1. Preparing for Upgrade

This section provides an overview of the upgrade process. It also lists the pre-requisites for upgrading Oracle Revenue Management and Billing from one version to another.

1.1 Upgrade Overview

The following figure provides an overview of the steps that need to be taken for upgrading Oracle Revenue Management and Billing.

**Figure 1: Upgrade Process**

1.2 Upgrade Pre-requisites

Before you upgrade Oracle Revenue Management and Billing, you need to upgrade the application framework as mentioned in the *Oracle Revenue Management and Billing Upgrade Path Guide*. While upgrading the application framework, you might have to apply some patches (additional single fixes) as pre-requisites or post-requisites.

Also, before you upgrade the application framework, you might have to upgrade some of the third party software. For more information, refer to the **Upgrade Prerequisites** section in the *Oracle Revenue Management and Billing Upgrade Path Guide*.

1.3 Supported Upgrades

In this release, we support the following upgrades:

- Upgrade from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0

2. Upgrading from ORMB Version 3.0.0.0.0 to 3.1.0.0.0

This section explains how to upgrade from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0. The high-level steps include:

1. [Downloading the ORMB Packages and Patches](#)
2. [Upgrading Framework on the Database](#)
3. [Installing Framework on the Application Environment](#)
4. [Installing the Oracle Revenue Management and Billing Application](#)
5. [Upgrading the Oracle Revenue Management and Billing Database](#)
6. [Migrating Data](#)

Note: Before you upgrade the application, you must take a backup of the application and the database.

2.1 Prerequisites

If you are already using the Transaction Feed Management feature and want to upgrade to Oracle Revenue Management and Billing Version 3.1.0.0.0, then you need to ensure the following (before upgrading):

- All bills generated in the system are in the **Complete** status. In other words, there should not be any bills in the **Pending** status. If there are any bills in the **Pending** status or if any billable charge (generated through TFM) is not yet billed, disaggregation and cancellation of transactions which are uploaded using 3.0.0.0.0 will not happen successfully.
- Transactions which are uploaded using 3.0.0.0.0 must not be in the **Initial Product Determined (INPD)** status. They can be in the **Uploaded (UPLD)**, **Invalid (INVL)**, **Error (EROR)**, **Completed (COMP)**, or **Cancelled (CNCL)** status.
- Equal to (=) or tilde (~) symbol is not used in any existing price item parameter code or value. Otherwise, erroneous results might occur.

Also, ensure that no data exists in the **CI_BCHG_TEMP** table before you start the upgrade process. If there is data in the **CI_BCHG_TEMP** table, it means all billing batches are not yet executed for a set of bills. We recommend you to either complete the billing process for such bills by executing all the billing batches or delete the data from the **CI_BCHG_TEMP** table. Otherwise, erroneous results might occur when you execute the billing batches after the upgrade.

2.2 Downloading the ORMB Packages and Patches

For upgrading from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0, you must download the following packages from the Oracle Revenue Management and Billing 3.1.0.0.0 media pack which is available on [Oracle Software Delivery Cloud](#):

- Oracle Utilities Application Framework V4.4.0.3.0 Single Fix Prerequisite Rollup for RMB V3.1.0.0.0
- Oracle Revenue Management and Billing V3.1.0.0.0 Multiplatform
- Oracle Revenue Management and Billing V3.1.0.0.0 Oracle Database

You must also download the following package from the Oracle Utilities Customer Care and Billing 2.8.0.0.0 media pack which is available on [Oracle Software Delivery Cloud](#):

- Oracle Utilities Application Framework 4.4.0.3.0

The downloaded files will be in the JAR or ZIP format.

2.3 Upgrading Framework on the Database

While upgrading from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0, you need to install the following on the database:

1. [Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.3.0](#)
2. [Rollup Pack for Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.3.0](#)

To install the framework and its service packs on the database, you must have ability to connect to the database.

