1. OBIEE Metadata Repository Deployment Guide

1.1 Introduction

The Oracle Business Intelligence Server is a stand-alone process that maintains the logical data model which it provides to BI Presentation Services via ODBC. Metadata is maintained for the data model in a local proprietary file called the repository file (rpd). On the back-end, the BI Server connects to customer data stores via data source adaptors.

1.1.1 Layers in RPD

The Physical layer defines the data sources to which Oracle BI Server submits queries and the relationships between physical databases and other data sources that are used to process multiple data source queries. The recommended way to populate the Physical layer is by importing metadata from databases and other data sources. The data sources can be of the same or different varieties. You can import schemas or portions of schemas from existing data sources. Additionally, you can create objects in the Physical layer manually.

When you import metadata, many of the properties of the data sources are configured automatically based on the information gathered during the import process. After import, you can also define other attributes of the physical data sources, such as join relationships, that might not exist in the data source metadata. There can be one or more data sources in the Physical layer, including databases, spreadsheets, and XML documents. In this example, you import and configure tables from the sample SH schema included with the Oracle 10g database.

The Business Model and Mapping layer of the Administration Tool defines the business, or logical, model of the data and specifies the mappings between the business model and the Physical layer schemas. This is where the physical schemas are simplified to form the basis for the users' view of the data. The Business Model and Mapping layer of the Administration Tool can contain one or more business model objects. A business model object contains the business model definitions and the mappings from logical to physical tables for the business model.

The main purpose of the business model is to capture how users think about their business using their own vocabulary. The business model simplifies the physical schema and maps the users' business vocabulary to physical sources. Most of the vocabulary translates into logical columns in the business model. Collections of logical columns form logical tables. Each logical column (and hence each logical table) can have one or more physical objects as sources.

There are two main categories of logical tables: fact and dimension. Logical fact tables contain the measures by which an organization gauges its business operations and performance. Logical dimension tables contain the data used to qualify the facts.

The Presentation layer is built after the Physical layer and Business Model and Mapping layer and adds a level of abstraction over the Business Model and Mapping layer. It is the view of the data seen by end users in client tools and applications, such as Oracle BI Answers. The Presentation layer provides a means to further simplify or customize the Business Model and Mapping layer for end users. For example, you can organize columns into catalogs and folders.

Simplifying the view of the data for users makes it easier to craft queries based on users' business needs because you can expose only the data that is meaningful to the users, organize the data in a way that aligns with the way users think about the data, and rename data as necessary for the set of users.

You typically create Presentation layer objects by dragging objects from the Business Model and Mapping layer. Corresponding objects are automatically created in the Presentation layer. Presentation layer objects can then be renamed and reorganized.

1.1.2 FCUBS OBIEE RPD

In FCUBS OBIEE we have module specific RPDs. They are named in the format Module Name.RPD (for example FT.RPD, SI.RPD etc.). In this document we will see how merge all module specific RPDs to FCUBS Metadata RPD. We will also see how to deploy sample dashboards generated using these RPDs.

1.2 **Prerequisites**

1.2.1 Hardware / Software Required

Server	Oracle 10G AS 10.1.3.3, OBI 10.1.3.3.1, Oracle 10g client, OBIEE 11.1.1.6.0
Client Workstations	Internet Explorer 6.0, Win2K/Windows XP

1.3 Deployment in OBIEE 10g

There are two major steps in deploying an OBIEE Dashboard, first we need to create the data object metadata (.rpd file) in the OBIEE Administration tool. Then, using the OBIEE Web, we create the Answers based on the .rpd file and assemble them in a Dashboard.

If the OBIEE server is present in Linux machine then merging of module specific repositories should be done using OBIEE Administration Tool installed on Windows machine and the merged repository should be copied from Windows to Linux machine in binary mode.

