Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked). However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request (C1-BillLevelUploadRequest)

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) on page 1912 and [Upload Request \(With Approval\) Status Transition](#) on page 1913.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1914.

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
 - Policy Status after Processing Reinstatement Upload Request
 - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu

- **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-BCU-VALID	C1-BCU-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Processing	Enter	C1-BCU-PROC	C1-BCU-PROC	<p>This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to Processed. However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error. Finally, the status of the upload request is changed to Processed.</p>
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-CR-VALID	C1-CR-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the Contract Rider Applicability flag on the bill factor is set to Y, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the Contract Rider Applicability flag on the bill factor is set to N, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. Status	System Event	Algorithm	Algorithm Type	Description
Processing	Enter	C1-CR-PROC	C1-CR-PROC	This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and contract ID, and updates the contract rider information of the contract using the entity business object defined in the upload request type. If the contract ID is not specified in the record, then the system derives the active contract of the specified contract type on the account, and then updates the contract rider information of the contract. If the record is successfully processed, the status of the record is changed to Processed . However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error . Finally, the status of the upload request is changed to Processed .
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>If the hold entity is ACCT and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is PERS and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the hold entity is ACCT and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is PERS and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-RF-VALID	C1-RF-VALID	This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in C1_UPLOAD_REQ_DTLS table.
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Processing	Enter	C1-RF-PROC	C1-RF-PROC	<p>This algorithm fetches the list of records that are in Valid status for a given request ID and invokes the entity business object for creating the refund requests. If successfully processed, then the record status will be updated to Processed, otherwise the record status will be updated to Error and error details will be logged in the exception table.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-WO-DERIV	C1-WO-DERIV	This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating write off requests and inserts the records in C1_UPLOAD_REQ_DTLS table.
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. Algorithms Used in C1-BillableChargeUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillableChargeUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p>
Draft	Enter	C1-BC-DERIV	C1-BC-DERIV	<p>This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating billable charges and inserts the records in C1_UPLOAD_REQ_DTLS table.</p>
Validated	Enter	C1-BC-VALID	C1-BC-VALID	<p>This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Processing	Enter	C1-BC-PROC	C1-BC-PROC	<p>This algorithm fetches the list of records that are in Valid status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to Processed, otherwise the record status will be updated to Error and error details will be logged in the exception table.</p>
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending .
Draft	Enter	C1-REN-DERIV	C1-REN-DERIV	This algorithm reads the data in the BO_DATA_AREA column of the C1_UPLOAD_REQ_DTLS table and then derives the policy ID using the source system and policy number combination whenever the policy ID is not specified in the record. Once the policy ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid .

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-REN-VALID	C1-REN-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the policy ID and reinstatement reason specified in the record is valid. If the policy ID and reinstatement reason are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the policy ID is invalid, it derives the policy ID using the source system and policy number combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the policy ID using the source system and policy number combination, or if the reinstatement reason is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more policies with the same policy ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid. It contains the following parameters:</p> <ul style="list-style-type: none"> • Policy Status after Processing Reinstatement Upload Request – Used to specify the status to which you want to transition the policy when the reinstatement upload request is processed. • Policy Reinstatement Status for Reason Verification – Used to validate the reinstatement reason. The reason should be a valid reason for the specified status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.

- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BLVUPLDTL	C1-BLVUPLDTL	Refer to C1-BLVUPLDTL on page 1954.
Draft	Enter	C1-BLVLDERIV	C1-BLVLDERIV	Refer to C1-BLVLDERIV on page 1954.
Validated	Enter	C1-BLVLVALID	C1-BLVLVALID	Refer to C1-BLVLVALID on page 1954.
Canceled	—	—	—	—

Processing	Enter	C1-BLVLVLPRO	C1-BLVLVLPRO	Refer to C1-BLVLVLPRO on page 1955.
Processed	—	—	—	—

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** – Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLVLVLP

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record

is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

CSV File Format for Account Bill Cycle Upload Request

Before uploading the account bill cycle file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional) Note: This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update. Note: If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	No
Bill Cycle	Used to specify the bill cycle. Note: You must specify a valid bill cycle which is associated with the division to which the account belongs.	Yes

CSV File Format for Contract Rider Upload Request

Before uploading a contract rider file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional) Note: This data is required when the account ID and contract ID are not specified.

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update.	Yes (Conditional)
	Note: You must specify a contract type which already exists in the system.	Note: This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update.	No
	Note: If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	
Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the bill factor is effective for the contract.	No
	Note: The end date cannot be earlier than the start date.	
Bill Factor	Used to specify the bill factor.	Yes
	Note: You must specify a valid bill factor where the Contract Rider Applicability flag is set to Y .	

CSV File Format for Billable Charge Upload

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.

Column Name	Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) Note: This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge.	Yes
End Date	Used to specify the end date of billable charge.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: <ul style="list-style-type: none"> • BP • FR 	Yes (Conditional) Note: This data is required if Frequency or Bill Period is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is FR.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is BP.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No

Column Name	Description	Mandatory (Yes or No)
Description on Bill1, Description on Bill2,, Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Currency1, Currency2,, Currency5	Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Amount1, Amount2,, Amount5	Used to specify the charge amount.	Yes (Conditional)
		Note: This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2,, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No
Summary1, Summary2,, Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: <ul style="list-style-type: none"> • true • false 	No
Memo Only1, Memo Only2,, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No

Column Name	Description	Mandatory (Yes or No)
GL Distribution Code1, GL Distribution Code2,, GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional) Note: This data is required when Variance Parameter or, Price Item Parameter and Price Item Parameter Value is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) Note: This data is required when Price Item is specified and Price Item Parameter and Price Item Parameter Value are not specified.
Price Item Parameter1, Price Item Parameter2,, Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
Price Item Parameter Value1, Price Item Parameter Value2,, Price Item Parameter Value15	Used to specify the parameter value. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
SQI1, SQI2,, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) Note: This data is required when the service quantity is specified.
SQI Value1, SQI Value2,, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) Note: This data is required when the SQI is specified.

Column Name	Description	Mandatory (Yes or No)
Effective Date1, Effective Date2,, Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Value1, Char Value2,, Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Hold Upload Request

Before uploading a hold request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type. Note: You must specify a valid hold request type which is in the Active status.	Yes
Start Date	Used to specify the date from when the hold request is effective. Note: The hold request start date cannot be later than the hold request end date.	Yes
End Date	Used to specify the date till when the hold request is effective. Note: The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active .	Yes

Column Name	Description	Mandatory (Yes or No)
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Account Identifier	Used to specify the identifier of the account for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Person Identifier	Used to specify the identifier of the person for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Hold Entity ID	Used to specify the entity ID. Note: If the hold entity is ACCT , you must specify the account ID in this field. If the hold entity is PERS , you must specify the person ID in this field. And, if the hold entity is BILL , you must specify the bill ID in this field. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Yes (Conditional) Note: This data is required when the hold entity is BILL .
Comments	Used to specify additional information about the hold request.	No

Column Name	Description	Mandatory (Yes or No)
Hold Entity Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<p>Note:</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p>	
Hold Entity End Date	Used to specify the date till when you want to hold the entity.	No
	<p>Note:</p> <p>The hold entity end date must be between hold request start and end dates and between the process's start and end dates.</p> <p>The hold entity end date cannot be earlier than the hold entity start date.</p>	
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: You can hold the funding process when the hold entity is PERS or BILL.</p>	
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process.	Yes (Conditional)
	<p>Note:</p> <p>The hold funding start date must be between the hold request start and end dates.</p> <p>The hold funding start date cannot be later than the hold funding end date.</p>	
Hold Funding End Date	Used to specify the date till when you want to hold the funding process.	No
	<p>Note:</p> <p>The hold funding end date must be between the hold request start and end dates.</p> <p>The hold funding end date cannot be earlier than the hold funding start date.</p>	

Column Name	Description	Mandatory (Yes or No)
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process. Note: The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Yes (Conditional) Note: This data is required when the overdue process must be kept on hold.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process. Note: The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	No
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process. Note: The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Yes (Conditional) Note: This data is required when the bill generation process must be kept on hold.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process. Note: The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No

Column Name	Description	Mandatory (Yes or No)
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Autopay Start Date	Used to specify the date from when you want to hold the automatic payment process. <p>Note: The hold autopay start date must be between the hold request start and end dates. The hold autopay start date cannot be later than the hold autopay end date.</p>	Yes (Conditional) Note: This data is required when the automatic payment process must be kept on hold.
Hold Autopay End Date	Used to specify the date till when you want to hold the automatic payment process. <p>Note: The hold autopay end date must be between the hold request start and end dates. The hold autopay end date cannot be earlier than the hold autopay start date.</p>	No
Effective Date1, Effective Date2,, Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) Note: This data is required when the characteristic type or characteristic value is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the hold request. <p>Note: You must specify a characteristic type where the characteristic entity is set to Hold Request.</p>	Yes (Conditional) Note: This data is required when the effective date or characteristic value is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when the effective date or characteristic type is specified.

CSV File Format for Refund Request Upload

Before uploading a refund request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Write Off Request Upload

Before uploading a write off request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Reinstatement Upload Request

Before uploading a policy reinstatement file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate.	No
	Note: If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy.	Yes
	Note: You must specify a reason which is defined for the status specified in the Policy Reinstatement Status for Reason Verification parameter of the C1-REN-VALID algorithm.	

CSV File Format for Bill Group Sorting Upload Request

Before uploading a bill group sorting file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.	Note: This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			Note: This data is required when the bill group (i.e. person) ID is not specified.

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional) Note: This data is required when the bill group (i.e. person) ID is not specified.
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group. Note: The start date cannot be later than the end date.	Yes
7	End Date	Used to specify the date till when the sort ID is effective for the bill group. Note: The end date cannot be earlier than the start date.	No

CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request

Before uploading a bill group derivation and pricing parameters file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received. Note: You must specify a source system which already exists in the extendable lookup which is specified in the Source System Extendable Lookup parameter of the C1-BLVLVALID algorithm.	Yes
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in the parameter 1.	Yes

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 2.	
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 3.	
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 4.	
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
		Note: The effective date must be within the date range of the sort ID defined for the bill group.	
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.	
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	

Sr. No.	Value	Description	Mandatory (Yes or No)
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement

- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1448
- [Upload Request Type](#) on page 1449

Parent topic: [Upload Request](#) on page 1909

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the Edit (✎) icon, the Upload Request Type screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the Delete (🗑) icon, you can delete the upload request type.
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the Mapping (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
File Size (KB)	Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. Note: This field appears when you create upload request type using Adjustment Upload Request Type business object.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>This field appears when you create upload request type using Adjustment Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p>
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>

Field Name	Field Description
FK Reference	Indicates the foreign key reference which specifies the created upload request type.
	<p>Note:</p> <p>This field appears when you create upload request type using Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p>

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type
	Note: The Match Type column is displayed for Adjustment Upload Request Business Object .
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object .

- **Characteristics** – This section lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval

- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when Adjustment Upload Request Type business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																						
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p>	No																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																						
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1" data-bbox="662 1104 1136 1787"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>
Upload Request	To Do Type																							
Adjustment	C1-ADJUP																							
Bill Cycle Update	C1-BCUUR																							
Billable Charge	C1-BCUR																							
Contract Rider Update	C1-CRUUR

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object is selected.	No

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

6. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

Upload Request Type List zone	Upload Request Type List on page 1448
How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1458

Defining a Characteristic for an Upload Request Type**Prerequisites**

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Note: This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit an upload request type	Editing an Upload Request Type on page 1459
How to copy an upload request type	Copying an Upload Request Type on page 1462

Editing an Upload Request Type**Prerequisites**

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes
	<p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

3. In the **Upload Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEV** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p>	Yes
	<p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	
Entity Business Object	<p>Used to indicate to create the copy of Business Object of the entity using the upload request type.</p>	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p>	
Approval Required	<p>Used to indicate whether approval is required for a file which is uploaded using the upload request type.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.
6. Click **Save**.

The new upload request type is defined.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1458

Mapping an Upload Request Type**Prerequisites**

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** (🔗) icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) Note: This column is required when you search the Data Records zone in the Upload Request screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable or not. Note: Upto 10 rows can be selected as searchable rows.	Yes (Conditional) Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen
Sequence Number	Used to specify the sequence of the searchable fields. Note: Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen

- Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

- Click **Save**.

The columns are mapped to the CSV files for upload request type.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Upload Request Type** sub-menu.

The **Upload Request Type** screen appears.

- In the **Upload Request Type List** zone, click the

Broadcast () icon corresponding to the upload request type whose details you want to view.

The **Upload Request Type** zone appears.

- View the details of the upload request type in the **Upload Request Type** zone.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 2000

This screen consists of the following zone:

- [Search Upload Request](#) on page 1993

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using Request Details .	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
To	Used to search upload requests which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> Approval In Progress Canceled Deferred Processing Draft Processed Rejected Validated 	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request ID	Used to search a particular upload request.	No
File Name	Used to search a particular file name.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Payment Request Information	Displays information about the upload request. Note: It has a link. On clicking the link, the Upload Request screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are: <ul style="list-style-type: none"> Approval In Progress Canceled Deferred Processing Draft Processed Rejected Validated
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.

Column Name	Column Description
Created By	Indicates the user who has created the upload request.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the details of data records uploaded in the csv file.
 - **Log** – This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
 4. View the data records in the csv file of the upload request in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. Note: The following upload request types are shipped with the product: <ul style="list-style-type: none"> • ADJ_UPL_REQ_TYPE_APVL • ADJ_UPL_REQ_TYPE_WO_APVL • BC_UPL_REQ_TYPE • BILL_CYCLE_UPD_UPL_REQ_TYPE • BILL_LVL_UPL_REQ_TYPE • BILL_SRT_UPL_REQ_TYPE • HOLD_UPL_REQ_TYPE • REFUND_UPL_REQ_TYPE • REIN_UPL_REQ_TYPE • SA_RIDER_UPD_UPL_REQ_TYPE • WO_UPL_REQ_TYPE 	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the {XXX} **Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The {XXX} **Upload Request** screen appears. Here, {XXX} changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.	Yes
	<p>Note:</p> <p>This field appears when you are creating an upload request using an upload request type where the upload request business object is set to C1-BillGrpSortUploadRequest or C1-BillLevelUploadRequest.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to Parent Customer.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	<p>Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.</p>	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.
- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

How to define a characteristic for an upload request	Defining a Characteristic for an Upload Request on page 1999

Defining a Characteristic for an Upload Request**Prerequisites**

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit an upload request	Editing an Upload Request on page 2005

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the data records of the upload request.
- **Log** – This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- [Upload Request](#) on page 2000
- [Data Records](#) on page 2002

Upload Request

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.

Field Name	Field Description
Upload Request Type	Indicates the upload request type using which the upload request is created.
	Note: It has a link. On clicking the link, the Upload Request Type screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Approved • Cancelled • Deferred Processing • Draft • Processed • Rejected • Submitted • Validated
File Name	Displays name of the uploaded file.

- **Statistics** – This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** – This section lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	Note: The Edit button appears when the upload request is in the Draft or Validated status.

Column Name	Column Description
Delete	Used to delete the upload request.
	Note: The Delete button appears when the upload request is in the Draft status.
Validate	Used to validate the upload request.
	Note: The Validate button appears when the upload request is in the Draft status.
Cancel	Used to cancel the upload request.
	Note: The Cancel button appears when the upload request is in the Validated status.
Submit	Used to submit the upload request for approval.
	Note: The Submit button appears when: <ul style="list-style-type: none"> The upload request is in the Validated status. The Approval Required check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> The upload request is in the Approval In Progress status. A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> The upload request is in the Approval In Progress status. A user with the approval To Do role is reviewing the upload request.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2,,Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid 	No

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the View () icon, the Data Record Details window appears where you can view the details of the data records.
Search Result 1, Search Result 2,, Search Result 10	Displays data from the CSV file.
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid
Message(s)	Displays message for the data record respective to it's status.

Column Name	Column Description
Entity ID	Displays entity ID of the upload request.
	Note: The entity ID is displayed only for data records with Processed status.
Entity Information	Displays entity information for the FK Reference selected in Upload Request Type screen.
	Note: The entity information is displayed only for data records with Processed status.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

Upload Request - Log

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 2004

Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.

The **Upload Request** screen appears.

3. Click the **Edit** button in the **Upload Request** zone.

Note: The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** – Used to define the characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Note: This field is required when you are defining a characteristic for the Upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.

5. Define, edit, or remove characteristics of the upload request, if required.
6. Click **Save**.

The changes made to the upload request are saved.

Deleting an Upload Request

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.

The **Upload Request** screen appears.

3. Click the **Delete** button in the **Upload Request** zone.

A message appears confirming whether you want to delete the upload request.

Note: The **Delete** button appears when the upload request is in the **Draft** status.

4. Click **OK**.

The upload request is deleted.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.

The **Upload Request** screen appears.

3. Click the **Validate** button in the **Upload Request** zone.

Note: The **Validate** button appears when the upload request is in the **Draft** status.

For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

The status of the upload request is changed to **Validated**.

Canceling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.

The **Upload Request** screen appears.

3. Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears when the upload request is in the **Validated** status.

4. Select the cancellation reason from the **Cancel Reason** list.
5. Click **Save**.

The status of the upload request is changed to **Canceled**.

Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve a upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Approve a upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
<p>The number of valid records in the upload request does not exceed the online record process limit defined in the C1-DEFERUPLD algorithm</p>	<p>The following table lists the behavior for the different upload requests:</p> <table border="1" data-bbox="889 348 1463 1455"> <thead> <tr> <th data-bbox="894 354 1133 394">Upload Request</th> <th data-bbox="1138 354 1458 394">Behavior</th> </tr> </thead> <tbody> <tr> <td data-bbox="894 401 1133 478">Bill Cycle Update</td> <td data-bbox="1138 401 1458 478">The bill cycle information is updated for the accounts.</td> </tr> <tr> <td data-bbox="894 485 1133 562">Billable Charge</td> <td data-bbox="1138 485 1458 562">The billable charges are created.</td> </tr> <tr> <td data-bbox="894 569 1133 674">Contract Rider Update</td> <td data-bbox="1138 569 1458 674">The contract rider information is updated for the contracts.</td> </tr> <tr> <td data-bbox="894 680 1133 758">Hold Request</td> <td data-bbox="1138 680 1458 758">The hold requests are created.</td> </tr> <tr> <td data-bbox="894 764 1133 842">Refund Request</td> <td data-bbox="1138 764 1458 842">The refund requests are created.</td> </tr> <tr> <td data-bbox="894 848 1133 926">Write Off Request</td> <td data-bbox="1138 848 1458 926">The write off requests are created.</td> </tr> <tr> <td data-bbox="894 932 1133 1220">Policy Reinstatement</td> <td data-bbox="1138 932 1458 1220">The policies are reinstated and the status of the policies is changed to the one defined in the Policy Status after Processing Reinstatement Upload Request parameter of the C1-REN-VALID algorithm.</td> </tr> <tr> <td data-bbox="894 1226 1133 1304">Bill Group Sorting</td> <td data-bbox="1138 1226 1458 1304">The sort ID is defined for the respective bill group.</td> </tr> <tr> <td data-bbox="894 1310 1133 1451">Bill Group Derivation and Pricing Parameters</td> <td data-bbox="1138 1310 1458 1451">The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td> </tr> </tbody> </table> <p>In addition, the status of the upload request is changed to Processed.</p>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Reject an upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to	Then
	6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

- Review the upload request details.
- Click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

Note: The **Reject** button appears when:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

- Search for the data record in the **Data Records** zone in the **Upload Request** screen.
- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

- View the details of the data record in the **Data Record Details** window.

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the upload request. It contains the following zones:
 - Upload Request** – Displays the details of the upload request.
 - Data Records** – Lists the data records of the upload request.
- Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - Upload Request Log** – Displays the trail of actions performed on the particular upload request.

- Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request**Procedure**

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to edit.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments for the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 28

General Ledger (GL) Accounting Template

Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do

for the approver to review the GL Accounting template. Once the approver approves a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.

If the bill segment is...	Then, the system...
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line. • Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

GL Accounting Template (Without Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is off:

GL Accounting Template (With Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is on:

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> GLAT Description GLAT Status Description GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 2033

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 2028
- [GL Accounting Template Lines](#) on page 2029

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected 	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. <p>Note: It has a link. On clicking the link, the GL Accounting Template screen appears where you can view the details of the respective template.</p>
Description	Displays the description of process.

Column Name	Column Description
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** () icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** —Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Note:

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details**Procedure**

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

Viewing the GL Accounting Template Lines Details

Procedure

To view the details of a GL Accounting Template Lines:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the **Broadcast** (📢) icon corresponding to the template in the **Search Results** section.

The **GL Accounting Template Lines** zone appears in the **GL Accounting Template** screen.

3. View the details of the template lines in the **GL Accounting Template Lines** zone.

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** — Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

[GL Accounting Template](#) on page 2033

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** — This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** — Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The Edit button appears when the template is in the Draft or Rejected status.
Delete	Used to delete the template.
	Note: The Delete button appears when the template is in the Draft or Rejected status.
Submit	Used to activate the template.
	Note: The Submit button appears when the template is in the Draft or Rejected status.

Button Name	Button Description
Approve	Used to approve the template.
	Note: the Approve button appears when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Reject	Used to reject the template.
	Note: the Reject button appears when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Deactivate	Used to deactivate the active template.
	Note: The Deactivate button appears when the template is in the Active status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 2035

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template**Procedure**

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.

The **GL Accounting Template** screen for editing appears.

3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** — Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add (+)** icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete (🗑)** icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search (🔍)** icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.

The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.

The **GL Accounting Template** screen appears.

3. Click the **Delete** button in the **GL Accounting Template** zone.

A message appears confirming whether you want to delete the template.

Note: The **Delete** button appears when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.

The GL Accounting template is deleted.

Note:

You can delete a template when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.

The **GL Accounting Template** screen appears.

3. Click the **Submit** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the C1-GLATSUB algorithm.	A To Do of the C1-GLAT To Do type is created and sent to the approver and the status of the template is changed to Approval In Progress .
Approval Required Flag is set to No in the C1-GLATSUB algorithm.	The template is created using the specified process and the status of the template is changed to Active .

Note:

The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the GL Accounting template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to Active as specified in the GL Accounting template.

Note: The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting Template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.

The **GL Accounting Template** screen appears.

3. Click the **Deactivate** button in the **GL Accounting Template** zone.

Note: The **Deactivate** button appears when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.

The GL Accounting template status is changed to **Deactivation Approval In Progress**.

Viewing the Log of a GL Accounting Template

Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

Chapter 29

Payment Agreement Request

Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 2048 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 2048. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

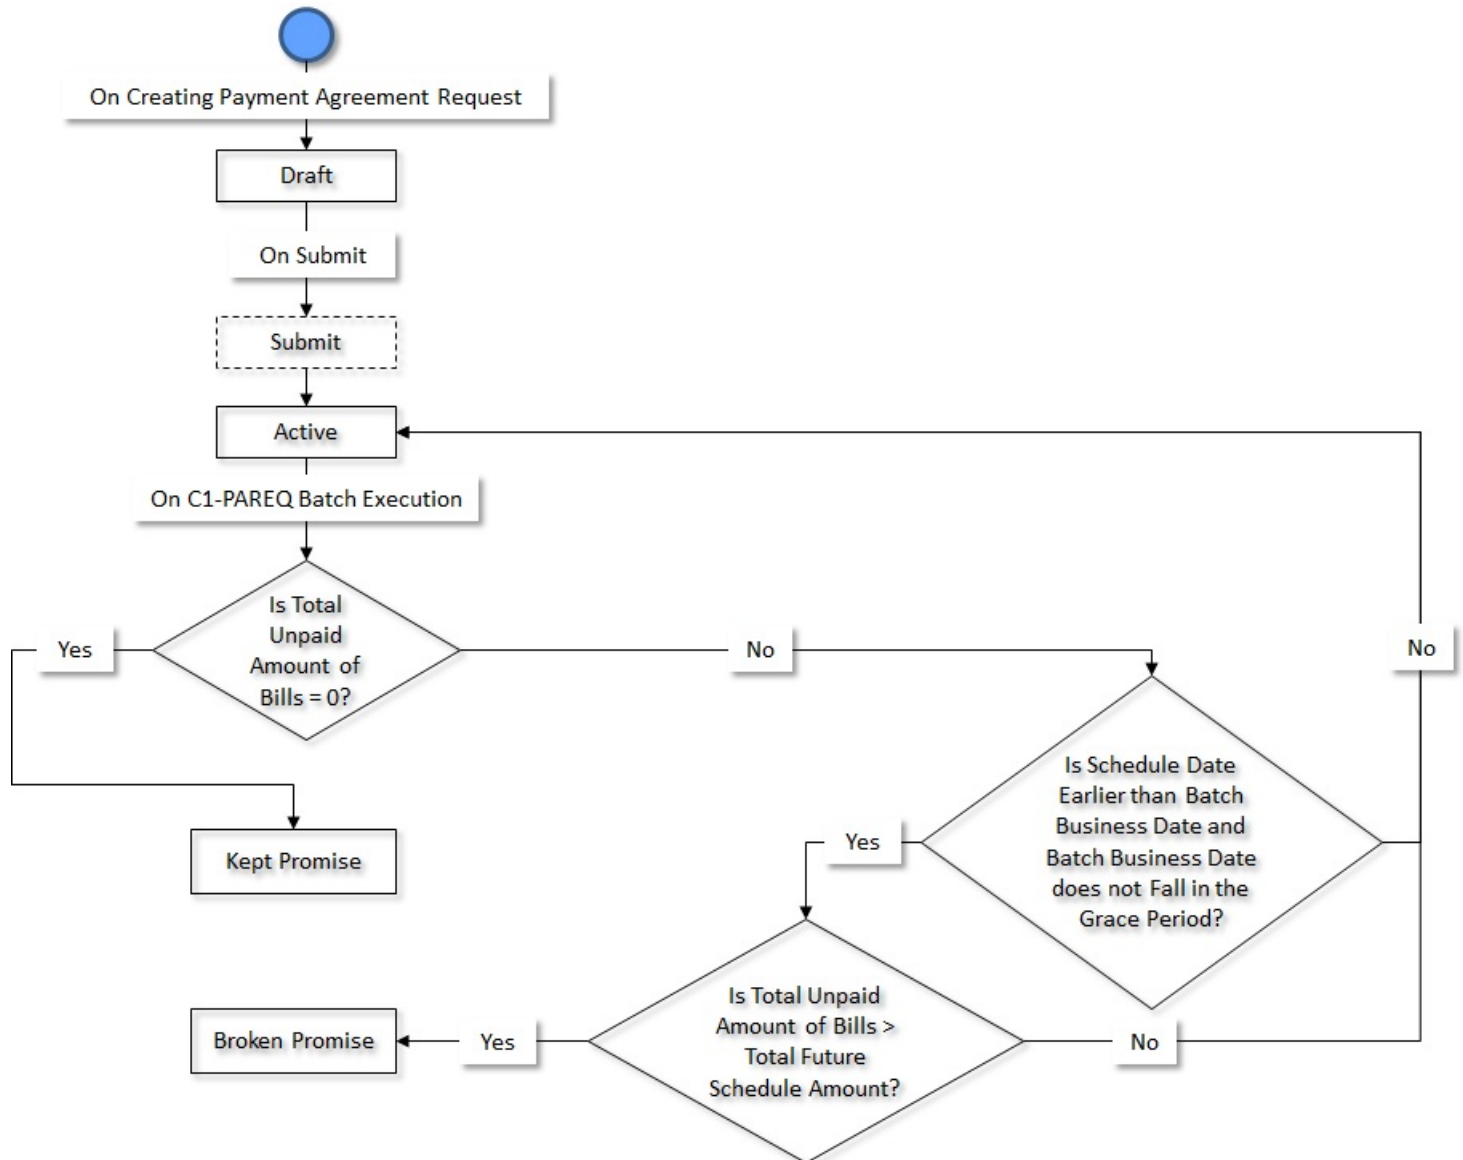

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 2049.

Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**

- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO
Pre-Processing	C1-PA-PRE	C1-PA-PRE	C1-PA-PRE
Validation	C1-PA-VAL	C1-PA-VAL	C1-PA-VAL

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	C1-PA-SUBMIT
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	C1-PA-APPENT
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	C1-PA-APPEXT
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	C1-PA-RESUB
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	C1-MONTR
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	C1-ACTENT

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 2051
- [Payment Agreement Request Type](#) on page 2051

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the Edit (✎) icon, the Payment Agreement Request Type screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the Duplicate (📄) icon, the Payment Agreement Request Type screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the Delete (🗑) icon, you can delete the payment agreement request type. Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Approval To Do Type field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Submitter To Do Type field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.

The payment agreement request type is defined.

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Note: This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. <p>Note: This field appears when the Approval Required check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
	The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

5. Enter the required details.
6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.

The new payment agreement request type is defined.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Payment Agreement Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

Defining a Characteristic for a Payment Agreement Request

Prerequisites

To define a characteristic for a payment agreement request:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Agreement Request**)

Procedure

To define a characteristic for a Payment Agreement Request:

1. Ensure that the **Characteristics** section is expanded when you are editing, submitting, approving, rejecting or resubmitting a payment agreement.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the payment agreement request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the payment agreement request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request.	Note: This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request, click the **Delete** (🗑️) icon corresponding to the characteristic.

The **Payment Agreement Request** screen appears.

- Review the payment agreement request details.
- Click the **Reject** button in the **Payment Agreement Request** zone.

The **Reject Payment Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

Note: The **Reject** button appears when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the payment agreement request is changed to **Rejected**.

Resubmitting a Payment Agreement Request

Prerequisites

To resubmit a payment agreement request, you should have:

- Entities added in the payment agreement request which is submitted for approval.

Procedure

To resubmit a payment agreement request:

- Search for the payment agreement request in the **Payment Agreement Request** screen.
- In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.

The **Payment Agreement Request** screen appears.

- Click the **Resubmit** button in the **Payment Agreement Request** zone.

The **Resubmit Payment Agreement Request** screen appears.

Note: The **Resubmit** button appears when the payment agreement request is in the **Approval In Progress** status.

A To Do of the **C1-PAREQ** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the payment agreement request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Note: While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the payment agreement request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Filtering Overdue Bills of an Account

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details.	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search for a particular bill.	No
	Note: The Search (🔍) icon appears corresponding to the field. On clicking the Search icon, the Bill Search window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔼) icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

Adding an Overdue Bill in a Payment Agreement Request

Prerequisites

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills should be available for accounts to add in payment agreement request

Procedure

To add an overdue bill in a payment agreement request:

Note: A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.
The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.
In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.
You can add more than one bill to the payment agreement request at the same time.
6. Click **Add**.
A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.

Note that the bill is added in the **Bill Details** zone in the **Main** tab.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

Related Topics

Adding a Log Entry for a Payment Agreement Request

Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments for the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Payment Agreement Request Log** zone.

Chapter 30

Inbound Message

Topics:

- [Health Care Inbound Message](#)
- [Health Product and Plan Inbound Message](#)
- [Inbound Message Type](#)
- [Inbound Message \(Used for Searching\)](#)
- [Inbound Message \(Used for Viewing\)](#)
- [Statement Construct Preference](#)

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2094	C1-HCInboundMessage on page 2265

Once an inbound message is created, you can submit the inbound message for validation and processing from the user interface or through a batch process. The following table lists the batches which validate and process the respective inbound message at regular intervals:

Inbound Message	Batch Control Name
Health Care Inbound Message	Health Care Inbound Message Periodic Monitor (C1-HCINB)

For more information about the batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Health Care Inbound Message

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
 - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
 - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1_PERSON_BO)** business object in the customer registration type.
 - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.
 - **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
 - **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
 - **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The **C1-HCInboundMessage** web service enables you to do the following depending on the person type and the category to which the policy type belongs:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	<ul style="list-style-type: none"> • Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of a bill group • Create or edit the policies of a bill group

Person Type	Policy Category	Enables you to:
	Fully-Insured Group	<ul style="list-style-type: none"> • Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the parent customer and bill group • Create or edit the policies of the parent customer and bill group • Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the parent customer and bill group
Bill Group	Self-Funded	<ul style="list-style-type: none"> • Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group
	Fully-Insured Group	<ul style="list-style-type: none"> • Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group • Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the bill group

Person Type	Policy Category	Enables you to:
Any Other Person Type	-	<ul style="list-style-type: none"> • Create or edit a person • Credit or edit the accounts of the person • Create or edit the memberships of the policy plans • Add or remove members from a membership • Create or edit the one-time or recurring pass-through billable charges for a membership

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	<p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the related person information is given for a bill group and the person type of the related person is Parent Customer, then the bill group is related to the parent customer using the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p> <p>Note: The system supports the Add and Update operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.</p>
Account	<p>While creating an account, the system defines the Invoice Type characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration.</p>

Entity	System Behavior
Policy	<p>If the fully-insured group policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>However, if the fully-insured group policy information is given for a parent customer, the system does the following:</p> <ul style="list-style-type: none"> • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>If the self-funded policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy.</p>
	<p>Note: You can renew a policy where the policy category is set to Self-Funded from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to Fully-Insured Group through a health care inbound message and not from the user interface.</p>
	<p>On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date:</p> <ul style="list-style-type: none"> • Policy • Policy Person • Policy Plan • Membership • Membership Person • Pricing Rule <p>However, before updating the end dates, the system stores the original end date in the ORG_END_DT column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLNG feature configuration.</p> <p>On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLNG feature configuration.</p>

Entity	System Behavior
Policy Plan	While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to Age Based , Tier Based , or Pass-Through Billable Charge .
Pricing Rule Type	The system does not allow you to create or update a pricing rule type through a health care inbound message.
Pricing Rule	<p>The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the Replace operation and not the Update operation when you are editing these pricing rules through a health care inbound message.</p> <p>Note:</p> <p>You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface.</p> <p>You can create the following pricing rules from the user interface and not through a health care inbound message:</p> <ul style="list-style-type: none"> • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • One-Time Flat Fees • Recurring Flat Fees • Ancillary • Discount Arrangement • Level Funded
Pass-Through Billable Charge	If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to Pass-Through Billable Charge . If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.