2.3.1 Installing OUAF Version 4.4.0.3.0

To install Oracle Utilities Application Framework (OUAF) Version 4.4.0.3.0:

1. Login to the database server using the administrator's credentials.
2. Create a temporary folder (for example, TEMPDIR) on the database server using the following command:

```
mkdir TEMPDIR
```

3. Copy the **Oracle Revenue Management and Billing V3.1.0.0.0 Oracle Database** package to the TEMPDIR folder using the following command:

AIX, Linux:

```
cp <PATH>/<filename>.zip <PATH>/TEMPDIR
```

Windows:

```
copy <PATH>\<filename>.zip <PATH>\TEMPDIR
```

Note: You can also use File Transfer Protocol (FTP) to transfer the downloaded file from one host to another. You must use the binary mode while copying files through FTP.

4. Change to the TEMPDIR folder using the following command:

AIX, Linux:

```
cd <PATH>/TEMPDIR
```

Windows:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_1>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_1> folder. The contents include the following sub-folders:

- FW
- RMB

6. Set the **JAVA_HOME** environment variable using the following command:

AIX, Linux:

```
export JAVA_HOME=<JAVA_HOME_PATH>
```

Windows:

```

Note: The <JAVA_HOME_PATH> is the location where Java Development Kit Version 8.0 is installed.

7. Set the **JAR_PATH** environment variable using the following command:

AIX, Linux:

```
export JAR_PATH=<DESTINATION_FOLDER_1>/FW/jarfiles
```

Note:

The above command is applicable only for AIX and Linux platforms.

The <DESTINATION_FOLDER_1> folder is the location where you have extracted the contents of the **Oracle Revenue Management and Billing V3.1.0.0.0 Oracle Database** package.

8. Set the **CLASS_PATH** environment variable using the following command:

AIX, Linux:

```
export CLASS_PATH=$JAR_PATH/commons-cli-1.4-

19.3.0.0.0.jar:$JAR_PATH/spl-oradbi-4.4.0.3.0.jar:$JAR_PATH/spl-
shared-4.4.0.3.0.jar
```

Windows:

```
SET CLASS_PATH=<DESTINATION_FOLDER_1>\FW\jarfiles\*
```

9. Change to the `Install-Upgrade` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/FW/Install-Upgrade
```

Windows:

```
cd <DESTINATION_FOLDER_1>\FW\Install-Upgrade
```

10. Execute the `OraDBI` (Java) utility using the following command:

AIX, Linux:

```
$JAVA_HOME/bin/java -Xmx1500M -cp $CLASS_PATH
com.oracle.ouaf.oem.install.OraDBI -d jdbc:oracle:thin:
@<DB_SERVER_NAME>:<DB_PORT>:<DB_NAME>, <SCHEMA_NAME>,

`mkdir TEMPDIR`

3. Copy the **Oracle Utilities Application Framework 4.4.0.3.0** package to the **TEMPDIR** folder using the following command:

AIX, Linux:

`cp <PATH>/<filename>.zip <PATH>/TEMPDIR`

Windows:

`copy <PATH>\<filename>.zip <PATH>\TEMPDIR`

Note: You can also use File Transfer Protocol (FTP) to transfer the downloaded file from one host to another. You must use the binary mode while copying files through FTP.

4. Change to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cd <PATH>/TEMPDIR

You will be warned if you did not edit a section. You may proceed if you want to keep the default settings.

Once the installation process is completed, the following utilities are automatically executed in the specified order:

1. `initialSetup` - The `initialSetup` utility updates the configuration files including the WAR files on the system. On the UNIX machine, this utility is available in the `$SPLEBASE/bin` folder. And, on the Windows machine, this utility is available in the `%SPLEBASE%\bin` folder.

2. `splenviron` – The `splenviron` utility sets the environment variables using the `ENVIRON.INI` file. On the UNIX machine, this utility is available in the `$SPLEBASE/bin` folder. And, on the Windows machine, this utility is available in the `%SPLEBASE%\bin` folder. The following are some of the key environment variables that are set using the `splenviron` utility:

- `$PATH`
- `$SPLEBASE (%SPLEBASE%)` – Indicates the `<SPLDIR>/<SPLENVIRON>` folder

2.6 Upgrading the ORMB Database

This section explains how to upgrade the database. When you upgrade the database, the system overwrites the database schema and the metadata present in the database. However, the transactional data is not affected.

While upgrading from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0, you need to install the following on the database:

1. [Oracle Revenue Management and Billing \(ORMB\) Version 3.1.0.0.0](#)
2. [Oracle Revenue Management and Billing \(ORMB\) Version 3.1.0.0.0 Post Requisite Patches](#)

Note:

To view the list of patches that you need to apply on the database, refer to the *ORMB V3.1.0.0.0 Patch Guide* (Document ID: 2815177.1) on [My Oracle Support](#).

Alternatively, instead of individually applying the patches, you can download and install the rollup packs, if available, to apply a set of patches at once. For more information about the rollup packs, refer to [Appendix J: ORMB V3.1.0.0.0 Rollup Packs](#).

Before you upgrade the database, you must take a backup of the existing database.

When you upgrade the database, any metadata with the Owner flag set to CM is not overridden during the upgrade process.

Pre-requisites:

Before installing Oracle Revenue Management and Billing Version 3.1.0.0.0 on the database, you need to set the **MAX_STRING_SIZE** parameter to **EXTENDED**. If you have a non-container database, you need to perform the following steps to set the **MAX_STRING_SIZE** parameter to **EXTENDED**:

1. Set the `ORACLE_HOME` and `ORACLE_SID` environment variables.

Note: You need to connect as system administrator while executing the below steps.

2. Shutdown the target database using the following command:

```
shutdown immediate
```

3. Start the database in the Upgrade mode using the following command:

```
startup upgrade
```

4. Set the **MAX_STRING_SIZE** parameter to **EXTENDED** using the following command:

```
alter system set max_string_size=extended scope=both;
```

5. Execute the `utl32k.sql` file using the following command:

```
@?/rdbms/admin/utl32k.sql;
```

6. Restart the database in the Normal mode using the following commands:

```
shutdown immediate
startup
```

However, if you have a container database, you need to perform the following steps to set the **MAX_STRING_SIZE** parameter to **EXTENDED**:

1. Set the `ORACLE_HOME` and `ORACLE_SID` environment variables.

Note: You need to connect as system administrator while executing the below steps.

2. Set the `MAX_STRING_SIZE` parameter to `EXTENDED` using the following command:

```
alter system set max_string_size=extended scope=spfile;
```

3. Start all pluggable databases in the Upgrade mode using the following command:

```
shutdown immediate
startup upgrade
alter pluggable database all open upgrade;
exit
```

4. Create the `utl32k_cdb_pdbs_output` folder to store the log files using the following command:

```
mkdir /scratch/mydir/utl32k_cdb_pdbs_output
```

5. Execute the `utl32k.sql` from the `catcon.pl` file for all pluggable databases using the following command:

```
cd $ORACLE_HOME/rdbms/admin
$ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u
SYS -d $ORACLE_HOME/rdbms/admin -l
'/scratch/mydir/utl32k_cdb_pdbs_output' -b
utl32k_cdb_pdbs_output utl32k.sql
```

6. Restart the database in the Normal mode using the following commands:

```
shutdown immediate
startup

2.6.2 Applying the Release-Specific Patches

Once you install Oracle Revenue Management and Billing Version 3.1.0.0.0, you need to apply all patches listed in the *ORMB V3.1.0.0.0 Patch Guide* (Document ID: 2815177.1). You can apply a patch from a Windows machine or UNIX Standalone server.

To apply a patch:

1. Download the patch from [My Oracle Support](#). A zip file is downloaded.
2. Unzip the downloaded file using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_3>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_3>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_3> folder. The contents include three files - README.txt, MultiPlatform.zip, and Bug_<PATCH_NUMBER>_Product_Fix_Design.pdf.

