## 2 Current Account Origination Process

This chapter includes following sections:

- [2.1 Introduction](#)
- [2.2 Reference Workflow for Current Account Origination](#)

### 2.1 Introduction

Oracle FLEXCUBE Onboarding (OFLO) is the middle office banking solution with a comprehensive coverage of Retail Banking Origination processes for Savings Account, Current Account, Term Deposit and Loans comprising of Home Loan, Personal Loan, Education Loan and Vehicle Loan. It is a Host-Agnostic solution.

It enables banks to deliver the improved user experience for various bank personas such as Sales Officers, Relationship Manager, Account Opening Officers, Branch Supervisor/Managers, Loan Officers, and Credit Officers and so on; handling defined functions in the lifecycle of the various product origination.

The convenience of configuring appropriate stages and the respective data segments within each of these stages, which can be business driven, is hosted and architected by our new platform solution. The random access navigation between data segments within a given stage with appropriate validations, helps enable the business user to capture apt information anytime during the account open process before the Current Account is created in the Host. The new workflow also supports capturing of relevant documents, stage wise, and generation of advices and notifications dynamically.

The initiation request for a Current Account can be originated by authorized branch users or relationship managers or by approved bank agents, either through the traditional branch channel or through dedicated protocol services made available on digital devices like tablets or mobiles. The initiation of Current Account request can be made for both new and existing customer types. Also, the system supports processing of the current account request from the customer which are directly received from the Self-Service Banking Channel (OBDX) through the REST based service APIs.

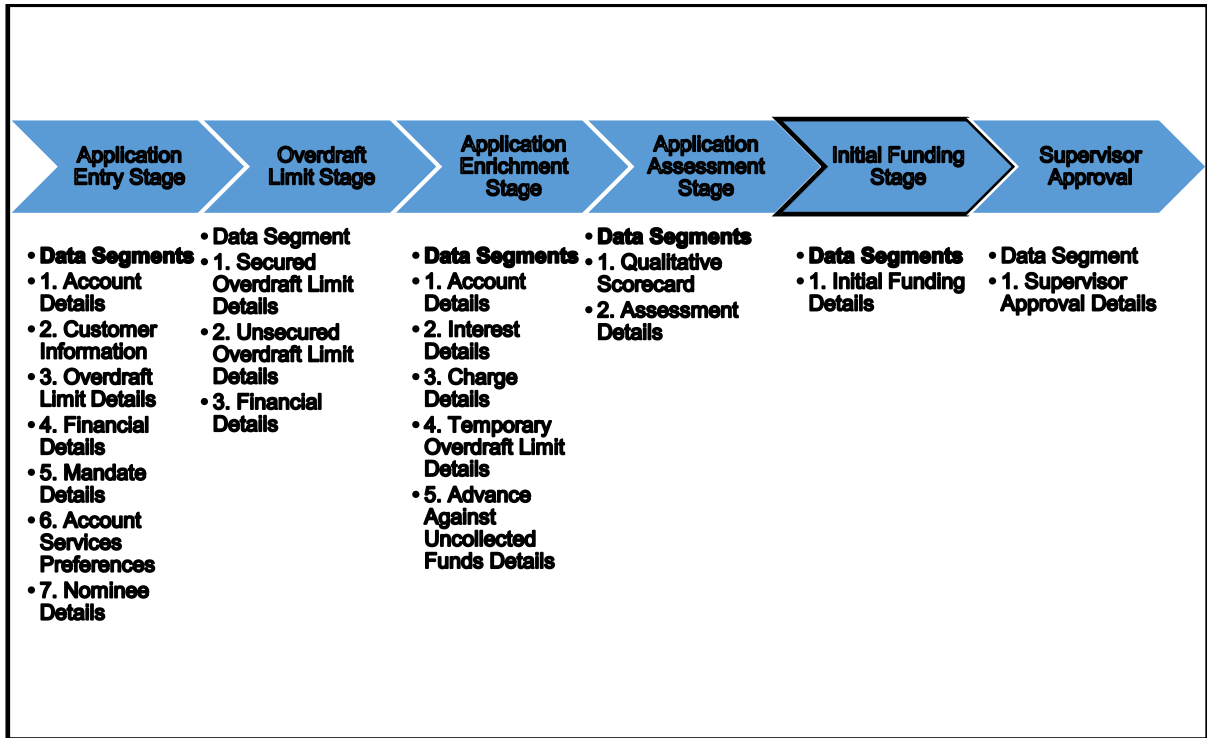

This user guide explains the reference workflow for the Current Account Origination process and further details the data that needs to be captured in the data segment linked to the specific stages.

## 2.2 Reference Workflow for Current Account Origination

The following diagram describes the workflow for Current Account Origination process.

Figure 1: Reference Workflow Diagram

### 3 Current Account Origination

As detailed in the **Operations user guide**, all the Product Originations are initiated in the Application Initiation stage from the Product Catalogue. The Cart Operation in Product Catalogue allows to originate Single or Multiple Product initiation. Once the Current Account Product origination process is initiated either as a single product origination or as part of the multiple product selection, Process Orchestrator generates the Current Account Process Reference Number on Submit of the Application Initiation stage. Process Orchestrator also updates the record in the Free Task process for the 'Application Entry' stage also referred as Task from orchestrator perspective.

