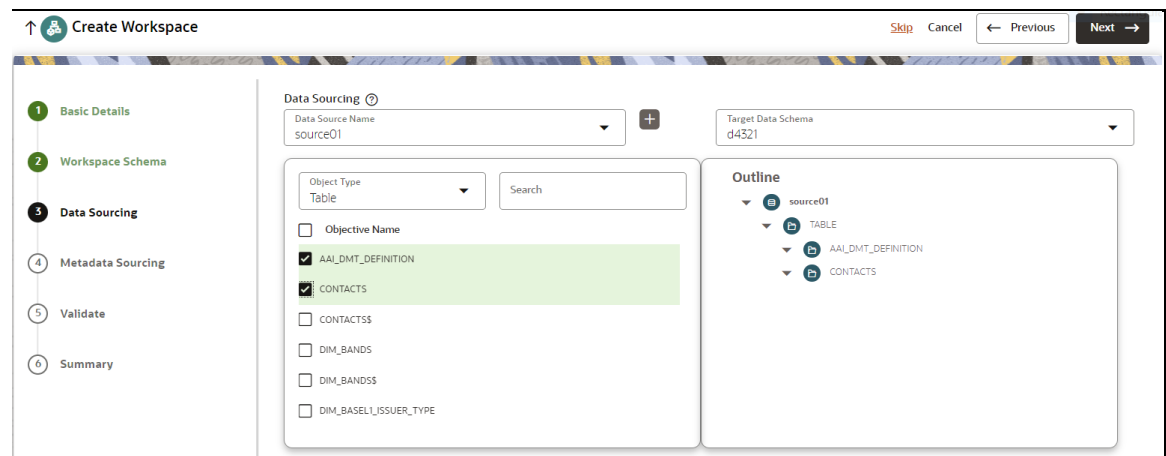

The schema type selected in the previous step requires the definition of database objects to be used for model creation. Data sourcing step of Workspace provisioning allows to select tables from Hive based data sources from which data has to pulled into the Oracle based Workspace data schemas. However, unlike the data sourcing from RDBMS data sources, the tables will not get physicalized in the target schema and hence it is expected that the tables with compatible structures are already present in target RDBMS schema.

In case any of the selected tables are not present in the target schema, those tables are included in the failed objects count in workspace provisioning summary.

This window shows the different icons for Oracle and Hive data sources.

Enter the details in this window.

Figure 12: Data Sourcing - External Data Source

To configure Data Sourcing, follow these steps:

1. You can select Data Source from Data Source Name drop-down list or create a new Data Source. To create a new Data Source, see the Configure Workspace Schema section.
2. Select the Target Data Schema. You can select multiple Data Sources for a Target Data Schema.
3. For example, if there are D1, D2 and D3 Data Sources, then you can select the tables from all these Data Sources, tables from two Data Sources, tables from one Data Source, or as required. Here, multiple combination of tables are possible with Data Source and Target Data Source.

4. If two Data Sources are having same tables (from different Data Sources), then the columns from the first selected table will be used. For example,
5. If Table A has columns C1, C2, C3 and Table B has columns C1, C2, and C4, then the data from the first table will be used.
6. During the data population, only columns C1 and C2 will be used and those will be marked in Green color.
7. Select the type of objects to be displayed in the pane that follows the drop-down list. The Object Type drop-down list will be enabled after selecting the Data Source from Data Source Name drop-down list. The following are the options in the drop-down list:
 - Table
 - View
 - Synonym

8. Click  to go to the next step.

OR

Click **Skip** to skip the step.

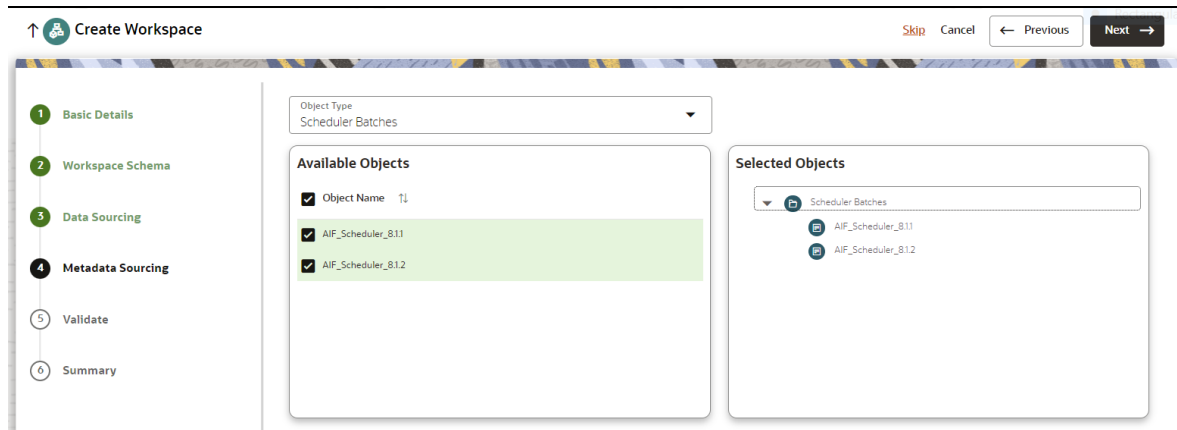

4.2.4 Configure Metadata Sourcing

The database objects selected in the previous step can be added with metadata for selected objects. Metadata Sourcing is a stage during Workspace provisioning to allow seeding of metadata like scheduler batches at the time of workspace provisioning.

Also, by default there will be seeded metadata. However, if you wish to seed the metadata, navigate to <installed path>/ftpshare/mmg/seeded/batches and drag and drop the metadata in SQL format.

NOTE This step is optional.

Figure 13: Metadata Sourcing

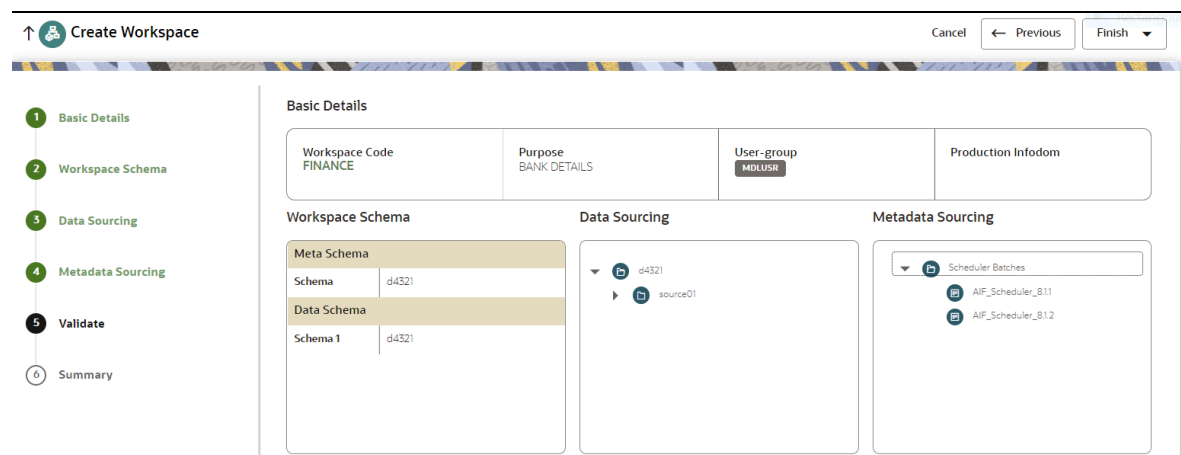

To configure Metadata Sourcing, follow these steps:

1. Select the required schema from the **Object Type (Optional)** drop-down list.
The **Available Objects** are displayed in **Selected Objects** pane.
2. Click  to go to the next step.
OR
Click **Skip** to skip the step.

4.2.5 Validate Workspace

The **Validate** pane displays a preview of the configuration values entered in the previous panes.

Figure 14: Validate Workspace

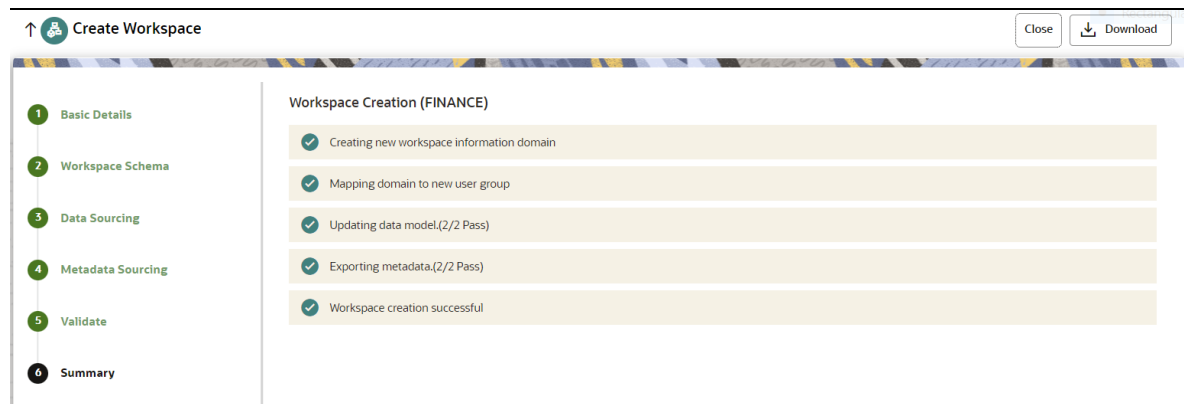

To validate the Workspace and deploy, follow these steps:

1. Review the details in the **Validate** pane. You can edit the Workspace by clicking on Edit icon  .
2. Click **Finish** to creation of the Workspace using **Physicalize Sandbox** option or **Download Configurable Archive**.
 - When you click **Download Configurable Archive**, it exports the metadata information of the workspace in .zip format which can be used later using the Import option.
 - When you click **Physicalize Sandbox**, it creates actual workspace.

4.2.6 Display Summary

The **Summary** pane displays the status of the workspace creation.

Figure 15: Workspace Creation Summary

- Click  to download the deployment report.

4.3 Launch a Workspace

The launching of the Workspace displays the **Workspace** window. The workspace displays a menu for Models and an application configuration and model creation submenu as shown in the following list:

- Dashboard
- Dataset
- Model Pipelines
- Model Actions
- Graphs
- Scheduler Service

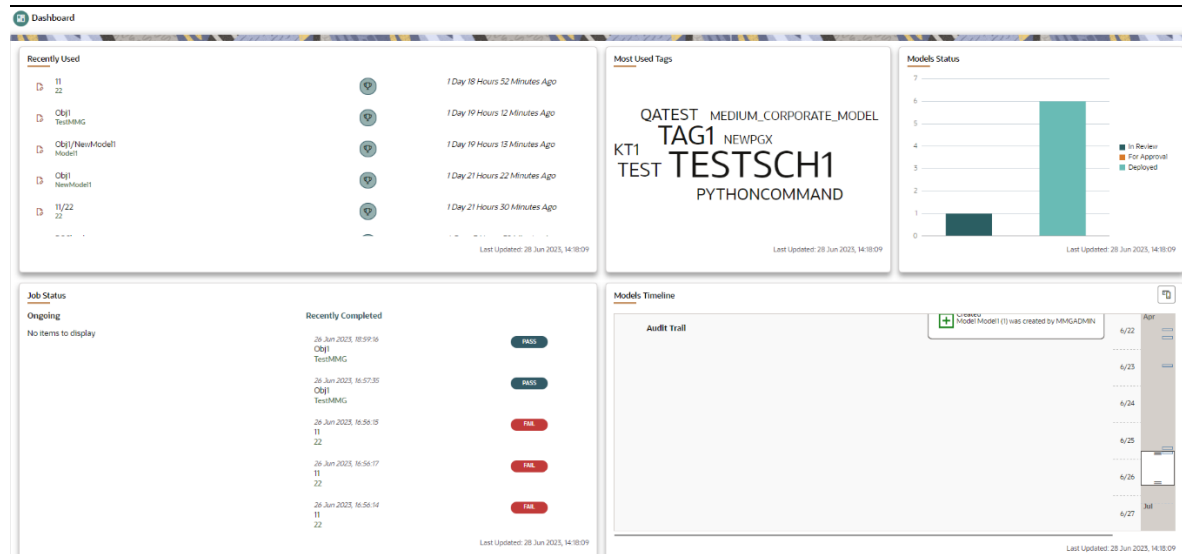

- Audit Trail
- Data Studio Options
- Object Migration
- Model Catalog

1. Click **Launch** next to corresponding Workspace.

The Workspace Dashboard is displayed.

Figure 16: Workspace Dashboard

4.4 View a Workspace

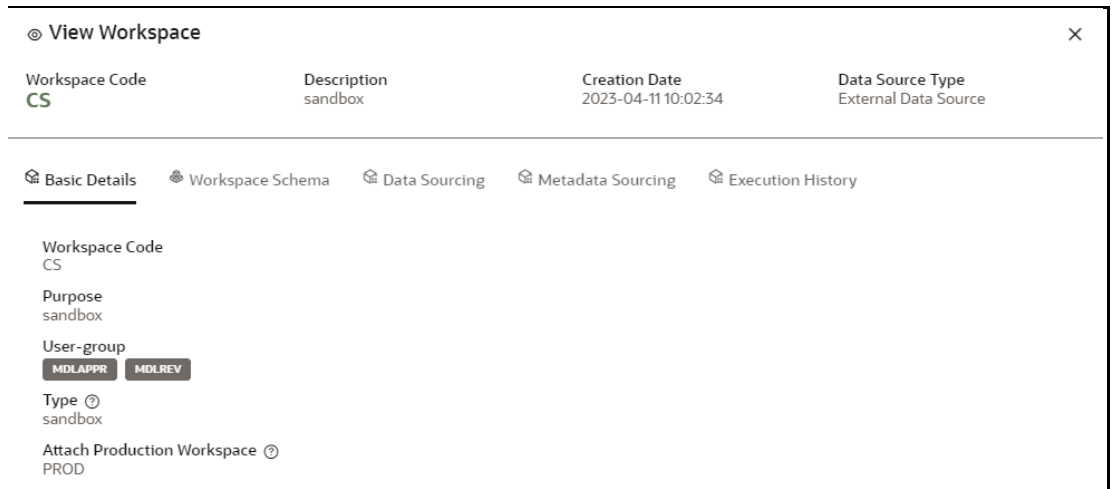

To view a workspace, follow these steps:

1. Navigate to **Workspace Management** to display the **Workspace Summary** page. The page displays workspace records in a table.

2. Click **Action** next to corresponding workspace and select **View** to view the workspace.

The Basic Details of the Workspace is displayed.

Figure 17: View Workspace Window

3. Navigate to the Workspace Schema, Data Sourcing, Metadata Sourcing, and Execution History tab to view the respective details.

NOTE You can view the data population logs under the Execution History page.

4.5 Populate a Workspace

The workspace is populated with data from the datasets in External sources.

To populate the Workspace, follow these steps:

1. Navigate to the Workspace **Summary** page.
The page displays Workspace records in a table.
2. Click Action  next to corresponding Workspace and select **Populate**  to populate the Workspace with data from a dataset in the **Populate Workspace** window.

Figure 18: Populate Workspace Window

The following table provides descriptions for the fields in the **Populate Workspace** window.

Field	Description
Workspace Code	The code of the Workspace.
Purpose	The description for the Workspace.
Creation Date	The date and time on which the Workspace was created.
Data Source Type	The source of data. The value can be the OFSAA Data Schema or an external data source.
Data Filter - Global	Enter the data filter that needs to be applied on all the tables selected for data sourcing. For example: If MISDATE is equal to Today, then it is applied to all tables (wherever it is available) for selected Data Sources during population. If this field is not found (MISDATE) in the tables, it is not updated.

Field	Description
Data Filter - Table level	<p>Provide the data filters individually on the tables here.</p> <p>NOTE: You can provide multiple table names for the same SQL filter. For example, there are two tables called Student and Employee in the target data source, and below filters are applied MISDATE as Today for Student and Employee tables ID as 1 for Student table</p> <p>Then, Student table will be populated with MISDATE and ID filters and Employee table will be populated with only MISDATE filter.</p> <p>Global Filters will not be applicable for those tables on which filters have been applied individually.</p> <p>If the same table name is provided in more than one rows here, then filter condition is generated as a conjunction of all the provided filters.</p>
Fetch Size	Enter the Fetch size of JDBC properties for data upload
Batch Commit Size	Enter the Batch Commit size of JDBC properties for data upload
Write Mode	You can either overwrite the existing data (truncate and insert) or to append to the existing data. You can choose to either overwrite the data or append to the existing data.
Rejection Threshold	<p>Following two options are available:</p> <ul style="list-style-type: none"> • Custom Rejection Threshold Enter the maximum of number of inserts that may fail for any of the selected tables. You can provide the maximum number of inserts that can fail while loading data to a given table from all the sources. In case of threshold breach, all the inserts into the particular target schema will be rolled back. However, it will continue with populating the next target schema. • Unlimited Here, all the errors will be ignored during the data population.

3. Click **Populate Workspace** to start the process.

Here, you can create the batch using Create Batch, or create and execute using Create and Execute Batch option. On selecting either of these options, a workspace population task gets added to the batch.

- When you select Create and Execute Batch option, it allows you to create batch and triggers the batch as well.
- When you select 'Create Batch' option, it allows you to prepare the batch and then execute or schedule the batch at a later time through Scheduler Service window.

The Workspace population task execution can be tracked in the 'Monitor Batch' window in the Scheduler Service.

Figure 19: Task Parameters

▼ Task Parameters

Parameter	\$BATCHDATE\$	Value	Batch Date	<input checked="" type="checkbox"/>
Parameter	\$BATCHRUNID\$	Value	BATCHRUNID	<input checked="" type="checkbox"/>
Parameter	Global Filter	Value	<input type="text"/>	<input type="checkbox"/>
Parameter	Table Filters	Value	<input type="text"/>	<input type="checkbox"/>
Parameter	Additional Parameters	Value	<input type="text"/>	<input type="checkbox"/>

4. Enter the following parameters for workspace population.

NOTE This step is optional.

- **Additional Parameters:** Enter the Additional Parameters in following format:

```
{ "fetch_size" :10, "batch_commit_size" :1000,
  "rejection_threshold" : "UNLIMITED", "write_mode" : "OVERWRITE" }
```

- **Global Filter**

Provided input will be applied as a data filter on all the tables selected for data sourcing.

- **Table Filter**

You can provide data filters individually on the tables here. You must provide multiple table names for the same SQL filter. Global Filters will not be applicable for those tables on which filters have been applied individually. In case the same table name is provided in more than one rows here, the filter condition will be generated as a conjunction of all the provided filters.

Enter the Table filters in following format:

```
[{"id":1,"filter": "<filter condition>", "tables": ["TABLE1",
"TABLE2"]}, {"id":2,"filter": "<filter condition>", "tables": ["TABLE2"]} ]
```

NOTE

You can run workspace population for a given workspace any number of times. New tables may be added to the definition. Any new table added to the definition, that is not present in the target schema will be physicalized on update of the workspace. Also, user can add new sources if required.

Any table that is deselected from the data sourcing definition will **NOT** be dropped.

4.6 Edit a Workspace

To edit a workspace, follow these steps:

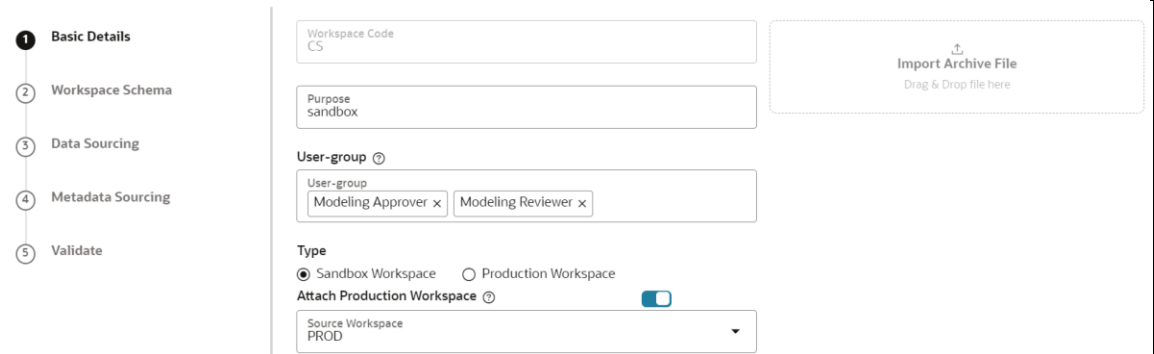

1. Navigate to **Workspace Management** to display the **Workspace Summary** page. The page displays Workspace records in a table.
2. Click Action  next to corresponding workspace and select **Edit**  to edit the workspace.

Figure 20: Edit Workspace Window

NOTE

You can modify the Workspace Type from Sandbox to Production or vice versa.

For more details on the Basic Details fields, see [Configure Basic Details](#) section.

3. Click **Save**.

4.7 Delete a Workspace

NOTE

When you delete a Workspace, all the underlying objects such as Dataset, Scheduler service metadata and so on from the associated tables are deleted.

To delete a Workspace, follow these steps:

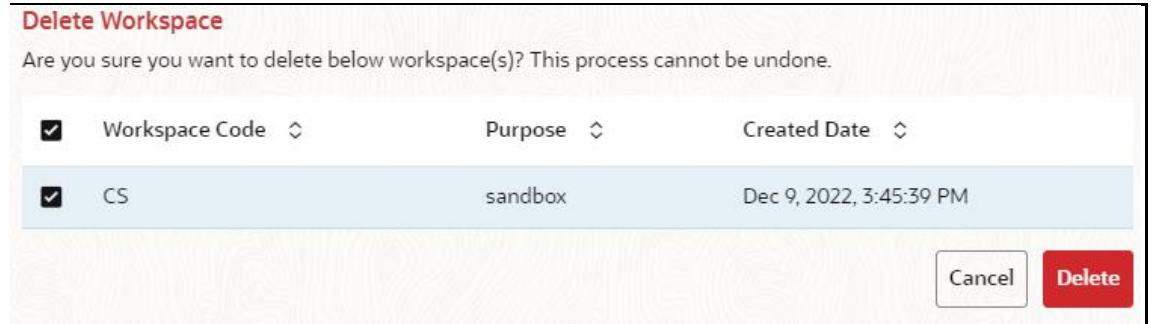

1. Navigate to **Workspace Management** to display the **Workspace Summary** page. The page displays workspace records in a table.
2. Click Action  next to corresponding Workspace and select **Delete**  to delete the workspace.

Figure 21: Delete Workspace Window

The following table provides descriptions for the fields in the **Delete Workspace** window.

Field	Description
Workspace Code	The code of the workspace.
Purpose	The description for the workspace.
Created Date	The date on which the workspace was created.

3. Click **Delete**.
4. Click **OK** on the confirmation dialog box to confirm or click **Cancel** to cancel.

NOTE

You must de-link the Sandbox workspaces from Production Workspace before deleting the Production Workspace

4.8 Download a Workspace

Downloading a workspace allows you to export the workspace metadata definition (without underlying objects such as Models, Pipeline, Graphs, and so on) in a zip format. Further, the same can be used to re-create the workspace.

To download a workspace, follow these steps:

1. Navigate to **Workspace Management** to display the **Workspace Summary** page. The page displays Workspace records in a table.

- Click Action  next to corresponding workspace and select **Download**  to download the workspace.

OR

Navigate to the Summary screen during the creation of a Workspace and click Finish and select **Download Configuration Archive** option.

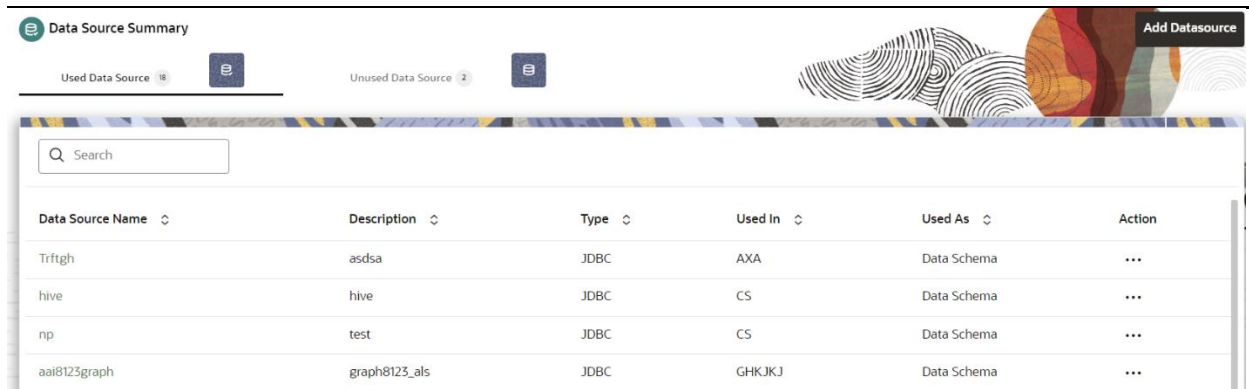

NOTE The file is downloaded in .cfg format.

4.9 Managing Data Sources

This feature allows you to manage the Data Schemas registered with MMG. The Data Source Summary window shows the list of Data schemas registered with MMG. These Data schemas can be used either for workspace or for sourcing data. Click Data Source

Summary  to navigate to Data Source Summary window.

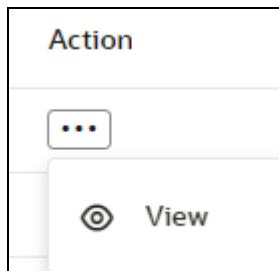

This window also allows you to manage these registered external sources.

Data Source Name	Description	Type	Used In	Used As	Action
Trftgh	asdsa	JDBC	AXA	Data Schema	...
hive	hive	JDBC	CS	Data Schema	...
np	test	JDBC	CS	Data Schema	...
aai8125graph	graph8125_als	JDBC	GHKJKJ	Data Schema	...

The Data Source Summary is divided into two sections: Used Data Source and Unused Data Source.

To view the Data Source details., Click **Action** icon next to corresponding Workspace and select **View**

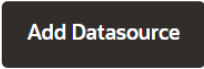

- Used Data Source:**

This shows the list of Data Sources registered with any workspace. Here, you can only view the Data Source details. The count of Used Data Sources also displayed at the top of Data Source Summary page.

- **Unused Data Source:**

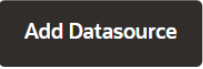

This shows the list of Data Sources those are not registered with any workspace. Here, you can only view, edit, or delete the Data Source details. The count of Unused Data Sources also displayed at the top of Data Source Summary page.

To add a Data Source from Workspace Summary window, follow these steps:

1. Navigate to **Workspace Summary** window.
2. Click Data Source Summary  to navigate to **Data Source Summary** window and click  .

The Add Data Source window is displayed.

To add a Data Source from Data Source Summary window, follow these steps:

1. Navigate to **Data Source Summary** window.
2. Click **Add Datasource** icon  .

For more information, see the [Create a Workspace](#) section.

4.10 API Configurations

Using API configurations, you will be able to register APIs above workspace level. Configured APIs can be mapped to multiple workspaces and the mapped APIs will be available for use in model pipelines.

Currently, only token-based and noAuth authentications are supported. Additionally, body parameters can only be provided with text data. All values that needs to be replaced during run time can be given in the format '<<placeholder variable name>>'.

Configured API can be viewed, edited (API code is not editable) and deleted. APIs that are not mapped to any workspace can only be deleted.

Integrating API with Model Pipelines

Mapped APIs will be available for use in model pipelines for the workspace. By selecting a specified API from the dropdown, you can link a node with an API. Additionally, you can provide an output variable name which will be assigned with the response from the API when that node is executed.

NOTE API configurations is available only for %python interpreters. Output variable will be a python variable accessible only for paragraphs with %python interpreters.

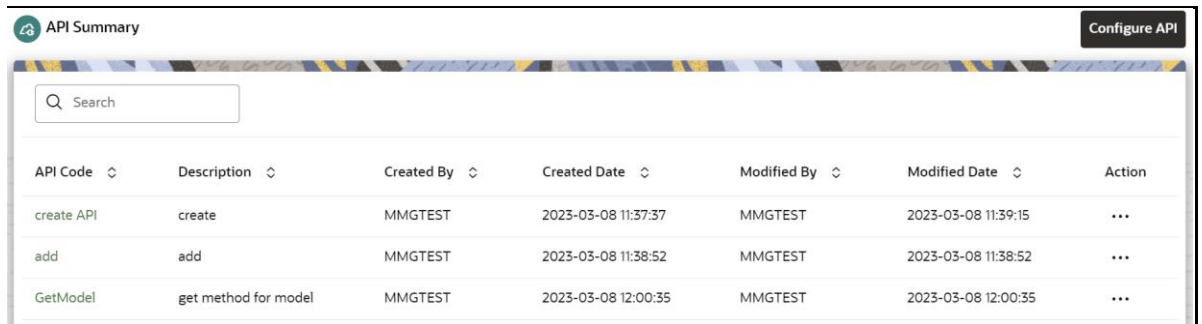

In pipeline execute screen, values can be entered for all the placeholder variables during run time.

NOTE Since variables are fetched during run time, it will be available in notebook or execute screen only after the first execution. This is the default behavior of all programmatic dynamic forms in Datastudio.

On executing the node/pipeline, result of the API executed can be accessed from the variable given under 'Output_variable_name'.

When the pipeline is imported to another workspace, it will seamlessly use the API that is mapped with the target workspace in the same order as that of the API mapped in source workspace.

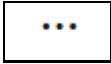

Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application. You can configure and manage APIs from this page.

API Code	Description	Created By	Created Date	Modified By	Modified Date	Action
create API	create	MMGTEST	2023-03-08 11:37:37	MMGTEST	2023-03-08 11:39:15	...
add	add	MMGTEST	2023-03-08 11:38:52	MMGTEST	2023-03-08 11:38:52	...
GetModel	get method for model	MMGTEST	2023-03-08 12:00:35	MMGTEST	2023-03-08 12:00:35	...

The following table provides descriptions for the fields and icons on the **API Summary** page.

Field or Icon	Description
Search	The field to search for an API. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.
API Code	The code of the API.
Description	The description for the API.
Created By	The User Id of the User who created the API.
Created Date	The date on which the API was created.
Modified By	The ID of the Last Modified by user who has modified the API.
Modified Date	The date on which the API was modified.

Field or Icon	Description
Configure API	Click Configure API to create a new API.
Action 	Click the three dots to perform View/Edit/Delete functions on selected API.

4.10.1 Configuring an API

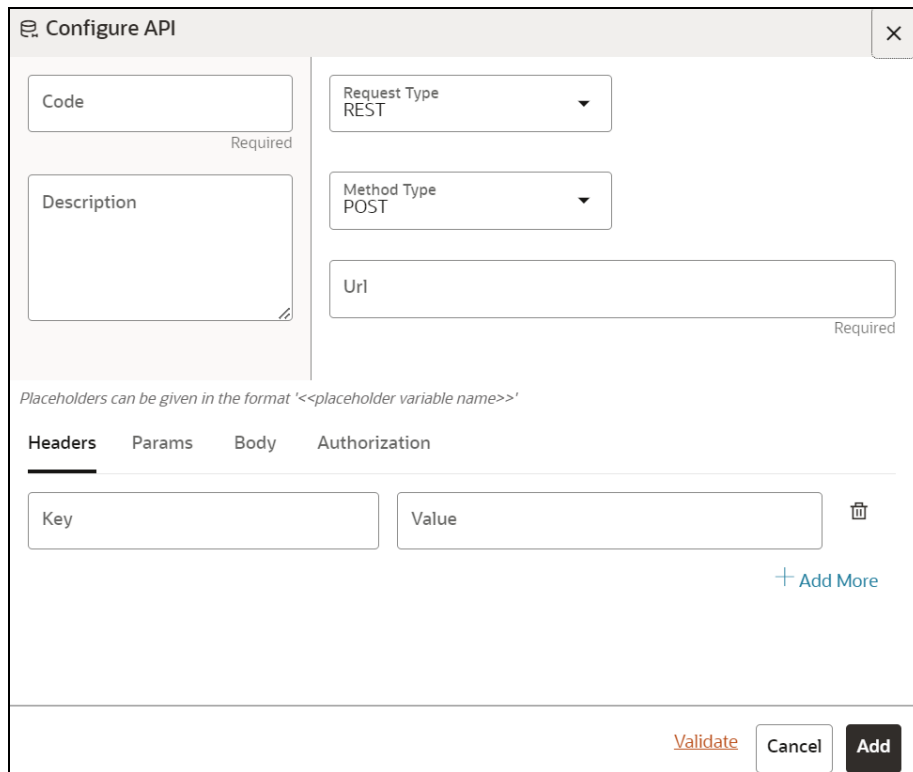

To configure an API, follow these steps:

1. Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application.

This page displays the API records in a table.

2. Click **Configure API** button.

The **Configure API** page is displayed.

3. Enter the **Code** for the API. This field is mandatory.
4. Enter the **Description** for the API.
5. In the **Request Type** drop-down list, select the required option. Currently, REST type is supported.
6. In the **Method Type** drop-down list, select the required option. The supported types are GET, POST, PUT, and DELETE.

7. Enter the **URL** for the API. This field is mandatory.
8. You can provide the details such as Headers, Params, Body, and Authorization under the respective fields.
9. Click **Validate** to validate the API details.

Clicking on Validate button prompts you to add the values for all the placeholder variables. After entering the values for placeholders, you can click the Validate button to view the API responses.

10. Click **Add**.

The API is added and displayed in the API Summary page. These API's can be selected while creating a Workspace. For more details, see the [Workspace Schema](#) section.

4.10.2 View an API Configuration

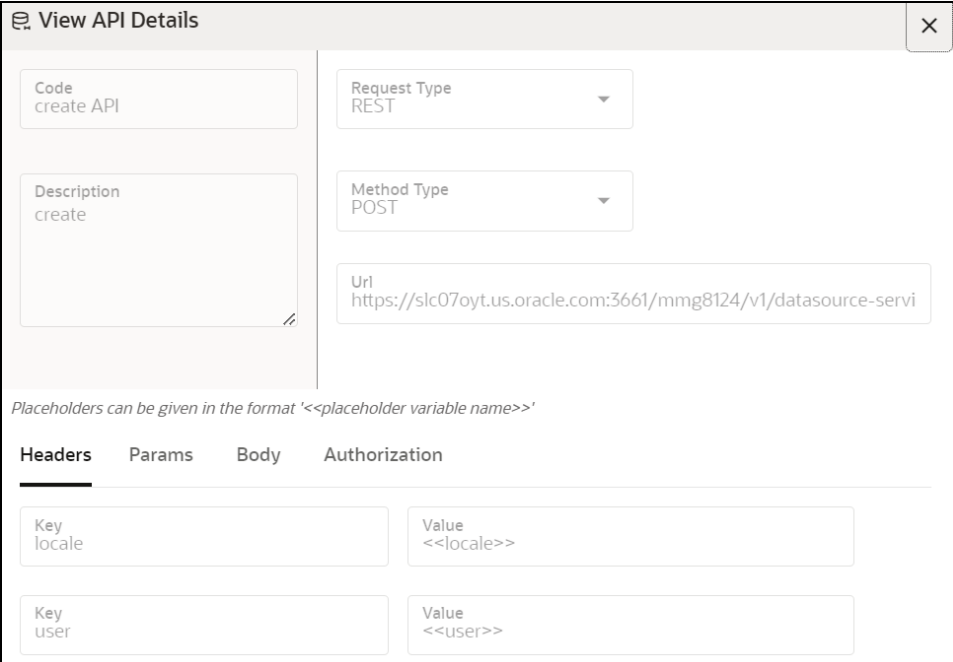

To view an API Configuration, follow these steps:

1. Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application.

This page displays the API records in a table

2. Click **Action**  next to corresponding API and select **View**  to view the API.

The details of the API is displayed.

View API Details

POST

Uri
https://slc07oyt.us.oracle.com:3661/mmg8124/v1/datasource-servi

Placeholders can be given in the format '<<placeholder variable name>>'

Headers Params Body Authorization

Key locale	Value <<locale>>
Key user	Value <<user>>

3. Navigate to the Headers, Params, Body, and Authorization to view the respective details.

4.10.3 Edit an API Configuration

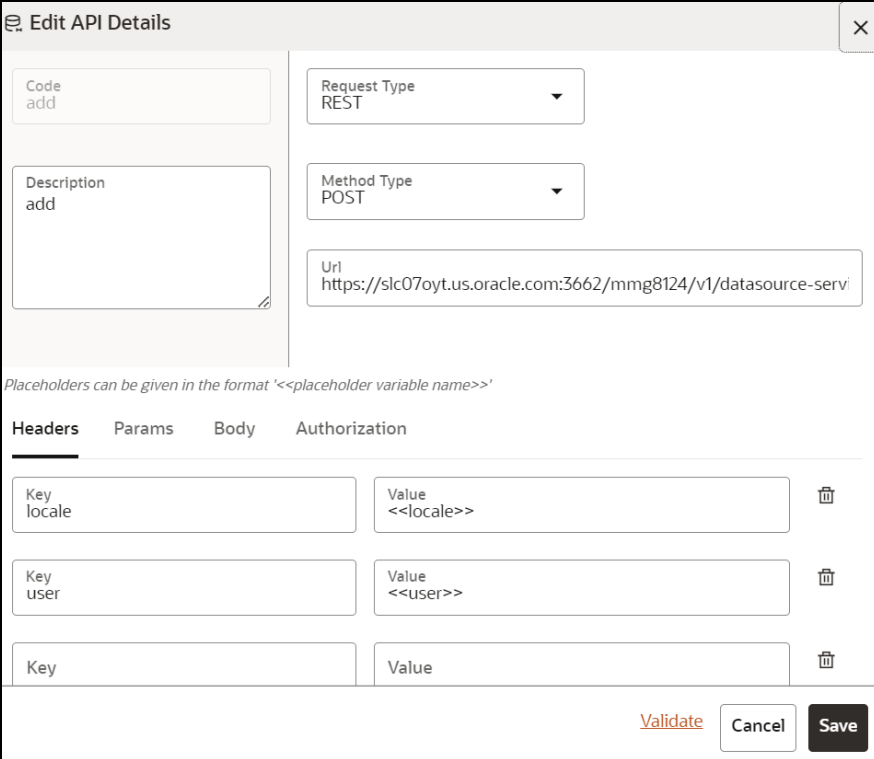

To edit an API configuration, follow these steps:

1. Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application.

This page displays the API records in a table

2. Click Action  next to corresponding API and select **Edit**  to edit the API.

The **Edit API Details** page is displayed.

For more details on the Edit API Details fields, see [Configuring an API](#) section.

3. Click **Save**.

4.10.4 Delete an API Configuration

To delete an API Configuration, follow these steps:

1. Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application.

This page displays the API records in a table

- Click Action  next to corresponding API and select **Delete**  to delete the API.

Delete Objects

Are you sure you want to delete below API? This process cannot be undone.

API Code 	Description 
create API	

- Click **Delete**.
The API configuration is deleted.

4.11 Conda Environments

Conda as a package manager helps you to find and install packages. With the capability of environment manager, you can set up a totally separate environment to run different versions of Python. In addition, you can continue to run your usual version of Python in your normal environment.

NOTE The supported version of Conda is 4.14.0.

You must add the miniconda/bin directory in the following path variable as shown below:

PATH=/scratch/ofsaadb/miniconda3/bin:\$PATH

For proxy support, you need to manually configure the `.condarc` file present in the root directory.

Limitation: Conda support currently does not include linking externally created environments to the MMG application.

To configure, perform the following:

Add the below in the `.condarc` file.

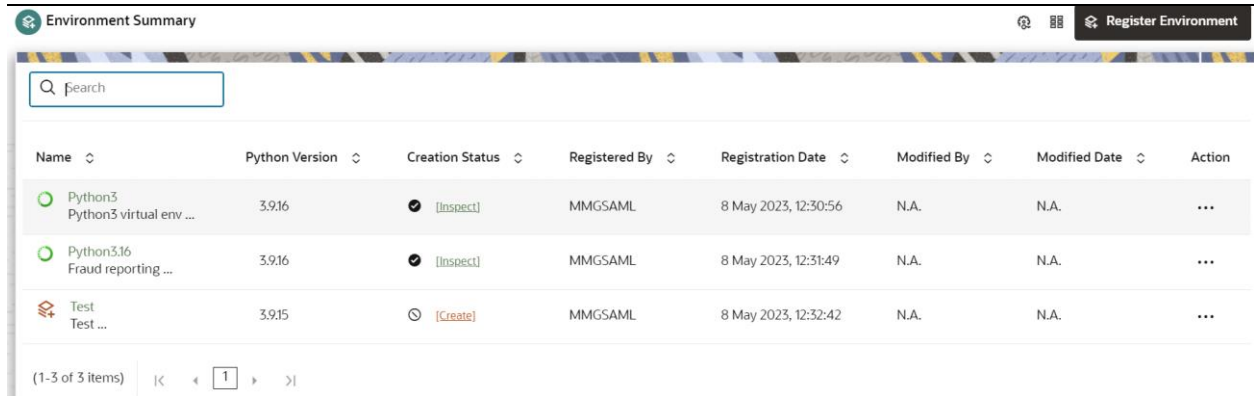

proxy_servers:

- `http: http://www-proxy.idc.oracle.com:80`
- `https: http://www-proxy.idc.oracle.com:80`

- NOTE**
- Conda package search is restricted only to the package name and does not include versions.
 - Python version displayed in the Register Conda UI.

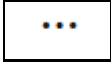

For more details on the user roles, and permissions, see the [Functions and Roles required to perform CRUD operations for Conda](#) section.

Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application. You can register and manage Conda environments from this page.

The following table provides descriptions for the fields and icons on the **Environment Summary** page.

Field or Icon	Description
Search	The field to search for a Conda environment. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results. NOTE: Conda package search is restricted only to the package name and does not include versions.
Name	The name of the Conda environment.
Python Version	The python library version of the Conda environment.
Creation Status	The status of the Conda environment. The status can be either Inspect or Create. <ul style="list-style-type: none"> Inspect: The environment is registered and created. You can perform functions such as Edit/View/Inspect/Clone/Export/Remove for the Inspect status environments. Create: The environment is registered but not created. You can perform functions such as Create/Edit/View/Deregister for the Create status environments
Registered By	The User Id of the User who registered the Conda environment.
Registration Date	The date on which the Conda environment has been registered.
Modified By	The ID of the Last Modified by user who has modified the Conda environment.
Modified Date	The date on which the Conda environment was modified.

Field or Icon	Description
Register Environment	Click to register a new Conda environment.
Conda Settings 	Click to add or modify the Conda components settings.
Conda Properties 	Click to view the Conda properties.
Action 	Click the three dots to perform Edit/View/Inspect/Clone/Export/Remove functions on selected Conda environment. The functions might vary based on the selected Conda environment.

4.11.1 Registering a Conda Environment

To register a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. In the **Environment Summary** screen, click **Register Environment**.

The **Register Environment** page is displayed.

Register Environment
✕

Basic Information

Required

Required

Advanced Features

Required

3. Enter the **Name** for the environment. This field is mandatory.
4. Enter the **Description** for the environment. This field is mandatory.

5. Enter a tag in the **Environment Tags** field. You can add multiple tags.

NOTE The **Location** of the Conda environment is displayed. This field is greyed out and cannot be modified.

6. In the **Advanced Features** drop-down list, select the required python package for the Conda environment. Python as a package is selected by default.
7. Click **Register**.

The Conda environment is registered and displayed in the Environment Summary page.

Once the registration of the environment is complete, you must create the Conda environment. For more details, see the [Creating a Conda Environment](#) section.

4.11.2 Creating a Conda Environment

To create a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **Create**  to create the Conda environment.

NOTE The **Create** option is not displayed for the Conda environment with the creation status **Inspect**.

A confirmation dialog is displayed.

3. Click **Create**.

The Conda environment is created.

These environments can be selected while creating a Workspace. For more details, see the [Workspace Schema](#) section.

In addition, these environments can be selected during the Model pipeline execution.