3. Unzip the MultiPlatform.zip file using the following command:

2.7 Migrating Data

While upgrading from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0, you need to execute the following batches to migrate the data from the previous version to the new version:

If you are using the following feature in ORMB...	Then...
Fully-Insured Group or Fully-Insured Individual	You need to execute the C1-LSUB batch. For more information, refer to the C1-LSUB section.
Bill Group Derivation and Pricing Parameters	You need to execute the C1-BLUPG batch. For more information, refer to the C1-BLUPG section.
Deal Management	You need to execute the C1-PITEM batch. For more information, refer to the C1-PITEM section.

Note: Irrespective of the feature that you are using in ORMB, you need to execute the [F1-BTIDT](#) batch while upgrading from Oracle Revenue Management and Billing Version 3.0.0.0.0 to 3.1.0.0.0. For more information about the [F1-BTIDT](#) batch, refer to the **Start Date, End Date, and Time Added to Batch Thread Instance** section in the *Oracle Revenue Management and Billing Version 3.1.0.0.0 Release Notes* or refer to the detailed description of the batch in the application.

2.7.1 Update Create Date for Membership Person (C1-LSUB)

The **Update Create Date for Membership Person (C1-LSUB)** batch is used to derive the creation date of all member persons for the existing group and individual memberships. This batch is a one-time batch and must be executed while upgrading to ORMB Version 3.1.0.0.0.

This batch is a multi-threaded batch. The multi-threading is based on the membership ID and the chunks for multi-threading are created based on each unique date. You can specify the following parameters while executing this batch:

Parameter Name	Mandatory (Yes or No)	Description
Membership ID	No	Used when you want to derive the creation date of member persons who belong to a particular membership.
Chunk Size	No	Used to specify the number of records you want to execute in each work unit. Note: If you do not specify any value, by default, the parameter value is set to 2 .

Note: If the **Update Create Date for Membership Person (C1-LSUB)** batch fails or aborts due to some reason, you can restart the batch over and over again with the same set of parameters.

Post Execution Check/Clean Up:

On successful completion of this batch, the creation date of a member person is stamped against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table.

2.7.2 Transaction Upgrade - Stamp Bill Level ID (C1-BLUPG)

The **Transaction Upgrade - Stamp Bill Level ID (C1-BLUPG)** batch is used to stamp the bill level ID of the derivation and pricing parameters against the transaction legs in the **CI_TXN_DTL_PRITM** and **CI_TXN_DTL_PRITM_STG** tables. For each transaction leg, the system derives the Bill Group Derivation algorithm defined on the pricing rule type which is associated with the respective transaction record type. This algorithm determines the bill level ID of the derivation and pricing parameters which are used to derive the bill group. Once the bill level ID is determined, the system stamps it against the transaction leg. This batch is a one-time batch and must be executed while upgrading to ORMB Version 3.1.0.0.0.

This batch is a multi-threaded batch. The multi-threading for records in the **CI_TXN_DTL_PRITM** table is based on the **CURR_SYS_PRCs_DT** column and the multi-threading for records in the **CI_TXN_DTL_PRITM_STG** table is based on the **LAST_SYS_PRCs_DT** column. The chunks for multi-threading are created based on each unique date. You can specify the following parameters while executing this batch:

Parameter Name	Mandatory (Yes or No)	Description
Processing Date	No	<p>Used when you want to update records whose CURR_SYS_PRCs_DT or LAST_SYS_PRCs_DT is earlier than or equal to the specified date.</p> <p>Note: You must specify the date in the YYYY-MM-DD format.</p>
Account ID	No	Used when you want to update the transactions belonging to a particular account.
Division	No	Used when you want to update the transactions which are mapped to accounts of a particular division.

Note: If the **Transaction Upgrade - Stamp Bill Level ID (C1-BLUPG)** batch fails or aborts due to some reason, you can restart the batch over and over again with the same set of parameters.

Post Execution Check/Clean Up:

On successful completion of this batch, the bill level ID is stamped corresponding to the records in the **BILL_LVL_ID** column of the **CI_TXN_DTL_PRITM** and **CI_TXN_DTL_PRITM_STG** tables.

