

SOA Suite Setup for BPEL Process Flow
Oracle FLEXCUBE Investor Servicing
Release 14.5.0.0.0
[May] [2021]

Table of Contents

1. PREFACE	1-1
1.1 BACKGROUND	1-1
1.2 AUDIENCE	1-1
1.3 ORGANIZATION	1-1
1.4 ACRONYMS AND ABBREVIATIONS	1-1
2. INSTALLING THE JDK, WEBLOGIC, RCU, SOA AND DOMAIN CREATION.....	2
2.1 INTRODUCTION	2
2.2 LIST OF DOWNLOADED FILES	2
2.3 INSTALL JDK.....	3
2.4 INSTALLING WEBLOGIC SERVER SOFTWARE	4
2.5 INSTALLING ORACLE FUSION MIDDLEWARE 12C SOFTWARE.....	9
2.6 CREATING PRODUCT SCHEMAS IN ORACLE DATABASE.....	13
2.7 WEBLOGIC SERVER DOMAIN CONFIGURATION.....	21
2.8 REMOTE SETUP CONFIGURATION	30

1. Preface

1.1 Background

This document provides an overview of configuring SOA suite for Oracle FLEXCUBE Investor Servicing BPEL process deployment.

Refer to the Oracle documentation for HA and other configuration patterns.

1.2 Audience

The audience for this document will be the development groups of BPEL/BPM process flows Oracle FLEXCUBE Investor Servicing.

1.3 Organization

This manual is organized as follows:

- The document helps in download and installation of Oracle SOA 12c.

1.4 Acronyms and Abbreviations

Acronym/Abbreviation	Description
BPEL	Business Process Execution Language
HA	High Availability

2. Installing the JDK, WebLogic, RCU, SOA and Domain Creation

2.1 Introduction

The download of software can be done from the oracle edelivery portal

<https://edelivery.oracle.com>

Refer to the Oracle certification matrix for qualified databases.

2.2 List of downloaded files

Latest Oracle JDK 8 Update for Linux x86-64

Search: Oracle Fusion Middleware 12c Infrastructure 12.2.1.2.0 (**WebLogic Installation**)

V78156-01.zip– Oracle Fusion Middleware 12c (12.2.1.2.0) Infrastructure

Search: Oracle Business Process Management 12.2.1.0.0 (**BPM/BPEL**)

V78169-01.zip– Oracle Fusion Middleware 12c (12.2.1.2.0) SOA Suite and Business Process Management

List of platform which can be selected based on the installation platform

<input type="checkbox"/>	HP-UX Itanium
<input type="checkbox"/>	IBM AIX on POWER Systems (64-bit)
<input type="checkbox"/>	IBM z/OS on System z
<input type="checkbox"/>	IBM: Linux on System z
<input type="checkbox"/>	Linux x86-64
<input type="checkbox"/>	Microsoft Windows (32-bit)
<input type="checkbox"/>	Microsoft Windows x64 (64-bit)
<input type="checkbox"/>	Oracle Solaris on SPARC (32-bit)
<input type="checkbox"/>	Oracle Solaris on SPARC (64-bit)
<input type="checkbox"/>	Oracle Solaris on x86-64 (64-bit)
<div>Select Cancel</div>

Selected Item	Platform
Release: Oracle SOA Suite 12.2.1.0.0	Linux x86-64
Release: Oracle Business Process Management 12.2.1.0.0	Linux x86-64

Remove All Continue

NOTE (Doc ID 1904280.1): As part of the new Release of SOA 12c, you need to get WebLogic 12c through the Oracle Fusion Middleware Infrastructure installation, which contains all required components for SOA. The standard WebLogic 12.2.1.0.0 Installer i.e. fmw_12.2.1.0.0_wls.jar, does not have the required JRF templates.

2.3 Install JDK

Login to WebLogic server host upload and install JDK package. Refer to the release certificate for the version of java JDK.

2.4 Installing WebLogic Server Software

```
[oracle@wls12c-node1 ~]$ cd /scratch/app/fmwTemp1221/  
[oracle@wls12c-node1 fmwTemp1221]$ unzip V78156-01.zip  
Archive: V78156-01.zip  
inflating: fmw_12.2.1_infrastructure.jar  
[oracle@wls12c-node1 fmwTemp1221]$ java -jar fmw_12.2.1 _infrastructure.jar
```

Step 1:

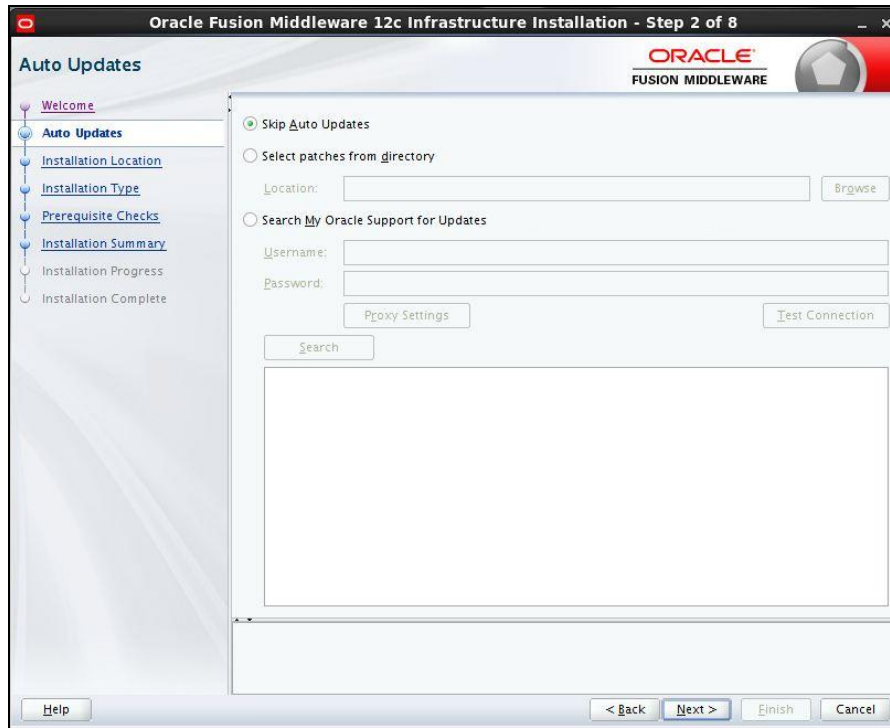

Step 2:

Option need to be selected based on the requirement:

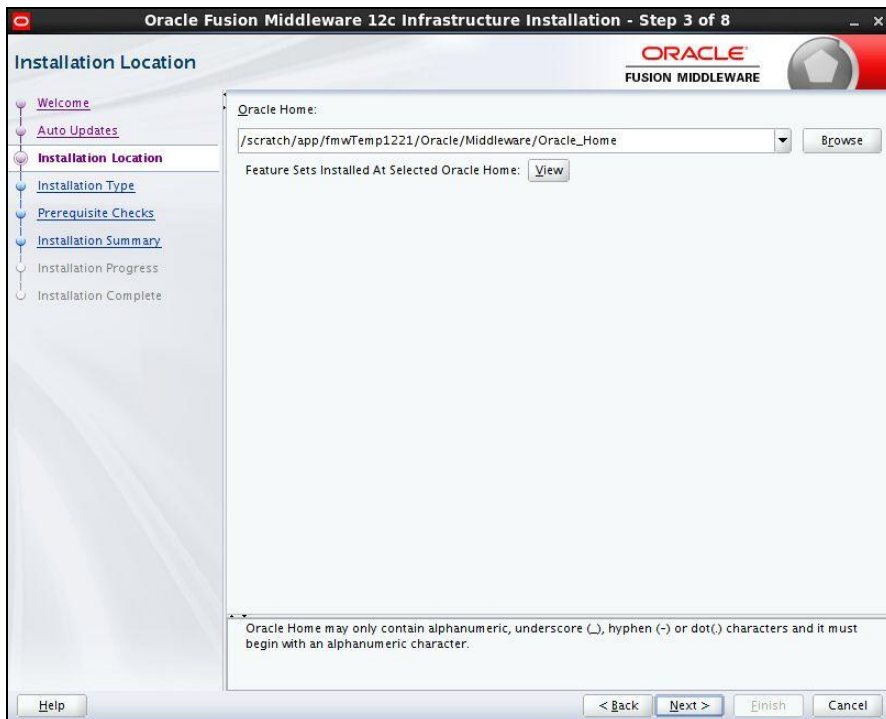

If you don't want the auto updates, select the first option.

If you are applying patches, select the second option.

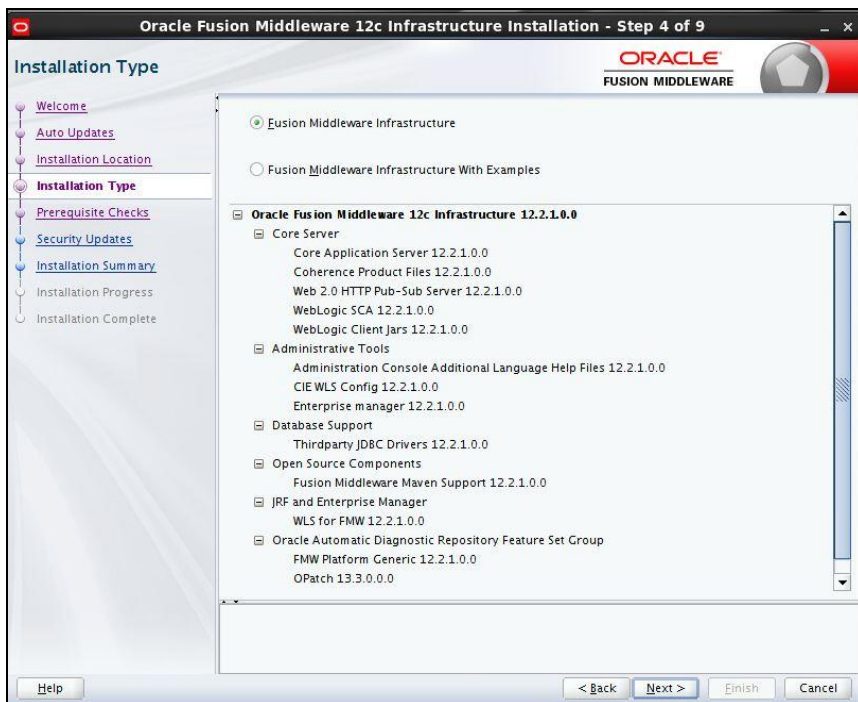

Please select the option based on the requirement:

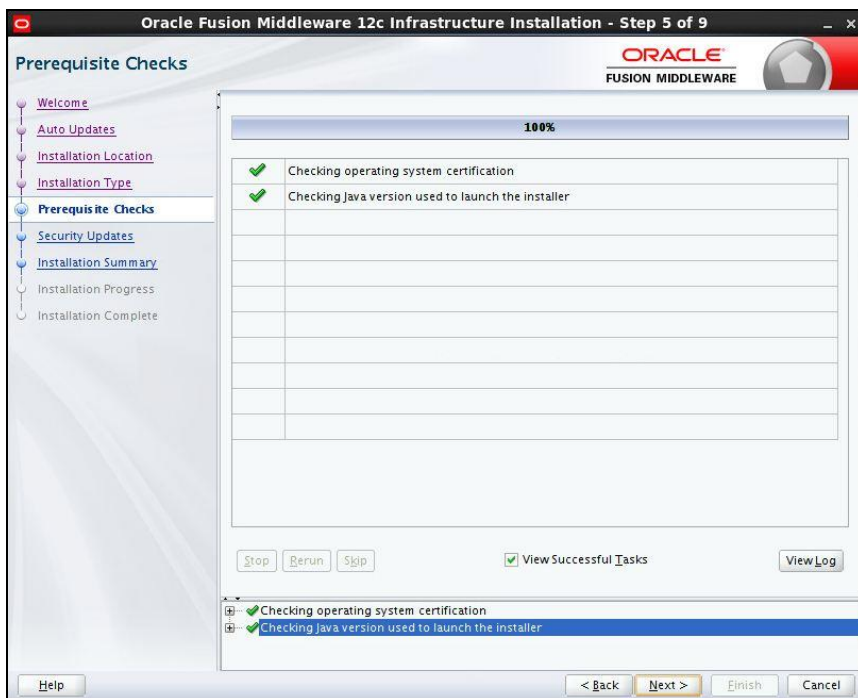

Step 3: Define the oracle home path

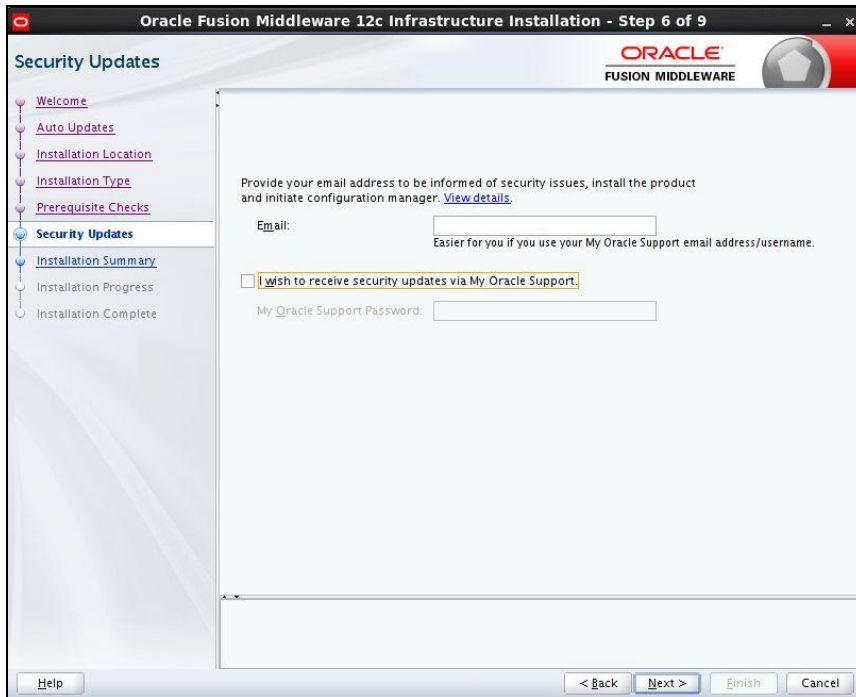

Step 4: Select fusion middleware infrastructure

Step 5:

Step 6: Optional based on installation requirement

Oracle Fusion Middleware 12c Infrastructure Installation - Step 6 of 9

Step 8:

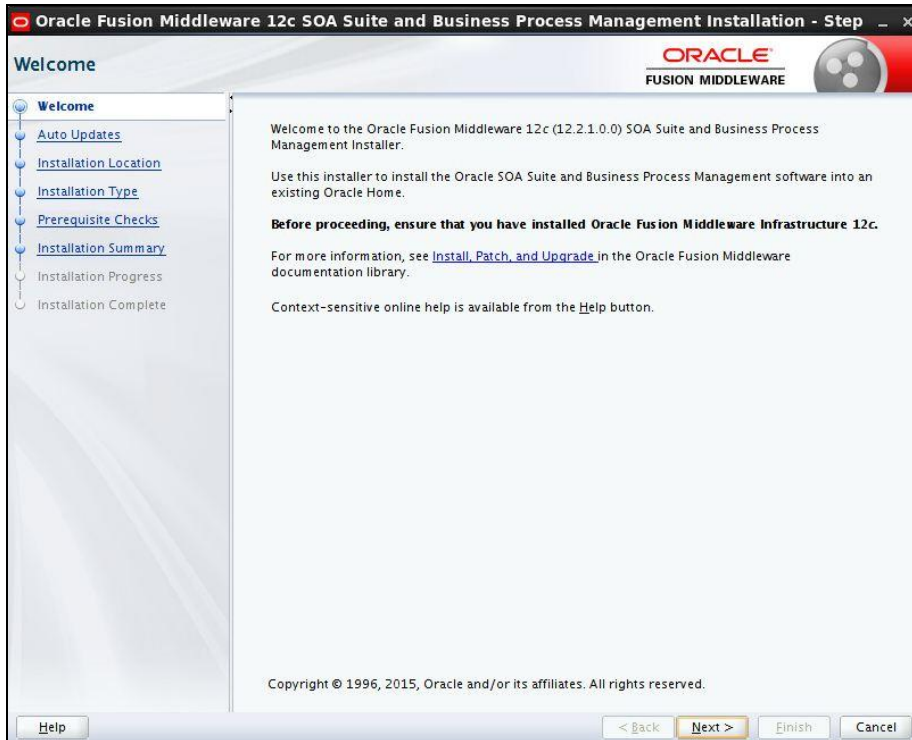

Step 9:

2.5 Installing Oracle Fusion Middleware 12c Software

```
[oracle@wls12c-node1 ~]$ cd /scratch/app/fmwTemp1221/  
[oracle@wls12c-node1 fmwTemp1221]$ unzip V78169-01.zip  
Archive: V78169-01.zip  
  inflating: fmw_12.2.1.0.0 _soa.jar  
  
[oracle@wls12c-node1 fmwTemp1221]$ java -jar fmw_12.2.1 _soa.jar
```

Step 1:

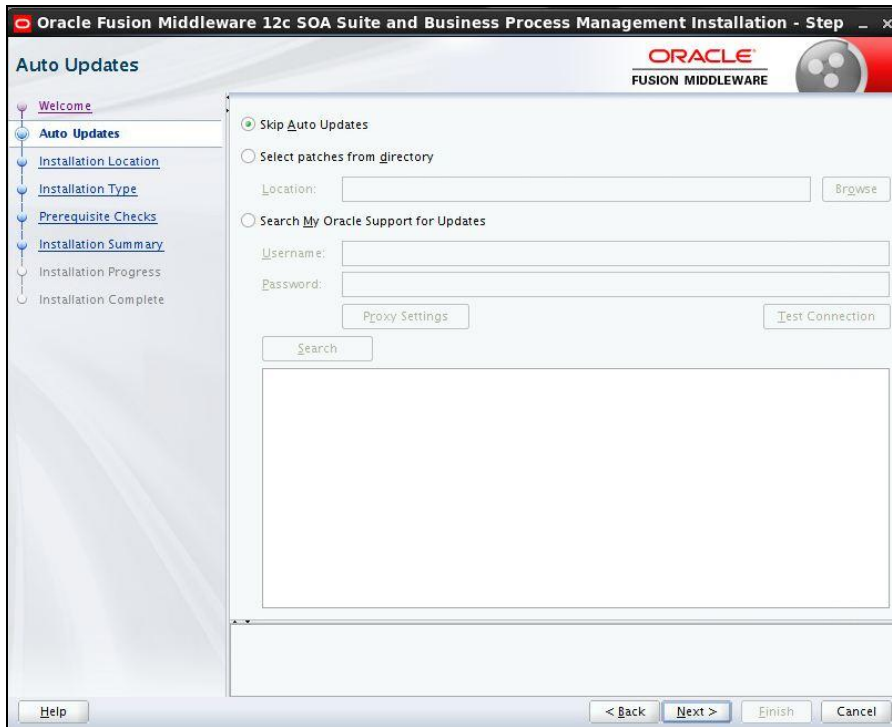

Step 2:

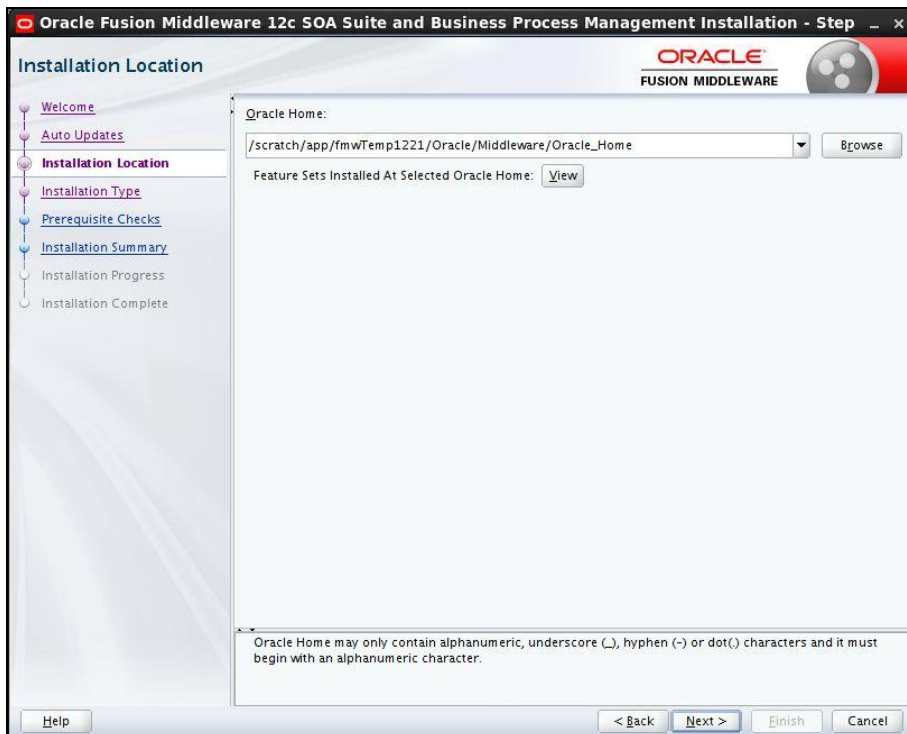

Option need to be selected based on the requirement:

- a) If you don't want the auto updates, select the first option.
- b) If you are applying patches, select the second option .