4.11.3 Editing a Conda Environment

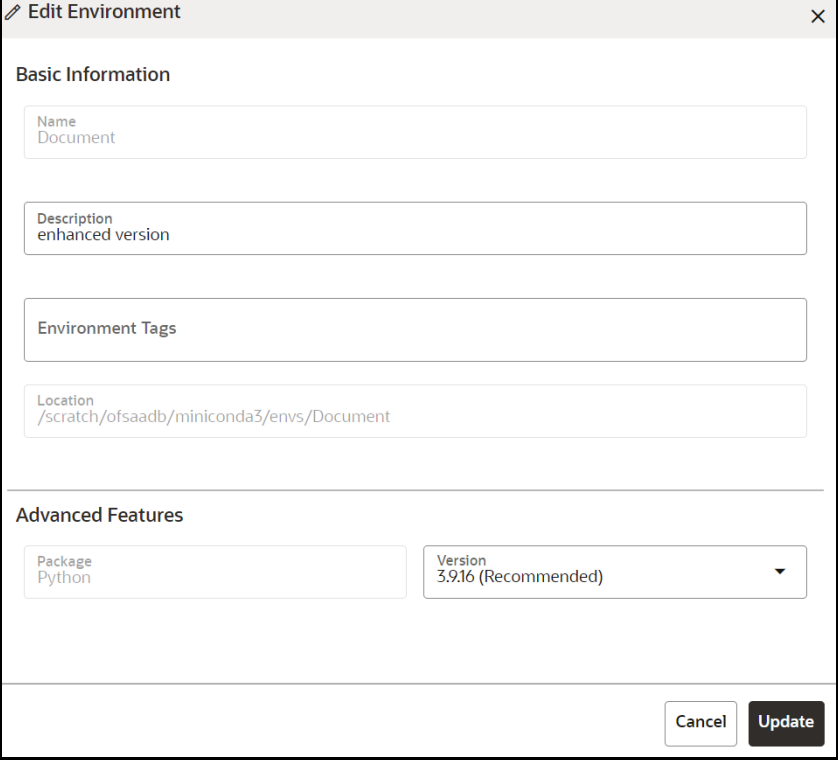

To edit a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

- Click **Action**  next to corresponding environment and select **Edit**  to edit the details.

The **Edit Environment** page is displayed.

For more details on the Edit environment fields, see [Registering a Conda Environment](#) section.

NOTE The **Name** of the Conda environment is greyed out and cannot be modified.

- Click **Update**.

The details of the Conda environment is updated.

4.11.4 Viewing a Conda Environment

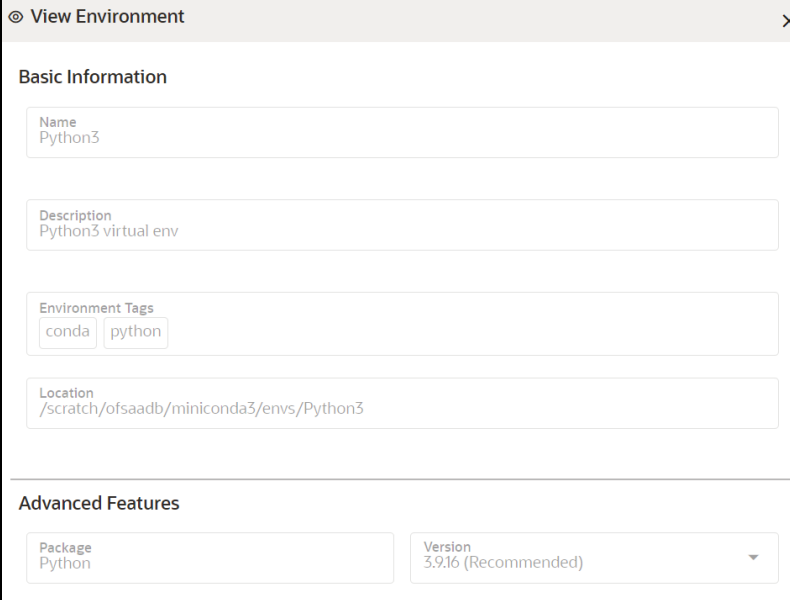

To view a Conda environment details, follow these steps:

- Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **View**  to view the details.

The details of the Conda environment is displayed.

The screenshot shows a 'View Environment' dialog box with the following details:

- Basic Information**
 - Name: Python3
 - Description: Python3 virtual env
 - Environment Tags: conda, python
 - Location: /scratch/ofsaadb/miniconda3/envs/Python3
- Advanced Features**
 - Package: Python
 - Version: 3.9.16 (Recommended)

4.11.5 Deregister a Conda Environment

To deregister a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **Deregister**  to deregister the Conda environment.

NOTE The **Deregister** option is not displayed for the Conda environment with the creation status **Inspect**.

A confirmation dialog is displayed.

3. Click **Deregister**.

The registered Conda environment is deregistered and removed from the Environment Summary page.

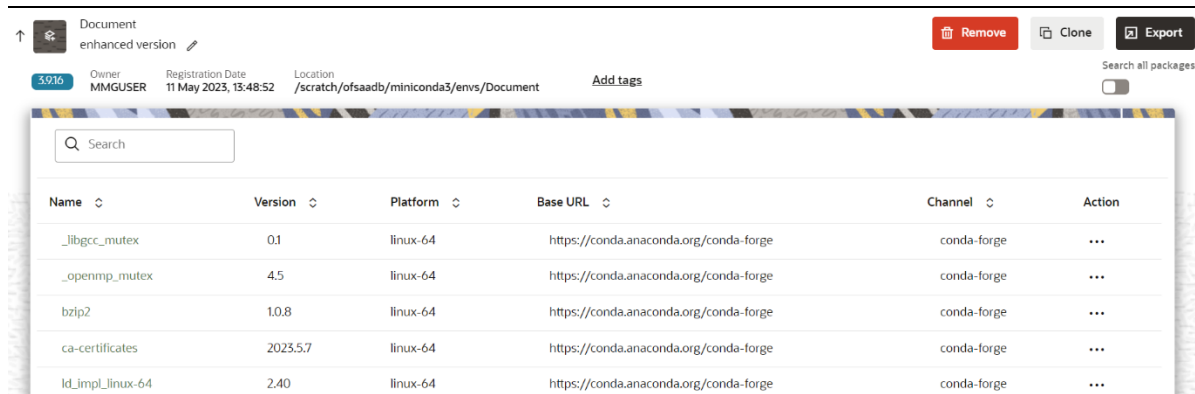

4.11.6 Inspect a Conda Environment

To inspect a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.
This page displays the Conda environments in a table.
2. Click **Action**  next to corresponding environment and select **Inspect**  to edit the details.

NOTE The **Inspect** option is not displayed for the Conda environment with the creation status **Create**.

The Conda environment details are displayed.

You can perform the following in the above page:

- [Remove Environment](#)
- [Clone Environment](#)
- [Export Environment](#)
- [Editing a Conda Environment Description](#)
- [Adding or Removing the Environment Tags](#)
- [Search All Packages](#)
- [Viewing the Package Properties](#)
- [Updating the Package](#)
- [Removing a package](#)

4.11.6.1 Remove Environment

To remove the Conda environment, follow these steps:

1. In the Conda details page, click **Remove**.
A confirmation dialog is displayed.

2. Click **Remove**.

The Conda environment is deregistered and removed from the **Environment Summary** page.

4.11.6.2 Clone Environment

To clone a Conda environment, follow these steps:

1. In the Conda details page, click **Clone**.

The **Clone Environment** page is displayed.

NOTE You can preview the packages of the current Conda environment by clicking

Preview  icon.

2. Enter the **Target Environment Name** to which the current environment needs to be cloned.
3. Enter the **Target Environment Description**.
4. Enter a tag in the **Environment Tags** field. You can add multiple tags
5. Click **Clone**.

The Conda environment is cloned to the targeted environment.

4.11.6.3 Export Environment

To export a Conda environment, follow the below step:

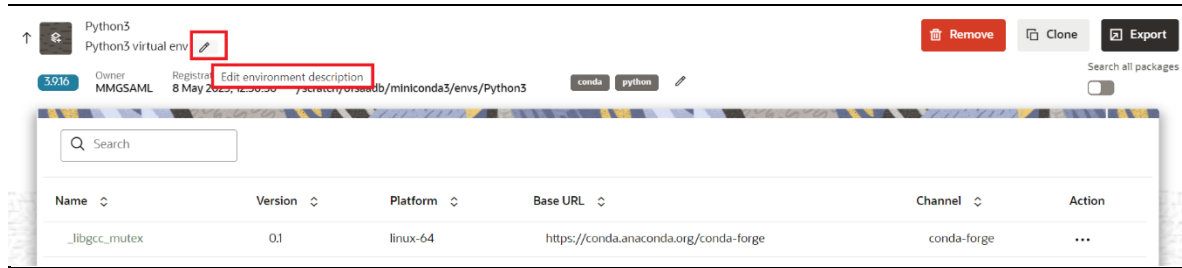

1. In the Conda details page, click **Export**.

The Conda environment is exported in **yml** format.

4.11.6.4 Editing a Conda Environment Description

To edit a Conda environment description, follow these steps:

1. In the Conda details page, click **Edit**  icon next to the environment description field.

2. Modify the description and click **Save** icon.

NOTE The **Name** of the Conda environment cannot be modified.

The details of the Conda environment is updated.

4.11.6.5 Adding or Removing the Environment Tags

To add or remove the Environment Tags, follow these steps:

1. In the Conda details page, click **Edit**  icon next to the environment tags field.

2. Add or remove the environment tags and click **Save** icon.

The environment tag details of the Conda environment is updated.

4.11.6.6 Search All Packages

To search all the packages, follow these steps:

1. In the Conda details page, enable the Search all packages option.
2. If you want to search the packages in cache, enable the Look up in cache option.

This option is set to true by default for faster processing. The searched package would be looked up in the cache and the result will be returned, if found. If not, a new search in the conda-forge channel is performed. Users can toggle this option in case if you expect more recent versions to be available.

3. Enter the package name in the search bar and press **Enter**.
All the package that meets the search criteria are displayed.
You can view and install the packages by clicking **Action** icon.

4.11.6.7 Viewing the Package Properties

To view the package properties of the Conda environment, follow these steps:

1. In the Conda details page, click **Action**  next to corresponding package and select **View**  to view the details.

The details of the package is displayed.

4.11.6.8 Updating the Package

To update the package of the Conda environment, follow these steps:

1. In the Conda details page, click **Action**  next to corresponding package and select **Update**  to update the package.

A confirmation dialog is displayed.

2. Click **Update**.
The selected package is updated.

4.11.6.9 Removing a package

To remove a package from the Conda environment, follow these steps:

1. In the Conda details page, click **Action**  next to corresponding package and click **Remove**.

A confirmation dialog is displayed.

2. Click **Remove**.

The selected package is removed from the Conda environment.

4.11.7 Clone Environment

To clone a Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **Clone**  to clone the Conda environments.

The **Clone Environment** page is displayed.

 **Clone Environment** ✕

All packages of "Python3" will be cloned into the target environment. 

Required

Required

Show Command 

NOTE You can preview the packages of the current Conda environment by clicking

Preview  icon.

3. Enter the **Target Environment Name** to which the current environment needs to be cloned.
4. Enter the **Target Environment Description**.
5. Enter a tag in the **Environment Tags** field. You can add multiple tags
6. Click **Clone**.

The Conda environment is cloned to the targeted environment.

4.11.8 Export Environment

To export a Conda environment, follow the below step:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **Export**  to export a Conda environment.

The Conda environment is exported in **yml** format.

4.11.9 Remove Environment

To remove the Conda environment, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Action**  next to corresponding environment and select **Remove**  to remove the Conda environment.

A confirmation dialog is displayed.

3. Click **Remove**.

The Conda environment is deregistered and removed from the **Environment Summary** page.

4.11.10 Conda Settings

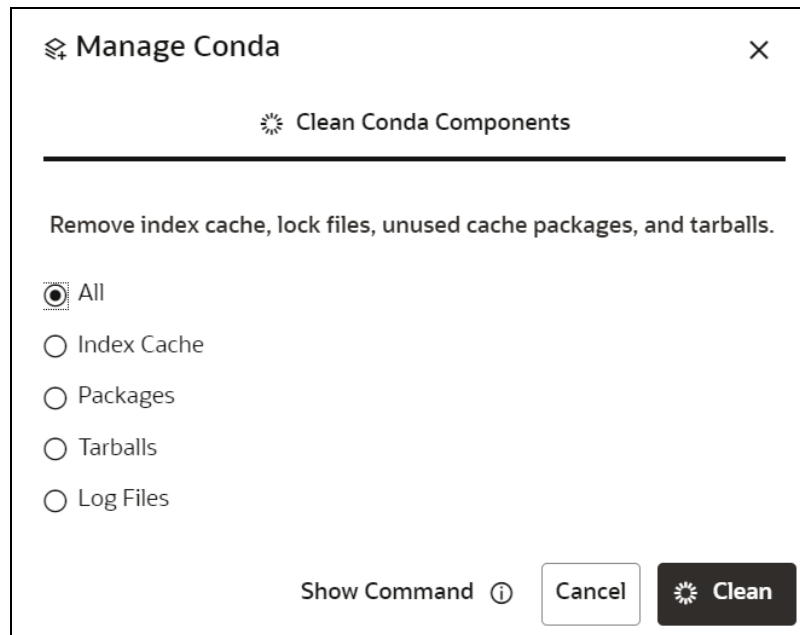

To modify the Conda settings, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Conda Settings**  icon.

The **Manage Conda** screen is displayed.

3. Select the required option and click **Clean**.
 - **All** : Remove index cache, lock files, unused cache packages, and tarballs.
 - **Index Cache** : Remove index cache.
 - **Packages** : Remove unused packages from writable package caches.
WARNING: This does not check for packages installed using symlinks back to the package cache.
 - **Tarballs** : Remove cached package tarballs.
 - **Log Files** : Remove log files.

This will clean up the Conda components based on the selection.

4.11.11 Viewing Conda properties

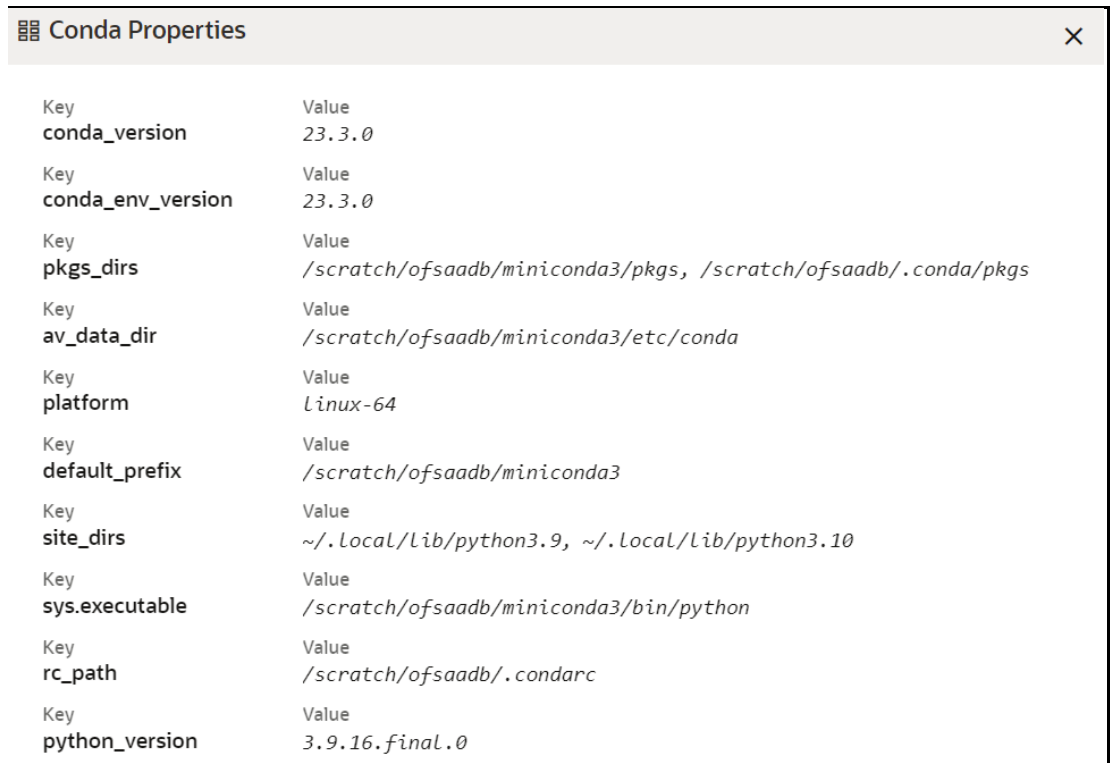

To view the Conda properties details, follow these steps:

1. Click **Conda Environments**  icon to navigate to **Environment Summary** page from any other window in MMG application.

This page displays the Conda environments in a table.

2. Click **Conda Properties**  icon.

The Conda properties are displayed in a key-value format.

4.12 Kafka Topics

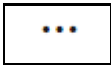

Kafka is a distributed data source which is used to create real-time data pipelines and allows you to decouple data streams and systems.

Click **API Configurations**  icon to navigate to **API Summary** page from any other window in MMG application. You can configure and manage Kafka topics and clusters from this page.

The following table provides descriptions for the fields and icons on the **Kafka Topics** page.

Field or Icon	Description
Search	The field to search for a Kafka topics and clusters. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.

Field or Icon	Description
Topic Name	The topic name of the Kafka.
Cluster Name	The cluster name of the Kafka.
Description	The description of the Kafka.
Created Date	The date on which the API was created.
Kafka Clusters	Click Kafka Clusters to view/create/delete Kafka Clusters.
Register API	Click Register API to create a new Kafka topic.
Action 	Click the three dots to perform View/Edit/Delete functions on selected Kafka topic.

4.12.1 Creating a Kafka Cluster

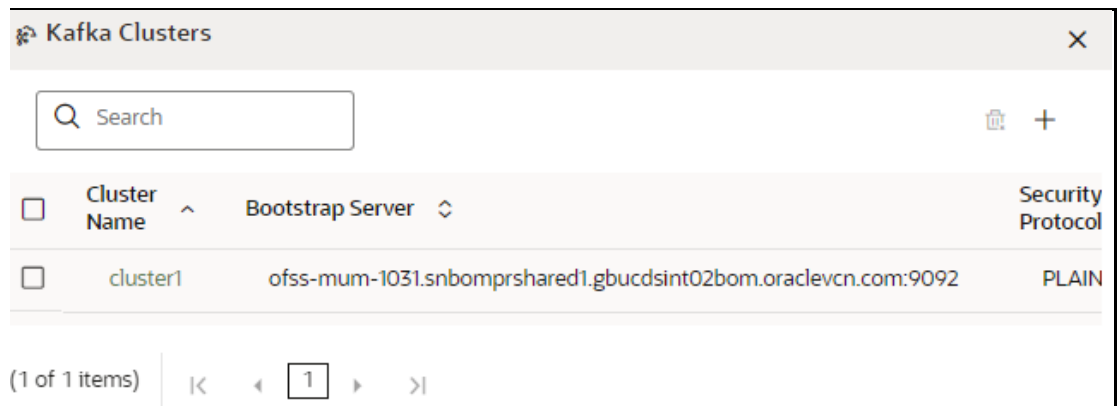

To create a Kafka Cluster, follow these steps:

1. Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application

This page displays the Kafka Topics in a table.

2. Click **Kafka Clusters** option.

The **Kafka Clusters** page is displayed.

3. Click **Add** icon.

The Add Cluster window is displayed.

4. Enter the **Cluster Name**. This field is mandatory.
5. Enter the **Bootstrap server** details. This field is mandatory.
6. Select the **Security Protocol** as **Plain Text**.

NOTE

In the current release:

- The **SSL** security protocol is not supported, and it is recommended not to use the same.
- The Kafka feature is not supported in Solaris Operating System.

7. Click **Save**.

The Kafka cluster is created, and this will be displayed while registering the Kafka Topic.

4.12.2 Deleting a Kafka Cluster

To delete a Kafka Cluster, follow these steps:

1. Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application

This page displays the Kafka Topics in a table.

2. Click **Kafka Clusters** option.

The **Kafka Clusters** page is displayed.

3. Select the Kafka Cluster which you want to delete and click **Delete** icon.

A confirmation dialog is displayed.

4. Click **Delete**.

The Kafka Cluster is deleted.

4.12.3 Registering a Kafka Topic

To Registering a Kafka Topic, follow these steps:

1. Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application

This page displays the Kafka Topics in a table.

2. Click **Register Topic** button.

The **Register Topic** page is displayed.

3. Enter the **Kafka Topic Name**. This field is mandatory.
4. Enter the **Description** for the Kafka Topic. This field is mandatory.
5. In the **Cluster Name** drop-down list, select the required option and enter a unique Kafka Topic ID. This field is mandatory.
6. In the **Record Schema** field, enter the order, name, and the data type for the Kafka topic.

NOTE Currently, **pyflink** schema type is supported. For more details, click the icon next to Schema Type field.

7. Click **Register**.

The Kafka topic is added and displayed in the Kafka Topics page. These topics can be selected while creating a Workspace.

4.12.4 Viewing a Kafka Topic

To view a Kafka Topic, follow these steps:

1. Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application

This page displays the Kafka Topics in a table.

2. Click **Action**  next to corresponding Kafka Topic and select **View** .

The details of the Kafka Topic is displayed.

Order ↕	Name ↕	Type	Action
			✓ ✕
1	account_id	Types.STRING()	✎ 🗑
2	atm	Types.STRING()	✎ 🗑
3	amount	Types.INT()	✎ 🗑
4	transaction_id	Types.STRING()	✎ 🗑

For more details on the Kafka Topic fields, see [Registering a Kafka Topic](#) section.

3. Click **Update**.

4.12.6 Deleting a Kafka Topic

To delete a Kafka Topic, follow these steps:

1. Click **Kafka Topics**  icon to navigate to **Kafka Topics** page from any other window in MMG application

This page displays the Kafka Topics in a table.

2. Click Action  next to corresponding Kafka Topic and select **Delete**  .

A confirmation dialog is displayed.

NOTE : If the selected Kafka Topic is mapped to a workspace, the delete option is disabled.

3. Click **Delete**.

The Kafka Topic is deleted.

5 Dataset

Dataset allows you to manage the entire operation related to dataset. You can perform the following two things using the Dataset window:

- Define a metadata on how you want to create a dataset
- In addition, a mechanism where you can actually take a snapshot of real time data and store it. So, it can be used later in the pipeline.

This is similar to T2Ts, where you can select data from Data Source, such as file, table or another dataset and so on. The data can be imported from one column of one table, and another column from another table, or any file. After extracting the data from tables or files, provide the name to Target Dataset.

The Dataset is a trail-based UI that allows you to configure the dataset details.

5.1 Accessing the Dataset Summary Page

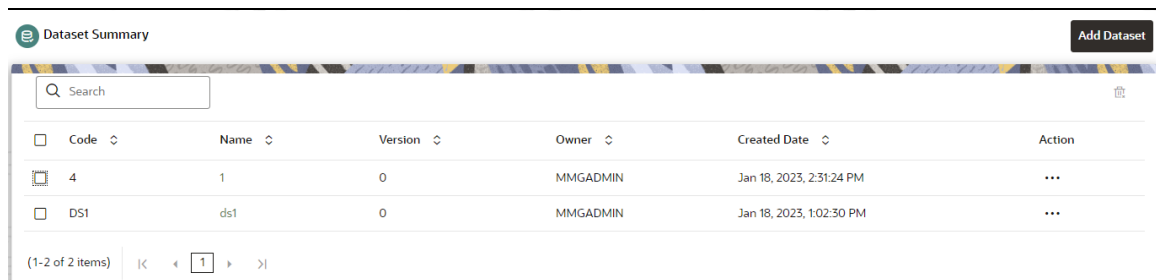

The Dataset Summary page gives access to the various Dataset functions such as create, view, and delete.

To access the Dataset Summary page, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. In the LHS menu, click **Dataset**  to display the **Dataset Summary** window.

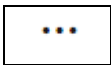

This window displays the dataset records in a table.

Figure 22: Dataset Summary Page

Code	Name	Version	Owner	Created Date	Action
4	1	0	MMGADMIN	Jan 18, 2023, 2:31:24 PM	...
DS1	ds1	0	MMGADMIN	Jan 18, 2023, 1:02:30 PM	...

The following table provides descriptions for the fields and icons on the **Dataset Summary** page.

Field or Icon	Description
Search	The field to search for Dataset. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.
Code	The code of the dataset.
Name	The name of the dataset.
Description	The description for the Workspace
Version	Version of dataset
Created Date	The date on which the Dataset was created.
Owner	The owner of the dataset.
Add Dataset	Click Add Dataset to create a new Dataset.
Delete 	Click Delete to delete multiple Datasets.
Action 	Click the three dots to perform View/Edit/Delete/ Profile functions on selected dataset.

5.2 Create a Dataset

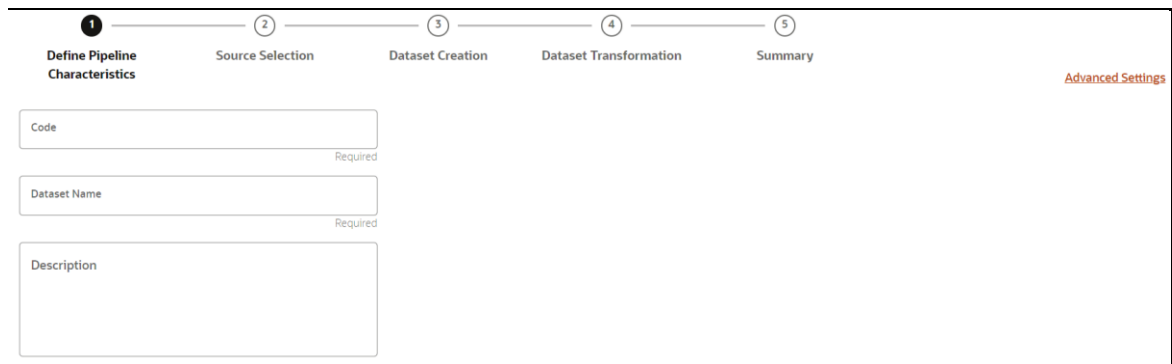

The Dataset creation requires entry of the source of dataset and validation. These datasets are required for schema creation.

5.2.1 Creating a Dataset

To create a Dataset, follow these steps:

1. Navigate to Dataset Summary page to display the **Dataset Summary** page.
This page displays the dataset records in a table.
2. Click **Add** to create a Dataset in the Dataset **Summary** window.

Figure 23: Dataset Creation Window

The screenshot shows a multi-step process for creating a dataset. The progress bar indicates the current step is 'Dataset Creation'. The form includes the following fields:

- Code**: A text input field with a 'Required' label below it.
- Dataset Name**: A text input field with a 'Required' label below it.
- Description**: A larger text area for entering details.
- Advanced Settings**: A link in the top right corner.

The following steps show the various phases from Dataset creation:

- Define Pipeline Characteristics
- Source Selection
- Dataset Creation
- Dataset Transformation
- Summary

5.2.2 Define Pipeline Characteristics

Enter basic configuration details in this window.

To configure the basic details for the dataset, follow these steps:

1. Enter the required details in the **Define Pipeline Characteristics** window as shown in the following table.

Field	Description
Code	Enter the code of the dataset. This field is limited to 30 alphanumeric characters.
Dataset Name	Enter the name of dataset. This field is limited to 30 alphanumeric characters. Space not exceeding 30 characters. You cannot keep this field blank.
Description	Enter the purpose of the creation of the dataset. This field is limited to 150 alphanumeric characters. Space not exceeding 150 characters.

2. Click **Advanced Settings** to select the Dataframe Library.

The Advanced Settings window is displayed.

3. Select the Dataframe Library for the Dataset as Pandas (Default) or Modin and click **Close**.

- **Pandas:** Pandas is an open-source data manipulation library for Python. It provides data structures such as Series (1-dimensional) and DataFrame (2-

dimensional) that allow for easy manipulation and analysis of data. It also provides tools for reading and writing data to various file formats, including CSV, Excel, and SQL databases.

By default, **Pandas** is selected.

- **Modin:** Modin is an open-source library that allows for faster operations on DataFrames using distributed computing which can lead to significant speed improvements, particularly for large datasets or computationally expensive operations.

4. Click **Next** to go to the next step.

5.2.3 Source Selection

This section allows you to define the source of data. Here, you can choose the data structures from an existing datasources. Click on the icon next to Data Source field to view the tables/data source information associated with the data source.

To configure the Source details for the dataset, follow these steps:

1. Enter the required details in the **Source Selection** pane as shown in the following table.

NOTE

The MISDATE feature is displayed only when the Data Source field is selected as a **File Type**.

If enabled, you need to add the Physical and Feature name for the Data Source.

Field	Description
Data Source	<p>The Data Source drop-down list shows all the data sources and the data forms those are tagged with the corresponding workspace. In addition, this lists all the available unused data source, which can be used. A confirmation message is displayed to tag an unused datasource with workspace.</p> <div data-bbox="651 596 1523 873"> </div> <p>Here, either use the unused or create a new datasource using New Datasource . When you create a new datasource, it becomes as unused. For more information, see Creating Data Source.</p> <p>You can add more Data Sources using Add More Add Source link.</p> <p>Use Delete  to delete added Data Source.</p>

2. Click [Next](#) to go to the next step or click [Previous](#) to back to previous step.

5.2.4 Dataset Creation

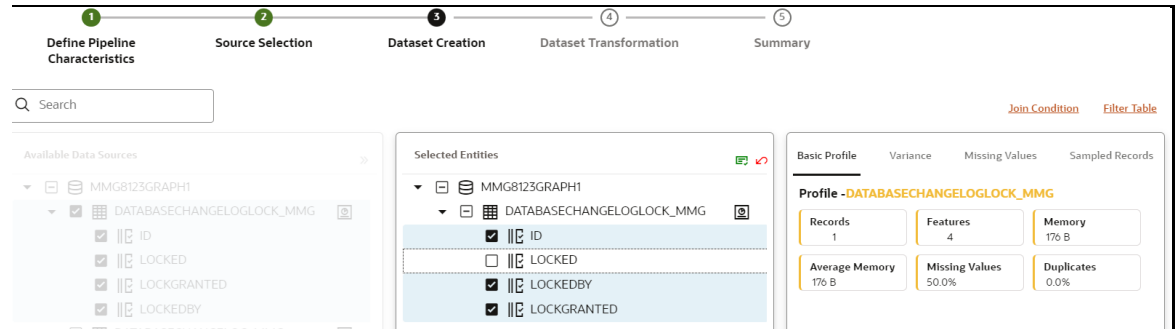

This window allows you to select entity part (for example, column of table) of the datasource. The data source selected in the previous step requires the definition of database objects to be used.

To configure the Dataset Creation, follow these steps:

1. Select the required data source from the **Available Data Sources pane** and click >> to move the selected data to **Selected Entities** pane. The **Available Data Sources** section shows the high-level data sources. You can select data from multiple data source entities. The selected Data Sources are displayed in **Selected Entities** pane.

You can use  to select or use  to de-select the data in the **Selected**

Entities pane. Also, clicking on  **View Profile** icon displays the profile details in the **Basic Profile** tab.

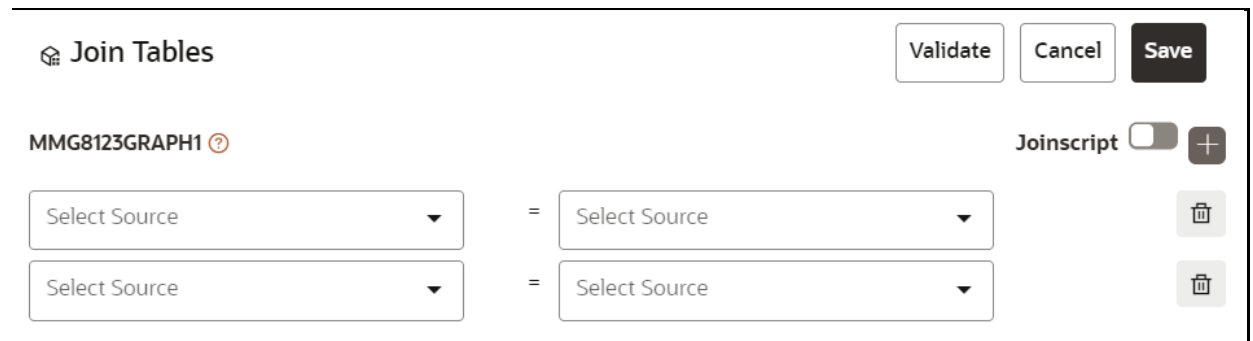

- For more information on Joins, see [Joining Tables](#) section.
For more information on Filtering, see [Filtering Tables](#) section.

- Click  to go to the next step or click  to back to previous step

5.2.4.1 Joining Tables

Use Join Condition to combine the data source details. Each data sources have multiple tables and multiple columns, so you can join them using Join Condition window. Joins can be applied only when user has selected more than 1 table

NOTE: As of now, only INNER JOIN is present.

You can join Tables either using drop-down or using the Joinscript option.

5.2.4.1.1 Using drop-down

Select the Column name of Table from the drop-down list. You can use multiple join conditions by using  icon

5.2.4.1.2 Using Script

- To use script, enable  option.

The Join Tables window is displayed to add scripts:

You must provide the script in below format:

```
Script:
Table1
FULL OUTER JOIN Table2 ON Table1.Column1 = Table2.Column2
LEFT JOIN Table3 ON Table1.Column4 = Table3.Column3
INNER JOIN Table4 ON Table1.Column5 = Table4.Column7
RIGHT JOIN Table5 ON Table1.Column6 = Table5.Column8

SQL Query:
SELECT
Table1.Column1, Table1.Column4, Table1.Column5, Table1.Column6, Table2.Column2, Table3.Column3, Table5.Column8
FROM
Table1
FULL OUTER JOIN Table2 ON Table1.Column1 = Table2.Column2
LEFT JOIN Table3 ON Table1.Column4 = Table3.Column3
INNER JOIN Table4 ON Table1.Column5 = Table4.Column7
RIGHT JOIN Table5 ON Table1.Column6 = Table5.Column8
```

- Click **Validate** to check the Join conditions.
- Click **Save**.

5.2.4.2 Filtering Tables

You can also use the filters in dataframe creation from entity.

- Click  to navigate to Filter Tables window.

Filter Table ?

Validate
Cancel
Save

MMG8123GRAPH1

Select Table

Filter Value

+
-

There are certain rules to be followed when adding filters

I. Filter values will not be applied in tables from datasources joined using joinscript.

II. Only one filter value entry is allowed for one table. If multiple entries are present, the last filter value entry will be used for that table.

III. Example for non-file datasource: SQL Format
 Filter : `Column1=1234`
 SQL script: `SELECT * FROM tablename WHERE Column1=1234`

IV. For file source, script follows python syntax

V. Always assign the output dataframe as 'df_out='

VI. Use 'df_prev' to access the original dataframe

VII. Example for file source: Python
 Filter : `df_out=df_prev.loc[df_prev['Column1'] == 1]`

2. Multiple filters can be added by using + icon.
3. Click **Validate** to check the Filter conditions.
4. Click **Save**.

5.2.4.3 Viewing Profile

The Profile section from RHS shows the report based on Selected Objects (complete dataset) section. For example, Missing Values report shows the details of missing data in selected table in Selected Objects section.

Basic Profile
Variance
Missing Values
Sampled Records

Profile - DATABASECHANGELOGLOCK_MMG

Records 1	Features 4	Memory 176 B
Average Memory 176 B	Missing Values 50.0%	Duplicates 0.0%

5.2.5 Dataset Transformation

This window allows you to transform the data source information. This complete grid displays the Table like structure, which helps you to make the data better using many methods, such as by remove all the missing values, performing scaling and so on.

Physical Name	Feature Name	Observations
npsept ATTEMPTED FIRSTTD	ATTEMPTED Numeric	High variance, outliers, positive skew
npsept CHECKING FIRSTTD	CHECKING Numeric	High variance, missing values, high cost, negative skew
npsept DATES FIRSTTD	DATES DateTime	
npsept ROUTE FIRSTTD	ROUTE Categorical	
npsept SUCCEEDED FIRSTTD	SUCCEEDED Numeric	High variance, high cost, negative skew
npsept SUCCESS_PERCENTAGE FIRSTTD	SUCCESS_PERCENTAGE Numeric	High variance, high cost, negative skew

This window shows the following columns:

- **Physical Name:** Shows the Physical Name of column.
- **Feature Name:** Shows the Feature Name of column along with its data type. You can edit the Feature Name.
- **Observations:** The Observations field shows the value of column. For example, if any column is missing any value, you can easily identify missing value columns. Use Transformation button to fix these values.
-  **Create Feature** icon: To create a new feature/column by doing operations on the existing features.
- **View Report:** To view the complete report of the sampled data
-  **Re-Validate** icon: To re validate all the transformations.

You can also revalidate an individual transformation by clicking the More Action

icon and select **Re-Validate** option.

-  **Add Transformation** icon: To add new transformations

The profile button helps you to view profile the final data frame that you have selected. For more information, see the Viewing Profile section.

Here, you can perform following actions

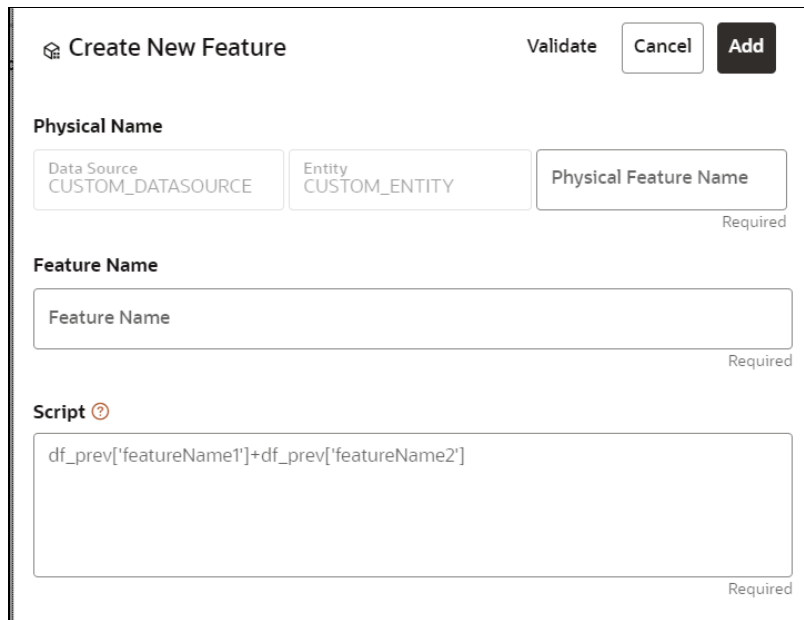

- Re-ordering of transformations
- Insertion of transformation

5.2.5.1 Create New Feature

The Create New Feature window allows you to create a new feature. This is used to add a new column to dataset. This is useful, if you want to add a new column based on derived T2Ts (from data source).

To create a New Feature, follow these steps:

1. Click Create Feature on Dataset Transformation of Dataset UI.

Create New Feature Validate Cancel Add

Physical Name

Data Source
CUSTOM_DATASOURCE

Entity
CUSTOM_ENTITY

Physical Feature Name
Required

Feature Name

Feature Name
Required

Script ?

df_prev['featureName1']+df_prev['featureName2']
Required

2. Enter the following details:
 - **Physical Feature:** Name of Physical feature
 - **Feature Name:** Logical Name of feature
 - **Script:** Update the script
3. Click Add after validating the feature.
The new feature will be added at end of LHS section.
4. You can also edit or delete a newly added feature.

5.2.5.2 Add Data Transformation

To add the data transformation, follow these steps:

1. Click **Add**.
The Transform window is displayed.
2. Select the Transformation Type.
Following types are available:
 - **Dataframe Transform:** This is used to transform entire dataframe. For example, if you want to remove all missing values from all the columns of entire sampled data.
 - **Feature Transform:** This is used to transform a particular column of dataframe.

3. **Select Transform:** Here you either enter values using Method and Argument fields, or script.
4. Click **Validate** to validate the details.
5. Click **Add** to add the new transformation.
The New Transform is created and displayed at RHS section.
6. Click **Finish** to navigate to Dataset Summary window.
This saves the metadata of dataset.

Example:

If there is “missing value” for one of the columns, then perform following steps to add the transform.

1. Click Add on Dataset Transformation window.
2. Select Type as Feature Transform.
3. Select Transform as Impute Missing Value
4. Select the Physical Name from Physical Name drop-down list.
5. Select the Method and enter parameter in Argument field. The Method is updated on selected Column type. For example, if the selected column type is numerical, then following methods will be available: Simple, Constant, KNN, and Mice

OR

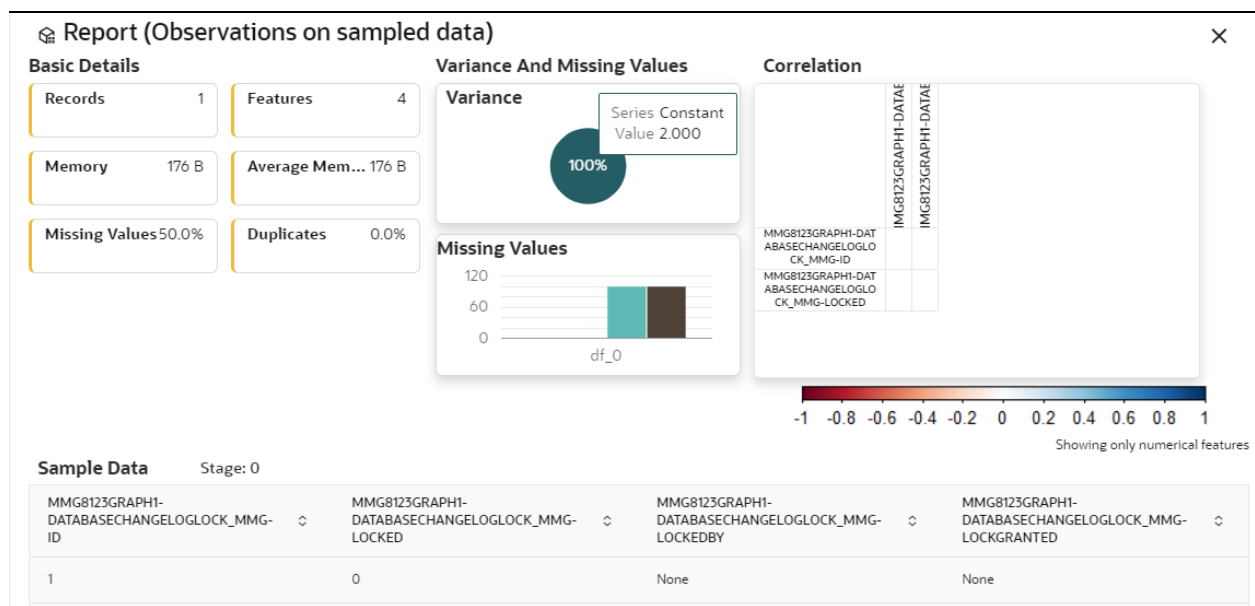

Enter the script

Below are Sample Custom Scripts

- Directly pass input data frame to output: `df_out=df_prev`
- Drop first row of data frame: `df_out=df_prev.drop(0,axis=0)` if not `df_prev.empty` else `df_prev`
- Drop column from data frame: `df_out = df_prev.drop('colname',axis=1)`

5.2.5.3 View Reports

This report shows the Observation on Sampled data, profiles, Variance, Correlation Matrix (correlation between columns), Sample Data. This report is based on sampled data.

5.2.5.4 Re-ordering of Transformations

You can re-order the transformations using the drag-drop. During the transformation re-order, you can compare the profile of transformations. The transformation order gets adjusted accordingly.

5.2.6 Display Summary

The **Summary** pane displays the status of the dataset creation.

Figure 24: Dataset Creation Summary

1 Define Pipeline Characteristics 2 Source Selection 3 Dataset Creation 4 Dataset Transformation 5 Summary

Dataset axa Created Successfully

① Would you like to optionally cache the snapshot of the data frame...

Snapshot Name* Required

A confirmation message is displayed as “Dataset #DATASETNAME# is created successfully.”

Enter the **Snapshot Name** having alphanumeric character, underscore and hyphen not exceeding 30 characters and click on Cache. This screen additionally allows users to cache a snapshot of the current state of data. The cached snapshots can be accessed later in Model Pipelines without any recompilation or re-read from data sources.

To use the dataset in model pipeline or data pipeline, the actual data is fetched using the Cache option. For example, to take the data from dataset on As of Date, create the data frame and provide the name to cache. Only Cache pulls the data from dataset.

