Preface

Understanding the PeopleSoft Online Help and PeopleBooks

The PeopleSoft Online Help is a website that enables you to view all help content for PeopleSoft applications and PeopleTools. The help provides standard navigation and full-text searching, as well as context-sensitive online help for PeopleSoft users.

Hosted PeopleSoft Online Help

You can access the hosted PeopleSoft Online Help on the Oracle Help Center. The hosted PeopleSoft Online Help is updated on a regular schedule, ensuring that you have access to the most current documentation. This reduces the need to view separate documentation posts for application maintenance on My Oracle Support. The hosted PeopleSoft Online Help is available in English only.

To configure the context-sensitive help for your PeopleSoft applications to use the Oracle Help Center, see Configuring Context-Sensitive Help Using the Hosted Online Help Website.

Locally Installed Help

If you’re setting up an on-premise PeopleSoft environment, and your organization has firewall restrictions that prevent you from using the hosted PeopleSoft Online Help, you can install the online help locally. See Configuring Context-Sensitive Help Using a Locally Installed Online Help Website.

Downloadable PeopleBook PDF Files

You can access downloadable PDF versions of the help content in the traditional PeopleBook format on the Oracle Help Center. The content in the PeopleBook PDFs is the same as the content in the PeopleSoft Online Help, but it has a different structure and it does not include the interactive navigation features that are available in the online help.

Common Help Documentation

Common help documentation contains information that applies to multiple applications. The two main types of common help are:

- Application Fundamentals
- Using PeopleSoft Applications

Most product families provide a set of application fundamentals help topics that discuss essential information about the setup and design of your system. This information applies to many or all applications in the PeopleSoft product family. Whether you are implementing a single application, some combination of applications within the product family, or the entire product family, you should be familiar with the contents of the appropriate application fundamentals help. They provide the starting points for fundamental implementation tasks.
Preface

In addition, the *PeopleTools: Applications User's Guide* introduces you to the various elements of the PeopleSoft Pure Internet Architecture. It also explains how to use the navigational hierarchy, components, and pages to perform basic functions as you navigate through the system. While your application or implementation may differ, the topics in this user’s guide provide general information about using PeopleSoft applications.

Field and Control Definitions

PeopleSoft documentation includes definitions for most fields and controls that appear on application pages. These definitions describe how to use a field or control, where populated values come from, the effects of selecting certain values, and so on. If a field or control is not defined, then it either requires no additional explanation or is documented in a common elements section earlier in the documentation. For example, the Date field rarely requires additional explanation and may not be defined in the documentation for some pages.

Typographical Conventions

The following table describes the typographical conventions that are used in the online help.

<table>
<thead>
<tr>
<th>Typographical Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Key+Key</td>
<td>Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For Alt+W, hold down the Alt key while you press the W key.</td>
</tr>
<tr>
<td>. . . (ellipses)</td>
<td>Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.</td>
</tr>
<tr>
<td>{ } (curly braces)</td>
<td>Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe (</td>
</tr>
<tr>
<td>[ ] (square brackets)</td>
<td>Indicate optional items in PeopleCode syntax.</td>
</tr>
<tr>
<td>&amp; (ampersand)</td>
<td>When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object. Ampersands also precede all PeopleCode variables.</td>
</tr>
<tr>
<td>⇒</td>
<td>This continuation character has been inserted at the end of a line of code that has been wrapped at the page margin. The code should be viewed or entered as a single, continuous line of code without the continuation character.</td>
</tr>
</tbody>
</table>

ISO Country and Currency Codes

PeopleSoft Online Help topics use International Organization for Standardization (ISO) country and currency codes to identify country-specific information and monetary amounts.

ISO country codes may appear as country identifiers, and ISO currency codes may appear as currency identifiers in your PeopleSoft documentation. Reference to an ISO country code in your documentation
does not imply that your application includes every ISO country code. The following example is a
country-specific heading: "(FRA) Hiring an Employee."

The PeopleSoft Currency Code table (CURRENCY_CD_TBL) contains sample currency code data. The
Currency Code table is based on ISO Standard 4217, "Codes for the representation of currencies," and
also relies on ISO country codes in the Country table (COUNTRY_TBL). The navigation to the pages
where you maintain currency code and country information depends on which PeopleSoft applications
you are using. To access the pages for maintaining the Currency Code and Country tables, consult the
online help for your applications for more information.

Region and Industry Identifiers

Information that applies only to a specific region or industry is preceded by a standard identifier in
parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear
at the beginning of a note or other text.

Example of a region-specific heading: "(Latin America) Setting Up Depreciation"

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in the PeopleSoft
Online Help:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following
industry identifiers may appear in the PeopleSoft Online Help:

- USF (U.S. Federal)
- E&G (Education and Government)

Translations and Embedded Help

PeopleSoft 9.2 software applications include translated embedded help. With the 9.2 release, PeopleSoft
aligns with the other Oracle applications by focusing our translation efforts on embedded help. We
are not planning to translate our traditional online help and PeopleBooks documentation. Instead we
offer very direct translated help at crucial spots within our application through our embedded help
widgets. Additionally, we have a one-to-one mapping of application and help translations, meaning that
the software and embedded help translation footprint is identical—something we were never able to
accomplish in the past.
Using and Managing the PeopleSoft Online Help

Select About This Help in the left navigation panel on any page in the PeopleSoft Online Help to see information on the following topics:

- Using the PeopleSoft Online Help
- Managing Hosted online help
- Managing locally installed PeopleSoft Online Help

PeopleSoft HCM Application Fundamentals

Additional, essential information describing the setup and design of your system appears in a companion volume of documentation called Application Fundamentals.

Chapter 1

Getting Started with Manage Profiles

Manage Profiles Overview

Profiles are widely used by organizations to describe the attributes of jobs or individuals. Typically, profiles summarize the competencies, qualifications, and skills of a job or a person. Profiles are valuable for tracking employees' skills, competencies, and accomplishments, in career planning, for identifying training needs, for performance management, and in the recruitment process for identifying job requirements and suitable applicants. The Manage Profiles business process provides a framework for developing and managing profiles that meet your industry or organizational requirements. The Search and Compare profiles feature enables you to perform searches for profiles that match user-defined criteria and easily compare profiles.

Content Catalog

The content catalog is the source of competencies, accomplishments, and other data that administrators, managers, and employees add to their profiles.

Image: Content catalog example with competencies, degrees, and language skills

The following diagram illustrates the content catalog that contains lists of competencies, such as flexibility, analytical thinking, and leadership; degrees, such as Bachelor of Arts, Bachelor of Science, and Masters; and language skills, such as English, Spanish, and German:

Information in the content catalog is organized by content type. A set of content types is delivered for the common content types such as competencies, language skills, degrees, licenses and certificates. Profile administrators add items for the delivered content types.

However, you are not limited to the delivered content types. You can extend the content catalog by defining additional content types and loading items for the new content types. This enables organizations to configure the content catalog to their specific needs and use this information in profiles. Note that you set up content types and properties to define the property structure of a content item as a separate task and then define the property structure of your profile types.
Person and Non-Person Profiles

In the same way that you set up the content catalog to include the attributes that you want to track, you define a set of profiles that match your organization's requirements.

Image: Profile examples for a job code, a job family, and a person

The following diagram illustrates how Manage Profiles enables you to configure profile content and link profiles to any object in the system: a job code is linked to a profile that describes the competencies, responsibilities, qualifications, and languages of a Marketing Manager, a job family is linked to a profile that describes the competencies, accomplishments, and national vocational qualifications (NVQ) for administrative jobs, and a person's record is linked to a profile that describes that person's competencies, responsibilities, education, and projects:
You use the content types in the content catalog to create profile types that define the structure of your profiles. The profile type defines the content types, the field properties that will appear in the profile, and the approvals processing associated with that content. The profile type also defines whether the profile is linked to a person ID to create person profiles, or linked to business entities, such as job code or positions, to create non-person profiles.

You can define as many profile types as you require for your business needs. Four profile types are delivered as system data. Use the CLUSTER, ROLE, and JOB profile types to create non-person profiles, and the PERSON profile type to create profiles that describe your employees.

Manage Profiles offers syndication and import features to reduce the administration of profile content. Profile administrators can set up common profile content once and then reuse that content in related profiles. Syndication has the added benefit that changes to the source profile trigger automatic updates to the target profiles that contain the syndicated content.

Approvals processing is an optional aspect of profile management. If required, set up approval processing using the standard HCM approvals framework and use it to control changes to particular sections of person and non-person profiles. PeopleSoft delivers approvals processing to handle these scenarios, but you can modify or create new definitions according to your needs:

- Employee changes to their person profiles (using PeopleSoft eDevelopment) are submitted to their manager for approval.
- Manager changes to non-person profiles (using eDevelopment) are submitted to the profile administrator for approval.

**Search and Compare Profiles**

The Search and Compare Profiles feature in Manage Profiles provides the ability to build searches that work with your content catalog and profiles. Here are a few examples of the search types that are possible:

- Search for job profiles that match an employee's profile.
- Search for an employee who matches the profile for a job opening.
- Select a job profile and search for similar job profiles.

Searches are linked to roles which enables you to create a set of searches that are appropriate to employees, managers, and administrators.

Search and Compare Profiles uses the PeopleTools Search Framework to perform the search of profile data based on the search criteria. This returns a list of matching profiles ranked according to how well they match that criteria.

The Compare facility provides an online comparison of a given source profile against one or more target profiles. The contents of the source profile and the target profiles are displayed in adjacent columns, enabling the administrator to identify the differences between the profiles.

**Note:** For more information on the Search Framework and to learn how to create and implement the application-specific items, see the product documentation for *PeopleTools: Search Technology*.
Manage Profiles Business Processes

PeopleSoft HR Manage Profiles provides these business processes:

- Manage person and non-person profiles.
  
  Administrators create profiles based on the profile types available and select items from the content catalog. They create and maintain employees' person profiles. They can also create and maintain non-person profiles for entities such as a job code, position, or job family.

- Manage interest lists.
  
  An interest list is a collection of non-person profiles associated with an employee. It provides a way for employees to identify profiles that are of interest. Profile administrators can add to and remove profiles from employee interest lists.

- Manage profile approvals.
  
  Using Manage Approvals, administrators can view profile changes routed to them by the approvals workflow engine and approve or reject the changes. They can also view approvals information for changes previously approved or rejected.

- Search and compare profiles.
  
  Administrators have access to a set of searches that are configured for their role. Depending on the search type, administrators use the searches to identify target profiles that match a source profile or search criteria that they enter manually. The search results identify the best matches generated by the search engine. Administrators can compare profiles listed in the search results or by using Compare Profiles (in Classic) or Profile Compare (in Fluid) to compare selected profiles.

- Match person competencies and other content types to the corresponding content in non-person profiles.
  
  Profile administrators can compare a person's competencies and other content types with those required by a non-person profile, or compare the competencies and other content types of a team with those required by a non-person profile.

- (GBR) Manage National Vocation Qualifications (NVQs).
  
  Manage Profiles provides content types and profile types for tracking and reporting employees who are enrolled in NVQs.

We discuss these business processes in the business process topics in this documentation.

Manage Profiles Integrations

Manage Profiles integrates with other business processes within PeopleSoft HR, including:

- Plan Careers and Successions.

- Administer Training.
• Administer Workforce.
  This includes the process for adding employment instances for U.S. Federal government employees and military rank processing.

• Manage French Public Sector.

It also integrates with other PeopleSoft HCM applications, including

• eDevelopment

  eDevelopment provides the employee and manager self-service options that complement the administrator functionality in Manage Profiles.

• ePerformance

• Talent Acquisition Manager

• Candidate Gateway

• Campus Self Service

Manage Profiles also integrates with:

• PeopleSoft Enterprise Learning Management, Financials, CRM, and Enterprise Performance Management.

  For example, Enterprise Learning Management and Enterprise Performance Management leverage profile content as configured by those products. Financials Resource Management and Staffing leverage competency and accomplishment data via the legacy EIPS (such as PERSON_COMPETENCY_SYNC, PERSON_ACCOMP_SYNC, and so on).

  **Note:** The Financials and CRM integration references the legacy content based on the legacy competencies and accomplishments structure only; new content that is added to Profile Management is not leveraged by Financials or CRM.

• Third-party applications.

  You can integrate Manage Profiles with third-party content providers to load competency content into the content catalog. Profile data can be integrated with Clairvia (see "Understanding Integration with Clairvia" (PeopleSoft HCM 9.2: Application Fundamentals)).

  We discuss integration considerations in the implementation topics in this documentation.

---

**Manage Profiles Implementation**

PeopleSoft Setup Manager enables you to generate a list of setup tasks for your organization based on the features that you are implementing. The setup tasks include the components that you must set up, listed in the order in which you must enter data into the component tables, and links to the corresponding documentation.
Manage Profiles also provides component interfaces to help you load data from your existing system into Manage Profiles tables. Use the Excel to Component Interface utility with the component interfaces to populate the tables.

This table lists all of the components that have component interfaces:

<table>
<thead>
<tr>
<th>Component</th>
<th>Component Interface</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CAT_ITEMS</td>
<td>CI_JPM_CAT_ITEMS_COMP</td>
<td>Add or update Competency content catalog items.</td>

Application Fundamentals
Chapter 2

Setting Up the Content Catalog

Understanding the Content Catalog

The content catalog is a repository of the data that can be associated with person and non-person profiles, and is used by other applications such as PeopleSoft ePerformance, Talent Acquisition Manager, Candidate Gateway, and Learning Management.

Image: PeopleSoft HCM generic content catalog structure

In PeopleSoft HCM, the content catalog provides a generic structure for setting up different types of information. The following diagram illustrates the generic structure in which the content catalog contains multiple content types and the content types contain content items. It also illustrates a specific example of where the content catalog contains content types for language skills, degrees, and competencies:

With the content catalog you define the different types of information (competency, degrees, languages, and so on) as content types and then set up the data for each content type as content items. For example, within the content type DEG (Degrees), a Bachelor of Arts degree (BA) is a content item.

The structure of the content catalog enables you to easily add new content types to your organization's profiles.

Content Catalog System Data

The PeopleSoft application delivers the content catalog already populated with a set of content types. You can add content types and content items to the content catalog to suit your organizational requirements.

Note: PeopleSoft delivers content items as sample data only.
The following content types are delivered as system data:

<table>
<thead>
<tr>

</table>

**Note:** The RANK content type is for military customers to record rank in profiles. You can integrate Manage Profiles with Job Data using the Event Manager, so that when a person's rank is updated in Job Data, the profile is automatically updated.

See "Job Data - Salary Plan Page" (PeopleSoft HCM 9.2: Human Resources Administer Workforce).

See "Understanding Event Setup" (PeopleSoft 9.2: Events and Notifications Framework).

### Understanding Content Catalog Setup

To set up the content catalog you define the following:

- Content types.
- Content items.
- (Optional) Content group types and groups.

Content groups enable you to categorize content items within a content type.

**Note:** If you want to use rating models with your content catalog, you must define these on the Rating Model page before you can associate content items with rating models.

See [Defining Rating Models](#).

The first step in setting up the content catalog is to set up content types. After this, the order in which you set up content groups and content items does not matter. If you know how you want to group your content items, create the content groups first and then set up your content items. Conversely if you know which content items you want to add but haven't decided how to group those items, you can set up the content items first, then create the groups and add the items to the groups.
Setting Up the Content Catalog Chapter 2

This diagram illustrates the two ways in which you can set up your content catalog: setting up content groups before setting up items, or setting up the items before the content groups:

**Content Types and Content Items**

The Content Type component (JPM_CAT_TYPES) has two pages:

- The Content Types page lists the properties (fields) for that content type.

  For each property, you define the attributes of the field, which determines how it will appear on the Content Items - Item Details page.

- The Relationship Rule page defines how the content type is related to other content types in the catalog.

The component for setting up content items is the same for all content types, but the pages and the fields that appear are determined by the content type definition. The Content Items component (JPM_CAT_ITEMS) has three pages:

- The Content Items - Item Details page is where you set up the main details for the content item.

- The Relationships page defines relationships between content items.

  The system hides this page if there are no relationship rules defined for the content type.

- The Group Memberships page defines the groups to which the content item belongs.

  The system hides this page if there are no groups for the content type.

The fields on the Content Items - Item Details page are entirely dependent on the properties selected on the Content Types page.
Chapter 2 Setting Up the Content Catalog

Note: These fields have no impact on the configuration or display of an item in a profile.

Image: Properties of content types flow through to become fields for content item definitions

The following diagram shows property selections on the Content Type page flowing though to become fields on the Content Items - Item Details page. The diagram includes a generic content type and two examples of content types (competencies and goals):

![Diagram of content types and item details]

Note: For a limited set of profile type properties, the search indexes that you use for the search and compare profile feature store only code-based data.
Setting Up Content Types and Properties

To set up content types and properties, use the Content Types (JPM_CAT_TYPES) component.

These topics provide an overview for content type properties, free form content types, and discuss how to set up content types.

<td>JPM_CAT_TYPE_RLAT</td>
<td>Set up and review relationships between content types.</td>
</tr>
</tbody>
</table>

Understanding Content Type Properties

A content type is a broad definition of a group of items that can be added to the content catalog. Within a content type, specify the properties that all items of this type can or must have. Many of the delivered content types define legacy content originating from the Competency Management application. Many of these content types contain additional attributes that control functionality in other products. When defining new content types, attributes other than the default values and RATING_MODE should not be added. The system displays the properties you define for a content type as fields on the Content Items - Item Details page. You can override the default label text, select default values, and indicate if the field should be available for entry, unavailable for entry, or hidden on the Content Items - Item Details page.

Content Type Properties

Understanding Free Form Content Types

Depending on your organization's requirements, you may find that certain types of profile content are not suitable for storing in the content catalog due to the quantity or maintainability of the data. For example, you may want to include a section in person profiles for recording an employee's previous employers. However, employers are not stored in the database and the information is applicable to person profiles only. For this type of information, you can define free form content types that are basically empty placeholders. Free form content types do not include fields and you cannot create content items for them.
When you add a free form content type to a profile type, you add the properties (fields) that define the information entered for that specific profile type. This diagram illustrates how you could use free form content types to record previous employers and associated information such as the employment dates and a job description:

In the example, the content type definition for previous employers has no fields or content items. When this content type is added to the profile type, fields are added for employer name, job start and end dates, and a descriptive field for the job description. On the Person Profiles page, employees add their previous employer’s information in these fields. There is no validation of the employers because it isn't defined as a record in the database.

To create a free form content type, select the Free Form Type Only check box on the Content Types page.

**Note:** You cannot include free form content sections when you use the search and compare profiles feature.

## Content Types Page

Use the Content Types page (JPM_CAT_TYPES) to define the properties of content types.

The properties selected for a content type determine which fields appear on the Content Items - Item Details page and the attributes of those fields.
Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Content Types > Content Types

Image: Content Types page: Properties tab

This example illustrates the fields and controls on the Content Types page: Properties tab. You can find definitions for the fields and controls later on this page.

Use this page to define the property structure of a content item. The system displays the field properties you define for a content type as fields on the Content Items - Item Details page.

Note: The Content Type structure is independent of the Profile Type structure and the properties defined for a Content Type apply to Content Items only. Fields for a person or non-person profile are defined at the Profile Type level, Content Section Page, and are not related to the field properties identified here.

System Data
Content types with this check box selected are delivered with the system.

Free Form Entry Only
Select this check box if you want to create a free form content type. You cannot define properties or content items for free form content types.

See Understanding Free Form Content Types.

Properties Tab
The system displays the properties that you select in this scroll area as fields on the Content Items - Item Details page. Use the properties to define content items for this content type.

All content types that are not defined as free from types automatically have the following five properties:

- Content Type (JPM_CAT_TYPE)
- Content Item ID (JPM_CAT_ITEM_ID)
• Effective Date (EFFDT)
• Status as of Effective Date (EFF_STATUS)
• Description (JPM_DESCR90)

When you create a new content type, the system automatically populates the grid with these properties and you can only edit the label text and the maximum length of the Content Item ID and the Description.

The RATING_MODEL properties can be optionally added if the items define content whose rating will be tracked in a profile.

**Property**

Select the properties to add to this content type from the list of available options. For content types that are delivered as system data you cannot delete the properties delivered, but you can add other properties.

See [Content Type Properties](#).

**Label Text**

Displays the default label text for the selected property, but you can override it with a more meaningful label. The system displays the label text defined here on the Item Details page.

**Note:** We strongly recommend that you choose a meaningful label for the property so that users clearly understand what kind of information to enter in the field on the Item Details page.

**Sys Data** (system data)

This field is display-only. PeopleSoft delivers some content types as system data. The system selects this check box if the property is delivered as part of this system data.

**Key Field**

This field is display-only. The system selects it if the property is a key field for the record.

**Required**

Select to make a property required when defining an item on the Item Details page.

**Property Attributes Tab**

Access the Property Attributes tab on the Content Types page.
Image: Content Types page: Property Attributes tab

This example illustrates the fields and controls on the Content Types page: Property Attributes tab. You can find definitions for the fields and controls later on this page.

### Display
Select whether the property should be available for entry (Editable), unavailable for entry (Display Only), or hidden (Hidden) on the Items Details page.

### Max Len (maximum length)
Enter the field length of this property.

**Note:** Although the JPM_DESCR90 field value allows you to enter up to a 90 character maximum, a description length that is within a maximum of 30 characters is recommended for legacy content types but can be overridden. A description length that is longer than the specified maximum may be truncated when referenced by certain applications.

### Minimum and Maximum
For numeric properties, enter the minimum and maximum values.

### List
This option is available for the attribute EP_SUB_LEVEL only. This property is used for ePerformance processing.

Select a custom list defined in the Custom List Values table. This field appears only when there is a custom list defined for the field (as delivered, EP_SUB_LEVEL). When a list value is selected, the Default field values are dynamically built from the list values associated with the custom list value assigned.

See Custom Prompt Page.

### Default
Enter the default value for this property. On the Item Details page, the system populates the field with this value. You should select a default value if the property is display only or hidden. The Default field is available for properties that have predefined values or are associated with a prompt table only.

### Relationship Rule Page
Use the Relationship Rule page (JPM_CAT_TYPE_RLAT) to set up and review relationships between content types.
Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Content Types > Relationship Rule

Image: Relationship Rule page

This example illustrates the fields and controls on the Relationship Rule page. You can find definitions for the fields and controls later on this page.

If a content type is related to other content types, define the relationship on this page. Leave the page blank if there are no relationship rules for the content type.

**Relationship**

Select from one of the following relationships: *Is a parent of* or *Is a child of*. Child items are added to profiles under the parent items. These relationships create a hierarchy.

(GBR) *Supports* or *Is Supported By* apply to the NVQ and NVQ Units content types. These are not in a hierarchical relationship with one another (that is, the support items do not have to go under the supported by items), but it enables you to apply the items of these types to a profile together and review them together.

**Related Content Type**

Select the content type to which this content type is related.

**System Data**

This field is display-only. The system selects this check box if the content type is system data delivered in the PeopleSoft application.

When you create a relationship here and save the content type, the system enters the opposite relationship for the related content type. For example, suppose you set up content type A and define the relationship:

Content type A *Is a parent of* content type B.

The system updates the content type B definition to define the relationship:

Content type B *Is a child of* content type A.

You cannot create two kinds of relationships between two types or create a relationship between a type and itself. The system displays a duplicate insert error when you attempt this. For example, the content type COMPETENCY cannot have both the relationship *Is a parent of* and the relationship *Is a child of* with the content type SUB_COMP.
Defining Content Items

To set up content items, use the Content Items (JPM_CAT_ITEMS) component. These topics discuss how to define content items.

Pages Used to Define Content Items

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content Items - Item Details Page</td>
<td>JPM_CAT_ITEMS</td>
<td>Define content items details for the selected content type.</td>
</tr>
<tr>
<td>Item Rating Descriptions Page</td>
<td>JPM_CAT_ITMRD_SEC</td>
<td>Define proficiency descriptions of the ratings for the content item. The Proficiency Descriptions link appears only if the RATING_MODEL property is included in the content type definition and a rating model is selected.</td>
</tr>
<tr>
<td>Content Items - Relationships Page</td>
<td>JPM_CAT_ITEM_RLAT</td>
<td>Set up and review the relationship between content items.</td>
</tr>
<tr>
<td>Content Items - Group Memberships Page</td>
<td>JPM_CAT_ITEM_GMEMB</td>
<td>Add the content item to existing content groups. From this page you can also view all the members of the selected content groups.</td>
</tr>
</tbody>
</table>

Content Items - Item Details Page

Use the Content Items - Item Details page (JPM_CAT_ITEMS) to define content item details for the selected content type.

**Note:** When creating new content item IDs for accomplishment-related content types (DEG, HON, LIC, LNG, MEM, TST, and NVQ) the ID must be unique across all accomplishment content types. For example, if you have a DEG content type that uses the content item ID BA, you cannot use the content item ID BA for a LIC or TST content type. However, you can use the content item ID BA for a GOAL item since this is not included in the accomplishment-related content type list. User defined content item IDs do not need to be unique across content types.

Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Content Items > Item Details
This example illustrates the fields and controls on the Content Items - Item Details page. You can find definitions for the fields and controls later on this page.

Note: The fields on the page vary depending on the properties of the content type. Each content type property is a field on the Item Details page and the system labels the fields using the label you entered in the Label Text field on the Content Types page.

Proficiency Descriptions

This link appears only if the RATING_MODEL property is included in the content type definition and a rating model is selected. Click the link to access the Item Rating Descriptions page, which you use to enter descriptions of the ratings for the content item.

Proficiency descriptions are optional and are used by ePerformance only. They enable you to set up a rating description for a specific item. However, employees and managers can evaluate content items without proficiency descriptions.

Note: If you change the rating model for an item that has proficiency descriptions associated with it, the system issues a warning indicating that the existing proficiency descriptions have been removed.

Rating models are defined on the Rating Model page.

See Defining Rating Models.

Content Type Properties
Understanding Content Catalog Setup

Item Rating Descriptions Page

Use the Item Rating Descriptions page (JPM_CAT_ITMRD_SEC) to define proficiency descriptions of the ratings for the content item.

The Proficiency Descriptions link appears only if the RATING_MODEL property is included in the content type definition and a rating model is selected.

Navigation

Click the Proficiency Descriptions link on the Item Details page.

Image: Item Rating Descriptions page

This example illustrates the fields and controls on the Item Rating Descriptions page. You can find definitions for the fields and controls later on this page.

Review Rating

Select a review rating. The system prompts against the rating model that you assigned on the Content Items - Item Details page. For example, you can define what it means to be an Expert in communication (a 5 rating), or Very Good in communication (a 4 rating). This helps ensure that everyone in the organization knows what each rating means.

Content Items - Relationships Page

Use the Content Items - Relationships page (JPM_CAT_ITEM_RLAT) to set up and review the relationship between content items.
Chapter 2 Setting Up the Content Catalog

Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Content Items > Relationships

Image: Content Items - Relationships page

This example illustrates the fields and controls on the Content Items - Relationships page. You can find definitions for the fields and controls later on this page.

The Relationships page is displayed if there are relationship rules for the content type defined on the Content Types - Relationship Rule page. If there are no relationship rules for the content type, the system hides this page.

Note: It is not mandatory to define relationships at the content item level.

Related Items

Relationship Displays the relationship rule defined for the content type.

You can't define relationships between content items that differ from the relationship rules for the content types. For example, the COMPETENCY type has a parent relationship with the SUB_COMP type. Therefore you can't set up a child relationship between a competency and a sub-competency when defining the competency content item.

Related Content Type Displays the content type of the related item.

Content Item ID Select the item to which this item is related. You can only select items of the type defined by the Related Content Type field.

Content Items - Group Memberships Page

Use the Content Items - Group Memberships page (JPM_CAT_ITEM_GMEMB) to add the content item to existing content groups.

From this page you can also view all the members of the selected content groups.
Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Content Items > Group Memberships

**Image: Content Items - Group Memberships page**

This example illustrates the fields and controls on the Content Items - Group Memberships page. You can find definitions for the fields and controls later on this page.

![Content Items - Group Memberships page](image)

The Group Memberships page is available if content groups have been set up for the content type. If there are no content groups, the system hides this page. Content groups are defined on the Content Group Types page.

**Content Group Type**
Select the content group type.

**Group**
Select a group from the list of groups.

**Content Group Members and View**
Click the View link to access the Content Group Members page that lists the content items in the selected group.

---

**Defining Content Groups**

To set up content groups, use the Content Groups (JPM_CAT_GROUPS) and the Content Group Members (JPM_CAT_GMEMB) components.

These topics discuss how to define content groups.

</tbody>
</table>

Understanding Rating Models

Rating models define the values that can be used to rate an employee's performance or level of proficiency. The rating model defines the qualitative values, such as A, B, C, or D, that the system uses to rate or score an employee's performance. Each qualitative value can have a numeric rating, review points, and a review band (range of points).

Rating models are used by several applications within HCM, including:

- Manage Profiles business process.

  In Manage Profiles, rating models are used to rate employees' proficiency level for items on their person profiles. In non-person profiles you can specify the proficiency levels expected for items in the profile. The RATING_MODEL property is associated with the rating model table. Add this property to your organization's content types and profile types that are measured using rating models and specify the rating model used at the content item level. The COMPETENCY content type includes the RATING_MODEL property.

- PeopleSoft ePerformance.

  In ePerformance, rating models are used to define values for the rating sections of a performance document as well as rating overall performance. The calculation method that you select for the overall rating (the Overall Summary section of the document) determines which of these values you must define in rating models. When you design document templates, you select the rating model that applies to each section of the document and to each item that is rated. You can use the same rating model for the entire document or select a different rating model for each item and section.

- Manage Employee Reviews business process.

- Plan Careers and Successions business processes.

- Manage Base Compensation and Budgeting business process.

"Working with Manage Profiles" (PeopleSoft HCM 9.2: ePerformance)
PeopleSoft Human Resources Manage Employee Reviews
PeopleSoft Human Resources Manage Base Compensation and Budgeting
"Career Strength/Develop Areas Page" (PeopleSoft HCM 9.2: Human Resources Plan Careers and Successions)
(USF) Understanding Rating Models

The PeopleSoft HR product delivers two rating models that have specific uses:

- GUSF (goal status for USF).
- PIP (performance improvement plans).

These rating models define statuses, rather than ratings, that you can assign to goals and performance improvement plans in performance evaluations. GUSF values are *Not Met*, *Met*, and *Exceeded*. PIP values are *In Progress*, *Satisfactory*, and *Unsatisfactory*.

Rating Model Page

Use the Rating Model page (RATING_MDL_TBL) to set up ratings models that contain values used to rate an employee's proficiency level.

Navigation

Set Up HCM > Product Related > Profile Management > Content Catalog > Rating Model > Rating Model

Image: Rating Model page: General tab

This example illustrates the fields and controls on the Rating Model page: General tab. You can find definitions for the fields and controls later on this page.

Rating Model Description

**Review Band**

Select this check box if you want to define this rating model as a Review Band Rating model.
Chapter 2 Setting Up the Content Catalog

Note: To use the JPN Grade Advance Candidate List and the JPN Salary Increase processes, the performance reviews in ePerformance must use a Review Band Rating model for overall review ratings.

See "Understanding Updating Salaries for Japan" (PeopleSoft HCM 9.2: Human Resources Manage Base Compensation and Budgeting).

**OPM Pattern** (Office of Personnel Management pattern) (USF) Select the pattern that applies to this rating model. This field appears for U.S. Federal users only.

**General Tab**

Define all possible rating levels that can be used to evaluate an employee when this rating model is used. At least two rating levels are required. You can add as many rows as necessary.

**Rating**

Enter an alphabetic or numeric code for the rating. This is sometimes referred to as the qualitative rating.

**Numeric Rating**

This field is used by ePerformance only. Enter a numeric value for the rating, if applicable. The value you enter serves two purposes:

- For sections of a performance document that use the average calculation method, the system uses this value to calculate the section's average or weighted average. It also uses this value to calculate the average rating for each item in the section (when sub-items exist).

- If you select the Show Numeric Ratings/Points check box on the Rules/Roles page (EP_TMPL_DEFN3) of the Template Definition component, the value you enter here displays next to the rating on the performance document. This feature is useful when ratings are alphabetic.

**Career Strength/Development**

The system uses this value when defining competencies in the Plan Careers business processes using the Manage Profiles pages. Select:

- *Development* (development) if the rating indicates an area that needs more skill development, education, or training.

- *Strength* if the rating indicates an area of strength.

See "Career Strength/Develop Areas Page" (PeopleSoft HCM 9.2: Human Resources Plan Careers and Successions).

Click to display the [Review Rating Explanation Page](#).
**Review Points Tab**

**Image: Rating Model page: Review Points tab**

This example illustrates the fields and controls on the Rating Model page: Review Points tab. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Review Points</th>
<th>From Points</th>
<th>To Points</th>
<th>Eligibility Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>0.0</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>2</td>
<td>4</td>
<td>0.0</td>
</tr>
<tr>
<td>2</td>
<td>2</td>
<td>5</td>
<td>7</td>
<td>0.0</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
<td>8</td>
<td>10</td>
<td>0.0</td>
</tr>
<tr>
<td>4</td>
<td>4</td>
<td>11</td>
<td>13</td>
<td>0.0</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>14</td>
<td>16</td>
<td>0.0</td>
</tr>
</tbody>
</table>

Complete the fields on this tab if you want to associate a number of points, or a points range with each rating level defined on the General tab.

**Rating**

The rating entered on the General tab displays here. If you change this value, the system automatically updates the Rating field on the General tab to match.

**Review Points**

Enter a number from 0 to 999 for the rating. This field is used by both ePerformance and Manage Profiles.

- ePerformance uses this field for section calculation using the Summation method. The system uses the review points that you enter here in its calculations.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Review Points</th>
<th>From Points</th>
<th>To Points</th>
<th>Eligibility Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>0.0</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>2</td>
<td>4</td>
<td>0.0</td>
</tr>
<tr>
<td>2</td>
<td>2</td>
<td>5</td>
<td>7</td>
<td>0.0</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
<td>8</td>
<td>10</td>
<td>0.0</td>
</tr>
<tr>
<td>4</td>
<td>4</td>
<td>11</td>
<td>13</td>
<td>0.0</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>14</td>
<td>16</td>
<td>0.0</td>
</tr>
</tbody>
</table>

Note: To use the Automated Step Increase process, the Summation method is required.

- Manage Profiles uses the matching function to determine how well an employee profile matches the competencies for a non-person profile. The matching function uses the review points that you enter here. Review points are also used by the Search and Compare profiles scoring algorithm.

See [Understanding Profile Comparisons](#) and [Understanding Profile Matching](#).

See "Understanding Salary Plans" (PeopleSoft HCM 9.2: Human Resources Manage Base Compensation and Budgeting) and "Understanding Salary Grades and Steps" (PeopleSoft HCM 9.2: Human Resources Manage Base Compensation and Budgeting).

**From Points and To Points**

Define a range of points to associate with this rating. These points are used to convert summed-up points to either a Review Band or a qualitative rating.
A Review Band is really the same as a qualitative rating. Instead of being directly assigned, it's calculated by summing points, then finding the entry in this table that contains a range of space From/To points that encloses the summed points.

If Review Band is selected, you must enter a value in the To Points field. When the calculation method is Review Band, the system uses these fields to resolve the number of total points in a review to a qualitative rating. When the calculation method is Summation, the system uses these fields to resolve the number of total section points or total review points to a qualitative rating.

**Eligibility Points**

If applicable, enter the number of points used by the *Shohkaku* (JPN), or Grade Advance, eligibility feature of the Plan Salaries business process. This is used only if the Appl for Grade Advance Prc check box is selected on the JPN Review Definition.

See "Understanding Updating Salaries for Japan" (PeopleSoft HCM 9.2: Human Resources Manage Base Compensation and Budgeting).

**USF Federal Tab**

**Image: Rating Model page: Federal tab**

This example illustrates the fields and controls on the Rating Model page: Federal tab. You can find definitions for the fields and controls later on this page.

This tab appears only when Federal is selected on the Products page of the Installation Table and the user is logged on as a U.S. Federal user.

**OPM Rating** (Office of Personnel Management rating)

Select the OPM rating that correlates with the rating level. This field is used for reporting to the Central Personnel Data File (CPDF)
**RIF Years** (Reduction in Force years) Enter the number of RIF Years associated with this rating level.

**Explanation** Enter a description for the rating. You can enter up to 1325 characters. This description is used by ePerformance on the performance document.
Understanding Profile Management

Organizations typically use two types of profile:

- **Non-person profiles.**
  
  These describe the competencies, qualifications, and responsibilities of a certain job code, position, job family, or salary grade, or other entities in the system.

- **Person profiles.**
  
  These describe people's skills, competencies, other content items such as accomplishments, and performance. Manage Profiles enables you to create profiles for employees and contingent workers. Persons of interest without a JOB record are not supported.

With the Manage Profiles business process, the content catalog provides the foundation for creating all profiles.

**Image: Profiles include content types and content items that are selected from the content catalog**

The following diagram provides an example of constructing a profile (a job profile for a marketing manager) by selecting from the content types and content items that are defined in the content catalog:
In the same way that you configure the content catalog to suit your organization, you define a set of profiles that are configured to your requirements. When employees, managers, and administrators create profiles they select the profile type that they want to use.

The profile type controls the following aspects of the new profile:

- The type of entities to which users can link the profile.
- The content of the profile.
- Profile security (who can update the profile).
- Whether approval is required for changes to the profile.

**Entity Types**

Profiles fall into two categories:

- Non-person profiles (also known as job profiles).
  
