### 3.7 Maintaining Reconciliation Rules

Reconciliation is one of the core modules of OBCM application which can be performed for two categories namely 'Invoice payment' and 'Cash flow payment'.

- Invoice payment: Any outstanding invoices due from buyer are reconciled against the payment initiated by the supplier/buyer as per the reconciliation rules configured in the application.
- Cashflow payment: Any outstanding expected cash flows raised by a corporate in the application, are reconciled against payments as per the reconciliation rules configured for this category in the application.

#### 3.7.1 Reconciliation Rule Definition

Back office user can configure recon rules for reconciliation category through this module. Two types of rules can be configured; 'Exact' and 'Generic'.

For the 'Exact' type of rule, attributes of one entity are mapped with attributes of another entity, e.g.: for 'Expected Debit/Credit to Payment' recon category attributes of expected debit/credit entity are mapped to attributes of payment entity and similarly for 'Invoice to Payment' recon category, attributes of invoice are mapped to attributed of payment for matching purpose. Also, multiple recon rules can be defined at global level or mapped to the corporate with priority assignment.

For the 'Generic' type of rule, user can configure generic reconciliation methods such as FIFO, LIFO, HAFO, and LAFO. As per selected method; one can choose 'Based on' attribute. For example, in 'FIFO' for Expected Cashflow recon category, one can choose 'Expected Date' or 'Revised Expected Date'.