1.3.1 <u>RPD Deployment Steps:</u>

1. Open the following shipment media directory for RPD files. For the modules where modularity has been done, the RPDs will be under

<<ShipmentMedia>>\SOFT\FLEXCUBE_Kernel\<Release_Folder>\MAIN\<<Module Code>>\OBIEE

For example,

<<ShipmentMedia>>\SOFT\FLEXCUBE_Kernel\<Release_Folder>\MAIN\BC\OBIEE

For the modules where modularity has not been done, the RPDs will be under <<ShipmentMedia>>\SOFT\FLEXCUBE_Kernel\<Release_Folder>\MAIN\Other_Modules\OB IEE

- 2. Copy and paste the released .rpd files into local installation directory (D:\OBIEE\RPD). If the released .rpd files already there in the local installation directory overwrite them with the newly released files.
- 3. Open the FCUBS_Full_Schema.RPD using OBIEE Administration Tool, which will have following tree structure in it.

🗢 Oracle Bl Administration Tool - FCUBS_Full_Schema.rpd				
File Edit View Manage Tools Window Help				
D 🗳 🛎 G 🖬 X 🖻 🛍 Z N N N 🖷				
Presentation	Business Model and Mapping	Physical		
		E- II FlexCube ⊢ II Connection Pool		

4. Open each remaining module specific RPDs (Ex. FT.rpd, PC.rpd, FX.rpd Etc.), one at a time using Administration Tool and do the following. (Username/Password : Administrator/Administrator)

Copy the aliases in the Synonyms folder and paste it to Synonyms folder of 'FCUBS_Full_Schema.RPD'.

E- 🚺 KERNE	LDEV

⊞… 💼 CL					

7. Copy and paste the module specific presentation catalog(s) to the presentation layer of Full schema repository.

- 8. Close the repository and continue with other module repositories.
- 9. Save the Full Schema repository.
- 10. Import Initialization Blocks and Variables
- 11. From Full Schema RPD do the following
- 12. Enable the 'Import from Repository' by checking the option in Tools->Options as follows.

Options 🛛 🔀
General Sort Objects Cache Manager Multiuser More Tile when resizing Display qualified names in diagrams Display original name for alias in diagrams Show Calculation Wizard introduction page Check out objects automatically Show row count in physical view Show toolbar Show statusbar Prompt when moving logical columns Remove unused physical tables after Merge Allow import from repository
OK Cancel Help

13. Click 'OK' and the following screen is displayed:

🖸 Oracle Bl Administration Tool - Metadata1

23. If server is present in Linux then go to <InstallDrive>/OracleBI/setup folder and execute the following command to stop BI Server and BI Presentation Server.

./run-sa.sh stop

./run-saw.sh stop

24. Rename the repository to FlexCube.rpd and put in following location:

OracleBI\server\Repository

If Server is present in Linux machine then copy FlexCube.rpd in binary mode to:

<OracleBI InstallDir>\server\Repository

25. Open OracleBI\server\config\NQSConfig.INI and change the property as below:

Star=FlexCube.rpd, DEFAULT;

Under CACHE set ENABLE = NO

🖡 NQSConfig. INI - Notepad
File Edit Format View Help

1.3.2 Web Catalog Deployment Steps

In OracleBIData\web\catalog create a folder called 'FlexCube'. Change catalog path in OracleBIData\web\config\instanceconfig.xml to point to FlexCube as follows.

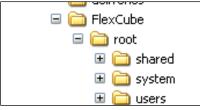

xml version="1.0" encoding="utf-8"?
<webconfig></webconfig>
<serverinstance></serverinstance>
<dsn>AnalyticsWeb</dsn>
<catalogpath>D:/OracleBIData/web/catalog/FlexCube</catalogpath>
<javahome>C:\Program Files\Java\jdk1.5.0_06</javahome>
<biforofficeurl>client/OracleBIOffice.exe</biforofficeurl>

1. Restart the presentation services.

🎇 Oracle BI Cluster Controller			Manual	Local S
🆏 Oracle BI Java Host		Started	Automatic	Local S
🍓 Oracle BI Presentation Server		Started	Automatic	Local S
🆓 Oracle BI Scheduler	Start		Manual	Local S
🆓 Oracle BI Server	Stop	Started	Automatic	Local S

🆓 Oracleoracleas1ASControl	Properties	Started	Automatic	Local S
🍓 Oracleoracleas 1 Process Manager	Fropercies	Started	Automatic	Local S
CracleServiceORCL	Help	Started	Automatic	Local S

- If server is present in Linux then go to <InstallDrive>/OracleBI/setup folder and execute the following command to start BI Presentation Server. ./run-saw.sh start
- 3. You will see directory created in following structure in OracleBIData\web\catalog.