  These are profiles that are created for a business entity, such as a position or a job code.

- Person profiles.
  
  A person profile is created for a specific person ID.

When you define a profile type, you specify the type of entities that the user can select when creating a profile. For example, suppose that you create a profile type and specify that it can be linked to job codes and salary grades. When users create a profile based on that profile type, they can only select job codes, salary grades, or both job codes and salary grades for the new profile. A profile type cannot be linked to both business entities and people. A person profile will automatically have an identifier added that is linked to the PERSON table. No other identifiers can be defined for a person profile.

The entities to which you can link a profile type are known as *profile identity options*. Use the Profile Identity Options page to maintain the list of profile identity options available.

In addition to profile identities, you can also link a profile type to entities outside the Manage Profiles business process. These entities are known as *profile association options*. ePerformance templates are linked to profile types in this way. The Association Option is used to find the ePerformance Template during the document creation process. The ePerformance template is currently the only supported external entity.
Profile Content

**Image: Content for profile types is divided into tabs and content sections**

This diagram shows how the content of profile types (and profiles created from those profile types) is divided into tabs and content sections. The diagram shows both a generic architecture and an example where the tabs are responsibilities, competencies, and qualifications.

![Diagram showing profile type structure](image)

When you set up a profile type you define the name of each tab and the order in which they are displayed in the profile. You add one or more content types to each tab to create *content sections*. For example, the previous diagram shows a tab labelled Qualifications that has three content sections for three different content types or sections: Honors and Awards, Licenses and Certifications, and Memberships. When users create a profile using this profile type (PERSON), they can only add content items of the type LIC (Licenses and Certifications) to the Licenses and Certifications content section. You define the order in which the content sections are listed within the tab.

Each content section is made up of supporting properties, or fields. The content section enables you to identify fields such as the content item, such as the specific degree required or earned, and other associated data, such as the school name and dates. For example, you can enter that a person received a Bachelors of Science in June of 2007.

**Note:** The profile type definition does not include content items. The purpose of the profile type is to provide the structure for the new profile and not the detailed content. Users select content items from a prompt list when they create a profile.

Property categories are associated with each field property, which enables you to easily retrieve the fields you want to include in a content section. Profile properties are organized into the following property categories:
<table>
<thead>
<tr>
<th>Property Category</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Career Properties</td>
<td>Properties tied to the delivered Mobility content types: Location Preference, Geographic Preference, International Preference, and Travel Preference. (If properties are used in any custom content, then the defaulting behavior of some of these properties cannot be guaranteed.).</td>
</tr>
<tr>
<td>Common Properties</td>
<td>Properties used for multiple content sections. A specific set of translate values or a prompt table is tied to each property.</td>
</tr>
<tr>
<td>Country Properties</td>
<td>Properties tied to the delivered education content sections: School Education, Degrees, and Area of Study. These properties are organized in separate page country specific sections and most have specific translate values or prompt lists tied to them.</td>
</tr>
<tr>
<td>Education Properties</td>
<td>Non-country specific properties tied to the delivered education content sections: School Education, Degrees, and Area of Study.</td>
</tr>
<tr>
<td>Key Properties</td>
<td>Properties that are part of the record key structure and special process indicator properties.</td>
</tr>
<tr>
<td>User Defined Properties</td>
<td>Properties can be used for extending delivered content sections or defining new content sections. The following types are provided: Integer Decimal Percent Check box Date Text (254) Text (1325) Custom prompt (12 characters)</td>
</tr>
</tbody>
</table>

See also "Defining Education-Related Information" (PeopleSoft HCM 9.2: Application Fundamentals).

**Profile Security**

When you set up a content section, you specify the Profile Management roles that can view that section of the profile. This enables you to display or hide sections to different types of users. There is an additional check box that enables you to control which roles can update the items in the section. There are three roles available:
Chapter 3 Setting Up Profile Management

• Administrator

The administrator is any user who has access to the Profile Management menu in Workforce Development.

• Manager

Managers are users that can access the self-service transactions for managing profiles, using the Manager Self Service menu.

• Employee

Employees use employee self service to access the profile management self-service transactions.

The manager and employee self service transactions are delivered in PeopleSoft eDevelopment.

See PeopleSoft eDevelopment.

Profile Approvals

Approvals processing is an optional aspect of profile management. If you want to use approval workflow to control changes to profiles, you:

1. Set up approval processing using the standard Approvals Framework engine.

2. Associate the approvals definition with the profile type.

   On the Profile Type - Attributes page, you define one approvals workflow transaction and one approvals definition for the profile type.

3. Specify whether identities require approval (non-person profile types only).

   You can specify that approvals workflow is triggered when users add or change the profile identities associated with a non-person profile. To do this, select the Approval Req'd for Identities check box on the Profile Types - Identities page. This applies to non-person profile types only. The check box is not available when you are working with person profile types.

4. Specify which content section roles require approval.

   Each content section within a profile type has an Approval Required check box per security role that controls whether changes to that content section require approval by the designated person or role. If you have set up approval processing for a content section when users add items to a profile, delete existing items, or modify existing items, this initiates the approvals process.

5. (Optional) Add properties to content sections to track workflow status.

   You should add the workflow status property (JPM_WF_STATUS) to content sections that require approval to enable users to view the status of profile items as they are processed by the Approvals Framework. Other useful properties for tracking approval are the last updated date and time property (LASTUPDDTTM), and the last updated user ID property (LASTUPDOPRID).

See "Understanding Approvals" (PeopleSoft HCM 9.2: Application Fundamentals).

See Content Section Page.
Manage Profiles Setup

Image: Steps for setting up profile management

This diagram illustrates the optional and required steps for setting up profile management:

To set up profile management you define the following:

- (Optional) Custom Prompts.
  - Custom prompts are used to define the prompt list for the JPM_PROMPT properties which allows you to customize the list of values that is permitted to be entered.

- (Optional) Instance qualifiers.
  - Instance qualifiers are used as additional key fields for a profile item. They can prompt off of a table or the valid values can be defined within the instance qualifier. Instance qualifiers are used to identify who updated the profile or the type of evaluation. You can also use instance qualifiers to restrict the profile item rows that are visible to employees and managers using self-service transactions.

- Profile Identity Options.

- (Optional) Profile Association Options.

  **Note:** You do not need to define profile association options for the Manage Profiles business process. However, if you have installed ePerformance and you want to use profile content to create performance or development documents, you must define profile association options for ePerformance.

- Profile Types and Clone Profile Types.
  - To facilitate profile type creation, the system enables you to copy an existing profile type through the Clone Profile Types Application Engine process. You can then modify the new profile type using the Profile Types component.
Note: Profile Type configurations are delivered for CLUSTER, ROLE, JOB, and PERSON. It is strongly recommended that if changes need to be made to these types, this should be done by adding a new effective dated entry for the profile type. Caution should be used when changing ROLE and PERSON content sections since there may be existing integration requirements. Refer to the topic Manage Profiles Integrations to determine the business processes that leverage profile content. Caution must be taken in the removal of delivered properties since there may be processing tied to the property. New properties should not be specified with an attribute of Required if profile data already exists. It is recommended that the Maximum Length value not be changed to avoid possible truncation during integration with other products.

See Manage Profiles Integrations.

- **Assign Default Profile Types.**
  The system uses the primary person and non-person profile types for products that need to interact with Profile Management.

- **(Optional) Profile Group Types and Profile Groups.**
  Profile group types and profile groups enable you to categorize profile types. Profile group types are defined as either person or non-person. Profile groups are used as search criteria in the search and compare profiles feature to filter the search results.

- **(Optional) Profile Actions (for Classic only)**
  Profile actions enable administrators, managers, and employees to perform transactions directly from the non-person profile and person profile pages.

Note: Before you can use Manage Profiles, you must also set up the installation settings on the Profile Management Installation page. This is described in the next section.

(Classic) Searching and Comparing Profiles
(Fluid) Searching and Comparing Profiles

**Common Elements Used to Set Up Profiles**

**Sys Data** or **System Data** (system data) This check box appears on setup pages for instance qualifiers, profile identities, profile associations, and profile types. It is system-maintained and indicates if the data is delivered as system data. When this check box is selected, the row of data is display-only.
Configuring Manage Profiles

To configure Manage Profiles, use the Profile Mgmt Installation (JPM_INSTALLATION) component.

This topic discusses how to configure Manage Profiles installation settings.

Page Used to Configure Manage Profiles

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Management Installation Page</td>
<td>JPM_INSTALLATION</td>
<td>Define installation settings for the Manage Profiles business process. This includes setting up the profile ID length and the last numbers used for profile ID and approval transaction. You complete this page once during implementation only.</td>
</tr>
</tbody>
</table>

Profile Management Installation Page

Use the Profile Management Installation page (JPM_INSTALLATION) to define installation settings for the Manage Profiles business process.

This includes setting up the profile ID length and the last numbers used for profile ID and approval transaction. You complete this page once during implementation only.

Navigation

Set Up HCM > Install > Product Specific > Profile MgmtInstallation > Profile Management Installation

Image: Profile Management Installation page

This example illustrates the fields and controls on the Profile Management Installation page. You can find definitions for the fields and controls later on this page.

Profile ID Length

Enter the number of characters in the profile ID. The maximum profile ID length is defined in Application Designer and the
system displays an error message if you enter a length that exceeds this maximum.

**Last Profile ID Used**

To let the system assign numbers for profile IDs, enter the last number that you used. The system automatically increases the number in this field each time that it assigns a new profile ID.

You can manually assign profile IDs to non-person profiles when you create the profile.

---

**Note:** To avoid maintaining two different sets of numbers, either always assign profile IDs manually or always let the system do it.

---

**Last Item Key ID Used**

Displays the last number used to identify items on profiles. The system automatically assigns an item key ID to each content item added to a profile. The field is set to 1 at installation and the system automatically increases the number in the field each time you add content items to a profile.

---

**Note:** The item key ID is not visible to users when setting up or using profiles.

---

**Last Approval Transaction Used**

Displays the last approval transaction number. The system automatically increases the number in the field each time that an approval transaction for Manage Profiles is generated.

See "Understanding Approvals" (PeopleSoft HCM 9.2: Application Fundamentals).

---

**Supervisor Navigation Method**

Select the method that is used by the Schedule Search index process to determine supervisor relationships when building manager security for the Profile Management indexes. Select from these options: 2 - Supervisor ID, 3 - Department Manager ID, 4 - Reports To Position, 5 - Position / Supervisor ID, or 6 - Position / Dept Manager.

See Understanding Setting Up Search and Compare Profiles.

---

**Days of Approval History**

Enter the number of days of approval history that is available from the Person or Non-person Profile pages. Links on the profile pages indicate how many profile items have been approved or denied approval over a period that is determined by the setting of Days of Approval History field. When users view a profile, the system checks the approval history for the period between the system date (current date) and the system date minus the number of days you specify in this field.

For example, if you enter 31 days in this field and the system date is August 2, the system checks for profile items that have been approved or denied in the period July 2 to August 2.
Defining Custom Prompts

To set up custom prompts, use the Custom Prompt (JPM_C_LIST_VALUES) component.

These topics provide an overview of custom prompts and discuss how to define custom list values.

Pages Used to Define Custom Prompts

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom Prompt Page</td>
<td>JPM_C_LIST_VALUES</td>
<td>Use the Content Prompt page (JPM_C_LIST_VALUES) to define customized prompt values that will be used to define valid values for custom lists, such as level of difficulty and ePerformance item statuses, or identify a prompt record from which to provide a list.</td>
</tr>
</tbody>
</table>

Understanding Custom Prompts

Prompt lists can be configured for certain properties. The Content Catalog contains a single property, EP_SUB_LEVEL (specific to ePerformance use), that permits a list of values to be configured. Profile Type content section definitions can leverage the special properties JPM_PROMPT_1 through JPM_PROMPT_20. These properties give you the ability of adding fields to a content section within the profile that have a customized list of values. The PeopleSoft application enables administrators the ability to define a customer list of values for the following fields:

- EP_SUB_LEVEL - This is the only Content Item property that leverages a custom prompt.
- JPM_PROMPT_1 through JPM_PROMPT_20.

The prompt list is defined separately from the property. This means that the property could have a different set of prompt values within each of the content sections in which it is used. For example, in one profile item a person may have the choice of selecting a level of difficulty Advanced, Basic, or Intermediate, while in another profile item a person may have the choice of selecting from values such as Minimum, Basic, or Stretch. The Custom Prompt page enables organizations to change or add prompt values for these fields. On the Content Types page: Property Attributes tab you select which custom list to use for the EP_SUB_LEVEL content item property. On the Profile Type - Content Section page, a custom list can be assigned to the properties JPM_PROMPT_1 through JPM_PROMPT_20 to configure the list of values for a profile item field.

The ePerformance business process also uses the Content Catalog to obtain content items. Through this integration, administrators can create custom lists for the EP_ITEM_STATUS and the Level of Difficulty (EP_SUB_LEVEL) fields on the ePerformance template and document. The EP_ITEM_STATUS field is used only by ePerformance and is not leveraged by the Content Type or Profile Type configurations.

This tables shows the custom lists delivered as system data:
<table>
<thead>
<tr>
<th>Where you can add the custom prompt field</th>
<th>Field Name</th>
<th>Prompt List Name</th>
<th>Description</th>
<th>List Values</th>
</tr>
</thead>
</table>
| Content Types component                   | EP_SUB_LEVEL | EP_SUB_LEVEL | Level of Difficulty | • A - Advanced  
|                                           |            |                |              | • B - Basic  
|                                           |            |                |              | • I - Intermediate |
| Profile Types component - Content Sections page | JPM_PROMPT_1 through JPM_PROMPT_20 | Varies based on custom prompt lists you have created. | Varies based on customer prompt list descriptions you have entered. | Varies based on customer prompt list values or record you have entered on the Custom Prompt page for the custom prompt. |

**Note:** The EP_SUB_LEVEL field is delivered in the Content Catalog in the SUB_COMP (Sub-Competencies) content type only. You can create or update other content types to include this property, or field, if necessary.

**Related Links**

"Defining Sections" (PeopleSoft HCM 9.2: ePerformance)

Setting Up Profile Types

Setting Up Content Types and Properties

Content Section Page

**Custom Prompt Page**

Use the Custom Prompt page (JPM_C_LIST_VALUES) to define customized prompt values that will be used to define valid values for custom lists, such as level of difficulty and ePerformance item statuses, or identify a prompt record from which to provide a list.

**Navigation**

Set Up HCM > Product Related > Profile Management > Profiles > Custom Prompt > Custom Prompt
Image: Custom Prompt page

This example illustrates the fields and controls on the Custom Prompt page. You can find definitions for the fields and controls later on this page.

### Prompt List Name
Enter the code that identifies this custom list.

### Description
Enter the description of the custom prompt list. The description will display in the List field under the Property Attributes tab on the Content Types page or the Content Section page of the Profile Type.

See [Content Types Page](#).

### System Data
Indicates if this is delivered data. Custom prompt values with this check box selected are delivered with the system.

### Maximum Length
Enter the length of the custom list value. Defaults to 12, which is consistent with other profile item values. However, the delivered `EP_SUB_LEVEL` custom prompt has a length of 1.

**Note:** If the custom prompt list is created for use in ePerformance as section item statuses, you must set the maximum length to 1.

### Prompt Type
Custom prompt definitions support two types of list formats: a customized list defined on the custom prompt or an external prompt record.

#### Use Custom List Values
Select this type to identify an internal self-contained list maintained within the custom prompt definition.

When you select this option, the page displays the Prompt Values group box, where you will enter a list of valid prompt values from which the user can select.
### Use Prompt Record

Select this type to use an external prompt table that the custom definition is associated with.

When you select this option, the page displays the Record Name field.

**Note:** Only tables with a single key, other than SET ID or EFFDT, are supported.

### Record Name

Indicate the external table that should supply the prompt values.

**Note:** When using an external table as a prompt, consider the following:
- The key field must be defined with the CHAR data type.
- The key data length cannot be greater than the property data length.
- The record must contain a description field.
- When you select a record that uses a SET ID as a high-level key, the system determines the SET ID based on the default values from the Org Defaults by Permission List component (see "Setting Up Primary Permission List Preferences" (PeopleSoft HCM 9.2: Application Fundamentals)).

### Prompt Values

Use this section to enter the valid values you want to include in your custom prompt list.

#### List Value

Enter a code, up to 12 characters, to identify the list value. Codes must be unique only within the same custom prompt definition.

**Note:** If the custom prompt list is created for use in ePerformance as section item statuses, enter a 1-character code as the list value.

#### Description

Enter the name of the value that the system will display. This text appears when the page displays the custom prompt field as a drop down list.

### Defining Instance Qualifiers

To define your instance qualifier sets, use the Instance Qualifiers (JPM_JP_INST_QUAL) component.

These topics provide an overview of instance qualifiers, instance qualifier integration, and discuss how to set up instance qualifiers.
Page Used to Define Instance Qualifiers

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instance Qualifiers Page</td>
<td>JPM_JP_INST_QUAL</td>
<td>Define instance qualifiers for a content type, and define which instance qualifiers employees and managers can view.</td>
</tr>
</tbody>
</table>

Understanding Instance Qualifiers

Instance qualifiers, or instance qualifier sets, are an optional element of profile types, used to uniquely identify a profile item. They can be used to add an additional key to the profile item, where needed for a certain type of content. Normally, a profile item is uniquely identified by the content type and item identifier. In some cases, such as the Degree content, an additional key (Major) is required to uniquely describe the item.

Define instance qualifiers in one of two ways:

- By selecting a record in the database.
  For example, if you specify the PERSON_NAME record, the person ID is the instance qualifier.

- By entering the values of each instance qualifier.
  When you define instance qualifiers in this way you can also specify those that employees and managers can view using self-service. This is useful if, for example, you don't want employees to view ratings given by peers, or you want to prevent employees and managers from viewing evaluations made by an executive committee.

Once you have set up instance qualifier sets you link them to content sections in the profile type. When users add a content item or update an item in a section that includes instance qualifiers, they select the instance qualifier that is inserted in that row. You can link a content section with up to two instance qualifier sets.

**Note:** The instance qualifier properties must be included in the content section definition in order for users to be able to select an instance qualifier when they add or update profile items.

These are the properties for instance qualifiers:

- **JPM_CAT_ITEM_QUAL** (instance qualifier 1).
  The instance qualifier 1 field can only be associated with instance qualifier sets where you define each value.

- **JPM_CAT_ITEM_QUAL2** (instance qualifier 2).
  The instance qualifier 2 field can only be associated with instance qualifier sets defined by a record.

The delivered PERSON profile type includes three content sections, Competencies, Degrees, and NVQs, that are configured to use instance qualifiers.

This table lists the instance qualifier fields, the field name, and the instance qualifier sets for the Competencies section:
Table: Instance Qualifier Set

<table>
<thead>
<tr>
<th>Field</th>
<th>Field Label</th>
<th>Instance Qualifier Set</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CAT_ITEM_QUAL</td>
<td>Evaluation Type</td>
<td>EVAL_TYPE</td>
</tr>
<tr>
<td>JPM_CAT_ITEM_QUAL2</td>
<td>Reviewer ID</td>
<td>REVIEWER_ID</td>
</tr>
</tbody>
</table>

This table lists the instance qualifier field, the field name, and the instance qualifier set for the Degree section:

<table>
<thead>
<tr>
<th>Field</th>
<th>Field Label</th>
<th>Instance Qualifier Set</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CAT_ITEM_QUAL2</td>
<td>Major Code</td>
<td>MAJOR</td>
</tr>
</tbody>
</table>

This lists the instance qualifier fields, the field name, and the instance qualifier sets for the NVQ section:

<table>
<thead>
<tr>
<th>Field</th>
<th>Field Label</th>
<th>Instance Qualifier Set</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CAT_ITEM_QUAL</td>
<td>Review Type</td>
<td>REVIEW_TYPE</td>
</tr>
<tr>
<td>JPM_CAT_ITEM_QUAL2</td>
<td>Reviewer ID</td>
<td>NVQ_REVIEWER</td>
</tr>
</tbody>
</table>

Example: Using Instance Qualifiers

**Image: Example of instance qualifiers where an evaluation type qualifies a competency rating**

This diagram illustrates how a section within a profile can be linked to a set of instance qualifiers. In this example, the tab called Skills contains a content section for the COMPETENCY content type, and this section is linked to a set of instance qualifiers called EVAL with qualifiers that describe the source of the competency rating.

![Diagram of instance qualifiers](image)

Suppose that an employee creates a profile, and he or she adds the competencies Abstract Thinking and Analytical Thinking to the profile, and enters a rating. The system creates two profile items with the following information:
If the manager reviews the employee's profile and adds a rating for the competencies, the profile now contains these rows for the profile items:

<table>
<thead>
<tr>
<th>Profile Item</th>
<th>Effective Date</th>
<th>Rating</th>
<th>Instance Qualifier</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abstract Thinking</td>
<td>April 16, 2014</td>
<td>3 (Good)</td>
<td>SELF</td>
</tr>
<tr>
<td>Analytical Thinking</td>
<td>April 16, 2014</td>
<td>5 (Expert)</td>
<td>SELF</td>
</tr>
</tbody>
</table>

**Example: Using Two Instance Qualifier Sets**

**Image: Example of two instance qualifier sets qualifying the same content section**

You can link a content section with up to two instance qualifier sets. Using the previous example, suppose that the Competencies section is linked to the EVAL instance qualifier set and a second instance qualifier set (REVIEWER_ID) that is linked to the PERSON_NAME record, as illustrated in this diagram:

Using two qualifier sets you can uniquely identify rows that have the same instance qualifier 1. For example, if a person is evaluated by a committee you can use the instance qualifiers to record the ratings.
given by each member of the committee. This table shows the rows created for each committee member's evaluation of the same profile item:

<table>
<thead>
<tr>
<th>Profile Item</th>
<th>Effective Date</th>
<th>Rating</th>
<th>Instance Qualifier 1</th>
<th>Instance Qualifier 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abstract Thinking</td>
<td>May 14, 2014</td>
<td>3 (Good)</td>
<td>EXECUTIVE COMMITTEE</td>
<td>KU0045</td>
</tr>
<tr>
<td>Abstract Thinking</td>
<td>May 14, 2014</td>
<td>5 (Expert)</td>
<td>EXECUTIVE COMMITTEE</td>
<td>KU0016</td>
</tr>
<tr>
<td>Abstract Thinking</td>
<td>May 14, 2014</td>
<td>4 (Very Good)</td>
<td>EXECUTIVE COMMITTEE</td>
<td>KU0119</td>
</tr>
</tbody>
</table>

**Note:** Since the Instance Qualifier defines key data, the profile type content section configuration should not be modified to remove an Instance Qualifier once profile items for that content type already exist. You cannot remove an Instance Qualifier value from the profile item retroactively.

**Understanding Instance Qualifier Integration**

Applications that publish data to Manage Profiles can use instance qualifiers. In ePerformance, when you define a document template, you can specify the instance qualifier to use for each role that participates in a performance or development document. When users complete the document, the system updates the person profile data in Manage Profile using the instance qualifier specified.

In PeopleSoft Enterprise Learning Management, you can also specify the instance qualifier that the system uses when publishing profile data to PeopleSoft HCM. When learners complete learning objectives that came from HCM, the system marks the objective as Met and publishes profile data to HCM, using the specified instance qualifier value.

See product documentation for *PeopleSoft Enterprise Learning Management*.

**Related Links**

"Section Definition Page" (PeopleSoft HCM 9.2: ePerformance)

**Instance Qualifiers Page**

Use the Instance Qualifiers page (JPM_JP_INST_QUAL) to define instance qualifiers for a content type, and define which instance qualifiers employees and managers can view.

**Navigation**

Set Up HCM > Product Related > Profile Management > Profiles > Instance Qualifiers > Instance Qualifiers
Image: Instance Qualifiers page

This example illustrates the fields and controls on the Instance Qualifiers page. You can find definitions for the fields and controls later on this page.

### Use Prompt Record
Select to use a record in the database as the instance qualifiers. For example, you might use the PERSON_NAME record as the instance qualifier. The system makes the Record Name field available and hides the Instance Qualifiers grid area.

When you define a content section in a profile type, instance qualifiers that use a prompt record can be associated with the Instance Qualifier 2 field only. You can't specify instance qualifiers that use a prompt record in the Instance Qualifier 1 field.

### Record Name
Select the record that contains the instance qualifiers. This field is available only if you select Use Prompt Record.

### Create Set of Qualifiers
Select to create a new set of instance qualifiers in the Instance Qualifiers grid area. When you select this radio button, the Record Name field becomes unavailable and displays the Instance Qualifiers grid area.

Instance qualifiers of this type can be associated with the Instance Qualifier 1 field on the Content Section page; they can't be specified in the Instance Qualifier 2 field.
### Instance Qualifiers

**Priority**

Enter a number that indicates the priority of the instance qualifier. The priority increases as the number decreases, so that the instance qualifier with the lowest number is considered the highest priority. The Schedule Search Index process that builds the search indexes for the Search and Compare Profiles feature also uses this field. The process uses the priority value to determine which profile item row is included in the index. The process includes the row that has the instance qualifier with the highest priority (lowest number).

See Building the Search Indexes.

**Instance Qualifier**

Enter the instance qualifier code and enter a description in the Description field.

**Empl View (employee view)**

Select this check box to enable employees to view rows in a profile that are assigned the selected instance qualifier.

**Mgr View (manager view)**

Select this check box to enable managers to view rows in a profile that are assigned the selected instance qualifier.

**Empl Default (employee default)**

Select this check box to specify the instance qualifier that is automatically used in the employee self-service transactions. If you select a check box in this column, when employees add or update rows in self-service, the system inserts the selected instance qualifier and employees cannot change the instance qualifier.

**Mgr Default (manager default)**

Select this check box to specify the instance qualifier that is automatically used in the manager self-service transactions. If you select a check box in this column, when managers add or update rows in self-service, the system inserts the selected instance qualifier and managers cannot change the instance qualifier.

**Searchable**

Select this check box if you want profile items with the selected instance qualifier to be included in the search indexes. The Schedule Search Index process uses this field to determine which profile item rows are included in the search indexes that are used by the Search and Compare Profiles feature.

If the Searchable check box is not selected, any profile item rows that are assigned the selected instance qualifier are always excluded from the search index.

---

### Setting Up Profile Identity and Association Options

To set up profile identity options and profile association options for your organization, use the Profile Identity Options (JPM_RLAT_SETUP) and the Profile Association Options (JPM_RLAT_ASC_SETUP) components.
These topics discuss how to set up profile identity and association options.

### Pages Used to Define Profile Identity and Association Options

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Identity Options Page</td>
<td>JPM_RLAT_SETUP</td>
<td>Define profile identity options, which can be linked to profile types. Entities include job codes, job functions, job families, people, and salary grades. The entities enabled on this page determine which options are available on the Identities page of the Profile Type component that defines the structure of a non-person profile. For example, if you enable Job Codes you can set up a profile type that is linked to job code. A set of default profile identity options is delivered but you can add to the list according to your requirements.</td>
</tr>
<tr>
<td>Profile Association Options Page</td>
<td>JPM_RLAT_SETUP</td>
<td>Define the entities external to the Manage Profiles business process to which you can link profile types. One association option is delivered that enables you to link a profile type to ePerformance templates. The addition of other associations would require customizations to leverage it.</td>
</tr>
</tbody>
</table>

### Common Elements Used to Define Profile Identity and Association Options

**Identity Option**

Enter the name of the entity to which you can link a profile. For the delivered identity and association options, this field is display-only.

Identity options are entities within the Profile Management business process, such as job code or position, whereas association options are entities external to the Profile Management business process. One association option is delivered that enables you to associate a profile type to an ePerformance template to automatically resolves which template is selected during document creation process.

**Enabled**

Select this check box to allow profile types to be linked to the entity specified in the Identity Option field.

**Record Name**

Select the record that defines the entity specified in the Identity Option field. This field is display-only for identity options that are delivered as system data (Sys Data check box is selected).

**Key 1 Field Name**

Displays the key field for the record selected in the Record Name field.
Key 2 Field Name, Key 3 Field Name, Key 4 Field Name, Displays the additional key fields for the record. These fields are hidden if the record has one key field only.

SetID, Indicates if SetID is a key field for the selected record. The system automatically selects this check box based on the record definition and makes the field display-only.

Eff Date (effective date), Indicates if the effective date field is a key field for the selected record. The system automatically selects this check box based on the record definition and makes the field display-only.

Profile Identity Options Page

Use the Profile Identity Options page (JPM_RLAT_SETUP) to define profile identity options, which can be linked to profile types.

Entities include job codes, job functions, job families, people, and salary grades. The entities enabled on this page determine which options are available on the Identities page of the Profile Type component that defines the structure of a non-person profile. For example, if you enable Job Codes you can set up a profile type that is linked to job code.

A set of default profile identity options is delivered but you can add to the list according to your requirements.

Only those records that are used for prompting on JOB and JOB_JR non-key record fields can be selected. Person profile identifiers cannot be defined.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Identity Options > Profile Identity Options
Image: Profile Identity Options page: Enable Options tab

This example illustrates the fields and controls on the Profile Identity Options page: Enable Options tab. You can find definitions for the fields and controls later on this page.

### Profile Identity Options

</table>

**Add Profile Identity Option**

Click this link to add a new profile identity option.

**Enable Options Tab**

**Enabled**

Select this check box to allow profile types to be linked to the entity specified in the Identity Option field.

If this check box is deselected, you cannot set up a profile type with this entity. For example, if you deselect the check box for the *Job_Sub_Function* option, you cannot define a profile type using the *Job_Sub_Function* profile identity option.

**Configuration Tab**

Access the Configuration tab on the Profile Identity Options page.
This example illustrates the fields and controls on the Profile Identity Options page: Configuration tab. You can find definitions for the fields and controls later on this page.

### Sequence

Enter the number that determines the order in which non-person profiles related to a person's job are listed. The system uses the sequence value as follows:

- On the Person Profile page, when you select View Related Job Profiles in the Profile Actions field, the system uses the sequence values to define the order in which the related profiles are listed. Profiles with the lowest sequence number are displayed first.

- In eDevelopment, when employees select My Job Profiles, the system uses the sequence values to define the order in which the related profiles are listed. Profiles with the lowest sequence number are displayed first.

- In ePerformance, when you are creating a document for an employee, the system retrieves all matching job profiles for an employee and then copies content from the profile with the highest priority (lowest sequence value).

See [Common Elements Used to Define Profile Identity and Association Options](#).

### Profile Association Options Page

Use the Profile Association Options page (JPM_RLAT_SETUP) to define the entities external to the Manage Profiles business process to which you can link profile types.

One association option is delivered that enables you to link a profile type to ePerformance templates. The addition of other associations would require customizations to leverage it.
Setting Up Profile Management

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Association Options > Profile Association Options

**Image: Profile Association Options page: Enable Options tab**

This example illustrates the fields and controls on the Profile Association Options page: Enable Options tab. You can find definitions for the fields and controls later on this page.

**Image: Profile Association Options page: Configuration tab**

This example illustrates the fields and controls on the Profile Association Options page: Configuration tab. You can find definitions for the fields and controls later on this page.

Use this page to define the entities external to the Manage Profiles business process to which you can link profile types. ePerformance Template is a delivered profile association option. The addition of other associations would require customizations to leverage. Enter the identity option on the Enable Options tab. Enter the record name and key field information on the Configuration tab.

**Add Profile Association Option**

Click this link to add a new profile association option.

See [Common Elements Used to Define Profile Identity and Association Options](#).

---

**Setting Up Profile Types**

To set up profile types, establish the person and non-person profile types for other business modules, and assign the default person and non-person profile types, use the Profile Types (JPM_JP_TYPES), Clone Profile Types (RUNCTL_JPM_CLONE), and Assign Default Profile Types (JPM_DFLT_JP_TYPES) components.

These topics discuss how to set up profile types.
## Pages Used to Set Up Profile Types

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Types - Attributes Page</td>
<td>JPM_JP_TYPE_ATTRIB</td>
<td>Set up profile type attributes. Define basic details of the profile type identifying the type of profile. If the profile type is associated with approvals workflow, specify the transaction and the approval definition on this page.</td>
</tr>
<tr>
<td>Profile Types - Identities Page</td>
<td>JPM_JP_TYPE_IDENT</td>
<td>Define profile type identities by selecting the identity options to which the profile type is linked. Identity options are entities such as a job code, position number, or person. When users create profiles based on a profile type, they can only create profiles for the entities that are defined on this page. Active profile types must have at least one identity option. Define the identity options enabled on the Profile Identity Options page. A Person identifier is automatically added for profile types with a Person usage. No other identifiers can be added for these.</td>
</tr>
<tr>
<td>Profile Types - Content Page</td>
<td>JPM_JP_TYPE_CONT</td>

<td>Definition Name</td>
<td>Usage</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>-------------------------</td>
<td>-------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Profile Type - Associations Page</td>
<td>JPM_JP_TYPE_ASSOC</td>
<td>Set up profile type associations. Select the associations to which the profile type is linked. Associations are entities external to the Profile Management business process. Define the association options enabled on the Profile Association Options page. This is only available for profile types with a Non-Person usage.</td>
</tr>
<tr>
<td>Clone Profile Types Page</td>
<td>RUNCTL_JPM_CLONE</td>
<td>Clone profile types. Create a new profile type by copying an existing profile type by running the Clone Profile Type process.</td>
</tr>
<tr>
<td>Assign Profile Type Defaults Page</td>
<td>JPM_DFLT_JP_TYPES</td>
<td>Assign profile type default person and non-person profile types available to other product features and services.</td>
</tr>
</tbody>
</table>

**Profile Types - Attributes Page**

Use the Profile Types - Attributes page (JPM_JP_TYPE_ATTRIB) to set up profile type attributes.

Define basic details of the profile type. If the profile type is associated with approvals workflow, specify the transaction and the approval definition on this page.

**Navigation**

Set Up HCM > Product Related > Profile Management > Profiles > Profile Types > Attributes
Image: Profile Types - Attributes page

This example illustrates the fields and controls on the Profile Types - Attributes page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Identities</th>
<th>Content</th>
<th>Associations</th>
</tr>
</thead>
</table>

**Summary**

Enter a brief description of the profile type.

**Profile Type Usage**

Select the usage value: *Person* or *Non-Person*. The usage will determine the Profile Identity Options values that can be selected on the Profile Types - Identities page. If the Profile Type Usage field is *Person*, then a *Person* identifier is automatically added and no other identifiers can be added. If the usage is *Non-Person* then any enabled Identity Option can be added.

**End Profile**

Select this check box if the profile type is an end profile. The system displays end profiles in employee and manager self service and uses the end profiles in search, match, and browse.

**Transaction Name**

Select the approvals workflow transaction associated with the profile type. You must complete this field if any of roles in the content sections in the profile type have the Approval Required check box selected or if the Approval Req'd for Identities check box on the Profile Type - Identities page is selected.

See Content Section Page.

**Definition ID**

Select the approvals definition for the profile type. If you leave this field blank, the system uses the default approval definition ID for the approval process ID specified in the Transaction Name field.
If multiple approval definition IDs exist, the approval framework will decide which approval definition ID to use, based on the criteria and priority configured on the Approval Process Definition component. For the definition IDs used for Manage Profiles approvals processing, the default definition has a priority of 1 and the non-default definitions have a priority of 9.

Profile Types - Identities Page

Use the Profile Types - Identities page (JPM_JP_TYPE_IDENT) to define profile type identities by selecting the identity options to which the profile type is linked.

Identity options are entities such as a job code, position number, or person. When users create profiles based on a profile type, they can only create profiles for the entities that are defined on this page. Active profile types must have at least one identity option. Define the identity options enabled on the Profile Identity Options page. Identifiers can only be added for profile types with the non-person usage.

A Person identifier is automatically added for profile types with a Person usage. No other identifiers can be added for these.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Types > Identities
Image: Profile Types - Identities page

This example illustrates the fields and controls on the Profile Types - Identities page. You can find definitions for the fields and controls later on this page.

### Approval Req’d for Identities

Select this check box if approval is required for changes to the profile identities associated with profiles of this profile type.

### Profile Identity Option

Select one or more objects to which the profile type can be linked. The objects available are determined by the profile identity options enabled on the Profile Identity Options page.

Profile identity options can only be added for non-person profiles. A *Person* identifier is automatically added for person profiles and no further identifiers can be added. The system validates that there is only one active profile per profile identity key within a given profile type. For example, if the position Human Resources Administrator is listed as the identifier for a certain active JOB profile, then another JOB profile cannot be defined with the same position identifier.

See [Profile Identity Options Page](#).

### Add Profile Identity

Click to add another profile identity option to the page.
Profile Types - Content Page

Use the Profile Types - Content page (JPM_JP_TYPE_CONT) to define profile type content.

The content of a profile is divided into tabs and each tab comprises one or more sections. Use the Content page to set up the tabs in the profile, and add content types to each tab.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Types > Content

Image: Profile Types - Content page

This example illustrates the fields and controls on the Profile Types - Content page. You can find definitions for the fields and controls later on this page.

Use this page to define the content of a profile type.

The order in which the tabs are displayed is determined by the Tab Order field. Within each tab, you specify the content types in the Content Sections grid area. These links will appear as actual tabs to the user on the profile pages.

View All Sections

Click this link to display the sections for all the tabs in the profile type. The system updates the Content Sections group box to list the sections from all tabs, and hides the Tab Name and
Tab Order fields. To return to viewing a specific tab, click that tab link.