This helps the things to work faster when you have millions of data, and you want to use intermediate data for use. For example, if you have 1 million data and want to use only 10,000 out of that, then perform the sampling for that 10, 000 entries. This increases the speed of processing, validation of information.

- Once the metadata is created, the original data can be cached. A snapshot of the actual data in the dataset at the current time can be stored referenced by a tag name.
- The location for caching is in the datastudio server location `$DS_HOME/work/ftpshare/mmg/workspace_name/dscode/tag`. The dataset will be saved as a parquet file with name `dscode_tag.parquet`
- When executing all APIs from notebook, workspace has to be attached.
- Caching can be performed in 2 ways
 - From UI, immediately after saving the metadata

Or the users will have to fetch(create) a new snapshot/dataframe of the dataset using the API 'Fetch New Snapshot of dataset' and manually cache using the 'Caching Data Frame' API.

The following table provides information on the error and the troubleshooting procedure in case of dataset failure.

Error	Troubleshooting procedure
ModuleNotFoundError: No module named '_bz2'	Install the package 'libbz2-dev' before building python.
ModuleNotFoundError: No module named '_sqlite3'	Install the package 'libsqlite3-dev' before building python.
Python-env-health-check fails if pandas version is less than 1.4.1. NOTE: modin dataframe library is supported only from pandas version 1.4.1 and higher.	You can switch between the options modin[dask] and pandas for the underlying dataframe library if pandas version 1.4.1 is installed.
"Not a valid file" error while profiling the Hive Data sources.	Copy the following required files : kbank.keytab , krb5.conf , hive-jdbc-driver.jar into the path : \$SDS_HOME/conf folder of datastudio

5.3 View a Dataset

To view a Dataset, follow these steps:

1. Navigate to Dataset Summary Page.
2. Click  next to corresponding Dataset and select View  .
The Profile Summary screen is displayed.

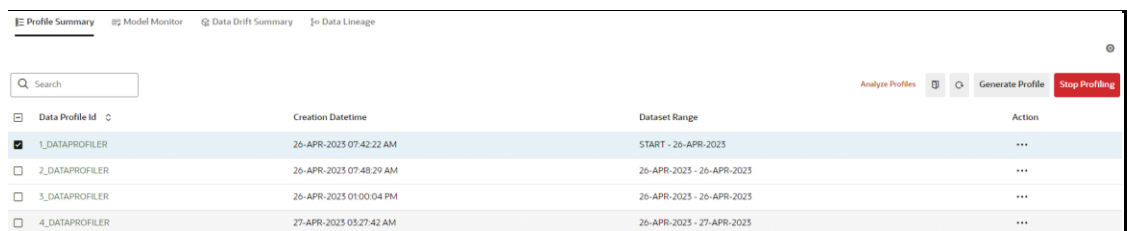

5.3.1 Profile Summary

To create a Profile, follow these steps:

Prerequisite:

You must create a Dataset with a datasource having columns with **DATA_TYPE** as **DATE**.

1. Navigate to Dataset Summary Page.
2. Click  next to corresponding Dataset and select View  .
This window displays the Dataset profiles in a table.

The screenshot shows the 'Profile Summary' page with a search bar and navigation tabs. Below is a table of dataset profiles:

Data Profile Id	Creation Datetime	Dataset Range	Action
<input checked="" type="checkbox"/> 1_DATAPROFILER	26-APR-2023 07:42:22 AM	START - 26-APR-2023	...
<input type="checkbox"/> 2_DATAPROFILER	26-APR-2023 07:48:29 AM	26-APR-2023 - 26-APR-2023	...
<input type="checkbox"/> 3_DATAPROFILER	26-APR-2023 01:00:04 PM	26-APR-2023 - 26-APR-2023	...
<input type="checkbox"/> 4_DATAPROFILER	27-APR-2023 05:27:42 AM	26-APR-2023 - 27-APR-2023	...

3. Click **Start Profiling** or click **Settings** icon.

The Profiler Settings page is displayed.

4. Under Basic Information section, enter the following details:
 - a. Select the required columns from the drop-down. All the numeric options are displayed under the Columns drop down. You can select multiple columns by clicking on + icon.
 - b. Enter the threshold for the columns. Threshold defines the Drift detection threshold for each column and only numerical columns can be selected for profiling.
 - c. Select the required filter column from the drop-down. Filter column contains date column of the dataset to filter.
5. Under Schedule section, enter the following details:
 - a. Enter a Schedule Name.
 - b. Select the Schedule Type as required:
 - **Daily** : Select to run the schedule everyday
 - **Weekly**: Select to run the schedule once in a week or the selected days in a week
 - **Monthly** : Select to run the schedule once in a month or the selected days in a month.
 - c. Click **Save**.

The Data Profiling has been started and Stop Profiling option is displayed in the Profile Summary screen.

For more details on disabling dataset profile, see [Stop Profiling](#) section.
6. Click **Generate Profile**.

The Data Profile is created.

5.3.1.1 Schedule Daily

To schedule the profiler to run daily, perform the following steps:

1. In the Profiler Settings screen, select the Schedule Type as Daily.
2. Select the start date on which you want to run the profiler.
3. Select the end date on which you want to stop your schedule.
4. Enter the time at which you want to run the profiler.
5. Click Save.

5.3.1.2 Schedule Weekly

To schedule the profiler to run weekly, perform the following steps:

1. In the Profiler Settings screen, select the Schedule Type as Weekly.
2. Select the start date on which you want to run the profiler.
3. Select the end date on which you want to stop your schedule.
4. Enter the time at which you want to run the profiler.
5. Select the day on which you want to run the profiler. You can select multiple days to run the profiler.
6. Click Save.

5.3.1.3 Schedule Monthly

To schedule the profiler to run monthly, perform the following steps:

1. In the Profiler Settings screen, select the Schedule Type as Daily.
2. Select the start date on which you want to run the profiler.
3. Select the end date on which you want to stop your schedule.
4. Enter the time at which you want to run the profiler.
5. Select the month on which you want to run the profiler. You can select multiple months to run the profiler.
6. Select the date on which you want to run the profile of the selected month to run.
7. Click Save.

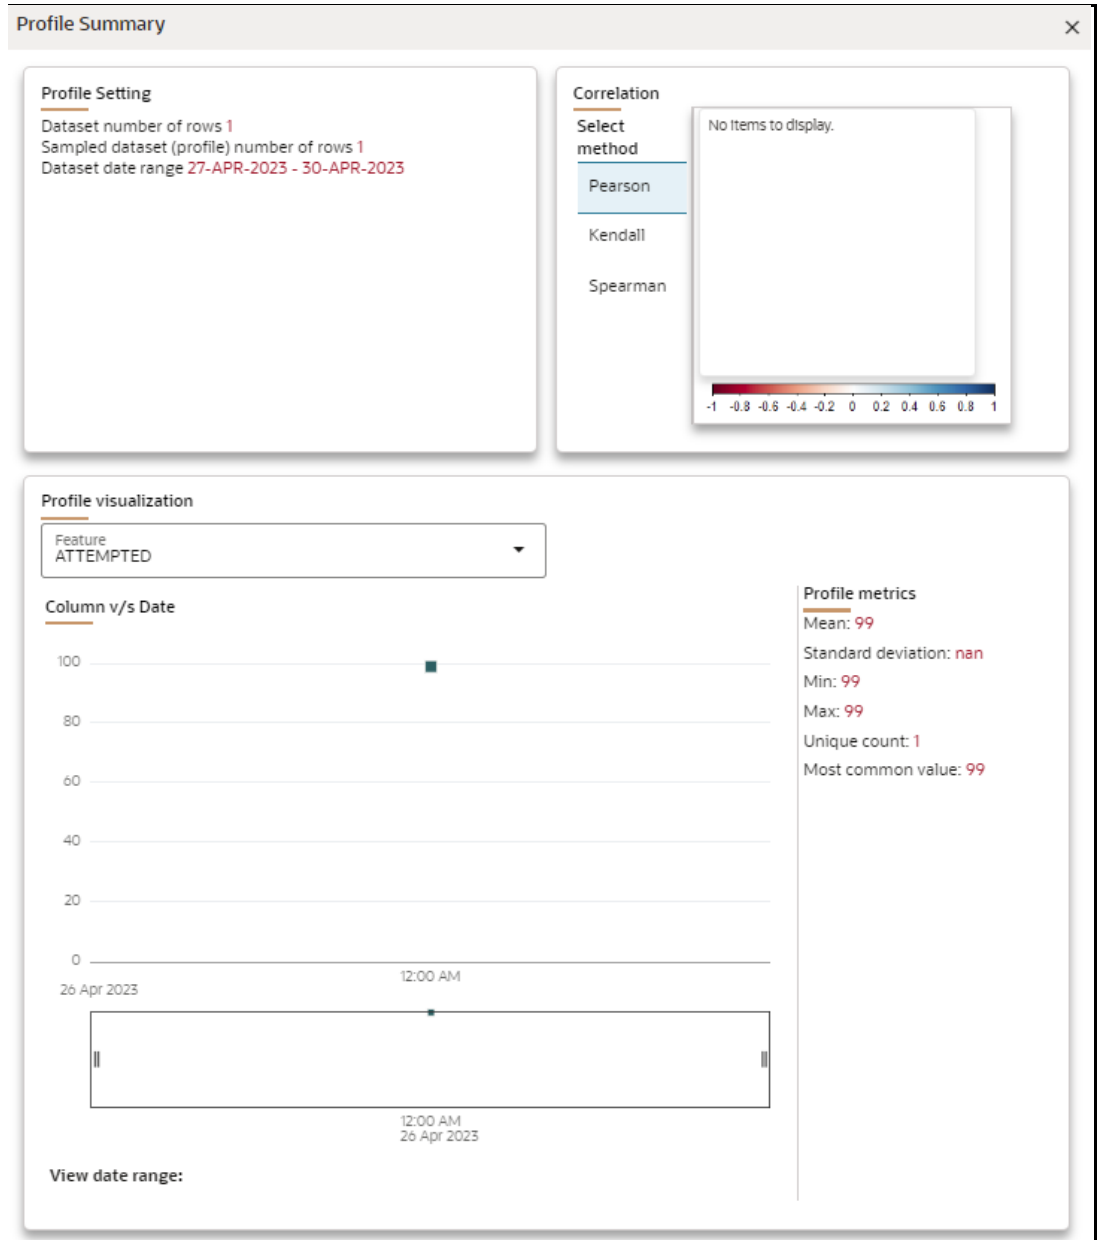

5.3.1.4 Viewing the Profile Summary

To view the profile summary, perform the following steps:

1. In the Profiler Summary screen, click  next to corresponding data profile and select View summary .

This window displays the following details in graphical format.

- Profile Setting
- Correlation
- Profile visualization along with the metrics

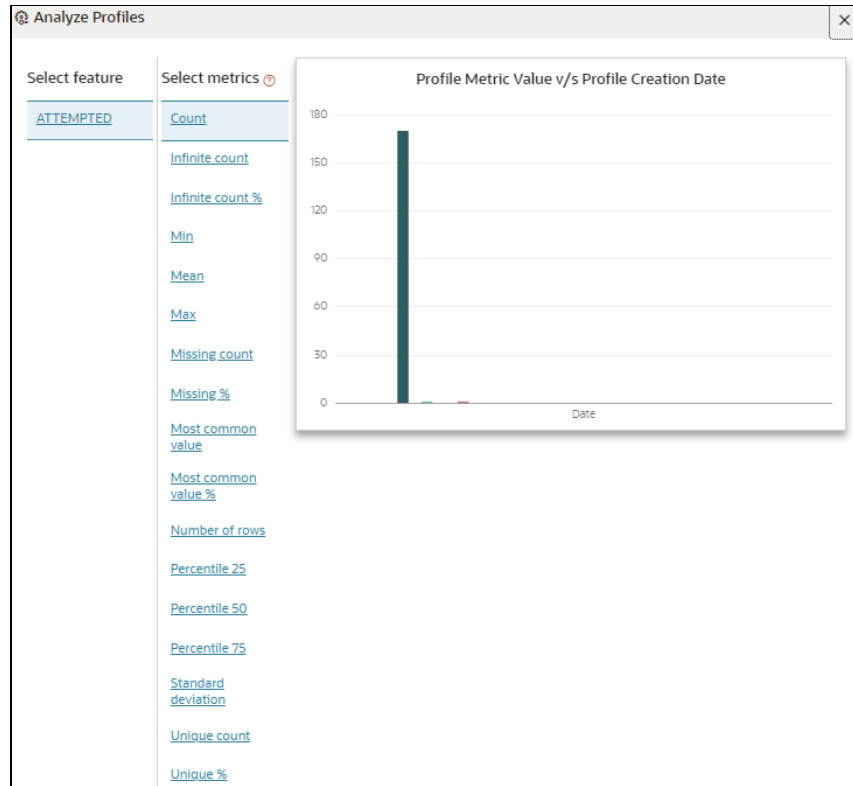

5.3.1.5 Analyze Profiles

To analyze multiple data profiles, perform the following steps:

1. In the Profiler Summary screen, select the data profiles that you want to analyze profiles. You can select multiple data profiles.

2. Click Analyze Profiles.

A window is displayed with multiple metrics of the selected profiles. Click on each metric to view the data in graphical format.

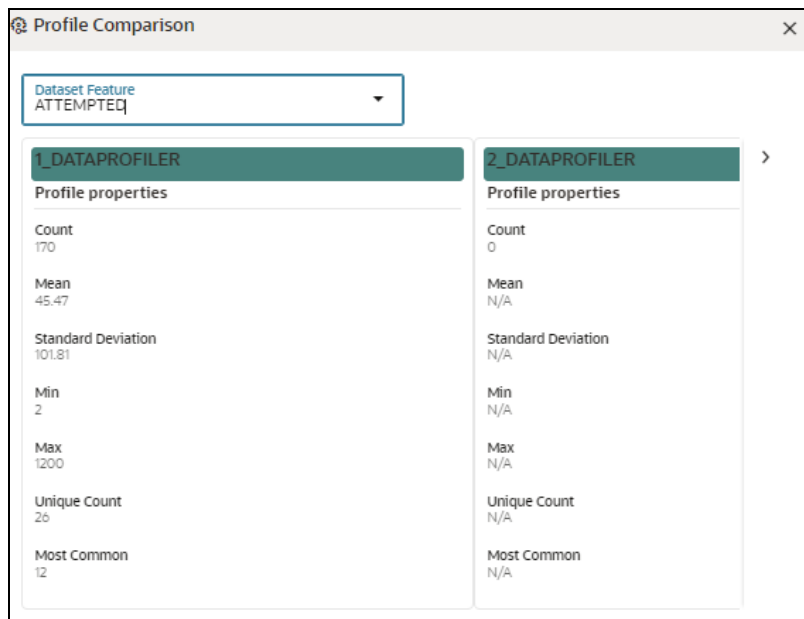

5.3.1.6 Compare Profiles

To compare the data between two data profiles, perform the following steps:

1. In the Profiler Summary screen, select two data profiles that you want to compare.
2. Click Compare Profiles  .

The Profile Comparison is displayed.

3. In the Dataset Feature drop-down, select the feature that you want to compare.
The properties of both the profiles is compared and displayed in a tabular format.

5.3.1.7 Stop Profiling

To stop the profiling, perform the following steps:

1. In the Profiler Summary screen, select the data profiles that you want to stop profiling. You can select multiple data profiles.
2. Click Stop Profiling.
A confirmation pop-up window is displayed.
3. Click Yes to disable the dataset profile.

The dataset profiling has been disabled and Start Profiling option is displayed. For more information on profile, see [Create a Profile](#) section.

5.3.2 Model Monitor

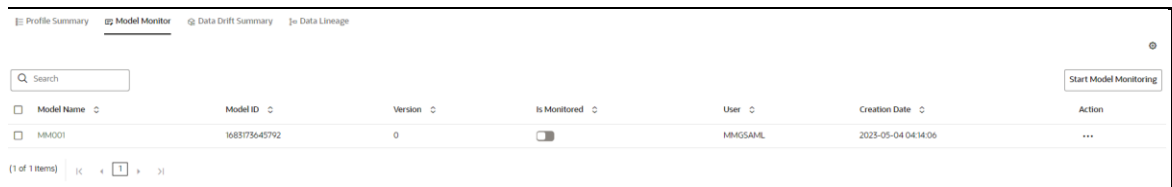

Model Monitoring refers to the process of closely tracking the performance of models in production and helps you to frequently monitor the distribution of the model and provides alerts in case of any exceptions

In addition , it enables you to identify and eliminate bad quality predictions and poor technical performance of the models.

The model's robustness depends not only on the training of the feature-engineered data but also on how well the model is monitored after deployment. Typically a model's performance degrades over time, and it essential to detect the cause of the decrease in performance of the model. The main cause of the decline in performance can be drift in the independent or/and dependent features which may violate the model's assumption and distribution about the data. When models are built, the model builder will create a snapshot of the dataset used for training the model and save it in a file which is later used for calculating drift with the current snapshot of the dataset.

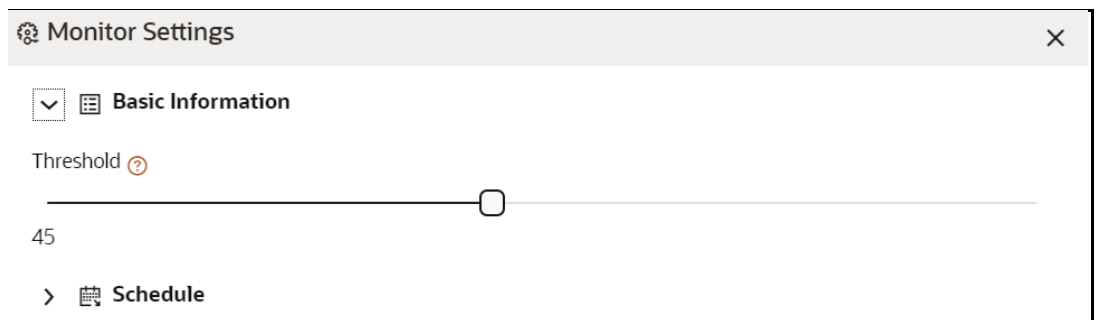

To start the model monitoring, perform the following steps:

1. In the LHS menu, click **Dataset**  to display the **Dataset Summary** window. This window displays the dataset records in a table.
2. Click  next to corresponding Dataset and select View  . The Profile Summary screen is displayed.
3. Navigate to **Mode Monitor** page. All the models associated with the selected dataset will be displayed.

Model Name	Model ID	Version	Is Monitored	User	Creation Date	Action
M14001	1683775642792	0	<input checked="" type="checkbox"/>	MBAGSAML	2023-05-04 04:14:06	...

4. Click **Start Model Monitoring**. The Monitor Settings page is displayed.

Monitor Settings

Basic Information

Threshold 

45

Schedule

5. Drag the slider and set the threshold settings. Threshold is the value in percentage, beyond which it is labelled as drifted.
6. Select the Schedule Type as required:
 - **Daily** : Select to run the schedule everyday
 - **Weekly**: Select to run the schedule once in a week or the selected days in a week
 - **Monthly** : Select to run the schedule once in a month or the selected days in a month

The monitoring for the model is started and **Is Monitored** option is enabled by default and you can disable it if you do not want to monitor.

5.3.2.1 Stop the Model Monitoring

To stop the model monitoring, perform the following steps:

1. Navigate to **Model Monitor** page.
All the models associated with the selected dataset will be displayed.
2. Click **Stop Model Monitoring**.
A confirmation pop-up window is displayed.
3. Click **Yes**.
The Model Monitoring is stopped.

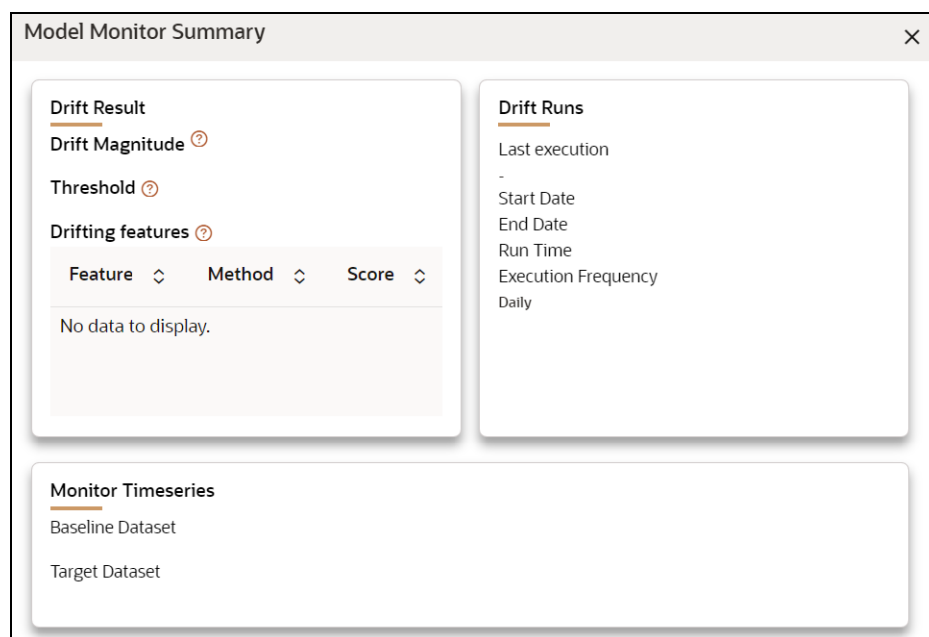

5.3.2.2 Viewing the Model Summary

To view the Model Summary, perform the following steps:

1. Navigate to **Model Monitor** page.
All the models associated with the selected dataset will be displayed.
2. Click **Action**  next to corresponding model and select **View Summary** .
This window displays the following details in graphical format.

- Drift Result
- Drift Runs
- Monitor Timeseries

Figure 25: Model Monitor Summary

5.3.2.3 Viewing the Model Latest Report

To view the Model Latest Report, perform the following steps:

1. Navigate to **Model Monitor** page.

All the models associated with the selected dataset will be displayed.

2. Click **Action**  next to corresponding model and select **View Latest Report** .

The execution details of the model are displayed.

Model Execution History ×			
Report Id 	Creation Datetime 	Data Drift 	Action
1	2023-05-06 00:00:04		...

(1 of 1 items) | <K < 1 > >I

To view the report of each execution, click **Action**  next to corresponding report and select **View Report**.

5.3.2.4 Viewing the Model Execution History

To view the Model Execution History, perform the following steps:

1. Navigate to **Model Monitor** page.
All the models associated with the selected dataset will be displayed.
2. Click **Action**  next to corresponding model and select **View Execution History** .

This window displays the details such as Baseline Distribution, Target Distribution, Drift Method, Drift Score, and Data Drift of the models.

5.3.3 Data Drift Summary

A Data Drift Summary report summarizes the changes in a dataset over time. It typically includes information for any changes in the data distribution of the selected features over the selected baseline and target date ranges.

The report is used to help identify potential issues with data quality which helps the users to take necessary actions further.

To calculate the data drift, perform the following steps:

1. In the Data Drift Summary screen, click Calculate Drift.

The Data drift Analysis window is displayed.

2. Select the data range (From and To) dates for the baseline.
3. Select the data range (From and To) dates for the target.
4. Select the drift method from the drop-down.

The available drift methods are:

- Kolmogorov–Smirnov (K-S) test
 - Only for numerical features
 - Output: p_value, drift detected when p_value < threshold.
- Kullback-Leibler divergence
 - For numerical and categorical features
 - Output: divergence, drift detected when divergence >= threshold.
- Wasserstein distance (normed)
 - Only for numerical features
 - Output: distance, drift detected when distance >= threshold.
- Population Stability Index (PSI)
 - For numerical and categorical features
 - Output: psi_value, drift detected when psi_value >= threshold.
- Jensen-Shannon distance
 - For numerical and categorical features
 - Output: distance, drift detected when distance >= threshold.

5. Click **Calculate**.

The drift analysis report is displayed.

6. Click **Save**.

The reports are displayed under Data Drift Summary screen.

5.3.3.1 Disabling the Data Drift Monitoring

To stop the Data Drift monitoring, perform the following steps:

1. Navigate to **Data Drift Summary** page.

The data drift summary reports are displayed in a table.

2. Click **Stop Data Monitoring**.
A confirmation pop-up window is displayed.
3. Click **Yes**.
The Data Drift Monitoring is disabled.

5.3.3.2 Start the Data Drift Monitoring

To start the Data Drift monitoring, perform the following steps:

1. Navigate to **Data Drift Summary** page.
The data drift summary reports are displayed in a table.
2. Click **Start Data Monitoring**.
The Data Drift Settings window is displayed.

> **Schedule**

3. Enter the basic information and schedule details and click **Save**.
For more details, see [Data Drift Summary](#) section
The Data Drift Monitoring is started.

5.3.3.3 Viewing the Data Drift Summary Report

To view the Data Drift Summary Report, perform the following steps:

1. Navigate to **Data Drift Summary** page.
The data drift summary reports are displayed in a table.

- Click **Action**  next to corresponding drift report Id and select **View**  .
The drift report is displayed in a graphical format.

Figure 26: Drift Report

5.3.3.4 Deleting the Data Drift Summary Report

To delete the Data Drift Summary Report, perform the following steps:

- Navigate to **Data Drift Summary page**.

The data drift summary reports are displayed in a table.

- Click **Action**  next to corresponding drift report Id and select **Delete**  .

OR

If you wish to delete multiple data drift reports, select reports and click  .

A confirmation pop-up window with report details is displayed.

- Click **Delete**.

The Data Drift Report is deleted.

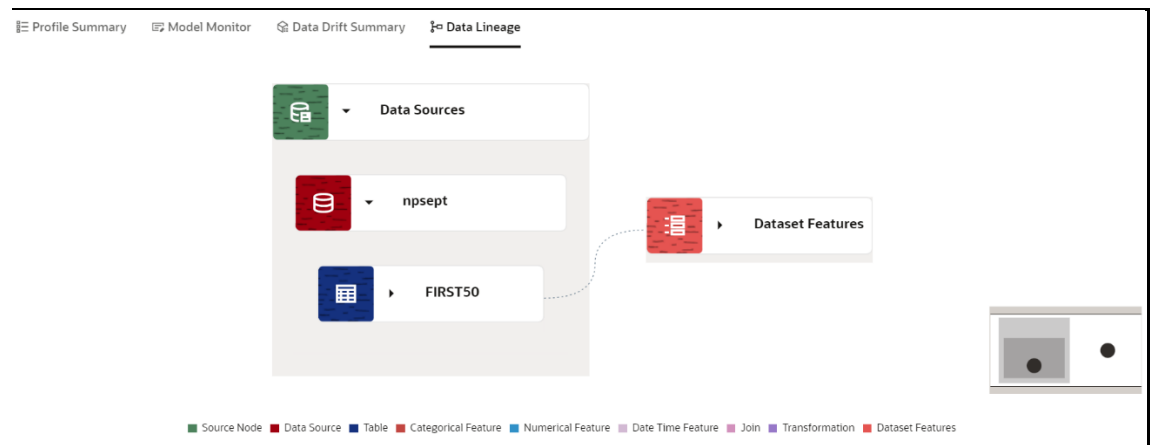

5.3.4 Data Lineage

Data Lineage provides a summary view or visualization of Data Sources and its associated dataset and features in a graphical format. Also displays the complete data flow from start to finish.

To view the data lineage, perform the following steps:

1. In the LHS menu, click **Dataset**  to display the **Dataset Summary** window.
This window displays the dataset records in a table.
2. Click  next to corresponding Dataset and select View  .
The Profile Summary screen is displayed.
3. Navigate to **Data Lineage** page.

A summary view of Data Sources and its associated dataset and features in a graphical format.

Click the drop-down of the respective features to view granular details and its workflow.

5.4 Edit a Dataset

To edit a Dataset, follow these steps:

1. Navigate to Dataset Summary Page.
2. Click  next to corresponding Dataset and select Edit  .
You can edit the Dataset fields except Code and Dataset Name.

5.5 Delete a Dataset

To delete a Dataset, follow these steps:

1. Navigate to Dataset Summary Page.
2. Click  next to corresponding Dataset and select Delete  .

5.6 Python functions for accessing Dataset from Model Pipelines/Notebooks

5.6.1 Listing tags of Datasets Cached from UI

To get a list of all snapshots/tags of a dataset cached from UI, use the API below:

API	Notebook Script	Notes/Input
List Tags of a Dataset	<pre>from mmg.datasets import list_tags list_tags(dscore)</pre>	dscode = dataset code - string tag = tag with which the dataset was cached - string

5.6.2 Deleting Cached Dataset

A cached dataset can be deleted by using the API below where tag refers to a particular snapshot/timestamp of the dataframe

API	Notebook Script	Notes/Input
Delete Dataset	<pre>from mmg.datasets import delete_df delete_df(dscore, tag)</pre>	dscode = dataset code - string tag = tag with which the dataset was cached - string

5.6.3 Listing all Datasets with Metadata saved from UI

API	Notebook Script	Notes/Input
List Datasets	<pre>from mmg.datasets import list_datasets list_datasets()</pre>	

5.6.4 Fetching Dataset in Notebook

Dataset whose metadata has been saved from UI can be fetched in two ways:

1. Dataset that has already been cached from UI can be fetched using first API below by providing the dataset code and tag.(DataFrame will not be recalculated. It will be read from cache.)
2. A new data frame for a dataset can be calculated/fetched using data from the present time with the metadata saved for that dataset as given in second API.

API	Notebook Script	Notes/Input
Fetch Dataset Cached from UI	<pre>from mmg.datasets import fetch_ds df = fetch_ds(dscode,tag)</pre>	dscode = dataset code - string tag - string
Fetch New Snapshot of dataset	<pre>from mmg.datasets import fetch_ds df = fetch_ds(dscode)</pre>	dscode = dataset code - string

5.6.5 Cache User's Dataframe from Notebook

A user-made data frame can also be cached using the below API. It will be stored in the datastudio server in location :

\$DS_HOME/work/ftpshare/mmg/workspace_name/cached/tag. The dataset will be saved as a parquet file with name cached_tag.parquet.

Note: This dataframe is not related to dataset created from UI. This is independent of dataset metadata.

API	Notebook Script	Notes/Input
Caching Data Frame	<pre>from mmg.datasets import cache_df path=cache_df(df, tag) path</pre>	df = dataframe to be cached - pandas dataframe tag - string

5.6.6 Fetching Data Frame Cached from Notebook

The data frame cached from notebook can be fetched using the below API.

API	Notebook Script	Notes/Input
Fetch dataset cached manually	<pre>from mmg.datasets import fetch_ds df = fetch_ds("cached",tag)</pre>	tag - string

5.6.7 List Tags of all Data frames Cached from Notebook

API	Notebook Script	Notes/Input
-----	-----------------	-------------

List Tags of Manually Cached Datasets	<pre>from mmg.datasets import list_tags list_tags()</pre>	
---------------------------------------	---	--

5.6.8 Sample Custom Scripts

Below are few sample scripts which the users can refer to create transformations.

Function	Script	Comments
Directly pass input data frame to output	<code>df_out=df_prev</code>	
Drop first row of data frame	<code>df_out=df_prev.drop(0,axis=0)</code> if not <code>df_prev.empty</code> else <code>df_prev</code>	
Drop column from data frame	<code>df_out=df_prev.drop('colname',axis=1)</code>	FEATURE TRANSFORMATION

5.6.9 Transformations

These are the various transformations which can be done from the UI.

No.	Transformation	Function
1.	Add New Feature	A new feature can be added to the dataset which could be derived from the existing features using Script. Physical Feature Name and Feature Name are the names of the new feature. Script can be used to create a pandas Series for the new feature
2.	Encode Categorical Features	This function performs One Hot Encoding on a categorical feature and replaces it with multiple numerical features in the dataset.
3.	Encode Datetime Features	This function encodes a datetime feature and replaces it with multiple numerical features having the following information derived from the datetime feature - year, month, week, day, hour, minute, dayofweek.
4.	Encode Cyclical Features	This function encodes a cyclical feature having hour, minute data, and so on and returns two features carrying the sine and cosine transformation of the cyclical data. 'fmax ' denotes the maximum possible value of the cyclical feature data.

No.	Transformation	Function
5.	Impute Missing Data	<p>This function imputes missing data within a feature.</p> <p>For numerical features, there are 4 methods for imputing missing data.</p> <p>simple - imputes with mean, median, most_frequent values based on chosen arg value using the SimpleImputer in sklearn.</p> <p>const - fills the missing values with the value given in the arg</p> <p>knn - imputes using the KNNImputer in sklearn with k value given in arg</p> <p>mice - imputes using the IterativeImputer in sklearn</p> <p>For non-numerical data, missing values can be imputed using the 'const' method by replacing all missing values with the value given in arg</p>
6.	Feature Scaling	<p>This function is used to scale multiple selected numerical features using the StandardScaler in sklearn</p>
7.	Dimensionality Reduction	<p>This function performs PCA on selected numerical features to reduce the dimensionality using sklearn.decomposition.PCA module.</p> <p>The number of output features can be specified using dim field.</p> <p>The names of the output features' names can be specified in the fields 'Physical Feature Name' and 'Feature Name'</p>
8.	Outlier removal	<p>This function is used to remove outliers present in a feature based on the specified zscore value.</p> <p>Non-numerical features are label encoded before removing the outliers.</p>
9.	Duplicates Removal - Data Frame	<p>This function removes all duplicate rows in the dataframe.</p>
10.	Duplicates Removal - Feature	<p>This function removes all duplicate rows within a specified subset of features and consequently removes those rows from the data frame</p>
11.	Filter Features	<p>This function is used to filter the data frame based on conditions specified on features</p> <p>Operations allowed : >, >=, =, !=, <, <=, isin</p> <p>When the chosen operation is 'isin', the input to 'Filter Value' is a list of values that should be present in the output data frame</p>

6 Using Model Pipeline

Model Pipeline allows you to create and publish models based on the workspaces created from datasources. The published models are then deployed in production to be consumed by users. Modelers create models by using the Notebooks in the Data Studio. The Notebooks are used to create training models and the iterations of comparison between various models lead to the elimination of undesired models and filters a few robust ones that can be considered for deployment in production. Modelers then use their better judgement to consolidate their choice and fix on one model - the champion model. The champion model is also called the scoring model or the actual model in this document.

6.1 Prerequisites

The prerequisites for model pipeline are as follows:

- To create a model, your user profile must be mapped to the Modeler Group. For more information, see the [Mapping User Groups](#) section.
- To create a model, a workspace must be deployed. For more information, see the [Create a Workspace](#) section.
- To approve and deploy a model, your user profile must be mapped to the Modeling Administrator Group. For more information, see the [Mapping User Groups](#) section.

6.2 Access the Model Pipeline

The Model Pipeline window allows you to create and publish models.

To access the Model Pipeline window, follow these steps:

1. Navigate to **Workspace Summary** page.

The page displays workspace records in a table.

2. Click  next to corresponding Workspace to Launch Workspace.

The MMG **Dashboard** window is displayed with application configuration and model creation menu.

3. In the LHS menu, click **Model Pipelines**  to display the **Model Pipelines** page.

The window displays objectives that contain drafts and models. When you hover on the count that are next to the ID column, it displays the count of sub objectives, Drafts, Models, and Champion if available.

Figure 27: Model Pipelines Page

<input type="checkbox"/>	Objective Name	ID	
<input type="checkbox"/>	AIF Admin Admin Activity for AIF4AML	AIF0000018	1
<input type="checkbox"/>	AIF Batch Framework Batch Framework for AIF4AML	AIF0000005	12 1 1 1
<input type="checkbox"/>	AIF Big Data AIF Data Aggregation in Big Data	AIF0000020	
<input type="checkbox"/>	AIF Graph Analytics PGX for AIF4AML	AIF0000019	

You can switch the Model Summary page view from Flat to Hierarchical and vice-versa. Flat list is the default view in Production workspace while Hierarchical list is the default in Sandboxes.

- **Hierarchical option:** The Model Management window shows the hierarchical list of

the Objectives using the Hierarchical  option. In the Hierarchy view, you can see the following details of the Objectives such as Objective Name, and ID.

- **Flat option:** The Model Pipeline window shows the flat list of all the models

(published and drafts) using the Flat  option. Flat list is not objective-specific. It shows the models across all the objectives. You can search the models using the Filter by Version, Filter by Status, and All champions. You can also sort the drafts and models by Default or Latest first options.

- In the Flat list of models, you can see the following details of the models such as Name, ID, Version, Objective ID, Objective Name, Owner, and Status.

<input type="checkbox"/>	Name	ID	Version	Objective ID	Objective Name	Owner	Status
<input type="checkbox"/>	New1 New1	...	1670582624646	0	1670582092000 NewObj1	MMGADMIN	
<input type="checkbox"/>	New1 New1	...	1670582624646	1	1670582092000 NewObj1	MMGADMIN	Approved
<input type="checkbox"/>	New1 New1	...	1670582624646	2	1670582092000 NewObj1	MMGADMIN	Approved
<input type="checkbox"/>	New1 New1	...	1670582624646	3	1670582092000 NewObj1	MMGADMIN	Approved

The following table provides descriptions for the fields and icons on the **Model Pipeline** page.

Field or Icon	Description
Model Pipeline Page Header	The header that follows the global header in the application.
Breadcrumbs	<p>Indicates the position of the current page in the Model Management hierarchy. Use breadcrumbs locator links to navigate back to higher levels in the hierarchy after you have drilled down through levels of functions.</p> <div style="border: 1px solid black; padding: 2px; display: inline-block;">  Model Pipelines / NewObj1 </div> <p>Click  to navigate to Model Summary page.</p> <p>Click  or  to navigate back to Workspace Summary page.</p>
Create Objectives and Models	<p>Select Add to display a list with the following options:</p> <ul style="list-style-type: none"> • Draft • Objective • Seeded Models <p>To create Models, select Draft. To create Objectives, select Objective. See the Create Objective (Folders) and Create Draft Models sections for more information.</p> <p>However, if you want to know about the cycle of model creation, see the Create, Review, Approve, and Deploy a Model Section.</p>
Requester	<p>Displays that the logged-in user has the Requester privileges when the status is green.</p>  <p>You can create a model. However, to approve and publish, the model must be reviewed by a user with reviewer privileges and approved by a user with approver privileges.</p>
Reviewer	<p>Displays that the logged-in user has the Reviewer privileges when the status is green.</p>  <p>You can review models. However, to approve and publish, the model must be approved by a user with approver privileges.</p>
Approver	<p>Displays that the logged-in user has the Approver privileges when the status is green.</p>  <p>You can approve models that are created and reviewed.</p>
Model Pipeline Page Table	The table displays the objective and model records on the page.

Field or Icon	Description
Objective Name	Displays the name and description of the Objective 
ID	Displays the ID of the objective.
Owner	Displays the owner who created the Drafts. This information does not display for an Objective.
Tags	Displays the tags associated with the Models or Drafts.  This information does not display for an Objective.
Delete Objective	Select  to delete the model from the Confirmation dialog box. Click Delete to process or click Cancel to cancel. This information does not display for an Objective.
Edit Objective	Select  to edit the models in Data Studio. See the Edit Models section for more information. This information does not display for an Objective.

6.3 Create, Review, Approve, and Deploy a Model

Model creation and deployment undergoes a workflow of Model Governance where the following types of users in the system have privileges that restrict the activities, they can do in the model creation and deployment workflow.

Field or Icon	Description
Requester 	You can create a model. However, to approve and publish, the model must be reviewed by a user with reviewer privileges and approved by a user with approver privileges. NOTE: User Groups must be mapped to the MDLDEPLOY role to access Requester functions.
Reviewer 	You can review models. However, to approve and publish, the model must be approved by a user with approver privileges. NOTE: User Groups must be mapped to the MDLREVIEW role to access Reviewer functions.
Approver 	You can approve models that are created and reviewed. You can then promote to production and make the model the champion in the production. NOTE: User Groups must be mapped to the MDLAUTH role to access Approver functions.

The following sections in this topic provide details for the cycle of creation of a model, review, approval, and deployment:

- Create Objective (Folders)
- Create Draft Models
- Publish Models (Scoring)
- View Model Details
- Compare Models
- Understand Model Governance
- Request Model Acceptance
- Review Models and Move to Approve or Reject
- Approve Models and Promote to Production
- Deploy Models in Production and Make it a Global Champion

6.3.1 Create Objective (Folders)

Create folders called Objectives within which you can create Models.

To create an Objective, follow these steps:

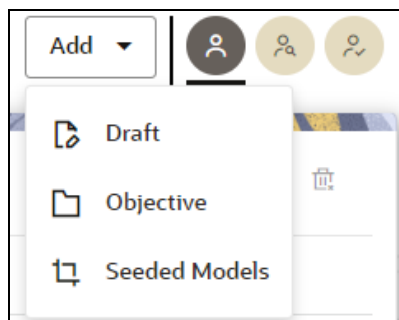

1. Click Launch Workspace  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window. The window displays folders that contain models and model records in a table.
3. Click **Add** and select **Objective** from the list to display the **Objective Details** dialog box.

Figure 28: Select Objective from Add

4. Enter details in Objective **Name** and **Description** fields in the Add **Objective** dialog box.

Figure 29: Objective Details Dialog box

5. Click **Save**.

6.3.2 Create Draft Models

Create Models that are classified as draft models. These models will be reviewed before being sent for Scoring.

To create a draft Model, follow these steps:

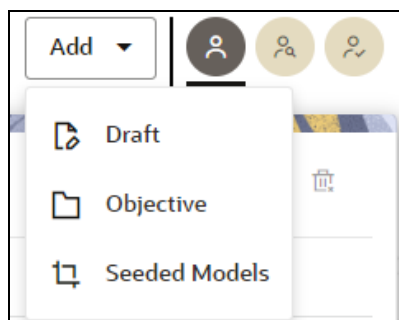

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window. The window displays folders that contain models and model records in a table.
3. Click **Add** and select **Draft** from the list to display the **Add Draft** dialog box.

Figure 30: Create Model

4. **Create New Model** is the default setting in the **Model Details** dialog box. Drag the toggle button to select **Import Dump**. Use Create New Model to start from a blank Notebook in Compliance Studio. Import Dump lets you drag and drop an existing file with model data and modify it. To import a model data dump from another

model, see the [Import a Workspace Model Data into a New Model](#) section. You can also create a draft under Objective (Folder) also. Click an Objective to open it.

To create a new model, follow these steps:

- a. Enter details for Draft **Name** and **Description**.

Figure 31: Model Details - Create New Model

- b. Enter a tag in the **Tags** field.
- c. Click Create.

6.3.3 Create Seeded Models

You can seed the models from the external sources which can be imported in the MMG application.

To import the models, follow these steps:

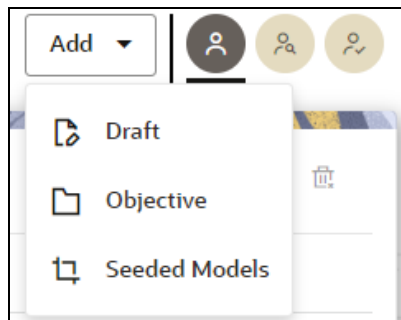

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window. The window displays folders that contain models and model records in a table.
3. Click **Add** and select **Seeded Models** from the list to display the **Add Draft** dialog box.

Figure 32: Add Seeded Models

4. You must add the models in the following installed path location:
`/scratch/ofsaaweb/ftpshare/mmg/seeded/models`
 The added models is displayed in the Seeded Models page.

Figure 33: Seeded Models

Seeded Models					
<input type="checkbox"/>	Objective Path	Model Name	Model Description	Version	Seeded File Name
<input type="checkbox"/>	Test/NewDraft	NewDraft	Supervised learning analysis of loan application frauds	0	CS_1670477976040_0.zip
<input type="checkbox"/>	Test/NewDraft	NewDraft	Supervised learning analysis of loan application frauds	1	CS_1670477976040_1.zip

Import Seeded Models

5. Select the models which you want to import and click **Import Seeded Models**.
 The selected models are imported and displayed in the **Model Pipelines** page.