2.7.3 Update Price Item Group ID (C1-PITEM)

The **Update Price Item Group ID (C1-PITEM)** batch is used to check whether the price item parameter group of a price item in a deal version matches the price item parameter group of the corresponding record in the **C1 DEAL SIMULATION DTL** table. If the system finds one record for a price item with different price item parameter group in the **C1 DEAL SIMULATION DTL** table, the system updates the price item parameter group of the price item in the **C1 MODEL PRICEITEM** table. If the system finds multiple records for a price item with different price item parameter groups in the **C1 DEAL SIMULATION DTL** table, the system adds the missing price item and price item parameter group records in the **C1 MODEL PRICEITEM** table. This batch is a one-time batch and must be executed while upgrading to ORMB Version 3.1.0.0.0.

Note: You can execute this batch only after you apply the **MANDATORY PATCH 1 FOR ORMB VERSION 3.1.0.0.0** patch (Patch Number: 33378669).

This batch is a multi-threaded batch. The multi-threading is based on deal version ID and chunks for multi-threading are created based on numerical distribution of deal version ID. You can specify the following parameters while executing this batch:

Parameter Name	Mandatory (Yes or No)	Description
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.
Override Maximum Number of Errors	No	Used to override the maximum number of errors after which the batch must be terminated.

Note: If the **Update Price Item Group ID (C1-PITEM)** batch fails or aborts due to some reason, you can restart the batch over and over again with the same set of parameters.

Post Execution Check/Clean Up:

On successful completion of this batch, either new records are added or the **PRICEITEM_PRAM_GRP_ID** column is updated for the existing records in the **C1_MODEL_PRICEITEM** table.

3. Additional Tasks

This section describes the following tasks that you need to perform after upgrading the application:

1. [Generating the Application Viewer](#)
2. [Starting the Thread Pool Worker](#)
3. [Building Javadoc Index](#)

3.1 Generating the Application Viewer

Once you upgrade the application, you need to regenerate the application viewer. To regenerate the application viewer:

1. Login to the application server using the administrator's credentials.
2. Initialize the application environment (on which you want to regenerate the application viewer) using the following command:

AIX, Linux:

```
$SPLEBASE/bin/splenviron.sh -e $SPLENVIRON
```

Windows:

```
%SPLEBASE%\bin\splenviron.cmd -e %SPLENVIRON%
```

Where, `$SPLEBASE` or `%SPLEBASE%` is the path where the application environment is installed, and `$SPLENVIRON` or `%SPLEBASE%` is the name of the application environment for which you want to set the environment variables.

3. Set the `ANT_OPTS` environment variable using the following command:

Windows:

```
Set ANT_OPTS= -Xms512m -Xmx1024m -XX:PermSize=256M
```

Note: This command helps to process some tasks which require more memory. This command is only applicable for Windows and not for Linux machine.

4. Execute the `genappvieweritems` utility using the following command:

AIX, Linux:

```
$SPLEBASE/bin/genappvieweritems.sh
```

Windows:

```
%SPLEBASE%\bin\genappvieweritems.cmd
```

If the application viewer is generated successfully, the response code is set to 0. However, if you get a response code other than 0, it means an error has occurred while generating the application viewer. A log file is created in the `$SPLEBASE/logs` folder.

5. Execute the `initialSetup` utility using the following command:

AIX, Linux:

```
$SPLBASE/bin/initialSetup.sh
```

Windows:

```
%SPLBASE%\bin\initialSetup.cmd
```

Where, `$SPLBASE` or `%SPLBASE%` is the path where the application environment is installed. The `initialSetup` utility updates the configuration files including the WAR files on the system.

3.2 Starting the Thread Pool Worker

Once you upgrade the application, you need to start the thread pool worker. The thread pool worker is required when you execute batches either online or through batch scheduler.