The Current Account Origination Process Flow comprises of the below stages and the detailed information of the same is available in the below sections:

- [3.1 Application Entry Stage](#)
- [3.2 Overdraft Limit Stage](#)
- [3.3 Application Enrichment Stage](#)
- [3.4 Application Assessment Stage](#)
- [3.5 Account Funding Stage](#)
- [3.6 Supervisor Approval Stage](#)
- [3.7 Manual Retry Stage](#)

### 3.1 Application Entry Stage

Users having functional access to the Application Entry stage will be able to view the record in the Free Task process and can 'Acquire and Edit' or 'Acquire' the task from the Action column and the header Panel respectively.

The Application Entry Stage will be automatically submitted, in case the Bank level configuration for allowing full Application submission is set as 'Yes' and the User has updated all the Data Segment of Application Entry stage as part of the Application Initiation stage itself by clicking on the 'Application' button available in the Product Details Data Segment.

#### Prerequisite

Specify **User Id** and **Password**, and login to **Home screen**.

1. From **Home screen**, click **Tasks**. Under **Tasks**, click **Free Tasks**.

→ The **Free Tasks** screen is displayed.

## 3.4 Application Assessment Stage

Users having functional access to the Application Enrichment stage will be able to view the record in the Free Task process.

The Assessment stage enables the bank to assess the Unsecured Overdraft Limit request of the customer and based on the Assessment Score the User can decide on granting the Unsecured Overdraft Limit for the Current Account being originated. System derives the recommendation based on the Quantitative and Qualitative Score. The Quantitative Score is calculated based on the score the system calculates for the Customer for the various parameters configured in the Quantitative Scorecard ID. Similarly, the Qualitative Score is calculated based on the answers provided to the questionnaire configured in the Qualitative Scorecard ID.

The Application Assessment Stage comprises of the below mentioned data segments:

- [3.4.1 Qualitative Scorecard Data Segment](#)

**Figure 72: Confirmation**

On submission of this stage, the Conductor workflow will automatically move this application to the next processing stage, **Account Create on Host** which has been automated. The account will be successfully created in Product Processor, if all the required validation are successful.

In case due to any error the account creation is rejected on Product Processor side, the application moves to the [3.7 Manual Retry Stage](#).

## 3.7 Manual Retry Stage

As mentioned earlier, this stage appears in the Free Task only if the Current Account creation has been rejected by Product Processor and the User has the required access rights for the same.

The Manual Retry Stage comprises of the below data segment:

- [3.7.1 Manual Retry Data Segment](#)

### 3.7.1 Manual Retry Data Segment

Click **Acquire & Edit** in the **Free Tasks** screen for the application for which Manual Retry stage has to be acted upon.

## 4 Instant Current Account Origination Process

Additional Instant Business Process is available wherein various stages in the Reference Flow for Current Account have been automated.

This allows Instantaneous Account origination from Self-Service Channel such as Oracle FLEXCUBE Digital Experience for existing Customer who are KYC Compliant and New Customers for whom KYC is completed in Oracle FLEXCUBE Digital Experience (OBDX). KYC Type supported for the STP is Identification and Address only and the same has to be configured in Oracle Banking Party Module. Please refer the **Retail Onboarding User Guide** for more details.

Based on whether the Application has been initiated by self-service channel or by a Branch personnel the automatic submission of the stages or skipping of the stages are done by the system.

### Prerequisite:

- For the automatic submission to work, it is expected that document and checklist are not configured in any of the stages.
- Initial Funding is either not taken for the Account or taken as Account Transfer for which the mode configured has to be 'H' which represents that the selected Account will be debited by the Host as part of the Account Opening Process (Allowed for both Self-Service Channel and Branch Initiated Applications) or Initial Funding is taken via External Bank Account Transfer on self-service channel (This mode is not allowed for Branch Initiated Applications). For more details refer **Section 2.7 Initial Funding Configuration** in the **Configurations User Guide**.

In the Instant Current Account Origination Reference Business Process, the stages that have been configured are mentioned below.

- **Application Entry Stage:** On successful submission of the Current Account Application from self-service channel, the system starts the Application Entry stage without any manual intervention and completes the Data Segment level validation. On successful completion of the validation, the system automatically submits the Application Entry Stage.

Similarly, for the Branch initiated Application also this stage is automatically submitted, if the data segment configured for Application Entry stage are updated in the Application Initiate Stage itself by clicking the 'Application' button in the Product Details Data Segment.

- **Account Funding Stage:** On successful submission of the Application Entry Stage, system checks if Initial Funding has been updated for the Account Opening or not.
  - The initial funding mode allowed for self-service initiated applications are External Bank Account Transfer and Account Transfer.
  - In case Initial Funding has been taken for the Account via the External Bank Account Transfer in the self-service channel, system starts the Application Funding Stage and validates the Initial Funding Details Data Segment and submits the Application Funding Stage automatically.
  - For Application where the Initial Funding is updated as Account Transfer or where no funding has been taken for the Account, this stage is skipped completely by the system for Application initiated from Self-Service Channel and Branch Initiated Applications.
  - For the Branch Initiated Applications wherein the Initial Funding has been taken in Cash or Other Bank Cheque, this stage has to be manually actioned by the Branch User having access permission for this stage.

- **Supervisor Approval Stage:** System skips this stage for self-service initiated application and submits the application directly to the Product Processor for Account Creation.

However, for Branch initiated Application considering the 4-eye principle, system expects the application to be approved by a Supervisor. Hence this stage, will have to be picked and actioned by the Supervisor User. Supervisor User can either approve or reject the Application. On submission of this stage by selecting 'approve' outcome, system submits the Application to the Product Processor for Account Creation.

- **Handoff Retry:** Application moves to this stage and appears in the Free Task only if the Current Account creation has been rejected by Product Processor. User having the required access rights can pick such task and can retry submission to Host after taking required actions on the Failure reason.