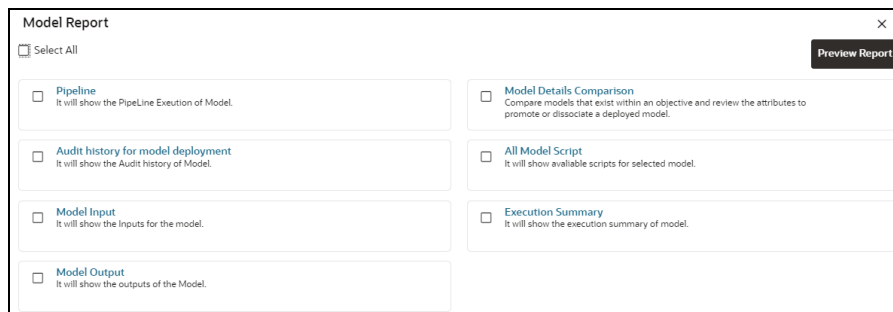

6.3.3.1.1 Model Report

This option allows you to view the Model report and download the same in PDF format.

To view and download Report, follow these steps:

1. Open a Model in Pipeline Designer.
2. Click **Generate Model Report**.

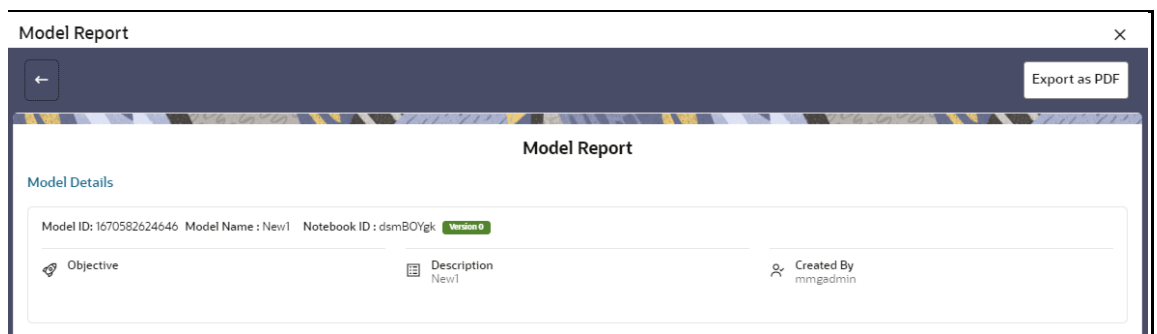

The Model Report window is displayed.

3. Select the Parameters to generate the report.

4. Click **Preview Report**.

The report is displayed based on selected parameters.

5. Click **Export as PDF** to save the report as PDF in local system.

6.3.3.1.2 Download a Model

This option allows you to download the Model. To download a model, follow these steps:

1. Open a Model in Pipeline Designer.
2. Click **Download**.

A zip folder is downloaded. This folder contains .cfg and .dsnb files.

6.3.3.1.3 Delete

This option is used to delete the Model.

6.3.3.1.4 Cloning a Model

You can pick any published model and clone the contents to a new draft in the same objective or clone the content to the current parent draft. The cloned draft can be edited and used further. Audit Trail window also captures the clone information.

To clone the model details, follow these steps:

1. Open a Published Model in Pipeline Designer.

2. Select Clone to new Draft or Reimage parent draft with current.

6.4 Pipeline Designer

Click on the More Actions icon and select Open in Pipeline Designer option to open a draft in the Pipeline Designer.

The following sections are available on the Pipeline Designer window:

- Pipeline Canvas
- Dashboard
- Notebook
- Simulations
- Execution History
- Compare

NOTE:

- a. Models in Production workspace have the 'Dashboard' as the default tab.
- b. Drafts or Models in the Sandbox workspace have the 'Pipeline Canvas' as the default tab.

6.4.1 Pipeline Canvas

You can perform following functions on Pipeline Canvas:

- Creating a Pipeline
- Creating Script Template
- Viewing a Pipeline
- Using Link Connector Nodes
- Execution of Pipeline
- Publishing a Pipeline

6.4.1.1 Create Paragraphs using Pipeline Designer

After creating the Models in the Workspace, create Paragraphs using the Pipeline Designer window.

Pipeline Designer enables you to design the paragraph using widgets (graphical representation) instead of using python codes. In addition, if you add new paragraphs in Data Studio, the added paragraphs are displayed in the widget format on Pipeline. Similarly, if you create a Notebook using Pipeline Designer, it can be opened for editing in Data Studio using Studio Notebook option.

NOTE When you open the notebooks from MMG UI, the attach workspace call will be made from mmg service and proper workspace will get attached.

If the Studio is opened outside of mmg, then the attach_workspace command has to be used.

This helps the Financial Institutes and Banks in following ways:

- Visualization of the data (for example, based on data tasks)
- View the dependency
- Modify the flow of execution or execution order
- Easy for Auditing purpose

You can execute the flow based on requirement. For example, if you have created one flow and want to execute a flow of training paragraphs out of that and other flow as experimental way, then you can modify using the Training and Experimentation link types. One flow can be break into 2-3 flows for execution purpose.

When a draft is edited using the Pipeline Designer/Data Studio, and published, then a new version of published model is displayed in Model Summary page.

NOTE When you add a new paragraph from studio and opened the same in pipeline designer, it gets linked to multiple paragraphs. For example, you have paragraphs P1, P2 and P3 in the same order in a Notebook. It shows in Pipeline Designer canvas as P1 > P3 > P2.

If you add two new paragraphs P1a and P1b in the Notebook after the P1 and open the canvas, this gets reflected as the following:

1. P1 -> P1a -> P1b -> P2
2. P1 -> P3 -> P2

After opening a Model in the Pipeline Designer, following options are displayed:

- Generate Model Report
- Download

- Delete
- Clone Model

After opening a Draft in the Pipeline Designer, following options are displayed:

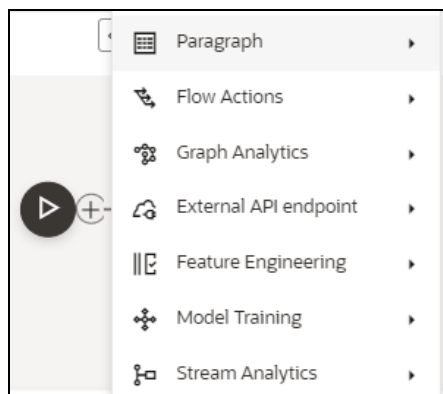

- Generate Model Report
- Download
- Delete
- Publish
- Script Template list

Creating a Pipeline

To create a paragraph using pipeline, follow these steps:

1. Navigate to the **Pipeline Designer** page.
The Start widget is displayed by default in the canvas screen.
2. Hover over on Start widget and new nodes can be added using the add button in the Pipeline Canvas.

This will open a menu which contains all the widgets sectioned into different categories. The spectra diagram builder is based on row and column positioning.

NOTE Click on each menu to select the widgets of the required types.

You cannot edit or delete this widget. Whenever a new draft is created (not by importing dump files), the default paragraph created is converted into a start widget. The visibility of code/result/title in notebook of this node will be kept to invisible.

Whenever the notebook is opened, init script execution including workspace attach will happen in this start node.

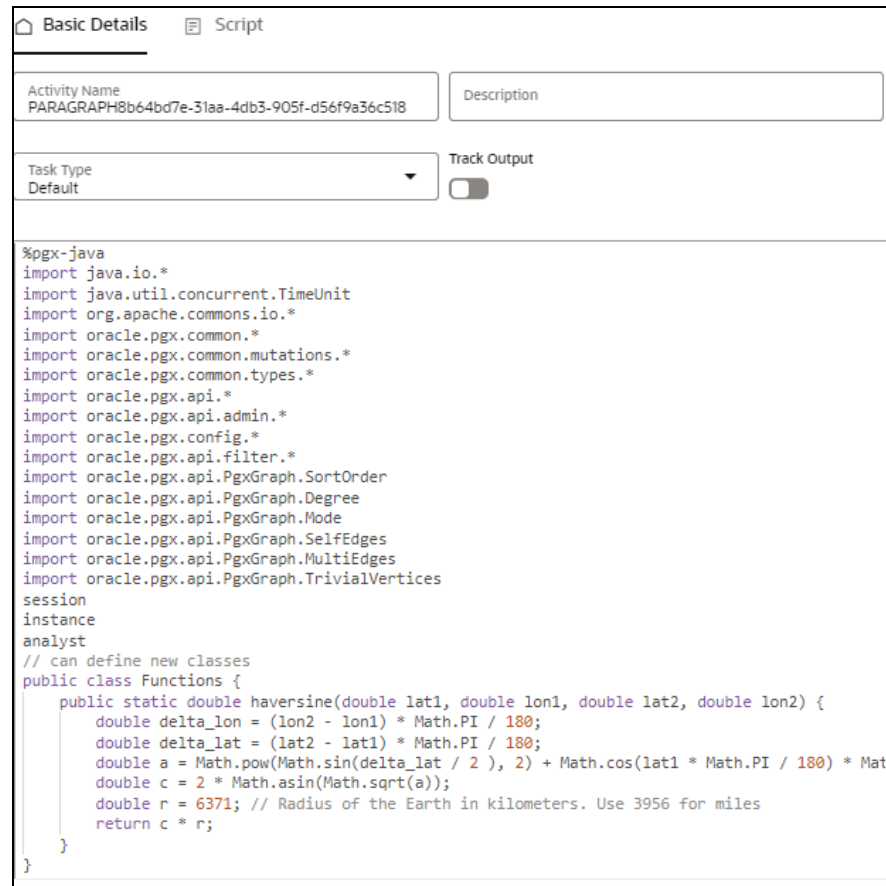

Title of the node is called 'Start widget'. Publish /download and import /promote to production of model with start widget will keep this widget. Publish from canvas will keep the start widget in the published model. When you publish model from model

summary, you can explicitly select the start widget paragraph from the list of paragraphs. After this only, start widget will appear in the published model.

3. Click on the node to add the basic details.

The Basic Details page is displayed.

Figure 34: Basic Details for Paragraph

4. Provide details as described in the following table:

Field	Description
Activity Name	Enter the Activity Name
Description	Enter the description of Activity
Task Type	Select the task type. For example, Model Training, Data Analysis and so on. You can also search the task type.
Track Output	If this option is selected for any paragraph, then during the model comparison the output details are displayed. Keep the Track Output to ON in case you want to execute the paragraph and view the result from the Dashboard tab.

Field	Description
Script	Shows the script. You can edit the script in this screen or in the Script tab. This script can also be saved as the Script Template.

Creating Script Template

Navigate to Script tab to manage scripts. These scripts can be called for paragraph. You can also create the Script template by clicking on the More options icon in the Pipeline Designer.

To add a script template, follow these steps:

1. In the Script tab, Click Save Script as Template.

Script Name

 Required

Description

Script Type

Script Content

```
%python
print('Hello World')
```

2. Enter the following details:

Field	Description
Script Name	Enter the Script Name

Field	Description
Description	Enter the description of Script
Task Type	Select the task type. For example, Model Training, Data Analysis and so on. You can also search the task type.
Script Content	Enter Python script

3. Click **Save**.

A node is created.

You can perform the following functions on Pipeline Designer window:

- **Parameter Sets:** Allows you to view, edit, clone, and delete the Parameter Set. Use the Clone option to duplicate the parameter set with different values and name.
- **Publish:** Allows publishing the pipeline. This option is displayed for the Drafts.
- **Deploy:** Allows you to deploy the model. This option is displayed for the published models.
- **More Actions icon:**
 - **Generate Model Report :** To generate model report
 - **Download :** Use Download to download the current working version in opened in canvas
 - **Script Template list :** Allows you to add, edit, view, and delete the script templates.
 - **Delete :** Allows to delete the current working version. If this is first draft of Model, it will delete all the dependent published version in the Sandbox. If the Model is not first version, then it will delete only the current working version.

The following options are displayed only for the published models.

- **Clone to new draft:** Allows to create a new draft with the same pipeline.
- **Overwrite existing draft:** Allows to overwrite the existing draft with the current published model.

You can perform the following functions on Pipeline Canvas window:

- **Clear Execution Results:** Clears the execution details.
- **Invalidate session:** Deletes the previous session details.

NOTE: When you click on Reinitialize or Invalidate session which will kill the existing session and all the session variables will be lost. You must re execute the prior paragraphs in the notebook.
- **Execute :** Allows you to execute the pipeline.

- Save Now: Allows saving the pipeline.
- Open Notebook in session: Allows you to open the notebook in canvas. This is displayed after the pipeline is executed.
- Execute Notebook in another session: Allows you to provide different data for the same notebook execution. This option is only displayed when execution is in progress.
- Stop Execution: Allows you to stop the execution which is in progress. This option is only displayed when execution is in progress.

Whenever user executes a batch, a user session is created. This execution time can be less or more for any execution. Sometime, user doesn't want to wait for execution to complete and navigate away from the Pipeline Canvas page.

For example, if user doesn't want to execute all the paragraphs and want to execute only Paragraph 1 and Paragraph 2. Paragraph 1 takes 15 mins time for execution and Paragraph 2 takes 10 mins for execution. Paragraph 2 execution also wants to use the execution of Paragraph 1. In this case, user can navigate away from the page. A confirmation message is displayed to close the current session. Here, this session time is configurable.

- If user clicks Yes, then execution thread will be closed after for this given session time.
- If user clicks No, then execution thread will be valid for this given kill time and run in the background.

User can configure these values in Application.xml file. For more information, see the *MMG Installation Guide*.

Viewing a Pipeline

The Pipeline canvas window allows you to view the Pipeline using following options:

- Auto-align : Arrange all the widgets in vertical order. After saving, the reverting option will not work.
- Revert-align : Revert all the widgets if they are Auto-aligned.
- Refresh : Refresh the pipeline canvas.

Executing a Notebook

The Execute icon on Pipeline Canvas allows us to execute the notebook.

The following link types are available in the Pipeline Designer:

- Default

- Scoring
- Training
- Experimentation

Note: When a model gets published from Model summary page, the Link types configured in Pipeline Designer are set to Default link type.

To execute the notebook, follow these steps:

1. Click Execute icon to view Execute Pipeline window.

Figure 35: Execute Pipeline

2. Execution parameters are the parameters defined in the notebook required for execution. Select the flow, which you want to execute Scoring, Training, and Experimentation. It displays all the keys defined for all the paragraphs in the notebook with a placeholder for providing the values.
3. Enter the execution Key and Value.

You can also use Runtime parameters for execution. This runtime parameter must be defined in Notebook. If this is defined, you can enter execution value during the process execution.

For more information, see Create Paragraphs in Model Studio Notebooks section.

The System Parameters window also shows the execution ID, execution Date, and execution Batch. These are required for executing all the paragraphs along with other parameters. It also shows from where the parameter comes from as a subscript.

- **Parameter Sets:** These are the set of parameters with a specific value required for an instance of execution. It consists Key and Value. You can save the parameters set that can be used for one execution instance and reuse it for the

next execution. It consists of parameters with a specific value to each parameter. Parameters containing no value will not be taken. Each set is identified with a unique code for each objective. While saving the parameter, you have to provide a code for identifying the name and description which is not mandatory.

You can save Key Value parameter set using the Save Parameter Set option. To Save Parameter Set, enter the Threshold Value and Description in the Parameter Set window.

- **Selecting Parameter Set:** These saved Parameter Set can be selected during the execution. It will replace the values of the parameters from the chosen Parameter Set.

To select the Parameter Set, follow these steps:

- i. Click "Open from saved Parameter Set". The Threshold Code window is displayed.
- ii. Select the Parameter Set from the available list. You can select multiple Parameter Set in the same execution instance. In that case, if there are any common keys, value will be replaced with that from the latest Parameter Set selected.

4. You can add new parameters using **Save parameter set** option.

Note: If the parameter is not defined in the notebook, it will not be used for the execution. In case of multi select, if there are common parameters among the chosen scenarios, it will take the value based on the order of selection. that is first chosen scenario parameter will be taken.

5. But if open from saved Parameter Set again (not on single go), then already added will get replaced by the newly added (same as what existed)
6. Execution is performed based on selected link types. It filters out all the not required/unused parameters. And all the unused parameters for the current

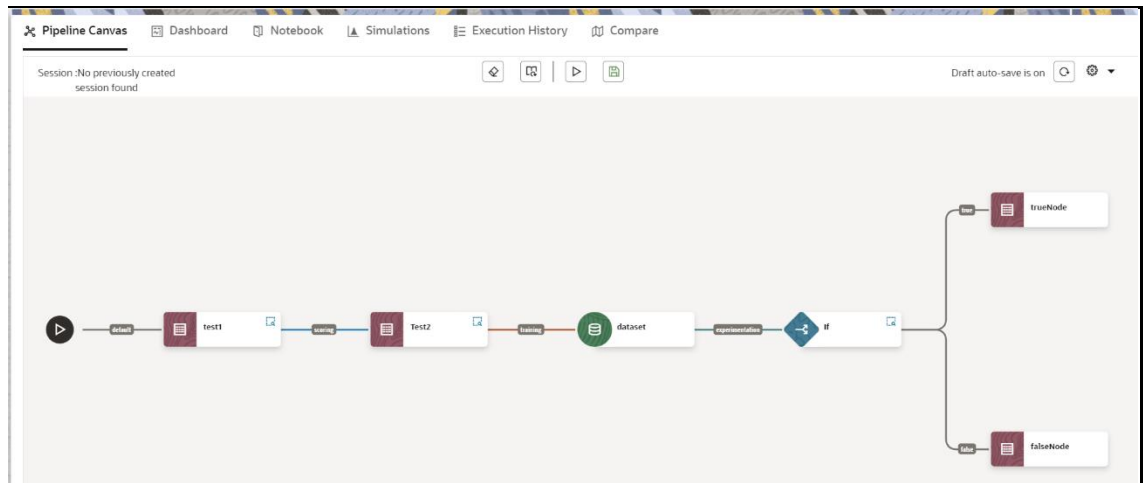

execution are displayed with a warning . To view the only required parameters, click **Show only required** link.

7. Click Reset  to reset the entered data.

8. Click Delete  to delete the entered Key and Value.

For example, refer to below Figure.

Figure 36: Example of Pipeline Canvas

- Here, if you want to execute this Notebook for scoring purpose, then the flow will be executed till Test2 . To perform this, Click Execute Notebook and select Links as Scoring.

Figure 37: Execute Pipeline

- Similarly, if you want to execute this Notebook for training purpose, then the flow will be executed till dataset with default paragraphs. To perform this, Click Execute Notebook and select Links as Training.

Publishing a Pipeline

To publish the pipeline, follow these steps:

1. Click Publish to view Publish Pipeline window.

Figure 38: Publish Pipeline

2. Enter the details as shown in the following table.

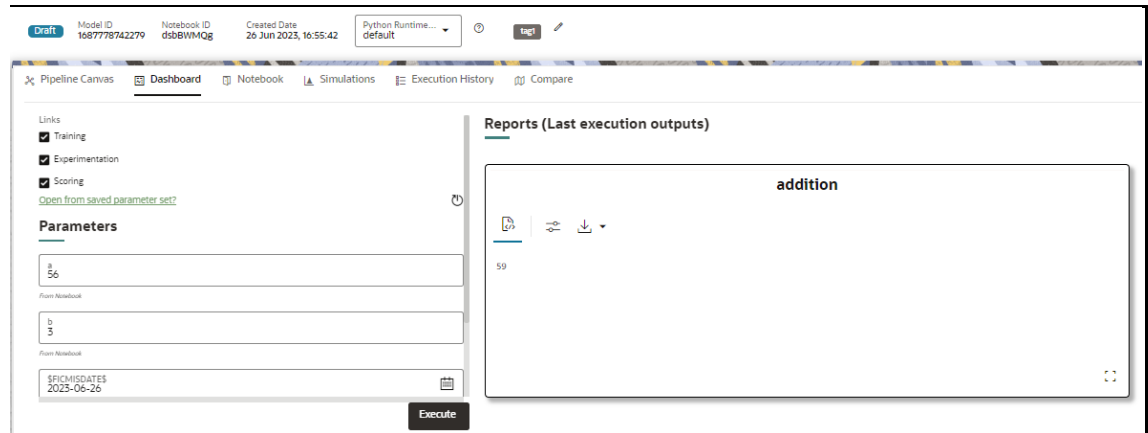

Field or Icon	Description
Model Name	The field displays the name of the Model. Modify the name if required.
Model Description	The field displays the description for the Model. Enter or modify the description if required.
Technique	Enter the registered technique to use.
Run Version	Select a run version.
Attach Parameter set	If this option is enabled: <ul style="list-style-type: none"> Selected parameter set will be associated with the published model. Best performing parameter set or prime reference of the objective is recommended to be associated with the model. This set is further used for promoting to production at the time of deployment. Users can update this dependency from model details screen.
Associate python runtime	If this option is enabled: <ul style="list-style-type: none"> Selected python runtime will be associated with the published model. This python run time will be further used for promoting the model to production at the time of deployment. Users can update this dependency from model details screen.

3. Click **Publish**.

6.4.2 Dashboard

This section of Pipeline Designer allows users to execute the Models and also shows the execution output of Model if the widgets are saved with Track output option enabled.

NOTE: For Promoted models, the 'Dashboard' is the default tab.

NOTE

There is no Cancel button in Settings tab of reports in the Dashboard tab. You can press 'Escape' key to close the Settings.

6.4.3 Notebook

NOTE

The Username is case sensitive. Ensure you use the correct case for the username when accessing and executing the notebook.

Navigate to **Notebook** page to view the paragraphs. You can run, invalidate session, edit, add, export the notebook, and so on.

NOTE

The following features on Notebook are not supported in the current release.

- Cloning the notebook
- Sharing the notebook
- Versioning the notebook
- Modifying the notebook
- Deleting the notebook
- Attaching credentials to the notebook
- Entering dependency modes to the notebook

6.4.3.1 Create Paragraphs in Model Studio Notebooks

After creating the Models in the Workspace, create Paragraphs in the Model Studio window. To create Paragraphs, you must have a working knowledge of scripting and Python.

Navigate to **Notebook** page to view and modify the paragraphs.

6.4.3.1.1 Creating the Paragraphs

The paragraph should be added after the start widget paragraph. Navigate to **Notebook** page to create the paragraphs.

The following types of paragraph creation are supported for model creation:

- Python Paragraph
- Shell in Python Paragraph
- Conda Paragraph
- PGQL Paragraph
- PGX - Java Paragraph
- Paragraph
- PGX - Python Paragraph
- PGX – Algorithm Paragraph
- PGX - PySpark Paragraph
- MySQL Paragraph
- Markdown Paragraph

To create Paragraphs in the Model Studio Notebooks, follow these steps:

1. Open the draft in Pipeline Designer and click **Notebook** tab.
2. Hover your mouse above or below a paragraph to display the interpreter toolbar:

Figure 39: Interpreter toolbar

3. Click an icon in the toolbar to select an interpreter and add a new paragraph that uses that interpreter. When you click some of the icons, the paragraph that's created includes example code that you can run.

NOTE

You should not delete the start widget paragraph or rewrite the contents of this seeded paragraph

Adding Python Paragraph

1. Click **Add Python Paragraph** icon in Model Studio to add a python paragraph in the Notebook and add the following scripting instructions.

- a. To fetch connection objects:

```
conn = mmg.getConnection(<workspace name>)
```

This creates a `cx_oracle` based connection object to the datadom of the workspace being passed:

- b. To fetch current Notebook and Model Objective details, use the following predefined parameters:

- `currentNotebookId` - fetches the current notebook ID
- `objectiveId` - fetches the current objective ID

To fetch the runtime parameters supported in Model Studio runtime or to access optional parameters passed from scheduler services;

- a. To access predefined batch runtime parameters like `taskId`, `batchrunid`, and `ficmisdate` passed during the model execution from scheduler, use the following variables : `$_BATCHRUNID$`, `$_TASKID$`, `$_FICMISDATE$`.

Example:

```
%python
print('BATCHRUNID value is : ${$_BATCHRUNID$}')
print('TASKID value is : ${$_TASKID$}')
print('FICMISDATE value is : ${$_FICMISDATE$}')
```

- b. To access any optional parameters passed during the model execution from scheduler, use the below sample script:

```
%python
print('threshold value is : ${threshold}')
```

NOTE Threshold is the optional parameter passed during the model execution.

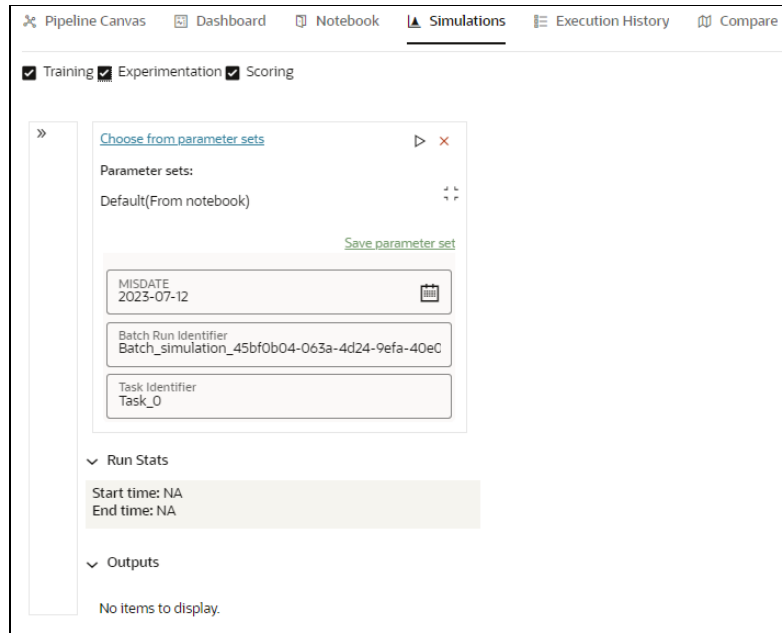

NOTE For more details on the predefined functions available in MMG for python scripting, see [Appendix -I](#).

Click  to run the script.

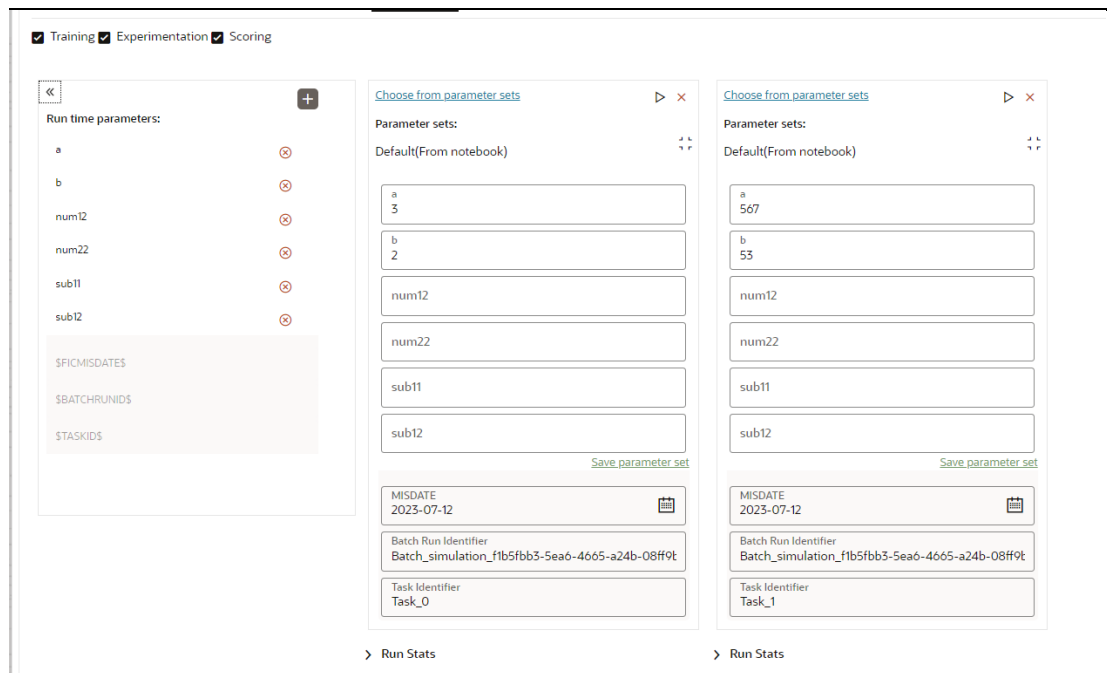

6.4.4 Simulations

Simulation run is for executing a single notebook in parallel by giving different values for same parameters. The simulation flow allows for iterative execution along that path with input drivers (variables) that are passed through a parameter set.

You can either create a new parameter set or use the existing parameter set and execute it from this tab. In addition, you can select or deselect the link types which you want to execute.

If you want to add different values for the same parameter, click **Add Run**. You can add any number of Run based on your requirements and then click **Execute all** to execute at one time. The **Batch Run Identifier** will be same for all runs and the Task id will be incremented for newly created run.

The Run Stats displays the execution start and end date. The Outputs of the tracked nodes will be shown under the inputs of each run panel.

6.4.5 Execution History

This section of Pipeline Designer shows the history of the executed pipelines.

Batch Run Identifier	Inputs	Task Identifier	Status	Outputs	Canvas view	MISC DATE	Start Time	End Time
Batch_auto_ccceb45-aa70-4bd5-b1bb-d4b56ecd7ed0	Custom	task1	▲	📄	🗑️	2023-06-26	26 Jun 2023, 16:55:16	26 Jun 2023, 16:56:15
Batch_auto_ccceb45-aa70-4bd5-b1bb-d4b56ecd7ed0	Custom	task1	▲	📄	🗑️	2023-06-26	26 Jun 2023, 16:55:13	26 Jun 2023, 16:56:17
Batch_auto_ccceb45-aa70-4bd5-b1bb-d4b56ecd7ed0	Custom	task1	▲	📄	🗑️	2023-06-26	26 Jun 2023, 16:55:10	26 Jun 2023, 16:56:14
Batch_auto_ccceb45-aa70-4bd5-b1bb-d4b56ecd7ed0	Custom	task1	▲	📄	🗑️	2023-06-26	26 Jun 2023, 16:55:07	26 Jun 2023, 16:56:17

You can compare and refresh the executions by clicking on **Compare** and **Refresh** icons.

To view the inputs, output, and canvas view, click on the corresponding options in the table.

6.4.6 Compare

This section allows you to compare the models with Champion model.

To compare, follow these steps:

Navigate to Pipeline Designer window and click **Compare** tab.

This shows the following comparison details:

- Model Properties
- Model Inputs (Last Execution Details)
- Audit Log
- Model Script
- Model Output

The screenshot shows the 'Publish Data Studio' interface with two model versions selected: 'feb08 ver 2' and 'feb08 ver 0'. The interface is divided into three main sections:

- Model Properties:** A table with columns for property name and value.

Objective	obj1	obj1
Description	test	test
Version	2	0
Language	Default	Default
Technique		
- Model Inputs (Last Execution Details):** A table with columns for input name and value.

Status of execution		COMPLETED
Start time		Feb 8, 2023, 1:08:17 PM
End time		Feb 8, 2023, 1:08:33 PM
a		2
b		2
\$FCMISDATES		2023-02-08
\$TASKID\$		task1
\$TASKID		task1
\$MISDATE		2023-02-08
\$BATCHID		Batch_auto_d3f6ab01-0b7a-4129-ac11-50f0d867d3b6
\$BATCHRUNID\$		Batch_auto_d3f6ab01-0b7a-4129-ac11-50f0d867d3b6
- Audit Log:** A table with columns for action, user, and timestamp.

Created By	MMGADMIN	MMGADMIN
Created Date	Feb 8, 2023, 1:09:24 PM	Feb 8, 2023, 1:02:20 PM
Modified By	MMGADMIN	

6.5 Publish Data Studio

After creating the Draft Models, publish the Notebooks, which have the Model script.

To create a Scoring Model, follow these steps:

1. Create a Draft Model. See the [Create Draft Models](#) section for more information.

2. Click  next to corresponding Draft Model and select **Publish Data Studio** option.

The Publish Model window is displayed.

Figure 40: Publish Model

The 'Publish Model' dialog box contains the following fields and sections:

- Model Name:** Testnewj
- Technique:** (Empty field)
- Description:** (Empty field)
- Run Version:** (Empty field)
- Script:** A table listing scripts.

ID	Title	Script
ds5alkd5	Start widget	## Do not delete this paragraph. Also, ensure that this is the first paragraph in the notebook. You may use 'Move Up/ Move Down' from Setting
- Publish:** A button at the bottom right.

3. Enter the details as shown in the following table.

Field or Icon	Description
Model Name	The field displays the name of the Model. Modify the name if required.
Model Description	The field displays the description for the Model. Enter or modify the description if required.
Technique	Enter the registered technique to use.
Run Version	Select a run version.
Script	The table displays the Paragraphs created in the Training Model. Select the Paragraphs that you want to use to create the Scoring Model. Track Output - Select this to track the output of the paragraph.

4. Click **Publish**.

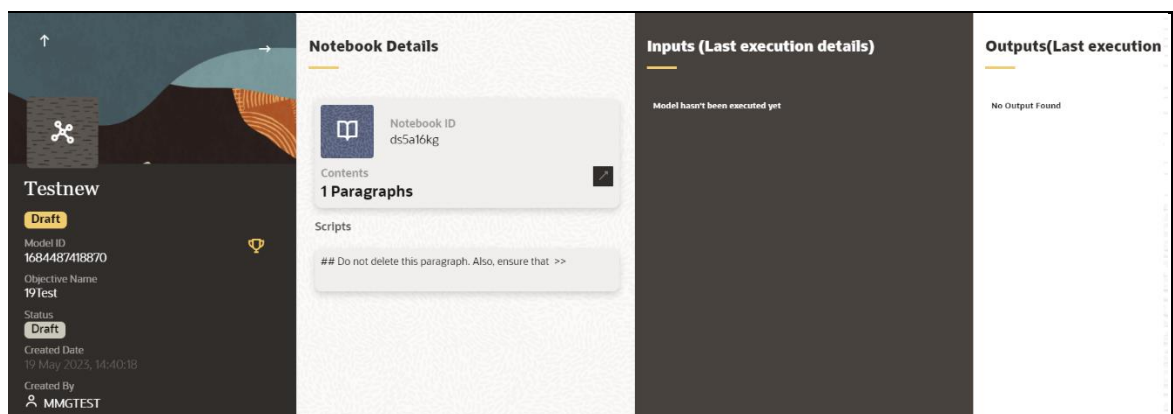

6.6 Scope Detail

To view the scope details of the model, follow these steps:

1. Click Launch Workspace  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays folders that contain models and model records in a table.
3. Click  next to corresponding Model and select **Scope Detail** option. This is available for both Draft and Published models.

The details such as Notebook, Inputs (Last execution details), Deployment Details, and Outputs (Last execution outputs) are displayed.

Figure 41: Scope Details

6.6.1 View Model Details

You can view model information for deployed models, models that require approval, and so on.

To view model details, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays folders that contain models and model records in a table.

- The  icon indicates that Model 1 is the champion

3. Hover over the model records to view the various icons.

Figure 42: Mouse over the Model

The icon actions are listed in the following:

- a.  Download
- b.  Open in Pipeline Designer. See the [Create Paragraphs using Pipeline Designer](#) section for more details.
- c.  Scope Detail. See the [Scope Detail](#) section for more details.
- d.  Delete Model.

6.7 Understand Model Governance

After comparing models, you must understand the Model Governance system in OFS MMG. The Model Governance has an impact on how the application functions with the various user types and the requests they can place from the Model Details window. You require to understand Model Governance before you request model acceptance, review models, or approve models for production.

As discussed earlier, the users are of three types:

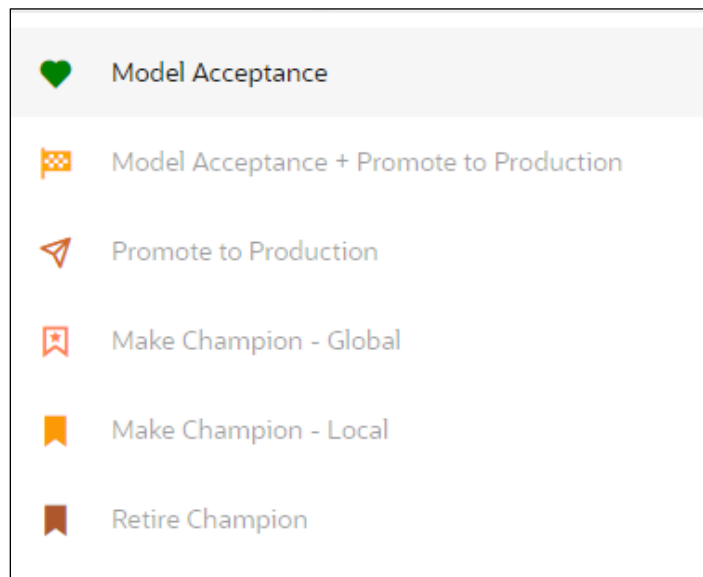

- Requester

- Reviewer
- Approver

The request consists of the following phases in the Request drop-down list (see the [Request Model Acceptance](#) section for how to access the drop-down list in the Model Deployment window):

- Model Acceptance
- Model Acceptance + Promote to Production
- Promote to Production
- Make - Champion - Global
- Make - Champion - Local
- Retire Champions

Figure 43: The Request Drop-down List

The values in the drop-down list are active based on the type of user (Requester, Reviewer, or Approver) and the phase that the model is in (accepted, promoted to production, global champion, and so on). Let us look at these with a few examples.

Example 1:

Assume that you are a user with Requester privileges, and you create a model. Now you can request for the model to be accepted on the Model Details window from the **Request** drop-down list. The values enabled for selection are **Model Acceptance** and **Model Acceptance + Promote to Production**. Let us proceed and assume that you select Model Acceptance, then a user with Reviewer privileges forwards your model to a user with Approver privileges. At this stage, the Approver can choose to reject or accept your model acceptance request. A rejection would bring the model back to the initial state with comments on the updates required before it can be requested for acceptance again. However, if the Approver accepts your model, then the **Make Champion - Local** selection

is enabled when you log in. You can create many models and send them for acceptance. After acceptance, any model that is accepted can be made the champion on your local workspace at any time replacing the earlier local champion.

Example 2:

Assume that in the previous example, you selected **Model Acceptance + Promote to Production**, then a Reviewer forwards it to the Approver. The Approver, at this stage, chooses to promote the model to production by selecting **Promote to Production**. The model is now available in the production environment and the Approver can choose at any time to select a model from these models in production and select **Make Champion - Global**. If there exists a Champion model in the production environment, then it will be replaced by the new global champion. However, the earlier champion will still be available in the production environment along with other models and the Approver can choose to make it the global champion again at any time or select any of the other models and make one of them the global champion.

6.7.1 Request Model Acceptance

After comparing models, move the selected models to acceptance. Only a user with the Requester role can request for model acceptance. The model will be moved to review which will be available to Reviewer and Approver role, and then to acceptance is available to users with the Approver role, who can promote to production. See the [Understand Model Governance](#) section before you start here.

To request a model to promote to production, follow these steps:

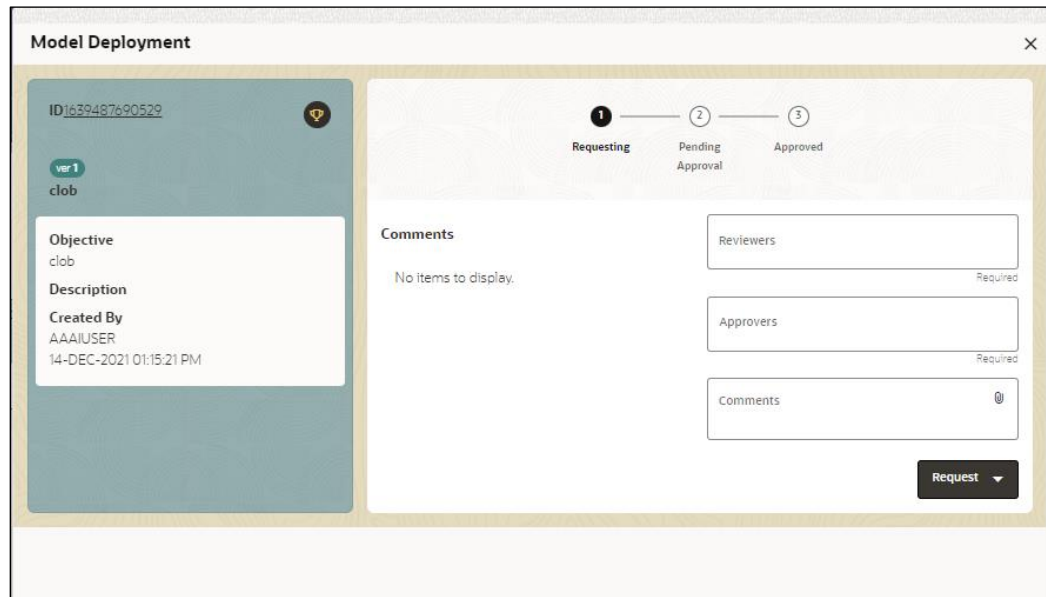

1. Click **Model Pipeline**  to display the **Model Pipeline** window.
The window displays folders that contain models and model records in a table.
2. Click on the Deploy icon on the Model to open it.
3. If a model is a champion, the  icon is displayed on it.
4. To make a model a champion from this window, place the mouse in the selected model columns. and click  to display the **Model Details** window. If a model is a champion model, the  icon is displayed.

Figure 44: Model Details Window

5. Select the Reviewer group from the **Reviewers** drop-down list.
6. Select the Approver group from the **Approvers** drop-down list.
7. Enter comments in **Comments** and click  to attach files supporting the comments.
8. Use the following features on the window to perform additional actions.
 - View the model status change in the progress indicator. The Progress Indicator displays the various states of progress that the model has been through. Accordingly, you must request, review, or approve models.

Figure 45: Model Approval Progress Indicator

- Click the type of request from the drop-down list:
 - Model Acceptance: To review and accept the model creation.
 - Model Acceptance + Promote to Production: To review and promote the model to production.
 - Make Champion - Local: If the model is not the champion model, select to make it the local champion.
 - Promote to Production: To promote a model to production
 - Make Champion - Global: If the model is not the champion model, select to make it the Global champion.

— Retire Champion: To retire a Champion model

- **Comment History:** A record of comments entered in the cycle of model creation and approval with the feature to download attachments.

The model sent for acceptance or for promotion to production is now displayed to a Reviewer to review it and then to Approver when signed in, who must either accept the request or reject it.

6.7.2 Review Models and Move to Approve or Reject

The Reviewer must provide comments describing the action (approve or reject). If comments are related to rejection and if the Approver rejects, then model goes back to the Requester to make changes or to delete it. If comments are related to approval, then model moves further in the workflow and is displayed to an Approver. See the [Understand Model Governance](#) section before you start here.

To review a model, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays folders that contain models and model records in a table.
3. Click  to display the Model Details Window.
4. Review the details and send it back to the Requester for modifications or send it to an Approver.

6.7.3 Approve Models and Promote to Production

The models reviewed and set to promote to production by either the Requester or Reviewer is displayed to the Approver when signed in. The Approver has to either reject the model and send it back to the requester with supporting comments or approve it for pushing to production. See the [Understand Model Governance](#) section before you start here.

NOTE

When dataset has used the datasource which is of order (N) for example 5 , and the Production workspace does not contain the datasources at order 5, then promotion of models containing dataset from Sandbox to Production workspace fails.

To remedy this issue, ensure that Sandbox and Production workspace contain the same number of Datasources before you perform promotion of models.

To approve or reject models, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays folders that contain models and model records in a table.
3. Select a model from the records in the objective.
4. Click  to display the Model Details Window.
5. Click **Approve** or **Reject** with appropriate comments.

6.7.4 Deploy Models in Production and Make it a Global Champion

After approving the models, deploy it to the production environment. You must have an Approver function role and privileges to do this activity.

Note: Sandbox should have the production workspace attached in order to have this option enabled.

To deploy Models in production, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays folders that contain models and model records in a table.
3. Select the model to deploy and click  to display the details of the model. If a model is a champion, the  icon is displayed.

6.8 Execute Models using Scheduler Service

The models that you have created require that they are executed using Scheduler Service before they can be available to the users of OFSAA applications. For more information on this, see the [Scheduler Service](#).