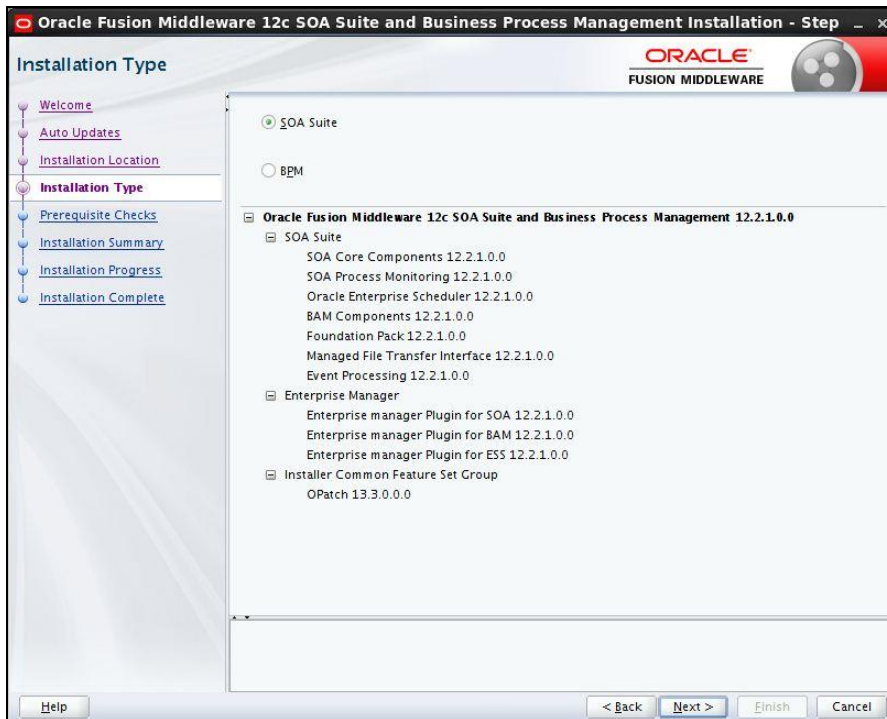

Please select the below option based on the requirement:

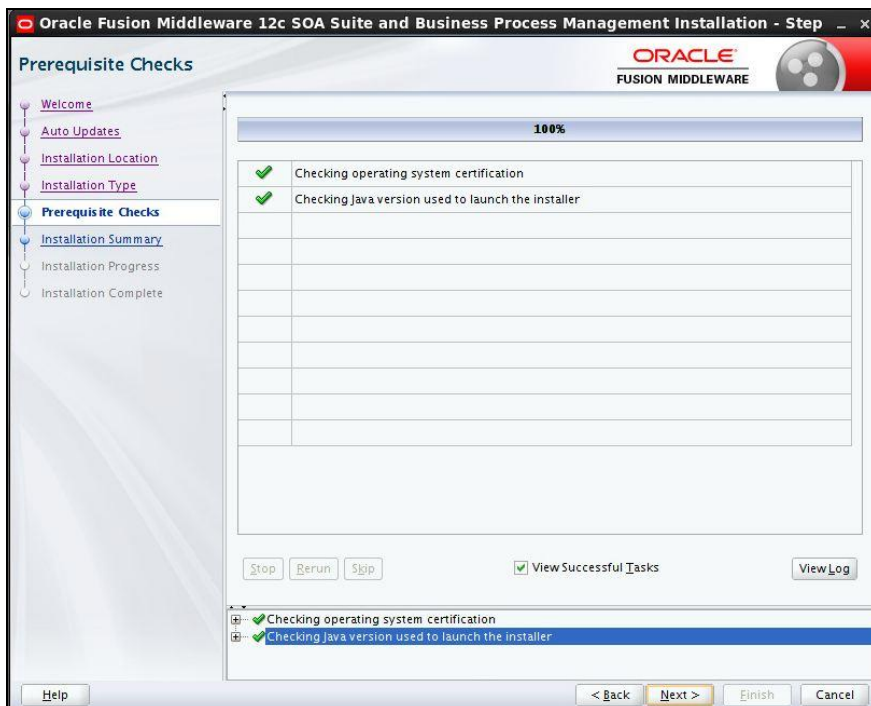

Step 3:

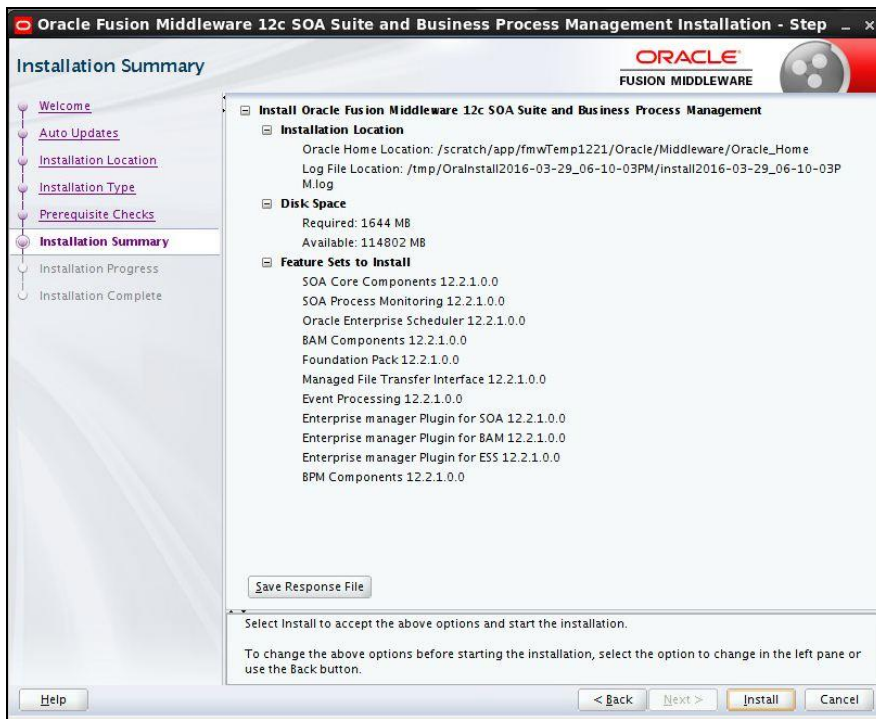

Step 4:  Please select BPM if the environment requires BPM process flow deployment

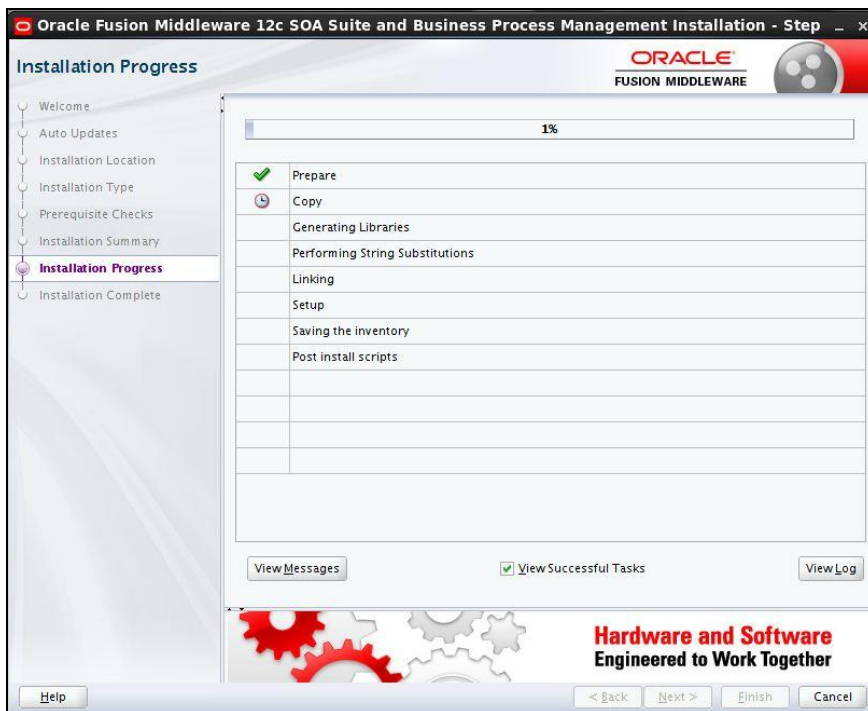

Step 5:

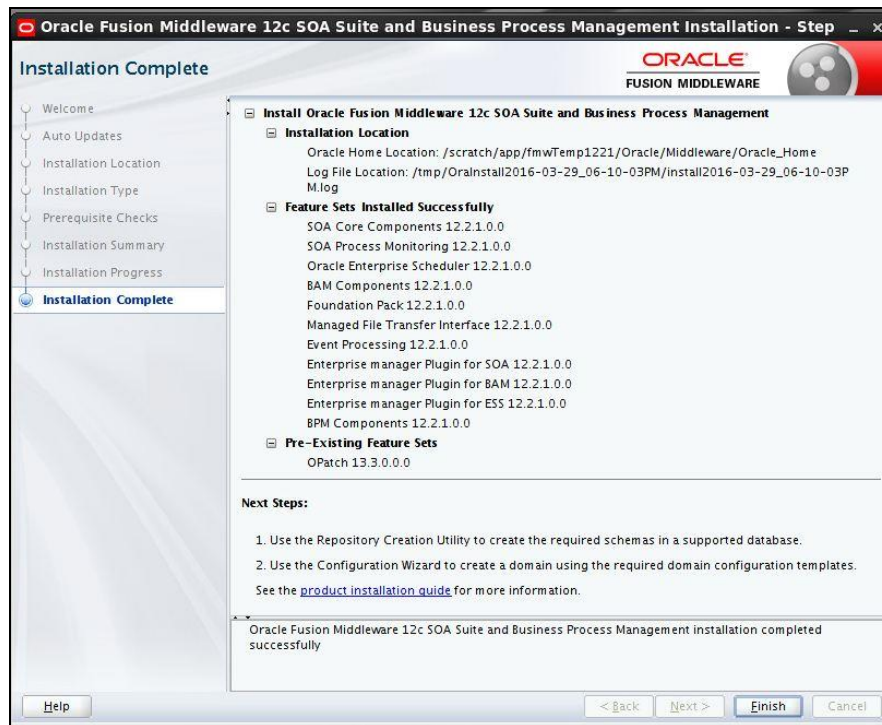

Step 6:

Step 7:

Step 8:

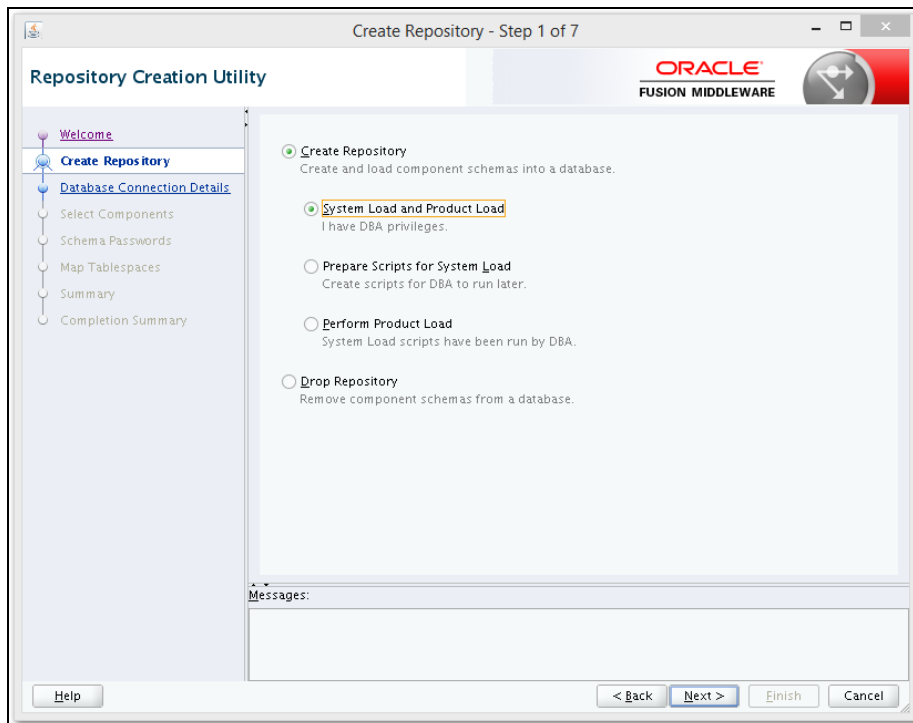

2.6 Creating Product Schemas in Oracle Database

The Repository Creation Utility (RCU) is the tool used to create schemas in a database. This tool is available once we've installed the Oracle Fusion Middleware Infrastructure software (Point 2).

Refer to [Oracle Fusion Middleware Creating Schemas with the Repository Creation Utility](#) for more information about the Repository Creation Utility.

- [oracle@wls12c-node1 fmwTemp1221]\$ cd /scratch/app/fmwTemp1221/Oracle/Middleware/Oracle_Home/bin/
- [oracle@wls12c-node1 bin]\$./rcu

Step 1:

Step 2: Define the host name port username and password for creating the RCU schemas in the database. The sys user required to create the rcu schemas.

Database Connection Details - Step 2 of 7

Repository Creation Utility

Database Type: Oracle Database

Host Name:

Port: 1522

Service Name: ORDB42C

Username: sys
User with DBA or SYSDBA privileges. Example: sys

Password:

Role: SYSDBA
One or more components may require SYSDBA role for the operation to succeed.

Repository Creation Utility - Checking Prerequisites

Checking Global Prerequisites

✓ Initializing repository configuration metadata	00:01.215(sec)
✓ Obtain properties of the specified database	00:00.102(mc)
✓ Check requirement for specified database	00:01.625(sec)

Operation completed. Click OK to continue to next page.

OK

Step 3: Define the prefix to be used for the schemas

Select Components - Step 3 of 7

Select Components

Welcome
Create Repository
Database Connection Details
Select Components
Schema Passwords
Map Tablespaces
Summary
Completion Summary

Specify a unique prefix for all schemas created in this session, so you can easily locate, reference, and manage the schemas later.

☐ Select existing prefix:

☒ Create new prefix:

Alpha numeric only. Cannot start with a number. No special characters.

Component	Schema Owner
<input type="checkbox"/> Oracle AS Repository Components	
<input checked="" type="checkbox"/> AS Common Schemas	
<input checked="" type="checkbox"/> Metadata Services	DEV_MDS
<input checked="" type="checkbox"/> Audit Services	DEV_IAU
<input checked="" type="checkbox"/> Audit Services Append	DEV_IAU_APPEND
<input checked="" type="checkbox"/> Audit Services Viewer	DEV_IAU_VIEWER
<input checked="" type="checkbox"/> Oracle Platform Security Services	DEV_OPSS
<input checked="" type="checkbox"/> User Messaging Service	DEV_UMS
<input checked="" type="checkbox"/> WebLogic Services	DEV_WLS

Step 4: Define the password for the schemas.

The screenshot shows the 'Schema Passwords - Step 4 of 8' window in the Oracle Fusion Middleware Repository Creation Utility. The left sidebar contains a navigation tree with the following items: Welcome, Create Repository, Database Connection Details, Select Components, Schema Passwords (highlighted), Custom Variables, Map Tablespaces, Summary, and Completion Summary. The main content area is titled 'Define passwords for main and auxiliary schema users.' and contains the following options:

- ☒ Use same passwords for all schemas
- ☐ Use main schema passwords for auxiliary schemas
- ☐ Specify different passwords for all schemas

Below these options are two password input fields:

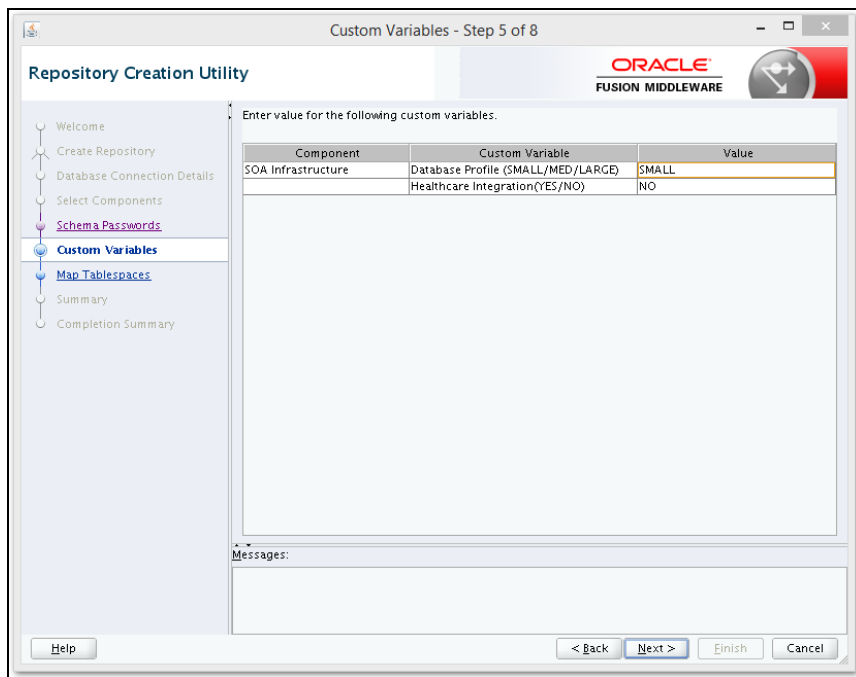

Password: [masked]
Alpha numeric only. Cannot start with a number.
No special characters except: \$, #, _ .

Confirm Password: [masked]

At the bottom of the window are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'. A 'Help' button is located in the bottom left corner.

Note: It is important to remember the password or passwords that you enter during the process.

Step 5:  Please select the database profile based on requirement (SMALL/MED/LARGE)