Note:

We recommend you to create or update the following through separate health care inbound messages:

- Entities, such as parent customer, bill group, accounts, policies, and policy plans
- Pricing rules
- Membership, member persons, and pass-through billable charges

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

Note: The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 3287
How to setup the C1-PERSTYPE feature configuration	Setting the C1_PERSTYPE Feature Configuration on page 3329

Prerequisites

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

Note: The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRetTypeRateOpt** extendable lookups.
- Define the values for the **HOUSE_TYPE**, **PER_OR_BUS_FLG**, **NAME_TYPE_FLG**, **ADDRESS_TYPE_FLG**, **BILL_ADDR_SRCE_FLG**, **BILL_FORMAT_FLG**, and **RUNOUT_ADM_OPT_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Parent Customer Policy Person Role
 - Invoice Type Characteristic Type
 - Policy Termination Status
 - Policy Reinstatement Status
 - Default Rate Option – Flat
 - Default Rate Option – Percentage
 - Age Based Parameter
 - Membership Inactive Status
 - Member Person Inactive Status
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
 - Bill Group Person Type
 - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language

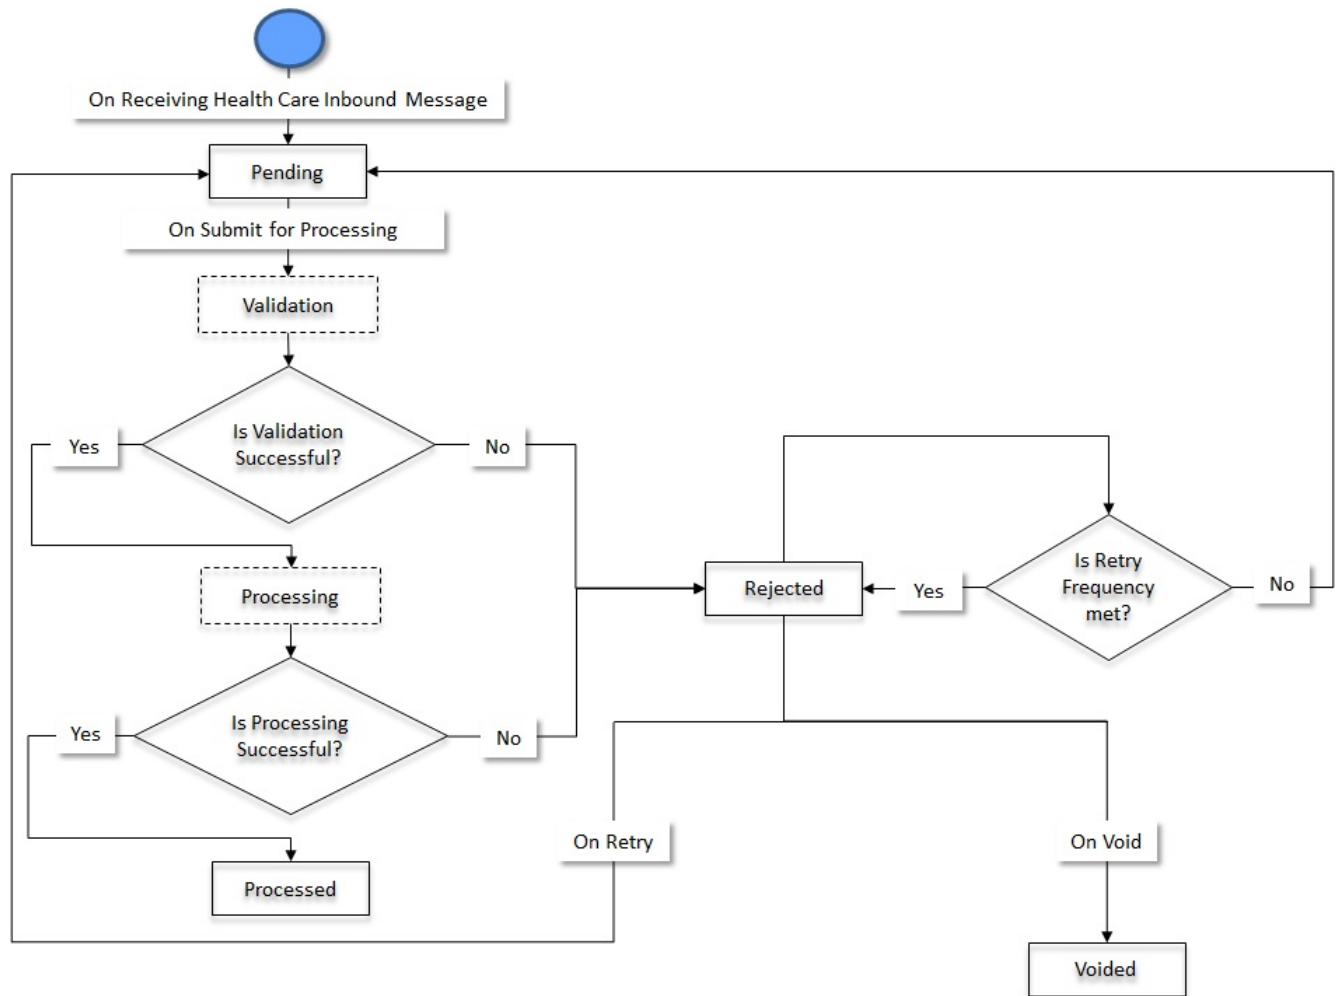

- Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.
- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

Health Care Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Health Care Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch:

Algorithms Used in C1-HCInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-HCInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 2104.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593.
	Enter	C1-HCINVAL	C1-HCINVAL	Refer to C1-HCINVAL on page 2104.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593.
	Enter	C1-HCINPROC	C1-HCINPROC	Refer to C1-HCINPROC on page 2105.

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2105.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2106.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Care Inbound Message XML Format

Note: We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> • C1-HCInboundMessage 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)												
messageType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 268 1170 751"> <thead> <tr> <th data-bbox="505 268 721 352">If this tag is used within...</th> <th data-bbox="721 268 1170 352">Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 352 721 604">schema</td> <td data-bbox="721 352 1170 604"> <p>Indicates the health care inbound message type using which the health care inbound message is created in the system.</p> <p>Note: The system refers the value from within the headerData tag.</p> </td> </tr> <tr> <td data-bbox="505 604 721 751">headerData</td> <td data-bbox="721 604 1170 751"> <p>Used to specify the health care inbound message type using which the health care inbound message should be created in the system.</p> </td> </tr> </tbody> </table> <p>Note: You must specify a valid health care inbound message type which is in the Active status.</p>	If this tag is used within... Yes (Conditional) Note: This data is required while defining the respective information.
If this tag is used within...	Then the purpose of the description tag is...							
billableChargeData	Used to specify the description for the billable charge.							
policyData	Used to specify the description for the policy.							
recurringMethod	Used to indicate whether recurring bill segments must be created for the billable charge at the specified intervals. The valid values are: <ul style="list-style-type: none"> • BP - Used when you want to create recurring bill segments at the intervals defined in the bill period. • FR - Used when you want to create recurring bill segments at the set invoice frequency. 	No						
billPeriod	Used to indicate the bill period using which you want to determine the intervals at which the recurring bill segments must be created. Note: You must specify a bill period which is already defined in the system.	Yes (Conditional) Note: This data is required when the recurringMethod tag contains BP .						

Tag Name	Tag Description	Mandatory (Yes or No)
frequency	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when the recurringMethod tag contains FR .
	Note: You must specify an invoice frequency which is already defined in the system.	
billAfterDt	Used to specify the date after which the bill must be generated for the billable charge.	No
	Note: You must specify the date in the YYYY-MM-DD format.	
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes
currencyCode	Used to indicate the currency in which you want to charge the amount.	Yes
	Note: You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: If you do not specify the value, by default, it is set to true .	
appearInSummarySw	Used to indicate whether the charge should be included in the summary line. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: If you do not specify the value, by default, it is set to false .	
distributionCode	Used to specify the distribution code which indicates the GL account associated with the charge.	No
	Note: You must specify a distribution code which is already defined in the system.	

Tag Name	Tag Description	Mandatory (Yes or No)
accountData	Used to specify the account details of a person.	Yes (Conditional) Note: This data is required while defining or editing an account.
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account. Note: The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Yes (Conditional) Note: This data is required while defining or editing an account.
customerClass	Used to indicate the customer class to which the account belongs. Note: You must specify a customer class which is already defined in the system.	Yes (Conditional) Note: This data is required while defining an account.
billCycle	Used to indicate the bill cycle for the account. Note: You must specify a bill cycle which is already defined in the system.	No
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0). Note: If you do not specify the value, by default, it is set to zero(0).	No
currency	Used to indicate the currency in which you want to bill the account. Note: You must specify a currency which is already defined in the system.	Yes (Conditional) Note: This data is required while defining an account.
setUpDate	Used to specify the date when the account was first created. This is purely informational. Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
acctUsageFlg	<p>Used to indicate the category to which the account belongs. The valid values are:</p> <ul style="list-style-type: none"> • INVC - Indicates that the account will be used to bill charges of the usage accounts. • SETL - Indicates that the account will be used only for settlement purposes. • USAG - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. <p>Note: If you do not specify the value, by default, it is set to USAG.</p>	No						
comments	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 793 1170 1041"> <thead> <tr> <th data-bbox="505 793 719 877">If this tag is used within...</th> <th data-bbox="719 793 1170 877">Then the purpose of the comments tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 877 719 961">accountData</td> <td data-bbox="719 877 1170 961">Used to specify additional information about the account.</td> </tr> <tr> <td data-bbox="505 961 719 1041">autoPayDetails</td> <td data-bbox="719 961 1170 1041">Used to specify additional information about the auto pay instruction.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the comments tag is...	accountData	Used to specify additional information about the account.	autoPayDetails	Used to specify additional information about the auto pay instruction.	No
If this tag is used within...	Then the purpose of the comments tag is...							
accountData	Used to specify additional information about the account.							
autoPayDetails	Used to specify additional information about the auto pay instruction.							
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No						
collectionClass	<p>Used to specify the collection class using which you want to control the account's debt.</p> <p>Note:</p> <p>If you do not specify the value, by default, it is set to the collection class which is specified in the customer class of the account.</p> <p>You must specify a collection class which is already defined in the system.</p>	No						

Tag Name	Tag Description	Mandatory (Yes or No)						
billRouteType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 268 1174 520"> <thead> <tr> <th data-bbox="505 268 719 352">If this tag is used within...</th> <th data-bbox="719 268 1174 352">Then the purpose of the billRouteType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 352 719 436">accountData</td> <td data-bbox="719 352 1174 436">Used to indicate how the account's bill must be sent to the main customer.</td> </tr> <tr> <td data-bbox="505 436 719 520">accountPersonRouting</td> <td data-bbox="719 436 1174 520">Used to indicate how the account's bill must be sent to the linked person.</td> </tr> </tbody> </table> <p>Note: You must specify a bill route type which is already defined in the system.</p>	If this tag is used within...	Then the purpose of the billRouteType tag is...	accountData	Used to indicate how the account's bill must be sent to the main customer.	accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the respective information.</p>
If this tag is used within...	Then the purpose of the billRouteType tag is...							
accountData	Used to indicate how the account's bill must be sent to the main customer.							
accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.							
billAddressSource	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 709 1174 1352"> <thead> <tr> <th data-bbox="505 709 719 793">If this tag is used within...</th> <th data-bbox="719 709 1174 793">Then the purpose of the billAddressSource tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 793 719 1075">accountData</td> <td data-bbox="719 793 1174 1075">Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. accountData	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 							
accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 							
autoPayDetails	Used to specify the auto pay instruction for the account.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing an auto pay instruction of an account.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	Note: The priority cannot be less than or equal to zero.	Note: This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)
		Note: This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> • C1DD - Indicates that you want to directly debit the main customer's bank account. • C1PA - Indicates that you want to send a payment advice to the main customer. 	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: You must specify an auto pay route type which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: You must specify an auto pay source which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	Note: You must specify the month in the MM format.	Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.

Tag Name	Tag Description	Mandatory (Yes or No)												
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional) Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.												
	Note: You must specify the year in the YYYY format.													
name	Used to specify the name of the person as it appears in the financial institution's system.	No												
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No												
	Note: The maximum withdrawal amount cannot be less than zero.													
accountPerson	Used to specify information about the person (other than main customer) to whom you want to link the account.	Yes (Conditional) Note: This data is required while linking a person to an account.												
	<p>Note:</p> <p>The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:</p> <table border="1"> <thead> <tr> <th>Attribute Name</th> <th>Attribute Value</th> </tr> </thead> <tbody> <tr> <td>Financially Responsible</td> <td>Y</td> </tr> <tr> <td>Account Relationship Type</td> <td>Main Customer</td> </tr> <tr> <td>Receive Copy of Bill</td> <td>Y</td> </tr> <tr> <td>Bill Format</td> <td>Detailed</td> </tr> <tr> <td>Receives Notification</td> <td>Y</td> </tr> <tr> <td>Number of Bill Copies</td> <td>1</td> </tr> </tbody> </table>		Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y
Attribute Name	Attribute Value													
Financially Responsible	Y													
Account Relationship Type	Main Customer													
Receive Copy of Bill	Y													
Bill Format	Detailed													
Receives Notification	Y													
Number of Bill Copies	1													
accountRelationshipType	Used to indicate how the person is related to the account.	Yes (Conditional) Note: This data is required while linking a person to an account.												
	Note: You must specify an account relationship type which is already defined in the system.													

Tag Name	Tag Description	Mandatory (Yes or No)
isFinanciallyResponsible	Used to indicate whether the person is financially responsible for the account. The valid values are: <ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value, by default, it is set to False.</p>	No
personAddressOverride	Used to specify the account override address for the linked person.	No
postal	Used to specify the postal code of the address.	No
accountPersonRouting	Used to specify the bill routing information for the linked person.	Yes (Conditional) <p>Note: This data is required while defining or editing the bill routing information of a linked person.</p>
shouldReceiveCopyOfBill	Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are: <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	No
billFormat	Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are: <ul style="list-style-type: none"> • D • S <p>Note:</p> <p>You must specify a value which is already defined in the BILL_FORMAT_FLG lookup field. It must be in the Active status.</p> <p>If you do not specify the value, by default, it is set to D when the linked person should receive a copy of the account's bill.</p> <p>This information is ignored when the shouldReceiveCopyOfBill tag contains N.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
numberOfBillCopies	<p>Used to indicate the number of copies of the bill which the linked person must receive.</p> <p>Note: If you do not specify the value, by default, it is set to 1 when the linked person should receive a copy of the account's bill. This information is ignored when the shouldReceiveCopyOfBill tag contains N.</p>	No
receivesNotification	<p>Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N. This information is ignored when the shouldReceiveCopyOfBill tag contains N.</p>	No
policyData	Used to specify the details of the policy.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a policy.</p>
policyType	<p>Used to indicate the policy type using which you are defining the policy.</p> <p>Note: You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to Fully-Insured Group. However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to Self-Funded.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a policy.</p>
runOutEndDate	<p>Used to specify the date when the runout period of the self-funded policy ends.</p> <p>Note: The runout end date cannot be earlier than or equal to the policy end date. This data is required when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
runOutAdminOption	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note:</p> <p>At present, this data is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This data is required when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p>	No
renewalDate	<p>Used to specify the date when you want to renew the fully-insured group policy.</p> <p>Note:</p> <p>You can renew a self-funded policy only from the user interface.</p> <p>You must specify the date in the YYYY-MM-DD format.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while renewing a fully-insured group policy.</p>
policyPersons	<p>Used to indicate the person that you want to associate with the policy.</p>	Yes
policyPerRole	<p>Used to indicate the role of the person in the policy.</p> <p>Note: You must specify a policy person role which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while associating a person with the policy.</p>
terminationInformation	<p>Used to specify the termination details of the fully-insured group policy.</p> <p>Note: At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message.</p>	No
terminateDate	<p>Used to specify the date when you want to terminate the fully-insured group policy.</p> <p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The termination date cannot be earlier than the policy start date.</p> <p>On terminating a policy, the status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLNG feature configuration.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while terminating a fully-insured group policy.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the status reason which is already defined for the status specified in the Policy Termination Status option type of the C1-ASOBLNG feature configuration.	Note: This data is required while terminating a fully-insured group policy.
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy.	No
	Note: At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message.	
reinstatementDate	Used to specify the date when you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLNG feature configuration.	Note: This data is required while reinstating a fully-insured group policy.
reinstateReason	Used to indicate the reason why you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the status reason which is already defined for the status specified in the Policy Reinstatement Status option type of the C1-ASOBLNG feature configuration.	Note: This data is required while reinstating a fully-insured group policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional)
	Note: At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy.	Note: This data is required while defining or editing a policy plan.
planName	Used to specify the description of the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	Yes (Conditional)
		Note: This data is required while associating a pricing rule type with the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleType	Used to specify the pricing rule type.	Yes (Conditional)
	Note: At present, you can only associate those pricing rule types where the category is set to Age Based, Tier Based, or Pass-Through Billable Charge . Therefore, the system will ignore the pricing rule types where the category is set to Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Flat Fees, Ancillary, Discount Arrangement, or Level Funded .	Note: This data is required when a price item is not associated with the policy plan.
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N.	
benefitTypeFlag	Used to indicate the type of benefit. The valid value is: <ul style="list-style-type: none"> • Medicare Affiliated 	Yes
	Note: The list includes only those benefit types which are defined in the BENEFIT_TYPE_FLG lookup field.	
policyPlanProrationRuleList	Used to specify the proration rules defined for the policy plan.	Yes (Conditional)
		Note: This data is required while defining or editing the proration rules for the policy plan.
prorationEventType	Used to indicate the event when you want to prorate the membership premium. The valid values are: <ul style="list-style-type: none"> • Enrollment – Used when you want to prorate the membership premium on enrolling a member person. • Termination - Used when you want to prorate the membership premium on terminating a member person. • New Born - Used when you want to prorate the membership premium on enrolling a new born. • Same Month Enrollment and Termination - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month. 	Yes (Conditional)
		Note: This data is required while defining or editing the proration rules for the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
prorationType	<p>Used to indicate how you want to prorate the membership premium. The valid values are:</p> <ul style="list-style-type: none"> • Daily – Used when you want to prorate the membership premium from the day the proration event has occurred. • Mid-Month – Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: $\text{Bill Period Start Date} + \text{Specified Number of Days}$ <p>For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person.</p> • Full Month – Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person. • Waiver – Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • Coverage Days – Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p> <ul style="list-style-type: none"> • Enrollment – Used when you want to prorate the premium for a member person using the proration type of the enrollment event. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the proration rules for the policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
numberOfDays	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) Note: This data is required when the proration type is set to Mid-Month or Coverage Days .
pricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: <ul style="list-style-type: none"> • PLAN - Used when you want to specify the plan number. • PLCY - Used when you want to specify the policy number. • SSYS - Used when you want to specify the source system 	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
status	Used to indicate the status of the pricing rule. The valid values are: <ul style="list-style-type: none"> • ACTV • INAC Note: If you do not specify the value, by default, it is set to Active .	No
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule. Note: You must specify a pricing rule type where the category is set to Age Based or Tier Based .	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. Note: You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) Note: This data is required while defining or editing a pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	<p>Used to indicate the rate option using which you want to create price assignment for the pricing rule.</p> <p>Note:</p> <p>You must specify a rate option which is already defined in the C1-ExtLookRetTypeRateOpt extendable lookup. It must be in the Active status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> • The value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT • The value specified in the Default Rate Option – Percentage option type of the C1-ASOBLNG feature configuration when the modifier method is set to EXPT or INPT <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT or NULL.</p>	No
modifierApplicability	<p>Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	No
modifierMethod	<p>Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:</p> <ul style="list-style-type: none"> • FLAT - Indicates that the system should consider the modifier rate as a flat amount. • INPT - Indicates that the system should consider the modifier rate as inclusive percentage. • EXPT - Indicates that the system should consider the modifier rate as exclusive percentage. 	<p>Yes (Conditional)</p> <p>Note: This data is required when the modifierApplicability tag contains Y.</p>
baseRate	<p>Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.</p> <p>Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a pricing rule.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
baseFee	Used to specify the base fees for the eligible members.	Yes (Conditional) Note: This data is required while defining a pricing rule.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. Note: The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) Note: This data is required while defining an age-based pricing rule.
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component. Note: The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) Note: This data is required while defining an age-based pricing rule.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) Note: This data is required while defining a tier-based pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)						
parameterCode	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the parameterCode tag is...</th> </tr> </thead> <tbody> <tr> <td>pricingParameter</td> <td>Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> <tr> <td>modifierInformation</td> <td>Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> </tbody> </table> <p>Note: You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to Pricing Eligibility Criteria. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p>	If this tag is used within...	Then the purpose of the parameterCode tag is...	pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.	modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterCode tag is...							
pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.							
modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.							
parameterValue	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the parameterValue tag is...</th> </tr> </thead> <tbody> <tr> <td>pricingParameter</td> <td>Used to specify the value for the parameter (i.e. employee attribute).</td> </tr> <tr> <td>modifierInformation</td> <td>Used to specify the value for the parameter (i.e. modifier).</td> </tr> </tbody> </table> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p>	If this tag is used within...	Then the purpose of the parameterValue tag is...	pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).	modifierInformation	Used to specify the value for the parameter (i.e. modifier).	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterValue tag is...							
pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).							
modifierInformation	Used to specify the value for the parameter (i.e. modifier).							
modifierInformation	<p>Used to specify the modifier based on which you want to increase or decrease the base fees.</p> <p>Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the modifier information.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) Note: This data is required while specifying the modifier information.
statementConstructDetails	Used to specify the statement construct details.	Yes (Conditional) Note: This data is required while specifying the statement construct information.
serviceAgreement	Used to specify the statement construct contract.	Yes
accountNumber	Used to specify the value for the account identifier type of the payee. Note: You must specify the account number which is already defined in the system.	Yes (Conditional) Note: This data is required while specifying the statement construct information.
accountNumberTypeCd	Used to specify the account identifier type of the payee.	Yes (Conditional) Note: This data is required while specifying the statement construct information.
statementPrintDescription	Used to specify the description of the construct detail associated with the contract.	Yes (Conditional) Note: This data is required while specifying the statement construct information.
printOrder	Used to specify the financial transactions associated with the account / contract to appear on the printed statement.	Yes (Conditional) Note: This data is required while specifying the statement construct information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health care inbound message.
statusReason	Indicates the reason why the status of the health care inbound message is changed.
person	At present, this tag is not supported in a health care inbound message.

Tag Name	Tag Description						
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.						
creationDateTime	Displays the date and time when the health care inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in a health care inbound message.						
version	This tag appears within the following parent tags: <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the health care inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the health care inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health care inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health care inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.						
paidThroughDate	Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 313.						
toDoRetry	Displays the information about the retry option used for the health care inbound message. <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health care inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the health care inbound message from Rejected to Pending .						
numberOfRetries	Indicates the number of times the retry option is used for the health care inbound message.						
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> REJECTED 						
isRetried	Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are: <ul style="list-style-type: none"> true false

Sample Health Care Inbound Message for Fully-Insured Group Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group health insurance business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
		APE Medicare Gold RE MALE		AGE_BASED	
		APE Medicare Bronze RE FEMALE		AGE_BASED	
		APE Medicare Silver RE FEMALE		AGE_BASED	
		APE Medicare Gold RE FEMALE		AGE_BASED	
		APE Medicare Gold RE FEMALE		AGE_BASED	

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	PPO
Antartica Petroleum COBRA	SMALLPRIME	COBRA	SEATTLE	MEDICAL	HMO
	SMALLPRIME	COBRA	SEATTLE	MEDICAL	PPO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	HMO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	HMO

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	PPO
Antartica Petroleum RETIREE	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	HMO
	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	PPO
	SMALLPRIME	RETIRED	SEATTLE	DENTAL	HMO

Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health insurance business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

Person Name	Person Type	Policy	Account
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Insurance Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employee Health Insurance Policy	Standard
			Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Insurance Policy	Standard
			Retention

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
	SMALLPRIME	ACTIVE	DALLAS	-	-
	SMALLPRIME	ACTIVE	SAN JOSE	-	-
	SMALLPRIME	ACTIVE	SAN FRANCISCO	-	-
	SMALLPRIME	ACTIVE	CHARLOTTE	-	-
	SMALLPRIME	ACTIVE	DETROIT	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	ACTIVE	CLEVELAND	-	-
	SMALLPRIME	ACTIVE	ORLANDO	-	-
	SMALLPRIME	ACTIVE	JERSEY CITY	-	-
	SMALLPRIME	ACTIVE	FONTANA	-	-
	SMALLPRIME	ACTIVE	OXNARD	-	-
US Energy COBRA	SMALLPRIME	COBRA	SEATTLE	-	-
	SMALLPRIME	COBRA	LOS ANGELES	-	-
	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
	SMALLPRIME	COBRA	SAN FRANCISCO	-	-
	SMALLPRIME	COBRA	CHARLOTTE	-	-
	SMALLPRIME	COBRA	DETROIT	-	-
	SMALLPRIME	COBRA	CLEVELAND	-	-
	SMALLPRIME	COBRA	ORLANDO	-	-
	SMALLPRIME	COBRA	JERSEY CITY	-	-
	SMALLPRIME	COBRA	FONTANA	-	-
	SMALLPRIME	COBRA	OXNARD	-	-
US Energy RETIREE	SMALLPRIME	RETIRED	SEATTLE	-	-
	SMALLPRIME	RETIRED	LOS ANGELES	-	-
	SMALLPRIME	RETIRED	DALLAS	-	-
	SMALLPRIME	RETIRED	SAN JOSE	-	-
	SMALLPRIME	RETIRED	SAN FRANCISCO	-	-
	SMALLPRIME	RETIRED	CHARLOTTE	-	-
	SMALLPRIME	RETIRED	DETROIT	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	RETIRED	CLEVELAND	-	-
	SMALLPRIME	RETIRED	ORLANDO	-	-
	SMALLPRIME	RETIRED	JERSEY CITY	-	-
	SMALLPRIME	RETIRED	FONTANA	-	-
	SMALLPRIME	RETIRED	OXNARD	-	-

```

Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD_BASIC** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	30	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	MALE
		60	EMPBAND	IC1
			SUBSCRIPTIONTIER	F
			GENDER	MALE
		25	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	FEMALE
		35	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
50	EMPBAND	IC1		
	SUBSCRIPTIONTIER	F		
	GENDER	FEMALE		

- Age-based pricing rule for the **PPO_MED_BRONZE_RETIRED** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_ BRONZE_ RETIRED	AGE_BASED	150	0	15	GENDER	FEMALE	TOBUSAGE	Y	10
		150	0	15	GENDER	MALE	TOBUSAGE	Y	20
		170	16	18	GENDER	FEMALE	TOBUSAGE	Y	20
		170	16	18	GENDER	MALE	TOBUSAGE	Y	30
		200	19	20	GENDER	FEMALE	TOBUSAGE	Y	30
		200	19	20	GENDER	MALE	TOBUSAGE	Y	40
		240	21	40	GENDER	FEMALE	TOBUSAGE	Y	40
		240	21	40	GENDER	MALE	TOBUSAGE	Y	50
		270	41	60	GENDER	FEMALE	TOBUSAGE	Y	50
		270	41	60	GENDER	MALE	TOBUSAGE	Y	60
		300	61	65	GENDER	FEMALE	TOBUSAGE	Y	60
		300	61	65	GENDER	MALE	TOBUSAGE	Y	70
		350	66	199	GENDER	FEMALE	TOBUSAGE	Y	70
		350	66	199	GENDER	MALE	TOBUSAGE	Y	80

Sample Health Care Inbound Message for Membership

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_SILVER_RETIRE	Yes	SELF
G, JOHNSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SPOUSE
G, CLARK	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, NELSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, PARKER	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, LINDA	Person	AP234389	HMO_MED_SILVER_RETIRE	No	DAUGHTER

```

Health Product and Plan Inbound Message

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, you can define a health product and plan inbound message using a health product and plan inbound message type. The **C1-HCProdHlthPlnInboundMessage** is a **SOAP** service which helps to create a health product, health plan, and pricing rule for a health plan through an inbound message, whereas the **C1-HCProdHlthPlnInboundMes** is a **RESTful** service which helps to create and edit a health product, health plan, and pricing rule for a health plan through an inbound message.

You can define a health product and plan inbound message type using the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object through the **Inbound Message Type** screen. The health product and plan inbound message type business object encapsulates the following information:

- A business object using which you want to create the health product when the health product and plan inbound message is processed.
- A business object using which you want to create the health plan when the health product and plan inbound message is processed.

The health product and plan inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. You must specify the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the health product and plan inbound message type. The health product and plan inbound message business object enables you to create and edit the following entities for a fully-insured individual customer through an inbound web service:
 - Health Product
 - Health Plan
 - Health Plan Pricing Rules

Note: You can create or update the above entities either through a single or separate health product and plan inbound messages.

- **Health Care Product Business Object** - The business object using which health product should be created in the system. You must specify the **Health Care Product (C1-HealthcareProduct)** business object in the health product and plan inbound message type.
- **Health Plan Business Object** - The business object using which health plan should be created in the system. You must specify the **Health Plan (C1-HealthPlan)** business object in the health product and plan inbound message type.

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, a batch named **C1-HCPHP** checks whether there are any health product and plan inbound messages in the **Pending** status. If there is a health product and plan inbound message in the **Pending** status, the batch changes the status of the health product and plan inbound message to the default next status (i.e. **Validation**). Then, the algorithm attached to the **Validation** status is triggered. If the validation is successful, the system changes the status of the health product and plan inbound message to **Processing**. Then, the algorithm attached to the **Processing** status is triggered. If the processing is successful, the system creates or updates the entities, such as health product, health plan, pricing rules for the health plan, and then changes the status of the health product and plan inbound message to **Processed**.

How to setup the C1-ASOBLLNG feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 3287

Prerequisites

To use the health product and plan inbound message feature, you need to do the following:

- Define the required health product and plan inbound message types in the system.
- Assign the **Product (C1_PRODUCT)** maintenance object to the **Healthcare Product (C1-HealthcareProduct)** business object, while defining the health product and plan inbound message type.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the required characteristic types where the characteristic entity is set to **Health Plan**.
- Define the required characteristic types where the characteristic entity is set to **Product**.
- Define the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the system.
- Define the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.
- Define the required pricing rule type business object in the system.
- Define the required values for the health plan in the **PRC_RULE_ENTITY_TYPE** lookup field.

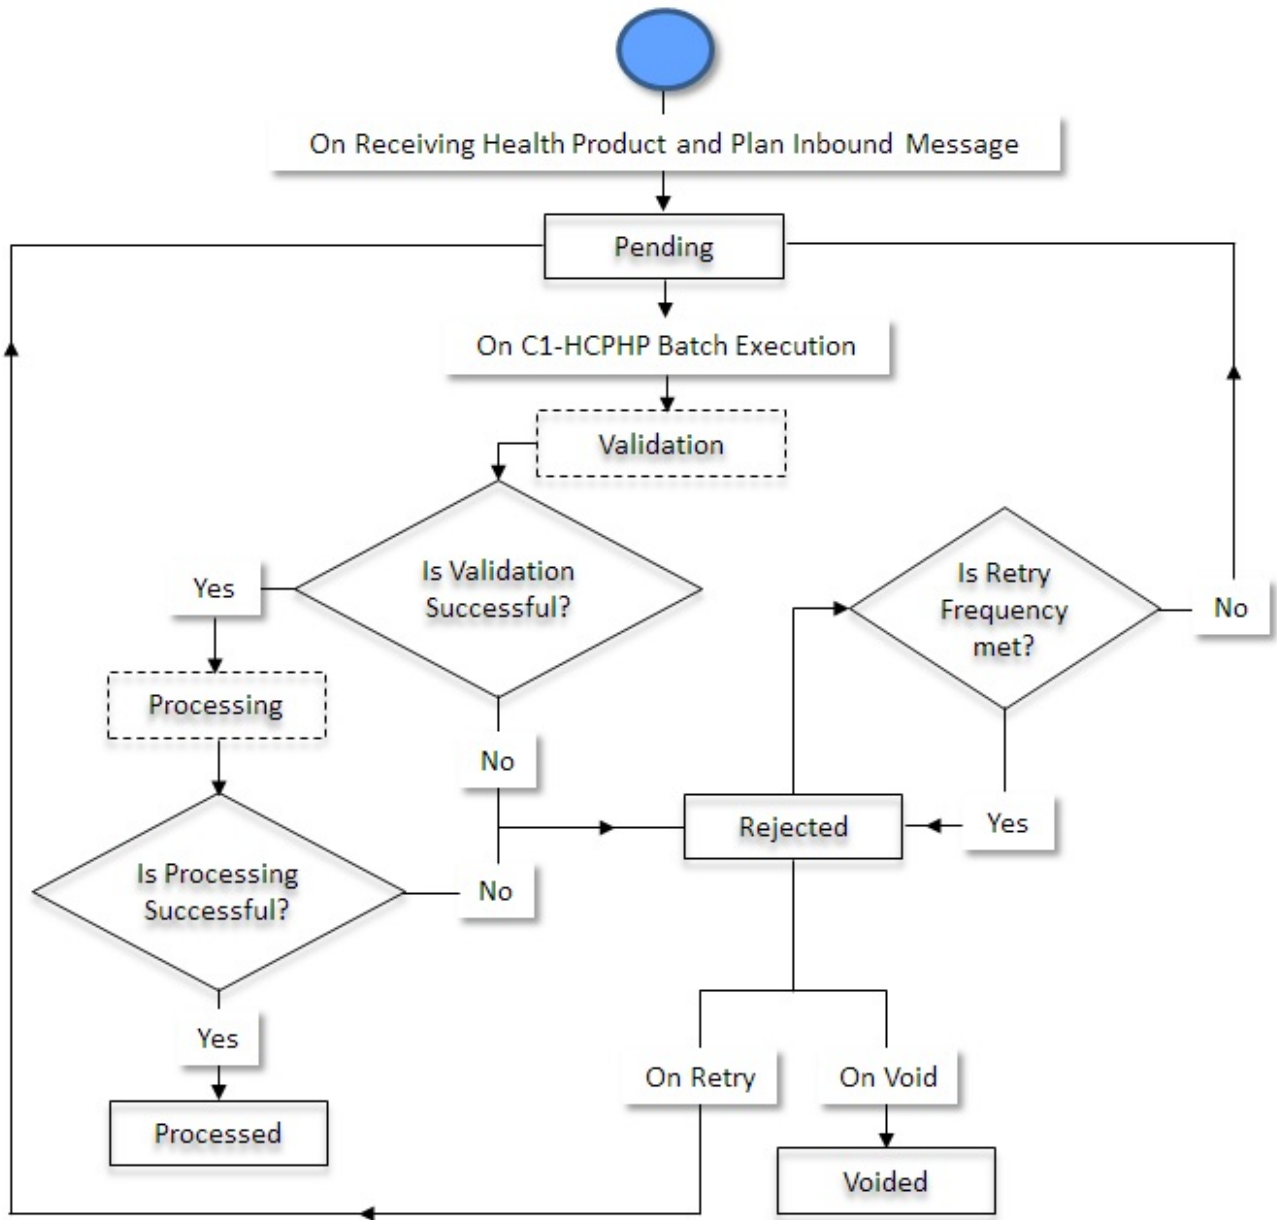

Health Product and Plan Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Health Product and Plan Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the **Health Product and Plan Inbound Message Periodic Monitor (C1-HCPHP)** batch:

Algorithms Used in C1-HCProdHlthPlnInbound

The following table lists the algorithms which are used in the lifecycle of the **C1-HCProdHlthPlnInbound** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 2104.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-HLTPRDVAL	C1-HLTPRDVAL	Refer to C1-HLTPRDVAL on page 2223
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593.
	Enter	C1-HCPRPROC	C1-HCPRPROC	Refer to C1-HCPRPROC on page 2224
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2105.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2106.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLTPRDVAL

This algorithm is invoked when you execute the **Health Product Health Plan (C1-HCPHP)** periodic monitor batch or click the **Submit for Processing** button in the **Inbound Message** screen. This algorithm validates the Health Product and Plan Inbound Message, which is in the Pending status, to check the following conditions:

- Whether the specified **Inbound Message Type** and **Inbound Message Business Object** are valid.
- Whether the specified source system is valid and does exist in the **Source System Extendable Lookup (C1-SourceSystemLookup)**.