You can use the **Distributed Thread Pool** property of the thread pool worker to set the number of threads that can run concurrently. By default, 5 threads run concurrently. You can change the default value by editing the following line in the `threadpoolworker.properties` file:

```
com.splwg.grid.distThreadPool.threads.DEFAULT=5
```

To start the thread pool worker, use the following command once you initialize the application environment:

AIX, Linux:

```
$SPLBASE/bin/threadpoolworker.sh
```

Windows:

```
%SPLBASE%\bin\threadpoolworker.cmd
```

Where, `$SPLBASE` or `%SPLBASE%` is the path where the application environment is installed.

3.3 Building Javadoc Index

Once you upgrade the application, you may want to regenerate the index file of Javadoc documentation. You must regenerate the Javadoc index file only when some modifications are made to the Java code.

To regenerate the Javadoc index file, use the following command:

AIX, Linux:

```
$SPLBASE/bin/buildJavadocsIndex.sh
```

Windows:

```
%SPLBASE%\bin\buildJavadocsIndex.cmd
```

Where, `$SPLBASE` or `%SPLBASE%` is the path where the application environment is installed.

2. Perform the following steps on the application environment:
 - a. Change the DB Name using the `configureEnv` command.
 - b. Execute the `initialSetup` utility using the following command:

AIX, Linux:

```
$SPLBASE/bin/initialSetup.sh
```

Windows:

```
%SPLBASE%\bin\initialSetup.cmd
```

- c. Execute the `invokeDBUpdatePatch` utility to change the database user name and password using the following command:

AIX, Linux:

Appendix J : ORMB V3.1.0.0.0 Rollup Packs

Instead of individually applying the patches, you can download and apply the release-specific rollup packs. To view the list of rollup packs that you need to apply on the application environment and database, refer to the *ORMB V3.1.0.0.0 Patch Guide (Document ID: 2815177.1)* on [My Oracle Support](#).

J.1 Applying a Rollup Pack on the Application Environment

Once you install Oracle Revenue Management and Billing Version 3.1.0.0.0, you need to apply the rollup packs listed in the *ORMB V3.1.0.0.0 Patch Guide (Document ID: 2815177.1)*. To apply a rollup pack on the application environment:

1. Download the rollup pack from [My Oracle Support](#). A zip file is downloaded.
2. Unzip the rollup pack using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_1>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_1> folder. The contents include the `README.txt` file and three folders named `RMB_V3.1.0.0.0_App_Rollup`, `RMB_V3.1.0.0.0_DB_Rollup`, and `RMB_V3.1.0.0.0_PFDs`.

3. Initialize the application environment (on which you want to install the rollup pack) using the following command:

AIX, Linux:

```
$SPLBASE/bin/splenvir.sh -e $SPLENIRON
```

Windows:

```
%SPLBASE%\bin\splenvir.cmd -e %SPLENIRON%
```

Where,

`$SPLBASE` or `%SPLBASE%` is the path where the application environment is installed and `$SPLENIRON` or `%SPLENIRON%` is the name of the application environment.

4. Change to the `RMB_V3.1.0.0.0_App_Rollup` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/RMB_V3.1.0.0.0_App_Rollup
```

Windows:

```
cd <DESTINATION_FOLDER_1>\RMB_V3.1.0.0.0_App_Rollup
```

Note: The <DESTINATION_FOLDER_1> folder is the location where you have extracted the contents of the rollup pack.

5. Install the patch using the following command:

AIX, Linux:

```
./installSFgroup.sh
```

Windows:

```
installSFgroup.cmd
```

J.2 Applying a Rollup Pack on the Database

```

The contents of the zip file are extracted in the `<DESTINATION_FOLDER_1>` folder. The contents include the `README.txt` file and three folders named `RMB_V3.1.0.0.0_App_Rollup`, `RMB_V3.1.0.0.0_DB_Rollup`, and `RMB_V3.1.0.0.0_PFDs`.

3. Change to the `RMB_V3.1.0.0.0_DB_Rollup` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/RMB_V3.1.0.0.0_DB_Rollup
```

Windows:

```
cd <DESTINATION_FOLDER_1>\RMB_V3.1.0.0.0_DB_Rollup
```

Note: The `<DESTINATION_FOLDER_1>` folder is the location where you have extracted the contents of the rollup pack.
