| ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five. |
| CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> |

| Parameter | Description |
|---|--|
| CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p> |
| BILL_DT=MMddy | <p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • “yyyy” or “yy” for year • “MM” or “M” for month • “dd” or “d” for day <p>Note: The date format should either start or end with the year.</p> |
| SEQ_NBR | The sequence number generated by the database. It should not be more than 12 characters. |
| FIXED_SUFFIX=XX | Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number. |
| LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE | Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left. |

You can specify the above mentioned parameters against any of the following parameters available in the C1_ALTBLSYS1 algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — SEQ_NBR
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|SEQ_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ_NBR** parameter while creating an algorithm using the **C1_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1_ALTBLSYS1** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

C1_ALTBLDV

The **C1_ALTBLDV** algorithm type is used to generate a unique alternate bill ID for the completed bills within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameter:

| Parameter | Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Initial Bill Sequence Number | Used to specify the initial alternate bill ID that you want to use while sequencing. Note: If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing. | No |

If you attach an algorithm created using the **C1_ALTBLDV** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

C1_ALTBLDIV1

The **C1_ALTBLDIV1** algorithm type is used to generate an alternate bill ID for the completed bills. You can generate an alternate bill ID in the required format using the following parameters:

| Parameter | Description |
|--|--|
| 'X' | Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number. |
| CIS_DIVISION | The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters. |
| BILL_CYC_CD | The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters. |
| ACCT_INDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five. |
| CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. |
| | <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> |

| Parameter | Description |
|---|--|
| CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p> |
| BILL_DT=MMddy | <p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • "yyyy" or "yy" for year • "MM" or "M" for month • "dd" or "d" for day <p>Note: The date format should either start or end with the year.</p> |
| FIXED_SUFFIX=XX | <p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p> |
| LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE | <p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p> |

You can specify the above mentioned parameters against any of the following parameters available in the **C1_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — BILL_DT=MMddy
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for the completed bills.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1_ALTBLDIV1** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

Enabling the Alternate Sequential Bill Numbers Feature

Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1_ALTBLLSYS**, **C1_ALTBLSYS1**, **C1_ALTBLDV**, or **C1_ALTBLDIV1** algorithm type that you want to use for alternate sequential bill number generation

Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Installation Options**.

The **Installation Options** screen appears.

3. Click the **Billing** tab.

The **Billing** tab appears.

4. Select the **Use Sequential Bill Numbers** option to indicate that you want to generate alternate sequential bill numbers for the completed bills.

The **Sequential Invoice** field is enabled.

5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.

6. Do either of the following:

| If you want to generate... | Then |
|--|---|
| Alternate sequential bill numbers unique throughout the system | <ol style="list-style-type: none"> 1. Attach an algorithm created using the C1_ALTBLLSYS algorithm type to the Sequence Generation Algorithm field |

| If you want to generate... | Then |
|--|---|
| | <p>to indicate how an alternate bill number which is unique throughout the system should be sequenced.</p> <div data-bbox="716 285 1399 394" style="border: 1px solid black; padding: 5px;"> <p>Note: The Sequence Generation Algorithm field is enabled when the System-wide option is selected from the Sequential Invoice list.</p> </div> <ol style="list-style-type: none"> 2. Click the Save button in the Page Title area. The changes made to the installation options are saved. |
| <p>Alternate sequential bill numbers unique within the division</p> | <ol style="list-style-type: none"> 1. Click the Save button in the Page Title area. The changes made to the installation options are saved. 2. From the Admin menu, select D and then click Division. The Division screen appears. 3. Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division. 4. In the Division screen, click the Algorithms tab. The Algorithms tab appears. 5. Select the Sequential Bill Number Generation option from the Division Algorithm Entity list. 6. Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed. 7. Attach an algorithm created using the C1_ALTBLDV algorithm type to the respective field to indicate how an alternate bill number which is unique within the division should be sequenced. 8. Click the Save button in the Page Title area. The changes made to the division are saved. |
| <p>Alternate sequential bill numbers unique throughout the system in the required format using a set of parameters</p> | <ol style="list-style-type: none"> 1. Attach an algorithm created using the C1_ALTBLSYS1 algorithm type to the Sequence Generation Algorithm field to indicate how an alternate bill number which is unique throughout the system should be generated. <div data-bbox="716 1583 1399 1871" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The Sequence Generation Algorithm field is enabled when the System-wide option is selected from the Sequential Invoice list.</p> <p>The alternate sequential bill number will be unique throughout the system when you configure the algorithm parameters appropriately.</p> </div> <ol style="list-style-type: none"> 2. Click the Save button in the Page Title area. |

Chapter 10

Currency Conversion

Topics:

- [Prerequisites](#)
- [Bill Segment Generation](#)
- [Adjustment Creation](#)
- [Payment and Tender Creation](#)
- [Transaction Aggregation](#)
- [FT GL Creation](#)
- [Currency Conversion Algorithms](#)
- [Exchange Rate \(Used for Searching\)](#)
- [Exchange Rate \(Used for Viewing\)](#)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during

currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

Prerequisites

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV_TYPE_FLG** and **EXCH_RATE_SRC_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1_EXCHRATE** maintenance object

Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration:
 - Allow Multi-Currency Accounts
 - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
 - Bill Segment Generation
 - FT GL Creation for Bill Segments

Note: The **C1_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
 - Adjustment Creation
 - FT GL Creation for Adjustments

Note: The **C1_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
 - Payment and Tender Creation
 - FT GL Creation for Payments

Note: The **C1_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

Note: The **C1_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** — If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** — If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

| C1_EXCRTBS algorithm type | CI_EXCRTBS on page 915 |

Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration.

The currency conversion is done when you have an algorithm of the C1_CURALGAD or C1_EXCRTAD algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

|----------------------------|---|
| C1_CURALGAD algorithm type | CI_CURALGAD on page 909 |
| C1_EXCRTAD algorithm type | CI_EXCRTAD on page 916 |

Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done when you have an algorithm of the C1_CURALGPY or C1_EXCRTPY algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

Note:

The currency conversion feature is available when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

|----------------------------|---|
| C1_CURALGPY algorithm type | CI_CURALGPY on page 911 |
| C1_EXCRTPY algorithm type | CI_EXCRTPY on page 918 |

Transaction Aggregation

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done when you have an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

|------------------------------------|--|
| C1_CURALGTFM algorithm type | CI_CURALGTFM on page 913 |
| C1_EXCRTTFM algorithm type | CI_EXCRTTFM on page 920 |

FT GL Creation

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

C1_CURALGBS

The **C1_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1_CURALGBS** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. | No |
| | Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |

C1_CURALGAD

The **C1_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_CURALGAD** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First <p>If you do not specify the value for this parameter, by default, the system uses the Division First search order.</p> | No |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |

C1_CURALGPY

The **C1_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_CURALGPY** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |

| Parameter | Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |

C1_CURALGTFM

The **C1_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)

7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_CURALGTFM** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |

C1_EXCRTBS

The **C1_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1_EXCRTBS** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. | No |
| | Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |
| Exchange Rate Override Algorithm | Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. | No |
| Exchange Rate Source | Used when you want to use the exchanges rates received from a particular source during currency conversion. <p>Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.</p> | No |

C1_EXCRTAD

The **C1_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or

direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_EXCRTAD** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). C1_EXCRTPY

The **C1_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_EXCRTPY** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate. | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate. | No |
| Exchange Rate Override Algorithm | Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. | No |
| Exchange Rate Source | Used when you want to use the exchanges rates received from a particular source during currency conversion. Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field. | No |

C1_EXCRTTFM

The **C1_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate

2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_EXCRTTFM** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Override Base Currency | Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency. | No |
| Conversion Type | Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field. | No |
| Search Order (Valid Values: Division First, Direct Rate First) | Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order. | No |

| Parameter | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Division Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p> | No |
| Global Reverse Rate (Valid Values: Yes, No) | Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p> | No |
| Exchange Rate Override Algorithm | Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. <p>Note: A sample algorithm type named C1_EXCRTOVRD is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the CI_TXN_DETAIL table. The exchange rate is then used by the algorithm which is created using the C1_EXCRTTFM algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the Transaction Detail Field for Exchange Rate parameter.</p> | No |
| Exchange Rate Source | Used when you want to use the exchanges rates received from a particular source during currency conversion. <p>Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.</p> | No |

FTFREZGLEXTN

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments when you have an algorithm of the **C1_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Exchange Rate Date Type for Adjustments with Freeze At Will | Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the Freeze At Will option. The valid values are: <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. | Yes |

| Parameter | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Exchange Rate Date Type for Adjustments with Freeze At Bill Completion | <p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the Freeze At Bill Completion option. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. | Yes |
| Exchange Rate Date Type for Payments (Valid Values: A, R, F, C) | <p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. | Yes |

| Parameter | Description | Mandatory (Yes or No) |
|---|--|-----------------------|
| Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E) | <p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. • E (Bill Segment End Date) - Used to search for an exchange rate which is effective on the bill segment end date. <p>Note: If you set the Exchange Rate Date Type for Bill Segments parameter to R, ensure that you set the Bill Segment Freeze Option to Freeze At Bill Completion in the Billing tab of the Installation Options screen. Otherwise, erroneous results might occur.</p> | Yes |

C1_EXCRTOVRD

The **C1_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI_TXN_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI_TXN_DETAIL** table, you need to create an algorithm using the **C1_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1_EXCRTTFM** algorithm type.

The **C1_EXCRTOVRD** algorithm type contains the following parameters:

| Parameter | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Transaction Detail Field for Exchange Rate | Used to indicate the column of the CI_TXN_DETAIL table from where the exchange rate must be picked during currency conversion. | Yes |

Exchange Rate (Used for Searching)

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- [Search Exchange Rate](#) on page 926

Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Search By | Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: <ul style="list-style-type: none"> • Date/Time and Exchange Rate Source • Date | Yes |
| | Note: By default, the Date/Time and Exchange Rate Source option is selected. | |
| From Currency | Used to search exchange rates with a particular source currency. | No |
| To Currency | Used to search exchange rates with a particular target currency. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Division | Used to search exchange rates which are defined for a particular division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Conversion Type | Used to search exchange rates which are defined using a particular conversion type. | No |
| Effective Start Date/ Time | Used to search exchange rates which are effective from a particular date and time onwards. | No |
| | Note: This field appears when you select the Date/Time and Exchange Rate Source option from the Search By list. | |
| Effective End Date/ Time | Used to search exchange rates which are effective till a particular date and time. | No |
| | Note: This field appears when you select the Date/Time and Exchange Rate Source option from the Search By list. | |
| Effective Start Date | Used to search exchange rates which are effective from a particular date onwards. | No |
| | Note: This field appears when you select the Date option from the Search By list. | |
| Effective End Date | Used to search exchange rates which are effective till a particular date. | No |
| | Note: This field appears when you select the Date option from the Search By list. | |
| Exchange Rate Source | Used to search exchange rates which are received from a particular source. | No |
| | Note: This field appears when you select the Date/Time and Exchange Rate Source option from the Search By list. | |

Note: You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| Exchange Rate ID | Displays the exchange rate ID. |
| | Note: It has a link. On clicking the link, the Exchange Rate screen appears with the details of the respective exchange rate. |

| Column Name | Column Description |
|---------------------------|--|
| From Currency | Indicates the currency which is translated. In other words, it is the source currency. |
| To Currency | Indicates the currency in which the source currency is translated. In other words, it is the target currency. |
| Division | Indicates the division for which the exchange rate is defined. Note: The data does not appear in this column when the exchange rate is a global exchange rate. |
| Exchange Rate Source | Indicates the source from where the exchange rate is received. Note: This column appears when you select the Date/Time and Exchange Rate Source option from the Search By list. |
| Conversion Type | Indicates the conversion type of the exchange rate. |
| Effective Start Date/Time | Displays the date and time from when the exchange rate is effective. Note: This column appears when you select the Date/Time and Exchange Rate Source option from the Search By list. |
| Effective End Date/Time | Displays the date and time till when the exchange rate is effective. Note: This column appears when you select the Date/Time and Exchange Rate Source option from the Search By list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time. |
| Effective Start Date | Displays the date from when the exchange rate is effective. Note: This column appears when you select the Date option from the Search By list. |
| Effective End Date | Displays the date till when the exchange rate is effective. Note: This column appears when you select the Date option from the Search By list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date. |
| Exchange Rate | Displays the exchange rate. |
| Spread | Indicates the spread for the exchange rate. |
| Inverse Rate | Displays the reverse exchange rate. |
| Edit | On clicking the Edit (✎) icon, the Add/Edit Exchange Rate screen appears where you can edit the details of the exchange rate. |
| Delete | On clicking the Delete (🗑) icon, you can delete the exchange rate. |

Note:

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

| Exchange Rate | Effective Start Date and Time | Effective End Date and Time |
|---------------|-------------------------------|-----------------------------|
| RT1 | 01-01-2014 12:00:00 PM | - |
| RT2 | 02-01-2014 12:00:00 PM | - |
| RT3 | 03-01-2014 12:00:00 PM | - |

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

| Search Criteria | Search Results |
|--|---|
| Effective Start Date and Time: 01-01-2014 12:00:00 PM | All three exchange rates — RT1, RT2, and RT3 — will appear in the search results. |
| Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM | RT1 will appear in the search results. |
| Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM | RT1 and RT2 will appear in the search results. |
| Effective Start Date and Time: 02-01-2014 12:00:00 PM | RT2 and RT3 will appear in the search results. |
| Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM | RT2 will appear in the search results. |
| Effective Start Date and Time: 03-01-2014 12:00:00 PM | RT3 will appear in the search results. |

Searching for an Exchange Rate**Prerequisites**

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application

- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.
The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and time based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of exchange rates that meet the search criteria appears in the **Search Results** section.

Defining an Exchange Rate

Prerequisites

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1_EXCHRATE** maintenance object

Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To define an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
A sub-menu appears.
3. Click the **Add** option from the **Exchange Rate** sub-menu.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|--|
| Business Object | Indicates the business object using which you are defining an exchange rate. | Not applicable |
| From Currency | Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency. | Yes |
| To Currency | Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency. | Yes |
| Conversion Type | Used to indicate the conversion type for the exchange rate. | Yes |
| Division | Used to indicate the division for which you want to define the exchange rate. | Yes (Conditional) |
| | <p>Note:</p> <p>You can only view those divisions to which you have access in the Division list.</p> <p>You must leave this field blank while defining a global exchange rate.</p> | Note: This field is required when you are defining a division-specific exchange rate. |
| Exchange Rate Source | Used to indicate the source from where the exchange rate is received. | No |
| | Note: This field appears when you are defining a date and time based exchange rate. | |
| Effective Start Date/Time | Used to specify the date and time from when the exchange rate is effective. | Yes |
| | <p>Note:</p> <p>This field appears when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|---|
| Effective End Date/ Time | Used to specify the date and time till when the exchange rate is effective. | Yes (Conditional) |
| | <p>Note:</p> <p>The effective end date and time cannot be earlier than the effective start date and time.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time.</p> <p>This field appears when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p> | <p>Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y, this field is required when you are defining a division-specific exchange rate.</p> |
| Effective Start Date | Used to specify the date from when the exchange rate is effective. | Yes |
| | <p>Note: This field appears when you are defining a date based exchange rate.</p> | |
| Effective End Date | Used to specify the date till when the exchange rate is effective. | Yes (Conditional) |
| | <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date.</p> <p>This field appears when you are defining a date based exchange rate.</p> | <p>Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y, this field is required when you are defining a division-specific exchange rate.</p> |
| Exchange Rate | Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency. | Yes |
| | <p>Note: The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).</p> | |
| Spread | Used to specify the spread for the exchange rate. | No |

Tip: Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

4. Enter the required details in the **Add/Edit Exchange Rate** screen.
5. Define characteristics for the exchange rate, if required.

Note: You can define characteristics when you are defining a date and time based exchange rate.

6. Click **Save**.

The exchange rate is defined in the system.

Note: If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

Defining a Characteristic for an Exchange Rate

Prerequisites

To define a characteristic for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

Procedure

To define a characteristic for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the exchange rate. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the exchange rate. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | | Note: The list includes only those characteristic types where the characteristic entity is set to Exchange Rate . |
| | | Note: This field is required when you are defining a characteristic for the exchange rate. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the exchange rate. |

Note: The **Characteristics** section appears when you are defining or editing a date and time based exchange rate.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the exchange rate, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the exchange rate, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Exchange Rate

Procedure

To edit an exchange rate:

- Search for the exchange rate in the **Exchange Rate** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the exchange rate whose details you want to edit.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Exchange Rate ID | Displays the exchange rate ID. | Not applicable |
| Business Object | Indicates the business object used while defining an exchange rate. | Not applicable |
| From Currency | Indicates the currency which is translated. In other words, it is the source currency. | Not applicable |
| To Currency | Indicates the currency in which the source currency is translated. In other words, it is the target currency. | Not applicable |
| Conversion Type | Indicates the conversion type of the exchange rate. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|---|
| Division | Indicates the division for which the exchange rate is defined. | Not applicable |
| | Note: The data does not appear corresponding to this field when the exchange rate is a global exchange rate. | |
| Exchange Rate Source | Indicates the source from where the exchange rate is received. | Not applicable |
| | Note: This field appears when you are editing a date and time based exchange rate. | |
| Effective Start Date/Time | Displays the date and time from when the exchange rate is effective. | Not applicable |
| | Note: This field appears when you are editing a date and time based exchange rate. | |
| Effective End Date/Time | Used to specify the date and time till when the exchange rate is effective. | Yes (Conditional) |
| | Note: The effective end date and time cannot be earlier than the effective start date and time. This field appears when you are editing a date and time based exchange rate. This field is non-editable when you are editing a date and time based global exchange rate. This is because a global exchange rate does not have an end date and time. | Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y , this field is required when you are defining a division-specific exchange rate. |
| Effective Start Date | Displays the date from when the exchange rate is effective. | Not applicable |
| | Note: This field appears when you are editing a date based exchange rate. | |
| Effective End Date | Used to specify the date till when the exchange rate is effective. | Yes (Conditional) |
| | Note: The effective end date cannot be earlier than the effective start date. This field appears when you are editing a date based exchange rate. This field is non-editable when you are editing a date based global exchange rate. This is because a global exchange rate does not have an end date. | Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y , this field is required when you are defining a division-specific exchange rate. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Exchange Rate | Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency. | Yes |
| | Note: The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001). | |
| Spread | Used to specify the spread for the exchange rate. | No |

Tip: Alternatively, you can click the **Edit** button in the **Exchange Rate** zone to edit the details of the exchange rate.

3. Modify the required details in the **Add/Edit Exchange Rate** screen.
4. Define, edit, or remove characteristics of the exchange rate, if required.

Note: The **Characteristics** section appears when you are editing a date and time based exchange rate.

5. Click **Save**.

The changes made to the exchange rate are saved.

Deleting an Exchange Rate

Procedure

To delete an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the exchange rate that you want to delete.

A message appears confirming whether you want to delete the exchange rate.

Tip: Alternatively, you can click the **Delete** button in the **Exchange Rate** zone to delete the exchange rate.

3. Click **OK**.

The exchange rate is deleted.

Exchange Rate (Used for Viewing)

The **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

It consists of the following tabs:

- [Exchange Rate - Main](#) on page 937
- [Exchange Rate - Log](#) on page 939

Exchange Rate - Main

The **Main** tab displays information about the exchange rate. It contains the following zones:

- [Exchange Rate](#) on page 937

Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- **Main** — This section provides basic information about the exchange rate. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Exchange Rate ID | Displays the exchange rate ID. |
| From Currency | Indicates the currency which is translated. In other words, it is the source currency. |
| To Currency | Indicates the currency in which the source currency is translated. In other words, it is the target currency. |
| Conversion Type | Indicates the conversion type of the exchange rate. |
| Division | Indicates the division for which the exchange rate is defined. Note: The data does not appear corresponding to this field when the exchange rate is a global exchange rate. It has a link. On clicking the link, the Division screen appears with the details of the respective division. |
| Exchange Rate Source | Indicates the source from where the exchange rate is received. Note: This field appears when you are viewing the details of a date and time based exchange rate. |

| Field Name | Field Description |
|-------------------------------|--|
| Effective Start Date/ Time | Displays the date and time from when the exchange rate is effective. |
| | Note: This field appears when you are viewing the details of a date and time based exchange rate. |
| Effective End Date/ Time | Displays the date and time till when the exchange rate is effective. |
| | Note: This field appears when you are viewing the details of a date and time based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time. |
| Effective Start Date | Displays the date from when the exchange rate is effective. |
| | Note: This field appears when you are viewing the details of a date based exchange rate. |
| Effective End Date | Displays the date till when the exchange rate is effective. |
| | Note: This field appears when you are viewing the details of a date based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date. |
| Exchange Rate | Displays the exchange rate. |
| Spread | Indicates the spread for the exchange rate. |

- **Characteristics** — This section lists the characteristics of the exchange rate. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Date | Indicates the date from when the characteristic is effective for the exchange rate. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

Note: The **Characteristics** section appears when you are viewing the details of a date and time based exchange rate.

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the exchange rate. |
| Delete | Used to delete the exchange rate. |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Create Date/Time | Displays the date and time when the exchange rate is created. |

Exchange Rate - Log

The **Log** tab contains the following zone:

- [Exchange Rate Log](#) on page 939

Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the exchange rate. |
| Details | Displays the details about the action performed on the exchange rate. |
| User | Indicates the user who has performed the action on the exchange rate. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the exchange rate. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements. |
| Status Reason | Indicates the reason why the status was changed. Note: At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle. |

Viewing the Exchange Rate Details

Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.

2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange rate whose details you want to view.

The **Exchange Rate** screen appears. It contains the following zones:

- **Exchange Rate** — Displays the details of the exchange rate.
 - **Exchange Rate Log** — Lists the complete trail of actions performed on the exchange rate.
3. View the details of the exchange rate in the **Exchange Rate** zone.
 4. View the log of the exchange rate in the **Exchange Rate Log** zone.

- [Disaggregation Request](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 992.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#) on page 951
- [Transaction Disaggregation](#) on page 977
- [Transaction Cancellation](#) on page 985
- [Transaction Rollback](#) on page 989

Prerequisites

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE_NUMBER lookup field
- Create an algorithm of the **C1_RTCL_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (CI_RLENG)*
- *Dummy Header (CI-TXNDMYID)*
- *Multi Parameter Based Pricing (CI_PPARAM_FLG)*
- *Feed Management (CI_FM)*

Transaction Rating Before Billing

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
 - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. Ignore the Transaction Leg for Billing – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

Note:

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created when you attach an algorithm of the **C1_RTCL_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

| Transaction Rating Approach and Way | Ignore Transaction (Yes or No) | Aggregate Transaction (Yes or No) | Rating Criteria | Batch in which the Rate is Determined |
|-------------------------------------|--------------------------------|-----------------------------------|---------------------------------|---|
| 3a | Yes | Not applicable | Do Not Rate Transactions (DNRT) | Not applicable because ignored transactions are not considered for billing. |

| Transaction Rating Approach and Way | Ignore Transaction (Yes or No) | Aggregate Transaction (Yes or No) | Rating Criteria | Batch in which the Rate is Determined |
|-------------------------------------|--------------------------------|-----------------------------------|--|---|
| 3b | Yes | Not applicable | Rate Transactions (RITX) | Update Status (C1-TXNEX) |
| 1b | No | Yes | Do Not Rate Transactions (DNRT) | Not applicable because the rate is determined during billing. |
| 2b | No | Yes | Aggregate transactions and then rate aggregated SQs (AGTR) | Service Quantity Calculation (C1-TXNSQ) |
| 2a | No | Yes | Rate individual transactions and aggregate calc lines across transactions (RITA) | Update Status (C1-TXNEX) |
| 1a | No | No | Do Not Rate Transactions (DNRT) | Not applicable because the rate is determined during billing. |
| 2c | No | No | Rate Transactions (RITX) | Service Quantity Calculation (C1-TXNSQ) |

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

| Transaction | Transaction Volume | Transaction Date | Account | Price Item | Price Item Parameter Group ID | Price Assignment ID | Aggregation Schedule |
|-------------|--------------------|------------------|---------|------------|-------------------------------|---------------------|----------------------|
| T1 | 300 | 01/01/2015 | A1 | P1 | PG1 | PA1 | Monthly |
| T1 | 300 | 01/01/2015 | A2 | P1 | PG1 | PA2 | Monthly |
| T2 | 200 | 15/01/2015 | A1 | P1 | PG1 | PA1 | Monthly |
| T2 | 200 | 15/01/2015 | A3 | P1 | PG1 | PA3 | Monthly |

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

| Transaction | Price Assignment ID | Rate Component | Currency Code | Distribution Code | Description on Bill | Aggregation Parameter Group ID (Rate Component's Characteristics) |
|-------------|---------------------|----------------------------|---------------|-------------------|---------------------|---|
| T1 | PA1 | RC1-0.1*Transaction Volume | USD | BK-AR1 | XYZ | Char1=Y |
| T1 | PA1 | RC2-0.2*Transaction Volume | USD | BK-AR2 | ABC | Char2=Y |
| T1 | PA2 | RC3-0.3*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |
| T1 | PA2 | RC4-0.2*Transaction Volume | USD | BK-AR4 | ABC | Char2=Y |
| T2 | PA1 | RC1-0.1*Transaction Volume | USD | BK-AR1 | XYZ | Char1=Y |
| T2 | PA1 | RC2-0.2*Transaction Volume | USD | BK-AR2 | ABC | Char2=Y |
| T2 | PA3 | RC3-0.3*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |
| T2 | PA3 | RC4-0.2*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|--|----------------|-------------------------------------|--------------------------|--|
| BC1 | 01/01/2015 | 31/01/2015 | T1– A1P1PG1– PA1, T2– A1P1PG1– PA1 | RC1 | $300 * 0.1 = 30$, $200 * 0.1 = 20$ | $30 + 20 = 50$ | The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |
| BC1 | 01/01/2015 | 31/01/2015 | T1– A1P1PG1– PA1, T2– A1P1PG1– PA1 | RC2 | $300 * 0.2 = 60$, $200 * 0.2 = 40$ | $60 + 40 = 100$ | The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |
| BC2 | 01/01/2015 | 31/01/2015 | T1– A2P1PG1– PA2 | RC3 | $300 * 0.3 = 90$ | 90 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1– A2P1PG1– PA2 | RC4 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2– A3P1PG1– PA3 | RC3, RC4 | $200 * 0.3 = 60$, $200 * 0.2 = 40$ | $60 + 40 = 100$ | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|-----------------|----------------|---------------------|--------------------------|--|
| BC1 | 01/01/2015 | 31/01/2015 | T1-A1P1PG1-PA1 | RC1 | $300 * 0.1 = 30$ | 30 | The pass through charge is calculated for the transaction leg. |
| BC1 | 01/01/2015 | 31/01/2015 | T1-A1P1PG1-PA1 | RC2 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1-A2P1PG1-PA2 | RC3 | $300 * 0.3 = 90$ | 90 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1-A2P1PG1-PA2 | RC4 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2-A1P1PG1-PA1 | RC1 | $200 * 0.1 = 20$ | 20 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2-A1P1PG1-PA1 | RC2 | $200 * 0.2 = 40$ | 40 | The pass through charge is calculated for the transaction leg. |

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|-----------------|----------------|-------------------------------|--------------------------|--|
| BC4 | 01/01/2015 | 31/01/2015 | T2-A3P1PG1-PA3 | RC3, RC4 | 200*0.3 = 60, 200*0.2 = 40 | 60+40 = 100 | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

| Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------------|--------------------|---------------|------------|-------------------|------------------------|-----------------------------------|---|
| AIP1PG1- PA1- Monthly | 300+200 = 500 | BC1 | 01/01/2015 | 31/01/2015 | RC1 | 500*0.1 = 50 | 50 | The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities. |

| Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------------|--------------------|---------------|------------|-------------------|------------------------|-----------------------------------|---|
| A1P1PG1- PA1- Monthly | 300+200 = 500 | BC1 | 01/01/2015 | 31/01/2015 | RC2 | 500*0.2 = 100 | 100 | The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities. |
| A2P1PG1- PA2- Monthly | 300 | BC2 | 01/01/2015 | 31/01/2015 | RC3 | 300*0.3 = 90 | 90 | The pass through charge is calculated for the transaction leg. |
| A2P1PG1- PA2- Monthly | 300 | BC2 | 01/01/2015 | 31/01/2015 | RC4 | 300*0.2 = 60 | 60 | The pass through charge is calculated for the transaction leg. |

| Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------|-----------------|------------|------------|----------------|-------------------------------------|--------------------------|--|
| A3P1PG1-PA3-Monthly | 200 | BC3 | 01/01/2015 | 31/01/2015 | RC3, RC4 | $200 * 0.3 = 60$, $200 * 0.2 = 40$ | $60 + 40 = 100$ | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |

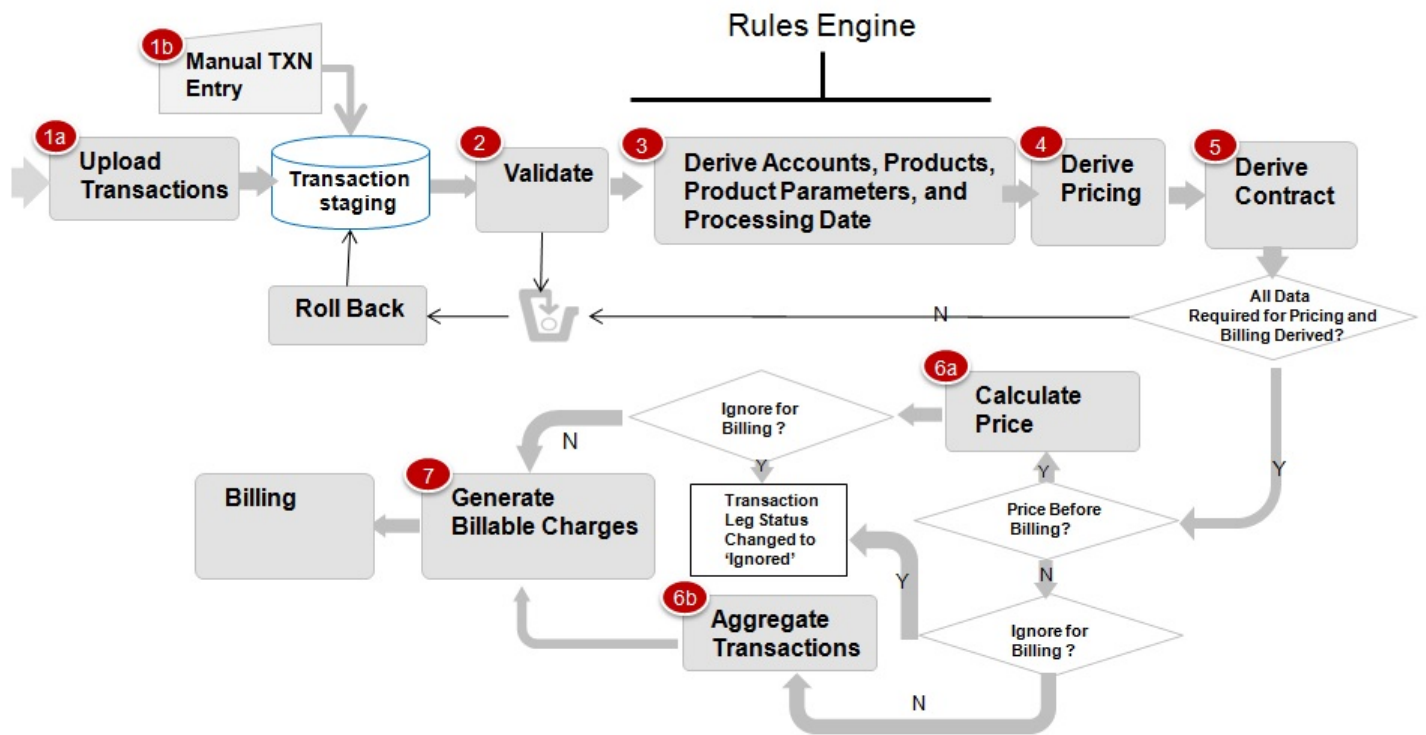

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 952
- [Transaction Validation and Initial Price Item Determination](#) on page 954
- [Price Item Pricing Verification](#) on page 964
- [Aggregation](#) on page 968
- [Clean Up](#) on page 972

The following figure graphically explains the transaction aggregation process:

Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to validate a particular transaction feed. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Transaction Source | Used when you want to validate the transaction feeds which are received from a particular transaction source. | No |
| Checksum Validation Required | Used to indicate whether the following should be validated: <ul style="list-style-type: none"> The number of transaction records in the file matches the total transaction records in the header. The sum of transaction amount matches the total transaction amount in the header. The sum of transaction volume matches the total transaction volume in the header. The valid values are: <ul style="list-style-type: none"> Y N | No |
| Duplicate Check Required | Used to indicate whether the following should be validated: <ul style="list-style-type: none"> File with the same header date and external header ID is not available in the system. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: The duplicate check is done only against the transaction feeds which are in the Validated (VALI) status and not against the transaction feeds which are in the Uploaded (UPLD) status.</p> | No |
| Allow Positive Transaction Volume in Header | Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to Y.</p> | Yes |
| Allow Negative Transaction Volume in Header | Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to N.</p> | Yes |

| Parameter Name | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Allow Zero Transaction Volume in Header | Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> • Y • N | Yes |
| | Note: By default, the parameter value is set to N. | |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Transaction Validation and Initial Price Item Determination

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
 - Transaction source is defined in the system.
 - Transaction record type is defined for the transaction source in the system.
 - Division and currencies are defined in the system.
 - The account with the specified account identifier, account identifier type and division exists in the system.

Note: This validation is done when the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Note: The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to BATCH_DT, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to TXN_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT_NO1_Val - Account 1
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT_NO1_Val, DIVISION1_VAL and PRODUCT1_1_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT_NO1_Val set to Account 1, DIVISION1_VAL set to D1, PRODUCT1_1_Val set to Price Item X, and PRODUCT1_2_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - US
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - US

- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - UK
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - UK
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD
- ACCT_NO2_Val - Account B
- DIVISION2_VAL - D2
- PRODUCT2_1_Val - Price Item A
- PCD2_1_1_VAL - Country
- PVL2_1_1_VAL - US
- PCD2_1_2_VAL - Currency
- PVL2_1_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

| Charges Borne By | Division to which the account belongs... | Price Item | Country | Currency |
|-------------------------|---|-------------------|----------------|-----------------|
| Account A | D1 | Price Item X | UK | USD |
| Account A | D1 | Price Item Y | UK | USD |
| Account B | D2 | Price Item A | US | USD |

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 1084. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

| Output Parameter | Naming Convention | Example | Description |
|-------------------------------------|--|--|--|
| Account Identifier | ACCT_NOX_Val | ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, | Used to indicate the account which must bear the charges for the transaction. |
| Account Identifier Column Name | ACCT_NOX_Col | ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ... | Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked. |
| Account Identifier Type | ACCT_NO_TYPEX_Val | ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ... | Used to indicate the type of account identifier. |
| Account Identifier Type Column Name | ACCT_NO_TYPEX_Col | ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ... | Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked. |
| Account Division | DIVISIONX_VAL | DIVISION1_VAL | Used to indicate the division to which the account belongs. |
| Account Division Column Name | DIVISIONX_COL | DIVISION1_COL | Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked. |
| Price Item Name | PRODUCTX_Y_Val | PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, | Used to indicate the price item to which the transaction must be mapped. |
| | Note: Here, X represents the account and Y represents the price item. | | |
| Price Item Column Name | PRODUCTX_Y_Col | PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ... | Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked. |
| | Note: Here, X represents the account and Y represents the price item. | | |

| Output Parameter | Naming Convention | Example | Description |
|------------------|---|---|---|
| TOU | TOUX_Y_Val | TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ... | Used to indicate the variance parameter which you want to use along with the price item for price determination. Note: This output parameter appears when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| | Note: Here, X represents the account and Y represents the price item. | | |
| TOU Column Name | TOUX_Y_Col | TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ... | Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked. Note: This output parameter appears when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| | Note: Here, X represents the account and Y represents the price item. | | |
| Parameter Code | PCDX_Y_Z_VAL | PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ... | Used to indicate the parameter which you want to use along with the price item for price determination. Note: This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (EROR) . |
| | Note: At present, the system does not support the Parameter Code Column output parameter. | | |
| | Note: Here, X represents the account, Y represents the price item, and Z represents the parameter. | | |

| Output Parameter | Naming Convention | Example | Description |
|-----------------------------|--|---|--|
| Parameter Value | PVLX_Y_Z_VAL | PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ... | Used to specify the value for the parameter. |
| | <p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p> | | <p>Note:</p> <p>This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p> |
| Parameter Value Column Name | PVLX_Y_Z_COL | PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ... | Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked. |
| | <p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p> | | <p>Note:</p> <p>This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p> |

| Output Parameter | Naming Convention | Example | Description |
|----------------------|---|---|--|
| Processing Date Type | PRCS_DTX_Y_TYP | PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ... | <p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> • TXN_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date. • Batch_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date. |
| | <p>Note: Here, X represents the account and Y represents the price item.</p> | | |

| Output Parameter | Naming Convention | Example | Description |
|--------------------|---|---|---|
| Processing Date | PRCS_DTX_Y_VAL | PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ... | Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate. |
| | <p>Note: Here, X represents the account and Y represents the price item.</p> | | <p>Note:</p> <p>The custom date must be a date other than the transaction or batch business date.</p> <p>Based on the Processing Date for Transaction Feed Management characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p> |
| Ignore Transaction | IGNORE_SW | | <p>Used to ignore transactions based on the transaction attributes. The valid values are:</p> <ul style="list-style-type: none"> • Y • N |

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

| Transaction | Charges Borne By | Division to which the account belongs... | Price Item | Variance Parameter | Price Item Parameters |
|-------------|------------------|--|------------|--------------------|--------------------------------------|
| T1 | A1 | D1 | P1 | - | Country - US, Currency - USD |
| T1 | A1 | D1 | P2 | - | Country - Germany, Currency - USD |
| T1 | A2 | D2 | P3 | USD | - |
| T2 | A1 | D1 | P1 | - | Country - US, Currency - USD |
| T2 | A2 | D2 | P2 | USD | - |
| T3 | A1 | D1 | P3 | - | Country - Germany, Currency - USD |

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

- **Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:
 - Account A, Price Item X, Country - US, Currency - USD
 - Account A, Price Item Y, Country - Germany, Currency - USD
 - Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Batch Business Date | Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date. Note: If you do not specify any date, the batch business date is set to the current date. The batch business date used while executing the C1-TXNIP batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle. | No |
| Transaction Header ID | Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to validate and derive price item for the transactions which are received from a particular transaction source. | No |
| Division | Used when you want to validate and derive price item for the transactions belonging to a particular division. | No |
| Shuffle Work Unit | Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N Note: By default, the parameter value is set to N. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

Note:

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1_PRDR_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1_PRDR_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

Price Item Pricing Verification

In this process, the system behaves in the following manner:

| If the Multi Parameter Based Pricing feature is... | Then... |
|--|--|
| Disabled | <p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p> |
| Enabled | <p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see Multi Parameter Based Pricing on page 259. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p> |

Note:

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to find the price item pricing for transactions which are received in a particular transaction feed. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used when you want to find the price item pricing for transactions which are received from a particular transaction source. | No |
| Division | Used when you want to find the price item pricing for transactions belonging to a particular division. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 942.

You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to change the status of transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to change the status of transactions which are received from a particular transaction source. | No |
| Division | Used when you want to change the status of transactions belonging to a particular division. | No |
| Shuffle Work Unit | Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| | Note: By default, the parameter value is set to N. | |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI_PRC_AGRD
- CI_PRC_PL
- CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Division | Used when you want to update the price item pricing information of accounts belonging to a particular division. | No |
| Chunk Size | Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the **SQL** values in the billable charge. In the aggregation process, the system behaves in the following manner:

| If the Multi Parameter Based Pricing feature is... | Then... |
|--|--|
| Disabled | <p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> |
| Enabled | <p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> |

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 942.

Note: If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to create the billable charges for transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to create the billable charges for transactions which are received from a particular transaction source. | No |
| Division | Used when you want to create the billable charges for transactions belonging to a particular division. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

| Rate for other transaction leg is determined using the following set of pricing attributes... | Then.... |
|--|---|
| Ignore Transaction is set to Yes and Rating Criteria is set to Rate Transactions (RITX) | The corresponding calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Rate Transactions (RITX) | The corresponding billable charge and calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA) | The corresponding calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The corresponding billable charge and calculation lines are not deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Do Not Rate Transactions | The corresponding non-aggregated billable charge is deleted. |

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to change the status of transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to change the status of transactions which are received from a particular transaction source. | No |
| Division | Used when you want to change the status of transactions belonging to a particular division. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|--|
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions | The SQIs are recalculated in the billable charge. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA) | The pass through charges are recalculated and accumulated accordingly. |

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|--|
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions | The aggregated billable charge is deleted. |

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|---|
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The aggregated billable charge and the corresponding calculation lines are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA) | The aggregated billable charge is deleted. |

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|--|
| Transaction Header ID | Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed. | Yes (Conditional) |
| | Note: This parameter should not be used during the disaggregation process. | Note: This parameter is required when you set the request type to CNCL . |
| | | |

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Transaction Source | Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source. | No |
| | Note: This parameter should not be used during the cancellation and disaggregation processes. | |
| Division | Used when you want to update or delete billable charges created for transactions belonging to a particular division. | No |
| | Note: This parameter should not be used during the cancellation process. | |
| Account ID | Used when you want to update or delete billable charges created for transactions of a particular account. | No |
| | Note: This parameter should be used only during the disaggregation process. | |
| Bill Cycle | Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle. | No |
| | Note: This parameter should be used only during the disaggregation process. | |
| Disaggregate Transactions From Date | Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards. | Yes (Conditional) |
| | Note: You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process. | |
| Request Type | Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> • CNCL • EROR • DISAGG | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

| Transaction Leg Status Transition | Transaction Leg Status Transition on page 993 |
| How to set the C1_FM feature configuration | Setting the C1_FM Feature Configuration on page 3048 |

Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI_TXN_DTL_PRITM_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

Note:

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
 - CI_PRC_AGRD
 - CI_PRC_PL
 - CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI_TXN_DISAGG_REQ table:

| If... | Then |
|--|--|
| A price item is assigned to an account | A disaggregation request is created for the account. |

| If... | Then |
|---|---|
| <p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter | <p>A disaggregation request is created for the account.</p> |
| <p>A price item is assigned to a person</p> | <p>A disaggregation request is created for each account of the person and its child person.</p> |
| <p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter | <p>A disaggregation request is created for each account of the person and its child person.</p> |
| <p>A price list is assigned to an account.</p> | <p>A disaggregation request is created for the account.</p> |
| <p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance | <p>A disaggregation request is created for the account.</p> |
| <p>A price list is assigned to a person.</p> | <p>A disaggregation request is created for each account of the person and its child person.</p> |
| <p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance | <p>A disaggregation request is created for each account of the person and its child person.</p> |

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL_TXN_DISAGG_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
 - Variance Parameter
 - Effective Start Date
 - Effective End Date
 - Aggregation Schedule
 - Ignore Transaction
 - Rating Criteria
 - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

| Transaction | Account | Price Item |
|-------------|---------|------------|
| T1 | A1 | P1 |
| T1 | A1 | P2 |
| T1 | A2 | P1 |
| T1 | A2 | P2 |

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Division | Used when you want to create disaggregation request for accounts belonging to a particular division. | No |
| Person ID | Used when you want to create disaggregation request for accounts belonging to a particular person. | No |
| Bill Cycle | Used when you want to create disaggregation request for accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards. | Yes |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note: The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI_TXN_DISAGG_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Division | Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation. | No |
| Account ID | Used when you want to identify the transactions of a particular account for disaggregation. | No |
| Bill Cycle | Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Disaggregate Transactions From Date | Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation. | No |
| | <p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the Disaggregate Transactions From Date parameter.</p> | |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Post-Processing Algorithm | Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation. | No |
| Exclude Canceled Billable Charges (Y or N) | Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the Canceled status during the disaggregation process. The valid values are: | No |
| | <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify any value, by default, the parameter value is set to N.</p> | |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The corresponding transaction leg and calculation lines (if any) are deleted.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Division | Used when you want to disaggregate the transactions of accounts belonging to a particular division. | No |
| Account ID | Used when you want to disaggregate the transactions of a particular account. | No |
| Bill Cycle | Used when you want to disaggregate the transactions of accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to disaggregate the transactions which were performed from a particular date onwards. Note: You must specify the date in the YYYY-MM-DD format. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTEXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_DSAG_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_DSAG_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 972.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the **CI_TXN_DISAGG_REQ** table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Account ID | Used when you want to update the disaggregation requests' status of a particular account. | No |
| Division | Used when you want to update the disaggregation requests' status of accounts belonging to a particular division. | No |
| Bill Cycle | Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the Pending Cancel or Frozen status. Note: You must specify the date in the YYYY-MM-DD format. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Update Status Algorithm | Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to COMPLETE . Note: If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests. | No |
| Exclude Canceled Billable Charges (Y or N) | Used to indicate whether you want to change the status of the disaggregation request to COMPLETE when the canceled billable charges are excluded during the disaggregation process. The valid values are: <ul style="list-style-type: none"> • Y • N Note: If you do not specify any value, by default, the parameter value is set to N. You must specify the same value for this parameter while executing the Identify Transactions for Disaggregation (C1-IDENT) and Update Disaggregation Request Status (C1-DRSUA) batches during the disaggregation process. Otherwise, erroneous results will occur. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

| When you cancel a transaction feed for which... | Then |
|---|--|
| <p>A bill (with the Pending status) is already generated in the system</p> | <p>The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>If a pending bill has a bill segment in the Frozen or Pending Cancel status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the Cancel status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • Deletes all other bill segments which are not in the Cancel status. • The billable charge corresponding to the bill segment which is not in the Cancel status is deleted if the billable charge is in the Billable status and if the billable charge only includes transactions from the feed that you want to cancel. • The billable charge corresponding to the bill segment which is not in the Cancel status is not deleted or recalculated if the billable charge is in the Cancelled status. • The billable charge corresponding to the bill segment which is in the Cancel status is cancelled if the billable charge only includes transactions from the feed that you want to cancel. • The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds. <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The bill and their corresponding bill segments are deleted. • The SQIs are recalculated in the corresponding billable charges. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)). |
| <p>A bill (with the Complete status) already exists in the system</p> | <p>The system does not allow you to cancel the transaction feed.</p> |

| When you cancel a transaction feed for which... | Then |
|---|---|
| A bill (with the Complete status) has all bill segments in the Cancelled status | The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL) . |
| A billable charge (with the Billable status) exists in the system | <p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The SQIs are recalculated in the billable charge. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)). |
| A billable charge (with the Cancelled status) exists in the system | The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to Cancelled (CNCL) . |

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 972.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to cancel a particular transaction feed. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_CNCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_CNCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)

Note: You must execute the **Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)** batch when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Status | Used to indicate whether you want to rollback transactions which are in the Ignored or Error status. The valid values are: <ul style="list-style-type: none"> • IGNR • EROR | Yes |
| Transaction Header ID | Used when you want to rollback transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to rollback transactions which are received from a particular transaction source. | No |
| Division | Used when you want to rollback transactions belonging to a particular division. | No |
| Rollback From Date | Used when you want to rollback transactions which were performed from a particular date onwards. <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> | No |
| Rollback To Date | Used when you want to rollback transactions which were performed till a particular date. <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_ROBK_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_ROBK_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Feed Status Transition

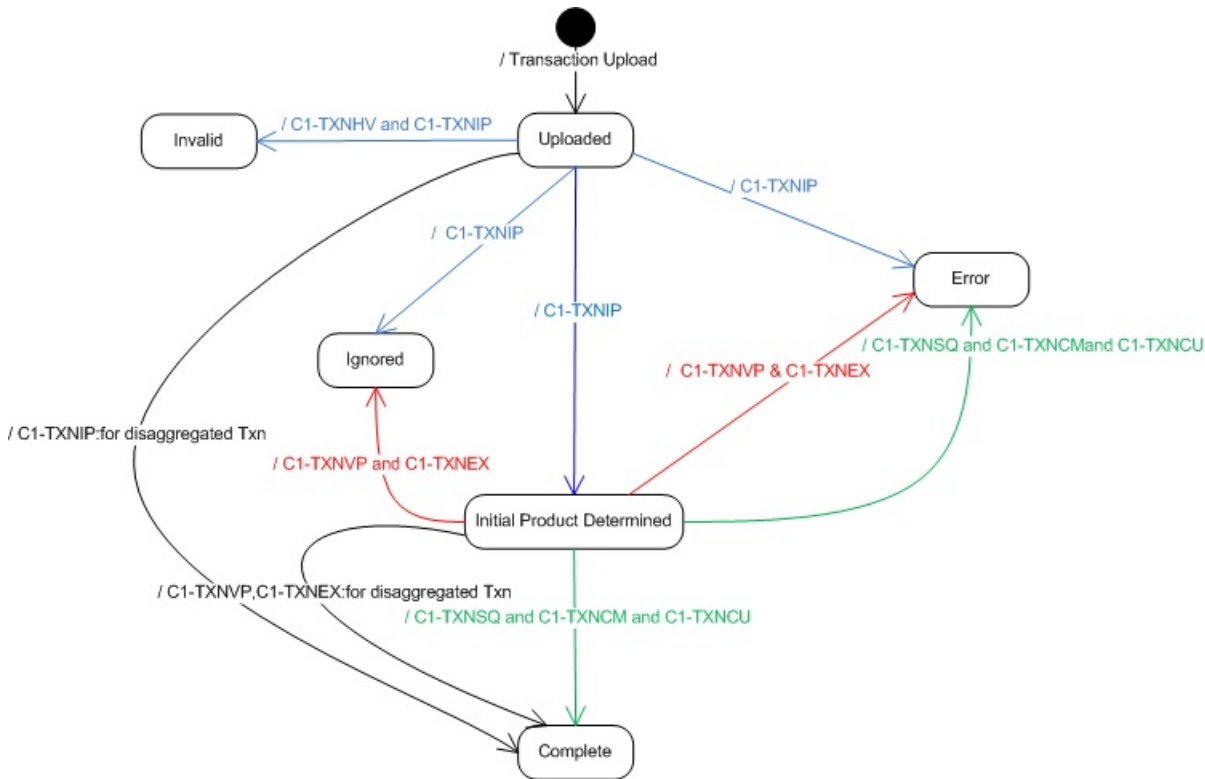

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

Transaction Status Transition

Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|-----------------------|--|------------------------------|--|-------------------------------|---|
| 1 | C1-TXNIP | Transaction validation fails due to incomplete transaction data | UPLOADED | Not applicable as the transaction legs are not yet created | INVALID | Not applicable as the transaction legs are not yet created |
| 2 | C1-TXNIP | Transaction validation fails due to invalid or incorrect transaction data | UPLOADED | Not applicable as the transaction legs are not yet created | ERROR | Not applicable as the transaction legs are not yet created |
| 3 | C1-TXNIP | Transaction validation is successful but no product is derived | UPLOADED | Not applicable as the transaction legs are not yet created | ERROR | Not applicable as the transaction legs are not yet created |
| 4 | C1-TXNIP | Transaction validation is successful and product is derived | UPLOADED | Not applicable as the transaction legs are not yet created | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED |
| 5 | C1-TXNIP | Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes | UPLOADED | Not applicable as the transaction legs are not yet created | IGNORED | Not applicable as the transaction legs are not yet created |
| 6 | C1-TXNVP and C1-TXNEX | Effective pricing is not found for any of the transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | ERROR | ERROR |
| 7 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to Y in the effective pricing for one or more transaction legs but not for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | IGNORED (when Ignore Transaction flag is set to Y in the effective pricing) INITIAL PRODUCT DETERMINED (when Ignore Transaction flag is set to N in the effective pricing) |
| 8 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to Y in the effective pricing for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | IGNORED | IGNORED |

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|-----------------------|--|------------------------------|----------------------------------|-------------------------------|-----------------------------------|
| 9 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to N in the effective pricing for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED |
| 10 | C1-TXNSQ and C1-TXNCM | SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | ERROR | ERROR |
| 11 | C1-TXNSQ and C1-TXNCM | Billable charges are created successfully for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | COMPLETED | COMPLETED |

Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|---|------------------------------|----------------------------------|-------------------------------|--|
| 1 | C1-TXNRB | Transactions with the Error (EROR) status are rolled back | ERROR | ERROR | UPLOADED | Not applicable as the transaction legs are not yet created |
| 2 | C1-TXNRB | Transactions with the Ignored (IGNR) status are rolled back | IGNORED | IGNORED | UPLOADED | Not applicable as the transaction legs are not yet created |

Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|--|---|--|-------------------------------|-----------------------------------|
| 1 | C1-TXCNC | Transactions in any status are cancelled | UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED | INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED | CANCELLED | CANCELLED |

Transaction Disaggregation

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|----------------|--------------|--|---|---|--------------------------------------|---|
| 1 | C1-DISTG | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | No change in the status | No change in the status |
| 2 | C1-DISTG | Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated. | CANCELLED, INVALID, or UPLOADED | Not applicable as the transactions will not have any legs in these statuses | No change in the status | Not applicable as the transactions will not have any legs in these statuses |
| 3 | C1-IDENT | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | No change in the status | No change in the status |

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|--|---|----------------------------------|-------------------------------|---|
| 4 | C1-IDENT | Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status. | UPLOADED | UPLOADED | No change in the status | No change in the status |
| 5 | C1-PDTXN | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | UPLOADED | Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table. |

Transaction Reaggregation

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|----------|--|--|--|--|--|
| 1 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y). | COMPLETED | COMPLETED, IGNORED | COMPLETED | Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED |
| 2 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y). | COMPLETED | COMPLETED, IGNORED | IGNORED | Derived Leg: IGNORED Existing Legs: IGNORED |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|----------|---|--|--|--|---|
| 3 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg. | COMPLETED | COMPLETED | ERROR | Derived Leg: No new transaction leg was created Existing Legs: COMPLETED |
| 4 | C1-TXNIP | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction. | ERROR | No Transaction Legs Exist | ERROR | Derived Leg: No new transaction leg was created Existing Legs: None |
| 5 | C1-TXNIP | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction. | ERROR | No Transaction Legs Exist | INITIAL PRODUCT DETERMINED | Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|-----------------------|--|--|--|--|---|
| 6 | C1-TXNVP and C1-TXNEX | Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg. | COMPLETED | COMPLETED, IGNORED | ERROR | Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED |
| 7 | C1-TXNVP and C1-TXNEX | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs. | ERROR | No Transaction Legs Exist | INITIAL PRODUCT DETERMINED | Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None |
| 8 | C1-TXNVP and C1-TXNEX | Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y). | COMPLETED | COMPLETED, IGNORED | COMPLETED | Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|-----------------------|---|--|--|--|--|
| 9 | C1-TXNVP and C1-TXNEX | Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y). | COMPLETED | COMPLETED, IGNORED | IGNORED | Derived Leg: IGNORED Existing Legs: IGNORED |
| 10 | C1-TXNSQ and C1-TXNCM | While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion. | COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status. | COMPLETED, ERROR | ERROR | Derived Legs: ERROR Existing Legs: No change in the status |
| 11 | C1-TXNSQ and C1-TXNCM | Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated. | COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status. | COMPLETED, ERROR | COMPLETED | Derived Leg: COMPLETED Existing Legs: No change in the status |

Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

| Header Data | Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Transaction Source | Used to specify the source from where the transactions are received. | Yes |
| Header Date (YYYYMMDD) | Used to specify the header date. | Yes |
| Transaction Header ID | Used to specify the external transaction header ID. | Yes |
| File Name | Used to specify the file name. | Yes |
| Number of Transactions | Used to specify the total number of transaction records in the file. | Yes |
| Total Transaction Volume | Used to specify the total transaction volume. | Yes |
| Total Transaction Amount | Used to specify the total transaction amount. | Yes |

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

| Record Data | Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Source | Used to specify the source from where the transaction is received. | Yes |
| Transaction Date (YYYYMMDD) | Used to specify the date when the transaction was performed. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | Yes |
| Customer Reference Number | Used to indicate the customer who has performed the transaction. | No |
| Division | Used to specify the division to which the transaction belongs. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |
| Transaction Amount | Used to specify the transaction amount. | Yes |

| Record Data | Description | Mandatory (Yes or No) |
|---|---|---|
| Transaction Currency | Used to specify the currency in which the transaction was performed. | Yes |
| | Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system. | |
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> • Plus (+) • Minus (-) | Yes |
| Account Identifier Type | Used to indicate the account identifier type. | Yes |
| Account Identifier | Used to indicate the account for which the transaction was performed. | Yes |
| UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20 | Used to specify additional information about the transaction. | No |
| UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 | Used to specify additional transaction amount. | Yes (Conditional) |
| | | Note: The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified. |
| UDF_CCY_1, UDF_CCY_2, UDF_CCY_3,, UDF_CCY_10 | Used to specify additional transaction currency. Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system. | Yes (Conditional) |
| | | Note: The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified. |
| UDF_DTTM_1, UDF_DTTM_2,, UDF_DTTM_5 | Used to specify additional information about the transaction. | No |
| UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50 | Used to specify additional information about the transaction. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | No |
| | | |

Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|--|------------------|---|
| C1-TXNHV | 102 | {Checksum Validation Required} field invalid. | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Checksum Validation Required parameter. |
| C1-TXNHV | 102 | {Duplicate Check Required} field invalid. | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Duplicate Check Required parameter. |
| C1-TXNHV | 1314 | The Transaction Source is mandatory. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Source column. |
| C1-TXNHV | 1332 | Sum of transaction records in the header does not match the total number of records in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1333 | Sum of transaction volume in the header does not match the total transaction volume in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1334 | Sum of transaction amount in the header does not match the total transaction amount in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1338 | The Transaction Header ID already exists in the system. Please enter unique header ID. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The same file is uploaded multiple times in the system. |
| C1-TXNHV | 1341 | Exception occurred during the transaction header validation. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the required format. |
| C1-TXNHV | 1421 | Transaction records does not exist in the file. Please check. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|---|------------------|---|
| C1-TXNHV | 1422 | Sum of transaction records in the header cannot be zero. Please enter valid data in the header. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Number of Transactions column is less than or equal to zero. |
| C1-TXNHV | 1423 | Sum of transaction volume in the header cannot be zero. Please enter valid data in the header. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Volume column is less than or equal to zero. |
| C1-TXNHV | 1663 | Transaction Header External Id is missing. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Header ID column. |
| C1-TXNHV | 1664 | Header Transaction Amount should be greater than 0. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Amount column is less than or equal to zero. |
| C1-TXNIP | 102 | {Chunk Size} field invalid | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Chunk Size parameter is less than or equal to one. |
| C1-TXNIP | 102 | { Maximum Batch Size } field invalid | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Maximum Batch Count parameter is greater than the value specified for the Chunk Size parameter. |
| C1-TXNIP | 106 | Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id} | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Header ID parameter exceeds the maximum length of 14 characters. |
| C1-TXNIP | 106 | Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code} | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Source parameter exceeds the maximum length of 30 characters. |
| C1-TXNIP | 106 | Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division} | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Division parameter exceeds the maximum length of 5 characters. |

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|---|------------------|---|
| C1-TXNIP | 1301 | The account with the specified identifier does not exist in the system. Enter a valid identifier. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The account with the specified account identifier is not found in the system. |
| C1-TXNIP | 1302 | UDF_CURRENCY_1 is mandatory when UDF_AMT_1 is non-zero. Enter a valid currency code. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The currency is not available in the UDF_CURRENCY_CD_1 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1303 | UDF_AMT_1 is mandatory when UDF_CURRENCY_1 is specified. Enter the amount. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The amount is not available in the UDF_AMT_1 column of the CI_TXN_DETAIL table. |

Alert Notification for Transaction Feed Management

Oracle Revenue Management and Billing enables you to configure alert notification for the **Transaction Feed Management** feature. At present, the system supports the following two alert notifications:

- To Do Creation
- Email Notification

The objective of these notifications is to create an alert for the records which are in the **Ignored** or **Error** status. Once a To Do is created, it indicates the number of records which are in the **Ignored** or **Error** status. However, the email notification provides the error summary statistics.

A new batch named **C1-ERRAL** is introduced in this release. While executing the **C1-ERRAL** batch, you need to set the **To Do Created For** parameter to **TFM**. In addition, you need to specify the transaction status (for example, EROR or IGNR) for which you want to create an alert notification. On executing the **C1-ERRAL** batch, the system creates a To Do using the **C1-TXNER** To Do type.

The **C1-ERRAL** batch must be executed only after all the transaction feed management batches are executed successfully. If the **C1-ERRAL** batch is executed for the first time, the system considers all the transactions whose **CURR_SYS_PRS_DT** is earlier than or equal to the batch business date. However, in the subsequent execution, the system considers only those transactions whose **CURR_SYS_PRS_DT** is later than the last To Do generation date and earlier than or equal to the batch business date.

On clicking the To Do notification in the **To Do List** screen, you can view the error records in the **Feed Management Dashboard** screen. Note that the system will not create a new To Do when the To Do for the same drill key combination already exists in the **Open** status.

To create an email notification, you need to attach an algorithm which is created using the **C1-TFMERREML** algorithm type to the **To Do Post-Processing** system event of the **C1-TXNER** To Do type. On creating a To Do, the batch creates an email outbound message which contains the error summary statistics.

Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- characteristics of each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 1041
- [Division Level Information](#) on page 1042
- [Transaction Level Information](#) on page 1043
- [Transaction Leg Information](#) on page 1045
- [Transaction Leg Service Quantity](#) on page 1046
- [Transaction Leg Calculation Lines](#) on page 1046
- [Transaction Leg Calc Line Characteristics](#) on page 1047

Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Feed Header Date From | Used to search for transaction feeds having header date later than or equal to the specified date. | No |
| Feed Header Date To | Used to search for transaction feeds having header date earlier than or equal to the specified date. | No |
| Transaction Source | Used to search for transaction feeds received from a particular transaction source. | No |
| File Name | Used to search for a transaction feed based on the file name. | No |
| Feed Load Date From | Used to search for transaction feeds which are uploaded on or later than the specified date. | No |
| Feed Load Date To | Used to search for transaction feeds which are uploaded on or earlier than the specified date. | No |
| Transaction Header ID | Used to search for a transaction feed based on the header ID. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| File Name | Displays the name of the file from where the transaction feed is uploaded. |
| Transaction Source | Displays the transaction source from where the transaction feed is received. |

| Column Name | Column Description |
|--------------------------------|--|
| Transaction Header ID | Displays the transaction header ID. |
| | Note: The transaction header ID is generated automatically when the file is uploaded. |
| Transaction Header External ID | Displays the ID mentioned in the file header. |
| Feed Header Date | Displays the date mentioned in the file header. |
| Feed Load Date | Displays the date when the transaction feed was uploaded in the system. |
| Feed Status | Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> • Uploaded - Indicates that the transaction feed is uploaded. • Validated - Indicates that the file header is validated. • Cancelled - Indicates that the transaction feed is cancelled. • Invalid - Indicates that the file header validation failed. |
| Error Message | Indicates the reason why the file header validation failed. |
| Total Volume | Displays the total transaction volume of the feed. |
| Uploaded Volume | Displays the total transaction volume which is uploaded in the system. |
| INPD Volume | Displays the total transaction volume which is validated and for which price item is determined in the system. |
| Completed Volume | Displays the total transaction volume for which billable charges are created and completed in the system. |
| Error Volume | Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process. |
| Cancelled Volume | Displays the total transaction volume which is cancelled in the system. |
| Ignored Volume | Displays the total transaction volume which is ignored in the system. |
| Invalid Volume | Displays the total transaction volume which is invalid. |

Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Division | Used when you want to view the transaction volume details of a particular division received through the feed. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| Division | Indicates the division. |
| Total Volume | Displays the total transaction volume of the division. |
| Uploaded Volume | Displays the total transaction volume (of the division) which is uploaded in the system. |
| INPD Volume | Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system. |
| Completed Volume | Displays the total transaction volume (of the division) for which billable charges are created and completed in the system. |
| Error Volume | Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process. |
| Cancelled Volume | Displays the total transaction volume (of the division) which is cancelled in the system. |
| Ignored Volume | Displays the total transaction volume (of the division) which is ignored in the system. |
| Invalid Volume | Displays the total transaction volume (of the division) which is invalid. |

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search — Feed Level** zone.

Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Account Identifier Type | Used to select the identifier type based on which you want to search transactions of an account. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Account Identifier | Used to search transactions which are performed for a particular account. | No |
| Transaction Source | Used to search transactions received from a particular transaction source. | No |
| Transaction Record Type | Used to search transactions with a particular record type. | No |
| Transaction Status | Used to search transactions with a particular status. | No |
| External Reference Number | Used to search a transaction with a particular external reference number. | No |

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Transaction ID | Displays the transaction ID. |
| External Reference Number | Displays the external reference number of the transaction. |
| Division | Indicates the division to which the transaction belongs. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Date | Displays the date when the transaction was performed. |
| Account Identifier Type | Displays the type of account identifier. |
| Account Identifier | Indicates the account for which the transaction was performed. |
| Transaction Volume | Displays the transaction volume. |
| Transaction Amount | Displays the transaction amount. |
| Credit/Debit Indicator | Indicates whether the transaction is a debit or credit transaction. |
| Customer Reference Number | Indicates the customer who performed the transaction. |
| Transaction Status | Indicates the status of the transaction. |
| Error Message | Indicates the reason why the validation, price item determination, or billable charge creation process failed. |
| Rule | Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule. |
| Transaction Information | Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction. |

Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

| Column Name | Column Description |
|--------------------------------|--|
| Transaction ID | Indicates the transaction to which the transaction leg belongs. |
| Sequence | Displays the sequence number of transaction leg. |
| Account Identifier Type | Indicates the type of account identifier to which the transaction is mapped. |
| Account Identifier | Indicates the account which will bear the charges for the transaction. |
| Price Item | Indicates the price item to which the transaction is mapped. |
| Variance | Indicates the variance parameter which is used along with the price item for determining price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| Price Item Parameters | Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Billable Charge ID | Indicates the billable charge which is created for the transaction leg. Note: The data appears in this column when the billable charge is created for the transaction leg. It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the billable charge. |
| Transaction Calculation ID | Displays the transaction calculation ID. Note: The data appears in this column when the transaction leg is rated before billing. |
| Aggregation Parameter Group ID | Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge. |

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the transaction in the **Transaction Level Information** zone.

Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| SQI | Indicates the service quantity identifier. |
| Daily Service Quantity | Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination. |

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Transaction Calculation ID | Displays the transaction calculation ID. |
| Sequence | Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule. |
| Price Component ID | Indicates the price component which is used during calculation. |
| Rate | Displays the rate which is used for calculation. |
| SQI | Indicates the service quantity identifier. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |
| Calculated Amount | Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency. |
| Precise Calculated Amount | Displays the calculated charge amount. This amount appears in the invoice currency. |
| Exempt Amount | Displays the amount of the calculated charge that the person does not have to pay due to tax exemption. |
| Base Amount | Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount. |
| Pricing Amount | Displays the calculated charge amount. This amount appears in the pricing currency. |
| Exchange Rate | Indicates the exchange rate which is used when the invoice currency is different from the pricing currency. |

| Column Name | Column Description |
|--------------------------------|---|
| Print | Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N |
| Description on Bill | Displays the summarized information about the calculation line that will be printed on the bill. |
| Distribution Code | Indicates the distribution code associated with the rate component. |
| Pricing Currency | Indicates the currency in which the price item pricing is defined. |
| Aggregation Parameter Group ID | Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge. |

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** () icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics of each calculation line. It contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Transaction Calculation ID | Displays the transaction calculation ID. |
| Sequence | Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** () icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Searching for a Transaction Feed

Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Feed Management Dashboard**.

The **Feed Management Dashboard** screen appears.

3. Enter the search criteria in the **Search — Feed Level** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

Transaction Details

The **Transaction Details** screen allows you to search for transactions using various search criteria. It also allows you to add and copy a transaction. This screen consists of the following zones:

- [Search](#) on page 1052

Search

The **Search** zone allows you to search for transactions using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
 - **Uploaded** — Used to indicate that you want to search for a transaction which is recently uploaded in the system.
 - **Initial Price Item Determined** — Used to indicate that you want to search for a transaction for which a price item is determined in the system.
 - **Ignored** — Used to indicate that you want to search for a transaction which is ignored in the system.
 - **Error** — Used to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.
 - **Cancelled** — Used to indicate that you want to search for a transaction which is cancelled in the system.
 - **Completed** — Used to indicate that you want to search for a transaction for which billable charge is completed in the system.
 - **Invalid** — Used to indicate that you want to search for a transaction which is invalid.
- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can also add a transaction manually by clicking the **Add** link in the upper right corner of this zone.

Searching for an UPLD Transaction

Procedure

To search for an uploaded transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Select the **Uploaded** option from the **Search By** list to indicate that you want to search for a transaction which is recently uploaded in the system.

The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| External Reference Number | Used to search a transaction with a particular external reference number. | No |
| Division | Used to search transactions that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list. | No |
| Transaction Source | Used to search transactions received from a particular transaction source. | No |
| Transaction Record Type | Used to search transactions with a particular record type. | No |
| Account Identifier Type | Used to select the identifier type based on which you want to search transactions of an account. | No |
| Account Identifier | Used to search transactions which are performed for a particular account. | No |
| Transaction Date | Used to search transactions which are performed on a particular date. | No |
| Transaction Upload Date | Used to search transactions which are uploaded in the system on a particular date. | No |
| Transaction Header ID | Used to search transactions which are uploaded through a particular transaction feed. | No |
| Disaggregated | Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section. It contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Transaction ID | Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction. |
| Transaction Source | Displays the transaction source from where the transaction was received. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Upload Date | Displays the date when the transaction was uploaded in the system. |
| Transaction Header ID | Indicates the transaction feed through which the transaction was uploaded in the system. |
| External Reference Number | Displays the external reference number of the transaction. |
| Disaggregation Status | Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Manual Entry | Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Transaction Date | Displays the date when the transaction was performed. |
| Transaction Amount | Displays the transaction amount. |
| Transaction Volume | Displays the transaction volume. |
| Division | Indicates the division to which the transaction belongs. |
| Account Information | Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier. |
| Transaction Information | Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction. |

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

Note: You can only view the legs of an uploaded transaction which is partially disaggregated.

Searching for an INPD Transaction

Procedure

To search for a transaction for which a price item is determined:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Select the **Initial Price Item Determined** option from the **Search By** list to indicate that you want to search for a transaction for which a price item is determined in the system.

The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| External Reference Number | Used to search a transaction with a particular external reference number. | No |
| Division | Used to search transactions that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list. | No |
| Transaction Source | Used to search transactions received from a particular transaction source. | No |
| Transaction Record Type | Used to search transactions with a particular record type. | No |
| Account Identifier Type | Used to select the identifier type based on which you want to search transactions of an account. | No |
| Account Identifier | Used to search transactions which are performed for a particular account. | No |
| Transaction Date | Used to search transactions which are performed on a particular date. | No |
| Transaction Upload Date | Used to search transactions which are uploaded in the system on a particular date. | No |
| Price Item | Used to search transactions which are mapped to a particular price item. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Disaggregated | Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Transaction ID | Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction. |
| Transaction Source | Displays the transaction source from where the transaction was received. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Upload Date | Displays the date when the transaction was uploaded in the system. |
| External Reference Number | Displays the external reference number of the transaction. |
| Transaction Date | Displays the date when the transaction was performed. |
| Disaggregation Status | Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Transaction Amount | Displays the transaction amount. |
| Transaction Volume | Displays the transaction volume. |
| Division | Indicates the division to which the transaction belongs. |
| Account Information | Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier. |
| Rule | Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule. |

| Column Name | Column Description |
|-------------------------|--|
| Transaction Information | Displays additional information about the transaction. |
| | Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction. |

- View the legs of the transaction in the **Transaction Legs** zone, if required.

Viewing the Transaction Legs

Procedure

To view the legs of a transaction:

- Search for the transaction in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears. It contains the following columns:

| Column Name | Column Description |
|----------------|------------------------------|
| Transaction ID | Displays the transaction ID. |

| Column Name | Column Description |
|-------------------------|---|
| Transaction Leg Status | Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"> • Uploaded (UPLD) • Initial Price Item Derived (INPD) • Ignored (IGNR) • Error (EROR) • Completed (COMP) |
| Account Information | Indicates the account which will bear the charges for the transaction. The string includes the account identifier type, account identifier, and division (to which the derived account belongs). |
| Initial Price Item Code | Indicates the initial price item to which the transaction is mapped. |
| Variance Parameter | Indicates the variance parameter which is used along with the final price item for determining price item pricing. <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p> |
| Price Item Parameters | Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing. <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> |
| Final Price Item Code | Indicates the final price item to which the transaction is mapped. |
| Rule | Indicates the rule which was met while determining initial price item for the transaction. <p>Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.</p> |
| Price Assignment ID | Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date. |
| Aggregate Transaction | Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Billable Charge ID | Indicates the billable charge in which the transaction leg is included for billing. |
| Division | Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction. |
| Sequence Number | Displays the sequence number of the transaction leg. |
| Error Message | Indicates the reason why the price item pricing verification or billable charge creation process failed. |

Note:

The **Broadcast** (📡) icon appears corresponding to an UPLD, INPD, IGNR, EROR and COMP transaction. This is because you can only view legs of an UPLD, INPD, IGNR, EROR and COMP transaction.

You can only view the legs of an uploaded transaction which is partially disaggregated.

- View the details of the transaction legs in the **Transaction Legs** zone.

Viewing Error Messages**Procedure**

To view the error messages logged for a transaction:

- Search for the transaction which is in the **Invalid (INVL)** or **Error (EROR)** status in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears. It contains the following columns:

| Column Name | Column Description |
|---------------|---|
| Error Message | Indicates the reason why the transaction is in the Invalid (INVL) or Error (EROR) status. |

Note: The **Transaction Error Messages** zone appears when the transactions are in the **Invalid (INVL)** status and when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

- View the error messages in the **Transaction Error Messages** zone.

Viewing the Transaction Details

Procedure

To view the details of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose details you want to view.

The **Transaction Details** screen appears. It contains the following fields:

| Field Name | Field Description |
|---|---|
| Transaction ID | Displays the transaction ID. Note: The transaction ID is generated automatically when the transaction is uploaded or manually created in the system. |
| Transaction Source | Displays the transaction source from where the transaction was received. |
| Division | Displays the division to which the transaction belongs. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Date | Displays the date when the transaction was performed. |
| Manual Entry | Indicates whether the transaction was manually entered in the system. |
| Credit/Debit Indicator | Indicates whether the transaction is a debit or credit transaction. |
| External Reference Number | Displays the external reference number of the transaction. |
| Customer Reference Number | Indicates the person who performed the transaction. |
| Account Identifier Type | Displays the type of account identifier. |
| Account Identifier | Indicates the account for which the transaction was performed. |
| Transaction Amount | Displays the transaction amount. |
| Transaction Currency | Indicates the currency in which the transaction was performed. |
| Transaction Volume | Displays the transaction volume. |
| Account ID | Indicates the account for which the transaction was performed. |
| Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 | Displays additional information about the transaction. Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. |

| Field Name | Field Description |
|---|--|
| Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code | Displays additional information about the transaction. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | |
| Additional Date 1, Additional Date 2,, Additional Date 5 | Displays additional information about the transaction. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | |
| Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20 | Displays additional information about the transaction. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | |
| Additional Data 1, Additional Data 2, Additional Data 3,, Additional Data 50 | Displays additional information about the transaction. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | |

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.
The **Transaction Details** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|---|
| Transaction Source | Used to specify the transaction source from where the transaction was received. | Yes |
| Division | Used to specify the division to which the transaction belongs. | Yes |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Date | Used to specify the date when the transaction was performed. | Yes |
| Manual Entry | Indicates that the transaction is manually entered in the system. | Not applicable |
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or credit transaction. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | No |
| Customer Reference Number | Used to indicate the person who performed the transaction. | No |
| Account Identifier Type | Used to specify the type of account identifier. | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | Used to indicate the account for which the transaction was performed. | Yes (Conditional) |
| | | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |
| Transaction Amount | Used to specify the transaction amount. | Yes |
| Transaction Currency | Used to indicate the currency in which the transaction was performed. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 | Used to specify additional information about the transaction. | Yes (Conditional) |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | Note: This field is required when you are specifying the currency in the corresponding field. |
| Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code | Used to specify additional information about the transaction. | Yes (Conditional) |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | Note: This field is required when you are specifying the amount in the corresponding field. |
| Additional Date 1, Additional Date 2, ..., Additional Date 5 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |

4. Enter the required details.
5. Click **Save**.

The transaction is added in the system. If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

Note: The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

Copying a Transaction

Instead of adding a transaction from scratch, you can create a copy of similar transaction and then edit it accordingly.

Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears. Note that the fields are in the read-only mode.

3. Click **Copy**.

The **Transaction Details** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|------------------------------|
| Transaction Source | Used to specify the transaction source from where the transaction was received. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|--|---|
| Division | Used to specify the division to which the transaction belongs. | Yes |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Date | Used to specify the date when the transaction was performed. | Yes |
| Manual Entry | Indicates that the transaction is manually entered in the system. | Not applicable |
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or credit transaction. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | No |
| Price Item Reference Number | Used to indicate the person who performed the transaction. | No |
| Account Identifier Type | Used to specify the type of account identifier. | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | Used to indicate the account for which the transaction was performed. | Yes (Conditional) |
| | | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |
| Transaction Amount | Used to specify the transaction amount. | Yes |
| Transaction Currency | Used to indicate the currency in which the transaction was performed. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |
| Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 | Used to specify additional information about the transaction. | Yes (Conditional) |
| | | Note: This field is required when you are specifying the currency in the corresponding field. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code | Used to specify additional information about the transaction. | Yes (Conditional) |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | Note: This field is required when you are specifying the amount in the corresponding field. |
| Additional Date 1, Additional Date 2, ..., Additional Date 5 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | |
| Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | |
| Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | |

4. Enter the required details.

5. Click **Save**.

The new transaction is added in the system.

Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. This screen consists of the following zones:

- [Search Transaction Source](#) on page 1078

Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used to search a particular transaction source. | No |
| Description | Used to search transaction sources with a particular description. | No |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Transaction Source | Displays the transaction source. |
| Description | Displays the description of the transaction source. |
| Account Identifier Type | Indicates the type of account identifier that will be received from the transaction source. |
| Edit | On clicking the Edit (✎) icon, the Transaction Source screen appears where you can edit the details of the transaction source. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction source. |
| | Note: You can only delete a transaction source which is not yet used. |
| Copy | On clicking the Copy (📄) icon, the Transaction Source screen appears where you can create a transaction source using an existing transaction source. |

You can create a new transaction source by clicking the **Add** link in the upper right corner of this zone.

Searching for a Transaction Source

Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
The **Transaction Source** screen appears.
3. Enter the search criteria in the **Search Transaction Source** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

Defining a Transaction Source

Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To define a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
The **Transaction Source** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Source** zone.
The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Used to specify the transaction source. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the transaction source. | |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

- Enter the required details.
- Click **Save**.

The transaction source is defined.

Editing a Transaction Source

Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To edit a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Displays the transaction source. | Not applicable |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

- Modify the required details.
- Click **Save**.

The changes made to the transaction source are saved.

Deleting a Transaction Source

Procedure

To delete a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction source that you want to delete.

A message appears confirming whether you want to delete the transaction source.

Note: You can only delete a transaction source which is not yet used.

3. Click **OK**.

The transaction source is deleted.

| How to search for a transaction source | Searching for a Transaction Source on page 1079 |

Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. Once you create a copy of a transaction source, the record types defined for the original transaction source are also copied to the new transaction source.

Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

Procedure

To copy a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Used to specify the transaction source. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the transaction source. | |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

3. Enter the required details.

4. Click **Save**.

The new transaction source is defined.

Related Topics

| For more information on... | See... |
|--|---|
| How to search for a transaction source | Searching for a Transaction Source on page 1079 |

Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

Note: At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 1082

Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Used to search transaction record types defined for a particular transaction source. | No |
| Transaction Record Type | Used to search a particular transaction record type. | No |
| Description | Used to search transaction record types with a particular description. | No |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Transaction Record Type | Displays the transaction record type. |
| Description | Displays the description of the transaction record type. |
| Transaction Source | Indicates the transaction source for which the transaction record type is defined. |
| Rule Type | Indicates the rule type that is invoked for the transaction record type. Note: It has a link. On clicking the link, the View Rule Type screen appears where you can view the details of the respective rule type. |
| Edit | On clicking the Edit (✎) icon, the Transaction Record Type screen appears where you can edit the details of the transaction record type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction record type. Note: You can delete a transaction record type when: <ul style="list-style-type: none"> • It is not yet used. • Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination. |
| Copy | On clicking the Copy (📄) icon, the Transaction Record Type screen appears where you can create a new transaction record type using an existing transaction record type. |

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

Searching for a Transaction Record Type

Procedure

To search for a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
The **Transaction Record Type** screen appears.
3. Enter the search criteria in the **Search Transaction Record Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results appear.

Defining a Transaction Record Type**Prerequisites**

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.
The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. | Yes |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.</p> | |
| Transaction Record Type | Used to specify the transaction record type. | Yes |
| | <p>Note: You cannot specify any special character except underscore (_) in the transaction record type.</p> | |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | Used to specify the rule type. | Yes |
| | <p>Note: You cannot specify any special character except underscore (_) in the rule type.</p> | |
| Rule Type Description | Used to specify the description for the rule type. | Yes |
| Rule Validation Algorithm | Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type. | No |
| | <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| Info String Algorithm | Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application. | No |
| | <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Maximum Accounts to be charged | <p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p> | Yes |
| Maximum Price Items to be mapped | <p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Maximum Price Item Parameters | <p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 | Yes |
| | <p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p> | |

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Rule Input/Output | Used to indicate whether you want to use the transaction detail field as input or output parameter. | No |
| Transaction Field | Displays the transaction field name. | Not applicable |
| Business Label | <p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p> | No |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

- Enter the required details.

Note: You can search for a transaction source and algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

- Click **Save**.

The transaction record type is defined.

Editing a Transaction Record Type

Prerequisites

To edit a transaction record type, you should have:

- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To edit a transaction record type:

- Search for the transaction record type in the **Transaction Record Type** screen.

2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. | Yes |
| | Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears. | |
| Transaction Record Type | Used to specify the transaction record type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the transaction record type. | |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | Used to specify the rule type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the rule type. | |
| Rule Type Description | Used to specify the description for the rule type. | Yes |
| Rule Validation Algorithm | Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type. | No |
| | Note: This algorithm checks whether: <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Info String Algorithm | <p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |
| Maximum Accounts to be charged | <p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Maximum Price Items to be mapped | Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are: <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 | Yes |
| | Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Maximum Price Item Parameters | <p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 | Yes |
| | <p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p> | |

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Rule Input/Output | Used to indicate whether you want to use the transaction detail field as input or output parameter. | No |
| Transaction Field | Displays the transaction field name. | Not applicable |
| Business Label | <p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p> | No |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

3. Modify the required details.

Note:

You can search for an algorithm and field by clicking the **Search** (🔍) icon corresponding to the respective field. You can edit and remove an input or output parameter from a rule type when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

4. Click **Save**.

The changes made to the transaction record type are saved.

Deleting a Transaction Record Type

Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

Note: You can only delete a transaction record type which is not yet used.

3. Click **OK**.

The transaction record type is deleted.

Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. Once you create a copy of a transaction record type, the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. | Yes |
| | Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears. | |
| Transaction Record Type | Used to specify the transaction record type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the transaction record type. | |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | Used to specify the rule type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the rule type. | |
| Rule Type Description | Used to specify the description for the rule type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Rule Validation Algorithm | <p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |
| Info String Algorithm | <p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. | Business Label | <p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p> | No |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

- Enter the required details.

Note: You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 1101

Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| SQL Description | Displays the description of the service quantity identifier (SQI). |
| Aggregation Function | Indicates the formula used in the transaction aggregation rule defined for the SQI. |
| Function | Indicates the function used for aggregation. |
| Transaction Parameter | Indicates the transaction parameter used for aggregation. |
| Edit | On clicking the Edit (✎) icon, the Transaction Aggregation Rule screen appears where you can edit the aggregation rule. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction aggregation rule. |

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 3024.

Defining Transaction Aggregation Rule for an SQI

Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.
The **Transaction Aggregation Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| SQL | Used to indicate the SQI for which you want to define the transaction aggregation rule. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Function | Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() | Yes |
| Transaction Parameter | Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 | Yes |

4. Enter the required details.

5. Click **Save**.

The transaction aggregation rule is defined for the SQL.

Editing Transaction Aggregation Rule of an SQI

Procedure

To edit the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.

The **Transaction Aggregation Rule** screen appears.

3. Click the **Edit**  icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| SQI | Indicates the SQI for which the transaction aggregation rule is defined. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Function | Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() | Yes |
| Transaction Parameter | Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 | Yes |

4. Modify the required details.

5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

Deleting Transaction Aggregation Rule of an SQI

Procedure

To delete the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.

The **Transaction Aggregation Rule** screen appears.

3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.

A message appears confirming whether you want to delete the transaction aggregation rule.

4. Click **OK**.

The transaction aggregation rule is deleted.

Schedule

The **Schedule** screen allows you to define, edit, and delete a schedule. This screen consists of the following zones:

- [Search Schedule](#) on page 1105

Search Schedule

The **Search Schedule** zone allows you to search for a schedule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Schedule | Used to search a particular schedule. | No |
| Description | Used to search schedules with a particular .description | No |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Schedule | Displays the schedule. |
| Description | Displays the description of the schedule. |
| View | On clicking the View () icon, the View Schedule screen appears where you can view the details of the schedule. |
| Edit | On clicking the Edit () icon, the Edit Schedule screen appears where you can edit the details of the schedule. |
| Delete | On clicking the Delete () icon, you can delete the schedule. |
| | Note: You can only delete a schedule which is not yet used. |

You can create a new schedule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Schedule

Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results appear.

Defining a Schedule

Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **S** and then click **Schedule**.

The **Schedule** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add Schedule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Schedule | Used to specify the schedule code. | Yes |
| Description | Used to specify the description for the schedule. | Yes |

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Start Date | Used to specify the start date of the schedule period. | Yes |
| | Note: The start date cannot be later than the end date. | |
| End Date | Used to specify the end date of the schedule period. | Yes |
| | Note: The end date cannot be earlier than the start date. | |

Note: At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Schedule Type | Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality. | Yes |

4. Enter the required details.
5. If you want to define more than one period in the schedule, click the **Add (+)** icon and then specify the *details*.

Note: However, if you want to remove a period from the schedule, click the **Delete** (🗑️) icon corresponding to the period.

6. Click **Save**.

The schedule is defined.

Editing a Schedule**Procedure**

To edit a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the schedule whose details you want to edit.

The **Edit Schedule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Schedule | Displays the schedule code. | Not applicable |
| Description | Used to specify the description for the schedule. | Yes |

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Start Date | Used to specify the start date of the schedule period. | Yes |
| | Note: The start date cannot be later than the end date. | |
| End Date | Used to specify the end date of the schedule period. | Yes |
| | Note: The end date cannot be earlier than the start date. | |

Note: At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Schedule Type | Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality. | Yes |

3. Modify the required details.

- If you want to define more than one period in the schedule, click the **Add (+)** icon and then specify the *details*.

Note: However, if you want to remove a period from the schedule, click the **Delete (🗑)** icon corresponding to the period.

- Click **Save**.

The changes made to the schedule are saved.

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person and account. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. This screen consists of the following zone:

- [Search Disaggregation Request](#) on page 1110

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for a disaggregation request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|---|
| Search By | Used to indicate whether you want to search for a disaggregation request using the person, account, or accumulation group details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Accumulation Group | Yes |
| | Note: By default, the Person option is selected. | |
| Person Name | Used to search disaggregation requests which are created for accounts belonging to persons with a particular name. | No |
| | Note: This field appears when the Person option is selected from the Search By list. | |
| Person ID | Used to search disaggregation requests which are created for accounts of a particular person. | No |
| | Note: This field appears only when the Person option is selected from the Search By list. | |
| Request Date From | Used to search disaggregation requests which are created from a particular date onwards. | Yes |
| Person Identifier | Used to search disaggregation requests which are created for accounts of a particular person. | Yes (Conditional) |
| | Note: This field appears only when the Person option is selected from the Search By list. | |
| | | Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier. |
| Request Date To | Used to search disaggregation requests which are created till a particular date. | Yes |
| Person Identifier Type | Used to indicate the person identifier type. | Yes (Conditional) |
| | Note: This field appears when the Person option is selected from the Search By list. | |
| | | Note: If you specify the person identifier as a search criteria, you have to select the person identifier type. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Processing Date From | Used to search disaggregation requests which are processed from a particular date onwards. | No |
| Request Source | Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> • AUTOMATIC • BATCH • MANUAL | No |
| Processing Date To | Used to search disaggregation requests which are processed till a particular date. | No |
| Request Status | Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING | No |
| Request Type | Used to search disaggregation requests with a particular request type. The valid values are: <ul style="list-style-type: none"> • Account • Billable Charge • Price Assignment • Price Item | No |
| | Note: This field appears when the Person or Account option is selected from the Search By list. | |
| Division | Used to search disaggregation requests which are created for accounts belonging to a particular division. | Yes (Conditional) |
| | Note: You can only view those divisions to which you have access in the Division list. This field appears when the Person or Account option is selected from the Search By list. | Note: This field is required when you are searching for a disaggregation request using the account details. |
| Account ID | Used to search disaggregation requests which are created for a particular account. | No |
| | Note: This field appears when you select the Account option from the Search By list. | |
| | a | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|--|
| Account Identifier | Used when you want to search disaggregation requests created for an account. | Yes (Conditional) |
| | Note: This field appears when you select the Account option from the Search By list. | Note: If you specify account identifier type as a search criteria, you have to enter the account identifier. |
| | a | |
| Account Identifier Type | Used to select the account identifier type based on which you want to search disaggregation requests created for an account. | Yes (Conditional) |
| | Note: This field appears when you select the Account option from the Search By list. | Note: If you enter account identifier as a search criteria, you have to select the account identifier type. |
| | a | |
| Accumulation Type | Used to select the accumulation type based on which you want to search disaggregation requests created for an accumulation group. | No |
| | Note: This field appears when you select the Accumulation Group option from the Search By list. | |
| Parent Accumulation Group ID | Used to select the parent accumulation group id based on which you want to disaggregation requests created for an accumulation group. | Yes (Conditional) |
| | | Note: If you enter accumulation type as a search criteria, you have to select the parent accumulation group id. |

- **Search Results** - The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

| Column Name | Column Description |
|--------------|---|
| Request ID | Displays the disaggregation request ID. |
| Request Date | Displays the date when the disaggregation request was created. |
| Status | Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING |
| Person ID | Indicates the person for whom the disaggregation request is created. |

| Column Name | Column Description |
|---------------------|--|
| Person Information | Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective person. |
| Account ID | Indicates the account for which the disaggregation request is created. |
| Account Information | Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. This column appears when you select the Account option from the Search By list. |
| Processing Date | Displays the date when the disaggregation request is processed. |
| Request Type | Displays the request type based on which the disaggregation request is processed. |
| Price Item | Displays the price item using which the disaggregation request is processed. |
| Pricing | Displays the pricing details using which the disaggregation request is processed. |
| Billable Charge ID | Displays the charge id billable for the processed disaggregation request. |
| Delete | On clicking the Delete button, you can delete the disaggregation request. Note: You can only delete a disaggregation request which is in the Pending status. |

You can create a disaggregation request manually by clicking the **Add** link in the upper right corner of this zone.

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Enter the search criteria in the **Search Disaggregation Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section.

Creating a Disaggregation Request

Prerequisites

To create a disaggregation request manually, you should have:

- Divisions, person identifier types, account identifier types, bill cycles, and invoice currencies defined in the application
- Price list assigned to the person or account (in case you want to search a person or an account based on an assigned price list)

Procedure

To create a disaggregation request manually:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.

The **Disaggregation Request** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Disaggregation Request** zone.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Request Type | Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> • Parent Accumulation Group • Person/Account | Yes |

4. Click **OK**.

The **Add Disaggregation Request** screen appears. It contains the following fields:

| | | |
|-------------------------|--|---|
| Request Type | Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> Account Person | |
| Division | Used to specify the division to which the person or account belongs. | Yes (Conditional) |
| | Note: You can only view those divisions to which you have access in the Division list. | Note: This field is required when you are creating a disaggregation request for an account. |
| Account ID | Used to indicate the account for which you want to create a disaggregation request. | No |
| | Note: This field is enabled when you select the Account option from the Request Type list. | |
| Person ID | Used to indicate the person for whom you want to create a disaggregation request. | No |
| | Note: This field is enabled when you select the Person option from the Request Type list. | |
| Account Identifier Type | Used to specify the account identifier type based on which you want to search for an account. | Yes (Conditional) |
| | Note: This field is enabled only when you select the Account option from the Request Type list. | Note: If you enter account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | Used to indicate the account for which you want to create a disaggregation request. | Yes (Conditional) |
| | Note: This field is enabled when you select the Account option from the Request Type list. | Note: If you specify account identifier type as a search criteria, you have to enter the account identifier. |
| Person Identifier Type | Used to specify the person identifier type based on which you want to search for a person. | Yes (Conditional) |
| | Note: This field is enabled when you select the Person option from the Request Type list. | Note: If you enter person identifier as a search criteria, you have to select the person identifier type. |
| Person Identifier | Used to indicate the person for whom you want to create a disaggregation request. | Yes (Conditional) |
| | Note: This field is enabled when you select the Person option from the Request Type list. | Note: If you specify person identifier type as a search criteria, you have to enter the person identifier. |

| | | |
|--------------------------|---|---|
| Bill Cycle | Used when you want to search accounts having a particular bill cycle. | No |
| | Note: This field is enabled when you select the Account option from the Request Type list. | |
| Person Name | Used to specify the name of the person. | No |
| Invoice Currency | Used when you want to search accounts having a particular invoice currency. | No |
| | Note: This field is enabled when you select the Account option from the Request Type list. | |
| With Assigned Price List | Used when you want to search for a person or an account to which a particular price list is assigned. | Yes (Conditional) |
| | | Note: This field is required when you want to search for a person or an account based on an assigned price list. |
| Price List Assigned From | Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range. | Yes (Conditional) |
| | | Note: This field is required when you want to search for a person or an account based on an assigned price list. |
| Price List Assigned To | Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range. | Yes (Conditional) |
| | | Note: This field is required when you want to search for a person or an account based on an assigned price list. |

5. Select the **Person** or **Account** option from the **Request Type** list depending on whether you want to search for a person or an account.
6. Enter the search criteria in the **Search** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

7. Click **Search**.

A list of persons or accounts that meet the search criteria appears in the **Search Results** section. It contains the following columns:

| Column Name | Column Description |
|--------------------------|--|
| Account Identifier Type | Displays the primary account identifier type of the account. |
| | Note: The data appears in this column when you search for an account. |
| Account Identifier | Displays the value of the primary account identifier type. |
| | Note: The data appears in this column when you search for an account. |
| Division | Displays the division to which the person or account belongs. |
| Person Identifier Type | Displays the primary person identifier type of the person. |
| | Note: The data appears in this column when you search for a person. |
| Person Identifier | Displays the value of the primary person identifier type. |
| | Note: The data appears in this column when you search for a person. |
| Person Name | Displays the name of the person. |
| With Assigned Price List | Displays the price list assigned to the person or account. |
| | Note: The data appears in this column when you search for a person or an account based on an assigned price list. |
| Price List Assigned From | Displays the date from when the price list is assigned to the person or account. |
| | Note: The data appears in this column when you search for a person or an account based on an assigned price list. |
| Price List Assigned To | Displays the date till when the price list is assigned to the person or account. |
| | Note: The data appears in this column when you search for a person or an account based on an assigned price list. |
| Account Info | Displays additional information about the account. |
| | Note: The data appears in this column when you search for an account. |
| Bill Cycle | Indicates the bill cycle defined for the account. |
| | Note: The data appears in this column when you search for an account. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

8. Do either of the following:

| If you want to... | Then... |
|---|--|
| Create disaggregation request for one or more persons or accounts | <ol style="list-style-type: none"> In the Search Results section, select the check box corresponding to the person or account for which you want to create a disaggregation request. Click Disaggregate. If you have selected an account, the disaggregation request is created for the account. However, if you have selected a person, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person. |
| Create disaggregation request for all persons or accounts that meet the search criteria | <ol style="list-style-type: none"> Click Disaggregate All. A message appears confirming whether you want to create disaggregation requests for all persons or accounts that meet the search criteria. Click OK. If the accounts are listed in the Search Results section, the disaggregation request is created for each account (listed on the respective page). However, if the persons are listed in the Search Results section, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person. |

Deleting a Disaggregation Request**Procedure**

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** button available in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

Note:

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

3. Click **OK**.

The disaggregation request is deleted.

Chapter 12

On Demand Billing

Topics:

- [Prerequisites](#)
- [CSV File Format for Banking Usage Data](#)
- [CSV File Format for Insurance Usage Data](#)
- [Usage Record Status Transition](#)
- [File Type](#)
- [On Demand Billing](#)
- [Usage Data Processing](#)

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date — Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date — Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date — Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date — Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see [Usage Record Status Transition](#) on page 1130.

Prerequisites

To setup the on demand billing process, you need to do the following:

- Ensure approver's user group has access to the **F1-DFLTS** application service
- Create a To Do Type for submitter named **C1-ODBSU** using the following information:

- **Navigation Option** — C1_SUBMIT
- **Priority** — Priority 10 – Highest
- **Message Category** — 17000
- **Message Number** — 1470
- **Sort Keys** — Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|---------------|----------------|------------|
| Usage Data ID | Yes | Descending |

- **Drill Keys** — Define the following drill keys for the To Do type:

| Table Name | Field Name |
|-------------|-------------------|
| CI_BCHG_STG | BCHG_HSTG_ID |
| CI_BCHG_STG | FILE_NAME |
| CI_BCHG_STG | BCHG_STG_STAT_FLG |

- Create a To Do Type for approver named **C1-ODBAP** using the following information:

- **Navigation Option** — CI_NDAP
- **Priority** — Priority 10 – Highest
- **Message Category** — 17000
- **Message Number** — 1470
- **Sort Keys** — Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|---------------|----------------|------------|
| Usage Data ID | Yes | Descending |

- **Drill Keys** — Define the following drill keys for the To Do type:

| Table Name | Field Name |
|-------------|--------------|
| CI_BCHG_STG | BCHG_HSTG_ID |
| CI_BCHG_STG | FILE_NAME |

- Create a To Do role named **C1-ODBSU** for submitter and **C1-ODBAP** for approver
- Assign the **C1-ODBSU** To Do type to the **C1-ODBSU** To Do role
- Assign the **C1-ODBAP** To Do type to the **C1-ODBAP** To Do role
- Create a To Do role named **C1-ODFU** and assign users to this To Do role. The users who have the **C1-ODFU** To Do role will receive the To Do entries generated while executing the **Upload and Validate Usage Data File (C1-ODFU)** batch.

- Assign the **C1-ODFU** To Do type to the **C1-ODFU** To Do role
- Create a To Do role named **C1-ODBCH** and assign users to this To Do role. The users who have the **C1-ODBCH** To Do role will receive the To Do entries generated while executing the **Billable Charge Creation (C1-ODBCH)** batch.
- Assign the **C1-ODBCH** To Do type to the **C1-ODBCH** To Do role
- Create a To Do role named **C1-FABL** and assign users to this To Do role. The users who have the **C1-FABL** To Do role will receive the To Do entries generated while executing the **Adhoc Billing (C1-FABL)** batch.
- Assign the **C1-FABL** To Do type to the **C1-FABL** To Do role
- Create a To Do role named **C1-FCADH** and assign users to this To Do role. The users who have the **C1-FCADH** To Do role will receive the To Do entries generated while executing the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch.
- Assign the **C1-FCADH** To Do type to the **C1-FCADH** To Do role
- Set e-mail address for the users who are going to use the **On Demand Billing** screen (otherwise To Do entry will not be generated on executing the above batches)
- Create a mapping algorithm using the **C1-CSVPMALGO** algorithm type
- Create a validation algorithm using the **C1-VLDALGO** algorithm type
- Create an extract algorithm using the **C1-EXTALGO** algorithm type
- Create a To Do algorithm using the **C1_ODBDALGO** algorithm type and set the following parameters in the algorithm:
 - **To Do Role for Submitter** — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.
 - **To Do Type for Submitter** — Used to indicate that a To Do entry of the specified To Do type must be created when the approver rejects the records.
 - **To Do Role for Approver** — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.
 - **To Do Type for Approver** — Used to indicate that a To Do entry of the specified To Do type must be created when the submitter submits the valid records for approval.
- Define the required file types in the system
- Define values for the following lookup fields:
 - ODB_CAN_RSN_FLG
 - ODB_REJ_RSN_FLG
 - PAGE_NUMBER
- If you want to create billable charges with future date for a contract, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.
- Create an algorithm using the **C1-ODBFILEIN** algorithm type and attach it to the **Upload File Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen.

Besides this, you need to setup the following feature configurations:

- On Demand Billing (C1-ODBFC)
- Multi Parameter Based Pricing (C1_PPARAM_FLG)

CSV File Format for Banking Usage Data

Before uploading a usage data file for banking, you need to ensure that the CSV file contains the following columns:

| Column Name | Description | Mandatory (Yes or No) |
|---|---|---|
| DATA IDENTIFIER | Used to specify the serial number of the usage record. | No |
| ACCOUNT ID TYPE | Used to specify the account identifier type. | Yes |
| ACCOUNT IDENTIFIER | Used to indicate the account to which the usage record belongs. | Yes |
| START DATE | Used to specify the date from when the price item was used. | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| END DATE | Used to specify the date till when the price item was used. | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| DIVISION | Used to specify the division to which the usage record belongs. | Yes |
| DESCRIPTION | Used to specify the description for the usage record. It is shown on the billable charge. | Yes |
| BILL DESCRIPTION1, LINE LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Used to specify the description for the line item (charge). | Yes (Conditional) |
| | | Note: This data is required when the charge amount is specified. |
| AMOUNT1, AMOUNT2, , AMOUNT10 | Used to specify the charge amount. | Yes (Conditional) |
| | | Note: This data is required when the bill line description or currency is specified. |

| Column Name | Description | Mandatory (Yes or No) |
|---|--|---|
| CURRENCY1, CURRENCY2, CURRENCY10 | Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system. | Yes (Conditional) Note: This data is required when the charge amount is specified. |
| MEMO ONLY1, MEMO ONLY2, MEMO ONLY10 | Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to false if the column does not contain any value. | No |
| SUMMARY1, SUMMARY2, SUMMARY10 | Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to true if the column does not contain any value. | No |
| SHOW ON BILL1, SHOW ON BILL2, SHOW ON BILL10 | Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to true if the column does not contain any value. | No |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, GL DISTRIBUTION CODE 10 | Used to specify the distribution code which indicates the GL account associated with the charge. | Yes (Conditional) Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description. |
| PRICE ITEM | Used to specify the price item code. | Yes |
| VARIANCE | Used to indicate the variance that must be used along with the price item for determining the price item pricing. | No |

| Column Name | Description | Mandatory (Yes or No) |
|--|--|--|
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter value is specified. |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Used to specify the parameter value. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter type is specified. |
| SQI1, SQI2,, SQI10 | Used to indicate the service quantity identifier that must be used for calculating the price item charges. | Yes (Conditional) |
| | | Note: This data is required when the service quantity is specified. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Used to specify the number of units of the service quantity. | Yes (Conditional) |
| | | Note: This data is required when the SQI is specified. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Used to indicate the characteristic that must be defined for the billable charge. | Yes (Conditional) |
| | | Note: This data is required when the characteristic value is specified. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Used to specify the value of the characteristic type. | Yes (Conditional) |
| | | Note: This data is required when the characteristic type is specified. |

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

CSV File Format for Insurance Usage Data

Before uploading a usage data file for insurance, you need to ensure that the CSV file contains the following columns:

| Column Name | Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| DATA IDENTIFIER | Used to specify the serial number of the usage record. | No |

| Column Name | Description | Mandatory (Yes or No) |
|--|---|---|
| START DATE | Used to specify the date from when the price item was used. | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| END DATE | Used to specify the date till when the price item was used. | No |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| CONTRACT ID | Used to specify the contract ID. | Yes |
| CHARGE TYPE | Used to indicate the charge type. | No |
| DESCRIPTION | Used to specify the description for the usage record. It is shown on the billable charge. | Yes |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Used to specify the description for the line item (charge). | Yes (Conditional) |
| | | Note: This data is required when the charge amount is specified. |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Used to specify the charge amount. | Yes (Conditional) |
| | | Note: This data is required when the bill line description or currency is specified. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Used to specify the currency in which the amount is charged. | Yes (Conditional) |
| | | Note: This data is required when the charge amount is specified. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> true false | No |
| | | |

| Column Name | Description | Mandatory (Yes or No) |
|--|--|--|
| SUMMARY1, SUMMARY2,, SUMMARY10 | Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> true false | No |
| | Note: By default, the value will be set to true if the column does not contain any value. | |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> true false | No |
| | Note: By default, the value will be set to true if the column does not contain any value. | |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Used to specify the distribution code which indicates the GL account associated with the charge. | Yes (Conditional) |
| | | Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description. |
| PRICE ITEM | Used to specify the price item code. | Yes |
| VARIANCE | Used to indicate the variance that must be used along with the price item for determining the price item pricing. | No |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter value is specified. |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Used to specify the parameter value. | Yes (Conditional) |
| | Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | Note: This data is required when the parameter type is specified. |
| SQI1, SQI2,, SQI10 | Used to indicate the service quantity identifier that must be used for calculating the price item charges. | Yes (Conditional) |
| | | Note: This data is required when the service quantity is specified. |

| Column Name | Description | Mandatory (Yes or No) |
|--|---|--|
| SQIVALUE1, SQIVALUE2, SQIVALUE10 | Used to specify the number of units of the service quantity. | Yes (Conditional) Note: This data is required when the SQL is specified. |
| CHARTYPE1, CHARTYPE2, CHARTYPE10 | Used to indicate the characteristic that must be defined for the billable charge. | Yes (Conditional) Note: This data is required when the characteristic value is specified. |
| CHARVAL1, CHARVAL2, CHARVAL10 | Used to specify the value of the characteristic type. | Yes (Conditional) Note: This data is required when the characteristic type is specified. |
| RECURRING FLAG | Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. | No |
| BILL PERIOD | Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created. | Yes (Conditional) Note: This data is required when the recurring flag is equal to Bill Period. |
| FREQUENCY | Used to indicate the invoice frequency at which the recurring bill segments must be created. | Yes (Conditional) Note: This data is required when the recurring flag is equal to Frequency. |

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

Usage Record Status Transition

The following figure graphically indicates how a usage record moves from one status to another during the on demand billing process:

File Type

Oracle Revenue Management and Billing allows you to define file types using which you can upload a usage or payment data file. It is the file type which helps the system to understand how to process the file. The feed type specified in the file type indicates the type of data that you can upload using the file type. You can upload the following types of data using a file type:

- Banking Usage Data
- Insurance Usage Data
- Payment Upload Data

The following table lists the algorithms that you need to specify while defining file types for uploading usage or payment data:

| Feed Type | Algorithm | Mandatory (Yes or No) | Algorithm Type Shipped with the Product... | Algorithm Type Purpose |
|---------------------|----------------------|-----------------------|--|--|
| Payment Upload Data | Mapping algorithm | Yes | C1-CSVUPLPAY | Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database. |
| Payment Upload Data | Validation algorithm | Yes | C1-PUPLVALID | Validates a payment data file. |

| Feed Type | Algorithm | Mandatory (Yes or No) | Algorithm Type Shipped with the Product... | Algorithm Type Purpose |
|----------------------|----------------------|-----------------------|---|---|
| Banking Usage Data | Mapping algorithm | Yes | C1-CSVPMALGO | Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface . |
| Banking Usage Data | Validation algorithm | No | C1-VLDALGO | Validates a usage data file. |
| Banking Usage Data | To Do algorithm | No | C1_ODBTDALGO | Initiates the approval process for usage records before creating the billable charges. |
| Banking Usage Data | Extract algorithm | No | C1-EXTALGO | Extracts the usage records along with the error messages (if any) in the CSV format. |
| Insurance Usage Data | Mapping algorithm | Yes | C1-CSVPMALGO | Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface . |
| Insurance Usage Data | Validation algorithm | No | None | - |
| | | | Note: You need to design custom algorithm type to validate insurance usage data. | |
| Insurance Usage Data | To Do algorithm | No | C1_ODBTDALGO | Initiates the approval process for usage records before creating the billable charges. |
| Insurance Usage Data | Extract algorithm | No | C1-EXTALGO | Extracts the usage records along with the error messages (if any) in the CSV format. |

The **File Type** screen allows you to define, edit, and delete a file type. This screen consists of the following zones:

- [File Types](#) on page 1132

File Types

The **File Types** zone lists the file types that are already defined in the system. You can define, edit and delete a file type through this zone.

This zone contains the following columns:

| Column Name | Column Description |
|-------------|--|
| File Type | Displays the file type. |
| Description | Displays the description of the file type. |

| Column Name | Column Description |
|----------------------|---|
| Feed Type | Indicates the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> Banking Usage Data Insurance Usage Data Payment Upload Data |
| Mapping Algorithm | Indicates the mapping algorithm which is triggered when you upload a file. |
| Validation Algorithm | Indicates the validation algorithm which is triggered once the file is uploaded in the system. |
| To Do Algorithm | Indicates whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required. |
| Extract Algorithm | Indicates the extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format. |
| Edit | On clicking the Edit (✎) icon, the File Type screen appears where you can edit the details of the file type. |
| | Note: You can edit the details of a file type when no files are uploaded using the file type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the file type. |
| | Note: You can only delete a file type which is not yet used for uploading a file. |

You can define a file type by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 3024.

Defining a File Type

Prerequisites

To define a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Procedure

To define a file type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **File Type**.

The **File Type** screen appears.

3. Click the **Add** link in the upper right corner of the **File Types** zone.

The **File Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| File Type | Used to specify the file type. | Yes |
| Description | Used to specify the description for the file type. | Yes |
| Feed Type | Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> • Banking Usage Data • Insurance Usage Data • Payment Upload Data | Yes |
| Disable Move to Staging | Used to indicate whether you want to disable the Move to Staging functionality in the Payment Upload screen. Note: This field appears when you select the Payment Upload Data option from the Feed Type list. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Mapping Algorithm | <p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p>Note:</p> <p>The C1-CSVUPLPAY algorithm type is designed for uploading payment data and the C1-CSVPMALGO algorithm type is designed for uploading usage data. The C1-CSVUPLPAY algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether at least one payment record is available in the CSV file 3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database 4. Uploads the payments records in the pre-staging area <p>However, the C1-CSVPMALGO algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether the CSV file contains data in the required format 3. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> • Account Identifier Type • Account Identifier • Division • Price Item • Description 4. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| To Do Algorithm | <p>Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.</p> <p>Note:</p> <p>The C1_ODBTDALGO algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> • To Do Role For Submitter — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver. • To Do Type For Submitter — Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records. • To Do Role For Approver — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter. • To Do Type For Approver — Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval. <p>This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Validation Algorithm | Used to attach a validation algorithm which is triggered once the file is uploaded in the system. | Yes (Conditional) Note: This field is required when you select the Payment Upload Data option from the Feed Type list. |
| | <p>Note:</p> <p>The C1-PUPLVALID algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to Valid, Invalid, or Error. For more information about the pre-defined validations, see Upload Payment Records in the Pre-Staging Area on page 1212.</p> <p>However, the C1-VLDALGO algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the C1-VLDALGO algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| Extract Algorithm | Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format. | No |
| | <p>Note: This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |

In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Division | Used to indicate the division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |

Note: This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

Note:

This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑️) icon corresponding to the division.

5. Click **Save**.

The file type is defined.

Editing a File Type**Prerequisites**

To edit a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Note: You can edit the details of a file type when no files are uploaded using the file type.

Procedure

To edit a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Edit** (✎) icon in the **Edit** column corresponding to the file type whose details you want to edit.
The **File Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| File Type | Used to specify the file type. | Yes |
| Description | Used to specify the description for the file type. | Yes |
| Feed Type | Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> • Banking Usage Data • Insurance Usage Data • Payment Upload Data | Yes |
| Disable Move to Staging | Used to indicate whether you want to disable the Move to Staging functionality in the Payment Upload screen. | No |
| | Note: This field appears when you select the Payment Upload Data option from the Feed Type list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Mapping Algorithm | <p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p>Note:</p> <p>The C1-CSVUPLPAY algorithm type is designed for uploading payment data and the C1-CSVPMALGO algorithm type is designed for uploading usage data. The C1-CSVUPLPAY algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Division | Used to indicate the division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |

Note: This section does not appear when the feed type is set to **Payment Upload Data**.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

Note:

This section does not appear when the feed type is set to **Payment Upload Data**.

If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** (+) icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** (🗑️) icon corresponding to the division.

5. Click **Save**.

The changes made to the file type are saved.

Deleting a File Type**Procedure**

To delete a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the file type that you want to delete.
A message appears confirming whether you want to delete the file type.

Note: You can only delete a file type which is not yet used for uploading a file.

4. Click **OK**.

The file type is deleted.

On Demand Billing

The **On Demand Billing** screen allows you to search for a file group based on various search criteria. Through this screen, you can:

- Define a file group
- Edit a file group
- Delete a file group
- Close a file group
- Generate adhoc bills for a file group
- Freeze and complete adhoc bills of a file group
- View all bills generated for a file group
- View usage data files of a file group
- Cancel a usage data file

This screen consists of the following zones:

- [Search](#) on page 1144

Search

The **Search** zone allows you to search for file groups for which bills are processed and/or generated in the system. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| File Group | Used to specify the file group. | No |
| Description | Used to specify the description for the file group. | No |
| User ID | Used to specify the name of the user who has uploaded the usage data files in the file group. | No |
| Bill After Date | Used to specify the date after which the bills must be generated for the file group. | No |
| Status | Used to indicate the status of the file group. The valid values are: <ul style="list-style-type: none"> • Closed • Open | No |

Note: You must specify at least one search criterion while searching for a file group.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------|--|
| File Group | Displays the name of the file group. |
| | Note: It has a link. On clicking the link, the File Group screen appears where you can view the details of the file group. |
| Bill After Date | Displays the date after which the bills must be generated for the file group. |
| Default Usage Start Date | Displays the date from when the price item was used. |
| Default Usage End Date | Displays the date till when the price item was used. |
| Status | Displays the status of the file group. The valid values are: <ul style="list-style-type: none"> • Open • Close |
| Close | On clicking the Close (✖) icon, you can close a file group. |
| | Note: You can only close a file group in which all the records of the usage data files are either in the processed or cancelled status. |
| Generate Bill | On clicking the Generate Bill (📄) icon, you can generate bills for a file group. |
| Complete Bill | On clicking the Complete Bill (✅) icon, you can freeze and complete the bills of a file group. |
| Total | Displays the total number of records that are uploaded through the file group. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Submitted | Displays the number of valid records which are submitted for approval. |
| Processed | Displays the number of valid records for which billable charges are already created. |
| Rejected | Displays the number of records which are rejected by the approver. |
| Cancelled | Displays the number of records which are cancelled in the system. |
| Unbilled | Displays the number of records for which billable charges are created, but are not yet billed to the person. |
| Billed | Displays the number of records for which billable charges are created and billed to the person. |
| Bills | Displays the number of bills generated for the file group. |
| | Note: It has a link. On clicking the link, the View Bill Data screen appears where you can view all bills generated for the usage data file. |
| Last Batch Status | Indicates the batch that was last executed on the file group and its current status. |
| | Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch. |

Group Files

The **Group Files** zone allows you to view the usage data files uploaded using a file group. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| File Name | Used to specify the name of the usage data file. | No |
| File Type | Used to specify the type of usage data file. | No |
| File Upload From Date | Used to specify the start date of the period during which the usage data file that you want to search was uploaded in the system. | No |
| File Upload To Date | Used to specify the end date of the period during which the usage data file that you want to search was uploaded in the system. | No |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| File Information | Displays the name of the usage data file of the file group and its related details. |
| Total | Displays the total number of records that are uploaded through the usage data file. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Submitted | Displays the number of valid records which are submitted for approval. |
| Rejected | Displays the number of records which are rejected by the approver. |

| Column Name | Column Description |
|-------------|--|
| Processed | Displays the number of valid records for which billable charges are already created. |
| Cancelled | Displays the number of records of a usage data file which are cancelled. |
| UnBilled | Displays the number of records for which billable charges are created, but are not yet billed to the person. |
| Billed | Displays the number of records for which billable charges are created and billed to the person. |
| Cancel | On clicking the Cancel () icon, you can cancel a file. |

By default, the **Group Files** zone does not appear in the **On Demand Billing** screen. It appears when you click the **Broadcast** () icon corresponding to the file group in the **Search Results** section.

Note: By default, the **Group Files** zone displays a list of usage data files that are uploaded using the file group in the **Search Results** section. However, you can filter the list of usage data files by specifying a search criteria in the **Search Criteria** section.

Searching for a File Group

Procedure

To search for a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of file groups that meet the search criteria appears in the **Search Results** section.

Defining a File Group

Prerequisites

To define a file group, you should have:

- Access to the divisions for which you want to define the file group

Procedure

To define a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.
The **File Group** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| File Group | Used to specify the file group. | Yes |
| Description | Used to specify the description for the file group. | Yes |
| Bill After Date | Used to specify the date after which the bill must be generated for the file group. | Yes |
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. Note: The default usage start date cannot be later than the default usage end date. | Yes |
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. Note: The default usage end date cannot be earlier than the default usage start date. | Yes |

In addition, the **File Group** screen contains the following section:

Map Divisions— The **Map Divisions** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Division | Used to indicate the division for which you want to define the file group. | No |
| | | Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file. |

- Enter the required details.
- If you want to define the file group for more than one division, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a division from the file group, click the **Delete (🗑)** icon corresponding to the division.

- Click **Save**.

The file group is defined.

Editing a File Group

Procedure

To edit a file group:

Note: You can edit the details of a file group when no usage data files of this group have been uploaded in the system or all the records in the usage data files of a file group are cancelled.

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- Select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **File Group** column corresponding to the file group whose details you want to edit.

The **File Group** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| File Group | Displays the file group. | Not applicable |
| Description | Used to specify the description for the file group. | Yes |
| Bill After Date | Used to specify the date after which the bill must be generated for the file group | Yes |
| Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. Note: The default usage start date cannot be later than the default usage end date. | Yes |
| Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. Note: The default usage end date cannot be earlier than the default usage start date. | Yes |

In addition, the **Add/Edit File Group** screen contains the following section:

- **Map Divisions**— The **Map Divisions** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Division | Used to indicate the division for which you want to define the file group. | No Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file. |

5. Modify the required details.

Note: If you want to define the file group for more than one division, click the **Add (+)** icon and then specify the details. However, if you want to remove a division from the file group, click the **Delete (🗑)** icon corresponding to it.

6. Click **Save**.

The changes made to the file group are saved.

Deleting a File Group

Procedure

To delete a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group that you want to delete.
The **File Group** screen appears.
5. Click **Delete**.
The file group is deleted.

Note: The delete button appears only if the file group is not yet used. In other words, you cannot delete a file group that you have used for uploading usage data files.

Closing a File Group

Procedure

To close a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the **Close** (✖) icon in the **Close** column corresponding to the file group that you want to close.
The status of the file group is changed to **Closed**.

Note: You can only close a file group in which all the records of the usage data files are either in the processed, cancelled, or rejected status. However, you may close a file group in which all the records are not in the cancelled and/or processed status, but in that case a to do entry is sent to the approver for approval of the pending records.

Generating Adhoc Bills for a File Group

The **On Demand Billing** screen allows you to generate adhoc bills for a file group. However, you can generate bills only after you close the file group for which you want to generate adhoc bills.

Procedure

To generate adhoc bills for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Generate Bill** () icon corresponding to the file group for which you want to generate the adhoc bills.

The **Generate Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Cutoff Date | Used to specify the cutoff date for the bill. | Yes |
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

3. Enter the required details.
4. Click **OK**.

The adhoc bills are generated for the usage data files of a file group. An adhoc bill is generated for a usage data file and account combination when the bill after date is equal to or earlier than the current date. The status of the usage records is changed to **Billed**. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, a batch job is created using the **Adhoc Billing (C1-FABL)** batch. A message appears indicating the batch job ID. This batch job creates adhoc bills for the usage data file.

Note:

You can change the online bill creation limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Adhoc Billing (C1-FABL)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If an adhoc bill with the **Pending** status already exists for a usage data file and account combination, then the existing bill is deleted and regenerated. However, you can generate the bill again for a file group only after manually deleting the bill from the **Bill** screen.

On successful completion of the **Adhoc Billing (C1-FABL)** batch, a To Do entry is created using the **C1-FABL To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FABL To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of billable charges which were processed
- Number of billable charges for which the bill after date is a future date
- Number of adhoc bills generated for the usage data file
- Number of billable charges which could not be processed successfully

Once the batch is executed successfully, the status of the usage records in a usage data file of a file group is changed to **Billed**.

Freezing All Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for the usage data files of a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete all adhoc bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Freeze and Complete** (🗑️) icon corresponding to the file group whose adhoc bills you want to freeze and complete.

The **Complete Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Bill Date | Used to specify the date on which the bill was completed. | Yes |
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

3. Enter the required details.

4. Click **OK** in the message box.

A batch job is created using the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch. A message appears indicating the batch job ID. This batch job freezes and completes all adhoc bills of the usage data file which are in the **Pending** status. The system does not freeze and complete pending adhoc bills which have bill segments in the **Error** status. For more information on the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note:

On successful completion of the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, a To Do entry is created using the **C1-FCADH** To Do type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-FCADH** To Do type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of bills which were picked up for completion
- Number of bills which were completed
- Number of bills which could not be completed successfully

Once the batch is executed successfully, the status of the bills is changed to **Complete**.

Freezing Selected Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete selected adhoc bills of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose adhoc bills you want to freeze and complete.

The **View Bill Data** screen appears.

3. Select the check box corresponding to the pending adhoc bill that you want to freeze and complete.

Note: The check box does not appear corresponding to the completed adhoc bills and pending adhoc bills which have bill segments in the **Error** status.

4. Click **Freeze/Complete**.

The **Complete Bill** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Bill Date | Used to specify the date on which the bill was completed. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Accounting Date | Used to specify the accounting date of the bill. | Yes |

- Enter the required details.
- Click **OK** in the message box.

The status of the bills is changed to **Complete**.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a file group are in the **Complete** status
- Multiple bills are generated for a usage data file of a file group and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a file group where none of the bill segments are in the **Error** status.

Viewing All Bills Generated for a File Group

Procedure

To view all bills generated for a file group:

- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose bills you want to view.

The **View Bill Data** screen appears. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| File Group | Displays the name of the file group. |
| Description | Displays the description of the file group. |
| Bill Generation Date | Used to specify the date when the bills were generated for the file group. |
| Billing Method | Indicates the type of billing used for the file group. The valid values are: <ul style="list-style-type: none"> Adhoc Billing |
| Bill Status | Used to indicate the status of the bill. The valid values are: <ul style="list-style-type: none"> Pending Complete |

In addition, this screen contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| Bill ID | Displays the bill ID. |
| | Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Alternate Bill ID | Displays the alternate bill ID. |
| Bill Status | Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete |
| Bill Date | Displays the date when the bill was completed. |
| Accounting Date | Displays the accounting date for which the financial transaction of the bill is created. |
| Invoice Amount | Displays the total amount billed to the person. |
| Invoice Currency | Displays the currency in which the amount is billed to the person. |
| Invoice Account ID | Indicates the account for which the bill is created. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Display Bill | On clicking this link, you can view the details of the respective bill. |
| | Note: This link appears only for the bills that are in the Complete status. The facility to view the generated bills in PDF format is available only if Oracle Documaker is integrated with Oracle Revenue Management and Billing. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. Click **Search**.
4. View the bills generated for the usage data file in the **View Bill Data** screen.
5. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

6. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
7. If required, you can freeze and complete adhoc bills which are generated for the usage data file.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a usage data file are in the **Complete** status
- Multiple bills are generated for a usage data file and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen when there is at least one pending bill for a usage data file where none of the bill segments are in the **Error** status.

**Viewing Usage Data Files of a File Group****Procedure**

To view usage data files of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the file group whose usage data files you want to view.

The **Group Files** zone appears.