6.8.1 Defining a Task

MMG supports following three Components during the Task creation:

- Model
- Populate Workspace
- Custom

Enter the following details in Task Details section:

- **Task Name:** Enter the task name.
NOTE: The Task Name must be alphanumeric and should not start with a number. • The Task Name should not exceed 60 characters in length. The Task Name should not contain any special characters except underscore (_).
- **Task Description:** Enter the task description. No special characters are allowed in Task Description. Words like Select From or Delete From (identified as potential SQL injection vulnerable strings) should not be entered in the Description
- **Task Type:** Select the task type from the drop-down list. The options are REST and SCRIPT. You can enter Shell script for Model, Populate Workspace, Custom components. Status key in the curl command should be in uppercase as STATUS.
- **Batch Service URL:** Select the required Batch Service URL from the drop-down list. This can be blank, and you can provide the full URL in the Task Service URL field.
- **Task Service URL:** Enter task service URL if it is different from Batch Service URL.
NOTE: Task Parameters will vary based on the selected Component.

6.8.2 When Component is Model

The following window shows the Task Parameters for Model Component.

Figure 46: Task Parameters

Task Parameters			
Parameter	\$BATCHDATE\$	Value	Batch Date
Parameter	\$BATCHRUNID\$	Value	BATCHRUNID
Parameter	Objective	Value*	<input type="text" value="Click to select param va..."/>
Parameter	Model	Value*	<input type="text" value="Click to select param va..."/>
Parameter	Link types	Value	<input type="text" value="Click to select param value"/>
Parameter	Synchronous Execution	Value	<input type="text" value="Click to select param value"/>
Parameter	Optional Parameters	Value	<input type="text"/>

NOTE: Fields marked with * are mandatory fields.

- **Batch Date:** Shows the batch execution date. You can enable or disable this parameter.
- **Batch Run ID:** Shows the batch execution run ID. You can enable or disable this parameter.
- **Objective:** Select the Object which you want to use for execution. For more information, see the Create Objective (Folders) section. The Sub Objective is displayed with path. For example, if Test1 is Objective and Test11 is Sub Objective, and you want to use Test11 Objective for execution, then select this field as Test1/Test11.
- **Model:** Select the Model of selected Objective. It can be any specific model of Objective or All models of Objective.
 - If the ALL_CHAMPION is selected here, then Objectives with no Champion Model is skipped, and the Objectives with Champion Models gets executed.
 - If CHAMPION is selected, and no Champion is present, then Model Execution gets fail.
- **Link Type:** Select the link type for execution. For example: Training, Scoring, or Training+Scoring. For more information, see the Links in the Pipeline Designer section.
- **Synchronous Execution:** You can set this parameter to Yes or No.
 - If Synchronous Execution is set to Yes, then execution will wait for the notebook execution status.

- If Synchronous Execution is set to No, then execution will not wait for the notebook execution status, it will trigger the notebook and update task status as successful in batch monitor.

- **Optional Parameters:** This is used pass the parameters dynamically.

For example:

model_group_name=LOB1,benford_flag=Y,benford_digit=1,from_date=01-Jul-2020,to_date=31-Jul-2021

Model_group is parameter defined in model and value can be passed here.

The Create Task window also shows the following Header Parameters, which are not editable:

- User: logged in user name
- Workspace: shows the launched workspace name
- Locale: shows the locale. For example: en_US

6.8.3 When Component is Populate Workspace

If you select Component as Populate Workspace, then to use the data population, enter the following parameters

- Additional Parameters
- Table Filters
- Global Filters

For more information, see the [Populating Workspace](#) section.

6.9 Import a Model Data into a New Model

The model data from existing models in OFS MMG in .dmp format and the existing model data in MMG in .dsnb can be imported during the creation of a new model.

Note: The import should happen inside an Objective only.

The import of model data lets you reuse and extend on model creation. This topic is part of the procedure of creating Draft Models and after creating a new model using this method, see the [Create Draft Models](#) section for instructions on how to proceed further.

To import model data, follow these steps:

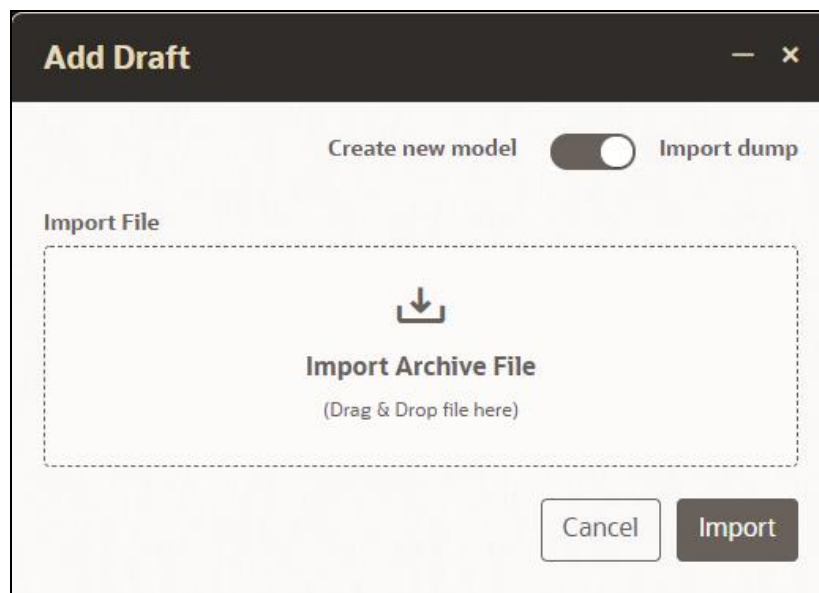

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window. The window displays folders that contain models and model records in a table.
3. Select an **Objective**.
4. Double click a model to display the model versions in the expanded display.
5. Hover over a model and click  to download the model data dump.
6. Click **Add** and  Drafts to display the **Model Details** dialog box for the creation of a new model.

Figure 47: Model Details - Import Dump

7. Drag the toggle switch to select **Import Dump**.
8. Drag and drop the file into the **Import Dump File** field or click in the box to open the file selector dialog and select a file.
9. Click **IMPORT**. A new model is created by importing the model data dump of another model.

6.10 Import / Export Models via Utility

You can import and export the models between Sandbox to Production or vice versa using the Utility.

Prerequisite:

Before you import, ensure the Model artifacts are available in the <installed path>/ftpshare.

To import the models, perform the following steps:

1. Navigate to <MMG_PACK>OFS_MMG/bin and execute in the following format:

```
./model_export_import_utility.sh IMPORT WORKSPACE LOGIN_USER  
LOCALE FILE_NAME Y/N
```

Example:

```
./model_export_import_utility.sh IMPORT CS SAUSER en_US  
CS_1638105398036_0.zip Y
```

Field	Description
Import	Command to import the Model into Workspace
Workspace	The name of the Workspace to which you are importing the Model
Login_User	The logged in user name.
Locale	The application language preferences For example: en_US
File_name	The file name with the following format: Workspace name_Model ID_Model version.zip For example: CS_1638105398036_0.zip

NOTE If you enter input as **Y**, the utility imports the models in the approved status.
If you enter as **N**, the models are imported but not in the approved status.

To export the models, perform the following steps:

Prerequisite:

Before you export, ensure the Models and Drafts are available in the UI / setup.

1. Navigate to <MMG_PACK>OFS_MMG/bin and execute in the following format:

```
./model_export_import_utility.sh EXPORT WORKSPACE LOGIN_USER  
LOCALE MODELID MODEL_VERSION
```

Example:

```
./model_export_import_utility.sh EXPORT CS SAUSER en_US
1638105398036 0
```

Field	Description
Export	Command to export the Model from the Workspace
Workspace	The name of the Workspace from which the model is exported
Login_User	The logged in user name.
Locale	The application language preferences. For example: en_US
Model ID	The Model ID
Model Version	The version of the Model

6.11 View Models

The View Models feature launches the OFS MMG Data Studio window. You can view models on this window.

To use View Models, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window. The window displays folders that contain models and model records in a table.
3. Click  next to corresponding Model and select Open in Pipeline Designer. See the [Create Paragraphs in Pipeline Designer](#) sections for details on how to use the OFS MMG Data Studio.

6.12 Edit Models

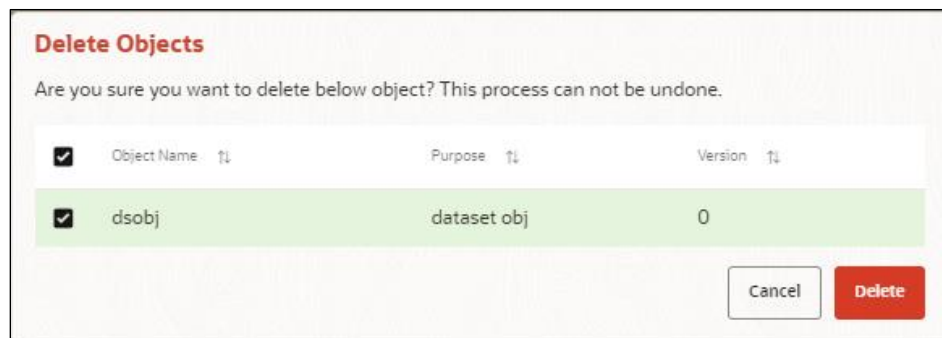

The editing of models created versions that are different from the previously saved model and the cycle of [Model Governance](#) applies to any edited model. You can edit models from the OFS MMG Data Studio window using Python scripting language.

You can edit the script of version 0 only even in Pipeline Designer and Studio. It is not possible in other versions.

6.13 Delete Objectives and Draft Models

To delete Objectives and Models that exist in the Objectives, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Pipelines**  to display the **Model Pipelines** window.
The window displays objectives that contain models and model records in a table.
3. Click  next to corresponding record (objective/draft) and select Delete .
4. You can select two or more objectives or models from the records.
5. Click  to display the Delete dialog box.
6. Click **Delete** to delete or click **Cancel** to cancel.

NOTE If the Model is promoted to Production, you cannot delete the model even it is retired.

6.14 Programmatic Dynamic Forms and Fixed Dynamic Forms

The Programmatic Dynamic Forms and Fixed Dynamic Forms scripts are supported.

A dynamic form is a user input field that is generated from the code of a paragraph. Dynamic forms allow users to bind free variables in a paragraph.

For Example:

Textbox

The Textbox dynamic form allows users to input any string of characters. Its format is as follows:

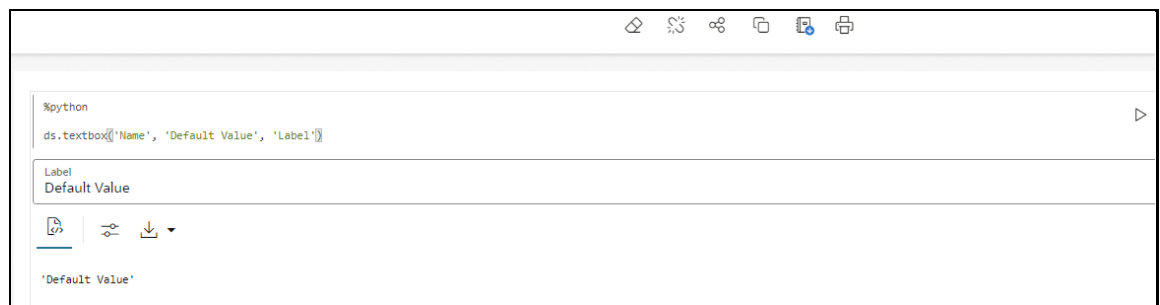

1. Click **Add Python Paragraph** in Model Studio to add a Paragraph in the Notebook and fetch the runtime parameters supported in Model Studio runtime as shown in the following example. This is available for all the interpreters.

For example, enter as follows:

```
%python
```

```
ds.textbox('Name', 'Default Value', 'Label')
```

Click  to run the script and display.

NOTE

In the current release, the MMG Studio supports Textbox, Select, Slider, Checkbox, Date Picker, Time Picker and DateTime Picker dynamic forms.

For more details on the sample dynamic scripts, see

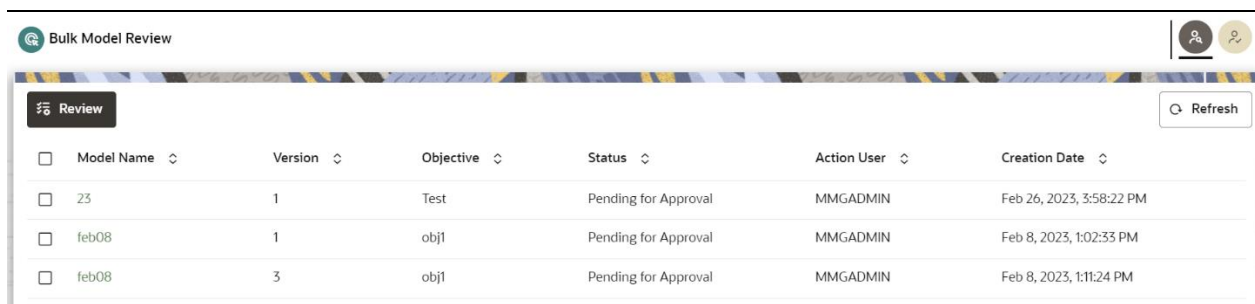

<https://datastudio.oraclecorp.com/docs/user/pages/features/notebooks/dynamic-forms/dynamic-forms.html#dynamic-forms>

7 Model Actions

The Model Actions window allows you to view the list of models for which the Workflow action has been taken which requires review or approve across the workspace.

For example, when any Model User sends and Model for review or approval, the user receives the bulk Models in Model Actions window for review or approval. This helps when lot of models are received for review before deployment or some actions need to be performed on many models, such as making models champion locally or globally, and so on.

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Model Actions**  to view the list Models pending for action.

<input type="checkbox"/>	Model Name	Version	Objective	Status	Action User	Creation Date
<input type="checkbox"/>	23	1	Test	Pending for Approval	MMGADMIN	Feb 26, 2023, 3:58:22 PM
<input type="checkbox"/>	feb08	1	obj1	Pending for Approval	MMGADMIN	Feb 8, 2023, 1:02:33 PM
<input type="checkbox"/>	feb08	3	obj1	Pending for Approval	MMGADMIN	Feb 8, 2023, 1:11:24 PM

If you are a reviewer, Review Models screen is displayed and if you are an approver, Approve Models screen is displayed. This can be toggled in the header of the screen using Reviewer and Approver icon.

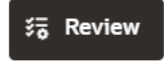

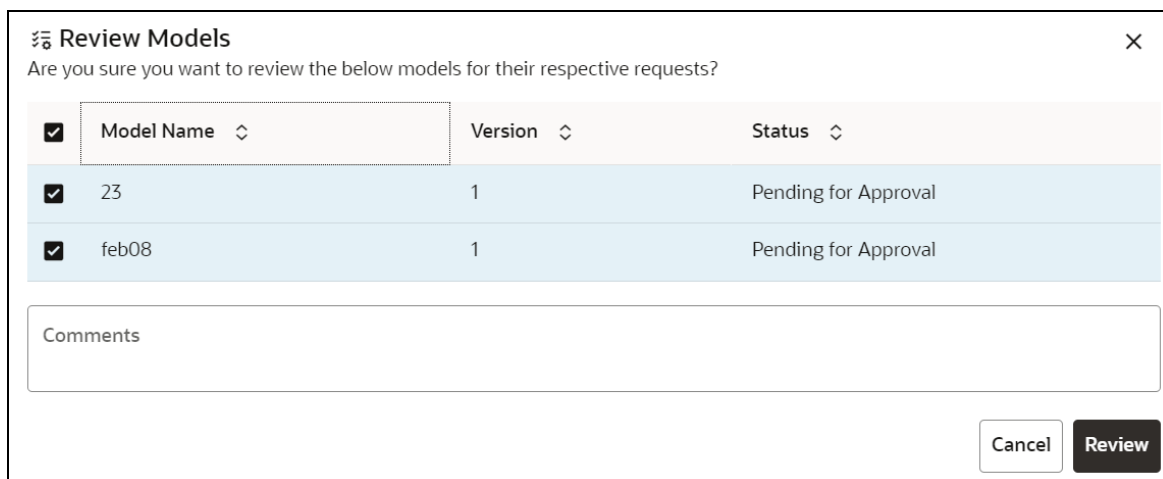

3. To review the model, follow these steps:
 - a. Select the Model using the corresponding check box and click Review .
 - b. Enter the comments in Comments field of the Review Models window and click **Review**.

Figure 48: Review Models window

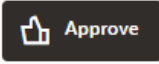

Review Models X

Are you sure you want to review the below models for their respective requests?

<input checked="" type="checkbox"/>	Model Name	Version	Status
<input checked="" type="checkbox"/>	23	1	Pending for Approval
<input checked="" type="checkbox"/>	feb08	1	Pending for Approval

Comments

4. To approve or reject the models , follow these steps:

- a. To approve or reject the model, follow these steps: Select the Model using the corresponding check box and click  or  .
- b. Enter the comments in Comments field of the Approve Models window or Reject Models window and click Approve or Reject.

Approve Models ✕

Are you sure you want to approve the below models for their respective requests?

<input checked="" type="checkbox"/>	Model Name 	Version 	Status 
<input checked="" type="checkbox"/>	23	1	Pending for Approval
<input checked="" type="checkbox"/>	feb08	1	Pending for Approval

8 Graph Pipeline

Unlike traditional relational database management systems, the Graph Pipeline feature allows you to view the data relationships in a graphical format.

This feature uses the latest technology to harness the power of Graph Analytics to give Financial Institutions the ability to monitor the data financial institutions effectively. The data is organized as nodes, relationships, and properties (property data is stored on the nodes or relationships). The results of analytics algorithms are stored as transient properties of nodes and edges in the Graph.

Users can harness the power of Graph Analytics using our in-built in-memory Oracle Graph Analytics Engine (PGX).

The Graph Pipeline functionality allows users to define graphs easily, attach underlying data, and match pipelines to populate data in the graph.

The Graph Pipeline functionality allows users to quickly create and configure a graph for use in advanced analytics. It can also manage and schedule the tasks required to run populate the graph on a periodic basis.

The MMG application allows you to perform the following using Graph Pipeline:

- Creating Graph Model from their existing relational data model
- Configuring the Graph Model through Pipeline UI
- Creating and Scheduling the data pipeline and matching (creation of similarity relationships) for created Graph Model
- Adding new sources and contextualizing the links quickly
- Standardizing the data before pushing it to Graph Model
- Using the following data source for Graph Model:
 - Oracle
 - File System (CSV)
- Using BD data source definitions for pre-seeded Workspace
- Using pre-configured Financial Crime Graph Model pipelines
- Using pre-seeded mappings of Graph Model properties with BD Data source properties
- Scheduling to create Graph by running pre-configured batches
- Blending data and getting insights from data quickly
- Load data into elastic search indexes so matching and entity resolution can occur in the graph
- Define matching rules for the generation of similarity edges in the graph.

The following figure is an example of the preconfigured Financial Crime Graph Model with Nodes and Edges:

Figure 49: Example of Graph Model

The Graph Model defines the nodes and the relationship between them:

- **Node:** It represents a single entity with its attributes. The entity can be a single table or combination of tables merged on some common feature, it could be from a file, or any generalized component of multiple substructures merged for a specific reason/objective.

For example, Customer.

A customer could be a single entity.

Customer, Salesperson, Manager, and so could be individual entities that can be structured together as a “Person” entity with a set of attributes persisted across individual entities.

- **Edge:** Edge is a connector between nodes or the same Node itself. Each edge can have a set of attributes associated with it. These edges will map to 'join' between two entities that could be direct or transitive.
- **Modeler Attributes:** Modeler attributes are the properties of Node/Edge, and these are mandatory inputs.

For example:

Customer Node will have properties like Customer ID, Name, Age, Gender, etc.

A Transaction edge will have properties like Transaction ID, Date, Amount, From/To account, etc.

See the [Adding a Graph Pipeline](#) section for creating Graph, Nodes, Edges, and Scheduling

8.1 Accessing the Graph Summary Page

The Graph Summary page gives access to the various graph pipeline functions such as create, view and delete.

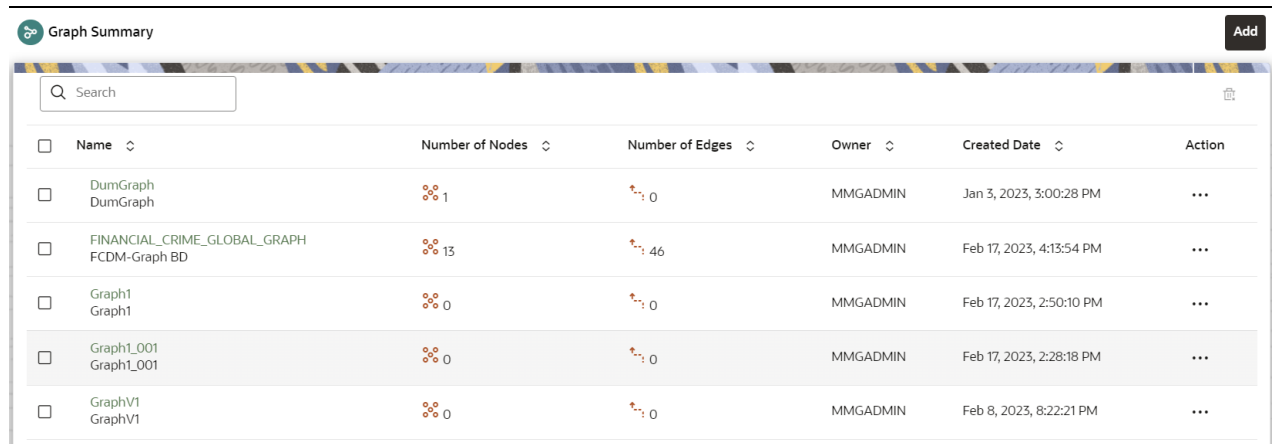

To access the Graph Summary page, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.

2. Click the **Graphs**  icon .

This displays the graph pipeline in a table.

Figure 50: Graph Summary Page

The following table provides descriptions for the fields and icons on the **Graph Summary** page.

Table 6: Graph Summary Details

Field or Icon	Description
Search	The field to search for a graph pipeline. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.
Name	The name of the graph pipeline.
Number of Nodes	The number of nodes present in the graph pipeline.
Number of Edges	The number of edges present in the graph pipeline.
Owner	The owner of the graph pipeline.
Created Date	The date on which the graph pipeline was created.
	Click to delete multiple graph pipelines.
	Click to create a new graph pipeline. See Adding a Graph Pipeline section.
	Click Action icon to View/Edit/Delete/Download functions on the selected graph pipeline.

8.1.1 Adding a Graph Pipeline

To add a graph pipeline, follow these steps:

1. Navigate to Graph Summary page.

This page displays the graph summary records in a table.

2. Click **Add**.

The **Add Graph** pop-up window is displayed.

Figure: Add Graph Window

3. In the **Graph Name** field, enter a name for the graph pipeline.
The name must be unique to a particular workspace.
4. In the **Graph Description** field, enter the description for the graph pipeline and click **Add**.

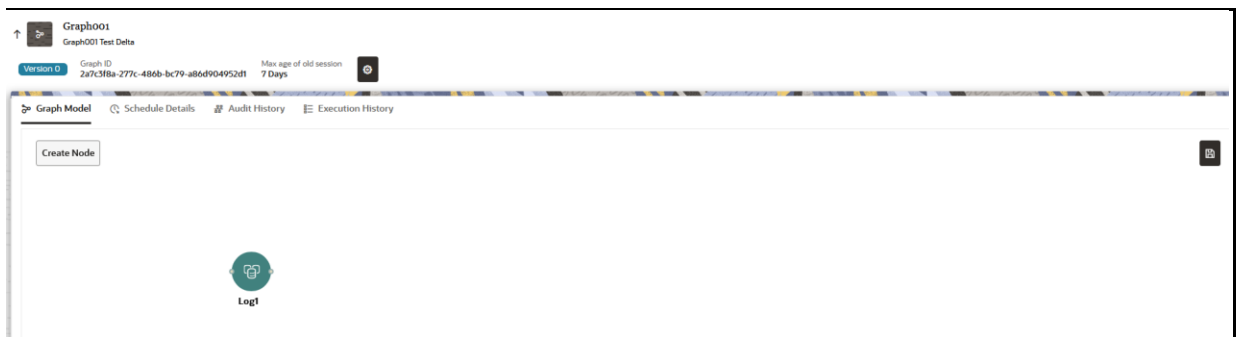

OR

You can import an existing Graph. Use the toggle button to select **Import Dump**.

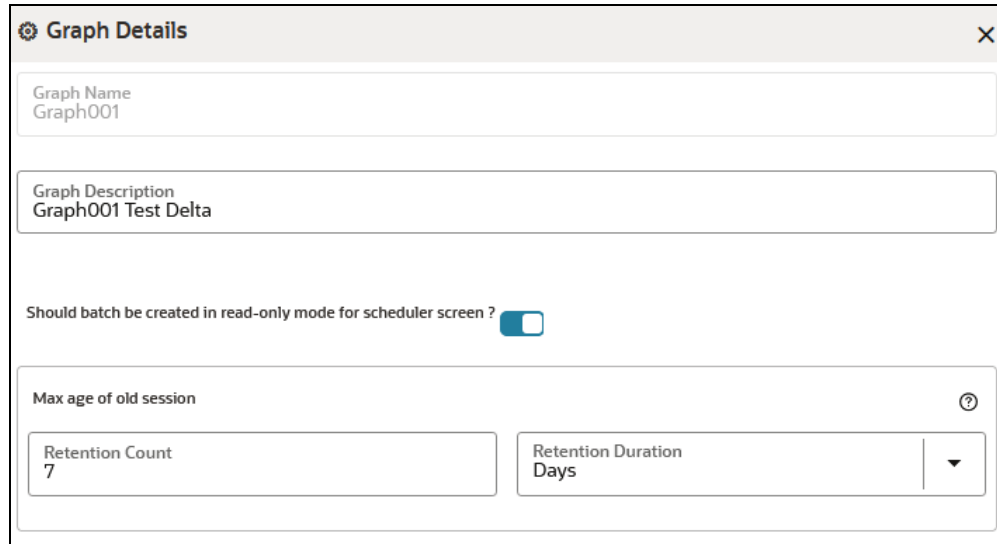

The following page is displayed.

Figure: Import Dump

Browse the file and click **Import**. Once the Import is successful, the Graph Model page is displayed.

The Maximum Age of Old session for a graph is 7 days by default. The Maximum age of old session of 7 days specifies that graph would be retained for a period of 7 days. You can modify the description and Max Age of Old session by clicking on the Setting  icon. If you want the batch to be created in read-only mode for scheduler screen, enable the option.

5. Click **Save**.

The user session of the Graph Pipeline will get refreshed after the set timeline

6. You can perform the following:

- a. [Creating a Node](#)
- b. [Creating an Edge](#)
- c. Toggle drawing which will enable or disable the user from dragging components
- d. [Zoom In and Zoom Out](#)

8.1.2 Creating a Node

To create a Node, follow these steps:

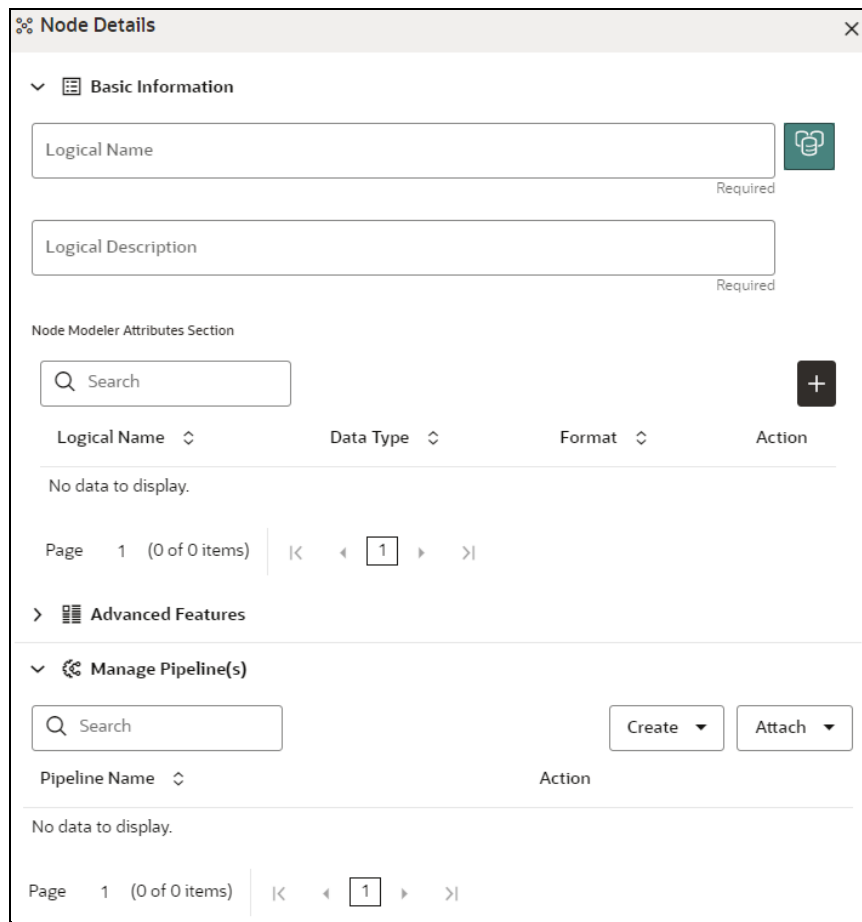

1. In the Graph Model page, click **Create Node**.

OR

Select the graph pipeline for which you want to create a Node, click on the **Action** button, and select the **Edit** option. In the Graph Model page, click **Create Node**.

The **Node Details** screen is displayed.

Figure : Node Details

2. In the **Logical Name** field, enter a name for the Node or click **Setting** icon . The **Setting** pop-up window is displayed.

Figure: Setting

3. Select the required representation from the above Node icon.
For example: Person, Institution, Account etc.
Hover over the icon to view the definition of the node.
4. Based on your selection, the related Nodes are displayed. Select the Node, and you can choose the required color for the Node using the **Select Color** option.

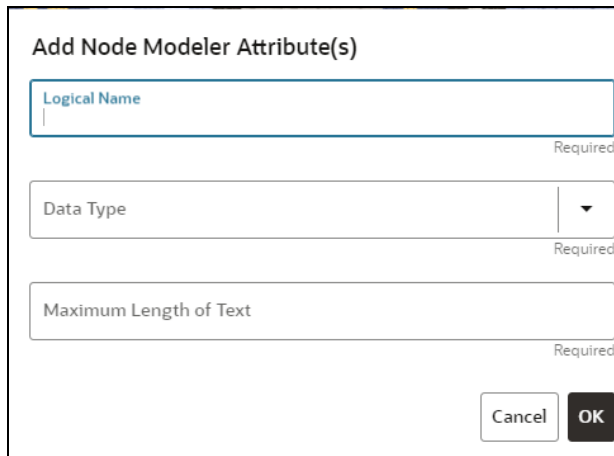

- The selected Node is displayed on the graph pipeline. To add attributes to the Node, click **Add** icon .

Modeler attributes are the properties of Node/Edge, and these are mandatory inputs.

For Example:

Customer Node will have properties like Customer ID, Name, Age, Gender, etc.

The **Add Node Modeler Attribute(s)** screen is displayed.

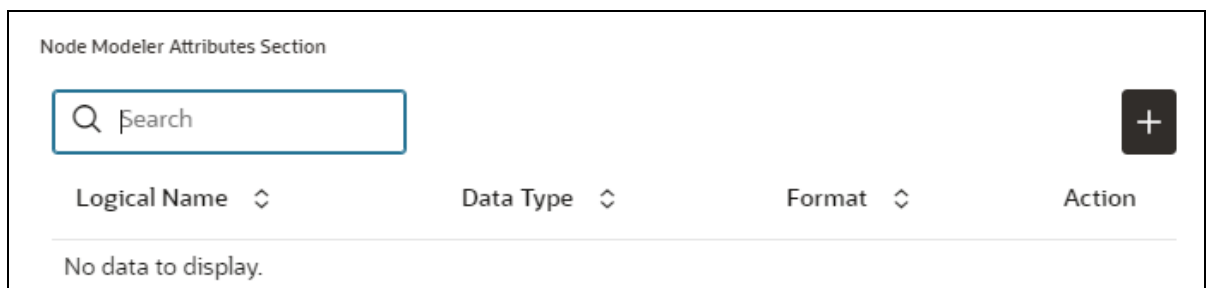

- In the **Logical Name** field, enter the logical name for the modeler attribute.
This field is mandatory.
- Select the data type based on your requirements in the **Data Type** field drop-down.
The available data types are Text, Number, and Date. This field is mandatory.
Based on the data type selection, the following input field is displayed.
For example, the **Maximum Length of Text** field is displayed if the data type is selected as Text.

NOTE Ensure the Maximum Length attribute is set to at least the field's length from which the data is to be populated.

- Enter the data and click **OK**.
The Node attributes are displayed on the Node Details page below.

Figure: Search

You can add any number of modeler attributes based on your requirements by clicking on the Add icon.

- Under the **Advanced Features** group, select the modeler attribute from the Column Identifier drop-down. All the created modeler attributes are displayed under this drop-down.

Figure: Advanced Features

Under the **Manage Pipeline(s)** group, you can either create a new data pipeline or attach the existing pipeline.

The application uses data pipelines to prepare filtered data which can be used to create and run scenarios. Data pipelines prepare data by selecting and joining data sources to create virtual data tables, adding derived attributes to data, running derivations on the data to determine the risk associated with the entity, and so on.

NOTE The newly created data pipeline is not automatically added to the Node. You must attach the pipeline using the **Attach** drop-down option.

The selected data pipeline is displayed under the Manage Pipeline(s) group.

Figure: Manage Pipeline(s)

- Click **Create** drop-down and select **Data Pipeline**.

The Create Pipeline window is displayed.

Figure: Create Pipeline

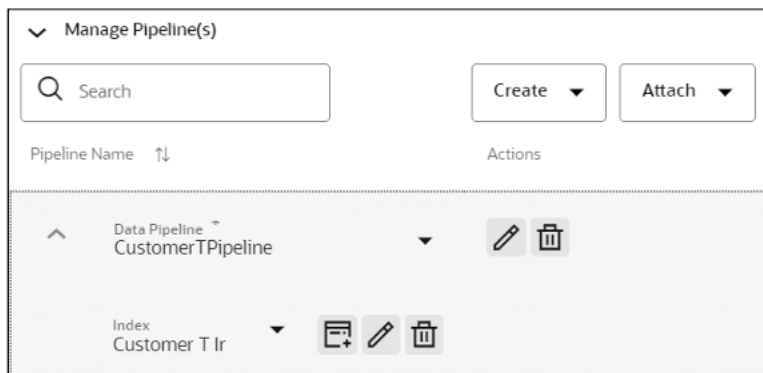

11. Select the **Create New Data Pipeline** option and then click **Ok**.

The **Pipeline Designer** page is displayed.

- To create a data pipeline, see the [Managing Data Pipeline](#) section.
- OR
- To clone from an existing data pipeline, see the [Cloning from an Existing Data Pipeline](#) section.

NOTE The Persist of the Data pipeline of the corresponding node should be defined with the prescript. see the [Prescript Condition](#) section for more details.

Figure: Create an Index

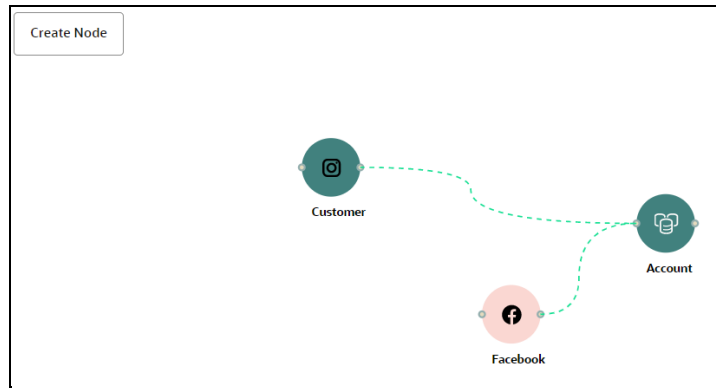

- To define an index for the data pipeline, see the [Defining an Index](#) section.

12. By clicking on the **Attach** drop-down, you can add any number of data pipelines to the Node-based on your requirements.

13. Click **OK**.

The Node is created with pipeline Facebook and an account attached to it.

Figure 51: Graph with Node and Edge

8.1.3 Creating an Edge

An Edge can be used to connect two different nodes or connect to itself. When compared to nodes, edges also capture the basic information like name, description, attributes to an edge, and possible pipelines that can be attached to an edge.

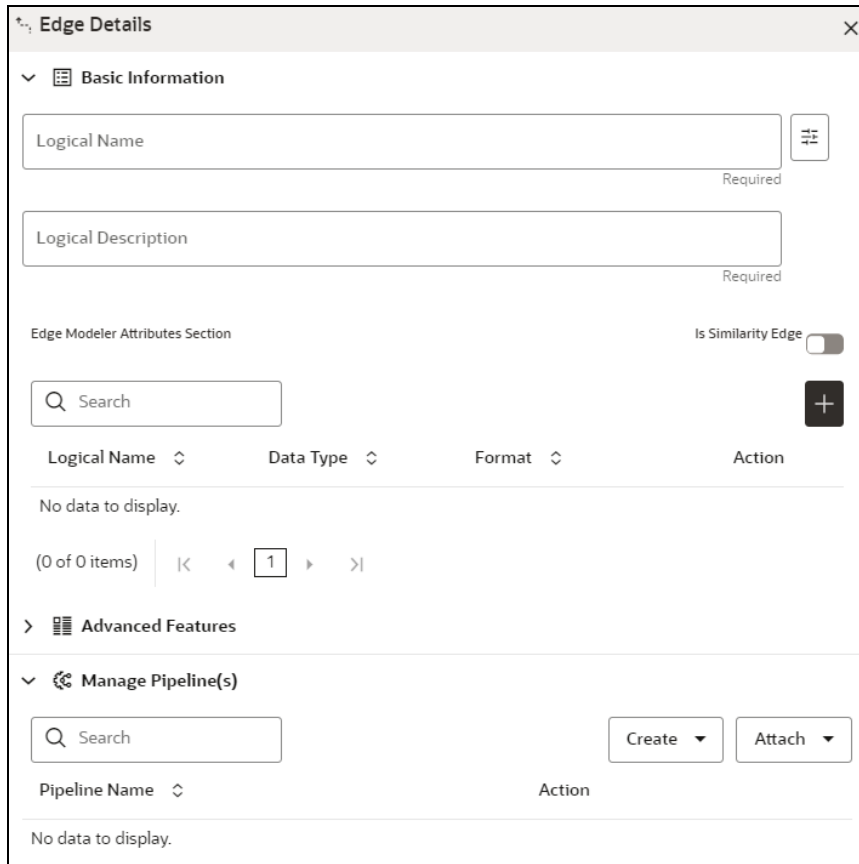

Figure: Edge

To create an edge, perform these steps:

1. Hover on the Node to create a relationship between them.
The **Edge Details** screen is displayed.

Figure: Edge Details

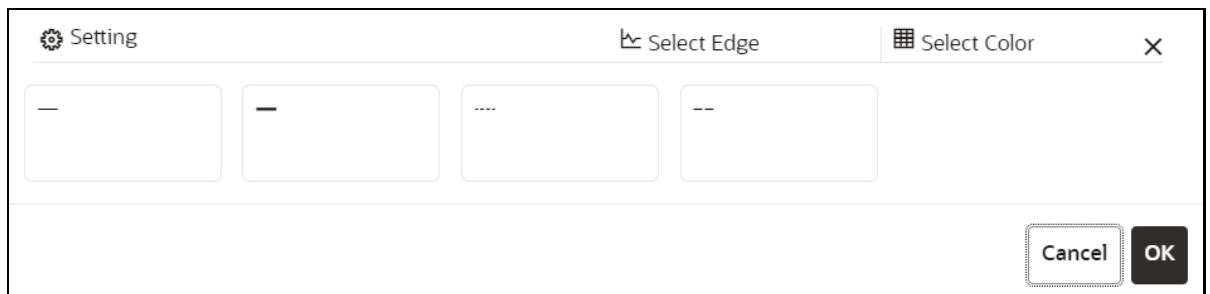

- In the **Logical Name** field, enter the Node's name or click the Setting icon . The **Setting** pop-up window is displayed.

Figure: Setting

- Select the required edge from the options displayed and choose the required color for the edge using the **Select Color** option.
- Click **OK**.
The selected edge is displayed on the graph pipeline
- To add attributes to the edge, click **Add** icon . The **Add Edge Modeler Attribute(s)** screen is displayed.

6. In the **Logical Name** field, enter the logical name for the edge attribute.
This field is mandatory.
7. In the **Data Type** drop-down, select the data type based on your requirements.
The available data types are Text, Number, and Date. This field is mandatory.
Based on the data type selection, the following input field is displayed.
For example, the **Maximum Length of Text** field is displayed if the data type is selected as **Text**.
8. Enter the data and click **Ok**.
The edge attribute is displayed on the Edge Details page.

Figure: Search

Logical Name	Data Type	Format	Action
Test	Text	Maximum Length of Text 30	

By clicking on the **Add** icon, you can add any number of edge attributes based on your requirements.

OR

Figure: Edge Details

Edge Modeler Attributes Section Is Similarity Edge

Search

Logical Name	Data Type	Format
Edge ID	Number	22
Source ID	Text	100
Target ID	Text	100
Label	Text	100
Source	Text	100

Drag the toggle button to **Is Similarity Edge** in the **Edge Modeler Attributes Section** to add the pre-defined set of attributes available in the edge.

Similarity edges in the graph are created by Match Rules. If the edge is defined using Match Rule (under Manage Pipeline, by selecting Match Rule from drop down), the toggle button should be enabled to make it a Similarity Edge.

- Under the **Advanced Features** group, you can specify the Edge Retention Policy.
For example, An Edge Retention Policy of 7 Days specifies that the current edge would be retained in the physicalized Graph for a period of 7 Days.
- Enter the retention count and select the retention duration from the drop-down.

The available retention durations are Days, Weeks, and Months.

Retention Policy ?

Retention Count: 5

Retention Duration: Days

- Enable the **Pluggable Attribute**, then the corresponding drop-down will contain the list of attributes of the Edge.

Pluggable edges are those edges whose data can be directly plugged in to the graph. In Financial Crime and Compliance domain, Transaction is a pluggable edge, which is generally large and is difficult to find out difference/ delta between two subsequent loads. Hence, it's data is provided for a range of dates which can be directly plugged in to the PGX memory while refreshing the graph.

Any pluggable edge should have an identifier attribute, which is of "Date" data type.

Figure: Pluggable Attribute

Pluggable Attribute

Is Pluggable

Pluggable Attribute Required

- Under the **Key Attributes** field, select the Column, Start, and End identifier from the respective Identifier drop-down. Without these attributes, an edge cannot be created.

All the created edge attributes are displayed under this drop-down.

- Under the **Manage Pipeline(s)** group, you can either create a new data pipeline if the edge is coming from source data and Match Rules, if a similarity edge is to be created between nodes or attach the existing pipeline and Match Rules.

Figure: Manage Pipeline(s) for Edge

- Click **Create** drop-down and then select the **Data Pipeline**.
The **Create Pipeline** window is displayed.

Figure: Create Pipeline

- Select the **Create New Data Pipeline** option and then click **OK**.
The Pipeline Designer page is displayed.

- To create a data pipeline, see the [Creating a New Data Pipeline](#) section.
- OR
- To clone from an existing data pipeline, see the [Cloning from an Existing Data Pipeline](#) section.

NOTE The Persist of the Data pipeline of the corresponding edge should be defined with the prescript. See the [Prescript Condition](#) section for more details.

- Click **Create** drop-down and then select the **Match Rules** from the **Manage Pipeline(s)** group.
The **Create Pipeline** window is displayed.

Figure: Create Pipeline

17. Select the Create New Match Rule option and then click Ok.

The Create Match Ruleset window is displayed

- To create a Match Rule, see the [Creating Match Ruleset](#) section.
- OR
- To clone from an existing match rule, see the Cloning Ruleset (Match) section.

NOTE The newly created data pipeline and match rule are not automatically added to the edge. You must attach using the Attach drop-down option.

The selected data pipeline/match rule is displayed.