**Display Tab Icons and Tab Icon**

Select this check box if you want to associate tabs with icons that will appear within the PeopleSoft Fluid User Interface on the "Talent Profile Page (for Employees) or Team Talent Profile Page (for Managers)" (PeopleSoft HCM 9.2: eDevelopment). Employees use these self-service pages to update their own profiles.

When you select this option the Tab Icon field appears where you can select the icon you want to display preceding the tab name.

**Add Tab button**

Click this button to add a new tab to the profile type.

**Delete Tab button**

Click this button to delete the selected tab. This option may not be available for system delivered profile types.

**Tab Name**

Enter a name for the tab. When users create a profile using this profile type, the tab name appears as a link in the profile. Therefore, it is important to use meaningful names and not leave the default name of Tab 1, Tab 2, and so on.

**Tab Order**

Enter a value to specify the order in which the system should display the tab links.

**Tab Icon**

This field is available when you have selected the Display Tab Icons option. Select the icon that represents this tab in the PeopleSoft Fluid User Interface (on the Talent Profile pages).

**Content Sections**

This grid area lists the sections in the selected tab. If you click the View All Sections link, this grid area lists the content sections for all the tabs in the profile type.

**Section Name**

Click the section name to access the Content Section page and view and update details of the section or sub-section.

*Note:* A "&gt;" symbol preceding a section name indicates that the section is a child of the section above it.
**Note:** Profile Type configurations are delivered for CLUSTER, ROLE, JOB, and PERSON. This can be changed by adding a new effective dated entry for the profile type. Caution should be used when changing ROLE and PERSON content sections since there may be existing integration requirements. Refer to the topic “Getting Started with Manage Profiles,” Manage Profile Integrations to determine the business processes that leverage profile content. Caution should be exercised when removing delivered properties. If profile content already exists for the property, then it should not be removed.

<table>
<thead>
<tr>
<th><strong>Parent Section Name</strong></th>
<th>Displays the name of the parent section for child sections.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Required</strong></td>
<td>Select this check box if the section is a required section of the profile. When users create a profile, the system uses this check box to validate that required sections have at least one profile item.</td>
</tr>
<tr>
<td><strong>Move To Tab</strong></td>
<td>Displays the current tab name where this content section is located. Select the tab from the list and click the Reorder Content link to move a section to a different tab.</td>
</tr>
<tr>
<td><strong>Order</strong></td>
<td>Enter a value to specify the order in which the content sections are displayed within the tab in the profile.</td>
</tr>
<tr>
<td><strong>Add Content Section</strong></td>
<td>Click this link to add a new section to the Content Sections grid area. The system displays the Add Content Section page that lists all the content types available. Content types are defined using the Content Types component. See Setting Up Content Types and Properties.</td>
</tr>
<tr>
<td><strong>Add Sub-section</strong></td>
<td>Add sub-sections to include content types that are related to the content type of an existing section. Select the radio button for the content section for which you want to create a sub-section, and click this link. Relationships between content types are defined on the Relationship Rules page in the Content Types component. For example, if you add a Competencies section to a tab, you can add the Element or Sub-Competencies content type as sub-sections because these content types are related to the competencies type. When you click this link the system displays the Add Content Section page, which lists the content types that are defined as a child of the content type of the parent section.</td>
</tr>
</tbody>
</table>
Chapter 3 Setting Up Profile Management

Reorder Content

Click this link if you have changed the Tab Order or the section Order field values. The system refreshes the page to show the new ordering of tabs or content sections.

Add Content Section Page

Use the Add Content Section page (JPM_JP_ADD_CNT_SEC) to select content types.

This page lists the content types available to add to the profile type. Select the content type you want to add and the system displays the Content Section page.

Navigation

• Click the Add Content Section link on the Profile Types - Content page.
• Click the Add Sub-section link on the Profile Types - Content page.
Image: Add Content Section page

This example illustrates the fields and controls on the Add Content Section page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>

</tbody>
</table>

This page lists the content types that you can add to the profile type. Those content types that are already included in the profile type are shown in normal text and do not have a link.

If you are adding a sub-section, the system displays the content types that have a subordinate relationship with the content type of the parent section.

See Profile Types - Content Page.

Click the link for the content type that you want to add, or click the Return to Previous Page link to cancel the addition.
Chapter 3 Setting Up Profile Management

Content Section Page

Use the Content Section page (JPM_JP_CONTENT_SEC) to define content section properties (fields) and the attributes of those properties.

You also use this page to define the users that can access the content section when creating or updating profiles.

Navigation

- Select a content type on the Add Content Section page.
- Click the section name link on the Content page.

Image: Content Section page showing the Properties tab

This example illustrates the fields and controls on the Content Section page showing the Properties tab. You can find definitions for the fields and controls later on this page.

Note: Profile Type configurations are delivered for CLUSTER, ROLE, JOB, and PERSON. This can be changed by adding a new effective dated entry for the profile type. Caution should be used when changing ROLE and PERSON content sections since there may be existing integration requirements. It is not recommended that delivered properties be removed.
### Instance Qualifier Set 1
(Optional) Select the instance qualifier set that you want to use with this section. You can only select instance qualifiers that are associated with the content type of the section and are defined as sets of values. You cannot select instance qualifier sets that are based on prompt records for this field. Define instance qualifiers using the Instance Qualifiers page.

You will be required to add the property JPM_CAT_ITEM_QUAL.

See Defining Instance Qualifiers.

### Instance Qualifier Set 2
(Optional) If you want to define an instance qualifier that is based on a prompt record, then select an Instance Qualifier Set that has a prompt definition.

You will be required to add the property JPM_CAT_ITEM_QUAL2.

### Allow Copy From Job
This check box is available for Person profile types.

Select to enable the functionality to select a non-person profile from a list of related profiles when maintaining a person's profile. The system determines which non-person profiles are related to an employee by searching the employee's job data record. If the employee has multiple jobs, the system checks all the person's active jobs for matching non-person profiles. For example, the system checks for active profiles that match the employee's job codes, positions, and salary grades. If this check box is not selected, these content types related to the person will not be copied from the non-person profile.

### Copy from another Profile Type
Click this icon to identify an existing profile type from which you want to copy content properties for the content type section you have selected. When you click this icon, the system displays the Copy Content from another Profile Type page. Enter the profile type to copy and click OK to have the system insert the properties into the content section definition.

### Visualize Profile Detail
Click this icon to access the Profile Content Visualization page to view how the content section configuration will render on the Add <content type> or Update <content type> pages.

### Content Property Definition Group Box: Properties Tab
If you are setting up a content section, the Content Property Definition group box lists the key properties defined for the content type in the content catalog. You can add other properties as required.

**Note:** If the content type is a free form content type, a description field, JPM_ADHOC_DESCR, is included. You can add any other properties as required.

The Content Type structure is independent of the Profile Type structure and the properties defined for a Content Type apply to Content Items only. Fields for a person or non-person profile are defined at this Profile Type level, and are not related to the field properties identified on the Content Types Page.
See Understanding Content Type Properties.

See Profile Type Properties.

**Field Name**
Displays the name of the field for the property that is part of the content type definition.

If you are adding a new property, click the Add Property link to select a field name from the available options.

Enter one or more of the twenty custom field values `JPM_PROMPT_1` through `JPM_PROMPT_20` to present to the user a list of values defined on the Custom Prompt Page.

**Label Text**
Displays the label specified for the field if the property is part of the content type definition. If you are adding a new property, enter the text that you want to appear for this field on the profile pages.

**Note:** You should choose a meaningful label for the property so that users clearly understand what kind of information to enter in the field when they create profiles.

**Add Property**
Click this link to add a property to the section. Use the Property Category field to narrow your property search by category. You can also copy profile properties from another profile type using the Copy from another Profile Type icon.

See profile content information under Understanding Profile Management.

See Profile Type Properties.

### Content Properties Group Box: Property Attributes Tab

Access the Property Attributes tab on the Content Section page.

**Image: Content Section page: Property Attributes tab**

This example illustrates the fields and controls on the Content Section page: Property Attributes tab. You can find definitions for the fields and controls later on this page.
Note: New properties should not be specified with an attribute of *Required* if profiles already exist with that content. Caution should be used when changing the Maximum Length value. If integrations exist with other products that leverage the legacy COMPETENCIES and ACCOMPLISHMENTS data model, then truncation of data should be avoided.

See Manage Profiles Integrations.

**Required**
Select to make a property required when creating a profile using this profile type. If the check box is selected, users must complete the field when they set up a profile.

**Display**
Select whether the property should be available for entry (*Editable*), unavailable for entry (*Display*), or hidden (*Hidden*) on the profile pages. The system populates the property with the value you enter in the Default Value field. If you select *Editable*, the system populates the default value at the profile, but users can override that value.

**Max Len** (maximum length)
This field applies to character properties only. If you added the property to the profile type, enter a value that is less than or equal to the field length of this property.

**Minimum** and **Maximum**
These fields apply to numeric properties only. If you added the property to the profile type, enter the minimum and maximum values allowed when a user adds a profile item.

**Prompt List Name**
Select a custom list for this field property. This field is available when you have selected from the user define properties *JPM_PROMPT_1* through *JPM_PROMPT_20* for a field property.

**Default**
If you added the property to the profile type, enter the default value that will be assigned to this property when a user adds a profile item.

When creating a profile item that contains the RATING_MODEL property, the system attempts to populate the RATING_MODEL property default first from the content catalog. If that does not exist, the default is assigned from this value entered for the Content Section.

**Detail**
Select this check box if you want the field to appear on the details page for the content section.

**Summary**
Select this check box to display the field within the summary grid when creating or viewing a profile. Fields that are marked as summary automatically appear within the summary grid on the classic administrator, employee self service, and manager self service profile pages (see Person Profile Page and "(Fluid) Maintaining Person Profiles" (PeopleSoft HCM 9.2: eDevelopment)).

See Understanding Managing Profiles.
Chapter 3 Setting Up Profile Management

**Note:** This option does not apply to the fluid Talent Profile and Team Talent Profile transaction summary grid as referenced in the "(Fluid) Maintaining Person Profiles" (PeopleSoft HCM 9.2: eDevelopment) documentation.

**Search/Compare**

Select this check box if you want to include the property in the search index that is used by the search and compare profiles feature. The check box is display-only if the property is not supported by this feature.

**Note:** The item ID (JPM_CAT_ITEM_ID) is automatically set to searchable if you make other properties in the content section searchable.

**Sys Data** (system data)

Displays as selected if a PeopleSoft delivered and maintained value for this profile type. System data cannot be deleted. When you manually enter another property this check box is not selected.

**Role Security**

Access the Content Section page, Role Security section (select a content type on the Add Content Section page or click the section name link on the Profile Types - Content page).

**Image: Role Security section of the Content Section page**

This example illustrates the fields and controls in the Role Security section of the Content Section page. You can find definitions for the fields and controls later on this page.

The Role Security group box lists the Profile Management (Profile Role) and PeopleTools (Role Name) roles that can access the content section when creating or updating a profile.

**Note:** If you don't select a Profile Management role for any content section, then users can't view or create profiles using this profile type.

This video demonstrates the Profile Management role security feature:

**Image Highlights, PeopleSoft HCM Update Image 31: Enhanced Security for Profile Management**

**Profile Role**

Select the role that should have access to the content section according to the options you have selected here.
Note: Profile Management roles should not be confused with PeopleTools role names. Profile Management roles correspond to certain profile pages in the system, and you use this section to further define which content sections they can view and manage from those pages.

There are three Profile Management roles:

- **Administrator**: Administrators view and create profiles using the options available in the classic (Workforce Development > Profile Management) or fluid (Workforce Administrator > Profile Administration tile) pages.

- **Employee**: Employees view and create their own profiles using the options available in the classic (Self Service > Learning and Development) or fluid (Employee Self Service > Talent Profile tile) pages.

- **Manager**: Managers use the manager self-service transactions available in the classic (Manager Self Service > Learning and Development) or fluid (Team Talent Profile tile) pages.

Note: If a Profile Role type is not selected for a content section, this content section will be hidden for that user.

**Role Name**

Associate PeopleTools security roles with Profile Management roles.

Note: PeopleTools roles are assigned to a user’s profile and identify data permission security.

Consider the following when linking PeopleTools role names with a profile role:

- **No Role Name associated with a Profile Role**: When the Role Name is left blank, any user in that Profile Management role will have access to this content section according to the role security options you have selected.

- **One Role Name associated with a Profile Role**: Only those users that have this PeopleTools role assigned to them in their user profile will be able to access this content section according to the role security options you have selected.

- **Multiple Role Names associated with a Profile Role**: Users that have any of these PeopleTools roles assigned to them in their user profile will be able to access this content section according to the role security options you have selected.

When a user is assigned to more than one of the PeopleTools security roles, the system will use the *highest level of security to determine the user’s access.*
Chapter 3  Setting Up Profile Management

(See the * for the role security options and the “Understanding How the System Determines Role Security Access” subtopic that follow to see how the system determines the highest level of security).

Use these security option fields to determine what a role can perform for this content section. When none of the following options are selected, the user will be able to see the content section, but not be able to make any updates.

**Allow Update**

Select this check box to enable these users to update the content section within a profile. If this check box is left deselected, users cannot add, update, or remove items for this content section in the profile.

* The highest level of security for this option is *Selected* (the user is able to make updates to a content section).

**Note:** This check box is not available for the NVQ, NVQ Units, or NVQ Elements content sections because it is not possible to update them within a profile.

**Approval Required**

Select this check box if approval is required for this role to add, update, or remove profile items.

* The highest level of security for this option is *Deselected* (the user is not required to go through the approval process to add or delete a profile item).

**Note:** Since the highest level of security is to *not require approvals*, you should take this into consideration when you are adding more than one PeopleTools security role for a profile role where one requires approvals and the other does not.

**Important!** The Profile Management security does not define Approvals security. For example, a manager or administrator given access to approve profile requests may see the content items sent for approval, even if you did not give the manager or administrator access to this Profile Management content section for this profile.

**Enable Attachments**

**Note:** This option is available for *Person* profile types only and is not available for *Non-Person* profile types.

Profile Management supports attachments on the fluid manager and employee self service "<Content Type> Page" (PeopleSoft HCM 9.2: eDevelopment), and on the classic administrator Add New <content type>, Update <content type>, or View <content type> Page. The attachments functionality is not delivered for the classic self service and approvals pages.

Identify if a role can use attachments when accessing the profile pages. Options include:
• **No Attachments**: Select to indicate that this role cannot access attachments.

• **Update Attachments**: Select to indicate that this role can add, view, or delete attachments.

• **View Attachments**: Select to indicate that this role can view attachments but cannot add or delete them.

* The highest level of security for this option is **Update Attachments** (the user is able to add, view, or delete attachments).

**Add Role**
Click this link to add another role to the list of roles that have access to the profile type content section.

**Understanding How the System Determines Role Security Access**

Profile Management enables you to use PeopleTools security roles to further define your Profile Management security. When PeopleTools roles are associated with a profile role, the system looks to the user profile to see who has access to a content section for this profile type. Those users that have the role associated with the profile role will have access to the content section according to the parameters set up here. However, sometimes a user may be associated with more than one PeopleTools role name.

The following scenario is an example of how the system determines security for the Profile Management data. The following table shows an example of the setup of the PERSON profile, COMPETENCY content section. In this scenario, the Employee Profile Management users that are associated with the PeopleTools Role 1 are allowed to view, make updates, and add attachments to the COMPETENCY content section of their own profile. These users will also need to get approvals to make changes to the COMPETENCY section of their profile. Users that are associated with the PeopleTools Role 2, can only view the COMPETENCY content section within their own profile data and cannot add or delete information. Although they cannot make changes to their profile COMPETENCY items, the configuration for this content section does not require approvals.

<table>
<thead>
<tr>
<th>Profile Role</th>
<th>Role Name</th>
<th>Allow Update</th>
<th>Approval Required</th>
<th>Enable Attachments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employee</td>
<td>Role 1</td>
<td>Yes</td>
<td>Yes</td>
<td>Update Attachments</td>
</tr>
<tr>
<td>Employee</td>
<td>Role 2</td>
<td>No</td>
<td>No</td>
<td>View Attachments</td>
</tr>
</tbody>
</table>

Now let’s say you have an employee who has been granted both Role 1 and Role 2 in his or her user profile. In this case, the system will give the user security access to the highest level security level based on these two security configurations, which are:

• **Allow Update = Yes**, the user can make changes to this content section (comes from Role 1).

• **Approval Required = No**, the user does not need approval to make changes to this content section (comes from Role 2).

• **Enable Attachments = Update Attachments**, the user can add and make changes to the attachments (comes from Role 1).
Note: If you wanted to ensure that users would still need to go through approvals, we recommend that you select the Approval Required option to accommodate for scenarios in which a user may have access to several PeopleTools security roles.

Profile Type - Associations Page

Use the Profile Type - Associations page (JPM_JP_TYPE_ASSOC) to set up profile type associations.

Select the associations to which the profile type is linked. Associations are entities external to the Profile Management business process. Define the association options available on the Profile Association Options page. This is only available for profile types with a Non-Person usage.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Types > Associations

Image: Profile Types - Associations page

This example illustrates the fields and controls on the Profile Types - Associations page. You can find definitions for the fields and controls later on this page.

Profile Association Option

Select the object you want to link to the profile type. The objects available are determined by the profile association options enabled on the Profile Association Options page. The system allows multiple active profiles per association within a given profile type.

See Profile Association Options Page.

Add Profile Association

Click this link to add another association to the profile type.
Clone Profile Types Page

Use the Clone Profile Types page (RUNCTL_JPM_CLONE) to clone profile types.

Create a new profile type by copying an existing profile type by running the Clone Profile Type process.

Navigation

Set Up HCM >Product Related >Profile Management >Profiles >Clone Profile Types >Clone Profile Types

Image: Clone Profile Types page

This example illustrates the fields and controls on the Clone Profile Types page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Source Profile Type</th>
<th>Enter the profile ID that you want to copy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target Profile Type</td>
<td>Enter the new profile ID that you want to create.</td>
</tr>
<tr>
<td>Copy Validations</td>
<td>Select this check box to copy the validations associated with the source profile type. Only the PERSON profile type has system delivered validations.</td>
</tr>
</tbody>
</table>

Assign Profile Type Defaults Page

Use the Assign Profile Type Defaults page (JPM_DFLT_JP_TYPES) to assign profile type default person and non-person profile types available to other product features and services.

Navigation

Set Up HCM >Product Related >Profile Management >Profiles >Assign Default Profile Types >Assign Profile Type Defaults
Page 91

Chapter 3 Setting Up Profile Management

Image: Assign Profile Type Defaults page

This example illustrates the fields and controls on the Assign Profile Type Defaults page. You can find definitions for the fields and controls later on this page.

**Assign Profile Type Defaults**

*Primary Person Profile Type* | PERSON | Person
*Primary NonPerson Profile Type* | JOB | Job

The purpose of the Assign Profile Type Defaults page is to provide a primary person and non-person profile type for business processes within Profile Management and also the products that interface with Profile Management, such as Federal Hire, Military, NVQ, Talent Acquisition Management, and so forth. If you change these profile types from the delivered profile types, be sure that the new profile types will support the interface of those workflows that you use. For instance, if you use Military Rank, make sure you have a content section that matches the Worn Rank content section in the PERSON profile type.

**Important!** Before making changes to this page, you must consider all integration points related to this data. Additional setup may be required within the specific business processes to specify further interfacing options with Profile Management.

**Primary Person Profile Type**

Specify the profile type that will serve as the default person profile for other business processes in the system interfacing with Profile Management. This default value can be overwritten at the individual business process level.

**Primary NonPerson Profile Type**

Specify the profile type that will serve as the default non-person profile for other business processes in the system interfacing with Profile Management. This default value can be overwritten at the individual business process level.

---

**Creating Profile Group Types and Profile Groups**

To set up profile groups, use the Profile Group Types (JPM_JP_GTYPE_GRP) and Profile Groups (JPM_JP_GROUPS) components.

These topics provide an overview of profile groups and group types, list prerequisites, and discuss how to create profile group types and profile groups.

</tbody>
</table>

### Understanding Profile Groups and Group Types

The PeopleSoft application provides the means of creating profile groups, either manually or by using group criteria, to provide filtering in the Search and Compare process. The Profile Group Types page enables you to identify a group and valid profile types for that group. It also specifies which profile types this profile group can be applied as a search filter in Search and Compare and self service. The profile group is an instance of the group type and specifies which profile IDs are members of this group.

The system uses profile group types of either Person or Non-person to drive the behavior of the criteria that is entered for each of the groups tied to the group type. It also controls the profile types that can be selected for the group type. The Profile Groups component enables you to include criteria to build a list of profile members for a person profile group, through the use of the Group Build feature, or for a non-person profile group, which uses criteria from the Profile Identity Options page.
To create the profile group, the administrator uses the Profile Groups component. The administrator can choose to select the group build identifier that he or she defined in the Group Build feature for person group type, or use field criteria from a profile identity. Upon clicking the Populate Profiles button on the Profile Groups - Group Definition page, the system uses the Build Profile Groups process to populate the Profile Groups - Group Members page. The administrator can also manually defines a profile group without entering any group criteria:

The system uses the Build Profile Groups process to create profile groups. This Application Engine program executes both online via the Populate Profiles button PeopleCode and in batch mode via Process Scheduler. It is possible to rebuild multiple groups of the same profile group type when you run the Application Engine program in batch mode. When this process is executed via the Populate Profiles button, the system will only build or rebuild a single group.

Since person and job attributes are frequently changing, person profile groups are a lot more volatile. You can schedule person profile group builds to run on a regular basis. As the profile group member list changes, the Last Update datetime stamp is updated for those profiles that are added or removed from the list. This will result in the profile automatically being selected by the next incremental Schedule Search Index process run. Only those profiles with group changes are rebuilt.

**Prerequisites**

To build profile groups, you must establish profile types. Optionally you can set up profile identity options and create groups using the Group Build functionality.

See Setting Up Profile Identity and Association Options.

See "Understanding Group Build" (PeopleSoft HCM 9.2: Application Fundamentals).
Profile Group Types Page

Use the Profile Group Types page (JPM_JP_GTYPE_GRP) to set up profile group types.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Group Types > Profile Group Types

Image: Profile Group Types page

This example illustrates the fields and controls on the Profile Group Types page. You can find definitions for the fields and controls later on this page.

Profile Groups - Group Definition Page

Use the Profile Groups - Group Definition page (JPM_JP_GROUPS) to define criteria to create a profile group.
Chapter 3 Setting Up Profile Management

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Groups > Group Definition

Image: Profile Groups - Group Definition page

This example illustrates the fields and controls on the Profile Groups - Group Definition page. You can find definitions for the fields and controls later on this page.

The page displays differently depending on if the profile type usage is Person or Non-Person.

For non-person groups, the Profile Identity Options field and Group Criteria grid display and criteria can be added to construct the group based upon the profile identity.

A person profile group displays the Group ID field that is part of the Group Build functionality, which lists the criteria for extracting an employee ID list.

Profile Type Usage

Displays the group as a Person or a Non-Person profile, as defined for the profile group type on the Profile Group Types page. This value determines how you will select criteria that is entered for each of the groups tied to the group type.

Group ID

This field displays when the Profile Type Usage field is Person.

The system uses the Group Build functionality to extract the group of people used to identify person profiles. The group build groups must be created prior to defining a profile group. The Group ID field lists the IDs defined through the Group Build business process.

Note: Group definitions for this process should only include employees, contingent workers, and persons of interest having a JOB record. Profiles for persons of interest without a Job record are not supported.
A group ID is not required. You may manually enter person profile IDs on the Profile Groups - Group Members page to create a group.

**Profile Identity Option**

This field displays when the Profile Type Usage field is *Non-Person*.

Enter the non-person profile identity option. The Profile Identity Option field lists the non-person IDs defined in the Profile Identity Option component. Once you enter the profile identity option ID, the group criteria fields become available for entry.

This criteria is not required. You may manually define a group on the Profile Groups - Group Members page.

**Group Criteria**

Use this section to identify group identifier criteria for a non-person group. The non-person profile group criteria uses fields from the Profile Identity Options record along with corresponding values and relational operators entered on this page to create a profile group. This grid becomes available when you enter a value in the Profile Identity Option field.

- **Sequence**: Specify the sequence order of the criteria.
- **Search Condition**: Select either the connector value `AND` or `WHERE`. `AND` connectors are connected to the row with the sequence prior to it. `WHERE` connectors are independent of any rows with a sequence prior to it.
- **Field Name**: Select the field that should be used to construct a filter for a non-person profile. Valid fields are defined in the Profile Identity Options component.
- **Operator**: Define the field values to include in or exclude from the group. Valid operators include `equal to`, `greater than`, `greater than or equal to`, `is blank`, `is not blank`, `less than`, `less than or equal to`, `like`, and `not like`.
- **Value**: Enter the value that should be used in filtering data for the non-person profile.
- **Add Criteria for Group**: Click this link to add another criteria row.
- **Populate Profiles**: Click this button to run the Build Profile Groups (JPM_BLD_GROUP) Application Engine process to build or rebuild the member list based on the group criteria defined. This process populates the group members on the Group Members page.

This Application Engine program executes both online via the Populate Profiles button PeopleCode and in batch mode via Process Scheduler.
Profile Groups - Group Members Page

Use the Profile Groups - Group Members page (JPM_JP_GMEMB) to view or add profiles to define members for a profile group.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Profile Groups > Group Members

Image: Profile Groups - Group Members page

This example illustrates the fields and controls on the Profile Groups - Group Members page. You can find definitions for the fields and controls later on this page.

The system automatically populates the Group Members grid when you click the Populate Profiles button on the Profile Group Definition page. You can also enter profiles manually on this page. When you have the system automatically rebuild profile group members according to the group criteria, any manual changes you have made to the group will be lost.

When the Profile Group component is saved, each profile that has been added or removed from the group will have its Last Update datetime stamp updated. This will cause the profile to automatically be selected by the next incremental Schedule Search Index process run so that the index profile document can be rebuilt.

Use the search fields to locate a specific profile ID or profile description.

Search On: Descr and Search On: Profile ID

Enter the description or profile ID of the profile you wish to locate.

Search

Click this button to search for the profile ID based upon the description or ID you entered in the search fields.
Profile ID  
Select the profile that you want to add to the profile group. The system displays the profile description and type, as well as the employee name and ID, if applicable.

Add Profile to Group  
Click this link to add another profile to the group.

Build Profile Groups Page

Use the Build Profile Groups page (RUNCTL_JPM_GROUP) to run the Build Profile Groups process to create a profile group.

Navigation

Set Up HCM > Product Related > Profile Management > Profiles > Build Profile Group > Build Profile Groups

Image: Build Profile Group page

This example illustrates the fields and controls on the Build Profile Group page. You can find definitions for the fields and controls later on this page.

Build Profile Groups

Use this page to run the Build Profile Groups process. The RUNCTL_JPM_GRP record stores the requested profile groups to be built or rebuilt.

Profile Group Type  
Enter a profile group type you wish to build or rebuild. Only those profile groups that have criteria are available for selection. This field is required.

Profile Group ID  
Enter the profile group ID for the group type you wish to build or rebuild. This field is optional. When no profile group is specified, all groups for that profile group type are rebuilt.

(Classic) Enabling Profile Actions

To enable profile actions, use the Profile Actions (JPM_PROFILE_ACTION) component.

Note: Profile Actions are specific to the Classic Manage Profile pages and are not used in Fluid Manage Profiles pages.
These topics provide an overview of profile actions, and discusses how to enable profile actions.

## Pages Used to Enable Profile Actions

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Actions Page</td>
<td>JPM_PROFILE_ACTION</td>
<td>Enable profile actions by person or non-person profile component for each role.</td>
</tr>
</tbody>
</table>

## Understanding Profile Actions

**Image: Example of the Profile Actions drop-down menu for a user**

The Profile Actions field appears on the Classic non-person profile and person profile pages. It enables administrators, managers, and employees to perform transactions directly from the profile pages, as shown in this example:

Use the Profile Actions component to modify action descriptions and to control which Profile Management roles within the organization (Administrator, Manager, or Employee) have access to specific actions. This functionality enables you to hide or display profile actions according to your organizational policies. For example, if your organization does not use the Search and Compare Profiles transaction, you can hide this option for each profile role.

## Pages That Display the Profile Actions Field

The Profile Actions field is available on the Classic person and non-person profile pages throughout the system. The following pages display the Profile Actions field.

The administrator uses these pages to access profile data by navigating to Workforce Development >Profile Management >Profiles:

- Person Profiles
- Non-person Profiles

**Note:** The administrator can access the fluid Workforce Administrator home page >Profile Administration tile >View Profiles tile to access these classic components.

See Maintaining Profiles as an Administrator.
Employees use these self-service pages to access profile data by navigating to Self Service > Learning and Development:

- My Current Profile
- My Historical Profile
- My Job Profiles
- View Job Profiles

Managers use these manager self-service pages to access profile data by navigating to Manager Self Service > Learning and Development:

- Current Team Profiles
- Historical Team Profiles
- Maintain Job Profile

See "(Classic) Maintaining Person Profiles as an Employee or Manager" (PeopleSoft HCM 9.2: eDevelopment) and "(Classic) Viewing and Updating Job Profiles" (PeopleSoft HCM 9.2: eDevelopment).

**Delivered Profile Actions**

The following tables list the Profile Actions that are delivered with the Manage Profiles business process, although some of the actions are not available for all profile roles or pages.

This table lists the profile actions available for the Person profile transaction pages and the Profile Management roles that can perform these transactions:

<table>
<thead>
<tr>
<th>Profile Action</th>
<th>Usage</th>
<th>Administrator Pages</th>
<th>Employee Self Service Pages</th>
<th>Manager Self Service Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Copy From Job Profile</td>
<td>Copy items from a non-person profile to the employee's profile using the Copy Items from Job Profile page, which lists the profiles related to the employee's active jobs.</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Update Profile Groups</td>
<td>Categorize your profiles by profile groups using the Update Profile Groups page, which you use to list the profile group types and profile groups to which you want to add the profile.</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td><strong>Profile Action</strong></td>
<td><strong>Usage</strong></td>
<td><strong>Administrator Pages</strong></td>
<td><strong>Employee Self Service Pages</strong></td>
<td><strong>Manager Self Service Pages</strong></td>
</tr>
<tr>
<td>--------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------------</td>
<td>---------------------------------</td>
<td>-------------------------------</td>
</tr>
<tr>
<td>Compare my profile to current job</td>
<td>Compare your own profile to your job profile. If more than one job profile applies to your job, select from a list of all applicable job profiles to compare.</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>Compare employee profile to current job</td>
<td>Compare an employee’s profile items to his or her job profile items. If more than one job profile applies to the employee, select from a list of all applicable job profiles to compare.</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td>View Related Job Profiles</td>
<td>View a list of non-person profiles that are related to the employee's job data. The system determines which non-person profiles are related to an employee by searching the employee's job data record. If the employee has multiple jobs, the system checks all the person's active jobs for matching non-person profiles.</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Search and Compare Profiles</td>
<td>Select and perform a search on the Search for Profiles page</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

This table lists the profile actions available for the Non-Person profile transaction types:
<table>
<thead>
<tr>
<th>Profile Action</th>
<th>Usage</th>
<th>Administrator Pages</th>
<th>Employee Self Service Pages</th>
<th>Manager Self Service Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Update Profile Groups</td>
<td>Categorize your profiles by profile groups on the Update Profile Groups page, which you use to list the profile group types and profile groups to which you want to add the profile.</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>Express Interest for Employee</td>
<td>Add a non-person profile to a person's interest list using the Person Search - Simple page, which you use to search for an employee whose interest list you want to update.</td>
<td>Yes</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td>Express Interest</td>
<td>Add a job profile to your interest list using the Add to Interest List - Confirmation page.</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>Search and Compare Profiles</td>
<td>Select and perform a search on the Search for Profiles page</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

This table lists the profile actions available for the Historical profile transaction types:

<table>
<thead>
<tr>
<th>Profile Action</th>
<th>Usage</th>
<th>Administrator Pages</th>
<th>Employee Self Service Pages</th>
<th>Manager Self Service Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>View As Of Another Date</td>
<td>Indicate a new as of date on the Select New As Of Date page to view profile information as of a certain time.</td>
<td>No</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Profile Actions Page**

Use the Profile Actions page (JPM_PROFILE_ACTION) to enable profile actions by person or non-person profile component for each role.

</tbody>
</table>

Note: This Profile Action list is maintained by PeopleSoft development. Changes to this list require code line modifications. For a list of all profile actions delivered with the system, see Delivered Profile Actions in the Understanding Profile Actions topic.

See Understanding Profile Actions.

Profile transaction types are not available for all roles. When the system does not allow a profile transaction for a specific role, the access check box for that role is not available for selection.

Profile Transaction Type

Identifies the types of profile pages where this transaction can be used. This is also the high level key value for this table. Transaction types for Manage Profiles are:

- Person
- Non-Person
- Historical

Description

View or modify the text that will appear in the Actions Type drop-down list.

Admin Access (administrator access)

Select to add this action type to the Actions Type drop-down list on the administrator profile pages in the system.
Employee Access  
Select to add this action type to the Actions Type drop-down list on employee self-service profile pages in the system.

Manager Access  
Select to add this action type to the Actions Type drop-down list on manager self-service profile pages in the system.

Note: Deselecting a <role> Access check box will remove the profile action option from the Profile Actions drop-down menu list. If all options that could appear for a role in the Profile Actions drop-down menu list are deselected, the Profile Actions field will be hidden on the page.

### Setting Up to Use BI Publisher Reports and Profiles

These topics provide an overview of BI Publisher reports and templates, list prerequisites, and discuss how to set up for BI Publisher reports and profiles.

### Pages Used to View and Modify BI Publisher Reports and Templates

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Definition Page</td>
<td>PSXPRPTDEFN</td>
<td>View the report properties and download or view the data schema and data source.</td>
</tr>
<tr>
<td>Template Page</td>
<td>PSXPRPTTMPL</td>
<td>View or update the existing template.</td>
</tr>
<tr>
<td>Design Helper Page</td>
<td>PSXPSETUPDWNLD</td>
<td>Download plug-ins to facilitate template design and modification.</td>
</tr>
</tbody>
</table>

### Understanding BI Publisher Reports and Templates

Manage Profiles uses the PeopleTools BI Publisher to generate the Content Catalog Listing report as well as the online profiles and profile reports for person and non-person profiles.

### Delivered Report Definitions

This table lists the delivered report definitions and data sources for the related RTF templates:

<table>
<thead>
<tr>
<th>Report Name</th>
<th>Description</th>
<th>Data Source Type</th>
<th>Data Source ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CATI_RPT</td>
<td>Content Items Reports</td>
<td>PS Query</td>
<td>JPM_CONTENT_ITEMS</td>
</tr>
<tr>
<td>JPM_JPNP_RPT</td>
<td>Non Person Profile Batch</td>
<td>XMLDoc</td>
<td>JPM_PROFILE</td>
</tr>
<tr>
<td>JPM_JPPP_RPT</td>
<td>Person Profile Batch</td>
<td>XMLDoc</td>
<td>JPM_PROFILE</td>
</tr>
<tr>
<td>JPM_NP_PROF</td>
<td>Non Person Profile Online</td>
<td>XMLDoc</td>
<td>JPM_PROFILE</td>
</tr>
<tr>
<td>JPM_PP_PROF</td>
<td>Person Profile Online</td>
<td>XMLDoc</td>
<td>JPM_PROFILE</td>
</tr>
</tbody>
</table>
## Delivered Data Sources

This table describes each of the delivered data sources:

<table>
<thead>
<tr>
<th>Data Source ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_CONTENT_ITEMS</td>
<td>PS Query that is used only for content items reports.</td>
</tr>
<tr>
<td>JPMPROFILE</td>
<td>BI document structured by row sets. All profile reports use the same data structure. All data elements are included in the data structure and are available for both person and non-person profile report templates.</td>
</tr>
</tbody>
</table>

## Delivered Templates

To format the reports, we deliver three template files that specify the content and layout:

- One template file for the Content Items reports.
- One template file for both the online and batch Person Profile reports.
- One template file for both the online and batch Non-Person Profile reports.

You can modify the delivered template files to address your specific reporting requirements. After modifying each template, you must upload it to the corresponding report definition. You can modify one instance of each of the profile reports and attach that same updated template file to both of the corresponding report definitions.

See Template Page.

See Modifying an Existing Template.

## Profile Report Nodes

This table describes the report nodes for profile reports:

<table>
<thead>
<tr>
<th>Node</th>
<th>Data Elements Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPM_PROFILE</td>
<td>High level data elements related to the profile.</td>
</tr>
<tr>
<td>JPM_IDENTITY_WK</td>
<td>Profile identities and associations.</td>
</tr>
<tr>
<td>JPM_JP_SECTION</td>
<td>Sections defined in the profile type.</td>
</tr>
<tr>
<td>JPM_JP_CRITM_VW</td>
<td>Profile content items in the sections in the profile. All properties are included whether the content type uses them or not.</td>
</tr>
<tr>
<td>JPM_CATITMAXD_VW</td>
<td>Definitions of the content items in the content catalog. All properties are included whether the content type uses them or not.</td>
</tr>
</tbody>
</table>
### Node Data Elements Summary

| RUN_PARAMETERS | Criteria used to generate the report. |

For more information, see the product documentation for *PeopleTools: BI Publisher for PeopleSoft*.

Click this link to open or save the RTF template in a new window or save it to a location of your choice.

**Preview**
Click to view an example of the report using sample data registered with the data source.

Note: The person profile online and batch reports share the same person profile template file. Similarly, the non-person batch and online reports share the non-person profile template file.

