# 1. Deploying Oracle Banking Treasury Management on WebLogic

## 1.1 Introduction

This chapter explains the steps to deploy Oracle Banking Treasury Management application into Oracle WebLogic application server.

## 1.2 Building Application

For building Oracle Banking Treasury Management Application, refer to the following chapters.

### 1.2.1 Building Application

Refer to the chapter 'Building Application'. This includes the following details:

- Creating Property File
- Building EAR File
- Configuring Plug-ins
- Loading Properties Files

## 1.3 Deploying Application in Oracle WebLogic

This section explains the method of deploying Oracle Banking Treasury Management Application into Oracle WebLogic application server.

### 1.3.1 Deploying Integration Adapter EAR from WebLogic Administration Console

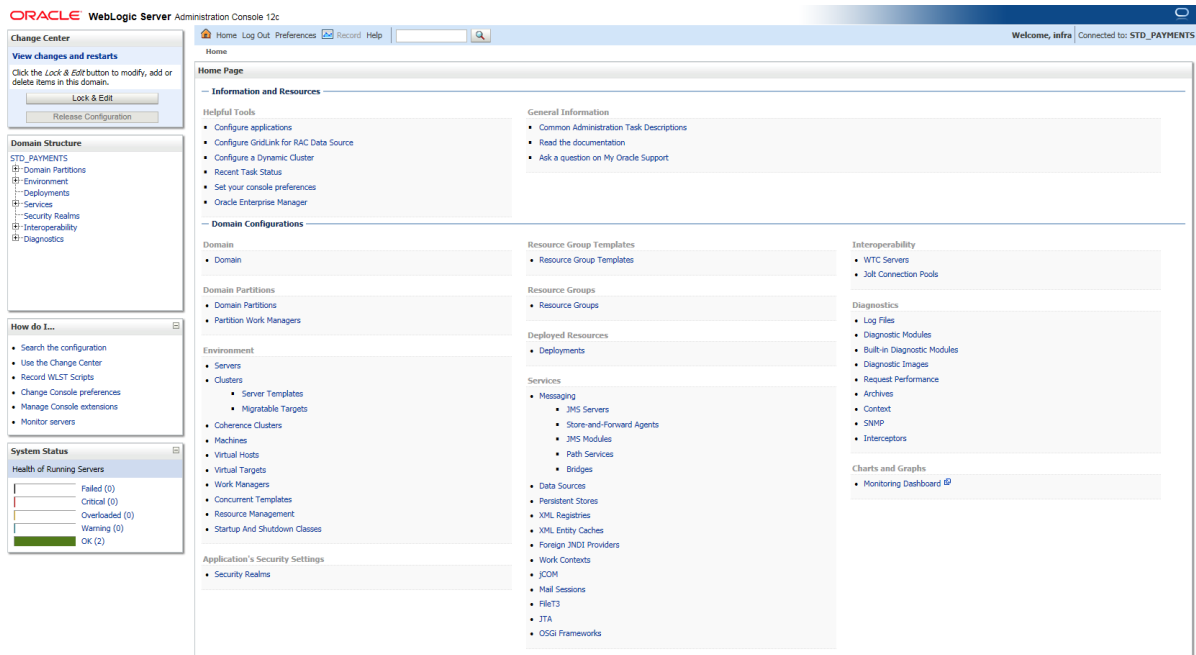

To deploy Oracle Banking Treasury Management Application from Oracle WebLogic administration console, follow the steps given below.

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: <http://10.10.10.10:1001/console>

The following screen is displayed:

2. Specify the WebLogic administrator user name and password. Click 'Log In'.

### How do I...

  - Install an enterprise application
  - Configure an enterprise application
  - Update (redploy) an enterprise application
  - Monitor the modules of an enterprise application
  - Deploy ESB modules
  - Install a Web application

### Summary of Deployments

[Configuration](#) | [Control](#) | [Monitoring](#)

This page displays the list of Java EE applications and standalone application modules installed to this domain.

You can update (redploy) or delete installed applications and modules from the domain by selecting the checkbox next to the application name and then using the controls on this page.

To install a new application or module for deployment to targets in this domain, click **Install**.