- Whether the mandatory data (such as health product code, description, product type, bundled product, start date, status) is specified in the health product.
- Whether the mandatory data (such as health plan code, description, health product, start date, status) is specified in the health plan.
- Whether the mandatory data (such as health plan code, charge, start date, pricing rule) is specified in the health plan pricing rules.
- Whether the specified data for the lookup columns matches with those mentioned in the system.
- Whether all of the switch columns either contain **Y** or **N** as values.
- Whether the specified end date for health product, health plan, and health pricing rule is greater than the start date.
- Whether the product is mapped to the division which exists in the system, and the product - division mapping is a one time process.
- Whether the product code is mapped with the health plan exists in the system.
- Whether the characteristic type mapped with the respective entity exists in the system.
- Whether the specified pricing rule type for creating the pricing rule exists in the system in the **Active** status, and the pricing rule type - health plan mapping is a one time process.
- Whether the specified price item and price item parameters for pricing rule eligibility are valid, and the price item parameters exist in the **CI_PRICE_PARM** table.
- Whether the price item parameters that have parameter usage specified as **Pricing Rule Eligibility Criteria** are available while defining the pricing rule eligibility for the pricing rule.
- Whether the entity type is specified as **Health Plan** and entity value as **Health Plan Code** while creating a pricing rule for a health plan.

Note:

This algorithm does not consider the following validations or checks:

- No validation is performed between the date range of the product and health plan.
- No check is performed whether the product is in the **Active** status while creating a health plan.
- No check is performed whether the health plan is in the **Active** status while creating the health plan pricing rules.
- No check is performed on the set of the pricing rule eligibility, which is defined on multiple pricing rules, for a price item.
- No validation is performed if duplicate parameters are defined for a pricing rule.

C1-HCPRPROC

This algorithm is invoked when the health product and plan inbound message is successfully validated. This algorithm creates or updates the health product, health plan, and health plan pricing rule information for individual memberships.

This algorithm fetches the business object from the health product and plan inbound message type to create or update the records for health product, health plan, and health plan pricing rule. The algorithm performs the following operations:

- Creates or updates the health product based on the health product code.
- Creates or updates the health plan based on the health plan code.
- Creates or updates the health plan pricing rules based on the price item, health plan, start date, and eligibility criteria.

Note:

The pricing rule eligibility is optional while creating or updating the pricing rules for the health plan.

The health product and plan inbound message log maintains complete trail of actions performed on health product, health plan, and health plan pricing rules.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Product and Plan Inbound Message XML Format

Note: We recommend you to refer the Health Product and Plan Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, you need to ensure that the health product and plan inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)				
schema	Used to specify the tags of a health product and plan inbound message.	Yes				
bo	Used to indicate the business object using which the health product and plan inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> C1-HCProdHlthPlnInboundMessage 	Yes				
messageType	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the health product and plan inbound message type using which the health product and plan inbound message is created in the system.</td> </tr> </tbody> </table> <p>Note: You must specify a valid health product and plan inbound message type which is in the Active status.</p>	If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the health product and plan inbound message type using which the health product and plan inbound message is created in the system.	Yes
If this tag is used within...	Then the purpose of the messageType tag is...					
schema	Indicates the health product and plan inbound message type using which the health product and plan inbound message is created in the system.					
sourceSystem	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sourceSystem tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the external system from where the health product and plan inbound message is received.</td> </tr> </tbody> </table> <p>Note: You must specify a source system which is already defined in the C1-SourceSystemLookup extendable lookup. It must be in the Active status.</p>	If this tag is used within...	Then the purpose of the sourceSystem tag is...	schema	Indicates the external system from where the health product and plan inbound message is received.	Yes
If this tag is used within...	Then the purpose of the sourceSystem tag is...					
schema	Indicates the external system from where the health product and plan inbound message is received.					
externalTransactionId	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the externalTransactionId tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the transaction in the external source system which resulted in the health product and plan inbound message.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the externalTransactionId tag is...	schema	Indicates the transaction in the external source system which resulted in the health product and plan inbound message.	No
If this tag is used within...	Then the purpose of the externalTransactionId tag is...					
schema	Indicates the transaction in the external source system which resulted in the health product and plan inbound message.					

Tag Name	Tag Description	Mandatory (Yes or No)						
externalBatchId	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the externalBatchId tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the external batch job or batch run number through which the health product and plan inbound message is created.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the externalBatchId tag is...	schema	Indicates the external batch job or batch run number through which the health product and plan inbound message is created.	Yes		
If this tag is used within...	Then the purpose of the externalBatchId tag is...							
schema	Indicates the external batch job or batch run number through which the health product and plan inbound message is created.							
externalSourceId	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the externalSourceId tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the external source system ID.</td> </tr> </tbody> </table>	If this tag is used within... productCharacteristic	Used to specify a list of characteristics for the health product.	No								
healthProductDivision	Used to specify a division for the health product.	Yes								

Tag Name	Tag Description	Mandatory (Yes or No)
division	<p>Used to indicate the division to which the health product belongs.</p> <p>Note:</p> <p>If any division is configured for the health product, the system allows you to create memberships for various health plans of that health product, only for those persons who belong to the configured division.</p> <p>If any division is not configured, the system allows you to create memberships for various health plans of that health product for all the persons belonging to their respective divisions.</p>	Yes
healthPlanData	Used to specify the details of the health plan along with its characteristics.	Yes
healthPlanCode	Used to specify the plan code belonging to a specific health plan.	Yes
charitablePlan	<p>Used to indicate whether the health plan is primarily designed for subsidies. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the N option is selected.</p>	No
standardPlan	<p>Used to indicate whether the health plan is designed as a standard plan for multiple customers or as a custom plan catering to the needs of a group. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the N option is selected.</p>	No
acaQhp	<p>Used to indicate whether the health plan is a certified plan by the Health Insurance Marketplace®, follows established guidelines on cost-sharing, provides essential health benefits, and meets other requirements under the Affordable Care Act. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the N option is selected.</p>	No
grandFatherPlan	<p>Used to indicate whether the health plan is designed for people who belong to the Grandfather category.</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the N option is selected.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)						
ancillaryBenefits	Used to indicate whether the health plan provides the benefits of an ancillary plan. <ul style="list-style-type: none"> • Y • N 	No						
	Note: By default, the N option is selected.							
riderBenefits	Used to indicate whether the health plan contains the provision to add or amend the terms and conditions mentioned in the base plan. <ul style="list-style-type: none"> • Y • N 	No						
	Note: By default, the N option is selected.							
addOnPlan	Used to indicate whether the health plan is the base plan or a supplemental plan. <ul style="list-style-type: none"> • Y • N 	No						
	Note: By default, the N option is selected. The supplemental or add-on plans may contain either the ancillary or rider benefits. As these plans provide additional benefit to the base plan, they are never available as a standalone plan.							
healthPlanCharacteristics	Used to specify a list of characteristics for the health plan.	No						
healthPlanPricingRuleType	Used to associate the pricing rule type with the health plan.	Yes (Conditional)						
		Note: This data is required while associating a pricing rule type with the health plan.						
pricingRuleType	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>healthPlanPricingRuleType</td> <td>Used to specify the pricing rule type for the health plan.</td> </tr> <tr> <td>healthPlanPricingRuleDetails</td> <td>Used to specify the pricing rule type while defining or editing the pricing rule defined for the health plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the sequence tag is...	healthPlanPricingRuleType	Used to specify the pricing rule type for the health plan.	healthPlanPricingRuleDetails	Used to specify the pricing rule type while defining or editing the pricing rule defined for the health plan.	Note: This data is required when a price item is not associated with the health plan.
If this tag is used within...	Then the purpose of the sequence tag is...							
healthPlanPricingRuleType	Used to specify the pricing rule type for the health plan.							
healthPlanPricingRuleDetails	Used to specify the pricing rule type while defining or editing the pricing rule defined for the health plan.							
	Note: At present, you can only associate those pricing rule types where the category is set to Age Based and Tier Based .							

Tag Name	Tag Description	Mandatory (Yes or No)												
healthPlanPricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) Note: This data is required while defining or editing a pricing rule defined for the health plan.												
sequence	You can use this tag within the following tags: <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>healthPlanPricingRuleData</td> <td>Used to indicate the order in which the pricing rules should be created in the system.</td> </tr> <tr> <td>baseRate</td> <td>Used to indicate the order in which the price component should be created using the given base rate information.</td> </tr> <tr> <td>pricingParameter</td> <td>Used to indicate the order in which the pricing eligibility criteria should be created using the parameter information.</td> </tr> <tr> <td>modifierInformation</td> <td>Used to indicate the order in which the pricing eligibility criteria should be created using the modifier information.</td> </tr> <tr> <td>pricingRuleEligibility</td> <td>Used to indicate the order in which the pricing rule eligibility should be created for the health plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the sequence tag is...	healthPlanPricingRuleData	Used to indicate the order in which the pricing rules should be created in the system.	baseRate	Used to indicate the order in which the price component should be created using the given base rate information.	pricingParameter	Used to indicate the order in which the pricing eligibility criteria should be created using the parameter information.	modifierInformation	Used to indicate the order in which the pricing eligibility criteria should be created using the modifier information.	pricingRuleEligibility	Used to indicate the order in which the pricing rule eligibility should be created for the health plan.	Yes (Conditional) Note: This data is required while defining or editing the respective information.
If this tag is used within...	Then the purpose of the sequence tag is...													
healthPlanPricingRuleData	Used to indicate the order in which the pricing rules should be created in the system.													
baseRate	Used to indicate the order in which the price component should be created using the given base rate information.													
pricingParameter	Used to indicate the order in which the pricing eligibility criteria should be created using the parameter information.													
modifierInformation	Used to indicate the order in which the pricing eligibility criteria should be created using the modifier information.													
pricingRuleEligibility	Used to indicate the order in which the pricing rule eligibility should be created for the health plan.													
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes												
entityIdentifiersList	Used to specify the details of the entity.	Yes												
entityIdentifierType	Used to specify the entity type. The valid values are: <ul style="list-style-type: none"> PLAN - Used when you want to specify the health plan number. PLCY - Used when you want to specify the policy number. SSYS - Used when you want to specify the source system 	Yes (Conditional) Note: This data is required while defining or editing a pricing rule defined for the health plan.												
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional) Note: This data is required while defining or editing a pricing rule defined for the health plan.												

Tag Name	Tag Description	Mandatory (Yes or No)
priceItemCd	Used to indicate the price item for which you want to define the pricing rule.	Yes (Conditional)
	Note: You must specify a price item which is already associated with the respective pricing rule type.	
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule of a health plan.	No
	<p>Note:</p> <p>You must specify a rate option which is already defined in the C1-ExtLookRetTypeRateOpt extendable lookup. It must be in the Active status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> • The value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT • The value specified in the Default Rate Option – Percentage option type of the C1-ASOBLNG feature configuration when the modifier method is set to EXPT or INPT <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT or NULL.</p>	
pricingType	<p>Used to indicate the type of pricing defined for the pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Flat • Percentage 	Yes
modifierApplicability	<p>Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N .	

Tag Name	Tag Description	Mandatory (Yes or No)
modifierMethod	<p>Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:</p> <ul style="list-style-type: none"> • FLAT - Indicates that the system should consider the modifier rate as a flat amount. • INPT - Indicates that the system should consider the modifier rate as inclusive percentage. • EXPT - Indicates that the system should consider the modifier rate as exclusive percentage. 	<p>Yes (Conditional)</p> <p>Note: This data is required when the modifierApplicability tag contains Y.</p>
baseRate	<p>Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.</p> <p>Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a pricing rule for the health plan.</p>
baseFee	<p>Used to specify the base fees for the health plan.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a pricing rule for the health plan.</p>
lowerAgeLimit	<p>Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component.</p> <p>Note:</p> <p>The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration.</p> <p>This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing an age-based pricing rule for the health plan.</p>
upperAgeLimit	<p>Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component.</p> <p>Note:</p> <p>The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration.</p> <p>This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining an age-based pricing rule for the health plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)						
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) Note: This data is required while defining a tier-based pricing rule for the health plan.						
parameterCode	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the parameterCode tag is...</th> </tr> </thead> <tbody> <tr> <td>pricingParameter</td> <td>Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> <tr> <td>modifier/information</td> <td>Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> </tbody> </table> <p>Note: You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to Pricing Eligibility Criteria. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.</p>	If this tag is used within...	Then the purpose of the parameterCode tag is...	pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.	modifier/information	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.	Yes (Conditional) Note: This data is required while specifying the respective information.
If this tag is used within...	Then the purpose of the parameterCode tag is...							
pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.							
modifier/information	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.							
parameterValue	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the parameterValue tag is...</th> </tr> </thead> <tbody> <tr> <td>pricingParameter</td> <td>Used to specify the value for the parameter (i.e. employee attribute).</td> </tr> <tr> <td>modifierInformation</td> <td>Used to specify the value for the parameter (i.e. modifier).</td> </tr> </tbody> </table> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p>	If this tag is used within...	Then the purpose of the parameterValue tag is...	pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).	modifierInformation	Used to specify the value for the parameter (i.e. modifier).	Yes (Conditional) Note: This data is required while specifying the respective information.
If this tag is used within...	Then the purpose of the parameterValue tag is...							
pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).							
modifierInformation	Used to specify the value for the parameter (i.e. modifier).							

Tag Name	Tag Description	Mandatory (Yes or No)
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees.	Yes (Conditional)
	Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Note: This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional)
		Note: This data is required while specifying the modifier information.
pricingRuleEligibility	Used to specify a set of attributes based on which the pricing rule eligibility is decided.	Yes (Conditional)
		Note: This data is required while defining or editing an age or tier-based pricing rule for the health plan.
priceParmCode	Used to specify the pricing attribute using which you want to define the pricing eligibility criteria.	Yes (Conditional)
		Note: This data is required while specifying the respective information.
priceParmVal	Used to specify the value for the parameter (i.e. pricing attribute).	Yes (Conditional)
		Note: This data is required while specifying the respective information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health product and plan inbound message.
statusReason	Indicates the reason why the status of the health product and plan inbound message is changed.
statusDateTime	Displays the date and time when the status of the health product and plan inbound message is changed in the system.
creationDateTime	Displays the date and time when the health product and plan inbound message is created in the system.

Tag Name	Tag Description						
searchCharacteristicValue	At present, this tag is not supported in a health product and plan inbound message.						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the health product and plan inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the health product and plan inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health product and plan inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health product and plan inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health product and plan inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health product and plan inbound message.						
toDoRetry	<p>Displays the information about the retry option used for the health product and plan inbound message.</p> <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health product and plan inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the health product and plan inbound message from Rejected to Pending .						
numberOfRetries	Indicates the number of times the retry option is used for the health product and plan inbound message.						
currentErrorState	<p>Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> REJECTED 						
isRetried	<p>Indicates whether the retry option is used to change the status of the health product and plan inbound message. The valid values are:</p> <ul style="list-style-type: none"> true false

Sample Health Product and Plan Inbound Message for Health Plan Setup

Using the below example, you can do the following:

- Create the health plan for the product in the ORMB system through the health product and plan inbound message.