For more information, see the product documentation for *PeopleTools: BI Publisher for PeopleSoft*.

Modifying an Existing Template

The existing templates contain two sections at the end to print out the ID and description of any additional items for content types that you added after the template was created. If you want to display more specific information about your new items, you must create an additional section in the template and define the data that you want to display.

The reports group and display content items in order of profile tab number and profile section sequence number based on the profile type definition that you set up for online display. Regardless of where you place a new section in the template, the report sorting order governs the order of display in the report. To change the report display order, you must edit the sorting. To sort new sections properly, you must also add within the correct loops in the report's driving logic.

Note: Become familiar with BI Publisher before modifying either of the delivered templates.

Setting Up to Modify a Template

To prepare to modify an existing template:

1. Access the Design Helper page (Reporting Tools > BI Publisher > Setup > Design Helper > Design Helper) and save the plug-in design helper for Microsoft Word to facilitate template modifications.

2. Access the Definition page (Reporting Tools > BI Publisher > Report Definition > Definition) for the appropriate report definition and click the links to download the data schema and sample data files.

3. Click Template File link on the Template page (Reporting Tools > BI Publisher > Report Definition > Template) and row for the existing RTF template that you want to edit.

Creating a New Section in a Template

To create a new section:

1. Copy an entire section defined by `<?when: JPM_JP_SECTION.JPM_CAT_TYPE=…..end when?>` and paste it into the template.

2. Modify the conditional statement to identify the item that you want to add.

3. Insert fields into the table to identify the data that you want to display on the report.

4. Save the revised template any file name and the .rtf file extension (*.rtf).
Uploading the Revised Template

To upload the revised template:

1. Add a new effective dated row in the Template Files scroll area on the Template page (Reporting Tools > BI Publisher > Report Definition > Template).
   
   Update these options:

<table>
<thead>
<tr>
<th>Effective Date</th>
<th>Enter the date that the system should begin to print and display reports and profiles with this template.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>Select the Active status for the new template.</td>
</tr>
</tbody>
</table>

2. Click Upload and select the revised template file.

3. Repeat the last two steps to provide the new template to both the online and the batch report definitions.

For more information, see the product documentation for PeopleTools: BI Publisher for PeopleSoft.
Chapter 4

Using the PeopleSoft Fluid User Interface to Manage Profile Administration Tasks

Managing Profile Administration Tasks Using Fluid

This topic lists the pages that administrators can access from a single location in the PeopleSoft Fluid User Interface to perform Profile Management-related transactions.

For general information about fluid pages in PeopleSoft HCM, see "Understanding PeopleSoft Fluid User Interface Home Pages" (PeopleSoft HCM 9.2: Application Fundamentals).

Pages Used to Manage Profile Administration Tasks Using Fluid

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Administration Tile</td>
<td>HC_PROFILE_ADMIN_FL_LINK (this is the cref for his tile)</td>
<td>Access the Profile Administration dashboard where you can set up, view, or manage profile data.</td>
</tr>
<tr>
<td>Profile Administration Dashboard</td>
<td>HC_PROFILE_ADMIN_FL</td>
<td>Access Profile Management-related tiles and pages.</td>
</tr>
</tbody>
</table>

Profile Administration Tile

Use the Profile Administration tile to access the Profile Administration dashboard where you can set up, view, or manage profile data.

Navigation

The Profile Administration tile is delivered as part of the Workforce Administrator home page, but the location can change if you change the delivered home pages or if administrators personalize their home pages.
Image: Profile Administration Tile

This example illustrates the Profile Administration tile.

Click the Profile Administration tile to access the Profile Administration Dashboard, where you can perform tasks such as set up profile content and profiles, search and compare profiles, view profiles, run reports, and manage National Vocational Qualifications (NVQ) information for Great Britain.

Profile Administration Dashboard

Use the Profile Administration dashboard (HCPROFILE_ADMIN_FL) to access Profile Management-related tiles and pages.

Navigation

Click the Profile Administration Tile, which is delivered as part of the Workforce Administrator home page, but the location can change if you change the delivered home pages or if administrators personalize their home pages.
Image: Profile Administration Dashboard

This example illustrates the Profile Administration dashboard.

This Position Management dashboard enables administrators to access frequently-used Position Management components from one location.

The dashboard lists the components collected under these tiles:

<table>
<thead>
<tr>
<th>Tile Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content Catalog Tile</td>
<td>Access the Content Catalog navigation collection to set up content</td>

## Viewing and Managing Profiles as an Administrator Using Fluid

The View Profiles navigation collection allows you to easily access various profile-related pages used to create and maintain profiles, review and approve changes, match profiles, and identify interest lists and training for individuals.

For an overview of creating and maintaining profiles for your workers and jobs, see [Understanding Managing Profiles](#).

This topic lists the pages that workforce administrators can access from a single location in the PeopleSoft Fluid User Interface to view and manage profile-related data.

For general information about fluid pages in PeopleSoft HCM, see "Understanding PeopleSoft Fluid User Interface Home Pages" (PeopleSoft HCM 9.2: Application Fundamentals).

### Pages Used to View and Manage Profiles as an Administrator Using Fluid

<table>
<thead>
<tr>
<th>Page Name</th>

NVQ GBR Tile

Administrators use the NVQ GBR tile to access the navigation collection to manage NVQ information for employees in Great Britain.
Navigation

The NVQ GBR is delivered as part of the Profile Administration Dashboard, but the location can change if you change the delivered home pages or if administrators personalize their home pages.

Image: NVQ GBR tile

This example illustrates the NVQ GBR tile.

Click the NVQ GBR tile to access the Manage NVQ GBR application start page.

Image: Manage NVQ GBR application start page

This example illustrates the Manage NVQ GBR application start page.

This application start page is a navigation collection that enables administrators to access frequently used NVQ-related components from one location.

The application start page lists the components collected under these categories:

- Manage NVQ
• Reports

Rows that display a downward facing arrow are category headers. Select a category row to expand and view the component collection associated with that category.

When using a large form factor device, the right panel displays the component selected in the left panel.
Chapter 5

Managing Profiles

Understanding Managing Profiles

These topics discuss the profile management options available to profile administrators that enable them to:

• Create and maintain person and non-person profiles.

Person profiles are those profiles that are linked to a person ID, while non-person profiles describe business entities such as job codes, positions, and salary grades. These changes can be performed by accessing the profile pages directly or by using the Smart HR Transactions component to add or update a person’s profile.

• Review and approve changes to profiles.

Depending on the configuration of your profile types, approvals workflow is triggered when employees update their personal profiles and managers make changes to non-person profiles. Typically, managers approve changes to their employees' person profiles and administrators approve non-person profile changes.

• Complete searches for profiles that match certain criteria.

Administrators, managers, and employees use Search and Compare Profiles to run any of the search types that have been configured for them.

• Compare profiles.

Administrators can compare the content of a source profile with one or more target profiles. The Compare Profiles (in Classic) or Profile Compare (in Fluid) provides a summary of the common content sections in a simple readable format along with a score (Classic) or match percentage (in Fluid) for each content or criteria item indicating the degree of fit.

• Manage interest lists.

An interest list is a collection of non-person profiles that is associated with an employee. Any profile can be added to an interest list, but it is typically used to identify jobs that an employee is interested in applying for, or jobs that match an employee's profile. Employees maintain their own interest list using a self-service transaction. However, an employee's manager and administrators can also add profiles to an interest list or remove profiles from them.

• Track training.

Manage Profiles provides profile administrators access to employees' training history for training that is managed by the Administer Training business process. In addition, Manage Profiles enables you to track external training that is not managed using Administer Training.
For information about the employee and manager self-service transactions, see PeopleSoft eDevelopment.

---

**Prerequisites**

Before administrators can create profiles, approve changes to profiles, or run searches for profiles you must:

- Define the content catalog.
- Define your profile types.
- (Optional) Set up Smart HR templates using profiles.
- (Optional). Define and configure approvals for profiles.

The use of approval processing for profiles is optional. You associate approvals workflow to profile types.

- Configure search queries and run the Direct Reports Tables Build and Schedule Search Index processes required by the Search and Compare Profiles feature.

</table>
Understanding Profiles and Profile Types

Administrators use the Person Profile page and the Non-person Profile page to create and maintain profiles. Both pages have a similar format. This diagram and the following text identify the elements in these pages:

Here is a description of the parts of a profile:

- **Header.**
  
The header includes general information such as the profile ID, profile type, profile status, and effective date. For a person profile, the header includes the person ID.

- **Approvals Information.**
  
  This section includes links that indicate how many profile items are saved (but not submitted for approval), pending approval, approved, or were denied approval.

  **Note:** The content section on the profile pages displays approved items only. Any new profile items, changes to existing items, or deletions that have not been approved do not appear in the content sections. Use the links in this area of the profile to view the changes that are unapproved.

- **Tabs.**
Profiles are grouped together by tabs. When you select a tab, the system displays the content sections defined for that tab. The naming and order of the tabs in a profile are determined by the profile type.

• Content sections.

Tabs consist of one or more content sections. Profile types define the content sections and are secured by profile and PeopleTools role security for each content section. Users with the proper role security access can view or add profile items to the content sections. For pages discussed in these topics, the system uses the Administrator profile role.

• Profile identities (non-person profiles only).

On the Non-person Profile page, the Profile Identities grid lists the entities to which the profile is linked. The type of profile identities available are controlled by the profile type selected. For example, if the profile type allows job codes to be linked to the profile, users can insert a row for a job code for the profile, but they cannot link the profile to a position number. An active profile must be linked to at least one profile identity.

• Profile Associations (non-person profiles only).

On the Non-person Profile page, the Profile Associations grid lists any entities to which the profile is associated. Profile associations are entities, such as ePerformance templates, that are outside of the Manage Profiles business process. The profile type defines the profile associations available.

**Image: The profile type serves as a template for the tabs and content sections in a profile**

This diagram shows how the tabs and content sections of a profile are determined by the tabs and content sections of the profile type; in this example, the three tabs in the profile type automatically exist in the related profile, as do the content sections within the tabs:

The profile type provides the structure for a profile, it does not provide the actual content. To complete the profile, users add profile items, such as competencies or education information, by selecting from the content items available in the content catalog.
Note: The structure of the content items and their data (other than the content item ID) do not have any impact on the profile item structure.

**Image: Adding items to profiles by selecting from the content catalog**

This diagram illustrates how you complete the Degrees content section by selecting from degrees such as Bachelor of Science, Bachelor of Arts, and Master of Business Administration, all of which are defined in the content catalog:

Note: The profile type controls whether approvals workflow is triggered when the profile is updated, and the Profile Management roles that can view and update each section of the profile.

See Setting Up Profile Types.

**Understanding Profile Copy, Import, and Syndication**

Often the same profile items appear in related profiles. For example, employees' profiles may contain profile items that also appear in the profiles for their job code or position. Non-person profiles for similar or related jobs may have common profile items. To streamline the process of creating and maintaining profiles, Manage Profiles provides three ways to copy profile items. You can:

- Load profile items into a person profile from a related non-person profile.

  The Profile Actions field on the classic Person Profile page has an option, *Copy from Job Profile*, that enables you to select a non-person profile from a list of related profiles. The system determines which non-person profiles are related to an employee by searching the employee's job data record. If the employee has multiple jobs, the system checks all the person's active jobs for matching non-person profiles. For example, the system checks for active profiles that match the employee's job codes, positions, and salary grades.

- Import content into a non-person profile from another profile or from the content catalog.
When you import content, the system copies the profile items from the source profile into the target profile. Any changes made to the source profile or content items after the import do not affect the target profile. Use the Import Content link on the Non-person Profile page to import content.

- Syndicate content into a non-person profile from another profile.

When you syndicate content, the system copies profile items from the source profile into the target profile. However, it also sets up a relationship between the source profile and the target profile that contains the syndicated content. Whenever syndicated content is updated, the changes are incorporated into the target profiles automatically. Use the Syndicate Profile profile action on the Non-person Profile page to syndicate content.

**Note:** The copy from job profile, import, and syndicate actions copy profile content that is not defined as free form content. Import and syndicate copy the properties that are defined in the target profile type definition only. Additional properties in the non-person (source) profile type are not copied. If the target profile has additional properties that are not used in the source profile, the system uses the default values defined for these properties. The default values can be defined for that property in the content section of the profile type.

### Setting Up Syndication

Syndication reduces maintenance by enabling administrators to set up common content once in a source profile and copy it to multiple target profiles. You can also syndicate content through a series of related profiles.

**Image: Syndication propagates a job function profile through the job family, job code, and position number profiles**

This diagram shows how you could set up a job function profile and syndicate the content through the hierarchy to job family, job code, and position number profiles:

![Diagram of job function profile syndication](image)

If you set up cascading syndication, we recommend that you use it in a similar hierarchical method.

When setting up syndication, you should consider what happens when the target profile already includes an item that is in the syndicate source profile. For example, if you syndicate content from more than one source profile into a target profile, it is possible for the same item to occur in the source profiles but with
different values. These are known as syndication exceptions. In this situation, the system updates the
target profile with the values from the source profile, effectively overriding the existing values.

View syndication exceptions using the Syndication Exceptions page.

Prerequisites

Before you can syndicate content:

• Configure the application server for publish/subscribe.

• Configure the integration broker and make it active.

  Ensure that the:

  • The EOEN_MSG_CHNL queue is running.
  
  • The service operation EOEN_MSG is active.
  
  • The associated routing definitions are active.

• Set up the Event Manager.

  Make the event JPMProfileItemsUpdated and the associated event handlers active. We also
  recommend that you enable logging for the event and handler.

  See PeopleTools: Integration Broker and PeopleTools: System and Server Administration.

Events and Notifications Framework

Common Elements Used in Managing Profiles

Status

Select one of these values:

Active: If the profile type does not require approval, update the status to Active to make the profile available to other users.

Inactive: Profiles that are inactive are not available to employees and managers in self-service. When you update the status to Inactive, the system removes the profile from the profile groups to which it belongs.

When you create a non-person profile, the default status is Inactive. You can only update the status to Active when the profile is linked to one or more profile identities and approved. Employees can view active non-person profiles only. Managers can view both active and inactive non-person profiles.

Profile Type

Select the profile type for the new profile. When you update an existing profile, the Profile Type field is display-only. The profile type determines the tabs that appear in the profile.
Profile Actions

(Classic) This field appears on the Non-person Profile and Person Profile classic pages. Select an action and click the Go icon if you want to do one of the following, if the action has been enabled on the Profile Actions Page:

- **Compare employee profile to current job:** To compare an employee’s profile items to his or her job profile items. This profile action is available from the Person Profile page only. If more than one job profile applies to the employee, select from a list of all applicable job profiles to compare.

- **Copy From Job Profile:** To copy items from a non-person profile to the employee's profile. This profile action is available from the Person Profile page only. The system displays the Copy Items from Job Profile page, which lists the profiles related to the employee's active jobs.

- **Express Interest for Employee:** To add the profile to a person's interest list. This profile action is available from the Non-person Profile page only. The system displays the Person Search - Simple page, which you use to search for the employee whose interest list you want to update.

- **Import Profile Items:** To import content from another profile or the content catalog. This profile action is available from the Non-person Profile page only. The system displays the Import Profile Items page, which you use to search for and add the types of item you wish to import into a profile.

- **Search and Compare Profiles:** To run a search. This profile action is available from the Non-person Profile page and the Person Profile page. The system displays the Search for Profiles page.

- **Syndicate Profile:** To syndicate content from another profile or the content catalog. This profile action is available from the Non-person Profile page only. The system displays the Profile Syndication page, where you can add or view the source profiles that provide syndicated content for the profile and view the target profiles that contain content syndicated from the profile.

- **Update Profile Groups:** To categorize your profiles by profile groups. This profile action is available from the Non-person Profile page and the Person Profile page when the profile is active and the page is not display only. The system displays the Update Profile Groups page, which you use to list the profile group types and profile groups to which you want to add the profile. This action is not available if the profile status is inactive.

See Setting Up Profile Types.
See Update Profile Groups Page.

• View Related Job Profiles: To display a list of non-person profiles that are related to the employee's job data. This profile action is available from the Person Profile page only. The system determines which non-person profiles are related to an employee by searching the employee's job data record. If the employee has multiple jobs, the system checks all the person's active jobs for matching non-person profiles.

See Profile Actions Page.

Person Profile Page

Use the Person Profile page (JPM_PROFILE_PERS) to create and update person profiles.

Navigation

• Workforce Development > Profile Management > Profiles > Person Profiles > Person Profile

• From the Workforce Administrator home page in fluid, select Profile Administration tile >View Profiles tile >Person Profiles tab

• Workforce Administration > Global Assignments > Assignee Qualifications > Person Profiles > Person Profile

• Organizational Development > Succession Planning > Manage Person Profiles > Incumbent Profiles

This menu navigation returns profiles only for people who already have a succession plan defined.
Image: Person Profile page

This example illustrates the fields and controls on the Person Profile page in classic. You can find definitions for the fields and controls later on this page.

Profile Status

Select the status of the profile. Options are Active or Inactive.

When a worker's job is terminated, the Event Manager event InactivatePersonProfile event is raised to determine if all the worker's job assignments are inactive. If all job assignments are inactive, then all person profiles for that employee ID are also changed to Inactive.

See Events and Notifications Framework, “Setting Up Events”.

Click the Print link to display the profile in a PDF file that you can print from Adobe Acrobat. BI Publisher technology generates the printable file using the same template and layout as the Person Profile batch report.

See Setting Up to Use BI Publisher Reports and Profiles.

Click the Comments link to display the Profile Comments page and enter additional comments about the profile.

Select an action you want to perform and click the Go icon.

Values on the Person Profile page include those profile
actions that are enabled on the Profile Actions Page for the administrator. Each of these actions opens a corresponding page where you can view or update information related to the action.

**Note:** When during setup there are no action types enabled for a profile user role, the Profile Actions field is hidden on the page.

See Common Elements Used in Managing Profiles.

See Update Profile Groups Page.

### Approvals

**Note:** The Person Profile page displays approved items only. Any new profile items, changes to existing items, or deletions that have not been approved do not appear on the profile content sections. Instead links appear on the page that indicate how many items have been saved but not submitted, are pending approval, or denied approval. Use these links to view the changes.

- ✰ **<number> item(s) awaiting submission for approval**
  
  Click this link to access the Items Awaiting Submission page and view the profile items that have been saved but not submitted for approval. This includes profile items that have been added, amended, or deleted.

  When a profile item has been saved but not submitted, the Submit button appears after the <number> item(s) awaiting submission for approval link. When you click the Submit button, the system displays the Summary of Changes page (Person Profile - Summary of Changes Page or Non-person Profile - Summary of Changes Page), where newly added items can be submitted for approval. The system will also display the Summary of Changes page upon saving the profile page when there are items awaiting submission. If approval is not required, the system automatically changes the status of the items approved.

- **Submit**

  Click this button if there are any items awaiting to be submitted for approval. The Person Profile - Summary of Changes page appears and lists the new, deleted, and changed items requiring approval. This button appears only when there are items awaiting submission for approval.

- ☑️ **<number> item(s) pending approval**

  Click this link to access the Pending Items page and view the profile items that have been submitted for approval but are pending approval.

- **<number> item(s) approved (since <date>)**

  Displays the number of items that have been approved.

  The date displayed is determined by the value in the Days of Approval History field on the Profile Management Installation Page.
<number> items denied (since <date>)

Click this link to access the Denied Items page and view the profile items that have been submitted for approval but the approver denied.

The date displayed is determined by the value in the Days of Approval History field on the Profile Management Installation page.

Tabs and Content Sections

The system enables the profile administrator to group profile content sections into separate tabs when configuring a profile type (see the Profile Types - Content Page). When you select a tab within this administrator component, the page displays content sections to which you have been granted role security access under the Administrator profile role (see the Role Security configuration on the Content Section Page).

The tabs, content sections, and many of the columns will vary based on the configuration of the profile type you have selected and the configuration of the content type.

<content item> links

Click a content item link to access the Update <content type> or View <content type> page.

You will be able to update the content on this page if the profile type configuration for this content section has the Allow Update selected for the Administrator profile and you have been assigned to the corresponding PeopleTools role. If it is not selected, you will only be able to view the details of the content item.

See Add New <content type>, Update <content type>, or View <content type> Page.

View History

This column and icon appears when a profile item has more than one effective-dated row.

Click the View History icon to access the View Profile Item History Page.

Attachments

This column will display on this page if the profile type configuration for this content section has attachments enabled for the Administrator profile role and you have been assigned to the corresponding PeopleTools role for the profile type setup.

Click this icon to access the Profile Item Attachments Page and add, view, or delete attachments.

For information on how to enable attachments for profile types, see the Content Section Page.

+ Add New <content type>

This option will display on this page if the profile type configuration for this content section has the Allow Update selected for the Administrator profile and you have been assigned to the corresponding PeopleTools role.
Click this link to access the Add <content type> page and add a content item.

See Add New <content type>, Update <content type>, or View <content type> Page.

Saving and Submitting Person Profile Data

Save

Click this button to save the changes you have made. The system updates the Person Profile page to display approved items or items not requiring approval within the profile content sections. Pending items and items awaiting to be submitted do not appear in the profile content sections. If you are creating a new profile that requires approval of all its items, no profile items will appear in the content sections upon saving. However, the system displays the item(s) awaiting submission for approval or item(s) pending approval links to enable you to view the changes you have saved but not submitted or that are pending approval. Once these items have been approved, then they will appear in the content sections.

Upon saving, the system does the following:

- For items that do not require approval, the system saves them to the page and a message appears saying you have successfully saved those profile changes that do not require approval. These items will appear in the profile tab item list.

- For items that require approval, the system displays the Person Profile - Summary of Changes page, which provides a list of the items requiring approval.

  - Click Submit to route items to an approver. The system will then display the <number> item(s) pending approval link on the Person Profile page, which you can click to view pending items.

  - Click Cancel to save your items without submitting them for approval. The system will then display the <number> item(s) awaiting submission for approval link and the Submit button on the Person Profile page, where you can view the items awaiting submission or submit items for approval at a later time.
**Note:** The Approval Framework is configured for automatic approval of administrators. Even if a content section is defined in the profile type configuration as requiring approval for the administrator, when you save you will see the change displayed on the Summary of Changes page; however, when the administrator clicks Submit, the system display a message that no approvals are required, and changes will be immediately reflected in the profile.

**Related Links**

- Setting Up Profile Types

**Non-person Profile Page**

Use the Non-person Profile page (JPM_PROFILE1) to create and update non-person profiles.

**Navigation**

- Workforce Development > Profile Management > Profiles > Non-person Profiles > Non-person Profile

- From the Workforce Administrator home page in fluid, select Profile Administration tile > View Profiles tile > Non-person Profiles tab
This example illustrates the fields and controls on the Non-person Profile page (1 of 2). You can find definitions for the fields and controls later on this page.
This example illustrates the fields and controls on the Non-person Profile page (2 of 2). You can find definitions for the fields and controls later on this page.

The tabs, content sections, and many of the columns will vary based on the configuration of the profile type you have selected.

Select the Print icon to display the profile in a PDF file that you can print from Adobe Acrobat. BI Publisher technology generates the printable file using the same template and layout as the Non-Person Profile batch report. See Setting Up to Use BI Publisher Reports and Profiles.

Select the Comments link to display the Profile Comments page and enter the employee owner ID as well as additional comments about the profile.

Select an action you want to perform and click Go. Values on the Non-person Profile page include those profile actions that are enabled on the Profile Actions Page for the administrator. Each of these actions opens a corresponding page where you can view or update information related to the action.

**Note:** When during setup there are no action types enabled for a profile user role, the Profile Actions field is hidden on the page. See Common Elements Used in Managing Profiles.

See Profile Actions Page.

See Update Profile Groups Page.
### Approvals

**Note:** The Non-person Profile page displays approved items only. Any new profile items, changes to existing items, or deletions that have not been approved do not appear within the profile content sections. Instead, links appear on the page that indicate how many items are awaiting submission, are pending approval, or have been denied approval. Use these links to view the changes.

Chapter 5 Managing Profiles

Tabs and Content Sections

The system enables the profile administrator to group profile content sections into separate tabs when configuring a profile type (see the Profile Types - Content Page). When you select a tab on this page, the page displays content sections to which you have been granted role security access under the Administrator profile role (see the Role Security configuration on the Content Section Page).

<content item> link

Click a content item link to access the Update <content type> or View <content type> page.

You will be able to update the content on this page if the profile type configuration for this content section has the Allow Update selected for the Administrator profile and you have been assigned to the corresponding PeopleTools role. If it is not selected, you will only be able to view the details of the content item.

See Add New <content type>, Update <content type>, or View <content type> Page.

Source Profile

Click the source profile link to view details about the source profile from which this item was syndicated. The system displays this field only when items have been syndicated into the profile.

View History

This column and icon appears when a profile item has more than one effective-dated row.

Click the View History icon to access the View Profile Item History Page.

+ Add New <content type>

This option will display on this page if the profile type configuration for this content section has the Allow Update selected for the Administrator profile and you have been assigned to the corresponding PeopleTools role.

Click this link to access the Add <content type> page and add a content item.

See Add New <content type>, Update <content type>, or View <content type> Page.

Profile Identities

Expand this section to view a lists of the profile identities information to which the profile is linked.

Edit Identity

Click the Edit Identity icon to open the Profile Identity page and update an existing identity.

+ Add Profile Identity

Click this link to add a profile identity to this profile. The system displays the Profile Identity page.

See Profile Identity Page.
Profile Associations

Expand this group box to view a list of the associations for the profile. Profile associations are entities outside the Manage Profiles business process. PeopleSoft ePerformance templates are linked to profiles in this way.

**Note:** If a non-person profile type does not have an association specified in its configuration then the page will not display the Profile Associations grid.

<table>
<thead>
<tr>
<th>Profile Association Option link</th>
<th>Select the profile association ID link to view association details or update the effective date or status. The options available are determined by the profile type definition.</th>
</tr>

</tbody>
</table>

Saving and Submitting Non-person Profile Data

**Save**

Click this button to save the changes you have made. The system updates the Non-person Profile page to display approved items or items not requiring approval within the profile content sections. Pending items and items awaiting to be submitted do not appear in the profile content sections. If you are creating a new profile that requires approval of all it's items, no profile items will appear in the content sections upon saving until they have been approved.

Upon saving, the system does the following:

- For items that do not require approval, the system saves them to the page and a message appears saying you have successfully saved those profile changes that do not require approval. These items will appear in the profile content section.

- For items that require approval, the system displays the Non-person Profile - Summary of Changes page, which provides a list of the items requiring approval.
  - Click Submit to route to the approver. The system will then display the <number> item(s) pending approval link on the non-person Profile page, which you can click to view pending items.
  - Click Cancel to save your items without submitting them for approval. The system will then display the <number> item(s) awaiting submission for approval link and the Submit button on the Non-person Profile page, where
you can view the items awaiting submission or submit items for approval at a later time.

Note: The Approval Framework is configured for automatic approval of administrators. Even if a content section is defined in the profile type configuration as requiring approval for the administrator, when you save you will see the change displayed on the Summary of Changes page; however, when the administrator clicks Submit, the system display a message that no approvals are required, and changes will be immediately reflected in the profile.

Update Profile Groups Page

Use the Update Profile Groups page (JPM_UPD_GROUP_SEC) to add and update profile groups for a profile.

Navigation

Select the Update Profile Groups value in the Profile Actions field on the Person Profile page or the Non-person Profile page and click Go.

Image: Update Profile Groups page

This example illustrates the fields and controls on the Update Profile Groups page. You can find definitions for the fields and controls later on this page.

This page lists the profile groups to which the profile belongs.

Profile Group Type
Select the profile group type.

Profile Group ID
Select the profile group you want to add to the profile.

Add Profile to Group
Click this link to add another profile group to this profile.

See Creating Profile Group Types and Profile Groups.
Note: Manually entered profiles may be deleted when this group is repopulated. This group is populated using preset group criteria. When the group is rebuilt the manually entered profiles will be deleted if they do not fit the criteria.

Profile Comments Page

Use the Profile Comments page (JPM_PROF_INFO_SEC) to enter additional profile information such as comments or the owner ID for non-person profiles.

Navigation

Select the Comments link on the Person Profile page or the Non-person Profile page.

Image: Example of the Non-person Profile - Profile Comments page

This example illustrates the fields and controls on the Profile Comments page. You can find definitions for the fields and controls later on this page.

Note: The fields on the Profile Comments page for a Person Profile and a Non-person Profile vary only slightly.

End Profile

This field is available on the Non-Person Profile - Profile Comments page.

Displays whether the profile type is used for end profiles or not. End profiles can be viewed from self service and must have a profile identity before they can be set to a status of active.

Legacy Profile ID

This field is available on the Non-Person Profile - Profile Comments page.
Chapter 5 Managing Profiles

Displays the legacy profile ID assigned to the profile during upgrade. This field is displayed for some types of profiles that existed in earlier versions of PeopleSoft HR.

**Owner**

This field is available on the Non-Person Profile - Profile Comments page.

Select the employee ID of the profile owner. Use this field if you want to assign owners to profiles for reporting or other purposes.

**Comments**

Enter additional comments about the profile.

**Add New <content type>, Update <content type>, or View <content type> Page**

Use the Add New, Update, or View <content type> pages (JPM_PROF_DTL_SEC) to add, update, and view profile item details.

**Navigation**

Click a content item link or the Add New <content type> link for a profile content item ID on the Person Profile page or the Non-person Profile page.

**Note:** Add, update and view options will vary based on your Role Security access (see the Role Security subtopic under the Content Section Page topic).
Image: Add New <content type> page for a person profile

This example illustrates the fields and controls on the Add New <content type> page for a person profile. You can find definitions for the fields and controls later on this page.
Image: Add New <content type> page for a non-person profile

This example illustrates the fields and controls on the Add New <content type> page for a non-person profile. You can find definitions for the fields and controls later on this page.

Note: The fields and field labels that appear on this page vary according to the item's content type and the content section definition in the profile type. Define content sections using the Profile Types - Content Page.

See Setting Up Profile Types.

In the administrator profile pages, when you look up a content item ID, the system enables you to use these items as part of the search criteria:

- Content item ID
- Content group type
- Content group
- Description

The content item name, such as the 601 Job Profile Competency shown in the previous screen shot example, appears as a link. Select this link to open the Content Item Details page to view more information about this item.

Select this icon button to open the Rating Model page and view rating model details of the selected item. When accessing the
page from the update or add new pages, you can modify the rating as well.

**Related Content**

Click the link associated with this field to access the Update <Related Content Type> Page where you can add, update, and view items that are related to the selected profile item. This link appears only for items with a child relationship in the Content Catalog where the child content section is included in the profile type definition.

**Note:** If you are adding a parent item, the system does not automatically add related items for it unless you click the Related Content link.

**OK**

Click to keep any updates that you make on the profile detail or on the related items pages. If you deleted a parent item row, the system deletes all of its related items.

**Related Links**

- Relationship Rule Page
- Content Items - Relationships Page
- Profile Types - Content Page

**Profile Item Attachments Page**

Use the Profile Item Attachments page (JPM_PROF_ATTACH) to add, view, or delete attachments associated with a specific profile content item.

**Navigation**

Click the Attachments icon from a row on the Person Profile Page.

**Note:** The Attachments column and icon appear when attachments have been enabled for the Administrator role and you have the role security access as define on the Content Section Page, Role Security section. Add, update and view options will vary based on the Role Security access as well.
Image: Profile Item Attachments page

This example illustrates the fields and controls on the Profile Item Attachments page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>File Name</th>
<th>Description</th>
<th>Attached On</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBA_Diploma.png</td>
<td>Diploma for MBA</td>

</tr>
</tbody>
</table>

File Name
Displays the file link to the attachment. Click this link to view the file attachment.

Description
Enter a short description to identify the file. If you do not enter a description when adding the file, this field will be blank.

Delete icon
Click this icon button to remove the attachment from the profile content item.

Add Attachment
Click this button to open the File Attachment page to upload files.

The following video provides an overview and demonstration of the Fluid Attachment framework:

Image Highlights, PeopleSoft HCM Update Image 27: Attachment Capability Added to Profile Management

Update <Related Content Type> Page

Use the Update <Related Content Type> page (JPM_PROF_DETAIL) to add, update, or view profile items that are related to a selected profile item.

Navigation

Click the related content link on the Add New <content type>, Update <content type>, or View <content type> Page.
Image: Update <Related Content Type> page

This example illustrates the fields and controls on the Update <Related Content Type> page. You can find definitions for the fields and controls later on this page.

Use this page to add profile items to a profile that are related to an existing profile item. The related items that you can add to a profile are determined by the content section definitions in the profile type and the relationships defined in the content catalog.

Note: The fields and field labels that appear on this page vary according to the related item's content type and the content section definition in the profile type.

**Populate Related Items**

Clicked to have the system automatically insert all related items defined in the content catalog. It is also possible to manually select individual items from those defined in the content catalog.

**OK**

Click OK to save the updates made on this page. The system does not merge the updates with the profile items until you click the OK button on the parent item page (Update <content type> or Add New <content type>).

**Related Links**

- Relationship Rule Page
- Content Items - Relationships Page
- Content Section Page

**View Profile Item History Page**

Use the View Profile Item History page (JPM_PROF_HIST_SEC) to view profile item rows for different effective-dates.

**Navigation**

Click the icon in the View History column on the Person Profile page or Non-person Profile page.

Note: Click the content type item to update historical information on the Update <content type> page by using the scroll arrows.
### Image: View Profile Item History page

This example illustrates the fields and controls on the View Profile Item History page. You can find definitions for the fields and controls later on this page.

![View Profile Item History](image)

**Note:** The fields that appear on this page are configured in the Profile Type definition and are indicated as Summary.

This page lists the current, future, and historical rows for an item in a person or non-person profile, enabling you to track the history of a profile item. For example, you can use this page to review the changes to an employee's rating for a profile item, or the desired rating of an item in a job profile. Click the profile item link to view details of the profile item for the selected effective date.

Click Return to Profile to return to the Person Profile page or the Non-person Profile page, depending on the profile type.

### Profile Syndication Page

Use the Profile Syndication page (JPM_PROF_SYND_SEC) to view the syndication source and target profiles.

You can also add and remove syndicated content on this page.

**Navigation**

Select the Profile Action *Syndicate Profile* from the Non-person Profile page and click the Go icon.
**Image: Profile Syndication page**

This example illustrates the fields and controls on the Profile Syndication page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Profile ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>100887</td>
<td>Accountant</td>
</tr>
</tbody>
</table>

**Syndication Sources**

Lists the profiles that provide content for the selected profile. If you want to remove syndicated content, select the trash can icon.

**Add New Syndication**

Click this link to open the Syndicate Profiles page to select the profiles from which content will be syndicated.

**Syndication Targets**

Displays the profiles that are targets for syndication. These profiles contain content from the selected profile. If you make changes to the selected profile, the syndicated profiles are automatically updated.

**Syndicate Profiles Page or Import Profile Items Page**

Use the Syndicate Profiles or Import Profile Items pages (JPM_PROF_SRCH_SEC) to select the profiles from which content will be syndicated or imported.

**Navigation**

- Select Add New Syndication on the Non-person Profile - Profile Syndication page.
- Select the Profile Action *Import Profile Items* from the Non-person Profile page and click the Go icon.
This example illustrates the fields and controls on the Syndicate Profiles page. You can find definitions for the fields and controls later on this page.
**Image: Import Profile Items page**

This example illustrates the fields and controls on the Import Profile Items page. You can find definitions for the fields and controls later on this page.

Note: The Syndicate Profiles page works the same as the Import Profile Items page where you select a search type and enter your search criteria. The search types for the Syndicate Profiles page are *By Profile Data* and *By Profile Groups*. The search types for the Import Profile Items page are *By Content Groups*, *By Profile Data*, and *By Profile Groups*.

When you syndicate content, you establish a relationship between the source profile and the target profile, such that changes to the source profile result in the same changes in the target profiles. View syndication relationships on the Profile Syndication page.

When you import profile items, the system does not establish a link between the source profile or content item and the target profile. This means that changes to the content of the source profile or item made after the import action do not affect the target profile.

**Selecting a Search Type**

When you first enter the page, it lists the search types available:
### By Profile Data
Select to search for a non-person profile by profile ID, profile type, description, and status.

This option is available on the Import Profile Items page and the Syndicate Profiles page.

### By Profile Groups
Select to search for a profile by limiting the search to a profile group type or profile group.

This option is available on the Import Profile Items page and the Syndicate Profiles page.

### By Content Groups
Select to search for content items within a content group. This enables you to import multiple items within a content group in one step.

This option is available on the Import Profile Items page.

When you select the search type the Enter Search Criteria group box appears. When you enter search criteria and click Search, the Select Profiles and Results group boxes appear.

#### Enter Search Criteria
Select the search criteria and click the Search button to search for profiles that you want to use for the import or syndication. The fields in this group box vary depending on the search type you select.

#### Select Profiles
The Results group box lists the profiles or items that meet your search criteria. Select the profiles from which you want to import or syndicate content by selecting the check box next to the profile ID, profile group type, or catalog item.

- **Profile ID or Content Item ID**
  Click the profile ID or content item ID to view the profile or item.

- **Add Items**
  Click to import or syndicate content from the profiles or content items you selected. A message will appear indicating how many profile items will be imported. Click OK to merge imported items in content sections of profile. The Cancel button returns to the profile without merging items.

#### Profile Identity Page
Use the Profile Identity page (JPM_JP_PID_SEC) to add or edit profile identities associated with the profile.