**Customize this table**

7. Click 'Next'. The following screen is displayed.

8. Select the application Adapter EAR from the list.

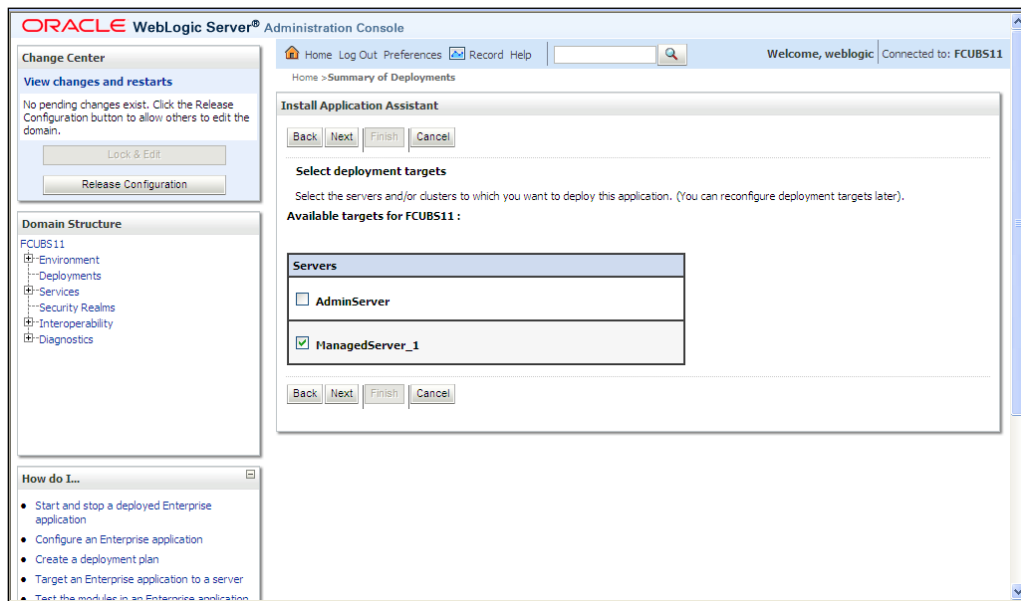

9. Click 'Next'. Following screen is displayed:

10. Choose the targeting style 'Install this deployment as a library'.

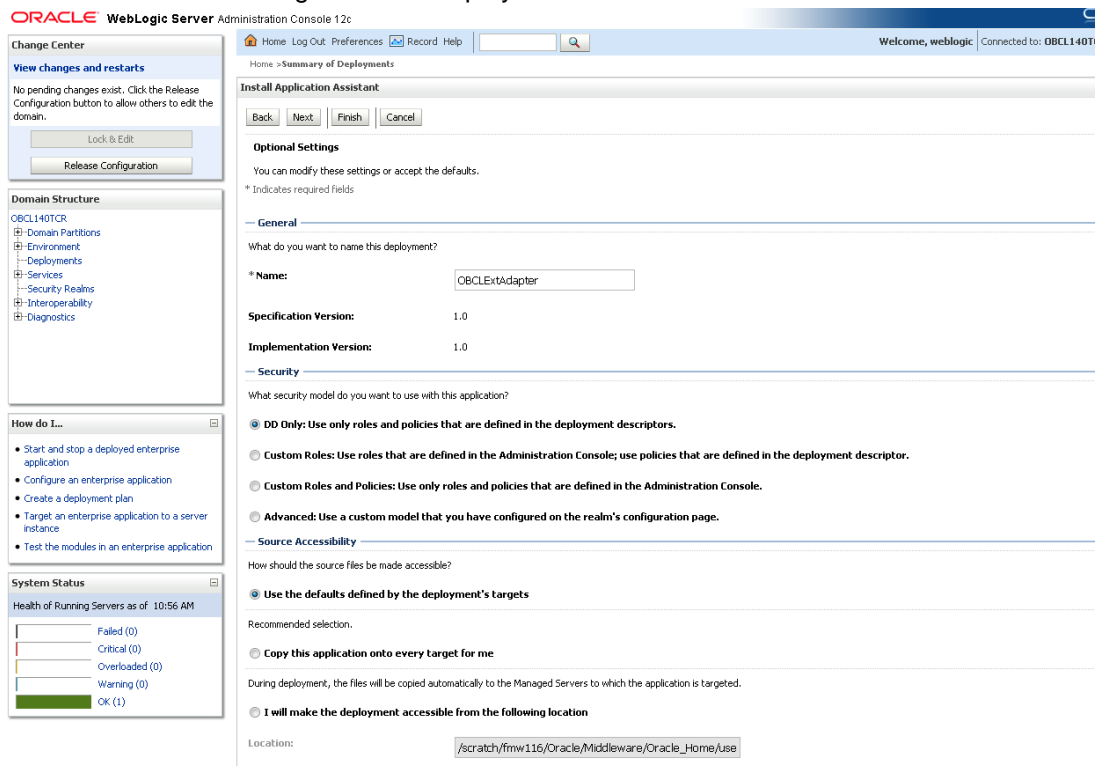

11. Click 'Next'.

12. The following screen is displayed

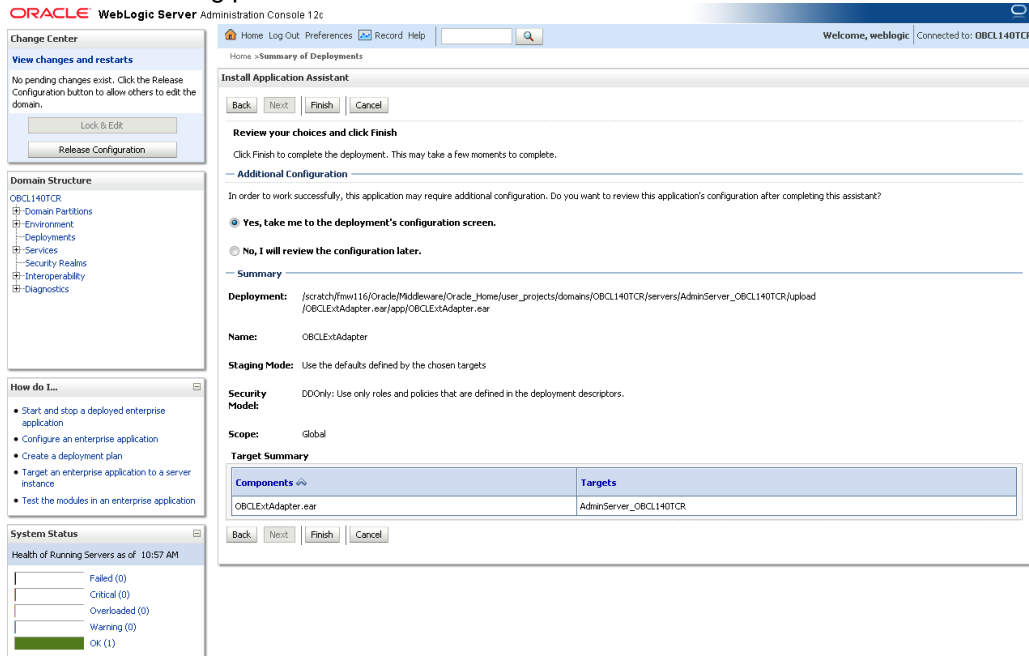

13. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

14. Click 'Next'. The following screen is displayed.

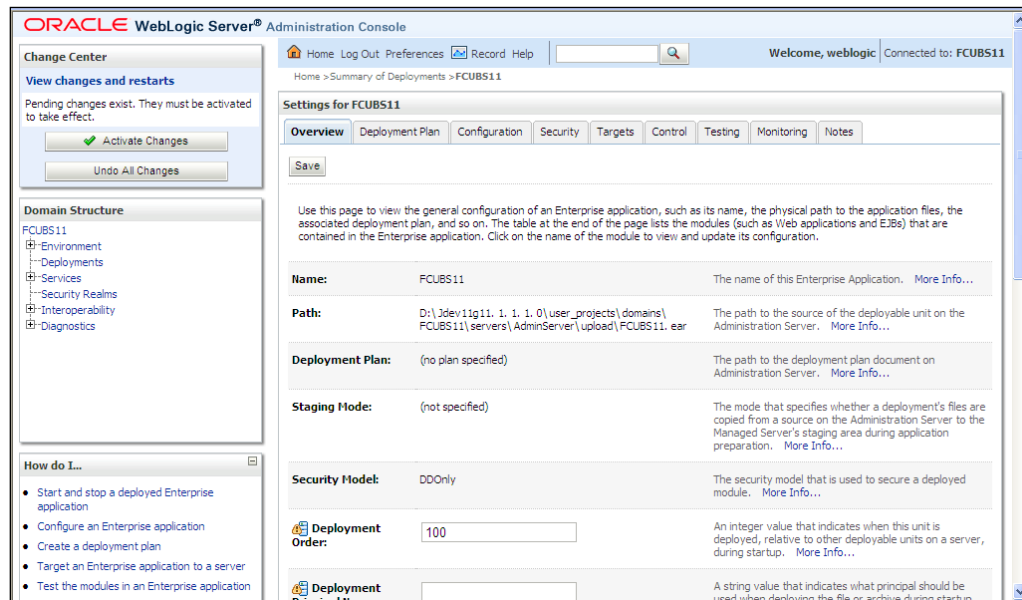

15. Check the deployment name.