3. View the usage data files of the file group in the **Group Files** zone.

**Usage Data Processing**

The **Usage Data Processing** screen allows you to search for a usage data file based on various search criteria. Through this screen, you can:

- Upload a usage data file
- Cancel a usage data file

- View all records uploaded through a usage data file
- View the valid, invalid, and cancelled records of a usage data file
- View the valid records of a usage data file which are submitted for approval
- View the valid records of a usage data file for which billable charges are already created
- View the rejected, billed and unbilled records of a usage data file
- Submit the valid records of a usage data file and create billable charges for them
- Approve or reject one or more valid records of a usage data file
- Revalidate the valid and invalid records of a usage data file
- Edit the valid, invalid and rejected records of a usage data file
- Export the usage data of a usage data file into a CSV file

This screen consists of the following zones:

- [Search](#) on page 1158

Search

The **Search** zone allows you to search for usage data files that are uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| File Name | Used to specify the name of the usage data file. | No |
| File Type | Used to indicate the type of usage data file. | No |
| File Upload From Date | Used when you want to search for usage data files that were uploaded from a particular date onwards. | No |
| To | Used when you want to search for usage data files that were uploaded till a particular date. | No |
| User ID | Used to specify the name of the user who has uploaded the usage data file. | No |
| Billing Method | Used to specify the type of billing used for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing | No |
| File Group | Used to specify the file group of the usage data file. | No |

Note: You must specify at least one search criterion while searching for a usage data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| File Information | Displays the name of the usage data file and its related details. |

| Column Name | Column Description |
|-------------|---|
| Revalidate | <p>On clicking the Revalidate () icon, you can execute the validation process once again on the valid, invalid, and rejected records.</p> <p>Note: The Revalidate icon appears when the usage records are in the Valid, Invalid, and/or Rejected status. In other words, you cannot revalidate a usage data file for which billable charges are created or when the bills are generated for a usage data file.</p> |
| Cancel | <p>On clicking the Cancel () icon, you can cancel all valid, invalid, and rejected records of the usage data file.</p> <p>Note: The Cancel icon appears when the usage records are in the Valid, Invalid, and/or Rejected status. In other words, you cannot cancel a usage data file for which billable charges are created or when the bills are generated for a usage data file.</p> |
| Submit | <p>On clicking the Submit () icon, you can submit the valid records and create billable charges for them. If the valid usage records need to be approved before creating the billable charges, a To Do entry is created for the approver to approve the valid records.</p> <p>Note: The Submit icon appears when all the records of a usage data file are in the Valid status. In other words, if a usage data file contains records in the Invalid status, you cannot create billable charges for a usage data file.</p> |
| Approve | <p>On clicking the Approve () icon, the approver can approve all valid records of the usage data file.</p> <p>Note: The Approve icon appears when the usage data file (with all usage records in the Valid status) is uploaded using a file type to which the To Do algorithm (for enabling approval workflow) is attached.</p> |
| Total | <p>Displays the total number of records that are uploaded through the usage data file.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all records uploaded through the usage data file.</p> |
| Valid | <p>Displays the number of records which are successfully validated in the system.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all valid records of the usage data file.</p> |
| Invalid | <p>Displays the number of records which could not pass through the validation process in the system.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all invalid records of the usage data file.</p> |
| Submitted | <p>Displays the number of valid records which are submitted for approval.</p> <p>Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all submitted records of the usage data file.</p> |

| Column Name | Column Description |
|------------------|---|
| Rejected | Displays the number of records which are rejected by the approver. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all rejected records of the usage data file. |
| Processed | Displays the number of valid records for which billable charges are already created. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all processed records of the usage data file. |
| Billed | Displays the number of records for which billable charges are created and billed to the person. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all billed records of the usage data file. |
| Unbilled | Displays the number of records for which billable charges are created, but are not yet billed to the person. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all unbilled records of the usage data file. |
| Cancelled | Displays the number of records which are cancelled in the system. |
| | Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all cancelled records of the usage data file. |
| Batch Run Status | Indicates the batch that was last executed on the usage data file and its current status. |
| | Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch. |

You can upload a usage data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for a Usage Data File

Procedure

To search for a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of usage data files that meet the search criteria appears in the **Search Results** section.

Uploading a Usage Data File

Prerequisites

To upload a usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

Procedure

To upload a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.

3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|---|
| Billing Method | Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing | Yes |
| File Group | Used to specify the file group to which you want to add the usage data file. Note: This field appears when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list. | Yes (Conditional) Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file. |
| Bill After Date | Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field. Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the bill after date. |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage start date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date. | |
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage end date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date. | |
| File Type | Used to specify the type of usage data file. | Yes |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |
| File Name | Used to specify the name and path of the usage data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system. | |

4. Enter the required details.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the usage data file that you want to upload is available.
7. Click **Open**.
The usage data file name and path appears in the **File Name** field.
8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Replacing an Existing File**Prerequisites**

To replace an existing usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format

- File group using which you want to upload the usage data files is in **Open** status

Procedure

To replace an existing usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Select **Billing Management** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| Billing Method | Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing | Yes |
| File Group | Used to specify the file group to which you want to add the usage data file. | Yes (Conditional) |
| | Note: This field appears when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list. | Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file. |
| Bill After Date | Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field. | Yes (Conditional) |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. | Note: If you select the billing method as Regular Billing , you have to specify the bill after date. |
| Default Usage Start Date | Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required. | Yes (Conditional) |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date. | Note: If you select the billing method as Regular Billing , you have to specify the default usage start date. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|--|
| Default Usage End Date | Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required. | Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage end date. |
| | Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date. | |
| File Type | Used to specify the type of usage data file. | Yes |
| Replace Existing File | Used to indicate that you want to replace any existing file in the system. | Yes |
| File Name | Used to specify the name and path of the usage data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system. | |

- Select the **Replace Existing File** check box.

Note: You can replace an existing file when the usage records of a usage data file are in any of the statuses:

- **Valid** and/or **Invalid**
- **Rejected**
- **Cancelled**

In other words, you cannot replace a file when the billable charges are already created for the usage records of a usage data file, or are pending for approval with the approver.

- Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
- Browse to the location where the usage data file that you want to replace is available.
- Click **Open**.
The usage data file name and path appears in the **File Name** field.
- Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Viewing All Records of a Usage Data File**Procedure**

To view all records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the usage records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Used to specify the status of the usage record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Submitted for Approval • Processed • Rejected • Cancelled | No |
| Division | Used to specify the division to which the usage record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the usage records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose usage records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. Note: This column appears only for the valid records for which billable charges have been created. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |

| Column Name | Column Description |
|--|--|
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |

| Column Name | Column Description |
|--|---|
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

Note: You can download details of all the records of a usage data file in a CSV file format using the **Export TO Excel** link provided in the **Search** section.

- View the records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the usage records in the **Usage Data** screen.
- If required, you can click the **Export TO Excel** link to download details of all the records of a usage data file in a CSV file format.

Viewing Valid Records of a Usage Data File**Procedure**

To view valid records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Valid** column corresponding to the usage data file whose valid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the valid records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all valid records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the valid record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the valid records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose valid records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all valid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |

| Column Name | Column Description |
|--|--|
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |

| Column Name | Column Description |
|---|---|
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the valid records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the valid records in the **Usage Data** screen.

Viewing Invalid Records of a Usage Data File

Procedure

To view invalid records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Invalid** column corresponding to the usage data file whose invalid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the invalid records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all invalid records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the invalid record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the invalid records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose invalid records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all invalid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|--|--|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. |
| | Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. |
| | Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |

| Column Name | Column Description |
|--|---|
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the invalid records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the invalid records in the **Usage Data** screen.

Viewing Submitted Records of a Usage Data File**Procedure**

To view submitted records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Submitted** column corresponding to the usage data file whose submitted records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the submitted records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all records submitted for approval are displayed in the Usage Data screen. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| Division | Used to specify the division to which the submitted record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the submitted records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose submitted records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all submitted records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |

| Column Name | Column Description |
|--|--|
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |

| Column Name | Column Description |
|--|---|
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ..., GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the submitted records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the submitted records in the **Usage Data** screen.

Viewing Processed Records of a Usage Data File

Procedure

To view processed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Processed** column corresponding to the usage data file whose processed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the processed records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all processed records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the processed record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the processed records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose processed records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all processed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |

| Column Name | Column Description |
|--|--|
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQVALUE1, SQVALUE2,, SQVALUE10 | Displays the number of units of the service quantity. |

| Column Name | Column Description |
|--|---|
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the processed records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
6. If required, you can filter the processed records in the **Usage Data** screen.

Viewing Cancelled Records of a Usage Data File**Procedure**

To view cancelled records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Cancelled** column corresponding to the usage data file whose cancelled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the cancelled records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all cancelled records are displayed in the Usage Data screen. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| Division | Used to specify the division to which the cancelled record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the cancelled records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose cancelled records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all cancelled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. Note: This column appears only if you have cancelled a valid record for which billable charges have been created. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |

| Column Name | Column Description |
|--|--|
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |

Viewing Rejected Records of a Usage Data File**Procedure**

To view rejected records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Rejected** column corresponding to the usage data file whose rejected records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the rejected records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Status | Indicates that all rejected records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the rejected record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the rejected records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose rejected records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all rejected records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|--|--|
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. |
| | Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. |
| | Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. |
| | Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |

Viewing Billed Records of a Usage Data File**Procedure**

To view billed records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Billed** column corresponding to the usage data file whose billed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the billed records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all billed records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the billed record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the billed records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose billed records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all billed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |

| Column Name | Column Description |
|--|--|
| START DATE | Displays the date from when the price item was used. |
| | Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. |
| | Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. |
| | Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |

| Column Name | Column Description |
|--|---|
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the billed records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.

6. If required, you can filter the billed records in the **Usage Data** screen.

Viewing Unbilled Records of a Usage Data File

Procedure

To view unbilled records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Unbilled** column corresponding to the usage data file whose unbilled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the unbilled records based on the various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|--|
| File Name | Displays the name of the usage data file. | Not applicable |
| File Type | Indicates the type of the usage data file. | Not applicable |
| Default Usage Start Date | Displays the usage start date entered while uploading the usage data file. | Not applicable |
| Default Usage End Date | Displays the usage end date entered while uploading the usage data file. | Not applicable |
| Usage Record Status | Indicates that all unbilled records are displayed in the Usage Data screen. | Not applicable |
| Division | Used to specify the division to which the unbilled record belongs. | No |
| Account Identifier Type | Used to specify the identifier type based on which you want to search for the unbilled records. | Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type. |
| Account Identifier | Used to indicate the account whose unbilled records you want to view. | Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier. |

- **Search Results** — By default, all unbilled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

| Column Name | Column Description |
|---|--|
| BILLABLE CHARGE ID | Indicates the billable charge which is generated for the usage record. |
| ACCOUNT ID TYPE | Indicates the account identifier type. |
| ACCOUNT IDENTIFIER | Indicates the account to which the usage record belongs. |
| ACCOUNT INFORMATION | Displays information about the account. |
| DIVISION | Indicates the division to which the usage record belongs. |
| CONTRACT ID | Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module. |
| CHARGE TYPE | Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module. |
| START DATE | Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column. |
| END DATE | Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column. |
| DESCRIPTION | Displays the description of the usage record. It is shown on the billable charge. |
| PRICE ITEM | Displays the price item code. |
| VARIANCE | Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15 | Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |

| Column Name | Column Description |
|--|---|
| PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15 | Displays the value of the price item parameter. Note: These columns appear when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| SQI1, SQI2,, SQI10 | Indicates the service quantity identifier that must be used for calculating the price item charges. |
| SQIVALUE1, SQIVALUE2,, SQIVALUE10 | Displays the number of units of the service quantity. |
| BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10 | Displays the description of the line item (charge). |
| AMOUNT1, AMOUNT2,, AMOUNT10 | Displays the charge amount. |
| CURRENCY1, CURRENCY2,, CURRENCY10 | Displays the currency in which the amount is charged. |
| MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10 | Indicates whether the charge should be included in the bill amount or not. |
| SUMMARY1, SUMMARY2,, SUMMARY10 | Indicates whether the charge should be included in the summary line or not. |
| SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10 | Indicates whether the charge should appear on the person's printed bill or not. |
| GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10 | Displays the distribution code which indicates the GL account associated with the charge. |
| CHARTYPE1, CHARTYPE2,, CHARTYPE10 | Indicates the characteristic that must be defined for the billable charge. |
| CHARVAL1, CHARVAL2,, CHARVAL10 | Displays the value of the characteristic type. |

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the unbilled records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the unbilled records in the **Usage Data** screen.

Submitting a Valid Record**Procedure**

To submit a valid record:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the **Submit** (👉) icon corresponding to the usage data file whose valid records you want to submit.

The system behaves in the following manner when:

- Billing Method — Adhoc Billing, Approval Workflow — Off, and Bill After Date — Current or Future Date:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **Y** and

the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**.

- **Billing Method — Adhoc Billing, Approval Workflow — On, and Bill After Date — Current or Future Date:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** and the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account in the bill cycle in which the bill after date falls.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Not Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** in the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account based on the bill cycle defined for the account.
- **Billing Method — Regular Billing and Approval Workflow — On:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.

Note:

You can change the transaction limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Billable Charge Creation (C1-ODBCH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If you want to create billable charges for valid usage records where start date is a future date, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.

If a batch job is created automatically, the number of valid records for which billable charges are created in each work unit depends on the value defined for the **Billable Charge Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

In case an account belongs to an invoicing group, the billable charge is created for the member account and the bill is generated for the master account.

On successful completion of the **Billable Charge Creation (C1-ODBCH)** batch, a To Do entry is created using the **C1-ODBCH To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODBCH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records for which billable charges were created
- Number of records for which billable charges could not be created successfully

3. If a batch job is created automatically, click **OK** in the message box.

Approving a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To approve a valid record:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Approve the usage record from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve (☑) icon corresponding to the usage data file whose records you want to review. |
| Approve the usage record from the To Do List screen | <ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review. |

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

| If you want to... | Then... |
|-----------------------------------|--|
| Approve one or more usage records | <ol style="list-style-type: none"> 1. If the usage record is accurate, then select the check box corresponding to the usage record. 2. Click Approve. The system behaves in the following manner when: <ul style="list-style-type: none"> • Billing Method — Adhoc Billing and Bill After Date — Current or Future Date: A billable charge is created for each valid record which is approved. The Adhoc Bill flag is set to Y and |

Rejecting a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To reject a valid record:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Reject the usage record from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve (☺) icon corresponding to the usage data file whose records you want to review. |
| Reject the usage record from the To Do List screen | <ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review. |

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

| If you want to... | Then... |
|----------------------------------|--|
| Reject one or more usage records | <ol style="list-style-type: none"> 1. If the usage record is not appropriate, then select the check box corresponding to the usage record. 2. Click Reject. |
| Reject all usage records | <ol style="list-style-type: none"> 1. Click Reject All. |

The **Rejection Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Reason | Used to indicate the reason why you want to reject the usage record. | Yes |
| Comments | Used to specify additional information while rejecting the usage record. | Yes |

4. Select the reason for rejecting the usage record and enter the comments in the respective field.

Note: The **ODB_REJ_RSN_FLG** lookup field values appear in the **Reason** list.

5. Click **OK**.

The status of the usage record is changed to **Rejected**. A To Do entry is created for the submitter to include correct or missing data.

Related Topics

| How to search for a usage data file | Searching for a Usage Data File on page 1161 |

Canceling a Usage Data File

There might be situations when incorrect usage data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. Once the usage data file is cancelled, the status of the file and all usage records in the file is changed to **Cancelled**. However, note that you can cancel a usage data file when there are no records (in other words, zero records) in the **Processed** and **Submitted** statuses.

Procedure

To cancel a usage data file:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Cancel the usage data file from the Usage Data Processing screen | <ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Cancel (🚫) icon corresponding to the usage data file that you want to cancel. |
| Cancel the usage data file from the On Demand Billing screen | <ol style="list-style-type: none"> 1. From the Main Menu, select Billing Management and then click On Demand Billing. The On Demand Billing screen appears. 2. Search for the file group whose usage data file you want to cancel. The search results appears. 3. Click the Broadcast (📡) icon corresponding to the required file group. The Group Files zone appears. The Group Files zone lists the usage data files that are uploaded using the file group. 4. Click the Cancel (🚫) icon corresponding to the usage data file that you want to cancel. |

A message appears confirming whether you want to cancel the usage data file.

2. Click **OK**.

The **Cancel Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Reason | Used to indicate the reason why you want to cancel the usage data file. | Yes |
| Comments | Used to specify additional information while cancelling the usage data file. | Yes |

3. Select the reason for cancelling the usage data file and enter the comments in the respective field.

Note: The ODB_CAN_RSN_FLG lookup field values appear in the **Reason** list.

4. Click **OK**.

The status of the usage data file is changed to **Cancelled**.

Related Topics

| For more information on... | See... |
|-------------------------------------|--|
| How to search for a file group | Searching for a File Group on page 1147 |

Revalidating a Usage Data File

There might be situations when you want to execute the validation process once again on the usage data file. For example, initially when the usage data file was uploaded, accounts didn't have an active contract and therefore the status of the usage records was set to **Invalid**. Later, a contract was created and activated for each account (whose usage records are available in the usage data file). In such case, you need to execute the validation process once again on the usage data file. However, note that when you revalidate a usage data file, only the records in the **Valid** and **Invalid** status are revalidated.

Procedure

To revalidate a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Click the **Revalidate** () icon corresponding to the usage data file on which you want to execute the validation process once again.

The valid and invalid records are revalidated, and accordingly the status of records is changed. A message appears indicating that the validation process has completed successfully.

Note:

If the usage data file size exceeds the file size limit set in the **On Demand Billing (C1-ODBFC)** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job revalidates the usage data file. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If a batch job is created automatically, the number of usage records that are revalidated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

3. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Editing a Valid, Invalid, or Rejected Usage Record

If the usage record validation fails or the approver rejects the usage record due to some reason, the status of the record is changed to **Invalid** or **Rejected**, respectively. You need to then correct the existing data or add the missing data. The system allows you to edit the valid, invalid, and rejected usage records.

Procedure

To edit a valid, invalid or rejected usage record:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Depending on whether you want to edit a valid, invalid, or rejected record, click the link in the **Valid**, **Invalid**, or **Rejected** column corresponding to the usage data file whose records you want to edit.

The **Usage Data** screen appears. The columns in the **Search Results** section are editable.

Note:

In case of rejected records, all columns except the **Reason** and **Comments** columns are editable.

In case of invalid record, the field with incorrect or missing data is highlighted with the red color. This helps to easily identify the reason why the validation process failed.

3. Enter the correct or missing data in the respective field.
4. Click **Save**.

All valid, invalid, or rejected usage records are validated once again. Once the validation process has completed successfully, the status of the records is changed accordingly.

| How to search for a usage data file | Searching for a Usage Data File on page 1161 |

Exporting Usage Data into CSV file

Oracle Revenue Management and Billing provides you the facility to export the usage data into a CSV file. However, you can download the usage data in a CSV file only if the billable charges are not yet created. In other words, you can download the usage data only when all the records of a usage data file are in the valid and/or invalid status. Once the usage data is downloaded, you can edit the usage records and reupload the usage data file.

Note: When you download the usage data file using the **Export To Excel** option, the downloaded file is saved on your system with a unique ID. Once you make the required changes in the downloaded usage data file, you need to save the modified file with the same name as it exists in Oracle Revenue Management and Billing, and then upload the file into the system to replace the existing file.

Procedure

To export usage data into CSV file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose usage records you want to export.
The **Usage Data** screen appears.
3. Click the **Export TO Excel** link in the **Search** section to download details of all the valid and/or invalid records of a usage data file in a CSV file format.
A message appears indicating that all valid and invalid records will be exported.
4. Click **OK**.

The system prompts you to save the file.

Filtering Usage Records

Procedure

To filter records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.

- Depending on whether you want to filter total, valid, invalid, submitted, processed, rejected, cancelled, billed, or unbilled usage records, click the link in the respective column corresponding to the usage data file.

The **Usage Data** screen appears.

- Enter the search criteria based on which you want to filter the records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

Chapter 13

Upload Validated Payment Data

Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data — one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1215. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 1212.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 1217 and [Payment Record Status Transition](#) on page 1217, respectively.

Payment Upload Process

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 1212
- [Move Payment Records to the Staging Area](#) on page 1213
- [Create Payment Events and Payments](#) on page 1213

Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1215.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID, Tender Amount, Payment Amount, Date Received, Bank Account, and Payment Type** columns in the CSV file.
- The data is available in the **Match Type** and **Match Value** columns in the CSV file.

Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

Note: If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

Note: This validation is done when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.
- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 1217.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

Note: If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the

system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events
- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

| Column Name | Description | Mandatory (Yes or No) |
|----------------|--|--|
| Account ID | Used to specify the payee account ID. | Yes |
| Match Type | Used to specify the match type using which you want to match the payment. | Yes (Conditional) Note: This data is required when the match value is specified. |
| Match Value | Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment. | Yes (Conditional) Note: This data is required when the match type is specified. |
| Tender ID | Used to specify the payment tender ID. Note: If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event. | Yes |
| Tender Amount | Used to specify the tender amount. Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system. | Yes |
| Payment Amount | Used to specify the amount paid through the tender. Note: You must not specify the value less than or equal to 0. The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system. | Yes |
| Date Received | Used to specify the date when the payment is made. Note: You must specify the date in the MM/DD/YYYY format. | Yes |
| Bank Account | Used to specify the external source ID which is associated with the tender source. | Yes |

| Column Name | Description | Mandatory (Yes or No) |
|--|---|--|
| Payment Type | Used to specify the type of tender through which the payment is made. | Yes |
| Check Number | Used to specify the check number if the payment is made through check. | No |
| Currency | Used to specify the currency in which the payment is made. Note: If the currency is not specified, it is set to the payor account's invoice currency. | No |
| Account ID Type | Used to specify the account identifier type. | Yes (Conditional) Note: This data is required when the account identifier is specified. |
| Account Identifier | Used to specify the account for which the payment is made. | Yes (Conditional) Note: This data is required when the account identifier type is specified. |
| Payment Char Type1, Payment Char Type2,, Payment Char Type5 | Used to indicate the characteristic that must be defined for the payment. | Yes (Conditional) Note: This data is required when the characteristic value is specified. |
| Payment Char Value1, Payment Char Value2,, Payment Char Value5 | Used to specify the value for the characteristic type. | Yes (Conditional) Note: This data is required when the characteristic type is specified. |
| MICR ID | Used to specify the MICR code. | No |
| Payor ID | Used to specify the payor account ID. Note: If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same. | No |

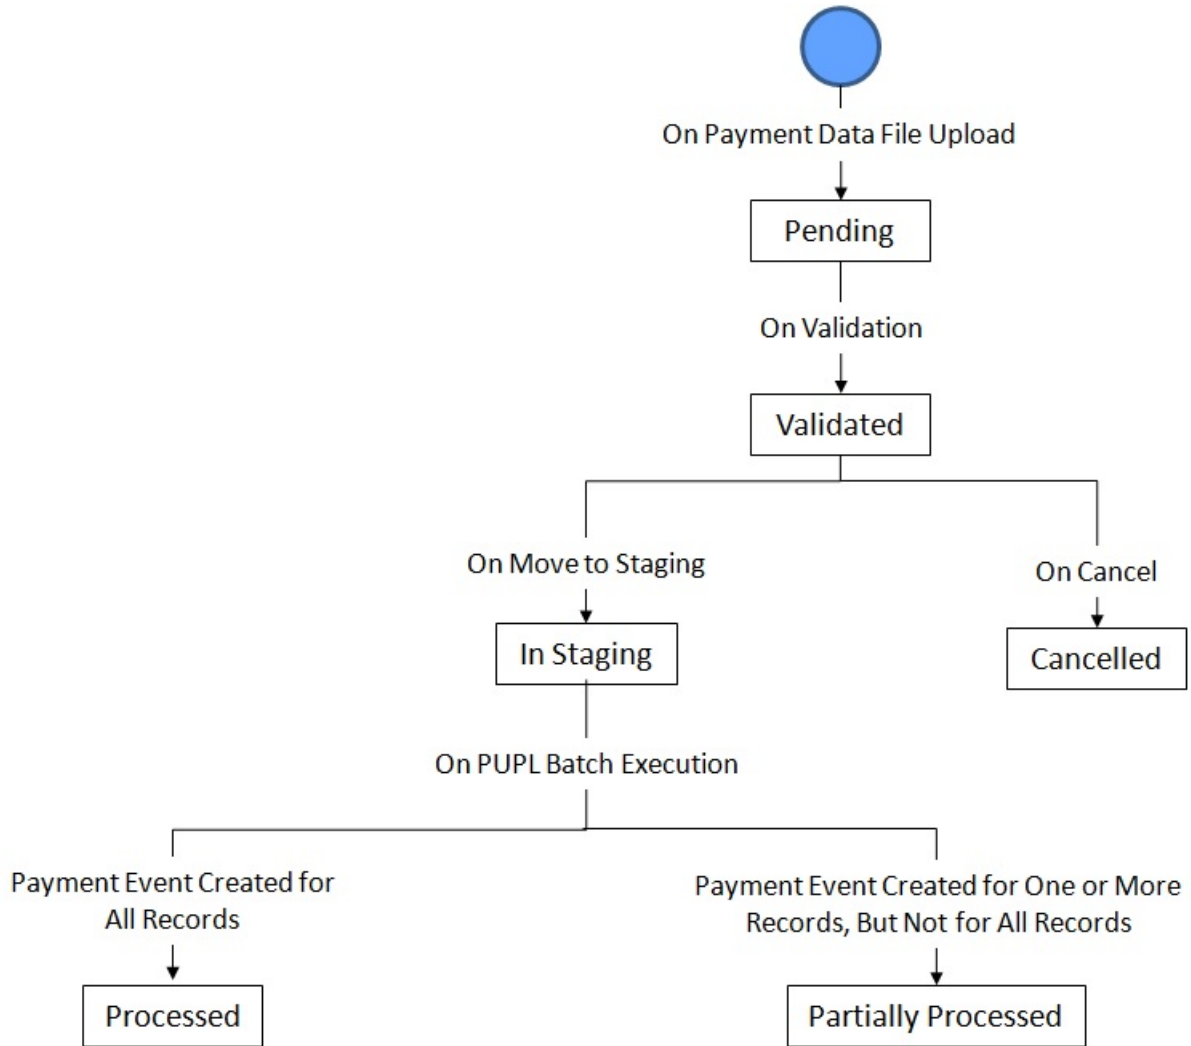

Note:

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

Payment Record Status Transition

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

| Scenario | Payment Record Status |
|---|-----------------------|
| The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record. | Invalid |
| The payee account ID specified in the payment record does not exist in the system. | Invalid |
| The payee account ID, account identifier type, or account identifier are not specified in the payment record. | Invalid |
| The match type is not specified in the payment record. | Invalid |
| The match type specified in the payment record does not exist in the system. | Error |
| The match value is not specified in the payment record. | Invalid |
| The currency code does not exist in the system. | Invalid |
| The tender amount is either zero or not specified in the payment record. | Invalid |
| The payment amount is either zero or not specified in the payment record. | Invalid |
| The bank account is not specified in the payment record. | Invalid |
| The payment type (i.e. tender type) does not exist in the system. | Invalid |

| Scenario | Payment Record Status |
|---|-----------------------|
| The payment type is not specified in the payment record. | Invalid |
| The tender ID is not specified in the payment record. | Invalid |
| The date received is not specified in the payment record. | Invalid |
| The payor account ID specified in the payment record does not exist in the system. | Invalid |
| The characteristic type specified in the payment record does not exist in the system. | Invalid |
| If a characteristic type is specified, but the characteristic value is not specified in the payment record. | Invalid |
| If a characteristic value is specified, but the characteristic type is not specified in the payment record. | Invalid |
| The characteristic value does not match any predefined value when the characteristic value type is set to Predefined Value . | Invalid |

Note: The system does the match type and match value related validations when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

| Message Number | Error Message | Message Category | Possible Issues |
|----------------|--|------------------|---|
| 80110 | File cannot be reuploaded as some records have already been processed. | 11111 | The possible issues could be: <ul style="list-style-type: none"> You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created. |
| 1463 | This file already exists in the system. Please check. | 17000 | The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is already uploaded in the system without selecting the Replace Existing File check box. |
| 1465 | Please upload a file in the CSV format. | 17000 | The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is not in the CSV format. |
| 80113 | Duplicate Header for column %1 in file. | 11111 | The possible issues could be: <ul style="list-style-type: none"> The file has two or more columns with the same header. |

| Message Number | Error Message | Message Category | Possible Issues | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|---|------------------|---|-------------|----------------|------------|----|------------|---|-------------|----|-----------|----|---------------|----|----------------|----|---------------|----|--------------|----|--------------|---|--------------|----|----------|---|-----------------|---|--------------------|----|---|---|--|-----|---------|----|----------|----|
| 80111 | Length of value %1 too long for Field %2. Maximum length: %3 Found %4. | 11111 | <p>The possible issues could be:</p> <ul style="list-style-type: none"> The length of value specified in the column exceeds the maximum field length. The following table lists the maximum length of each field: <table border="1" data-bbox="1089 436 1463 1661"> <thead> <tr> <th data-bbox="1096 443 1312 520">Column Name</th> <th data-bbox="1312 443 1456 520">Maximum Length</th> </tr> </thead> <tbody> <tr> <td data-bbox="1096 520 1312 569">Account ID</td> <td data-bbox="1312 520 1456 569">10</td> </tr> <tr> <td data-bbox="1096 569 1312 617">Match Type</td> <td data-bbox="1312 569 1456 617">8</td> </tr> <tr> <td data-bbox="1096 617 1312 665">Match Value</td> <td data-bbox="1312 617 1456 665">30</td> </tr> <tr> <td data-bbox="1096 665 1312 714">Tender ID</td> <td data-bbox="1312 665 1456 714">12</td> </tr> <tr> <td data-bbox="1096 714 1312 762">Tender Amount</td> <td data-bbox="1312 714 1456 762">15</td> </tr> <tr> <td data-bbox="1096 762 1312 810">Payment Amount</td> <td data-bbox="1312 762 1456 810">15</td> </tr> <tr> <td data-bbox="1096 810 1312 858">Date Received</td> <td data-bbox="1312 810 1456 858">10</td> </tr> <tr> <td data-bbox="1096 858 1312 907">Bank Account</td> <td data-bbox="1312 858 1456 907">30</td> </tr> <tr> <td data-bbox="1096 907 1312 955">Payment Type</td> <td data-bbox="1312 907 1456 955">4</td> </tr> <tr> <td data-bbox="1096 955 1312 1003">Check Number</td> <td data-bbox="1312 955 1456 1003">10</td> </tr> <tr> <td data-bbox="1096 1003 1312 1052">Currency</td> <td data-bbox="1312 1003 1456 1052">3</td> </tr> <tr> <td data-bbox="1096 1052 1312 1100">Account ID Type</td> <td data-bbox="1312 1052 1456 1100">8</td> </tr> <tr> <td data-bbox="1096 1100 1312 1192">Account Identifier</td> <td data-bbox="1312 1100 1456 1192">30</td> </tr> <tr> <td data-bbox="1096 1192 1312 1381">Payment Char Type1, Payment Char Type2,, Payment Char Type5</td> <td data-bbox="1312 1192 1456 1381">8</td> </tr> <tr> <td data-bbox="1096 1381 1312 1560">Payment Char Value1, Payment Char Value2,, Payment Char Value5</td> <td data-bbox="1312 1381 1456 1560">254</td> </tr> <tr> <td data-bbox="1096 1560 1312 1608">MICR ID</td> <td data-bbox="1312 1560 1456 1608">30</td> </tr> <tr> <td data-bbox="1096 1608 1312 1656">Payor ID</td> <td data-bbox="1312 1608 1456 1656">10</td> </tr> </tbody> </table> | Column Name | Maximum Length | Account ID | 10 | Match Type | 8 | Match Value | 30 | Tender ID | 12 | Tender Amount | 15 | Payment Amount | 15 | Date Received | 10 | Bank Account | 30 | Payment Type | 4 | Check Number | 10 | Currency | 3 | Account ID Type | 8 | Account Identifier | 30 | Payment Char Type1, Payment Char Type2,, Payment Char Type5 | 8 | Payment Char Value1, Payment Char Value2,, Payment Char Value5 | 254 | MICR ID | 30 | Payor ID | 10 |

| 13603 | Deposit control (%1/%2) Deposit Amount is not equal to sum of Tender Amounts | 11 | The possible issues could be: <ul style="list-style-type: none"> The sum of tender control staging amount does not match the deposit control staging amount. |
| 13604 | Deposit Control (%1/%2) Tender count does not equal the number of Tender controls | 11 | The possible issues could be: <ul style="list-style-type: none"> The number of tender control staging records does not match the total tender controls specified in the deposit control staging record. |
| 13605 | Tender control (%1/%2/%3) Total Tender Amount not equal to sum of Tender Amounts | 11 | The possible issues could be: <ul style="list-style-type: none"> The sum of payment tender staging amount does not match the total tender amount specified in tender control staging record. |
| 13606 | Tender control (%1/%2/%3) tender count does not equal the number of Tenders | 11 | The possible issues could be: <ul style="list-style-type: none"> The number of payment tender staging records does not match the total number of tenders specified in the tender control staging record. |
| 13607 | Suspense Contract does not exist for External Source ID (%1) | 11 | The possible issues could be: <ul style="list-style-type: none"> The suspense contract is not defined for the tender source. |
| 13608 | Many Tender Sources found for External Source ID (%1) | 11 | The possible issues could be: <ul style="list-style-type: none"> There are multiple tender sources in the system with the same external source ID. |

| Message Number | Error Message | Message Category | Possible Issues |
|----------------|---|------------------|---|
| 13701 | Pay Tender (%1/%2/%3/%4) Amount not equal to sum of Pay Amounts | 11 | The possible issues could be: <ul style="list-style-type: none"> The sum of payment staging amount does not match the total amount specified in payment tender staging record. |
| 13705 | Payment (%1/%2/%3/%4) Person ID (%5) exists on multiple accounts. | 11 | The possible issues could be: <ul style="list-style-type: none"> There are multiple payment records having contracts with the same old account ID but their payee account ID is different. |
| 80194 | File has no records to upload | 11111 | The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file without any payment records. |
| 80195 | Incorrect header: %1 | 11111 | The possible issues could be: <ul style="list-style-type: none"> One or more column names in the payment data file are incorrect. |
| 80196 | Maximum file name size allowed is 60 characters | 11111 | The possible issues could be: <ul style="list-style-type: none"> The file name contains more than 60 characters. |
| 80199 | Missing value for column %1 | 11111 | The possible issues could be: <ul style="list-style-type: none"> The match type is not specified in the payment record. The match value is not specified in the payment record. The payment type is not specified in the payment record. |

Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 1224
- [Payment Data Records](#) on page 1226
- [Payment Data File Log](#) on page 1227

Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| File Name | Used to search a particular payment data file. | No |
| User ID | Used to search payment data files which are uploaded by a particular user. | No |
| Upload From Date | Used to search payment data files which are uploaded from a particular date onwards. Note: By default, the date is set to the current date minus 7 days. You can change the date, if required. | No |
| To | Used to search payment data files which are uploaded till a particular date. Note: By default, the date is set to the current date. You can change the date, if required. | No |
| File Type | Used to search payment data files which are uploaded using a particular file type. | No |
| File Status | Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"> • Cancelled • In Staging • Partially Processed • Pending • Processed • Validated | No |

Note: You must specify at least one search criterion while searching for a payment data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|---|
| File Name | Displays the name of the payment data file. |
| File Type | Indicates the type of the payment data file. |
| Upload Date | Displays the date and time when the payment data file was uploaded in the system. |

| Column Name | Column Description |
|-----------------|---|
| Status | Indicates the status of the payment data file. The valid values are: <ul style="list-style-type: none"> Cancelled In Staging Partially Processed Pending Processed Validated |
| Total | Displays the total number of records that are uploaded through the payment data file. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Error | Displays the number of records where the data is incorrect. |
| In Staging | Displays the number of records which are copied from the pre-staging to staging area. |
| Processed | Displays the number of records for which payment events are created. |
| Staging Error | Displays the number of records for which payment events could not be created. |
| Cancel | On clicking the Cancel () icon, you can cancel the payment data file. Note: The Cancel icon appears when the status of the payment data file is Validated . In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file. |
| Move to Staging | On clicking the Move to Staging () icon, you can move the valid and error records of the payment data file to the staging area. Note: The Move to Staging icon appears when: <ul style="list-style-type: none"> The status of the payment data file is Validated. There are no invalid records in the payment data file. The Disable Move to Staging check box is not selected in the respective file type. |

You can upload a payment data file by clicking the **Upload** link in the upper right corner of this zone. On clicking the **Broadcast** () icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

| Column Name | Column Description |
|------------------|--|
| Payor Account ID | Indicates the account which made the payment. |
| Payee Account ID | Indicates the account for which the payment was made. |
| Match Type | Indicates the match type using which the payment must be matched. |
| Match Value | Indicates the entity (such as bill, contract, and so on) against which the payment must be matched. |
| Pay Tender ID | Displays the payment tender ID. |
| Tender Amount | Displays the tender amount. |
| Payment Amount | Displays the amount paid through the tender. |
| Currency | Indicates the currency in which the payment was made. |
| Date Received | Displays the date when the payment was made. |
| Bank Account | Displays the bank account from which the payment was made. |
| Tender Type | Indicates the type of tender through which the payment was made. |
| Check Number | Displays the check number if the payment was made through check. |
| MICR ID | Displays the MICR code. |
| Status | Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Error • In Staging • Processed • Error in Staging |

| Column Name | Column Description |
|---------------------------|---|
| Payment Information Event | Displays information about the payment event which is created for the payment record. |
| | <p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.</p> <p>The data appears in this column when the status of the payment record is Processed.</p> |
| Payment Staging Record | On clicking the Edit (✎) icon, the Payment Upload Staging screen appears where you can edit the details of the payment staging record. |
| | <p>Note: The Edit icon appears when the status of the payment record is In Staging.</p> |
| Error Message | On clicking the View (🔗) icon, the Error Messages window appears where you can view the reasons why the status of the payment record is Invalid or Error . |
| | <p>Note: The View icon appears when the status of the payment record is Error or Invalid.</p> |

Note: Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Date/Time | Displays the date and time when the action was performed on the payment data file. |
| Log Details | Displays the details about the action performed on the payment data file. |
| User | Indicates the user who has performed the action on the payment data file. |

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Searching for a Payment Data File

Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of payment data files that meet the search criteria appears in the **Search Results** section.

Uploading a Payment Data File

Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.
The **Upload Payment Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| File Type | Used to indicate the type of payment data file. | Yes |
| | Note: The list includes only those file types where the feed type is set to Payment Upload Data . | |
| File Name | Used to specify the name and path of the payment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the payment data file is available in the system. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |

4. Select the type of payment data file from the **File Type** list.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the payment data file that you want to upload is available.

7. Click **Open**.

The payment data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

Note: If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

9. Click **OK** in the message box.

On uploading the payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 1217.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Replacing an Existing File

Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.
The **Upload Payment Data File** screen appears.
4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to upload is available.
7. Click **Open**.
The payment data file name and path appears in the **File Name** field.
8. Select the **Replace Existing File** check box.

Note: You can replace an existing file when the payment data file is in the **Validated** status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.

9. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

10. Click **OK** in the message box.

Once the payment data file is successfully uploaded, the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is changed to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is changed to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 1217. You can view the details of the uploaded payment data file and its records in the **Payment Upload** screen.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Canceling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** () icon in the **Cancel** column corresponding to the payment data file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

Note: The **Cancel** icon appears when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

Moving the Payment Records to the Staging Area

Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** () icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

Note:

The **Move to Staging** icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.

A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.

4. Click **OK** in the message box.

The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

Editing a Payment Staging Record

You can edit a payment record when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **Edit** () icon in the **Payment Staging Record** column corresponding to the payment record whose details you want to edit in the staging area.

The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** — Enables you to view and edit the tender control staging details.
- **Payment Advice** — Enables you to view and edit the payment staging details.
- **Payment Characteristics** — Enables you to view and edit the payment characteristic staging details.

Note: The **Edit** icon appears when the status of the payment record is **In Staging**.

4. Modify the required details.
5. Click the **Save** link in the **Application** toolbar.

The changes made to the payment staging record are saved.

Viewing the Error Messages

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

Procedure

To view the error messages:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose payment records are in the **Error** or **Invalid** status.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **View** (🔍) icon in the **Error Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.

The **Error Messages** window appears. It lists the reasons why the payment record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Note: The **View** icon appears when the status of the payment record is **Error** or **Invalid**.

4. View the reasons in the **Error Messages** window.
5. Click **OK**.

Chapter 14

Freeze Payments on Notification

Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI_APAY_STAGE_UP
- CI_APAY_STAGE_UP_REM
- CI_APAY_STGUP_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 1237.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record when it is in the **Pending** or **Error** status, and you

can delete an automatic payment or refund clearing staging record when it is in the **Pending** status. During the freeze payments on notification process, the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 1241.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 1240.

Freeze Payments on Notification Process

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 1237
2. [Generating a Flat File](#) on page 1237
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 1237
4. [Freezing or Canceling Automatic Payments](#) on page 1238
5. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 1239
6. [Generating To Do Entries](#) on page 1239
7. [Creating Tender Controls](#) on page 1239

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Upload Response from Auto Clearing House (C1-APACK)
5. Freeze or Cancel Automatic Payments (APAYRA)
6. Cancel Automatic Refunds (AREFRA)
7. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
8. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI_APAY_CLR_STG** and **CI_ADJ_CLR_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing

ID in the **CI_APAY_STAGE_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI_APAY_STGUP_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI_APAY_STGUP_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY_DIST_FRZ_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: An additional table named **CI_APAY_STGUP_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

Note: You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1241.

Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e.

NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancelation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI_APAY_STAGE_UP** – Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI_APAY_STAGE_UP_REM** – Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI_APAY_STGUP_CHAR** – Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the APAYUPTD To Do type when an exception is logged for an automatic payment clearing staging record in the **CI_APAY_STGUP_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI_APAY_STGUP_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

Note: You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY_UPL_NOC_LOOKUP** lookup field.

Note: The **APAY_UPL_NOC_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

Note: You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.

- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
 - Line Separator
 - Field Separator
 - Reject Upload Reason
 - Success Upload Reason

Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

| Tag | Attribute | Description | Mandatory (Yes or No) |
|-----|----------------------|---|-----------------------|
| OTI | Reference Number | Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house. | Yes |
| OTI | Acknowledgement Code | Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify TE or TR as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can either specify any value other than TE or TR or leave this attribute blank. | No |
| TED | Error Code | Used to indicate either of the following: <ul style="list-style-type: none"> The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a payment cancellation reason which is already defined in the system.</div> <ul style="list-style-type: none"> The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC). <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a NOC reason which is already defined in the APAY_UPL_NOC_LOOKUP lookup field.</div> | Yes (Conditional) |
| | | Note: This attribute is required when the automatic payment clearing record is rejected by the auto clearing house. | |
| TED | Error Description | Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC). | No |

Sample EDI 824 File Format

```

OTI*TR*TN*411302586842\
TED*WA01*WRONG ACCOUNT\
OTI*TF*TN*411302525641\
OTI*TO*TN*806152348038\
TED*BR01*Bill Reopened\
OTI*TO*TN*806152307159\
OTI*TE*TN*806152307229\
TED*WA01*WRONG ACCOUNT\

```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string “WRONG ACCOUNT” and “Bill Reopened” are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1241.

Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 1243

Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Upload Reason | Displays the upload reason. |
| Reason Type | Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success |
| Eligible for Processing | Indicates whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. The valid values are: <ul style="list-style-type: none"> • Y • N |
| Description | Displays the description of the upload reason. |
| Edit | On clicking the Edit (✎) icon, the Automatic Payment and Refund Upload Reason screen appears where you can edit the details of the upload reason. |
| Delete | On clicking the Delete (🗑) icon, you can delete the upload reason. |

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

| How to delete an upload reason | Deleting an Upload Reason on page 1248 |

Defining an Upload Reason

Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Upload Reason | Used to specify the upload reason. | Yes |
| Description | Used to specify the description for the upload reason. | Yes |
| Reason Type | Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Eligible for Processing | Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. | No |

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|--|
| Sequence | Used to indicate the order in which the algorithm must be triggered. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |
| Algorithm | Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |

4. Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

5. Click **Save**.

The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.

The **Automatic Payment and Refund Upload Reason** screen appears.

3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Upload Reason | Displays the upload reason. | Not applicable |
| Description | Used to specify the description for the upload reason. | Yes |
| Reason Type | Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Eligible for Processing | Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. | No |

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|--|
| Sequence | Used to indicate the order in which the algorithm must be triggered. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |
| Algorithm | Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |

- Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The changes made to the upload reason are saved.

Deleting an Upload Reason

Procedure

To delete an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload reason that you want to delete.
A message appears confirming whether you want to delete the upload reason.
4. Click **OK**.
The upload reason is deleted.

Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics of the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 1249
- [Associated Clearing Staging Records](#) on page 1251
- [Clearing Staging Upload Reasons](#) on page 1252
- [Clearing Staging Characteristics](#) on page 1252

Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"> • Automatic Payment • Automatic Refund | Yes |
| Clearing ID | Used to search a particular clearing record. | No |
| Account ID | Used to search clearing records which are created for a particular account. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | No |
| Person Name | Used to search clearing records which are created for accounts of a particular person. | No |
| Extract From Date | Used to search clearing records that are extracted on or after a particular date. | No |
| Extract To Date | Used to search clearing records that are extracted on or before a particular date. | No |
| Bill ID | Used to search clearing records which are created against a bill. | No |
| Alternate Bill ID | Used to search clearing records which are created against a bill with the specified alternate bill ID. | No |
| Batch Control | Used to search clearing records where the APAYACH batch control is stamped. The valid value is APAYACH . | No |
| Batch Run Number | Used to search clearing records which are activated in a particular batch run. | No |

Note: You must specify at least one search criterion while searching for a clearing record.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|---------------------------|
| Clearing ID | Displays the clearing ID. |

| Column Name | Column Description |
|---------------------|---|
| Account Information | Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. |
| Bill Information | Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Payment Amount | Displays the payment amount. |
| | Note: This column appears only when you select the Automatic Payment option from the Search By list. |
| Pay Tender ID | Displays the payment tender ID. |
| | <p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective tender.</p> <p>This column appears when you select the Automatic Payment option from the Search By list.</p> |
| Tender Status | Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> Valid Canceled |
| | Note: This column appears when you select the Automatic Payment option from the Search By list. |
| Extract Date | Displays the date when the clearing record is extracted in a flat file. |
| Payment Freeze Date | Displays the date when the automatic payment must be frozen in the system. |
| | Note: This column appears when you select the Automatic Payment option from the Search By list. |
| External Source ID | Indicates the tender source through which the payment was remitted. |
| Entity Type | Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"> Refund Request |
| | Note: This column appears when you select the Automatic Refund option from the Search By list. |
| Entity ID | Displays the entity ID. |
| | Note: This column appears when you select the Automatic Refund option from the Search By list. |

| Column Name | Column Description |
|-------------------|---|
| Account Number | Indicates the bank account through which the automatic payment is made. |
| Batch Control | Indicates the batch control which is stamped on the clearing record. |
| Batch Run Number | Indicates the batch run in which the clearing record was activated. |
| Alternate Bill ID | Indicates the bill against which the clearing record is created. |

Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Status | Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error |
| Edit | On clicking the Edit () icon, the Edit Clearing Staging Record screen appears where you can edit the details of the clearing staging record. <p>Note: You can edit a clearing staging record when it is in the Pending or Error status.</p> |
| Delete | On clicking the Delete () icon, you can delete the clearing staging record. <p>Note: You can delete a clearing staging record when it is in the Pending status.</p> |

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** () icon corresponding to the clearing record in the **Search Clearing Record** zone.

Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Sequence | Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund. |
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Upload Reason | Indicates whether the auto clearing house has accepted or rejected the clearing record. |
| Cancel Reason | Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column. |
| NOC Reason | Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC). |
| NOC Reason Description | Displays the description of the NOC reason. |

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Related Topics

Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics of the automatic payment or refund clearing staging record. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the characteristic value. |

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Searching for a Clearing Record

Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Automatic Payment and Refund Clearing Staging**.
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for automatic payment or refund clearing records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of clearing records that meet the search criteria appears in the **Search Results** section.

Editing a Clearing Staging Record

Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY_UPL_NOC_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

Note: You can edit a clearing staging record when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI_APAY_STGUP_EXC** table.

Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose associated clearing staging record you want to edit.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Clearing Staging ID | Displays the clearing staging ID. | Not applicable |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. | Not applicable |
| Status | Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error | Not applicable |
| Upload Date | Used to specify the date when the clearing staging record was uploaded or added in the system. | Yes |

In addition, this screen contains the following two sections:

- **Upload Reasons** — Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Upload Reason | Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record. | Yes |
| Reason Type | Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success | Yes |
| Sub Reason Code | Used to specify either of the following: <ul style="list-style-type: none"> • Payment cancelation reason or void status reason (for automatic refund) when the reason type is set to Cancel • Notice to Change (NOC) reason when the reason type is set to Success | No |
| Sub Reason Description | Used to specify the description of the NOC reason. | No |

Note: The upload reason, payment cancelation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- **Characteristics** — Used to define the characteristics for the clearing staging record.
4. Modify the required details in the **Edit Clearing Staging Record** screen.

Note: If you want to add more than one reason or sub reason code, click the **Add (+)** icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete (🗑)** icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.
6. Click **Save**.

The changes made to the clearing staging record are saved.

Defining a Characteristic for a Clearing Staging Record

Prerequisites

To define a characteristic for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

Procedure

To define a characteristic for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the clearing staging record. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Auto Payment Upload . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the clearing staging record, click the **Delete** (🗑️) icon corresponding to the characteristic.

Deleting a Clearing Staging Record

Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.

2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the clearing record whose associated clearing staging record you want to delete.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Delete** () icon in the **Delete** column corresponding to the clearing staging record that you want to delete.

A message appears confirming whether you want to delete the clearing staging record.

Note: You can delete a clearing staging record when it is in the **Pending** status.

4. Click **OK**.

The clearing staging record is deleted.

Chapter 15

Construct

Topics:

- [Prerequisites](#)
- [Construct Status Transition](#)
- [Template](#)
- [Construct \(Used for Searching\)](#)
- [Construct \(Used for Viewing\)](#)
- [Billing and Settlement Hierarchy](#)

Oracle Revenue Management and Billing provides you with a flexible way to define the billing hierarchy using the construct based billing feature. In a construct, you can include:

- **Usage Accounts** - A set of usage accounts of different persons whose charges and/or adjustments must be billed through an invoice account. These persons need not belong to the same person hierarchy. The system allows you to select a set of usage accounts based on the criteria using the account selection template. The persons' and their child persons' usage accounts that meet the specified criteria are included in the construct.
- **Billable Charges** - A set of billable charges that you want to bill through an invoice account. The system will only consider billable charges of those usage accounts for which the construct is defined. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.
- **Adjustments** - A set of adjustments that you want to bill through an invoice account. The system will only consider adjustments of those usage accounts for which the construct is defined. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

You can bill the charges and adjustments of usage accounts on the same invoice account. Or, you can bill the charges of usage accounts on one invoice account and the adjustments on another invoice account. Or, you can bill the charges or adjustments of the usage accounts on more than one invoice account. You can define different types of constructs. At present, the system supports only invoice and settlement construct. Here, settlement includes receivables and payables.

One usage account can belong to only one active construct and not to multiple active constructs at the same time. The system also allows you to exclude some usage accounts when you do not want to include all usage accounts that satisfy the criteria in the construct. While defining a construct, you can use an existing invoice account. The contracts for the invoice account are created when you activate the construct. One contract is created for every target contract type set on usage accounts' contracts' contract type.

You can use a construct during the construct based billing process when the construct is in the **Active** status. The following batches are designed to support the construct based billing process:

- **Construct Based - Pending Bill Generation (BILLOPEN)** – This batch is used to generate pending bills for accounts that meet the criteria.
- **Construct Based - Bill Segment Generation (BSGENREG)** – This batch is used to generate the bill segments on the pending bills.

- **Construct Based - Bill Completion (POSTPROC)** – This batch is used to generate post processing bill segments during the bill completion process. It changes the status of the bill to **Complete**.

During the bill generation process, all accounts that meet the criteria are considered for billing. These accounts may be usage or invoice accounts. All billable charges (with the **Adhoc** flag set to **No**) whose start date is earlier than or equal to the batch business date are considered during bill segment generation. If a billable charge satisfies the rule defined on any active construct, the bill segment is generated on the respective invoice account. And, if a billable charge does not satisfy the rule defined on any active construct, the bill segment is generated on the usage account. The post-processing bill segments, if any, are generated on the invoice or usage account depending on the type of price assignment.

Note: The construct based billing batches are currently not designed to consider billable charges whose end date is earlier than or equal to the batch business date.

For more information on how to setup the construct based billing process, refer to [Prerequisites](#) on page 1261.

Prerequisites

To setup the construct based billing process, you need to do the following:

- Define the Target Contract Type characteristic for usage accounts' contracts' contract type.
- Set the **C1-INCT** feature configuration.
- Create a default account creation algorithm using the C1-ACTCR-IC algorithm type.
- Create a default contract creation algorithm using the C1-CTMP-IC algorithm type.
- Create a usage account construct mapping algorithm using the C1-UACM-IC algorithm type.
- Associate the usage account construct mapping algorithm to a division whose usage accounts you want to include in any existing active construct.

Note: There might be situations when a usage account is created after the construct is activated. If you want to include such usage account in any existing active construct, you need to associate the usage account construct mapping algorithm to a division in which you are creating the usage account. If the usage account satisfies the criteria specified in any active construct, it is included in the construct once the usage account is created.

- Define the required templates, profiles and constructs in the application.
- Define values for the PAGE_NUMBER lookup field.
- Define approval workflow group, approval workflow chain, approval workflow criteria, and approval workflow group chain linkage for construct.
- Configure the approval workflow settings for construct.
- Define approval workflow reasons which are required while rejecting a construct.
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct.
- Transfer adjustments algorithm defined using the **C1-IC-AD-XFR** algorithm type.
- Define an algorithm of the BS-CRE-INVCN algorithm type and attach it on the **Create Algorithm** spot of the bill segment type.

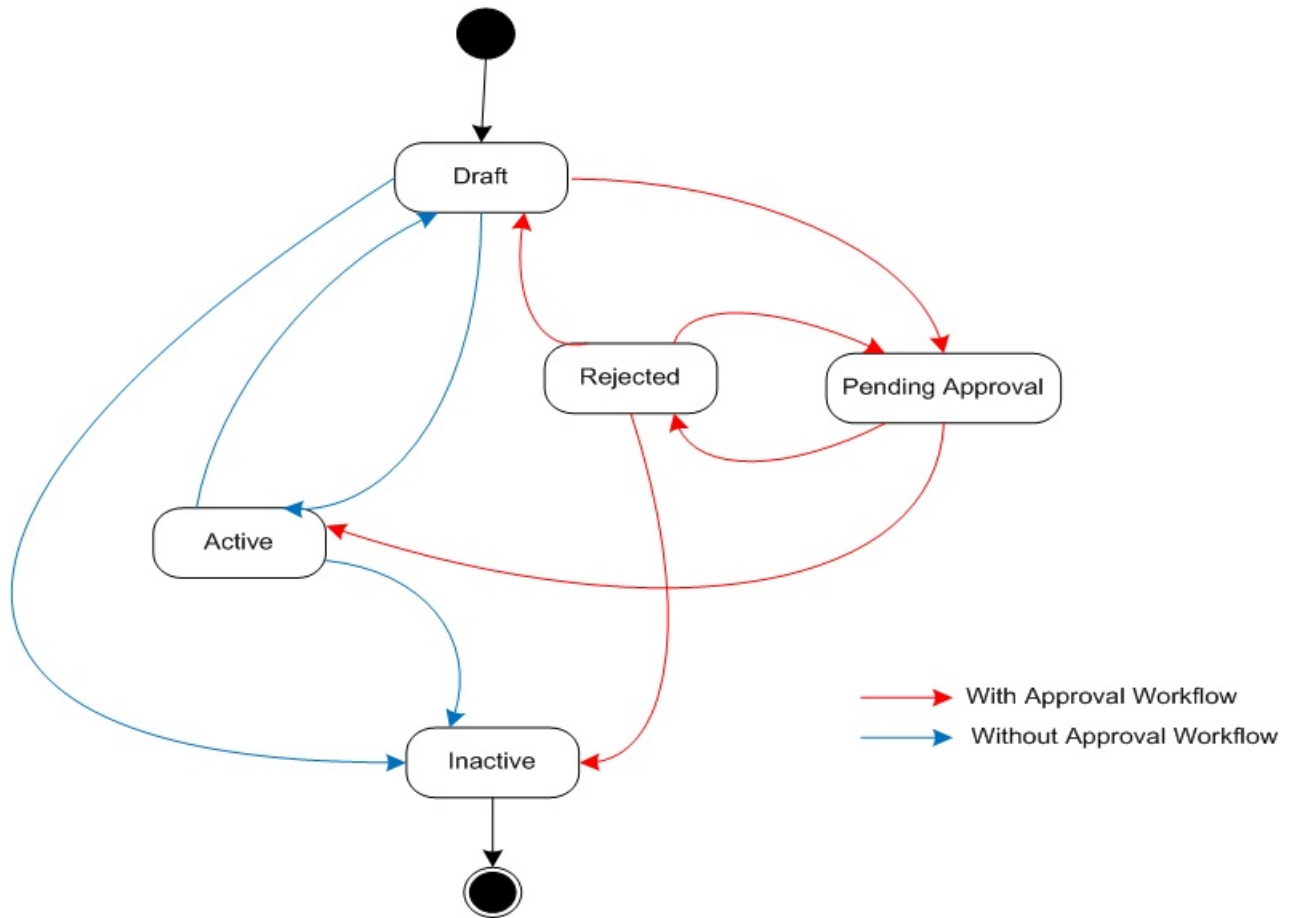

Note: If you want to use the regular billing process, you need to attach an algorithm of the BS-CRE-PRICE algorithm type on the **Create Algorithm** spot of the bill segment type. However, if you want to use the construct based billing process, you need to attach an algorithm of the BS-CRE-INVCN algorithm type on **Create Algorithm** spot of the bill segment type.

|---|--|
| How to set the C1-INCT feature configuration | Setting the C1-INCT Feature Configuration on page 3054 |

Construct Status Transition

The following figure graphically indicates how a construct moves from one status to another during its lifecycle:

Template

Template is used to select a set of usage accounts, billable charges, or adjustments based on the criteria. In a template, you can define a SELECT statement to retrieve data from a table or view based on a condition. You can use the bind variables in the where clause (condition). The bind variables must be alphanumeric and prefixed with the colon (:). The values for these bind variables are specified while defining a construct.

You can validate the syntax of the SELECT statement. If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

You can define the following three types of templates:

- **Account Selection** - Used for selecting a set of usage accounts based on the criteria.
- **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria.
- **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria.

You can only use templates which are active while defining or editing a construct. The **Template** screen allows you to define, edit, and delete a template. You can edit a template even if it is used in any construct. However, any changes made to a template will not be reflected in a construct where the template is already used unless you use the latest template in the construct. This screen consists of the following zones:

- [Search Template](#) on page 1263

Search Template

The **Search Template** zone allows you to search for a template using various search criteria. This zone contains the following two sections:

- **Search Criteria** - Used to search by different search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Template | Used to specify the template name. | No |
| Description | Used to specify the description for the template. | No |
| Purpose | Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Bill Segment Selection - Used for selecting a set of bill segments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. | No |
| Status | Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Template | Displays the name of the template. |
| Description | Displays the description of the template. |
| Purpose | Indicates the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection • Billable Segment Selection • Billable Charge Selection • Usage Account Selection • Usage and Invoice Account Selection |

| Column Name | Column Description |
|-------------|---|
| Status | Indicates the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| View | On clicking the View () icon, the View Template screen appears where you can view the details of the template. |
| Edit | On clicking the Edit () icon, the Template screen appears where you can edit the details of the template. |
| | Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. |

You can create a new template by clicking the **Add** button in the upper right corner of this zone.

Searching for a Template

Procedure

To search for a template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
The **Template** screen appears.
3. Enter the search criteria in the **Search Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of templates that meet the search criteria appears in the **Search Results** section.

Related Topics

| For more information on... | See... |
|-----------------------------|--|

| Search Template zone | Search Template on page 1263 |

Defining a Template

Procedure

To define a template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
A sub-menu appears.
3. Click the **Add** option from the **Template** sub-menu.

The **Template** screen appears. It consists of the following zone:

- **Search Template** — Used to specify basic details about the template. It consists of the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Template | Used to specify the template name. | Yes |
| Description | Used to search for a template by it's description. | Yes |
| Purpose | Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Bill Segment Selection - Used for selecting a set of bill segments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. | Yes |
| Status | Used to specify additional information about the template. | Yes |

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|--|
| Bind Variable | Used to specify the bind variable (which is used in the where clause). | Yes (Conditional) |
| | | Note: This field is required when you are defining a bind variable. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| Data Type | Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"> Date Numeric String | Yes (Conditional) Note: This field is required when you are defining a bind variable. |
| Label | Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges. | Yes (Conditional) Note: This field is required when you are defining a bind variable. |
| Zone | Used to specify the zone for the template. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears. | Yes (Conditional) Note: This field is required when you are defining a bind variable. |

- Enter the required details in the **Main** tab.
- If you want to define more than one bind variable, click the **Add (+)** icon in the **Bind Variables** section and then enter the required details.

Note: However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

- If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

- Define characteristics for the template, if required.
- Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the template.

| How to define a characteristic for a template | Defining a Characteristic for a Template on page 1266 |

Defining a Characteristic for a Template

Prerequisites

To define a characteristic for a template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Template)

Procedure

To define a characteristic for a template:

1. Click the **Characteristics** tab in the **Template** screen when you are creating or editing a template.

The **Characteristics** tab appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the template. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the template. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the template. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. |

2. Enter the required details.
3. If you want to define more than one characteristic for the template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the template, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Validate and Save**.

The characteristics are defined for the template.

| How to edit a template | Editing a Template on page 1267 |

Editing a Template**Procedure**

To edit a template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.

The **Template** screen appears.

3. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the template whose details you want to edit.

Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Template | Used to indicate the template name. | Not applicable |
| Description | Used to specify the description for the template. | Yes |
| Detailed Description | Used to specify additional information about the template. | No |
| Purpose | Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Account Selection - Used for selecting a set of usage accounts based on the criteria. • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. | Yes |
| Status | Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | |
|--|---|--|-------------------------------|-------------------|---------|----------------------|--------|---------------------------|-----------------|-----|
| Select | <p>Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.</p> <p>The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required.</p> <table border="1"> <thead> <tr> <th>If you have set the purpose of the template to....</th> <th>Then, the default value is...</th> </tr> </thead> <tbody> <tr> <td>Account Selection</td> <td>ACCT_ID</td> </tr> <tr> <td>Adjustment Selection</td> <td>ADJ_ID</td> </tr> <tr> <td>Billable Charge Selection</td> <td>BILLABLE_CHG_ID</td> </tr> </tbody> </table> | If you have set the purpose of the template to.... | Then, the default value is... | Account Selection | ACCT_ID | Adjustment Selection | ADJ_ID | Billable Charge Selection | BILLABLE_CHG_ID | Yes |
| If you have set the purpose of the template to.... | Then, the default value is... | | | | | | | | | |
| Account Selection | ACCT_ID | | | | | | | | | |
| Adjustment Selection | ADJ_ID | | | | | | | | | |
| Billable Charge Selection | BILLABLE_CHG_ID | | | | | | | | | |
| From | Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data. | Yes | | | | | | | | |
| Where | <p>Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:</p> <pre>{column_name}{operator} : {bind_variable}</pre> <p>The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the Bind Variables section.</p> | No | | | | | | | | |

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|--|
| Bind Variable | Used to specify the bind variable (which is used in the where clause). | Yes (Conditional) |
| | | Note: This field is required when you are defining a bind variable. |
| Data Type | <p>Used to indicate the type of data that you want to store in the bind variable. The valid values are:</p> <ul style="list-style-type: none"> • Date • Numeric • String | Yes (Conditional) |
| | | Note: This field is required when you are defining a bind variable. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Label | Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges. | Yes (Conditional) |
| | | Note: This field is required when you are defining a bind variable. |
| Zone | Used to indicate a zone for the template. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears. | Note: This field is required when you are defining a bind variable. |

- Modify the details in the **Main** tab, if required.
- If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details.

Note: However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

- If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

- Define, edit or remove characteristics of the template, if required.
- Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the changes [Defining a Characteristic for a Template](#) on page 1266 made to the template.

Deleting a Template

Procedure

To delete a template:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **T** and then click **Template**.
The **Template** screen appears.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the template that you want to delete.

A message appears confirming whether you want to delete the template.

Note: You can only delete a template which is not yet used in any construct.

4. Click **OK**.

The template is deleted.

Construct (Used for Searching)

The **Construct** screen allows you to search for a construct using various search criteria. Through this screen, you can define, edit, view, copy, inactivate a construct. It contains the following zones:

- [Search Construct](#) on page 1271

Search Construct

The **Search Construct** zone allows you to search for a construct using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Construct ID | Used to specify the construct ID. | No |
| Description | Used to specify the description for the construct. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Construct Type | Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"> • Invoice Only • Invoice and Settlement • Settlement Only | No |
| Status | Used to indicate the status of the construct. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Pending Approval • Rejected | No |
| Effective Start Date | Used to specify the date from when the construct is effective. | No |
| Effective End Date | Used to specify the date till when the construct is effective. | No |
| Usage Account Identifier Type | Used to indicate the usage account's identifier type based on which you want to search for a construct. Note: This field appears when you select the Invoice Only or Invoice and Settlement option from the Construct Type list. | No |
| Usage or Invoice Account Identifier Type | Used to indicate the usage or invoice account's identifier type based on which you want to search for a construct. Note: This field appears when you select the Settlement Only option from the Construct Type list. | No |
| Usage Account Identifier | Used to indicate the usage account which belongs to the construct. Note: This field appears when you select the Invoice Only or Invoice and Settlement option from the Construct Type list. | No |
| Usage or Invoice Account Identifier | Used to indicate the usage or invoice account which belongs to the construct. Note: This field appears when you select the Settlement Only option from the Construct Type list. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|--|-----------------------|
| Invoice Account Identifier Type | Used to indicate the invoice account's identifier type based on which you want to search for a construct. | No |
| | Note: This field appears when you select the Invoice Only or Invoice and Settlement option from the Construct Type list. | |
| Settlement Account Identifier Type | Used to indicate the settlement account's identifier type based on which you want to search for a construct. | No |
| | Note: This field appears when you select the Settlement Only option from the Purpose list. | |
| Invoice Account Identifier | Used to indicate the invoice account which is used in the construct. | No |
| | Note: This field appears when you select the Invoice Only or Invoice and Settlement option from the Construct Type list. | |
| Settlement Account Identifier | Used to indicate the settlement account which is used in the construct. | No |
| | Note: This field appears when you select the Settlement Only option from the Construct Type list. | |

Note: You must specify at least one search criterion while searching for a construct.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Construct ID | Displays the construct ID. |
| Description | Displays the description of the construct. |
| Construct Type | Indicates the purpose of the construct. The valid values are: <ul style="list-style-type: none"> • Invoice Only • Invoice and Settlement • Settlement Only |
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |

| Column Name | Column Description |
|-------------|---|
| Status | Indicates the status of the construct. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Pending Approval • Rejected |
| Copy | On clicking the Copy () icon, the Construct screen appears where you can create a construct using an existing construct. |
| View | On clicking the View () icon, the Construct screen appears where you can view the details of the construct. |
| Edit | On clicking the Edit () icon, the Construct screen appears where you can edit the details of the construct. |
| Inactivate | On clicking the Inactivate icon () in the Inactivate column, the Inactivate window appears confirming whether you want to inactivate the selected construct. <p>Note: You can only inactivate the construct which is in Active status. The Inactivate icon appears in the Inactivate column, only in front of the construct which is in Active status.</p> |

You can create a new construct by clicking the **Add** button in the upper right corner of the **Construct** screen.

Searching for a Construct

Procedure

To search for a construct:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select the **Billing Management** and then click **Construct**.
A sub-menu appears.
3. Click the **Search** option from the **Construct** sub-menu.
The **Construct** screen appears.

- Enter the search criteria in the **Search Construct** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of constructs that meet the search criteria appears in the **Search Results** section.

Defining a Construct

Procedure

To define a construct:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Billing Management** and then click **Construct**.
A sub-menu appears.
- Click the **Add** option from the **Construct** sub-menu.

The **Construct** screen appears. It consists of the following sections:

- **Main** — Used to specify basic details about the construct.
- **Characteristics** — Used to define the characteristics for the construct.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|------------------------------|
| Construct Description | Used to specify the description for the construct. | Yes |
| Construct Type | Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"> • Invoice — Indicates that you want to use the construct for billing. • Invoice and Settlement — Indicates that you want to use the construct for billing and settlement. • Settlement — Indicates that you want to use the construct for settlement. | Yes |
| | Note: Here, settlement includes receivables and payables | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Status | Used to indicate the status of the construct. By default, the Draft option is selected from the list. | Not applicable |
| Effective Start Date | Used to specify the date from when the construct is effective. | Yes |
| | Note: The effective from date cannot be later than the effective end date. | |
| Effective End Date | Used to specify the date till when the construct is effective. | No |
| | Note: The effective to date cannot be earlier than the effective start date. | |

Tip: Alternatively, you can access the **Construct** screen by clicking the **Add** button on the top-right of the **Construct** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the construct, if required.
6. Do either of the following:

| If you want to... | Then... |
|---|---|
| Save the construct in the draft version | <ol style="list-style-type: none"> 1. Click Save as Draft. <p>The construct is created and the status of the construct is set to Draft. The construct ID is generated automatically when the construct is created.</p> |
| Activate the construct | <ol style="list-style-type: none"> 1. Click Activate. <p>The construct is created and the status of the construct is set to Active. The construct ID is generated automatically when the construct is created.</p> <p>Note: The Activate button appears while defining a construct when the approval workflow process is not configured for construct.</p> |
| Send the construct for approval | <ol style="list-style-type: none"> 1. Click Send for Approval. <p>The construct is created and the approval workflow request is raised for the construct. The status of the construct is set to Pending Approval. In addition, the construct ID is generated automatically when the construct is created.</p> <p>Note: The Send for Approval button appears while defining a construct when the approval workflow process is configured for construct.</p> |

| How to define a characteristic for a construct | Defining a Characteristic for a Construct on page 1277 |

Defining a Characteristic for a Construct

Prerequisites

To define a characteristic for a construct, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Construct)

Procedure

To define a characteristic for a construct:

1. Ensure that the **Characteristics** section is expanded in the **Construct** screen when you are creating or editing a construct. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the construct. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Predefined Characteristic Search window appears. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the construct, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the construct, click the **Delete** (🗑️) icon corresponding to the characteristic.

|----------------------------|---|
| How to define a construct | Defining a Construct on page 1275 |
| How to edit a construct | Editing a Construct on page 1278 |

Editing a Construct

You can only edit a construct in the **Draft**, **Active**, or **Rejected** status. If a bill is already generated through a construct and it is in the **Pending** status, you cannot edit the details of the construct. You can only edit the effective to date of a construct when all bills generated through the construct are in the **Completed** status. The effective to date must be later than the last completed bill's bill date. Otherwise, the system will not allow you to edit the effective to date of the construct.

Procedure

To edit a template:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Billing Management** and then click **Construct**.
A sub-menu appears.
- Click on **Search**.
The **Construct** screen appears.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the **Construct ID** whose details you want to edit.

Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- Main** - Used to specify basic details about the template.
- Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Template | Used to indicate the template name. | Not applicable |
| Description | Used to specify the description for the template. | Yes |
| Detailed Description | Used to specify additional information about the template. | No |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | |
|--|--|--|-------------------------------|-------------------|---------|----------------------|--------|---------------------------|-----------------|-----|
| Purpose | <p>Used to indicate the purpose of the template. The valid values are:</p> <ul style="list-style-type: none"> • Account Selection - Used for selecting a set of usage accounts based on the criteria. • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. | Yes | | | | | | | | |
| Status | <p>Used to indicate the status of the template. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive | Yes | | | | | | | | |
| Select | <p>Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.</p> <p>The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required.</p> <table border="1" data-bbox="545 1142 1154 1409"> <thead> <tr> <th data-bbox="545 1142 850 1255">If you have set the purpose of the template to....</th> <th data-bbox="850 1142 1154 1255">Then, the default value is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="545 1255 850 1304">Account Selection</td> <td data-bbox="850 1255 1154 1304">ACCT_ID</td> </tr> <tr> <td data-bbox="545 1304 850 1352">Adjustment Selection</td> <td data-bbox="850 1304 1154 1352">ADJ_ID</td> </tr> <tr> <td data-bbox="545 1352 850 1409">Billable Charge Selection</td> <td data-bbox="850 1352 1154 1409">BILLABLE_CHG_ID</td> </tr> </tbody> </table> | If you have set the purpose of the template to.... | Then, the default value is... | Account Selection | ACCT_ID | Adjustment Selection | ADJ_ID | Billable Charge Selection | BILLABLE_CHG_ID | Yes |
| If you have set the purpose of the template to.... | Then, the default value is... | | | | | | | | | |
| Account Selection | ACCT_ID | | | | | | | | | |
| Adjustment Selection | ADJ_ID | | | | | | | | | |
| Billable Charge Selection | BILLABLE_CHG_ID | | | | | | | | | |
| From | Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data. | Yes | | | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Where | <p>Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:</p> <pre>{column_name}{operator} : {bind_variable}</pre> <p>The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the Bind Variables section.</p> | No |

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|---|
| Bind Variable | Used to specify the bind variable (which is used in the where clause). | Yes (Conditional) Note: This field is required when you are defining a bind variable. |
| Data Type | Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"> • Date • Numeric • String | Yes (Conditional) Note: This field is required when you are defining a bind variable. |
| Label | Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges. | Yes (Conditional) Note: This field is required when you are defining a bind variable. |
| Zone | Used to indicate a zone for the template. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears. | Yes (Conditional) Note: This field is required when you are defining a bind variable. |

5. Modify the details in the **Main** tab, if required.

Note: If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details. However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics of the template, if required.
8. Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the changes made to the template.

Copying a Construct

Instead of creating a construct from scratch, you can create a new construct using an existing construct. This is possible through copying a construct. On copying a construct, the usage accounts, billable charges, and adjustments' selection criteria and characteristics are copied to the new construct. You can then edit the details, if required.

Prerequisites

To copy a construct, you should have:

- Construct (whose copy you want to create) defined in the application

Procedure

To copy a construct:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.
A sub-menu appears.
3. Click on **Search**.
The **Construct** screen appears.
4. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the construct whose copy you want to create.

The **Construct** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Construct Description | Used to specify the description for the new construct. | Yes |
| Effective From | Used to specify the date from when the new construct is effective. | Yes |
| | Note: The effective from date cannot be later than the effective to date. | |
| Effective To | Used to specify the date till when the new construct is effective. | No |
| | Note: The effective to date cannot be earlier than the effective from date. | |

5. Enter the required details in the **Main** section and the **Characteristics** section.

6. Click **Save and Next**.

The **Construct** screen appears.

7. Edit the details of the new construct, if required.

Viewing the Construct Details

Procedure

To view the details of a construct:

1. Search for the construct in the **Construct** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the construct whose details you want to view.

The **Construct** screen appears. It contains the following sections:

- **Construct Information** — Displays basic details about the construct.
- **Include Usage/Invoice Accounts** — Indicates the persons and their usage accounts or the Invoice accounts for which the construct is defined.
- **Include Bill Segments** — Indicates the bill segments of the usage accounts
- **Include Billable Charges** — Indicates the billable charges of the usage accounts which are billed through a settlement account.
- **Exclude Usage/Invoice Accounts** — Indicates the usage accounts of the persons to which this construct is not applicable.
- **Include Adjustments** — Indicates the adjustments of the usage accounts which are billed through an invoice account.
- **Linked Accounts** — Indicates the linked accounts which are included in the construct.

- View the basic details of the construct in the **Construct Information** section.

| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays date till when the construct is effective. |

- Characteristics** - The **Characteristics** section contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Effective Date | Displays the date from when the characteristic is effective for the construct. |
| Characteristic Type | Displays the characteristic type. |

| Column Name | Column Description |
|----------------------|--|
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - The **Record Actions** section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the construct. |
| | Note: The Edit button appears when the construct is in the Draft status. |
| Delete | Used to delete the construct. |
| | Note: The Delete button appears when the construct is in the Draft status. |
| Submit | Used to submit the details of the construct. |
| | Note: The Submit button appears when the construct is in the Draft status. |

- **Record Information** - The **Record Information** section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the construct is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the construct business object. |
| Status Date Time | Displays the date and time when the construct status is updated |
| Create Date Time | Displays the date and time when the construct is created. |

Include Usage/Invoice Accounts

The **Include Usage/Invoice Accounts** zone displays the details of usage and invoice accounts. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria Description | Displays the description of the criteria. |

| Column Name | Column Description |
|-------------|---|
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Selection Criteria screen appears where you can edit the details of the usage and invoice accounts. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the usage and invoice accounts. |

Including Usage Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage accounts for which you want to define the construct. The system allows you to select a set of usage accounts based on the criteria using the account selection template. You need to ensure that all usage and invoice accounts in the construct should have the same bill cycle. Otherwise, erroneous results might occur.

Note: One usage account can belong to only one active construct and not to multiple active constructs at the same time.

Prerequisites

To include usage accounts in a construct, you should have:

- Persons, usage accounts, and account selection templates defined in the application

Procedure

To include usage accounts in a construct:

1. Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

| Field Name | Field Description |
|----------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria Description | Displays the description of the criteria. |

| Field Name | Field Description |
|------------|---|
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Payment Request Type screen appears where you can edit the details of the payment request type. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the payment request type. |

- Click the **Add** link at the top—right side of the **Include Usage/Invoice Accounts** zone.
The **Selection Criteria** screen appears.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.
- The **Usage Accounts** are included in the construct.

Including Usage and Invoice Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage and invoice accounts for which you want to define the construct. The system allows you to select a set of usage and invoice accounts based on the criteria using the usage and invoice account selection template. You need to ensure that all usage and invoice accounts in the construct should have the same bill cycle. Otherwise, erroneous results might occur.

Note: One usage and invoice account can belong to only one active construct and not to multiple active constructs at the same time.

Prerequisites

To include usage and invoice accounts in a construct, you should have:

- Persons, usage and invoice accounts, and account selection templates defined in the application

Procedure

To include usage and invoice accounts in a construct:

- Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

| Field Name | Field Description |
|----------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |

| Field Name | Field Description |
|----------------------|---|
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria Description | Displays the description of the criteria. |
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Selection Criteria screen appears where you can edit the construct. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the construct. |

- Click the **Add** link at the top—right side of the **Include Usage/Invoice Accounts** zone.
The **Selection Criteria** screen appears.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.
The **Usage and Invoice Accounts** are included in the construct.

Excluding Usage Accounts from a Construct

The system will determine the usage accounts based on the criteria defined in the **Exclude Usage Accounts** section. There might be situations when you do not want to include all usage accounts that satisfy the criteria in the construct. In such cases, you can list the usage accounts that should be excluded from the construct.

Procedure

To exclude usage accounts from a construct:

- Ensure that **Exclude Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

| Field Name | Field Description |
|----------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Account ID | Displays the account ID. |

| Field Name | Field Description |
|---------------------|---|
| Account Information | Displays the information of the account. In addition, this column has a Context Menu (▼) which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Selection Criteria screen appears where you can edit the construct. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the construct. |

- Click the **Add** link at the top—right side of the **Exclude Usage/Invoice Accounts** zone.

The **Exclude Usage Accounts** screen appears.

- Search for the usage account that you want to exclude from the construct.

Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.

- If you want to exclude more than one usage account, click the **Add** (+) icon and then repeat the step 3.

Note: However, if you do not want a usage account to be excluded from the construct, click the **Delete** (🗑) icon corresponding to the excluded usage account.

- Enter the required details and click **Save**.

The **Usage Accounts** are excluded from the construct.

Including Billable Charges in a Construct

While defining a construct, you need to indicate the billable charges that you want to bill through an invoice account. You can use an existing invoice account. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.

Prerequisites

To include billable charges in a construct, you should have:

- Billable charge selection templates defined in the application
- Invoice account defined in the application (in case you want to use an existing invoice account)

Procedure

To include billable charges in a construct:

- Ensure that **Include Billable Charges** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Invoice Account Information | Displays the information of the account. In addition, this column has a Context Menu (▼) which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Selection Criteria screen appears where you can edit the construct. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the construct. |

- Click the **Add** link at the top—right side of the **Include Billable Charges** zone.
The **Selection Criteria** screen appears.
- Search for the billable charge selection template that you want to use for selecting a set of billable charges.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The **Usage And Invoice Accounts** are included in the construct.

Including Bill Segments in a Construct

While defining a construct, you need to indicate the bill segments that you want to bill through a settlement account. You can use an existing settlement account. The system allows you to select multiple bill segments based on the criteria using the bill segment selection template.

Prerequisites

To include bill segments in a construct, you should have:

- Bill segment selection templates defined in the application
- Settlement account defined in the application (in case you want to use an existing settlement account)

Procedure

To include bill segments in a construct:

1. Ensure that **Include Bill Segments** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

| Field Name | Field Description |
|--------------------------------|---|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Settlement Account Information | Displays the information of the settlement account. In addition, this column has a context menu (▼) which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Edit | On clicking the Edit (✎) icon in the Edit column, the Selection Criteria screen appears where you can edit the construct. |
| Delete | On clicking the Delete (🗑) icon in the Delete column, you can delete the construct. |

2. Click the **Add** link at the top—right side of the **Include Bill Segments** zone.

The **Selection Criteria** screen appears.

3. Search for the bill segment selection template that you want to use for selecting bill segments.
4. Enter the required details and click **Save**.
5. If you want to include more than one bill segments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The bill segments are included from the construct.

Including Adjustments in a Construct

While defining a construct, you need to indicate the adjustments that you want to bill through an invoice or settlement account. You can use an existing invoice or settlement account. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

Prerequisites

To include adjustments in a construct, you should have:

- Adjustment selection templates defined in the application
- Invoice or settlement account defined in the application (in case you want to use an existing invoice account)

Procedure

To include adjustments in a construct:

1. Ensure that **Include Adjustments** zone is expanded while defining, editing, viewing or copying a construct in the **Construct** screen. It contains the following fields:

| Column Name | Column Description |
|-----------------------------|--|
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |
| Priority | Displays the priority of an account. |
| Template | Displays the name of the template. |
| Criteria | Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field. |
| Invoice Account Information | Displays the information of the invoice account. In addition, this column has a context menu () which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Edit | On clicking the Edit () icon in the Edit column, the Selection Criteria screen appears where you can edit the construct. |
| Delete | On clicking the Delete () icon in the Delete column, you can delete the construct. |

2. Click the **Add** link at the top-right side of the **Include Adjustments** zone.
The **Selection Criteria** screen appears.
3. Search for the adjustment selection template that you want to use for selecting a set of adjustments.
4. Enter the required details and click **Save**.
5. If you want to include more than one usage adjustments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The **Adjustments** are included in the construct.

Activating a Construct

Only active constructs which are effective are used during the construct based billing process. Therefore, you need to activate a construct.

Prerequisites

To activate a construct, you should have:

- Target contract type (characteristic type) defined on usage accounts' contracts' contract type
- Default account creation algorithm defined using the C1-ACTCR-IC algorithm type
- Default contract creation algorithm defined using the C1-CTMP-IC algorithm type
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct

Procedure

To activate a construct:

1. Search for the draft construct in the **Construct** screen.
2. In the **Search Results** section, click **View** () icon in the **View** column corresponding to the construct that you want to activate.

The **Construct** screen appears.

3. Click **Submit** button in the **Construct Information** zone.

A message appears confirming whether you want to activate a construct.

Note: If you click on **Edit** () icon or **Copy** icon () in the respective columns while searching for a construct, click on **Save and Next** button and then click **Submit** button in the **Construct Information** zone.

4. Click **OK**.

The construct is activated.

Billing and Settlement Hierarchy

The **Billing and Settlement Hierarchy** screen allows you to search for a person/account hierarchy using various search criteria. Through this screen, you can search and view person/account hierarchy. It contains the following zones:

- [Search Hierarchy](#) on page 1297
- [Linked Accounts](#) on page 1287
- [Criteria](#) on page 1300

Search Hierarchy

The **Search Hierarchy** zone allows you to search for a person or an account with its billing/settlement hierarchy using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: <ul style="list-style-type: none"> • Person-Billing Hierarchy • Person-Settlement Hierarchy • Account-Billing Hierarchy • Account-Settlement Hierarchy | Yes |
| Person ID | Used to search for accounts which belong to a particular person. Note: This field appears when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears. | Yes |
| As on Date | Used to search for billing information which is effective on the specified date. | No |
| Person Name | Used to search for accounts which belong to a particular person. Note: This field appears when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list. | Yes |
| View Option | Used to indicate whether you want to view invoice or usage account billing details. The valid values are: <ul style="list-style-type: none"> • Invoice Account — Used when you want to view the usage accounts billed through an invoice account. • Usage Account — Used when you want to view the invoice accounts through which a usage account is billed. Note: This field appears when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list. | No |
| Account ID | Used to specify the invoice or usage account ID. Note: This field appears when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list. | No |

Note: You must specify at least one search criterion while searching for a person or an account.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------------|--|
| Invoice Account Information | <p>Displays the information of the invoice account.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This field appears when you select the Person-Billing Hierarchy and Account-Billing Hierarchy (if View Option is selected as Settlement Account) option from the Search By list.</p> |
| Settlement Account Information | <p>Displays the information of the settlement account.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This field appears when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.</p> |
| Construct Information | <p>Displays additional information about the construct.</p> <p>Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.</p> |
| Effective Start Date | Displays the date from when the construct is effective. |
| Effective End Date | Displays the date till when the construct is effective. |

On clicking the **Broadcast** icon () corresponding to the account, **Linked Accounts** zone and **Criteria** zone appears with the details of the respective account.

Viewing Person Billing Hierarchy Details**Procedure**

To view the details of a construct with person billing hierarchy:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs with invoice only or invoice and settlement purposes are displayed.

5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Person Settlement Hierarchy Details

Procedure

To view the details of a construct with person settlement hierarchy:

1. Search for the construct in the **Billing and Settlement Hierarchy** screen.
2. Select **Person-Settlement Hierarchy** option from the **Search By** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs with settlement only types of construct are displayed.

5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Usage Accounts Billed through an Invoice Account

Procedure

To view the usage accounts billed through an invoice account:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Billing and Settlement Hierarchy**.

The **Billing and Settlement Hierarchy** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: <ul style="list-style-type: none"> • Person-Billing Hierarchy • Person-Settlement Hierarchy • Account-Billing Hierarchy • Account-Settlement Hierarchy | Yes |
| Person ID | Used to search for accounts which belong to a particular person. <p>Note: This field appears when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p> | Yes |
| As on Date | Used to search for billing information which is effective on the specified date. | No |
| Person Name | Used to search for accounts which belong to a particular person. <p>Note: This field appears when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list.</p> | Yes |
| View Option | Used to indicate whether you want to view invoice or usage account billing details. The valid values are: <ul style="list-style-type: none"> • Invoice Account — Used when you want to view the usage accounts billed through an invoice account. • Usage Account — Used when you want to view the invoice accounts through which a usage account is billed. <p>Note: This field appears when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Account ID | Used to specify the invoice or usage account ID. Note: This field appears when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list. | No |

4. Select the **Invoice Account** option from the **View Option** list.
5. Enter the date and invoice account ID in the respective fields.
6. Click **Search**.

A list of usage accounts which are billed through the invoice account appears in the search results. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Usage Account | Indicates the usage account which is billed through the invoice account. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Construct Description | Indicates the construct in which the usage account is included. Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct. |
| Selection Criteria | Indicates the criteria used to select a set of usage account's charges or adjustments. |

Chapter 16

Trial Billing

Topics:

- [Prerequisites](#)
- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** – This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** – This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

Note: The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills

you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** – This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account’s invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the trial billing feature, you need to do the following:

- Set the **Trial Bill Characteristics Conversion** option type of the **C1_FINTRANOP** feature configuration.

Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 1309

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 1312

Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** — The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"> • Trial Bill Details <p>Note: By default, the Trial Bill Details option is selected.</p> | Yes |
| Person ID | Used to search trial bills which are generated for a particular person. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p> | No |
| Trial Bill ID | Used to search for a particular trial bill. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|--|
| Account ID | Used to search trial bills which are generated for a particular account. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Division | Used to search trial bills which are generated for accounts belonging to a particular division. | No |
| From Trial Bill Date | Used to search trial bills which are generated from a particular date onwards. | No |
| Invoice Currency | Used to search trial bills which are generated in a particular invoice currency. | No |
| To Trial Bill Date | Used to search trial bills which are generated till a particular date. | No |
| Batch Run Date | Used to search trial bills which are generated on a particular batch run date. | No |
| Trial Bill Description | Used to search trial bills which are generated in a particular batch run. | Yes (Conditional) |
| | | Note: This field is required when you are searching for trial bills using the batch run date. |

Note: You must specify at least one search criterion while searching for a trial bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Trial Bill Information | Displays additional information about the trial bill. |
| | Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill. |
| Current Charges | Displays the trial bill amount. |
| Account Information | Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. |
| Person Name | Indicates the person for whom the trial bill is generated. |
| Division | Indicates the division to which the account belongs. |
| Batch Run Date | Displays the date when the batch is executed to generate the trial bill. |
| Batch Run Number | Indicates the batch run in which the trial bill is generated. |

Related Topics

Searching for a Trial Bill

Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Trial Bill**.
The **Trial Bill** screen appears.
3. Enter the search criteria in the **Search Trial Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of trial bills that meet the search criteria appears in the **Search Results** section.

Viewing the Trial Bill Details

Procedure

To view the details of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.
The **Trial Bill** screen appears.
3. View the basic details of the trial bill in the **Trial Bill** zone.
4. View the segments of the trial bill in the **Trial Bill Segments** zone.
5. View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.

6. View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
7. View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment
- View the details of the policy, plan, and membership for which a trial bill segment is created

It contains the following zones:

- [Trial Bill](#) on page 1312
- [Trial Bill Segments](#) on page 1314
- [Trial Bill Segment Calc Lines](#) on page 1315
- [Trial Bill Segment SQ Details](#) on page 1316
- [Trial Bill Segment Financial Details](#) on page 1317
- [Policy Details](#) on page 1317

Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** — This section provides basic information about the trial bill. It contains the following fields:

| Field Name | Field Description |
|------------------------|--|
| Trial Bill ID | Displays the trial bill ID. |
| Trial Bill Information | Displays additional information about the trial bill. |
| Trial Bill Description | Displays the description of the batch run in which the trial bill is generated. |
| Account Information | Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

- **Trial Bill Summary** — This section summarizes the financial impact of the bill. It contains the following fields:

| Field Name | Field Description |
|-------------------------------|---|
| New Charges | Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill. |
| Adjustments | Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill. |
| Corrections | Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill. |
| Total | Displays the sum of new charges, adjustments, and corrections. |
| No. of Bill Segments in Error | Indicates the number of bill segments in the trial bill which are in the Error status. |

- **Trial Bill Messages** — This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

| Column Name | Column Description |
|-----------------|--|
| Message Code | Displays the code that uniquely identifies the bill message. |
| Message on Bill | Displays the bill message. |
| Priority | Indicates the priority which determines the order in which the bill message must be printed on the trial bill. |
| Insert Code | Indicates whether the bill message must be sent separately along with the trial bill. |

- **Characteristics** — This section lists characteristics of the trial bill. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Account ID | Used to search trial bill segments which are generated for a particular usage account. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Contract Type | Used to search trial bill segments which are generated against a particular type of contract. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears. | |
| Trial Bill Segment Type | Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"> • Post Processing • Regular | No |
| Price Item | Used to search trial bill segments which are generated for a particular price item. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears. | |
| Trial Bill Segment Status | Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"> • Error • Freezable | No |

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------|--|
| Trial Bill Segment ID | Displays the trial bill segment ID. |
| Status | Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"> • Error • Freezable |
| Start Date | Displays the start date of the trial bill segment. |

| Column Name | Column Description |
|--------------------------------------|---|
| End Date | Displays the end date of the trial bill segment. |
| Calculated Amount (Pricing Currency) | Displays the trial bill segment amount in the pricing currency. |
| Price Item | Indicates the price item for which the trial bill segment is generated. |
| Pricing Parameters | Indicates the price item parameters which are used along with the price item for determining the price item pricing. |
| Rate Schedule | Indicates the rate schedule which is used for defining the price item pricing. |
| Price Assignment ID | Indicates the price item pricing which is used during calculation. |
| Billable Charge ID | Indicates the billable charge for which the trial bill segment is generated. |
| | Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge. |
| Construct ID | Indicates the construct through which the trial bill segment is generated. |
| | Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct. |

On clicking the **Broadcast** (📡) icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear with the details of the respective trial bill segment.

Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

| Column Name | Column Description |
|--------------------------------------|--|
| Sequence No. | Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount. |
| Description on Bill | Displays the summarized information about the calculation line that will be printed on the trial bill. |
| Calculated Amount (Pricing Currency) | Displays the calculated charge amount associated with the calculation line in the pricing currency. |
| Calculated Amount (Invoice Currency) | Displays the calculated charge amount associated with the calculation line in the invoice currency. |

| Column Name | Column Description |
|-----------------------------|--|
| Print | Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Appears in Summary | Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Exchange Rate | Indicates the exchange rate which is used when the invoice currency is different from the pricing currency. |
| Price Component ID | Indicates the price component which is used during calculation. |
| Service Quantity Identifier | Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |
| Base Amount | Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount. |
| Rate Component Sequence | Indicates the sequence of the rate component on the effective rate version which is used while calculating the line. |
| Exempt Amount | Displays the amount of the calculated charge that the person does not have to pay due to tax exemption. |
| Distribution Code | Indicates the distribution code associated with the rate component. |

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** () icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Trial Bill Segment SQ Details

The **Trial Bill Segment SQ Details** zone lists the service quantity identifiers associated with the contract against which the trial bill segment is created. It contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| SQI | Indicates the service quantity identifier. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |

By default, the **Trial Bill Segment SQ Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** () icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

| Column Name | Column Description |
|-------------------|--|
| Sequence No. | Indicates the sequence in which the distribution code will be considered for deriving the GL account. |
| Distribution Code | Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount. |
| Amount | Displays the amount that will be debited or credited to the GL account. |

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Policy Details

The **Policy Details** zone lists the policy, plan, and membership for which the trial bill segment is created. It contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Policy Information | Displays the information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy. |
| External Membership ID | Indicates the membership in which the member is included. |
| Member's Primary Identifier | Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:). |
| Member Name | Indicates the member for whom the trial bill segment is generated. |
| Plan Information | Displays information about the policy plan. Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan. |

By default, the **Policy Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Printing a Trial Bill in the PDF Format

Prerequisites

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

Procedure

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill that you want to print in the PDF format.

The **Trial Bill** screen appears.

3. Click the **Display Trial Bill** button in the **Trial Bill** zone.

The trial bill is printed in the PDF format.

Viewing the Segments of a Trial Bill

Procedure

To view the segments of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. View the segments of the trial bill in the **Trial Bill Segments** zone.
4. If required, you can filter the trial bill segments using various search criteria.

Filtering the Trial Bill Segments

Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

Procedure

To filter the trial bill segments:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. Enter the search criteria in the **Trial Bill Segments** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

Viewing the Calc Lines of a Trial Bill Segment

Procedure

To view the calc lines of a trial bill segment:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.
4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

- View the calc lines of the trial bill segment in the **Trial Bill Segment Calc Lines** zone.

Chapter 17

Bill Tolerance

Topics:

- [Prerequisites](#)

Oracle Revenue Management and Billing allows you to define tolerance limit for the bill amount. If the difference between the previous and current bill amount exceeds either positive or negative tolerance limit, a To Do entry is generated when you initiate the bill completion process. In addition, a To Do entry is generated for the first bill of an account during the bill completion process. Until you review and close the To Do entry, you cannot complete the bill. After you close the To Do entry, you need to initiate the bill completion process once again to freeze and complete the bill. Note that the To Do entries are generated only for regular bills and not for adhoc bills.

The **Bill Tolerance** feature is supported when you freeze and complete the regular bills through the user interface and through the charge based billing batch named **Bill Completion (C1-BLPPR)**. It is not yet supported when you freeze and complete the bill through the **BILLING** batch. In addition, this feature is not yet designed to work when bills are generated through the construct based billing batches.

For more information on how to setup the bill tolerance feature, refer to [Prerequisites](#) on page 1324.

Prerequisites

To setup the bill tolerance feature, you need to do the following:

- Define an algorithm of the C1-BILL_TOLR algorithm type and attach it to the **Pre-Bill Completion Review** system event on the respective customer class. This algorithm type has the following parameters:
 - **Positive Tolerance Percentage** – Used to specify the positive tolerance limit in percentage.
 - **Negative Tolerance Percentage** – Used to specify the negative tolerance limit in percentage.
 - **Positive Tolerance Amount** - Used to specify the positive tolerance limit in amount.
 - **Negative Tolerance Amount** - Used to specify the negative tolerance limit in amount.
 - **Tolerance To Do Type** – Used to indicate that To Do entry of the specified To Do type must be created when the bill amount difference exceeds either positive or negative tolerance limit. This parameter is mandatory.
 - **First Bill To Do Type** – Used to indicate that To Do entry of the specified To Do type must be created when the first bill is generated for an account. This parameter is mandatory.
 - **Tolerance To Do Role** - Used to indicate that users with the specified To Do role can only view the “%1 Bill Tolerance Limit Exceeded” To Do entry. This parameter is mandatory.
 - **First Bill To Do Role** - Used to indicate that users with the specified To Do role can only view the “%1 To-do generated for First Bill” To Do entry. This parameter is mandatory.

For example, if you set the **Positive Tolerance Percentage** parameter to 10 and the **Negative Tolerance Percentage** parameter to 15 in the algorithm, then in the following scenarios:

| Current Bill Amount (USD) | Previous Bill Amount (USD) | Tolerance Amount Calculation | To Do Entry Generated (Yes or No) | Reason |
|---------------------------|----------------------------|------------------------------|-----------------------------------|--|
| 120 | 100 | $100+(100*10)/100=110$ | Yes | Current Bill Amount is above Positive Tolerance Limit |
| 115 | 105 | $105+(105*10)/100=115.5$ | No | Current Bill Amount is within Positive Tolerance Limit |
| 80 | 100 | $100-(100*15)/100=85$ | Yes | Current Bill Amount is below Negative Tolerance Limit |
| 95 | 110 | $110-(110*15)/100=93.5$ | No | Current Bill Amount is within Negative Tolerance Limit |

If the tolerance limit is specified in both percentage and amount, the system calculates the tolerance amount using percentage and amount, considers the minimum value, and then creates the To Do entry accordingly. For example, if you set the **Positive Tolerance Percentage** parameter to 10, the **Positive Tolerance Amount** parameter to 15, the **Negative Tolerance Percentage** parameter to 5, and the **Negative Tolerance Amount** parameter to 25 in the algorithm, then in the following scenarios:

| Current Bill Amount (USD) | Previous Bill Amount (USD) | Tolerance Amount Calculation | To Do Entry Generated (Yes or No) | Reason |
|---------------------------|----------------------------|---|-----------------------------------|---|
| 120 | 100 | $100+(100*10)/100=110$ (Derived using positive tolerance percentage) $100+15=115$ (Derived using positive tolerance amount) Minimum Value is 110 in Positive Scenario | Yes | Current Bill Amount is above Positive Tolerance Limit |
| 180 | 200 | $200-(200*5)/100=190$ (Derived using negative tolerance percentage) $200-25=175$ (Derived using negative tolerance amount) Minimum Value is 190 in Negative Scenario | Yes | Current Bill Amount is below Negative Tolerance Limit |

During the tolerance amount calculation, the system checks whether the **Multi-Currency Accounts** feature is enabled or disabled. If the **Multi-Currency Accounts** feature is enabled, the system converts the previous and current bill amount in the division's base currency when the invoice currency is different from the division's base currency. Once the currency conversion is done, the tolerance amount is calculated and To Do entry is generated accordingly.

- Set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration to **True** if you want to enable the currency conversion feature during tolerance amount calculation
- Define the Tolerance and First Bill To Do types using the following information:
 - **Navigation Option** - billMaint
 - **Priority** – Priority 10 – Highest
 - **Message Category** - 11105
 - **Message Number** – 11009
 - **Sort Keys** — Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|----------|----------------|------------|
| Bill ID | Yes | Ascending |

- **Drill Keys** — Define the following drill keys for the To Do type:

| Table Name | Field Name |
|------------|------------|
| CI_BILL | BILL_ID |

Related Topics

| For more information on... | See... |
|--|---|
| How to set the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration | Setting the C1_PPARM_FLG Feature Configuration on page 3063 |

Chapter 18

GL Account Validation

Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 1328 and [Dynamic GL Account Validation](#) on page 1328, respectively.

Static GL Account Validation

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

“GL Account is validated on YYYY-MM-DD”

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

“GL Account is invalid”

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

Dynamic GL Account Validation

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the **GLA_VAL_DT** column of the **CI_TRL_FT_GL** or **CI_FT_GL** table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the **C1-GLASN** or **GLASSGN2** batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

Chapter 19

Upload Validated Adjustment Data

Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Upload Request Type](#)
- [Adjustment Upload Request \(Used for Searching\)](#)
- [Adjustment Upload Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 1331.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 1332 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 1333.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object.

If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

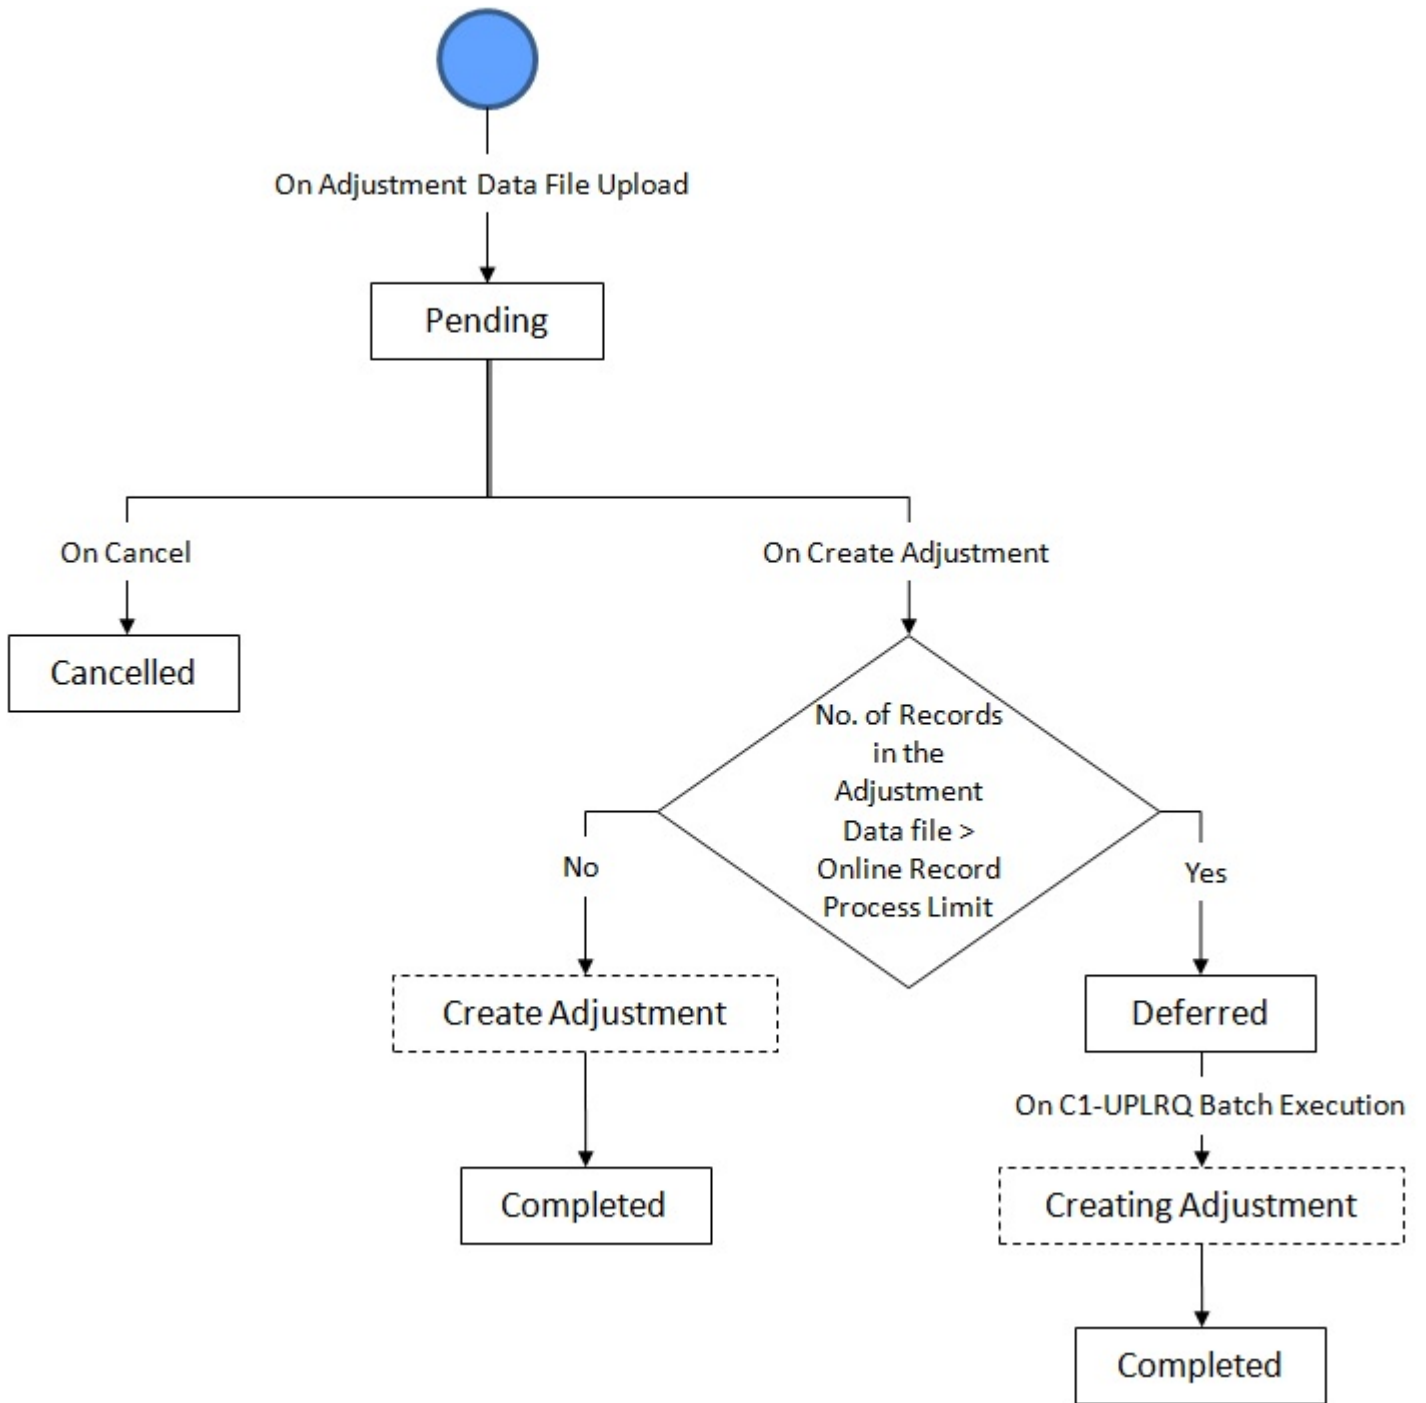

| Column Name | Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| Account Identifier Type | Used to specify the account identifier type. | Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified. |
| Account Identifier | Used to specify the account identifier. | Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified. |
| Account ID | Used to indicate the account for which the adjustment must be created. | Yes (Conditional) Note: This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified. |

| Column Name | Description | Mandatory (Yes or No) |
|---|--|--|
| Match Type | Used to indicate the match type using which the adjustment must be created. | Yes |
| Match Value | Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created. | Yes |
| Adjustment Type | Used to indicate the adjustment type using which the adjustment must be created. | Yes |
| | Note: The adjustment type must be included in the adjustment type profile which is attached to the contract type. | |
| Adjustment Amount | Used to specify the adjustment amount. | Yes |
| | Note: The adjustment amount precision must match the precision (decimal positions) defined for the currency. | |
| Currency Code | Used to indicate the currency in which the adjustment must be created. | Yes |
| Comments | Used to specify additional information about the adjustment. | No |
| Bill ID | Used to indicate the bill on which the adjustment must be created. | No |
| Arrears Date | Used to specify the date from when the amount is outstanding on the bill. | No |
| Char Type 1, Char Type 2,, Char Type 5 | Used to indicate the characteristic that must be defined for the adjustment. | Yes (Conditional) |
| | | Note: This data is required if the characteristic value is specified. |
| Char Value 1, Char Value 2,, Char Value 5 | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This data is required if the characteristic type is specified. |

Note: If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

Adjustment Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is off:

Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|--|
| Information | C1-FLREQ-INF | C1-FLREQ-INF | <p>This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Upload Request Description • Upload Request ID |
| Validation | C1-ADVALREQ | C1-ADVALREQ | <p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below:</p> <ol style="list-style-type: none"> 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows: <ul style="list-style-type: none"> • Validating mandatory column data • Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. • Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID. |

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|-----------|----------------|-------------|
| Draft | - | - | - | - |
| Cancelled | - | - | - | - |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|---|
| Create Adjustment | Enter | C1-ADJUPLDEF | C1-ADJUPLDEF | This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status. |
| Deferred | Monitor | C1-ADJ-MNTR | C1-ADJ-MNTR | This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the Upload Request Monitor batch. This algorithm transitions the business object status from Deferred to Creating . |
| Pending for Approval | Enter | C1-ADJUPAPVL | C1-ADJUPAPVL | This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the Enter status algorithm when the request object enters Submitted - Pending For Approver status. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|--------------|----------------|--|
| Approved | Enter | C1-ADJUPLDEF | C1-ADJUPLDEF | This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status. |
| Rejected | - | - | - | - |
| Completed | - | - | - | - |
| Creating Adjustment | Enter | C1-ADJCRTION | C1-ADJCRTION | This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction. |

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

| Match Type | Algorithm Type | Sample Algorithm | Algorithm Description |
|------------|----------------|------------------|---|
| Contract | C1-MTCIALG | C1-MTCIALG | This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) . |

| Match Type | Algorithm Type | Sample Algorithm | Algorithm Description |
|---------------|----------------|------------------|--|
| Contract Type | C1-MTCTALG | C1-MTCTALG | This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched. |

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1338
- [Upload Request Type](#) on page 1339

Parent topic: [Upload Request](#) on page 1811

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Upload Request Type | Displays the upload request type. |
| Description | Displays the description of the upload request type. |
| Edit | On clicking the Edit  icon, the Upload Request Type screen appears where you can edit the details of the upload request type. |

| Column Name | Column Description |
|-------------|---|
| Duplicate | On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type. |
| Delete | On clicking the Delete (🗑️) icon, you can delete the upload request type. |
| | Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type. |
| Mapping | On clicking the Mapping (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type. |

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

| Field Name | Field Description |
|--------------------------------|---|
| Upload Request Type | Displays the upload request type. |
| Upload Request Business Object | Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Description | Displays the description of the upload request type. |
| Detailed Description | Displays additional information about the upload request type. |

| Field Name | Field Description |
|---------------------|---|
| Status | <p>Indicates the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive |
| File Size (KB) | <p>Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p>Note: This field appears when you create upload request type using Adjustment Upload Request Type business object.</p> |
| Defer Algorithm | <p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note: This field appears when you create upload request type using Adjustment Upload Request Type business object. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> |
| Approval Required | <p>Indicates whether approval is required for a file which is uploaded using the upload request type.</p> |
| Approval To Do Type | <p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> |

| Field Name | Field Description |
|---------------------|---|
| Approval To Do Role | <p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p>Note: This field appears when the Approval Required check box is selected. On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated. It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p> |
| FK Reference | <p>Indicates the foreign key reference which specifies the created upload request type.</p> <p>Note: This field appears when you create upload request type using Upload Request Type business object. It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p> |

In addition, this section has the following columns:

| Column Name | Column Description |
|-------------|---|
| Match Type | <p>Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"> Contract Contract Type <p>Note: The Match Type column is displayed for Adjustment Upload Request Business Object.</p> |
| Algorithm | <p>Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object.</p> |

- **Characteristics** – This section lists the characteristics of the upload request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the upload request type. |
| Delete | Used to delete the upload request type. Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type. |
| Duplicate | Used to create a new upload request type using an existing upload request type. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval

- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval
- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type Business Object | Used to indicate the business object that you want to use to create the upload request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Used to specify the upload request type. | Yes |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type. | Not applicable |
| Upload Request Business Object | Used to indicate the business object that you want to use while creating the upload request. | Yes |
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. | Yes |
| | Note: This field appears when Adjustment Upload Request Type business object is selected. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | | | | | | | | | | | | | |

| Refund Request | C1-REFUR | | | | | | | | | | | | | | | | | | | | | | | |
| Write Off Request | C1-WOUR | | | | | | | | | | | | | | | | | | | | | | | |
| Policy Reinstatement | C1-RPUR | | | | | | | | | | | | | | | | | | | | | | | |
| Bill Group Sorting | C1-BGSRT | | | | | | | | | | | | | | | | | | | | | | | |
| Bill Group Derivation and Pricing Parameters | C1-BGDVP | | | | | | | | | | | | | | | | | | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|---|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. | Yes (Conditional) Note: This field is required when the Approval Required check box is selected. |
| FK Reference | Used to indicate the FK Reference code to display the entity information. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object is selected. | No |

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| Match Type | Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type | Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list. |
| Algorithm | Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. | Yes (Conditional) Note: This field is required when you select the match type from the respective field. |

6. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

| How to define a characteristic for an upload request type | Defining a Characteristic for an Upload Request Type on page 1348 |

Defining a Characteristic for an Upload Request Type**Prerequisites**

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type. | Note: This field is required when you are defining a characteristic for the upload request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the upload request type. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

| How to edit an upload request type | Editing an Upload Request Type on page 1349 |
| How to copy an upload request type | Copying an Upload Request Type on page 1352 |

Editing an Upload Request Type**Prerequisites**

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Displays the upload request type. | Not applicable |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type. | Not applicable |
| Upload Request Business Object | Used to specify the business object that you want to use while creating the upload request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. | Yes |
| | Note: This field appears when the business object is Adjustment Upload Request Type . | |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. | Yes |
| | <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Entity Business Object | Used to indicate for creating Business Object of the entity using the upload request type. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears. | |
| Approval Required | Used to indicate whether approval is required for a file which is uploaded using the upload request type. | No |
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears. | |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. | Yes (Conditional) |
| | | |
| FK Reference | Used to indicate the FK Reference code to display the entity information. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type . | |

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Match Type | Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type | Yes (Conditional) |
| | | Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| Algorithm | Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. | Yes (Conditional) |
| | | Note: This field is required when you select the match type from the respective field. |

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type

- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Used to specify the upload request type. | Yes |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type (whose copy you want to create). | Not applicable |
| Upload Request Business Object | Used to specify the business object that you want to use while creating the upload request. | Yes |
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. | Yes |
| | Note: This field appears when the business object is Adjustment Upload Request Type . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p> | Yes |
| Entity Business Object | <p>Used to indicate to create the copy of Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p> | No |
| Approval Required | Used to indicate whether approval is required for a file which is uploaded using the upload request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears. | Note: This field is required when the Approval Required check box is selected. |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. | Yes (Conditional) |
| | | Note: This field is required when the Approval Required check box is selected. |
| FK Reference | Used to indicate the FK Reference code to display the entity information. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type . | |

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| Match Type | Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type | Yes (Conditional) |
| | | Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list. |
| Algorithm | Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. | Yes (Conditional) |
| | | Note: This field is required when you select the match type from the respective field. |

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

- Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.
6. Click **Save**.

The new upload request type is defined.

Mapping an Upload Request Type**Prerequisites**

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** (🔗) icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|------------------------------------|-----------------------|
| Upload Request Type | Indicates the upload request type. | Not applicable |

The **Upload Request Type Mapping** screen also contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------------|--|---|
| CSV Column Header | Used to specify the rows correspond to the columns in CSV file. | Yes (Conditional) Note: This column is required when you search the Data Records zone in the Upload Request screen. |
| Use for Searching | Used to indicate whether the defined CSV Column Header is searchable or not. Note: Upto 10 rows can be selected as searchable rows. | Yes (Conditional) Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen |
| Sequence Number | Used to specify the sequence of the searchable fields. Note: Searchable rows should have sequence less than or equal to 10. | Yes (Conditional) Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen |

- Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

- Click **Save**.

The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

- Click **OK**.

The upload request type is deleted.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
- In the **Upload Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the upload request type whose details you want to view.
The **Upload Request Type** zone appears.
- View the details of the upload request type in the **Upload Request Type** zone.

Adjustment Upload Request (Used for Searching)

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 1359
- [Adjustment Upload Request](#) on page 1367
- [Adjustment Data Records](#) on page 1370

Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Upload Request Type | Used to search adjustment upload requests which are created using a particular upload request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Status | Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending For Approval | No |
| Upload From Date | Used to search adjustment upload requests which are created from a particular date onwards. Note: By default, the current date appears in this field. | No |
| To | Used to search adjustment upload requests which are created till a particular date. Note: By default, the current date appears in this field. | No |
| File Name | Used to search an adjustment upload request which is created while uploading an adjustment data file. | No |

Note: You must specify at least one search criterion while searching for an adjustment upload request.

- **Search Results** — On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------|---|
| Upload Date | Displays the date and time when the adjustment data file is uploaded in the system. |
| Upload Request Information | Displays information about the adjustment upload request. Note: It has a link. On clicking the link, the Adjustment Upload Request screen appears where you can view the details of the respective upload request. |
| Status | Indicates the status of the adjustment upload request. |
| Upload Request Type | Indicates the upload request type using which the adjustment data file is uploaded in the system. |
| File Name | Displays the name of the adjustment data file. |

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for an Adjustment Upload Request

Prerequisites

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

Uploading an Adjustment Data File

Prerequisites

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Upload Adjustment Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Upload Request Type | Used to indicate the upload request type using which you want to upload the adjustment data file. | Yes |
| | Note: The list includes only those upload request types which are in the Active status. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |
| | Note: You can replace an existing file when the adjustment upload request is in the Pending or Cancelled status. | |
| File Name | Used to specify the name and path of the adjustment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system. | |

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.
The adjustment data file name and path appears in the **File Name** field.
9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Errors | Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column. |
| | Note: This column appears when you click the Save button. |
| Account Identifier Type | Indicates the account identifier type. |

| Column Name | Column Description |
|--------------------|---|
| Account Identifier | Displays the value of the account identifier type. |
| Account ID | Indicates the account for which the adjustment must be created. |
| Match Type | Indicates the match type using which the adjustment must be created. |
| Match Value | Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created. |
| Adjustment Type | Indicates the adjustment type using which the adjustment must be created. |
| Adjustment Amount | Displays the adjustment amount. |
| Currency Code | Indicates the currency in which the adjustment must be created. |
| Comments | Displays additional information about the adjustment. |
| Bill ID | Indicates the bill on which the adjustment must be created. |
| Arrears Date | Displays the date from when the amount is outstanding on the bill. |
| Char Type 1 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 1 | Displays the value of the characteristic type. |
| Char Type 2 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 2 | Displays the value of the characteristic type. |
| Char Type 3 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 3 | Displays the value of the characteristic type. |
| Char Type 4 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 4 | Displays the value of the characteristic type. |
| Char Type 5 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 5 | Displays the value of the characteristic type. |

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.

- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Replacing an Adjustment Data File

Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Upload Request Type | Used to indicate the upload request type using which you want to upload the adjustment data file. | Yes |
| | Note: The list includes only those upload request types which are in the Active status. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |
| | Note: You can replace an existing file when the adjustment upload request is in the Pending or Cancelled status. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| File Name | Used to specify the name and path of the adjustment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system. | |

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

10. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Errors | Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column. |
| | Note: This column appears when you click the Save button. |
| Account Identifier Type | Indicates the account identifier type. |
| Account Identifier | Displays the value of the account identifier type. |
| Account ID | Indicates the account for which the adjustment must be created. |
| Match Type | Indicates the match type using which the adjustment must be created. |
| Match Value | Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created. |
| Adjustment Type | Indicates the adjustment type using which the adjustment must be created. |
| Adjustment Amount | Displays the adjustment amount. |
| Currency Code | Indicates the currency in which the adjustment must be created. |
| Comments | Displays additional information about the adjustment. |
| Bill ID | Indicates the bill on which the adjustment must be created. |
| Arrears Date | Displays the date from when the amount is outstanding on the bill. |
| Char Type 1 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 1 | Displays the value of the characteristic type. |
| Char Type 2 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 2 | Displays the value of the characteristic type. |
| Char Type 3 | Indicates the characteristic that must be defined for the adjustment. |

| Column Name | Column Description |
|--------------|---|
| Char Value 3 | Displays the value of the characteristic type. |
| Char Type 4 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 4 | Displays the value of the characteristic type. |
| Char Type 5 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 5 | Displays the value of the characteristic type. |

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

11. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Viewing the Adjustment Upload Request Details

Procedure

To view the details of an adjustment upload request:

1. Search for an adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose details you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:

- **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. View the details of the adjustment upload request in the **Adjustment Upload Request** zone.
 4. View the list of adjustment records which are uploaded through the adjustment data file in the **Adjustment Data Records** zone.

Adjustment Upload Request (Used for Viewing)

The **Adjustment Upload Request** screen allows you to:

- Edit the details of an adjustment upload request
- Delete or cancel an adjustment upload request
- View the details of an adjustment upload request
- Submit an adjustment upload request for processing
- Approve or reject an adjustment upload request
- Request the submitter to resubmit an adjustment upload request for approval
- Withdraw an adjustment upload request
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

It consists of the following tabs:

- [Adjustment Upload Request - Main](#) on page 1367
-

Adjustment Upload Request - Main

The **Main** tab displays information about the adjustment upload request. It contains the following zones:

- [Adjustment Upload Request](#) on page 1367
- [Adjustment Data Records](#) on page 1370

Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- **Header** — This section provides basic information about the upload request. It contains the following fields:

| Field Name | Field Description |
|----------------------------|--|
| Upload Request Information | <p>Displays information about the adjustment upload request. The information string contains the following comma-separated values:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Status Description • Upload Request ID <p>Note: This information string is generated using the C1-FLREQ-INF algorithm which is attached to the Information system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.</p> |
| Status | <p>Indicates the status of the adjustment upload request. The valid values are:</p> <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending for Approval |
| Status Reason | <p>Indicates the reason why the adjustment data file is cancelled or rejected.</p> <p>Note: This field appears when the adjustment upload request is in the Cancelled or Rejected status.</p> |
| File Name | <p>Displays the name of the adjustment data file for which the adjustment upload request is created.</p> |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Cancel File | <p>Used to cancel an adjustment data file.</p> <p>Note: The Cancel File button appears when the adjustment upload request is in the Pending status.</p> |

| Button Name | Button Description |
|---------------------|--|
| Create Adjustment | Used to create adjustments for the records which are uploaded through the adjustment data file. |
| | <p>Note: The Create Adjustment button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded. |
| Submit for Approval | Used to submit the adjustment data file for approval. |
| | <p>Note: The Submit for Approval button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded. |
| Approve | Used to approve the adjustment data file. |
| | <p>Note: The Approve button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file. |
| Reject | Used to reject the adjustment data file. |
| | <p>Note: The Reject button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file. |

Note: The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled, Completed, Deferred, or Rejected**.

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the adjustment upload request is created. |
| | <p>Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.</p> |
| Status Date/Time | Displays the date and time when the adjustment upload request status is updated. |
| Create Date/Time | Displays the date and time when the adjustment upload request is created. |

Adjustment Data Records

The **Adjustment Data Records** zone lists the adjustment records which are uploaded through the adjustment data file. This zone contains the following columns:

| Column Name | Column Description |
|---|---|
| Adjustment Information | <p>Displays information about the adjustment that is created using the adjustment record.</p> <p>Note:</p> <p>The data appears in this column when the status of the adjustment upload request is Completed.</p> <p>It has a link. On clicking the link, the Adjustment screen appears with the details of the respective adjustment.</p> <p>The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.</p> |
| Account Identifier Type | Indicates the account identifier type. |
| Account Identifier | Displays the value of the account identifier type. |
| Account ID | Indicates the account for which the adjustment must be created. |
| Adjustment Match Value | Indicates the contract against which the adjustment must be created. |
| Adjustment Type | Indicates the adjustment type using which the adjustment must be created. |
| Adjustment Amount | Displays the adjustment amount. |
| Comments | Displays additional information about the adjustment. |
| Bill ID | Indicates the bill on which the adjustment must be created. |
| Arrears Date | Displays the date from when the amount is outstanding on the bill. |
| Char Type 1, Char Type 2,, Char Type 5 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 1, Char Value 2,, Char Value 5 | Displays the value of the characteristic type. |

Adjustment Upload Request - Log

The **Log** tab contains the following zone:

- [Adjustment Upload Request - Log](#) on page 1371

Adjustment Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the adjustment upload request. It contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the funding request. |
| Details | Displays the details of the action performed on the funding request. |
| User | Indicates the user who has performed the action on the funding request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is created when the action is performed on the funding request. |
| | Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements. |
| Status Reason | Indicates the reason why the funding request was rejected by the approver. |
| | Note: The data appears in this column when the funding request is in the Rejected status. |

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Adjustment Upload Request Log** zone.

Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file when the adjustment upload request is in the **Pending** status.

Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Cancellation Reason | Used to indicate the reason why you want to cancel the adjustment data file. | Yes |

Note: The **Cancel File** button appears when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.

The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Related Topics

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- Main** – This tab contains the following two zones:
 - Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

Submitting an Adjustment Data File for Approval

Procedure

To submit an adjustment data file for approval:

- Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
- Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

Note:

The **Submit for Approval** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

Approving an Adjustment Data File

Procedure

To approve an adjustment data file:

- Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
- Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 - If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

Rejecting an Adjustment Data File

Prerequisites

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

Procedure

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 4. If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Rejection Reason | Used to indicate the reason why you want to reject the adjustment data file. | Yes |

Note:

The **Reject** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

5. Select the rejection reason from the list.
6. Click **Save**.

The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

Viewing the Log of an Adjustment Upload Request

Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.

- **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the adjustment upload request. |
| Details | Displays the details about the action performed on the adjustment upload request. |
| User | Indicates the user who has performed the action on the adjustment upload request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the adjustment upload request. |
| Status Reason | Indicates the reason why the adjustment upload request was rejected or cancelled. |

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Related Topics

| How to add a log entry for an adjustment upload request | Adding a Log Entry for an Adjustment Upload Request on page 1377 |

Adding a Log Entry for an Adjustment Upload Request

Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Request Information | Displays information about the adjustment upload request. | Not applicable |
| Log Details | Used to specify additional comments for the adjustment upload request. | Yes |

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 20

Foreign Exchange Gain Loss

Topics:

- [Foreign Exchange Gain Loss Calculation](#)
- [Prerequisites](#)
- [Foreign Exchange Gain Loss Scenarios](#)

In a multi-currency environment, financial transactions such as payments and adjustments created for an account can result in loss or gain due to fluctuations in the exchange rate at different point in time. This loss or gain is booked under the Foreign Exchange Gain Loss in the General Ledger and does not impact the account balance of the person.

The Foreign Exchange Gain or Loss might occur when:

- Exchange Rate for Invoice Currency to Division' Base Currency is different on Bill Completion Date and Payment Freeze Date

Assumption: In this case, the Invoice Currency and Payment Currency are same.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Adjustment Freeze Date

Assumption: In this case, the Adjustment Currency and Invoice Currency are same, but they are different from the Division's Base Currency.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Payment Freeze Date

Assumption: In this case, the Adjustment Currency, Payment Currency, and Invoice Currency are same, but they are different from the Division's Base Currency.

Oracle Revenue Management and Billing facilitates you to calculate the foreign exchange gain or loss and book it against an FXLG distribution code. However, you can calculate the foreign exchange gain or loss when you have enabled the FT GL Extension feature. For more information on how the system calculates the foreign exchange gain loss, see [Foreign Exchange Gain Loss Calculation](#) on page 1380. For more information on how to setup the Foreign Exchange Gain Loss feature, see [Prerequisites](#) on page 1380.

Note: The system can calculate the foreign exchange gain or loss appropriately when the Division's Base Currency is same on Bill Completion Date and Adjustment/Payment Freeze Date. Otherwise, erroneous results might occur.

Foreign Exchange Gain Loss Calculation

During the Foreign Exchange Gain Loss calculation, the system considers the following types of financial transactions:

- Payments (i.e. Pay Segments)
- Credit adjustments which are created against a bill after the bill completion
- Write-off adjustments which are created against a bill
- Write Up adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type
- Write Down adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type

Note: The system does not consider financial transactions which are created due to payment and adjustment cancellation.

To understand how foreign exchange gain or loss is calculated, see [Foreign Exchange Gain Loss Scenarios](#) on page 1381.

You can calculate the foreign exchange gain loss when you have enabled the FT GL Extension feature. Oracle Revenue Management and Billing provides you a batch named **Foreign Exchange Loss Gain (C1-FXLG)** which calculates the foreign exchange gain loss. This batch considers payment and adjustment FTs when:

- Division's Base Currency is different from the Payment or Adjustment Currency
- Payment or Adjustment Freeze Date is different from the Bill Completion Date
- Match Event ID exists in the financial transaction
- FXLG_CALC_STATUS column corresponding to the financial transaction in the CI_FT table is set to N or NULL

Once the foreign exchange gain or loss is calculated, two entries are added corresponding to each financial transaction in the CI_FT_GL and CI_FT_GL_EXT tables. One entry for foreign exchange gain loss is booked against the distribution code for FXLG and another entry for foreign exchange gain loss is booked against the distribution code which is used for contract balancing. The foreign exchange loss is recorded as positive entry and the foreign exchange gain is recorded as negative entry. In the CI_FT_GL table, the foreign exchange gain loss is recorded in the financial transaction currency. And, in the CI_FT_GL_EXT table, the foreign exchange gain loss is recorded in the division's base currency.

You must execute the **Foreign Exchange Loss Gain (C1-FXLG)** batch prior to the **Assign GL Account to Financial Transaction (C1-GLASN)** or **Insert Records in CI_FTTEMP (GLASSGN1)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the Foreign Exchange Gain Loss feature, you need to do the following:

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to enable FT GL extension feature
- Set the following parameters of an algorithm which is created using the **FTFREZGLEXTN** algorithm type to **R** (i.e. arrears date):
 - Exchange Rate Date Type for Adjustments with Freeze At Will Option (Valid Values: A, R, F, C)
 - Exchange Rate Date Type for Adjustments with Freeze At Bill Completion Option (Valid Values: A, R, F, C, E)
 - Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)

- Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C)
- Create an algorithm of the **C1_CURALGBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1_CURALGAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1_CURALGPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature
- Set the **Bill Segment Freeze Option** to **Freeze At Bill Completion** in the **Billing** tab of the **Installation Options** screen
- Define the required exchange rates for currency conversion
- Define the distribution code against which you want to book the foreign exchange gain loss
- Set the **Adjustment Freeze Option** to **Freeze At Bill Completion** for adjustment types whose adjustments are presented and impacts the next bill of an account

Related Topics

| For more information on... | See... |
|-----------------------------|--|
| FTFREZGLEXTN algorithm type | FTFREZGLEXTN on page 923 |
| C1_CURALGBS algorithm type | C1_CURALGBS on page 908 |
| C1_CURALGAD algorithm type | C1_CURALGAD on page 909 |

Foreign Exchange Gain Loss Scenarios

To understand how foreign exchange gain loss is calculated, refer to the following different scenarios:

- [Payment Scenarios](#) on page 1381
- [Credit Adjustment Scenarios](#) on page 1385
- [Write Off Adjustment Scenarios](#) on page 1386
- [Write Up/Down Adjustment Scenarios](#) on page 1388

Payment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for payments which are matched against bills:

- Scenario 1 — Payment Freeze Date = Bill Completion Date; Payment Amount = Invoice Amount

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-01-2001) |
|--------------------------|--------------------------------------|-------------------------------------|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 50 |
| Invoice/Payment Currency | USD | USD |
| Invoice Amount | 1000 | - |

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-01-2001) |
|--|--|---|
| Base Currency | INR | INR |
| Booked Revenue in Base Currency | 1000*50 = 50000 | - |
| Payment Amount | - | 1000 |
| Payment Amount in Base Currency on Bill Completion Date | - | 1000*50 = 50000 |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | 1000*50 = 50000 |
| Foreign Exchange Gain or Loss | - | Not applicable |

Observation: In the Scenario 1, the foreign exchange gain or loss is not applicable because Bill Completion Date and Payment Freeze Date are same.

- Scenario 2 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Payment Amount = Invoice Amount

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-02-2001) |
|--|--|---|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 50 |
| Invoice/Payment Currency | USD | USD |
| Invoice Amount | 1000 | - |
| Base Currency | INR | INR |
| Booked Revenue in Base Currency | 1000*50 = 50000 | - |
| Payment Amount | - | 1000 |
| Payment Amount in Base Currency on Bill Completion Date | - | 1000*50 = 50000 |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | 1000*50 = 50000 |
| Foreign Exchange Gain or Loss | - | 50000-50000 = 0 |

Observation: In the Scenario 2, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 3 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount = Invoice Amount

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-02-2001) |
|---------------------------|--|---|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 51 |

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-02-2001) |
|--|--|---|
| Invoice/Payment Currency | USD | USD |
| Invoice Amount | 1000 | - |
| Base Currency | INR | INR |
| Booked Revenue in Base Currency | $1000 * 50 = 50000$ | - |
| Payment Amount | - | 1000 |
| Payment Amount in Base Currency on Bill Completion Date | - | $1000 * 50 = 50000$ |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | $1000 * 51 = 51000$ |
| Foreign Exchange Gain or Loss | - | $50000 - 51000 = -1000$ |

Observation: In the Scenario 3, there is foreign exchange gain of 1000 INR on 01-02-2001 because of difference in exchange rate.

- Scenario 4 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Partial Payments; Total Payment Amount = Invoice Amount

| | Bill Completion Date (01-01-2001) | First Partial Payment Freeze Date (01-02-2001) | Second Partial Payment Freeze Date (01-03-2001) |
|--|--|---|--|
| Exchange Rate From | USD | USD | USD |
| Exchange Rate To | INR | INR | INR |
| Exchange Rate | 50 | 50 | 50 |
| Invoice/Payment Currency | USD | USD | USD |
| Invoice Amount | 1000 | - | - |
| Base Currency | INR | INR | INR |
| Booked Revenue in Base Currency | $1000 * 50 = 50000$ | - | - |
| Payment Amount | - | 500 | 500 |
| Payment Amount in Base Currency on Bill Completion Date | - | $500 * 50 = 25000$ | $500 * 50 = 25000$ |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | $500 * 50 = 25000$ | $500 * 50 = 25000$ |
| Foreign Exchange Gain or Loss | - | $25000 - 25000 = 0$ | $25000 - 25000 = 0$ |

Observation: In the Scenario 4, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 5 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount = Invoice Amount

| | Bill Completion Date (01-01-2001) | First Payment Date (01-02-2001) | Partial Freeze Date (01-03-2001) |
|--|--|--|---|
| Exchange Rate From | USD | USD | USD |
| Exchange Rate To | INR | INR | INR |
| Exchange Rate | 50 | 51 | 48 |
| Invoice/Payment Currency | USD | USD | USD |
| Invoice Amount | 1000 | - | - |
| Base Currency | INR | INR | INR |
| Booked Revenue in Base Currency | $1000 * 50 = 50000$ | - | - |
| Payment Amount | - | 800 | 200 |
| Payment Amount in Base Currency on Bill Completion Date | - | $800 * 50 = 40000$ | $200 * 50 = 10000$ |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | $800 * 51 = 40800$ | $200 * 48 = 9600$ |
| Foreign Exchange Gain or Loss | - | $40000 - 40800 = -800$ | $10000 - 9600 = 400$ |

Observation: In the Scenario 5, there is foreign exchange gain of 800 INR on 01-02-2001 and foreign exchange loss of 400 INR on 01-03-2001.

- Scenario 6 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount > Invoice Amount (i.e. Overpayment)

| | Bill Completion Date (01-01-2001) | Payment Freeze Date (01-02-2001) |
|--|--|---|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 49 |
| Invoice/Payment Currency | USD | USD |
| Invoice Amount | 1000 | - |
| Base Currency | INR | INR |
| Booked Revenue in Base Currency | $1000 * 50 = 50000$ | - |
| Payment Amount | - | 1200 |
| Payment Amount in Base Currency on Bill Completion Date | - | $1000 * 50 = 50000$ |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | $1000 * 49 = 49000$ |
| Foreign Exchange Gain or Loss | - | $50000 - 49000 = 1000$ |

Observation: In the Scenario 6, there is foreign exchange loss of 1000 INR on 01-02-2001 because of difference in exchange rate. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

- Scenario 7 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount > Invoice Amount (i.e. Overpayment)

| | Bill Completion Date (01-01-2001) | First Partial Payment Freeze Date (01-02-2001) | Second Partial Payment Freeze Date (01-03-2001) |
|--|--|---|--|
| Exchange Rate From | USD | USD | USD |
| Exchange Rate To | INR | INR | INR |
| Exchange Rate | 50 | 49 | 52 |
| Invoice/Payment Currency | USD | USD | USD |
| Invoice Amount | 1000 | - | - |
| Base Currency | INR | INR | INR |
| Booked Revenue in Base Currency | $1000 * 50 = 50000$ | - | - |
| Payment Amount | - | 800 | 400 |
| Payment Amount in Base Currency on Bill Completion Date | - | $800 * 50 = 40000$ | $200 * 50 = 10000$ |
| Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date | - | $800 * 49 = 39200$ | $200 * 52 = 10400$ |
| Foreign Exchange Gain or Loss | - | $40000 - 39200 = 800$ | $10000 - 10400 = -400$ |

Observation: In the Scenario 7, there is foreign exchange loss of 800 INR on 01-02-2001 and foreign exchange gain of 400 INR on 01-03-2001. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

Note: If a payment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Credit Adjustment Scenarios

An adjustment which is posted against a bill after the bill completion is treated as payment towards the bill. The following scenarios indicate how foreign exchange gain or loss is calculated for credit adjustments which are created against a bill after the bill completion:

- Scenario 1 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

| | Bill Completion Date (04-30-2015) | Adjustment Freeze Date (05-10-2015) |
|--|--|--|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 40 |
| Invoice/Adjustment Currency | INR | INR |
| Invoice Amount | 1000 | - |
| Base Currency | USD | USD |
| Booked Revenue in Base Currency | $1000 / 50 = 20$ | - |

| | Bill Completion Date (04–30–2015) | Adjustment Freeze Date (05–10–2015) |
|--|--|--|
| Adjustment Amount | - | 400 |
| Adjustment Amount in Base Currency on Bill Completion Date | - | $400/50 = 8$ |
| Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date | - | $400/40 = 10$ |
| Foreign Exchange Gain or Loss | - | $8-10 = -2$ |

Observation: In the Scenario 1, there is foreign exchange gain of 2 USD on 05–10–2015 because of difference in exchange rate.

- Scenario 2 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

| | Bill Completion Date (04–11–2014) | Adjustment Freeze Date (04–30–2014) |
|--|--|--|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 55 | 60 |
| Invoice/Adjustment Currency | INR | INR |
| Invoice Amount | 2000 | - |
| Base Currency | USD | USD |
| Booked Revenue in Base Currency | $2000/55 = 36.36$ | - |
| Adjustment Amount | - | 200 |
| Adjustment Amount in Base Currency on Bill Completion Date | - | $200/55 = 3.63$ |
| Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date | - | $200/60 = 3.33$ |
| Foreign Exchange Gain or Loss | - | $3.63-3.33 = 0.30$ |

Observation: In the Scenario 2, there is foreign exchange loss of 0.30 USD on 04–30–2014 because of difference in exchange rate.

Note:

Multi-currency is not supported while creating credit adjustments against a bill after the bill completion. Therefore, the credit adjustment's currency must be same as the invoice currency.

If the amount of credit adjustment exceeds the bill amount, you need to match the excess amount against another bill while freezing the adjustment. Otherwise, the adjustment is not considered during foreign exchange gain loss calculation.

If a credit adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Off Adjustment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for write off adjustments which are created against a bill:

- Scenario 1 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Full Bill Amount is Written Off

| | Bill Completion Date (04-30-2015) | Adjustment Freeze Date (05-10-2015) |
|--|--|--|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 50 | 60 |
| Invoice/Adjustment Currency | INR | INR |
| Invoice Amount | 1000 | - |
| Base Currency | USD | USD |
| Booked Revenue in Base Currency | $1000/50 = 20$ | - |
| Adjustment Amount | - | 1000 |
| Adjustment Amount in Base Currency on Bill Completion Date | - | $1000/50 = 20$ |
| Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date | - | $1000/60 = 16.67$ |
| Foreign Exchange Gain or Loss | - | $20 - 16.67 = 3.33$ |

Observation: In the Scenario 1, there is foreign exchange loss of 3.33 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Bill Amount is Written Off

| | Bill Completion Date (01-30-2014) | Adjustment Freeze Date (03-03-2015) |
|--|--|--|
| Exchange Rate From | USD | USD |
| Exchange Rate To | INR | INR |
| Exchange Rate | 60 | 55 |
| Invoice/Adjustment Currency | INR | INR |
| Invoice Amount | 1000 | - |
| Base Currency | USD | USD |
| Booked Revenue in Base Currency | $1000/60 = 16.67$ | - |
| Adjustment Amount | - | 600 |
| Adjustment Amount in Base Currency on Bill Completion Date | - | $600/60 = 10$ |
| Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date | - | $600/55 = 10.91$ |
| Foreign Exchange Gain or Loss | - | $10 - 10.91 = -0.91$ |

Observation: In the Scenario 2, there is foreign exchange gain of 0.91 USD on 03-03-2015 because of difference in exchange rate.

Note: If a write off adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Up/Down Adjustment Scenarios

If the lower or upper tolerance limit defined in the Bill Weighted Payment Distribution algorithm is met when a payment is matched against a bill using the Bill Weighted match type, the Write Up or Write Down adjustment is automatically created. The following scenarios indicate how foreign exchange gain or loss is calculated for write up or write down adjustments:

- Scenario 1 — Payment/Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Matched against a Bill with Two Bill Segments (BS1 — 50 INR; BS2 — 50 INR)

| | Bill Completion Date (04–30–2015) | Payment Freeze Date (05–14–2015) | Write Up/Down Adjustment (Against BS1) Freeze Date (05–14–2015) | Write Up/Down Adjustment (Against BS2) Freeze Date (05–14–2015) |
|---|-----------------------------------|----------------------------------|---|---|
| Exchange Rate From | USD | USD | USD | USD |
| Exchange Rate To | INR | INR | INR | INR |
| Exchange Rate | 50 | 45 | 45 | 45 |
| Invoice/Payment/Adjustment Currency | INR | INR | INR | INR |
| Invoice Amount | 100 | - | - | - |
| Base Currency | USD | USD | USD | USD |
| Booked Revenue in Base Currency | $100/50 = 2$ | - | - | - |
| Payment/Adjustment Amount | - | 95 | 2.5 | 2.5 |
| Payment/Adjustment Amount in Base Currency on Bill Completion Date | - | $95/50 = 1.9$ | $2.5/50 = 0.05$ | $2.5/50 = 0.05$ |
| Realized Revenue (Payment/Adjustment Amount) in Base Currency on Payment/Adjustment Freeze Date | - | $95/45 = 2.11$ | $2.5/45 = 0.056$ | $2.5/45 = 0.056$ |
| Foreign Exchange Gain or Loss | - | $1.9 - 2.11 = -0.21$ | $0.05 - 0.056 = -0.006$ | $0.05 - 0.056 = -0.006$ |

Observation: In the Scenario 1, two Write Up adjustments are created — one against BS1 and another against BS2. While freezing the payment which is matched against the bill, there is foreign exchange gain of 0.21 USD

on 05-14-2015. However, while freezing the Write Up adjustments which are created against BS1 and BS2, there is foreign exchange gain of 0.006 and 0.006 USD, respectively, on 05-14-2015.

Note: If a write up or write down adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Chapter 21

Payment Request

Topics:

- [Prerequisites](#)
- [Payment Request \(Without Approval\) Status Transition](#)
- [Payment Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-PaymentRequest](#)
- [Algorithms Used in C1-PaymentTransferRequest](#)
- [Payment Request Type](#)
- [Payment Request \(Used for Searching\)](#)
- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments. If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Request \(Without Approval\) Status Transition](#) on page 1394 and [Payment Request \(With Approval\) Status Transition](#) on page 1395.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 1393.

Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

| Match Type | Description | Payment Distribution Override Algorithm | Manual Distribution Algorithm | Entity Type | Match Type Search Zone | Entity Flag |
|------------|--------------------------------------|---|-------------------------------|-------------|------------------------|--------------|
| BILLR | By Bill Regular | C1-PDOV-PYBL | C1-MD-BILL | Account | C1_ACCTSRCH | Bill |
| BILLW | By Bill Weighted | C1-PDOV-WTBS | C1-MD-BILL | Account | C1_ACCTSRCH | Bill |
| BILL-WO | By Bill Weighted Outstanding Amount | C1-PDOV-WTOA | | Account | C1_ACCT_SRCH | Bill |
| BILLSEG | By Bill Segment | C1-PDOV-PYBS | C1-MD-BSEG | Account | C1_ACCTSRCH | Bill Segment |
| BYSATY | By Suspense Contract | C1-PDOV-SATY | C1-MD-ONSA | Account | C1_ACCTSRCH | Contract |
| SETT-ID | By Settlement ID | C1-PDOV-PYSL | C1-MD-SID | Account | C1_ACCTSRCH | Settlement |
| BYBILL | By Bill | C1-PDOV-PYBL or C1-PDOV-WTBS | C1-MDBYBILL | Bill | CI_BILL | Bill |
| BILL-BS | By Bill - Pay By Bill Segment Oldest | C1-PDOV-BSDT | | Account | C1_ACCT_SRCH | Bill |

Note: The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

Note: The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen

- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration
- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Payment Request (Without Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when the approval workflow is off:

Payment Request (With Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when approval workflow is on:

Algorithms Used in C1-PaymentRequest

The following table lists the algorithms which are attached to the **C1-PaymentRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------|--------------|----------------|--|
| Information | C1-PAYRQ-INF | C1-PAYRQ-INF | This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID |
| Post-Processing | C1-PAYREQPOS | C1-PAYREQPOS | This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request. |

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|---|
| Validation | C1-PAYREQVAL | C1-PAYREQVAL | <p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p> |

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|---|
| Draft | Enter | C1-PAY-DFT | C1-PAY-DFT | This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request. |
| Draft | Exit | C1-PAYDFTEXT | C1-PAYDFTEXT | This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button. |
| Approval In Progress | Enter | C1-PAY-PFA | C1-PAY-PFA | This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type. |
| Approval In Progress | Exit | C1-PAYPFAEXT | C1-PAYPFAEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request. |
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------------------|--------------|--------------|----------------|--|
| Approved | Enter | C1-PAY-APP | C1-PAY-APP | This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button. |
| Distribute | Enter | C1-PAY-DIST | C1-PAY-DIST | This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution . |
| Deferred Distribution | Monitor | C1-PAY-MONT | C1-PAY-MONT | This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed . |
| Distributed | Enter | C1-PAYCREATE | C1-PAYCREATE | This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed . |
| Distributed | Exit | C1-FRZ-VALID | C1-FRZ-VALID | This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-------------|--------------|--------------|----------------|---|
| Distributed | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |
| Freezing | Enter | C1-PAY-V-FRZ | C1-PAY-V-FRZ | This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity. |
| Freezing | Enter | C1-PAY-FRZ | C1-PAY-FRZ | <p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the old payments which are in the Frozen status to Cancelled • Deletes the old payments which are in the Error status • Changes the status of the new payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status |
| Processed | - | - | - | - |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------------------|--------------|-------------|----------------|--|
| Rejected | Enter | C1-PAY-RJT | C1-PAY-RJT | This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request. |
| Discarded | Enter | C1-PAY-RJT | C1-PAY-RJT | This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request. |
| Distribute And Freeze | Enter | C1-ISFREEZE | C1-ISFREEZE | This algorithm invokes the distribute algorithm and set Flag in the payment request clob. |

Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------|--------------|----------------|--|
| Information | C1-PAYRQ-INF | C1-PAYRQ-INF | This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID |
| Post-Processing | C1-PAYREQPOS | C1-PAYREQPOS | This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request. |

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|---|
| Validation | C1-PAYREQVAL | C1-PAYREQVAL | <p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p> |

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Draft | Enter | C1-PAY-DFT | C1-PAY-DFT | This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request. |
| Draft | Exit | C1-PAYDFTEXT | C1-PAYDFTEXT | This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button. |
| Approval In Progress | Enter | C1-PAY-PFA | C1-PAY-PFA | This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type. |
| Approval In Progress | Exit | C1-PAYPFAEXT | C1-PAYPFAEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |
| Approved | Enter | C1-PAY-APP | C1-PAY-APP | This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button. |
| Distribute | Enter | C1-PAY-DIST | C1-PAY-DIST | This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution . |
| Deferred Distribution | Monitor | C1-PAY-MONT | C1-PAY-MONT | This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed . |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-------------|--------------|--------------|----------------|---|
| Distributed | Enter | C1-PAYTRANS | C1-PAYTRANS | This algorithm is invoked when the status of the payment transfer request is changed to Distributed . A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the new payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed . |
| Distributed | Exit | C1-FRZ-VALID | C1-FRZ-VALID | This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment. |
| Distributed | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |
| Freezing | Enter | C1-PAY-V-FRZ | C1-PAY-V-FRZ | This algorithm validates the payment that already exists on the entity. It checks the unpaid amount of the entity. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|------------|----------------|---|
| Freezing | Enter | C1-PAY-FRZ | C1-PAY-FRZ | <p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the old payments which are in the Frozen status to Cancelled • Deletes the old payments which are in the Error status • Changes the status of the new payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status |
| Processed | - | - | - | - |
| Rejected | Enter | C1-PAY-RJT | C1-PAY-RJT | <p>This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------------------|--------------|-------------|----------------|--|
| Discarded | Enter | C1-PAY-RJT | C1-PAY-RJT | This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request. |
| Distribute And Freeze | Enter | C1-ISFREEZE | C1-ISFREEZE | This algorithm invokes the distribute algorithm and set Flag in payment request clob. |
| Cancel | - | - | - | - |

Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 1405
- [Payment Request Type](#) on page 1406

Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Payment Request Type | Displays the payment request type. |
| Description | Displays the description of the payment request type. |
| Edit | On clicking the Edit  icon, the Payment Request Type screen appears where you can edit the details of the payment request type. |
| Duplicate | On clicking the Duplicate  icon, the Payment Request Type screen appears where you can define a payment request type using an existing payment request type. |

| Column Name | Column Description |
|-------------|--|
| Delete | On clicking the Delete (🗑️) icon, you can delete the payment request type. |
| | Note: You can delete a payment request type when you have not created a payment request using the payment request type. |

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request type. It contains the following fields:

| Field Name | Field Description |
|---------------------------------|---|
| Payment Request Type | Displays the payment request type. |
| Payment Request Business Object | Indicates the business object that will be used to create the payment request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Description | Displays the description of the payment request type. |
| Detailed Description | Displays additional information about the payment request type. |
| Status | Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Transfer | Indicates whether the payment request type will be used to create payment transfer or payment creation request. |

| Field Name | Field Description |
|---------------------|---|
| Defer Algorithm | <p>Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |
| Approval Required | Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type. |
| Approval To Do Type | <p>Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> |
| Approval To Do Role | <p>Indicates that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |

- **Characteristics** — This section lists the characteristics of the payment request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the payment request type. |

| Button Name | Button Description |
|-------------|--|
| Delete | Used to delete the payment request type. |
| | Note: You can delete a payment request type when you have not created a payment request using the payment request type. |
| Duplicate | Used to create a new payment request type using an existing payment request type. |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to a payment request type in the **Payment Request Type List** zone.

Defining a Payment Request Type

Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request Type** sub-menu.
The **Select Business Object** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|-----------------------|
| Payment Request Type Business Object | Used to indicate the business object that you want to use to create the payment request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Payment Request Type | Used to specify the payment request type. | Yes |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Transfer | Used to indicate whether the payment request type will be used to create payment transfer or payment creation request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. When the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked, the system checks whether there are any payment requests in the Deferred Distribution status. If there is a payment request in the Deferred Distribution status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | Yes |
| Approval Required | Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type. | No |
| Approval To Do Type | <p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval. | Yes (Conditional) |
| | Note: This field appears when the Approval Required check box is selected. | Note: This field is required when the Approval Required check box is selected. |

6. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.
8. Click **Save**.

The payment request type is defined.

Defining a Characteristic for a Payment Request Type

Prerequisites

To define a characteristic for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

Procedure

To define a characteristic for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Request Type . | Note: This field is required when you are defining a characteristic for the payment request type. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment request type. |

- Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Payment Request Type

Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To edit a payment request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
- In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Payment Request Type | Displays the payment request type. | Not applicable |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Transfer | Used to indicate whether the payment request type will be used to create payment transfer or payment creation request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request Type** sub-menu.

The **Payment Request Type** screen appears.

- In the **Payment Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request type.
- Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Payment Request Type | Used to specify the payment request type. | Yes |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Transfer | Used to indicate whether the payment request type will be used to create payment transfer or payment creation request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. When the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked, the system checks whether there are any payment requests in the Deferred Distribution status. If there is a payment request in the Deferred Distribution status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | Yes |
| Approval Required | Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type. | No |
| Approval To Do Type | <p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|--|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval. | Yes (Conditional) |
| | Note: This field appears when the Approval Required check box is selected. | Note: This field is required when the Approval Required check box is selected. |

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Request Type** zone to create a copy of the payment request type.

- Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

- Define, edit, or remove characteristics of the payment request type, if required.
- Click **Save**.

The new payment request type is defined.

Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. Through this screen, you can navigate to the following screens:

- [Payment Request \(Used for Viewing\)](#) on page 1424

This screen consists of the following zones:

- [Search Payment Request](#) on page 1420

Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"> • Request Details • Payment Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| On or Before Creation Date/Time | Used to search payment requests which are created till a particular date and time. | No |
| | Note: By default, the current date and time appears in this field. This field appears when you select the Request Details option from the Search By list. | |
| Payment Request Status | Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Discarded • Distribute And Freeze • Distributed • Draft • Processed • Rejected | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Payment Request Type | Used to search payment requests which are created using a particular payment request type. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| User ID | Used to search payment requests which are created by a particular user. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Payment Request ID | Used to search a particular payment request. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Payment Event ID | Used to search a payment request through which a payment event is created. | No |
| | Note: This field appears when you select the Payment Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears. | |
| Payor Account ID | Used to search payment requests which are created for a particular payor account. | No |
| | Note: This field appears when you select the Payment Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Payor Name | Used to search payment requests which are created for a particular payor. | No |
| | Note: This field appears when you select the Payment Details option from the Search By list. | |
| Payment Date | Used to search payment requests through which payments are created on a particular date. | No |
| | Note: This field appears when you select the Payment Details option from the Search By list. | |

Note: You must specify at least one search criterion while searching for a payment request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------------|---|
| Create Date/Time | Displays the date and time when the payment request was created in the system. |
| Payment Request Information | Displays information about the payment request. |
| | Note: It has a link. On clicking the link, the Payment Request screen appears where you can view the details of the respective payment request. |
| Status | Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected |
| Payment Event Information | Displays information about the payment event which is created through the payment request. |
| | Note: It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event. |
| Created By | Indicates the user who has created the payment request. |
| Payor Account Information | Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

Searching for a Payment Request

Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Payments** and then click **Payment Request**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request** sub-menu.

The **Payment Request** screen appears.

- Enter the search criteria in the **Search Payment Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment requests that meet the search criteria appears in the **Search Results** section.

Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request

It consists of the following tabs:

- [Payment Request - Main](#) on page 1424
- [Payment Request - Log](#) on page 1432

Payment Request - Main

The **Main** tab displays information about the payment request. It contains the following zones:

- [Payment Request](#) on page 1424
- [Payment Distribution](#) on page 1430

Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** – This section provides basic information about the payment request. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Payment Request Information | Displays information about the payment request. |
| Payment Request Type | Indicates the payment request type using which the payment request is created. Note: It has a link. On clicking the link, the Payment Request Type screen appears where you can view the details of the payment request type. |

| Field Name | Field Description |
|---------------------------|--|
| Payment Request Status | <p>Indicates the status of the payment request. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected |
| Status Reason | <p>Indicates the reason why the payment request is rejected.</p> <p>Note: This field appears when the payment request is in the Rejected status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected reason.</p> |
| Payor Account Information | <p>Displays information about the payor's account for which the payment request is created.</p> <p>Note: This field appears when you are viewing the details of a payment creation request. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Payment Date | <p>Displays the date when the payment event and payments are created.</p> |
| Payment Event Information | <p>Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.</p> <p>Note: This field does not appear when the payment request is in the Rejected status. If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the Draft status. It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.</p> |
| Transfer Amount | <p>Displays the total payment amount which you want to transfer.</p> <p>Note: This field appears when you are viewing the details of a payment transfer request.</p> |

| Field Name | Field Description |
|-----------------|---|
| Transfer Reason | Indicates the reason why you want to transfer the payment amount. |
| | Note: This field appears when you are viewing the details of a payment transfer request. |

- **Tender Details** – This section provides details about the tender used in the payment request. This section appears when you are viewing the details of a payment creation request. It contains the following fields:

| Field Name | Field Description |
|------------------------------|--|
| Tender Type | Indicates the type of tender through which the payment was made. |
| Tender Amount | Displays the tender amount. |
| Currency | Indicates the currency in which the payment was made. |
| Check Number | Displays the check number if the payment is made through check. |
| | Note: This field appears when the tender type is set to Check . |
| Auto Pay Route Type Code | Indicates when and how automatic payment request of the account is routed to a financial institution. |
| | Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. |
| Schedule Extract Date | Displays the date when the automatic payment request is scheduled to be sent to a financial institution. |
| | Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. |
| Auto Pay Source Code | Indicates the financial institution that receives the automatic payment request. |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. |
| Distribution and Freeze Date | Displays the date when the automatic payment must be distributed and frozen in the system. |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. |
| Account Number | Indicates the bank account number through which the automatic payment was made. |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. |
| Expires On | Displays the date when the tender type will expire. |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. |

| Field Name | Field Description |
|-----------------------------|---|
| Name | Displays the name of the person as maintained in the financial institution's system. |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. |
| Tender Control Information | Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: This field appears only when the payment request is in the Distributed, Approval In Progress, Processed , or Rejected status. It has a link. On clicking the link, the Tender Control screen appears where you can view the details of the respective tender control. |
| Deposit Control Information | Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: This field appears only when the payment request is in the Distributed, Approval In Progress, Processed , or Rejected status. It has a link. On clicking the link, the Deposit Control screen appears where you can view the details of the respective deposit control. |
| Pay Tender ID | Displays the payment tender ID. |
| | Note: This field appears only when the payment request is in the Processed status. |
| Tender Status | Indicates the current status of the tender. The valid values are: <ul style="list-style-type: none"> Valid Cancelled |
| | Note: This field appears when the payment request is in the Processed status. |
| MICR ID | Displays the MICR code on the payment. |
| Ext. Reference ID | Displays the external reference number of the payment on the payment upload interface record. |
| Person ID | Indicates the person's account ID mentioned in the payment upload interface record. |
| Name | Indicates the person mentioned in the payment upload interface record. |

- **Characteristics** – This section lists the characteristics of the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Match Types** – This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Match Type | Indicates the match type using which you want to match the payment. |
| Match By | Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment. |

- **Payor Account Details** – This section appears when you are viewing the details of a payment transfer request. It contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payor Account Information | Displays information about the payor's account whose payments you want to transfer. |

- **Payment Details** – This section appears when you are viewing the details of a payment transfer request. It contains the **Show Payments** link. On clicking the link, the **Payment** screen appears where you can view the details of the payment that you want to transfer. In case, you want to transfer multiple payments, the **Payment Search** window appears with the list of payments selected for transfer. You can click the individual payment to view the details in the **Payment** screen. The **Show Payments** link does not appear when you are viewing the details of a payment transfer request which is in the **Processed** status. Instead, the following column appears in this section:

| Column Name | Column Description |
|-------------|--|
| Payment(s) | Displays information about the payment which is cancelled. |

- **Record Actions** – This section contains the following buttons:

| Column Name | Column Description |
|-------------|---|
| Edit | Used to edit the details of the payment request. |
| | Note: The Edit button appears when the payment request is in the Draft status. |
| Delete | Used to delete the payment request. |
| | Note: The Delete button appears when the payment request is in the Draft status. |
| Distribute | Used to distribute the tender or payment amount. |
| | Note: The Distribute button appears when the payment request is in the Draft status. |

| Column Name | Column Description |
|-----------------------|--|
| Submit for Approval | Used to submit the payment request for approval. |
| | <p>Note: The Submit for Approval button appears when:</p> <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is selected in the payment request type using which the payment request is created. |
| Freeze | Used to freeze the payments which are created through the payment request. |
| | <p>Note: The Freeze button appears when:</p> <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is not selected in the payment request type using which the payment request is created. |
| Approve | Used to approve the payment request. |
| | <p>Note: The Approve button appears when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request. |
| Reject | Used to reject the payment request. |
| | <p>Note: The Reject button appears when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request. |
| Back to Draft | Used to change the status of the payment request to Draft . |
| | <p>Note: The Back to Draft button appears when the payment request is in the Distributed status.</p> |
| Discard | Used to discard the payment creation or transfer request. |
| | <p>Note: The Discard button appears when the payment request is in the Distributed status.</p> |
| Distribute And Freeze | Used to distribute and freeze the payments at the same time. |
| | <p>Note: the Distribute And Freeze button appears only when the payment request is in the Draft status.</p> |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the payment request status is updated |
| Create Date/Time | Displays the date and time when the payment request is created. |

Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

| Column Name | Column Description |
|-----------------------------|---|
| Match Type | Indicates the match type using which the payment was matched. |
| Payee Account ID | Indicates the account for which the payment was made. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Match Value | Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched. |
| Match Entity | Indicates the type of entity against which the payment was matched. The valid values are: <ul style="list-style-type: none"> • Bill • Bill Segment • Contract • Settlement |
| Amount | Displays the entity amount. In case of contract, the entity amount would be zero. |
| Write Off Adjustment Amount | Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit. |
| | Note: The data appears in this column when the match type is Bill Weighted and the payment amount is within the underpayment or overpayment tolerance limit. This column does not appear when the payment request is in the Draft or Rejected status. |
| Paid Amount | Displays the amount which is already paid against the entity. |
| | Note: This column appears when the payment request is in the Draft or Rejected status. |
| Unpaid Amount | Displays the amount which is eligible for payment against the entity. |
| | Note: This column appears when the payment request is in the Draft or Rejected status. |

| Column Name | Column Description |
|------------------|---|
| Payment Amount | Displays the payment amount. If the Show Default check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the Show Default check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where Show Default check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required. |
| Payment Currency | Indicates the currency in which the payment was made. |
| Payment ID | <p data-bbox="524 537 1461 569">Displays the payment ID.</p> <p data-bbox="524 590 1461 783">Note: It has a link. On clicking the link, the Payment screen appears with the details of the respective payment. This column does not appear when the payment request is in the Draft or Rejected status.</p> |
| Payment Status | <p data-bbox="524 804 1461 835">Indicates the status of the payment. The valid values are:</p> <ul data-bbox="557 856 698 1073" style="list-style-type: none"> • Canceled • Error • Freezable • Frozen • Incomplete <p data-bbox="524 1094 1461 1167">Note: This column does not appear when the payment request is in the Draft or Rejected status.</p> |
| Error Message | <p data-bbox="524 1203 1461 1234">Indicates the reason why the payment is in the Error status.</p> <p data-bbox="524 1255 1461 1329">Note: This column does not appear when the payment request is in the Draft or Rejected status.</p> |
| Detail | <p data-bbox="524 1360 1461 1423">On clicking the Detail button, the Edit Payment Segment Amount screen appears where you can edit the payment segment amount.</p> <p data-bbox="524 1444 1461 1778">Note: This column does not appear when the payment request is in the Draft or Rejected status. The Detail button appears in the Detail column when:</p> <ul data-bbox="557 1591 1393 1675" style="list-style-type: none"> • The payment request is in the Distributed or Approval In Progress status • The payment is in the Freezable status. <p data-bbox="524 1686 1461 1749">However, a user with the approval To Do role will not be able to edit the payment segment amount.</p> |

| Column Name | Column Description |
|--------------|---|
| Redistribute | On clicking the Redistribute button, you can redistribute the payment amount among the payment segments. |
| | <p>Note:</p> <p>This column appears when the payment request is in the Distributed or Distribute and Freeze status.</p> <p>The Redistribute button appears in the Redistribute column when:</p> <ul style="list-style-type: none"> The payment request is in the Distributed or Approval In Progress status |

You can edit the payment amount by clicking the **Update Payment Amount** button in the upper right corner of this zone.

Creating a Payment Creation Request

Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

Procedure

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Payment Request Type | Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is not selected. | Yes |

Tip: Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

4. Select the required payment request type from the respective field.
5. Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Payment Request Type | Indicates the payment request type using which you want to create the payment request. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Payor Account Information | Used to indicate the payor account for which you want to create the payment request. | Yes |
| | <p>Note: On specify the account ID, additional information about the account appears corresponding to this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | |
| Payment Date | Used to specify the date when the payment was made. | Yes |
| | <p>Note: By default, the current date appears in this field.</p> | |

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Tender Type | Used to indicate the type of tender through which the payment was made. | Yes |
| Tender Amount | Used to specify the tender amount. | Yes |
| Currency | Used to indicate the currency in which the payment was made. | Yes |
| Check Number | Used to specify the check number if the payment is made through check. | No |
| Auto Pay Route Type Code | Used to indicate when and how automatic payment request of the account is routed to a financial institution. | Yes (Conditional) |
| | <p>Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected.</p> | |
| Schedule Extract Date | Displays the date when the automatic payment request is scheduled to be sent to a financial institution. | Not applicable |
| | <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.</p> | |
| Auto Pay Source Code | Used to indicate the financial institution that receives the automatic payment request. | Yes (Conditional) |
| | <p>Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Distribution and Freeze Date | Displays the date when the automatic payment must be distributed and frozen in the system. | Not applicable |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| Account Number | Used to indicate the bank account number through which the automatic payment was made. | Yes (Conditional) |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| Expires On | Used to specify the date when the tender type will expire. | No |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| Name | Used to specify the name of the person as maintained in the financial institution's system. | No |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| MICR ID | Used to specify the MICR code on the payment. | No |
| Ext. Reference ID | Used to specify the external reference number of the payment on the payment upload interface record. | No |
| Person ID | Used to indicate the person's account ID mentioned in the payment upload interface record. | No |
| Name | Used to indicate the person mentioned in the payment upload interface record. | No |
| Tender Control ID | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Tender Control Search window appears. | |

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment tender. |

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | Used to indicate whether the default payment amount should be displayed against the match type entities. | No |
| | Note: By default, the Show Default check box is selected when you select the match type. | |
| Entity | <p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | Not applicable |
| Entity ID | Used to specify the account or bill ID depending on the match type entity. | Yes |

6. Enter the required details.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.
8. Click **Manual Distribution**.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

| Match Type | Match Entity | Entities |
|----------------------|--------------|---|
| By Bill Regular | Account | Unpaid bills of the account |
| By Bill Weighted | Account | Unpaid bills of the account |
| By Bill | Bill | Unpaid bill |
| By Bill Segments | Account | Unpaid bill segments |
| By Suspense Contract | Account | Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone. |
| By Settlement | Account | Unpaid bill segments where the settlement account is stamped |

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Defining a Characteristic for a Payment Tender**Prerequisites**

To define a characteristic for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

Procedure

To define a characteristic for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment tender. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing the Payment Amount

Procedure

To edit the payment amount against each entity:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

- Click the **Update Payment Amount** button in the upper right corner of the **Payment Distribution** zone.

The **Edit Payment Amount** screen appears. It contains the following two sections:

- Search Criteria** — The **Search Criteria** section allows you to filter the payment distribution records using various search criteria. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Match Type | Used to search the entities which are considered using a particular match type. | Yes |
| | Note: By default, the All option is selected. | |
| Entity ID | Used to search entities which belong to a particular account. | Yes |
| | Note: By default, the All option is selected. | |
| Match Value | Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID). | No |
| Sort By | Used to sort entity information as per the match type defined in the C1-PYREQSRT feature configuration. | No |

- Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| Match Type | Indicates the match type using which the entity is considered. |
| Payee Information | Displays information about the account for which the payment was made. |
| Entity Information | Displays information about the entity against which the payment was matched. |
| Amount | Displays the entity amount. In case of contract, the entity amount would be zero. |
| Paid Amount | Displays the amount which is already paid against the entity. |
| Unpaid Amount | Displays the amount which is eligible for payment against the entity. |
| Payment Amount | Used to specify the payment amount. Note: If the Allow Overpayment option type of the C1-PAYPORTAL feature configuration is set to true , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity. |
| Payment Currency | Indicates the currency in which the payment was made. |

In addition, the **Search Results** section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Total Amount | Displays the tender or transfer amount. |
| Running Total | Displays the sum of payment amount specified against each entity. |
| Running Balance | Displays the difference between total amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero. |

Note: Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (), **Previous** (), **Next** (), and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- Modify the payment amount against an entity, if required.

Note: The sum of payment amount should be equal to the tender or transfer (payment) amount.

- Click **Save**.

The changes made to the payment request are saved.

- Click **Close**.

The payment amount is updated in the **Payment Distribution** zone.

Editing a Payment Request

Procedure

To edit a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Payment Request Information | Displays information about the payment request. | Not applicable |
| Payment Request Type | Indicates the payment request type using which the payment request is created. | Not applicable |
| Payor Account Information | Used to indicate the payor account for which you want to create the payment request. <div style="border: 1px solid black; padding: 5px;"> <p>Note: On specify the account ID, additional information about the account appears corresponding to this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears.</p> </div> | Yes |
| Payment Date | Used to specify the date when the payment was made. | Yes |

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Tender Type | Used to indicate the type of tender through which the payment was made. | Yes |
| Tender Amount | Used to specify the tender amount. | Yes |
| Currency | Used to indicate the currency in which the payment was made. | Yes |
| Check Number | Used to specify the check number if the payment is made through check. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| Auto Pay Route Type Code | Used to indicate when and how automatic payment request of the account is routed to a financial institution. | Yes (Conditional) |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | Note: This field is required when you select a tender type where the Generate Auto Pay check box is selected. |
| Schedule Extract Date | Displays the date when the automatic payment request is scheduled to be sent to a financial institution. | Not applicable |
| | Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. | |
| Auto Pay Source Code | Used to indicate the financial institution that receives the automatic payment request. | Yes (Conditional) |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | Note: This field is required when you select a tender type where the Generate Auto Pay check box is selected. |
| Distribution and Freeze Date | Displays the date when the automatic payment must be distributed and freed in the system. | Not applicable |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| Account Number | Used to indicate the bank account number through which the automatic payment was made. | Yes (Conditional) |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | Note: This field is required when you select a tender type where the Generate Auto Pay check box is selected. |
| Expires On | Used to specify the date when the tender type will expire. | No |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| Name | Used to specify the name of the person as maintained in the financial institution's system. | No |
| | Note: This field appears when you select a tender type where the Generate Auto Pay check box is selected. | |
| MICR ID | Used to specify the MICR code on the payment. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Ext. Reference ID | Used to specify the external reference number of the payment on the payment upload interface record. | No |
| Person ID | Used to indicate the person's account ID mentioned in the payment upload interface record. | No |
| Name | Used to indicate the person mentioned in the payment upload interface record. | No |

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code, Auto Pay Source Code, Account Number, Expires On, and Name** fields.

- **Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment tender. |

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | Used to indicate whether the default payment amount should be displayed against the match type entities. | No |
| | Note: By default, the Show Default check box is selected when you select the match type. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Entity | Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. Bill — Enables you to select the unpaid bill against which you want to match the payment. | Not applicable |
| Entity ID | Used to specify the account or bill ID depending on the match type entity. | Yes |

Note: The **Edit** button appears when the payment request is in the **Draft** status.

- Modify the details of the payment request, if required.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

- Define, edit, or remove characteristics of the payment request, if required.
- Click **Manual Distribution**.

The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

Deleting a Payment Request

Procedure

To delete a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to delete.

The **Payment Request** screen appears.

3. Click the **Delete** button in the **Payment Request** zone.

A message appears confirming whether you want to delete the payment request.

Note: The **Delete** button appears when the payment request is in the **Draft** status.

4. Click **OK**.

The payment request is deleted.

Distributing the Tender or Payment Amount

Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.

The **Payment Request** screen appears.

3. Click the **Distribute** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

Note:

The **Distribute** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Distributing and Freezing the Tender or Payment Amount

Procedure

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.

The **Payment Request** screen appears.

3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

Note:

The **Distribute And Freeze** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount**Procedure**

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.

The **Payment Request** screen appears.

3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.

The required payment gets redistributed among the account's contracts.

Note: The **Redistribute** button appears when the payment status is in **Incomplete**, **Error**, or **Freezable** status.

| How to edit the payment amount against each entity | Editing the Payment Amount on page 1439 |

Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount when there are multiple pay segments in a payment.

Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

| Field Name | Field Description |
|---------------------------|---|
| Payment Event Information | Displays information about the payment event which is created through the payment request. |
| Payment Information | Displays information about the payment which is created through the payment event. |
| Payee Account Information | Displays information about the account for which the payment is made. |
| Match Value | Displays information about the entity against which the payment is matched. |
| Payment Amount | Displays the total payment amount. |
| Running Total | Displays the sum of payment amount specified against each pay segment. |
| Running Balance | Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero. |

In addition, this section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Sr No | Indicates the sequence number of the pay segment. | Not applicable |

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Entity Information | Displays information about the entity (such as bill segment or contract) against which the pay segment is created. | Not applicable |
| Total Amount | Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount. | Not applicable |
| Unpaid Amount | Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount. | Not applicable |
| Payment Amount | Used to specify the payment amount that you want to distribute against the pay segment. | Yes |
| | Note: This field is non-editable when: <ul style="list-style-type: none"> • There is only one pay segment in a payment. • A user with the approval To Do role is reviewing the pay segment amount. | |
| Payment Currency | Indicates the currency in which the payment was made. | Not applicable |
| Pay Segment ID | Displays the pay segment ID. | Not applicable |

Note:

The **Detail** button appears in the **Detail** column when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (), **Previous** (), **Next** (), and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.

The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

Freezing Payments Created Through a Payment Request

Procedure

To freeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

| If you are... | Then |
|--|---|
| Freezing the payments created through a payment creation request | The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed . |
| Freezing the payments created through a payment transfer request | The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed . |

Note:

The **Freeze** button appears when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Request for Approval

Procedure

To submit a payment request for approval:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to submit for approval.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before submitting the payment request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.

The status of the payment request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

Note:

The **Submit for Approval** button appears when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment request for approval.

Approving a Payment Request

You can view the number of payment requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment request based on the observations.

Note: The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To approve a payment request:

1. Do either of the following:

| If you want to | Then |
|---|---|
| Approve a payment request through the Payment Request screen | <ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review. |
| Approve a payment request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-PAYRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the payment request that you want to review. |

The **Payment Request** screen appears.

2. Review the payment request details.
3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

| If you are... | Then |
|--------------------------------------|---|
| Approving a payment creation request | The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed . |
| Approving a payment transfer request | The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed . |

Note: The **Approve** button appears when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

Rejecting a Payment Request

Prerequisites

To reject a payment request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a payment request, you need to specify the reason why you want to reject the payment request. If you are rejecting a payment creation request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To reject a payment request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Reject a payment request through the Payment Request screen | <ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review. |
| Reject a payment request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. |

| If you want to... | Then... |
|-------------------|---|
| | <p>The To Do Type for User Search window appears.</p> <ol style="list-style-type: none"> Enter C1-PAYRQ in the To Do Type field. Click the Search button corresponding to the To Do Type field. <p>The To Do List screen appears.</p> <ol style="list-style-type: none"> Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the payment request that you want to review. |

The **Payment Request** screen appears.

- Review the payment request details.
- If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
- Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the payment request. | Yes |

Note: The **Reject** button appears when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

Discarding a Payment Request

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

Note:

The **Discard** button appears only when the payment request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment request is similar to rejecting a payment request. However, you can only reject a payment request, when approval workflow is on while creating a payment request but discarding a payment request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Request

Procedure

To view the log of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the payment request. |
| Details | Displays the details about the action performed on the payment request. |
| User | Indicates the user who has performed the action on the payment request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the payment request. |
| Status Reason | Indicates the reason why the payment request was rejected. |

Note: You can manually add a log entry for the payment request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Adding a Log Entry for a Payment Request

Procedure

To add a log entry for a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to edit.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

The **Add Payment Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Payment Request Information | Displays information about the payment request. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Log Details | Used to specify additional comments for the payment request. | Yes |

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Payment Request Log** zone.

Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 1457
- [Payments](#) on page 1460
- [Payment Segments](#) on page 1462

Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Search By | <p>Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are:</p> <ul style="list-style-type: none"> • Payor Account/Payment Event • Tender Details • Suspense/Excess Credit Contract <p>Note: By default, the Payor Account/Payment Event option is selected.</p> | Yes |
| Payment Event ID | <p>Used to search a particular payment event.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.</p> | No |
| Payor Account ID | <p>Used to search payment events which are created for a particular payor account.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | No |
| Payor Name | <p>Used to search payment events which are created for a particular payor.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> | No |
| Payment Date | <p>Used to search payment events which are created on a particular date.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> | No |
| Tender Type | <p>Used to search payment events where a particular tender type is used.</p> <p>Note: This field appears when you select the Tender Details option from the Search By list.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Check Number | Used to search a payment event which includes payments made through a particular check. | No |
| | Note: This field appears when you select the Tender Details option from the Search By list. | |
| MICR ID | Used to search payment events which include payments made with a particular MICR code. | No |
| | Note: This field appears when you select the Tender Details option from the Search By list. | |
| Contract ID | Used to search payment events which include payments made against a particular suspense or excess credit contract. | No |
| | Note: This field appears when you select the Suspense/Excess Credit Contract option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears. | |

Note: You must specify at least one search criterion while searching for a payment event.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Payment Event Information | Displays additional information about the payment event. |
| | Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event. |
| Transfer | On clicking the Transfer button, you can transfer all payments (which are in either Frozen and Error status) of the payment event to another payee account. |
| | Note: The Transfer button appears when: <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event. |

| Column Name | Column Description |
|------------------------|--|
| Cancel | On clicking the Cancel button, you can cancel all payments (which are in the Frozen status) of the payment event. |
| | <p>Note: The Cancel button appears when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen status. • One or more payments of the payment event are not in the Freezable or Error status. • There is no payment transfer request which is currently in progress for the payment event. |
| Delete | On clicking the Delete button, you can delete the payment event. |
| | <p>Note: The Delete button appears when the payments of a payment event are in the Freezable, Error or Incomplete status.</p> |
| Additional Information | Displays information about the status of the payment event. |
| Payment Date | Displays the date when the payment was made. |
| Payor Name | Indicates the person who has made the payment. |
| | <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> |
| Payor Account ID | Indicates the account which made the payment. |
| | <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Tender Amount | Displays the tender amount. |
| Payment Event ID | Displays the payment event ID. |

Searching for a Payment Event

Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.

- From the **Main Menu**, select **Payments** and then click **Payment Event Summary**.

The **Payment Event Summary** screen appears.

- Enter the search criteria in the **Search Payment Event** zone.

Note:

You can search for a payment event and payor account by clicking the **Search** (🔍) icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment events that meet the search criteria appears in the **Search Results** section.

Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

Prerequisites

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

Procedure

To create a payment transfer request:

- Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- Do either of the following:

| If you want to... | Then... |
|--|--|
| Transfer all payments of a payment event | <ol style="list-style-type: none"> In the Search Results section, click the Transfer button in the Transfer column corresponding to the payment event whose payments you want to transfer. |

| If you want to... | Then... |
|--|---|
| | <p>Note: The Transfer button appears only when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event. |
| Transfer one or more payments of a payment event | <ol style="list-style-type: none"> 1. In the Search Results section, click the Broadcast () icon corresponding to the payment event whose payments you want to view. The Payments zone appears. 2. Select the check box corresponding to the payments that you want to transfer. 3. Click the Transfer button in the Payments zone. <p>Note: You can transfer a payment when it is in the Frozen or Error status.</p> |

The **Select Payment Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Payment Request Type | Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is selected. | Yes |

3. Select the required payment request type from the respective field.
4. Click **OK**.
 - **Main** - Used to specify basic details about the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Payment Request Type | Indicates the payment request type using which you want to create the payment request. | Not applicable |
| Payment Event Information | Displays information about the payment event whose payments you want to transfer. | Not applicable |
| Transfer Amount | Displays the total payment amount which you want to transfer. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Payment Date | Used to specify the date when the payment was transferred. | Yes |
| | Note: By default, the current date appears in this field. | |
| Transfer Reason | Used to indicate the reason why you want to transfer the payments. | Yes |
| | Note: The list includes only those payment cancel reasons where the Payment Transfer check box is selected. | |

- **Payor Account Details** — This section contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payor Account Information | Displays information about the payor's account whose payments you want to transfer. |

- **Payment Details** — This section contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Payment(s) | Displays information about the payment that you want to transfer. |

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | Used to indicate whether the default payment amount should be displayed against the match type entities. | No |
| | Note: By default, the Show Default check box is selected when you select the match type. | |
| Entity | Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. | Not applicable |
| Entity ID | Used to specify the account or bill ID depending on the match type entity. | Yes |

5. Enter the required details.

Note:

You can search for an entity (such as account or bill) by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

6. Click Manual Distribution.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

| Match Type | Match Entity | Entities |
|----------------------|--------------|---|
| By Bill Regular | Account | Unpaid bills of the account |
| By Bill Weighted | Account | Unpaid bills of the account |
| By Bill | Bill | Unpaid bill |
| By Bill Segments | Account | Unpaid bill segments |
| By Suspense Contract | Account | Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone. |
| By Settlement | Account | Unpaid bill segments where the settlement account is stamped |

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs) do not exist for the payee account.

Canceling a Payment Event**Prerequisites**

To cancel a payment event, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Cancel** button in the **Cancel** column corresponding to the payment event that you want to cancel.

The **Cancel** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|------------------------------|
| Cancel Reason | Used to indicate the reason why you want to cancel the payment event. | Yes |
| Bank | Used to indicate the bank which should be charged for the cancellation. | Yes |
| Bank Account | Used to indicate the bank account which should be charged for the cancellation. | Yes |

Note: The **Cancel** button appears when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

3. Select the cancel reason, bank, and bank account from the respective fields.
4. Click **OK**.

The payment tender and all payments in the payment event are cancelled.

Deleting a Payment Event

You can delete a payment event when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

Procedure

To delete a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment event that you want to delete.

A message appears confirming whether you want to delete the payment event.

Note: The **Delete** button appears when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

3. Click **OK**.

The payment event is deleted.

Canceling a Payment

Prerequisites

To cancel a payment of a payment event, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment of a payment event:

- Search for the payment event in the **Payment Event Summary** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment event whose payment you want to cancel.

The **Payments** zone appears.

- Select the check box corresponding to the payment that you want to cancel.
- Click **Cancel** in the **Payments** zone.

The **Payment Cancel** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Cancel Reason | Used to indicate the reason why you want to cancel the payment. | Yes |

Note: You can cancel a payment when it is in the **Frozen** status.

- Select the cancel reason from the respective list.
- Click **OK**.

The status of the payment is changed to **Canceled**.

Chapter 22

Account Receivable Central

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Note: The **Unapply** button appears when the offset request is in the **Processed** status

| Bill Information | Original Outstanding Amount | Offset Amount | Remaining Bill Balance | Comments |
|------------------|-----------------------------|---------------|------------------------|---|
| Bill 1 | \$1200 | —\$800 | \$400 | Bill 1 amount \$1200 is offset against Bill 2. |
| Bill 2 | —\$1000 | \$500 | —\$500 | From Bill 2, \$500 is offset against from Bill 1. |
| Bill 3 | —\$300 | \$300 | 0 | From Bill 3, \$300 is offset against from Bill 1. |

Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

| Bill Information | Original Outstanding Amount | Offset Amount | Remaining Bill Balance | Comments |
|------------------|-----------------------------|---------------|------------------------|--|
| Bill 1 | \$2000 | —\$700 | \$1300 | The Offset amount \$400 is offset against Bill 2. |
| Bill 2 | —\$400 | \$400 | 0 | Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000. |
| Bill 3 | —\$300 | \$300 | 0 | Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600. |

Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

| Bill Information | Outstanding Amount | Outstanding Amount (in Offset currency) | Offset Amount | Remaining Bill Balance | Comments |
|------------------|--------------------|---|---------------|------------------------|--|
| Bill 1 | \$300 | \$300 | —\$130.1 | \$169.9 | Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$) |
| Bill 2 | —£100 | —\$130.1 | \$130.1 | 0 | Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1. |

Note: In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

Note: The adjustments are created in the currency of the bill.

Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

Refund

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

Write Off

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

Dispute

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

Account Receivable Central

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1474

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1525
- [Hold Request \(Used for Viewing\)](#) on page 1766
- [Refund Request](#) on page 1672
- [Write Off Request](#) on page 1705
- [Dispute Request \(Used for Viewing\)](#) on page 2104

Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details | Yes |
| | Note: By default, the Person Details option is selected. | |
| Person ID | Used to select the person ID based on which you want to search for bills of a person. | No |
| | Note: This field appears when you select the Person Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Person Hierarchy | Used to indicate whether to display hierarchy of the person linked to a particular bill. | No |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Person Identifier Type | Used to select the identifier type based on which you want to search for bills of a person. | Yes (Conditional) |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Person Identifier | Used to specify the value of the person identifier type. | Yes (Conditional) |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Bills on Hold | Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes | No |
| | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Bill Balance | Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero | No |
| Pending Bills | Used to indicate whether the bill is pending. | No |
| Account ID | Used to search for bills of a particular account. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Account Identifier Type | Used to specify the account identifier type of the account whose bill you want to search. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Account Identifier | Used to select the account identifier based on which you want to search for bills of a particular account. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Bill ID | Used to search a particular bill. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Alternate Bill ID | Used to search a particular bill using the alternate bill ID. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Invoice Currency | Used to search for bills which are billed in a particular currency. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Bill Date From | Used to search bills which are created from a particular date onwards. | No |
| To | Used to search bills which are created till a particular date. | No |
| Bill Outstanding Amount From | Used to search bills with a particular minimum outstanding amount. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| To | Used to search bills with a particular maximum outstanding amount. | |

Note: You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Bill Information | Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Original Bill Amount | Displays the bill amount when the bill was generated. |
| Outstanding Amount | Displays the current bill balance amount. |
| Bill Date | Used to specify the date on which the bill was generated. |
| Hold Amount | Displays the amount from the bill that is on hold. |
| Account Information | Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective bill. |
| Person Information | Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective bill. |

This zone contains following buttons:

| Button Name | Button Description |
|-----------------------|--|
| Single Offset | Used to add the selected bill with same currency to an offset request. |
| Mass Offset | Used to add the selected bills with same currency to an offset request. |
| Cross Currency Offset | Used to add the selected bills with different currency to an offset request. |
| Hold | Used to add the selected bill to hold request to be put on hold. |
| Write Off | Used to add the selected bill to a write off request. |
| Refund | Used to add the selected bill to a refund request. |
| Dispute | Used to add the selected bill to a dispute request. |

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**.
The **Account Receivable Central** screen appears.

