 - 2.3 Setting up OBX for first time use 7

1.1 Introduction

This guide would help you to install the Oracle Banking Extensibility Workbench – OBX on designated environment. It is assumed that all the prior setup is already done related with Base product/ Kernel. In this document it is also assumed that installation will be done on Windows 10 operating system with minimum 8GB Ram and available/free space of 5GB.

1.2 Audience

This document is intended for the teams and developers who are responsible for creating extensions like services and web components for products which are developed using Oracle Banking Microservices Architecture.

1.3 Document Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Related Documents

2. OBX Setup

2.1 Prerequisites

Machine and Operating System

- Windows 10 64-bit: Pro, Enterprise, or Education (Build 15063 or later)
- 8/16GB RAM
- 100GB of free space

List of Software

- Machine should have Java JDK 8 installed
- Cmdr | Console Emulator (Latest Version v1.3.21) (Recommended for Running sh files on windows)
- Visual Studio Code or Any preferred IDE
- Postman for Windows
- Chrome Browser/ Firefox
- SQL developer

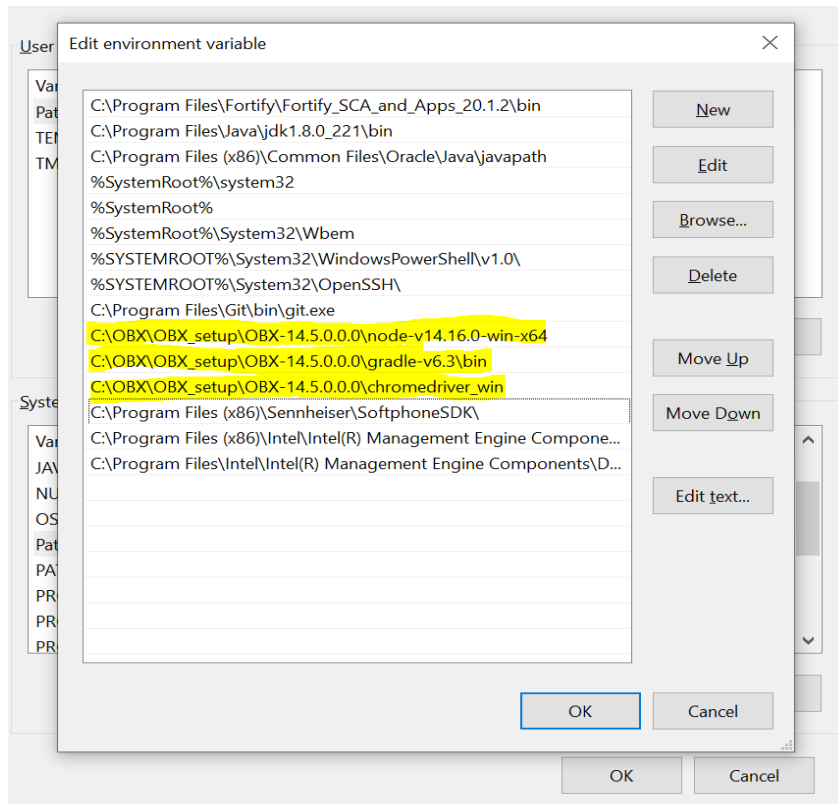

2.2 Steps to Install OBX

Following are the steps needed to follow sequentially for installing OBX on machine:

- Remove any previously installed NodeJS or Gradle on the machine and restart the machine
- Create a folder names OBX in your C drive.
- Create one more folder inside OBX with the name OBX_setup. Extract OBX-14.5.0.0.zip folder on your local directory in C:\OBX\OBX_setup folder.

- Set the Environment Variable for Gradle, Node and ChromeDriver by modifying the Path of System Variables.
- Point the path to extracted folder of OBX

- Save all the settings and open cmd or command prompt
- Create a directory **extension_home** in OBX folder like C:\OBX\extension_home
- Through cmd or command prompt navigate to **extension_home** folder
- Verify the Installation by using the command **obx -h**

```

cmd
C:\OBX\extension_home
λ obx -h
obx <command>

Commands:
obx batch                Creates new OBMA based batch service
obx build-cca            Generates extended-components war
obx event [options]     Creates publisher and/or subscriber event service
obx release              Displays release note
obx service-update      Update existing service to latest
obx service <command> [options] Creates new domain service
obx startup [options]   Executes UI component
obx start-cs            Starts the component server from extension home
obx task [options]      Creates a reference task service
obx ui-update           Update existing UI to latest
obx ui [options]        Creates UI component
obx validation [options] Creates a validation service
obx xdl-gen [options]   Opens OBX UI for generating XDL file

Options:
-h, --help             Show help [boolean]
-v, --version          Show version information [boolean]

Examples:
obx service new -c

C:\OBX\extension_home
λ |

```

2.3 Setting up OBX for first time use

It is assumed that before setting up OBX for generating the first artifact, all the installation process is completed till extension_home folder creation and you are able to see the help menu like below:

```
C:\OBX\extension_home
λ obx -h
obx <command>

Commands:
obx batch                Creates new OBMA based batch service
obx build-cca            Generates extended-components war
obx event [options]      Creates publisher and/or subscriber event service
obx release              Displays release note
obx service-update       Update existing service to latest
obx service <command> [options] Creates new domain service
obx startup [options]    Executes UI component
obx start-cs             Starts the component server from extension home
obx task [options]       Creates a reference task service
obx ui-update            Update existing UI to latest
obx ui [options]         Creates UI component
obx validation [options] Creates a validation service
obx xdl-gen [options]    Opens OBX UI for generating XDL file

Options:
-h, --help                Show help [boolean]
-v, --version              Show version information [boolean]

Examples:
obx service new -c

Copyright © 2021, 2022, Oracle and/or its affiliates. All rights reserved.

C:\OBX\extension_home
λ |
```

Once that is done, we will proceed to next step which is setting up libraries and components from base product. Please follow the below process to setup libraries and components:

- Go to app-shell folder and navigate to this path “\app-shell-snapshot-foundation\js\libs\lux”.
- Copy the whole lux folder from here and paste inside the following two places.
 1. C:\OBX\OBX_setup\OBX-14.5.0.0.0\node-v14.16.0-win-x64\node_modules\generator-obx\templates\startup
 2. C:\OBX\OBX_setup\OBX-14.5.0.0.0\node-v14.16.0-win-x64\node_modules\generator-obx\templates\xdl-gen
- Create a folder **lib** inside extension_home directory.
- Again, using 7zip or other similar tool, open any service war like **cmc-datasegment-services.5.1.0.war**, navigate inside WEB-INF\lib folder and copy all the jars and put it inside the **lib** folder of extension_home
- Create a folder **runtime** inside extension_home directory.
- From the **gradle** folder which comes inside the **obx.zip**, navigate inside the lib folder and copy **extra_jars** which are compile time dependencies for services, and paste it inside **runtime** folder.
- To run the artifacts locally you need to have a set up for component-server. Download the **component-server.zip** from the shared location and extract it to **extension_home** directory
- After all the above process extension_home folder looks like below.

extension_home

File Home Share View