Figure: Create Pipeline

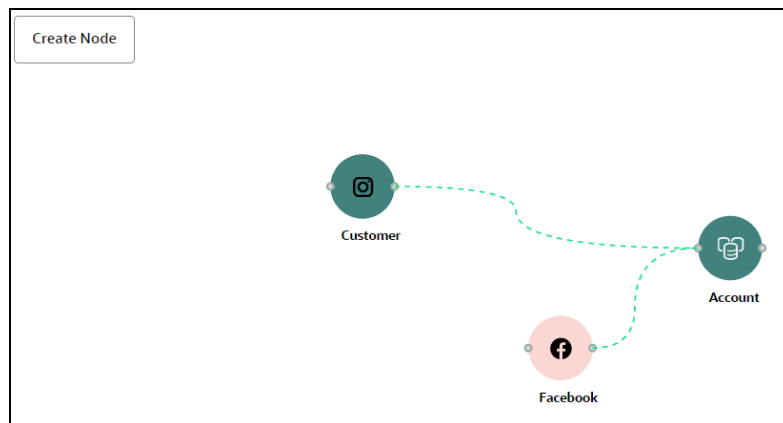

By clicking on the **Attach** drop-down, you can add any number of data pipelines/match rules to the Node-based on your requirements.

18. Click **OK**.

An Edge is created between the Customer, Facebook, and Account.

Figure 52: Graph page

8.1.4 Zoom In and Zoom Out

You can zoom in or zoom out of the graph pipeline and view the data pipelines using the diagram present in the bottom right corner of the page.

- Click  to zoom in on the graph pipeline.
- Click  to zoom out the graph pipeline.
- Click  to view the data pipelines.

8.1.5 Editing a Graph Pipeline

To edit a graph pipeline, perform these steps.

1. In the **Graph Summary** page, select the graph pipeline you want to edit, click the **Action** icon, and select **Edit**.
2. In the **Graph Name** field, modify the graph pipeline name.
The name must be unique to a particular workspace.
3. Click Setting  icon
4. In the **Graph Description** field, enter the description for the graph pipeline and click **Save**.
The following page is displayed.

Figure: Graph page

The Maximum Age of Old session for a graph is 7 days by default. The Maximum age of old session of 7 days specifies that graph would be retained for a period of 7 days. You can modify the description and Max Age of Old session by clicking on the Setting  icon. If you want the batch to be created in read-only mode for scheduler screen, enable the option.

5. Click **Save**.

The user session of the Graph Pipeline will get refreshed after the set timeline.

8.1.6 Deleting a Graph Pipeline

To delete a graph pipeline, perform these steps.

1. On the **Graph Summary** page, select the graph pipeline you want to delete, click the **Action** icon, and select **Delete**.

To delete multiple graph pipelines, select the graph pipelines which you want to delete and click

Delete icon in the Header..

8.1.7 Editing a Node

To edit a node, perform these steps.

1. On the **Graph Summary** page, select the graph pipeline you want to edit, click the **Action** icon, and select **Edit**.
2. Hover over the graph pipeline and click **Edit** icon.

The **Node Details** page is displayed.

Figure: Edit Node

3. Perform the steps from 3 to 12 in the [Creating a Node](#) section.

NOTE

If you delete any attribute in the Node Modeler Attribute section of the Node Details page, you must delete the same attribute in the match rule details.

For example:

If the edge has two match rules and one is attached, and another match rule is not attached to the edge details. You need to remove attributes in both match rules for this case. To remove the deleted attribute from the Node Details page in the unattached match rule, perform the following:

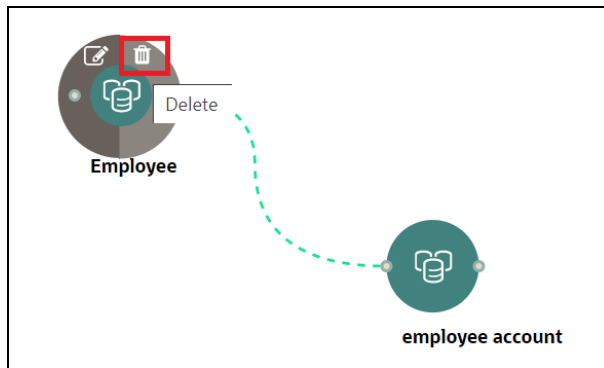

1. Navigate to **Edge Details > Manage Pipeline(s) > Attach**. Attach the new match rule, which is not attached to the node details.
2. Click **Edit** icon and delete the attribute in the Ruleset Details, which is removed from the Node Details page.
3. Click **Save**. The attribute is removed.
4. Click **Delete** in Manage Pipeline(s) of the Edge Details page to remove the attached match rule.
5. After saving in the Edge Details page, navigate to the Node Details page and delete the attribute again.
6. Click **OK**. The attribute is removed from the node.

8.1.8 Deleting a Node

To delete a node, perform these steps.

1. On the **Graph Summary** page, select the graph pipeline you want to edit, click the **Action** icon, and select **Edit**.
2. Hover over the graph pipeline and click **Delete** icon.

Figure: Delete Node

A confirmation dialog is displayed.

3. Click **Delete**.
The Node is deleted.

8.2 Schedule Details

NOTE Currently, when you execute a Graph pipeline for the first time and navigates to the "Monitor Batch" screen, two "run ids" are generated for that batch.

To create a Graph Refresh Schedule, perform these steps.

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click the **Graphs**  icon .
This displays the graph pipeline in a table.
3. Click on the graph for which you want to create refresh schedule.
The **Graph Model** page is displayed.
4. Navigate to **Schedule Details** page and click **Add Schedule**.
The **Manage Schedule** screen is displayed.

5. In the **Schedule Name**, enter the desired name.
6. Select the **Schedule** Type from the options.

Based on the schedule type, the following input field is displayed.

NOTE For more details and expressions of cron schedule type, click the **help** icon.

7. Click inside the **Select Task** field and select the tasks. You can select multiple tasks.
8. Click **Next** and add the values for the selected task, and the values are mandatory fields.

Figure: Add Optional Parameters

9. Click + icon to add optional parameters for the selected task.

For the Pre-configured Data pipeline, respective Key fields will be displayed. You can configure the respective key-value in the Value field as required and specified in the following table:

Table: Optional Parameters for Data Pipeline

Name	Description	Default Value
\$GRAPH_SCHEMA	Oracle wallet alias of graph schema. Navigate to <OFS_COMPLIANCE_STUDIO>/wallet/ tnsnames.ora and check the Graph Schema alias name. For example, graph_schema_alias	
\$BD_SCHEMA	Oracle wallet alias of BD schema. Navigate to <OFS_COMPLIANCE_STUDIO>/wallet/ tnsnames.ora and check the BD Schema alias name. For example, bd_schema_alias	
\$RUNTYPE\$	Indicates Run type. It can be either a production batch or a test batch. If it is a production batch, set it as PROD and TEST for the test batch.	PROD
\$batchRunType\$	Indicates Batch Run type. It can be either run or re-run. If it needs to execute once, set it as RUN and RE-RUN for re-executing after failure.	RUN
\$BATCTYPE\$	Indicates the batch type. It should be DATA for the data pipeline task.	DATA
\$JOBNAME\$	Name of the data pipeline to be executed.	

- To add Match Rules, enable the Process Matching Rule option and click + icon to add optional parameters.

For more information on Match Rule, see the [Creating Match Ruleset](#) section.

Figure: Process Matching Rule

For the Pre-configured Match Rules, respective Key fields will be displayed. You can configure the respective key-value in the Value field as required and specified in the following table:

Table: Optional Parameter for Match Rules

Name	Description	Default Value
datasource	Oracle wallet alias of graph schema. Navigate to <OFS_COMPLIANCE_STUDIO>/wallet/ tnsnames.ora and check the Graph Schema alias name. For example, graph_schema_alias	-
loadType	Execution Load Type. Available types are full and delta. In this release, only the full mode is supported.	full
processingGroupName	Logical processing group name for the batch. You should set it as MAN.	MAN
basedOnPipelineId	Match rules can be executed based on pipeline Ids or ruleset Ids. The value should be true while running from the Graph.	true
runSkey	A numeric value indicates the runskey of the execution.	100
runType	Indicates matching job that can be executed as part of graph or Entity Resolution. It should be set as Graph.	graph

11. Enable the **Refresh Graph** option and click **Add** icon to refresh the Graph to add optional parameters.

NOTE The Key and Value parameters are not required.

Figure: Refresh Graph

The screenshot shows a user interface for configuring a 'Refresh Graph' task. At the top, there is a 'Refresh Graph' toggle switch which is turned on. Below this, the task name 'Refresh_Graph' is displayed. To the right, there is a section for 'Optional Parameters' with a plus sign icon. The task details are: 'Task : Refresh_Graph | Populates : FINANCIAL_CRIME_GLOBAL_GRAPH | Type : refresh'. Below the details, there are two input fields: 'Key' with the value 'graphDatasource' and 'Value' which is empty. A 'Required' label is positioned below the 'Value' field. A trash icon is located to the right of the 'Value' field.

NOTE If you do not enable the Refresh Graph option, the pipeline will add nodes and edges to the graph schema but does not load into PGX.

8.3 Audit History

At any time, you can audit the Graphs from the Audit History page. This page provides the events on the Graph. This shows the information such as, when the Graph was created, who created the Graph and its status, and so on.

The sequence of actions performed on the Graph is listed in the table view and the timeline view (graphical representation).

To view the audit history of the Graph, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click the **Graphs**  icon .
This displays the graph pipeline in a table.
3. Click on the graph for which you want to view the audit history.
The **Graph Model** page is displayed.
4. Navigate to **Audit History** page to view the details.

Figure 53: Audit History

Status	Type	Name	User	Comments	Time
Created	Graph	FINANCIAL_CRIME_GLOBAL_GRAPH	MMGSAML	Graph FINANCIAL_CRIME_GLOBAL_GRAPH (0) was created by MMGSAML	2 May 2023, 17:40:12

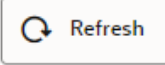

Click  **Audit Timeline View** for Timeline View and  **Audit Table View** to switch to the regular view. Click  **Refresh** to refresh the Audit History.

Figure 54: Audit History window Timeline View with Horizontal Time Axis

8.4 Execution History

To view the Graph Execution History, perform the following steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.

2. Click the **Graphs**  icon .

This displays the graph pipeline in a table.

3. Click on the graph for which you want to view the execution history.

The **Graph Model** page is displayed.

4. Navigate to **Execution History** page to view the details.

This window displays the details such as Batch Run Identifier, Status, Start and end time of the execution. Click on the Batch Run Identifier to view the individual task details.

The screenshot shows the 'Model Management and Governance' interface. The main window displays the 'FINANCIAL_CRIME_GLOBAL_GRAPH' model with its version and age. The 'Execution History' tab is active, showing a table with one entry: 'GRAPH_FINANCIAL_CRIME_GLOBAL_GRAPH_2023-06-01_166561736219_1' with a status of 'FAILED'. A 'Task Details' window is open on the right, showing a list of tasks: 'Customer' (FAILED), 'AccountNodeGDP' (EXCLUDED), 'Bahamas_Address_of_EE_to_EA' (EXCLUDED), 'Bahamas_EE_to_Related_to_EE' (EXCLUDED), and 'CASH_TXN_EE_ID' (EXCLUDED).

9 Scheduler Service

The Scheduler Service automates the running of models in the Compliance Studio application.

The Scheduler Service contains a graphical user interface and a single control point for defining and monitoring background executions.

The Scheduler Service is a service in the Infrastructure system that automates behind-the-scenes work that is necessary to sustain various enterprise applications and functionalities. This automation helps the applications to control unattended background jobs program execution.

The Scheduler Service contains a graphical user interface and a single point of control for the definition and monitoring of background executions.

Following are the concepts or terminologies in the Scheduler Service:

- **Batch:** Date and time-based execution of the background tasks based on a defined period during which the resources were available for batch processing.
- **Job:** A batch job is a piece of a program meant to meet specific and business-critical functions. The program is a RESTful API used in a batch.
- **Job Dependency:** When the batch job is submitted, it is moved to the job queue until the system is ready to process. The system process the job based on chronological order or priority in case if more jobs are required to be executed in the job queue.
- **Schedule:** Batch jobs are used to automate the tasks that require to be performed on a regular basis but don't necessarily need to occur during the day or have an employee interacted with the system are batch schedule. Jobs that happen on a regular basis are incorporated into batch schedules.

Monitor: The Scheduler Service enables you to monitor your executions by using a web-browser. It provides real-time feedback on the status of the current encoding job and lists the jobs pending in the batch. You can Cancel or Restart the service when required.

9.1 Scheduler Service Dashboard

1. Click **Launch Workspace** next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. In the LHS menu, click **Scheduler Service**.

This displays the executed runs in a table.

To view the demonstration of the Dashboard window, see the *Scheduler Service Introduction* video.

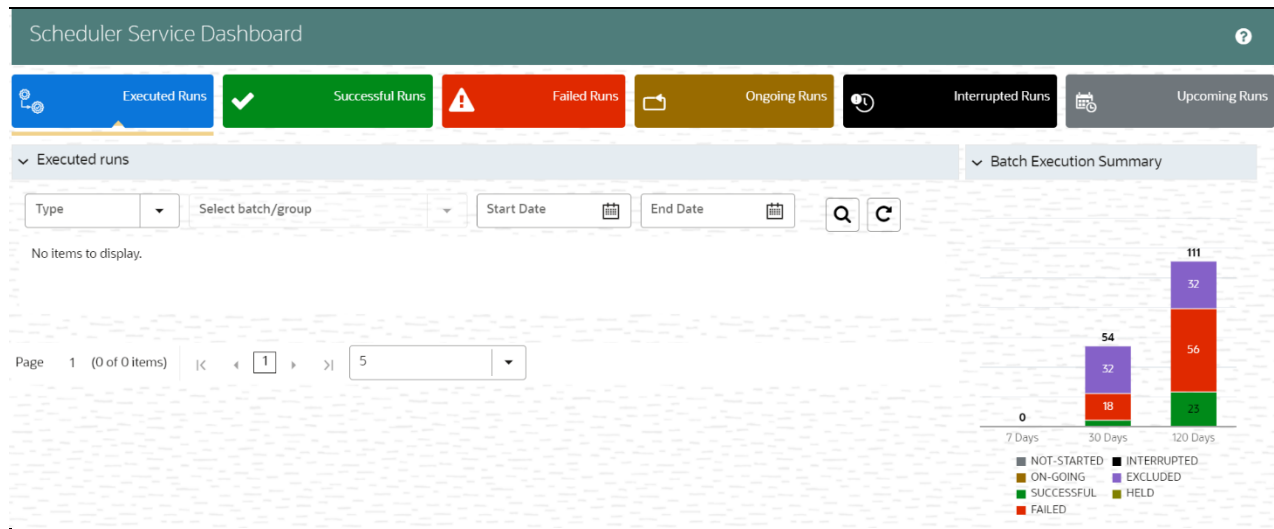

[Scheduler Service Introducing Video](#)

In the Scheduler Service window, you can view the following details:

- The *Executed Runs*, *Successful Runs*, *Failed Runs*, *Ongoing Runs*, *Interrupted Runs*, and *Upcoming Runs* tabs. You can click the tabs to view the details of the Batches based on their status. For example, click **Ongoing Runs** to view the details of the batches that are currently running.

- The Batches that were executed within the last 7 or 30 days contain details such as Batch Name, Batch Run ID, and Run Time. Click **30 days** to view the batches that were executed within the last 30 days.
- The **Batch execution Summary** pane displays the count of total batches executed that were executed within the last 7 days, 30 days, and 120 days. Additionally, you can see the separate count of successful batches, failed batches, interrupted batches, on-going batches, and the batches which are yet to start, by hovering your mouse the batches.

You can filter the executed runs based on Batch type, Batch/ group, start date and end date by selecting the corresponding options.

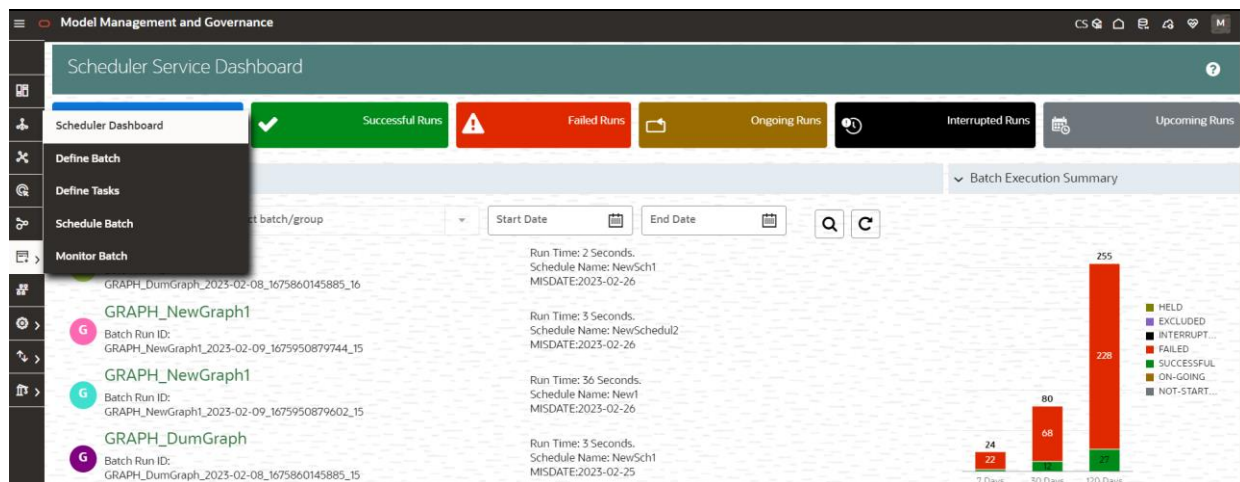

9.1.1 Header Details

The Header Details in the **Scheduler Service** window is displayed as shown and it has the following options.:

- **Menu Navigation:** Shows the menu options available in Scheduler Service.
- **Quick Actions:** Quick actions can be performed by using the buttons in this section.
- **User Details:** The User details are displayed, you can view the help, set you profile preferences.

Figure 55: Header Details

On the left side of the window, click the **Scheduler Service** icon to see the different option in the Scheduler Service.

9.2 Define Batch

The **Define Batch** window displays the details of all existing [Batch](#) like Batch ID, Batch Name, Batch Description, Last Modified By and Last Modified Date. This window allows you to create a new, edit, copy, and delete the batches. You can also create a [Batch Group](#) and execute the Batch Group which has the list of batches that you have selected and grouped.

To navigate to the Define Batch window, click Define Batch option from the Header in the Dashboard

window. After selecting the batch, you can select the  icon corresponding to the batch to proceed to create or edit tasks.

9.2.1 Batch

Batch is a process of execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing.

9.2.1.1 Create a Batch

You can create a new batch in the Define Batch Window and schedule and monitor the batch that you created.

To create a new Batch, perform the following steps:

1. In the Define Batch window, click .

The **Create a New Batch** window is displayed.

2. Specify the details as tabulated in the Create a New Batch window as described in the following table.

Table 1: Fields in the Create a New Batch window and their Description

Field	Description
Batch Details	
Batch Name	<p>The Batch Name is generated based on the values provided by you.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • The Batch Name should be unique across the Information Domain. • The Batch Name must be alphanumeric and should not start with a number. • The Batch Name should not exceed 60 characters in length. • The Batch Name should not contain any special characters except “_”.
Batch Description	<p>Enter a description for the Batch based on the Batch Name.</p> <p>NOTE:</p> <p>The Batch description should be alphanumeric. The allowed special characters are_:_- and <blank space>, along with spaces and alpha-numeric. It should not exceed 200 characters in length.</p>
Service URL Name/ Service URL	<ul style="list-style-type: none"> • Select the Service URL name from the drop-down list, if it is available. The Service URL is displayed in the Service URL field. • To add a new service URL, enter a name to identify it in the Service URL Name field and enter the proper URL in the Service URL field. You can give partial URL here and the remaining URL in the Task Service URL.

3. Click **Save**.

The new Batch is created and displayed in the **Define Batch** window.

9.2.1.2 Edit a Batch

The **Edit Batch** option allows you to edit the Batch details such as Batch Description, Service URL Name and Service URL and also add a new Batch Parameter.

NOTE Seeded batches cannot be edited.

To modify a Batch, perform the following steps:

1. In the **Define Batch** window, click  corresponding to the Batch you want to modify. The **Edit Batch** window is displayed.
2. Modify the required Batch details. For more information, see [Create a Batch](#) section.
3. Click **Save**.

The edited batch is saved and displayed in the **Define Batch** window.

9.2.1.3 Copy a Batch

The **Copy Batch** option allows you to copy a Batch that you want to clone or create instances in the system from the **Define Batch** window.

To copy a Batch, perform the following steps:

1. In the **Define Batch** window, click  corresponding to the Batch that you want to copy.
The **Copy Batch** window is displayed.
2. Specify the Batch details as you want to clone and copy the existing batch.
For more information, see [Create a Batch](#) section.
3. Click **Save**.

The copied batch is saved and displayed in the **Define Batch** window.

9.2.1.4 Delete a Batch

The **Delete Batch** option allows you to delete a Batch that are no longer required in the system from the **Define Batch** window.

NOTE Seeded batches cannot be deleted.

To delete a Batch, perform the following steps:

1. From the **Define Batch** window, click  corresponding to the Batch you want to delete.
2. Click OK in the confirmation dialog to confirm deletion. If the batch has any active schedules a warning is displayed.

Upon confirmation, all schedules of the batch are also deleted.

9.2.2 Batch Group

Batch Group is a process of grouping the batches that are required to be execute together for execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing.

9.2.2.1 Create a Batch Group

You can create a new batch group in the Define Batch window and schedule and monitor the batch group that you created.

To create a new Batch Group, perform the following steps:

1. In the Define Batch window, click .
The **Create a New Batch** window is displayed.
2. Select Batch Group option.

3. Specify the following fields:

- Name
- Description
- Add Batches

NOTE

The Add Batches is a multi-select field, you can select the batches that you want to add to the group using this field.

4. Click **Save**.

The new Batch Group is created and displayed in the **Define Batch** window.

9.2.2.2 Edit a Batch Group

The **Edit Batch Group** option allows you to edit the Batch Group details such as Batch Group name, Added Batches, and Batch Group Description.

To modify a Batch Group, perform the following steps:

1. In the **Define Batch** window, click Batch Group option to list the batch groups.

2. Click  corresponding to the Batch Group you want to modify.

The **Edit Batch** window is displayed.

3. Modify the required Batch Group details.

For more information, see [Create a Batch Group](#) section.

4. Click **Save**.

The edited batch group is saved and displayed in the **Define Batch** window.

9.2.2.3 Copy a Batch Group

The **Copy Batch** option allows you to copy a Batch that you want to clone or create instances in the system from the **Define Batch** window.

To copy a Batch Group, perform the following steps:

1. In the **Define Batch** window, click Batch Group option to list the batch groups.

2. Click  corresponding to the Batch Group that you want to copy.

The **Copy Batch** window is displayed.

3. Specify the Batch Details as you want to clone and copy the existing batch.

For more information, see [Create a Batch Group](#) section.

4. Click **Save**.

The copied batch group is saved and displayed in the **Define Batch** window.

9.2.2.4 Delete a Batch Group

The **Delete Batch** option allows you to delete a Batch that are no longer required in the system from the **Define Batch** window.

To delete a Batch Group, perform the following steps:

1. From the **Define Batch** window, click Batch Group option to list the batch groups.
2. Click  corresponding to the Batch Group you want to delete.
3. Click OK in the confirmation dialog to confirm deletion.

9.3 Define Tasks

The **Define Tasks** window displays the list of tasks associated with a specific Batch definition. You can create new tasks, edit the existing tasks or delete unwanted tasks. Additionally, you can specify task

precedence for each task in Task Precedence window and click the Schedule  icon to Schedule the batch.

The **Define Tasks** window allows you to perform the following task operations for your batch and batch group:

- [Batch](#)
- [Batch Group](#)

9.3.1 Batch

Batch is a process of execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing. You can perform the following operation for the batch based on the task.

- [Add a Task](#)
- [Modify a Task](#)
- [Define Task Precedence](#)
- [Delete a Task](#)

9.3.1.1 Add a Task

Adding a new task option allows you to add new tasks to a selected Batch definition.

To add new task, perform the following steps:

1. Click **Define Tasks** from the Header panel.
The **Define Task** window is displayed.
 2. Select the Batch for which you want to add new task from the **Select** drop-down list.
 3. Click Add .
- The **Create a New Task** window is displayed.

4. Enter the details as tabulated:

Table 3: Fields in the Create a New Task window and their Description

Field	Description
Task Details	
Task Name	Enter the task name. NOTE: <ul style="list-style-type: none"> The Task Name must be alphanumeric and should not start with a number. The Task Name should not exceed 60 characters in length. The Task Name should not contain any special characters except underscore (_).
Task Description	<ul style="list-style-type: none"> Enter the task description along with spaces and alpha-numeric. No special characters are allowed in Task Description. Words like Select From or Delete From should not be entered in the Description.
Task Type	Select the task type from the drop-down list.
Batch Service URL	Select the required Batch Service URL from the drop-down list. This can be blank, and you can provide the full URL in the Task Service URL field.
Task Service URL	Enter task service URL if it is different from Batch Service URL.

5. From the *Task Parameters* pane, click Add  to add a new Task Parameter. By default, all Batch level parameters are added and enabled as task parameters. To disable, deselect the check box corresponding to the task parameter ()
- Enter the Parameter name in the **Param Name** field.
 - Enter the Parameter value in the **Param Value** field.

You can delete a parameter by clicking  corresponding to the parameter.

6. Click **Save**.

9.3.1.2 Modify a Task

Modifying a task option allows you to modify the details of existing tasks of a Batch definition such as Task Description, Task Type, Batch Service URL and Task Service URL. You can also add a new task parameter and enable or disable already existing task parameters.

To modify a Task, perform the following steps:

- From the **Define Task** window, select the Batch whose task details you want to modify, from the **Select** drop-down list.
- Click Edit  corresponding to the Task whose details you want to modify.
The **Edit Task** window is displayed.
- Modify the required Task Details.

For more information, see [Add a Task](#) section.

4. Click **Save**.

9.3.1.3 Define Task Precedence

Task Precedence indicates the execution-flow of a Batch. Task Precedence value facilitates you to determine the order in which the specific Tasks of a Batch are executed.

For example, consider a Batch consisting of 4 Task. The first 3 Task does not have a precedence defined and hence will be executed simultaneously during the Batch execution. But, Task 4 has a precedence value as task 1 which indicates that, Task 4 is executed only after Task 1 has been successfully executed.

You can set Task precedence between Tasks or define to run a Task after a set of other tasks. However, multiple tasks can be executed simultaneously, and cyclical execution of tasks is not permitted. If the precedence for a Task is not set, the Task is executed immediately on Batch execution.

To define the task precedence in the *Define Task* window, perform the following steps:

1. Click Menu  button corresponding to the task for which you want to add precedence task.

The **Task Precedence Mapping** window is displayed.

NOTE The Task Precedence option is disabled if a batch has only one task associated.

- a. Select the Task you want to execute before the current task, from the **Available Tasks** pane and click . You can press Ctrl key for multiple selections.
 - b. To select all the listed Tasks, click .
 - c. To remove a Task, select the task from the *Selected Tasks* pane and click .
 - d. To remove all the selected Tasks, click .
2. Click **Save** to update Task Precedence.
 3. Click **Preview** to view the Precedence information.

9.3.1.4 Delete a Task

You can remove a task from a Batch definition which are no longer required in the system by deleting it from the **Define Task** window.

To delete a Task, perform the following steps:

1. From the **Define Task** window, select the Batch whose task details you want to delete from the **Select** drop-down list.

2. Click Delete  corresponding to the Task you want to delete.
3. Click **OK** in the confirmation dialog to confirm deletion.

9.3.2 Batch Group

Batch Group is a process of grouping the batches that are required to be execute together for execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing. You can perform the following operation for the batch based on the task.

- [Define Task Precedence](#)

9.3.2.1 Define Task Precedence

Task Precedence indicates the execution-flow of a Batch. Task Precedence value facilitates you to determine the order in which the specific Tasks of a Batch are executed.

For example, consider a Batch consisting of 4 Task. The first 3 Task does not have a precedence defined and hence will be executed simultaneously during the Batch execution. But, Task 4 has a precedence value as task 1 which indicates that, Task 4 is executed only after Task 1 has been successfully executed.

You can set Task precedence between Tasks or define to run a Task after a set of other tasks. However, multiple tasks can be executed simultaneously, and cyclical execution of tasks is not permitted. If the precedence for a Task is not set, the Task is executed immediately on Batch execution.

To define the task precedence in the *Define Task* window, perform the following steps:

1. Click Menu  button corresponding to the task for which you want to add precedence task.

The **Task Precedence Mapping** window is displayed.

NOTE The Task Precedence option is disabled if a batch has only one task associated.

- a. Select the batch that you want to execute before the current task, from the **Available Tasks** pane and click . You can press Ctrl key for multiple selections.
 - b. To select all the listed batches, click .
 - c. To remove a batch, select the task from the **Selected Tasks** pane and click .
 - d. To remove all the selected batches, click .
2. Click **Save** to update Task Precedence in the batches.
 3. Click **Preview** to view the Precedence information.

9.4 Schedule Batch

The *Schedule Batch* window facilitates you to run, schedule, re-start, re-run the batches in the Scheduler Service. After you upload the data in the required format into the Object Storage, you must load the data into the system using the Scheduler Service. You can schedule them to run in a required pattern and view the run time status of the scheduled services using the Monitor Batch feature.

The **Schedule Batch** window allows you to perform the following operations for your batch and batch group:

- [Batch](#)
- [Batch Group](#)

9.4.1 Batch

Batch is a process of execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing. You can perform the following operation for the batch:

- [Execute a Batch](#)
- [Schedule a Batch](#)
- [Re-start a Batch](#)
- [Re-run a Batch](#)
- [Edit Dynamic Parameters](#)
- [Task Definition of a Batch](#)

9.4.1.1 Execute a Batch

The Execute batch option allows you to run a batch instantaneously. To execute a batch, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule** window is displayed.
2. Select the Batch Name from the Select Name drop down menu.
For example, AMLDataLoad.
3. Click **Execute**.
The Execution Status Dialog Box is displayed with the Batch executed successfully message.
This indicates the unique identification reference number for the batch and date of the batch execution.
4. In the Execution Status Dialog Box, click Monitor to monitor the batch.
5. If you want to exclude/include some tasks, click **Exclude Tasks**. For more information, see [Exclude/Include Tasks](#) section.
6. If you want to hold/release some tasks, click **Hold Tasks**.
For more information, see [Hold/Release Tasks](#) section.

7. If you want to edit the dynamic parameters of the batch, click **Edit Dynamic Parameters**. For more information, see [Edit Dynamic Parameters](#) section.

9.4.1.2 Schedule a Batch

You can schedule a Batch to run just for [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#) for scheduling the batches. You can also have a user defined schedule to schedule and run a batch.

9.4.1.2.1 Schedule Once

To schedule a Batch to run once, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule Batch** window is displayed.
2. In the **Schedule Batch** window, click **Once**.
3. Select the Batch or Batch Name you want to schedule for once from the Select drop down menu.
4. Enter a Schedule Name.
5. Click  and select the date on which you want to run the Batch.
6. Click  and select the time at which you want to run the Batch.
7. Click **Schedule**.

9.4.1.2.2 Schedule Daily

To schedule a Batch to run daily, perform the following steps:

1. In the **Schedule Batch** window, click **Daily**.
2. Select the Batch or Batch Name you want to schedule daily from the Select drop down menu.
3. Enter a **Schedule Name**.
4. Click  and select the start date from which you want to run the Batch.
5. Click  and select the end date till which you want to run the Batch.
6. Click  and select the time at which you want to run the Batch daily.
7. Click **Schedule**.

9.4.1.2.3 Schedule Weekly

To schedule a Batch to run weekly, perform the following steps:

1. In the **Schedule Batch** window, click **Weekly**.
2. Select the Batch or Batch Name you want to schedule weekly from the Select drop down menu.
3. Enter a Schedule Name.
4. Click  and select the start date from which you want to run the Batch.

5. Click  and select the end date till which you want to run the Batch.
6. Click  and select the time at which you want to run the Batch.
7. Select the days on a week you want to run the Batch from the Select Days of the Week multi-select drop down menu.
8. Click **Schedule**.

9.4.1.2.4 Schedule Monthly

To schedule a Batch to run monthly, perform the following steps:

1. In the **Schedule Batch** window, click **Monthly**.
2. Select the Batch or Batch Name you want to schedule monthly from the Select drop down menu.
3. Enter a Schedule Name.
4. Click  and select the start date from which you want to run the Batch.
5. Click  and select the end date till which you want to run the Batch.
6. Click  and select the time at which you want to run the Batch.
7. Select the months in a year you want to run the Batch from the Select Months of the Year multi-select drop down menu.
8. Select the day of the month that you want to run the Batch from the Select Day of the Month drop down menu.
9. Click **Schedule**.

9.4.1.2.5 Schedule Cron Expression

To run a Batch in a user-defined schedule, you can have custom schedule with the help of Cron Expression. A cron expression is a string comprised of 6 or 7 fields separated by white space. Fields can contain any of the allowed values, along with various combinations of the allowed special characters for that field. For more information, click  icon next to the Cron Expression field.

To schedule a Batch based on Cron Expression, perform the following steps

1. In the **Schedule Batch** window, click **Cron Expression**.
2. Select the Batch or Batch Name you want to schedule from the Select drop down menu.
3. Enter a **Schedule Name**.
4. Enter the Cron Expression for your schedule. For more information about the Cron Expression, click  icon next to the Cron Expression field.
5. Click **Schedule**.

9.4.1.3 Re-start a Batch

You can restart a Batch which has not been executed successfully or which has been explicitly interrupted, or cancelled, or put on hold during the execution process. By restarting a Batch, you can continue Batch execution directly from the point of interruption or failure and complete executing the remaining tasks.

To re-start a batch, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The Schedule window is displayed.
2. From the **Schedule** window, select **Re-start** tab.
3. Select the Batch or Batch Name you want to re-start from the Select Name drop down menu.
4. Select the Batch Run ID.
5. Click **Re-start**.

9.4.1.4 Re-run a Batch

You can re-run a Batch which has previously been executed. Rerun Batch facilitates you to run the Batch irrespective of the previous execution state. A new Batch Run ID is generated during the Rerun process and the Batch is executed as similar to the new Batch Run.

To re-run a batch, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule Batch** window is displayed.
2. In the **Schedule Batch** window, select **Re-run** tab.
3. Select the Batch or Batch Name you want to re-run from the Select Name drop down menu.
4. Select the Batch Run ID.
5. Click **Re-run**.

9.4.1.5 Edit Dynamic Parameters

Dynamic Parameters facilitates you to the modify the dynamic parameters for the batch. You can change the param value from the Edit Dynamic Params window and save the changes to the Batch. The Edit Dynamic Parameters option is available in all the tab in the *Schedule Batch* window.

To edit the dynamic parameters for a batch, perform the following steps:

1. In the **Schedule Batch** window, click Edit Dynamic Parameters.
The **Edit Dynamic Params** window is displayed.
2. In the **Edit Dynamic Params** window, modify the values as required.
3. Click **Save**.
The modified parameters are applied to the Batch.

9.4.1.6 Task Definitions of a Batch

You can modify the task definition state in the Batch Execution window to exclude or hold the defined task in a Batch from execution. The excluded tasks are therefore assumed to have completed execution and get excluded during the Batch Run.

While executing or scheduling a Batch from the **Schedule Batch** window, you can:

- Exclude a task or include the excluded task
- Hold a task or release the held task

9.4.1.6.1 Exclude or Include Tasks

You can exclude tasks or include the excluded tasks during Batch Execution. The excluded task components are therefore executed in the normal process assuming that the excluded task have completed execution.

To exclude/include tasks, perform the following steps:

1. In the **Schedule Batch** window, click **Exclude Tasks**.

The **Select Tasks** window is displayed.

2. To exclude tasks:

- a. Select the required task from the **Included Tasks** list and click . You can press Ctrl key for multiple selections.

- b. To exclude all tasks, click .

3. To include the excluded tasks:

- a. Select the required task from the **Excluded Tasks** list and click . You can press Ctrl key for multiple selections.

- b. To include all excluded tasks, click .

4. Click **Save**.

9.4.1.6.2 Hold or Release Tasks

You can hold tasks or release the held tasks during Batch Execution. The tasks which are on hold along with the defined components are skipped during execution. However, at least one task should be available in a Batch without being held/excluded for Batch execution.

To hold/release tasks, perform the following steps:

1. In the **Schedule Batch** window, click **Hold Tasks**.

The **Select Tasks** window is displayed.

2. To hold tasks:

- a. Select the required task from the **Released Tasks** list and click . You can press Ctrl key for multiple selections.
 - b. To hold all tasks, click .
3. To release held tasks:
 - a. Select the required task from the **Held Tasks** list and click . You can press Ctrl key for multiple selections.
 - b. To release all held tasks, click .
 4. Click **Save**.

9.4.2 Batch Group

Batch Group is a process of grouping the batches that are required to be execute together for execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing. You can perform the following operation for the batch group:

- [Execute a Batch Group](#)
- [Schedule a Batch Group](#)
- [Re-start a Batch Group](#)
- [Re-run a Batch Group](#)
- [Edit Dynamic Parameters](#)
- [Task Definition of a Batch Group](#)

9.4.2.1 Execute a Batch Group

The Execute batch option allows you to run a batch instantaneously. To execute a batch group, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule** window is displayed.
2. Select the Batch Group from the Select Name drop down menu.
For example, AMLDataLoad.
3. Click **Execute**.
The Execution Status Dialog Box is displayed with the Batch executed successfully message.
This indicates the unique identification reference number for the batch and date of the batch execution.
4. In the Execution Status Dialog Box, click Monitor to monitor the batch.
5. If you want to exclude/include some tasks, click **Exclude Tasks**.

For more information, see [Exclude/Include Tasks](#) section.

6. If you want to hold/release some tasks, click **Hold Tasks**.

For more information, see [Hold/Release Tasks](#) section.

7. If you want to edit the dynamic parameters of the batch, click **Edit Dynamic Parameters**.

For more information, see [Edit Dynamic Parameters](#)

9.4.2.2 Schedule a Batch Group

You can schedule a Batch group to run just for [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#) for scheduling the batches. You can also have a user defined schedule to schedule and run a batch.

9.4.2.2.1 Schedule Once

To schedule a Batch to run once, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule Batch** window is displayed.
2. In the **Schedule Batch** window, click **Once**.
3. Select the Batch Group you want to schedule for once from the Select drop down menu.
4. Enter a Schedule Name.
5. Click  and select the date on which you want to run the Batch.
6. Click  and select the time at which you want to run the Batch.
7. Click **Schedule**.

9.4.2.2.2 Schedule Daily

To schedule a Batch to run daily, perform the following steps:

1. In the **Schedule Batch** window, click **Daily**.
2. Select the Batch Group you want to schedule daily from the Select drop down menu.
3. Enter a **Schedule Name**.
4. Click  and select the start date from which you want to run the batch group.
5. Click  and select the end date till which you want to run the batch group.
6. Click  and select the time at which you want to run the batch group daily.
7. Click **Schedule**.

9.4.2.2.3 Schedule Weekly

To schedule a Batch to run weekly, perform the following steps:

1. In the **Schedule Batch** window, click **Weekly**.

2. Select the Batch Group you want to schedule weekly from the Select drop down menu.
3. Enter a Schedule Name.
4. Click  and select the start date from which you want to run the batch group.
5. Click  and select the end date till which you want to run the batch group.
6. Click  and select the time at which you want to run the batch group.
7. Select the days in a week you want to run the batch group from the Select Days of the Week multi-select drop down menu.
8. Click **Schedule**.

9.4.2.2.4 Schedule Monthly

To schedule a Batch to run monthly, perform the following steps:

1. In the **Schedule Batch** window, click **Monthly**.
2. Select the Batch Group you want to schedule monthly from the Select drop down menu.
3. Enter a Schedule Name.
4. Click  and select the start date from which you want to run the batch group.
5. Click  and select the end date till which you want to run the batch group.
6. Click  and select the time at which you want to run the batch group.
7. Select the months in a year you want to run the batch group from the Select Months of the Year multi-select drop down menu.
8. Select the day of the month that you want to run the batch group from the Select Day of the Month drop down menu.
9. Click **Schedule**.

9.4.2.2.5 Schedule Cron Expression

To run a Batch in a user-defined schedule, you can have custom schedule with the help of Cron Expression. A cron expression is a string comprised of 6 or 7 fields separated by white space. Fields can contain any of the allowed values, along with various combinations of the allowed special characters for that field. For more information, click  icon next to the Cron Expression field.

To schedule a Batch based on Cron Expression, perform the following steps

1. In the **Schedule Batch** window, click **Cron Expression**.
2. Select the Batch Group you want to schedule from the Select drop down menu.
3. Enter a **Schedule Name**.
4. Enter the Cron Expression for your schedule.

For more information about the Cron Expression, click  icon next to the Cron Expression field.

5. Click **Schedule**.

9.4.2.2.6 Pre Conditions for a Batch Group

You can schedule the batches and set the pre conditions within a Batch group with frequency as [Weekly](#), [Monthly](#), or based on an [Interval](#) for scheduling the batches. The batch that satisfies the configured pre conditions are executed as part of the schedule.

NOTE Pre Conditions can only be applied when using the Schedule option in the Schedule Batch window.

Weekly

To set the pre conditions to the batches in a batch group weekly, perform the following steps:

1. In the **Schedule Batch** window, you can select either [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#) option based on the schedule that you want to run the batch group.
2. Select the Batch Group you want from the Select drop down menu.
3. Enter a Schedule Name.
4. Specify the other details displayed when you are selecting [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#).
5. Click Pre Conditions.
6. In the Pre Conditions window, specify the Batch from the drop down and from the Frequency drop down and select Weekly.
7. Select the days from the Select Days drop down that you want to schedule the batch run within the selected week.
8. Click  to add the specified entry.

NOTE Pre Conditions can be added only to one batch at a time

9. Click **Save**.

The batch is executed based on the configured pre conditions.

Monthly

To set the pre conditions to the batches in a batch group monthly, perform the following steps:

1. In the **Schedule Batch** window, you can select either [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#) option based on the schedule that you want to run the batch group.
2. Select the Batch Group you want from the Select drop down menu.
3. Enter a Schedule Name.

4. Specify the other details displayed when you are selecting [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#).
5. Click Pre Conditions.
6. In the Pre Conditions window, specify the Batch from the drop down and from the Frequency drop down and select Monthly.
7. Select the days from the Select Days drop down that you want to schedule the batch run within the selected week.
8. Click  to add the specified entry.

NOTE

Pre Conditions can be added only to one batch at a time.

9. Click **Save**.

The batch is executed based on the configured pre conditions.

Interval

To set the pre conditions to the batches in a batch group based on an interval, perform the following steps:

1. In the **Schedule Batch** window, you can select either [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#) option based on the schedule that you want to run the batch group.
2. Select the Batch Group you want from the Select drop down menu.
3. Enter a Schedule Name.
4. Specify the other details displayed when you are selecting [Once](#), [Daily](#), [Weekly](#), [Monthly](#), or [Cron Expression](#).
5. Click Pre Conditions.
6. In the Pre Conditions window, specify the Batch from the drop down and from the Frequency drop down and select Interval.
7. Select the interval from the Custom Recurrence (Repeat every) Days drop down that you want to schedule the batch run within the selected week.

NOTE

The Custom Recurrence can be set maximum to 60 days.

8. Click  to add the specified entry.

NOTE

Pre Conditions can be added only to one batch at a time.

9. Click **Save**.

10. The batch is executed based on the configured pre conditions.

9.4.3 Re-start a Batch Group

You can restart a Batch which has not been executed successfully or which has been explicitly interrupted, or cancelled, or put on hold during the execution process. By restarting a Batch, you can continue Batch execution directly from the point of interruption or failure and complete executing the remaining tasks.

To re-start a batch, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule** window is displayed.
2. From the **Schedule** window, select **Re-start** tab.
3. Select the Batch Group you want to re-start from the Select Name drop down menu.
4. Select the Batch Run ID.
5. Click **Re-start**.

9.4.4 Re-run a Batch Group

You can re-run a Batch which has previously been executed. Rerun Batch facilitates you to run the Batch irrespective of the previous execution state. A new Batch Run ID is generated during the Rerun process and the Batch is executed as similar to the new Batch Run.

To re-run a batch, perform the following steps:

1. Click **Schedule Batch** from the Header panel.
The **Schedule Batch** window is displayed.
2. In the **Schedule Batch** window, select **Re-run** tab.
3. Select the Batch Group you want to re-run from the Select Name drop down menu.
4. Select the Batch Run ID.
5. Click **Re-run**.