3. Enter the search criteria in the **Search Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Note: The wild card search for searching bill in the **Search Bill** zone is applicable when you select the **Bill Details** option from the **Search By** list.

4. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

Chapter 23

Offset Request

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Prerequisites](#)
- [Offset Request \(Without Approval\) Status Transition](#)
- [Offset Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffsetRequest](#)
- [Additional Algorithms Used in Offset Request](#)
- [Offset Request Type](#)
- [Offset Request \(Used for Searching\)](#)
- [Offset Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to offset the credit and debit bills across accounts of the person and/or its hierarchy. However, you can offset bills across person's hierarchy when the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**.

You can offset a credit bill with a debit bill and vice-versa. You can offset one or more credit bills with one or more debit bills and vice-versa. You can offset the credit and debit bills in the same currency or in the different currencies. The system enables you to offset bills through an offset request. You can create an offset request from the following screens:

- [Account Receivable Central](#) on page 1474
- [Offset Request \(Used for Searching\)](#) on page 1518

You can create the following types of offset request from both the above screens:

- [Single Offset](#) on page 1483
- [Mass Offset](#) on page 1484
- [Cross Currency Offset](#) on page 1487

While creating an offset request, you need to specify an offset request type using which you want to create the offset request. It is the offset request type which helps the system to determine:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustment should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether the transfer or offset adjustments should be created while offsetting bills through an offset request.

In addition, while creating an offset request, you need to specify a primary bill for which you want to create the offset request. A primary bill can be a debit

or credit bill. Once the primary bill is added to an offset request, you can never remove it from the offset request.

Once you specify an offset request type and primary bill, the offset request is created in the **Draft** status. You can then add one or more debit or credit bills in the same or different currencies to the offset request depending on whether you want to create single, mass, or cross currency offset request. These bills are called as secondary bills. You can remove a secondary bill from the offset request when it is in the **Draft** status.

Once both the debit and credit bills are added to an offset request, the default offset amount is calculated for each bill. You can then update the offset amount of a bill, if required. Once the offset amount is specified for each bill, you can submit the offset request. On submitting an offset request, the system checks whether the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type). If the number of financial transactions does not exceed the defer processing count, the system creates the transfer or offset adjustments in the **Frozen** status. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. The batch then creates the transfer or offset adjustments for these offset requests in the **Frozen** status.

You can optionally configure the approval process for the offset request. The approver can either approve or reject an offset request based on the observations. The system also enables you to unapply (i.e. cancel) an offset request. On canceling an offset request, the transfer or offset adjustments created for bills through the offset request are canceled.

An offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1490 and [Offset Request \(With Approval\) Status Transition](#) on page 1491. Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request feature, see [Prerequisites](#) on page 1489.

Single Offset

Single offset means you can offset one credit bill against multiple debit bills and vice-versa in the same currency. For example, the following bills are created for Garry Smith:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|--|-------------|
| A1 | Bill 1 | 06-18-2018 | BS1 | 10 | -\$100 | -\$100 | -\$20 |
| | Bill 2 | 06-12-2018 | BS2 | 10 | \$30 | \$30 (This is because \$20 is already paid.) | \$10 |
| | | | BS3 | 20 | \$20 | | |
| | Bill 3 | 06-22-2018 | BS4 | 10 | \$30 | \$30 | \$10 |
| | Bill 4 | 06-28-2018 | BS5 | 20 | \$30 | \$40 | - |
| | | | BS6 | 30 | \$10 | | |

The system enables you to offset these bills through a single offset request. While creating a single offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 - (-\$20)) = (-\$100 + \$20) = -\$80$$

Sum of debit bills' amount which is available for offsetting:

$$((\$30 - \$10) + (\$30 - \$10) + (\$40)) = \$80$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a single offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

| Transfer | Transfer Adjustments |
|----------|--|
| 1 | <ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2 |
| 2 | <ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4 |
| 3 | <ul style="list-style-type: none"> \$30 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5 |
| 4 | <ul style="list-style-type: none"> \$10 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$10 transfer adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$80 offset adjustment is created for Bill 1 and matched to -\$100 Bill Segment Cancellation (BS1) FT 1
- \$20 offset adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2
- \$20 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- \$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5
- \$10 offset adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1495.

You can create a single offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a single offset request, see [Creating an Offset Request](#) on page 1522.

Mass Offset

Mass offset means you can offset one or more credit bills against one or more debit bills and vice-versa in the same currency. For example, the following bills are created for Juliet Hurd:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| A11 | Bill 1 | 01-15-2019 | BS1 | 10 | -\$50 | -\$100 | - |
| | | | BS2 | 20 | -\$50 | | |

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| | Bill 2 | 01-20-2019 | BS3 | 10 | -\$50 | -\$50 | - |
| | Bill 3 | 01-18-2019 | BS4 | 10 | \$30 | \$50 | - |
| | | | BS5 | 10 | \$20 | | |
| A12 | Bill 4 | 01-21-2019 | BS6 | 10 | \$30 | \$30 | - |
| | Bill 5 | 01-25-2019 | BS7 | 20 | \$30 | \$40 | - |
| | | | BS8 | 30 | \$10 | | |
| A13 | Bill 6 | 01-29-2019 | BS9 | 10 | \$20 | \$20 | - |

The system enables you to offset these bills through a mass offset request. While creating a mass offset request, you can add the Bill 1 as the primary bill. Once the offset request is created, you can add another credit bill (i.e. Bill 2) and the debit bills – Bill 3, Bill 4, Bill 5, and Bill 6. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 + (-\$50)) = (-\$100 - \$50) = -\$150$$

Sum of debit bills' amount which is available for offsetting:

$$(\$50 + \$30 + \$40 + \$20) = \$140$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. In this case, the default offset amount is set to \$140. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a mass offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

| Transfer | Transfer Adjustments |
|----------|---|
| 1 | <ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$30 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4 |

| Transfer | Transfer Adjustments |
|----------|---|
| 2 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$20 transfer adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5 |
| 3 | <ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6 |
| 4 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$20 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7 |
| 5 | <ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7 |
| 6 | <ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8 |
| 7 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$20 transfer adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS1) FT 1
- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS2) FT 2
- \$40 offset adjustment is created for Bill 2 and matched to -\$50 Bill Segment Cancellation (BS3) FT 3
- -\$30 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- -\$20 offset adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5
- -\$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6
- -\$30 offset adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
- -\$10 offset adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8
- -\$20 offset adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1495.

You can create a mass offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a mass offset request, see [Creating an Offset Request](#) on page 1522.

Cross Currency Offset

Cross currency offset means you can offset one credit bill against multiple debit bills and vice-versa in the different currencies. For example, the following bills are created for Mark Forbes:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| A1 | Bill 1 | 09-18-2018 | BS1 | 10 | -\$250 | -\$250 | - |
| | Bill 2 | 09-12-2018 | BS2 | 10 | €10 | €30 | - |
| | | | BS3 | 20 | €20 | | |
| | Bill 3 | 09-22-2018 | BS4 | 10 | €50 | €50 | - |
| | Bill 4 | 09-28-2018 | BS5 | 20 | €30 | €70 | - |
| | | | BS6 | 30 | €40 | | |

The system enables you to offset these bills through a cross currency offset request. While creating a cross currency offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. In a cross currency offset request, you can offset the bills which are in the currency different from the primary bill. For example, if you have added a primary bill with credit balance in USD, you can only add the debit bills in the currency other than USD. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

-\$250

Sum of credit bills' amount which is available for offsetting (in offset currency):

-€227

Sum of debit bills' amount which is available for offsetting:

(30€+50€+70€)=€150

Sum of debit bills' amount which is available for offsetting (in offset currency):

\$33+\$55+\$77=\$165

The system considers the credit or debit bills' total (in the primary bill's currency) whichever is less as the default offset amount. In this case, the default offset amount is set to \$165. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a cross currency offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

| Transfer | Transfer Adjustments |
|----------|--|
| 1 | <ul style="list-style-type: none"> \$11 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€10 transfer adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2 |
| 2 | <ul style="list-style-type: none"> \$22 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€20 transfer adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3 |
| 3 | <ul style="list-style-type: none"> \$55 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€50 transfer adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4 |
| 4 | <ul style="list-style-type: none"> \$33 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€30 transfer adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5 |
| 5 | <ul style="list-style-type: none"> \$44 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€40 transfer adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$165 offset adjustment is created for Bill 1 and matched to -\$250 Bill Segment Cancellation (BS1) FT 1
- €10 offset adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
- €20 offset adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
- €50 offset adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
- €30 offset adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
- €40 offset adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [C1-OFST-DIST](#) on page 1495.

To use the cross currency offset request feature, you need to do the following:

- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.

You can create a cross currency offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a cross currency offset request, see [Creating an Offset Request](#) on page 1522.

Prerequisites

To setup the offset request feature, you need to do the following:

- Define the required offset adjustment types where the **A/P Request Type Code** field is not set to **REFUND**.
- Define a default offset amount algorithm using the **C1-OFST-AMT** algorithm type.
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive a To Do while submitting an offset request for approval.
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must not approve an offset request.
- Define the required offset request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Offset Request**.
- Define the values for the **CAN_RSN_CD_FLG** lookup field.
- Set the parameters of the **C1-UPD-FUND**, **C1-DFRUNAPLY**, **C1-WTBS-CRBL**, and **C1-OFST-DIST** algorithms.
- Define the status reasons for the **Rejected** and **Unapplied Offset** statuses of the **C1-OffsetRequest** business object in the **Status Reason** screen.
- Set the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration.
- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.
- Set the batch control type of the **Offset Request Periodic Monitor (C1-OFSRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

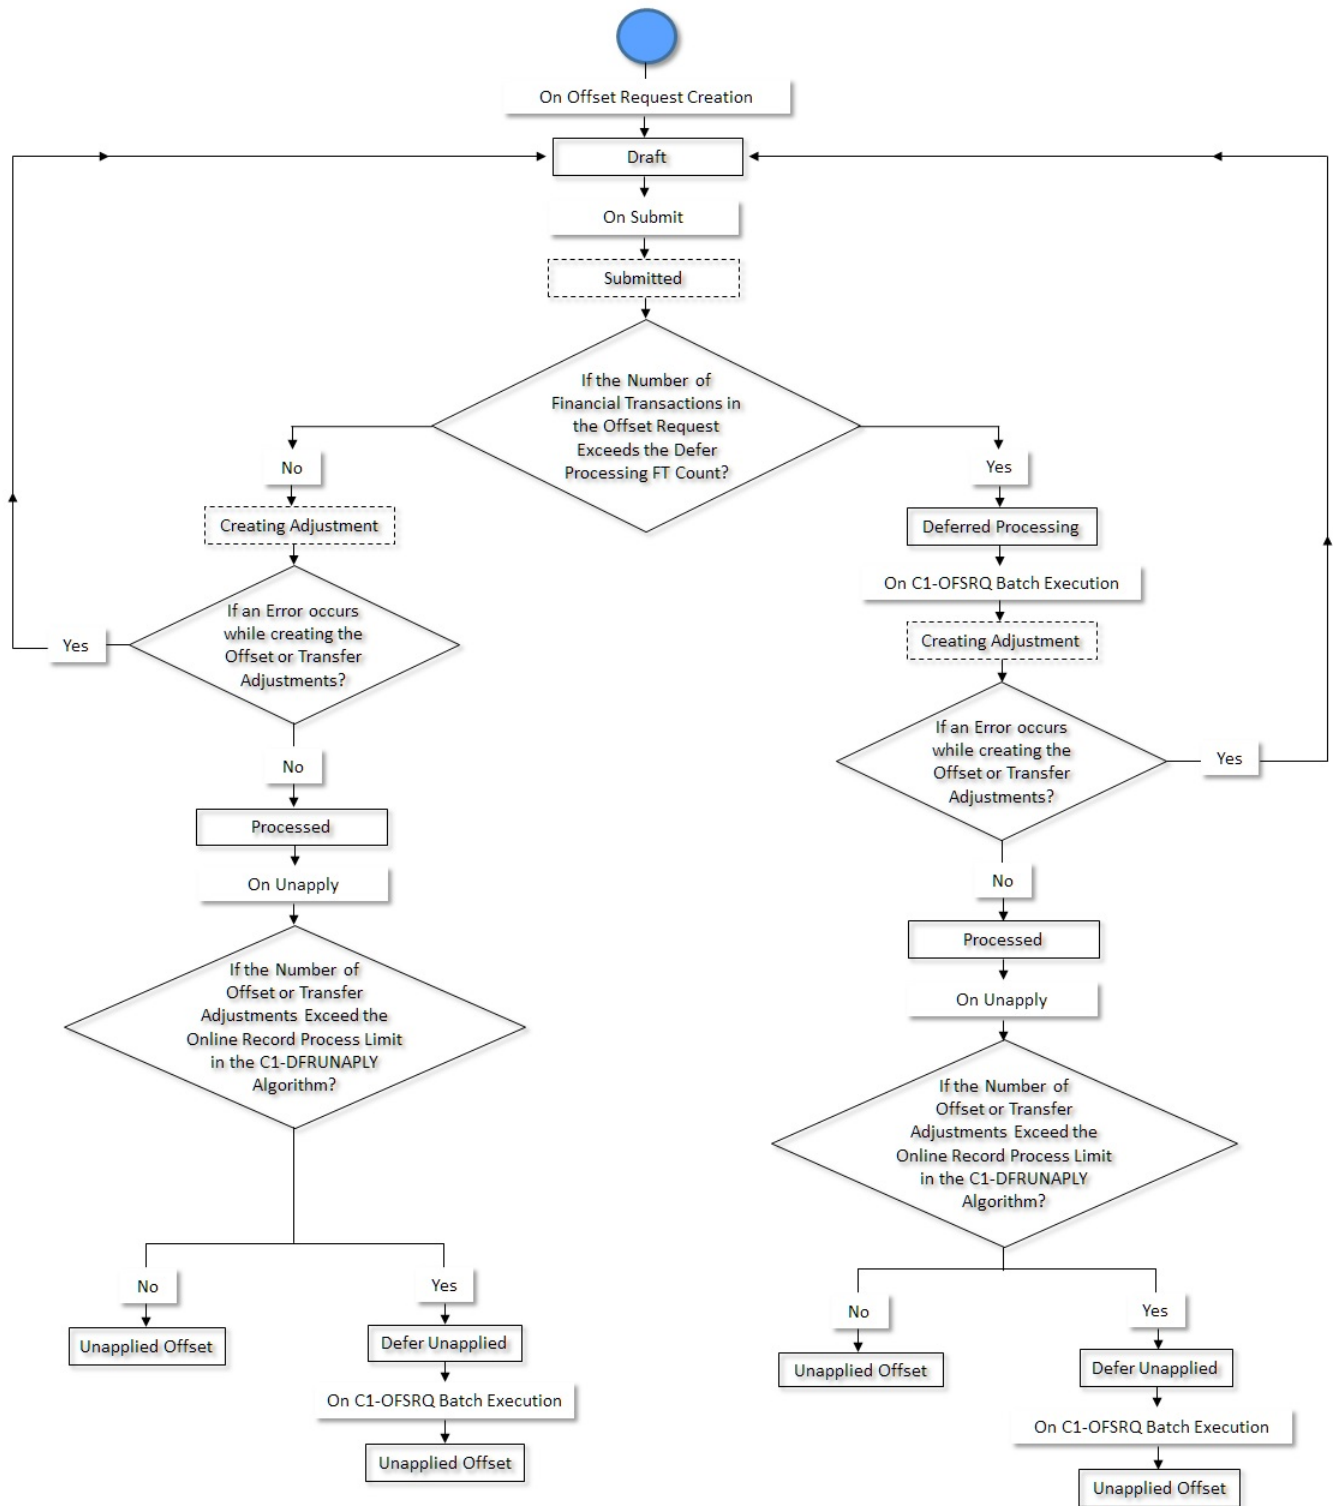

For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-OFFST-INF

This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Offset Request Type Description
2. Offset Request Status Description
3. Offset Request ID

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-OFFSUBENT

This algorithm is invoked when you click the **Submit** button. It validates the following:

- Whether the outstanding amount of the selected bills is not zero
- Whether the selected bills are in the **Complete** status
- Whether the overridden offset amount of a bill is not zero
- Whether the sum of the debit bills' offset amount is equal to the sum of the credit bills' offset amount
- Whether at least one debit and credit bills are selected in the offset request

If the validation is successful, it checks whether the **Approval Required** option is selected in the respective offset request type. If the **Approval Required** option is selected in the respective offset request type, it changes the status of the offset request to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective offset request type, it checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

C1-OFFAPPENT

This algorithm is invoked when the status of the offset request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type which is specified in the respective offset request type. Once a To Do is created, it is assigned to all users with the approval To Do role which is specified in the respective offset request type. In addition, it creates a log entry for the offset request when the To Do is created.

C1-OFFAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role which is specified in the respective offset request type. If so, it allows the approver to approve or reject the offset request. It also ensures that the submitter does not approve or reject the offset request.

C1-OFSAPRENT

This algorithm is invoked when you click the **Approve** button. It checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-OFST-DIST

This algorithm is invoked when the status of the offset request is changed to **Creating Adjustment**. It creates offset adjustments using the adjustment type specified in the offset request and sets the status of the offset adjustments to **Frozen**. If the **Transfer Adjustment** option is selected in the respective offset request type, it creates transfer adjustments in the **Frozen** status.

This algorithm distributes the offset amount of a bill in the following manner:

1. **Internal Offsetting Within Each Bill** - This happens when a bill contains both debit and credit line items. The internal offsetting happens either at the bill segment or contract level depending on the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. If the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BILL** or **SA**, the internal offsetting happens at the contract level. However, if the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BSEG**, the internal offsetting happens at the bill segment level. In the bill, the internal offsetting is done starting from a credit contract with highest payment priority against a debit contract with highest payment priority by creating transfer adjustments. This continues until the sum of credit or debit amount within a bill is exhausted.
2. **Offsetting Across Debit and Credit Bills** - This offsetting is always done from the credit bills to the debit bills with the objective to reduce the debit bill balance. This algorithm checks whether any match event is created for the bill. If so, it creates the offset adjustments against the bill using the existing match event. If there are no match events created for the bill, this algorithm creates match events using the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. It distributes the amount from the credit bill starting with the oldest due date. This continues until the credit bill balance is exhausted.

It contains the following parameters:

- **Match Type** - Used to specify the match type using which you want to distribute the offset amount. You must specify a match type where the payment distribution override algorithm is attached.

Note: If a bill which is offset is partially paid using a match type, this algorithm uses the same match type for offset distribution. However, if no payment is received for a bill which is offset, this algorithm uses the match type which is specified in the **Match Type** parameter for offset distribution.

- **Match Type Entity (Valid Values: BILL, BSEG, SA)** - Used to indicate the entity, such as bill, bill segment, or contract, against which you want to create match event. It is used to create match events for bills which are unpaid. The valid values are:
 - **BILL** - Used when you want to stamp same match event on all financial transactions of the bill.
 - **BSEG** - Used when you want to stamp unique match event on each bill segment or adjustment financial transaction.
 - **SA** - Used when you want to stamp same match event on all financial transactions which are created for the same contract.
- **Credit Bill Distribution Algorithm** - Used to specify an algorithm which helps to create offset adjustments for a credit bill at the bill segment level. This parameter is required when the **Transfer Adjustment** option is not selected in the respective offset request type.

Note: The **C1-WTBS-CRBL** algorithm type is shipped with the product. You can attach an algorithm created using the **C1-WTBS-CRBL** algorithm type to the **Credit Bill Distribution Algorithm** parameter. For more information, see [C1-WTBS-CRBL](#) on page 1497.

C1-UPD-HOLD

This algorithm updates the hold request whenever a bill on hold is offset through an offset request. If the remaining outstanding amount of a bill after offsetting is not zero and is less than the current hold amount, this algorithm updates the hold amount to the current hold amount plus remaining outstanding bill balance. For example, if the original outstanding amount is 80\$, hold amount is 40\$, offset amount is 20\$, then the remaining outstanding amount (i.e. $80\$ - 40\$ - 20\$ = 20\$$) is less than the current hold amount (i.e. 40\$). Therefore, this algorithm updates the hold amount of the bill in the hold request to 60\$ (i.e. $40\$ + 20\$$).

However, if the remaining outstanding amount of a bill after offsetting is zero and the bill is included in any active hold request, the hold end date of the bill in the hold request is changed to the system date.

In both the above scenarios, this algorithm creates a log entry for the offset and hold requests. The bill whose hold details (i.e. either hold amount or hold end date) are updated through the offset request is maintained in its log. Similarly, the old and updated hold amount and hold end date of the bill are maintained in the respective hold request log.

C1-UPD-FUND

If a bill which is offset through an offset request is present in a funding request which is in the **Draft** status, this algorithm updates the funding amount of the bill in the funding request. If entire sum of the funding and garnishment amount of a bill is offset through the offset request, the bill is excluded from the funding request.

It contains the following parameter:

- **Funding Exclusion Reason Code** - Used to indicate the reason why you want to exclude the bill from the funding request. This parameter is mandatory while excluding a bill from a funding request. You must specify a value which is already defined in the **CAN_RSN_CD_FLG** lookup field.

C1-DFRUNAPLY

This algorithm is invoked when you click the **Unapply** button. It checks whether the number of transfer or offset adjustments created through the offset request exceeds the online record process limit defined in this algorithm. If the number of transfer or offset adjustments does not exceed the online record process limit, the system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**. However, if the number of transfer or offset adjustments exceeds the online record process limit, the system changes the status of the offset request to **Defer Unapplied**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of transfer or offset adjustments you can process in the real time (i.e. immediately).

C1-UNAPOFST

This algorithm is invoked when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is executed. It cancels all transfer or offset adjustments created through the offset request and then changes the status of the offset request to **Unapplied Offset**.

C1-UPDT-FUND

Once the transfer or offset adjustments of a bill are canceled, it checks whether the bill is included in any funding request which is in the **Draft** status. If so, it updates the funding amount of the bill in the respective funding request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Additional Algorithms Used in Offset Request

Besides using the algorithms attached to the lifecycle, the system uses the following algorithms for the **Offset Request** feature:

- [C1-OFST-AMT](#) on page 1497
- [C1-WTBS-CRBL](#) on page 1497

C1-OFST-AMT

This algorithm calculates the default offset amount whenever a bill is added to the offset request. The default offset amount is equal to the sum of outstanding amount of the debit or credit bills whichever is less. For example, if the following bills are added to the offset request:

- Bill 1 (-100\$) where due date is set to 01-01-2018
- Bill 2 (-100\$) where due date is set to 01-01-2019
- Bill 3 (25\$) where due date is set to 01-01-2018
- Bill 4 (25\$) where due date is set to 06-01-2018

In such case, the system sets the default offset amount of Bill 1 to 50\$.

Note: This algorithm does not calculate the default offset amount until both the debit and credit bills are added to the offset request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Offset Request Type

Oracle Revenue Management and Billing allows you to define an offset request type using which you can create an offset request. It is the offset request type which helps the system to determine the following:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustments should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether transfer or offset adjustments should be created while offsetting bills through an offset request.

The **Offset Request Type** screen allows you to define, edit, delete, and copy an offset request type. It contains the following zones:

- [Offset Request Type List](#) on page 1498
- [Offset Request Type](#) on page 1499

Offset Request Type List

The **Offset Request Type List** zone lists the offset request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Offset Request Type | Displays the offset request type. |
| Description | Displays the description of the offset request type. |
| Edit | On clicking the Edit () icon, the Offset Request Type screen appears where you can edit the details of the offset request type. |
| Duplicate | On clicking the Duplicate () icon, the Offset Request Type screen appears where you can define a new offset request type using an existing offset request type. |

| Column Name | Column Description |
|-------------|---|
| Delete | On clicking the Delete (🗑️) icon, you can delete the offset request type. |
| | Note: You can delete an offset request type when an offset request is not created using the offset request type. |

On clicking the **Broadcast** (📡) icon corresponding to an offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

| How to view the details of an offset request type | Viewing the Offset Request Type Details on page 1517 |

Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. It contains the following sections:

- **Main** - Displays basic information about the offset request type. It contains the following fields:

| Field Name | Field Description |
|---------------------------------|--|
| Offset Request Type | Displays the offset request type. |
| Description | Displays the description of the offset request type. |
| Offset Request Business Object | Indicates the business object using which an offset request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the offset request type. |
| Status | Indicates the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Adjustment Type | Indicates the adjustment type using which the transfer or offset adjustments should be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Default Offset Amount Algorithm | Indicates the algorithm using which the default offset amount should be calculated while adding a bill in an offset request. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |

| Field Name | Field Description |
|------------------------|---|
| Defer Processing Count | Displays the count which helps to determine whether an offset request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). |
| Approval Required | Indicates whether approval is required while offsetting bills through an offset request. |
| Approval To Do Type | Indicates that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type. This field appears when the Approval Required option is selected. |
| Approval To Do Role | Indicates that users with the specified To Do role can only approve an offset request which is submitted for approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role. This field appears when the Approval Required option is selected. |
| Submitter To Do Type | Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the offset request type. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. |
| Submitter To Do Role | Indicates that users with the specified To Do role cannot approve an offset request which is submitted for approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. |
| Bill Search Period | Displays the maximum search period (in days) which is allowed while searching bills in an offset request. |
| Transfer Adjustment | Indicates whether transfer adjustments should be created while offsetting bills through an offset request. |

- **Characteristics** - Lists the characteristics defined for the offset request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the offset request type. |
| Delete | Used to delete the offset request type. |
| | Note: You can delete an offset request type when an offset request is not created using the offset request type. |
| Duplicate | Used to create a new offset request type using an existing offset request type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the offset request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to an offset request type in the **Offset Request Type List** zone.

Defining an Offset Request Type

Prerequisites

To define an offset request type, you should have:

- Offset request type business objects defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **O** and then click **Offset Request Type**.

A sub-menu appears.

- Click the **Add** option from the **Offset Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Offset Request Type Business Object | Used to indicate the business object using which you want to create the offset request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple offset request type business objects defined in the application. If there is only one offset request type business object defined in the application, the **Offset Request Type** screen appears.

- Select the required offset request type business object from the respective field.
- Click **OK**.

The **Offset Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the offset request type.
- Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Offset Request Type | Used to specify the offset request type. | Yes |
| Business Object | Indicates the business object using which you are defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| | Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed , Rejected , or Unapplied Offset . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Adjustment Type | <p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Default Offset Amount Algorithm | <p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | No |
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.</p> <p>Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Bill Search Period | Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. | No |
| | <p>Note: If you do not specify any value, by default, it is set to 30.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Transfer Adjustment | Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. Note: By default, the Transfer Adjustment option is selected. This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type. | No |

6. Enter the required details in the **Main** section.
7. Define characteristics for the offset request type, if required.
8. Click **Save**.

The offset request type is defined.

Defining a Characteristic for an Offset Request Type

Prerequisites

To define a characteristic for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**).

Procedure

To define a characteristic for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request Type . | Note: This field is required when you are defining a characteristic for the offset request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the offset request type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the offset request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Offset Request Type

Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **O** and then click **Offset Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Offset Request Type** sub-menu.

The **Offset Request Type** screen appears.

4. In the **Offset Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Offset Request Type | Displays the offset request type. | Not applicable |
| Business Object | Indicates the business object which is used while defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Adjustment Type | <p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Default Offset Amount Algorithm | <p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | No |
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.</p> <p>Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Bill Search Period | Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. | No |
| | <p>Note: If you do not specify any value, by default, it is set to 30.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Transfer Adjustment | Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. | No |
| | Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type. | |

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Offset Request Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove characteristics of the offset request type, if required.
- Click **Save**.

The changes made to the offset request type are saved.

Deleting an Offset Request Type

Procedure

To delete an offset request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
- In the **Offset Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the offset request type that you want to delete.
A message appears confirming whether you want to delete the offset request type.

Note: You can delete an offset request type when an offset request is not created using the offset request type.

Tip: Alternatively, you can delete an offset request type by clicking the **Delete** button in the **Offset Request Type** zone.

5. Click **OK**.

The offset request type is deleted.

Copying an Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Offset Request Type | Used to specify the offset request type. | Yes |
| Business Object | Indicates the business object which is used while defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | <p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset.</p> | Yes |
| Adjustment Type | <p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Default Offset Amount Algorithm | <p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | Yes |
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | No |
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval. | Yes (Conditional) |
| | Note: The list includes only those To Do roles which are associated with the submitter To Do type. | Note: This field is required when the Approval Required option is selected. |
| Bill Search Period | Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. | No |
| | Note: If you do not specify any value, by default, it is set to 30 . | |
| Transfer Adjustment | Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. | No |
| | Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type. | |

Tip: Alternatively, you can copy an offset request type by clicking the **Duplicate** button in the **Offset Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request type, if required.
7. Click **Save**.

The new offset request type is defined.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- [Search Offset Request](#) on page 1518

Through this screen, you can navigate to the following screen:

- [Offset Request \(Used for Viewing\)](#) on page 1525

Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for an offset request using the offset request or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details | Yes |
| | Note: By default, the Request Details option is selected. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Offset Request ID | Used to search a particular offset request. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created From | Used to search offset requests which are created from a particular date onwards. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| User ID | Used to search offset requests which are created by a particular user. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created To | Used to search offset requests which are created till a particular date. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Status | Used to search offset requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Person ID | Used to search offset requests which include bills of a particular person. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Offset Request Type | Used to search offset requests which are created using a particular offset request type. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Account ID | Used to search offset requests which include bills of a particular account. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. | |
| Bill ID | Used to search offset requests which include a particular bill. | No |
| | Note: This field appears when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears. | |
| Bill Date From | Used to search offset requests which include bills created from a particular date onwards. | No |
| | Note: This field appears when the Bill Details option is selected from the Search By list. | |
| Alternate Bill ID | Used to search offset requests which include a particular bill. | No |
| | Note: This field appears when the Bill Details option is selected from the Search By list. | |
| Bill Date To | Used to search offset requests which include bills created till a particular date. | No |
| | Note: This field appears when the Bill Details option is selected from the Search By list. | |

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Creation Date Time | Displays the date and time when the offset request is created. |
| Offset Request Information | Displays information about the offset request. |
| | Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request. |
| Offset Amount | Displays the total amount which is offset through the offset request. |
| Status | Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset |
| Created By | Indicates the user who has created the offset request. |
| Creation Mode | Indicates whether the offset request is created manually or automatically. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |
| Primary Bill | Indicates the bill for which the offset request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.
The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Create a single offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. |

| If you want to... | Then... |
|---|---|
| | <ol style="list-style-type: none"> 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a single offset request. 5. Click Single Offset. |
| Create a mass offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a mass offset request. 5. Click Mass Offset. |
| Create a cross currency offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a cross currency offset request. 5. Click Cross Currency Offset. |
| Create a single, mass, or cross currency offset request from the Offset Request screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Offset Request. A sub-menu appears. 3. Click the Add option from the Offset Request sub-menu. |

The **Add Offset Request** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Offset Request Type | Used to indicate the offset request type using which you want to create the offset request. | Yes |
| Bill | Used to indicate the bill which you want to offset through the offset request. Note: The Search (🔍) icon appears corresponding to the Bill field. On clicking the Search icon, the Bill Search window appears. On specifying the bill, the information about the bill appears corresponding to the Bill field. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

- Enter the required details in the **Add Offset Request** screen.
- Click **Save**.

The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.

- Add debit and/or credit bills in the offset request.
- Define characteristics for the offset request, if required.

| Offset Request zone | Offset Request on page 1525 |

Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request
- Add a log entry for the offset request

It consists of the following tabs:

- [Offset Request - Main](#) on page 1525
- [Offset Request - Log](#) on page 1534

Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- [Offset Request](#) on page 1525
- [Selected Bills](#) on page 1528
- [Search Bill](#) on page 1529
- [Offset Request Adjustments](#) on page 1534

Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

| Field Name | Field Description |
|----------------------------|---|
| Offset Request Information | Displays information about the offset request. |
| Offset Request Type | Indicates the offset request type using which the offset request is created. Note: It has a link. On clicking the link, the Offset Request Type screen appears where you can view the details of the respective offset request type. |
| Status | Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Rejected • Processed • Unapplied Offset |
| Status Reason | Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason. This field appears when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status. |
| Adjustment Type | Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Offset Amount | Displays the total amount which is offset through the offset request. |
| Comments | Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request. Note: This field appears when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status. |

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Date | Displays the date from when the characteristic is effective for the offset request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the offset request. |
| | Note: The Edit button appears when the offset request is in the Draft status. |
| Delete | Used to delete the offset request. |
| | Note: The Delete button appears when the offset request is in the Draft status. |
| Submit | Used to submit the offset request. |
| | Note: The Submit button appears when the offset request is in the Draft status. |
| Approve | Used to approve the offset request. |
| | Note: The Approve button appears when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request. |
| Reject | Used to reject the offset request. |
| | Note: The Reject button appears when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request. |
| Unapply | Used to unapply (i.e. cancel) the offset request. |
| | Note: The Unapply button appears when the offset request is in the Processed status. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the offset request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the offset request status is updated |
| Create Date/Time | Displays the date and time when the offset request is created. |

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Bill Information | Indicates the debit or credit bill which is added to the offset request. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Bill Date | Displays the date when the debit or credit bill is created. |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through an hold request. |
| Offset Amount | Displays the amount which you want to offset from the debit or credit bill. |
| Remaining Bill Balance | Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). |
| | Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status. |
| Updated Hold Amount | Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. |
| | Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status. |
| Account Information | Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Bill ID | Displays the bill ID. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** () icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 3024.

Search Bill

The bills listed in the **Search Bill** zone varies depending on the following scenarios:

| If... | Then... |
|--|---|
| The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed bills of all accounts of its effective child persons. If the primary bill is a debit bill, it lists credit bills of the main customer and its child persons. However, if the primary bill is a credit bill, it lists debit bills of the main customer and its child persons. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer and its child persons which are in USD. |
| The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). If the primary bill is a debit bill, it lists credit bills of the main customer. However, if the primary bill is a credit bill, it lists debit bills of the main customer. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer which are in USD. |
| The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD. |
| The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD. |

| If... | Then... |
|--|--|
| The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in the currency other than USD. |
| The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in the currency other than USD. |
| The offset request is created through the Offset Request screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | <p>The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD.</p> <p>Note: This zone lists the debit and credit bills in the currency different from the primary bill when the Show Cross Currency Bills option is selected.</p> |
| The offset request is created through the Offset Request screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | <p>The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD.</p> <p>Note: This zone lists the debit and credit bills in the currency different from the primary bill only when the Show Cross Currency Bills option is selected.</p> |

It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details | Yes |
| | Note: By default, the Person Details option is selected. | |
| Person ID | Used to search completed bills of a particular person. | No |
| | Note: This field appears when the Person Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears. | |
| Bill Date From | Used to search completed bills which are created from a particular date onwards. | Yes |
| | Note: By default, it is set to a date which is calculated as follows: Bill Date To - Bill Search Period (Specified in Offset Request Type) | |
| Bills on Hold | Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes | No |
| Bill Date To | Used to search completed bills which are created till a particular date. | Yes |
| | Note: By default, it is set to the current date. | |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|-----------------------------|--|-----------------------------|-----------------------|-------------|-------------------|------------|----------------|----|
| Bill Balance | <p>Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are:</p> <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero <p>Note:</p> <p>If a single or cross currency offset request is created through the Account Receivable Central screen, this field is disabled, and by default, it is set to the following:</p> <table border="1"> <thead> <tr> <th>If the primary bill is a...</th> <th>Then, it is set to...</th> </tr> </thead> <tbody> <tr> <td>Credit Bill</td> <td>Greater Than Zero</td> </tr> <tr> <td>Debit Bill</td> <td>Less Than Zero</td> </tr> </tbody> </table> | If the primary bill is a... | Then, it is set to... | Credit Bill | Greater Than Zero | Debit Bill | Less Than Zero | No |
| If the primary bill is a... | Then, it is set to... | | | | | | | |
| Credit Bill | Greater Than Zero | | | | | | | |
| Debit Bill | Less Than Zero | | | | | | | |
| Show Cross Currency Bills | <p>Used to indicate whether you want to search completed bills in the currencies different from the primary bill.</p> <p>Note:</p> <p>This option is disabled when a single or cross currency offset request is created through the Account Receivable Central screen.</p> <p>By default, this option is selected when a cross currency offset request is created through the Account Receivable Central screen.</p> | No | | | | | | |
| Account ID | <p>Used to search completed bills which created for a particular account.</p> <p>Note:</p> <p>This field appears when the Account Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> | Yes | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Bill ID | Used to search a particular completed bill. | No |
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p> | |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------------------|---|
| Bill Information | Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Bill Date | Displays the date when the debit or credit bill is created. |
| Due Date | Displays the date when the debit or credit bill is due for payment. |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through an hold request. |
| Outstanding Amount (Offset Currency) | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. |
| | Note: This column appears when the offset request is a cross-currency offset request. |
| Account Information | Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

| Button Name | Button Description |
|-------------|---|
| Add | Used to add a bill to the offset request. |

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

Offset Request Adjustments

The **Offset Request Adjustments** zone lists the offset or transfer adjustments which are created for the bill through the offset request. It appears when the offset request is in the **Processed** status. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Adjustment Information | Displays information about the offset or transfer adjustment. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. |
| From Bill ID | Indicates the bill from where the amount is offset. |
| To Bill ID | Indicates the bill against which the amount is offset. |
| Current Amount | Displays the adjustment amount. |

Offset Request - Log

The **Log** tab contains the following zone:

- [Offset Request Log](#) on page 1534

Offset Request Log

The **Offset Request Log** zone lists the complete trail of actions performed on the offset request. It contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| Creation Date Time | Displays the date and time when the action was performed on the offset request. |
| Details | Displays the details about the action performed on the offset request. |
| User | Indicates the user who has performed the action on the offset request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is created when the action is performed on the offset request. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements. |
| Status Reason | Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). |

Note: You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

Viewing the Debit and Credit Bills Added to an Offset Request

Procedure

To view the debit and credit bills which are added to an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the debit and credit bills added to the offset request in the **Selected Bills** zone.

Viewing the Adjustments Created Through an Offset Request

Procedure

To view the adjustments created through an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. In the **Selected Bills** zone, click the **Broadcast** (📡) icon corresponding to the bill whose offset or transfer adjustments you want to view.

The **Offset Request Adjustments** zone appears.

Note: The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

- View the offset or transfer adjustments created for the bill through the offset request in the **Offset Request Adjustments** zone.

Adding a Debit or Credit Bill to an Offset Request

Prerequisites

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

Procedure

To add a debit or credit bill to an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

- Ensure that the **Main** tab is selected.
- Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears when the offset request is in the **Draft** status.

The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of completed bills that meet the search criteria appears in the **Search Results** section.
- Select the check box corresponding to a completed bill that you want to add to the offset request.
- Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the offset request.

Note: You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

8. Click **OK**.

The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

Note: The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see [CI-OFFST-AMT](#) on page 1497.

Editing an Offset Request

Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the offset request.
- **Characteristics** - Used to define the characteristics for the offset request.
- **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

Note: You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Offset Request Information | Displays information about the offset request. | Not applicable |
| Offset Request Type | Indicates the offset request type using which the offset request is created. | Not applicable |
| Adjustment Type | Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request. Note: The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field. | Yes |
| Comments | Used to specify additional information about the offset request. | No |

Note: The **Edit** button appears when the offset request is in the **Draft** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request, if required.
7. Edit the offset amount of a debit or credit bill, if required.
8. Remove a debit or credit bill from the offset request, if required.
9. Click **Save**.

The changes made to the offset request are saved.

Defining a Characteristic for an Offset Request

Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the offset request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the offset request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request . | Note: This field is required when you are defining a characteristic for the offset request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the offset request. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the offset request.

Editing the Offset Amount of a Debit or Credit Bill

Prerequisites

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

Procedure

To edit the offset amount of a debit or credit bill:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

The **Offset Details** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Total Debit Offset Amount | Displays the total offset amount of all debit bills which are included in the offset request. | Not applicable |
| Total Credit Offset Amount | Displays the total offset amount of all credit bills which are included in the offset request. | Not applicable |
| Total Offset Amount | Displays the sum of the total debit and credit offset amount. | Not applicable |

In addition, this section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|-----------------------|
| Bill ID | Indicates the debit or credit bill which is added to the offset request. | Not applicable |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. | Not applicable |
| Due Date | Displays the date when the debit or credit bill is due for payment. | Not applicable |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through an hold request. | Not applicable |
| Outstanding Amount (Offset Currency) | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. Note: This field appears when the offset request is a cross-currency offset request. | Not applicable |
| Offset Amount | Used to specify the amount which you want to offset from the debit or credit bill. | Yes |
| Remaining Bill Balance | Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). | Not applicable |
| Updated Hold Amount | Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. | Not applicable |

The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
3. Click **Save**.

The changes made to the offset request are saved.

Removing a Debit or Credit Bill from an Offset Request

Procedure

To remove a debit or credit bill from an offset request:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.
2. Click the **Delete** (🗑️) icon corresponding to the debit or credit bill that you want to remove from the offset request.

A message appears confirming whether you want to delete the bill.

Note: The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills. It does not appear corresponding to the primary debit or credit bill. This is because you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

3. Click **OK**.

The debit or credit bill is removed from the offset request.

Deleting an Offset Request

Procedure

To delete an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to delete.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Offset Request** zone.

A message appears confirming whether you want to delete the offset request.

Note: The **Delete** button appears when the offset request is in the **Draft** status.

5. Click **OK**.

The offset request is deleted.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to submit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

| If... | Then |
|---|--|
| The Approval Required option is selected in the respective offset request type | A To Do of the C1-OFSRQ To Do type is created and sent to the approver. The status of the offset request is then changed to Approval In Progress . |

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an offset request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Approve an offset request through the Offset Request screen | <ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review. |
| Approve an offset request through the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review. |

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

The system behaves in the following manner:

| If... | Then |
|---|---|
| <p>The number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)</p> | <p>The status of the offset request is changed to Deferred Processing. On executing the Offset Request Periodic Monitor (C1-OFSRQ) batch, the system considers the offset requests which are in the Deferred Processing status. If the Transfer Adjustment option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to Frozen. However, if the Transfer Adjustment option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to Frozen. Finally, the status of the offset request is changed to Processed.</p> <p>Note: If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to Open. However, if the entire match type entity amount is offset, the status of the corresponding match event is set to Balanced. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1495.</p> |

| If... | Then |
|---|---|
| <p>The number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)</p> | <p>If the Transfer Adjustment option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to Frozen. Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Reject an offset request through the Offset Request screen | <ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review. |
| Reject an offset request through the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review. |

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the offset request. | Yes |
| Comments | Used to specify additional information while rejecting the offset request. | No |

Note: The **Reject** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Rejected**.

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request when the offset request is in the **Processed** status.

Prerequisites

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Procedure

To cancel an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to cancel.

The **Offset Request** screen appears.

- Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Unapply Reason | Used to indicate the reason why you want to cancel the offset request. | Yes |
| Comments | Used to specify additional information while canceling the offset request. | No |

Note: The **Unapply** button appears when the offset request is in the **Processed** status.

- Select the reason for canceling the offset request from the **Unapply Reason** list.
- Click **Save**.

The system behaves in the following manner:

| If... | Then... |
|--|---|
| The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the C1-DFRUNAPLY algorithm) | The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to Unapplied Offset . |

| If... | Then... |
|--|--|
| The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the C1-DFRUNAPLY algorithm) | The system changes the status of the offset request to Defer Unapplied . On executing the Offset Request Periodic Monitor (C1-OFSRQ) batch, the system considers the offset requests which are in the Defer Unapplied status. The system then cancels the frozen transfer or offset adjustments of the offset request and changes the status of the offset request to Unapplied Offset . |

Viewing the Log of an Offset Request

Procedure

To view the log of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the offset request in the **Offset Request Log** zone.

Adding a Log Entry for an Offset Request

Procedure

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request for which you want to add a log entry.

The **Offset Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Request Information | Displays information about the offset request. | Not applicable |
| Log Details | Used to specify additional comments for the offset request. | Yes |

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Offset Request Log** zone.

Chapter 24

Funding Request

Topics:

- [Prerequisites](#)
- [Funding Request \(Without Approval\) Status Transition](#)
- [Funding Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-FundingReq](#)
- [Funding Request Type](#)
- [Funding Request \(Used for Searching\)](#)
- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.

- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.
- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

| Bill Type | Funding Amount for the Bill |
|-------------|--|
| Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) |
| Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in the funding request) |

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic**

Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1554.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Funding Request (Without Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

Algorithms Used in C1-FundingReq

The following table lists the algorithm which is attached to the **C1-FundingReq** business object:

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding

request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount}$). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount} - \text{Garnishment Amount}$). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
 - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
 - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).

- **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1560
- [Funding Request Type](#) on page 1561

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Funding Request Type | Displays the funding request type. |
| Description | Displays the description of the funding request type. |
| Edit | On clicking the Edit (✎) icon, the Funding Request Type screen appears where you can edit the details of the funding request type. |

| Column Name | Column Description |
|-------------|---|
| Duplicate | On clicking the Duplicate (📄) icon, the Funding Request Type screen appears where you can define a new funding request type using an existing funding request type. |
| Delete | On clicking the Delete (🗑️) icon, you can delete the funding request type. |
| | Note: You can delete a funding request type when you have not created a funding request using the funding request type. |

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

| Field Name | Field Description |
|--|--|
| Funding Request Type | Displays the funding request type. |
| Description | Displays the description of the funding request type. |
| Funding Request Business Object | Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the funding request type. |
| Status | Indicates the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Funding Amount Currency | Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone. |
| Account Funding Currency Characteristic Type | Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency. |

| Field Name | Field Description |
|-------------------------------------|--|
| Default Funding Adjustment Type | Indicates the adjustment type using which the funding adjustments must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Default Garnishment Adjustment Type | Indicates the garnishment adjustment type using which the garnishment adjustments must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type. |
| Threshold Range Algorithm | Indicates the threshold range for a bill based on the payments done for the bill. |
| | Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |
| Defer Processing Count | Displays the number of bills to determine if the funding request will be processed in deferred mode. |
| | Note: If the number of bills is less than the Defer Processing Count , the funding request will be processed in real time (i.e. immediately). |
| Approval Required | Indicates whether approval is required while creating the funding adjustments using the funding request type. |
| Approval Profile | Indicates the approval profile which must be used to define approval hierarchy for the funding request type. |
| | Note: The Approval Profile field appears when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile. |
| Submitter To Do Type | Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver. |
| | Note: The Submitter To Do Type field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. |

| Field Name | Field Description |
|--|---|
| Submitter To Do Role | <p>Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.</p> <p>Note:</p> <p>The Submitter To Do Role field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |
| Currency Conversion Adjustment Algorithm | Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. |
| Currency Conversion Payment Algorithm | Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. |

- **Characteristics** - The **Characteristics** section lists the characteristics of the funding request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - The **Record Actions** section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the funding request type. |
| Delete | <p>Used to delete the funding request type.</p> <p>Note: You can delete a funding request type when you have not created a funding request using the funding request type.</p> |
| Duplicate | Used to create a new funding request type using an existing funding request type. |

- **Record Information** - The **Record Information** section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | <p>Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the funding request type in the **Funding Request Type List** zone.

Defining a Funding Request Type**Prerequisites**

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|-----------------------|
| Funding Request Type Business Object | Used to indicate the business object using which you want to create the funding request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Funding Request Type | Used to specify the funding request type. | Yes |
| Business Object | Indicates the business object using which you are defining the funding request type. | Not applicable |
| Description | Used to specify the description for the funding request type. | Yes |
| Funding Request Business Object | Used to indicate the business object using which you want to create the funding request. | Yes |
| Detailed Description | Used to specify additional information about the funding request type. | No |
| Status | Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Funding Amount Currency | <p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Account Funding Currency Characteristic Type | <p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |
| Default Funding Adjustment Type | <p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Default Garnishment Adjustment Type | <p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Threshold Range Algorithm | <p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|---|
| Defer Processing Count | <p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p>Note:</p> <p>You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p> | No |
| Approval Required | Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request. | No |
| Approval Profile | <p>Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.</p> <p>Note: This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|---|
| Submitter To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Currency Conversion Adjustment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|---|-----------------------|
| Currency Conversion Payment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> <p>Note: This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | |

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.

The funding request type is defined.

Defining a Characteristic for a Funding Request Type

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request Type . | Note: This field is required when you are defining a characteristic for the funding request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the funding request type. |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

| How to edit a funding request type | Editing a Funding Request Type on page 1572 |
| How to copy a funding request type | Copying a Funding Request Type on page 1580 |

Editing a Funding Request Type

Prerequisites

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)

- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the funding request type whose details you want to edit.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Funding Request Type | Displays the funding request type. | Not applicable |
| Business Object | Indicates the business object using which you are defining the funding request type. | Not applicable |
| Description | Used to specify the description for the funding request type. | Yes |
| Funding Request Business Object | Used to indicate the business object using which you want to create the funding request. | Yes |
| Detailed Description | Used to specify additional information about the funding request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Status | Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected . | |
| Funding Amount Currency | Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone. Note: <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Account Funding Currency Characteristic Type | <p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |
| Default Funding Adjustment Type | <p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Default Garnishment Adjustment Type | <p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Threshold Range Algorithm | <p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|--|
| Defer Processing Count | Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count. | No |
| | <p>Note:</p> <p>You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p> | |
| Approval Required | Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request. | No |
| Approval Profile | Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. | Yes (Conditional) |
| | <p>Note: This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|---|
| Submitter To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Currency Conversion Adjustment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|--|---|
| Currency Conversion Payment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> |

Tip: Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.

The changes made to the funding request type are saved.

Deleting a Funding Request Type

Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the funding request type that you want to delete.

A message appears confirming whether you want to delete the funding request type.

Note: You can delete a funding request type when you have not created a funding request using the funding request type.

Tip: Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

- Click **OK**.

The funding request type is deleted.

Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To copy a funding request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.

3. Click the **Search** option from the **Funding Request Type** sub-menu.

The **Funding Request Type** screen appears.

4. In the **Funding Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the funding request type whose copy you want to create.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define the characteristics for the funding request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Funding Request Type | Used to specify the funding request type. | Yes |
| Business Object | Indicates the business object using which you are defining the funding request type. | Not applicable |
| Description | Used to specify the description for the funding request type. | Yes |
| Funding Request Business Object | Used to indicate the business object using which you want to create the funding request. | Yes |
| Detailed Description | Used to specify additional information about the funding request type. | No |
| Status | Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected . | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Funding Amount Currency | <p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Account Funding Currency Characteristic Type | <p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> | Yes |
| Default Funding Adjustment Type | <p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Default Garnishment Adjustment Type | <p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Threshold Range Algorithm | <p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search (🔍) icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|---|
| Defer Processing Count | <p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p>Note: You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p> | No |
| Approval Required | Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request. | No |
| Approval Profile | <p>Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.</p> <p>Note: This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|---|
| Submitter To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Currency Conversion Adjustment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|--|---|
| Currency Conversion Payment Algorithm | Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. | Yes (Conditional) |
| | <p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> |

Tip: Alternatively, you can copy a funding request type by clicking the **Duplicate** button in the **Funding Request Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the funding request type, if required.
- Click **Save**.

The new funding request type is defined.

Viewing the Funding Request Type Details

Procedure

To view the details of a funding request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Broadcast** () icon corresponding to the funding request type whose details you want to view.

The **Funding Request Type** zone appears.

- View the details of the funding request type in the **Funding Request Type** zone.

Funding Request (Used for Searching)

The **Funding Request** screen allows you to search for a funding request using various search criteria. It also allows you to create a funding request. It contains the following zone:

- [Search Funding Request](#) on page 1588

Through this screen, you can navigate to the following screen:

- [Funding Request \(Used for Viewing\)](#) on page 1593

Search Funding Request

The **Search Funding Request** zone allows you to search for a funding request using various search criteria. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a funding request using the funding request or bill details. The valid values are: <ul style="list-style-type: none"> Request Details Bill Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| Created From | Used to search funding requests which are created from a particular date onwards. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Status | Used to search funding requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created To | Used to search funding requests which are created till a particular date. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| User ID | Used to search funding requests which are created by a particular user. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Funding Request Type | Used to search funding requests which are created using a particular funding request type. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Person Name | Used to search funding requests which includes bills of a particular person. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Funding Request ID | Used to search a particular funding request. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Creation Mode | Used to search funding requests which are created in a particular mode. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Bill ID | Used to search funding requests which include a particular bill. | No |
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p> | |
| Bill Date From | Used to search funding requests which include bills that are created from a particular date onwards. | No |
| | <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Alternate Bill ID | Used to search funding requests which include a particular bill. | No |
| | <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Bill Date To | Used to search funding requests which include bills that are created till a particular date. | No |
| | <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Division | Used to search funding requests which includes bills of accounts which belong to a particular division. | No |
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>You can only view those divisions to which you have access in the Division list.</p> | |

Note: You must specify at least one search criterion while searching for a funding request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Create Date Time | Displays the date and time when the funding request is created. |
| Funding Request Information | Displays information about the funding request. |
| | <p>Note: It has a link. On clicking the link, the Funding Request screen appears where you can view the details of the respective funding request.</p> |

| Column Name | Column Description |
|---------------------|--|
| Status | Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected |
| Total Debit Amount | Displays the total amount of the debit bills which are added in the funding request. |
| Total Credit Amount | Displays the total amount of the credit bills which are added in the funding request. |
| Created By | Indicates the user who has created the funding request. |
| Creation Mode | Indicates how the funding request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

| How to search for a funding request | Searching for a Funding Request on page 1591 |

Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.
The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of funding requests that meet the search criteria appears in the **Search Results** section.

Creating a Funding Request

Prerequisites

To create a funding request, you should have:

- Funding request types defined in the application

Procedure

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
A sub-menu appears.
3. Click the **Add** option from the **Funding Request** sub-menu.

The **Add Funding Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Funding Request Type | Used to indicate the funding request type using which you want to create the funding request. | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

4. Select the required funding request type from the respective field.
5. Click **OK**.

The funding request is created in the **Draft** status.

Viewing the Funding Request Details

Procedure

To view the details of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the funding request in the **Funding Request** zone.
5. View the credit and/or debit bills added in the funding request in the **Selected Bills** zone.

Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- [Funding Request - Main](#) on page 1593
- [Funding Request - Bills](#) on page 1601
- [Funding Request - Log](#) on page 1605

Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- [Funding Request](#) on page 1594
- [Search Bill](#) on page 1597

Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|--|
| Funding Request Information | Displays information about the funding request. |
| Funding Request Type | Indicates the funding request type using which the funding request is created. Note: It has a link. On clicking the link, the Funding Request Type screen appears where you can view the details of the respective funding request type. |
| Status | Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected |
| Status Reason | Indicates the reason why the funding request is rejected. Note: This field appears when the funding request is in the Rejected status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason. |
| Funding Adjustment Type | Indicates the adjustment type using which the A/P adjustment is created against a credit bill. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Garnishment Adjustment Type | Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Comments | Displays additional information entered while rejecting the funding request. Note: This field appears when the funding request is in the Rejected status. |
| Creation Mode | Indicates whether the funding request is created automatically or manually. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

| Field Name | Field Description |
|---------------------------------------|---|
| Total Records | Displays the total number of debit or credit bills which are added in the funding request. |
| Total Records Processed | Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system. |
| Total Records Excluded | Displays the total number of debit or credit bills which are excluded from the automatic funding request. |
| Total Records In Error | Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system. |
| Total Payment Incoming Events Created | Displays the total number of payment events created against the debit bills in the funding request. |
| Total Adjustments Created | Displays the total number of adjustments created against the credit bills in the funding request. |
| Total Credit Funding Amount | <p>Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p> |
| Total Debit Funding Amount | <p>Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division.</p> |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the funding request. |
| | Note: The Edit button appears when the funding request is in the Draft status. |
| Delete | Used to delete the funding request. |
| | Note: The Delete button appears when the funding request is in the Draft status. |
| Submit | Used to submit the funding request. |
| | Note: The Submit button appears when the funding request is in the Draft status. |

| Button Name | Button Description |
|-------------|---|
| Cancel | Used to cancel the funding request. |
| | Note: The Cancel button appears when the funding request is in the Draft status. |
| Approve | Used to approve the funding request. |
| | Note: The Approve button appears when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request. |
| Reject | Used to reject the funding request. |
| | Note: The Reject button appears when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request. |
| Re Submit | Used to request for resubmitting the funding request. |
| | Note: The Re Submit button appears when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request. |
| Withdraw | Used to withdraw the funding request. |
| | Note: The Withdraw button appears when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the submitter To Do role is viewing the funding request. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the funding request status is updated |
| Create Date/Time | Displays the date and time when the funding request is created. |

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Effective Date | Displays the date from when the characteristic is effective for the funding request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

Search Bill

The **Search Bill** zone allows you to search for a bill using various search criteria. It appears when the funding request is in the **Draft** status and the creation mode is set to **Manual**. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Account Details • Person Details <p>Note: By default, the Bill Details option is selected.</p> | Yes |
| Bill ID | Used to search a particular bill. <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Bill Date From | Used to search bills which are created from a particular date onwards. | Yes |
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>By default, the current date appears in this field.</p> | |
| Alternate Bill ID | Used to search a particular bill. | No |
| | <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Bill Date To | Used to search bills which are created till a particular date. | Yes |
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>By default, the current date appears in this field.</p> | |
| Bill Balance | Used to indicate whether you want to search bills with debit or credit balance. The valid values are: | No |
| | <ul style="list-style-type: none"> • Credit • Debit <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Bill Due Date From | Used to search bills which are due from a particular date onwards. | No |
| | <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | |
| Division | Used to search bills of accounts which belong to a particular division. | No |
| | <p>Note:</p> <p>You can only view those divisions to which you have access in the Division list.</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|--|
| Bill Due Date To | Used to search bills which are due till a particular date. | No |
| | Note: This field appears when the Bill Details option is selected from the Search By list. | |
| Account ID | Used to search bills of a particular account. | Yes (Conditional) |
| | Note: This field appears when the Account Details option is selected from the Search By list. | Note: This field is required when the Account Details option is selected from the Search By list. |
| Person ID | Used to search bills which belong to a particular person. | Yes (Conditional) |
| | Note: This field appears when the Person Details option is selected from the Search By list. | Note: This field is required when: <ul style="list-style-type: none"> • The Person Details option is selected from the Search By list. • The person name is not specified in the search criteria. |
| Person Name | Used to search bills which are created for accounts of a particular person. | Yes (Conditional) |
| | Note: This field appears when the Person Details option is selected from the Search By list. | Note: This field is required when: <ul style="list-style-type: none"> • The Person Details option is selected from the Search By list. • The person ID is not specified in the search criteria. |
| Country | Used to search bills of persons who reside in a particular country. | No |
| | Note: This field appears when the Person Details option is selected from the Search By list. | |

Note: You must specify at least one search criterion while searching for a bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description | | | | | | |
|--------------------|---|-----------------------------|-----------------------------|------------|--|-------------|--|
| Bill Information | Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. | | | | | | |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. | | | | | | |
| Due Date | Displays the date when the bill is due for payment. | | | | | | |
| Outstanding Amount | Displays the unpaid amount of the bill. | | | | | | |
| Hold Amount | Displays the amount of the bill which is kept on hold through a hold request. | | | | | | |
| Funding Amount | Displays the bill amount which can be used for the funding process. It is calculated in the following manner: | | | | | | |
| | <table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table> | Bill Type | Funding Amount for the Bill | Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) | Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request) |
| | Bill Type | Funding Amount for the Bill | | | | | |
| Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) | | | | | | |
| Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request) | | | | | | |
| | | | | | | | |
| Person Name | Indicates the person to whom the bill belongs. In addition, this column has a context menu which helps in navigating to other screens in the application. | | | | | | |
| | Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. | | | | | | |
| Bill ID | Displays the bill ID. | | | | | | |
| Defer Auto Pay | Indicates whether the Defer Auto Pay option is selected on the customer class of the account for which the bill is created. The valid values are: <ul style="list-style-type: none"> • N • Y | | | | | | |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

| Button Name | Button Description |
|-------------|--|
| Add | Used to add a bill to the funding request. |

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the funding request.

Funding Request - Bills

The **Bills** tab lists the bills which are added in the funding request. It contains the following zones:

- [Currency Statistics](#) on page 1601
- [Selected Bills](#) on page 1601
- [Funding Payment Details](#) on page 1604

Note: This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in debit.

- [Funding Adjustments](#) on page 1605

Note: This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in credit.