#### Navigation
Click the Add Profile Identity link or the Edit Identity icon in the Profile Identities grid area on the Non-person Profile page.
Managing Profiles Chapter 5

Image: Profile Identity page

This example illustrates the fields and controls on the Profile Identity page. You can find definitions for the fields and controls later on this page.

**Profile Identity**

Select the profile identity. The options available are determined by the profile type definition.

See Profile Types - Identities Page.

**Set ID**

Select the Set ID for the profile identity you want to link to this profile. This field appears if the profile identity selected has Set ID as a key field. Set ID is a key field for job codes and salary grades.

**Job Data, Job Family, Position Number, Salary Administration Plan, and Salary Grade**

Select the profile identity you want to link to the profile. The number of fields that appear depends upon whether the profile identity has one or up to four key fields. For example, if you select *Salary Grade* in the Profile Identity field, you can enter a salary administration plan and grade. The system displays the Key 1 Value and Key 2 Value fields for the salary administration plan and salary grade on the Non-person Profile page.

Profile Association Page

Use the Profile Association pages (JPM_JP_ASSC_SEC) to add or update profile associations for the profile.
Navigation

Click the Add Profile Association link or the Profile Association Option name link in the Profile Associations grid area on the Non-person Profile page.

Image: Profile Association page

This example illustrates the fields and controls on the Profile Association page. You can find definitions for the fields and controls later on this page.

Profile associations are entities outside the Manage Profiles business process. PeopleSoft ePerformance templates are linked to profiles in this way.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profile Association</td>
<td>Select the profile association that you want to link to the profile.</td>
</tr>
<tr>
<td>Document Type</td>
<td>Enter the document type and template ID that you want to link to the profile. The system displays these fields as the Key &lt;number&gt; Value fields on the Non-person Profile page. You can have up to four key fields. For example, if you select ePerformance in the field, the Key 1 Value field is for the Document Type and the Key 2 Value field is for document template ID.</td>
</tr>
<tr>
<td>Document Template ID</td>
<td></td>
</tr>
</tbody>
</table>

Person Profile - Summary of Changes Page

Use the Person Profile - Summary of Changes page (JPM_JP_PERSUMM_SEC) to view a list of changes that have been made to the person profile that require approval.
You can also enter comments for the approver. Click the Submit button to submit the changes for approval or click Cancel to return to the Person Profile page and not submit the items for approval. These items will not be available to other processes until they have been submitted for approval and approved.

**Navigation**

Click the Save button or the Submit button on the Person Profile page when there are items that need to be submitted for approval.

**Image: Person Profile - Summary of Changes page**

This example illustrates the fields and controls on the Person Profile - Summary of Changes page. You can find definitions for the fields and controls later on this page.

This page lists the changes that have been made to the person profile that require approval. The title of the scroll areas indicate that content sections that require approval. The fields displayed on this page are determined by the definition of the content section in the profile type. The properties in the content section with the Approval Required check box selected are displayed on this page only.

See Content Section Page.

- **Profile Type**
  - Displays the profile type for the profile.

- **Disposition**
  - Displays the type of change made:
    - *Add*: If it is a new profile item
    - *Change*: If you have made any changes to the item properties.
    - *Delete*: If you have deleted a profile item.

- **Comments**
  - Enter comments for the approver, if applicable.

- **Submit**
  - Click this button to submit the changes for approval. The system then displays the Submit Confirmation page.
The Submit Confirmation page displays the approval routing. When the system needs to route items to an approver, the item's status is changed to pending. If the items do not require approval, the approval routing specifies that no approvals are required.

**Note:** The Approval Framework is configured for automatic approval of administrators. Even if a content section is defined in the profile type configuration as requiring approval for the administrator, when you save you will see the change displayed on the Summary of Changes page; however, when the administrator clicks Submit, the system display a message that no approvals are required, and changes will be immediately reflected in the profile.

**Cancel**

Click this button to return to the Person Profile page without submitting the items for approval.

**Non-person Profile - Summary of Changes Page**

Use the Non-person Profile - Summary of Changes page (JPM_JP_NPSUMM_SEC) to view a list of changes that have been made to the non-person profile that require approval.

You can also enter comments for the approver. Click the Submit button to submit the changes for approval or click Cancel to return to the Non-person Profile page and not submit the items for approval.

**Navigation**

Click the Save button or the Submit button on the Non-person Profile page when there are items that need to be submitted for approval.
Image: Non-person Profile - Summary of Changes page

This example illustrates the fields and controls on the Non-person Profile - Summary of Changes page. You can find definitions for the fields and controls later on this page.

This page lists the changes to the non-person profile shown in the Profile ID field. The fields on this page are similar to the Person Profile - Summary of Changes Page.

Syndication Exceptions Page

Use the Syndication Exceptions page (JPM_JP_SYJPM_JP_SYND_EXC1ND_EXC1) to display the syndication exceptions for a profile.

Syndication exceptions occur when an content item is syndicated from multiple source profiles but has different property values from each source profile.

Navigation

- Workforce Development > Profile Management > Profiles > Syndication Exceptions > Syndication Exceptions
- From the Workforce Administrator home page in fluid, select Profile Administration tile > View Profiles tile > Syndication Exceptions tab
**Image: Syndication Exceptions page**

This example illustrates the fields and controls on the Syndication Exceptions page. You can find definitions for the fields and controls later on this page.

### Syndication Exceptions

Target Profile 100695  Managing Director
Profile Type ROLE

This profile has multiple syndication sources with the same content items. The content items in question are listed below. To see the details of the differences select view details.

#### Select Content Type

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Descr</th>
<th>Content Item ID</th>
<th>View Details</th>

</tr>
</tbody>
</table>

This page lists the content types that include syndication exceptions. Click the View Details link to access the Exception Details page that lists the profile items with syndication exceptions.

### Exception Details Page

Use the Exception Details page (JPM_JP_SYND_EX_SEC) to display details of profile items with exceptions.

### Navigation

Click the View Details link on the Syndication Exceptions page.
Image: Exception Details page

This example illustrates the fields and controls on the Exception Details page. You can find definitions for the fields and controls later on this page.

Current Profile Item from Syndicated Source

This tab displays the details of the source profile and profile items that have been syndicated into the target profile.

Ignored Profile Items from Syndicated Source

This tab displays the details of the source profile that conflicts with the syndicated profile items specified in the Source Profile Items tab.

Properties

Access the Properties tab.
Image: Exception Details: Properties tabs

This example illustrates the fields and controls on the Exception Details: Properties tabs. You can find definitions for the fields and controls later on this page.

The Properties tabs display the field values in the syndicate source profiles. In the example shown, the Target Proficiency field has different values in the two source profiles. The values shown for the Source Profile Items are those inserted into the target profile.

Approving Profile Changes

These topics provide an overview of profile approval processing and discuss how to view profile changes.

</tr>
</tbody>
</table>

Understanding Profile Approval Processing

You can use approval processing to control:

- Updates to profile items on person profiles.
If approval processing is configured for a content section, when profiles items are added, deleted, or updated, it triggers approval processing.

- Updates to profile items and profile identities associated with non-person profiles.

If approval is required for profile identities, any changes to the list of profile identities associated with the profile triggers approval processing.

Configure profile approvals at the profile type level. You associate an approval definition with the profile type and then specify which content sections in the profile type require approval. For non-person profiles, you can also specify whether profile identities require approval.

Profile approvals uses the Approval Framework for managing approval of person and non-person profiles. The delivered approvals definitions provide the following profile approval processing:

- When employees make changes to their person profiles, the changes are routed to their manager for approval.

  When managers or administrators update person profiles, these changes do not require approval.

- When managers create or update non-person profiles, the changes are routed to the profile administrator for approval.

  When administrators update non-person profiles, the changes do not require approval.

You can use the delivered definitions or set up new approval definitions for managing profiles, according to your business needs.

**Note:** Profile Management does not support delegation and push back of approval transactions. All profile changes submitted together as a group for approval cannot be approved or denied at the line item level. The entire group must either be approved or denied.

</table>
Approve Profiles Page

Use the Approve Profiles page (JPM_JP_PERS_APPR) to view a list of the changes to a selected person profile.

If the profile changes are pending approval, you can either approve or reject the changes.

Navigation

Click a person profile ID on the Select Approval Transaction page.

Image: Approve Profiles page

This example illustrates the fields and controls on the Approve Profiles page. You can find definitions for the fields and controls later on this page.

Note: Profile Management does not support delegation and push back of approval transactions. All profile changes submitted together as a group for approval cannot be approved or denied at the line item level. The entire group must either be approved or denied.

Disposition

Displays one of these values to indicate the type of change:

Add: Indicates a new profile item.

Change: Indicates that the originator changed one or more properties for the profile item.

Delete: The originator has deleted the profile item.

<content item>

Click a content item link to view details of the changes to the profile item. The item properties are determined by the profile type definition.
**Chapter 5 Managing Profiles**

**Comments**
Enter any comments for the originator relating to this approval transaction. The comments field is available only if the profile changes require approval. For profile items that have been denied or approved, an expandable Comments section appears in the Approval Routing group box where you can view comments that may have been entered by the originator.

**Approve**
Click this button to approve the profile changes. This button appears only for profile changes with a *Pending* workflow status.

**Deny**
Click this button to reject the profile changes. This button appears only for profile changes with a *Pending* workflow status.

<table>
<thead>
<tr>
<th>(View Profile as Printable Page icon)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click the View Profile as Printable Page icon to display the profile in a PDF file that you can print from Adobe Acrobat. BI Publisher technology generates the printable file using the same template and layout as the Non-Person Profile batch report. The printable file displays approved items only.</td>
</tr>
<tr>
<td>See Setting Up to Use BI Publisher Reports and Profiles.</td>
</tr>
</tbody>
</table>

**Approval Routing**
This group box displays the routing information from the Approval Framework.

**View/Hide Comments**
Click to view or hide the comments entered by the originator when he or she submitted the profile changes for approval.

---

**Managing Interest Lists**

These topics provide an overview of interest lists, list common elements, and discuss how to manage interest lists.

**Pages Used to Manage Interest Lists**

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interest List by Person Page</td>
<td>JPM_INTEREST_PERS</td>
<td>View an employee's interest list and add profiles to the list.</td>
</tr>
<tr>
<td>Interest List by Profile Page</td>
<td>JPM_INTEREST_PROF</td>
<td>View a list of employees who have a selected profile on their interest list. You can also add the selected profile to an employee's interest list.</td>
</tr>
</tbody>
</table>
Understanding Interest Lists

Interest lists enable employees to maintain a list of the non-person profiles that are of interest. They can also compare the added profile to their own profile to determine degree of a fit. The interest list can include any profile. For example, employees could add profiles for jobs that they want to include in their career planning, or job profiles that are similar to their own profile. Each employee has one interest list that can be modified by the employee, the employee's manager, and the profile administrator:

- Employees maintain their own interest list using the self-service options provided in eDevelopment.
  The interest list shows who added each profile to the interest list, and employees can remove any profiles that they added. Employees cannot remove profiles added by their manager or the profile administrator.

- Managers can view and modify interest lists for their direct reports using the manager self-service options in eDevelopment.
  Managers can remove profiles that they added to an interest list only. They cannot remove profiles that are added by the employee or the profile administrator.

- Administrators have access to interest lists based on the row-level security permissions associated with their role.
  Administrator can remove any profile from an interest list, including those added by the employee and manager.

</table>
Understanding How to Track Employee Training

The Administer Training business process enables you to set up training courses and manage course sessions. If you use Administer Training to manage your training courses, the Training page (COURSE_STUDNT_ENRL) gives you a summary of employees' training history.

Use the Professional Training page (EDUCAT_TRAIN_GBL) to track other training that is not managed using Administer Training. You can use this page to track training that an employee is enrolled in, or has completed.

This topic discusses how to record employee training.

**Course Start Date and Course End Date**
Enter the date on which the course was started and completed.
Chapter 6

Working with Search and Compare Profiles

Understanding Setting Up Search and Compare Profiles

The Search and Compare Profiles feature uses the PeopleTools Search Framework to search and compare profiles. Search and Compare Profiles enables employees, managers, and administrators to search for profiles that match selected search criteria and compare those profiles. Here are examples of the types of searches that are possible:

• Employees can search for jobs that match their own personal profile.

• Managers can select an employee who reports to them and search for other direct or indirect reports with similar skills.

• Managers can search for direct or indirect reports who match the profile for a job opening that they want to fill.

• Administrators can select a job profile and search for similar job profiles.

Note: Before users can run any searches, administrators must build the indexes and define the search queries available on the Search Configuration page. For a limited set of profile type properties, the indexes store only code-based data. These indexes support search word matching only on the property data.

(Fluid) For fluid Search and Compare, additional filters are provided for the Person Profile index on Regulatory Region, Business Unit, Department, Location, Job Title, Regular/Temporary, and Full/Part-time, where a full or partial description can be entered.

Note: To use Fluid Search and Compare you need to be on PeopleTools 8.57 or higher.

Defining Search Configurations

Define search types for your organization on the Define Search Configuration Page and (Fluid) Fluid Compare Configuration - Page Display Page. The high level keys for a search configuration are the object owner identifier, the sub application id, and the search ID. The object owner identifier enables other products to easily interface with the PeopleSoft Manage Profiles search engine. For Manage Profiles searches, select the HCM Profile Management (JPM) in the Object owner identifier field. The Sub Application Id field indicates other products using the Search and Compare processes, such as Succession Planning.

For each search configuration, you define:

• Search Properties (source and target profile types)

The source and the target profile types are the two profile types that are being compared in the search. The source is the profile type that forms the basis for the search criteria and the target is the profile type being searched for matching profiles. These profile types (source and target profile types) must
share a common set of content types (for Classic) or criteria (for Fluid), otherwise no search criteria items can be entered. For example, if an employee searches for jobs that match his or her personal profile, the source is the employee's person profile type and the target is the job profile type. All content types or criteria shared by both the person profile type and the job profile type are exposed as search criteria content sections.

- Criteria Rule

The Criteria Rule field defines two aspects of the search: whether the system populates the search criteria based on the profile that the user selects for the search and whether users can view and adjust the search criteria.

There are three types of criteria rules:

- *Default, No Display:* The system populates the search criteria from the source profile and runs the search without displaying the search criteria page. If you select any other criteria rule, the system displays the search criteria page and users can adjust the criteria before running the search.

- *Default and Display:* The system populates the search criteria using the source profile and displays the search criteria so users can view and adjust the data before running the search.

- *No Default, Display (Adhoc):* The search does not have default search criteria and users define the search criteria manually. For this type of search, the source and target profile types are not mandatory in the configuration. However, if these fields are blank, users must select source and target profile types before they define the search criteria.

- Display Max

You can indicate the maximum number of profiles per page returned by the search query.

- Roles (who can run the search)

You can set up searches for one or more of the roles: *Employee, Manager,* and *Administrator.* Users can only run the searches that are defined for their role. In addition, the search results list only those profiles to which the user has the appropriate security. For example, if a manager searches for employees that match a job profile, the search results include those employees that are direct or indirect reports of the manager.

- Fluid Display Options

Specify the default sorting order of the search results. You can also identify a profile compare configuration ID that defines additional data to display for a person or non-person profile on the compare page.

**Viewing Search Results**

The profile type definitions are the basis for Search and Compare Profiles so it's important to understand how they affect the search results. When users select a search, to build the search criteria, the system:

1. Identifies the content sections to include in the search criteria.

   The system compares the source and target profile types to identify which content sections appear in both source and target. Only the content sections that are common to the source and target profile types are included in the search criteria.
2. Identifies the properties to include in the search criteria for each of the content sections identified in the previous step.

The properties included are those defined as searchable in the target profile type.

See Setting Up Profile Types.

**Example: Search Criteria**

To illustrate how Search and Compare Profiles works, consider the example of an administrator searching for employees who match a given job profile. In this example:

- Source profile type is \textit{JOB}.
- Target profile type is \textit{PERSON}.

Suppose that the \textit{JOB} profile type has the following content sections and properties that are defined as searchable:

<table>
<thead>
<tr>
<th>Content Section</th>
<th>Searchable Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Competencies</td>
<td>JPM_CAT_ITEM_ID (Competency)</td>
</tr>
<tr>
<td></td>
<td>JPM_RATING1 (Target Proficiency)</td>
</tr>
<tr>
<td>Degrees</td>
<td>JPM_CAT_ITEM_ID (Degree)</td>
</tr>
<tr>
<td></td>
<td>COUNTRY (Country)</td>
</tr>
<tr>
<td>Test/Examinations</td>
<td>JPM_CAT_ITEM_ID (Test)</td>
</tr>
<tr>
<td>Responsibilities</td>
<td>JPM_CAT_ITEM_ID (Responsibility)</td>
</tr>
<tr>
<td></td>
<td>JPM_YN_2 (Critical)</td>
</tr>
</tbody>
</table>

Suppose that the \textit{PERSON} profile type has the following content sections and properties that are defined as searchable:

<table>
<thead>
<tr>
<th>Content Section</th>
<th>Searchable Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Competencies</td>
<td>JPM_CAT_ITEM_ID (Competency ID)</td>
</tr>
<tr>
<td></td>
<td>JPM_RATING1 (Proficiency)</td>
</tr>
<tr>
<td></td>
<td>JPM_INTEREST_LEVEL (Interest Level)</td>
</tr>
<tr>
<td>Degrees</td>
<td>JPM_CAT_ITEM_ID (Degree)</td>
</tr>
<tr>
<td></td>
<td>COUNTRY (Country)</td>
</tr>
<tr>
<td></td>
<td>MAJOR_CODE (Major Code)</td>
</tr>
<tr>
<td>Content Section</td>
<td>Searchable Properties</td>
</tr>
<tr>
<td>-----------------------</td>
<td>------------------------------------------------------------</td>
</tr>
<tr>
<td>School Education</td>
<td>JPM_CAT_ITEM_ID (Education Level)</td>
</tr>
<tr>
<td></td>
<td>SCHOOL CODE (School Code)</td>
</tr>
<tr>
<td></td>
<td>COUNTRY (Country)</td>
</tr>
<tr>
<td></td>
<td>AVERAGE_GRADE (Average Grade)</td>
</tr>
<tr>
<td>Test/Examinations</td>
<td>JPM_CAT_ITEM (Test)</td>
</tr>
</tbody>
</table>

In this example, the search criteria are:

<table>
<thead>
<tr>
<th>Content Section</th>
<th>Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Competencies</td>
<td>JPM_CAT_ITEM_ID (Competency)</td>
</tr>
<tr>
<td></td>
<td>JPM_RATING1 (Target Proficiency)</td>
</tr>
<tr>
<td></td>
<td>JPM_INTEREST_LEVEL (Interest Level)</td>
</tr>
<tr>
<td>Degrees</td>
<td>JPM_CAT_ITEM_ID (Degree)</td>
</tr>
<tr>
<td></td>
<td>COUNTRY (Country)</td>
</tr>
<tr>
<td></td>
<td>MAJOR_CODE (Major Code)</td>
</tr>
<tr>
<td>Test/Examinations</td>
<td>JPM_CAT_ITEM_ID (Test)</td>
</tr>
</tbody>
</table>

Notice that:

- Responsibilities and School Education are missing because these content sections do not appear in both the source and the target profile types.
- The properties included in the search criteria are those defined as searchable in the target profile type.
- The labels displayed on the Search Criteria page are those defined in the source profile type for those properties that are defined in both the source and the target profile type.

In the example, the label for the property JPM_RATING1 is Target Proficiency in the source profile type and Proficiency in the target profile type. When users run the search, the JPM_RATING1 field is labelled Target Proficiency on the Search Criteria page.

**(Classic) Importance and Mandatory Properties**

The classic pages allow you to use the Importance and Mandatory properties when retrieving results. These properties are not used in the Fluid pages.

The Importance (JPM_IMPORTANCE) and Mandatory (JPM_MANDATORY) properties appear on the Search Criteria page for each of the content sections included in the search criteria. The system automatically adds these fields to enable users to adjust the search as follows:
• The Mandatory check box enables users to specify profile items that must appear in the matching profiles.

If the Mandatory check box is selected for any profile item, the search results include only those profiles containing that profile item and having the same property values as those in the search criteria. For example, if the search criteria includes an item 0100 - Abstract Thinking and a proficiency of Good for the item, if you specify that the item is mandatory, the search results include only profiles that contain both the 0100 - Abstract Thinking item AND a proficiency equal to Good. Any profiles that have the item but with a lower or higher proficiency value are not included in the search results.

If the Mandatory property is included in a content section definition, the system uses the setting of the property in the profile as the default value in the search criteria, but users can override the default.

• The Importance field is a way to define the profile items that are most or least important.

When the search runs, the search framework uses the Importance field to determine the ranking of matching profiles. The default value is 3 - Average, but users can override this value.

For searches with a criteria rule of Default, No Display that do not allow users to modify the search criteria, the system automatically assigns the default importance value (3 - Average).

If the Mandatory property is included in a content section definition, the system uses the Mandatory setting in the profile as the default value for the Mandatory field in the search criteria, but users can override the default.

See (Classic) Searching and Comparing Profiles.

(Fluid) Exact Match Property

The Fluid Search and Compare process uses the Exact Match property.

The Exact Match property appears on the Search Criteria page for each of the content sections included in the search criteria and enables users to specify profile items that must appear in the matching profiles.

When an exact match is specified for a criteria item, the search process incorporates the boolean logic to determine if a match occurs. When you use the OR operator between items or groups, the results can still return a profile if matches occur on other criteria items. However, when there is only one criteria group and the items are connected with the AND operator, then the results will not return the profile if the property or rating do not match exactly for that item.

If the Mandatory property is included in a content section definition, the system uses the Mandatory setting in the profile as the default value for the Exact Match field in the search criteria, but users can override the default.

See also (Fluid) Searching and Comparing Profiles.

Search Filters and Advanced Filters

The Search Criteria page includes filters if you have set up searchable profile group types for the target profile type. Search filters enable you to narrow the search to specific data and will vary based on your user interface.
• (Classic) When using the classic Search Criteria pages, the top of the page will display a collapsible Search Filters section. You use this section to narrow your search to specific profile groups, locations, or travel preferences.

• (Fluid) When using the fluid Search Criteria pages, the page will display an Advanced Filters tab. Access this page to narrow your search by advanced filters (regulatory region, business unit, department, location, job title, regular/temporary status, and full/part time status) and by profile groups.

To illustrate how this works, consider the following example:

• The profile group type GLOBAL includes the profile type JOB.

• The profile groups for GLOBAL are REGION1, REGION2, and REGION3.

When users select a search where the target profile type is JOB, the search filter link enables users to select one or more of the profile groups REGION1, REGION2, and REGION3. The search results are limited to profiles that belong to the selected profile groups. The Search Filter feature is particularly useful if your organization has large numbers of profiles.

(Classic) Current Location and Travel Preferences filters are only available in the classic pages if the target profile is configured to include those content sections. Current Location and Travel Preferences do not display in the Advanced Filters section of the fluid pages.

See (Classic) Searching and Comparing Profiles and (Fluid) Searching and Comparing Profiles.

See Creating Profile Group Types and Profile Groups.

### Setting Up Searches

Use the Define Search Configuration (JPM_SRCH_CFG) and Fluid Compare Configuration (JPM_CSC_DEFN) components to define the search types for your users.

**Note:** Users must be assigned the Profile Administrator or JPM Administrator roles to access these pages.

This topic discusses how to set up profile search types.

### Page Used to Set Up Search Types

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Fluid) Fluid Compare Configuration - Page Display Page</td>
<td>JPM_CSC_DEFN</td>
<td>Create compare group headings that define additional data to display for the profile when viewing the Compare Results page in fluid.</td>
</tr>
<tr>
<td>(Fluid) Fluid Compare Configuration - Data Sources Page</td>
<td>JPM_CSC_FLD</td>
<td>Select the fields that should appear within the Compare Results group headings in fluid.</td>
</tr>
<tr>
<td>(Fluid) Configure Compare Field Page</td>
<td>JPM_CSC_FLD_SEC</td>
<td>Configure field display and label options for the Compare Results page in fluid.</td>
</tr>
</tbody>
</table>
(Fluid) Fluid Compare Configuration - Page Display Page

Use the Fluid Compare Configuration - Page Display page (JPM_CSC_DEFN) to create compare group headings that define additional data to display for the profile when viewing the Compare Results page in fluid.

**Note:** This configuration is used to display data on the fluid pages only.

**Navigation**

- Set Up HCM > Product Related > Profile Management > Profiles > Fluid Compare Configuration > Page Display
- From the Workforce Administrator home page in fluid select the Profile Administration tile > Profile Configuration tile > Configure Search and Compare tab > Fluid Compare Configuration > Page Display.

**Image: Fluid Compare Configuration - Page Display page**

This example illustrates the fields and controls on the Fluid Compare Configuration - Page Display page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Define Search Configuration Page</td>
<td>JPM_SRCH_CFG</td>
<td>Set up profile search types for employees, managers, and administrators.</td>
</tr>
</tbody>
</table>

**Profile Usage**

Select the usage value: *Person* or *Non-Person*.

The usage will determine the valid person or non-person compare IDs on the Define Search Configuration Page.
**Sequence and Group Description**  Enter the group headings and the order in which they should appear on the *(Fluid)* Compare Results Page. The groups allow you to combine like fields that describe the profiles that a user is comparing.

After you have created compare definition IDs, associate them with search types on the Define Search Configuration Page.

*(Fluid)* Fluid Compare Configuration - Data Sources Page

Use the Fluid Compare Configuration - Data Sources page (JPM_CSC_FLD) to select the fields that should appear within the Compare Results group headings in fluid.

**Note:** This configuration is used to display data on the fluid pages only.

**Navigation**

- Set Up HCM > Product Related > Profile Management > Profiles > Fluid Compare Configuration > Data Sources
- From the Workforce Administrator home page in fluid select the Profile Administration tile > Profile Configuration tile > Configure Search and Compare tab > Fluid Compare Configuration > Data Sources.

**Image: Fluid Compare Configuration - Data Sources page**

This example illustrates the fields and controls on the Fluid Compare Configuration - Data Sources page. You can find definitions for the fields and controls later on this page.

**Record Name**  Enter the record that the system will use to retrieve the employee or non-person information.

**Field Name**  Specify the field from the record that should appear on the Compare Results page.
Configure

Click this button to open the (Fluid) Configure Compare Field Page and define the field display and label options.

Use the Labels tab to view the field labels and the Compare Group to which it belongs.

After you have created compare definition IDs, associate them with search types on the Define Search Configuration Page.

(Fluid) Configure Compare Field Page

Use the Configure Compare Field page (JPM_CSC_FLD_SEC) to configure field display and label options for the Compare Results page in fluid.

Navigation

Click the Configure button on the (Fluid) Fluid Compare Configuration - Data Sources Page.

Image: Configure Compare Field page

This example illustrates the fields and controls on the Configure Compare Field page. You can find definitions for the fields and controls later on this page.

The information you set up on this page will appear on the Labels tab of the Data Sources page.

Compare Display

Select how the field and label should display. Options include:

- Both: Displays two fields on the Compare Results page; one that shows the code and one the description of the field value. For example, using the preceding screen shot, the following rows will appear:

  Job Code 13055
  Job Code Description Finance Manager
This option will display both the Compare Field Information and Compare Description Information sections on this page.

- **Display Field**: Displays the field item code of the field value on the Compare Results page.

This option will display the Compare Field Information section on this page.

- **Display Field Description**: Displays the field description of the field value on the Compare Results page.

This option will display the Compare Description Information section on this page.

### Results Group

Indicate the group in which this field will appear. Groups are defined on the (Fluid) Fluid Compare Configuration - Page Display Page.

### Compare Field Information

This section is available when the Compare Display value is **Display Field or Both**.

- **Compare Field Label**: Enter the label of the field that will appear in the results page. This label is associated with the **Display Field** option and the field value will only display the code of the item.

### Compare Description Information

This section is available when the Compare Display value is **Display Field Description or Both**.

These fields and label are associated with the **Display Field Description** option and the field value will display the description instead of the code.

- **Description Table Name**: Enter the record table name to specify what data the system will display.

- **Description Field Name**: Enter the field name, typically a DESCR-related field, that should be used for the description.

- **Description Field Label**: Enter the label for the field that will appear in the results page.

### Source Table Fields Needed for the Lookup

This section is available as part of the Compare Description Information section when you need to identify the look up and source table fields. The fields are based off of the values entered in the Description Table Name field.
Define Search Configuration Page

Use the Define Search Configuration page (JPM_SRCH_CFG) to set up profile search types for employees, managers, and administrators.

Navigation

• Set Up HCM > Product Related > Profile Management > Profiles > Define Search Configuration

• From the Administer Workforce home page in fluid select the Profile Administration tile >Profile Configuration tile >Configure Search and Compare tab >Define Search Configuration.

Image: Define Search Configuration page (1 of 2)

This example illustrates the fields and controls on the Define Search Configuration page (1 of 2). You can find definitions for the fields and controls later on this page.

Define Search Configuration

<table>
<thead>
<tr>
<th>Object Owner ID</th>
<th>HCM Profile Management</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>*Criteria Rule</td>
<td>No Default, Display (Adhoc)</td>
<td></td>
</tr>
<tr>
<td>Display Max</td>
<td>10</td>
<td></td>
</tr>
</tbody>
</table>
Image: Define Search Configuration page (2 of 2)

This example illustrates the fields and controls on the Define Search Configuration page (2 of 2). You can find definitions for the fields and controls later on this page.

**Object Owner ID**
Select *HCM Profile Management* to view and define searches for profile management.

**Sub Application Id**
Leave this field blank for all profile searches. It is not used by Profile Management.

**Search Id**
Enter a search key unique to the object owner ID and sub application ID.

### Search Properties

**Note:** Caution should be used when identifying a property in the profile type configuration as searchable. Consideration needs to be given to the types of searches this property will be included in to ensure that the property in both the source and target profile of the search have been defined with the same meaning.

Use this section to define search types for your organization.

**Source Profile**
Select the profile type to use as the basis for the search criteria.

**Target Profile**
Select the profile type that you want to search for matching profiles and to which you want to compare.

**Search Name**
Enter a descriptive name for the search. Employees, managers, and administrators see the search name when they select the Search and Compare Profiles option. Therefore, it's important that the name accurately describes the search.

**Criteria Rule**
Select one of these options:
• **Default and Display:** The system populates the search criteria using data from the selected profile and displays the Search Criteria page. This option enables users to adjust the search criteria before running the search.

• **Default, No Display:** The system generates the search criteria using data from the selected profile and immediately runs the search without first displaying the Search Criteria page.

• **No Default, Display (Adhoc):** The system displays the Search Criteria page without populating the search criteria. The user has to set up the search criteria from scratch for this type of search, which requires knowledge of the profile types. Typically, you use this option to enable administrators to run adhoc searches.

**Display Max** (display maximum) Enter the maximum number of profiles to be returned by the search query. For example, if you specify a maximum of ten (10), the search query will return only 10 results on the page, even though the document match count may be greater. Users will then use options on the page to view additional results.

**Job Profile Management Roles**

**Job Profile Management Roles** Add the Profile Management roles that have access to the search. The options are: *Administrator*, *Manager*, and *Employee*.

Users can run the searches that are defined for their role only. The search results will display only those profiles to which the user has the appropriate security.

**Fluid Display Options**

(Fluid) Use this section to configure additional fields used only in fluid Search and Compare.

**Empl ID** This option appears when the target profile identifies a person profile or is blank.

Select this option to display the employee ID in the search results.

**Add to Interest List Button** This option appears when the target profile identifies a non-person profile.

Select this option to display this button on the search results page.

**Sort By** This field is not available when the source and target profiles are of the same profile type (Nonperson-to-Nonperson or Person-to-Person).

Select a default sorting method for the search results.
When the search criteria includes one or more of the Rating properties for an item, the target rating impacts the profile search ranking based on the following methods:

For searches where the Target Profile type is NON-PERSON:

- **Job Rating with Closest Fit**: The closer the job profile results are to the search criteria rating the higher the ranking.
- **Lowest to Highest Job Rating**: Job ratings that are at or below the person rating will be ranked higher.

For searches where the Target Profile type is PERSON:

- **Person Rating with Closest Fit**: The closer the person profile results are to the search criteria rating the higher the ranking.
- **High to Low Person Rating**: Person ratings that are at or above the job rating will be ranked higher.

For searches where the Target Profile type is blank:

- **Closest Fit**: The closer the target profile results are to the source search criteria rating the higher the ranking.
- **Relative to Person Rating**: The rating depends on how the profile results compare to the person. When you select this option, the (Fluid) Search Results Page will provide by default the Sort By option relative to the source and target profile search types entered by the end user and described above (either **Lowest to Highest Job Rating** or **High to Low Person Rating**).

**Person Compare ID**

Identify the profile compare configuration ID that defines additional data to display for a person on the Compare Results page in fluid.

Valid values for this field are defined using the Fluid Compare Configuration component for IDs that have a profile usage type of **Person**.

**Non-Person Compare ID**

Identify the profile compare configuration ID that defines additional data to display for a non-person profile on the Compare Results page in fluid.

Valid values for this field are defined using the Fluid Compare Configuration component for IDs that have a profile usage type of **Non-Person**.

See also (Fluid) Fluid Compare Configuration - Page Display Page, (Fluid) Fluid Compare Configuration - Data Sources Page, and (Fluid) Compare Results Page.

The following fields appear based on the source and target profiles you select:
<table>
<thead>
<tr>
<th>Source = Person</th>
<th>Source = Non-Person</th>
<th>No target profile selected (Adhoc searches)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target = Non-Person</td>
<td>Target = Person</td>
<td>Empl ID</td>
</tr>
<tr>
<td>Empl ID</td>
<td>Add to Interest List Button</td>
<td>Add to Interest List Button</td>

<tr>
<td>Sort By (with the following options):</td>
<td></td>
<td>Sort By (with the following options):</td>
</tr>
<tr>
<td>• Job Rating with Closest Fit</td>
<td>• Person Rating with Closest Fit</td>
<td>• Closest Fit</td>
</tr>
<tr>
<td>• Lowest to Highest Job Rating</td>
<td>• High to Low Person Rating</td>
<td>• Relative to Person Rating</td>
</tr>
<tr>
<td>Person Compare ID</td>
<td>Non-Person Compare ID</td>
<td>Person Compare ID</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Non-Person Compare ID</td>
</tr>
</tbody>
</table>

### Building the Search Indexes

These topics provide an overview of the search indexes and index maintenance, list prerequisites, and discuss how to:

- Run the Direct Reports Tables Build process.
- Schedule a search index build.

For more information on deploying search definitions and categories, as well as building the search index, see the product documentation for *PeopleTools: PeopleSoft Search Technology*, PeopleSoft Search Framework content.

**Understanding the Search Indexes**

Search and Compare Profiles uses the PeopleTools Search Framework (PTSF) by way of Integration Broker to generate search results and perform comparisons between matching profiles. In order to complete searches, the search engine uses a set of indexes that contain data about the profiles in your system; it does not search the database tables directly.

The PTSF creates the search objects, and two source objects are supported for Profile Management. One source object contains person profile documents and the other contains non-person profile documents.

Creating the source objects involves the following sequence of steps:

1. Deploy the Search Definition.
   - Person Profile search definition
   - Non-person Profile search definition

2. Create Search Index Schedule.
   - For the person profile search definitions.
     (Fluid only) Build the Person Profile index by selecting the All Languages option if multiple languages are enabled for the PS environment.
   - For the non-person profile search definition.
     Run the Schedule Search Index process with the Base Language option for the Non-person Profile index.

3. Deploy the profile Search Category that combines the non-person and person profile documents into a single searchable object.

*Warning!* This is required for the Search and Compare Profiles transaction. The Search and Compare Profile process requires that the Search Categories be used as delivered and should not be renamed.
Image: Processes for maintaining indexes for search and compare profiles

The diagram illustrates how the queries, search definitions, search category, and search index schedule relate to each other:

Note: It is recommended that the incremental Schedule Search Indexes process be scheduled to run following the completion of the Direct Reports Table Build Process.

Direct Reports Tables Build

The Build Direct Reports Tables process maintains the direct reports tables by updating the direct reports for managers with current information used in the in Profile Search and Compare process.

Note: The Direct Reports Tables Build process is required to build the manager security for the Search and Compare Profiles transaction. If you are not using the Manager Self Service Search and Compare Profiles transaction, then this process is not needed. The incremental updating of the Profile indexes leverages the manager hierarchy that is built based on the Access Type value specified on the Profile Management Installation page. It is required that the Direct Reports Tables Build process be scheduled to run on an interval to capture the latest organization changes.

See "Configuring Direct Reports Functionality" (PeopleSoft HCM 9.2: Application Fundamentals)
As shown in this table, running the Direct Reports Tables Build process in incremental mode updates only the manage list information for the relevant job record.

<table>
<thead>

<td>2</td>
<td>Manager data for the reporting structure for record 2.</td>
</tr>
</tbody>
</table>

**Deploying the Search Definitions and Search Category**

Before end users can run the Profile Search and Compare process against the search indexes, the Profile Management search definitions (HC_JPM_PERSON_PROFILE and HC_JPM_NONPERSON_PROFILE) need to be deployed to the search engine. Once the search definitions are deployed, you use categories to group search definitions within logical, manageable groups.