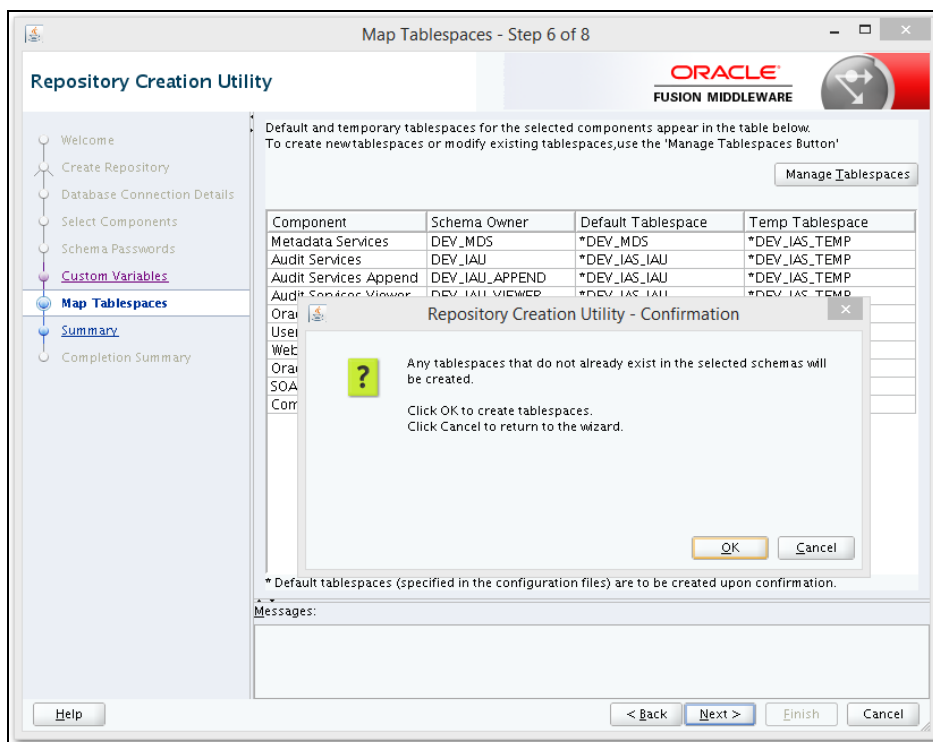

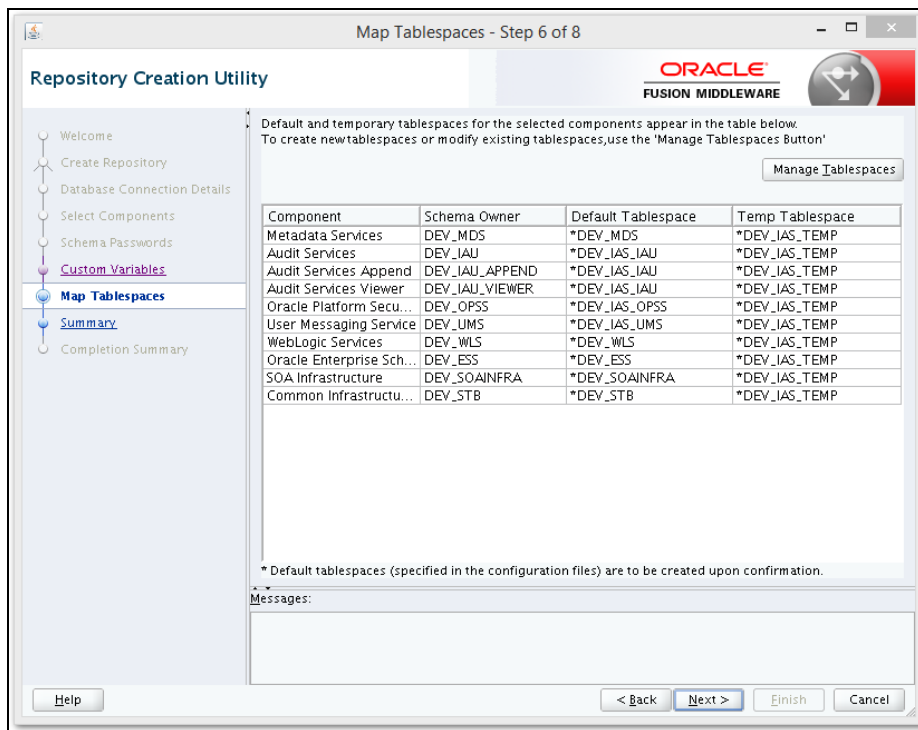

The screenshot shows the 'Custom Variables - Step 5 of 8' window in the Oracle Fusion Middleware Repository Creation Utility. The left sidebar contains a navigation tree with the following items: Welcome, Create Repository, Database Connection Details, Select Components, Schema Passwords, Custom Variables (highlighted), Map Tablespaces, Summary, and Completion Summary. The main content area is titled 'Enter value for the following custom variables.' and contains a table with the following data:

Component	Custom Variable	Value
SOA Infrastructure	Database Profile (SMALL/MED/LARGE)	SMALL
	Healthcare Integration(YES/NO)	NO

Below the table is a large empty text area for additional custom variables. At the bottom of the window are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'. A 'Help' button is located in the bottom left corner.

Note: Verifying Schema Version Numbers in the database where RCU is executed

```
SQL> select comp_name, version from schema_version_registry;
```

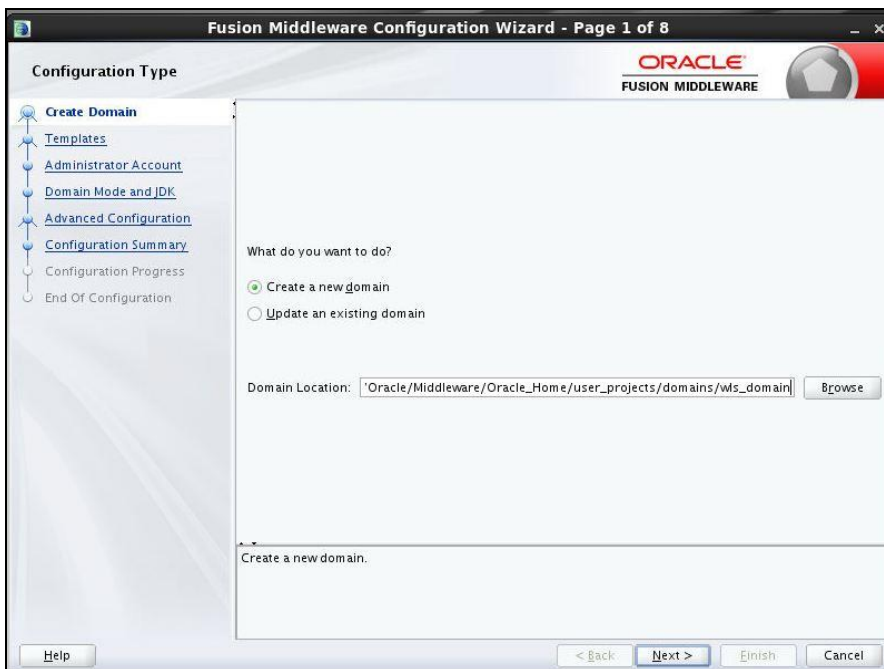

The screenshot shows the SQL Developer interface with the query `SELECT comp_name, version FROM Schema_Version_Registry` executed. The results are displayed in a table with two columns: `COMP_NAME` and `VERSION`. The table contains 8 rows of data, all with version `12.2.1.0.0`.

	COMP_NAME	VERSION
1	Audit Service	12.2.1.0.0
2	Audit Service Append	12.2.1.0.0
3	Audit Service Viewer	12.2.1.0.0
4	Metadata Services	12.2.1.0.0
5	Oracle Platform Security Services	12.2.1.0.0
6	SOA Infrastructure Services	12.2.1.0.0
7	User Messaging Service	12.2.1.0.0
8	WebLogic Services	12.2.1.0.0

2.7 WebLogic Server Domain Configuration

Step 1:

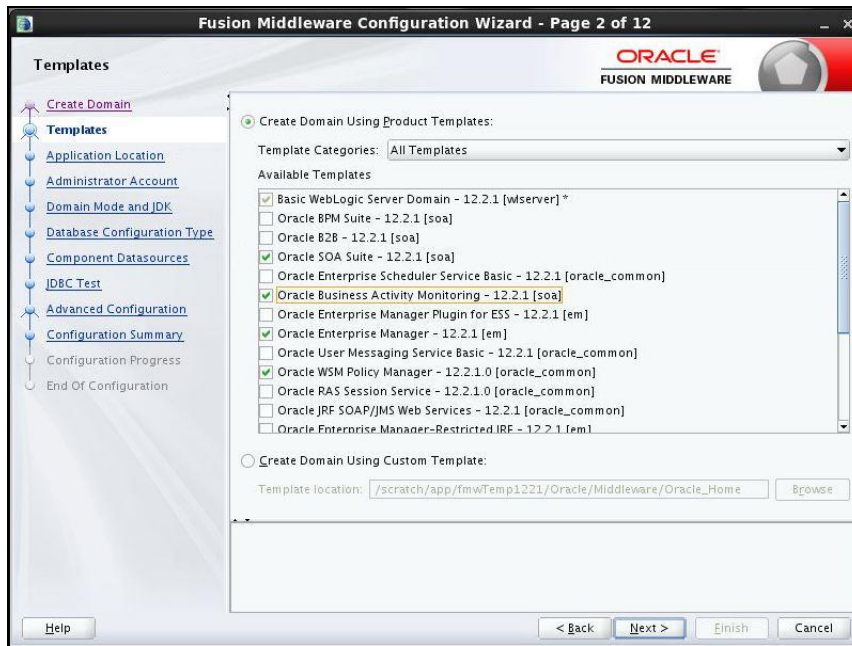

The screenshot shows the Fusion Middleware Configuration Wizard - Page 1 of 8. The wizard is titled "Fusion Middleware Configuration Wizard - Page 1 of 8" and features the Oracle Fusion Middleware logo. The "Configuration Type" section on the left lists the following steps: "Create Domain" (selected), "Templates", "Administrator Account", "Domain Mode and JDK", "Advanced Configuration", "Configuration Summary", "Configuration Progress", and "End Of Configuration". The main area asks "What do you want to do?" with two radio buttons: "Create a new domain" (selected) and "Update an existing domain". Below this, the "Domain Location" is set to `'Oracle/Middleware/Oracle_Home/user_projects/domains/wls_domain'`, with a "Browse" button. At the bottom, there is a "Help" button, a "< Back" button, a "Next >" button, an "Finish" button, and a "Cancel" button.