Currency Statistics

A funding request might include bills in different currencies. The **Currency Statistics** zone lists the sum total of various amount of bills which are created in the same currency. It contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Currency Code | Indicates the currency in which the sum total is calculated. |
| | Note: Here, the system lists those currencies in which the bills added to the funding request are created. |
| Total Outstanding Amount | Displays the sum of outstanding amount of all bills which are created in the respective currency. |
| Total Hold Amount | Displays the sum of hold amount of all bills which are created in the respective currency. |
| Total Garnishment Amount | Displays the sum of garnishment amount of all bills which are created in the respective currency. |
| Total Debit Funding Amount | Displays the sum of funding amount (which is in debit) of all bills which are created in the respective currency. |
| Total Credit Funding Amount | Displays the sum of funding amount (which is in credit) of all bills which are created in the respective currency. |

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the funding request. It contains the following columns:

| Column Name | Column Description |
|-------------------|---|
| Bill Date | Displays the date when the bill is created. |
| Person Identifier | Displays the primary identifier of the person for whom the bill is created. |
| Person Country | Indicates the country where the person is located. |

| Column Name | Column Description | | | | | | |
|-----------------------------|---|-----------|-----------------------------|------------|--|-------------|--|
| Invoice Account Identifier | Displays the primary identifier of the account for which the bill is created. | | | | | | |
| Funding Amount | <p>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</p> <table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table> <p>Note: The funding amount is calculated in the bill's currency.</p> | Bill Type | Funding Amount for the Bill | Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) | Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request) |
| Bill Type | Funding Amount for the Bill | | | | | | |
| Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) | | | | | | |
| Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request) | | | | | | |
| Currency Code | Indicates the currency in which the funding amount is calculated. | | | | | | |
| Hold Amount | Displays the amount of the bill which is kept on hold through a hold request. | | | | | | |
| Offset Amount | Displays the amount of the bill which is offset against another bill through an offset request. | | | | | | |
| Garnishment Amount | Displays the amount of the credit bill which is transferred to the garnishment contracts of the account through the funding request. | | | | | | |
| Original Outstanding Amount | Displays the original outstanding amount when the bill was added in the funding request. | | | | | | |
| Bill ID | <p>Displays the bill ID.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> | | | | | | |
| Open Bills | <p>Indicates whether there are any unpaid bills of the person. The valid values are:</p> <ul style="list-style-type: none"> • Y • N | | | | | | |
| Garnishment Contract | <p>Indicates whether the garnishment contract exists for the account. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>This column appears when the funding request is in the Draft status.</p> <p>The data appears in this column when a credit bill is added to the funding request.</p> <p>It has a link. On clicking the link, the Edit Garnishment Details screen appears where you can transfer the funding amount from the credit bill to one or more garnishment contracts of the account.</p> | | | | | | |

| Column Name | Column Description |
|-------------------------|--|
| Garnishment | <p>On clicking the View (🔗) icon, the View Garnishment Details screen appears where you can view the funding amount transferred to the different garnishment contracts of the account.</p> <p>Note: This column does not appear when the funding request is in the Draft status. The View (🔗) icon appears in this column when the funding request is in the Processed status.</p> |
| Record Status | <p>Indicates the status of the bill record in the funding request. The valid values are:</p> <ul style="list-style-type: none"> • Excluded • Invalid • Masked • Pending • Processed • Valid • Error |
| Threshold Range | Indicates the threshold range for a bill which is calculated based on the number of payments made for the bill in the specified period. |
| Person Name | Indicates the person whose bill is added in the funding request. |
| Bill Information | Displays the information about the bill. |
| Split Banking | <p>Indicates whether the split automatic payment feature is used for the account. The valid values are:</p> <ul style="list-style-type: none"> • Y • N |
| Funding Currency Amount | Displays the funding amount which is converted in the funding currency defined on the account. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

| Button Name | Button Description |
|-------------|--|
| Delete | <p>Used to delete a bill from the funding request.</p> <p>Note: The Delete button appears when the funding request is created manually and it is in the Draft status.</p> |

| Button Name | Button Description |
|-------------|--|
| Edit | Used to exclude a debit or credit bill from the funding request. |
| | Note: The Edit button appears when the funding request is created automatically and it is in the Draft status. |
| Hold | Used to create a hold request for one or more bills. However, you cannot select more than 20 bills. On activating or releasing a hold request, the funding amount is automatically updated in the funding request. |
| | Note: The Hold button appears only when the funding request is in the Draft status. |
| Offset | Used to create an offset request for a bill. On processing or unapplying an offset request, the funding amount is automatically updated in the funding request. |
| | Note: The Offset button appears when the funding request is in the Draft status. |

A check box appears corresponding to each bill when the funding request is in the **Draft** status. On selecting the check box, you can delete the bill from the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all bills listed in the respective page from the funding request.

On clicking the **Broadcast** () icon corresponding to a debit or credit bill, the **Funding Payment Details** or **Funding Adjustments** zone appears, respectively.

Note: The **Broadcast** icon does not appear when the funding request is in the **Draft** status.

You can filter the list using various search criteria (such as, **Bill ID**, **Alternate Bill ID**, **Record Status**, **Bill Balance**, **Funding Amount From**, **Person ID**, **Funding Amount To**, **Currency**, **Funding Amount Threshold Range**, and **Country**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Funding Payment Details

The **Funding Payment Details** zone lists the payment events which are created for a debit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payment Event Information | Displays information about the payment event. |
| | Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event. |
| Payment Amount | Displays the amount for which automatic payment is created. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Adjustments

The **Funding Adjustments** zone lists the funding and garnishment adjustments which are created for a credit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Adjustment Information | Displays information about the funding or garnishment adjustment. |
| | Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. |
| Adjustment Amount | Displays the adjustment amount. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Request - Log

The **Log** tab contains the following zone:

- [Funding Request Log](#) on page 1605

Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the funding request. |
| Details | Displays the details of the action performed on the funding request. |
| User | Indicates the user who has performed the action on the funding request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is created when the action is performed on the funding request. |
| | Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements. |

| Column Name | Column Description |
|---------------|---|
| Status Reason | Indicates the reason why the funding request was rejected by the approver. |
| | Note: The data appears in this column when the funding request is in the Rejected status. |

Note: You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears when the funding request is in the **Draft** status.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the funding request.

Note: You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.

The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

Deleting a Debit or Credit Bill from a Funding Request

Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to delete from the funding request.

5. Click the **Delete** button in the **Selected Bills** zone.

A message appears confirming whether you want to delete the bill from the funding request.

Note: The **Delete** button appears when the funding request is in the **Draft** status.

6. Click **OK**.

The debit or credit bill is deleted from the funding request.

Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

Prerequisites

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN_RSN_CD_FLG** lookup field

Procedure

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to exclude from the funding request.

5. Click the **Edit** button in the **Selected Bills** zone.

The **Edit Funding Request Details** screen appears. It contains the following field:

| Field Name | Field Description |
|-----------------------------|---|
| Funding Request Information | Displays the information about the funding request. |

In addition, this screen contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|--------------------|--|-----------------------|-----------------------------|------------|--|-------------|--|----------------|
| Bill Information | Displays the information about the bill. | Not applicable | | | | | | |
| Garnishment Amount | Displays the funding amount which is transferred to the garnishment contracts of the account. | Not applicable | | | | | | |
| Funding Amount | <p>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</p> <table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table> | Bill Type | Funding Amount for the Bill | Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) | Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request) | Not applicable |

Editing a Funding Request

Prerequisites

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Edit** button in the **Funding Request** zone.

The **Edit Funding Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request.
- **Characteristics** - Used to define the characteristics for the funding request.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|--|
| Funding Request Information | Displays information about the funding request. | Not applicable |
| Funding Adjustment Type | Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill. Note: The Search (🔍) icon appears corresponding to the Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND . | Yes (Conditional) Note: This field is required while creating an A/P adjustment against a credit bill. |
| Garnishment Adjustment Type | Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: The Search (🔍) icon appears corresponding to the Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND . | Yes (Conditional) Note: This field is required while creating garnishment adjustments for a credit bill. |
| Comments | Used to specify additional information about the funding request. | No |

Note: The **Edit** button appears when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics of the funding request, if required.

6. Click **Save**.

The changes made to the funding request are saved.

Defining a Characteristic for a Funding Request

Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the funding request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the funding request. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the funding request. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | <p>Note: This field is required when you are defining a characteristic for the funding request.</p> |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Deleting a Funding Request

Procedure

To delete a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to delete.

The **Funding Request** screen appears.

- Click the **Delete** button in the **Funding Request** zone.

A message appears confirming whether you want to delete the funding request.

Note: The **Delete** button appears when the funding request is in the **Draft** status.

- Click **OK**.

The funding request is deleted.

Canceling a Funding Request

Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Procedure

To cancel a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.

The **Funding Request** screen appears.

- Click the **Cancel** button in the **Funding Request** zone.

The **Funding Request** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to cancel the funding request. | Yes |
| | Note: The list includes only those reasons which are defined for the Canceled status of the C1-FundingRequest business object in the Status Reason screen. | |

Note: The **Cancel** button appears when the funding request is in the **Draft** status.

- Select the cancellation reason from the **Status Reason** list.
- Click **Save**.

The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

Submitting a Funding Request

Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to submit.

The **Funding Request** screen appears.

3. Click the **Submit** button in the **Funding Request** zone.

The system behaves in the following manner:

| If... | Then... | | | | |
|---|---|---------|---------|--|--|
| <p>The Approval Required option is selected in the funding request type using which the funding request is created</p> | <p>It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:</p> | | | | |
| | <table border="1"> <thead> <tr> <th data-bbox="886 455 1179 508">If...</th> <th data-bbox="1183 455 1466 508">Then...</th> </tr> </thead> <tbody> <tr> <td data-bbox="886 514 1179 905"> <p>The sum total is less than the minimum threshold amount in the approval hierarchy</p> </td> <td data-bbox="1183 514 1466 905"> <p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> </td> </tr> </tbody> </table> | If... | Then... | <p>The sum total is less than the minimum threshold amount in the approval hierarchy</p> | <p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> |
| | If... | Then... | | | |
| <p>The sum total is less than the minimum threshold amount in the approval hierarchy</p> | <p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> | | | | |
| <p>The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy</p> | <p>The system changes the status of the funding request to Approval In Progress. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</p> | | | | |

| If... | Then... |
|---|--|
| <p>The Approval Required option is not selected in the funding request type using which the funding request is created</p> | <p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p> |

Note: The **Submit** button appears when the funding request is in the **Draft** status.

Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To approve a funding request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Approve a funding request through the Funding Request screen | <ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review. |
| Approve a funding request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review. |

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

The system behaves in the following manner:

| If... | Then... |
|---|---|
| The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy | The system changes the status of the funding request to Approval In Progress . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created. |

| If... | Then... |
|---|--|
| <p>The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy</p> | <p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p> |

Note: The **Approve** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

Rejecting a Funding Request

Prerequisites

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To reject a funding request:

1. Do either of the following:

| If you want to... | Then... |
|--|---|
| Reject a funding request through the Funding Request screen | <ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review. |
| Reject a funding request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review. |

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

The **Reject Funding Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | <p>Used to indicate the reason why you want to reject the funding request.</p> <p>Note: The list includes only those reasons which are defined for the Rejected status of the C1-FundingRequest business object in the Status Reason screen.</p> | Yes |
| Comments | Used to specify additional information while rejecting the funding request. | No |

Note: The **Reject** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the funding request is changed to **Rejected**.

Requesting to Resubmit a Funding Request

Procedure

To request for resubmitting a funding request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Request for resubmitting a funding request through the Funding Request screen | <ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review. |
| Request for resubmitting a funding request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. |

| If you want to... | Then... |
|-------------------|---|
| | <ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review. |

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the request, click the **Re Submit** button in the **Funding Request** zone.

The **Resubmit Funding Request** window appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Comments | Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval. | Yes |

Note: The **Re Submit** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

Withdrawing a Funding Request

Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.

- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to withdraw.

The **Funding Request** screen appears.

- If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.

The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed when the submitter To Do role is associated with the To Do type specified in the approval profile.

Note: The **Withdraw** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

- Click the **Bills** tab.

The **Bills** tab appears.

- In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding to a credit bill whose funding amount you want to transfer to a garnishment contract of the account.

The **Edit Garnishment Details** screen appears. It contains the following field:

| Field Name | Field Description |
|------------------|---|
| Bill Information | Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account. |

In addition, this screen contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Garnishment Contract | Used to indicate the garnishment contract of the account. | Yes |
| Garnishment Amount | Used to specify the amount that you want to transfer to the garnishment contract. | Yes |

- Enter the required details in the **Edit Garnishment Details** screen.
- If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑️) icon corresponding to the garnishment record.

- Click **Save**.

The changes made to the funding request are saved.

Viewing the Garnishment Details of a Credit Bill

Procedure

To view the garnishment details of a credit bill:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

- Click the **Bills** tab.

The **Bills** tab appears.

- In the **Selected Bills** zone, click the **Broadcast** (📡) icon in the **Garnishment** column corresponding to the credit bill whose garnishment details you want to view.

The **View Garnishment Details** screen appears. It contains the following field:

| Field Name | Field Description |
|------------|--|
| Bill Info | Indicates the credit bill whose garnishment details you are viewing. |

In addition, this screen contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Garnishment Contract | Indicates the garnishment contract of the account against which amount from the credit bill is transferred. |
| Garnishment Amount | Displays the amount which is transferred to the garnishment contract. |

Note:

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View** () icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

Viewing the Adjustments Created Through a Funding Request

Procedure

To view the adjustments created through a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, click the **Broadcast** () icon corresponding to a credit bill whose adjustment details you want to view.

The **Funding Adjustments** zone appears.

Note: The **Broadcast** () icon appears when the funding request is in the **Processed** status.

5. View the A/P adjustments and garnishment adjustments (if any) created for the credit bill through the funding request in the **Funding Adjustments** zone.

Viewing the Log of a Funding Request

Procedure

To view the log of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to view.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the funding request in the **Funding Request Log** zone.

Adding a Log Entry for a Funding Request**Procedure**

To add a log entry for a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to edit.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Request Information | Displays information about the funding request. | Not applicable |
| Log Details | Used to specify additional comments for the funding request. | Yes |

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Funding Request Log** zone.

- [Write Off Request](#)

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see [Refund Request \(Without Approval\) Status Transition](#) on page 1629 and [Refund Request \(With Approval\) Status Transition](#) on page 1629.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved

- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see [Write Off Request \(Without Approval\) Status Transition](#) on page 1630 and [Write Off Request \(With Approval\) Status Transition](#) on page 1631.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

For more information on how to setup the refund and write off request processes, see [Prerequisites](#) on page 1641.

Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------|--------------|----------------|---|
| Information | C1-REFREQINF | C1-REFREQINF | <p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID |
| Post-Processing | C1-REFWOPOSP | C1-REFWOPOSP | <p>This algorithm recalculates and updates the total refund amount in the Refund Request zone when you change the refund amount against an entity while editing a refund request.</p> |
| Validation | C1-REFUNDVAL | C1-REFUNDVAL | <p>This algorithm validates the following for each entity that you have selected in the refund request:</p> <ul style="list-style-type: none"> • The mandatory data, such as refund amount and adjustment type, is specified. • The refund amount is not less than zero. • The refund amount is not greater than the entity amount. • The refund amount is not greater than the eligible refund amount. • The partial refund is not done at the payment event or bill level. |

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundReq** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|---|
| Draft | Enter | C1-REF-DFT | C1-REF-DFT | <p>This algorithm fetches the account's main customer's name and address and displays in the Refund Request zone. In addition, when you refund the payments from the Payment Event Summary screen, this algorithm does the following:</p> <ul style="list-style-type: none"> • The total eligible refund amount is calculated and accordingly displayed in the Refund Request screen. • The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments. • On selecting a payment event for refund, if all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the Refund Details zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the Refund Details zone. |
| Submitted | Enter | C1-REFUNDSUB | C1-REFUNDSUB | <p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to Approval In Progress. However, if the approval is not required for a refund request, the status of the refund request is changed to Creating Adjustment. • At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request. • Whether the approval profile attached to the refund request type has the credit hierarchy and C1-REFRQ To Do type defined. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Enter | C1-REFUNDAPP | C1-REFUNDAPP | <p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type. |
| Approved | Enter | C1-REFAPPRVD | C1-REFAPPRVD | <p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the refund request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the refund request is changed to Creating Adjustment.</p> |
| Rejected | - | - | - | - |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|--------------|----------------|--|
| Creating Adjustment | Enter | C1-REFADJCRI | C1-REFADJCRI | <p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the refund adjustments for the refund request. These refund adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Refund Details zone. Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction. If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction. If you are doing a partial refund for any entity, the corresponding match event status is set to Open. However, if you are refunding the entire eligible amount, the corresponding match event status is set to Balanced. The details of the refund adjustments are added in the A/P Check Request (CL_ADJ_APREQ) table. If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the Refund Details zone. |
| Processed | - | - | - | - |

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|------------|----------------|--|
| Voided | Enter | C1-REFVOID | C1-REFVOID | <p>This algorithm is invoked on click of the Void button for a refund request which is in processed state.</p> <p>The algorithm cancels all the frozen adjustments created for the refund request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user</p> |

Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|-----------------|--------------|----------------|--|
| Information | C1-REFREQINF | C1-REFREQINF | <p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID |
| Post-Processing | C1-WOPOSP | C1-WOPOSP | <p>This algorithm recalculates and updates the total write off amount in the Write Off Request zone when you change the write off amount against an entity while editing a write off request.</p> |

| System Event | Algorithm | Algorithm Type | Description |
|--------------|------------|----------------|---|
| Validation | C1-WOBOVAL | C1-WOBOVAL | <p>This algorithm validates the following for each entity that you have selected in the write off request:</p> <ul style="list-style-type: none"> • The mandatory data, such as write off amount and adjustment type, is specified. • The write off amount is not less than zero. • The write off amount is not greater than the entity amount. • The write off amount is not greater than the eligible write off amount. • The partial write off is not done at the bill level. • The A/P Request Type is not defined in the selected adjustment type. |

The following table lists the algorithms which are used in the lifecycle of the **C1-WORequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|-------------|----------------|---|
| Draft | - | - | - | - |
| Submitted | Enter | C1-WOSUBMIT | C1-WOSUBMIT | <p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to Approval In Progress. However, if the approval is not required for a write off request, the status of the write off request is changed to Creating Adjustment. • At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request. • Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Enter | C1-WOAPPROVL | C1-WOAPPROVL | <p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type. |
| Approved | Enter | C1-WOAPPROVD | C1-WOAPPROVD | <p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the write off request is changed to Creating Adjustment.</p> |
| Rejected | - | - | - | - |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|-------------|----------------|---|
| Creating Adjustment | Enter | C1-WOAJCRT | C1-WOAJCRT | <p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the write off adjustments for the write off request. These write off adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Write Off Details zone. Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction. If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is created and stamped on the write off adjustment and the corresponding financial transaction. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced. |
| Processed | - | - | - | - |
| Cancelled | Enter | C1-WOCANCEL | C1-WOCANCEL | <p>This algorithm is invoked on click of the Cancel button for a write off request which is in the Processed state.</p> <p>This algorithm cancels all the frozen adjustments created for the write off request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user.</p> |

Prerequisites

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WOREquest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required write off request types in the system

Refund/Write Off Request Type

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** — It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
 - Whether the refund request must be approved before creating refund adjustments in the system
 - Approval profile using which the refund request must be approved
 - Whether multi-level or single-level approval is required while creating refund adjustments in the system
 - Tolerance limit for refund (i.e. minimum refund amount)
 - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
 - Default adjustment type using which refund adjustments must be created

- **Write Off Request Type** — It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
 - Whether the write off request must be approved before creating write off adjustments in the system
 - Approval profile using which the write off request must be approved
 - Whether multi-level or single-level approval is required while creating write off adjustments in the system
 - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the refund or write off request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval — First Level (Threshold Amount: 300, To Do Role: *Manager*) and Second Level (Threshold Amount: 500, To Do Role: *Senior Manager*). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

Example 1

| Refund Request Type | Approval Profile | Approval Hierarchy | Hierarchical Approval | | | | | | | | |
|---------------------|------------------|---|-----------------------|------------|-------|----------------|-------|---------|--------|----------------|-----|
| R1 | Refund Analyst | <p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table> | Threshold Amount | To Do Role | \$500 | Senior Analyst | \$750 | Manager | \$1500 | Senior Manager | Yes |
| Threshold Amount | To Do Role | | | | | | | | | | |
| \$500 | Senior Analyst | | | | | | | | | | |
| \$750 | Manager | | | | | | | | | | |
| \$1500 | Senior Manager | | | | | | | | | | |
| R2 | Refund Analyst | <p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table> | Threshold Amount | To Do Role | \$500 | Senior Analyst | \$750 | Manager | \$1500 | Senior Manager | No |
| Threshold Amount | To Do Role | | | | | | | | | | |
| \$500 | Senior Analyst | | | | | | | | | | |
| \$750 | Manager | | | | | | | | | | |
| \$1500 | Senior Manager | | | | | | | | | | |

The following table indicates how the system will behave in different refund scenarios:

| Refund Request | Refund Request Type | Total Refund Amount (\$) | Comments |
|----------------|---------------------|--------------------------|--|
| RR1 | R1 | 200 | This refund request is automatically approved by the system because the total refund amount is less than \$500. |
| RR2 | R1 | 750 | <p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role <p>This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.</p> |
| RR3 | R1 | 2000 | <p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total refund amount is greater than \$1500 and hierarchical approval is required.</p> |
| RR4 | R2 | 200 | This refund request is automatically approved by the system because the total refund amount is less than \$500. |

| Refund Request | Refund Request Type | Total Refund Amount (\$) | Comments |
|----------------|---------------------|--------------------------|--|
| RR5 | R2 | 750 | The To Do is sent for approval to users with the Manager To Do role. This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required. |
| RR6 | R2 | 2000 | The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total refund amount is greater than \$1500 and hierarchical approval is not required. |

Example 2

| Write Off Request Type | Approval Profile | Approval Hierarchy | Hierarchical Approval | |
|------------------------|-------------------|-------------------------|-----------------------|-------------------|
| W1 | Write Off Analyst | Debit Hierarchy | Yes | |
| | | Threshold Amount | | To Do Role |
| | | \$100 | | Senior Analyst |
| | | \$200 | | Manager |
| | | \$300 | | Senior Manager |
| W2 | Write Off Analyst | Debit Hierarchy | No | |
| | | Threshold Amount | | To Do Role |
| | | \$100 | | Senior Analyst |
| | | \$200 | | Manager |
| | | \$300 | | Senior Manager |

The following table indicates how the system will behave in different write off scenarios:

| Write Off Request | Write Off Request Type | Total Write Off Amount (\$) | Comments |
|-------------------|------------------------|-----------------------------|---|
| WO1 | W1 | 90 | This write off request is automatically approved by the system because the total write off amount is less than \$100. |
| WO2 | W1 | 250 | <p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role <p>This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is required.</p> |

| Write Off Request | Write Off Request Type | Total Write Off Amount (\$) | Comments |
|-------------------|------------------------|-----------------------------|--|
| WO3 | W1 | 500 | <p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total write off amount is greater than \$300 and hierarchical approval is required.</p> |
| WO4 | W2 | 90 | This write off request is automatically approved by the system because the total write off amount is less than \$100. |
| WO5 | W2 | 250 | The To Do is sent for approval to users with the Manager To Do role. This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is not required. |
| WO6 | W2 | 500 | The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total write off amount is greater than \$300 and hierarchical approval is not required. |

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- [Refund/Write Off Request Type List](#) on page 1645
- [Refund/Write Off Request Type](#) on page 1646

Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists refund and write off request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|-------------------------------|--|
| Refund/Write Off Request Type | Displays the refund or write off request type. |
| Description | Displays the description of the refund or write off request type. |
| Edit | On clicking the Edit (✎) icon, the Refund/Write Off Request Type screen appears where you can edit the details of the refund and write off request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Refund/Write Off Request Type screen appears where you can define a refund and write off request type using an existing refund and write off request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the refund or write off request type. |
| | Note: You can delete a refund or write off request type when you have not created a refund or write off request using the refund or write off request type. |

On clicking the **Broadcast** (📡) icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

Refund/Write Off Request Type

The **Refund/Write Off Request Type** zone displays the details of the refund or write off request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the refund or write off request type. It contains the following fields:

| Field Name | Field Description |
|--|---|
| Refund/Write Off Request Type | Displays the refund or write off request type. |
| Refund/Write Off Request Business Object | Indicates the business object that will be used to create the refund or write off request. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object. |
| Description | Displays the description of the refund or write off request type. |
| Detailed Description | Displays additional information about the refund or write off request type. |
| Status | Indicates the status of the refund or write off request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Action | Indicates whether the request type is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off |
| Minimum Refund Amount | Displays the minimum refund amount. Note: This field appears when the Action field is set to Refund . |

| Field Name | Field Description |
|--------------------------|---|
| Write Up Adjustment Type | Indicates the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. |
| | Note: This field appears when the Action field is set to Refund . |
| Approval Required | Indicates whether approval is required while creating the refund or write off adjustments using the refund or write off request type. |
| Approval Profile | Indicates the approval profile which must be used to define approval hierarchy for the refund or write off request type. |
| | Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears with the details of the respective approval profile. |
| Hierarchical Approval | Indicates whether multi-level or single approval is required while creating the refund or write off adjustments using the refund or write off request type. |
| | Note: This field appears when the Approval Required check box is selected. |
| Adjustment Type | Indicates the adjustment type using which the refund or write off adjustments must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type. |

- **Characteristics** — This section lists the characteristics of the refund or write off request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the refund or write off request type. |
| Delete | Used to delete the refund or write off request type. |
| | Note: You can delete a refund or write off request type when you have not created a refund or write off request using the refund or write off request type. |
| Duplicate | Used to create a new refund or write off request type using an existing refund or write off request type. |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the refund or write off request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Refund/Write Off Request Type** zone does not appear in the **Refund/Write Off Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to the refund or write off request type in the **Refund/Write Off Request Type List** zone.

Defining a Refund or Write Off Request Type

Prerequisites

To define a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Refund/Write Off Request Type Business Object | Used to indicate the business object that you want to use to create the refund or write off request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define the characteristics for the refund or write off request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| Refund/Write Off Request Type | Used to specify the refund or write off request type. | Yes |
| Business Object | Indicates the refund and write off request type business object used while defining the refund or write off request type. | Not applicable |
| Refund/Write Off Request Business Object | Used to indicate the business object that you want to use while creating the refund or write off request. | Yes |
| Description | Used to specify the description for the refund or write off request type. | Yes |
| Detailed Description | Used to specify additional information about the refund or write off request type. | No |
| Status | <p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p> | Yes |
| Action | <p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Minimum Refund Amount | Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. | Yes |
| | Note: This field appears when the Action field is set to Refund . | |
| Write Up Adjustment Type | Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. | Yes |
| | Note: This field appears when the Action field is set to Refund . You can create write up adjustments only using those adjustment types where A/P request type is not defined. | |
| Approval Required | Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type. | No |
| Approval Profile | Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type. | Yes (Conditional) |
| | Note: This field appears when the Approval Required check box is selected. | |
| Hierarchical Approval | Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type. | No |
| | Note: This field appears only when the Approval Required check box is selected. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Refund Adjustment Type | Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. | Yes |
| | <p>Note:</p> <p>This field appears when the Action field is set to Refund.</p> <p>The list includes only those adjustment types where A/P request type is defined.</p> | |
| Write Off Adjustment Type | Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request. | Yes |
| | <p>Note:</p> <p>This field appears when the Action field is set to Write Off.</p> <p>You can create write off adjustments only using those adjustment types where A/P request type is not defined.</p> | |

6. Enter the required details depending on whether you want to define refund or write off request type.

Note: You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the refund or write off request type, if required.
8. Click **Save**.

The refund or write off request type is defined.

Defining a Characteristic for a Refund or Write Off Request Type

Prerequisites

To define a characteristic for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request Type**)

Procedure

To define a characteristic for a refund or write off request type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or write off request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request Type . | Note: This field is required when you are defining a characteristic for the refund or write off request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the refund or write off request type. |

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the refund or write off request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Refund or Write Off Request Type

Prerequisites

To edit a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application

- Adjustment types with and without A/P request type defined in the application

Procedure

To edit a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the refund or write off request type whose details you want to edit.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define the characteristics for the refund or write off request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|------------------------------|
| Refund/Write Off Request Type | Displays the refund or write off request type. | Not applicable |
| Business Object | Indicates the refund and write off request type business object used while defining the refund or write off request type. | Not applicable |
| Refund/Write Off Request Business Object | Used to indicate the business object that you want to use while creating the refund or write off request. | Yes |
| Description | Used to specify the description for the refund or write off request type. | Yes |
| Detailed Description | Used to specify additional information about the refund or write off request type. | No |
| Status | Used to indicate the status of the refund or write off request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p> </div> | Yes |

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

Prerequisites

To copy a refund or write off request type, you should have:

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define the characteristics for the refund or write off request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Refund/Write Off Request Type | Used to specify the refund or write off request type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Business Object | Indicates the refund and write off request type business object used while defining the refund or write off request type. | Not applicable |
| Refund/Write Off Request Business Object | Used to indicate the business object that you want to use while creating the refund or write off request. | Yes |
| Description | Used to specify the description for the refund or write off request type. | Yes |
| Detailed Description | Used to specify additional information about the refund or write off request type. | No |
| Status | <p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p> | Yes |
| Action | <p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off | Yes |
| Minimum Refund Amount | <p>Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. | Approval Required | Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type. | No |
| Approval Profile | Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type. | Yes (Conditional) |
| | <p>Note: This field appears when the Approval Required check box is selected.</p> | |
| Hierarchical Approval | Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type. | No |
| | <p>Note: This field appears only when the Approval Required check box is selected.</p> | |
| Refund Adjustment Type | Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. | Yes |
| | <p>Note:</p> <p>This field appears when the Action field is set to Refund.</p> <p>The list includes only those adjustment types where A/P request type is defined.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Write Off Adjustment Type | Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request. | Yes |
| | <p>Note:</p> <p>This field appears when the Action field is set to Write Off.</p> <p>You can create write off adjustments only using those adjustment types where A/P request type is not defined.</p> | |

Tip: Alternatively, you can click the **Duplicate** button in the **Refund/Write Off Request Type** zone to create a copy of the refund or write off request type.

- Enter the required details in the **Main** section.

Note: You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the respective field.

- Define, edit, or remove characteristics of the refund or write off request type, if required.
- Click **Save**.

The new refund or write off request type is defined.

Deleting a Refund or Write Off Request Type

Procedure

To delete a refund or write off request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
The **Refund/Write Off Request Type** screen appears.

- In the **Refund/Write Off Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the refund or write off request type that you want to delete.

A message appears confirming whether you want to delete the refund or write off request type.

Note: You can delete a refund or write off request type when you have not defined a refund or write off request using the refund or write off request type.

Tip: Alternatively, you can click the **Delete** button in the **Refund/Write Off Request Type** zone to delete the refund or write off request type.

- Click **OK**.

The refund or write off request type is deleted.

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to search for a refund or write off request.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Define a refund request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Refund. <p>Note: Only one bill at a time is allowed to select for Refund Request from the Account Receivable Central screen.</p> |
| Define a refund request from the Refund Request screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Refund/Write Off Request. A sub-menu appears. 3. Click the Add option from the Refund/Write Off Request sub-menu. |

The **Select Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Action | <p>Displays the type of request (refund or write off) to be created.</p> <p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> | Not applicable |
| Refund/Write Off Request Type | <p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p> | Yes |
| Account | <p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.</p> | Yes |

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the refund request.
- 4. Add payment events, payments, or credit bill line items that you want to refund.
- 5. Edit the refund amount of each entity, if required.
- 6. Define characteristics for the refund request, if required.
- 7. Override the address if you want to sent the refund to an address other than the account’s main customer address.

Refund Request

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Bill Line Items** — Displays the details of the bill which must be refunded.

Note: This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.

- **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears when the refund request is in the **Draft** status.

- **Payments** — Used to search payment events or individual payments that you want to refund. It contains the following zones:
 - **Search Payment Event** — Lists the payment events which are created for the account. You can filter the payment events using various search criteria.
 - **Payments** — Lists all payments created through the payment event.

This tab appears when the refund request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the refund request.

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- [Refund Request](#) on page 1673
- [Refund Details](#) on page 1675
- [Bill Line Items](#) on page 1676

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** — This section provides basic information about the refund request. It contains the following fields:

| Field Name | Field Description |
|----------------------------|---|
| Refund Request Information | Displays information about the refund request. |
| Refund Request Type | Indicates the refund request type using which the refund request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the refund request type. |
| Status | Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Voided |
| Status Reason | Indicates the reason why the refund request is rejected or voided. Note: This field appears when the refund request is in the Rejected or Voided status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or voided reason. |

| Field Name | Field Description |
|---------------------|---|
| Account Information | Indicates the account for which the refund request is created. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Person Name | Indicates the person for whom the refund request is created. |
| Override Address | Indicates whether the account's mailing address is overridden. |
| Address 1 | Displays the house number and apartment name. |
| Address 2 | Displays the street name. |
| Address 3 | Indicates the landmark, if available. |
| Address 4 | Displays the village, town, or city name. |
| City | Displays the city name. |
| State | Displays the state name. |
| Country | Displays the country name. |
| Postal | Displays the postal or zip code. |
| Comments | Displays additional information about the refund request. |
| Total Refund Amount | Displays the total refund amount. |

- **Characteristics** — Lists the characteristics defined for the refund request. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Effective Date | Indicates the date from when the characteristic is effective for the refund request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the refund request. |
| | Note: The Edit button appears when the refund request is in the Draft status. |
| Delete | Used to delete the refund request. |
| | Note: The Delete button appears when the refund request is in the Draft status. |
| Submit | Used to submit the refund request for approval. |
| | Note: The Submit button appears when the refund request is in the Draft status. |

| Button Name | Button Description |
|-------------|--|
| Approve | Used to approve the refund request. |
| | <p>Note: The Approve button appears when:</p> <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request. |
| Reject | Used to reject the refund request. |
| | <p>Note: The Reject button appears when:</p> <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request. |
| Void | Used to void the refund request. |
| | <p>Note: The Void button appears when the refund request is in the Processed status.</p> |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the refund request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Status Date/Time | Displays the date and time when the refund request status is updated |
| Create Date/Time | Displays the date and time when the refund request is created. |

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

| Column Name | Column Description |
|---------------|--|
| Entity ID | Displays the entity ID. |
| Entity Type | Indicates whether the entity is a payment event, payment, bill, bill segment, or an adjustment. |
| Currency | Indicates the currency in which the entity was created. |
| Entity Amount | Displays the entity amount. |
| Refund Amount | Displays the amount that must be refunded. |
| | <p>Note: By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.</p> |

| Column Name | Column Description |
|------------------------|--|
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |
| Adjustment Type | Indicates the adjustment type using which the refund adjustment must be created. |
| | Note: By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request. |
| Adjustment Information | Displays information about the refund adjustment. |
| | <p>Note:</p> <p>It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.</p> <p>The data appears in this column when the status of the refund request is Processed.</p> <p>The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.</p> |

Note: On clicking the Broadcast () icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of bill line items. |
| Delete | Used to delete the bill line items. |

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

| Column Name | Column Description |
|---------------|--|
| Bill ID | Displays the bill ID. |
| Entity ID | Displays the bill segment or adjustment ID. |
| Entity Type | Indicates whether the entity is a bill, bill segment or an adjustment. |
| Currency | Displays the currency in which the entity was created. |
| Entity Amount | Displays the bill segment or adjustment amount. |

| Column Name | Column Description |
|------------------------|--|
| Request Amount | Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded. |
| | Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero. |
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |
| Adjustment Type | Indicates the adjustment type using which the refund adjustment must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Adjustment Information | Displays information about the refund adjustment. |

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** (📢) icon corresponding to the bill in the **Refund Details** zone.

| How to add a credit bill line item to the refund request | Adding a Credit Bill Line Item to the Refund Request on page 1689 |

Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:

- [Search Bills](#) on page 1677
- [Bill Line Items](#) on page 1679

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details | Yes |
| | Note: By default, the Bill Details option is selected. | |
| Bill ID | Used to search a particular bill. | No |
| Bill Date From | Used to search bills which are created from a particular date onwards. | No |
| To | Used to search bills which are created till a particular date. | No |
| Price Item | Used to search bills which are created for a particular price item. | No |
| | Note: This field appears when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search (🔍) icon corresponding to the field. | |

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|--|
| Bill ID | Displays the bill ID. |
| Bill Information | Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Amount | Displays the total bill amount. |

If you want to refund a bill with credit balance and all credit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit bill segments and adjustments of the bill are added in the **Refund Details** zone on the **Main** tab. However, if you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

| How to add a credit bill line item to the refund request | Adding a Credit Bill Line Item to the Refund Request on page 1689 |

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Entity ID | Displays the bill segment or adjustment ID. |
| Entity Type | Indicates whether the entity is a bill segment or an adjustment. |
| Entity Information | Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application. |
| | Note: It has a link. If the entity is a bill segment, the Bill Segment screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the Adjustment screen appears with the details of the respective adjustment on clicking the link. |
| Entity Amount | Displays the bill segment or adjustment amount. |
| Eligible Amount | Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded. |
| | Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero. |
| Amount Refunded | Displays the amount which is already refunded to the account. |
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |

You can select one or more credit bill segments or adjustments and click the **Add** button in this zone to add selected credit bill segments or adjustments to the refund request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (📡) icon corresponding to the bill in the **Search Bills** zone.

Refund Request - Payments

The **Payments** tab allows you to search payment events or individual payments that you want to refund. It contains the following zones:

- [Search Payment Event](#) on page 1680
- [Payments](#) on page 1681

Search Payment Event

The **Search Payment Event** zone lists the payment events which are created for the account. You can filter the payment events using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Search By | Used to indicate that you want to search for a payment event using the payment details. The valid values are: <ul style="list-style-type: none"> • Payment Details | Yes |
| | Note: By default, the Payment Details option is selected. | |
| Payment Event ID | Used to search a particular payment event. | No |
| Suspense/Excess Credit Contract | Used to search payment events which include payments made against a particular suspense or excess credit contract. | No |
| | Note: The suspense and excess credit contracts are listed when these contracts are associated with the account | |
| Check Number | Used to search a payment event which includes payment made through a particular check. | No |
| Payment Date | Used to search payment events which include payments created from a particular date onwards. | No |
| To | Used to search payment events which include payments created till a particular date. | No |
| MICR ID | Used to search payment events which include payments made with a particular MICR code. | No |

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payment Event Information | Displays additional information about the payment event. |
| | Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event. |
| Payment Date | Displays the date when the payments were created. |
| Tender Amount | Displays the tender amount. |
| Payment Event ID | Displays the payment event ID. |

If you want to refund all payments of a payment event, you need to select the check box corresponding to the payment event and then click the **Add** button in the **Search Results** section. If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details**

zone on the **Main** tab. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Note: If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

Payments

The **Payments** zone lists only those payments which are created through the payment event and are currently in the **Frozen** status. This zone contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payment ID | Displays the payment ID. |
| | Note: It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment. |
| Payee Account Information | Displays additional information about the account for which the payment was made. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Payment Amount | Displays the payment amount. |
| Payment Currency | Indicates the currency in which the payment was made. |
| Payment Status | Indicates the status of the payment. |
| Match Type | Indicates the match type using which the payment was matched. |
| Match Value | Indicates the entity (such as bill, contract, and so on) against which the payment was matched. |
| Amount Refunded | Displays the amount which is already refunded to the payor account. |

You can select one or more payments and click the **Add** button in this zone to add selected payments to the refund request.

By default, the **Payments** zone does not appear in the **Payments** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the payment event in the **Search Payment Event** zone.

Refund Request - Log

The **Log** tab contains the following zone:

- [Refund Request Log](#) on page 1682

Refund Request Log

The **Refund Request Log** zone lists the complete trail of actions performed on the refund request. This zone contains the following columns:

| Column Name | Column Description |
|----------------|---|
| Date/Time | Displays the date and time when the action was performed on the refund request. |
| Details | Displays the details about the action performed on the refund request. |
| User | Indicates the user who has performed the action on the refund request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the refund request. |
| Status Reason | Displays the status reason of action performed on the refund request. |

Note: You can manually add a log entry for the refund request by clicking the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

The **Add Request Log** window appears. Enter **Log Details** and click **Save**. The refund request log is added.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Define a refund request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Refund. |

| If you want to... | Then... |
|---|--|
| | <p>Note: Only one bill at a time is allowed to select for Refund Request from the Account Receivable Central screen.</p> |
| Define a refund request from the Refund Request screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Refund/Write Off Request. A sub-menu appears. 3. Click the Add option from the Refund/Write Off Request sub-menu. |

The **Select Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Action | <p>Displays the type of request (refund or write off) to be created.</p> <p>Note: This field is pre-populated if the refund request is created from the Account Receivable Central screen. This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> | Not applicable |
| Refund/Write Off Request Type | <p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Account | <p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.</p> | Yes |

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the refund request.
4. Add payment events, payments, or credit bill line items that you want to refund.
 5. Edit the refund amount of each entity, if required.
 6. Define characteristics for the refund request, if required.
 7. Override the address if you want to sent the refund to an address other than the account's main customer address.

Defining a Characteristic for a Refund Request

Prerequisites

To define a characteristic for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

3. Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears.

Note: The **Edit** button appears only when the refund request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the refund request.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the refund request. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the refund request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request . | Note: This field is required when you are defining a characteristic for the refund request. |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the refund request. |

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.

The **Payments** tab appears.

2. Filter the payment events, if required, in the **Search Payment Event** zone.

Note: You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search Results** section.

Note: You can add more than one payment event to the refund request at the same time.

4. Click **Add**.

A message appears indicating that the selected payment events are added to the refund request.

5. Click **OK**.

Note that the entity is added in the **Refund Details** zone on the **Main** tab.

Note:

You can only refund payments which are in the **Frozen** status.

If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to the account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

| If... | Then... |
|--|---|
| A bill has all credit line items and you want to add the credit bill to the refund request | <ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p> |
| A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request | <ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p> |

4. Click **Add**.

A message appears indicating that the selected bills are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Adding a Credit Bill Line Item to the Refund Request

You can refund the credit bill line items, such as bill segments and adjustments, to the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all credit line items of a bill to the refund request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit line items) to the refund request

Prerequisites

To add a credit bill line item to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill line item to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

| If... | Then... |
|---|---|
| A bill has all credit line items and you want to add a particular credit bill line item to the refund request | <ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. |

| If... | Then... |
|--|--|
| | <ol style="list-style-type: none"> <li data-bbox="846 205 1393 296">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund. |
| A bill has credit balance and one or more debit line items | <ol style="list-style-type: none"> <li data-bbox="846 352 1393 506">1. In the Search Bills zone, click the Broadcast () icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. <li data-bbox="846 533 1393 623">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund. |
| A bill has debit balance and one or more credit line items | <ol style="list-style-type: none"> <li data-bbox="846 684 1393 837">1. In the Search Bills zone, click the Broadcast () icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. <li data-bbox="846 865 1393 955">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund. |

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that the credit bill segments or adjustments are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

3. Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears. It contains the following section:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|------------------------------|
| Refund Request Information | Displays information about the refund request. | Not applicable |
| Account Information | Indicates the account for which the refund request is created. | Not applicable |
| Person Name | Used to indicate the person for whom the refund request is created. Note: The system maintains a log when you edit the person name in a refund request. A log is created in the following format: Person Name is changed; Old Value: <OLD NAME>; New Value: <NEW NAME> | No |
| Override Address | Used to indicate whether the account's mailing address must be overridden. Note: By default, the account's main customer's address appears in the following fields — Address 1, Address 2, Address 3, Address 4, City, Country, State, and Postal. You can override the address in these fields, if required. The system maintains a log when you edit the address in a refund request. A log is created in the following format: Address is changed; Old Value: <OLD ADDRESS>; New Value: <NEW ADDRESS> | No |
| Address 1 | Used to specify the house number and apartment name. | No |
| Address 2 | Used to specify the street name. | No |
| Address 3 | Used to specify any landmark, if available. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Address 4 | Used to specify the village, town, or city name. | No |
| City | Used to specify the city name. | No |
| Country | Used to specify the country name. | No |
| State | Used to specify the state name. | No |
| Postal | Used to specify the postal or zip code. | No |
| Comments | Used to specify additional information about the refund request. | No |

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define the characteristics for the refund request. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the refund request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the refund request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request . | Note: This field is required when you are defining a characteristic for the refund request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the refund request. |

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics of the refund request, if required.
6. Click **Save**.

The changes made to the refund request are saved.

Editing the Refund Details

Prerequisites

To edit the refund details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the refund details:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose bill line item details you want to edit.

The **Refund Request** screen appears. You can edit the bill line items by either of the following ways:

| If... | Then |
|---|--|
| Select the bill whose details you want to edit in the Refund Details zone and click the Edit button available in the upper left corner of this zone. | The Edit Request Details screen appears. |
| In the Refund Details zone, click the Broadcast () icon corresponding to the bill whose line items details you want to edit. | The Bill Line Items zone appears. |
| | <p>Note: This zone appears when the Entity Type is Bill.</p> <ol style="list-style-type: none"> 1. Select the bill line item whose details you want to edit in the Bill Line Items zone and click the Edit button available in the upper left corner of this zone. <p>The Edit Request Details screen appears.</p> |

Note: A bill line item from the refund request can be edited when the refund request is in the **Draft** status.

The **Edit Request Details** screen contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|------------------------------|
| Request ID | Displays the refund request ID. | Not applicable |
| Account Information | Displays additional information about the account. | Not applicable |
| Adjustment Type | Indicates the adjustment type of the refund request type. You can search for an adjustment type by clicking the Search () icon corresponding to the field. | No |

In addition to these fields, this screen contains following columns:

| Column Name | Column Description |
|-----------------|--|
| Entity Type | Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment • Payment Event • Payment |
| Entity ID | Displays the entity ID. |
| Entity Amount | Displays the entity amount. |
| Currency | Displays the currency in which the entity was created. |
| Request Amount | Displays the amount that must be refunded. |
| Adjustment Type | Indicates the adjustment type using which the refund adjustment must be created. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the field.</p> </div> |
| Bill ID | Displays the bill ID. |

In addition to the above columns, the screen has following button:

| Button Name | Button Description |
|-------------|--|
| Override | Used to override an adjustment type of the refund request. |

Note:

In the **Bill Line Items** zone, click the **Broadcast** (📢) icon corresponding to the bill line item which you want to delete

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (◀◀), **Previous** (◀), **Next** (▶), and **Last** (▶▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the bill line items.
4. Click **Save**.

The changes made to the refund bill line items are saved.

Approving a Refund Request

You can view the number of refund requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the refund request based on the observations.

Note: The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To approve a refund request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Approve a refund request through the Refund/Write Off Request screen | <ol style="list-style-type: none"> 1. Search for the refund request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the refund request which you want to review. |
| Approve a refund request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-REFRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the refund request that you want to review. |

The **Refund Request** screen appears.

2. Review the refund request details.
3. Click the **Approve** button in the **Refund Request** zone.

The system behaves in the following manner:

| If... | Then |
|---|---|
| <p>The Hierarchical Approval check box is selected in the refund request type using which the refund request is created and the total refund amount is greater than the threshold amount specified at the next level in the approval hierarchy</p> | <p>A To Do of the C1-REFRQ To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the refund request remains as Approval In Progress.</p> |
| <p>The Hierarchical Approval check box is selected in the refund request type using which the refund request is created and the total refund amount is less than the threshold amount specified at the next level in the approval hierarchy</p> | <p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to Processed.</p> <p>Note: The refund adjustments are created in the Frozen status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to Open. However, if you are refunding the entire eligible amount, the corresponding match event status is set to Balanced.</p> |
| <p>The Hierarchical Approval check box is not selected in the refund request type using which the refund request is created</p> | <p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to Processed.</p> <p>Note: The refund adjustments are created in the Frozen status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. Rejecting a Refund Request

Prerequisites

To reject a refund request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To reject a refund request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Reject a refund request through the Refund/Write Off Request screen | <ol style="list-style-type: none"> 1. Search for the refund request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the refund request which you want to review. |
| Reject a refund request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. |

| If you want to... | Then... |
|-------------------|---|
| | <ol style="list-style-type: none"> 3. Enter C1-REFRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the refund request that you want to review. |

The **Refund Request** screen appears.

2. Review the refund request details.
3. Click the **Reject** button in the **Refund Request** zone.

The **Reject Refund Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the refund request. | Yes |
| Comments | Used to specify additional information while rejecting the refund request. | No |

Note: The **Reject** button appears when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the refund request is changed to **Rejected**.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to void.

The **Refund Request** screen appears.

- Click the **Void** button in the **Refund Request** zone.

The **Void Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to void the refund request. | Yes |
| Comments | Used to specify additional information while voiding the refund request. | No |

Note: The **Void** button appears when the refund request is in the **Processed** status.

- Select the void reason from the **Status Reason** list.
- Click **Save**.

The status of the refund request is changed to **Voided**.

Note: The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

Write Off Request

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- Main** – Displays information about the write off request. It contains the following zones:
 - Write Off Request** – Displays the details of the write off request.
 - Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - Bill Line Items** — Displays the details of the bill which must be written off.

Note:

This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears when the write off request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the write off request.

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- [Write Off Request](#) on page 1706
- [Write Off Details](#) on page 1708
- [Bill Line Items](#) on page 1709

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** — This section provides basic information about the write off request. It contains the following fields:

| Field Name | Field Description |
|-------------------------------|---|
| Write Off Request Information | Displays information about the write off request. |
| Write Off Request Type | Indicates the write off request type using which the write off request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the write off request type. |
| Status | Indicates the status of the write off request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Cancelled |

| Field Name | Field Description |
|------------------------|---|
| Status Reason | Indicates the reason why the write off request is rejected or cancelled. Note: This field appears when the write off request is in the Rejected or Cancelled status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or cancelled reason. |
| Account Information | Indicates the account for which the write off request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Comments | Displays additional information about the write off request. |
| Total Write Off Amount | Displays the total write off amount. |

- **Characteristics** — Lists the characteristics defined for the write off request. It contains the following fields:

| Field Name | Field Description |
|----------------------|---|
| Effective Date | Indicates the date from when the characteristic is effective for the write off request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the write off request. Note: The Edit button appears when the write off request is in the Draft status. |
| Delete | Used to delete the write off request. Note: The Delete button appears when the write off request is in the Draft status. |
| Submit | Used to submit the write off request for approval. Note: The Submit button appears when the write off request is in the Draft status. |
| Approve | Used to approve the write off request. Note: The Approve button appears when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request. |

| Button Name | Button Description |
|-------------|---|
| Reject | Used to reject the write off request. |
| | <p>Note: The Reject button appears when:</p> <ul style="list-style-type: none"> The write off request is in the Approval In Progress status. A user with the approval To Do role is reviewing the write off request. |
| Cancel | Used to cancel the write off request. |
| | <p>Note: The Cancel button appears when the write off request is in the Processed status.</p> |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Status Date/Time | Displays the date and time when the write off request status is updated |
| Create Date/Time | Displays the date and time when the write off request is created. |

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Entity ID | Displays the entity ID. |
| Entity Type | Indicates whether the entity is a bill, bill segment or an adjustment. |
| Currency | Indicates the currency in which the entity was created. |
| Entity Amount | Displays the entity amount. |
| Write Off Amount | Displays the amount that must be written off. |
| | <p>Note: By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.</p> |
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | <p>Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.</p> |

| Column Name | Column Description |
|------------------------|---|
| Adjustment Type | Indicates the adjustment type using which the write off adjustment must be created. |
| | Note: By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request. |
| Adjustment Information | Displays information about the write off adjustment. |
| | Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. The data appears in this column when the status of the write off request is Processed . The information string appears when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen. |
| | |

Note:

On clicking the **Broadcast** () icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of bill line items. |
| Delete | Used to delete the bill line items. |

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Bill ID | Displays the bill ID. |
| Entity ID | Displays the bill segment or adjustment ID. |
| Entity Type | Indicates whether the entity is a bill, bill segment or an adjustment. |
| Currency | Displays the currency in which the entity was created. |
| Entity Amount | Displays the bill segment or adjustment amount. |
| Request Amount | Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded. |
| | Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero. |

| Column Name | Column Description |
|------------------------|--|
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |
| Adjustment Type | Indicates the adjustment type using which the refund adjustment must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Adjustment Information | Displays information about the refund adjustment. |

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** () icon corresponding to the bill in the **Write Off Details** zone.

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|---|-----------------------|
| Search By | Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details | Yes |
| | Note: By default, the Bill Details option is selected. | |
| Bill ID | Used to search a particular bill. | No |
| Bill Date From | Used to search bills which are created from a particular date onwards. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| To | Used to search bills which are created till a particular date. | No |
| Price Item | Used to search bills which are created for a particular price item. | No |
| | Note: This field appears when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search (🔍) icon corresponding to the field. | |

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|--|
| Bill ID | Displays the bill ID. |
| Bill Information | Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Amount | Displays the total bill amount. |

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Entity ID | Displays the bill segment or adjustment ID. |

| Column Name | Column Description |
|----------------------|---|
| Entity Type | Indicates whether the entity is a bill segment or an adjustment. |
| Entity Information | Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application. Note: It has a link. If the entity is a bill segment, the Bill Segment screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the Adjustment screen appears with the details of the respective adjustment on clicking the link. |
| Entity Amount | Displays the bill segment or adjustment amount. |
| Eligible Amount | Displays the bill segment or adjustment amount which is eligible for write off. In other words, it means entity amount minus amount written off. Note: If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero. |
| Amount Written Off | Displays the amount which is already written off to the account. |
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |

You can select one or more debit bill segments or adjustments and click the **Add** button in this zone to add selected debit bill segments or adjustments to the write off request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (📡) icon corresponding to the bill in the **Search Bills** zone.

Write Off Request - Log

The **Log** tab contains the following zone:

- [Write Off Request Log](#) on page 1712

Write Off Request Log

The **Write Off Request Log** zone lists the complete trail of actions performed on the write off request. This zone contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Date/Time | Displays the date and time when the action was performed on the write off request. |
| Details | Displays the details about the action performed on the write off request. |

| Column Name | Column Description |
|----------------|--|
| User | Indicates the user who has performed the action on the write off request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the write off request. |
| Status Reason | Displays the status reason of action performed on the write off request. |

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

The **Add Request Log** window appears. Enter **Log Details** and click **Save**. The write off request log is added.

Creating a Write Off Request

Prerequisites

To create a write off request, you should have:

- Write off request types defined in the application

Procedure

To create a write off request:

1. Do either of the following:

| If you want to... | Then... |
|--|---|
| Define a write off request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Write Off. <p>Note: Only one bill at a time is allowed to select for Write Off Request from the Account Receivable Central screen.</p> |
| Define a write off request from the Write Off Request screen | <ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. |

| If you want to... | Then... |
|-------------------|--|
| | <p>2. From the Main menu, select Accounting and Receivable and then click Refund/Write Off Request.</p> <p>A sub-menu appears.</p> <p>3. Click the Add option from the Refund/Write Off Request sub-menu.</p> |

The **Select Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Action | <p>Displays the type of request (refund or write off) to be created.</p> <p>Note:</p> <p>This field is pre-populated if the write off request is created from the Account Receivable Central screen.</p> <p>This field is editable if the write off request is created from the Refund/Write Off Request screen.</p> | Yes |
| Refund/Write Off Request Type | <p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p> | Yes |
| Account | <p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note:</p> <p>This field is pre-populated if the write off request is created from the Account Receivable Central screen.</p> <p>This field is editable if the write off request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.</p> | Yes |

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective fields.
3. Click **Save**.

The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request. It contains the following tabs:

Note: The write off request can be created only for bill with outstanding amount greater than zero.

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
4. Add debit bill line items that you want to write off.
 5. Edit the write off amount of each entity, if required.
 6. Define characteristics for the write off request, if required.

Defining a Characteristic for a Write Off Request

Prerequisites

To define a characteristic for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears.

Note: The **Edit** button appears only when the write off request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the write off request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the write off request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request . | Note: This field is required when you are defining a characteristic for the write off request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the write off request. |

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the write off request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the write off request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

| If... | Then... |
|--|--|
| A bill has all debit line items and you want to add the debit bill to the write off request | <ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to write off. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p> |
| A bill has debit balance and one or more credit line items and you want to add the debit bill to the write off request | <ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to write off. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p> |

4. Click **Add**.

A message appears indicating that the selected bills are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone. The system will not allow you to add a credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

| If... | Then... |
|--|--|
| A bill has all debit line items and you want to add a particular debit bill line item to the write off request | <ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off. |
| A bill has debit balance and one or more credit line items | <ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off. |
| A bill has credit balance and one or more debit line items | <ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. |

| If... | Then... |
|-------|--|
| | <p>The Bill Line Items zone appears.</p> <p>2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</p> |

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.

The system will not allow you to add a credit line item to the **Write Off Details** zone.

Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

- Adjustment types without A/P request type defined in the application

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| Write Off Request Information | Displays information about the write off request. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Account Information | Indicates the account for which the write off request is created. | Not applicable |
| Comments | Used to specify additional information about the write off request. | No |

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define the characteristics for the write off request. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the write off request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the write off request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request . | Note: This field is required when you are defining a characteristic for the write off request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the write off request. |

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics of the write off request, if required.
6. Click **Save**.

The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.

The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

| If... | Then... |
|--|---|
| Select the bill whose details you want to edit in the Write Off Details zone and click the Edit button available in the upper left corner of this zone. | The Edit Request Details screen appears. |
| In the Write Off Details zone, click the Broadcast () icon corresponding to the bill whose line items details you want to edit. | <p>The Bill Line Items zone appears.</p> <p>Note: This zone appears when the Entity Type is Bill.</p> <p>1. Select the bill line item whose details you want to edit in the Bill Line Items zone and click the Edit button available in the upper left corner of this zone.</p> <p>The Edit Request Details screen appears.</p> |

Note: A bill line item from the write off request can be edited when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Request ID | Displays the write off request ID. | Not applicable |
| Account Information | Displays additional information about the account. | Not applicable |
| Adjustment Type | <p>Indicates the adjustment type of the write off request type.</p> <p>You can search for an adjustment type by clicking the Search () icon corresponding to the field.</p> | No |

In addition to these fields, this screen contains following columns:

| Column Name | Column Description |
|-----------------|---|
| Entity Type | Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment • Payment Event • Payment |
| Entity ID | Displays the entity ID. |
| Entity Amount | Displays the entity amount. |
| Currency | Displays the currency in which the entity was created. |
| Request Amount | Displays the amount that must be write off. |
| Adjustment Type | Indicates the adjustment type using which the write off adjustment must be created. Note: You can search for an account by clicking the Search (🔍) icon corresponding to the field. |
| Bill ID | Displays the bill ID. |

In addition to the above columns, the screen has following button:

| Button Name | Button Description |
|-------------|---|
| Override | Used to override an adjustment type of the write off request. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (◀◀), **Previous** (◀), **Next** (▶), and **Last** (▶▶) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the bill line items.
4. Click **Save**.

The changes made to the write off bill line items are saved.

Submitting a Write Off Request

Prerequisites

To submit a write off request, you should have:

- Debit bill line items added in the write off request

Procedure

To submit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to submit.

The **Write Off Request** screen appears.

- Click the **Submit** button in the **Write Off Request** zone.

The system behaves in the following manner:

| If... | Then |
|---|---|
| The Approval Required and Hierarchical Approval check boxes are selected in the write off request type using which the write off request is created | A To Do of the C1-WOREQ To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the write off request is changed to Approval In Progress . |
| The Approval Required check box is selected, but the Hierarchical Approval check box is not selected in the write off request type using which the write off request is created | A To Do of the C1-WOREQ To Do type is created and sent to the approver at the hierarchy level where the total write off amount falls within the threshold limit. In addition, the status of the write off request is changed to Approval In Progress . |
| The Approval Required check box is not selected in the write off request type using which the write off request is created | <p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.</p> |
| The total write off amount is less than the minimum threshold amount | <p>The write off request is automatically approved by the system and write off adjustments are created using the specified adjustment types. In addition, the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.</p> |

Note: The **Submit** button appears when the write off request is in the **Draft** status.

Approving a Write Off Request

You can view the number of write off requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the write off request based on the observations.

Note: The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To approve a write off request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Approve a write off request through the Refund/Write Off Request screen | <ol style="list-style-type: none"> 1. Search for the write off request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review. |
| Approve a write off request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-WOREQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. |

| If you want to... | Then... |
|-------------------|---|
| | 6. Click the link in the Message column corresponding to the To Do of the write off request that you want to review. |

The **Write Off Request** screen appears.

2. Review the write off request details.
3. Click the **Approve** button in the **Write Off Request** zone.

The system behaves in the following manner:

| If... | Then... |
|---|---|
| The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is greater than the threshold amount specified at the next level in the approval hierarchy | A To Do of the C1-WOREQ To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the write off request remains as Approval In Progress . |
| The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is less than the threshold amount specified at the next level in the approval hierarchy | <p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.</p> |
| The Hierarchical Approval check box is not selected in the write off request type using which the write off request is created | <p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.</p> |

Note: The **Approve** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Reject a write off request through the Refund/Write Off Request screen | <ol style="list-style-type: none"> 1. Search for the write off request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review. |
| Reject a write off request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. |

| If you want to... | Then... |
|-------------------|--|
| | <ol style="list-style-type: none"> 3. Enter C1-WOREQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the write off request that you want to review. |

The **Write Off Request** screen appears.

2. Review the write off request details.
3. Click the **Reject** button in the **Write Off Request** zone.

The **Reject Write Off Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the write off request. | Yes |
| Comments | Used to specify additional information while rejecting the write off request. | No |

Note: The **Reject** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Rejected**.

Viewing the Log of a Write Off Request

Procedure

To view the log of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to view.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bill Line Items** — Displays the details of the bill which must be written off.

Note:

This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab
 4. View the log of the write off request in the **Write Off Request Log** zone.

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Adding a Log Entry for a Write Off Request

Procedure

To add a log entry for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to edit.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Request Information | Displays information about the write off request. | Not applicable |
| Log Details | Used to specify additional comments for the write off request. | Yes |

5. Enter the comments in the **Log Details** field.
 6. Click **Save**.
- The log entry is added in the **Write Off Request Log** zone.

Canceling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.

The **Write Off Request** screen appears.

3. Click the **Cancel** button in the **Write Off Request** zone.

The **Cancel Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to cancel the write off request. | Yes |
| Comments | Used to specify additional information while cancelling the write off request. | No |

Note: The **Cancel** button appears when the write off request is in the **Processed** status.

4. Select the cancel reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Cancelled**.

Note: The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

Chapter 26

Hold Request

Topics:

- [Hold Request \(Without Approval\) Status Transition](#)
- [Hold Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-HoldRequest](#)
- [Prerequisites](#)
- [Hold Request Type](#)
- [Hold Request \(Used for Searching\)](#)
- [Hold Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to hold the amount for Person, Account or Bills. Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. The activities that need to be on Hold vary according to the reason for hold, such as due to a climate disaster the collection activity remains on Hold until disaster period is over.

Hold Request is a object which contains list of processes to be kept on hold for certain entities such as account, person, and bill for certain period of time. The hold period is defined as the duration between Hold Request Start Date and End Date. Each Hold Request contains an entity and processes on hold. There could exists multiple hold requests for an entity for different hold reasons and processes.

Following are the hold request entities:

- **Person:** If the person is on hold then all entities linked to that person where the person is financially responsible, such as accounts and its bills will be on hold.
- **Account:** If the account is on hold then all the bills of that account will be on hold.
- **Bill:** A bill will be on complete or partial hold.