You do this by navigating to the PeopleTools >Search Framework >Administration >Deploy/Delete Object component, and then:

1. Select one or several of the following search definitions from the Deploy Search Definition page and select Deploy:
   - HC_JPM_NONPERSON_PROFILE
   - HC_JPM_PERSON_PROFILE
   - HC_JPM_PROFILES

2. Access the Deploy Search Category page to select and deploy search categories.

Before end users can submit search requests against the Search Framework deployed objects, the search indexes must first be built. Prior to the index being built, a deployed search definition contains no searchable data. Therefore, a search index needs to be built for each individual search definition.

Invoke a search index build for one or several search definitions from the Build Search Index page.

**Schedule Search Process**

The Schedule Search Index Application Engine process (PTSF_GENFEED) builds an index for person or non-person profile types. Select the search definition HC_JPM_PERSON_PROFILE if building the index for person profile types. Select the search definition HC_JPM_NONPERSON_PROFILE for non-person profile types. You cannot create an index for a profile type if it:

- Is inactive.
- Is a not an end profile type.

When you set up a profile type, you can specify if the profile type is an end profile on the Profile Types - Attributes page. The delivered CLUSTER profile type is an example of a profile type that is not an end profile.
- Does not have searchable properties.

When you set up content sections for a profile type, you select the Searchable check box for the properties that you want to include in the index. If none of the content sections contain searchable properties, you can't create an index.

The process uses the profile type definition to determine what profile information is included in the index. Only those properties defined as searchable in the profile type are selected for indexing. The process retrieves active profiles, the active profile items in those profiles, and the searchable properties to include in the index. For profile types with a profile type of Person, the Schedule Search Index process retrieves manager hierarchy data and row level security for the person ID associated with the profile. If a profile type belongs to a profile group type that is defined as searchable, the profile group is also included in the index.

The index created by this process is separate from the database. It is a snapshot of the database at one point in time and does not remain synchronized with the profile data in the database unless you routinely update the index.

When the Schedule Search Index is run, the application engine process PTSF_GENFEED generates an XML feed and creates a schedule in the search engine, which in turn crawls the XML feed and builds the search index.

With the exception of facets for the Fluid search, searching is language-independent since only the codes and not the associated descriptions are indexed. For example, if a user searches for the competency Forecasting whose content item ID is 1000, then the search query will look for item ID 1000 and not for the word Forecasting.

**Understanding Index Maintenance**

The indexes represent a snapshot of the profile data and security as of the date that you last ran the Direct Reports Tables Build, Build Profile Groups, and Schedule Search Index processes. To ensure that your Search and Compare Profiles results are accurate, run these processes periodically to update the indexes and its security.

You can run the Schedule Search Index process in two modes:

- **Full Index**: creates or recreates the index for the selected search definition.

- **Incremental Index**: updates profile documents for an existing index based on the profile update datetime stamp (LASTUPDDTM). If the profile has been updated since the last incremental run, then this profile will be selected for re-indexing.

Run the process according to a frequency that balances frequency of profile updates with the need to search on the most up-to-date information. You can select this process to run immediately or schedule it to run at intervals using Process Scheduler when the system usage is low.

Run the Schedule Search Index process with the **Base Language** option for the Non-person Profile index.

(Fluid only) Build the Person Profile index by selecting the All Languages option if multiple languages are enabled for the PS environment.

Run the Schedule Search Index process using the **Full Index** mode when any of the following changes are made:
• A new profile type is defined that has searchable properties.

• The Searchable check box for a property is selected.

When you select the Searchable check box for a property that previously was not searchable, the index must be recreated to include the property in the index for profiles of that type.

• The Priority field for an Instance Qualifier is changed.

The Maintain Profile Indexes process uses the priority field to determine which profile item row is included in the index when instance qualifiers are associated with a content section of a profile type. The row with the highest priority and highest effective date for that priority is selected for indexing only.

• A large reorganization has occurred that impacts the manager reports or administrator row level security.

To illustrate how the Schedule Search Index process selects rows in the profile for indexing, suppose that you have defined an Instance Qualifier Set to identify the evaluation type. This table lists the instance qualifier values and their assigned priorities:

<table>
<thead>
<tr>
<th>Instance Qualifier</th>
<th>Description</th>
<th>Priority</th>
<th>Searchable</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Approved</td>
<td>10</td>
<td>Y</td>
</tr>
<tr>
<td>R</td>
<td>Supervisor/Manager</td>
<td>20</td>
<td>Y</td>
</tr>
<tr>
<td>S</td>
<td>Self</td>
<td>30</td>
<td>Y</td>
</tr>
</tbody>
</table>

Note: The priority decreases as the value in the Priority field increases. In this example, the instance qualifier with the highest priority is A and the instance qualifier with the lowest priority is S.

In this example, the employee's profile has three profile items for competencies 0010, 0200, and 0120. This table lists the profile item rows:

<table>
<thead>
<tr>
<th>Competency</th>
<th>Date</th>
<th>Proficiency</th>
<th>Evaluation Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>0010</td>
<td>May 1, 2019</td>
<td>3 - Good</td>
<td>A</td>
</tr>
<tr>
<td>0010</td>
<td>June 21, 2019</td>
<td>4 - Very Good</td>
<td>S</td>
</tr>
<tr>
<td>0200</td>
<td>June 21, 2019</td>
<td>4 - Very Good</td>
<td>S</td>
</tr>
<tr>
<td>0200</td>
<td>June 21, 2019</td>
<td>5 - Expert</td>
<td>R</td>
</tr>
<tr>
<td>0120</td>
<td>January 30, 2019</td>
<td>2 - Fair</td>
<td>A</td>
</tr>
<tr>
<td>0120</td>
<td>May 1, 2019</td>
<td>2 - Fair</td>
<td>A</td>
</tr>
</tbody>
</table>

This table lists the rows that are included in the index for this profile:
Notice that:

- For competency 0010, the row with the highest priority (lowest sequence number) instance qualifier (A) is selected even though the effective date for this row is earlier than the row dated June 21, 2019.

- For competency 0200, the two rows have the same effective date. In this case the system selects the row that is assigned the instance qualifier with the highest priority (R - Supervisor/Manager).

- For competency 0120, the system selects the row with the highest effective date.

**Note:** Instance qualifiers that are defined by a prompt record are not searchable and not included in indexes.

See Defining Instance Qualifiers.

**Understanding PeopleTools Search Framework Profile Document Security for Person Profiles**

Document level security exists for Person Profiles. The administrator can only view profiles for employees in their range of HCM row-level security. Managers can only view profiles for direct and indirect reports. Employees can only view their own profile.

The list of “manager access” EmplIDs and “administrator access” Class Ids is merged into a single Document Security Attribute called JPM_SRCH_SECID. When a search is executed against the Person Profile Index, this security attribute is automatically filtered based on the Profile Management role that issues the query.
Image: Security for Person Profiles

This diagram illustrates how document level security will add security attributes to the profile document and search framework will automatically apply a list of values to be matched against the security attributes of those documents returned by the search query.

Prerequisites

Before you run the Schedule Search Index process, you must define the Supervisor Navigation Method field on the Profile Management Installation page and run the Direct Reports Tables Build process for at least that access type specified. The Supervisor Navigation Method field value specifies the reporting structure (access type) for your organization.

Before you run the Schedule Search Index process, you must set up the content catalog, define your profile types, and set up the Integration Broker.
For more information on the Search Framework, see the product documentation for *PeopleTools: Search Technology*.

## Direct Reports Tables Build Page

Use the Direct Reports Tables Build page (RUNCTL_HR_DR) to run the Direct Reports Tables Build process to build the reporting relationships for a single access type or all access types. This will fully or incrementally load all or a selected access type.

**Navigation**

Set Up HCM > Common Definitions > Direct Reports for Managers > Direct Reports Tables Build > Direct Reports Tables Build

**Image: Direct Reports Tables Build page**

This example illustrates the fields and controls on the Direct Reports Tables Build page. You can find definitions for the fields and controls later on this page.

### Build Mode

Select one of these modes:

- **Full - Complete Rebuild**: Created the full organizational hierarchy. Any existing data is overwritten by this process.

- **Incremental - Current Date Upd**: Detects where the organization hierarchy has changed and updates those changes in the tables.

### Access Method

Select the access method that was defined on your Profile Management Installation Page.

**Related Links**

"Configuring Direct Reports Functionality" (PeopleSoft HCM 9.2: Application Fundamentals)

## Build Search Index Page

Use the Build Search Index page (PTSF_SCHEDULE_SI) to run the process that builds the search index for a person or non-person profile.
Navigation

PeopleTools > Search Framework > Administration > Schedule Search Index > Build Search Index

Image: Build Search Index page

This example illustrates the fields and controls on the Build Search Index page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Build Search Index</th>
</tr>
</thead>
<tbody>
<tr>
<td>Run Control ID: 1</td>
</tr>
<tr>
<td>Report Manager</td>
</tr>
<tr>
<td>Process Monitor</td>
</tr>
<tr>
<td>Run</td>
</tr>
</tbody>
</table>

**Search Definition**

Select `HC_JPM_NONPERSON_PROFILE` for non-person profiles, or `HC_JPM_PERSON_PROFILE` for person profiles.

**Note:** These search definitions must be deployed prior to running this process.

**Indexing type**

Select one of these values:

- Full index: Builds a new index for the selected search definition.
- Incremental Index: Updates the existing index for the selected search definition.

**Language Option**

Select the Base Language option for the Non-person Profile index and when using classic Profile Management.

(Fluid only) Select the All Languages option to build the Person Profile index if multiple languages are enabled for the PS environment.

**Understanding the Search and Compare Profiles Process**

Users accessing the Search and Compare Profile pages will walk through a series of steps to define and generate the search and compare results.
1. Selecting a Search

Users can run search and compare profiles in various ways:

- By selecting the Search and Compare Profiles component from the Profiles menu.

- By selecting *Search and Compare Profiles* in the Profile Actions field on the (Classic) Person Profile or Non-person Profile pages.

- Select as a related action item from the Talent Profile.

Whichever navigation you use, the system displays only those searches that are configured for your role. Roles are associated with searches on the Define Search Configuration page. In addition, if you run search and compare profiles from the Person Profile or Non-person Profile page, the list of searches is restricted to those that have a source profile type that matches the profile you are viewing.
Note: The use of special characters in searchable property data can lead to incorrect search results. Special processing has been added to handle special characters for the content type and content item codes.

This table lists the search configurations delivered for the various roles with the system:

<table>
<thead>
<tr>
<th>Object Owner Identifier</th>
<th>Sub Application ID</th>
<th>Search ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>PERSON1 - Find people having certain qualifications</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>PERSON2 - Find people that fit this job</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>ADHOC3 - Adhoc search</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>JOB4 - Find jobs that fit my qualifications</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>JOB5 - Find jobs for a team member</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>PERSON6 - Find similar people on team</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>PERSON7 - Find team member for a specific job profile</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>JOB8 - Find jobs</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>JOB16 - Find jobs like my job</td>
</tr>
<tr>
<td>HCM Profile Management (JPM)</td>
<td>NA</td>
<td>JOB17 - Find jobs for this person</td>
</tr>
<tr>
<td>Human Resources (Human Res)</td>
<td>Success Planning (Succ Plan)</td>
<td>PLANINC – For people with profile matches to plan incumbent</td>
</tr>
<tr>
<td>Human Resources (Human Res)</td>
<td>Success Planning (Succ Plan)</td>
<td>PLANJOB – For people with profile matches to plan/pool job code</td>
</tr>
<tr>
<td>Human Resources (Human Res)</td>
<td>Success Planning (Succ Plan)</td>
<td>PLANPOS – For people with profile matches to plan/pool position</td>
</tr>
</tbody>
</table>

Note: NA means it is not applicable.

The "(Classic) Searching and Comparing Profiles" (PeopleSoft HCM 9.2: eDevelopment) and "(Fluid) Searching and Comparing Profiles" (PeopleSoft HCM 9.2: eDevelopment) documentation also discusses the search and compare for employees and managers.

2. Selecting a Source Profile ID

If you select a search with a criteria rule of Default, No Display or Default and Display, you must select a source profile ID that provides the default search criteria for the search and compare. The Source Profile field on the Define Search Configuration page defines the profile type that you can select for the search.
Note: If you run the search from the profile pages, the system automatically uses the profile that you were viewing as the source profile ID and therefore you are not prompted for a source profile ID.

If the search has the criteria rule of Default, No Display, the system automatically runs the search after you select the source profile ID. For this type of search, the search criteria is based on the profile items that default from the source profile and you can't adjust the criteria before running the search.

3. Defining Search Criteria (where applicable)

When you run a search with a criteria rule of Default and Display or No Default, Display (Adhoc), you define or modify the search criteria using the Search Criteria page.

If you are running a search with a criteria rule of Default and Display, the page has default criteria based on the source profile type defined in the configuration. You can modify the default search criteria and add other criteria before you run the search.

If the search has a criteria rule of No Default, Display (Adhoc), no default criteria is provided; use the Search Criteria page to define the items you want to search for in the target profiles. You are prompted for the source and target profile types if these are not defined for the search. The system then refreshes the Search Criteria page with the criteria sections and search filters that you can use for the search.

The Search Criteria page may include search filters (Search Filters group box section for classic pages, Advanced Filter tab for fluid pages). Search filters enable you to narrow the search, such as to specific profile groups.

When you have defined the search criteria, click the Search button to run the search.

4. Viewing Search Results

The Search Results page lists the profiles that match the search criteria. Results will vary by user interface:

- (Classic) Matching profiles are ranked according to the profile scores calculated by the system. Profile scores are in the range 0 to 100, where a score of 100 means that the profile meets all the search criteria. Profile scores are discussed in the Understanding Search and Compare Profile Scores Using the Classic Pages topic. The travel preferences and current location filters are used to filter the target profile candidates but do not contribute to the overall search score.

- (Fluid) Matching profiles are ranked according to the sort by option (see also Fluid Display Options on the Define Search Configuration Page) and display the results based on this value.

Note: Only profiles that you are authorized to access are listed among the search results.

If you want to adjust the search criteria and rerun the search, click the Modify Search Criteria link (Classic) or Search Results back button (Fluid) on the page to return to the Search Criteria page. You can also run a new search by clicking the Return to Search For Profiles (Classic) or Search and Compare Profiles (Fluid) back button in the banner.

5. Comparing Profiles

The profiles shown on the Search Results page give an overall indication of how closely each profile matches the search criteria. However, you can also view a breakdown of the information at the item or criteria level. From the Compare Results page you can compare profiles and item from your search results.
Interfacing with Profile Management Search and Compare

PeopleSoft Profile Management delivers these interfaces to perform Search and Compare for other business processes:

- Employee Self Service Career Progression Chart
  Compare the person's profile to their job profile.
- Administer Succession Planning - Succession 360 Degree
  Compares the person's profile to their job profile.

(Classic) Searching and Comparing Profiles

These topics provide an overview of search and compare profiles scores and discuss how to search for and compare profiles using the classic user interface.

For an overview of search and compare, setup steps, and the process flow of using the Search and Compare Profile pages, see Understanding Setting Up Search and Compare Profiles and Understanding the Search and Compare Profiles Process.

Pages Used to Search and Compare Profiles Using the Classic User Interface

<table>

</tbody>
</table>

Understanding Search and Compare Profile Scores Using the Classic Pages

These topics discuss:
- The scoring calculation.
- Calculating property and item scores.
- Calculating item weighting based on the Importance field.
- Calculating the rating property score.
- Calculating the interest level property score.
- Calculating item scores for mandatory items.
Overview of the Scoring Calculation

This topic discusses how the system calculates scores for target profiles to determine the profiles that best match the search criteria. Search and compare profiles uses the search engine to determine which profiles most closely meet the specified criteria. The search query is constructed of search elements generated from each profile item property in the search criteria. A full text search is performed to return matching profiles with a score which represents the match percentage. The scores are displayed in descending order with the profile having the best fit listed first.

To calculate the score for a target profile, the system calculates:

- Property scores for each property associated with an item.

  The search criteria comprises a set of profile items that you want to search for in the target profile. However, items in the search criteria can have multiple properties. For example, if you add a competency to the search criteria you can also specify the desired rating for the competency, or if you add a language skill you can specify the desired writing proficiency for that language. The competency rating and the writing proficiency are properties of the competency and language skill profile items. The system calculates a property score for each property that you specify in the search criteria and these contribute to the item scores.

- Item scores for each item in the search criteria.

  The item score is an average of the property scores for the properties associated with an item.

- Weighted item scores based on the Importance field.

  The Importance field is used to denote the relative importance of each item in the search criteria. The system applies a weighting to item scores that reflect the Importance values assigned to the items. The default for the Importance field is 3 - Average, but this can be changed.

- The sum of the weighted item scores.

  The overall profile score is the sum of the weighted item scores. This is the value that you see on the Search Results page.

Profile scores are also determined by the setting of the Mandatory check box. This is discussed later in this topic under the Calculating Item Scores for Mandatory Items section.

Calculating Property and Item Scores

The property score varies according to the property. For most properties, profiles with matching properties score 100 and those that don't score 0. However, properties with a rating scale such as the rating property and the interest level property have scores that are in the range 0–100 according to how closely the source and the target match. This is discussed later in this topic in the Calculating the Rating Property section.

To calculate the item score the system calculates the average of the property scores as follows:

\[
\text{Total Property Score} \div \text{Property Count}
\]

In this example, the source profile contains three profile items for these content types:
For the degree item BA (Bachelor of Arts), the system searches for two properties, the item ID and the country. Therefore, the score for the degree item is calculated as follows:

\[
\frac{\text{Property score item ID} + \text{Property score Country}}{2}
\]

This means that only profiles with the degree BA and country USA have an item score of 100.

To show how the system calculates the property scores, this example compares the source profile with three person profiles, for Nicola Edwards, Rachel Norris, and Helen Scott.

This table lists the items in the person profile for Nicola Edwards:

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Item ID</th>
<th>Other Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Degree</td>
<td>BA (Bachelor of Arts)</td>
<td>Country: USA</td>
</tr>
<tr>
<td>Tests/Examinations</td>
<td>1006 (Accounting Aptitude Test)</td>
<td></td>
</tr>
</tbody>
</table>

This table lists the items in the person profile for Rachel Norris:

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Item ID</th>
<th>Other Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language</td>
<td>DU (Dutch)</td>
<td></td>
</tr>
<tr>
<td>Tests/Examinations</td>
<td>1006 (Accounting Aptitude Test)</td>
<td></td>
</tr>
</tbody>
</table>

This table lists the items in the person profile for Helen Scott:

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Item ID</th>
<th>Other Properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Degree</td>
<td>BA (Bachelor of Arts)</td>
<td>Country: GBR</td>
</tr>
<tr>
<td>Tests/Examinations</td>
<td>1006 (Accounting Aptitude Test)</td>
<td></td>
</tr>
</tbody>
</table>

This table lists the item scores for each person profile:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Country Property</th>
<th>Person Profile</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>BA</td>
<td>USA</td>
<td>Nicola Edwards</td>
<td>100 = (100+100)/2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Rachel Norris</td>
<td>0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Helen Scott</td>
<td>50 = (100+0)/2</td>
</tr>
</tbody>
</table>
Calculating Item Weighting Based on the Importance Field

The system automatically includes the Importance field for each item in the search criteria and assigns the default value of 3-Average, which means that each item is of equal importance. Depending on the search type, you can override the default importance to specify the relative importance of each profile item. When you run the search, the system applies a weighting to each item score according to the importance that you assigned to that item. The result is that profiles that include the most important items are assigned a higher score than profiles that only include the least important items.

The system calculates the weighting for each item as follows:

Importance % = (Item Importance / Total Importance) × 100

To show how this works, suppose you specify the following Importance values to items in the search criteria:

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Item ID</th>
<th>Importance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Degree</td>
<td>BA (Bachelor of Arts)</td>
<td>4-Above Average</td>
</tr>
<tr>
<td>Language</td>
<td>DU (Dutch)</td>
<td>3-Average</td>
</tr>
<tr>
<td>Tests/Examinations</td>
<td>1006 (Accounting Aptitude Test)</td>
<td>1-Low</td>
</tr>
</tbody>
</table>

In this example, the total importance points is 8 = 4 + 3 + 1

This table shows how the weighting is calculated for each item in the search criteria:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Importance</th>
<th>Weighting</th>
</tr>
</thead>
<tbody>
<tr>
<td>BA (Bachelor of Arts)</td>
<td>4-Above Average</td>
<td>4/8 × 100 = 50%</td>
</tr>
<tr>
<td>DU (Dutch)</td>
<td>3-Average</td>
<td>3/8 × 100 = 37.5%  = 38 rounded</td>
</tr>
<tr>
<td>1006 (Accounting Aptitude Test)</td>
<td>1-Low</td>
<td>1/8 × 100 = 12.5%  = 13 rounded</td>
</tr>
</tbody>
</table>

The system uses the item weighting value to calculate the weighted item score using this formula:

Item Score (weighted) = Item score × Importance %

Using the person profiles from the earlier examples you can see how the weighting affects the overall score. This table lists the item scores and the weighted scores for Nicola Edwards:
Nicola's overall score is the sum of the weighted item scores:

Total score = 50 + 12.5 = 62.5 (63 rounded)

Note: The system rounds the score to the nearest integer value.

This table lists the item scores and the weighted scores for Rachel Norris:

<table>
<thead>
<tr>
<th>Item</th>
<th>Item Score</th>
<th>Item Score (weighted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>BA (Bachelor of Arts) / USA</td>
<td>100</td>
<td>50 = 100 × 50%</td>
</tr>
<tr>
<td>DU (Dutch)</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1006 (Accounting Aptitude Test)</td>
<td>100</td>
<td>12.5 = 100 × 12.5% = 13 rounded</td>
</tr>
</tbody>
</table>

Total score = 37.5 + 12.5 = 50

This table lists the item scores and the weighted scores for Helen Scott:

<table>
<thead>
<tr>
<th>Item</th>
<th>Item Score</th>
<th>Item Score (weighted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>BA (Bachelor of Arts) / USA</td>
<td>50</td>
<td>25 = 50 × 50%</td>
</tr>
<tr>
<td>DU (Dutch)</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1006 (Accounting Aptitude Test)</td>
<td>100</td>
<td>12.5 = 100 × 12.5% = 13 rounded</td>
</tr>
</tbody>
</table>

Total score = 25 + 12.5 = 37.5 = 38 rounded

Calculating the Rating Property Score

If the search criteria includes items with the rating or interest level property (JPM_RATING1, JPM_RATING2, JPM_RATING3, or JPM_INTEREST_LEVEL), the system calculates this property score differently than other properties. Instead of scoring 100 or 0, the system assigns a score that depends on how closely the rating or interest level in the target profile matches the rating or interest level specified in the search criteria.

The following use cases illustrate the scoring methodology which is tied to the profile usage (PERSON and JOB) of the search source and target profile types:

1. Person looking for a job match:
Working with Search and Compare Profiles

Chapter 6

• If target (job) profile has a matching item with a higher rating, then score < 100%.
• If target (job) profile has a matching item with the same or lower rating, then score 100%.
• If the target (job) profile has a matching item with a lower rating, then the “person overqualified” symbol will be displayed on the Compare page for that target profile item.

2. Job needs to be filled with the best person match:
• If target (person) profile has a matching item with the same or higher rating, then score 100%.
• If target (person) profile has a matching item with a lower rating, then score < 100%.
• If the target (person) profile has a matching item with a higher rating, then the “person overqualified” symbol will be displayed on the Compare page for that target profile item.

3. Look for people with certain qualifications: (uses fit-gap scoring method)
• If target (person) profile has a matching item with the same rating, then score 100%.
• If target (person) profile has a matching item with a lower or higher rating, then score < 100%.
• The Compare page will not display the “person overqualified” symbol in the legend since this does not apply.

4. Look for jobs with certain criteria: (uses fit-gap scoring method)
• If target (job) profile has a matching item with the same rating, then score 100%.
• If target (job) has a matching item with a lower or higher rating, then score < 100%.
• The Compare page will not display the “person overqualified” symbol in the legend since this does not apply.

The interest level property is discussed in the Calculating the Interest Level Property Score section later in this topic.

The system calculates the rating property score based on the number of levels in the rating model defined for that item.

Important! When running a search and compare, the rating models used for the profile items in the source and target profiles must have the same number of rating levels. If the rating models are not consistent, the scores will not be accurate.

This table shows an example of a rating model and the rating levels that are assigned by the system for the search and compare:

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
<th>Rating Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent</td>
<td>5</td>
</tr>
</tbody>
</table>
### Chapter 6 Working with Search and Compare Profiles

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
<th>Rating Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td>Very Good</td>
<td>4</td>
</tr>
<tr>
<td>C</td>
<td>Good</td>
<td>3</td>
</tr>
<tr>
<td>D</td>
<td>Fair</td>
<td>2</td>
</tr>
<tr>
<td>E</td>
<td>Poor</td>
<td>1</td>
</tr>
</tbody>
</table>

When you assign a rating to a profile item, the system compares the level of the requested rating to the target rating level in the search and compare. For this example, the source profile has the following item and associated rating:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating ID</th>
<th>Rating Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102</td>
<td>(Conceptual thinking)</td>
<td>B (Very Good)</td>
</tr>
</tbody>
</table>

This table lists target profiles that include the same item and the ratings for that item:

<table>
<thead>
<tr>
<th>Profile</th>
<th>Item ID</th>
<th>Rating</th>
<th>Rating Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>01000</td>
<td>0102</td>
<td>B (Very Good)</td>
<td>4</td>
</tr>
<tr>
<td>02000</td>
<td>0102</td>
<td>A (Excellent)</td>
<td>5</td>
</tr>
<tr>
<td>03000</td>
<td>0102</td>
<td>C (Good)</td>
<td>3</td>
</tr>
</tbody>
</table>

The system calculates the difference between the desired rating level (in the source) and the actual rating level in the target profiles as follows:

**ABS (Desired Rating Level – Actual Rating Level)**

ABS (absolute value) means that the system ignores the sign of the number that results from the calculation of Desired Rating Level – Actual Rating Level. By calculating the difference in this way, if the actual rating has a higher value than the desired rating the system doesn't use a negative number in the calculation of the rating score.

**Note:** This ABS calculation applies only to Use Cases 3 and 4 mentioned below. Use Cases 1 and 2 use a separate calculation algorithm.

This example demonstrates a search query using the Rating property. The Rating Model contains the following entries in its rating scale:

1–Little
2–Fair
3–Good
4–Excellent
Incremental weighting = 100 / 4 scale entries = .25

Search criteria is looking for profiles having a matching item whose rating is 3-Good.

1. Use Case 1: Person looking for a Job match

   This use case measures how closely the job requirements match a person’s qualifications indicating overqualification for those items where the person’s skill level exceeds the job requirement.

   The default logic for assigning the weights is as follows:
   • Find entry number in scale (i.e. 3 is the 3rd scale entry).
   • Calculate incremental weighting for each scale entry: 100 / total scale entries = n% (i.e. 100/4 = .25).
   • If the target rating is greater than (>) the desired rating, the score calculation is:
     \[ 1 - [(\text{Target rating} - \text{desired rating}) \times \text{incremental weight}] \]
   • If Target rating less than or equal to (<=) the desired rating, a score of 100% is assigned.

   The scores generated based on the search criteria rating value 3-Good are:
   Target rating of 1-Little = 100%
   Target rating of 2-Fair = 100%
   Target rating of 3-Good = 100%
   Target rating of 4-Excellent = 1 - [(4 - 3) \times .25] = 75%

2. Use Case 2: Job looking for a Person match

   This use case measures how closely the person’s qualifications match the job’s requirements indicating an overqualification for those items where the person’s skill level exceeds the job requirement.

   The scores generated based on the search criteria rating value 3-Good are:
   Target rating of 1-Little = 1 - [(3 - 1) \times .25] = 50%
   Target rating of 2-Fair = 1 - [(3 - 2) \times .25] = 75%
   Target rating of 3-Good = 100%
   Target rating of 4-Excellent = 100%

   • Calculate incremental weighting: 100 / total scale entries = n% (i.e. 100/4 = .25).
   • If target rating >= desired rating, a score of 100% is assigned.
   • If target rating < desired rating, the score calculation is:
     \[ 1 - [(\text{desired rating} - \text{target rating}) \times \text{incremental weight}] \]

3. Use Case 3 and 4: Person compared to other people or Job compared to other jobs.
This use case measures how closely the qualifications of several people match or the requirements of several jobs match (i.e. “fit-gap” scoring).

The scoring algorithm can be calculated as follows:

- Calculate incremental weight = 100 / total scale entries = n% (i.e. 100/4 = .25).
- Score = 1 – (ABS(target rating level – desired rating level) * incremental weight)

The scores generated based on the search criteria rating value 3-Good are:

Target has rating = 1-Little: 1 – (ABS(1 – 3) * .25) = 50%
Target has rating = 2-Fair: 1 – (ABS(2 – 3) * .25) = 75%
Target has rating = 3-Good: 1 – (ABS(3 – 3) * .25) = 100%
Target has rating = 4-Excellent: 1 – (ABS(4 – 3) * .25) = 75%

This table lists the difference between the desired rating and the actual rating in the example profiles:

<table>
<thead>
<tr>
<th>Profile</th>
<th>Item ID</th>
<th>Desired Rating Level</th>
<th>Actual Rating Level</th>
<th>ABS (Desired – Actual Rating Level)</th>
</tr>
</thead>
<tbody>
<tr>
<td>01000</td>
<td>0102</td>
<td>4</td>
<td>4</td>
<td>0</td>
</tr>
<tr>
<td>02000</td>
<td>0102</td>
<td>4</td>
<td>5</td>
<td>1</td>
</tr>
<tr>
<td>03000</td>
<td>0102</td>
<td>4</td>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>

This difference value is used in the calculation of the rating score, which the system calculates using the following formula:

Rating Score = 100 – ABS (Desired Rating Level – Actual Rating Level) × Rating Weight

The Rating Weight is calculated as follows:

Rating Weight = 100 / (total number of rating levels in rating model)

In the example rating model, the total number of rating levels is 5 and the rating weight is therefore 20 = 100/5.

This table lists the rating score for the example profiles:

<table>
<thead>
<tr>
<th>Profile</th>
<th>Item ID</th>
<th>ABS (Desired – Actual Rating Level)</th>
<th>Rating Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>01000</td>
<td>0102</td>
<td>0</td>
<td>100</td>
</tr>
<tr>
<td>02000</td>
<td>0102</td>
<td>1</td>
<td>80</td>
</tr>
<tr>
<td>03000</td>
<td>0102</td>
<td>1</td>
<td>80</td>
</tr>
</tbody>
</table>
The highest rating score is 100 and this is assigned only if the item has the same rating in both the source and the target. If the actual rating in the target is lower or higher than the desired rating, the rating score is less than 100. In the example, you can see that profile 02000 and 03000 have the same rating score even though the ratings are different. This is because the difference between the desired and actual rating is the same for these profiles.

The system applies weightings to items with the rating model property in the same way that it applies weightings to items without the rating model property.

To illustrate how this works, the next example shows how the system calculates scores for items with the rating model property. In this example, the job search criteria includes three competency items and desired rating, with importance values as listed in this table:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Rating Level</th>
<th>Importance</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102 (Conceptual thinking)</td>
<td>C (Good)</td>
<td>3</td>
<td>2-Below Average</td>
</tr>
<tr>
<td>0110 (Time management)</td>
<td>A (Excellent)</td>
<td>5</td>
<td>4-Above Average</td>
</tr>
<tr>
<td>0203 (Confidence &amp; maturity)</td>
<td>B (Very Good)</td>
<td>4</td>
<td>3-Average</td>
</tr>
</tbody>
</table>

The target profiles for the search and compare are person profiles. This table summarizes the competency ratings for Nicola Richardson:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Rating Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102 (Conceptual thinking)</td>
<td>B (Very Good)</td>
<td>4</td>
</tr>
<tr>
<td>0110 (Time management)</td>
<td>A (Excellent)</td>
<td>5</td>
</tr>
<tr>
<td>0203 (Confidence &amp; maturity)</td>
<td>D (Fair)</td>
<td>2</td>
</tr>
</tbody>
</table>

In this search and compare, the system calculates two property scores for each item:

- **Item ID.**
  
  The profiles that have the same competency item score 100. If the competency is missing, the item score is 0.

- **Rating score for the Rating property.**

The first step in the search and compare is to calculate the property scores for each competency item. This table lists the property scores for Nicola Richardson:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating Level</th>
<th>Item ID Score</th>
<th>Rating Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102</td>
<td>4</td>
<td>100</td>
<td>$80 = 100 - [\text{ABS}(3-4) \times 20]$</td>
</tr>
<tr>
<td>0110</td>
<td>5</td>
<td>100</td>
<td>$100 = 100 - [\text{ABS}(5-5) \times 20]$</td>
</tr>
<tr>
<td>0203</td>
<td>2</td>
<td>100</td>
<td>$60 = 100 - [\text{ABS}(4-2) \times 20]$</td>
</tr>
</tbody>
</table>
Next the system calculates these values:

- Total property scores.

  The total property score for each item is the sum of the property scores for item ID and rating.

- Average item score.

  This is calculated as follows:

  \[
  \frac{\text{Total property score}}{\text{Property Count}}
  \]

  In this example, the property count is 2 (item ID and rating).

This table lists the item scores for Nicola:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Item ID Score</th>
<th>Rating Score</th>
<th>Total Property Score</th>
<th>Average Item Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102</td>
<td>100</td>
<td>80</td>
<td>180</td>
<td>90</td>
</tr>
<tr>
<td>0110</td>
<td>100</td>
<td>100</td>
<td>200</td>
<td>100</td>
</tr>
<tr>
<td>0203</td>
<td>100</td>
<td>60</td>
<td>160</td>
<td>80</td>
</tr>
</tbody>
</table>

Next the system applies the weighting to the average item scores. To do this, the system calculates the weighting for each item based on the Importance assigned to the item using this formula:

\[
\text{Importance} \% = \frac{\text{Item Importance}}{\text{Total Importance}} \times 100
\]

In this example, the total importance is \(9 = 2 + 4 + 3\).

This table lists the weightings for the competency items:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Importance</th>
<th>Importance %</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102</td>
<td>2</td>
<td>22.22%</td>
</tr>
<tr>
<td>0110</td>
<td>4</td>
<td>44.44%</td>
</tr>
<tr>
<td>0203</td>
<td>3</td>
<td>33.33%</td>
</tr>
</tbody>
</table>

The system calculates the weighted item score as follows:

\[
\text{Item Score (weighted)} = \text{Item score} \times \text{Importance} \%
\]

This table lists the weighted item scores for Nicola:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Average Item Score</th>
<th>Item score (weighted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0102</td>
<td>90</td>
<td>20 = 90 \times 22.22%</td>
</tr>
</tbody>
</table>
Finally, the system calculates the overall profile score by summing all the weighted item scores:

Total Profile Score = 91 = 20 + 44 + 27

**Calculating the Interest Level Property Score**

If the search criteria include items with the interest level property (JPM_INTEREST_LEVEL), the system calculates the property score in the same way as the rating property. The interest level property score depends on how closely the interest level in the target profile matches the interest level specified in the search criteria:

Interest Level Score = 100 – ABS (Desired Interest Level – Actual Interest Level) × Rating Weight

The Rating Weight is calculated as follows:

Rating Weight = 100 / (total number of rating levels in rating model)

The delivered interest level model (which is delivered as a rating model) has 5 levels and the rating weight is therefore 20 (100/5).

**Calculating Item Scores for Mandatory Items**

The system automatically includes the Mandatory check box for each item in the search criteria. If you select this check box for an item, the system searches for profiles that include the item and all the properties specified for that item. Profiles must include the item and an exact match for the requested item properties for the profile to be included in the search results. Profiles that have different item properties are not included.

For this example, the search criteria includes two competency items and a degree as shown in the table:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Country</th>
<th>Mandatory</th>
</tr>
</thead>
<tbody>
<tr>
<td>0110 (Time management)</td>
<td>3</td>
<td></td>
<td>Y</td>
</tr>
<tr>
<td>0203 (Confidence &amp; maturity)</td>
<td>4</td>
<td></td>
<td>N</td>
</tr>
<tr>
<td>BA (Bachelor of Arts)</td>
<td></td>
<td>CAN</td>
<td>N</td>
</tr>
</tbody>
</table>

This table lists the items in the target profile and the item scores:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Country</th>
<th>Item Score (unweighted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0110 (Time management)</td>
<td>2</td>
<td></td>
<td>0</td>
</tr>
<tr>
<td>0203 (Confidence &amp; maturity)</td>
<td>4</td>
<td></td>
<td>100</td>
</tr>
</tbody>
</table>
### (Classic) Select a Profile Page

Use the Select a Profile page (JPM_COM_PROF_SRCH) to select the profile that you want to use as the source of criteria for the search using the classic user interface.

The source profile that you select provides the default search criteria. This page is displayed only if the search selected has a criteria rule of Default, No Display or Default and Display and the source profile type is a non-person profile type. If the criteria rule is No Default, Display, you enter the search criteria manually on the Search Criteria page.

### Navigation

Select a search link on the Search for Profiles page.

### Image: Select a Profile page

This example illustrates the fields and controls on the Select a Profile page. You can find definitions for the fields and controls later on this page.
Basic Search Criteria

Type
Displays the profile type defined as the source for the search. The source and target profile types are configured on the Define Search Configuration Page.

Profile ID
Select the profile, or enter part of the profile ID.

Profile Name
Enter the profile name, or part of the profile name, to search for profiles with matching names.

Status
Select a status to list profiles of one status only, such as Active.

Legacy Profile ID
Enter the legacy profile ID if you want to search for a profile that existed in earlier versions of HR. The legacy profile ID is assigned to the profile during upgrade.

Search
Click this button to list profiles that match the search criteria.