## 16. The remaining portion of the screen is shown below:

## 17. Click 'Finish' button. The following screen is displayed.

18. Click 'Save' button. The message 'Settings updated successfully' is displayed.

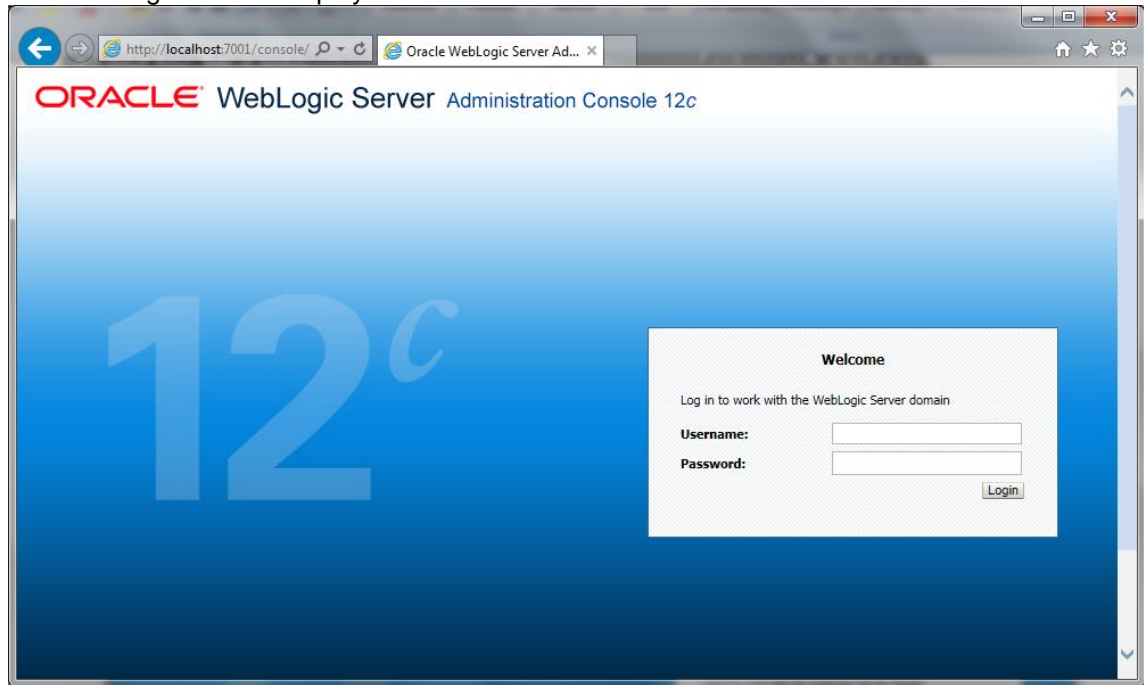

19. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

### 1.3.2 Deploying Dependency Library "Jax-RS"

This library must be installed before deploying OBTR.ear. Follow the below steps

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: <http://10.10.10.10:1001/console>

2. The following screen is displayed:

3. Specify the WebLogic administrator user name and password. Click 'Log In'.

The following screen is displayed:

#### 4. Click install button

4. Click 'Install' button. The following screen is displayed:

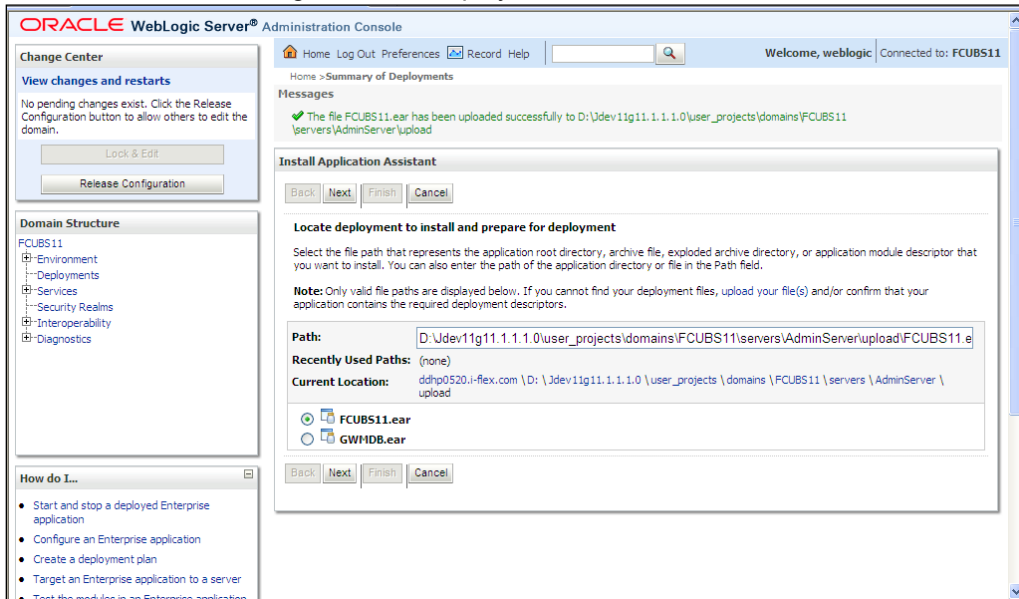

5. In order to specify the path/location of the enterprise archive file, click the link 'upload your file(s)'.

6. Click 'Next'. The following screen is displayed:

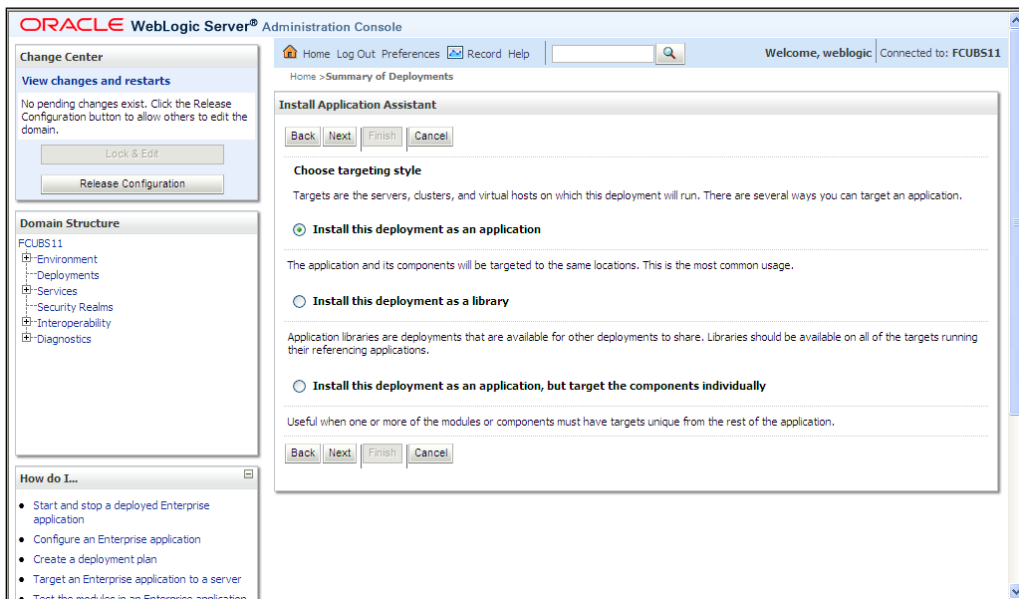

7. Specify the EAR file path. You can use the 'Browse' button to locate the file.

8. Click 'Next'. The following screen is displayed.

9. Select the application OBTRM EAR created from the list.

10. Click 'Next'. Following screen is displayed:

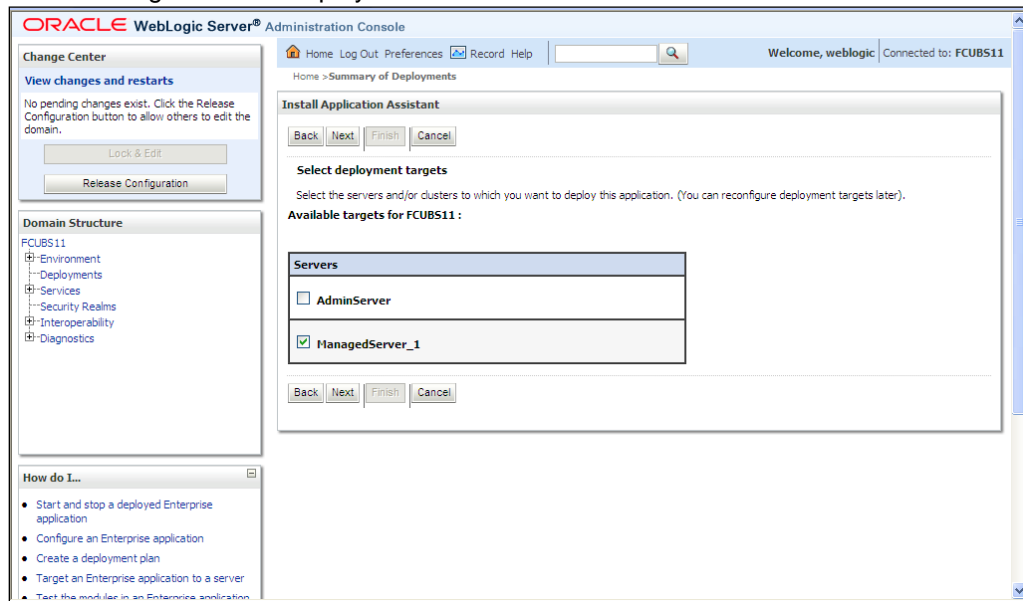

11. Choose the targeting style 'Install this deployment as an application'.

12. Click 'Next'.

The following screen is displayed

13. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

14. Click 'Next'. The following screen appears.

15. Check the deployment name.

The remaining portion of the screen is shown below:

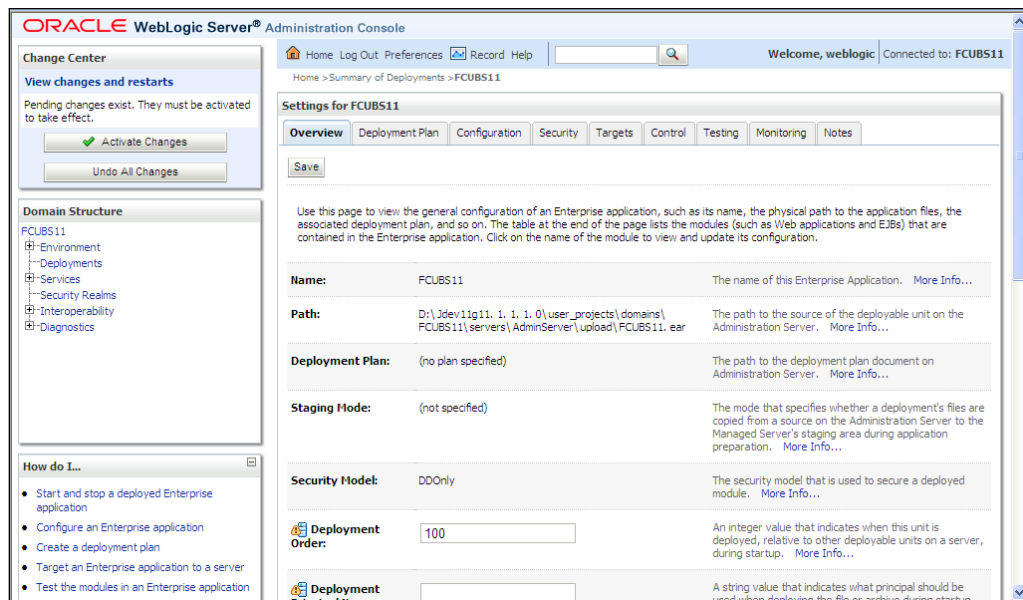

The screenshot shows the 'Security' and 'Source accessibility' configuration screens. The left sidebar contains a tree view with 'Security Realms', 'Interoperability', and 'Diagnostics'. Below the tree is a 'How do I...' section with a list of tasks: 'Start and stop a deployed Enterprise application', 'Configure an Enterprise application', 'Create a deployment plan', 'Target an Enterprise application to a server', and 'Test the modules in an Enterprise application'. Below that is a 'System Status' section showing 'Health of Running Servers' with a bar chart indicating 'Failed (0)', 'Critical (0)', 'Overloaded (0)', 'Warning (0)', and 'OK (1)'. The main content area is divided into two sections: 'Security' and 'Source accessibility'. The 'Security' section asks 'What security model do you want to use with this application?' and has three radio button options: 'DD Only: Use only roles and policies that are defined in the deployment descriptors.' (selected), 'Custom Roles: Use roles that are defined in the Administration Console; use policies that are defined in the deployment descriptor.', and 'Custom Roles and Policies: Use only roles and policies that are defined in the Administration Console.'. The 'Source accessibility' section asks 'How should the source files be made accessible?' and has two radio button options: 'Use the defaults defined by the deployment's targets' (selected) and 'Copy this application onto every target for me'. Below the 'Source accessibility' section is a 'Location' text box containing 'D:\dev11g11.1.1.0\user\_projects\domains\FCUBS11\src' and a 'Recommended selection' section with a radio button option 'I will make the deployment accessible from the following location'. At the bottom are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

16. Check whether the deployment location is accessible or not.

The following screen is displayed.

The screenshot shows the 'Install Application Assistant' screen. The left sidebar contains a tree view with 'Domain Structure', 'Environment', 'Deployments', 'Services', 'Security Realms', 'Interoperability', and 'Diagnostics'. Below the tree is a 'How do I...' section with a list of tasks: 'Start and stop a deployed Enterprise application', 'Configure an Enterprise application', 'Create a deployment plan', 'Target an Enterprise application to a server', and 'Test the modules in an Enterprise application'. Below that is a 'System Status' section showing 'Health of Running Servers'. The main content area is divided into two sections: 'Review your choices and click Finish' and 'Additional configuration'. The 'Review your choices and click Finish' section has a 'Click Finish to complete the deployment. This may take a few moments to complete.' message and a 'Click Finish to complete the deployment. This may take a few moments to complete.' message. The 'Additional configuration' section has a message 'In order to work successfully, this application may require additional configuration. Do you want to review this application's configuration after completing this assistant?' and two radio button options: 'Yes, take me to the deployment's configuration screen.' (selected) and 'No, I will review the configuration later.'. Below the 'Additional configuration' section is a 'Summary' section with a 'Deployment' text box containing 'D:\dev11g11.1.1.0\user\_projects\domains\FCUBS11\servers\AdminServer\upload\FCUBS11.ear', a 'Name' text box containing 'FCUBS11', and a 'Staging mode' text box containing 'Use the defaults defined by the chosen targets'. Below the 'Summary' section is a 'Security Model' text box containing 'DDOnly: Use only roles and policies that are defined in the deployment descriptors.'. At the bottom is a 'Target Summary' table with two columns: 'Components' and 'Targets'. The table has one row with 'FCUBS11.ear' in the 'Components' column and 'ManagedServer\_1' in the 'Targets' column. At the bottom are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

17. Click 'Finish' button. The following screen is displayed.

18. Click 'Save' button. The message 'Settings updated successfully' is displayed.

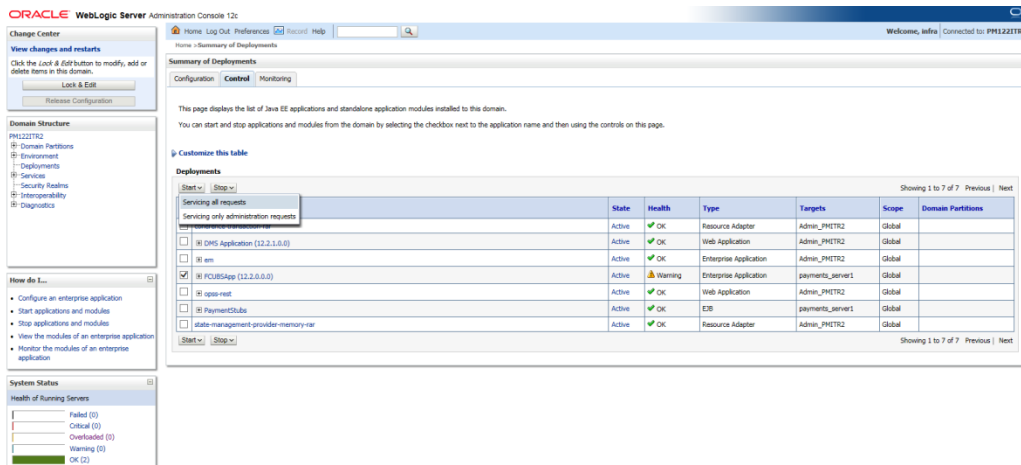

19. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

The screen is given below:

Click 'Deployment' on the left pane. Switch to Control tab .The following screen is displayed.

20. Click 'Start' drop-down button and select 'Servicing all requests'.

The following screen is displayed.

21. Click 'Yes'. The following screen is displayed.

This completes the deployment process.

### 1.3.4 Deploying Gateway/Scheduler Applications from WebLogic Administration Console

To deploy Oracle Banking Treasury Management Gateway/Scheduler Application from Oracle WebLogic administration console, follow the steps given below.