Health Product Code	Health Plan Code	Plan Description	Start Date	Status
HPMP444	HMCSP01	Health Plan Medicare Surplus	2021-02-01	ACTIVE
HPMP444	HMCDP01	Health Plan Medicare Dental	2021-03-01	ACTIVE

```

Sample Health Product and Plan Inbound Message for Health Plan Pricing Rules Setup

Using the below example, you can do the following:

- Tier-based pricing rule for the following health plan.

Health Plan Code	Pricing Rule Type	Base Rate	Parameter	Parameter Value	
HMCSP01	TIER_BASED	20	EMP_BAND	IC1	
			TIER_LEVEL	PRIMARY	
			GENDER	MALE	
	40	TIER_BASED	40	EMP_BAND	IC1
				TIER_LEVEL	SECONDARY
				GENDER	FEMALE
	25	TIER_BASED	25	EMP_BAND	IC1
				TIER_LEVEL	PRIMARY
				GENDER	FEMALE
50	TIER_BASED	50	EMP_BAND	IC1	
			TIER_LEVEL	SECONDARY	
			GENDER	MALE	

- Age-based pricing rule for the following health plans.

		Base Rate			Pricing Parameter		Modifier Information		
Health Plan	Pricing Rule Type	Base Fee	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
HMCDP01	AGE_BASED	200	1	20	TOBAC_USEY		SMOKER	N	10
HMCDP02	AGE_BASED	500	1	40	TOBAC_USEY		SMOKER	N	20

		Base Rate			Pricing Parameter		Modifier Information		
Health Plan	Pricing Rule Type	Base Fee	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
HMCDP03	AGE_BASED	700	1	70	TOBAC_USEY		SMOKER	N	30

Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Health Care Inbound Message Type	<ul style="list-style-type: none"> Inbound Message Business Object - The business object using which the inbound message should be created in the system. Customer Registration Type - The customer registration type using which the customer registration object should be created through a health care inbound message.

Inbound Message Type	Helps the system to determine...
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> Health Product and Plan Inbound Message Business Object - The business object using which the health product and plan inbound message should be created in the system.

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 2249
- [Inbound Message Type](#) on page 2249

Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.
Edit	On clicking the Edit (✎) icon, the Inbound Message Type screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the Duplicate (📄) icon, the Inbound Message Type screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the Delete (🗑) icon, you can delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** – Displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.

Field Name	Field Description
Customer Registration Type	<p>Indicates the customer registration type using which the customer registration object is created through a health care inbound message.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Customer Registration Type screen appears where you can view the details of the respective customer registration type.</p> <p>This field appears when you are viewing the details of an inbound message type which is created using the C1-HCInboundMsgType business object.</p>
Inbound Message Business Object	<p>Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Healthcare Product Business Object	<p>Indicates the business object using which the healthcare product is created when the health product and plan inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears when you are viewing the details of an inbound message type which is created using the C1-HealthcareProduct business object.</p>
Health Plan Business Object	<p>Indicates the business object using which the health plan is created when the health product and plan inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears when you are viewing the details of an inbound message type which is created using the C1-HealthPlan business object.</p>
Description	Displays the description of the inbound message type.
Status	<p>Indicates the status of the inbound message type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
Detailed Description	Displays additional information about the inbound message type.

- **Characteristics** – Lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type. Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears when you click the **Broadcast** () icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

Defining an Inbound Message Type

Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type business objects defined in the application • Health care inbound message business objects defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> • Health product and plan inbound message type business objects defined in the application • Health product and plan inbound message business objects defined in the application • Health product business object defined in the application • Health plan business object defined in the application

Procedure

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)						
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type: <table border="1" data-bbox="565 390 1203 604"> <thead> <tr> <th>Inbound Message Type</th> <th>Business Object</th> </tr> </thead> <tbody> <tr> <td>Health Care Inbound Message Type</td> <td>C1-HCInboundMsgType</td> </tr> <tr> <td>Health Product and Plan Inbound Message Type</td> <td>C1-HCProdHlthPlnInbound</td> </tr> </tbody> </table>	Inbound Message Type	Business Object	Health Care Inbound Message Type	C1-HCInboundMsgType	Health Product and Plan Inbound Message Type	C1-HCProdHlthPlnInbound	Yes
Inbound Message Type	Business Object							
Health Care Inbound Message Type	C1-HCInboundMsgType							
Health Product and Plan Inbound Message Type	C1-HCProdHlthPlnInbound							

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

4. Select the **Health Care Inbound Message Type** business object to create the respective inbound message type.
5. Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. <p>Note:</p> <p>This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product when the health product and plan inbound message is processed.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthcareProduct business object.	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan when the health product and plan inbound message is processed.	Yes
	Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthPlan business object.	
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- Enter the required details in the **Main** section.
- Define characteristics for the inbound message type, if required.
- Click **Save**.

The inbound message type is defined.

How to define a characteristic for an inbound message type	Defining a Characteristic for an Inbound Message Type on page 2254

Defining a Characteristic for an Inbound Message Type

Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound message type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message Type .	Note: This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Inbound Message Type

Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message business objects defined in the application • Customer registration types defined in the application

If you want to define a..	Then, you should have...
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> • Health product and plan inbound message type business objects defined in the application • Health product and plan inbound message business objects defined in the application • Health product business object defined in the application • Health plan business object defined in the application

Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Inbound message type whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.	Yes
	<p>Note:</p> <p>This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.</p>	
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product when the health product and plan inbound message is processed.	Yes
	<p>Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthcareProduct business object.</p>	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan when the health product and plan inbound message is processed.	Yes
	<p>Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthPlan business object.</p>	
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

Tip: Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

Copying an Inbound Message Type

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

Prerequisites

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type (whose copy you want to create) defined in the application • Health care inbound message business objects defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	<ul style="list-style-type: none"> • Health product and plan inbound message type business objects defined in the application • Health product and plan inbound message business objects defined in the application • Health product business object defined in the application • Health plan business object defined in the application

Procedure

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.

4. In the **Inbound Message Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. Note: This field appears when you are defining an inbound message type using the C1-HCInboundMsgType business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required , Final Approval Required , and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product when the health product and plan inbound message is processed. Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthcareProduct business object.	Yes
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan when the health product and plan inbound message is processed. Note: This field appears when you are defining a health product and plan inbound message type using the C1-HealthPlan business object.	Yes
Description	Used to specify the description for the inbound message type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

Tip: Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the inbound message type, if required.
- Click **Save**.

The new inbound message type is defined.

Deleting an Inbound Message Type

Procedure

To delete an inbound message type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
- Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
- In the **Inbound Message Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.
A message appears confirming whether you want to delete the inbound message type.

Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

Tip: Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

5. Click **OK**.

The inbound message type is deleted.

Inbound Message (Used for Searching)

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 2261

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 2267

Search Inbound Message

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none"> • Message Details • Person Details <p>Note: By default, the Message Details option is selected.</p>	Yes
Inbound Message ID	Used to search a particular inbound message. <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person ID	<p>Used to search inbound messages through which a particular parent customer or bill group and their related entities are created in the system.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.</p> <p>This field appears when the Person Details option is selected from the Search By list.</p> <p>This field is only applicable for the fully-insured group and self-funded businesses.</p> <p>This field can only be used to search inbound messages through which a person of the following person types is created in the system:</p> <ul style="list-style-type: none"> • Parent Customer • Bill Group 	Yes
Status	<p>Used to search inbound messages with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
Source System	<p>Used to search inbound messages which are received from a particular external system.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
Created From	<p>Used to search inbound messages which are created from a particular date onwards.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No
External Source ID	<p>Used to search inbound messages which are received from a particular external source system.</p> <p>Note: This field appears when the Message Details option is selected from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Created To	Used to search inbound messages which are created till a particular date.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
User ID	Used to search inbound messages which are created by a particular user.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
External Batch ID	Used to search inbound messages which are created through a particular batch job.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.	No
	Note: This field appears when the Message Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Inbound Message Information	Displays information about the inbound message.
	Note: It has a link. On clicking the link, the Inbound Message screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.

Column Name	Column Description
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. This column appears when the Person Details option is selected from the Search By list.
Created By	Indicates the user who has created the inbound message. Note: This column appears when the Message Details option is selected from the Search By list.
Creation Date	Displays the date when the inbound message is created in the system.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Inbound Message

Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.

The **Inbound Message** screen appears.

- Enter the search criteria in the **Search Inbound Message** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of inbound messages that meet the search criteria appears in the **Search Results** section.

Creating an Inbound Message

Oracle Revenue Management and Billing allows you to create the following inbound messages by calling the respective inbound web service:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2094	C1-HCInboundMessage on page 2265
Health Product and Plan Inbound Message on page 2219	C1-HCProdHlthPlnInboundMessage (SOAP Based Service) on page 2266
	C1-HCProdHlthPlnInboundMes (REST Based Service) on page 2266

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service enables you to create or update a person, account and self-funded or fully-insured group policy. It also allows you to create or update a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, it allows you to terminate, reinstate, or renew a fully-insured group policy.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 2099.

Viewing the Inbound Message Details

Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.

2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 2267
- [Inbound Message - Message](#) on page 2269
- [Inbound Message - Log](#) on page 2270

Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 2267

Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** – Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.

Field Name	Field Description
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. Note: It has a link. On clicking the link, the Inbound Message Type screen appears where you can view the details of the respective inbound message type.
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** – Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics of the inbound message. Note: The Edit button appears when the inbound message is in the Pending or Rejected status.
Delete	Used to delete the inbound message. Note: The Delete button appears when the inbound message is in the Pending status.
Submit for Processing	Used to submit the inbound message for validation and processing. Note: The Submit for Processing button appears only when the inbound message is in the Pending status.

Button Name	Button Description
Retry	Used when you want to change the status of the inbound message from Rejected to Pending so that the inbound message can be considered once again for validation and processing.
	Note: The Retry button appears when the inbound message is in the Rejected status.
Void	Used to cancel the inbound message.
	Note: The Void button appears when the inbound message is in the Rejected status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

How to define a characteristic for an inbound message	Defining a Characteristic for an Inbound Message on page 2272

Defining a Characteristic for an Inbound Message

Prerequisites

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

Procedure

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the inbound message.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the inbound message.

Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message when the inbound message is in the **Pending** status.

Procedure

To delete an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Inbound Message** zone.

A message appears confirming whether you want to delete the inbound message.

Note: The **Delete** button appears when the inbound message is in the **Pending** status.

5. Click **OK**.

The inbound message is deleted.

Processing an Inbound Message

Prerequisites

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Health Care Inbound Message	Prerequisites on page 2099
Health Product and Plan Inbound Message	Prerequisites on page 2220

Procedure

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Health Care Inbound Message	<p>Creates or updates a person, account and fully-insured group or self-funded policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to Processed.</p> <p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p>

If the inbound message is a...	Then...
Health Product and Plan Inbound Message	<p>Creates or updates a health product, health plan, and pricing rules for individual memberships. In addition, it also maintains a log of the entities that are either added or updated through the health product and plan inbound message. Note that the system allows to upload the health product, health plan, and pricing rules together in a single inbound message or by creating three separate inbound messages. Finally, the status of the inbound message is changed to Processed.</p> <p>The system uses the C1-HLTPRDVAL algorithm to validate the uploaded data through the health product and plan inbound message. Once the data is successfully validated, entities like health product, health plan, and pricing rules are created in the system.</p>

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

Note: The **Submit for Processing** button appears when the inbound message is in the **Pending** status.

Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Pending**.

Note: The **Retry** button appears when the inbound message is in the **Rejected** status.

Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message when the inbound message is in the **Rejected** status.

Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Voided**.

Note: The **Void** button appears when the inbound message is in the **Rejected** status.

Viewing the Content of an Inbound Message

Procedure

To view the content of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Click the **Message** tab.

The **Message** tab appears.

4. View the content of the inbound message in the XML format in the **Inbound Message Content** zone.

Adding a Log Entry for an Inbound Message

Procedure

To add a log entry for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to add a log entry.

The **Inbound Message** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments for the inbound message.	Yes

- Enter the comments in the **Log Details** field.
- Click **Save**.

The log entry is added in the **Inbound Message Log** zone.

Statement Construct Preference

Oracle Revenue Management and Billing enables you to create and edit the statement construct of a person through a health care inbound message. However, note that you can create and edit the statement construct of only those persons through a health care inbound message whose record is created via a customer registration object. While creating or editing a statement construct, the system uses the statement construct business object of the customer registration type which is specified in the respective inbound message type.

If the data is not available in the following tags of a health care inbound message while creating a statement construct for a person, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
statementAddressSource	Default Statement Address Source
effectiveStatus	Default Statement Status
statementCycle	Default Statement Cycle
statementFormat	Default Statement Format
statementRouteType	Default Statement Route Type
numberOfCopies	Default Statement Number of Copies

In addition, if the data is not available in the following tag of a health care inbound message while adding an account or contract in a statement construct, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
printOrder	Default Statement Print Order

The system considers the statement construct preference which is specified in the **Field Mapping** parameter of the **C1-HCINPROC** algorithm. You can define, edit, delete, and copy a statement construct preference through the **Field Mapping** screen.

Searching for a Statement Construct Preference

Prerequisites

To search for a statement construct preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Statement Construct** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of statement construct preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Statement Construct Preference Details

Procedure

To view the details of a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the statement construct preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the statement construct preference in the **Field Mapping** zone.

Defining a Statement Construct Preference

Prerequisites

To define a statement construct preference, you should have:

- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Statement cycles and statement route types defined in the application

Procedure

To define a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the statement construct preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:</p> <ul style="list-style-type: none"> • Default Statement Address Source - Used when the address source is not specified while creating a statement construct through a health care inbound message. • Default Statement Status - Used when the status is not specified while creating a statement construct through a health care inbound message. • Default Statement Cycle - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • Default Statement Format - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • Default Statement Route Type - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • Default Statement Number of Copies - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message. • Default Statement Print Order - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the statement construct preference.</p>

Field Name	Field Description	Mandatory (Yes or No)										
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:	Yes (Conditional)										
	<table border="1"> <thead> <tr> <th data-bbox="639 396 867 474">If the attribute is set to...</th> <th data-bbox="867 396 1179 474">Then, this field is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="639 474 867 900">Default Statement Address Source</td> <td data-bbox="867 474 1179 900"> Used to indicate the source whose address should be used for sending the statements to the person. Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement. Note: You must specify a positive integer for this attribute.	
Default Statement Route Type	Used to indicate how to route the statements to the person. Note: The list includes only those statement route types which are already defined in the system.							
Default Statement Number of Copies	Used to indicate how many copies of the statement should be sent to the person. Note: You must specify a positive integer for this attribute.							
Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement. Note: You must specify a positive integer for this attribute.							
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No						

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

6. Select the **Statement Construct** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the statement construct preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the statement construct preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click Save.

The statement construct preference is defined.

Editing a Statement Construct Preference

Prerequisites

To edit a statement construct preference, you should have:

- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Statement cycles and statement route types defined in the application

Procedure

To edit a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the statement construct preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the statement construct preference.	Not applicable
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Statement Construct 	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:</p> <ul style="list-style-type: none"> • Default Statement Address Source - Used when the address source is not specified while creating a statement construct through a health care inbound message. • Default Statement Status - Used when the status is not specified while creating a statement construct through a health care inbound message. • Default Statement Cycle - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • Default Statement Format - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • Default Statement Route Type - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • Default Statement Number of Copies - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message. • Default Statement Print Order - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the statement construct preference.</p>

Field Name	Field Description	Mandatory (Yes or No)		
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:	Yes (Conditional)

Note: The list includes only those statement route types which are already defined in the system.	Default Statement Number of Copies	Used to indicate how many copies of the statement should be sent to the person. Note: You must specify a positive integer for this attribute.	Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement. Note: You must specify a positive integer for this attribute.	
Default Statement Route Type	Used to indicate how to route the statements to the person. Note: The list includes only those statement route types which are already defined in the system.							
Default Statement Number of Copies	Used to indicate how many copies of the statement should be sent to the person. Note: You must specify a positive integer for this attribute.							
Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement. Note: You must specify a positive integer for this attribute.							
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> Account Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No						

Tip: Alternatively, you can edit the details of a statement construct preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the statement construct preference, if required.

Note: You must set at least one attribute in a statement construct preference.

5. Click **Save**.

The changes made to the statement construct preference are saved.

Copying a Statement Construct Preference

Instead of creating a statement construct preference from scratch, you can create a new statement construct preference using an existing statement construct preference. This is possible through copying a statement construct preference. On copying a statement construct preference, the details including the attributes are copied to the new statement construct preference. You can then edit the details, if required.

Prerequisites

To copy a statement construct preference, you should have:

- Statement construct preference (whose copy you want to create) defined in the application
- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Statement cycles and statement route types defined in the application

Procedure

To copy a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the statement construct preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Statement Construct 	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:</p> <ul style="list-style-type: none"> • Default Statement Address Source - Used when the address source is not specified while creating a statement construct through a health care inbound message. • Default Statement Status - Used when the status is not specified while creating a statement construct through a health care inbound message. • Default Statement Cycle - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • Default Statement Format - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • Default Statement Route Type - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • Default Statement Number of Copies - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message. • Default Statement Print Order - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the statement construct preference.</p>

Field Name	Field Description	Mandatory (Yes or No)		
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:	Yes (Conditional)		
		<p>Note: This field is required while setting an attribute in the statement construct preference.</p>		
			<p>If the attribute is set to...</p>	<p>Then, this field is...</p>
			<p>Default Statement Address Source</p>	<p>Used to indicate the source whose address should be used for sending the statements to the person. The valid value is:</p> <ul style="list-style-type: none"> • Person <p>Note: The list includes only those values which are defined in the STM_ADDR_SRC_FLG lookup field.</p>
			<p>Default Statement Status</p>	<p>Used to indicate the status of the statement construct. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
			<p>Default Statement Cycle</p>	<p>Used to indicate when statements should be generated for the statement construct.</p> <p>Note: The list includes only those statement cycles which are already defined in the system.</p>
<p>Default Statement Format</p>	<p>Used to indicate the format in which the statements should be printed. The valid values are:</p> <ul style="list-style-type: none"> • Detail • Summary <p>Note: The list includes only those values which are defined in the STM_FORMAT_FLG lookup field.</p>			

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <tr> <td data-bbox="639 254 865 537">Default Statement Route Type</td> <td data-bbox="865 254 1175 537"> <p>Used to indicate how to route the statements to the person.</p> <p>Note: The list includes only those statement route types which are already defined in the system.</p> </td> </tr> <tr> <td data-bbox="639 537 865 821">Default Statement Number of Copies</td> <td data-bbox="865 537 1175 821"> <p>Used to indicate how many copies of the statement should be sent to the person.</p> <p>Note: You must specify a positive integer for this attribute.</p> </td> </tr> <tr> <td data-bbox="639 821 865 1178">Default Statement Print Order</td> <td data-bbox="865 821 1175 1178"> <p>Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement.</p> <p>Note: You must specify a positive integer for this attribute.</p> </td> </tr> </table>	Default Statement Route Type	<p>Used to indicate how to route the statements to the person.</p> <p>Note: The list includes only those statement route types which are already defined in the system.</p>	Default Statement Number of Copies	<p>Used to indicate how many copies of the statement should be sent to the person.</p> <p>Note: You must specify a positive integer for this attribute.</p>	Default Statement Print Order	<p>Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement.</p> <p>Note: You must specify a positive integer for this attribute.</p>	
Default Statement Route Type	<p>Used to indicate how to route the statements to the person.</p> <p>Note: The list includes only those statement route types which are already defined in the system.</p>							
Default Statement Number of Copies	<p>Used to indicate how many copies of the statement should be sent to the person.</p> <p>Note: You must specify a positive integer for this attribute.</p>							
Default Statement Print Order	<p>Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement.</p> <p>Note: You must specify a positive integer for this attribute.</p>							
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No						

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

Tip: Alternatively, you can copy a statement construct preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the statement construct preference, if required.
5. Click **Save**.

The new statement construct preference is defined.

Deleting a Statement Construct Preference

Procedure

To delete a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the statement construct preference that you want to delete.

A message appears confirming whether you want to delete the statement construct preference.

Tip: Alternatively, you can delete a statement construct preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The statement construct preference is deleted.

Chapter 31

Upload Lockbox Payment and Remittance Advices Overview

Topics:

- [Prerequisites](#)
- [EDI 820 Flat File Description](#)
- [Sample EDI 820 Flat File](#)
- [Upload EDI 820 Files in ORMB](#)

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files have to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders,

payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Sample EDI 820 Flat File	Sample EDI 820 Flat File on page 2299
Upload EDI 820 Files in ORMB	Upload EDI 820 Files in ORMB on page 2300

Prerequisites

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE**, **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

EDI 820 Flat File Description

Following is the description of the key field segments in the EDI 820 flat file format:

Field Name	Description
External Source ID	Uniquely identifies the lockbox.
External Transmission ID	Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.
External Batch ID	Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.

Field Name	Description													
Payment Transaction	The following table describes the fields that are included in the payment transaction:													
	<table border="1"> <thead> <tr> <th>Field</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Attributes</td> <td> <p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name </td> </tr> </tbody> </table>	Field	Description	Attributes	<p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name 									
	Field	Description												
	Attributes	<p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> • Payment Amount • Payment Method • Payment Date • Payor Name 												
	Reference Records	<p>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:</p> <table border="1"> <thead> <tr> <th>External Reference ID Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ACH</td> <td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td> </tr> <tr> <td>CHK</td> <td>Use the transaction reference number. (Reference Identifier Code TN).</td> </tr> <tr> <td>FWT</td> <td>Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).</td> </tr> <tr> <td>CAS</td> <td>Use the transaction reference number. (Reference Identifier Code TN).</td> </tr> <tr> <td>OBP</td> <td>Use the online payment trace number. (Reference Identifier Code 8G).</td> </tr> </tbody> </table>	External Reference ID Value	Description	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).	CHK	Use the transaction reference number. (Reference Identifier Code TN).	FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).	CAS	Use the transaction reference number. (Reference Identifier Code TN).	OBP	Use the online payment trace number. (Reference Identifier Code 8G).
	External Reference ID Value	Description												
	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).												
	CHK	Use the transaction reference number. (Reference Identifier Code TN).												
FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).													
CAS	Use the transaction reference number. (Reference Identifier Code TN).													
OBP	Use the online payment trace number. (Reference Identifier Code 8G).													
Source Customer Number	Uniquely identifies the customer. This is retrieved from the internal customer number reference record. (Reference Identifier Code is IT).													
MICR	Uniquely identifies the MICR. (Reference Identifier Code is MICR)													
Check Number	Uniquely identifies the check number. (Reference Identifier Code is CK)													
Taxpayer Identification Number	Uniquely Identifies the taxpayer. (Reference Identifier Code is EI)													

Field Name	Description												
Remittance Advice	he following table describes the fields that are involved in the remittance advice:												
	<table border="1"> <thead> <tr> <th>Field</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Attributes</td> <td> Following are the attributes: <ul style="list-style-type: none"> • Invoice Number • Payment Amount </td> </tr> <tr> <td>Reference Records</td> <td> Uniquely identifies the remittance advice. The following table indicates the external reference ID based on the payment methods used in the remittance advice: <table border="1"> <thead> <tr> <th>External Reference ID Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Billing Account ID</td> <td>Uniquely identifies the account. (Reference Identifier Code is I2).</td> </tr> <tr> <td>Bill Group ID</td> <td>Uniquely identifies the billing group. (Reference Identifier Code is U1).</td> </tr> </tbody> </table> </td> </tr> </tbody> </table>	Field	Description	Attributes	Following are the attributes: <ul style="list-style-type: none"> • Invoice Number • Payment Amount 	Reference Records	Uniquely identifies the remittance advice. The following table indicates the external reference ID based on the payment methods used in the remittance advice: <table border="1"> <thead> <tr> <th>External Reference ID Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Billing Account ID</td> <td>Uniquely identifies the account. (Reference Identifier Code is I2).</td> </tr> <tr> <td>Bill Group ID</td> <td>Uniquely identifies the billing group. (Reference Identifier Code is U1).</td> </tr> </tbody> </table>	External Reference ID Value	Description	Billing Account ID	Uniquely identifies the account. (Reference Identifier Code is I2).	Bill Group ID	Uniquely identifies the billing group. (Reference Identifier Code is U1).
	Field	Description											
	Attributes	Following are the attributes: <ul style="list-style-type: none"> • Invoice Number • Payment Amount 											
Reference Records	Uniquely identifies the remittance advice. The following table indicates the external reference ID based on the payment methods used in the remittance advice: <table border="1"> <thead> <tr> <th>External Reference ID Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Billing Account ID</td> <td>Uniquely identifies the account. (Reference Identifier Code is I2).</td> </tr> <tr> <td>Bill Group ID</td> <td>Uniquely identifies the billing group. (Reference Identifier Code is U1).</td> </tr> </tbody> </table>	External Reference ID Value	Description	Billing Account ID	Uniquely identifies the account. (Reference Identifier Code is I2).	Bill Group ID	Uniquely identifies the billing group. (Reference Identifier Code is U1).						
External Reference ID Value	Description												
Billing Account ID	Uniquely identifies the account. (Reference Identifier Code is I2).												
Bill Group ID	Uniquely identifies the billing group. (Reference Identifier Code is U1).

Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.
- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to N, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
100	50	50	50	One payment (50\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
150	50	100	120	One payment (100\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
175	60	75	50	One payment (75\$) is created for Bill 2 (oldest due date); One payment (60\$) is created for Bill 1; The remaining amount (40\$) is applied on the On Account contract.
200	50	50	50	The entire amount (200\$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/N)** parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

Following scenarios must be considered before uploading the **EDI 820** file in the system.

Scenario	System Behavior
If the RMR tag contains the bill Id and the NM1 tag contains the binder payment identification value	The system initiates the payment for the bill Id and defines the binder payment identifier value in the Characteristics tab of the Payment screen.
If the RMR tag contains the bill Id but the NM1 tag does not contains the binder payment identification value	The system initiates the payment for the bill Id and does not process further.

Scenario	System Behavior
If the RMR tag contains some other information besides the bill Id and the NM1 tag contains the binder payment identification value	<p>The system performs the following actions:</p> <ol style="list-style-type: none"> 1. Identifies the appropriate membership using the binder payment identification value provided in the NM1 tag. The binder payment identification value must contain the binder payment applicability flag set to Y. 2. Once the membership is identified and is in the Pending Effectuation status, the system identifies the account of the membership, using the information provided in the RMR tag, and applies the payment against the binder contract. 3. If the membership is in the Active status, the system applies the payment against the account's contract.
If the RMR tag contains some other information besides the bill Id and the NM1 tag does not contains the binder payment identification value	The system identifies the account of the membership using the information provided in the RMR tag and applies the payment against the account's contract.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Chapter 32

Deferred Revenue Recognition

Topics:

- [Prerequisites](#)
- [Deferred Revenue Recognition Status Transition](#)
- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 2305.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 2305.

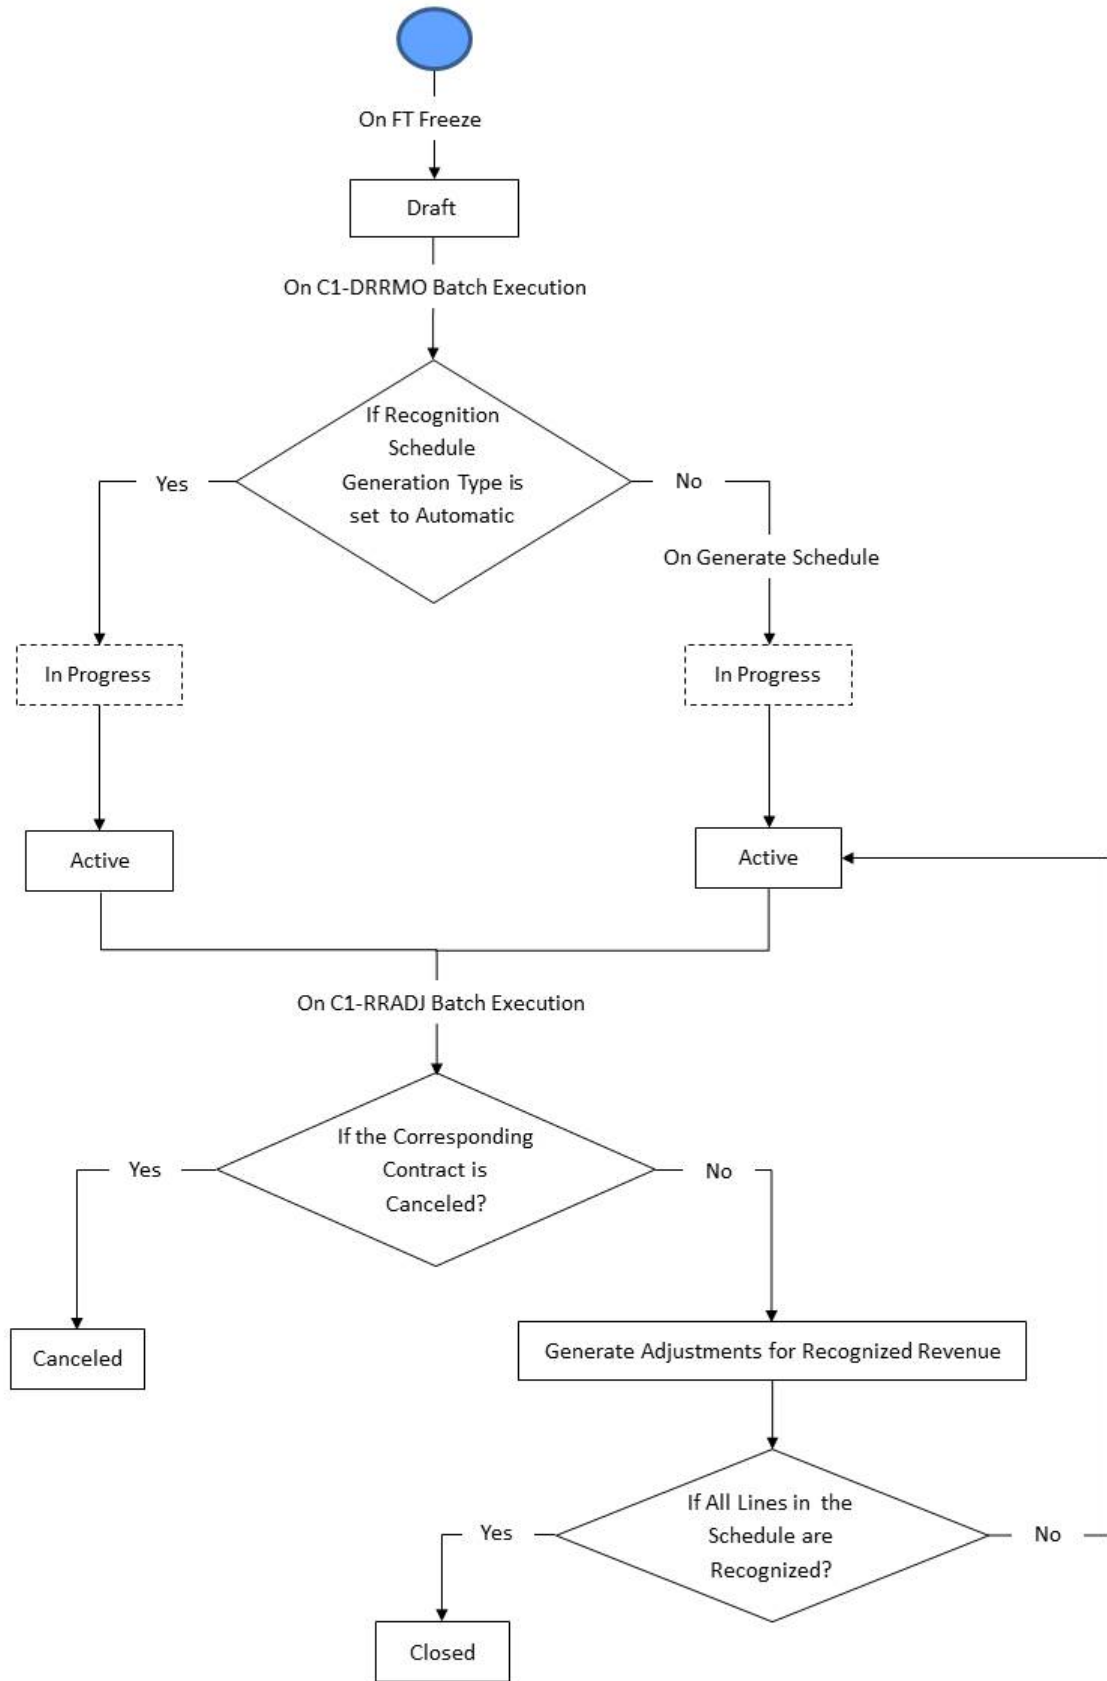

Prerequisites

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
 - Use Calendar or Business Days (C or B)
 - Override Default Recognition Date (Y or N)
 - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
 - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> • Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> • Use Calendar or Business Days (C or B) - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • Override Default Recognition Date (Y or N) – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun) – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • Override Default Monthly Recognition Date (1-31) - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> • Create Adjustments (Y or N) – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Description

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> • Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Deferred Revenue Recognition Status 3. Distribution Code 4. Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 2320

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 2312

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition. Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the deferred revenue recognition template.
- **Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** – Used to associate a deferred revenue recognition template with a division.
- **Characteristics** – Used to define the characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	
Contract Type	Used to indicate a particular type of contract.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Automatic Manual 	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Daily Monthly Weekly 	Yes
Allow Proration	Used to allow proration.	Yes
	Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .	

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears when you check the tick-box for Allow Proration .	Note: This field is required when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears when you check the tick-box for Allow Proration .	Note: This field is required when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.

- Enter the required details.
- Associate algorithms with the deferred revenue recognition template, if required.
- View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
- Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
- Click **Save**.

The deferred revenue recognition template is created.

How to associate algorithms with the deferred revenue recognition template	Associating Algorithms with a Deferred Revenue Recognition Template on page 2316

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

- Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the Algorithm field.	

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the algorithm.

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	Note: You can only view those divisions to which you have access in the Division list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Valued field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete (🗑)** icon corresponding to the characteristic.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 2320

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. Note: It has a link. On clicking the link, the Distribution Code screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the Deferred Revenue Recognition Template which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> Manual Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> Daily Monthly Weekly
Allow Proration	Used to allow proration. Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. Note: This field appears when you check the tick-box for Allow Proration .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. Note: This field appears when you check the tick-box for Allow Proration .

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.	

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. Note: The Edit button appears when the deferred revenue recognition template is in the Active status.
Delete	Used to delete the deferred revenue recognition template.

-
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 2324

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none"> • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details 	Yes
	Note: By default, the Account Details option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Account ID	Used to search the account ID.	No
	Note: This field appears only when you select the Account Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)
		Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
	Note: This field appears when you select the Account Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	Note: This field appears when you select the Account Details option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.	No
	Note: This field appears when you select the Account Details option from the Search By list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft 	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	Note: This field appears when you select the Person Details or Account Details option from the Search By list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the deferred revenue recognition.	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.	
	Note: This field appears only when you select the Financial Transaction Details option from the Search By list.	
Policy Type	Used to indicate the type of policy.	Yes
	Note: This field appears when you select the Policy Details option from the Search By list.	
Policy Number	Used to indicate the policy number.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Plan Number	Used to indicate the plan number of the policy.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Source System	Used to indicate the name of the external system from where the policy originated.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Start Date	Used to indicate the date from when the policy is effective.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable**.
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details**Procedure**

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2330
- [Deferred Revenue Recognition - Log](#) on page 2333

3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2330
- [Deferred Revenue Recognition - Log](#) on page 2333

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 2330
- [Associated Deferred Revenue Recognitions](#) on page 2332
- [Recognition Schedule](#) on page 2332
- [Revenue Recognition Items](#) on page 2333

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template. Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition. Note: It has a link. On clicking the link, the Financial Transaction Information screen appears where you can view the details of the financial transaction.

Field Name	Field Description
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The Edit button appears when the deferred revenue recognition is in the Active status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The Generate Schedule button appears only when the deferred revenue recognition is in the Draft status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.

Field Name	Field Description
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 2333

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
The **Deferred Revenue Recognition** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Deferred Revenue Recognition .	Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

- Enter the required details in the **Characteristics** section.

Note: If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

- If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

- Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deferred Revenue Recognition Search window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transactions Search window appears.	

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the related deferred revenue recognition.

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

Note: A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete (🗑)** icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

- [Member Reconciliation Preference](#)

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- **CSV File Format** – You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- **EDI 820 File Format** – You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

Note: The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy

number, plan number, member identifier, and coverage period combination. Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statuses in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** – It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** – It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancellation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancellation** status. If there is a reconciliation in the **Pending Cancellation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECUD)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- [Reconciliation Status Transition](#) on page 2344
- [Pay Instruction Status Transition](#) on page 2345
- [Discrepancy Report Status Transition](#) on page 2347

Pre-requisites

To setup the Member to Member Reconciliation feature, you need to do the following:

- **Configure the following Characteristics:**
 - Define an account eligible for reconciliation process from an **On-Account Contract** of a Universal Generic account.
 - Populate the Policy ID, or Plan ID, or Membership ID linked with the billable charges.
- Define the bills having the status as **Completed** for reconciliation.
- Define the **Contract Types** for reconciliation.
- Ensure that payment on **Suspense Contract** is available to match against the bills.
- Configure the **Customer Class** algorithm for a payer account.

Reconciliation Status Transition

The following figure graphically indicates how a reconciliation goes through various statuses in its lifecycle:

Pay Instruction Status Transition

The following figure graphically indicates how a pay instruction goes through various statuses in its lifecycle:

Discrepancy Report Status Transition

The following figure graphically indicates how a Discrepancy Report goes through various statuses in its lifecycle:

EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: <ul style="list-style-type: none"> • Account Name • Base Global Account ID • Bill Group Identifier • Demo Bank Account Number • External Account Identifier • Flexcube Account ID • International Bank Account Number 	Yes (Conditional)
			Note: This data is required when Account Identifier is provided.

Tag	Attribute	Description	Mandatory (Yes or No)
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional)
			Note: This data is required when Account Identifier Type is provided.
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes
			Note: The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts.	Yes
		Note: The Coverage Start Date cannot be later than the coverage end date.	
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends.	Yes
		Note: The coverage end date cannot be earlier than the coverage start date.	
NM1[4] [5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional)
			Note: This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancellation status.	Yes

Sample EDI 820 File Format

Here the tags ISA and IEA resemble Bank Details, whereas LBTEST01 indicates Tender Source information.

Tags like GS and GE, ST and SE are known as Start and End Tags. All of the other tags are embedded inside these Start and End tags.

For more information about the EDI 820 file format, see topic [EDI 820 File Format For Reconciliation](#) on page 2347

Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to C1-REOCNPEP on page 2349

C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

System Event	Algorithm	Algorithm Type	Description

C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** – Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** – Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** – Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to **Completed**. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** – Used to specify the match type using which you want to apply payment against the reconciliation contract.

Both these parameters are mandatory.

C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** – Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** – Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** – Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** – Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** – Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** – Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason -**

Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the cancel reason does not match, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancellation** status of the **C1-MemberReconciliation** business object.

C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** – Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** – Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to C1-MPAYININF on page 2356

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	-	-	-	-
Derivation In Progress	Enter	C1-PYINDRVAN	C1-PYINDRVAN	Refer to C1-PYINDRVAN on page 2356

Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593
Error	-	-	-	-

C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- “Period:” Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number
- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction

is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** – Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments – one against the payee account’s reconciliation contract and another against the bill segment’s contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Adjustment Type for Bill Segment Contract** – Used to specify the adjustment type using which you want to create the adjustment on the bill segment’s contract when the pay instruction is reconciled.
- **Adjustment Type for Reconciliation Contract** – Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.

- **Reconciliation Open Status** – Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.
- **Pay Instruction Open Status** – Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Pay Instruction Completed Status** – Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Characteristic Type** – Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** – Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Adjustment Type for Offsetting Debits against Billed Credits** – Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** – Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** – Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** – Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** – Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Algorithms Used in C1-MemberDiscReportType

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to C1-DISCPEP on page 2359

C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are attached to the **C1-DiscrepancyReport** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DISRINFO	C1-DISRINFO	Refer to C1-DISRINFO on page 2359

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1593
	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to C1-VALNEWDIS on page 2360
Pending	Enter	C1-CRDSLNTM	C1-CRDSLNTM	Refer to C1-CRDSLNTM on page 2360
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1592
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to C1-VALCMPDIS on page 2360

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status

- Discrepancy Report ID

C1-VALNEWDIS

This algorithm allows you to create a discrepancy report when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** – Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

C1-CRDSLNITM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

- **Consumer Status Characteristic Type** – Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** when the discrepancy category is specified for each discrepancy line item in the report.

Reconciliation Type

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine:

- The business object using which the reconciliation should be created.

- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- [Reconciliation Type List](#) on page 2361
- [Reconciliation Type](#) on page 2361

Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the Edit (✎) icon, the Reconciliation Type screen appears where you can edit the details of the reconciliation type.
Duplicate	On clicking the Duplicate (📄) icon, the Reconciliation Type screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the Delete (🗑) icon, you can delete the reconciliation type. Note: You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.

On clicking the **Broadcast** (📡) icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Detailed Description	Indicates the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Status	Displays additional information about the reconciliation type.

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithms with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> Upload Pay Instructions
Algorithm	Indicates the algorithm attached to the system event. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. Note: The data appears in this column when the type of characteristic value is set to Predefined Value or Foreign Key Value .

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.

Button Name	Button Description
Delete	Used to delete the reconciliation type.
	Note: You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears when you click the **Broadcast** () icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

Defining a Reconciliation Type

Prerequisites

To define a reconciliation type, you should have:

- Reconciliation business objects defined in the application

Procedure

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
A sub-menu appears.
3. Click the **Add** option from the **Reconciliation Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

Note: The **Select Business Object** screen appears when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.

The reconciliation type is defined.

Defining a Characteristic for a Reconciliation Type

Prerequisites

To define a characteristic for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

Procedure

To define a characteristic for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Reconciliation Type .	Note: This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the reconciliation type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the reconciliation type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two

algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Prerequisites

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format

Procedure

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms with the same system event should be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> Upload Pay Instructions - Used when you want to execute the attached algorithm while uploading a pay instruction file using the Pay Instruction CSV File Upload (C1-RECUP) or Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG) batch. 	Yes (Conditional) Note: This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the reconciliation type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the reconciliation type.

Editing a Reconciliation Type**Prerequisites**

To edit a reconciliation type, you should have:

- Reconciliation business objects defined in the application

Procedure

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the reconciliation type whose details you want to edit.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

Tip: Alternatively, you can edit the details of a reconciliation type by clicking the **Edit** button in the **Reconciliation Type** zone.

- Modify the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics of the reconciliation type, if required.
- Click **Save**.

The changes made to the reconciliation type are saved.

Deleting a Reconciliation Type

Procedure

To delete a reconciliation type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **R** and then click **Reconciliation Type**.
A sub-menu appears.
- Click the **Search** option from the **Reconciliation Type** sub-menu.
The **Reconciliation Type** screen appears.
- In the **Reconciliation Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the reconciliation type that you want to delete.
A message appears confirming whether you want to delete the reconciliation type.

Note: You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.

Tip: Alternatively, you can delete a reconciliation type by clicking the **Delete** button in the **Reconciliation Type** zone.

5. Click **OK**.

The reconciliation type is deleted.

Copying a Reconciliation Type

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

Prerequisites

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application

Procedure

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the reconciliation type whose copy you want to create.
The **Reconciliation Type** screen appears. It contains the following sections:
 - **Main** - Used to specify basic details about the reconciliation type.
 - **Algorithms** - Used to associate algorithms with the reconciliation type.
 - **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

Tip: Alternatively, you can copy a reconciliation type by clicking the **Duplicate** button in the **Reconciliation Type** zone.

- Enter the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics of the reconciliation type, if required.
- Click **Save**.

The new reconciliation type is defined.

Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- [Search Reconciliation](#) on page 2371

Through this screen, you can navigate to the following screen:

- [Reconciliation \(Used for Viewing\)](#) on page 2375

Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, payee account, or payment tender details. The valid values are: <ul style="list-style-type: none"> • Reconciliation Details • Account Details • Payment Tender Details 	Yes
	Note: By default, the Reconciliation Details option is selected.	
Reconciliation ID	Used to search a particular reconciliation.	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	
Reconciliation Type	Used to search reconciliations which are created using a particular reconciliation type.	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search reconciliations which are created from a particular date onwards.	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	
Status	Used to search reconciliations with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancellation • Pending • Pending Reconciliation • Reconciliation in Progress 	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	
Created Until	Used to search reconciliations which are created till a particular date.	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	
File Name	Used to search a reconciliation which is created for a particular pay instruction file.	No
	Note: This field appears when you select the Reconciliation Details option from the Search By list.	
Person Name	Used to search reconciliations which contain a particular member's pay instructions.	No
	Note: This field appears when you select the Account Details option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account.	Yes (Conditional)
	Note: This field appears when you select the Account Details option from the Search By list.	
	Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search reconciliations which contain pay instructions for a particular payee account.	No
	Note: This field appears when you select the Account Details option from the Search By list.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	Note: This field appears when you select the Account Details option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check.	No
	Note: This field appears when you select the Payment Tender Details option from the Search By list.	
Payor Account ID	Used to search reconciliations which are associated with a particular payor account.	No
	Note: This field appears when you select the Payment Tender Details option from the Search By list.	
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.	No
	Note: This field appears when you select the Payment Tender Details option from the Search By list.	
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount.	No
	Note: This field appears when you select the Payment Tender Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the reconciliation is created in the system.
Reconciliation Information	Displays information about the reconciliation.
	Note: It has a link. On clicking the link, the Reconciliation screen appears where you can view the details of the respective reconciliation.

Column Name	Column Description
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress
Payor Account ID	Indicates the payor account to which the reconciliation is associated. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective payor account.
Payment ID	Indicates the payment to which the reconciliation is associated. Note: It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	Used to create a new reconciliation using an existing reconciliation. Note: The Duplicate button appears when the reconciliation is in the Canceled status.

Searching for a Reconciliation

Prerequisite

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

Procedure

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Reconciliation**.
The **Reconciliation** screen appears.

- Enter the search criteria in the **Search Reconciliation** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of reconciliations that meet the search criteria appears in the **Search Results** section.

Viewing the Reconciliation Details

Procedure

To view the details of a reconciliation:

- Search for the reconciliation in the **Reconciliation** screen.
- In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.

The **Reconciliation** screen appears.

- Ensure that the **Main** tab is selected.
- View the details of the reconciliation in the **Reconciliation** zone.
- View the list of pay instructions uploaded through the file in the **Pay Instructions** zone.

Reconciliation - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Reconciliation](#) on page 2376

Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created. Note: It has a link. On clicking the link, the Reconciliation Type screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancellation • Pending • Pending Reconciliation • Reconciliation in Progress
Status Reason	Indicates the reason why the status of the reconciliation is changed. Note: This field appears when the reconciliation is in the Pending Cancellation or Canceled status.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.

Field Name	Field Description
Payment Information	<p>Indicates the payment to which the reconciliation is associated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment.</p> <p>This field does not appear when the reconciliation is in the Draft or Pending status.</p>
Account Information	<p>Indicates the payor account to which the reconciliation is associated.</p> <p>Note: This field does not appear when the reconciliation is in the Draft or Pending status.</p>

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the reconciliation.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	<p>Displays the description of the characteristic value.</p> <p>Note: The data appears in this column when the type of characteristic value is set to Predefined Value or Foreign Key Value.</p>

- **Pay Instruction Statistics** - Lists the statistics of records in the reconciliation. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in the reconciliation file.
Total Records Processed	Displays the count of data records derived after processing.
Total Records Cancelled	Displays the count of data records derived after unsuccessful processing.
Total Records in Error	Displays the count of data records in error status.
Total Records Pending	Displays the count of data records pending after successful derivation.
Total Records in Open	Displays the count of data records in open status.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the reconciliation.</p> <p>Note: The Edit button appears when the reconciliation is in the Pending or Draft status.</p>

Button Name	Button Description
Delete	Used to delete the reconciliation.
	Note: The Delete button appears when the reconciliation is in the Pending or Draft status.
Submit for Reconciliation	Used to submit the pay instructions for reconciliation.
	Note: The Submit for Reconciliation button appears when the reconciliation is in the Pending status.
Cancel	Used to cancel the reconciliation.
	Note: The Cancel button appears when the reconciliation is in the Completed or Open status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.
	Note: The Reconcile button appears when the reconciliation is in the Pending Reconciliation status.
Revert to Pending	Used to revert the status of the reconciliation to Pending .
	Note: The Revert to Pending button appears when the reconciliation is in the Pending Reconciliation status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation Date Time	Displays the date and time when the reconciliation is created.

Reconciliation - Pay Instruction

The **Pay Instruction** tab allows you to search for a pay instruction using various search criteria. It contains the following zone:

- [Pay Instructions](#) on page 2378

Pay Instructions

The **Pay Instructions** zone allows you to search for a pay instruction using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pay instructions for a particular payee account.	No
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search screen appears.	
Policy Number	Used to search pay instructions with a particular policy number.	No
Member Identifier Type	Used to search pay instructions with a particular member identifier type.	No
Member Identifier	Used to search pay instructions with a particular member identifier.	No
Coverage Start Date	Used to search pay instructions which are created from a particular date.	No
Coverage End Date	Used to search pay instructions which are created till a particular date.	No
Amount From	Used to search pay instructions with a particular minimum amount.	No
Amount To	Used to search pay instructions with a particular minimum amount.	No
Status	Used to search pay instructions with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing 	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account ID	Displays the account ID of the member.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Policy Number	Displays the policy number of the member.

Column Name	Column Description
Plan Number	Displays the plan number of the member.
Member Identifier Type	Displays the member identifier type of the member.
Member Identifier	Displays the member identifier of the member.
Member Name	Displays the member name of the member.
Coverage Start Date	Displays the date of the policy from where the coverage starts.
Coverage End Date	Displays the coverage end date of the policy till where the coverage ends.
Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.
Status	Displays the status of the pay instruction. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing
Pay Instruction ID	Displays the pay instruction ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** () icon corresponding to an **Account Identifier Type** column, the **Pay Instruction** screen appears with the details of the respective pay instruction record.

You can filter the list using various search criteria (such as, **Account ID**, **Policy Number**, **Member Identifier Type**, **Member Identifier**, **Coverage Start Date**, **Coverage End Date**, **Amount From**, **Amount To**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Defining a Characteristic for a Reconciliation

Prerequisites

To define a characteristic for a reconciliation, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Reconciliation**)

Procedure

To define a characteristic for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

The **Characteristics** section contains the following fields:

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

The **Reconciliation** screen appears.

3. If you want to define more than one characteristic for the reconciliation, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the reconciliation, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Search**.

A list of reconciliation files that meet the search criteria appear in the **Search Results** section.

5. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the status column.

The **Reconciliation** screen appears.

6. Click **Edit** button from **Record Actions** section.

The **Member Reconciliation** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the reconciliation.
- **Characteristics** - Used to specify the characteristics for the reconciliation. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation.	Yes
Characteristic Type	Used to indicate the characteristic type.	Yes
	Note: The list includes only those characteristic types where the characteristic entity is set to Reconciliation .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

Canceling a Reconciliation

Prerequisites

To cancel a reconciliation, you should have:

- Cancellation reasons defined in the application.

Note: While cancelling a reconciliation, you need to specify the reason why you want to cancel the reconciliation. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

Procedure

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.

The **Reconciliation** screen appears.

- [Reconciliation - Main](#) on page 2376
- [Pay Instructions](#) on page 2378
- [Reconciliation - Log](#) on page 2380

3. Click the **Cancel** button in the **Reconciliation** zone.

The **Status Reason** window appears. It contains following field:

:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation.	Yes

Note: The **Cancel** button appears when the reconciliation is in the **Open** or **Completed** status.

4. Select the cancellation status reason from the **Status Reason** list.
5. Click **Save**.

The status of the reconciliation is changed to **Cancelled**.

Searching for a Pay Instruction

Prerequisite

To search for a pay instruction, you should have:

- Pay instruction statuses and member identifier types defined in the application.

Procedure

To search for a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.

The **Reconciliation** screen appears.

3. Ensure that the **Pay Instruction** tab is selected.

The **Pay Instruction** screen appears.

4. Enter the search criteria in the **Pay Instruction** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pay instruction that meet the search criteria appears in the **Search Results** section.

- [Related Objects](#) on page 2390

Pay Instruction

The **Pay Instruction** zone lists payment related information that is specific to each member. It contains the following sections:

- **Main** - This section provides information about the pay instruction. It contains the following fields:

Field Name	Field Description
Pay Instruction Information	Displays the details of pay instruction in brief.
Reconciliation Information	Displays the details of the reconciliation.
Status	Displays the status of the pay instruction.

Field Name	Field Description
Coverage Start Date	Displays the date of the policy from where the coverage starts.
Coverage End Date	Displays the coverage end date of the policy till where the coverage ends.
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account ID	Displays the account ID of the member.
Policy Number	Displays the policy number of the member.
Plan Number	Displays the plan number of the member.
Member Identifier Type	Displays the member identifier type of the member.
Member Identifier	Displays the member identifier of the member.
Member Name	Displays the member name of the member.
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Pay Instruction Amount** -This section provides information on the pay instruction amount. It contains the following fields:

Field Name	Field Description
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Record Information** - This section provides information on the pay instruction business object. It contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the pay instructions are executed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the pay instruction object status is updated.
Creation Date Time	Displays the date and time when the pay instruction object is created.

- **Characteristics** - This section provides characteristic information for the pay instruction.

Field Name	Field Description
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of characteristic type.
Description	Displays the description of the characteristic type.

Reconciliation Adjustments

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following fields:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transfer transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction / financial transaction.
Related Object ID	Indicates the ID of the related pay instruction / financial transaction created in reconciliation process.. Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the financial transaction of reconciliation adjustments.

Note: Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of the **Reconciliation Adjustments** zone.

Related Objects

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following fields:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in pay instruction process.
Related Object Information	Displays the details of related object in brief.

Note: Pagination is used to display limited number of records in the **Related Topics** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- [Pay Instruction Log](#) on page 2391

Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the pay instruction.
Status Reason	Displays the status reason of action performed on the pay instruction.

Note: You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - This section provides basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which the discrepancy report will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Characteristics** - This section lists the characteristics of the discrepancy report type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Discrepancy Report Type.
Characteristic Value	Displays the value of the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.
Description	Displays detailed description of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.

Button Name	Button Description
Delete	Used to delete the discrepancy report type.
	Note: You can delete a discrepancy report type when you have not created a discrepancy report using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears when you click the **Broadcast** () icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

Defining a Discrepancy Report Type

Prerequisites

To define a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

Procedure

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.
The sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type** .

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Indicates the discrepancy report type business object used to create a discrepancy report type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

Note: The **Select Business Object** screen appears when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the business object depending on whether you want to create a discrepancy report type.
5. Click **OK**.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

6. Enter the required details in the **Main** section.
7. Define characteristics for the discrepancy report type, if required.
8. Click **Save**.

The discrepancy report type is defined.

Defining a Characteristic for a Discrepancy Report Type

Prerequisites

To define a characteristic for a discrepancy report type, you should have:

- Characteristic Types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

Procedure

To define a characteristic for a discrepancy report type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy report type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Discrepancy Report Type .	Note: This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the discrepancy report type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the discrepancy report type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the discrepancy report type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Discrepancy Report Type

Prerequisites

To edit a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discrepancy report type whose details you want to edit.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Displays the discrepancy report type.	Not applicable
Business Object	Indicates the discrepancy report type business object used while defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No

Tip: Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.

The changes made to the discrepancy report type are saved.

Deleting a Discrepancy Report Type

Procedure

To delete a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
The sub-menu screen appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑️) icon corresponding to the discrepancy report type that you want to delete.
A message appears confirming whether you want to delete the discrepancy report type.

Note: You can delete a discrepancy report type when you have not created a discrepancy report using the discrepancy report type.

Tip: Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type

5. Click **OK** .
The discrepancy report type is deleted.

Copying a Discrepancy Report Type

Prerequisites

To copy a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

Procedure

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
The sub-menu appears.

- Click the **Search** option from the **Discrepancy Report Type** sub-menu.

The **Discrepancy Report Type** screen appears.

- In the **Discrepancy Report Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the discrepancy report type whose copy you want to create.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- Main** - The main section contains the following fields:
- Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type	Not applicable
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Indicates the status of discrepancy report type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

Tip: Alternatively, you can create a copy of the **Discrepancy Report Type** zone to create a copy of the discrepancy report type.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the discrepancy report type, if required.
- Click **Save**.

The new discrepancy report type is defined.

Discrepancy Report (Used for Searching)

The **Discrepancy Report** screen allows you to search for a discrepancy report using various search criteria. Through this screen, you can navigate to the following screen:

- [Discrepancy Report \(Used for Viewing\)](#) on page 2406
- [Search Discrepancy Report](#) on page 2401

Search Discrepancy Report

The **Search Discrepancy Report** zone allows you to search for a discrepancy report using various search criteria. It contains the following two sections:

Search Criteria - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a discrepancy report using the discrepancy or account details. The valid values are: <ul style="list-style-type: none"> • Discrepancy Details • Account Details 	Yes
	Note: By default, the Discrepancy Details option is selected	
Discrepancy Report ID	Used to search a particular discrepancy report..	No
	Note: This field appears when you select the Discrepancy Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the levels at which the discrepancy report is generated. It has following options: <ul style="list-style-type: none"> Account Level File Level 	No
	Note: This field appears when Discrepancy Details is selected from the Search By list.	
Status	Used to search a particular discrepancy reports with a particular status. The valid values are: <ul style="list-style-type: none"> Completed Draft Pending 	No
	Note: This field appears when you select the Discrepancy Details option from the Search By list.	
File Name	Used to specify the filename that is provided when a discrepancy report is created at file level.	No
	Note: This field appears when you select the Discrepancy Details option from the Search By list.	
Created From	Used to search discrepancy reports which are created from a particular date onwards.	No
	Note: This field appears when you select the Discrepancy Details option from the Search By list.	
Created To	Used to search for discrepancy report which is created till a particular date.	No
	Note: This field appears when you select the Discrepancy Details option from the Search By list.	
Person Name	Used to search discrepancy reports through which a particular person's record is created or updated in the system.	No
	Note: This field appears when you select the Account Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search discrepancy reports through which the account details are created or updated in the system. <ul style="list-style-type: none"> Account Name Base Global Account ID Bill Group Identifier Demo Bank Account Number External Account Identifier Flexcube Account ID International Bank Account Number 	Yes (Conditional) Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
	Note: This field appears when you select the Account Details option from the Search By list.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier.
	Note: This field appears when Account Details is selected from the Search By list.	
Account ID	Used to search discrepancy reports that are created by a particular user.	No
	Note: This field appears when you select the Account Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a discrepancy report.

Search Results - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays date and time when the discrepancy report was created.
Discrepancy Report Information	Displays information about the discrepancy report.
	Note: It has a link. On clicking the link, the Discrepancy Report screen appears where you can view the details of the respective discrepancy report.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> Pending Draft Completed
Account ID	Displays the account ID of the person who created the discrepancy report.
File Name	Displays the filename given when discrepancy report is created at file level.

Searching for a Discrepancy Report**Prerequisites**

To search for a discrepancy report, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Discrepancy Report Type defined for discrepancy report.
- Status defined for discrepancy report.

Procedure

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** menu, select **Accounting and Receivable** and then click **Discrepancy Report**.
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.
The **Discrepancy Report** screen appears.
4. Enter the search criteria in the **Search Discrepancy Report** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

Discrepancy Report

The **Discrepancy Report** zone displays the details of the discrepancy report. It contains the following sections:

- **Main** - Displays basic information about the discrepancy report. It contains the following fields:

Field Name	Field Description
Discrepancy Report Information	Displays information about the discrepancy report.
Discrepancy Report Type	Indicates the discrepancy report type using which the discrepancy report is created. Note: It has a link. On clicking the link, the Discrepancy Report Type screen appears where you can view the details of the discrepancy report type.
File Name	Displays the filename for which the discrepancy report is generated.
Account Information	Displays the details of the account for which discrepancy report is generated.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> • Pending • Draft • Completed

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Delete	Used to delete the discrepancy report.
	Note: The Delete button appears when the discrepancy report is in the Pending status.
Finalize	Used to finalize all the changes and process the discrepancy report.
	Note: Finalize button appears when the discrepancy report is in the Pending status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the status of the discrepancy report was defined.
Creation Date Time	Displays the date and time when the discrepancy report was created.

Discrepancy Line Items

The **Discrepancy Line Items** zone displays the details of the discrepancy report It contains the following columns:

Column Name	Column Description
Account ID	Indicates the account for which the discrepancy line item is created.
	Note: This column appears when you select the discrepancy report information where the filename is provided.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the date from when the coverage starts.
Coverage End Date	Displays the date till when the coverage ends.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill.
Discrepancy Amount	Displays the discrepancy amount.
Discrepancy Category	Displays the discrepancy category.

Column Name	Column Description
Consumer Status	Displays the status of the consumer for its existence in the application.
Comments	Displays the comments, added for the discrepancy line items.
Edit	On clicking the Edit (✎) icon, the Discrepancy Line Item screen appears where you can edit the details of the discrepancy line item. Note: The Edit icon appears when the discrepancy report is in Pending or Draft status.

Note:

On clicking the Broadcast (📡) icon corresponding to the discrepancy line item, the Discrepancy Line Item Related Objects and Discrepancy Line Item Characteristics zones appear.

You can filter the discrepancy line items using Discrepancy Category search criteria available in the Filter area. By default, the Filter area is hidden. You can view the Filter area by clicking the Filters (🔍) icon in the upper right corner of the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report whose log you want to view.

The **Discrepancy Report** screen appears. It consists of the following tabs:

- [Discrepancy Report - Main](#) on page 2407
- [Discrepancy Report - Log](#) on page 2410

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the discrepancy report in the **Discrepancy Report Log** zone.

Member Reconciliation Preference

Oracle Revenue Management and Billing enables you to reconcile all pay instructions of a file at the member level through a batch named **C1-RCPM**. While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

A member reconciliation preference consists of the following attributes:

- Payment Event Characteristic Type
- Pay Instruction Completed Status
- Reconciliation Matching Level Characteristic Type
- Pay Instruction Open Status
- Reconciliation Open Status

For more information about these attributes, see [Defining a Member Reconciliation Preference](#) on page 2415. You can define, edit, delete, and copy a member reconciliation preference through the **Field Mapping** screen.

Searching for a Member Reconciliation Preference

Prerequisites

To search for a member reconciliation preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Member Reconciliation** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of member reconciliation preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Reconciliation Preference Details

Procedure

To view the details of a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the member reconciliation preference whose details you want to view. The **Field Mapping** zone appears.
3. View the details of the member reconciliation preference in the **Field Mapping** zone.

Defining a Member Reconciliation Preference

Prerequisites

To define a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To define a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are:</p> <ul style="list-style-type: none"> • Payment Event Characteristic Type - Used when a pay instruction is reconciled at the member level through the C1-RCPM batch. • Pay Instruction Completed Status - Used when a pay instruction is fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Matching Level Characteristic Type - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • Pay Instruction Open Status - Used when a pay instruction is not fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Open Status - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the C1-RCPM batch. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the member reconciliation preference.</p>

If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No				

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

6. Select the **Member Reconciliation** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.

9. If you want to set more than one attribute in the member reconciliation preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member reconciliation preference, click the **Delete (🗑)** icon corresponding to the attribute.

10. Click **Save**.

The member reconciliation preference is defined.

Editing a Member Reconciliation Preference

Prerequisites

To edit a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To edit a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the member reconciliation preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member reconciliation preference.	Not applicable
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Member Reconciliation 	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)

Copying a Member Reconciliation Preference

Instead of creating a member reconciliation preference from scratch, you can create a new member reconciliation preference using an existing member reconciliation preference. This is possible through copying a member reconciliation preference. On copying a member reconciliation preference, the details including the attributes are copied to the new member reconciliation preference. You can then edit the details, if required.

Prerequisites

To copy a member reconciliation preference, you should have:

- Member reconciliation preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member reconciliation preference:

- Search for the member reconciliation preference in the **Field Mapping** screen.
- In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the member reconciliation preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> Member Reconciliation 	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> • Payment Event Characteristic Type - Used when a pay instruction is reconciled at the member level through the C1-RCPM batch. • Pay Instruction Completed Status - Used when a pay instruction is fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Matching Level Characteristic Type - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • Pay Instruction Open Status - Used when a pay instruction is not fully reconciled at the member level through the C1-RCPM batch. • Reconciliation Open Status - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the C1-RCPM batch. 	Yes (Conditional)
		Note: This field is required while setting an attribute in the member reconciliation preference.

Pay Instruction Completed Status	Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled. Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-PayInstruction business object.					
Reconciliation Matching Level Characteristic Type	Used to specify the characteristic type which indicates all pay instructions in the file must be reconciled at the member level. This type of characteristic is defined for the reconciliation when all pay instructions in a file have member data. Here, you must specify a characteristic type where the characteristic entity is set to Member Reconciliation . Note: The C1-MTLVL characteristic type is shipped with the product.					

Field Name	Field Description	Mandatory (Yes or No)				
	<table border="1"> <tr> <td data-bbox="639 254 927 758">Pay Instruction Open Status</td> <td data-bbox="927 254 1175 758"> Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-PayInstruction business object. </td> </tr> <tr> <td data-bbox="639 758 927 1335">Reconciliation Open Status</td> <td data-bbox="927 758 1175 1335"> Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to Open. Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-MemberReconciliation business object. </td> </tr> </table>	Pay Instruction Open Status	Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-PayInstruction business object.	Reconciliation Open Status	Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to Open . Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-MemberReconciliation business object.	
Pay Instruction Open Status	Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-PayInstruction business object.					
Reconciliation Open Status	Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to Open . Note: Here, you must specify the status code which is already defined in the lifecycle of the C1-MemberReconciliation business object.					
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No				

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

Tip: Alternatively, you can copy a member reconciliation preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member reconciliation preference, if required.
5. Click **Save**.

The new member reconciliation preference is defined.

Deleting a Member Reconciliation Preference

Procedure

To delete a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the member reconciliation preference that you want to delete.

A message appears confirming whether you want to delete the member reconciliation preference.

Tip: Alternatively, you can delete a member reconciliation preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The member reconciliation preference is deleted.

Self-Funded Pricing

Topics:

- [Prerequisites](#)
- [Approval Workflow for the Self-Funded Pricing Rules](#)
- [Line Item Extendable Lookup](#)
- [Extendable Lookup \(Line Item\)](#)
- [Claim Template Extendable Lookup](#)
- [Extendable Lookup \(Claim Template\)](#)
- [Rate Option Extendable Lookup](#)
- [Extendable Lookup \(Rate Option\)](#)
- [Rate Type Extendable Lookup](#)
- [Extendable Lookup \(Rate Type\)](#)
- [Pricing Group](#)
- [Pricing Rule Type](#)
- [Claim Pricing](#)
- [Specific Stop-Loss \(SSL\) Pricing](#)
- [Aggregate Stop-Loss \(ASL\) Pricing](#)
- [Retention Type Claim Based Pricing](#)
- [Retention Type Enrollment Based Pricing](#)
- [Flat Fee Pricing](#)
- [Ancillary Pricing](#)
- [Discount Pricing](#)
- [Level Funding Pricing](#)

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health insurance business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

- [*Terminal Liability Reserve \(Run Out\) Level Funding Pricing*](#)
- [*Pricing Rule \(Used for Viewing\)*](#)
- [*Self-Funded Pricing Rule Versioning*](#)

Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLNG** feature configuration
- Define price items for the pricing rules
- Define parameters for the pricing rules
- Associate parameters to the price items for the pricing rules

Related Topics

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 3287

Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTTEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

Note: The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.

2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.

3. Ensure that the following value is set in the respective option type of the **C1-ASOBLNG** feature configuration:

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTFFEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

Tip: Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

Line Item Extendable Lookup

Different charges, such as consumer-driven amount, traditional health insurance amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, you can create a line item for the following charges:

Charge	Line Item	Write Off, If Not Eligible for Billing	Pricing Rule Type Category
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Health Insurance Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **C1-ExtLookPricingRuleLineItem** extendable lookup is redesigned to:

- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the fees separately for each applicable claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum amount for a line item

Once you derive the pricing information from a claim pricing rule in a specific stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for specific stop-loss. If so, it is considered for calculating specific stop-loss.

Once you derive the pricing information from a claim pricing rule in an aggregate stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for aggregate stop-loss. If so, it is considered for calculating aggregate stop-loss.

Once you derive the pricing information from a claim pricing rule in a level-funded pricing rule, you need to specify whether the additional fee (if any) should be settled through level funding. If so, it is considered while accumulating level funded charges.

Until now, when the **Include In Settlement** column was selected corresponding to a line item in a level funded pricing rule, the system settled the charge as well as its markup or markdown through level funding. However, now, the system provides two different options – one which helps to determine whether the charge should be settled through level funding and another which helps to determine whether the corresponding markup or markdown should be settled through level funding.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2437

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup.

How to view the values of the Line Item extendable lookup	Viewing the Values of the Line Item Extendable Lookup on page 2439

Searching for the Line Item Extendable Lookup

Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Line Item** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Line Item Extendable Lookup

Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view. The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

Related Topics

Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2439
- [Extendable Lookup Value](#) on page 2440

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> • Base • Customer Modification • Framework
Edit	On clicking the Edit  icon, the Line Item screen appears where you can edit the details of the line item.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Line Item screen appears where you can define a new line item using an existing line item.
Delete	On clicking the Delete (🗑️) icon, you can delete the line item.
	Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Detailed Description	Displays additional information about the line item.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** – Displays basic information about the line item. It contains the following fields:

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).

Field Name	Field Description
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Line Item Usage** – Indicates the pricing rule type categories to which the line item is associated. It contains the following column in a grid:

Column Name	Column Description
Pricing Rule Type Category	Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Retention Type Claim Based • Specific Stop-Loss

- **Markup or Markdown Billing Information** – Indicates the markup or markdown billing information defined for the line items. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the minimum and maximum markup or markdown billing information defined using the rate type.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge.

- **Line Item Billing Information** – Indicates the rate type and billable charge line type to which the line item is associated. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the rate type defined for the line item.
Billable Charge Line Type	Indicates the billable charge line type billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum amount for a line item.

- **Claim Handling Fees Billing Information** – Indicates the claim handling fees billing information. It contains the following columns in a grid:

Column Name	Column Description						
Fee Type	Indicates the type of charge applicable on the line items.						
Fee	Indicates the fee defined for the line items.						
Rate	Indicates the rate and billable charge line type defined for the line items.						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type defined for a line item.</td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.</td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type defined for a line item.	Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.
	Column Name	Column Description					
Rate Type	Indicates the rate type defined for a line item.						
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.						

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	Used to delete the line item.
	Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Line Item

Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line items.
- **Line Item Billing Information** – Used to define line item billing information for the line items.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line items.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No
	Note: By default, the value is set to Active .	

Field Name	Field Description	Mandatory (Yes or No)
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	No
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.	Yes (Conditional) Note: This field is required when the Write Off, if Not Eligible for Billing field is set to Yes .
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none">• Yes• No Note: By default, the value is set to No .	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none">• Yes• No Note: By default, the value is set to No .	No

4. Enter the required details in the **Main** section.

5. Associate the line item with one or more pricing rule type categories.
6. Define the markup or markdown billing information for the line items.
7. Define line item billing information for the line items.
8. Define the claim handling fees billing information for the line items.
9. Click **Save**.

The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Associating a Line Item with a Pricing Rule Type Category

Procedure

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)												
Pricing Rule Type Category	<p>Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Retention Type Claim Based Specific Stop-Loss <p>The following table describes the significance of each category that can be associated with the line item:</p> <table border="1"> <thead> <tr> <th>Pricing Rule Type Category</th> <th>Significance</th> </tr> </thead> <tbody> <tr> <td>Claim</td> <td>Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.</td> </tr> <tr> <td>Specific Stop-Loss</td> <td>Whether the line item can be considered while calculating specific stop-loss.</td> </tr> <tr> <td>Aggregate Stop-Loss</td> <td>Whether the line item can be considered while calculating aggregate stop-loss.</td> </tr> <tr> <td>Retention Type Claim Based</td> <td>Whether the line item can be used while calculating the percentage based retention type claim based fee.</td> </tr> <tr> <td>Ancillary</td> <td>Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.</td> </tr> </tbody> </table> <p>Note: At present, the line items are not used in the pricing rule types where the pricing rule type category is set to Retention Type Enrollment Based and Flat Fees.</p>	Pricing Rule Type Category	Significance	Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.	Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.	Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.	Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.	Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating the line item with a pricing rule type category.</p>
Pricing Rule Type Category	Significance													
Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.													
Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.													
Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.													
Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.													
Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.													

- Enter the required details in the **Line Item Usage** section.
- If you want to associate the line item with more than one pricing rule type category, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove a pricing rule type category from the line item, click the **Delete (🗑)** icon corresponding to the pricing rule type category.

- Click **Save**.

The line item is associated with the pricing rule type category.

Defining the Markup or Markdown Billing Information for the Line Items**Procedure**

To define the markup or markdown billing information for the line items:

1. Ensure that the **Markup or Markdown Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Markup or Markdown Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.
Billable Charge Line Type	Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Yes (Conditional) Note: This field is required when you select an option from the Rate Type field.

2. Enter the required details in the **Markup or Markdown Billing Information** section.
3. If you want to add more than one markup or markdown billing information for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a markup or markdown billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The markup or markdown billing information is defined for the line items.

Defining Line Item Billing Information for the Line Items

Procedure

To define the line item billing information for the line items:

1. Ensure that the **Line Item Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.
Billable Charge Line Type	Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Yes (Conditional) Note: This field is required when you select an option from the Rate Type field.

2. Enter the required details in the **Line Item Billing Information** section.
3. If you want to add more than one line item billing information for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a line item billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The line item billing information is defined for the line items.

Defining the Claim Handling Fees Billing Information for the Line Items

Procedure

To define the claim handling fees billing information for the line items:

1. Ensure that the **Claim Handling Fees Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Claim Handling Fees Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Fee Type	Used to indicate the type of charge applicable on the line items.	Yes (Conditional) Note: This field is required when fee is selected from the Fee field.
Fee	Used to indicate the fee defined for the line items.	Yes (Conditional) Note: This field is required when fee type is selected from the Fee Type field.

Field Name	Field Description	Mandatory (Yes or No)															
Rate	Used to indicate the rate and billable charge line type for the line items.	Yes															
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Used to indicate the rate type.</td> <td>Yes (Conditional)</td> </tr> <tr> <td></td> <td> <p>Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.</p> </td> <td></td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Used to specify the billable charge line type.</td> <td>Yes (Conditional)</td> </tr> <tr> <td></td> <td> <p>Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> </td> <td> <p>Note: This field is required when you select an option from the Rate Type field.</p> </td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Rate Type	Used to indicate the rate type.	Yes (Conditional)		<p>Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.</p>		Billable Charge Line Type	Used to specify the billable charge line type.	Yes (Conditional)		<p>Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	<p>Note: This field is required when you select an option from the Rate Type field.</p>	
Field Name	Field Description	Mandatory (Yes or No)															
Rate Type	Used to indicate the rate type.	Yes (Conditional)															
	<p>Note: This field is required when you select a billable charge line type from the Billable Charge Line Type field.</p>																
Billable Charge Line Type	Used to specify the billable charge line type.	Yes (Conditional)															
	<p>Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	<p>Note: This field is required when you select an option from the Rate Type field.</p>															

- Enter the required details in the **Claim Handling Fees Billing Information** section.
- If you want to add more than one claim handling fee billing information for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a claim handling fee billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

- If you want to add more than one rate for the line item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a rate from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

- Click **Save**.

The claim handling fees billing information is defined for the line items.

Editing a Line Item

Prerequisites

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To edit a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the line item whose details you want to edit.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup and markdown billing information for the line item.
- **Line Item Billing Information** – Used to define the line item billing information for the line item.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Indicates the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.	Yes (Conditional) Note: This field is required when the Write Off, if Not Eligible for Billing field is set to Yes .
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Tip: Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The changes made to the line item are saved.

Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line item.
- **Line Item Billing Information** – Used to define the line item billing information for the line item.

- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)	
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes	
Description	Used to specify the description for the line item.	Yes	
Override Description	Used when you want to override the description of the line item.	No	
Detailed Description	Used to specify additional information about the line item.	No	
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes	
Service Identifier	Quantity	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type Search field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> </div>	Yes	

Field Name	Field Description	Mandatory (Yes or No)
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Write Off Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Write Off Billable Charge Line Type field.</p>	<p>Note: This field is required when the Write Off, if Not Eligible for Billing field is set to Yes.</p>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Tip: Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Deleting a Line Item

Procedure

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the line item that you want to delete.

A message appears confirming whether you want to delete the line item.

Note: You can delete a line item when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

Tip: Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Viewing the Line Item Details

Procedure

To view the details of a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.

- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Broadcast** () icon corresponding to the line item whose details you want to view.

The **Extendable Lookup Value** zone appears.

- View the details of the line item in the **Extendable Lookup Value** zone.

Claim Template Extendable Lookup

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/Active, Post Runout, or Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, you can create the claim templates with the following line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	\$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2458

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup.

Searching for the Claim Template Extendable Lookup

Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Claim Template** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2460
- [Extendable Lookup Value](#) on page 2461

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification
Edit	On clicking the Edit () icon, the Claim Template screen appears where you can edit the details of the claim template.
Duplicate	On clicking the Duplicate () icon, the Claim Template screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the Delete () icon, you can delete the claim template.
	Note: You can delete a claim template when it is not yet used in a claim pricing rule type.
Detailed Description	Displays additional information about the claim template.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** – Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Claim Template Usage** – Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the In Force/Active, Post Runout, or Runout status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout

- **Claim Handling Fees** – Indicates the claim handling fees which are applicable to one or more line items in the claim template. It contains the following columns:

Column Name	Column Description
Show Line Items in Pricing Rule	Indicates that claim line item appears when you are defining or editing a claim pricing rule.
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Fee Significance	Indicates the purpose of the imposing the claim handling fees on the line items.
Fee Applicability	Indicates the fee applicability on which the claim handling fees are defined.

Column Name	Column Description								
Rating Information	Indicates the rate type and value that you want to use while defining the rating information for the line items.								
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate</td> <td>Displays the rate that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> </tbody> </table>	Column Name	Column Description	Editable	Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.	Rate Type	Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.	Rate	Displays the rate that you want to use while defining or editing the claim handling fees for the line items.
Column Name	Column Description								
Editable	Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.								
Rate Type	Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.								
Rate	Displays the rate that you want to use while defining or editing the claim handling fees for the line items.								

- **Default Markup or Markdown Values** – Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None
Markup or Markdown Type	Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field appears when the Markup or Markdown option is selected from the Pricing Strategy list.</p>
Markup or Markdown Amount	Displays the default flat markup or markdown amount for the line items. <p>Note: This field appears when the Flat Amount option is selected from the Markup or Markdown Type list.</p>
Markup or Markdown Percentage	Displays the default percentage of markup or markdown for all line items. <p>Note: This field appears when the Percentage option is selected from the Markup or Markdown Type list.</p>
Editable	Indicates that rate type and rate value fields are editable while defining or editing the markup or markdown values for the line items.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the rate for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** – Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description								
Sequence	Indicates the order in which the calculation line should be generated for the line item.								
Line Item	Indicate the line item which is added in the claim template.								
Billing Eligibility	Indicates whether the line item is eligible for billing. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible • Rule Based • Used Defined (Default No) • User Defined (Default Yes) 								
Rule Type	Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing. Note: The data appears in this column when the Rule Based option is selected from the Billing Eligibility list.								
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage . The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 								
Post-Processing Required	Indicates that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.								
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items. <table border="1" data-bbox="613 1213 1461 1684"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</td> </tr> </tbody> </table>	Column Name	Column Description	Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Rate	Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.
Column Name	Column Description								
Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.								
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.								
Rate	Used to specify the rate that you want to use while defining the rate for the line items. Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.								

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.

Button Name	Button Description
Delete	Used to delete the claim template.
	Note: You can delete a claim template when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

Defining a Claim Template

Procedure

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: By default, the value is set to Active .	

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes

- **Claim Handling Fees** – Used to define the claim handling fees for the claim lines items which are added in the claim template.
 - **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
 - **Line Items** – Used to add the claim line items in the claim template.
4. Enter the required details in the **Main** section.
 5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** dropdown list depending on whether you want to use the claim template while defining a claim pricing rule for a
 6. Define the claim handling fees for the line items in the claim template, if required.
 7. Define the default markup or markdown values for the line items in the claim template, if required.
 8. Add the required the line items in the claim template.
 9. Click **Save**.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Defining the Claim Handling Fees for Line Items in the Claim Template

Procedure

To define the claim handling fees for the line items in the claim template:

1. Ensure that the **Claim Handling Fees** section is expanded when you are defining, editing, or copying a claim template.

The **Claim Handling Fees** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)				
Show Line Items in Pricing Rule	Used to indicate whether the claim line item is visible while defining or editing the pricing rules.	Not applicable				
Fee Type	Used to indicate the charge type defined on the line items.	Yes				
Fee	Used to indicate the type of rate defined on the line items.	Yes				
Fee Significance	Used to indicate the purpose of the imposing the fees on the line items.	Yes				
Fee Applicability	Displays one or more applicable claim line item on which the claim handling fees are imposed. <table border="1" data-bbox="537 1308 1252 1472"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Line Items</td> <td>Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.</td> </tr> </tbody> </table>	Field Name	Field Description	Line Items	Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.	Yes
Field Name	Field Description					
Line Items	Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.					

Field Name	Field Description	Mandatory (Yes or No)												
Rating Information	Used to indicate one or more rate options which are valid for a line item.	Yes												
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.</td> <td>No</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> <td>Yes</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items. <div style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rating Information column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div> </td> <td>Yes</td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	No	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Yes	Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rating Information column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>	Yes	
Field Name	Field Description	Mandatory (Yes or No)												
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	No												
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Yes												
Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rating Information column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>	Yes												

- Enter the required details in the **Claim Handling Fees** section.
- If you want to add more than one claim handling fee in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim handling fee from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one fee applicability in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a fee applicability from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one rating information in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a rating information from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The claim handling fees are defined for the line items in the claim template.

Defining the Default Markup or Markdown Values for Line Items in a Claim Template

Procedure

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Default Markup or Markdown Values** section is expanded when you are defining, editing, or copying a claim template.

The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	No