- Open the following shipment media directory for Web catalogs. <<Shipment Media>>\SOFT\FLEXCUBE_Kernel\<Release_Folder>\<<Module Code>>\OBIEE
- 5. Copy and paste the released .zip files into local directory (D:\OBIEE\WebCatalog). Overwrite with released files, if files already exist.
- 6. Extract all the zip files.
- 7. Copy and paste the extracted files (Except .xml files) into OracleBIData\web\catalog\FlexCube\root\shared

Copy and paste the .xml files into OracleBI\web\msgdb\customMessages.

1.3.3 Web Catalog Permissions Changes

1. Once all the module specific web catalogs are extracted to the above location, use catalog manager to change the permissions of all presentation objects. This is required if the user wants to edit the saved answers and dashboard.

Oracle Business Intelligence Catalog Mana	ager

users	🗀 SE 🦲 SI	Folder Folder	Administrator	Full Full		Thu Jun 12 Thu Jun 12
	<	1111)		>

5. Change the permissions by selecting the 'Everyone' in left and change the permission to 'Full Control' and Check the 'Apply Recursively' enabled like below:

O Permissions				
🗀 PC				
Users and groups (Explicit permis	sions)		Additional users and groups	
Name	Permission		Name	Туре
Everyone	Full Control	< >	Authenticated Users Presentation Server Administ	Group Group
<	>		<	>
Apply Recursively			, In the second	now groups only
			ОК	Cancel

If the server is present in Linux Machine then zip the catalogs which are present in

OracleBIData\web\catalog\FlexCube\root\shared

Except the default folders (ie _devices, _disconnected, _ibots, _mktgdefaults and the corresponding .atr files) from windows and copy it to

OracleBIData\web\catalog\FlexCube\root\shared in Linux machine

6. Once all the above steps done, start the Oracle BI Server, Oracle BI Presentation Server services from Services window.

If server is present in Linux then go to <InstallDrive>/OracleBI/setup folder and execute the following command to start BI Server and BI Presentation Server.

./run-sa.sh start

./run-saw.sh start

7. Start OC4J from Programs->Oracle Business Intelligence->Start OC4J

In Linux go to <InstallDrive>/OracleBI/oc4j_bi/bin and execute the following commands to restart the OC4J

oc4j –stop

oc4j -start

- 8. Login to Presentation services from Programs->Oracle Business Intelligence->Presentation Services.
- 9. Enable 'Write Back option to Database' by going to:

Settings->Administration->Manage Privileges->Write Back to Database

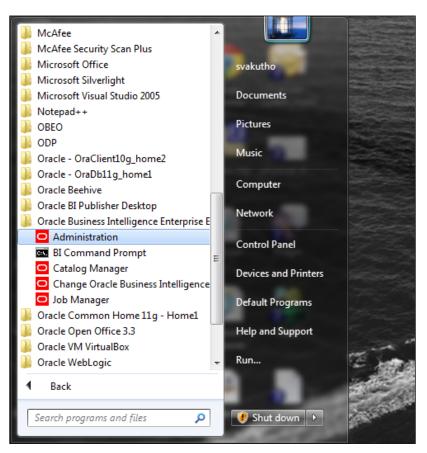

10. Provide privilege for Presentation Service Administrator.

1.4 Deployment in OBIEE 11g

1.4.1 Rpd Connection Changes

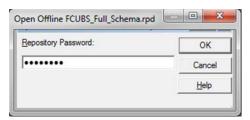

1. Open 'OBIEE Administration tool'.

2. Open rpd in the offline mode.

3. Enter the Password: Admin123 and click 'OK'.

4. Double-click on connection pool.

9. Click 'Restart' the instance to take the effect of changes.

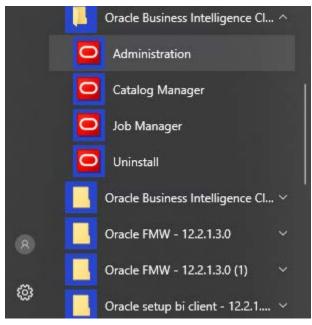

This completes the deployment.