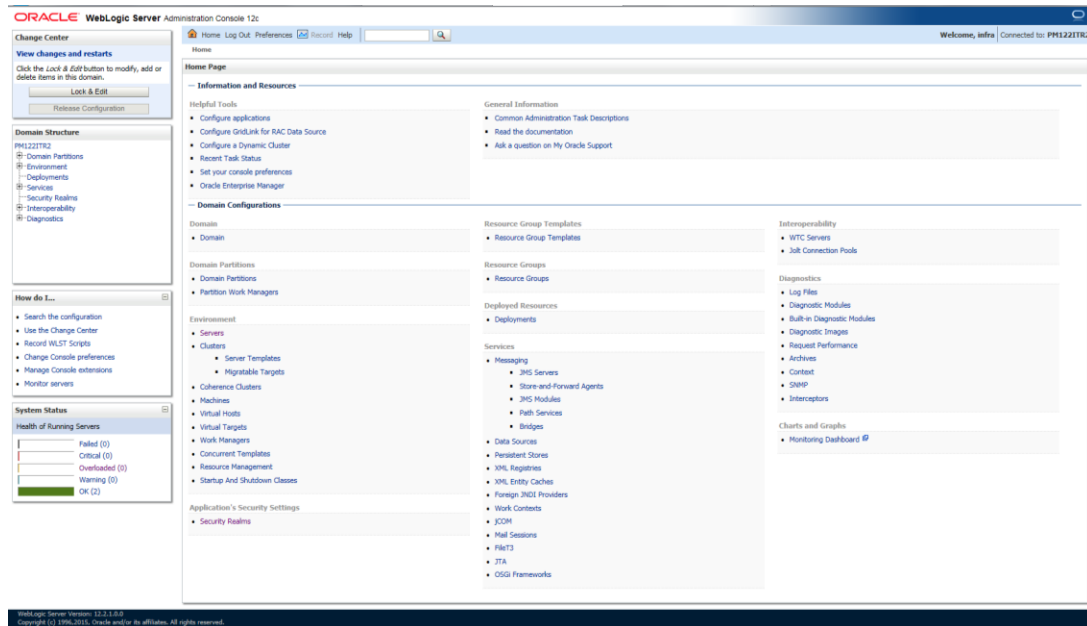

1. Launch Administrative Console of WebLogic application server. You can launch this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: <http://10.10.10.10:1001/console>

22. The following screen is displayed:

23. Specify the WebLogic administrator user name and password. Click 'Log In'.

The following screen is displayed:

24. You need to deploy an EAR. For e.g. 'GWEJB.ear'. Go to 'Deployment'.

Click 'Lock & Edit' button to enable the buttons. This action enables the buttons.