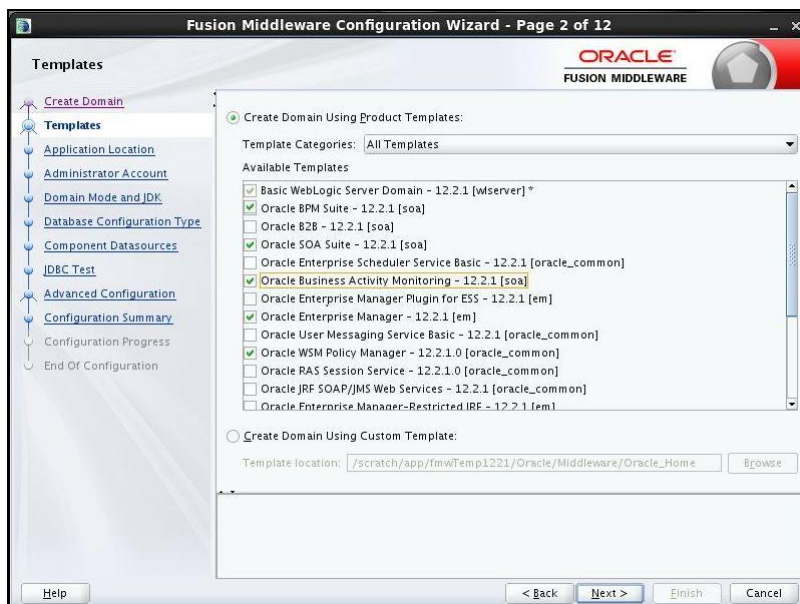

Step 2: Domain creation template

a. For BPEL only domain

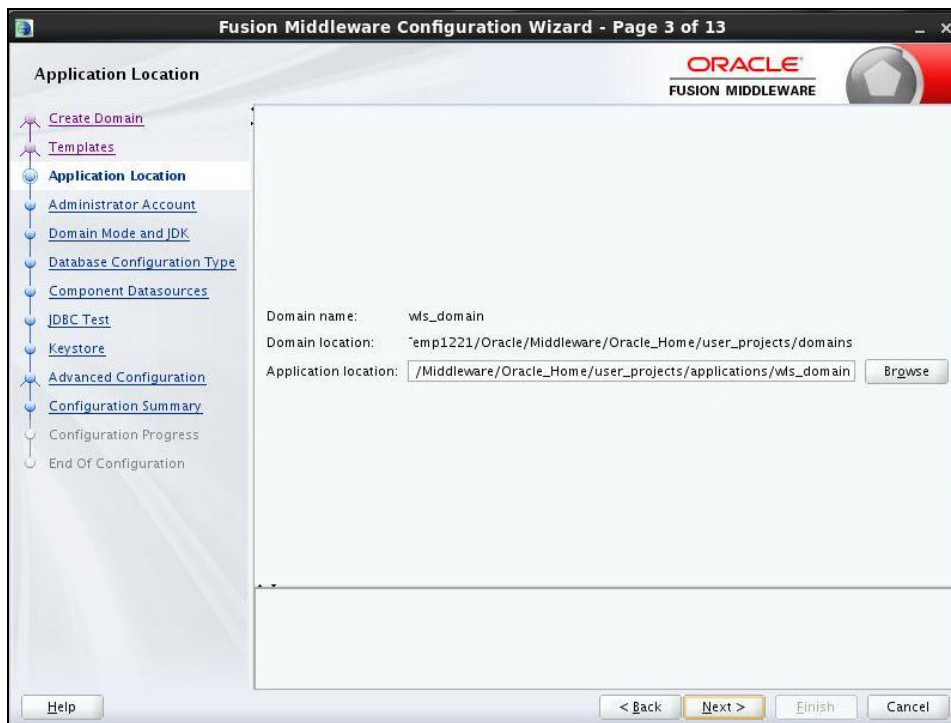

b.  Based on the requirement select the Oracle Business Activity Monitoring (BAM) check box.

c. For BPM enabled domain (If BPM process flows deployment is required then we have to select the Oracle BPM Suite – 12.2.1)

Step 3:

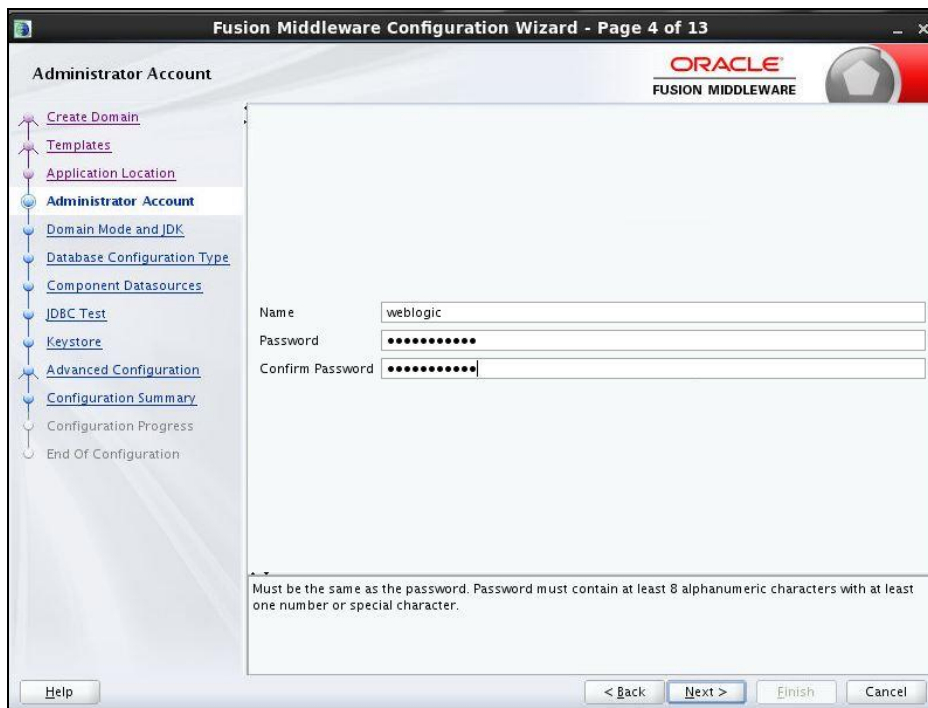

The screenshot shows the 'Application Location' step of the Fusion Middleware Configuration Wizard. The left sidebar contains a tree view with the following items: 'Create Domain' (selected), 'Templates', 'Application Location' (highlighted), 'Administrator Account', 'Domain Mode and JDK', 'Database Configuration Type', 'Component Datasources', 'JDBC Test', 'Keystore', 'Advanced Configuration', 'Configuration Summary', 'Configuration Progress', and 'End Of Configuration'. The main area displays the following configuration details:

- Domain name: wls_domain
- Domain location: /tmp1221/Oracle/Middleware/Oracle_Home/user_projects/domains
- Application location: /Middleware/Oracle_Home/user_projects/applications/wls_domain (with a 'Browse' button)

At the bottom, there are navigation buttons: '< Back', 'Next >' (highlighted), 'Finish', and 'Cancel'. A 'Help' button is located in the bottom left corner.

Step 4: Defining the domain user name and password

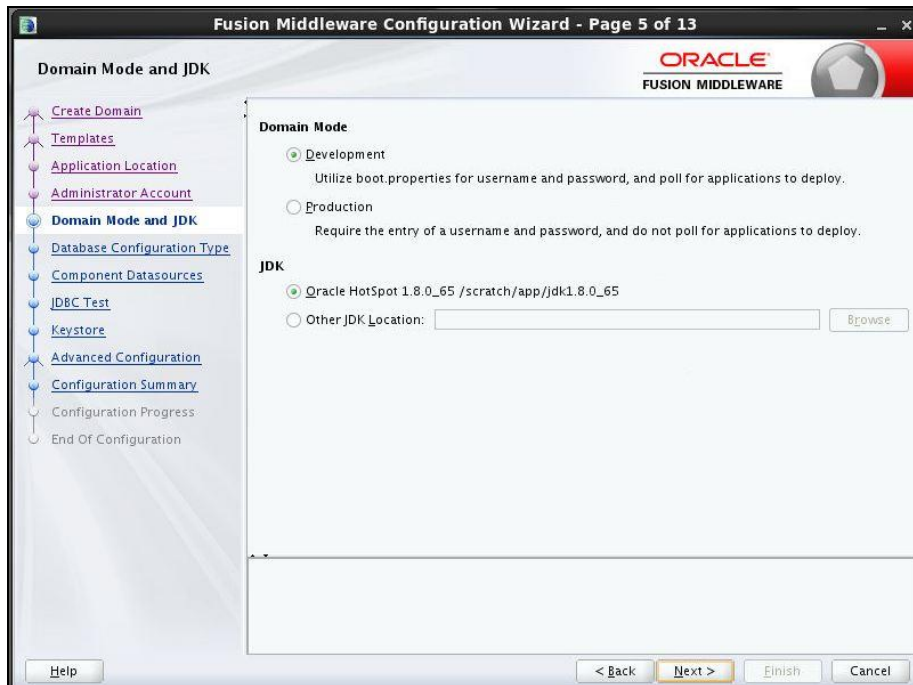

The screenshot shows the 'Administrator Account' step of the Fusion Middleware Configuration Wizard. The left sidebar contains a tree view with the following items: 'Create Domain', 'Templates', 'Application Location', 'Administrator Account' (highlighted), 'Domain Mode and JDK', 'Database Configuration Type', 'Component Datasources', 'JDBC Test', 'Keystore', 'Advanced Configuration', 'Configuration Summary', 'Configuration Progress', and 'End Of Configuration'. The main area displays the following configuration details:

- Name: weblogic
- Password: (masked with dots)
- Confirm Password: (masked with dots)

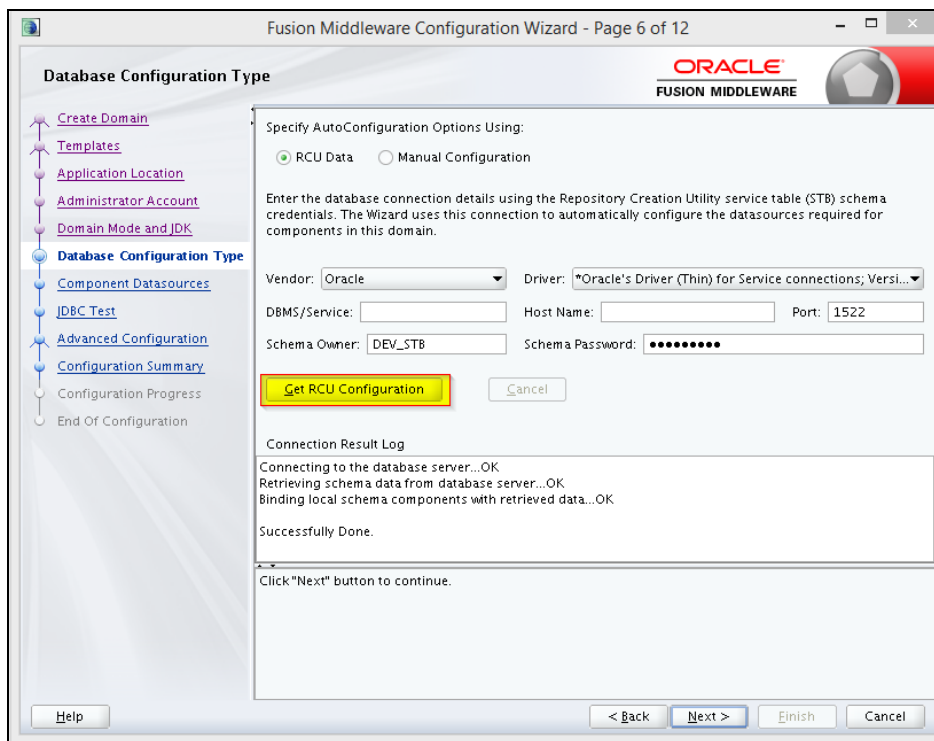

At the bottom, there is a note: 'Must be the same as the password. Password must contain at least 8 alphanumeric characters with at least one number or special character.' Below this note are navigation buttons: '< Back', 'Next >' (highlighted), 'Finish', and 'Cancel'. A 'Help' button is located in the bottom left corner.

Step 5:  Domain mode needs to be production for all installations.

The screenshot shows the 'Domain Mode and JDK' configuration page. The left sidebar lists the steps: Create Domain, Templates, Application Location, Administrator Account, Domain Mode and JDK (selected), Database Configuration Type, Component Datasources, JDBC Test, Keystore, Advanced Configuration, Configuration Summary, Configuration Progress, and End Of Configuration. The main area is titled 'Domain Mode and JDK'. Under 'Domain Mode', the 'Development' radio button is selected, with a description: 'Utilize boot.properties for username and password, and poll for applications to deploy.' The 'Production' radio button is unselected, with a description: 'Require the entry of a username and password, and do not poll for applications to deploy.' Under 'JDK', the 'Oracle HotSpot 1.8.0_65 /scratch/app/jdk1.8.0_65' radio button is selected. The 'Other JDK Location' radio button is unselected, followed by a text field and a 'Browse' button. At the bottom, there are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'.