Clear
Click this button to clear all search criteria or search results from the page.

Profile Search Results

This scroll area lists the profiles that match the search criteria you selected. Click the profile name that you want to use as the source for the search and compare. Depending on the search type, the system either displays the Search Criteria page or runs the search using the selected profile. If the criteria rule for the search is Default, Display the system displays the Search Criteria page and you can modify the search criteria before running the search. If the criteria rule for the search is Default, No Display the system runs the search and displays the results on the Search Results page.

(Classic) Search Criteria Page

Use the Search Criteria page (JPM_SRCH_CRITERIA) to view and modify the search criteria for the search and compare using the classic user interface.

If the search selected on the Search for Profiles page has a criteria rule of Default and Display or No Default, Display (Adhoc), this page is displayed before you run the search. If the criteria rule is Default, No Display, the system runs the search without first displaying the Search Criteria page.

Navigation

• Select a search link on the Search for Profiles page.
• Click the Modify Search Criteria link on the Search Results page.
Image: Search Criteria page (1 of 2): Search Filters section of the page

This example illustrates the fields and controls on the Search Criteria page: Search Filters section of the page. You can find definitions for the fields and controls later on this page.

Image: Search Criteria page (2 of 2): Search Criteria section of the page

This example illustrates the fields and controls on the Search Criteria page (2 of 2): Search Criteria section of the page. You can find definitions for the fields and controls later on this page.
Use this page to define the search criteria. If the search that you selected has the criteria rule of Default, Display, the system automatically displays the default search criteria based on the source profile you selected on the Select a Profile page or the Person Search page. Review and modify the search criteria as required.

However, if the search you selected doesn't have the profile types defined, you must first specify the source and target profile types to use, and then define the search criteria manually.

**Note:** The content types listed on this page and the fields for each content type are determined by the search type selected, the profile type definitions, and the content types definitions.

See [Understanding the Search and Compare Profiles Process](#).

See [Understanding Setting Up Search and Compare Profiles](#).

See [Setting Up Profile Types](#).

See [Setting Up Content Types and Properties](#).

**Source Profile Type and Target Profile Type**

Select the profile types that you want to use in the search. The source profile type is used as the basis for the search criteria. The target is the profile type from which the system searches for matching profiles.

These fields appear for adhoc searches that don't have the source and target profile types defined on the Search Configuration page.

When you complete these fields, the system displays the content sections and search filters that you can use in the search.

**Search**

Click to initiate the search based on the criteria you have specified on this page. The system performs the search and displays the matching profiles on the Search Results page.

**Clear**

Click this button to clear the search criteria.

**Search Filters**

Filters may include profile groups, current location, and travel preferences, depending upon how the profile was set up. Use the Profile Groups group box to limit the search to selected profiles. The Profile Groups group box appears only if the target profile type belongs to searchable profile groups. Filter group boxes for current location and travel preferences may also appear if the target profile type includes this content section in the Profile Type configuration.

Filter data is used to filter the target profile candidates, but does not contribute to the overall search score. For example, you may want to find those person profiles that best match the requirements of the job Manager-Information Systems and are currently located in the Paris office. The Current Location fields filter out those candidates that are not in the Paris office and the score of the candidates is based on how well their profiles match the Manager-Information Systems job profile. If no candidates are found, then the Travel Preferences properties, such as Willing to Relocate and Take International Assignment can be used as filters to find those candidates outside the Paris office. The PERSON profile type is delivered with the Mobility content section where you can enter these preferences for a person.
See Profile Group Types Page.

**Search Criteria**

Fields in this section depend upon how the profile type is set up.

**Importance**

Select a value that indicates the importance of the profile item. The default value is 3 - *Average*. The system uses the Importance value to determine how well profiles match the search criteria. If you select a high importance value, those profiles that include the profile item are considered a better match than the profiles without the profile item.

**Mandatory**

If you want matching profiles to include certain profile items, select this check box for those items. When you run the search, the system searches for target profiles with matches on the mandatory items and the same item properties that are specified in the search criteria. For example, if the search criteria includes a mandatory competency item and you specify a proficiency rating for the competency, the search results include only those profiles with the competency item and the same proficiency rating.

**Related Items**

Select this icon to access the Related Items page and enter related items that should be part of the search.

This icon is available when the content item has been set up with related items.

**(Classic) Related Items Criteria Page**

Use the Related Items Criteria page (JPM_SRCH_RELITMS) to enter the related items to be included as search criteria using the classic user interface.

**Navigation**

Select the Related Items icon for an item on the Search Criteria page.
**Image: Related Items Criteria page**

This example illustrates the fields and controls on the Related Items Criteria page. You can find definitions for the fields and controls later on this page.

Select the Add Related Item link to include specific related items in your search. Indicate whether this item should be a mandatory item included in the search. When the search criteria includes a mandatory related item, the search results include only those target profiles with that related item.

**Classic) Search Results Page**

Use the Search Results page (JPM_SRCH_RESULT) to display the results of the search using the classic user interface.

**Navigation**

- Click the Search button on the Search Criteria page.
- Select a profile on the Select a Profile page.
Chapter 6 Working with Search and Compare Profiles

Image: Search Results page (1 of 2)

This example illustrates the fields and controls on the Search Results page (1 of 2). You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>

<tr>
<td>50</td>
<td>N9000001 - Position N90001</td>
</tr>
</tbody>
</table>

Modify Search Criteria

Return to Search For Profiles
Important! When running Search and Compare, if the Indexes cannot be located, the system will issue a message stating that the search index could not be found. This means that the process Schedule Search Indexes has not been run to create the indexes or the search framework environment is not accessible. When the index has been located, but the search criteria does not find any profile matches, the system will issue a message stating that your search did not return any results.

Search Results
Select
Select this check box to select the profile. This will add the profile to the Selected Profiles section and will be used in the compare process. You can select up to ten (10) profiles to compare.

Score
Click the score link to view the Match Results page. This page lists the items in the search criteria and the corresponding item score for the profile that you selected.

Profile Name
Click the profile name link to view the profile. The system displays the Person Profile page or the Non-person Profile page depending on the profile type.

Selected Profiles
Compare Profiles
Click this button to run the comparison. You can include 1 and 10 profiles for comparison. The system displays the Compare Results page, which lists the items in the search criteria and the corresponding item scores for the profiles that you selected.

Add to Interest List
Click this button to add the profiles you have selected to a person's interest list.

This button is displayed when the target profile type for the search is a non-person profile type.

Modify Search Criteria
Click this link to view and modify the search criteria if you want to rerun the search with different search criteria. The system displays the Search Criteria page.

Return to Search for Profiles
Click this link to run a new search. The system returns you to the Search for Profiles page that lists all the searches available.

(Classic) Compare Profiles Page
Use the Compare Profiles page (JPM_COMPARE_MAIN) to select the source and the target profile types that you want to compare using the classic user interface.

Navigation
Workforce Development > Profile Management > Profiles > Compare Profiles
Image: Compare Profiles page

This example illustrates the fields and controls on the Compare Profiles page. You can find definitions for the fields and controls later on this page.

Source Profile Type
Select the profile type that you want to use for the source of the compare.

Source Profile ID
Select the profile that you want to compare the target profiles against.

Target Profile Type
Select the profile type from which the target profiles are selected.

Target Profile ID or Empl ID (employee identification)
Select the profile ID. The system compares the target profiles with the profile selected in the Source Profile ID field.

Add Profile
Click to add another target profile.

(Classic) Compare Results Page

Use the Compare Results page (JPM_COMPARE_RESULT) to view a summary of the comparison of the profiles you selected using the classic user interface.
Navigation

- Select source and target profiles on the Compare Profiles page and click the Compare Profiles button.
- Select profiles on the Search Results page, select the check box next to 1 to 10 profiles and then select the Compare Profiles button.
- Click the score link on the Search Results page.
- Click the Compare button on the Interest List page.
- Select the *Compare employee profile to current job* profile action and select the Go icon.

Image: Compare Results page

This example illustrates the fields and controls on the Compare Results page. You can find definitions for the fields and controls later on this page.

This page displays the results of the compare. You access this page from the Search Results page, Compare Profiles page, or by clicking the Compare button on the Interest List page. In the left hand
column the system displays the content sections and content items in the source profile or search criteria. Related items appear as an indented item beneath the item to which it is related. The remaining columns show the corresponding data in the target profiles. The system shows the item scores for each target profile. Select the score links to view more details about the profile item.

**View Content Section**

Select `<View All Sections>` to list all the sections in the profiles or select a section to view the information for one content section. The default is `<View All Sections>`.

---

**(Fluid) Searching and Comparing Profiles**

Fluid Search and Compare provides a robust way of analyzing your profile data. It provides person and non-person pre-delivered sections but allows you the flexibility to configure criteria items as needed. Criteria groups help you find and compare people or jobs using different combinations of criteria in a single search. Search criteria uses boolean logic that creates focused and productive results.

**Note:** To use Fluid Search and Compare you need to be on PeopleTools 8.57 or higher.

These topics provide an overview of search and compare profiles results values and discuss how to search for and compare profiles using the fluid user interface.

For an overview of performing a profile search and compare, see [Understanding the Search and Compare Profiles Process](#).

These videos provide an overview of the Profile Manage Search and Compare modernization feature using the Fluid User Interface:

- [PeopleSoft Profile Search Match Compare](#)

### Understanding Search and Compare Profile Results Using the Fluid Pages

These topics discuss:

- Results calculation ranking.
- Calculating property and item percentages.
- Calculating the rating property percentages.
- Calculating item scores for exact match items.

### Overview of the Results Calculation Ranking

This topic discusses how the system calculates results for target profiles to determine the profiles that best match for the search criteria. Search and compare profiles uses the search engine to determine which profiles most closely meet the specified criteria. The search query is constructed of search elements generated from each criteria item property in the search criteria. A search against the Person or Non-person Profile index is performed to return matching profiles with a match percentage. The profiles are displayed with the profile having the best fit listed first.

The search criteria comprises a set of profile criteria items that you want to search for in the target profile. However, items in the search criteria can have multiple properties. For example, if you add a competency to the search criteria you can also specify the desired rating for the competency, or if you add a language skill you can specify the desired writing proficiency for that language. The competency rating and the writing proficiency are properties of the competency and language skill profile criteria items. The system calculates a property percentage match value for each property that you specify in the search criteria.

Profile match percentages are also determined by the setting of the Exact Match field. This is discussed later in this topic.

### Calculating Property and Item Percentages

The property percentages vary according to the property. For most properties, criteria with matching properties score 100 percent and those that don't score 0 percent. However, properties with a rating scale, such as the rating property and the interest level property, have scores that are in the range 0–100 percent according to how closely the source and the target match.

A search criteria item must at least match on the content item, unless Exact Match is specified. With Exact Match, the content item and all specified properties must match. When Exact Match is not specified, then the more properties that match for the criteria item the higher the score will be for that item.

</tbody>
</table>
If the search criteria include items with the interest level property (JPM_INTEREST_LEVEL), the system calculates the property score in the same way as the rating property.

Calculating the Rating Property Percentages

If the search criteria includes items with the rating or interest level property (JPM_RATING1, JPM_RATING2, JPM_RATING3, or JPM_INTEREST_LEVEL), the system calculates this property value differently than other properties. Instead of scoring 100 or 0 percent, the system assigns a score that depends on how closely the rating or interest level in the target profile matches the rating or interest level specified in the search criteria.

The system uses a Closest Fit scoring method for all search types (person-to-person, job-to-job, person-to-job, and job-to-person) to rank the target profiles to the source search criteria. This means the profiles closest to the search criteria will be ranked higher. Items with the same rating score will be identified at a 100 percent match while target profile items with a lower or higher rating will be assigned a score of less than 100 percent.

However, for searches that use person-to-job or job-to-person types, the end user has the option on the Search Results page to sort the profiles, relative to the person, by either:

- **Lowest to Highest Job Rating**: Job ratings that are at or below the person rating will be ranked higher.
  
  For example, you are trying to find jobs for a person who is rated at a level 4—Very Good for an item. When a job in the search results only requires a level 3—Good rating for the same item, this person is overqualified for the job and therefore the score for this job profile, relative to the person, will indicate a greater than 100 percent (>100%) match value for this item.

- **High to Low Person Rating**: Person ratings that are at or above the job rating will be ranked higher.
  
  For example, you are trying to find individuals for a job that requires a level 4—Very Good rating for an item. When a person in the search results possesses a rating of 5—Excellent for the same item, this person is overqualified for the job requirement and therefore the score for this person profile will indicate a greater than 100 percent (>100%) match value for this item.

The following use cases illustrate the scoring methodology that is tied to the profile usage (PERSON and JOB) of the search source and target profile types:

- **Person looking for a best job match using the following scoring method**:
  
  - **Closest Fit** — A target (job) profile has a matching item with:
    
    - A higher rating, then the job profile score is a number less than 100 percent.
    
    - The same rating, then the job profile score is 100% (100 percent).
    
    - A lower rating, then the job profile score is a number less than 100 percent

  - **Lowest to Highest Job Rating** — A target (job) profile has a matching item with:
    
    - A higher rating, then the job profile score is a number less than 100 percent.
    
    - The same rating, then the job profile score is 100% (100 percent).
    
    - A lower rating, then the job profile score is >100% (greater than 100 percent).
Job needs to be filled with the best person match using the following scoring method:

- **Closest Fit** — A target (person) profile has a matching item with:
  - A higher rating, then the person profile score is a number less than 100 percent.
  - The same rating, then the person profile score is 100% (100 percent).
  - A lower rating, then the person profile score is less than 100 percent.

- **High to Low Person Rating** — A target (person) profile has a matching item with:
  - A higher rating, then the person profile score is >100% (greater than 100 percent).
  - The same rating, then the person profile score is 100% (100 percent).
  - A lower rating, then the person profile score is a number less than 100 percent.

The system automatically uses the *Closest Fit* method for person-to-person or job–to–job searches (such as looking for people with certain qualifications or looking for jobs with certain criteria). This is where a target profile has a matching item with:

- A higher rating, then the score is a number less than 100 percent.
- The same rating, then the score is 100% (100 percent).
- A lower rating, then the score is a number less than 100 percent.

When a target profile does not have the criteria item, the score is 0% (zero percent).

The system calculates the rating property score based on the number of levels in the rating model defined for that item.

---

**Important!** When running a search and compare, the rating models used for the profile items in the source and target profiles must have the same number of rating levels. If the rating models are not consistent, the scores will not be accurate.

---

**Calculating Item Scores for Exact Match Items**

The system automatically includes the Exact Match field for each item in the search criteria. If you select *Yes* to the Exact Match option for an item, the system searches for profiles that include the item and all the properties specified for that item. Profiles that have different item properties are not included in the results. However, since the Fluid pages use boolean logic, the results may return a profile that does not have an exact match, depending on your use of the AND and OR operator.

For example, your search criteria includes two competency items and a degree, as shown in the table, and each item is connected by an OR operator:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Country</th>
<th>Exact Match</th>
</tr>
</thead>
<tbody>
<tr>
<td>0110 (Time mgt)</td>
<td>3</td>
<td></td>
<td>Yes</td>
</tr>
<tr>
<td>0203 (Conf &amp; mgt)</td>
<td>4</td>
<td></td>
<td>No</td>
</tr>
</tbody>
</table>
This table lists the items in the target profile and the item scores:

<table>
<thead>
<tr>
<th>Item ID</th>
<th>Rating</th>
<th>Country</th>
<th>Item Score (unweighted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0110 (Time management)</td>
<td>2</td>
<td></td>
<td>0</td>
</tr>
<tr>
<td>(Although the profile has the item, it did not have an exact match to the rating property)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>0203 (Confidence &amp; maturity)</td>
<td>4</td>
<td></td>
<td>100</td>
</tr>
<tr>
<td>BA (Bachelor of Arts)</td>
<td></td>
<td>USA</td>
<td>50</td>
</tr>
<tr>
<td>(Although it matched the item, it did not match the country value, thus only matching 50% of the requirement)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The target profile scored 0 for item 0110 (Time Management) because the rating does not have an exact match with the item. However, the profile is returned in the results because the target profile contained exact or partial matches to other items. With the OR operator, the profile only needed to possess at least one of the criteria item properties.

If the items in this example had been joined with the AND boolean operator, then the profile would not have been returned because the profile needed to have a match with all the items.

**Search and Compare Profiles Tile**

Use the Search and Compare Profiles tile to access and search for profiles that match selected search criteria and compare those profiles.

**Navigation**

The Search and Compare Profiles tile is delivered as part of the following dashboards based on your user role, but you can add the tile to any home page through personalizations:

- **Administrator**: From the Workforce Administrator home page in fluid, select the Profile Administration tile to access the Profile Administration Dashboard.

- **Employee**: From the Employee Self Service home page in fluid, select the My Profiles tile to access the "My Profiles Dashboard" (PeopleSoft HCM 9.2: eDevelopment).

- **Manager**: From the Manager Self Service home page in fluid, select the Team Profiles tile to access the "Team Profiles Dashboard" (PeopleSoft HCM 9.2: eDevelopment).
Image: Search and Compare Profiles tile

This example illustrates the Search and Compare Profiles tile.

Click the Search and Compare Profiles tile to access the Start a New Search page.

(Fluid) Start a New Search Page

Use the Start a New Search page (JPM_ADMIN_SRCH_FL) to select from the list of available configured search queries that are defined for a user using the fluid user interface.

Navigation

- **Administrator**: Workforce Administrator home page >Profile Administration tile >Search and Compare Profiles tile.
- **Employee**: Employee Self Service home page >My Profiles tile >Search and Compare Profiles tile.
- **Manager**: Manager Self Service home page >Team Profiles tile >Search and Compare Profiles tile.
- Select the Search and Compare Profiles tile from any home page to which it has been added.

Image: Start a New Search page

This example illustrates the fields and controls on the Start a New Search page.
The options on this page vary based on the configuration.

**Workforce Searches, My Team Searches, and My Searches**

These tabs display across the top of the page and are based on the roles you are assigned. You will see the following tabs if you have been assigned the corresponding role:

- Workforce Searches page tab: *Administrator* role
- My Team Searches page tab: *Manager* role
- My Searches page tab: *Employee* role

If you are assigned to only one role, the search queries associated with your role are displayed, and the tab is not shown on the page.

**Note:** Valid search queries for user roles (*Administrator*, *Employee*, and *Managers*) are defined on Define Search Configuration Page.

The configuration of the search queries determines which of the following pages the application will display next:

- (Fluid) Search Profiles Page
- (Fluid) Adhoc Search Profiles Page
- Select an Employee (for an Administrator), Select Team Member (for a Manager), or Select Your Job Profile (for an Employee)
- (Fluid) Search Criteria Page

**Related Links**

Understanding the Search and Compare Profiles Process

**(Fluid) Search Profiles Page**

Use the Search Profiles page (JPM_COMPRF_SRCH_FL) to select the profile that you want to use as the source of criteria for the search.

**Note:** The source profile that you select provides the default search criteria. This page is displayed only if the search selected has a criteria rule of *Default, No Display or Default and Display* and the source profile type is a non-person profile type. If the criteria rule is *No Default, Display*, you enter the search criteria manually on the (Fluid) Search Criteria Page.

**Navigation**

Select a search query with a non-person source type on the (Fluid) Start a New Search Page.
Image: Search Profiles page

This example illustrates the fields and controls on the Search Profiles page.

All Searches button

Click this button to return to the previous step and select a new search query.

These fields appear when the source profile type is a non-person profile type.

Type

Displays the profile type defined as the source for the search. The source and target profile types are configured on the Define Search Configuration Page.

Profile Name or ID search field and Search

Enter a description or ID for the non-person profile that you want to use as the source of criteria. Click the profile Search below the search field to have the system retrieve profiles that meet your criteria and display them in the Profile Search Results section of the page.

Advanced Search or Basic Search

Click these links to toggle between the basic and advanced search field options.

Profile Search Results grid and Search > button

The Profile Search Results scroll area lists the profiles that match the search criteria you selected. Select the profile name that you want to use as the source for the search and compare.

Click the Search button in the sub-header of this page to run the search process and retrieve the search criteria for the source profile you selected.
Depending on the search type, the system does one of the following:

- Displays the (Fluid) Search Criteria Page.
  
  When the criteria rule for the search is Default, Display, the system displays this page and you can modify the search criteria before running the search.

- Runs the search using the selected profile and displays the (Fluid) Search Results Page.
  
  When the criteria rule for the search is Default, No Display, the system runs the search and displays the results.

(Fluid) Adhoc Search Profiles Page

Use the Adhoc Search Profiles page (JPM_SRCH_ADHOC_FL) to select the profile type that you want to use as the source of criteria for the adhoc search.

Navigation

Select an adhoc search query on the (Fluid) Start a New Search Page.

Image: Adhoc Search Profiles page

This example illustrates the fields and controls on the Adhoc Search Profiles page.

These fields appear for adhoc [No Default, Display (Adhoc)] searches where the source and target profile types are not defined on the search configuration page.

All Searches button

Click this button to return to the previous step and select a new search query.

These fields appear when the source profile type is blank:

Source Profile Type and Target Profile Type

Select the profile that you want to use as the source of criteria for the search. The source profile type is used as the basis for the search criteria. The target is the profile type from which the system searches for matching profiles.

When you complete these fields, the system displays the (Fluid) Search Criteria Page.
Chapter 6 Working with Search and Compare Profiles

(Fluid) Search Criteria Page

Use the Search Criteria page (JPM_SRCH_CRITERIA) to view and modify the search criteria for the search and compare.

Note: If the search selected on the Search for Profiles page has a criteria rule of Default and Display or No Default, Display (Adhoc), this page is displayed before you run the search. If the criteria rule is Default, No Display, the system runs the search without first displaying the Search Criteria page.

Navigation

• Select a search query item from the (Fluid) Start a New Search Page.

• Click the Search > button in the header of the (Fluid) Search Profiles Page.

Image: Search Criteria page

This example illustrates the fields and controls on the Search Criteria page.

Use this page to define the search criteria. If the search that you selected has the criteria rule of Default, Display, the system automatically displays the default search criteria based on the source profile you selected on either the (Fluid) Search Profiles Page or the select an employee search page. Review and modify the search criteria as required.

Search and Compare Profiles button

Click this button in the page banner to start a new search. The system returns you to the (Fluid) Start a New Search Page that lists all the searches available for your role.

Select a Profile or All Searches button

Click this button to return to the previous step and enter a new source profile or select a new search query.

Search > button

Click this button in the sub-header to run the search and compare process.
Working with Search Criteria Groups

Use groups to help you to find and compare people or jobs using different combinations of criteria in a single search. You can add the same criteria in multiple groups and make different combinations. You can also move search criteria items from one group to another group.

The following scenario shows an example of using groups in your search criteria:

You are looking for a person who has certain qualifications but are open to several different combinations of educational experiences. Qualified individuals would need to possess one of the following educational combinations:

• Bachelor of Business Administration
  
  OR
  
  • Associate of Business Administration AND Certified Public Accountant
  
  OR
  
  • Associate of Business Administration AND Association of Cost Management Accountants certification

To enter this search criteria, you will need to:

1. In the Group -1 group box, select the Add / Remove Criteria link, select the criteria type Degrees, add the Bachelor of Business Administration criteria, and click Done.

2. Select the + Add Group icon and link to insert the Group - 2 group box at the top of the page. Click the Add / Remove Criteria link in the Group - 2 header. Select a criteria type of Degrees and add the Associate of Business Administration criteria. Then select a criteria type of Licenses and Certifications and add the Certified Public Accountant, and click Done.

3. Select the + Add Group icon and link to insert the Group - 3 group box at the top of the page. Click the Add / Remove Criteria link in the Group -3 header. Select a criteria type of Degrees and add Associate of Business Administration. Then select a criteria type of Licenses and Certifications, add the Association of Cost Management Accountants criteria, and click Done.
**Image: Example: Criteria Groups**

This example illustrates the use of criteria groups as explained in the previous scenario.

<table>

</tbody>
</table>

**Adding and Removing Groups**

- **Add Group** icon and link: Click this link to add another criteria group to your search. The system will always provide one group by default, but you can add multiple groups to create different combinations of criteria in a single search. You can add the same criteria in multiple groups to make different combinations.

- **Clear All Groups** link: Click this link to remove the search criteria from all the groups.
Click this link in the criteria group header to remove the group from this search criteria. When a group is the only criteria group on the page, click this link to remove all the criteria specified in the group.

**Note:** When a group is collapsed, this icon is not available for selection.

Displays the operator OR to indicate that a profile need only meet the requirements of one of the groups.

**Note:** You can only use the operator OR between groups.

### Adding or Removing Criteria

A group consists of one or several criteria cards that indicate your searching parameters. Each group must contain at least one search criterion.

**Add / Remove Criteria** icon and link

Click this icon and link to open the (Fluid) Add / Remove Criteria Page to specify criteria items for a group to include in your search.

**Show All Details** and **Hide All Details** links

Toggle between these two links to show or hide additional details that may reside on the criteria card.

**Edit** icon and link

Click this icon and link to access the <Edit Criteria Item> Page where you can update or delete a group criteria item.

**Details** link

Click this link to show or hide additional details that reside on the criteria card. The link will toggle between a down and up arrow to expand or collapse the data.

**Exact Match**

Displays whether a criteria item must be part of the target profile to be in the search results.

**Note:** Exact Match is the Mandatory property in the profile setup configuration. If the Mandatory property is included in a content section definition, the system uses the setting in the profile as the default value in the search criteria, but you can override the default.

Click these icons to toggle between the **OR** and **AND** operators. These operators are available between criteria cards within a group and provide you with the flexibility to require that the target profile possess all criteria items (AND) or specify that the target profile need have only one of the criteria items (OR).

When you select OR, the page combines the criteria cards indicating that only one item from the cards is required.
When you select AND, the criteria cards remain separate, indicating that both card items are required to return rows in the search.

**Moving Criteria from One Group to Another**

Moving criteria varies depending upon the device you are using or mode in which you have accessed the system.

(Desktop) Click and drag this icon to move a criteria card to another drag and drop icon location. You can also move a criteria card to another group. When you move a card, the operator that sits on top of the card moves with it. For example, if you had a criteria item card that was preceded with the AND operator and you move it below another card, the AND operator will remain between the top card and the card you just moved.

**Image: Moving Criteria when using a touch screen or in accessibility mode**

This example illustrates the moving options when using a touch device or in accessibility mode.

Move `<Criteria Item>` link

(Touch screens or Accessibility mode) Click the link to open the Move `<Criteria Item>` page (JPM_SRCH_MOVCR_SCF) and move a criteria item to another location. You can also move a criteria card to another group. When you have more than one group, select the group to which this item should be moved. Then use the Placement in Group field to specify where you want to place it within the group.

(Fluid) Add / Remove Criteria Page

Use the Add / Remove Criteria page (JPM_SRCH_ADDCR_SCF) to specify group criteria items that you want to include in your search.

Navigation

Click the Add / Remove Criteria link in the header of a group box.

Image: Add / Remove Criteria page

This example illustrates the fields and controls on the Add / Remove Criteria page.

Use this page to add or remove criteria items from a criteria group box. This page allows you to display all criteria items for a content type, or display the items you have selected thus far. The bottom of the page
shows how many items you have selected for a criteria type and the total of all items selected from all content types.

| Note: Criteria items are known as content items when configuring the Profile Management system. |

| Type | Select a criteria type. Valid criteria types are added as content sections to a profile type on the Profile Types - Content Page. When you select a type and click the Search Criteria, the page will list those criteria items you can add to the criteria group. |
| Name or ID | Enter a full or partial name or ID of a criteria item to filter the list to show only those items that match the information you entered. |

| Note: You must select a criteria type first to use this field. |

| Search Criteria button | Click this button to search for items that are within the specifications you entered in the Type and Name or ID fields. |
| Show All Selected Criteria | This link becomes active after you add criteria items. Click to show a list of all items you have selected for this criteria group. |
| (Add Criteria) icon | Click to add an item to the criteria group. When this icon appears, it is not added to your criteria group. |
| (Remove Criteria) icon | Click to remove an item from the criteria group. When this icon appears, it has already been selected for this criteria group. Note that if the item was already a part of this criteria group prior to selecting the Add / Remove Criteria link, it will still show up on the list preceded by the remove criteria icon. |
| Cancel button | Click this button to return to the Search Criteria page without saving any of your changes. |
| Done button | Click this button to save and add your changes to the criteria group. |

**Add / Remove Criteria page when viewing selected criteria**

To view only the criteria items you have selected for your search criteria, use the Show All Selected Criteria link.

**Navigation**

Click the Show All Selected Criteria link on the Add / Remove Criteria page.
Image: Add / Remove Criteria page showing all the selected criteria

This example illustrates the Add / Remove Criteria page when you click the Show All Selected Criteria link.

When you click the Show All Selected Criteria link, the page shows all the items you have selected for this criteria group. It also includes the following field elements:

**Name or ID**
- Enter a full or partial name or ID of a criteria item to filter the list to show only those items that match the information you entered. It searches on all items selected for this group.

**Filter Criteria** button
- Click this button to search for items that meet the criteria you entered in the Name or ID field.

**Clear Filter** button
- Click this button to clear the Name or ID field and reset the list to show all items you have selected for this group.

**Add Search Criteria**
- Click this link to return to the page where you can select types and add more items.
<Edit Criteria Item> Page

Use the <Edit Criteria Item> page (JPM_SRCH_CHGCR.SCIF) to update or remove search criteria from a group.

**Note:** The page name will display the content item you selected for edit.

**Navigation**

Click the Edit icon and link for a criteria card on the *(Fluid) Search Criteria Page.*

**Image: <Edit Criteria Item> page**

This example illustrates the fields and controls on the <Edit Criteria Item> page.

```
<table>
<thead>
<tr>
<th>Cancel</th>
<th>Financial Accounting</th>
<th>Done</th>
</tr>
</thead>
</table>

Exact Match Yes

Proficiency 4-Very Good

Remove Criteria
```

The fields and options on this page will vary based on the configuration of the criteria item.

**Exact Match**

Identify if a criteria item must be part of the target profile for it to be returned in the search results. This option can be used in conjunction with another property value in order to indicate what value the target source needs to match.

If the Exact Match option is set to Yes for any criteria item, the search results include only those profiles containing that profile item and having the same property values as those in the search criteria, provided it is not combined with an OR operator in the search criteria where it may match the other item values.
**Note:** Exact Match is the Mandatory property in the profile setup configuration. If the Mandatory property is included in a content section definition, the system uses the setting in the profile as the default value in the search criteria, but users can override the default.

**Note:** A profile may still return if it contains a criteria item that does not have the same properties as the search criteria if the profile matches other items in the criteria.

**Proficiency or Target Proficiency**
Select the proficiency rating wanted for the criteria item. This field is available when the search criteria includes one or more of the Rating properties.

**Remove Criteria** icon and link
Click this icon and link to delete this criteria item from the criteria group.

**Done**
Click this button to save your changes.

---

**(Fluid) Advanced Filters Page**
Use the Advanced Filters page (JPM_SRCH_GRPFLT_FL) to specify additional filters to narrow the search to specific profile groups or job data properties.

**Note:** If the search selected on the Search for Profiles page has a criteria rule of Default and Display or No Default, Display (Adhoc), this page is displayed before you run the search. If the criteria rule is Default, No Display, the system runs the search without first displaying this Search Criteria page.

**Navigation**
- Select a search query item from the (Fluid) Start a New Search Page and select the Advanced Filters tab.
- Click the Search > button in the sub-header of the (Fluid) Search Profiles Page and select the Advanced Filters tab.
**Image: Advanced Filters page**

This example illustrates the fields and controls on the Advanced Filters page.

Use this information to limit or narrow your search to those with selected job data or that are part of a profile group. Filter data is used to filter the target profile information but does not contribute to the overall search scores or ranking. For example, you may want to find those person profiles that best match the requirements of the job *Manager-Information Systems* and are currently located in the *Paris* location. The Location field will filter out those candidates that are not in the Paris office and the ranking of the candidates is based on how well their profiles match the *Manager-Information Systems* job profile.

**Additional Filters**

This section is available when the target source is a person type.

Enter a partial or full description to use as a filter against your search. You can use single quotes (‘’) around words that make up a phrase or an asterisk (*) to search for partial strings.

**Clear Additional Filters**

Click this link to clear all the values you have entered in the Additional Filters section.

**Profile Group Filters**

The group box appears only if the target profile type belongs to searchable profile groups.

See Profile Group Types Page.

**Profile Group Type**

Select a profile group type. Valid groups are those that share the same profile type as this search.

**Profile Group**

Select a profile group, which is a subset of the group type, and specify which profile IDs are members of this group.
(Fluid) Search Results Page

Use the Search Results page (JPM_SRCH_RESULT) to display the results of the search.

Navigation

- Click the Search button on the Search Criteria page.
- Select a profile on the Select a Profile page.

Image: Search Results page

This example illustrates the fields and controls on the Search Results page. You can find definitions for the fields and controls later on this page.

Important! When running Search and Compare, if the indexes cannot be located, the system will issue a message stating that the search index could not be found. This means that the process Schedule Search Indexes has not been run to create the indexes or the search framework environment is not accessible. When the index has been located, but the search criteria does not find any profile matches, the system will issue a message stating that your search did not return any results.

Filters (Facets) Panel

This left panel displays facets that are based off of the search results. Select different facets to further filter and narrow your results.
Chapter 6 Working with Search and Compare Profiles

Note: When you have multiple languages enabled, you must run the Person Profile search index for All Languages to enable the multi-language display of the facet values.

Breadcrumbs will appear above the Search Results grid for each selected facet. Each time you select a facet, the list of facet values is refined and a new set of values and counts are displayed.

Search Results

Search and Compare Profiles button
Click this button in the page banner to start a new search. The system returns you to the (Fluid) Start a New Search Page that lists all the searches available for your role.

Search Criteria button
Click this button to return to the (Fluid) Search Criteria Page and review, modify, and rerun the search with different search criteria.

Sort By
This field is not available when the source and target profiles are of the same profile type (Non-Person-to-Non-Person or Person-to-Person) and displays results according to closest fit.

Displays the sorting method of the profile search results.

When the search criteria includes one or more of the Rating properties for an item, the target rating impacts the profile search ranking method.

Options vary based on the target profile. The default method is provided by the value defined on the Define Search Configuration Page, but you can override this value.

Options for a Person source to a Non-Person target profile include:

• *Job Rating with Closest Fit*: The closer the job profile results are to the search criteria rating the higher the ranking.

• *Lowest to Highest Job Rating*: Job ratings that are at or below the person rating will be ranked higher.

Options for a Non-Person source to a Person target profile include:

• *Person Rating with Closest Fit*: The closer the person profile results are to the search criteria rating the higher the ranking.

• *High to Low Person Rating*: Person ratings that are at or above the job rating will be ranked higher.

See also Understanding Search and Compare Profile Results Using the Fluid Pages.

Add to Interest List button
This button appears when the target profile type for the search is a non-person profile type and the Add to Interest List Button option is selected on the Define Search Configuration Page.
Click this button to add the profiles you have selected to a person's interest list.

When you select jobs to add to an interest list, the system displays a confirmation message stating the number of jobs added and an ADDED badge will appear at the end of the row for that profile.

**Note:** The ADDED badge remains until you move to another page.

Profile check boxes

Select the profiles that you want to include in the compare process. This will add the profile to the (Fluid) Compare Results Page.

If you are viewing job profiles for a person and the Add to Interest List button is available, select those job profiles you want to add to the person’s interest list.

**View > profile link**

Click this link to open and view the profile. The system displays the Person Profile page or the Non-person Profile page depending on the profile type.

**Compare Results button**

Click this button to run the comparison for the profiles you selected. The system displays the (Fluid) Compare Results Page, which lists the profiles you selected and the match percentages for each of the search criteria items.

**Show More link**

If more profiles are returned in the results than appear on the page, this link will appear at the bottom of the search results grid.

Click this link to show additional profiles that are returned by the search. The default number of items to display is defined in the Display Max field on the (Fluid) Compare Results Page.

Click the Compare Results button on the (Fluid) Search Results Page or (Fluid) Compare Profiles Page.
Chapter 6 Working with Search and Compare Profiles

Image: Compare Results page

This example illustrates the fields and controls on the Compare Results page. You can find definitions for the fields and controls later on this page.

This page lists the items in the search criteria and the corresponding item score for the profiles that you selected.

Search and Compare Profiles button
Click this button in the page banner to start a new search. The system returns you to the (Fluid) Start a New Search Page that lists all the searches available for your role.

Search Results button
Click this button to return to the (Fluid) Search Results Page and select other profiles for comparison or change the sort order.

Profile Search Results Cards

The top of this page shows those profiles you selected for the compare process in a card format. Use this section to review, move, delete, or add profiles to the compare process.

(Drag and Drop) icon
Click and drag this icon to move a profile results card to another drag and drop icon location to change the sort order manually.

Note: For touch screen or in accessibility mode, the cards will display Move to the Right [>] or Move to the Left [<] arrow buttons to change the order of the cards.

(Related Actions) icon
Click the Related Actions icon to perform other transactions for this profile.

View link
Click this link to open and view the profile. The system displays the Person Profile page or the Non-person Profile page depending on the profile type.
(Minimize Profile) icon

Click this icon to minimize a profile so it does not show in the compare results. This removes the profile from the grid, but displays this profile in minimized form at the bottom of the page. You can select this minimized icon to reinstate the profile in the Compare grids.

(Add Profile) card

Click this card icon to open the (Fluid) Profile Selection Page and view a list of profiles that were returned as part of the search process and add it to the compare process.