Markup or Markdown Type	Used to indicate the markup or markdown type for the claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	No
Markup or Markdown Percentage	Used to specify the markup or markdown percentage.	No
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	Not applicable
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Yes (Conditional) Note: This field is required when you define the rate from the respective field.
Rate	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional) Note: This field is required when you select the rate type from the respective field.

2. Enter the required details in the **Markup or Markdown Values** section.

- If you want to add more than one default markup or markdown value in the claim template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a default markup or markdown value from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The markup or markdown values for line items are defined for the claim template.

Adding a Line Item in a Claim Template

Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

Procedure

To add a line item in a claim template:

- Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional) Note: This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template. Note: The list includes only those line items which are associated to the Claim pricing rule type category.	Yes (Conditional) Note: This field is required while adding a line item in the claim template.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility	<p>Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are:</p> <ul style="list-style-type: none"> • Eligible - Used when the line item is eligible for billing. • Not Eligible - Used when the line item is not eligible for billing. • Rule Based - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the Update Status (C1-TXNEX) batch. • Used Defined (Default No) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is not selected for the line item in the claim pricing rule. • User Defined (Default Yes) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is selected for the line item in the claim pricing rule. 	<p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p>
Rule Type	<p>Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.</p> <p>Note: The list includes only those rule types where the rule type usage is set to ASO Billing Line Item Eligibility. The values appear in this list when you select the Rule Based option from the Billing Eligibility list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you select the Rule Based option from the Billing Eligibility list.</p>
Markup or Markdown Percentage Eligibility	<p>Used to indicate whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage. The valid values are:</p> <ul style="list-style-type: none"> • Eligible • Not Eligible 	<p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p>
Post-Processing Required	<p>Used to indicate that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while adding a line item in the claim template.</p>

Field Name	Field Description	Mandatory (Yes or No)												
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items.	Yes (Conditional)												
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.</td> <td>Not applicable</td> </tr> <tr> <td>Rate Type</td> <td>Used to indicate the rate type that you want to use while defining the rate for the line items.</td> <td>Yes (Conditional) Note: This field is required when you define the rate from the respective field.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items.</td> <td>Yes (Conditional) Note: This field is required when you select the rate type from the respective field.</td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Editable	Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule. How to copy a claim template	Copying a Claim Template on page 2473

Editing a Claim Template

Procedure

To edit a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the claim template whose details you want to edit.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Yes

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
- **Line Items** – Used to indicate the line items in the claim template.

Tip: Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove line items from the claim template, if required.
9. Click **Save**.

The changes made to the claim template are saved.

Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the claim template whose copy you want to create.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the In Force/Active , Post Runout , or Runout status. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the line items which are added in the claim template.
- **Line Items** – Used to add the claim line items in the claim template.

Tip: Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove the line items from the claim template, if required.
9. Click **Save**.

The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Deleting a Claim Template

Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim template that you want to delete.

A message appears confirming whether you want to delete the claim template.

Note: You can delete a claim template when it is not yet used in a claim pricing rule type.

Tip: Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

Viewing the Claim Template Details

Procedure

To view the details of a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the claim template whose details you want to view.
The **Extendable Lookup Value** zone appears.
4. View the details of the claim template in the **Extendable Lookup Value** zone.

Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule. For example,

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2477

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup.

Searching for the Rate Option Extendable Lookup

Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Rate Option** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2479
- [Extendable Lookup Value](#) on page 2480

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification
Edit	On clicking the Edit () icon, the Rate Option screen appears where you can edit the details of the rate option.
Duplicate	On clicking the Duplicate () icon, the Rate Option screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the Delete () icon, you can delete the rate option.
	Note: You can delete a rate option when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** – Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Rate Schedule	Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <p>Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the respective rate schedule.</p>
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	Indicates whether zero pricing will be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Ignore Transaction	Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No
Aggregate Transaction	Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.

Field Name	Field Description
Transaction Rating Criteria	Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> Aggregate Transactions and Then Rate SQs Do Not Rate Transactions Rate Transaction and Aggregate Calc Lines Rate Transactions
Apply To	Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	Used to delete the rate option.
	Note: You can delete a rate option when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> Framework Base Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

Defining a Rate Option

Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: By default, the value is set to Active .	
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, the value is set to Yes .	
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, the value is set to No .	
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, the value is set to No . This field is disabled when the Ignore Transaction field is set to Yes .	
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	Note: This field is disabled when the Ignore Transaction field is set to Yes .	
	Note: This field is required when the Aggregate Transaction field is set to Yes .	

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Transactions and Then Rate SQs <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> Do Not Rate Transactions Rate Transaction and Aggregate Calc Lines <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> Rate Transactions <p>Note: This value appears in the list only when the Ignore Transaction field is set to either Yes or No and the Aggregate Transaction field is set to No.</p> <p>Note: By default, the value is set to Do Not Rate Transactions.</p>	Yes
Apply To	<p>Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> All Customers New Customers <p>Note: By default, the value is set to All Customers.</p>	Yes

4. Enter the required details in the **Main** section.

5. Click **Save**.

The rate option is added in the **C1-ExtLookRefTypeRateOpt** extendable lookup.

Editing a Rate Option

Prerequisites

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To edit a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the rate option whose details you want to edit.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Displays the rate option.	Not applicable
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification 	Not applicable
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: This field is disabled when the Ignore Transaction field is set to Yes .	
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	Note: This field is disabled when the Ignore Transaction field is set to Yes .	
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate SQs 	Yes
	Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes .	
	<ul style="list-style-type: none"> • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines 	
	Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes .	
	<ul style="list-style-type: none"> • Rate Transactions 	
	Note: This value appears in the list only when the Ignore Transaction field is set to either Yes or No and the Aggregate Transaction field is set to No .	

Field Name	Field Description	Mandatory (Yes or No)
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes

Tip: Alternatively, you can edit the details of a rate option by clicking the **Edit** button in the **Extendable Lookup Value** zone.

- Modify the required details in the **Main** section.
- Click **Save**.

The changes made to the rate option are saved.

Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To copy a rate option:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

The **Rate Option** screen appears. It contains the following section:

- Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> Yes No <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is disabled when the Ignore Transaction field is set to Yes.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	Note: This field is disabled when the Ignore Transaction field is set to Yes .	Note: This field is required when the Aggregate Transaction field is set to Yes .
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Transactions and Then Rate SQs <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> Do Not Rate Transactions Rate Transaction and Aggregate Calc Lines <p>Note: This value appears in the list when the Ignore Transaction field is set to No and the Aggregate Transaction field is set to Yes.</p> <ul style="list-style-type: none"> Rate Transactions <p>Note: This value appears in the list only when the Ignore Transaction field is set to either Yes or No and the Aggregate Transaction field is set to No.</p>	Yes
Apply To	<p>Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> All Customers New Customers 	Yes

Tip: Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Click **Save**.

The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Deleting a Rate Option

Procedure

To delete a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate option that you want to delete.

A message appears confirming whether you want to delete the rate option.

Note: You can delete a rate option when it is not yet used in a pricing rule type.

Tip: Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The rate option is deleted from the **C1-ExtLookRefTypeRateOpt** extendable lookup.

Rate Type Extendable Lookup

A new extendable lookup for rate type named **C1-ExtLookRateType** is introduced in the system. A rate type extendable lookup enables you to specify the following:

- Whether the system should calculate fees on sum of all applicable claim charges or separately for each applicable claim charge.
- The billable charge line type using which the calculation line should be created when the fee is calculated on sum of all applicable claim charges
- Whether the system should calculate percentage based markup or markdown on sum of all eligible claim charges or separately for each eligible claim charge
- The billable charge line type using which the calculation line should be created when the minimum and maximum markup or markdown is calculated on sum of all eligible claim charges
- Whether the rate type can be used while adding fees, default markup or markdown, or claim line items

Following rate types are used in the system:

- Maximum Fee
- Minimum Fee
- Retained Percentage
- Minimum Markup or Markdown
- Maximum Markup or Markdown
- Minimum Amount
- Maximum Amount

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2491

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup.

Searching for the Rate Type Extendable Lookup

Procedure

To search for the **Rate Type** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRateType** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The **Rate Type** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Rate Type)

The **Extendable Lookup** screen allows you to view the values of the **Rate Type (C1-ExtLookRateType)** extendable lookup. It also allows you to define, edit, copy, and delete a rate type. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2479
- [Extendable Lookup Value](#) on page 2480

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Type** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate type.
Description	Displays the description of the rate type.
Owner	Indicates the user who has created the rate type. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification
Edit	On clicking the Edit () icon, the Rate Type screen appears where you can edit the details of the rate type.
Duplicate	On clicking the Duplicate () icon, the Rate Type screen appears where you can define a rate type item using an existing rate type.

Column Name	Column Description
Delete	On clicking the Delete (🗑️) icon, you can delete the rate type.
	Note: You can delete a rate type when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate type, the **Extendable Lookup Value** zone appears with the details of the respective rate type.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate type. It contains the following sections:

- **Main** – Displays basic information about the rate type. It contains the following fields:

Field Name	Field Description
Rate Type	Displays the rate type.
Description	Displays the description for the rate type.
Override Description	Displays the overridden description of the rate type.
Detailed Description	Displays the additional information about the rate type.
Status	Indicates the status of the rate type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Line-Specific Calculation	Indicates whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge.

Rate Type Usage – Lists the various charges to which the rate type is associated. It contains the following column in a grid:

Column Name	Column Description
Applicable To	Indicates the claim handling fees that are associated with the rate type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate type.
Delete	Used to delete the rate type. Note: You can delete a rate type when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate type using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Rate Type

Prerequisites

To define a rate type, you should have:

- Billable charge line type and rate types defined in the application.

Procedure

To define a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No
	Note: By default, the value is set to Active .	
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).	No
	Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: <ul style="list-style-type: none"> • Claim Handling Fees • Claim Line Items • Markup or Markdown 	Yes

4. Enter the required details in the **Main** section.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The rate type is added in the **C1-ExtLookRateType** extendable lookup.

Editing a Rate Type

Prerequisites

To edit a rate type, you should have:

- Billable charge line type and rate type usage defined in the application.

Procedure

To edit a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate type whose details you want to edit.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Displays the rate type.	Not applicable
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	No

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: <ul style="list-style-type: none"> Claim Handling Fees Claim Line Items Markup or Markdown 	Yes

Tip: Alternatively, you can edit the details of a rate type by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section, if required.
5. Add, edit, or remove usage (for the rate type) from the **Usage** section, if required.
6. If you want to define more than one rate type usage for the rate type, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete (🗑)** icon corresponding to the **Applicable To** field.

7. Click **Save**.

The changes made to the rate type are saved.

Copying a Rate Type

Instead of creating a rate type from scratch, you can create a new rate type using an existing rate type. This is possible through copying a rate type. On copying a rate type, the line specific calculation, billable charge type, and usage detailed are copied to the new rate type. You can then edit the details, if required.

Prerequisites

To copy a rate type, you should have:

- Rate type (whose copy you want to create) defined in the application.
- Billable charge line type and rate type usage defined in the application.

Procedure

To copy a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate (📄)** icon in the **Duplicate** column corresponding to the rate type whose copy you want to create.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	No

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items.	Yes

Tip: Alternatively, you can copy a rate type by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section, if required.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The new rate type is added in the **C1-ExtLookRateType** extendable lookup.

Deleting a Rate Type

Procedure

To delete a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate type that you want to delete.

A message appears confirming whether you want to delete the rate type.

Note: You can delete a rate type when it is not yet used in a pricing rule type.

Tip: Alternatively, you can delete a rate type by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The rate type is deleted from the **C1-ExtLookRateType** extendable lookup.

Viewing the Rate Type Details

Procedure

To view the details of a rate type:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.

2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the rate option whose details you want to view.

The **Extendable Lookup Value** zone appears.

4. View the details of the rate type in the **Extendable Lookup Value** zone.

Pricing Group

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1, Parameter 2, Parameter 3, and Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

Viewing the Pricing Groups of a Bill Group

Procedure

To view the pricing groups of a bill group:

1. Search for the bill group whose is associated with the self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Bill Group Self-Funded Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose pricing groups you want to view.

The **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

Defining a Pricing Group for a Bill Group

Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define a pricing group for a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group for whom you want to define a pricing group.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. Note: You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the Add  icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to define the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. Note: You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone. You must not specify the ampersand (&) character in this field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	

9. Enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The pricing group is defined for the bill group.

Editing a Pricing Group of a Bill Group

Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to edit.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing group whose details you want to edit.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item.	Yes
	Note: You cannot define multiple rules in the pricing group with the same priority.	
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the Add  icon, you can define criteria for the pricing group rule.	Not applicable

Note: You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

6. Modify the required details in the **Main** section.
7. Edit the required rules in the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.	Yes
	<p>Note:</p> <p>You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone.</p> <p>You must not specify the ampersand (&) character in this field.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears.</p>	
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.	No
	Note: You must not specify the ampersand (&) character in this field.	

Note: You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The changes made to the pricing group are saved.

Deleting a Pricing Group of a Bill Group

Procedure

To delete a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to delete.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing group that you want to delete.

A message appears confirming whether you want to delete the pricing group.

Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.

6. Click **OK**.

The pricing group is deleted.

Copying a Pricing Group of a Bill Group

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

Prerequisites

To copy a pricing group of a bill group, you should have:

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to copy.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the pricing group whose copy you want to create.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. Note: You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the Add () icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define, edit, or remove the required rules from the **Pricing Group Rules** section.

8. Click the **Add** (+) icon in the **Criteria** field corresponding to the pricing group rule for which you want to define or edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. Note: You can only specify the employee attribute which is defined for the bill group and source system combination in the Bill Group Derivation and Pricing Parameters zone. You must not specify the ampersand (&) character in this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter 1 List for Bill Group window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. Note: You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑️) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The new pricing group is defined for the bill group.

Pricing Rule Type

Pricing rules are created using pricing rule types. Following are the pricing rules:

- **Claim** – can be created using the claim pricing rule type.
- **Retention Type Claim Based** – can be created using the retention type claim base pricing rule type.
- **Retention Type Enrollment Based** – can be created using the retention type enrollment base pricing rule type.
- **Specific Stop-Loss** – can be created using the specific stop-loss pricing rule type.
- **Aggregated Stop-Loss** – can be created using the aggregated stop-loss or specific stop-loss pricing rule type.
- **One-Time Flat Fee** – can be created using the one-time flat fee pricing rule type.
- **Bill Period Based Recurring Flat Fee** – can be created using the bill period based recurring flat fee pricing rule type.
- **Frequency Based Recurring Flat Fee** – can be created using the frequency based recurring flat fee pricing rule type.

Pricing rule type has a parent business object, **C1-PricingRuleType** with all the common elements required for all pricing rule types. Elements that are specific to each pricing rule type are configured using the child business object. Following are the child business objects:

- **C1-PricingRuleTypeClaim** business object for Claim Pricing Rule Type.
- **C1-PrcRuleTypRetClaimBase** business object for Retention Claim Based Pricing Rule Type.

- **C1-PrcRuleTypRetEnrollBased** business object for Retention Enrollment Based Pricing Rule Type.
- **C1-PricingRuleTypeASL** business object for Aggregate Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeSSL** business object for Specific Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeFlatFees** business object for One-Time Flat Fee, Bill Period Based Recurring Flat Fee, Frequency Based Recurring Flat Fee Pricing Rule Types.

The **C1-GetPrcRuleTypeRateOpt** business service returns the list of rate options associated with a pricing rule type and selected price item. The **C1-GetPrcRuleTypeProd** business service returns the list of products associated with the pricing rule type.

This screen consists of the following zones:

- [Pricing Rule Type List](#) on page 2513
- [Pricing Rule Type](#) on page 2516

Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description of the pricing rule type.
Pricing Rule Type Category	Indicates the category to which the pricing rule type belongs. The valid values are: <ul style="list-style-type: none"> • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Level Funded • Age Based • Tier Based • Pass-Through Billable Charge • Benefit • Additional Charge

Column Name	Column Description
Edit	On clicking the Edit () icon, the Claim Pricing Rule Type , Specific Stop-Loss (SSL) Pricing Rule Type , Aggregate Stop-Loss (ASL) Pricing Rule Type , Retention Type Claim Based Pricing Rule Type , Retention Type Enrollment Based Pricing Rule Type , Flat Fees Pricing Rule Type , Ancillary Pricing Rule Type , Discount Arrangement Pricing Rule Type , Level Funded Pricing Rule Type , Age Based Pricing Rule Type , Tier Based Pricing Rule Type , Pass-Through Billable Charge Pricing Rule Type , Benefit Pricing Rule Type , or Additional Charge Pricing Rule Type screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.
Delete	On clicking the Delete () icon, you can delete the pricing rule type.
	Note: You can delete a pricing rule type when it is not yet used in the system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee. This zone contains the following sections:

- **Main** – This section provides basic information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description for the pricing rule type.
Detailed Description	Displays additional information about the pricing rule type category.

Field Name	Field Description
Pricing Rule Business Object	<p>Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Business Object	<p>Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> • Claim Pricing Rule Type • Aggregate Stop-Loss (ASL) Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Flat Fee Pricing Rule Type <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status	<p>Indicates the status of the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
Primary	Displays whether the pricing rule type is primary or not.
Pricing Rule Type Category	<p>Indicates the pricing rule type category for the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees

- **Related Pricing Rule Types** – This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order in which pricing rule type is executed.
Pricing Rule Type	Displays the related pricing rule type for the parent rule type. Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** – This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

Field Name	Field Description
Source System	Displays the external system from where the transaction data is mapped.
Parameter 1 ... Parameter 4	Displays the parameters mapped for the transactions.
Incurred Date	Displays the date incurred for transaction.
Paid Date	Displays the transaction paid date.
Source of Funds	Displays the source of funds used to make the payment.
Composite	Displays the composite transaction data.
Claim Disposition	Displays the disposition of the claims transaction.
Provider's Tax Identification Number	Displays the tax identification number of the provider.
Member ID	Displays the member ID.
Main Subscriber ID	Displays the customer ID.
Run-in Identifier	Displays the run-in identifier.
Runout Identifier	Displays the runout identifier.
Coverage Start Date	Displays the transaction coverage start date.
Coverage End Date	Displays the transaction coverage end date.
Retroactivity Indicator	Displays information of the retroactivity indicator.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Algorithms** – This section displays the algorithms used for the pricing rule type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed. The valid values are: <ul style="list-style-type: none"> Account and Price Item Derivation Bill After Date Determination Bill Group Derivation Pricing Rule Post Processing Transaction Validation
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm. Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm.

- **Additional Data** – This section displays the additional information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Indicates whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> Yes No
Eligible for Specific Stop-Loss	Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> Yes No <p>Note: This field appears when the option selected for the Pricing Rule Type Category is Claim, Retention Type Claim Based, or Retention Type Enrollment Based.</p>
Run-in Identifier Value	Displays the value for run-in identifier.
Runout Identifier Value	Displays the value for runout identifier.

Note: This section does not appear when the pricing rule type category is flat fees.

- **Price Items** – This section displays the price items assigned to the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.

Column Name	Column Description						
Rate Option	On clicking the Add  icon, the following column appears:						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Indicates the rate option for the price item.</td> </tr> </tbody> </table>	Column Name	Column Description	Rate Option	Indicates the rate option for the price item.		
	Column Name	Column Description					
Rate Option	Indicates the rate option for the price item.						
Note: This column does not appear when the pricing rule type category is flat fees.							
Bill To Account	On clicking the Add  icon, the following columns appear:						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Displays the order in which the invoice type was considered while defining a price item.</td> </tr> <tr> <td>Invoice Type</td> <td>Displays the invoice type for the price item.</td> </tr> </tbody> </table>	Column Name	Column Description	Priority	Displays the order in which the invoice type was considered while defining a price item.	Invoice Type	Displays the invoice type for the price item.
	Column Name	Column Description					
	Priority	Displays the order in which the invoice type was considered while defining a price item.					
Invoice Type	Displays the invoice type for the price item.						

- **Price Item Parameters** – This section displays the price item parameters in the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item Parameter	Displays the parameter associated with the price item.
	Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter.
Transaction Field	Displays the additional transaction data.
	Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective transaction field.
	This column does not appear when the pricing rule type category is flat fees.
Eligible for Specific Stop-Loss	Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked.
	Note: This field appears only when the option selected for the Pricing Rule Type Category is Claim, Retention Type Claim Based, or Retention Type Enrollment Based .
Eligible for Level Funding	Displays the parameter eligible for level funding when the eligibility checkbox was checked.

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Event Management** – This section displays the audit event details. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type which you can use while adding elements for audit in a fully-insured benefit pricing rule type.
Element Type	Indicates the type of audit element for a fully-insured benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field
Element Name	Displays the element name for a fully-insured benefit pricing rule type.
Element Value	Displays the value for an element name.

- **Claim Templates** – This section list the pricing rule type for claim template. It contains the following field:

Field Name	Field Description
Claim Template	Indicates the claim template.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** – This section displays the claim specific additional data. It contains the following fields:

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not.
	Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not.
	Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** – This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

Field Name	Field Description
ASL Billable Charge Line Type	Displays the Aggregated Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.

Field Name	Field Description
ASL Limit Price Item	Displays the Aggregated Stop-Loss limit price item.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not.
	Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not.
	Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** – This section displays the enrollment specific additional data. It contains the following fields:

Field Name	Field Description
Retroactivity Indicator Value	Displays the value for the retroactivity indicator.

Note: This section appears when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** – This section displays the details of claim disposition. It contains the following columns:

Column Name	Column Description
Claim Disposition	Indicates the claim disposition.
Disposition Mode	Indicates the claim disposition mode. The valid values are: <ul style="list-style-type: none"> • Align Signage • Zero Out

Note: This section appears when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** – This section displays the Specific Stop-Loss additional data. It contains the following fields:

Field Name	Field Description
SSL Billable Charge Line Type	Displays the Specific Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. Note: It has a link. On clicking the link, the Field screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** – This section list the billable charge line type. It contains the following column:

Column Name	Column Description
Billable Charge Line Type	Indicates the billable charge line type.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** – This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

Field Name	Field Description
Bill Segment Cancel Reason	Indicates the reason for cancelling the bill segment.
Recurring Fee	Displays whether the recurring flat fee is required or not.
Recurring Method	Indicates the recurring method if recurring fee is required. The valid values are: <ul style="list-style-type: none"> • Bill Period • Frequency Note: This field appears when the checkbox for Recurring Fee field is selected.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** – This section displays the bill period for the recurring flat fee. It contains the following column:

Column Name	Column Description
Bill Period	Indicates the bill period.

Note: This section appears when the **Recurring Method** is **Bill Period**.

- **Additional Fee Indicator** – This section displays the additional fees which are applicable to one or more line items in the claim pricing rule. It contains the following fields:

Column Name	Column Description
Fee	Indicates the charge type category for the claim pricing rule.
Claim Additional Fee Indicator	Indicates the charge type sub category for the claim pricing rule.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the pricing rule type.
Delete	Used to delete the pricing rule type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears when you click the **Broadcast** () icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as specific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

Note: You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
 - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
 - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
 - Billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Note: You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Claim Pricing Rule Type

Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.
- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	Note: You can create a claim pricing rule type using the Claim Pricing Rule Type business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Claim Pricing Rule Type** business object.
5. Click **OK**.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Indicate the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based 	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.

13. Define characteristics for the pricing rule type, if required.
14. Add claim templates in the claim pricing rule type, if required.
15. Add the claim-specific data in the pricing rule type, if required.
16. Define claim handling fees indicator in the claim pricing rule type, if required.
17. Click **Save**.

The claim pricing rule type is defined.

Adding Related Pricing Rule Types in a Primary Pricing Rule Type

Prerequisites

To add related pricing rule types in a primary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.

Procedure

To add related pricing rule types in a primary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a primary pricing rule type.

Note:

This section appears when you have chosen the **Primary** from the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) Note: This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.	Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility .	No

- Enter the required details in the **Related Pricing Rule Types** section.
- If you want to define more than one related pricing rule type for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the primary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

- Click **Save**.

The related pricing rule types are added for the primary pricing rule type.

Defining Transaction Field Mapping in a Primary Pricing Rule Type

Prerequisites

To define the transaction field mapping for a primary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To define the transaction field mapping for a primary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining a primary pricing rule type.

Note:

This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description
Source System	<p>Used to specify the external system from where the transaction data is mapped.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Source System field, the Transaction Field Search window appears.</p> <p>On specifying the source system, the description of the source system appears corresponding to the Source System field.</p>
Parameter 1.....Parameter 4	<p>Used to specify the parameters mapped for the transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Parameter 1, Parameter 2, Parameter 3, Parameter 4 field, the Transaction Field Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Parameter 1, Parameter 2, Parameter 3, Parameter 4 field respectively.</p>
Incurred Date	<p>Used to specify the date incurred for transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Incurred Date field, the Transaction Field Search window appears.</p> <p>On specifying the incurred date, the description of the incurred date appears corresponding to the Incurred Date field.</p>
Paid Date	<p>Used to specify the transaction paid date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Paid Date field, the Transaction Field Search window appears.</p> <p>On specifying the paid date, the description of the paid date appears corresponding to the Paid Date field.</p>
Source of Funds	<p>Used to specify the source of funds used to make the payment.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Source of Funds field, the Transaction Field Search window appears.</p> <p>On specifying the source of funds, the description of the source of funds appears corresponding to the Source of Funds field.</p>

Field Name	Field Description
Composite	<p>Used to specify the composite transaction data.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Composite field, the Transaction Field Search window appears.</p> <p>On specifying the composite, the description of the composite appears corresponding to the Composite field.</p>
Claim Disposition	<p>Used to specify the disposition of the claims transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Claim Disposition field, the Transaction Field Search window appears.</p> <p>On specifying the claim disposition, the description of the claim disposition appears corresponding to the Claim Disposition field.</p>
Provider's Tax Identification Number	<p>Used to specify the tax identification number of the provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Provider's Tax Identification Number field, the Transaction Field Search window appears.</p> <p>On specifying the provider's tax identification number, the description of the provider's tax identification number appears corresponding to the Provider's Tax Identification Number field.</p>
Member ID	<p>Used to specify the member ID.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Member ID field, the Transaction Field Search window appears.</p> <p>On specifying the member ID, the description of the member ID appears corresponding to the Member ID field.</p>
Main Subscriber ID	<p>Used to specify the customer ID.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Main Subscriber ID field, the Transaction Field Search window appears.</p> <p>On specifying the main subscriber ID, the description of the main subscriber ID appears corresponding to the Main Subscriber ID field.</p>

Field Name	Field Description
Run-in Identifier	Used to specify the run-in identifier.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Run-in Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the run-in identifier, the description of the run-in identifier appears corresponding to the Run-in Identifier field.</p>
Runout Identifier	Used to specify the runout identifier.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Runout Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the runout identifier, the description of the runout identifier appears corresponding to the Runout Identifier field.</p>
Third Party Identifier	Used to specify the third party identifier to determine that the claim transaction is received from an external source system while defining a claim pricing rule type.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Third Party Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the third party identifier, the description of the third party identifier appears corresponding to the Third Party Identifier field.</p>
Coverage Start Date	Used to specify the transaction coverage start date.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Coverage Start Date field, the Transaction Field Search window appears.</p> <p>On specifying the coverage start date, the description of the coverage start date appears corresponding to the Coverage Start Date field.</p>
Coverage End Date	Used to specify the transaction coverage end date.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Coverage End Date field, the Transaction Field Search window appears.</p> <p>On specifying the coverage end date, the description of the coverage end date appears corresponding to the Coverage End Date field.</p>

Field Name	Field Description
Retroactivity Indicator	Used to specify information of the retroactivity indicator.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Retroactivity Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the retroactivity indicator, the description of the retroactivity indicator appears corresponding to the Retroactivity Indicator field.</p>
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Network Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the network indicator, the description of the network indicator appears corresponding to the Network Indicator field.</p>
Covered Charged Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Covered Charged Amount field, the Transaction Field Search window appears.</p> <p>On specifying the covered charged amount, the description of the covered charged amount appears corresponding to the Covered Charged Amount field.</p>
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Discount Savings Amount field, the Transaction Field Search window appears.</p> <p>On specifying the discount savings amount, the description of the discount savings amount appears corresponding to the Discount Savings Amount field.</p>

Field Name	Field Description
Accumulation Only Identifier	<p>Used to map to a transaction field which indicates that the claim transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the claim transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the claim transaction.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Accumulation Only Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the accumulation only identifier, the description of the accumulation only identifier appears corresponding to the Accumulation Only Identifier field.</p>
Billing Eligibility Identifier	<p>Used to specify whether the transaction is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Billing Eligibility Identifier field, the Transaction Field Search window appears.</p> <p>On specifying the billing eligibility identifier, the description of the billing eligibility identifier appears corresponding to the Billing Eligibility Identifier field.</p>
Transaction Upload Date	<p>Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Transaction Upload Date field, the Transaction Field Search window appears.</p> <p>On specifying the transaction upload date, the description of the transaction upload date appears corresponding to the Transaction Upload Date field.</p>
Claim Handling Fees Indicator	<p>Used to specify the claim handling fees which are applicable to one or more line items in the claim pricing rule.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Claim Handling Fees Indicator field, the Transaction Field Search window appears.</p> <p>On specifying the claim handling fees indicator, the description of the claim handling fees indicator appears corresponding to the Claim Handling Fees Indicator field.</p>

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.

The transaction field mapping is defined for the primary pricing rule type.

Associating Algorithms with a Pricing Rule Type**Prerequisites**

To associate algorithms with a pricing rule type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate algorithms with a pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining a pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event on which the algorithm is executed. The valid values are: <ul style="list-style-type: none"> Account and Price Item Derivation Accumulation Billable Charge Post-Processing Accumulation Billable Charge Pre-Processing Accumulation Post-Processing Accumulation Pre-Processing Bill After Date Determination Bill Group Derivation Final Settlement Derivation Billable Charge Creation Pre-Processing Billable Charge Creation Post-Processing Pricing Rule Post-Processing Pricing Rule Pre-Processing Premium Calculation Transaction Validation 	Yes Note: This field is required when you are defining an algorithm for the pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) Note: This field is required when you are defining an algorithm for the pricing rule type.
Algorithm	Used to specify the algorithm. Note: If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are defining an algorithm for the pricing rule type.

- Enter the required details in the **Algorithms** section.
- If you want to associate more than one algorithm for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.
The algorithms are associated with the pricing rule type.

Defining Additional Data for a Pricing Rule Type**Procedure**

To define additional data for a pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining a pricing rule type.

Note: This section does not appear when the Pricing Rule Type Category is Flat Fees .
--

The **Additional Data** section contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Used to indicate whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Eligible for Specific Stop-Loss	Used to whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: This field appears when the option selected for the Pricing Rule Type Category is Claim, Retention Type Claim Based, or Retention Type Enrollment Based.</p>
Run-in Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received during the run-in period of the policy.
Third Party Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received from an external source system.
Accumulation Only Identifier Value	Used to specify the identifier value to determine that the ancillary transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.
Rule Based Price Item Eligibility Field	Used to specify the price item eligibility field that satisfies the pricing rule.
Rule Based Related Pricing Rule Type Eligibility Field	Used to specify the pricing rule type eligibility field that satisfies the pricing rule.
Rule Based Eligibility Value	Used to specify the eligibility value that satisfies the pricing rule.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined for the pricing rule type.

Adding Price Items in a Pricing Rule Type

Prerequisites

To add price items in a pricing rule type, you should have:

- Price items defined in the application
- Rate Options defined in the application
- Invoice Type defined in the application

Procedure

To add price items in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a pricing rule type.

The **Price Items** section contains the following columns in a grid:

Column Name	Column Description						
Price Item	<p>Used to specify the price item information.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Items field.</p>						
Rate Option	<p>On clicking the Add (+) icon, the following column appears in a grid:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td> <p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop Loss Ancillary Claims Discount Share Enrollment Based Retention Per Member Per Month Enrollment Based Retention Per Subscriber Per Month Flat Dollar Per Claim - Aggregate Daily Percentage of Claim - Aggregate Daily Retention Claim Percentage Based Service Agreement Retention - Aggregate Monthly Specific Stop Loss TFM Claim Weekly </td> <td> <p>Yes (Conditional)</p> <p>Note: This field is required when the Price Item field is present.</p> </td> </tr> </tbody> </table> <p>Note: The Rate Option column does not appear when the Pricing Rule Type Category is Flat Fees.</p>	Column Name	Column Description	Mandatory (Yes or No)	Rate Option	<p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop Loss Ancillary Claims Discount Share Enrollment Based Retention Per Member Per Month Enrollment Based Retention Per Subscriber Per Month Flat Dollar Per Claim - Aggregate Daily Percentage of Claim - Aggregate Daily Retention Claim Percentage Based Service Agreement Retention - Aggregate Monthly Specific Stop Loss TFM Claim Weekly 	<p>Yes (Conditional)</p> <p>Note: This field is required when the Price Item field is present.</p>
Column Name	Column Description	Mandatory (Yes or No)					
Rate Option	<p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop Loss Ancillary Claims Discount Share Enrollment Based Retention Per Member Per Month Enrollment Based Retention Per Subscriber Per Month Flat Dollar Per Claim - Aggregate Daily Percentage of Claim - Aggregate Daily Retention Claim Percentage Based Service Agreement Retention - Aggregate Monthly Specific Stop Loss TFM Claim Weekly 	<p>Yes (Conditional)</p> <p>Note: This field is required when the Price Item field is present.</p>					

Column Name	Column Description		
Bill To Account	On clicking the Add (+) icon, the following columns appear in a grid:		
	Column Name	Column Description	Mandatory (Yes or No)
	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes (Conditional) Note: This field is required when you are defining the invoice type.
Invoice Type	Used to specify the invoice type for the price item. Note: On clicking the Search (🔍) icon that appears corresponding to the Invoice Type field, the Invoice Type Search window appears.	No	

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one rate option to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a rate option from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the rate option.

- If you want to define more than one invoice types to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a invoice type from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the invoice type.

- Click **Save**.

The price items are added for the pricing rule type.

Adding a Price Item Parameter in a Pricing Rule Type

Prerequisites

To add a price item parameter in a pricing rule type, you should have:

- Parameters defined in the application
- Transaction field defined in the application
- Price item parameter associated with the price item

Procedure

To add a price item parameter in a pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pricing rule type.

The **Price Item Parameters** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining the pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are defining the pricing rule type.</p>
Transaction Field	Used to specify the transaction field from where the data should be retrieved.	Yes (Conditional)
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field.</p>	<p>Note: This field is required once the price item parameter is specified.</p>
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used in the accumulation criteria.	No
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding or not.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.
A price item parameter is added for the pricing rule type.

Defining a Characteristic for a Pricing Rule Type

Prerequisites

To define the characteristics for a pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining a pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for the pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the pricing rule type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the pricing rule type.

Adding Claim Templates in a Claim Pricing Rule Type

Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

The **Claim Templates** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template.	Yes (Conditional)
		Note: This field is required when you are defining a claim template for the pricing rule type.

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim template from the pricing rule type, click the **Delete (🗑)** icon corresponding to the claim template.

4. Click **Save**.

The claim templates are defined for the pricing rule type.

Adding the Claim-Specific Data in a Pricing Rule Type

Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Claim-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. Note: On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field.	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge lien type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.

The Claim-Specific Additional data is added in the pricing rule type.

Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type

Procedure

To add claim handling fees indicator in a claim pricing rule type:

1. Ensure that the **Claim Handling Fees Indicator** section is expanded when you are defining or editing a claim pricing rule type.

The **Claim Handling Fees Indicator** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to indicate the charge type category for the claim pricing rule type.	Yes (Conditional) Note: This field is required while adding claim handling fees indicator in a claim pricing rule.
Fee Indicator	Used to specify the charge type sub category for the claim pricing rule type.	No

- Enter the required details in the **Claim Handling Fees Indicator** section.
- If you want to define more than one claim handling fees indicator for the claim pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim handling fees indicator from the claim pricing rule type, click the **Delete (🗑)** icon corresponding to the fee.

- Click **Save**.

The claim handling fees indicator is defined for the claim pricing rule type.

Editing a Claim Pricing Rule Type

Prerequisites

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> Claim Pricing Rule Aggregate Stop-Loss (ASL) Pricing Rule Specific Stop-Loss (SSL) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Displays the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based 	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Add, edit, or remove claim templates in the claim pricing rule type, if required.
14. Modify the claim-specific data in the pricing rule type, if required.
15. Click **Save**.

The changes made to the claim pricing rule type are saved.

Deleting a Claim Pricing Rule Type

Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.

A message appears confirming whether you want to delete the claim pricing rule type.

Note: You can delete a claim pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The claim pricing rule type is deleted.

Defining a Claim Pricing Rule for a Parent Customer

Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Defining a Characteristic for a Claim Pricing Rule

Prerequisites

To define a characteristic for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a claim pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the claim pricing rule.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the claim pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the claim pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the claim pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the claim pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the claim pricing rule.

How to edit the claim pricing rule for a parent customer	Editing a Claim Pricing Rule of a Parent Customer on page 2562

Editing a Claim Pricing Rule of a Parent Customer

Prerequisites

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees for the lines items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the lines items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent customer information
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
	Note: The pricing start date cannot be later than the pricing end date.	
		Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a parent customer.	Yes (Conditional)
		Note: This field is required when you are reapplying for a claim template.

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Modify the details in the **Main** section, if required.
6. Modify the claim handling fees specified for the line items in a claim pricing rule, if required.
7. Modify the markup or markdown values for the line items in a claim pricing rule, if required.
8. Modify the line items in a claim pricing rule, if required.
9. Add, edit, or remove characteristics for a claim pricing rule, if required.
10. Click **Save**.

The changes made to a claim pricing rule for a parent customer are saved.

Editing a Claim Pricing Rule of a Bill Group

Prerequisites

To edit a claim pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
The **Pricing Information** tab appears.
4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** () icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for the bill group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees on the lines items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values on the lines items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
	Note: The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

6. Modify the details in the **Main** section, if required.
7. Modify the claim handling fees specified on the line items in a claim pricing rule, if required.
8. Modify the markup or markdown values on the line items in a claim pricing rule, if required.
9. Modify the line items in a claim pricing rule, if required.

10. Add, edit, or remove the characteristics for a claim pricing rule, if required.

11. Click **Save**.

The changes made to a claim pricing rule for a bill group are saved.

Viewing a Claim Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose claim pricing rule bill group details you want to view.

5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Claim** – Displays the pricing rule claim details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the claim pricing rule.
 - **Claim Handling Fees** – Displays the claim handling fees specified for the lines items in the claim pricing rule.
 - **Markup or Markdown Values** – Displays the markup or markdown values for the lines items in the claim pricing rule.
 - **Line Items** – Displays the associated line items eligible for billing.
 - **Characteristics** – Displays the characteristics defined for the claim pricing rule.

6. View the basic details of claim pricing rule in the **Main** section.

7. View the claim handling fees specified for the line items in the **Claim Handling Fees** section.
8. View the markup or markdown values for the line items in the **Markup or Markdown Values** section.
9. View the associated line items eligible for billing in the **Line Items** section.
10. View the characteristics of the claim pricing rule in the **Characteristics** section.

Deleting a Claim Pricing Rule of a Bill Group

Procedure

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing rule type that you want to delete.

A message appears confirming whether you want to delete the claim pricing rule.

4. Click **OK**.

The claim pricing rule of a bill group is deleted.

Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

Note: The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
 - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
 - SSL billable charge line type using which you want to create specific stop-loss billable charges.
 - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
 - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - Immediately – If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
 - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
 - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
 - Yearly – If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. lasered amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasering information.

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	Note: You can create a specific stop-loss pricing rule type using the Specific Stop-Loss (SSL) Pricing Rule Type business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Indicate the pricing rule type business object for specific stop-loss.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the SSL-Specific data in the pricing rule type, if required.
- Click **Save**.