Step 6: Define the RCU schema details and the TNS connection details

The screenshot shows the 'Database Configuration Type' configuration page. The left sidebar lists the steps: Create Domain, Templates, Application Location, Administrator Account, Domain Mode and JDK, Database Configuration Type (selected), Component Datasources, JDBC Test, Advanced Configuration, Configuration Summary, Configuration Progress, and End Of Configuration. The main area is titled 'Database Configuration Type'. It says 'Specify AutoConfiguration Options Using:' with 'RCU Data' selected and 'Manual Configuration' unselected. Below this, it says: 'Enter the database connection details using the Repository Creation Utility service table (STB) schema credentials. The Wizard uses this connection to automatically configure the datasources required for components in this domain.' There are fields for 'Vendor' (Oracle), 'Driver' (Oracle's Driver (Thin) for Service connections; Versi...), 'DBMS/Service' (empty), 'Host Name' (empty), 'Port' (1522), 'Schema Owner' (DEV_STB), and 'Schema Password' (masked with dots). There is a yellow 'Get RCU Configuration' button and a 'Cancel' button. Below these is a 'Connection Result Log' section showing: 'Connecting to the database server...OK', 'Retrieving schema data from database server...OK', 'Binding local schema components with retrieved data...OK', and 'Successfully Done.' At the bottom, it says 'Click "Next" button to continue.' and there are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'.

Step 7:

Step 9: Select the admin server, node manager and managed servers.

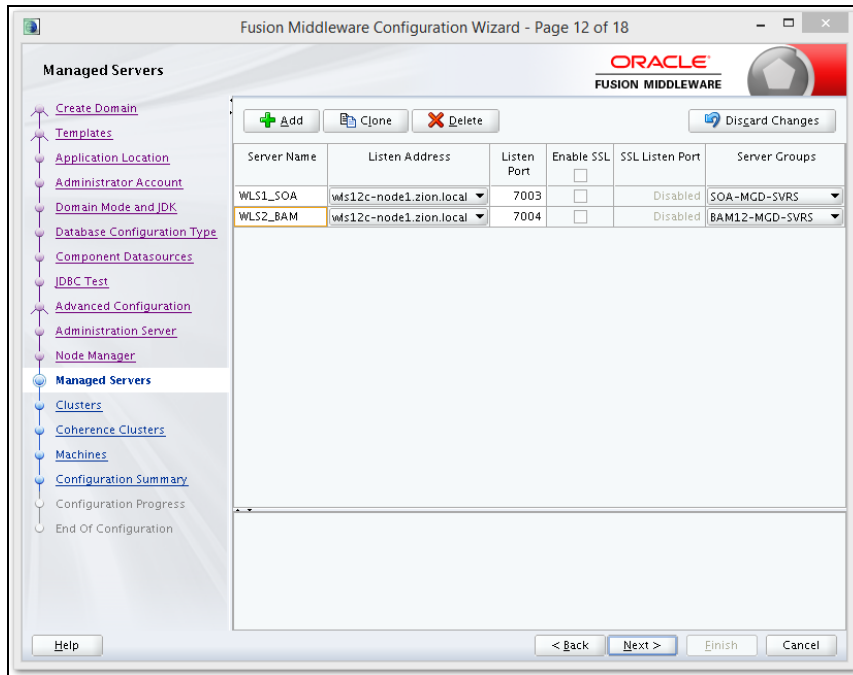

Step 10: Specify the server name as AdminServer and listener address as hostname. Based on the installation requirement, SSL need to be enabled.

Step 11: specify the server name as soa_server1 and bam_server1 for the managed servers.

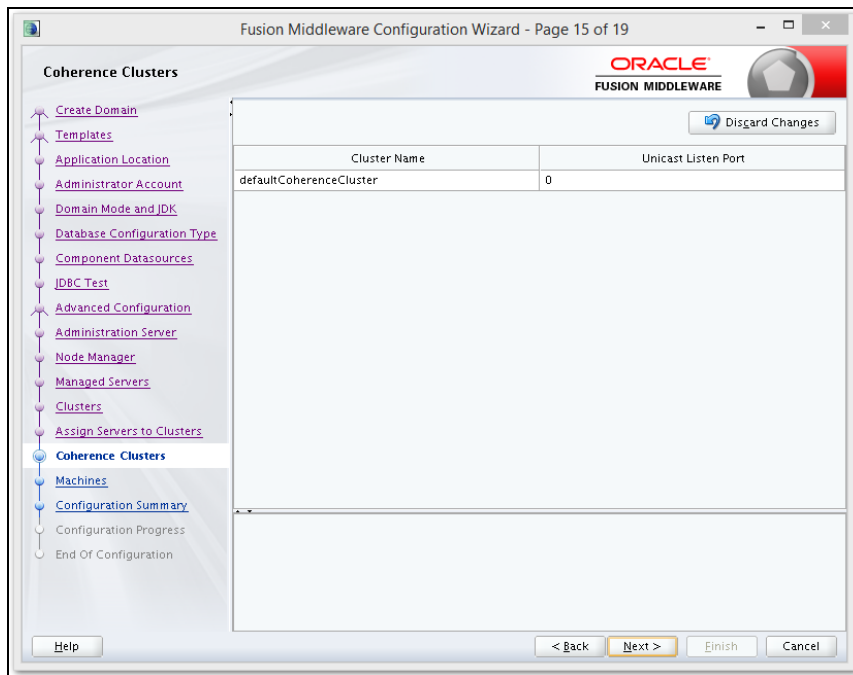

Based on the installation requirement SSL need to be enabled for managed servers

The screenshot shows the 'Managed Servers' page of the Fusion Middleware Configuration Wizard. The left sidebar contains a tree view with the following items: Create Domain, Templates, Application Location, Administrator Account, Domain Mode and JDK, Database Configuration Type, Component Datasources, JDBC Test, Advanced Configuration, Administration Server, Node Manager, Managed Servers (selected), Clusters, Coherence Clusters, Machines, Configuration Summary, Configuration Progress, and End Of Configuration. The main area displays a table with the following columns: Server Name, Listen Address, Listen Port, Enable SSL, SSL Listen Port, and Server Groups. The table contains two rows: WLS1_SOA and WLS2_BAM. The WLS2_BAM row is highlighted. The 'Listen Address' for both is 'wls12c-node1.zion.local'. The 'Listen Port' for WLS1_SOA is 7003 and for WLS2_BAM is 7004. The 'Enable SSL' checkbox is unchecked for both. The 'SSL Listen Port' is 'Disabled' for both. The 'Server Groups' are 'SOA-MGD-SVRS' and 'BAM12-MGD-SVRS' respectively. At the top of the main area, there are buttons for '+ Add', 'Clone', 'Delete', and 'Disard Changes'. At the bottom, there are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'.

Server Name	Listen Address	Listen Port	Enable SSL	SSL Listen Port	Server Groups
WLS1_SOA	wls12c-node1.zion.local	7003	<input type="checkbox"/>	Disabled	SOA-MGD-SVRS
WLS2_BAM	wls12c-node1.zion.local	7004	<input type="checkbox"/>	Disabled	BAM12-MGD-SVRS

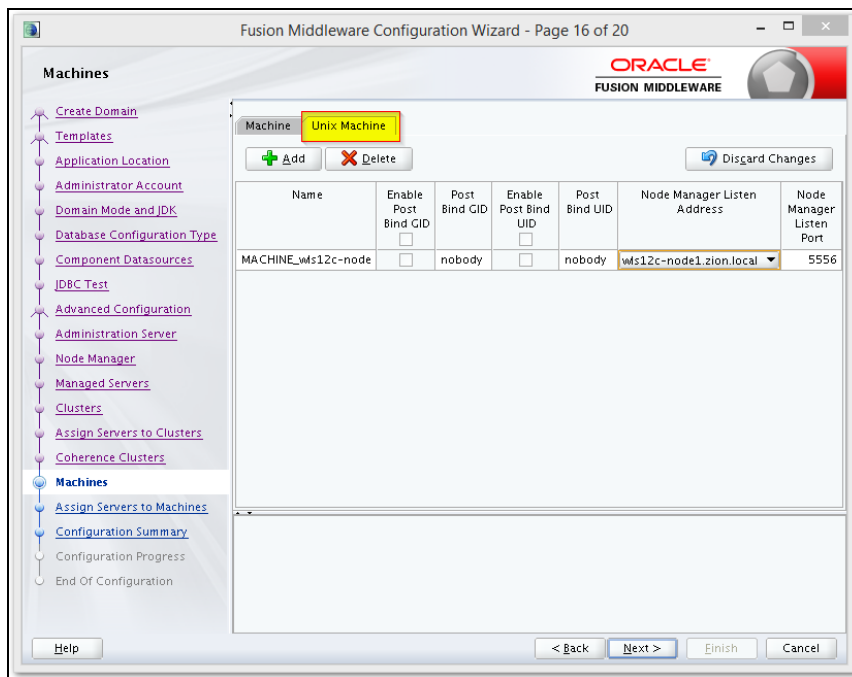

Step 12:

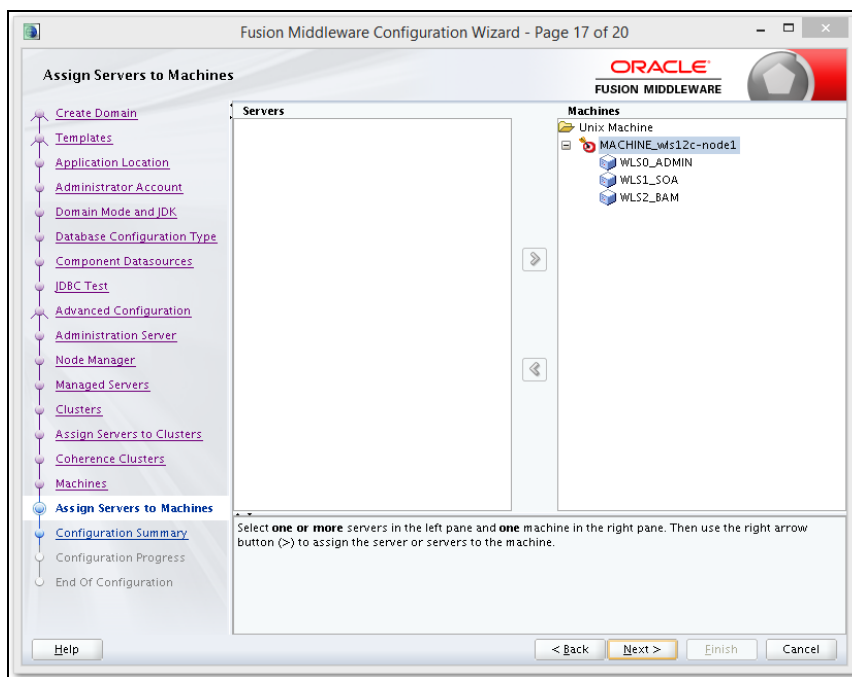

The screenshot shows the 'Coherence Clusters' page of the Fusion Middleware Configuration Wizard. The left sidebar contains the same tree view as in Step 11, with 'Coherence Clusters' selected. The main area displays a table with the following columns: Cluster Name and Unicast Listen Port. The table contains one row: defaultCoherenceCluster. The 'Unicast Listen Port' is 0. At the top of the main area, there is a button for 'Disard Changes'. At the bottom, there are buttons for '< Back', 'Next >', 'Finish', and 'Cancel'.