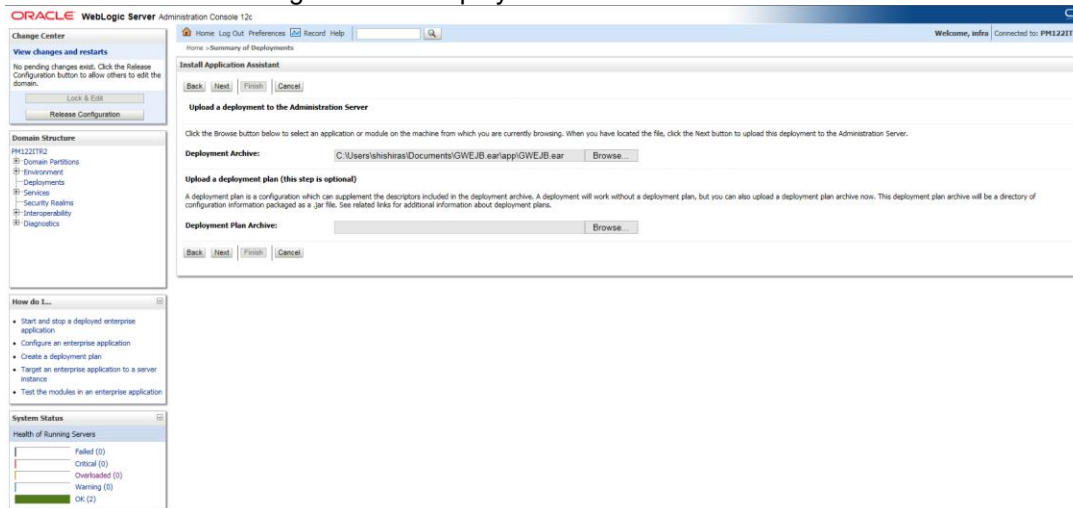

25. Click 'Install' button. The following screen is displayed:

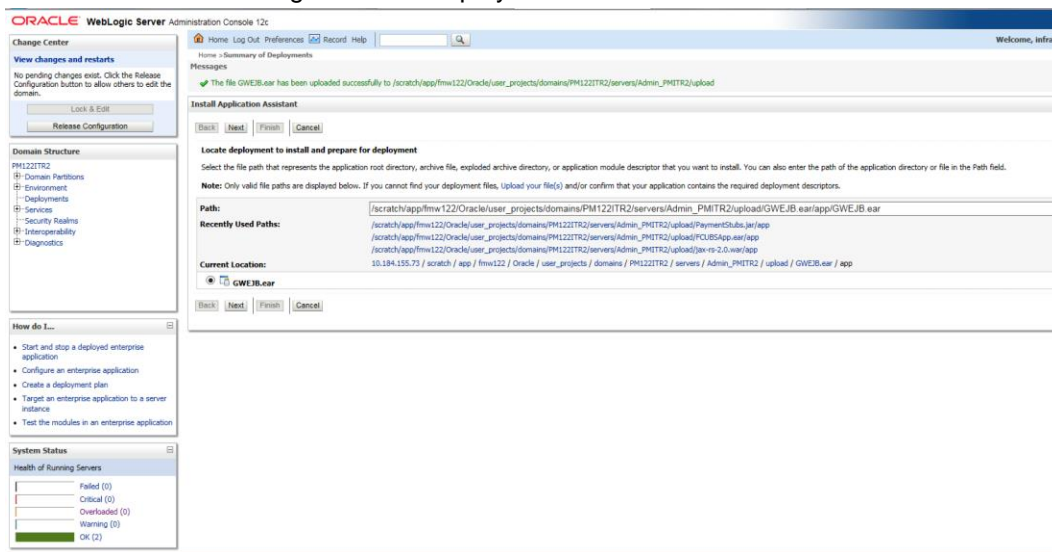

26. In order to specify the path/location of the enterprise archive file, click the link 'upload your file(s)'.

27. Click 'Next'. The following screen is displayed:

28. Specify the EAR file path. You can use the 'Browse' button to locate the file.

29. Click 'Next'. The following screen is displayed:

30. Select the application from the list.

31. Click 'Next'. Following screen is displayed:

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are three panels: 'Change Center' with 'View changes and restarts' and 'Release Configuration' buttons; 'Domain Structure' showing a tree view with 'PM1221TR2' selected; and 'System Status' showing 'Health of Running Servers' with a bar chart indicating 'OK (2)'. The main area is titled 'Install Application Assistant' and contains the following sections:

- Choose installation type and scope**: A message states, 'Select if the deployment should be installed as an application or library. Also decide the scope of this deployment. The application and its components will be targeted to the same locations. This is the most common usage.'
- Install this deployment as an application**: This option is selected. A message states, 'Application libraries are deployments that are available for other deployments to share. Libraries should be available on all of the targets running their referencing applications.'
- Install this deployment as a library**: This option is unselected.
- Install this deployment as an application, but target the components individually**: This option is unselected. A message states, 'Useful when one or more of the modules or components must have targets unique from the rest of the application. Select a scope in which you want to install the deployment.'
- Scope**: A dropdown menu is set to 'Global'.

At the bottom of the main area, there are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

32. Choose the targeting style 'Install this deployment as an application'.

33. Click 'Next'.

The following screen is displayed

The screenshot shows the Oracle WebLogic Server Administration Console. On the left, there are three panels: 'Change Center' with 'View changes and restarts' and 'Release Configuration' buttons; 'Domain Structure' showing a tree view with 'PM1221TR2' selected; and 'System Status' showing 'Health of Running Servers' with a bar chart indicating 'OK (2)'. The main area is titled 'Select deployment targets' and contains the following sections:

- Select deployment targets**: A message states, 'Select the servers and/or clusters to which you want to deploy this application. (You can reconfigure deployment targets later).'