The specific stop-loss pricing rule type is defined.

Adding the SSL-Specific Data in a Pricing Rule Type

Procedure

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **SSL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SSL Billable Charge Line Type	Used to specify the Specific Stop-Loss billable charge line type. Note: On clicking the Search (🔍) icon that appears corresponding to the SSL Billable Charge Line Type field, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the SSL Billable Charge Line Type field.	No

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	<p>Used to specify the claim billable charge line type for domestic provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Domestic Provider Claim Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Claim Billable Charge Line Type field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	No
Rule Based Domestic Provider Claim Eligibility Field	<p>Used to specify the rule based domestic provider for claim eligibility field.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p>	No

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.

The SSL-Specific Additional data is added in the pricing rule type.

Editing a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

Procedure

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Displays the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based 	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the SSL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the specific stop-loss pricing rule type are saved.

Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the specific stop-loss pricing rule type that you want to delete.
A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

Note: You can delete a specific stop-loss pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The specific stop-loss pricing rule type is deleted.

Defining a Specific Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Procedure

To define a specific stop-loss pricing rule for a parent customer:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss.	

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Pricing Start Date	Used to specify the pricing rule start date.	Yes
	Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy Start Date .	
Pricing End Date	Used to specify the pricing rule end date.	Yes
	Note: This field is enabled when an option from Price Item field is selected. By default it displays the Policy End Date .	

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item.	Yes
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	Yes
	Note: This field is enabled when an option from Price Item field is selected.	
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber 	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is stamped on the specific stop-loss billable charge. • Never – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is stamped on the specific stop-loss billable charge. • Yearly – The bill after date in the specific stop-loss billable charge is set to the pricing end date. 	Yes
	Note: This field is disabled when you select Pricing and Billing option from the Pricing Rule Usage field.	

Field Name	Field Description	Mandatory (Yes or No)
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer.	Yes
	Note: This field is enabled for selection when an option from Price Item field is selected.	

- Enter the required details in the **Main** section.
- Define accumulation parameters in a specific stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

- Define run-in parameters in a specific stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

- Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

Note: The **Lasering and Exclusion** section appears when an option from the **Price Item** field is selected.

- Define characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The specific stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on which you want to accumulate the specific stop-loss.	Yes
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Incurred End Date	Used to specify the incurred end date based on which you want to accumulate the specific stop-loss.	Yes
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
SSL Payout Limit	Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the specific stop-loss.	Yes
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Paid End Date	Used to specify the paid end date based on which you want to accumulate the specific stop-loss.	Yes
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date.	Yes
	Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	
Compute Aggregate SSL (ASSL)	Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the C1-BCSSL batch run for each bill group. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
ASSL Credit Count	Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account.	Yes
	Note: This field is enabled when you select Yes option from the Compute Aggregate SSL (ASSL) field.	
ASSL Limit	Note: This field is enabled when you select Yes option from the Compute Aggregate SSL (ASSL) field.	Yes

- Enter the required details in the **Accumulation Parameters** section.
- Click **Save**.

The accumulation parameters are defined in the specific stop-loss pricing rule.

Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define run-in parameters in a specific stop-loss pricing rule:

- Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing	No
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the specific stop-loss pricing rule.

Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

- Ensure that the **Lasering and Exclusion** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Lasering and Exclusion** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Level Identifier	Used to specify the lasering or exclusion level identifier.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Lasering or Exclusion Level	Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: <ul style="list-style-type: none"> Main Subscriber Member Provider 	Yes
Exception Type	Used to indicate the exception type. The valid values are: <ul style="list-style-type: none"> Lasering Exclusion 	Yes
	Note: This field displays Exclusion option and is disabled on selection of Provider option from the Lasering or Exclusion Level column.	
Comments	Used to specify the comments.	No
Lasered Amount	Used to specify the lasered amount.	Yes (Conditional)
	Note: This field is disabled when Exclusion option is selected from the Exception Type column.	Note: This column is mandatory when Lasering option is selected from the Exception Type column.

- Enter the required details in the **Lasering and Exclusion** section.
- If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete (🗑)** icon corresponding to the level identifier.

- Click **Save**.

The lasering and exclusion information is defined in a specific stop-loss pricing rule.

Defining a Characteristic for a Specific Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the specific stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit a specific stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

Procedure

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the

View () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Pricing Start Date	Used to specify the pricing rule start date.	Yes
Pricing End Date	Used to specify the pricing rule end date.	Yes
Rate Option	Indicates the rate option used for defining the specific stop-loss pricing rule for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber 	
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCSSL batch is stamped on the specific stop-loss billable charge. • Never – • Yearly – The bill after date in the specific stop-loss billable charge is set to the pricing end date. <p>Note: This field is disabled when you select Pricing and Billing option from the Pricing Rule Usage field.</p>	Not applicable
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.
9. Click **Save**.

The changes made to a specific stop-loss pricing rule for a parent customer are saved.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group**Prerequisites**

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss.	
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes
	Note: Specific stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing.	

- Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the specific stop-loss pricing rule.
- Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- Pricing Information** – Used to define stop-loss eligibility for claim line items.
- Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	Note: Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Yes
	Note: This field is enabled for selection when an option from Price Item field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	Note: This field displays the Policy Start Date .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	Note: This field displays the Policy End Date .	
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item.	Yes
	Note: Rate options in this field appears for selection, when you select an option from the Price Item field.	

- Enter the required details in the **Main** section.
- Define accumulation criteria in a specific stop-loss pricing rule, if required.

<p>Note:</p> <p>The Accumulation Criteria section appears when an option from Parent Customer's SSL Pricing Rules field is selected.</p> <p>You can also define the Accumulation Criteria for each rule in a specific stop-loss pricing rule.</p>

- Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule**Procedure**

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss.	Not applicable
Run-In Maximum Limit	Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.	Yes
	Note: This field is enabled when the start date and end date selected from the Parent Customer's SSL Pricing Rules field of Main section is greater than today's date.	

Field Name	Field Description	Mandatory (Yes or No)									
SSL Limit	Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.	Yes									
Price Item	Used to specify the price item information. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.	No									
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="532 611 1024 1791"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify the value of the parameter. Note: On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</td> <td>No</td> </tr> </tbody> </table>	Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.	No	Parameter Value	Used to specify the value of the parameter. Note: On selecting the Price Item Parameter , the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.	No	No
Column Name	Column Description	Mandatory (Yes or No)									
Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.	No									
Parameter Value	Used to specify the value of the parameter. Note: On selecting the Price Item Parameter , the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.	No									

- Enter the required details in the **Accumulation Criteria** section.

- If you want to define more than one price item in the accumulation group, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The accumulation criteria is defined in the specific stop-loss pricing rule.

- You can define accumulation rules for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

Procedure

To define the stop-loss eligibility for claim line items:

- Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating specific stop-loss.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
 - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

Note: The **Reapply Claim Template** button appears when you are editing a specific stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude SSL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for specific stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.

3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.

The claim line items are defined in the specific stop-loss pricing rule.

6. You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create a specific stop-loss pricing rule using the Pricing Rule Type for specific stop-loss.	
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Yes
	Note: Specific stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out End Date is missing.	

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	Note: Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Yes
	Note: This field is enabled for selection when an option from Price Item field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item.	Yes
	Note: Rate options in this field appears for selection, when you select an option from the Price Item field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.

Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The changes made to a specific stop-loss pricing rule for a bill group are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.
- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose specific stop-loss pricing rule bill group details you want to view.

- In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the specific stop-loss pricing rule.
 - **Accumulation Criteria** – Displays the accumulation criteria in a specific stop-loss pricing rule.
 - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
 - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
- View the basic details of specific stop-loss pricing rule in the **Main** section.
 - View the accumulation criteria in the **Markup or Markdown Values** section.
 - View the stop-loss eligibility for claim line items in the **Line Items** section.
 - View the characteristics of the specific stop-loss pricing rule in the **Characteristics** section.

Deleting a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To delete a specific stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to delete.
A message appears confirming whether you want to delete the specific stop-loss pricing rule.
- Click **OK**.

The specific stop-loss pricing rule is deleted.

Aggregate Stop-Loss (ASL) Pricing

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

Note: The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

- Additional information, such as:
 - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
 - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
 - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
 - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

- Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
- ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - Immediately – If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
 - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
 - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
 - Yearly – If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
 - Policy Based Limit
 - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
 - Enrollment Based Limit
 - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
 - Policy Based Limit
 - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
 - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

Note: The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

Procedure

To define an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. Note: You can create an aggregate stop-loss pricing rule type using the Aggregate Stop-Loss (ASL) Pricing Rule Type business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
- Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- Algorithms** – Used to define the algorithms used for the pricing rule type.
- Additional Data** – Used to specify the additional information about the pricing rule type.
- Price Items** – Used to define the price items assigned to the pricing rule type.
- Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- Characteristics** – Used to define the characteristics for the pricing rule type.
- ASL-Specific Additional Data** – Used to specify the aggregate stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> Claim Pricing Rule Aggregate Stop-Loss (ASL) Pricing Rule Specific Stop-Loss (SSL) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the ASL-Specific additional data in the pricing rule type, if required.
- Click **Save**.

The aggregate stop-loss pricing rule type is defined.

Adding the ASL-Specific Data in a Pricing Rule Type

Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **ASL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
ASL Billable Charge Line Type	Used to specify the Aggregate Stop-Loss billable charge line type. Note: On clicking the Search (🔍) icon that appears corresponding to the ASL Billable Charge Line Type field, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the ASL Billable Charge Line Type field.	No

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	<p>Used to specify the claim billable charge line type for domestic provider.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Domestic Provider Claim Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Claim Billable Charge Line Type field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Billing Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Billing Eligibility Field field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon that appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p>	
ASL Limit Price Item	Used to specify the Aggregated Stop-Loss limit price item.	No

2. Enter the required details in the **ASL-Specific Additional Data** section.
3. Click **Save**.

The ASL-Specific Additional data is added in the pricing rule type.

Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **ASL-Specific Additional Data** – Used to specify the aggregate stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Displays the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based 	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the aggregate stop-loss pricing rule type are saved.

Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

Note: You can delete an aggregate stop-loss pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The aggregate stop-loss pricing rule type is deleted.

Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the aggregate stop-loss pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregation stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Yes
	Note: This field is enabled when you select an option from the Price Item field.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	Note: By default it displays the Policy Start Date .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	Note: This field displays date when you select the date range from Parent Customer's SSL or ASL Pricing Rules .	

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item.	Yes
	Note: Options appears in this field when you select an option from the Price Item field.	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Monthly – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Yearly – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. 	Yes
	Note: This field is enabled when you select an option from the Price Item field.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: This field is enabled when you select an option from the Price Item field.	

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss.	Not applicable
ASL Credit Account	Used to indicate the account in which the aggregate stop-loss amount should be credited. Note: This field becomes read when you select a date range from the Parent Customer's SSL or ASL Pricing Rules .	Not applicable
Incurred Start Date	Displays the incurred start date based on which you want to accumulate the aggregate stop-loss. Note: The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules . Incurred Start Date is equal to the pricing rule start date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Incurred End Date	<p>Displays the incurred end date based on which you want to accumulate the aggregate stop-loss.</p> <p>Note:</p> <p>The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules.</p> <p>Incurred End Date is equal to the pricing rule end date.</p>	Not applicable
ASL Payout Limit	Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level.	Yes
Paid Start Date	<p>Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss.</p> <p>Note:</p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules.</p> <p>Paid Start Date is equal to the pricing rule start date.</p>	Yes
Paid End Date	<p>Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.</p> <p>Note:</p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the Parent Customer's SSL or ASL Pricing Rules.</p> <p>Paid End Date is equal to the pricing rule end date.</p>	Yes
Settlement Days	<p>Used to indicate the settlement days which helps to calculate the settlement date.</p> <p>Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
ASL Limit (During Policy Period)	Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater) 	Yes
ASL Limit (During Settlement Period)	Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater) 	Yes
Minimum ASL Limit	Used to specify the minimum ASL limit.	Yes (Conditional)
	Note: This field is enabled when you select the Enrollment Based or Minimum ASL Limit (Whichever is Greater) option from the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.	Note: This field is required when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) is Enrollment Based or Minimum ASL Limit (Whichever is Greater) .
Percentage of Enrollment Based Limit	Used to specify the percentage of enrollment based limit.	Yes (Conditional)
	Note: This field is enabled when you select the Percentage of Enrollment Based Limit option from ASL Limit (During Policy Period) field.	Note: This field is required when the ASL Limit (During Policy Period) is Percentage of Enrollment Based Limit .
Policy Based Limit	Used to specify the policy based limit.	Yes (Conditional)
	Note: This field is enabled when you select the Policy Based Limit option from the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.	Note: This field is required when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) is Policy Based Limit .

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the aggregated stop-loss pricing rule.

Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule**Prerequisites**

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

Procedure

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing	No
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	
Run-In Maximum Limit	Used to specify the maximum limit of the run-in parameters.	Yes
	Note: This field is enabled when you select the checkbox for the Run-In field.	

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the aggregate stop-loss pricing rule.

Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for an aggregate stop-loss pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you v

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Indicates the settlement frequency to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> • Immediately – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • Manually (At Required Intervals) – The bill after date specified in the Manual Settlement Bill After Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Monthly – The bill after date specified in the Manual Settlement Date parameter while executing the C1-BCASL batch is stamped on the aggregate stop-loss billable charge. • Yearly – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. 	Yes
Underwriter Review	<p>Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule parent customer details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Aggregate Stop-Loss** – Displays the pricing rule aggregate stop-loss details for a parent customer. It contains the following sections:
 - **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
 - **Accumulation Parameters** – Displays the accumulation parameters based on which accumulated aggregate stop-loss for the transactions are processed in the run-in or active period of the policy.
 - **Run-In Parameters** – Displays the run-in parameters in the run-in period of the policy.
 - **Characteristics** – Displays the characteristics defined for the aggregate stop-loss pricing rule.
5. View the basic details of aggregate stop-loss pricing rule in the **Main** zone.
 6. View the accumulated parameters in the **Accumulation Parameters** zone.
 7. View the run-in parameters in the **Run-In Parameters** zone.
 8. View the characteristics of the aggregate stop-loss pricing rule in the **Characteristics** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes
	Note: Aggregate stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing.	

4. Click OK.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	Note: Once an option is selected for this field, the field appears disabled.	

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Yes
	Note: This field is enabled for selection when an option from Price Item field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	Note: This field displays the Policy Start Date .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	Note: This field displays the Policy End Date .	
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes
	Note: Rate options in this field appears for selection, when you select an option from the Price Item field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

Note:
The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.
You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:
The **Pricing Information** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.
You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss.	Not applicable
Price Item	Used to specify the price item information. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.	No

Field Name	Field Description	Mandatory (Yes or No)									
Price Item Parameters	This field contains the following columns:	No									
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify the value of the parameter. Note: On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</td> <td>No</td> </tr> </tbody> </table>		Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.	No	Parameter Value	Used to specify the value of the parameter. Note: On selecting the Price Item Parameter , the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.	No
	Column Name		Column Description	Mandatory (Yes or No)							
Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization. Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.	No									
Parameter Value	Used to specify the value of the parameter. Note: On selecting the Price Item Parameter , the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.	No									

- Enter the required details in the **Accumulation Criteria** section.
- If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

5. Click **Save**.

The accumulation criteria is defined in the aggregate stop-loss pricing rule.

6. You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating aggregate stop-loss.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
 - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

Note: The **Reapply Claim Template** button appears when you are editing an aggregate stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude ASL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for aggregate stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.

5. Click **Save**.

The claim line items are defined in the aggregate stop-loss pricing rule.

6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group**Prerequisites**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create an aggregate stop-loss pricing rule using the Pricing Rule Type for aggregate stop-loss.	
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Yes
	Note: Aggregate stop-loss pricing rule cannot be created for Runout or Post Runout policy status where the policy run out End Date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	Note: Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Yes
	Note: This field is enabled for selection when an option from Price Item field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes
	Note: Rate options in this field appears for selection, when you select an option from the Price Item field.	

- Enter the required details in the **Main** section.
- Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to view.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group

Procedure

To view an aggregate stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to the bill group whose aggregate stop-loss pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Aggregate Stop-Loss** – Displays the pricing rule aggregate stop-loss details for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
 - **Accumulation Criteria** – Displays the accumulation criteria in an aggregate stop-loss pricing rule.
 - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
 - **Characteristics** – Displays the characteristics defined for the aggregate stop-loss pricing rule.
6. View the basic details of aggregate stop-loss pricing rule in the **Main** section.
 7. View the accumulated criteria in the **Accumulation Criteria** section.
 8. View the stop-loss eligibility for claim line items in the **Pricing Information** section.
 9. View the characteristics of the aggregate stop-loss pricing rule in the **Characteristics** section.

Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group

Procedure

To delete an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule you want to delete.
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule.
4. Click **OK**.
The aggregate stop-loss pricing rule is deleted.

Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
 - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
 - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.

- Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to Yes, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

Note: If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Claim Based Pricing Rule Type

Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type claim based pricing rule type Note: You can create a retention type claim based pricing rule type using the Claim Pricing Rule Type business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Retention Type Claim Based Pricing Rule Type** business object.
- Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the retention type claim based pricing rule type.
- Algorithms** – Used to associate the algorithms with the retention type claim based pricing rule type.
- Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- Price Items** – Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- Claim Disposition Details** – Used to define the disposition details of the claims transaction.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the retention type claim based pricing rule type.	Yes
Description	Used to specify the description for the retention type claim based pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the retention type claim based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the retention type claim based pricing rule business object. The valid value is: <ul style="list-style-type: none"> Retention Type Claim Based Pricing Rule 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type.	Not applicable
	Note: You must not select the Primary option while defining the retention type claim based pricing rule type.	
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Retention Type Claim Based 	Yes

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
- Associate the following algorithms with the retention type claim based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Pricing Rule Post Processing	C1-PRCRETPOS	C1-PRCRETPOS	Retention Claim Based - Post Processing
Transaction Validation	C1-RETCLMVAL	C1-RETCLMVAL	Retention Claim Based - Validation

- Define additional data for the retention type claim based pricing rule type.
- Add the required price items for retention type claim based pricing rule type.
- Add price item parameters for the retention type claim based pricing rule type.
- Define characteristics for the retention type claim based pricing rule type.
- Add the claim disposition details for retention type claim based pricing rule type.
- Click **Save**.

The retention type claim based pricing rule type is defined.

Adding Claim Based Disposition Details in a Pricing Rule Type

Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining or editing for a primary pricing rule type.

The **Claim Disposition Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Disposition	Used to specify the type of claim disposition.	No
Disposition Mode	Used to specify the mode of claim disposition.	No

2. Enter the required details in the **Claim Disposition Details** section.

Note:

If the **Claim Disposition** field in the transaction is set to **Yes**, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete** () icon corresponding to the related pricing rule type.

Editing a Retention Type Claim Based Pricing Rule Type

Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRefTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type claim based pricing rule type.

- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the retention type claim based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type claim based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type claim based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for retention type claim based template.
- **Claim-Specific Additional Data** – Used to specify the retention type claim based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Displays the retention type claim based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	
Primary	Used to select the checkbox if the retention type claim based pricing rule type is primary.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss Claim Discounted Agreement Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss 	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

- Modify the details in the **Main** section, if required.
- Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
- Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
- Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
- Modify the additional data for the retention type claim based pricing rule type, if required.
- Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
- Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
- Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
- Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
- Modify the claim-specific data in the retention type claim based pricing rule type, if required.
- Click **Save**.

The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

Deleting a Retention Type Claim Based Pricing Rule Type

Procedure

To delete a retention type claim based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the retention type claim based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the retention type claim based pricing rule type.

Note: You can delete a retention type claim based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The retention type claim based pricing rule type is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values is: <ul style="list-style-type: none"> • Retention Type Claim Based Pricing Rule 	Yes
		Note: If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type claim based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type claim based pricing rule.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: <ul style="list-style-type: none"> • Admin Fee 	Yes
Pricing Start Date	Used to specify the start date from when the retention type claim based pricing will be effective for the price item.	Yes (Conditional)
	Note: The pricing start date cannot be later than the pricing end date.	Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type claim based pricing will be effective for the price item.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	

Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	<p>Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is:</p> <ul style="list-style-type: none"> Flat Dollar Per Claim - Agg Daily <p>On selecting an option from the Rate Option field, following fields appear in a grid:</p> <table border="1" data-bbox="516 453 1256 1667"> <thead> <tr> <th data-bbox="516 453 667 569">Field Name</th> <th data-bbox="667 453 1110 569">Field Description</th> <th data-bbox="1110 453 1256 569">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="516 569 667 1100">Price Item Parameter</td> <td data-bbox="667 569 1110 1100"> <p>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</p> <div data-bbox="667 688 1110 1087" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the fee for the price item parameter.	

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer.

7. Add the required details in the main and characteristics section.

8. Click **Save**.

The retention type claim based pricing rule for a parent customer is defined.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

Editing a Retention Type Claim Based Pricing Rule of a Parent Customer

Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type claim based pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab. It consists of the following zones:

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the retention type claim based pricing rule, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- Customer Information** - Displays information about the parent customer for whom the retention type claim based pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer.

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
	Note: The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	Note: The pricing end date cannot be earlier than the pricing start date.

Defining a Retention Type Claim Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRefTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule.	Yes
	Note: Select the Retention Type Claim Based Pricing Rule Type option, as the pricing rule type.	Note: If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	No
	Note: Select the pricing group option when the retention type claim based pricing rule has to be defined for a bill group using the pricing group.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Note: Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> • Admin Fee 	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> Flat Dollar Per Claim - Agg Daily 	Yes
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group is defined.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> Eligible for Billing 	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

Editing a Retention Type Claim Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRefTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type claim based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.	
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears.	
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: <ul style="list-style-type: none"> • Eligible for Billing 	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group.	No
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

6. Click Save.

The **Approval Transaction Information** pop-up window appears with the Approval Transaction ID that is generated by the application.

7. Click OK

The retention type claim based pricing rule of a bill group is edited.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer

Procedure

To view a retention type claim based pricing rule for a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Claim Based** – Displays Retention Type Claim Based Pricing Rule of a Parent. It contains the following sections:
 - **Main** – Displays the basic details of the retention type claim based pricing rule of a parent customer.
 - **Price Item Parameters** – Displays the price item parameters defined for the retention type claim based pricing rule of a parent customer.

- **Characteristics** – Displays the characteristics defined for the retention type claim based pricing rule of a parent customer.
5. View the basic details of a retention type claim based pricing rule of a parent customer in the **Main** section.
 6. View the price item parameters of a retention type claim based pricing rule of a parent customer in the **Price Item Parameters** section.
 7. View the characteristics of a retention type claim based pricing rule of a parent customer in the **Characteristics** section.

Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

Note: You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.

- Additional information, such as:
 - Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
 - Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.
- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type.	Yes
	Note: You can create a retention type enrollment based pricing rule type using the Claim Pricing Rule Type business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** – Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** – Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the retention type enrollment based pricing rule type business object for the claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss Claim Discount Arrangement Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

- Associate algorithms with the enrollment based pricing rule type, if required.
- Define additional data for the enrollment based pricing rule type, if required.
- Add pricing items in the enrollment based pricing rule type, if required.
- Add price item parameters in the enrollment based pricing rule type, if required.
- Define characteristics for the enrollment based pricing rule type, if required.
- Add the enrollment-specific data, if required.
- Click **Save**.

The retention type enrollment based pricing rule type is defined.

Adding the Enrollment Specific Data in a Pricing Rule Type

Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

Procedure

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are adding enrollment specific data for a primary pricing rule type.

The **Enrollment-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retroactivity Indicator Value	Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type.	No
	Note: Set the retroactivity indicator value to R if the field should be excluded from enrollment based pricing rule types.	

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.

The enrollment-specific data has been added in the pricing rule type.

Defining a retention type enrollment based pricing rule type	Defining a Retention Type Enrollment Based Pricing Rule Type on page 2678

Editing a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRefTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.
- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

Procedure

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the retention type enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** – Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule 	Yes
Business Object	Displays the retention type enrollment based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	
Primary	Used to select the checkbox if the retention type enrollment based pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss 	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.

8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.
13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.
14. Click **Save**.

The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> Retention Type Enrollment Based Pricing Rule 	Yes Note: If the pricing rule type is not selected then the application displays an error message.

- Select the required pricing rule type in the respective field.
- Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Customer Information** - Displays information about the parent customer for whom you are defining the retention type enrollment based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type enrollment based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type enrollment based pricing rule.

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> Administrative Services Fees Administrative Services Fees (No Mandatory Parameters) AS_RET_ENRB Consultant Oversight Fees 	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. Note: The pricing start date cannot be later than the pricing end date.	Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type enrollment based pricing will be effective for the price item. Note: The pricing end date cannot be earlier than the pricing start date.	No

Field Name	Field Description	Mandatory (Yes or No)															
Rate Option	<p>Used to specify the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily <p>On selecting an option from the Rate Option field, following fields appear in a grid:</p> <table border="1" data-bbox="558 642 1227 1969"> <thead> <tr> <th data-bbox="558 642 695 758">Field Name</th> <th data-bbox="695 642 1081 758">Field Description</th> <th data-bbox="1081 642 1227 758">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="558 758 695 905">Price Item Parameter</td> <td data-bbox="695 758 1081 905">Used to specify multiple price item parameters based on which you want to determine the price item utilization.</td> <td data-bbox="1081 758 1227 905">No</td> </tr> <tr> <td data-bbox="558 905 695 1367"></td> <td data-bbox="695 905 1081 1367"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type enrollment based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> Eligible for Billing 	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule.

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type enrollment based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> Eligible for Billing 	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule.

Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type enrollment based pricing rule of a bill group, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type enrollment based pricing rule of a bill group:

- Search for a bill group in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

- Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

- Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Group	Displays the pricing group information.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group Rule Code	Displays the name of the pricing group rule code.	Not applicable
	Note: If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.	
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears.	
Fee	Indicates the fee for the price item parameter.	Not applicable

Note: If you want to define more than one price item parameter information, click the **Add (+)** icon. However, if you want to remove more than one price item or price item bundle, click the **Delete (🗑)** icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: <ul style="list-style-type: none"> • Eligible for Billing 	No

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

Note: If you want to define more than one characteristic, click the **Add** (+) icon. However, if you want to remove more than one characteristic, click the **Delete** (🗑️) icon corresponding to the characteristic.

6. Click **Save**.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

7. Click **OK**

The retention type enrollment based pricing rule of a bill group is edited.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

Procedure

To define a retention type enrollment based pricing rule for a bill group using pricing group:

- Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

- Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> Aggregate Stop-Loss (ASL) Pricing Rule Claim Pricing Rule Discount Arrangement Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule Specific Stop-Loss (SSL) Pricing Rule 	Yes
	Note: Select the Retention Type Enrollment Based Pricing Rule option, as the pricing rule type.	Note: If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	Yes
	Note: You must select a pricing group for the bill group on which a retention type enrollment based pricing rule is to be defined.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes (Conditional)
		Note: Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> Administrative Services Fees Administrative Services Fees (No Mandatory Parameters) AS_RET_ENRB Consultant Oversight Fees 	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	Note: If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	
Rate Option	Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily 	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.	
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the Search icon, the Parameter Value Search screen appears.	
Fee	Used to specify the fee for the price item parameter.	No

Note: If you want to define more than one price item parameter information, click the **Add (+)** icon. However, if you want to remove more than one price item or price item bundle, click the **Delete (🗑)** icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group using a pricing group is defined.

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule for a bill group using a pricing group.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> • Eligible for Billing 	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule for a bill group using a pricing group.

Flat Fee Pricing

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring

flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

Note: You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.

- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
 - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
 - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
 - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.
 - Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.

- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

Defining a One-Time Flat Fee Pricing Rule Type

Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	Note: You can create a one-time flat fee pricing rule type using the Flat Fee Pricing Rule Type business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
	Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees .	
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> Claim Aggregate Stop-Loss Specific Stop-Loss Retention Type Claim Based Retention Type Enrollment Based Flat Fees 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Define billable charge line types in the flat fees pricing rule type, if required.
- Add the flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click Save.

The one-time flat fee pricing rule type is defined.

Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required.	No
	Note: This field cannot be edited.	

Field Name	Field Description	Mandatory (Yes or No)
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: <ul style="list-style-type: none"> • Bill Period • Frequency 	Yes (Conditional)
	<p>Note:</p> <p>This field appears when you select the checkbox for Recurring Fee field.</p> <p>This field cannot be edited.</p>	<p>Note: This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.</p>

- Enter the required details in the **Flat Fees - Specific Additional Data** section.
- Click **Save**.

The Flat Fees - Specific Additional data is added in the pricing rule type.

How to edit a one-time flat fee pricing rule type	Editing a One-Time Flat Fee Pricing Rule Type on page 2711

Editing a One-Time Flat Fee Pricing Rule Type

Prerequisites

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a one-time flat fee pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.

- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule 	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. <div style="border: 1px solid black; padding: 2px;"> Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees 	Yes

Tip: Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Note:

Defining a One-Time Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create a one-time flat fee pricing rule using the Pricing Rule Type for flat fees.	
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Yes

- Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the one-time flat fee pricing rule.
- Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Charge Date	Used to specify the flat fee charge date.	Yes
	Note: By default this field displays the policy start date or policy runout start date.	
Billable Charge Line Type	Used to specify the billable charge line type.	No
	Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	
Bill After Date	Used to specify the bills after the specific date.	No
Fee	Used to specify the amount of flat fee.	Yes
	Note: This field appears when you select the billable charge line type in the Billable Charge Line Type field.	
Bill To Account Override	Used to specify the account to which the bill is override.	Yes
	Note: On clicking the Search (🔍) icon, the Account Search window appears. On specifying the account, the description of the account appears corresponding to the Bill To Account Override field.	

5. Enter the required details in the **Main** section.
6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.

The one-time flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the one-time flat fee pricing rule.

Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a bill period based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for bill period based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a bill period based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	Note: You can create a bill period based recurring flat fee pricing rule using the Pricing Rule Type for flat fees.	
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the bill period based recurring flat fee pricing rule.
- Characteristics** – Used to define the characteristics for the bill period based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. Note: On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Bill Period	Used to indicate the bill period for flat fee.	Yes
Fee	Used to specify the amount of flat fee. Note: This field appears when you select the billable charge line type in the Billable Charge Line Type field.	Yes

Defining a Frequency Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To define a frequency based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. Note: You can create a frequency based recurring flat fee pricing rule type using the Flat Fee Pricing Rule Type business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.

- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule 	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees .	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees 	Yes

6. Enter the required details in the **Main** section.

7. Add the related pricing rule types in the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.

10. Define additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.

12. Add price item parameters in the pricing rule type, if required.

13. Define characteristics for the pricing rule type, if required.

14. Define billable charge line types in the flat fees pricing rule type, if required.

15. Add the flat fees - specific additional data in the pricing rule type, if required.

Note:

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.

The frequency based recurring flat fee pricing rule type is defined.

Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. Note: This field is not enabled for selection if the Pricing Rule Type Category is Flat Fees .	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees 	Yes

Tip: Alternatively, you can edit the details of a frequency based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.

The changes made to the frequency based recurring flat fee pricing rule type are saved.

Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type

Procedure

To delete a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the frequency based recurring flat fee pricing rule type that you want to delete.
A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule type.

Note: You can delete a frequency based recurring flat fee pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a frequency based recurring flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The frequency based recurring flat fee pricing rule type is deleted.

Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details

Procedure

To view the details of a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the frequency based recurring flat fee pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the frequency based recurring flat fee pricing rule type in the **Pricing Rule Type** zone.

Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a frequency based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a frequency based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. Note: You can create a frequency based recurring flat fee pricing rule using the Pricing Rule Type for flat fees.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>On clicking the Search (🔍) icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p> </div>	No
Charge End Date	Used to specify the flat fee charge end date.	No
Frequency	Used to indicate the frequency for flat fee.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the amount of flat fee.	Yes
	Note: This field appears when you select the billable charge line type in the Billable Charge Line Type field.	
Bill To Account Override	Used to specify the account to which the bill is override.	Yes
	Note: On clicking the Search (🔍) icon, the Account Search window appears. On specifying the account, the description of the account appears corresponding to the Bill To Account Override field.	

5. Enter the required details in the **Main** section.
6. Define characteristics for a frequency based recurring flat fee pricing rule, if required.
7. Click **Save**.

The frequency based recurring flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the frequency based recurring flat fee pricing rule.

How to define a characteristic for a frequency based recurring flat fee pricing rule	Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule on page 2747

Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a frequency based recurring flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a frequency based recurring flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the frequency based recurring flat fee pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the frequency based recurring flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the frequency based recurring flat fee pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the frequency based recurring flat fee pricing rule.

Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a frequency based recurring flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.

Procedure

To edit a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (🔗) icon in the **Edit** column corresponding to the pricing rule type for frequency based recurring flat fee whose frequency based recurring flat

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Charge End Date	Used to specify the flat fee charge end date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Frequency	Indicates the frequency for flat fee.	Not applicable
Fee	Used to specify the amount of flat fee.	Yes
	Note: This field appears when you have added the billable charge line type in the Billable Charge Line Type field.	

Field Name	Field Description	Mandatory (Yes or No)
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the frequency based recurring flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a frequency based recurring flat fee pricing rule, if required.
6. Click **Save**.

Note:

If **Fee** is modified then,

- The frequency based recurring flat fee is saved as a one time charge process.

If **Charge Start Date** is modified then it checks whether bill segment is already created for a period which is not available for the updated duration then,

- Bill segment is deleted and existing billable charge is updated.
- For recurring flat fee bill segments are not created or is in cancelled status.

Note: The modified charge start date should be a future date and not past date.

The changes made to a frequency based recurring flat fee pricing rule for a bill group are saved.

Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360^o Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

Note: You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.

- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF_CHAR_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
 - Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.

- Whether the price items included in the ancillary pricing rule type are eligible for level funding.
- Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
- Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
- Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type – one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
 - Pass Through Charge Without Markup and Markdown
 - Pass Through Charge With Markup and Markdown
 - Rate Based Charge Without Markup and Markdown
 - Rate Based Charge With Markup and Markdown

Note: The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively.

- Additional ancillary-specific information, such as:
 - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
 - Billable charge line type using which you want to create billable charges for markup and markdown.
 - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
 - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
 - Billable charge line type matches the one specified in the ancillary transaction
 - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction
 - Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP1	BCLT0	Pass Through with Markup or Markdown	-	Markup	\$10	-
AP2	BCLT1	Pass Through with Markup or Markdown	-	Markdown	-	\$5
AP3	BCLT2	Rate Based without Markup or Markdown	\$5	-	-	-
AP4	BCLT3	Rate Based with Markup or Markdown	\$5	Markup	\$10	-
AP5	BCLT4	Rate Based with Markup or Markdown	\$5	Markdown	-	\$5
AP6	-	Pass Through without Markup or Markdown	-	-	-	-

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. \$5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

Defining an Ancillary Pricing Rule Type

Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type <p>Note: You must select the Ancillary Pricing Rule Type option from the Pricing Rule Type Business Object list while defining an ancillary pricing rule type.</p>	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
 1. Specific Stop Loss
 2. Aggregate Stop Loss
 3. Level Funding

Note: You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.

- **Transaction Field Mapping** – Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with an ancillary pricing rule type.
- **Additional Data** – Used to specify additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define the ancillary-specific additional data in an ancillary pricing rule type.

Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
 - **Pass Through (Markup or Markdown Optional)**
 - **Pass Through Without Markup or Markdown**
 - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the ancillary pricing rule type.	Yes
Description	Used to specify the description for the ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Ancillary Pricing Rule option from the Pricing Rule Business Object list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.	No
Pricing Rule Type Category	<p>Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss <p>Note: You must select the Ancillary option from the Pricing Rule Type Category list while defining an ancillary pricing rule type.</p>	Yes

6. Enter the required details in the **Main** section.

7. Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Select the **Primary** option in the **Main** section.

The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.

9. Select the **Ancillary** option from the **Pricing Rule Type Category** list.
10. Add the related pricing rule types in the ancillary pricing rule type, if required.
11. Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
12. Associate the following algorithms with the ancillary pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_TXNBGDRV	C1_TXNBGDRV	Derive Bill Group
Account and Price Item Derivation	C1_ACCPRIDRV	C1_ACCPRIDRV	Account and Price Item Derivation