Cluster Name	Unicast Listen Port
defaultCoherenceCluster	0

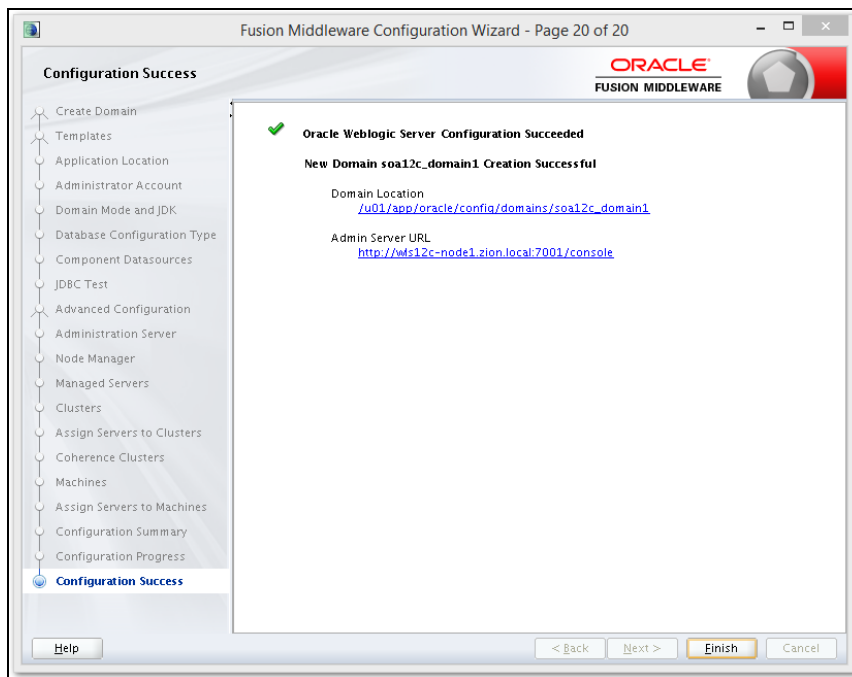

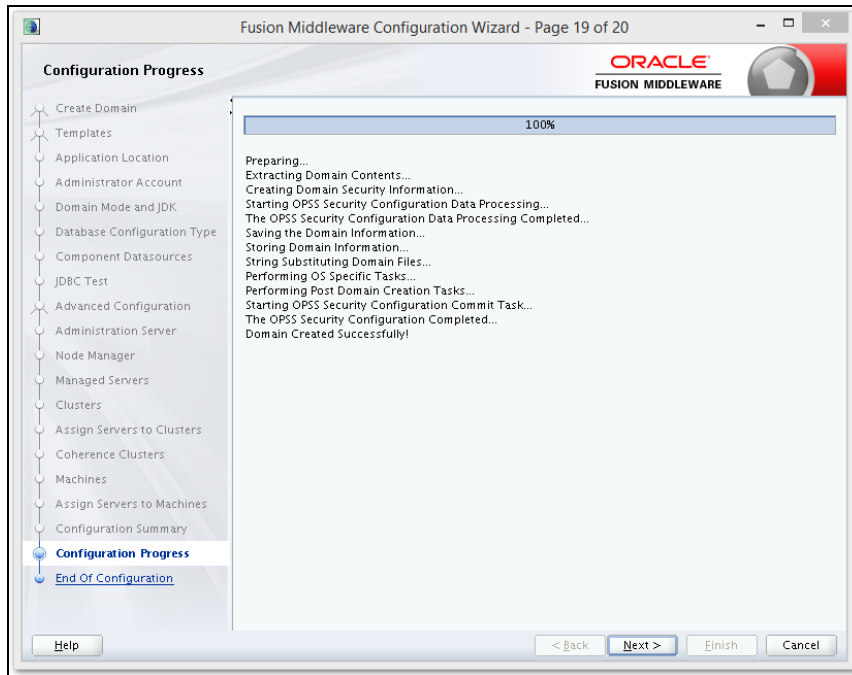

Step 13:

Step 14:

Step 15:

2.8 Remote Setup Configuration

Remote setup means SOA is installed in different machine and EAR is running in different machine.

Configuring FLEXCUBE Application to point to remote BPEL instances

1. Following Jars has to be copied to <Weblogic_home>\<domain>\lib

Jar to be copied	Path where the jar is available in SOA Middleware
bpm-services.jar	%Middleware Home%/soa/soa/modules/oracle.soa.workflow_11.1.1
fabric-runtime.jar	%Middleware Home%/soa/soa/modules/oracle.soa.fabric_11.1.1
tracking-fabric.jar	
tracking-api.jar	
jrf-api.jar	%Middleware Home%/oracle_common/modules/oracle.jrf
orabpel-common.jar	%Middleware Home%/soa/soa/modules/oracle.soa.bpel_11.1.1
orabpel-thirdparty.jar

xmlparserv2.jar	
mdsrt.jar	%Middleware Home%/oracle_common/modules/oracle.mds
com.oracle.webservices.fmw.wsc lient-rt-impl.jar	%Middleware Home%/oracle_common/modules

2. Additionally if BPMN enabled

Jar to be copied	Path where the jar is available in SOA Middleware
oracle.bpm.bpm-services.client.jar	%Middleware Home%/soa/soa/modules/oracle.bpm.client_11.1.1
oracle.bpm.bpm-services.interface.jar	
oracle.bpm.project.draw.jar	%Middleware Home%/soa/soa/modules/oracle.bpm.project_11.1.1
oracle.bpm.project.model.jar	
oracle.bpm.core.jar	%Middleware Home%/soa/soa/modules/oracle.bpm.runtime_11.1.1
oracle.bpm.ui.jar	
oracle.bpm.casemgmt.interface.jar	%Middleware Home%/soa/soa/modules/oracle.bpm.runtime_11.1.1

3. The jars copied have to be from same soa-suite version where BPEL processflows deployed. Ie, We cannot have jars from soa12.1.3.0.0 and BPEL deployed in soa12.2.1.0.0 It should be consistent.
4. The properties file **fcubs.properties** should read as below
- ```
WORKFLOW_CLIENT_TYPE =REMOTE
java.naming.provider.url =t3://10.184.74.143:8001/?partitionName=DOMAIN (Remote
soa server provider url)
java.naming.security.principal =weblogic (Remote bpel server userid)
java.naming.security.credentials=RF2MRTP/MG8TB1T5QG6lnQ== (Remote soa server
password)
dedicated.connection =true
domain.name =default (Remote soa server partition)
domain.pwd =RF2MRTP/MG8TB1T5QG6lnQ== (Remote soa server
password)
```

5. Configure domain password same as for both fcj ear domain and remote BPEL domain and DowngradeUntrusted Principals has to be checked

**Mapping**

- Reset the EnforceStrictURLPattern flag

**System Status**

Health of Running Servers

|                |
|----------------|
| Failed (0)     |
| Critical (0)   |
| Overloaded (0) |
| Warning (0)    |
| OK (2)         |

**Advanced**

**Security Interoperability Mode:** default

Specifies the security mode of the communication channel used for JA calls between servers that participate in a global transaction. All server instances in a domain must have the same security mode setting. [More Info...](#)

**Credential:** [masked]

The credential for this WebLogic Server domain. When a domain is created, a unique credential is generated for the domain. If you want to establish trust between two or more domains, decide on a credential that will be shared by the domains, then specify it here and in the other domains. [More Info...](#)

**Confirm Credential:** [masked]

**NodeManager Username:** weblogic

The user name that the Administration Server uses to communicate with Node Manager when starting, stopping, or restarting Managed Servers. [More Info...](#)

**NodeManager Password:** [masked]

The password that the Administration Server uses to communicate with Node Manager when starting, stopping, or restarting Managed Servers. [More Info...](#)

**Confirm NodeManager Password:** [masked]

**Web App Files Case Insensitive:** false

Specifies the case sensitive URL-pattern matching behavior for security-constraints, servlets, filters, virtual-hosts, etc. in the webapp container and external security policies. The valid values are os, true, or false. [More Info...](#)

☒ **Enforce Strict URL Pattern**

Specifies whether the system should enforce strict URL pattern, "\*" / "\*" to represent the entire contents of a Web Application. [More Info...](#)

☒ **Downgrade Untrusted Principals**

Specifies whether to downgrade to anonymous principals that cannot be verified. [More Info...](#)

☐ **Principal Equals Case Insensitive**

Specifies whether the WebLogic Server principal name is compared using a case insensitive match when the equals method for the principal object is performed. [More Info...](#)

☐ **Principal Equals Compare DN and GUID**

Specifies whether the GUID and DN data in a WebLogic Server principal object are used when the equals method of that object is invoked. [More Info...](#)

☐ **Compatibility Connection Filters Enabled**

Specifies whether this WebLogic Server domain enables compatibility with previous connection filters. [More Info...](#)

☐ **Allow Security Management Operations if Non-dynamic Changes have been Made**

Specifies whether security management operations are allowed if non-dynamic changes have been made and the Admin Server requires restart. [More Info...](#)

☐ **Clear Text Credential Access Enabled**

Returns true if allow access to credential in clear text. This can be overridden by the system property -Dweblogic.management.clearTextCredentialAccessEnabled [More Info...](#)
