Figure 2.5: High Level Integration Diagram of OBTR Components for RP

2.7 Integration Process

OBTR integrates with FCUBS to get relationship pricing data for pricing components namely Charges, Interest, and Exchange Rate.

Table 2.7: Pricing Components

Pricing Component Type	Rate Type
Charges	Rate and Amount
Interest	Rate
Exchange Rate	Rate

- The system verifies if the customer is RP enabled, and components of the transaction are defined as pricing components in **Treasury External Pricing Component Maintenance** screen. The synchronous call is made to OBTR Adapter on subsystem pickup and save.
- OBTR Adapter builds pricing requests and invokes FCUBS Web service. The OBTR adapter consumes the FCUBS WS response and extracts the RP rate or amount from the response.

- RP Rate or Amount is displayed in related subsystems as Charges, Interest, and Exchange Rate. Users can modify the rates or amount, and the modified pricing is considered for processing on saving the modification.
- Components which are not applicable for external pricing are processed with the rate or amount defined in OBTR.

2.7.1 Integration Log

You can have integration logs generated that captures the OBTR Adapter flow during RP integration. The log path can be configured in the **IFDTRPRM** screen.

Error in the integration process is also captured and stored in integration log table IFTB_TR_EXT_PRICING_LOG.

2.8 Integration of Pricing Components

Integration between OBTR and FCUBS allows you to transfer rate or amount for Charges, Interest, and Exchange Rate.