Bill After Date Determination	C1_BAFTDRV	C1_BAFTDRV	Bill After Date Determination

13. Define additional data for an ancillary pricing rule type, if required.
14. Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
15. Add the price item parameters based on which you want to define the ancillary pricing, if required.
16. Define the characteristics for an ancillary pricing rule type, if required.
17. Define the required ancillary-specific additional data in the ancillary pricing rule type.
18. Define the pricing arrangements for an ancillary pricing rule type, if required.
19. Click **Save**.

The ancillary pricing rule type is defined.

Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional)
		Note: This field is required when you are adding a related pricing rule type in the ancillary pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Pricing Rule Type	<p>Used to indicate the non-primary pricing rule type which should inherit the transaction field mapping details from the claim pricing rule type. You can add a non-primary pricing rule type of the following categories in the claim pricing rule type:</p> <ol style="list-style-type: none"> 1. Retention Type Claim Based 2. Discount Arrangement 3. Specific Stop-Loss 4. Aggregate Stop-Loss 5. Level Funding <p>Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.</p> <p>The Search (🔍) icon appears corresponding to the Pricing Rule Type field.. On clicking the Search (🔍) icon corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the corresponding Sequence field is specified for the related pricing rule type.</p>
Eligibility Rule Type	<p>Used to specify the rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.</p> <p>Note: The list includes only those rule types where the rule type usage is set to Related Pricing Rule Type Eligibility.</p>	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule type is added in the ancillary pricing rule type.

Mapping the Transaction Field in an Ancillary Pricing Rule Type

Prerequisites

To map the transaction field mapping for an ancillary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To map the transaction field mapping for an ancillary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining an ancillary pricing rule type.

Note:

This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to map to a transaction field which indicates the external system from where the ancillary transaction is received. The information stored in this field is then used for deriving the bill group, parent customer, and policy for the ancillary transaction.	Yes
Parameter 1	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes
Parameter 2	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) Note: This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 3	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) Note: This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 4	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) Note: This field is required when you want to derive the bill group using multiple employee attributes.

Field Name	Field Description	Mandatory (Yes or No)
Incurred Date	Used to map to a transaction field which contains the date when the health insurance service was availed by the employee.	Yes (Conditional)
		Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the claim transaction.
Paid Date	Used to map to a transaction field which contains the date when the claim amount was paid to the employee.	Yes (Conditional)
		Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the ancillary transaction.
Source of Funds	Used to map to a transaction field which indicates the source of funding. At present, this field is not used in the system.	No
Composite	Used to map to a transaction field which indicates whether the employee is covered under the composite insurance.	No
Claim Disposition	Used to map to a transaction field which helps to determine how the claim based fees should be charged for the positive and negative claim transactions.	Yes (Conditional)
		Note: This field is required while calculating the retention type claim based fees for the claim transaction.
Provider's Tax Identification Number	Used to map to a transaction field which states the health insurance provider's identification number. The information stored in this field is then used to determine whether the health insurance provider is excluded from the specific stop-loss coverage.	Yes (Conditional)
		Note: This field is required while calculating specific stop-loss for the ancillary transaction.
Member ID	Used to map to a transaction field which states the member's identification number. The information stored in this field is then used to determine whether the member is excluded from the specific stop-loss coverage.	Yes (Conditional)
		Note: This field is required while calculating specific stop-loss for the ancillary transaction.
Main Subscriber ID	Used to map to a transaction field which states the main subscriber's identification number. The information stored in this field is then used to determine whether the main subscriber is excluded from the specific stop-loss coverage.	Yes (Conditional)
		Note: This field is required while calculating specific stop-loss for the ancillary transaction.

Field Name	Field Description	Mandatory (Yes or No)
Run-in Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a run-in ancillary transaction.	Yes (Conditional)
		Note: This field is required while defining a ancillary pricing rule type.
Runout Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a runout ancillary transaction. At present, this field is not used in the system.	No
Third Party Identifier	Used to specify the third party identifier to determine that the ancillary transaction is received from an external source system while defining an ancillary pricing rule type.	No
Coverage Start Date	Used to map to a transaction field which indicates the coverage start date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a non-retroactive enrollment transaction.	Yes (Conditional)
		Note: This field is required while defining a retention type enrollment based pricing rule type.
Coverage End Date	Used to map to a transaction field which indicates the coverage end date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a retroactive enrollment transaction.	Yes (Conditional)
		Note: This field is required while defining a retention type enrollment based pricing rule type.
Retroactivity Indicator	Used to map to a transaction field which indicates whether the enrollment transaction is a retroactive enrollment transaction.	Yes (Conditional)
		Note: This field is required while defining a retention type enrollment based pricing rule type.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.	Yes (Conditional)
		Note: This field is required while defining a discount arrangement pricing rule.
Covered Charge Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.	Yes (Conditional)
		Note: This field is required while calculating the discount using a discount guarantee pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.	Yes (Conditional) Note: This field is required while calculating the discount using a discount guarantee or discount share pricing rule.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the ancillary transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the ancillary transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the ancillary transaction.	No
Billing Eligibility Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is eligible for billing.	Yes (Conditional) Note: This field is required while defining an ancillary pricing rule type.
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.	Yes (Conditional) Note: This field is required while calculating the discount using a discount guarantee or discount share pricing rule.

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Transaction Field Search** window appears.

On specifying the transaction field, the description of the transaction field appears corresponding to the respective field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.

The transaction fields are mapped to the appropriate fields in the claim pricing rule type.

Associating an Algorithm with an Ancillary Pricing Rule Type

Prerequisites

To associate algorithms with an ancillary pricing rule type, you should have:

- Algorithms defined using the **C1_TXNBGDRV**, **C1_ACCPRIDRV**, and **C1_BAFTDRV** algorithm types.

Procedure

To associate an algorithm with an ancillary pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for the ancillary transaction. • Accumulation Billable Charge Post Proc - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Billable Charge Pre Proc - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Post Processing - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Accumulation Pre Processing - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Bill After Date Determination - Used to determine the bill after date for the ancillary transaction. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for the ancillary transaction. • Pricing Rule Post Processing - Used to introduce a custom logic once the effective ancillary pricing rule is derived for the ancillary transaction. • Transaction Validation - Used to introduce a custom validation for the ancillary transaction. <p>Note: You must specify Account and Price Item Derivation and Bill Group Derivation algorithms when you are associating the algorithms with an ancillary pricing rule type.</p>	<p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>
Sequence	<p>Used to specify the order in which the algorithms with the same system event should be executed.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Used to indicate the algorithm that you want to execute on the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>

2. Enter the required details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDRV	Yes	Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 2940
Accumulation Billable Charge Post Proc	-	No	-
	<p>Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Billable Charge Pre Proc	-	No	-
	<p>Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Post Processing	-	No	-
	<p>Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Pre Processing	-	No	-
	<p>Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Bill After Date Determination	C1_BAFTDRV	Yes	Bill After Date Determination on page 2988

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Bill Group Derivation	C1_TXNBGDRV	Yes	Bill Group Derivation on page 2937
Pricing Rule Post Processing	- Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Transaction Validation	- Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.	No	-

- If you want to associate more than one algorithm with an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with an ancillary pricing rule type.

Defining Additional Data in an Ancillary Pricing Rule Type

Procedure

To define additional data in an ancillary pricing rule type:

- Ensure that the **Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	<p>Used to indicate whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note:</p> <p>This field appears when the Pricing Rule Type Category is either Ancillary, Claim, Retention Type Claim Based, or Retention Type Enrollment Based.</p> <p>If you do not specify the value for this field, by default, it is set to No</p>	No
Eligible for Level Funding	<p>Used to indicate whether the price items included in the ancillary pricing rule type are eligible for level funding. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the value when received in an ancillary transaction indicates that the ancillary transaction should only be considered for calculating specific stop-loss and aggregate stop-loss. In such case, a transaction leg is not derived for the ancillary transaction.	No
Eligible for Write-Off in Post Runout	<p>Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>For more information, refer to the Write-Off Charges during Post Runout section.</p> <p>Note: By default, the value is set to No.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Eligible for Write-Off in Post Runout field.</p>	<p>Note: This field is required when the Eligible for Write-Off in Post Runout field is set to Yes.</p>
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. For more information, refer to the Price Item Eligibility on page 2930.	No
<p>Note:</p> <p>This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p>		
Rule Based Related Pricing Rule Type Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs. For more information, refer to Related Pricing Rule Type Eligibility on page 2928.	No
<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Related Pricing Rule Type Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Related Pricing Rule Type Eligibility Field field.</p>		

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.	Yes (Conditional)
		Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field or Rule Based Related Pricing Rule Type Eligibility Field field.

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data is defined in the ancillary pricing rule type.

Adding a Price Item in an Ancillary Pricing Rule Type

Prerequisites

To add a price item in an ancillary pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an ancillary pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Price Item	Used to indicate the price item that you want to include in an ancillary pricing rule type.	Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.				
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Items field.</p>					
Rate Option	Used to indicate one or more rate options which are valid for a price item.	Not applicable				
	On clicking the Add (+) icon, the following field appears in a grid:					
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Rate Option
Field Name	Field Description	Mandatory (Yes or No)				
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes				
<p>Note:</p> <p>If you want to define more than one rate option to the price item in an ancillary pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from an ancillary pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.</td> <td>Yes</td> </tr> </tbody> </table> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> </div>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.	Yes									
	<p>Note:</p> <p>If you want to define more than one invoice type to the price item in an ancillary pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in an ancillary pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>										
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item.

4. Click **Save**.

The price items are added for an ancillary pricing rule type.

Adding a Price Item Parameter in an Ancillary Pricing Rule Type

Prerequisites

To add a price item parameter in an ancillary pricing rule type, you should have:

- Parameters defined in the application where parameter usage is set to **Price Item**.
- Parameters associated with the price item.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** defined in the application.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** set as option types in the **C1-ASOBLNG** feature configuration.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in an ancillary pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an ancillary pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required while adding a price item parameter in an ancillary pricing rule type.</p>
Transaction Field	Used to map to a transaction field which contains the parameter value.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field.</p>	<p>Note: This field is required while adding a price item parameter in an ancillary pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the ancillary pricing rule type.

Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type

Procedure

To add the ancillary-specific additional data in an ancillary pricing rule type:

- Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Ancillary-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier Value	Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data.
Billing Non-Eligibility Identifier Value	Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.	Yes (Conditional) Note: This field is required when the Markup or Markdown Eligibility Rule Type field is specified.
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	
Markup or Markdown Billable Charge Line Type	Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	
Markup or Markdown Eligibility Rule Type	Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are:	No
	<ul style="list-style-type: none"> • Rule 1 <p>Note: The Markup or Markdown Eligibility Rule Type list includes only those rule-types where the rule type eligibility is ASO Billing Mark Up / Down Eligibility.</p>	

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.

The ancillary-specific additional data is added in the ancillary pricing rule type.

Defining Pricing Arrangements in an Ancillary Pricing Rule Type

Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

Procedure

To add pricing arrangements in an ancillary pricing rule type:

- Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are defining or editing a pricing rule type.

The **Pricing Arrangements** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Pricing Arrangement Identifier	Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) 	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Pricing Arrangement Identifier Value	Used to specify the value for the pricing arrangement identifier. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) 	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Line Item	Used to indicate the line item which using the billable charge is created for a pricing arrangement.	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.

- Enter the required details in the **Pricing Arrangements** section.
- If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the pricing arrangement identifier.

- Click **Save**.

The pricing arrangements are defined for the ancillary pricing rule type.

Defining a Characteristic for a Ancillary Pricing Rule Type**Prerequisites**

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an ancillary pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for an ancillary pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for an ancillary pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for an ancillary pricing rule type.

How to define an ancillary pricing rule type	Defining an Ancillary Pricing Rule Type on page 2754
How to edit an ancillary pricing rule type	Editing an Ancillary Pricing Rule Type on page 2779

Editing an Ancillary Pricing Rule Type**Prerequisites**

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
 1. Retention Type Claim Based
 2. Discount Arrangement
 3. Specific Stop-Loss
 4. Aggregate Stop-Loss
 5. Level Funding

Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.

- **Transaction Field Mapping** – Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with the ancillary pricing rule type.
- **Additional Data** – Used to specify the additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define ancillary-specific additional data.

Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the pricing arrangements for the ancillary pricing rule type.
 - **Pass Through (Markup or Markdown Optional)**
 - **Pass Through Without Markup or Markdown**
 - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the ancillary pricing rule type.	Not applicable
Description	Used to specify the description for an ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Ancillary Pricing Rule option from the Pricing Rule Business Object list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	<p>Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.</p> <p>Note: This field is disabled when you select the Flat Fees option from the Pricing Rule Type Category list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the ancillary pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Discount Arrangement Flat Fees Level Funded Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss 	No
	<p>Note: You must select the Ancillary option from the Pricing Rule Type Category list while defining an ancillary pricing rule type.</p>	

Tip: Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

- Modify the required details in the **Main** section, if required.
- Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
- Ensure that the **Primary** option is selected in the **Main** section.
- Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected from the **Main** section.

- Modify the transaction field mapping in the ancillary pricing rule type, if required.

Note: The **Transaction Field Mapping** section appears when the **Primary** option is selected from the **Main** section.

- Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

- Edit generic additional data for the ancillary pricing rule type, if required.
- Add, edit, or remove price items in an ancillary pricing rule type, if required.
- Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
- Add, edit, or remove characteristics in an ancillary pricing rule type, if required.
- Modify the ancillary-specific data in an ancillary pricing rule type, if required.
- Modify the pricing arrangements in an ancillary pricing rule type, if required.
- Click **Save**.

The changes made to the ancillary pricing rule type are saved.

Deleting an Ancillary Pricing Rule Type

Procedure

To delete an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the ancillary pricing rule type that you want to delete.
A message appears confirming whether you want to delete the ancillary pricing rule type.

Note: You can delete an ancillary pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an ancillary pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The ancillary pricing rule type is deleted.

Defining an Ancillary Pricing Rule for a Parent Customer

Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create an ancillary pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer 	Not applicable
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining an ancillary pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining an ancillary pricing rule.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define an ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	
		Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with the Rate Based option.

Field Name	Field Description	Mandatory (Yes or No)
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Based option is selected.	Note: This field is required when Rate Based option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Yes (Conditional)
	Note: This field is enabled when the Pricing Strategy field is selected.	Note: This field is required when the Pricing Strategy field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule is defined for a parent customer.

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an ancillary pricing rule.

Editing an Ancillary Pricing Rule of a Parent Customer

Prerequisites

To edit an ancillary pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit a ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** screen appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Parent Customer Pricing Rules** zone, corresponding to the ancillary pricing rule whose details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.

Field Name	Field Description
Parent Customer Information	Displays the parent customer for whom the ancillary pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item that is used to create ancillary pricing rule.	Not applicable
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Not applicable
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	Not applicable
Rate Option	Displays the rate option that you want to use while defining the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with or without the Rate Based option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with the Rate Based option.
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Based option is selected.	Note: This field is required when Rate Based option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> Markup Markdown None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage 	Yes (Conditional)
		Note: This field is required when the Pricing Strategy field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

5. Modify the details in the **Main** section.
6. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
7. Click **Save**.

The changes made to an ancillary pricing rule for a parent customer are saved.

Defining an Ancillary Pricing Rule for a Bill Group

Prerequisites

To define an ancillary pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** (📢) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Add** link in the upper-right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the type of the parent customer.	Not applicable
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes
	Note: Select the Ancillary Pricing Rule Type option, as the pricing rule.	Note: If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Yes
	Note: An ancillary pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing.	

6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the bill group. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that is used to create ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with the Rate Based option.
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Based option is selected.	Note: This field is required when Rate Based option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Yes (Conditional)
		Note: This field is required when the Pricing Strategy field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the ancillary pricing rule.

How to define the characteristics for an ancillary pricing rule	Defining a Characteristic for an Ancillary Pricing Rule on page 2787

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an ancillary pricing rule.

Editing an Ancillary Pricing Rule of a Bill Group

Prerequisites

To edit an ancillary pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit an ancillary pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.

Field Name	Field Description
Bill Group Information	Displays the bill group for whom the ancillary pricing rule is define.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you want to define an ancillary pricing rule.
Status	Indicates the status of the bill group.

- **Main** – Used to specify basic details about the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item that is used to create ancillary pricing rule.	Yes
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
	Note: This field by default displays the Policy End Date .	
Rate Option	Indicates the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used to indicate that markup and markdown prices must not be considered when the ancillary transaction is processed.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	
		Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with the Rate Based option.

Field Name	Field Description	Mandatory (Yes or No)
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Based option is selected.	Note: This field is required when Rate Based option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Yes (Conditional)
	Note: This field is enabled when the Pricing Strategy field is selected.	Note: This field is required when the Pricing Strategy field is selected.
Amount/Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

6. Modify the details in the **Main** section.
7. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
8. Click **Save**.

The changes made to an ancillary pricing rule for a bill group are saved.

Deleting an Ancillary Pricing Rule of a Bill Group

Procedure

To delete an ancillary pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to delete.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the **Pricing Group Information** column, whose bill group information you want to delete.
A message appears confirming whether you want to delete the ancillary pricing rule of a bill group.

Note: You can delete an ancillary pricing rule when it is not yet used in the system.

6. Click **OK**.
The ancillary pricing rule of a bill group is deleted.

Discount Pricing

The Administrative Services Only (ASO) provider may offer some discounts to its network hospitals and providers. A portion of these discounts is then charged to the self-funded employer. Oracle Revenue Management and Billing enables you to calculate and bill the discount share or discount guarantee amount to the self-funded employer. The system enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2801
- [Discount Guarantee](#) on page 2801

The pricing for the share or guarantee discount can be defined using the respective discount pricing rules. You can define a share or guarantee discount pricing rule only at the parent customer level. You can define the share or guarantee discount pricing rules for parent customers from the **Customer 360° Information** screen. You can define a share or guarantee discount pricing rule using a discount arrangement pricing rule type.

Once a discount arrangement pricing rule type is defined, you can create discount pricing rules using the discount arrangement pricing rule type. Once a discount pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the parent customer.

The following new batches are introduced in this release:

- **C1-ACDA** – Once the transaction legs and calculation lines are created for discount, this batch is used to accumulate the discount. It also calculates the required minimum or maximum limit on the contract. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

- **C1-BCDA** – Once the discount is accumulated, this batch is used to create the credit (if any) and discount billable charges. It is also used to calculate the bill after date. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

Types of Discount Arrangement

The Oracle Revenue Management and Billing enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2801
- [Discount Guarantee](#) on page 2801

Discount Share

In the discount share method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Billable Discount Amount = Discount Savings Amount * Discount Percentage

Note that the discount share percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Discount Guarantee

In the discount guarantee method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Targeted Guaranteed Amount = Covered Charge Amount * Discount Guarantee Percentage

Billable Discount Amount = Discount Savings Amount - Targeted Guaranteed Amount

Note that the discount guarantee percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Defining a Discount Arrangement Pricing Rule Type

Prerequisites

To define a discount arrangement pricing rule type, you should have:

- Discount Arrangement pricing rule type business object defined in the application
- Discount Arrangement pricing rule business object defined in the application

Procedure

To define a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create a discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss (ASL) Pricing Rule Type Ancillary Pricing Rule Type Claim Pricing Rule Type Discount Arrangement Pricing Rule Type Flat Fee Pricing Rule Type Level Funded (LF) Pricing Rule Type Retention Type Claim Based Pricing Rule Type Retention Type Enrollment Based Pricing Rule Type Specific Stop-Loss (SSL) Pricing Rule Type <p>Note: You must select the Discount Arrangement Pricing Rule Type option from the Pricing Rule Type Business Object list while defining a discount arrangement pricing rule type.</p>	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the discount arrangement pricing rule type.
- Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- DA – Specific Additional Data** – Used to specify discount arrangement-specific additional data in the discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the discount arrangement pricing rule type.	Yes
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p>Note: You must not select the Primary option while defining a discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the category to which the discount arrangement pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss 	Yes
	Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.	

- Enter the required details in the **Main** section.
- Select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list.
- Ensure that **Primary** option is not selected when you are defining a discount arrangement pricing rule type.
- Select the **Discount Arrangement** option from the **Pricing Rule Type Category** list.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRDIS	C1_ACCPRDIS	Account and Priceitem Derivation For Discount Arrangement

- Define additional data for a discount arrangement pricing rule type, if required.
- Add the required price items in the discount arrangement pricing rule type.
- Add the price item parameters in the discount arrangement pricing rule type, if required.
- Define characteristics for a discount arrangement pricing rule type, if required.
- Add discount arrangement-specific additional data in the discount arrangement pricing rule type.
- Click **Save**.

The discount arrangement pricing rule type is defined.

Associating Algorithms with a Discount Arrangement Pricing Rule Type

Prerequisites

To associate algorithms with a discount arrangement pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to execute the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for the discount arrangement transaction. • Accumulation Billable Charge Post Proc - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Billable Charge Pre Proc - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Post Processing - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Accumulation Pre Processing - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Pricing Rule Post Processing - Used to introduce a custom logic once the effective discount arrangement pricing rule is derived for the discount arrangement transaction. • Transaction Validation - Used to introduce a custom validation for the discount arrangement transaction. 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>
Sequence	<p>Used to specify the order in which the algorithms with the same system event must be executed.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm that you want to execute on the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDIS	Yes	Information will be available soon...
Accumulation Billable Charge Post Proc	-	No	-
	<p>Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Billable Charge Pre Proc	-	No	-
	<p>Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Post Processing	-	No	-
	<p>Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Pre Processing	-	No	-
	<p>Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Pricing Rule Post Processing	-	No	
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Transaction Validation	-	No	
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

- If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add (+)** icon and then specify the details. However, if you want to remove an algorithm from the discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.
- Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Discount Arrangement Pricing Rule Type

Procedure

To define additional data in a discount arrangement pricing rule type:

- Ensure that the **Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> Yes No 	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: If you do not specify the value for this field, by default, it is set to No .	
Run-in Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received from an external source system.	Not applicable
	Note: At present, this field is not used in the system.	
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the discount charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> • Yes • No For more information, refer to the Write-Off Charges during Post Runout section.	No
	Note: By default, the value is set to No .	
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment.	Yes (Conditional)
	Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes . The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Post Runout Write-Off Adjustment Type field.	Note: This field is required when the Eligible for Write-Off in Post Runout field is set to Yes .

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.	No
	<p>Note:</p> <p>For more information, refer to the Price Item Eligibility on page 2930 section.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p>	
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.	Yes (Conditional)
		<p>Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field field.</p>

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data is defined in the discount arrangement pricing rule type.

Related Topics

How to define a discount arrangement pricing rule type	Defining a Discount Arrangement Pricing Rule Type on page 2801
How to edit a discount arrangement pricing rule type	Editing a Discount Arrangement Pricing Rule Type on page 2818

Adding a Price Item in a Discount Arrangement Pricing Rule Type

Prerequisites

To add a price item in a discount arrangement pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the discount arrangement pricing rule type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (➕) icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in the discount arrangement pricing rule type, click the Add (➕) icon. However, if you want to remove a price item from a discount arrangement pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in a discount arrangement pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in a discount arrangement pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 65 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a discount arrangement pricing rule type.

Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type

Prerequisites

To add a price item parameter in a discount arrangement pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a discount arrangement pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a discount arrangement pricing for the price item. Note: The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.	Yes (Conditional) Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value. Note: The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field .	Yes (Conditional) Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a discount arrangement pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the discount arrangement pricing rule type.

Defining a Characteristic for a Discount Arrangement Pricing Rule Type

Prerequisites

To define a characteristic for a discount arrangement pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount arrangement pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for a discount arrangement pricing rule type.

Defining the Discount Specific Data in a Discount Arrangement Pricing Rule Type

Procedure

To add the discount-specific data in a discount arrangement pricing rule type:

- Ensure that the **DA - Specific Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **DA - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Guaranteed Discount	<p>Used to indicate whether the discount arrangement pricing rule type is defined for discount guarantee or discount share. The valid values are:</p> <ul style="list-style-type: none"> Yes - Used when you want to create a discount guarantee pricing rule type. No - Used when you want to create a discount share pricing rule type. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Discount Billable Charge Line Type	<p>Used to indicate a billable charge line type using which you want to create the charge line for discount.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Discount Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Discount Billable Charge Line Type field.</p>	Yes
Credit Billable Charge Line Type	<p>Used to indicate a billable charge line type using which you want to create the charge line for any credit to the customer.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Credit Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Credit Billable Charge Line Type field.</p>	Yes
Minimum Limit Pricing Rule Type	<p>Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the minimum limit for the discount.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Minimum Limit Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Minimum Limit Pricing Rule Type field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p>

Field Name	Field Description	Mandatory (Yes or No)
Minimum Limit Price Item	Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Minimum Limit Price Item field. On clicking the Search icon, the Price Item Details window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Minimum Limit Price Item field.</p>	<p>Note: This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p>
Maximum Limit Pricing Rule Type	Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the maximum limit for the discount.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Maximum Limit Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Maximum Limit Pricing Rule Type field.</p>	<p>Note: This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p>
Maximum Limit Price Item	Used to indicate the price item whose pricing you want to use while calculating the maximum limit for the discount. Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Maximum Limit Price Item field. On clicking the Search icon, the Price Item Details window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Maximum Limit Price Item field.</p>	<p>Note: This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p>

2. Enter the required details in the **DA - Specific Additional Data** section.
3. Click **Save**.

The discount-specific data is added in the discount arrangement pricing rule type.

Editing a Discount Arrangement Pricing Rule Type

Prerequisites

To edit a discount arrangement pricing rule type, you should have:

- Discount arrangement pricing rule type business object defined in the application.
- Discount arrangement pricing rule business object defined in the application.

Procedure

To edit a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- **DA-Specific Additional Data** – Used to specify discount arrangement-specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the discount arrangement pricing rule type.	Not applicable
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value is:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object used while defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p>Note: You must not select the Primary option while defining the discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the discount arrangement pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Discount Arrangement Flat Fees Level Funded Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss 	No
	<p>Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.</p>	

Tip: Alternatively, you can edit the details of a discount arrangement pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the required details in the **Main** section.
- Ensure that the **Discount Arrangement Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
- Ensure that **Primary** option is not selected when you are editing a discount arrangement pricing rule type.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

- Modify the additional data for a discount arrangement pricing rule type, if required.
- Add, edit, or remove price items in the discount arrangement pricing rule type, if required.
- Add, edit, or remove price item parameters in the discount arrangement pricing rule type, if required.
- Add, edit, or remove characteristics in the discount arrangement pricing rule type, if required.
- Modify the discount arrangement-specific data in the discount arrangement pricing rule type, if required.
- Click **Save**.

The changes made to the discount arrangement pricing rule type are saved.

Defining a Discount Arrangement Pricing Rule for a Parent Customer

Prerequisites

To define a discount arrangement pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Discount Arrangement**.
- Price items associated with the discount arrangement pricing rule type.

Procedure

To define a discount arrangement pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> Parent Customer 	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a discount arrangement pricing rule.	Yes

- Select the required pricing rule type in the respective field.
- Click **OK**.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays information about the parent customer for whom you are defining the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the discount arrangement pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the discount arrangement pricing rule.

- Main** – Used to specify basic details about the discount arrangement pricing rule.
- Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

Note: The **Discount Details**, **Discount Limits**, and **Exclusion** sections appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. 	Yes
	Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges.	

7. Enter the required details in the **Main** section.
8. Add the required discount details in the discount arrangement pricing rule.
9. Define the minimum and maximum discount limits on the contract in the discount arrangement pricing rule, if required.
10. Add the exclusion details of a network or a provider in the discount arrangement pricing rule, if required.
11. Define characteristics for the discount arrangement pricing rule, if required.
12. Click **Save**.

The discount arrangement pricing rule is defined for the parent customer.

Adding the Discount Details in a Discount Arrangement Pricing Rule

Prerequisites

To add the discount details in a discount arrangement pricing rule, you should have:

- Parameters defined in the application
- Parameters associated with the price item.

Procedure

To add the discount details in a discount arrangement pricing rule:

1. Ensure that the **Discount Details** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to indicate the parameter using which you want to define an eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Price Item Parameter field.</p> <p>You can only select those price item parameters which are effective during the date range specified in the discount arrangement pricing rule.</p> <p>If a parameter associated with the price item is mandatory, then by default, the parameter appears in the Price Item Parameter field.</p>	No
Parameter Value	<p>Used to specify the value for the price item parameter.</p> <p>Note:</p> <p>If you select a predefined parameter, the Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the parameter value, the description of the parameter value appears corresponding to the Parameter Value field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the parameter associated with the price item is mandatory.</p>
Discount Percentage	Used to specify the discount share or discount guarantee percentage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Discount Per Claim	Used to specify the maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	No

Note: The **Discount Details** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Details** section.
- If you want to define a discount percentage for another price item parameter and parameter value combination, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a discount percentage for a price item parameter and parameter value combination from the discount arrangement pricing rule, click the **Delete (🗑)** icon corresponding to the combination.

- Click **Save**.

The discount details are added in the discount arrangement pricing rule.

Defining the Discount Limits in a Discount Arrangement Pricing Rule

Prerequisites

To define the discount limits in a discount arrangement pricing rule, you should have:

- An account, to which you want to credit the discount, defined in the application
- Minimum limit pricing rule type and minimum limit price item defined in the respective discount arrangement pricing rule type when you want to define minimum discount limit on the contract
- Maximum limit pricing rule type and maximum limit price item defined in the respective discount arrangement pricing rule type when you want to define maximum discount limit on the contract

Procedure

To define the discount limits in a discount arrangement pricing rule:

- Ensure that the **Discount Limits** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Limits** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Used to indicate whether you want to define minimum or maximum discount limit on the contract.	No

Field Name	Field Description	Mandatory (Yes or No)
Discount Credit Account	Used to indicate the account to which you want to credit the discount when the minimum or maximum discount limit is defined on the contract.	Yes (Conditional)
	Note: This field is enabled when the No Limit option is not selected.	Note: This field is required when the No Limit option is not selected.
Settlement Days	Used to specify the number of days which helps to calculate the final settlement date (which is pricing end date + the settlement days). The valid values: <ul style="list-style-type: none"> • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days 	Yes

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount Limit	Displays the type of discount limit. The valid values are: <ul style="list-style-type: none"> • Minimum • Maximum 	Not applicable
Select	On clicking the check box corresponding to the type of discount limit, you can define minimum or maximum discount limit on the contract. <p>Note: This field is enabled when the No Limit option is not selected.</p>	Yes
Limit Type	Used to indicate whether you want to define a flat limit or an enrollment based limit. The valid values are: <ul style="list-style-type: none"> • Enrollment Based • Flat 	Yes (Conditional)
	Note: This field is enabled when the No Limit option is not selected. If you select the check box corresponding to the Minimum discount limit, the Limit Type field corresponding to the Minimum discount limit is enabled.	Note: This field is required when you are defining a minimum or maximum discount limit in the discount arrangement pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Amount Limit	Used to specify the flat minimum or maximum discount amount.	Yes (Conditional)
	<p>Note:</p> <p>This field is enabled when:</p> <ul style="list-style-type: none"> The No Limit option is not selected. The minimum or maximum limit type is set to Flat. 	<p>Note: This field is required when the minimum or maximum limit type is set to Flat.</p>

Note: The **Discount Limits** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Limits** section.
- Click **Save**.

The discount limits are defined in the discount arrangement pricing rule.

Excluding a Network or Provider in a Discount Arrangement Pricing Rule

Procedure

To exclude a network or provider in a discount arrangement pricing rule:

- Ensure that the **Exclusion** section appears when you are defining or editing a discount arrangement pricing rule.

The **Exclusion** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Used to indicate whether you want to exclude the discount offered to certain network hospitals and providers during the discount share or discount guarantee calculation. The valid values are: <ul style="list-style-type: none"> Network Provider 	Yes (Conditional)
	<p>Note: The system creates the transaction legs and calculation lines for such excluded network hospitals and providers, but does not accumulate the discount.</p>	<p>Note: This field is required while excluding a network or provider in the discount arrangement pricing rule.</p>

Field Name	Field Description	Mandatory (Yes or No)
Level Identifier	Used to specify the network or provider ID.	Yes (Conditional)
		Note: This field is required while excluding a network or provider in the discount arrangement pricing rule.

- Enter the required details in the **Exclusion** section.
- If you want to exclude more than one network or provider in the discount arrangement pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a network or provider from the exclusion list, click the **Delete** (🗑️) icon corresponding to the network or provider.

- Click **Save**.

The network or provider is excluded in the discount arrangement pricing rule.

Defining a Characteristic for a Discount Arrangement Pricing Rule

Prerequisites

To define a characteristic for a discount arrangement pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a discount arrangement pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the discount arrangement pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the discount arrangement pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the discount arrangement pricing rule.

Editing a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discount arrangement pricing rule, whose details you want to edit.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Indicates the discount arrangement pricing rule type using which the discount arrangement pricing rule is defined.

- **Main** – Used to specify basic details in the discount arrangement pricing rule.
- **Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- **Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- **Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. 	Yes
	<p>Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges.</p>	

5. Modify the required details in the **Main** section.
6. Modify the required discount details in the discount arrangement pricing rule.
7. Modify the minimum or maximum discount limit on the contract in the discount arrangement pricing rule, if required.
8. Modify the exclusion list in the discount arrangement pricing rule, if required.
9. Define, edit, or remove characteristics of the discount arrangement pricing rule, if required.
10. Click **Save**.

The changes made to the discount arrangement pricing rule are saved.

Deleting a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To delete a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the discount arrangement pricing rule that you want to delete.

A message appears confirming whether you want to delete the discount arrangement pricing rule.

Note: You can delete a discount arrangement pricing rule when it is not yet used in the system.

- Click **OK**.

The discount arrangement pricing rule of a parent customer is deleted.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

- Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
- Specify the post runout write-off adjustment type in the respective pricing rule type.
- Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Level Funding Pricing

Level funding is a type of self-funding. It offers all benefits of traditional self-funding. However, it provides one additional benefit which helps to stabilize monthly costs of the self-funded employer to pay off the claim, ancillary, claim based fee, enrollment based fee, and discount charges.

Oracle Revenue Management and Billing enables you to process and bill the funds charges to the self-funded employer in either of the following ways:

- Pay the fixed flat amount in every bill period
- Pay the amount based on the enrollment based limit in every bill period

The system enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some surplus or deficit in funds at the time of settlement which is ideally at the end of year. In such case, the

system enables you configure whether a flat amount or percentage of surplus should be retained by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer.

The pricing for the level funding can be defined using the level funding pricing rules. You can define a level funding pricing rule at the parent customer and bill group levels. The level funding pricing rule at the bill group level takes precedence over the level funding pricing rule at the parent customer level. You can define the level funding pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a level funding pricing rule using a level funding pricing rule type. It is the level funding pricing rule type which helps the system to determine:

- Business object using which the level funding pricing rule should be created in the system.

Note: You must not select the **Primary** option while defining a level funding pricing rule type.

- Algorithm which should be triggered for deriving the account and price item while creating the funds transaction legs.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective level funding pricing rule is derived.

Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
 - Whether the funds charge should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the level funding pricing rule type.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
 - Value which the output parameter in the rule should return when the price item in the level funding pricing rule type should be considered for processing.
- Price items for which you can define level funding pricing rules using the level funding pricing rule type.
- Rate options that you can use while defining the pricing for the level funded price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional level funding specific information, such as:
 - Whether the level funding premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule.
 - Bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the level funded premium.
 - Price item whose pricing you want to use for calculating the level-funded premium.
 - LF billable charge line type using which you want to create billable charges for level funded premium.
 - GL only contract type which indicates the contract against which the claim, ancillary, claim based fees, enrollment based fees, and discount charges that are settled against the funds must be debited. The distribution code on the GL only contract type will indicate the GL account against which charges settled against the funds must be debited.

- Liability distribution code will indicate the GL account against which charges settled against the funds must be credited.
- Number of days before which you want to create a To Do for reminding the self-funded employer to renew the level funded agreement.
- Surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.
- Deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.
- Domestic provider billable charge line type using which you want to create billable charges for the claim, claim based fees, enrollment based fees, ancillary, and discount charges which are settled against the funds for a domestic provider.
- Markup or markdown billable charge line type using which you want to create billable charges for markup or markdown which are settled against the funds.
- Rule type which indicates the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
- Rule type which indicates the rules that should be executed to determine whether the level funded premium is for a domestic provider.
- Transaction field which you want to use in the rules as the output parameter to determine whether the level funded premium is for a domestic provider.

Once a level funding pricing rule type is defined, you can create level funding pricing rules using the level funding pricing rule type. While defining a level funding pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the level funding. On selecting a specific stop-loss pricing rule, the level funding pricing date range is set automatically. The level funding pricing date range is same as the specific stop-loss pricing rule.
- Rate option which you want to use while defining the level funding pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - **Immediately** – If you select this option from the list, the bill after date is not calculated. The funds billable charge is billed immediately in the next bill cycle.
 - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Never** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Yearly** – If you select this option from the list, the bill after date is set to the pricing end date in the funds billable charge.
 - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the funds billable charge.

Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Whether the customer would like to renew or cancel the level funded agreement.
- Whether a flat amount or percentage of surplus should be retained by the ASO provider at the time of settlement.
- Whether a flat amount or percentage of deficit should be offered as discount to the self-funded employer at the time of settlement.

However, while defining a level funding pricing rule for a bill group, you need to specify the following:

- The policy status in which the level funding pricing rule is applicable.
- Price item for which you want to define the pricing.
- Parent customer's level funding pricing rule from which you want to inherit the accumulation parameters.

Note:

The pricing date range is derived from the parent customer's level funding pricing rule because the level funding pricing rules for parent customer and bill group should have the same date range.

The settlement fund price item is derived from the level funding pricing rule type using which the level funding pricing rule is created.

- Rate option which you want to use while defining the level funding pricing.
- Price items whose charges should be accumulated against the level funded price items so that it can be settled against the funds.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated.

OR

Whether the line items which are associated with the **Level Funded** pricing rule type category should be accumulated.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated.

OR

Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated.

- Whether the discount calculated using a particular discount arrangement pricing rule should be accumulated.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated.

You can also specify a pricing group while defining a level funding pricing rule for a bill group. Once a level funding pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

The following new batches are introduced in this release:

- **C1-ACLF** – This batch is used to accumulate the charges which are to be settled against the funds. During the accumulation post-processing, the level funded billable charges (which are created through the TFM process) are posted against the GL accounts which are derived using the GL only contract type and liability distribution code information in the level funding pricing rule type. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCLF** – Once the level funded billable charges are accumulated, this batch is used to create the accumulated level funded billable charges. It is also used to calculate the bill after date. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Defining a Level Funded Pricing Rule Type

Prerequisites

To define a level funded pricing rule type, you should have:

- Level Funded Pricing Rule Type business object defined in the application.
- Level Funded Pricing Rule business object defined in the application.

Procedure

To define a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a level funded pricing rule type.	Yes
	Note: You can create a discount arrangement pricing rule type using the Level Funded Pricing Rule Type (C1-PricingRuleTypeDA) business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Level Funded (LF) Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the level funded pricing rule type.
- **Algorithms** – Used to associate the algorithms with a level funded pricing rule type.
- **Additional Data** – Used to specify the additional information about the level funded pricing rule type.
- **Price Items** – Used to add the price items for which you can define the level funded pricing rules using the level funded pricing rule type.