Configurable Compare Group Headings

Administrators can configure this page to display additional compare groups using the search and compare configuration pages. This allows you to view additional fields in the compare results which do not impact the search ranking. In the previous screen shot, the Job Information and Additional Information collapsible sections were part of this search query’s setup.

Matching Results for “<Profile Name>”

This section shows the results for the compare based on the profiles and sort order for the compare process.

Match percentage calculated based on <Sort Order>

Displays this text and the sort order value that you selected on the previous page to indicate how the individuals are ranked on this page.

Show Profile Name and Hide Profile Name link

Click this link to toggle between showing the target profile names (for example, the employee or job names) in the header of each column.

The results will display a collapsible Criteria Type group box that lists the criteria items selected for that type. The left most column in the box shows the source criteria items, and when applicable, the proficiency or requirements specified for that profile. The other columns represent the target items that correspond to the search criteria with a percentage score of how well they match to the source item based on the sort.

Details

Click this link to show or hide additional details that reside on a row for a criteria item. The link will toggle between a down and up arrow to expand or collapse the data.

Add Profile icon and link
Click to add another target profile ID.
Chapter 7

Matching Profiles

Understanding Profile Comparisons

The PeopleSoft Manage Profiles business process provides three ways to compare profiles:

- Search and compare profiles.
- Compare profiles.
- Role matching.

Search and Compare Profiles

Using the Search and Compare Profiles option you can configure searches to suit your content catalog, profile types, and users. Users select the search that they want to run and the search returns the profiles that best match the search criteria. Each profile in the search results is assigned a score that indicates how well the profile matches all the item properties specified in the search criteria. You can also compare profiles in the search results with the search criteria. Depending on the search type, users can also modify the search criteria, which makes the Search and Compare Profiles more flexible than role matching.

Use the Search and Compare Profiles option if you have a specific profile or profile item criteria and you want to search for matching profiles within a profile type.

See (Classic) Searching and Comparing Profiles and (Fluid) Searching and Comparing Profiles.

Compare Profiles

The Compare Profiles option provides an online comparison of the profile items in a source profile with one or more target profiles.

See (Classic) Compare Results Page or (Fluid) Compare Results Page.

Profile Matching

Use the profile matching options if you want to compare a specific employee profile with a specific non-person profile and you want fit-gap information on each competency based on proficiency and importance only.

The options on the Workforce Development > Profile Management >Profiles >Profile Matching menu enable you to compare the competencies and other profile content of an employee's profile against those required by a non-person profile, or a group of employee profiles against a non-person profile for a job task. The degree of fit is based on importance (field JPM_IMPORTANCE) and in the case of competencies, item proficiency (field JPM_RATING1). The comparison is not configurable and will use these fields only. The points assigned as a match score are based on the importance points of the matching items. If the non-person profile uses a profile type that does not have JPM_IMPORTANCE defined as a field on the content types, each item is given an importance of 1 and the points scored will match the number of items matched.
The matching can be done using any profile type, but the delivered PERSON and ROLE profile types are set up to work best with the scoring of points in the matching process.

Use Search and Compare Profiles if you want to:

• Search person or non-person profiles for best matches.

With profile matching you select one person profile and one non-person profile and then match on proficiency and importance only. With Search and Compare Profiles, you have greater flexibility to set up search criteria and the searches return the profiles that best match those criteria.

See (Classic) Searching and Comparing Profiles and (Fluid) Searching and Comparing Profiles.

• Make searches available to employees and managers.

If you have eDevelopment installed you can set up searches for self-service users.

See Understanding Setting Up Search and Compare Profiles and Understanding the Search and Compare Profiles Process.

---

**Understanding Profile Matching**

These topics discuss:

• Point awards and importance levels.

• Multiple evaluations.

**Point Awards and Importance Levels**

You run different inquiries to match:

• Employee to non-person profiles.

• Teams to job tasks.

However, all inquiries are performed the same way. The system awards points to employees or teams based on their assigned competencies using competency proficiency ratings, and importance given to the competency in the non-person–profile. Other content items are awarded points only based on the importance assigned in the non-person profile. If the Importance field is left blank, the system assigns an importance of 1 to all items. This happens when the profile type for the profile does not have the Importance field defined to the content sections.

The system assigns the following point values to importance levels:

<table>
<thead>
<tr>
<th>Importance Level</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>5</td>
</tr>
<tr>
<td>Above Average</td>
<td>4</td>
</tr>
<tr>
<td>Average</td>
<td>3</td>
</tr>
</tbody>
</table>
This table shows the competency requirements for a human resources (HR) specialist position and the points awarded for each competency:

<table>
<thead>
<tr>
<th>Competency</th>
<th>Importance Level</th>
<th>Points Assigned</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>High</td>
<td>5</td>
</tr>
<tr>
<td>Leadership</td>
<td>Average</td>
<td>3</td>
</tr>
<tr>
<td>Interpersonal Effectiveness</td>
<td>Above Average</td>
<td>4</td>
</tr>
<tr>
<td>Planning</td>
<td>Low</td>
<td>1</td>
</tr>
<tr>
<td>Decision Making</td>
<td>Above Average</td>
<td>4</td>
</tr>
<tr>
<td>Adaptability to Change</td>
<td>Below Average</td>
<td>2</td>
</tr>
</tbody>
</table>

The total match value for a position represents the maximum number of points available if the employee meets all the requirements. In the preceding example, the total match equals 19 (the sum of the points in the Points Assigned column). Points are assigned differently for content items other than competencies.

**Employee Points for Content Items Other than Competencies**

Other content points are calculated by the system. If the item exists in an employee's profile, the system awards points to the employee based on the importance value that you assign to the item. Some of the content types that are calculated in this manner are: degrees, school education, honors and awards, licences & certifications, language skills, memberships, and tests/examinations, and NVQs.

**Employee Points for Competencies**

Competencies have proficiency ratings associated with them. These ratings indicate a level of expertise. If you are using a profile type with this matching process, you should set it up in such a way that when you assign competencies to the non-person profile, you also define the rating required for each competency. Similarly, you should set up the employee profiles in such a way that you give a rating for each competency that you add to the profile.

The system assigns points to an employee only if the individual has the required proficiency level for the competency. The points assigned are calculated as the average of the points for the most current row for each of the user specified evaluation types. These user evaluation types are assigned in the Match Evaluation Types component.

Here are the match indicator icons:
If the employee's rating is more than one level higher than the rating required for the role, the system displays a blue diamond and the text indicating that the employee is over qualified.

A green filled circle indicates that the employee possesses the required competency and has the required proficiency rating.

A yellow triangle indicates that the employee has a rating that is one level lower than that required for the role.

A red square indicates that the employee's rating in this competency is multiple levels below that required for the role.

Because proficiency ratings vary according to the rating model, the system uses the review points value associated with the rating to perform the match analysis. In some cases, the value in Review Points field on the Rating Model page is the same as the rating. For example, the PSCM rating model uses ratings from 0 (none) to 5 (expert), and these ratings have the associated review points of 0 to 5.

The following table shows an example of the ratings required for an HR specialist position, and it shows a hypothetical employee profile. The competencies in the profile are assigned the PSCM rating model. The Match Indicator column shown describes the icon that appears for the particular scenario.

<table>
<thead>
<tr>
<th>Competency</th>
<th>Required Rating</th>
<th>Employee Rating</th>
<th>Match Indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>5</td>
<td>5</td>
<td>Met (green circle icon)</td>
</tr>
<tr>
<td>Leadership</td>
<td>4</td>
<td>3</td>
<td>Met Some (yellow triangle icon)</td>
</tr>
<tr>
<td>Interpersonal Effectiveness</td>
<td>3</td>
<td>5</td>
<td>Over Qualified (blue diamond icon)</td>
</tr>
<tr>
<td>Planning</td>
<td>3</td>
<td>1</td>
<td>Not Met (red square icon)</td>
</tr>
<tr>
<td>Decision Making</td>
<td>2</td>
<td>3</td>
<td>Over Qualified (blue diamond icon)</td>
</tr>
<tr>
<td>Adaptability to Change</td>
<td>3</td>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>

**Related Links**
- Setting Up Profile Types
- Defining Rating Models
- Maintaining Profiles as an Administrator

**Multiple Evaluations**

If multiple people evaluate an employee or group of employees, each evaluation might include different competencies and competency ratings.

To control which evaluations are used in match and gap analyses, you define match evaluation types. For example, you might include only evaluations with the status of Approved/Official.
To understand how the system performs a match analysis with multiple evaluations, consider the following example:

<table>
<thead>
<tr>
<th>Competency</th>
<th>Manager Evaluation</th>
<th>Peer 1 Evaluation</th>
<th>Peer 2 Evaluation</th>
<th>Average Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>5</td>
<td>4</td>
<td>5</td>
<td>4.67</td>
</tr>
<tr>
<td>Leadership</td>
<td>4</td>
<td>3</td>
<td>3</td>
<td>3.33</td>
</tr>
<tr>
<td>Interpersonal</td>
<td>5</td>
<td>5</td>
<td>5</td>
<td>5</td>
</tr>
<tr>
<td>Effectiveness</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Planning</td>
<td>NA</td>
<td>NA</td>
<td>NA</td>
<td>NA</td>
</tr>
<tr>
<td>Decision Making</td>
<td>3</td>
<td>2</td>
<td>3</td>
<td>2.67</td>
</tr>
<tr>
<td>Adaptability to Change</td>
<td>2</td>
<td>1</td>
<td>2</td>
<td>1.67</td>
</tr>
</tbody>
</table>

If you use manager and peer evaluations for match analysis, the system calculates the average rating based on the three evaluations: manager, peer 1, and peer 2.

The following table shows the results if this employee is compared with the HR specialist position. The Employee Match column describes the icon that appears for the particular scenario.

<table>
<thead>
<tr>
<th>Competency</th>
<th>Importance</th>
<th>Points Assigned</th>
<th>Rating Required</th>
<th>Employee Rating</th>
<th>Employee Match</th>
<th>Employee Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>High</td>
<td>5</td>
<td>5</td>
<td>4.67</td>
<td>Green half-filled circle</td>
<td>0</td>
</tr>
<tr>
<td>Leadership</td>
<td>Average</td>
<td>3</td>
<td>4</td>
<td>3.33</td>
<td>Green half-filled circle</td>
<td>0</td>
</tr>
<tr>
<td>Interpersonal</td>
<td>Above Average</td>
<td>4</td>
<td>3</td>
<td>5</td>
<td>+ Blue filled circle</td>
<td>4</td>
</tr>
<tr>
<td>Effectiveness</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Planning</td>
<td>Low</td>
<td>1</td>
<td>3</td>
<td>None</td>
<td>None</td>
<td>0</td>
</tr>
<tr>
<td>Decision Making</td>
<td>Above Average</td>
<td>4</td>
<td>2</td>
<td>2.67</td>
<td>Blue filled circle</td>
<td>4</td>
</tr>
<tr>
<td>Adaptability to Change</td>
<td>Below Average</td>
<td>2</td>
<td>3</td>
<td>1.67</td>
<td>Red circle outline</td>
<td>0</td>
</tr>
</tbody>
</table>

The total points value for the HR Specialist position is 19 (the sum of the values in the points assigned column). The employee earns the points for a competency when their rating meets or exceeds the required rating for the position being evaluated. In this case, the employee met or exceeded the required rating for two competencies. The combined point value for those two competencies is 8. Therefore, the employee's total points for evaluation against the HR Specialist position is 8.
Setting Up Match Evaluation Types

To set up match evaluation types, use the Match Evaluation Types (MATCH_TYPES) component.

This topic discusses how to define match evaluation types.

You must set up match evaluation types that correspond to the users for whom you want to run match analyses. Evaluation types determine which evaluations are included in each analysis.

## Page Used to Set Up Match Evaluation Types

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Match Evaluation Types Page</td>
<td>CM_MATCH_INSTR</td>
<td>Define match evaluation types specifying the types of inquiries a user can run and the evaluation types a user can access. To run the match analyses, you must first set up evaluation types and user access.</td>
</tr>
</tbody>
</table>

### Match Evaluation Types Page

Use the Match Evaluation Types page (CM_MATCH_INSTR) to define match evaluation types specifying the types of inquiries a user can run and the evaluation types a user can access.

To run the match analyses, you must first set up evaluation types and user access.

**Navigation**

Workforce Development > Profile Management > Profiles > Profile Matching > Match Evaluation Types > Match Evaluation Types

**Image: Match Evaluation Types page**

This example illustrates the fields and controls on the Match Evaluation Types page. You can find definitions for the fields and controls later on this page.
Search Type
Displays Role/Person. This enables the selected user ID to match non-person profiles to employees, employees to non-person profiles, and teams to projects.

Evaluation Type
Select evaluation types for this user.
These control which competency ratings the system includes when performing the analysis. For example, when performing a gap analysis for an individual (as opposed to a project team), you might include manager and peer evaluations and exclude customer evaluations.

If Self is selected as the evaluation type, only self-evaluations that have been approved by the employee's manager are included in the role matching process.

Matching Employee Profiles
These topics list prerequisites and discuss how to match employee profiles.

Pages Used to Match Employees to Profiles

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>

</tr>
</tbody>
</table>
Matching Profiles

Chapter 7

Prerequisites

Before you use the employee to profile match, set up:

- A profile for the employee using a person usage profile type. This profile type should have competencies set up with $JPM\_RATING1$ as the Proficiency field. The delivered profile type $PERSON$ is set up in this manner.

- A profile for the role using a non-person usage profile type. This profile type should have competencies set up with $JPM\_RATING1$ as the Proficiency field and $JPM\_IMPORTANCE$ set up as the Importance field. The delivered profile type $ROLE$ is set up in this manner.

- Match evaluation types for the user ID of the person running the search to control which evaluations are considered in the role match.

Setting Up Match Evaluation Types

Employee Profile Matching - Summary Page

Use the Employee Profile Matching - Summary page (CM_PROFILE_SUMM) to specify the employee, employee profile type and non-person profile with which you want to compare and view an analysis of the employee matches.

Navigation

Workforce Development > Profile Management > Profiles > Profile Matching > Employee Profile Matching > Summary

Image: Employee Profile Matching - Summary page

This example illustrates the fields and controls on the Employee Profile Matching - Summary page. You can find definitions for the fields and controls later on this page.

Employee Profile ID

Select the employee profile you wish to analyze. If you do not know the profile ID of the employee, select the look up button to access a search page where you can enter additional information to locate an employee profile.
The page will display the person’s name and the profile type associated with the employee’s profile after you have entered the employee profile ID.

**Profile ID and Find Profiles**

Enter the non-person profile ID you wish to compare to and rate the employee against. Select the Find Profiles button to access the search page to search for the profile by profile identity, profile group, or by description.

The page will display the description and profile type after entering the ID.

**Calculate Matches**

Select this button, after you have selected an employee profile and non-person profile, to calculate the matches. The system compares the employee’s profile content to that of the non-person profile and displays the results of the analysis.

**Match Analysis**

**Total Match Points and Total Possible Points**

Indicates the employee's points out of the total points possible compared to the non-person profile. This calculation includes points for all content items, both competencies and the non-competency items.

This total is weighted for the importance of each content item assigned to the non-person profile.

**Competency Match Points and Possible Competency Points**

Indicates how many of the points are from the employee's competencies and how many competency points are available. These numbers add to the total match and total possible point values.

**Other Item Match Points and Possible Other Item Points**

Indicates how many of the employee points are from non-competency content items and how many non-competency content item points are available. These numbers add to the total match and total possible point values.

**Employee Profile Matching - Competency Match Page**

Use the Employee Profile Matching - Competency Match page (CM_PROFILE_MATCH) to view competency matches that display an analysis of how the employee matches the individual competencies required for a given non-person profile.

**Navigation**

Workforce Development > Profile Management > Profiles > Profile Matching > Employee Profile Matching > Competency Match
Image: Employee Profile Matching - Competency Match page

This example illustrates the fields and controls on the Employee Profile Matching - Competency Match page. You can find definitions for the fields and controls later on this page.

**Match Analysis**

**Employee Match Points and Competency Points**

Indicates the number of competency points that an employee has out of a total possible number of competency points required by the non-person profile.

**Employee Competency Match and Total Competencies**

Displays the number of employee competencies that match the competencies required for the non-person profile. For example, an employee may only have 7 of the 15 competencies defined for the role.

**Competencies not ranked**

Displays the number of competencies required by the role that are not included in the employee's evaluations.

**Competency Match Detail**

Click to open the Competency Match Detail page and view the breakdown of each competency and its match within the profiles.

**Competencies**

**Competency**

Lists competencies assigned to the non-person profile, from highest to lowest importance.

**Importance**

Displays the importance levels that are assigned to the competencies in the non-person profile.

**Met Requirement**

Displays the appropriate text and icon in the field for how the person matches the competency. Values include *Over Qualified*, *Met*, *Met Some*, and *Not Met*. When a person's profile does not
Training Scheduled

Indicates whether the employee is already scheduled for training in the competency.

Competency Training

Select this link to open the Competency Training page to see if any available training courses target the competency.

Competency Match Detail Page

Use the Competency Match Detail page (CM_PROF_MATCH_SEC) to view competency match details of the employee's ratings in each competency assigned to the non-person profile.

Navigation

Click the Competency Match Detail link on the Competency Match page.

Image: Competency Match Detail page

This example illustrates the fields and controls on the Competency Match Detail page. You can find definitions for the fields and controls later on this page.

Required Points

Each rating in a rating model has points associated with it. Required points are derived from the rating (or rather a point translation of the rating) this is assigned to the competency for the specified role. You specify the number of points for each rating by using the Review Points field on the Rating Model page.
Employee Points

Displays the employee's point rating for the competency. Employee review points are the point translation of the rating that the employee receives for the competency, and these points are specified for each rating using the Review Points field on the Rating Model page.

Importance Match

If the employee possesses the required competency and has the required rating, the employee is awarded points based on the importance of the competency.

Employee Profile Matching - Other Items Match Page

Use the Employee Profile Matching - Other Items Match page (CM_PROFILE_MATCH2) to analyze other profile item matches for an employee. Review how well an employee matches individual content for a given non-person profile.

Navigation

Workforce Development > Profile Management > Profiles > Profile Matching > Employee Profile Matching > Other Items Match

Image: Employee Profile Matching - Other Items Match page

This example illustrates the fields and controls on the Employee Profile Matching - Other Items Match page. You can find definitions for the fields and controls later on this page.

Match Analysis

Employee Match Points

Indicates the number of employee importance points for those profile item matches between the employee and the non-person profile.

Possible Other Item Points

Indicates the total number of profile item importance points available.

Employee Other Item Match

Displays the number of employee profile items other than competencies that match the profile items required for the non-person profile.
Total Other Content Items
Displays the number of total profile items that are required for the non-person profile.

Other Items
Content Type
Lists each content type for the content item assigned to the non-person profile, from highest to lowest importance.

Description
Lists descriptions of each profile item in the non-person profile from, highest to lowest importance.

Importance
Displays importance levels assigned to the profile item in the non-person profile.

Employee Complete
Indicates whether the employee has accomplished the content item.

Employee Profile Matching - Gap-Fit Measurement Page
Use the Employee Profile Matching - Gap-Fit Measurement page (CM_PROFILE_MATCH3) to compare an employee's ratings in each required competency with the rating expected for the role, and view the percentage difference.

The sum of these percentages provides an overall indication of how well the employee matches the requirements.

Navigation
Workforce Development > Profile Management > Profiles > Profile Matching > Employee Profile Matching > Gap-Fit Measurement
Image: Employee Profile Matching - Gap-Fit Measurement page

This example illustrates the fields and controls on the Employee Profile Matching - Gap-Fit Measurement page. You can find definitions for the fields and controls later on this page.

### Match Analysis

**Employee Proficiency Points**
Indicates how many importance points the employee has been awarded for competencies.

**Total Required Points**
Indicates how many competency importance points are possible for the non-person profile.

**Total Competencies**
Displays the number of competencies that are assigned to the non-person profile.

**Proficiency % Fit (proficiency percentage fit)**
Displays the employee's points as a percentage of the total possible. The system only includes points associated with competencies in this calculation.

For example, if the employee has 5 points and the total possible for the non-person profile is 20 points, then the percentage fit is 25%.

### Gap-Fit Analysis

**Empl Review Points (employee review points)**
Displays the employee's proficiency point rating for the competency. For example, if you use the PSCM rating model, a rating of 5 has an associated review point value of 5.

**Required Points**
Each rating in a rating model has points associated with it. Points are derived from the rating (or rather a point translation of the rating) that is assigned to the competency for the specified
role. You specify the number of points for each rating by using the Review Points field on the Rating Model page.

% Proficiency (percentage proficiency)

Displays the employee's rating percentage compared to the rating required for the role. The system divides the employee review points by the required points and converts the result into a percentage. For example, if the value of the employee review points is 3 but the role requires a point value of 4, then the percentage proficiency is 75%.

If an employee's rating exactly matches the required rating, then the percentage proficiency deficiency is 100%. A percentage less than 100% indicates that the employee has not met the required rating, and a percentage greater than 100% indicates that the employee's rating exceeds the rating required for the role.

Matching Teams to Projects

These topics list prerequisites and discuss how to match teams to projects.

Pages Used to Match Teams to Projects

<table>
<thead>
<tr>

</tbody>
</table>

Prerequisites

Before you can use the Compare Team to Job Task option, set up:

- A profile for the job task using a non-person usage profile type. This profile type should have competencies set up with JPM_RATING1 as the Proficiency field and JPM_IMPORTANCE set up as the Importance field. The delivered profile type ROLE is set up in this manner.
• Profiles for the employees in the team using a person usage profile type. This profile type should have competencies set up with \textit{JPM\_RATING1} as the Proficiency field. The delivered profile type \textit{PERSON} is set up in this manner.

• Match evaluation types for the user ID of the person running the search to control which evaluations are considered in the comparison.

Understanding NVQs

National Vocational Qualifications (NVQs) reflect the skills, knowledge, and understanding that employees possess, much like competencies. As with other accomplishments, NVQs enable transfer and progression, both within areas of competence and between them.

The national Qualifications and Curriculum Authority (QCA) coordinates the development and specification of NVQ standards. Refer to the QCA website http://www.qca.org.uk for further information. NVQ competence areas derive from a functional analysis of business roles and provide structure for competence-based qualifications. The qualifications are unit-based; the number and size of units varies between areas of competence. A unit is achieved when an enrolled employee is assessed as having competent skills and knowledge.

The following areas of work are currently covered by the NVQ system:

- Tending animals, plants, and land.
- Extracting and providing natural resources.
- Constructing.
- Engineering.
- Transporting.
- Providing health, social, and protective services.
- Providing goods and services.
- Manufacturing.
- Providing business services.
- Developing and extending knowledge and skill.
- Communicating.

NVQ competence levels include the following:

<table>
<thead>
<tr>
<th>Level</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level 1</td>
<td>Competence that involves the application of knowledge and skills in the performance of a range of varied work activities, most of which may be routine or predictable.</td>
</tr>
<tr>
<td>Level</td>
<td>Definition</td>
</tr>
<tr>
<td>--------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Level 2</td>
<td>Competence that involves the application of knowledge and skills in a significant range of varied work activities and performed in a variety of contexts. Some of the activities are complex or non-routine, and there is some individual responsibility and autonomy. Collaboration with others, perhaps through membership of a work group or team, may often be a requirement.</td>
</tr>
<tr>
<td>Level 3</td>
<td>Competence that involves the application of knowledge and skills in a broad range of varied work activities performed in a variety of contexts, most of which are complex and non-routine. There is considerable responsibility and autonomy, and control or guidance of others is often required.</td>
</tr>
<tr>
<td>Level 4</td>
<td>Competence that involves the application of knowledge and skills in a broad range of complex, technical or professional work activities, performed in a wide range of contexts and with a substantial degree of personal responsibility and autonomy. Responsibility for the work of others and the allocation of resources is often present.</td>
</tr>
<tr>
<td>Level 5</td>
<td>Competence that involves the application of skills and a significant range of fundamental principles across a wide and often unpredictable variety of contexts. Substantial personal autonomy and significant responsibility for the work of others and for the allocation of substantial resources is important, as personal accountability for analysis and diagnosis, design, planning, execution, and evaluation.</td>
</tr>
</tbody>
</table>

Several organizations develop, deliver, award, and preserve the quality of NVQs:

- **Sector bodies** identify, define, and update employment-based standards of competence for groups of occupations.
- **Awarding bodies** also develop NVQ standards. Additionally, they monitor the assessment process and award NVQs and unit certificates. They verify that employees are assessed fairly and consistently across all assessment centers.

The National Database of Vocational Qualifications contains comprehensive information on NVQs, including the units that make up each qualification, key skills, and units specifically developed for assessors and verifiers.

---

### Setting Up NVQ Information

These topics provide an overview of NVQ setup and discuss how to specify awarding bodies for NVQs.
Pages Used to Set Up NVQ Awarding Bodies

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>NVQ Award Body Table Page</td>
<td>NVQ_AWARD_TBL</td>
<td>Define name and location information for NVQ awarding bodies.</td>
</tr>
<tr>
<td>NVQ Award Bodies Page</td>
<td>NVQDETAILS</td>
<td>Specifying awarding bodies for NVQs that you have defined in the content catalog. You must set up NVQs and the NVQ Award Body Table values in before you can use this page.</td>
</tr>
</tbody>
</table>

Understanding NVQ Setup

To track NVQs, you need to define the following:

- NVQ content items.
- NVQ unit content items.
- NVQ Element content items.
  
  NVQ units are divided into elements and you track an employee's progress for each element separately.
- Awarding bodies.

NVQs, NVQ units, and NVQ elements are stored in the content catalog. Use the following delivered content types for NVQs:

<table>
<thead>
<tr>
<th>Content Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NVQ ELEMENT</td>
<td>Use to define the elements associated with NVQ units.</td>
</tr>
<tr>
<td>NVQ UNIT</td>
<td>Use to define the NVQ units that are required by NVQs.</td>
</tr>
<tr>
<td>NVQ</td>
<td>Use to define the NVQ codes.</td>
</tr>
</tbody>
</table>

The content types are related as follows:

- NVQ ELEMENT is a child of NVQ UNIT. This enables an element content item to be defined for different NVQ Unit content items. Satisfying the element only satisfies it within a specific NVQ Unit.
- NVQ UNIT supports NVQ.
  
  This enables one NVQ unit to be linked to more than one NVQ. Satisfying one NVQ Unit qualifies as completion within all NVQs that are supported by the NVQ Unit.

When you set up NVQs, NVQ units, and NVQ elements, use the Relationship page in the Content Item component to link these items.

Set up NVQ data as follows:

1. Set up the NVQs, NVQ units, and NVQ elements in the content catalog.
2. Set up awarding body name and location using the NVQ Award Body Table component (NVQ_AWARD_BODY).

3. Assign awarding bodies to NVQs using the NVQ Award Bodies component (NVQ_DETAILS).

Enroll NVQ Page

Use the Enroll NVQ page (NVQ_EMPLNVQS) to register employees for NVQ programs.

Navigation

Workforce Development > Profile Management > Manage NVQ GBR > Enroll NVQ > Enroll NVQ

Image: Enroll NVQ page

This example illustrates the fields and controls on the Enroll NVQ page. You can find definitions for the fields and controls later on this page.

Status

Enter the status of the NVQ for which you are registering the employee. Valid values are:

- *Achieved*: Select to indicate that the employee achieved the NVQ. You can select this value only if all of the associated NVQ units have a status of Completed.
- *Cancelled*: Select to cancel the employee's registration for the NVQ program.
• **Enrolled**: Select to enroll the employee in the NVQ program.

• **Previous Achievement**: Select to indicate that the employee already achieved this NVQ prior to enrollment in this program.

**Start**
Enter the date on which you set the NVQ status.

**Certificate Award Date**
Enter the date of the NVQ certificate award. This field is available only if you select *Achieved* or *Previous Achievement* in the Status field.

**Completed**
Enter the date on which the NVQ was completed. This field is available only if you select *Achieved* or *Previous Achievement* in the Status field.

**Registration Date and Registration Number**
Enter the date the employee registered for the NVQ program along with any registration number assigned to the employee.

When you save this page, the system updates the Manage Profiles profile tables with the enrollment information using the SetPersonProfileItems service. You can then view the enrollment information when you access the Person Profile page for the employee, but it cannot be updated from this page.

**NVQ Review Page**
Use the NVQ Review page (NVQ_REVIEW) to enter an NVQ review.

**Navigation**
Workforce Development > Profile Management > Manage NVQ GBR > Track NVQ > NVQ Review

**Image: NVQ Review page**
This example illustrates the fields and controls on the NVQ Review page. You can find definitions for the fields and controls later on this page.

**Review Date**
Enter or view the date of the review.
Type

Select the type of review you are entering. Valid values are:

- Brief Meet
- Meeting
- Requested
- Review

Reviewer

Enter the ID of the reviewer.

Description

Enter any pertinent notes you want to record for the review.

Note: You must also enter information in the required fields on the NVQ Unit Plan page before you can save the information on the NVQ Review page.

**NVQ Unit Plan Page**

Use the NVQ Unit Plan page (NVQ_UNIT_PLAN) to populate and track unit status for an NVQ review.

**Navigation**

Workforce Development > Profile Management > Manage NVQ GBR > Track NVQ > NVQ Unit Plan

**Image: NVQ Unit Plan page**

This example illustrates the fields and controls on the NVQ Unit Plan page. You can find definitions for the fields and controls later on this page.

This page enables you to track the status of the NVQ units associated with an NVQ program in which an employee is enrolled. Each time you create a new review on the NVQ Review page, you must populate the NVQ units on this page and enter a value in the Unit Status column for each unit.

**Populate NVQ Units**

Click to populate the NVQ Tracking, Data grid with the units defined with a Supports relationship with the content item associated with the NVQ. Once you have populated the grid, this button is no longer visible.

**Unit Status**

Select the status for each NVQ unit in the NVQ Tracking, Data grid. Valid values are:
- C (Completed)
- D (Submitted)
- I (In Progress)
- N (Not Started)
- P (Planned)

**Note:** The system changes the status to *Completed* automatically for a unit when you enter a date in the Completed field on the Unit Detail page. All NVQ units associated with an NVQ must have a status of *Completed* before you can set the NVQ status to *Achieved* on the Enroll NVQ page.

**Detail**

Click to access the Unit Detail page.

When you create and save a new review using the Track NVQ component, the system updates the Manage Profiles profile tables using the `SetPersonProfileItems` service (or the `DeletePersonProfileItems` service if you deleted a review). You can then view the tracking information for both the NVQ and NVQ Units content sections on the Person Profile page.

**Unit Detail Page**

Use the Unit Detail page (`NVQ_UNIT_PLAN_SEC`) to enter details for an NVQ unit being reviewed.

**Navigation**

Click the Detail link for an NVQ unit on the NVQ Unit Plan page.
**Image: Unit Detail page**

This example illustrates the fields and controls on the Unit Detail page. You can find definitions for the fields and controls later on this page.

```
<table>
<thead>
<tr>
<th>Competency</th>
<th>Unit Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>KGUNIT1</td>
<td>NVQ Unit 1</td>
</tr>
</tbody>
</table>

**Start Date**
Enter the date on which the employee began the NVQ unit.

**Expected**
Enter the date on which the employee is expected to complete the NVQ unit.

**Completed**
Enter the actual date on which the employee completed the NVQ unit. When you enter a date in this field and click the OK button, the system automatically sets the status of the NVQ unit to Completed.

**Presented**
Enter the date on which the evidence was presented.

**Submitted**
Enter the date on which the evidence was submitted.

**Description**
Enter information regarding evidence submitted by the employee toward the completion of the NVQ unit.

**Detail**
Click to access the Element Detail page.

**Element Detail Page**

Use the Element Detail page (NVQ_EMPLELEM_SEC) to enter details for an element of an NVQ unit being reviewed.

**Navigation**

Click the Detail link for an element on the Unit Detail page.
Image: Element Detail page

This example illustrates the fields and controls on the Element Detail page. You can find definitions for the fields and controls later on this page.

<table>
<thead>
<tr>
<th>Element Code</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>KGEL1</td>
<td>NVQ Element 1</td>
</tr>
</tbody>
</table>

- **Start Date**: Enter the date on which the employee began the element.
- **Expected**: Enter the date on which the employee is expected to complete the element.
- **Completed**: Enter the actual date on which the employee completed the element.
- **Description**: Enter any information pertinent to the completion of the element.

**View NVQs or View NVQs Units Page**

Use the View NVQs page (JPM_PROF_DTL_SEC) to view NVQ and NVQ Units details for a given person's profile.

**Navigation**

Click the NVQ or NVQ Unit link within the Person Profile page: NVQ tab.
Image: View NVQs page

This example illustrates the fields and controls on the View NVQs page. You can find definitions for the fields and controls later on this page.

<table>
<thead>

Reviewing NVQ Summaries

These topics discuss reviewing NVQ summaries.

Pages Used to Review NVQ Information

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>NVQs by Employee Page</td>
<td>NVQ_SUMMARY1</td>
<td>Review all NVQs associated with an employee.</td>
</tr>
<tr>
<td>NVQs by Qualification Page</td>
<td>NVQ_SUMMARY2</td>
<td>View the employees associated with an NVQ.</td>
</tr>
</tbody>
</table>
NVQs by Employee Page

Use the NVQs by Employee page (NVQ_SUMMARY1) to review all NVQs associated with an employee.

Navigation

Workforce Development > Profile Management > NVQ Reports GBR > NVQs by Employee > NVQs by Employee

Image: NVQs by Employee page

This example illustrates the fields and controls on the NVQs by Employee page. You can find definitions for the fields and controls later on this page.

The system lists the NVQ units sorted by status and date. Click a button in the View Options group box to see only those units of a given status.

Note: Only those NVQ units listed in the employee's PERSON profile are included. The system does not check employees' profiles of any other type.

NVQs by Qualification Page

Use the NVQs by Qualification page (NVQ_SUMMARY2) to view the employees associated with an NVQ.

Navigation

Workforce Development > Profile Management > NVQ Reports GBR > NVQs by Qualification > NVQs by Qualification
Image: NVQs by Qualification page

This example illustrates the fields and controls on the NVQs by Qualification page. You can find definitions for the fields and controls later on this page.

The system lists all the employees associated with the selected NVQ, sorted by status and date. Click a button in the View Options group box to see only those employees of a given status.

Running NVQ Reports

These topics list the pages used to run NVQ reports and discuss how to run the Initialize Plan process.

Note: You must run the Initialize Plan process before running the Employee Plan (NVQ006) report.

Pages Used to Run NVQ Reports

<table>
<thead>
<tr>
<th>Page Name</th>
<th>Definition Name</th>
<th>Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employee Status - NVQ001 Page</td>
<td>PRCSRUNCNTL</td>
<td>Run the NVQ - Employee Status report (NVQ001). This report lists employees assigned to an NVQ and their status.</td>
</tr>
<tr>
<td>Unit Listing - NVQ002 Page</td>
<td>PRCSRUNCNTL</td>
<td>Run the NVQ - Unit Listing report (NVQ002) that lists all defined NVQ units.</td>
</tr>
<tr>
<td>NVQ Listing - NVQ003 Page</td>
<td>PRCSRUNCNTL</td>
<td>Run the NVQ - NVQ Listing report (NVQ003) that lists all defined NVQs.</td>

<tr>
<td>Employee Plan - NVQ006 Page</td>
<td>PRCSRUNCNTL</td>
<td>Run the Employee Unit Plan report (NVQ006). This report summarizes an employee's NVQ Unit plan. You must run the Initialize Plan process (NVQ005) before you can generate the report.</td>
</tr>
</tbody>
</table>

**Initialize Plan Page (NVQ005)**

Use the Initialize Plan page (RUNCTL_NVQ005) to run the Initialize Plan process (NVQ005) for a selected employee.

This SQR process compiles the data required for the Employee Unit Plan report (NVQ006).

**Navigation**

Workforce Development > Profile Management > NVQ Reports GBR > Initialize Plan > Initialize Plan

**Image: Initialize Plan page (NVQ005 process)**

This example illustrates the fields and controls on the Initialize Plan page (NVQ005 process). You can find definitions for the fields and controls later on this page.

Use this page to run the Initialize Plan process (NVQ005) that compiles the data required to generate the Employee Unit Plan report (NVQ006).

**Language**

Automatically populated based on the run control ID that you selected.

Override the default language if necessary.
Appendix A

Content Type and Profile Type Properties

Understanding Properties

When you set up a content type, you select the properties, or field names, that are shared by items of that type. The system displays the properties that you define for a content type as fields on the Item Details page when you set up content items. These properties will be used to describe the content items when you define them.

After you add content types to the profile type to create content sections, you will then add the properties that will be available for viewing or updating a profile item. When users add profile items to the profile, the system displays the properties you define for the content section.

Note: The properties defined for a content type do not have any impact on the profile type content section properties.

The order in which properties are displayed on the Item Details page or in profiles is determined by the page field ordering and cannot be altered.

Note: The order in which properties are added to the profile type content section or to the Content Type has no impact on the display order.

The tables in this topic list the properties in the order that they are displayed.

### Property Initializations and Validations

The following initialization/validations are delivered to work with the PERSON Profile Type definition. An entry for the profile type exists in the table JPM_PKG_TYPES to specify that the validations in the application class ControllerPerson are active. If these validations are not desired, then the entry for the PERSON profile type can be removed from JPM_PKG_TYPES. When creating a new profile type, these validations will be included if the profile type is cloned from the delivered PERSON profile type and the Copy Validations check box is selected.