9.4.5 Edit Dynamic Parameters

Dynamic Parameters facilitates you to the modify the dynamic parameters for the batch. You can change the param value from the Edit Dynamic Params window and save the changes to the Batch. The Edit Dynamic Parameters option is available in all the tab in the **Schedule Batch** window.

To edit the dynamic parameters for a batch group, perform the following steps:

1. In the **Schedule Batch** window, click **Edit Dynamic Parameters**.
The **Edit Dynamic Params** window is displayed.
2. In the **Edit Dynamic Params** window, modify the values as required.
3. Click **Save**.

The modified parameters are applied to the Batch.

9.4.5.1.1 Accessing Scheduler optional parameters inside MMG studio model paragraphs

The Scheduler Service automates the running of models in the MMG application. The Scheduler Service contains a graphical user interface and a single control point for defining and monitoring background executions.

For more details on the Scheduler service, see [Scheduler Service](#) section.

To access the optional parameters passed from the **Scheduler** during execution of any models, run the following script:

To print

```
print('BATCHRUNID value is : ${BATCHRUNID$}')
print('TASKID value is : ${TASKID$}')
print('FICMISDATE value is : ${FICMISDATE$}')
```

To access the optional parameters passed during execution of any models, run the following scripts:

```
%python
print('threshold value is : ${threshold}')
```

NOTE

Threshold is the optional parameter passed during the model execution.

9.4.6 Task Definitions of a Batch Group

You can modify the task definition state in the Batch Execution window to exclude or hold the defined task in a Batch from execution. The excluded tasks are therefore assumed to have completed execution and get excluded during the Batch Run.

While executing or scheduling a batch group from the *Schedule Batch* window, you can:

- [Exclude a task or include the excluded task](#)
- [Hold a task or release the held task.](#)

9.4.6.1 Exclude or Include Tasks

You can exclude tasks or include the excluded tasks during Batch Group Execution. The excluded task components are therefore executed in the normal process assuming that the excluded task have completed execution.

To exclude/include tasks, perform the following steps:

1. In the Schedule Batch window, click **Exclude Tasks**.

The **Select Tasks** window is displayed.

2. To exclude tasks:

- a. Select the required task from the **Included Tasks** list and click . You can press Ctrl key for multiple selections.

- b. To exclude all tasks, click .
3. To include the excluded tasks:
 - a. Select the required task from the **Excluded Tasks** list and click . You can press Ctrl key for multiple selections.
 - b. To include all excluded tasks, click .
4. Click **Save**.

9.4.6.2 Hold or Release Tasks

You can hold tasks or release the held tasks during Batch Group Execution. The tasks which are on hold along with the defined components are skipped during execution. However, at least one task should be available in a Batch without being held or excluded for Batch execution.

To hold/release tasks, perform the following steps:

1. In the **Schedule Batch** window, click **Hold Tasks**.
The **Select Tasks** window is displayed.
2. To hold tasks:
 - a. Select the required task from the *Released Tasks* list and click . You can press Ctrl key for multiple selections.
 - b. To hold all tasks, click .
3. To release held tasks:
 - a. Select the required task from the *Held Tasks* list and click . You can press Ctrl key for multiple selections.
 - b. To release all held tasks, click .
4. Click **Save**.

9.5 Monitor Batch

The Monitor Batch enables you to view the status of executed Batch along with the task's details. You can track the issues if any, on regular intervals and ensure smoother Batch execution. A visual representation as well as tabular view of the status of each Tasks in the Batch is available.

The **Monitor Batch** window allows you to perform monitoring for the following operations:

- [Batch](#)

- [Batch Group](#)

9.5.1 Batch

Batch is a process of execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing. To monitor a batch, perform the following steps:

1. Click **Monitor Batch** from the Header panel.
The **Monitor** window is displayed.
2. Select the **Batch from the Select drop-down and then select the Batch Run ID** from the Run ID drop-down.
3. Click Start Monitor.

The result is displayed in Visualization and List View tabs. Details of these tabs are as follows:

- The Visualization tab displays the details in the form of a chart represented with the following details:
 - i. Batch Status: Displays the batch status, the different batch status are NOT-STARTED, ON-GOING, SUCCESSFUL, FAILED, INTERRUPTED, EXCLUDED, HELD, and UNDEFINED.
 - ii. Batch Start Time: Displays the batch start time details.
 - iii. Batch End Time: Displays the batch end time details.
 - iv. Task Details: Mouseover the task to display its status and details.
 - The **List View** tab displays the details in a tabular form with the following details:
 - i. Batch Status: Displays the batch status, the different batch status are NOT-STARTED, ON-GOING, SUCCESSFUL, FAILED, INTERRUPTED, EXCLUDED, HELD, and UNDEFINED.
 - ii. Batch Start Time: Displays the batch start time details.
 - iii. Batch End Time: Displays the batch end time details.
 - iv. Task Details: Mouseover the task to display its status and details.
 - v. More Information: The message returned by the Rest Service.
4. If you wish to stop the monitoring, select Stop Monitor. You can also specify the Start and Stop Monitor options along with refresh interval in the Refresh every seconds and minutes fields.

NOTE

- You can select the refresh interval and the duration for the auto refresh. The refresh interval is defaulted to 5 seconds and duration is defaulted to 5 minutes. That is the refresh happens every 5 seconds for next 5 minutes.
- Range of interval input must be between 5 to 60 seconds and range of duration.
- Input should be between 5 to 180 minutes.
- You can use the Stop Monitor button to stop the auto refresh.

5. To restart the Batch Group, select Restart .
6. To rerun the Batch Group, select Rerun .
7. To interrupt the Batch Group, select Interrupt .
8. To view the log information about the batch, click the Log  icon in the List View tab. The Log Viewer pop-up is displayed.
9. In the Log Viewer pop-up, the log information is displayed. You can click Download  icon to download the log or click the Close  icon to close the log information.

9.5.2 Batch Group

Batch Group is a process of grouping the batches that are required to be execute together for execution of the Date and time-based background tasks based on a defined period during which the resources were available for batch processing.

To monitor a batch group, perform the following steps:

1. Click **Monitor Batch** from the Header panel.
The **Monitor** window is displayed.
2. Select the **Batch Group from the Select drop-down and then select the Batch Run ID** from the Run ID drop-down.
3. Click Start Monitor.

The result is displayed in Visualization and List View tabs. Details of these tabs are as follows:

- The Visualization tab displays the details in the form of a chart represented with the following details:
 - i. Batch Status: Displays the batch status, the different batch status are NOT-STARTED, ON-GOING, SUCCESSFUL, FAILED, INTERRUPTED, EXCLUDED, HELD, and UNDEFINED.
 - ii. Batch Start Time: Displays the batch start time details.

- iii. Batch End Time: Displays the batch end time details.
- iv. Batch Details: Mouseover the task to display its status and details.
- The **List View** tab displays the details in a tabular form with the following details:
 - i. Batch Status: Displays the batch status, the different batch status are NOT-STARTED, ON-GOING, SUCCESSFUL, FAILED, INTERRUPTED, EXCLUDED, HELD, and UNDEFINED.
 - ii. Batch Start Time: Displays the batch start time details.
 - iii. Batch End Time: Displays the batch end time details.
 - iv. Batch Details: Mouseover the task to display its status and details.
 - v. More Information: The message returned by the Rest Service.
- 4. If you wish to stop the monitoring, select Stop Monitor. You can also specify the Start and Stop Monitor options along with refresh interval in the Refresh every seconds and minutes fields.

NOTE

- You can select the refresh interval and the duration for the auto refresh. The refresh interval is defaulted to 5 seconds and duration is defaulted to 5 minutes. That is the refresh happens every 5 seconds for next 5 minutes.
- Range of interval input must be between 5 to 60 seconds and range of duration.
- Input should be between 5 to 180 minutes.
- You can use the Stop Monitor button to stop the auto refresh.

- 5. To restart the Batch Group, select Restart .
- 6. To rerun the Batch Group, select Rerun .
- 7. To interrupt the Batch Group, select Interrupt .

To view the log information about the batch group, click View Log in the List View tab

9.6 External Interface Component Scheduler Service

The **EICSchedulerService.sh** utility is added to perform basic scheduler operations which is located in the `<installed path> mmg-home/bin` folder.

Prerequisites:

- Ensure public and private keys are present in `conf` folder and corresponding path is present in `application.properties` of mmg UI service.

- You should be aware of `clientId/secret` which will be used for basic authentication. (Currently, these values are stored in `application.properties` as `token.clientid` and `token.secret`).

Table: List of possible flagged arguments to be passed while executing `EICSchedulerService.sh`

Flag	Description	Comments
-o	Operation Type: It will decide which operation user want to perform.	This is a mandatory argument for all the type of requests. Possible Values are: 1 – To trigger an object 2 – To get the current status of a run. 3 – To re-start an execution. 4 – To re-run an execution. 5 – To interrupt an execution.
-u	<code>ofs_remote_user</code>	This is a mandatory argument for all the type of requests
-w	Workspace Id	This is a mandatory argument for all the type of requests
-c	Client Id for authentication	This is a mandatory argument for all the type of requests Currently, in <code>mmg-ui</code> <code>application.properties</code> the parameter <code>token.clientid</code> is set to <code>ofsouser</code>
-s	Client Secret for authentication	This is a mandatory argument for all the type of requests Currently, in <code>mmg-ui</code> <code>application.properties</code> the parameter <code>token.secret</code> is set to <code>secret</code>
-b	Object Name	Batch or Batch Group Name in case of triggering.
-t	Object Type	For Batch, it is set to <code>rest</code> and for Batch Group, it is set to <code>group</code> .
-r	Batch Execution Id	Execution Id of the Batch or Batch Group
-x	External Unique Id	This is the unique Id for every execution and mandatory for execute and rerun operations.
-i	Included Jobs	In case of trigger, included jobs can be provided as comma separated using this flag.
-e	Excluded Jobs	In case of trigger, excluded jobs can be provided as comma separated using this flag.

Flag	Description	Comments
-h	Held Jobs	In case of trigger, held jobs can be provided as comma separated using this flag.

Table: List of possible exit codes returned by "EICSchedulerService.sh"

Exit Code	Description
0	Success
-1	Failure/Failed
-2	Interrupted
1	Not Started
2	Ongoing
4	Excluded
5	Held
-3	Object does not exist.
-4	Invalid arguments passed in request/not enough parameters in Request body
-6	No executable job is present.
-7	Job is already interrupted
-9	Duplicate External Unique Id
-10	Unable to connect to scheduler

Sample commands to perform Scheduler Operations:

- **Trigger/Execute**

Execute batch “batch1”:**Syntax:**

```
./EICSchedulerService.sh -o 1 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --x < External Unique Id > --b < Object Name > --t < Object Type>
```

Example:

```
./EICSchedulerService.sh -o 1 -u scheduler -w WS1 -c ofsouser -s secret -x batch1_1001 -b batch1 -t rests
```

Execute batch “batch1” with “task1” and “task2” included:**Syntax:**

```
./EICSchedulerService.sh -o 1 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --x < External Unique Id > --b < Object Name > --t < Object Type> --I < Included Jobs with comma separated values>
```

Example:

```
./EICSchedulerService.sh -o 1 -u scheduler -w WS1 -c ofsouser -s secret -x batch1_1001 -b batch1 -t rest -i task1,task2
```

Execute batch “batch1” with “task1” as excluded and “task2” as held:**Syntax:**

```
./EICSchedulerService.sh -o 1 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --x < External Unique Id > --b < Object Name > --t < Object Type> --e < Excluded Jobs> --h < Held Jobs>
```

Example:

```
./EICSchedulerService.sh -o 1 -u scheduler -w WS1 -c ofsouser -s secret -x batch1_1001 -b batch1 -t rest -e task1 -h task2
```

- **Status**

Get status of execution having runid = MMG_R1_2022-09-07_1662557327886_1:**Syntax:**

```
./EICSchedulerService.sh -o 2 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --r < Batch Execution Id>
```

Example:

```
./EICSchedulerService.sh -o 2 -u scheduler -w WS1 -c ofsouser -s secret -r MMG_R1_2022-09-07_1662557327886_1
```

- **Re-Start**

Restart execution for batch “MMG_R1” having runid = MMG_R1_2022-09-07_1662557327886_1:

Syntax:

```
./EICSchedulerService.sh -o 3 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --b < Object Name > --r < Batch Execution Id >
```

Example:

```
./EICSchedulerService.sh -o 3 -u scheduler -w WS1 -c ofsaurer -s secret -b MMG_R1 -r MMG_R1_2022-09-07_1662557327886_1
```

- **Re-Run**

Rerun execution for batch “batch1” having runid = batch1 -r batch1_2022-09-01_1662011065557_1:

Syntax:

```
./EICSchedulerService.sh -o 4 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --x < External Unique Id > --b < Object Name > --r < Batch Execution Id >
```

Example:

```
./EICSchedulerService.sh -o 4 -u scheduler -w WS1 -c ofsaurer -s secret -x batch1_1002 -b batch1 -r batch1_2022-09-01_1662011065557_1
```

- **Interrupt**

Interrupt execution for batch “batch1” having runid = batch1_2022-09-07_1662530601924_1:

Syntax:

```
./EICSchedulerService.sh -o 5 -u < ofs_remote_user > --w < Workspace Id > --c < Client Id for authentication > --s < Client Secret for authentication > --b < Object Name > --r < Batch Execution Id >
```

Example:

```
./EICSchedulerService.sh -o 5 -u scheduler -w WS1 -c ofsaurer -s secret -b batch1 -r batch1_2022-09-07_1662530601924_1
```

NOTE

- On successful request for execute/rerun, the batchrunid corresponding to external unique id will be stored in AAICL_SS_EXT_BATCH_RUN_ID_MAPPING table.
- External Unique Id is required only in case of execute/rerun request.

10 Audit Trail

At any time, you can audit the models from the Audit Trail window. The Audit Trail window provides the complete details of model. This shows the information such as, when Model was created, who created the Model, workflow of Model, for example when this Model became champion or deployed, and so on.

The sequence of actions performed in the model lifecycle is listed in the table view and the timeline view (graphical representation).

To audit models, follow these steps:

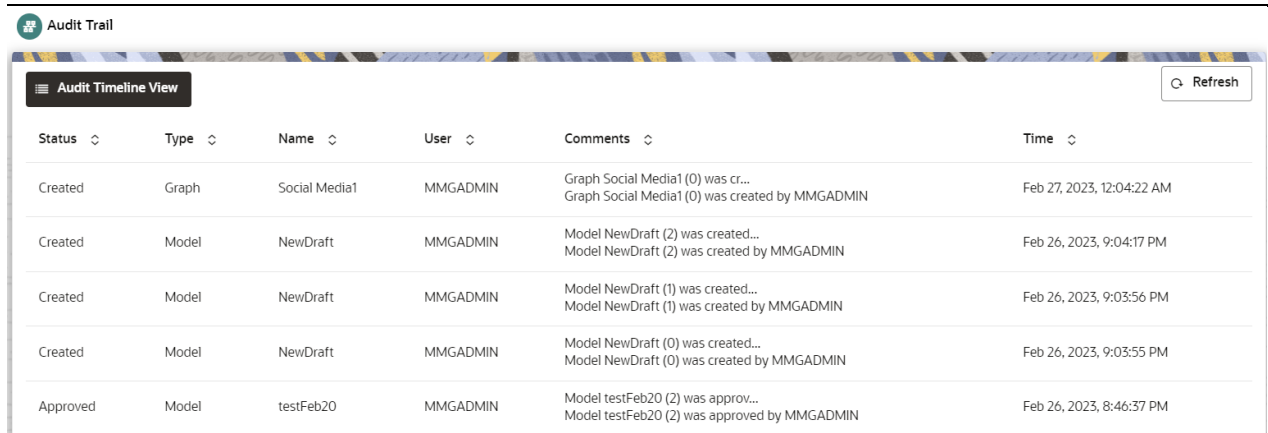

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click **Audit Trail**  to view the time of the various actions performed on the model in the **Audit Trail** window.

Figure 56: Audit Trail Window

Status	Type	Name	User	Comments	Time
Created	Graph	Social Media1	MMGADMIN	Graph Social Media1 (0) was cr... Graph Social Media1 (0) was created by MMGADMIN	Feb 27, 2023, 12:04:22 AM
Created	Model	NewDraft	MMGADMIN	Model NewDraft (2) was created... Model NewDraft (2) was created by MMGADMIN	Feb 26, 2023, 9:04:17 PM
Created	Model	NewDraft	MMGADMIN	Model NewDraft (1) was created... Model NewDraft (1) was created by MMGADMIN	Feb 26, 2023, 9:03:56 PM
Created	Model	NewDraft	MMGADMIN	Model NewDraft (0) was created... Model NewDraft (0) was created by MMGADMIN	Feb 26, 2023, 9:03:55 PM

3. Click **Audit Timeline View**  for Timeline View. Click **Audit Table View**  to switch to the regular view.

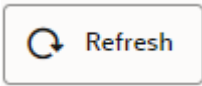

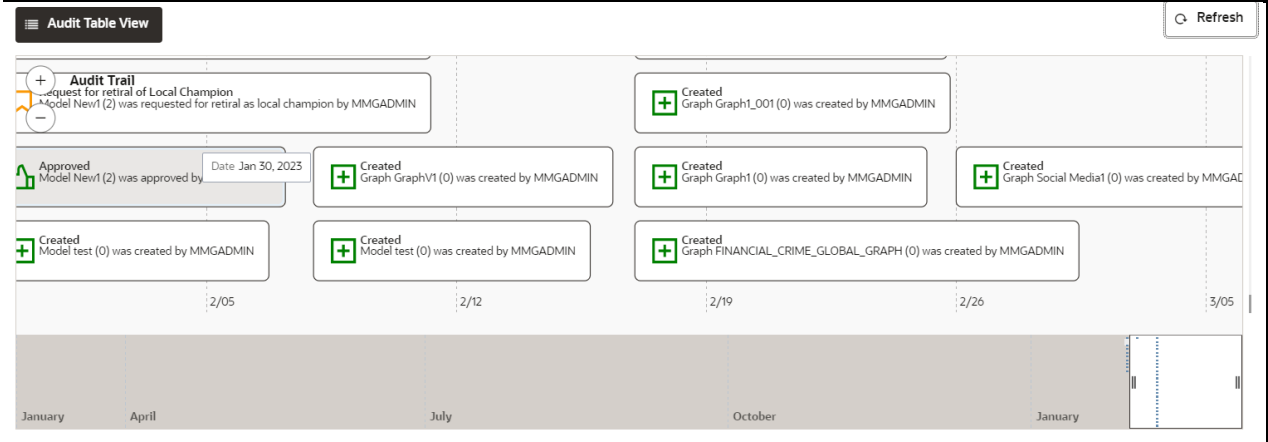

Click  to refresh the Audit Trail window.

Figure 57: Audit Trail Window Timeline View with Horizontal Time Axis

11 Data Studio Options

MMG contains an underlying Notebook Server which has the following configurable options:

- Interpreters
- Tasks
- Permissions
- Credentials
- Templates

To access the Data Studio Options page, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Hover the mouse over the Data Studio Options widget  the following options are available:
 - Interpreters
 - Tasks
 - Permissions
 - Credentials
 - Templates

11.1 Configuring Interpreters

An interpreter is a program that directly executes instructions written in a programming or scripting language without requiring them previously to be compiled into a machine language program. Interpreters are plug-ins that enable users to use a specific language to process data in the backend. Examples of Interpreters are jdbc-interpreter, spark-interpreters, python-interpreters, etc. Interpreters allow you to define customized drivers, URLs, passwords, connections, SQL results to display, etc.

In OFS Compliance Studio, Interpreters are used in Notebooks to execute code in different languages. Each Interpreter has a set of properties that are adjusted and applied across all notebooks. For example, using the python-interpreter makes it possible to change between versions, whereas the jdbc-interpreter offers to customize the URL, schema, or credentials. In MMG, you can either use a default interpreter variant or create a new variant for an interpreter. You can create more than one variant for an interpreter. The benefit of creating multiple variants for an Interpreter is to connect different versions of interpreters (Python ver:3, Python ver:2, etc.). This helps to connect a different set of users and database schema. For example, Compliance Studio schema, BD schema, etc. Compliance Studio provides secure and safe credential management such as Oracle Wallet (jdbc wallet), Password (jdbc password), or KeyStores to link to interpreter variants to access secured data.

MMG has ready-to-use interpreters such as fcc-python, jdbc Interpreter, etc. You can configure them based on the use case. Additional variants of interpreters are created as multiple users might require different settings to access the database securely. The jdbc Interpreters use the credentials to enable secure data access.

NOTE fcc-python, Pyspark, spark, and ore are a few other available interpreters.

Interpreters are configured when you want to modify URL, data location, drivers, enable or disable connections, etc.

1. To configure ready-to-use interpreters, follow these steps: 1. Click the Interpreter that you want to view from the list displayed on the LHS. The default configured interpreter variant is displayed on the RHS.
2. Modify the values in the fields as per requirement. For example, to modify a parameter's limit, connect to a different schema, PGX server, etc.
3. Click Update. The modified values are updated in the Interpreter.

For more information on Interpreters, see the Interpreter Configuration and Connectivity section in the OFS Compliance Studio Administration and Configuration Guide.

11.2 Managing Tasks

Tasks are created when notebooks or paragraphs are executed by the Notebook users. It is important to know the status of the execution, whether the tasks are created, rejected, canceled, etc. The Tasks page allows you to view the status of the task and associated notebooks, paragraphs, interpreters, etc. By default, all the tasks are listed on the Task page. You can view the specific task using filters such as task status, date of creation, and notebook name.

For more information on tasks, see the Monitoring Tasks on Notebook Server section in the OFS Compliance Studio Administration and Configuration Guide.

11.3 Managing Permissions

Use this section to view the logged-in users and view, add, or modify ready-to-use permissions granted to the users, roles, or groups. You can create groups, roles, and permission templates (actions).

NOTE You can only view users and their details.

See the User Access and Permissioning Management section in the OFS Compliance Studio Administration and Configuration Guide.

11.4 Managing Credentials

Compliance Studio provides secure and safe credential management. Examples of credentials are passwords, Oracle Wallets, or KeyStores. This section links credentials (a wallet and a password) to the jdbc interpreter variant to enable secure data access. This linking enables the jdbc interpreter to securely connect to the specified Oracle Database. You can also create new credentials based on your requirement to connect to the new interpreter variants.

For more information on Credentials, see the Link Credentials section in the OFS Compliance Studio Administration and Configuration Guide.

NOTE

You can link credentials only to the jdbc interpreter. The Credentials section is enabled if an Interpreter variant can accept credentials.

11.5 Configuring Templates

Perform the following steps to Create, Import, and set the FCGM Default Template in the Template Dashboard.

1. Click CS Launch Workspace to display the CS Production Workspace window.
2. Click Templates from Design Studio Options.

Figure: Templates

The Compliance Studio offers different formats to view the result after a paragraph's execution. Templates enable you to define parameters to customize the result formats. You can customize the visualization of the result by defining parameters in a template and then applying that template to a notebook.

NOTE

- Compliance Studio comes with a default template, but users can customize this at the template level but can also override any global template settings in each notebook paragraph
- It is recommended to use the template that is available from out-of-the-box Compliance Studio.

For more information, see the Interpreter Configuration and Connectivity section in the OFS Compliance Studio Administration and Configuration Guide.

12 Object Migration

Object Migration is the process of migrating or moving objects between environments.

You may want to migrate objects for several reasons such as managing global deployments on multiple environments or creating multiple environments so that you can separate the development, testing, and production processes.

12.1 Prerequisites to Migrate Objects

In order to migrate the objects, the users must be mapped to the **Object Migration Admin Group**.

NOTE

The Identity Administrator Group Users cannot migrate objects if they are not mapped to the **Object Migration Admin Group**.

12.2 Migration Object Types

You can migrate (import/export) the following Object Types by clicking the Object Migration  icon on the left menu.

- Schedule
- Batch
- Batch Group
- Pipeline
- Threshold
- Job
- PMF_Process
- Roles
- Groups

12.2.1 Schedule

Schedule provides the instruction to schedule the execution of defined processes. When a schedule is migrated, the associated batch is also migrated.

12.2.2 Batch

A batch is a group of jobs that are scheduled to automatically execute at a preset interval of time, without any user's intervention. When a batch is migrated, the batch and the associated pipeline information are also migrated.

12.2.3 Batch Group

A set of individual batches are consolidated to form a single Batch Group. When we migrate a Batch Group all the batches, tasks and pipeline information associated with that Batch Group are also migrated.

12.2.4 Pipeline

A pipeline is an embedded data processing engine that runs inside the application to filter, transform, and migrate data on-the-fly. Pipelines are a set of data processing elements called widgets connected in series, where the output of one widget is the input to the next element.

12.2.5 Threshold

The threshold limit associated with set variables values for scenarios in FCCM Cloud Service. These threshold values are set when scenarios are created or installed and can be changed, if required.

12.2.6 Job

Jobs provide set of instructions to execute Workflow Pipelines, based on the set threshold values

12.2.7 PMF_Process

PMF_Processes are defined to sequence the Workflow Pipelines the applications, and to design the artifacts that participate in the Pipelines, to implement the Pipelines. Export of PMF_Process will take care of dependent metadata, such as data fields, transition rules associated to the PMF process, that are defined in PMF.

12.2.8 Roles

Roles are used to map functions to a defined set of groups to ensure user access system security.

12.2.9 Groups

Groups are used to map Roles. Specific User Groups can perform only set of functions associated with that group.

12.3 Object Export Summary

To access the Object Export Summary page, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click the Object Migration  icon and select **Export Objects**.

The Object Export Summary page containing the records is displayed with the following details.

Name	Status	Last Modified By	Actions
Name: EXP5	Success	Last Modified By: mmgtest	[More]
Name: EXP4	Success	Last Modified By: mmgtest	[More]
Name: EXP3	Success	Last Modified By: mmgtest	[More] (Context Menu Open)
Name: EXP2	Success	Last Modified By: mmgtest	[More]
Name: EXP1	Success	Last Modified By: mmgtest	[More]

Page 1 of 1 (1 - 5 of 5 items)

- **Name:** The unique migration name assigned to the collection when the migration definition was created.
- **Object Migration Status:** The migration status of the record corresponding to the specified Definition Name. The three migration status values are as follows:
 - **Success** - Set to Success, when the object export is completed successfully.
 - **Saved** - Set to Saved, when the migration definition is ready for export and needs to import.
 - **Failed** - Set to failed, when the migration definition is not exported successfully.
- **Last Modified By:** The ID of the Last Modified by user who has modified the record.

12.3.1 Navigating Migration Object Export Summary Page

To search for a specific migration definition, type the first few letters of the user name that you want to search in the **Search** box and click Search  icon. The search results display the names that consist of your search string in the list of available users.

Name	Status	Last Modified By	Actions
Name: EXP5	Success	Last Modified By: mmgtest	[More]
Name: EXP4	Success	Last Modified By: mmgtest	[More]
Name: EXP3	Success	Last Modified By: mmgtest	[More] (Context Menu Open)
Name: EXP2	Success	Last Modified By: mmgtest	[More]
Name: EXP1	Success	Last Modified By: mmgtest	[More]

Page 1 of 1 (1 - 5 of 5 items)

At the bottom of the page, you can enter the number of entries that are available on a single page in the Records box. You can increase or decrease the number of entries that are displayed using the up and down arrows. To navigate between pages in the **View** bar, use the following buttons:

- Use the **First Page**  button to view the entries in the first page.
- Use the **Previous Page**  button to view the entries in the previous page.
- Use the **Next Page**  button to view the entries in the next page.
- Use the **Last Page**  button to view the entries in the last page.

You can also navigate to the desired page. To do this, enter the page number in the **View** bar control and press **Enter**.

To create a new migration definition, click **Add**  button and proceed with [Creating Migration Export Object Definitions](#)

12.3.2 Creating Migration Export Object Definitions

You can create Migration Export object definitions for the following object types.

- Batch Group
- Threshold
- PMF Process
- Batch
- Pipeline
- Schedule
- Job

To create a definition for export of objects to be migrated, do as follows:

1. Click **Add**  in the **Object Export Summary** Page to display the **Migration Definition Window**.

2. In the Migration Definition Window, enter the details for the following:
 - **Migration Name:** Enter the code of the export of objects to be migrated definition. This is a unique identifier.
 - **File Name:** The system auto-creates the file name of the objects that can be used to export the definition in the following format:
 - **For Business Objects:** Migration Name_BO_Time Stamp (MMDDYYYY HHMMSS)
 - **For Identity Objects:** Migration Name_IDM_Time Stamp (MMDDYYYY HHMMYY)
3. Click **Apply** to save the details.
The Object Selection Page is displayed.
4. In the Object Selection Page, select the required Object Type from the Object Types drop-down list.
The object types listed for the System Configuration tab are, Schedule, Batch group, Batch, Pipeline, Threshold, Job and PMF process. For more information about the object types, refer [Migration Object Types](#)
You can also enter the first few letters in Search to add a particular object from a selected Object type.
The list of objects is displayed.
5. Select the objects to be added to the Migrate Definition.
The selected objects are added to the respective object type branch.
6. Click **Save** to create the Migrate Definition.

A confirmation message is displayed, when the definition is saved successfully.

The new migration definition is listed in the Object Export Summary Page and the status is set to Saved.

NOTE If the migration definition object is not created successfully and the status is set to Failed. Contact [My Oracle Support](#) of more information.

12.3.3 Viewing Migration Export Objects

You can view and edit the migration objects from the **Object Export Summary** Page.

To view the list of migration export objects associated with a migration definition, highlight the migration definition and click **Menu** button  .

The following options are displayed.

Field	Description
View Log	View the migration log details of the selected Migration Definition. For more information, refer to View Log of Migration Export Objects .
View	View the Object Details for a specific Migration Definition. Click an object to view more details. For more information, refer to Viewing Export Migration Object Details .
Export	Click Export to initiate Object Migration (Export) for a specific Migration Definition. When the migration is completed, the status will change from Saved to Success. For more information, refer to Exporting Migration Objects .
Edit	Click Edit to view and edit the objects linked to a Migration Definition. For more information, refer to Editing Migration Export Definitions .

12.3.3.1 View Log of Migration Export Objects

To view the log details of object with migration status Success or Failed, follow these steps. The view log facilitates you to view the log information of the definition for export of objects to be migrated with its status.

1. Highlight the migration definition and click **Menu** button  and select **View Log**.

The View Log Page is displayed.

The export migration status with the following details is displayed.

Field	Description
Object Migration ID	The migration ID associated with the export object.
Object Type	The object type of the export object.

Field	Description
Object Code	The object code associated with the export object.
Creation Date	The date of creation of the export object.
Created By	The User Id of the User who created the export object.
Status	The migration status of the export object. <ul style="list-style-type: none"> • Success - Indicates that the export migration was completed successfully. • Failed - Indicates that the export migration did not complete

NOTE The View Log Page for a migration object with status Saved will be empty

2. Click **OK** to close the window.

12.3.3.2 Viewing Export Migration Object Details

To view the list of objects added to a specific Migration Definition:

1. Highlight the migration definition and click **Menu** button  and select **View**.
The list of migration objects added to the definition is displayed.
2. Double-click an object to view the object attribute details.

12.3.4 Exporting Migration Objects

To export the list of objects added to a specific Migration Definition:

1. Highlight the migration definition and click **Menu** button  and select **Export**.
After you export, the following types of status are displayed:
 - **Success** - When the object is migrated successfully
 - **Failed** - When the object migration didn't complete.

NOTE Object Migration (export) facilitates you to export a set of objects within the same setup or across different setups

12.3.5 Editing Migration Export Definitions

You can edit the migration export objects that are not exported and their status is Saved or Failed. If the object is already exported and the status is set to Success, you cannot edit the object details.

To edit a record of the definition of export of objects to be migrated, follow these steps. You can add more objects to export or remove existing objects.

1. Highlight the migration definition and click **Menu** button  and select **Edit**.

The Object Selection Window is displayed.

2. Update the required details.
3. In the Object Selection window, select the required Object Type from the Object Types drop-down list.

The object types listed for the System Configuration tab are, Batch_Group, PMF_Process, Batch and Schedule. For more information about the object types, refer [Migration Object Types](#).

You can also enter the first few letters in Search to add a particular object from a selected Object type.

The list of objects is displayed.

4. Select the objects to be added to the Migrate Definition or to be deleted from the Migration Definition.

The selected objects are added/deleted to the respective object type branch.

5. Click **Save** to edit the Migrate Definition.

A confirmation message is displayed, when the definition is saved successfully.

The edited migration definition is listed in the Object Export Summary Page and the status is set to Saved.

6. Click **Save** to update the changes.

12.3.6 Deleting Migration Export Objects Definition

You can delete only a record that is set to Saved or Failed status and not a record that is in Success status.

To delete a migrate export object definition, follow these steps.

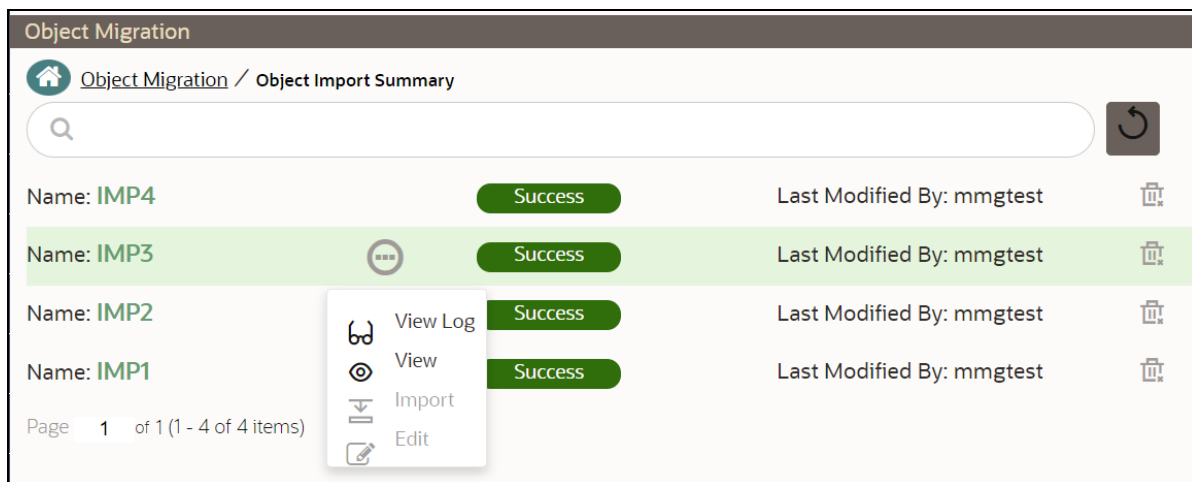

1. Highlight the record to be deleted and click the **Delete**  button.
2. Click **Yes** to confirm and proceed with the deletion.

12.4 Object Import Summary

To access the Object, Import Summary page, follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. Click the Object Migration  icon and select **Import Objects**.

The Object Import Summary page containing the records is displayed with the following details.

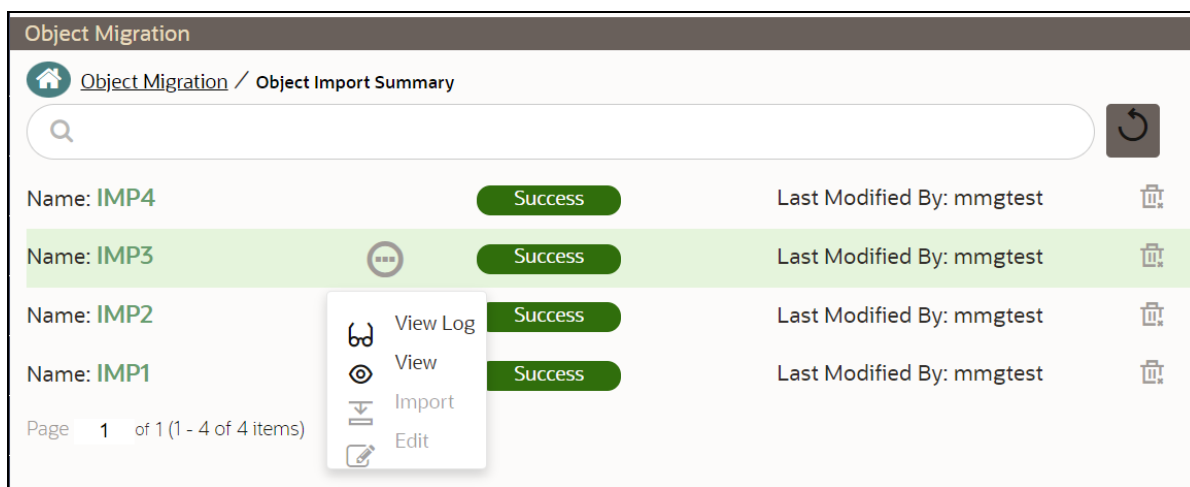

Name	Status	Last Modified By
IMP4	Success	mmgtest
IMP3	Success	mmgtest
IMP2	Success	mmgtest
IMP1	Success	mmgtest

Page 1 of 1 (1 - 4 of 4 items)

- **Name:** The unique migration name assigned to the collection when the migration definition was created.
- **Object Migration Status:** The migration status of the record corresponding to the specified Definition Name. The three migration status values are as follows:
 - **Success** - Set to Success, when the object import is completed successfully.
 - **Saved** - Set to Saved, when the migration definition is ready for import and needs to import.
 - **Failed** - Set to failed, when the migration definition is not imported successfully.
- **Last Modified By:** The ID of the Last Modified by user who has modified the record.

12.4.1 Navigating Migration Object Import Summary Page

To search for a specific migration definition, type the first few letters of the user name that you want to search in the **Search** box and click Search  icon. The search results display the names that consist of your search string in the list of available users.

Name	Status	Last Modified By
IMP4	Success	mmgtest
IMP3	Success	mmgtest
IMP2	Success	mmgtest
IMP1	Success	mmgtest

Page 1 of 1 (1 - 4 of 4 items)

At the bottom of the page, you can enter the number of entries that are available on a single page in the Records box. You can increase or decrease the number of entries that are displayed using the up and down arrows. To navigate between pages in the **View** bar, use the following buttons:

- Use the **First Page**  button to view the entries in the first page.
- Use the **Previous Page**  button to view the entries in the previous page.
- Use the **Next Page**  button to view the entries in the next page.
- Use the **Last Page**  button to view the entries in the last page.

You can also navigate to the desired page. To do this, enter the page number in the **View** bar control and press **Enter**.

To create a new migration definition, click **Add**  button and proceed with [Creating Migration Import Object Definitions](#).

12.4.2 Creating Migration Import Object Definitions

You can create Migration Import object definitions for the following object types.

- Batch Group
- Threshold
- PMF Process
- Batch
- Pipeline
- Schedule
- Job

To create a definition for import of objects to be migrated, do as follows:

1. Click **Add**  in the **Object Import Summary** Page to display the **Migration Definition Window**.

2. In the **Migration Definition** Window, enter the details for the following:
 - **ID:** Enter a valid name for the new migration import definition.
This is a unique identifier.
 - **Dump File:** Select the dump file to be utilized for creating the Migration Import Definition.
3. **Import All:** Select an option to import the nodes that are associated with the selected object type
You can edit this option if required, in the **Object Selection** page.

- **Yes** - Imports all the nodes that are included in the dump file.
 - **No** - Imports only those nodes that you can select in the **Object Selection** page.
4. **Fail on Error:** Select an option to proceed with the definition creation in case of an error.
You can edit this option if required, in the **Object Selection** Page.
 - **Yes** - Stops the creation process, if error is generated
 - **No** - Creates the import definition even when error is generated. The node with the error is not included in the object creation.
 5. **Overwrite:** Select an option to overwrite the existing definition file.
You can edit this option if required, in the **Object Selection** Page.

- **Yes** - Replaces the existing Import definition.
 - **No** - Creates a new Import definition.
6. Click **Apply** to save the details.
The **Object Selection** page is displayed.
 7. In the **Object Selection** page, click Add Members, to add objects associated with specific object types.
 8. In the **Object Selection** page, select the required **Object Type** from the **Object Types** drop-down list.

The object types listed are, Schedule, Batch group, Batch, Pipeline, Threshold, Job and PMF process. For more information about the object types, refer [Migration Object Types](#).

You can also enter the first few letters in **Search** to add a particular object from a selected Object type.

The list of objects is displayed.
 9. Select the objects to be added to the Migrate Definition.

You can select the objects only if you select **No** for **Import All**.

The selected objects are added to the respective object type branch.
 10. Click **Save** to create the Migrate Definition.

A confirmation message is displayed, when the definition is saved successfully.

The new migration definition is listed in the Object Import Summary Page and the status is set to **Saved**.

NOTE If the migration definition object is not created successfully and the status is set to Failed. Contact [My Oracle Support](#) of more information.

12.4.3 Viewing Migration Import Objects

You can view and edit the migration objects from the **Object Import Summary** Page.

To view the list of migration export objects associated with a migration definition, highlight the migration definition and click **Menu** button  .

The following options are displayed.

Field	Description
View Log	View the migration log details of the selected Migration Definition. For more information, refer to View Log of Migration Import Objects .
View	View the Object Details for a specific Migration Definition. Click an object to view more details. For more information, refer to Viewing Import Migration Object Details .

Field	Description
Export	Click Export to initiate Object Migration (Import) for a specific Migration Definition. When the migration is completed, the status will change from Saved to Success . For more information, refer to Importing Migration Objects .
Edit	Click Edit to view and edit the objects linked to a Migration Definition. For more information, refer to Editing Migration Import Definitions .

12.4.3.1 View Log of Migration Import Objects

To view the log information of a record of the definition for import of objects to be migrated, follow these steps. The view log facilitates you to view the log information of the definition for import of objects to be migrated with its status.

1. Highlight the migration definition and click **Menu** button  and select **View Log**.

The View Log Page is displayed.

The export migration status with the following details is displayed.

Field	Description
Object Migration ID	The migration ID associated with the export object.
Object Type	The object type of the export object.
Object Code	The object code associated with the export object.
Creation Date	The date of creation of the export object.
Created By	The User Id of the User who created the export object.
Status	The migration status of the export object. <ul style="list-style-type: none"> • Success - Indicates that the export migration was completed successfully. • Failed - Indicates that the export migration did not complete

NOTE The View Log Page for a migration object with status Saved will be empty

2. Click **OK** to close the window.

12.4.3.2 Viewing Import Migration Object Details

To view the list of objects added to a specific Migration Definition:

1. Highlight the migration definition and click **Menu** button  and select **View**.

The list of migration objects added to the definition is displayed.

2. Double-click an object to view the object attribute details.

12.4.4 Importing Migration Objects

To export the list of objects added to a specific Migration Definition:

1. Highlight the migration definition and click **Menu** button  and select **Export**.

After you export, the following types of status are displayed:

- **Success** - When the object is migrated successfully
- **Failed** - When the object migration didn't complete.

NOTE Object Migration (export) facilitates you to export a set of objects within the same setup or across different setups

12.4.5 Editing Migration Import Definitions

You can edit the migration export objects that are not exported and their status is Saved or Failed. If the object is already exported and the status is set to Success, you cannot edit the object details.

To edit a record of the definition of export of objects to be migrated, follow these steps. You can add more objects to export or remove existing objects.

1. Highlight the migration definition and click **Menu** button  and select **Edit**.

The Object Selection Window is displayed.

2. Update the required details.
3. In the Object Selection window, select the required Object Type from the Object Types drop-down list.

The object types listed for the System Configuration tab are, Batch_Group, PMF_Process, Batch and Schedule. For more information about the object types, refer [Migration Object Types](#).

You can also enter the first few letters in Search to add a particular object from a selected Object type.

The list of objects is displayed.

4. Select the objects to be added to the Migrate Definition or to be deleted from the Migration Definition.

The selected objects are added/deleted to the respective object type branch.

5. Click **Save** to edit the Migrate Definition.

A confirmation message is displayed, when the definition is saved successfully.

The edited migration definition is listed in the Object Export Summary Page and the status is set to Saved.

6. Click **Save** to update the changes.

12.4.6 Deleting Migration Import Objects Definition

You can delete only a record that is set to Saved or Failed status and not a record that is in Success status.

To delete a migrate export object definition, follow these steps.

