5.4 Steps to Deploy as Application

To deploy application please refer ANNEXURE-1. “**How to deploy section**”.

6. Restarts and Refresh

Once everything is deployed, the managed servers. And for each application call path “/refresh” for refreshing the configuration properties.

6.1 Restarting Servers

To restart the server please refer to ANNEXURE-1.”How to restart” section.

7. Logging Area

7.1 Introduction

This part of the document will talk about the logs area where after deployment of OBIC Applications in WebLogic server.

Logging Area

Server Logs

Managed Server writes logs in the below area of the server:

```
<WEBLOGIC_DOMAIN_CONFIG_AREA/servers/managed_server1/logs/  
managed_server1.out
```

Let's assume a domain has been created **obic** with **managed_server** name called **managed_server1** in the following area of the server

/scratch/oracle/middleware/user_projects/domains/obic". Logging area for OBIC applications would be

```
/scratch/oracle/middleware/user_projects/domains/obic/servers/managed_server1/  
logs/managed_server1.out
```

Application Log:

Application logs are found under **/scratch/obic/logs** and this path has to be configured in `setDomainEnv.sh` as `-Dplato.service.logging.path=/scratch/obic/logs`