In Hold Request, following mentioned processes can be on hold:

- **Auto Pay** — If the auto payment process is on hold then, then auto pay for the bills of the account added in hold request will be on hold till the request is released. However, you can do the manual payments. On activation of the hold request, **Defer Auto Pay Date** field (in Account screen) is populated with some future date. If billing process is on hold then auto payment process would also go on hold.
- **Bill Generation** — If the bill generation process is on hold then, then new bills will not be created for the account added in hold request till request is released. On activation of the hold request, **Bill After** date field (in Account screen) is populated with either hold request end date or some future date until that date billing is kept on hold. Whenever hold request is released for billing process then **Bill After** date field will be populated as system date.

Note: During the tenure of a hold request if customer does not require pending bills to be used for bill generation, bill in pending for accounts under hold are identified during activation of hold request which can be deleted by execution of the **C1-DELBI** batch . For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

- **Overdue** — If the overdue process is on hold then bills associated with accounts in the hold request will be on hold for overdue process. It means existing overdue will be cancelled. New overdue process will get created once hold request is released. On activation of the hold request, **Postpone Credit Review** field (in Account screen) is populated with either hold request end date or some future date. When hold request is released, **Postpone Credit Review** field would be set as system date. If the overdue process is on hold then request for policy termination due to non payment will be on hold.
- **Funding** — A list of bills identified for a full bill amount or a partial bill amount will be kept on hold for a funding process.

Note:

For Funding process, Person, Bill, and Account entities can be put on hold. However, for processes like Auto pay, Bill Generation, and Overdue, only Account entity can be put on hold.

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End Date.

You need to specify the hold request type while creating a hold request. Hold request type helps the system to determine:

- Whether to allow the partial hold for bill or not
- Whether hold request must be approved by the approver before keeping entities and processes on hold

It is possible for a given entity, such as a person or account, to be affected by hold request with differing periods or at differing levels. For example, if there is a hold request added for a person manually and another hold request is there due to some other reason for an account belongs to the person who is already on hold. The system assumes that both hold requests are in effect for the account and that the period of accounts starts from the start of the earlier hold request record (for the account) until the later of the two release dates.

During the hold request process, a hold request goes through various statuses in its lifecycle. For more information about the hold request statuses, see [Hold Request \(Without Approval\) Status Transition](#) on page 1735 and [Hold Request \(With Approval\) Status Transition](#) on page 1735

Note that the lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object. In addition, you can configure the search feature by setting **Fkref** feature configuration for each entity, such as person, account and bill.

For more information on how to setup the hold request processes, see [Prerequisites](#) on page 1742.

Hold Request (Without Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is off:

Hold Request (With Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is on:

Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|-------------|----------------|--|
| Information | C1-HOLD-INF | C1-HOLD-INF | <p>This algorithm generates hold request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Hold Request Type • Status • Entity • Hold Request ID |

| System Event | Algorithm | Algorithm Type | Description |
|--------------|-------------|----------------|--|
| Validation | C1-HLDVALDN | C1-HLDVALDN | <p>This algorithm validates following during different statuses:</p> <p>For Draft status, it checks the following:</p> <ul style="list-style-type: none"> • At least one Process is present in the request. Entity selection is optional • No duplicate entity and process is allowed in a single request. • Same entity cannot be placed on hold with the same Hold Reason in multiple Hold Requests. • Request start date is earlier than or equal to process and entity start date. • Request End Date is later than or equal to process and entity end date. • At least one process start date is earlier than or equal to any entity start date. • At least one process end date is later than or equal to any entity end date. • For Bill and Person entity, Bill Generation, Overdue, and Auto Pay processes cannot be selected as the hold processes in a hold request. • For Bill entity, it checks if hold amount is less than or equal to bill outstanding amount • For Bill entity, to add a new bill to the request, the selected bill should be with a non-zero outstanding amount. • Each Entities start date should lie within at least one process start date and end date in a request. <p>For Active state following are some additional validations:</p> <ul style="list-style-type: none"> • Hold Process or Entities cannot be deleted. • Hold Request or Entity or Process Start Date cannot be modified. • Hold Reason cannot be modified • Hold Request or Process or Entity End Date can be updated as either equal or greater than system date. • Process can be added with start date as system date. • Entity cannot be added in hold request. • If entity or process end date is in past then it cannot be updated. |

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|--------------|----------------|---|
| Draft | Enter | C1-HLDARCTRN | C1-HLDARCTRN | This algorithm transitions the request to active status when the request is created from Account Receivable Central and Delinquency Control . |
| Draft | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for primary key of the current business object, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |
| Submit | Enter | C1-HOLDSUBMT | C1-HOLDSUBMT | This algorithm checks the following: <ul style="list-style-type: none"> Whether the approval is required for the hold request. If the approval is required for a hold request, the status of the hold request is changed to Approval In Progress. However, if the approval is not required for a hold request, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|-------------|----------------|--|
| Active | Enter | C1-HOLDACTV | C1-HOLDACTV | <p>This algorithm is invoked on Active button and validates following:</p> <ul style="list-style-type: none"> • Entities Start Date is on or after Hold Request Start Date • Entities End Date is on or before Hold Request End Date • For an Entity Bill, Hold Amount is not more than bill outstanding amount or Bill outstanding amount is not equal to zero. • Updates and processes entities start date to system date. • It updates following mentioned date to minimum of Entity End Date or Process End Date: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process. • Postpone Credit review Date Until- For Overdue Process. • Defer Auto Pay Date - For Auto pay process. • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account. • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account. <p>Note: If entity end date is empty, process end date will be considered. If process end date and entity is empty, Hold Request End Date will be considered.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Deferred Processing | Monitor | F1-AT-RQJ | F1-AT-RQJ | This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Only one of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm. |
| Approval In Progress | Enter | C1-HOLDAPP | C1-HOLDAPP | This algorithm creates To Do based on 'Approval To Do Type configured in Hold Request Type. |
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed. |
| Approved | Enter | C1-HOLDAPRVD | C1-HOLDAPRVD | This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval profile hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the hold request is changed to Approval In Progress . If further approval is not required, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|--------------|----------------|--|
| Return to Submitter | Enter | C1-HLDRESUBM | C1-HLDRESUBM | This algorithm is triggered when the approver clicks the Re Submit button. A To Do is created and sent to the submitter. It transitions the status of the hold request from Approval In Progress to Draft . The submitter can make required changes to the request details and submit it again. The To Do Type and To Do Role for submitter is specified in hold request type. |
| Rejected | - | - | - | - |
| Released | Enter | C1-RELENTITY | C1-RELENTITY | This algorithm is invoked on Release button and updates following date to system date for all entities in the Hold Request: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process • Postpone Credit review Date Until- For Overdue Process • Defer Auto Pay Date - For Auto pay process • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account. |
| Released | Enter | C1-RLSHOLD | C1-RLSHOLD | This algorithm is invoked on click of Release button in hold request and updates the following: <ul style="list-style-type: none"> • Hold Request End Date is updated to System Date • Processes End Date is updated to System Date • Entities End Date is updated to System Date • Hold request status is changed to Released after Hold Release Reason is accepted. |

Prerequisites

To setup the hold request process, you need to do the following:

- Define the release status reasons for the **C1-HoldRequest** business object
- Define the required hold reasons in the system
- Define rejected status reasons for the **C1-HoldRequest** business object
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive To Do generated while submitting a hold request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive To Do generated while resubmitting a hold request
- Define the required hold request types in the system
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)** and **Hold Request Monitor (C1-HLMON)** batches to Timed and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request.

The **Hold Request Type** screen allows you to define, edit, copy, and delete a hold request type. This screen consists of the following zones:

- [Hold Request Type List](#) on page 1742
- [Hold Request Type](#) on page 1743

Hold Request Type List

The **Hold Request Type List** zone lists hold request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|-------------------|--|
| Hold Request Type | Displays the hold request type. |
| Description | Displays the description of the hold request type. |

| Column Name | Column Description |
|-------------|--|
| Edit | On clicking the Edit (✎) icon, the Hold Request Type screen appears where you can edit the details of the hold request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Hold Request Type screen appears where you can define a hold request type using an existing hold request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the hold request type. Note: You can delete a hold request type when you have not created a hold request using the hold request type. |

On clicking the **Broadcast** (📡) icon corresponding to the hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Related Topics

| For more information on... | See... |
|--|--|
| How to define a hold request type | Defining a Hold Request Type on page 1745 |
| How to edit a hold request type | Editing a Hold Request Type on page 1749 |

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the hold request type. It contains the following fields:

| Field Name | Field Description |
|------------------------------|--|
| Hold Request Type | Displays the hold request type. |
| Description | Displays the description of the hold request type. |
| Hold Request Business Object | Indicates the business object that will be used to create the hold request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the hold request type. |
| Status | Indicates the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Allow Partial Hold for Bill | Indicates whether the partial hold amount is allowed for a bill. |

| Field Name | Field Description |
|------------------------|---|
| Defer Processing Count | Displays the number of entities to determine if the hold request will be processed in deferred mode. |
| | Note: If the number of entities is less than the Defer Processing Count , the hold request will be processed in real time (i.e. immediately). |
| Approval Required | Indicates whether approval is required while creating the hold request using hold request type. |
| Approval To Do Type | Indicates that To Do of the specified To Do type must be created when you submit the hold request for approval. |
| | Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type. |
| Approval To Do Role | Indicates that users with the specified To Do role can only approve the hold request submitted for approval. |
| | Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. |
| Submitter To Do Type | Indicates the To Do type of the submitter. |
| | Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. |
| Submitter To Do Role | Indicates the To Do role of the submitter. |
| | Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. |

- **Hold Processes** —This section displays the list of processes to be kept on hold for the hold request type.
- **Characteristics** — This section lists the characteristics of the hold request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the hold request type. |

| Button Name | Button Description |
|-------------|---|
| Delete | Used to delete the hold request type. |
| | Note: You can delete a hold request type when you have not created a hold request using the hold request type. |
| Duplicate | Used to create a new hold request type using an existing hold request type. |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the hold request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the hold request type in the **Hold Request Type List** zone.

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|--|-----------------------|
| Hold Request Type Business Object | Used to indicate the business object that you want to use to create the hold request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

4. Select the required hold request type business object from the respective field.
5. Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Hold Request Type | Used to specify the hold request type. | Yes |
| Business Object | Indicates the hold request type business object used while defining the hold request type. | Not applicable |
| Description | Used to specify the description for the hold request type. | Yes |
| Hold Request Business Object | Used to indicate the business object that you want to use while creating the hold request. | Yes |
| Detailed Description | Used to specify additional information about the hold request type. | No |
| Status | Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| | Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status. | |
| Allow Partial Hold for Bill | Used to indicate whether the partial hold amount will be accepted for a bill. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Defer Processing Count | Used to indicate the number of entities to determine if the hold request will be processed in deferred mode. | No |
| | <p>Note:</p> <p>If the number of entities is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p> | |
| Approval Required | Used to indicate whether approval is required while creating the hold request using hold request type. | No |
| Approval To Do Type | Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval. | Yes (Conditional) |
| | <p>Note: This field appears when the Approval Required check box is selected.</p> <p>Note: This field is required when the Approval Required check box is selected</p> | |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval. | Yes (Conditional) |
| | <p>Note: This field appears when the Approval Required check box is selected.</p> <p>Note: This field is required when the Approval Required check box is selected</p> | |
| Submitter To Do Type | Used to indicate the To Do type for the submitter. | No |
| Submitter To Do Role | Used to indicate the To Do role for the submitter. | No |

Note:

Deferred mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

6. Enter the required details.

Note: You can search for **To Do Type** by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define processes to hold for the hold request type.

Note:

At least one hold process needs to be selected for defining a hold request type.

8. Define characteristics for the hold request type, if required.
9. Click **Save**.

The hold request type is defined.

**Defining a Characteristic for a Hold Request Type****Prerequisites**

To define a characteristic for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define a characteristic for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request Type . | Note: This field is required when you are defining a characteristic for the hold request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the hold request type. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the hold request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hold request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To edit a hold request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
- In the **Hold Request Type List** zone, click the **Edit** (📎) icon in the **Edit** column corresponding to the hold request type whose details you want to edit.
The **Hold Request Type** screen appears. It contains the following sections:
 - Main** — Used to specify basic details about the hold request type.
 - Hold Processes** — Used to define the processes to hold for the hold request type.
 - Characteristics** — Used to define the characteristics for the hold request type.

The **Hold Request Type** screen appears. It contains the following sections:

- Main** — Used to specify basic details about the hold request type.
- Hold Processes** — Used to define the processes to hold for the hold request type.
- Characteristics** — Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Hold Request Type | Displays the hold request type. | Not applicable |
| Business Object | Indicates the hold request type business object used while defining the hold request type. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Description | Used to specify the description for the hold request type. | Yes |
| Hold Request Business Object | Used to indicate the business object that you want to use while creating the hold request. | Yes |
| Detailed Description | Used to specify additional information about the hold request type. | No |
| Status | Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application

Procedure

To copy a hold request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- In the **Hold Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the hold request type whose copy you want to create.

The **Hold Request Type** screen appears. It contains the following sections:

- Main** — Used to specify basic details about the hold request type.

- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Hold Request Type | Used to specify the hold request type. | Yes |
| Business Object | Indicates the hold request type business object used while defining the hold request type. | Not applicable |
| Description | Used to specify the description for the hold request type. | Yes |
| Hold Request Business Object | Used to indicate the business object that you want to use while creating the hold request. | Yes |
| Detailed Description | Used to specify additional information about the hold request type. | No |
| Status | <p>Used to indicate the status of the hold request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.</p> | Yes |
| Allow Partial Hold for Bill | Used to indicate whether the partial hold amount will be accepted for a bill. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|---|
| Defer Processing Count | <p>used to indicate the number of bills to determine if the hold request will be processed in deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. When the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked, the system checks whether there are any hold requests in the Deferred status. If there is an hold request in the Deferred status, then its status is changed to Active.</p> <p>If the number of bills is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p> | No |
| Approval Required | Used to indicate whether approval is required while creating the hold request using hold request type. | No |
| Approval To Do Type | <p>Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected</p> |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected</p> |
| Submitter To Do Type | Used to indicate the To Do type for the submitter. | No |
| Submitter To Do Role | Used to indicate the To Do role for the submitter. | No |

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details.
6. Define, edit or remove processes from the hold request type, if required.
7. Define, edit, or remove characteristics of the hold request type, if required.
8. Click **Save**.

The new hold request type is defined.

Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. Through this screen, you can navigate to the following screen:

- [Hold Request \(Used for Viewing\)](#) on page 1766

This screen consists of the following zone:

- [Search Hold Request](#) on page 1756

Search Hold Request

The **Search Hold Request** zone allows you to search for hold requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a hold request using request or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| Hold Request Type | Used to search hold requests which are created using a particular hold request type. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Hold Process | Used to search hold requests which are created using a particular hold process. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Status | Used to search hold requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Released • Approval In Progress • Deferred Processing • Rejected | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Account ID | Used to search hold requests which are created for a particular account. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. You can search for an account by clicking the Search (🔍) icon corresponding to the field. | |
| Entity | Used to search hold request with a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Person • Bill | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| User ID | Used to search hold requests which are created by a particular user. | |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Start Date | Used to search hold requests which are created from a particular date onwards. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| End Date | Used to search hold requests which are created till a particular date. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Hold Request ID | Used to search a particular hold request. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Person ID | Used to search hold requests which are created for a particular person. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. You can search for a person by clicking the Search (🔍) icon corresponding to the field. | |
| Bill ID | Used to search hold requests which includes bill segments or adjustments of a particular bill. | No |
| | Note: This field appears only when you select the Bill Details option from the Search By list. You can search for a bill by clicking the Search (🔍) icon corresponding to the field. | |
| Bill Date From | Used to search hold requests which includes bill segments or adjustments of bills which are created from a particular date onwards. | No |
| | Note: This field appears when you select the Bill Details option from the Search By list. | |
| To | Used to search hold requests which includes bill segments or adjustments of bills which are created till a particular date. | No |
| | Note: This field appears when you select the Bill Details option from the Search By list. | |

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------|---|
| Create Date/Time | Displays the date and time when the hold request is created. |
| Hold Request Information | Displays information about the hold request. |
| | Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request. |

| Column Name | Column Description |
|----------------|---|
| Status | Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Released |
| Start Date | Displays the date when the hold request is created. |
| End Date | Displays the date when the hold request is released. |
| Hold Processes | Displays the hold processes using which hold request is created. |
| Hold Reason | Displays the hold reason for the hold request. |
| Created By | Indicates the user who has created the hold request. |

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application

Procedure

To search for a hold request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request** sub-menu.
The **Hold Request** screen appears.
4. Enter the search criteria in the **Search Hold Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of hold requests that meet the search criteria appears in the **Search Results** section.

Creating a Hold Request

Prerequisites

To create a hold request, you should have:

- Hold request types defined in the application.

Procedure

To create a hold request:

1. Do either of the following:

| If you want to... | Then... |
|---|---|
| Define a hold request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Hold. <p>Note: Bills are selected to be on hold from Account Receivable Central. Only one bill at a time is allowed to select for Hold Request from Account Receivable Central</p> |
| Define a hold request from the Delinquency Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Delinquency Management and then click Delinquency Central. The Delinquency Central screen appears. 3. Search for the overdue process in the Delinquency Central screen. |

| If you want to... | Then... |
|---|--|
| | <p>4. In the Search Results section, select the required overdue process and then click Create Hold Request.</p> <p>Note: Accounts are selected to be on hold from Delinquency Central screen Only one account at a time is allowed to select for Hold Request from Delinquency Central screen.</p> |
| Define a hold request from the Hold Request screen | <p>1. Click the Menu link in the Application toolbar. A list appears.</p> <p>2. From the Main menu, select Accounting and Receivable and then click Hold Request. A sub-menu appears.</p> <p>3. Click the Add option from the Hold Request sub-menu.</p> |

The **Add Hold Request** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Hold Request Type | Used to indicate the request type using which you want to create the hold request. | Yes |

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective fields.
3. Click **OK**.

The hold request is defined and the status of the hold request is set to **Draft**. The **Hold Request** screen appears where you can view the details of the hold request. It contains the following sections:

- **Main** – Used to specify basic details about the hold request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Hold Request Type | Indicates the hold request type using which you want to create the hold request. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Start Date | Used to specify the date from when the hold request is effective. | Yes |
| | Note: The hold request start date cannot be later than the hold request end date. By default, system date appears in this field. | |
| End Date | Used to specify the date till when the hold request is effective. | Yes |
| | Note: The hold request end date cannot be earlier than the hold request start date. | |
| Hold Reason | Used to indicate the reason why you want to hold the entity. | Yes |
| | Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active . | |
| Entity | Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • Account • Bill • Person | Yes |
| | Note: If bill is kept on hold using Account Receivable Central screen, then this field will display Bill as an entity and Hold Entities section will display information about this bill. | |
| Comments | Used to specify the additional information about hold request. | No |

- **Hold Entities** — Used to specify details of the selected hold entity. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Hold Entity ID | Used to specify the hold entity ID. | Yes |
| | <p>Note:</p> <p>You can search for an entity ID by clicking the search (🔍) icon corresponding to the field</p> <p>If the hold entity is account, you must specify the account ID in this field. If the hold entity is person, you must specify the person ID in this field. And, if the hold entity is bill, you must specify the bill ID in this field.</p> | |
| Start Date | Used to specify the date from when you want to hold the entity. | Yes |
| | <p>Note:</p> <p>By default, system date appears in this field</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p> | |

Hold Request (Used for Viewing)

Once you create a hold request, the **Hold Request** screen allows you to:

- Add entities in a hold request
- Add processes in a hold request
- Edit the details of a hold request
- Edit the hold amount against each entity. This is valid for only bill.
- Delete a hold request
- View the details of a hold request
- Submit a hold request for approval
- Approve or reject a hold request
- Resubmit a hold request for approval
- Activate and Release a hold request
- View the log of a hold request
- Add a log entry for a hold request

This screen consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
 - **Hold Request** – Displays the details of the hold request.
 - **Hold Entities** – Lists the entities, such as person, accounts, or bills that are on hold request.
 - **Search Account** — Searches the accounts to be put on hold.

Note: This zone appears when hold request is for **Account** and its status is **Draft**.

- **Search Bill** — Searches the bills to be put on hold.

Note: This zone appears when hold request is for **Bill** and its status is **Draft**.

- **Search Person** — Searches the persons to be put on hold.

Note: This zone appears when hold request is for **Person** and its status is **Draft**.

- **Log** — Lists complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** — Displays the actions performed on the hold request.

Hold Request - Main

The **Main** tab on the **Hold Request** contains the following zones:

- [Hold Request](#) on page 1767
- [Hold Entities](#) on page 1769
- [Search Account](#) on page 1770

Note: This zone appears when hold request is for **Account** and its status is **Draft** .

- [Search Bill](#) on page 1773

Note: This zone appears when hold request is for **Bill** and its status is **Draft** .

- [Search Person](#) on page 1774

Note: This zone appears when hold request is for **Person** and its status is **Draft** .

Hold Request

The **Hold Request** zone displays the details of the hold request. This zone contains the following sections:

- **Main** — This section provides basic information about the hold request. It contains the following fields:

| Field Name | Field Description |
|--------------------------|---|
| Hold Request Information | Displays information about the hold request. |
| Hold Request Type | Indicates the hold request type using which the hold request is created. Note: It has a link. On clicking the link, the Hold Request Type screen appears where you can view the details of the hold request type. |
| Status | Indicates the status of the hold request. |
| Status Reason | Indicates the reason why the hold request is released. Note: This field appears when the hold request is in the Released status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the released reason. |
| Start Date | Displays the date when the hold request is created. |
| End Date | Displays the date when the hold request is released. |
| Hold Reason | Displays the reason of hold request. |
| Entity | Displays the hold request entity. |
| Comments | Displays the additional information for a hold request. |

- **Hold Processes** — Lists the processes that are on hold in the hold request. It contains the following columns:

| Column Name | Column Description |
|--------------|--|
| Hold Process | Lists the processes that are on hold. |
| Start Date | Displays the date from when the process is to be on hold for hold request. |
| End Date | Displays the date till when the process is to be on hold for hold request. |

- **Characteristics** — Lists the characteristics defined for the hold request. It contains the following fields:

| Field Name | Field Description |
|----------------------|--|
| Effective Date | Displays the date from when hold request is effective. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the hold request. |
| | Note: The Edit button appears when the hold request is in the Draft or Active status. |
| Delete | Used to delete the hold request. |
| | Note: The Delete button appears when the hold request is in the Draft status. |
| Submit | Used to activate the hold request. |
| | Note: The Submit button appears when the hold request is in the Draft status. |
| Re Submit | Used to re-submit the hold request. |
| | Note: the Re Submit button appears when the hold request is in the Approval In Progress status. |
| Approve | Used to approve the hold request. |
| | Note: the Approve button appears when the hold request is in the Approval In Progress status. |
| Reject | Used to reject the hold request. |
| | Note: the Reject button appears when the hold request is in the Approval In Progress status. |
| Release | Used to release the hold request. |
| | Note: The Release button appears when the hold request is in the Active status. |

- **Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the hold request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the hold request status is updated. |

| Field Name | Field Description |
|------------------|--|
| Create Date/Time | Displays the date and time when the hold request is created. |

Hold Entities

The **Hold Entities** zone on the **Hold Request** screen lists the entities that are on hold request. This zone contains the following columns:

| Column Name | Column Description |
|------------------------------|---|
| Person Information | Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Person screen appears with details of the respective person. |
| Account Information | Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears with details of the respective account. |
| Bill Information | Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Bill screen appears with details of the respective bill. |
| Start Date | Displays the date from when the entity is on hold. |
| End Date | Displays the date till when the entity is on hold. |
| | Note: When hold request for entity is released, then its end date gets updated to the release date when its end date lies between the hold request start date and end date . |
| Hold Amount | Displays the amount on hold. |
| | Note: This column appears only when the entity bill is on hold. |
| Bill After Date | Displays the date after which bills can be generated. |
| | Note: This column appears when the entity account is on hold. |
| Postpone Credit Review Until | Displays the date till when overdue process is to be on hold. |
| | Note: This column appears when the entity account is on hold. |
| Defer Auto Pay Date | Displays the date from when auto pay process is to be put on deferred mode. |
| | Note: This column appears when the entity account is on hold. |

Note:

You can directly edit the start and end date of the hold entities by selecting the corresponding column and then click the **Edit** button available on the upper left corner of the **Hold Entities** zone.

You can directly delete the hold entities by selecting the corresponding column and then click the **Delete** button available on the upper left corner of the **Hold Entities** zone.

| Status | Used to indicate the status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • In Force/ Active • Pending Cancellation • Pending Resinstatement • Pending Termination • Reinstate • Terminated • Cancelled | No |
| | Note: This field appears when you select the Policy Details option from the Search By list. | |
| Policy Start Date | Used to indicate the date from when the policy is effective. | No |
| | Note: This field appears when you select the Policy Details option from the Search By list. | |
| Policy End Date | Used to indicate the date till when the policy is effective. | No |
| | Note: This field appears when you select the Policy Details option from the Search By list. | |
| Characteristic Type/Value | Used to indicate the characteristic Type/ Value associated with the policy. | No |
| | Note: This field appears when you select the Policy Details option from the Search By list. | |
| State | Used to indicate the state name. | No |
| County | Used to indicate the county name. | No |
| Postal | Used to indicate the postal or zip code. | No |

Note:

You must specify at least one search criterion while searching for accounts.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| Account Information | Displays the account information. |
| Country | Displays the country name. |
| State | Displays the state name. |
| County | Displays the county name. |
| Postal | Displays the postal or zip code. |
| Customer Class | Displays the customer class of the account. |
| Division | Displays the division to which the account belongs. |
| Entity ID | Displays the entity ID. |

- Hold processes defined in the application.

Procedure

To add processes in a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Click the **Edit** button in the **Hold Request** zone.

The **Hold Request** screen appears.

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

4. Ensure that the **Hold Processes** section is expanded when you are editing the hold request.
5. Select the required hold processes from the **Hold Process** field.
6. If you want to define more than one hold process for the hold request, click the **Add (+)** icon and then repeat step 5.

Note:

However, if you want to remove a hold process from the hold request, click the **Delete** (🗑️) icon corresponding to the hold process.

Once we create active hold request for accounts on Overdue process, all existing active overdue processes will be inactive for those account.

7. Enter the required details.

Defining a Characteristic for a Hold Request

Prerequisites

To define a characteristic for a hold request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request**)

Procedure

To define a characteristic for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Click the **Edit** button in the **Hold Request** zone.

The **Hold Request** screen appears.

Note: The **Edit** button appears when the Hold request is in the **Draft** or **Active** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the hold request.
5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the hold request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the hold request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Hold Request

Procedure

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.
The **Hold Request** screen appears.
3. Click the **Edit** button in the **Hold Request** zone.

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

The **Hold Request** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|------------------------------|
| Hold Request Information | Displays information about the hold request. | Not applicable |
| Hold Request Type | Displays the hold request type using which the hold request is created. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Start Date | Used to specify the date till when you want to hold the entity. | Yes |
| | Note: The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date. | |
| End Date | Used to specify the date till when the hold request is effective. | Yes |
| | Note: The hold request end date cannot be earlier than the hold request start date. | |
| Hold Reason | Used to indicate the reason why you want to hold the entity. | Yes |
| | Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active . | |
| Entity | Displays the hold entity. | Not applicable |
| Comments | Used to specify the additional information about hold request. | No |

- **Hold Processes** — Used to specify the processes on hold in the hold request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Hold Process | Used to indicate the process that needs to be kept on hold. | Yes |
| Start Date | Used to specify the date from when process is to be on hold for the hold request. | Yes |
| | Note: This field is not editable when hold request is in Active status. The hold process start date must be between the hold request start and end dates. | |
| End Date | Used to specify the date till when the hold process is to be on hold. | No |

- **Characteristics** — Used to define the characteristics for the hold request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the hold request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the hold request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request . | Note: This field is required when you are defining a characteristic for the hold request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the hold request. |

- Modify the details of the hold request, if required.

Note:

If you want to specify more than one hold processes, click the **Add** (+) icon corresponding to the process and then specify the details.

However, if you want to remove a hold process from the hold request, click the **Delete** (🗑) icon corresponding to the process.

- Define, edit, or remove characteristics of the hold request, if required.
- Click **Save**.

The changes made to the hold request are saved.

Editing Hold Request Entities

Procedure

To edit a hold request entities:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Select the entities that you want to edit in the **Hold Entities** zone and click the **Edit** button available in the upper left corner.

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

The **Edit Hold Request Entities** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Hold Request Information | Displays information about hold request. | Not applicable |
| Start Date | Displays the start date of hold request. | Not applicable |
| End Date | Displays the end date of hold request. | Not applicable |

It also contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Entity ID | Displays the entity ID. | Not applicable |
| Entity Information | Displays the information about the entity. | Not applicable |
| Start Date | Used to indicate the date from when the entity is on hold. | Yes |
| | Note: This field is not editable when hold request is in Active status. | |
| End Date | Used to indicate the date till when the entity is on hold. | No |
| Hold Amount | Used to indicate the hold amount for bill. | Yes |
| | Note: This field appears only hold request is for bill. | |

4. Modify the details of the hold entities, if required.
5. Click **Save**.

The changes made to the hold entities are saved.

Submitting a Hold Request

Prerequisites

To submit a hold request, you should have:

- Hold Request Types, Hold Processes and Hold Entities defined in the request.

Procedure

To submit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to submit.

The **Hold Request** screen appears.

3. Click the **Submit** button in the **Hold Request** zone.

The system behaves in the following manner:

| If... | Then |
|--|--|
| The Approval Required check box is selected in the hold request type using which the hold request is created. | A To Do of the C1-HLDAP To Do type is created and sent to the approver and the status of the hold request is changed to Approval In Progress . |
| The Approval Required check box is not selected in the hold request type using which the hold request is created. | The hold request is created using the specified hold request types and the status of the hold request is changed to Active or Deferred Processing as specified in the hold request type. |

Note:

The **Submit** button appears when the hold request is in the **Draft** status.

Once the request is activated, the **Release** button appears in the **Record Actions** section.

If hold request start date is in past and its status is draft then, on activation of the hold request, the start date is changed to the system date.

For Active hold request, **C1-DELBI** batch will delete all pending bill segments and bills under account for bill generation process.

For more information about the **Delete Pending Bill segments and Bills (C1-DELBI) batch**, refer to Oracle Revenue Management and Billing Batch Guide.

**Approving a Hold Request**

You can view the number of hold requests which are pending for approval in the **Hold Request** screen. The approver can review, and accordingly approve, reject or resubmit the hold request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a hold request submitted by you.

Procedure

To approve a hold request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Approve a hold request through the Hold Request screen | <ol style="list-style-type: none"> 1. Search for the hold request in the Hold Request screen. 2. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review. |
| Approve a hold request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. |

| If you want to... | Then... |
|-------------------|---|
| | <ol style="list-style-type: none"> 3. Enter C1-HLDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the hold request that you want to review. |

The **Hold Request** screen appears.

2. Review the hold request details.
3. Click the **Approve** button in the **Hold Request** zone.

The system behaves in the following manner:

| If you are... | Then... |
|--------------------------|---|
| Approving a Hold request | The status of the hold request is changed to Active or Deferred Processing as specified in the hold request type. |

Note:

The **Approve** button appears when the hold request is in the **Approval In Progress** status.

You can also resubmit the hold request if any changes are required in the hold request. Upon clicking the **Resubmit** button, provide the comments to make the required changes for the hold request.

Releasing a Hold Request

Procedure

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

- Click the **Release** button in the **Hold Request** zone.

The **Release Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Release Reason | Used to indicate the reason for releasing the hold request. | Yes |
| Comments | Used to specify the additional comments for the release reason | No |

- Ensure the required release reason.
- click **Save**.

The hold request is released.

Note:

The **Release** button appears only when the hold request is in the **Active** status.

Once the hold request is in **Released** status, the **End Date** of processes and entities gets updated.

Rejecting a Hold Request

Prerequisites

To reject a hold request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a hold request, you need to specify the reason why you want to reject the hold request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a hold request submitted by you.

Procedure

To reject a hold request:

- Do either of the following:

| If you want to | Then |
|--|--|
| Reject a hold request through the Hold Request screen | <ol style="list-style-type: none"> Search for the hold request in the Hold Request screen. In the Search Results section, click the link in the Hold Request Information column |

| If you want to | Then |
|---|--|
| | corresponding to the hold request which you want to review. |
| Reject a hold request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-HLDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the hold request that you want to review. |

The **Hold Request** screen appears.

2. Review the hold request details.
3. Click the **Reject** button in the **Hold Request** zone.

The **Reject Hold Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the hold request. | Yes |
| Comments | Used to specify additional information while rejecting the hold request. | No |

Note: The **Reject** button appears when:

- The hold request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the hold request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the hold request is changed to **Rejected**.

Resubmitting a Hold Request

Prerequisites

To resubmit a hold request, you should have:

- Entities added in the hold request which is submitted for approval.

While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the hold request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Procedure

To resubmit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to resubmit.

The **Hold Request** screen appears.

3. Click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** screen appears.

Note: The **Re Submit** button appears when the hold request is in the **Approval In Progress** status.

A To Do of the **C1-HOLSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the hold request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Viewing the Log of a Hold Request

Procedure

To view the log of a hold request:

1. Search for the hold request in the **Hold Request** screen.

- In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose log you want to view.

The **Hold Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the hold request. It contains the following zones:

- Hold Request** – Displays the details of the hold request.
- Hold Entities** – Lists the hold entities records of the hold request.
- Search Account** – Searches the accounts to be put on hold.

Note: This zone appears when hold request is for **Account** and its status is **Draft**.

- Search Bill** – Searches the bills to be put on hold.

Note: This zone appears when hold request is for **Bill** and its status is **Draft**.

- Search Person** – Searches the persons to be put on hold.

Note: This zone appears when hold request is for **Person** and its status is **Draft**.

- Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:

- Hold Request Log** – Displays the trail of actions performed on the particular hold request.

- Click the **Log** tab.

The **Hold Request Log** zone in the **Log** tab contains the following columns:

| Column Name | Column Description |
|----------------|---|
| Date/Time | Displays the date and time when the action was performed on the hold request. |
| Details | Displays the details about the action performed on the hold request. |
| User | Indicates the user who has performed the action on the hold request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the hold request. |
| Status Reason | Indicates the reason why the hold request was rejected or voided. |

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Adding a Log Entry for a Hold Request

Procedure

To add a log entry for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose log you want to edit.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:

- **Hold Request** – Displays the details of the hold request.
- **Hold Entities** – Lists the hold entities records of the hold request.
- **Search Account** – Searches the accounts to be put on hold.

Note: This zone appears when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

Note: This zone appears when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

Note: This zone appears when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

The **Add Hold Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Hold Request Information | Displays information about the hold request. | Not applicable |
| Log Details | Used to specify additional comments for the hold request. | Yes |

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Hold Request Log** zone.

Chapter 27

Delinquency Central

Topics:

- [Prerequisites](#)
- [Delinquency Central \(Used for Viewing\)](#)
- [Overdue Process Information for Account: {Account ID}](#)

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see [Prerequisites](#) on page 1796.

Related Topics

| For more information on... | See... |
|--|--|
| Delinquency Central screen | Delinquency Central (Used for Viewing) on page 1796 |
| Overdue Process Information for Account: {Account ID} | Overdue Process Information for Account: {Account ID} on page 1803 |

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- [Search Overdue Process](#)
- [Overdue Events](#)

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill • Overdue Process | No |
| | Note: By default, the Person option is selected. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Person ID | Used to search for overdue processes which belong to a particular person. | No |
| | Note: This field appears when you select the Person option from the Search By list. | |
| Person Identifier Type | Used to search for overdue processes with a particular person identifier type. | Yes (Conditional) |
| | Note: This field appears when you select the Person option from the Search By list. | |
| Person Identifier | Used to search for overdue processes with a specific value of the person identifier type. | Yes |
| | Note: This field appears when you select the Person option from the Search By list. | |
| Account ID | Used to search for overdue processes created for a particular account. | No |
| | Note: This field appears when you select the Account option from the Search By list. | |
| Account Identifier Type | Used to search for overdue processes with a particular account identifier type. | Yes (Conditional) |
| | Note: This field appears when you select the Account option from the Search By list. | |
| Account Identifier | Used to search for overdue processes with a particular account identifier. | Yes |
| | Note: This field appears when you select the Account option from the Search By list. | |
| Bill ID | Used to search for overdue processes with a particular bill. | No |
| | Note: This field appears when you select the Bill option from the Search By list. | |
| Alternate Bill ID | Used to search for overdue processes using an alternate bill ID. | No |
| | Note: This field appears when you select the Bill option from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Characteristic Type / Value | Used to search for overdue processes with a particular characteristic type and its value. | No |
| | Note: This field appears when you select the Bill option from the Search By list. | |
| Overdue Process Template | Used to search for overdue processes with a particular overdue process template. | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| Start Date | Used to search for overdue processes with a particular start date. | Yes |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| End Date | Used to search overdue process with a particular end date. | Yes |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| Status | Used to search for overdue processes with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| On Hold | Used to search for overdue processes that are on hold. | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| Overdue Amount From | Used to search for overdue processes with a particular lower limit of the overdue amount. | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |
| To | Used to search for overdue processes with a particular higher limit of the overdue amount. | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Characteristic Type / Value | Used to search for overdue processes with a particular characteristic type and value. | No |
| | Note: This field appears when you select the Overdue Process option from the Search By list. | |

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

| Column Name | Column Description |
|------------------------------------|---|
| Main Customer | Displays the name of the main customer to whom the account belongs. |
| | Note: This field appears when you select the Account option from the Search By list. |
| Person Name | Displays the name of the person to whom the account belongs. |
| | Note: This field appears when you select the Person option from the Search By list. |
| Person Identifier Type | Displays the person identifier type. |
| | Note: This field appears when you select the Person or Account option from the Search By list. |
| Person Identifier | Displays the value of the person identifier type. |
| | Note: This field appears when you select the Person or Account option from the Search By list. |
| Account Identifier Type | Displays the account identifier type. |
| | Note: This field appears when you select the Account option from the Search By list. |
| Account Identifier | Displays the value of the account identifier type. |
| | Note: This field appears when you select the Account option from the Search By list. |
| Overdue | Displays whether the person account(s)/bill(s) are overdue. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| | Note: This field appears when you select the Person or Account option from the Search By list. |
| Number of Active Overdue processes | Displays the number of overdue processes linked to the person's account that are in active status. |
| | Note: This field appears when you select the Person or Account option from the Search By list. |

| Column Name | Column Description |
|---|---|
| Number of Hold(s) on Account(s) | Displays the number of hold requests on the particular account. |
| Number of Overdue Bills | Displays the total number of bills that are overdue. Note: This field appears when you select the Person or Account option from the Search By list. |
| Total Overdue Amount | Displays the total overdue amount for an account. |
| Last Payment Date | Displays date of the last payment made by the person. Note: This field appears when you select the Person or Account option from the Search By list. |
| Last Payment Amount | Displays the amount last paid by the person. Note: This field appears when you select the Person or Account option from the Search By list. |
| Number Of Payment Arrangements | Displays the number of payment arrangements for the person's account. Note: This field appears when you select the Person or Account option from the Search By list. |
| Total Number of Overdue Process on Hold | Displays the total number of overdue process that are on hold. Note: This field appears when you select the Person or Account option from the Search By list. |
| Number of Promise To Pay | Displays the number of promise to pay belonging to the person. Note: This field appears when you select the Person or Account option from the Search By list. |
| Number of Broken Promise To Pay | Displays the total number of promise to pay that are broken. Note: This field appears when you select the Person or Account option from the Search By list. |

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------|---|
| Overdue Process | Display additional information about the overdue process. Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the overdue process. |
| Overdue Process Template | Displays the template that was used to create overdue process's events. |

| Column Name | Column Description |
|-------------------------|--|
| Account Information | Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears with the details of the account. |
| Person Information | Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Person screen appears with the details of the person. |
| Overdue Amount | Displays the overdue amount under that overdue process. |
| On Hold | Displays whether the overdue process is on hold. |
| Overdue Process Details | On clicking the View () icon, the Overdue Process Details screen appears where you can view details of the overdue process. |

On clicking the **Broadcast** () icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.

The **Delinquency Central** screen appears.

3. Enter the search criteria in the **Search Overdue Process** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Viewing Events of an Overdue Process

Procedure

To view events of an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the overdue process whose event details you want to view.

The **Overdue Events** zone appears.

3. View the overdue event details of the overdue process in the **Overdue Events** zone.

Viewing the Overdue Process Details

Procedure

To view the details of an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, click the link in the **Overdue Process Information** column corresponding to the overdue process whose details you want to view.

The **Overdue Process** screen appears. It consists of the following tabs:

- **Main** – Displays the basic details of the overdue process.
 - **Events** – Displays the events details of the overdue process.
 - **Log** – Displays a complete trail of actions performed on the overdue process.
 - **Characteristics** – Displays the characteristics of the overdue process.
3. View the event details of the overdue process in the **Overdue Process** screen.

- [Defining a Promise To Pay for an Overdue Process](#) on page 1809

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

| Column Name | Column Description |
|--------------|---|
| Person Name | Displays the name of the person whose account is linked to the overdue process. |
| Phone Number | Displays the phone number of the person. |
| Address | Displays the address of the person. |

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

| Column Name | Column Description |
|-------------------------|--|
| Account ID | Displays the account ID. |
| Account Identifier Type | Displays the account identifier type. |
| Account Identifier | Displays the value of the account identifier type. |
| Last Payment Date | Displays the date of the last payment made from the account that is linked with the overdue process. |
| Last Payment Amount | Displays the amount last paid from the account. |

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

| Column Name | Column Description |
|------------------------------|---|
| Contact Date/Time | Displays the date and time when the customer was contacted. |
| Customer Contact Information | Displays additional information about the customer contact. |
| | Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact. |
| Preferred Contact Method | Displays the preferred method of contacting the customer. |
| Comments | Displays the comments that are placed against each customer. |

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

| Column Name | Column Description |
|----------------------------|--|
| Promise To Pay Information | Displays additional information of promise to pay. |
| | Note: It has a link. On clicking the link, the Promise To Pay screen appears where you can view the details of promise to pay. |
| Scheduled Amount | Displays the amount to be paid on the Scheduled Date . |
| Scheduled Date | Displays the date when the payment is expected as per promise to pay. |
| Status | Displays the status of promise to pay. |
| Created By | Displays the user ID who has created the promise to pay. |

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

| Column Name | Column Description |
|--------------------------|---|
| Hold Request Information | Displays additional information about the hold request. |
| | Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request. |
| Status | Displays the status of the hold request. |
| Entity | Displays the hold request entity. |
| Entity Information | Displays the information about the entity on hold. |
| | Note: It has a link. On clicking the link, the Account, Bill or Person screen appears, where you can view details of the respective account, bill or person. |
| Start Date | Displays the date when the hold request is created. |
| End Date | Displays the end date of the hold request. |

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

| Column Name | Column Description |
|----------------------|---|
| Bill Information | Displays additional information about the bill. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Original Bill Amount | Displays the bill amount when the bill was generated. |
| Due Date | Displays the due date of the bill. |
| Overdue Amount | Displays the amount that is overdue in the bill. |
| Days Past Due | Displays the number of days past after the bill date. |

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

| Column Name | Column Description |
|------------------------|---|
| Contract Information | Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |
| Payoff Balance | Displays the total amount that is paid against the payment arrangement contract. |
| Arrange Amount | Displays the amount that is paid in installments as per the payment arrangement contract. |
| Number of Installments | Displays the number of installments used to calculate the Arrange Amount . |

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| Person Name | Used to specify the name of the person for whom the bill is generated. | No |
| Person ID | Used to specify the person ID. | No |
| Bills of Persons in Hierarchy | Used to indicate whether you want to search for a bills generated against a person's hierarchy. | No |
| Bill Cycle | Used to indicate bills where a particular bill cycle is defined. | No |
| Bill Currency | Used to indicate the bill currency. | No |
| Billing Method | Used to indicate the billing method. The valid values are: <ul style="list-style-type: none"> • Ad-Hoc Billing • Regular Billing | No |
| Bill ID | Used to specify the bill ID. | No |
| Alternate Bill ID | Used to search a particular bill using the alternate bill ID. | No |
| Account ID | Used to indicate the account against which the bill is generated. | No |
| On or After Bill Date | Used to specify the date when the bill was completed. | No |
| Account Identifier Type | Used to search for bills where the account against which it is generated, a particular account identifier type is defined. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Account Identifier | Used to search for a bill generated against an account with a particular account identifier. | No |

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------|--|
| Person Name | Displays the name of the person against whom the bill is generated. |
| Bill ID | Displays the bill ID. |
| Bill Status | Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete |
| Bill Date | Displays the date when the bill was completed. |
| Due Date | Displays the due date of the bill. |
| Current Charges | Displays the bill amount. |
| Bill Information | Displays additional information about the bill. |

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of bills that meet the search criteria appear in the **Search Results** section.

Creating a Hold Request for an Overdue Process

Procedure

To create a hold request for an overdue process:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a hold request for an overdue process.
3. Click **Create Hold Request** button.

The **Add Hold Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory |
|-------------------|--|-----------|
| Hold Request Type | Used to indicate the hold request type that is used for creating a hold request. | Yes |

4. Select the required hold request type from the **Hold Request Type** field.
 5. Click **OK**.
- The **Hold Request** screen appears.
6. Enter the required details for an overdue process.
 7. Click **Save**.

A hold request is defined for an overdue process where the status of the hold request is set as **Draft**.

Note:

The **Hold Request** screen appears where you can view the details of the hold request.

Creating a Payment Arrangement for an Overdue Process**Procedure**

To create a payment arrangement for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a payment arrangement for an overdue process.
3. Click the **Create Payment Arrangement** button.

The **Payment Arrangement** screen appears. It contains the following tabs:

- **Main**
- **History**

4. Enter the required details in the **Payment Arrangement** screen.
5. Click the **Save** button in the **Page Title** area of the **Payment Arrangement** screen.

A payment arrangement is created with the respective payment arrangement contract.

Note: The **Payment Arrangement** screen appears with the details of the payment arrangement.

Chapter 28

Upload Request

Topics:

- [Upload Request \(Without Approval\) Status Transition](#)
- [Upload Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-BillCycleUpdateUplReq](#)
- [Algorithms Used in C1-ContractRiderUpdateUplReq](#)
- [Algorithms Used in C1-HoldUploadRequest](#)
- [Algorithms Used in C1-RefundUploadRequest](#)
- [Algorithms Used in C1-WriteOffUploadRequest](#)
- [Algorithms Used in C1-BillableChargeUploadRequest](#)
- [Algorithms Used in C1-ReinstatementUploadRequest](#)
- [Algorithms Used in C1-BillGrpSortUploadRequest](#)
- [Algorithms Used in C1-BillLevelUploadRequest](#)
- [CSV File Format for Account Bill Cycle Upload Request](#)
- [CSV File Format for Contract Rider Upload Request](#)
- [CSV File Format for Billable Charge Upload](#)
- [CSV File Format for Hold Upload Request](#)
- [CSV File Format for Refund Request Upload](#)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving

- [CSV File Format for Write Off Request Upload](#)
- [CSV File Format for Reinstatement Upload Request](#)
- [CSV File Format for Bill Group Sorting Upload Request](#)
- [CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request](#)
- [Upload Request Type](#)
- [Upload Request \(Used for Searching\)](#)
- [Upload Request \(Used for Viewing\)](#)

mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked). However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request (C1-BillLevelUploadRequest)

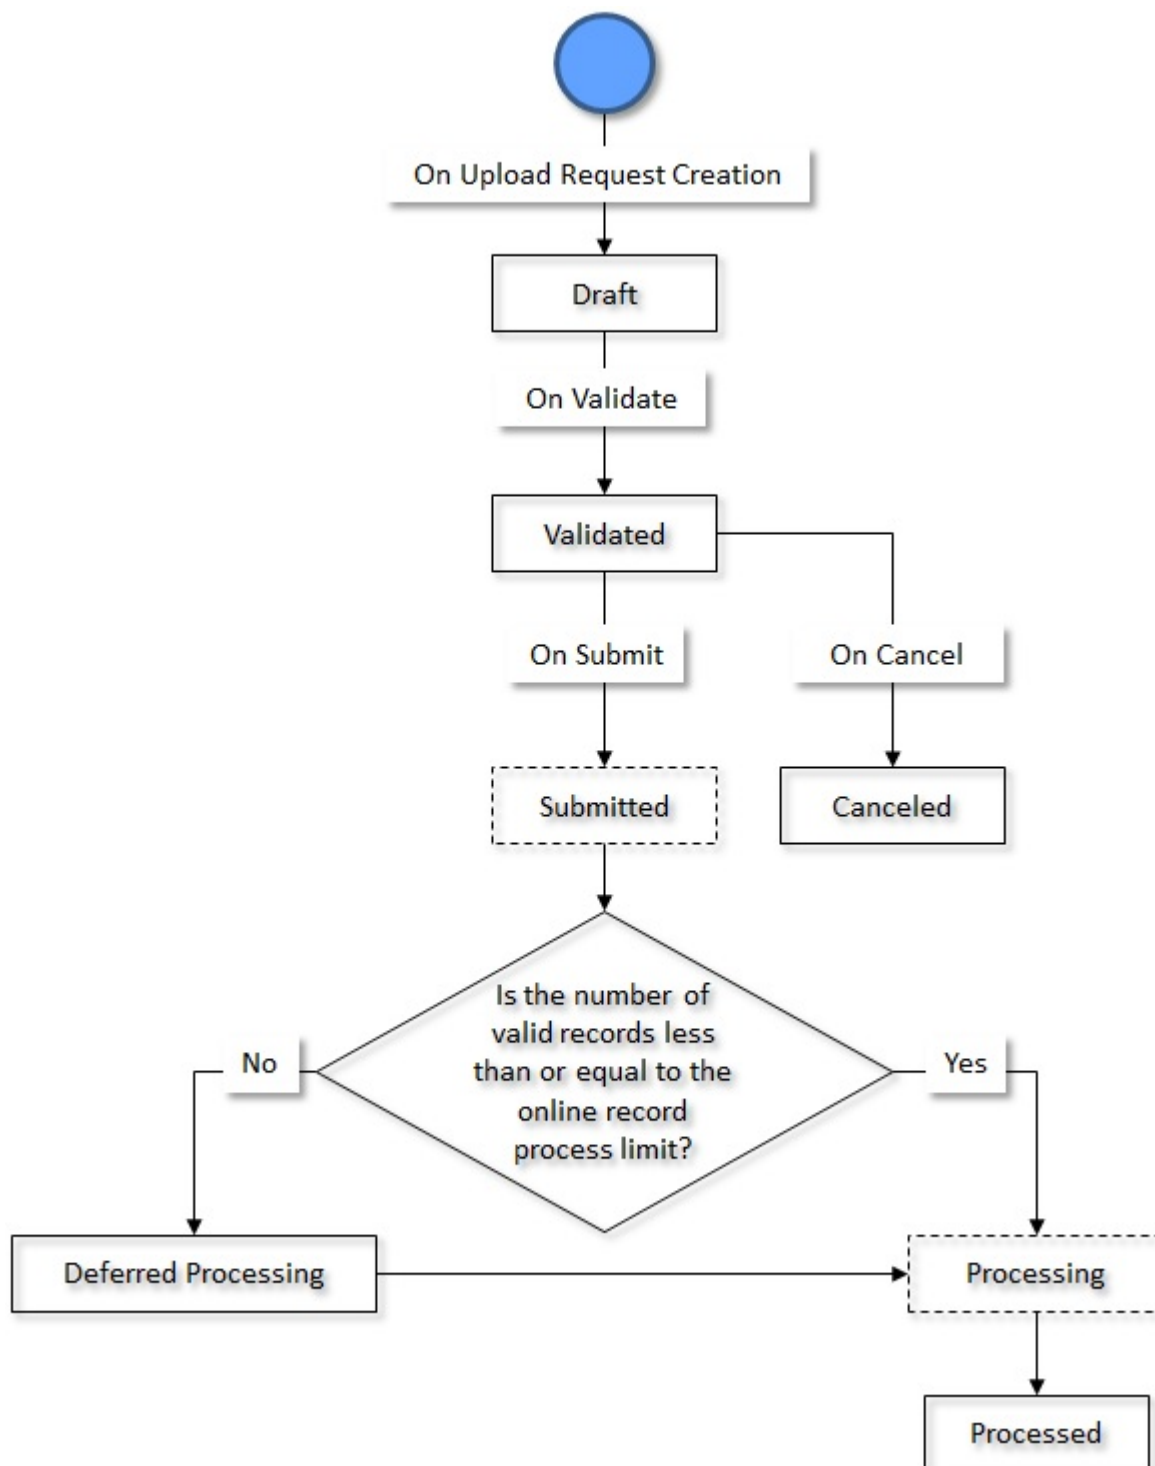

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) on page 1814 and [Upload Request \(With Approval\) Status Transition](#) on page 1815.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1816.

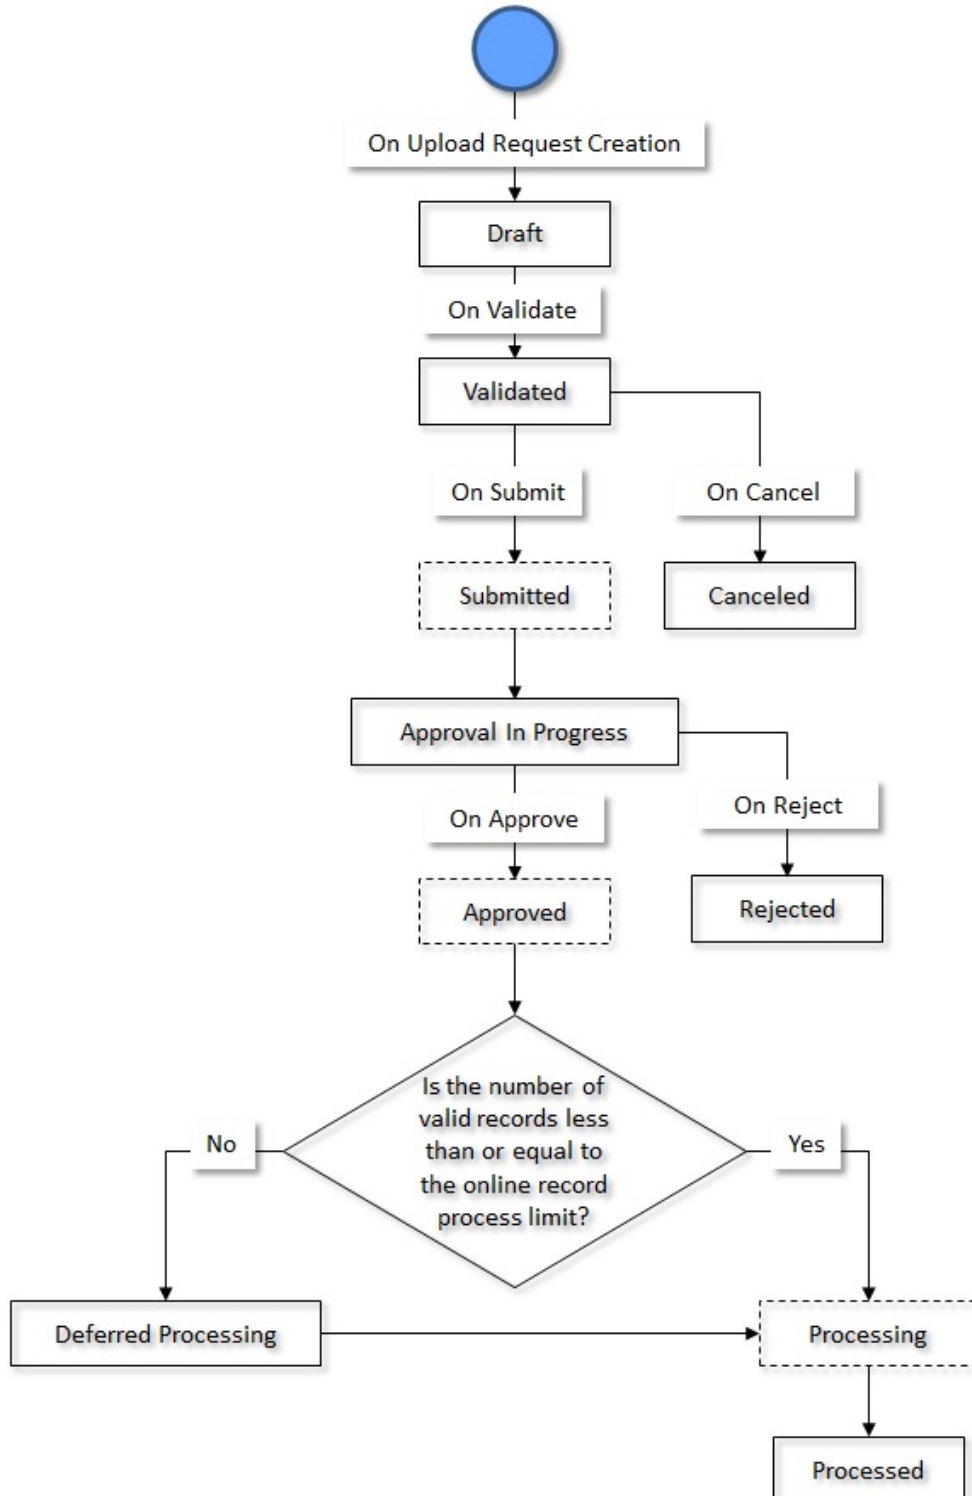

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
 - Policy Status after Processing Reinstatement Upload Request
 - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|-------------------|----------------|------------|
| Upload Request ID | Yes | Descending |

- **Drill Keys** - Define the following drill keys for the To Do type:

| Table Name | Field Name |
|---------------|-------------------|
| C1_UPLOAD_REQ | Upload Request ID |

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu

- **Sort Keys** - Define the following sort keys for the To Do type:

| Sort Key | Use as Default | Sort Order |
|-------------------|----------------|------------|
| Upload Request ID | Yes | Descending |

- **Drill Keys** - Define the following drill keys for the To Do type:

| Table Name | Field Name |
|---------------|-------------------|
| C1_UPLOAD_REQ | Upload Request ID |

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|--------------|----------------|---|
| Draft | Enter | C1-BCU-DERIV | C1-BCU-DERIV | <p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|---|
| Validated | Enter | C1-BCU-VALID | C1-BCU-VALID | <p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p> |
| Submitted | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Submitted | Enter | C1-UPLSUBENT | C1-UPLSUBENT | This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status. |
| Submitted | Enter | C1-DEFERUPLD | C1-DEFERUPLD | This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Approval In Progress | Enter | C1-UPLAPPENT | C1-UPLAPPENT | This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type. |
| Approval In Progress | Exit | C1-UPLAPPEXT | C1-UPLAPPEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry. |
| Approved | Enter | C1-DEFERUPLD | C1-DEFERUPLD | This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Approved | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|-------------|----------------|--|
| Deferred Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Processing | Enter | C1-BCU-PROC | C1-BCU-PROC | <p>This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to Processed. However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error. Finally, the status of the upload request is changed to Processed.</p> |
| Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|-------------|----------------|---|
| Draft | Enter | C1-CR-DERIV | C1-CR-DERIV | <p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|--|
| Validated | Enter | C1-CR-VALID | C1-CR-VALID | <p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the Contract Rider Applicability flag on the bill factor is set to Y, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the Contract Rider Applicability flag on the bill factor is set to N, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p> |
| Submitted | Enter | C1-UPLSUBENT | C1-UPLSUBENT | <p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Submitted | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Submitted | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. | Status | System Event | Algorithm | Algorithm Type | Description |
|------------|--------------|------------|----------------|---|
| Processing | Enter | C1-CR-PROC | C1-CR-PROC | This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and contract ID, and updates the contract rider information of the contract using the entity business object defined in the upload request type. If the contract ID is not specified in the record, then the system derives the active contract of the specified contract type on the account, and then updates the contract rider information of the contract. If the record is successfully processed, the status of the record is changed to Processed . However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error . Finally, the status of the upload request is changed to Processed . |
| Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. |

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|--------------|----------------|--|
| Draft | Enter | C1-HLD-DERIV | C1-HLD-DERIV | <p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>If the hold entity is ACCT and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is PERS and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|---|
| Validated | Enter | C1-HLD-VALID | C1-HLD-VALID | <p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the hold entity is ACCT and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is PERS and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> |
| Submitted | Enter | C1-UPLSUBENT | C1-UPLSUBENT | <p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Submitted | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Submitted | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Approval In Progress | Enter | C1-UPLAPPENT | C1-UPLAPPENT | <p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Exit | C1-UPLAPPEXT | C1-UPLAPPEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request. |
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry. |
| Approved | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|-----------|----------------|--|
| Approved | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Deferred Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|--|
| Validated | Enter | C1-RF-VALID | C1-RF-VALID | This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing. |
| Draft | Enter | C1-RF-DERIV | C1-RF-DERIV | This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in C1_UPLOAD_REQ_DTLS table. |
| Submitted | Enter | C1-UPLSUBENT | C1-UPLSUBENT | This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Submitted | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Submitted | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Approval In Progress | Enter | C1-UPLAPPENT | C1-UPLAPPENT | <p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Exit | C1-UPLAPPEXT | C1-UPLAPPEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request. |
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry. |
| Approved | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|------------|----------------|--|
| Approved | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Deferred Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Processing | Enter | C1-RF-PROC | C1-RF-PROC | <p>This algorithm fetches the list of records that are in Valid status for a given request ID and invokes the entity business object for creating the refund requests. If successfully processed, then the record status will be updated to Processed, otherwise the record status will be updated to Error and error details will be logged in the exception table.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|------------|--------------|-----------|----------------|--|
| Processing | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-----------|--------------|--------------|----------------|--|
| Draft | Enter | C1-WO-DERIV | C1-WO-DERIV | This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating write off requests and inserts the records in C1_UPLOAD_REQ_DTLS table. |
| Submitted | Enter | C1-UPLSUBENT | C1-UPLSUBENT | This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status. |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Submitted | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |
| Submitted | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
| Approval In Progress | Enter | C1-UPLAPPENT | C1-UPLAPPENT | <p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|--|
| Approval In Progress | Exit | C1-UPLAPPEXT | C1-UPLAPPEXT | This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request. |
| Approval In Progress | Exit | F1-TODOCOMPL | F1-TODOCOMPL | This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry. |
| Approved | Enter | C1-DEFERUPLD | C1-DEFERUPLD | <p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately). |

| Status | System Event | Algorithm | Algorithm Type | Description |
|---------------------|--------------|------------|----------------|--|
| Approved | Monitor | F1-AT-RQJ | F1-GEN-BOMNJ | <p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p> |