1. Highlight the record to be deleted and click the **Delete**  button.
2. Click **Yes** to confirm and proceed with the deletion.

13 Model Catalog

The Model Catalog page allows you to add and manage the Model Technique, Model Library, and Model Objectives. You can either import the models from external sources or create, train and label it as champion model.

13.1 Model Objective

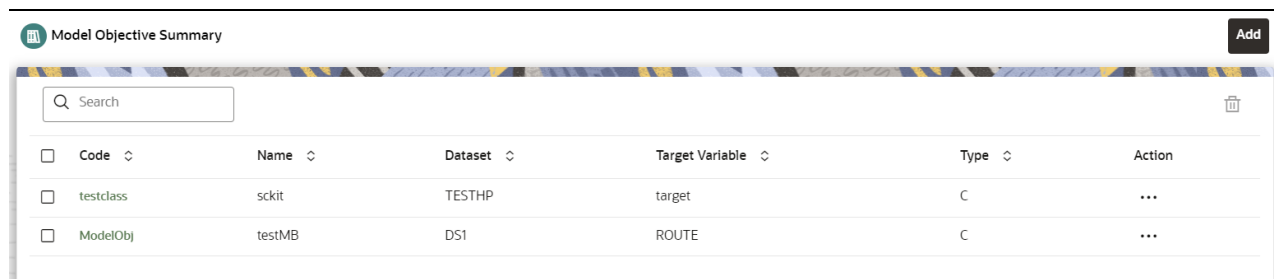

Model Objective is the top level metadata where further models are created or trained which can be consumed in the upcoming steps.

To add a Model Objective , follow these steps:

1. Click **Launch Workspace**  next to corresponding Workspace to Launch Workspace to display the **MMG Dashboard** window with application configuration and model creation menu.
2. In the LHS menu, click **Model Catalog**  to display the **Model Objective Summary** window.

This window displays the model objectives in a table.

Figure 58: Model Objective Summary Page

Code	Name	Dataset	Target Variable	Type	Action
testclass	sckit	TESTHP	target	C	...
ModelObj	testMB	DS1	ROUTE	C	...

The following table provides descriptions for the fields and icons on the **Model Objective Summary** page.

Field or Icon	Description
Search	The field to search for Model Objectives. Enter specific terms in the field for which you want to search, and press Enter on the keyboard to display the results.
Code	The unique identifier of the Model Objective.
Name	The name of the Model Objective.
Dataset	The dataset which is used to create the Model Objective.
Target Variable	Target Variable is the important parameter after the dataset. During the dataset selection, target variable is selected that constitutes of number of columns/features.
Type	The type which is selected during model objective creation. The type can be either Classification or Regression.

Field or Icon	Description
Action 	Click the three dots to perform View/Delete functions on the selected model objective..

13.1.1 Adding a Model Objective

To add a model objective, follow these steps:

1. In the **Model Objective Summary** screen, click **Add**.

The Add Model Objective screen is displayed.

2. Select the required dataset from the drop-down.
For more details on the dataset, see [Dataset](#) section.
3. Enter the code for the Model Objective.
The code should be unique for each model objective.
4. Enter the name and description for the Model Objective.
5. Select one of the column/feature as the target variable for the models which needs to be trained/uploaded.
6. Select the Type as either as **Classification** or **Regression**.

Classification: Classification is a process of finding a function which helps in dividing the dataset into classes based on different parameters. The task of the classification algorithm is to find the mapping function to map the input(x) to the discrete output(y).

Regression: Regression is a process of finding the correlations between dependent and independent variables. The task of the Regression algorithm is to find the mapping function to map the input variable(x) to the continuous output variable(y).

7. Click **Create**.

The Model Objective is created and displayed in the **Model Objective Summary** screen.

13.1.2 View a Model Objective

To view a Model Objective, follow these steps:

1. Navigate to **Model Objective Summary** page.

2. Click  next to corresponding Model Objective and select View .

The following page is displayed.

Model ID	Code	Version	Type	Status	Action	Champion
1677506289492	SAMPLE1 xnmkkl	0	Model		...	
1677506513489	SAMPLE1	1	Model		...	
1675078958019	TESTMODELBUILDER test	0	Model		...	
1675078994551	UPLOADED uploaded model	0	Uploaded Model		...	

Clicking on the Type of the model displays the individual model and build details.

13.1.2.1 Upload a Model

To upload a model, follow these steps:

1. In the View Model Objective page, click **Add** and select **Upload Model**.

The **Upload Model** page is displayed.

The screenshot shows a web form titled "Upload Model" with a close button (X) in the top right corner. The form contains the following fields:

- Select Library**: A dropdown menu with a downward arrow. A "Required" label is positioned to the right.
- Select Technique**: A dropdown menu with a downward arrow.
- Model Code**: A text input field. A "Required" label is positioned to the right.
- Description**: A text input field.
- Model File Name**: A text input field. A "Required" label is positioned to the right, along with a red question mark icon.
- Import File**: A dashed rectangular box containing the text "Import Archive File (Drag & Drop file here)" and an upward-pointing arrow icon.

2. Select the library from the drop-down.
For more details on the model library, see [Model Library](#) section.
3. Select the required technique from the drop-down.
For more details on the model technique, see [Model Technique](#) section.
4. Enter the model code and description for the Model Objective.
5. Enter the name of model file with extension for use during Save and Load.

OR

Import the model using **Import Archive File** option.

6. Click **Upload Model**.

The model is uploaded successfully.

13.1.2.2 Build a Model

Building a model consists of the following steps:

- [Model Details](#)

- [Pre – Processing Stage](#)
- [Model Training Stage](#)
- [Model Validation Stage](#)
- [Model Summary](#)

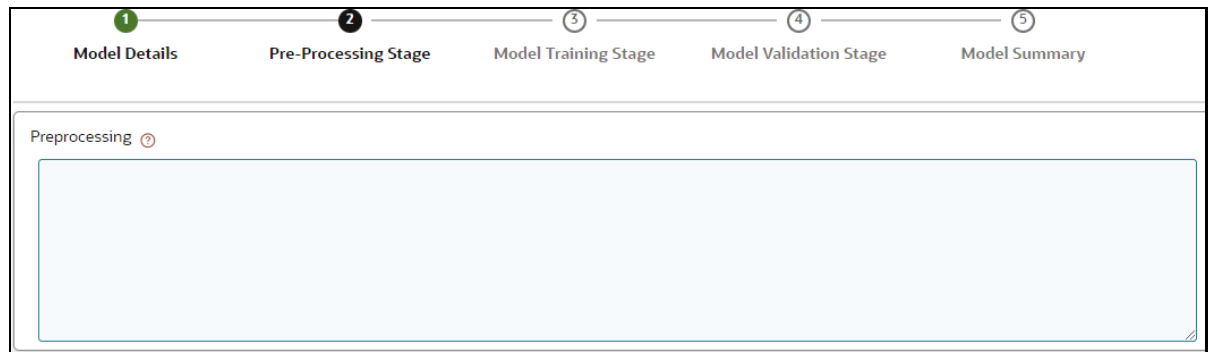

13.1.2.2.1 Model Details

1. In the View Model Objective page, click **Add** and select **Build Model**.
The **Model Details** page is displayed.

2. Select the library from the drop-down. Currently, the supported libraries are keras, ONNX, scikit-learn, and xgboost. For more details, see [Model Library](#) section.
3. Select the required technique from the drop-down. For more details, see [Model Technique](#) section.
4. Enter the model code and description for the model.
5. Enter the name of model file with extension for use during Save and Load.
6. Click **Next** to go to the next step.

13.1.2.2.2 Pre – Processing Stage

After adding the details in the Model Details page, the Pre-Processing Stage screen is displayed.

1. Enter the data in the Preprocessing textbox based on the following example.

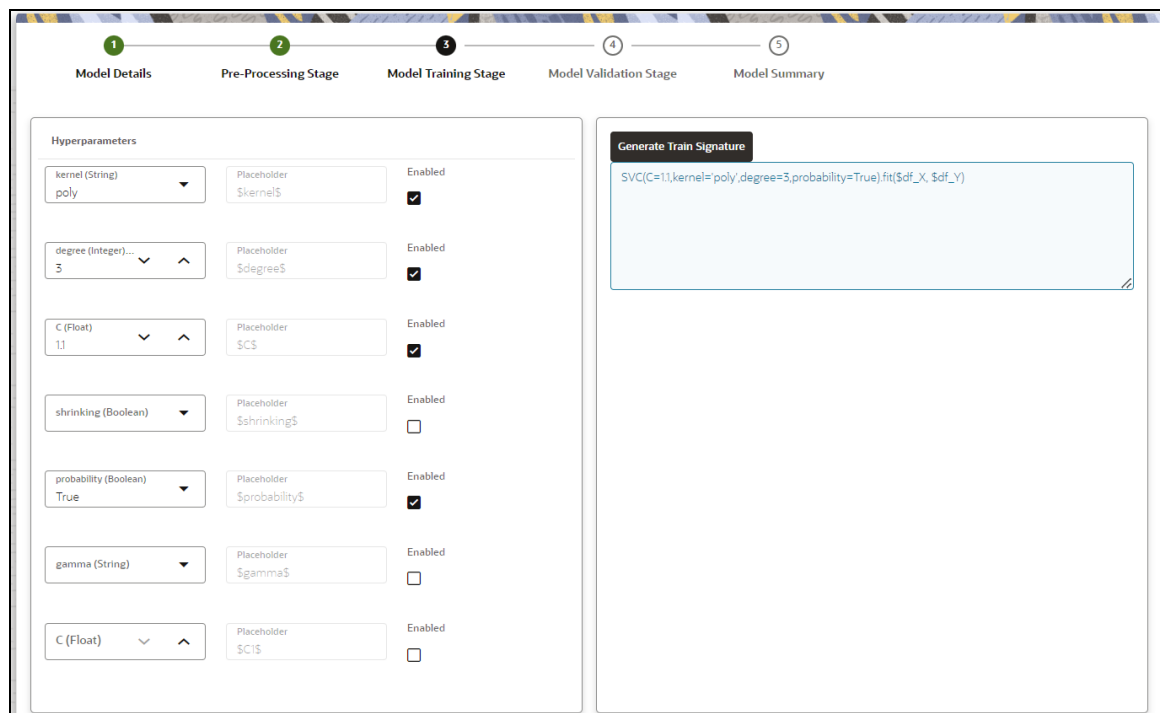

Pre-Processing Help:

1. The pre-processing block will be plain python script which will be executed before model train signature.
e.g. `print('inside pre-processing block')\nprint('pre-processing done')`
2. For line breaks in the python script use `\"n\"`
3. Based on the dataset provided in the model objective, user will get data in form of pandas dataframe which can then be used in pre-processing block.
4. 'mmg_dataset_df_X' is the variable name for training data which can be used to perform some operations on it but final variable that will be used in train signature will be 'mmg_dataset_df_X' only.
e.g. `mmg_dataset_df_X = some_func(mmg_dataset_df_X)`

2. Click **Next** to go to the next step.

13.1.2.2.3 Model Training Stage

After adding the details in the Pre-Processing Stage page, the Model Training Stage screen is displayed.

1. Select the hyperparameters.
When the parameters is selected, the **Enabled** check box is selected by default.
2. Click **Generate Train Signature**.

The signature is displayed.

3. Click **Next** to go to the next step.

13.1.2.2.4 Model Validation Stage

After adding the details in the Model Training Stage page, the Model Validation Stage screen is displayed.

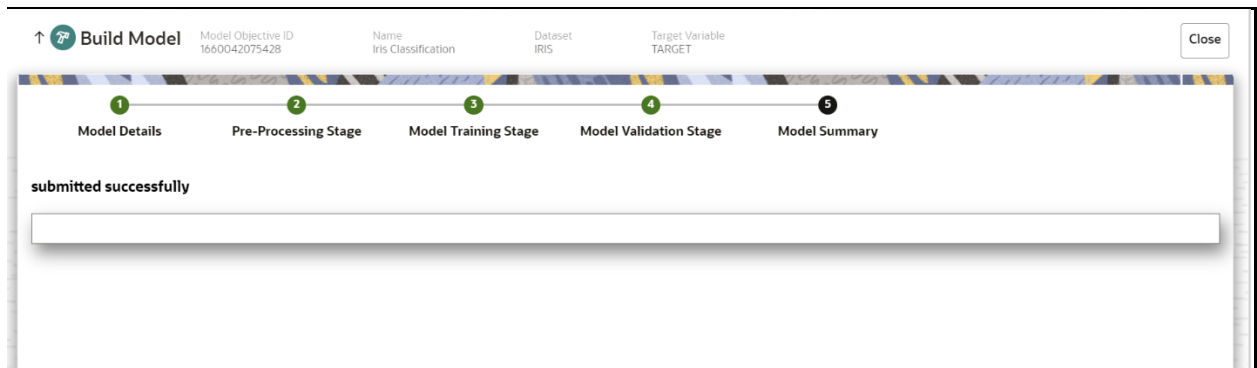

The Validation is work in progress.

1. Click **Finish** to start the training of the model.

13.1.2.2.5 Model Summary

Once the validation of the model is completed, the Model Summary screen is displayed

1. Click **Close**.

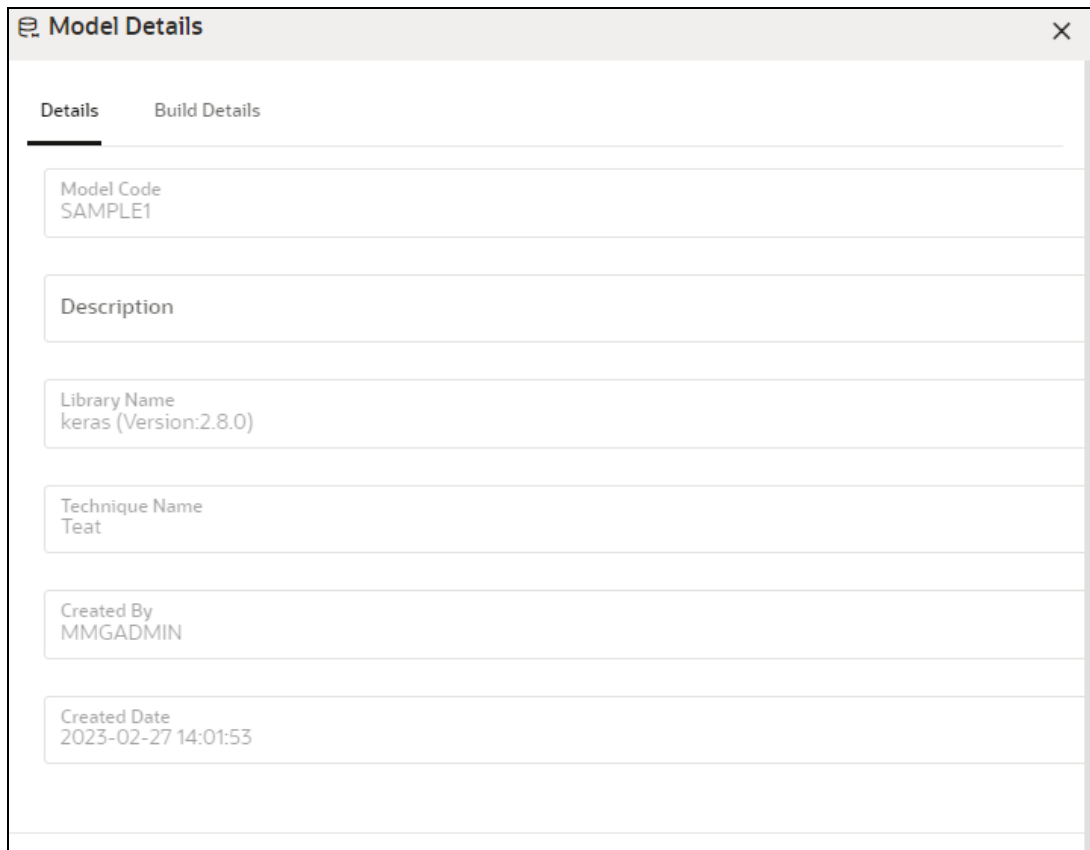

The model is created and displayed in the Model Objective screen.

13.1.2.3 View Details of a Model

To view details of a model, follow these steps:

1. In the View Model Objective page, click **Action**  next to corresponding model and select **View Details**.

The model details are displayed.

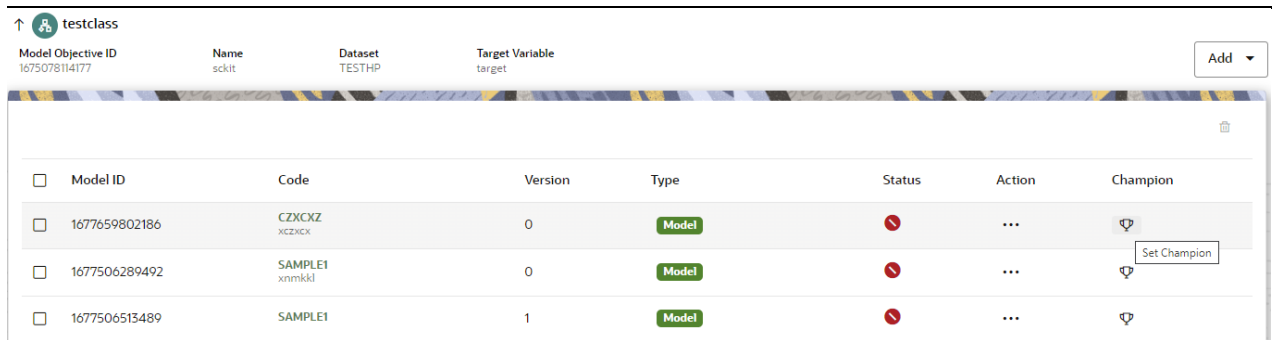

2. Click on the Build Details tab to view the Preprocessing, and Hyperparameters details of the model.

13.1.2.4 Setting the Model as Champion

You can set the trained models as champion model.

To set the model as champion, follow these steps:

1. In the View Model Objective page, hover over the model which you want to set as champion and click **Set Champion** icon.

A confirmation dialog is displayed.

2. Click **Update**.

The model is set as champion for the selected model objective.

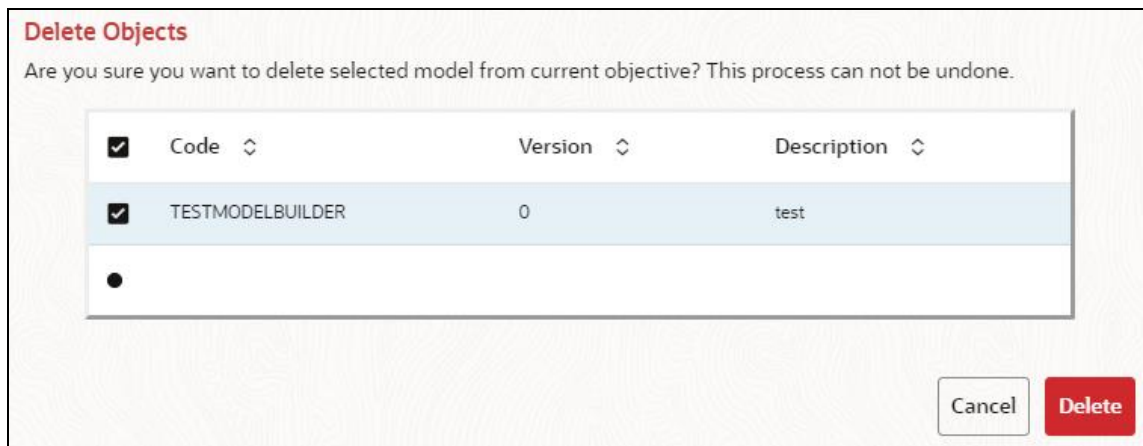

13.1.2.5 Delete a Model

To delete a model, follow these steps:

1. In the View Model Objective page, select the models which you want to delete.

2. Click Delete  .

A confirmation dialog is displayed.

3. Click **Delete**.

The selected models are deleted.

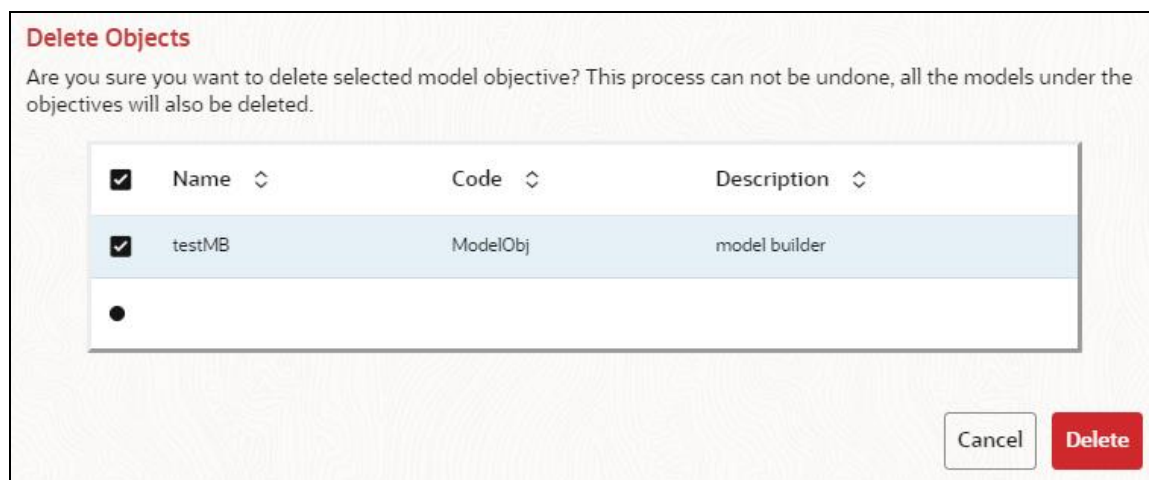

13.1.3 Delete a Model Objective

To delete a Dataset, follow these steps:

1. Navigate to Model Objective Summary page.

2. Click  next to corresponding Dataset and select Delete  .

A confirmation dialog is displayed.

3. Click **Delete**.

The selected model objective and all the models associated are deleted.

13.2 Model Library

The Model Library information is used to bind a particular technique and its details to one unique Model Library. The Starting point for the Model builder is to register a model library with MMG application after it is properly set up in the python environment to be used.

Currently, MMG supports the following libraries:

- keras
- ONNX
- scikit-learn
- xgboost

As an example, the below section provides information on how to set up and register scikit-learn library.

Setting up the python library in the python environment:

Open the terminal and install the scikit-learn library using the following command:

```
python3 -m pip install scikit-learn
```

NOTE Proxy might be required to install the packages from pip.

Once the installation is complete, check for the package details using the following command:

```
pip show scikit-learn
```

Once the installation is complete in python environment, you need to register the library into MMG application.

Registering the python library in MMG:

1. In the LHS menu, click **Model Catalog > Model Library** option.

The **Library Summary** page is displayed.

- In the **Library Summary** page, click **Add**.

The **Add Library** page is displayed.

- Enter the name of the library.
- Enter the version and description of the library.
- Enter the signatures such as Import, Load, Train, Save, and Infer. For more details on the signatures, click on the respective help icon.

Some of the signatures captured in library stage might not be standard across different algorithm/techniques provided by the library.

- Click **Create**.

The Model Objective is created and displayed in the Model Objective screen.

NOTE MMG User needs to check the details provided above from the homepage of the library being captured.

For example: <https://scikit-learn.org/stable/>.

OR

You can select the **Use Template** option to pre-fill the entries from the seeded list of Libraries. Currently following are the library present in the template.

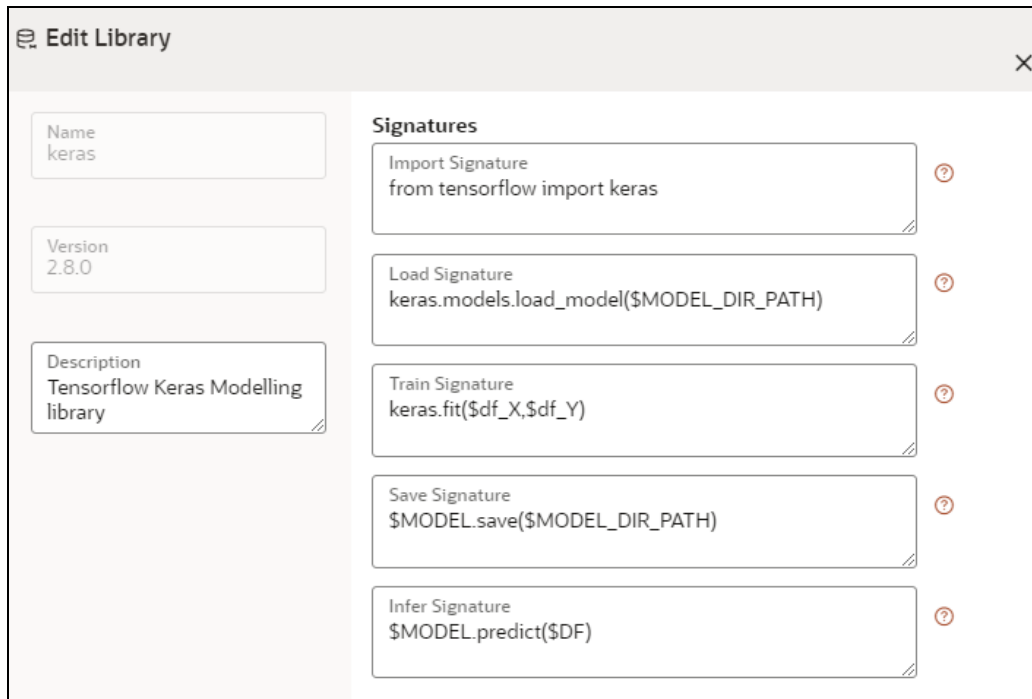

You can also edit the data based on your requirements.

13.2.1 Edit a Model Library

To edit a model library, follow these steps:

1. Navigate to **Library Summary** page.
2. Click **⋮** next to corresponding model library and select Edit .

The **Edit Library** screen is displayed.

3. Make the necessary changes and click **Update**.

NOTE The Model Library name and version is unique and cannot be modified.

13.2.2 Delete a Model Library

To delete a model library, follow these steps:

1. Navigate to **Library Summary** page.

2. Click  next to corresponding model library and select Delete .

A confirmation dialog is displayed.

Delete Objects

Are you sure you want to delete selected model library? This process can not be undone.

<input checked="" type="checkbox"/> Code	Name	Description
<input checked="" type="checkbox"/> xgboost(Ver:1.0)	xgboost	Xgboost Library for Modeling

To view the Techniques that will be deleted with Library, click 

 These items are not consumed by any Model Catalogs.

3. Click **Delete**.

The selected model library and all the model techniques associated are deleted. The libraries that are deleted cannot be consumed by any model catalogs.

To delete multiple model libraries:

Select the model libraries which you want to delete and click  on the header of the page.

13.3 Model Technique

Model Technique is the algorithm/technique used to create python model using the library/package which was created in the Model Library Screen. It is the actual information captured in the MMG application that helps in training the model (Upload and Build).

1. In the LHS menu, click **Model Catalog > Model Technique** option.

The **Technique Summary** page is displayed.

Name	Library	Type	Action
DecisionTreeClassifier	scikit-learn (Version:1.1.3)	C	...
DecisionTreeClassifier1	scikit-learn (Version:1.1.3)	C	...
DecisionTreeRegressor	scikit-learn (Version:1.1.3)	R	...

- In the **Technique Summary** page, click **Add**.

The **Add Technique** page is displayed.

- Enter the name of the technique.
- Enter the description of the technique.
- Select the library from the drop-down. Currently, MMG supports the libraries such as keras, ONNX, scikit-learn, and xgboost.
- Select the type as either as **Classification** or **Regression**.

Classification: Classification is a process of finding a function which helps in dividing the dataset into classes based on different parameters. The task of the classification algorithm is to find the mapping function to map the input(x) to the discrete output(y).

Regression: Regression is a process of finding the correlations between dependent and independent variables. The task of the Regression algorithm is to find the mapping function to map the input variable(x) to the continuous output variable(y)

- Enter the signatures such as Import, Load, Train, Save, and Infer. For more details on the signatures, click on the respective help icon.

Some of the signatures captured in library stage might not be standard across different algorithm/technique provided by the library.

- Navigate to **Hyperparameter Details** tab and click **Add** to add the parameters.

You can add the type of parameters such as String, Integer, Float, and Boolean.

9. Click **Create**.

The Model Technique is created and displayed in the **Technique Summary** screen.

NOTE MMG User needs to check the details provided above from the homepage of the library being captured.

For example: <https://scikit-learn.org/stable/>.

OR

You can select the Use Template option to pre-fill the entries from the seeded list of Libraries.

You can also edit the data based on your requirements.

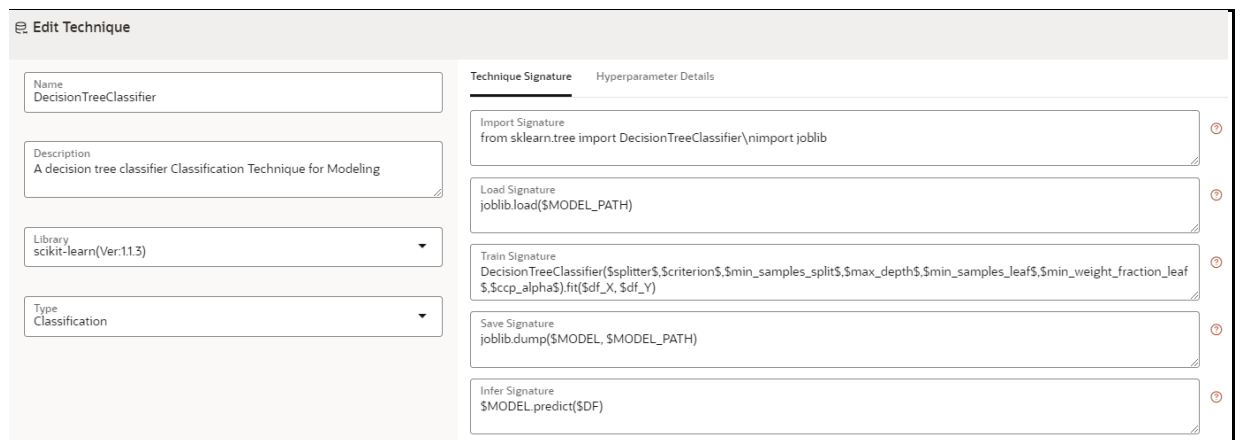

13.3.1 Edit a Model Technique

To edit a model technique, follow these steps:

1. Navigate to **Technique Summary** page.

2. Click  next to corresponding model technique and select Edit .

The **Edit Technique** screen is displayed.

3. Make the necessary changes and click **Update**.

For more details, see [Model Technique](#) section.

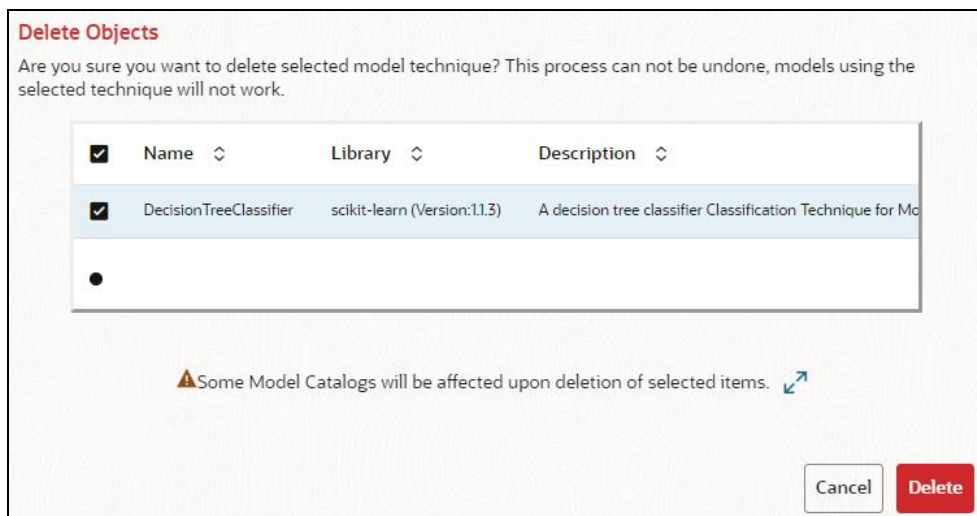

13.3.2 Delete a Model Technique

To delete a model technique, follow these steps:

1. Navigate to **Technique Summary** page.

2. Click  next to corresponding model technique and select Delete .

A confirmation dialog is displayed.

3. Click **Delete**.

The selected model technique and all the model catalogs associated are deleted.

To delete multiple model techniques:

Select the model techniques which you want to delete and click  on the header of the page.

14 Appendix -I

All the listed APIs/Functions can be utilized by users in Model Pipelines.

Table: Python paragraph scripting

API Type	Functionality	Prerequisite	Notebook Execution Script	Notebook Script Input	Minimum Supported Version
Set User	Set the user for a session		<pre>%python from mmg.constants import * user = "SAUSER" set_user(user)</pre>	user - username to be set	8.1.1
Get User	Get the user that has been set	Set User	<pre>%python from mmg.constants import * get_user()</pre>		8.1.1
Attach Workspace	Attach the workspace for a session		<pre>%python from mmg.workspace import attach_workspace workspace = "CS" attach_workspace(workspace)</pre>	workspace- workspace to be attached	8.1.1
Get Workspace	Get the workspace that has been attached	Attach Workspace	<pre>%python from mmg.workspace import get_workspace get_workspace()</pre>		8.1.1
List Workspaces	Lists all workspaces available to a user	Set User	<pre>%python from mmg.workspace import list_workspaces list_workspaces()</pre>		8.1.1
Check AIF	Check if AIF is set or not	Set User	<pre>%python from mmg.workspace import check_aif check_aif()</pre>		8.1.1
List All Data Sources	List all data sources available in a workspace for a set user. The default workspace chosen is the one that is attached.	Set User, Attach Workspace	<pre>%python from mmg.workspace import list_datasources list_datasources(order=None)</pre>	order - None ensures that all the data sources will be listed for the attached workspace	8.1.1

API Type	Functionality	Prerequisite	Notebook Execution Script	Notebook Script Input	Minimum Supported Version
List All Data Sources of Workspace	List all Data Sources of a specific Workspace that is not the attached workspace for a set user.	Set User	<pre>%python from mmg.workspace import list_datasources workspace="HELLO NEW" list_datasources(workspace,order=None)</pre>	workspace - Name of workspace for which data sources should be listed order - None ensures that ALL data sources will be listed for that workspace	8.1.1
Fetch First Order Data Source	This method will fetch the data source related to attached workspace with default order 1.	Set User, Attach Workspace	<pre>%python from mmg.workspace import list_datasources list_datasources()</pre>	order - 1 by default, if not specified	8.1.1
Fetch First Order Data Source of Workspace	This method will fetch the data source with default order 1 related to specified workspace.	Set User	<pre>%python from mmg.workspace import list_datasources workspace="CS" list_datasources(workspace)</pre>	workspace - Name of workspace for which data source should be listed order - 1 by default if not specified	8.1.1
Fetch Nth Order Data Source	This method will fetch the data source related to attached workspace with given order	Set User, Attach Workspace	<pre>%python from mmg.workspace import list_datasources list_datasources(order=2)</pre>	order - Order of data source to be fetched	8.1.1
Fetch Nth Order Data Source of Workspace	This method will fetch the data source with given order related to specified workspace.	Set User	<pre>%python from mmg.workspace import list_datasources workspace="CS" list_datasources(workspace,order=2)</pre>	workspace - Name of workspace for which data source should be listed order = Order of data source to be fetched	8.1.1

API Type	Functionality	Prerequisite	Notebook Execution Script	Notebook Script Input	Minimum Supported Version
Get Connection Object	Returns Oracle/SQLAlchemy Connection Object to Data Source of order 1 in attached workspace.	Set User, Attach Workspace	<pre>%python import cx_Oracle from mmg.workspace import get_connection conn=get_connection() if not isinstance(conn,cx_Oracle.connect): print("Not Connection Object") print(conn)</pre>		8.12.0
Get Connection Object To Specific Data Source	Returns Oracle/SQLAlchemy Connection Object to specified Data Source	Set User	<pre>%python import cx_Oracle from mmg.workspace import get_connection datasource="DS001" conn=get_connection(datasource) if not isinstance(conn,cx_Oracle.connect): print("Not Conn Object") print(conn)</pre>	datasource - Name of datasource for which the connection object has to be returned	8.12.0
Get Connection Object To Data Source Using Order	Returns Oracle/SQLAlchemy Connection Object to Data Source of specified order in attached workspace.	Set User, Attach Workspace	<pre>%python import cx_Oracle from mmg.workspace import get_connection datasource=2 conn=get_connection(datasource) if not isinstance(conn,cx_Oracle.connect): print("Not Conn Object") print(conn)</pre>	datasource - Order number of datasource in attached workspace for which the connection object has to be returned	8.12.0
Test Connection Object	This script can be used to test the connection object to data source	Get Connection Object OR Get Connection Object To Specific Data Source OR Get Connection Object To Data Source Using Order	<pre>%python query="SELECT table_name FROM user_tables" cur = conn.cursor() cur.execute(query) print(cur.fetchall()) if cur: cur.close()</pre>		8.12.0

PYTHON LINEPARSER APIs (for MMG version 8.1.0)

API Type	Functionality	Notebook Execution Script	Note
Attach Workspace	Attach the workspace for a session	<pre>%python mmg.attachWorkspace(workspace) #eg- mmg.attachWorkspace("CS")</pre>	workspace - workspace to be attached (String) Sets 'mmg' python variable which contains the information about the attached workspace. Output- Print a boolean in one line on the status of workspace attachment and another line of boolean on status of AIF enabled and attached.
List Workspaces	Lists all workspaces available to a user	<pre>%python mmg.listWorkspaces()</pre>	Sets 'ofs_wsList' python variable which is the list of all available workspaces. Output- Print the list of workspaces.
Check AIF	Check if AIF is set or not	<pre>%python print(aif__isAttached)</pre>	Output- Boolean on the status of AIF.
Get Connection Object	Returns cx_Oracle Connection Object	<pre>%python mmg.getConnection(schema_name) #eg- mmg.getConnection("OFSAA")</pre>	schema_name = name of the schema for which connection is required (String). Sets 'conn' python variable which is the cx_Oracle connection object to be used for firing queries.
Publish	Fetch and sets the Notebook JSON dump	<pre>%python mmg.publish()</pre>	Sets 'emf_para' python variable which is the JSON dump for the notebook component. Output- Print the set 'emf_para' value.
Register	Register the Notebook	<pre>%python mmg.register(register) #eg- mmg.register({"modelname":"model1", \ # "modeldescription":"Model description"}) #eg- mmg.register(emf_para) {After doing mmg.publish() }</pre>	register - JSON Stringify object for RegisterNotebookBean Object. Sets 'publishedNotebookId' python variable which is the studio notebook id for the published version. Output- Prints the published notebook id.
Load Flat File		<pre>%python mmg.loadFlatFile() #eg- mmg.loadFlatFile() Incomplete</pre>	
Profile Data		<pre>%python mmg.profileName(code, title) #eg- mmg.profileName(ABC,XYZ)</pre>	

15 Appendix - II

Public APIs for Scheduler Operations

The following APIs are exposed for the Scheduler Operations.

- NOTES**
1. All the below APIs are POST requests.
 2. All the APIs accept below values in request header:
 - ofs_tenant_id - Optional
 - ofs_service_id - Optional
 - ofs_workspace_id - Respective workspace id where the batch needs to be created
 - ofs_remote_user – MMG login user
- The ofs_workspace_id and ofs_remote_user are mandatory fields.

Table: APIs for Scheduler Operations

Base URL: `http(s)://<MMG_Service_HostName>:<MMG-Service_Port>/<CONETXTNAME>/`

Functionality	API	Sample Request JSON	Sample Response JSON	Comments
Execute Immediate	rest-api/v1/external/trigger	<pre>{ "batchName": "batch1", "batchType": "rest", "includedTasks": "task1,task2", "excludedTasks": "task1,task2", "heldTasks": "task1,task2" }</pre>	<pre>{ "severity": "info", "summary": "Object triggered successfully with Run Id: batch1_2022-08-17_1660721567845_1", "batchRunId": "batch1_2022-08-17_1660721567845_1", "details": "Object triggered successfully.", "status": "success", "statusCode": "0" }</pre>	<ul style="list-style-type: none"> • The includedTasks/ excludedTasks/ heldTasks are options keys. • The batchType will be “group” for batch group execution.

Functionality	API	Sample Request JSON	Sample Response JSON	Comments
Execution Status	rest-api/v1/external/status	<pre>{ "batchRunId": "batch1_2022-08-17_1660721567845_1", "tasks":["task1","task2"] }</pre>	<pre>{ "severity": "info", "batchRunId": "batch1_2022-08-17_1660721567845_1", "taskStatusList": [{ "taskCode": "task1", "taskStatus": "SUCCESSFUL", "statusCode": "0" }, { "taskCode": "task2", "taskStatus": "EXCLUDED", "statusCode": "4" }], "batchStatusCode": "0", "batchList": [], "batchStatus": "SUCCESSFUL", "status": "success", "statusCode": "0" }</pre>	<ul style="list-style-type: none"> “tasks” is options key. If not passed, then response will contain status all the tasks inside a batch.

Functionality	API	Sample Request JSON	Sample Response JSON	Comments
Rerun	rest-api/v1/external/rerun	<pre>{ "batchName": "batchgroup1", "batchRunId": "batchgroup1_202 2-08- 17_1660720814942 _1" }</pre>	<pre>{ "severity": "info", "summary": "Object triggered successfully for rerun with Run Id: batchgroup1_2022- 08- 17_1660730049819_1 ", "batchRunId": "batchgroup1_2022- 08- 17_1660730049819_1 ", "details": "Object triggered successfully.", "status": "success", "statusCode": "0" }</pre>	

Functionality	API	Sample Request JSON	Sample Response JSON	Comments
Restart	rest-api/v1/external/restart	<pre>{ "batchName": "MMG_R1", "batchRunId": "MMG_R1_2022-07- 15_1657867378160 _1" }</pre>	<pre>{ "severity": "info", "summary": "Object triggered successfully for restart with Run Id: MMG_R1_2022-07- 15_1657867378160_1 ", "batchRunId": "MMG_R1_2022-07- 15_1657867378160_1 ", "details": "Object triggered successfully.", "status": "success", "statusCode": "0" }</pre>	

Functionality	API	Sample Request JSON	Sample Response JSON	Comments
Interrupt	rest-api/v1/external/interrupt	<pre>{ "batchName": "B2001", "batchRunId": "B2001_2022-05- 22_1653222717896 _1" }</pre>	<pre>{ "summary": "Execution interrupted successfully for Run Id: B2001_2022-05- 30_1653233511394_1 ", "severity": "info", "batchRunId": "B2001_2022-05- 30_1653233511394_1 ", "details": "Execution interrupted successfully.", "statusCode": "0", "status": "success" }</pre>	

Failed Response Body

Failed Sample Response JSON	Description
Batch Status Failed	<pre>{ "severity": "info", "batchRunId": "BT-BI- EXCHG_RATES_EOD_2022-05- 27_1653662703599_1", "batchStatusCode": "-1", "batchList": [], "batchStatus": "FAILED", "statusCode": "0", "status": "success" }</pre>
Object Not found	<pre>{ "severity": "error", "summary": "Object does not exist.", "details": "Object does not exist.", "error": { "errorCode": "OBJECT_NOT_EXIST", "errorMsg": "Object does not exist." }, "statusCode": "-3", "status": "failed" }</pre>

Status Codes in the Response Body

Status Code	Description
0	Success
1	Not Started
2	Ongoing
4	Excluded
5	Held
-1	Failure
-2	Interrupted

Status Code	Description
-3	Object does not exist
-4	Invalid arguments passed in request/not enough parameters in the Request body
-5	Invalid request headers/request headers missing
-6	No executable job is present
-7	Job is already interrupted

OFSAA Support

Raise a Service Request (SR) in [My Oracle Support \(MOS\)](#) for queries related to the OFSAA applications.

Send Us Your Comments

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, indicate the title and part number of the documentation along with the chapter/section/page number (if available) and contact the My Oracle Support.

Before sending us your comments, you might like to ensure that you have the latest version of the document wherein any of your concerns have already been addressed. You can access My Oracle Support site that has all the revised or recently released documents.