1.5 Deployment in OBIEE 12c

1.5.1 Rpd Connection Changes

1. Open OBIEE 'Administration' tool.

2. Open rpd in the offline mode.

Oracle BI Administration Tool	Viewing Vara Prasad Burla's screen	_ & ×

1. Change Data source name for the marked info given in the below format:

(DESCRIPTION = (ADDRESS_LIST = (ADDRESS = (PROTOCOL = TCP)(HOST = <*Host Address*>)(PORT = <*Port*>)))(CONNECT_DATA = (SERVICE_NAME <*Servicename*>)))

Eg:

(DESCRIPTION=(ADDRESS_LIST =(ADDRESS = (PROTOCOL = TCP)(HOST = whf00brs.in.oracle.com)(PORT = 1522)))(CONNECT_DATA =(SERVICE_NAME = FC142DEVPDB2)))

2. Enter the User ID and password and click OK. Again enter the same password when it prompts. Save the Rpd changes.

1.5.2 Merge Repositories

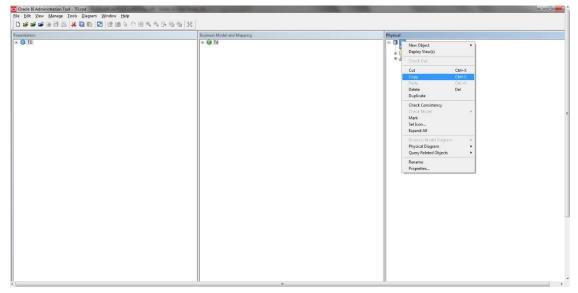

To Merge Repositories and to make FCUBS_Full_Schema.rpd we need to follow below steps.

All the OBIEE repositories are in MAIN/<Module>/OBIEE_11g

1. Open the 'FCUBS_Full_Schema.rpd' from svn. This is an empty repository.

- 2. Open the repository to be merged eg TD.rpd
- 3. Copy TD folder under Physical layer in TD rpd and paste in physical layer of FCUBS_Full_Schema.rpd.

4. After pasting, FCUBS_Full_Schema.rpd would look like below:

Oracle BL Administration Tool + KUBS, Full, Schemaryd Efel Edit View Manage Tools Diagram Window Help				
Tour Tien Wayade Tools Diagram Window				
sentation	Business Model and Mapping	Physical		
		Connection Pool ⊕ 10 Connection Pool ⊕ 10 T0 ⊕ 3 Synoryms		
		a ania ania ania		

5. Similarly copy the folders from Business model and Presentation layer from 'Td.rpd' to 'FCUBS_Full_Schema.rpd'. Then 'FCUBS_Full_Schema.rpd' would like below:

e BI Administration Tool - FCUBS_Full_Schema.rpd fit _ <u>V</u> iew _ <u>M</u> anage _ <u>T</u> ools _ <u>D</u> iagram _ <u>W</u> indow _ <u>H</u> elp			
in New Ways Tools Distant Mingon Helb	n n e n e e le

то	e 📦 Td	III TD Connecton Pool IIII TD Connecton Pool IIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIIII	
		(e 🛅 TD	
		🛞 🚠 Synanyme	

- 6. Please follow the order of Physical, Business Model and Presentation layer to paste in 'FCUBS_Full_Schema.rpd'.
- 7. Save the repository and do a global consistency check to see 0 errors. Similarly repeat the merging process for all modules.

it			

1.5.3 Deploying RPD using putty

1. Copy the rpd in the below path in OBIEE server.

Path :< Oracle_Home>/user_projects/domains/bi/bitools/bin

Example Path : /scratch/app/obi12213/user_projects/domains/OBIEE12C/bitools/bin

2. Run putty and then go to path:

cd <Oracle_Home>/user_projects/domains/bi/bitools/bin

Example cd /scratch/app/obi12213/user_projects/domains/OBIEE12C/bitools/bin

3. Run the below command from the putty to deploy RPD.

Syntax:

sh data-model-cmd.sh uploadrpd -I <RPDname> [-W <RPDpwd>] -SI <service_instance> -U <cred_username> [-P <cred_password>] [-S <hostname>] [-N <port_number>] [-SSL] [-H]

Example:

sh datamodel.sh upload**rpd** -I FCUBS_Full_Schema.**rpd** -W Admin123 -SI ssi -U weblogic -P weblogic123