- Available targets for GWEJB :**: A table with two rows: 'Admin\_PM1TR2' and 'payments\_server1'. The 'payments\_server1' row is checked.

At the bottom of the main area, there are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

34. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

35. Click 'Next'. The following screen is displayed.

Optional Settings

You can modify these settings or accept the defaults.

\* Indicates required fields

General

What do you want to name this deployment?

Name: GWEJB

Security

What security model do you want to use with this application?

DD Only: Use only roles and policies that are defined in the deployment descriptors.

Custom Roles: Use roles that are defined in the Administration Console; use policies that are defined in the deployment descriptor.

Custom Roles and Policies: Use only roles and policies that are defined in the Administration Console.

Advanced: Use a custom model that you have configured on the realm's configuration page.

Source Accessibility

How should the source files be made accessible?

Use the defaults defined by the deployment's targets

Recommended selection.

Copy this application onto every target for me

During deployment, the files will be copied automatically to the Managed Servers to which the application is targeted.

I will make the deployment accessible from the following location

Locations: /scratch/app/v12212/user\_projects/domains/FCAPACK125/serv

Provide the location from where all targets will access this application's files. This is often a shared directory. You must ensure the application files exist in this location and that each target can reach the location.

Plan Source Accessibility

How should the plan source files be made accessible?

Use the same accessibility as the application

36. Check the deployment name.

The remaining portion of the screen is shown below:

### Settings for GWEJB(12.2.0.0.0)

Overview Deployment Plan Configuration Security Targets Control Testing Monitoring Notes

Save

Use this page to view the general configuration of an enterprise application, such as its name, the physical path to the application files, the associated deployment plan, and so on. The table at the end of the page lists the modules (such as Web applications) contained in the enterprise application. Click on the name of the module to view and update its configuration.

**Name:** GWEJB The name of this enterprise application. [More Info...](#)

**Scope:** Global Specifies if this enterprise application is accessible within the domain, a partition, or a resource template. [More Info...](#)

**Archive Version:** 12.2.0.0.0 The archive version, specified from the manifest or overridden during deployment. [More Info...](#)

**Path:** /scratch/app/fmw122/Oracle/user\_projects/domains/PM1221TR2/servers/Admin\_PM1TR2/upload/GWEJB.ear/app/GWEJB.ear The path to the source of the deployable unit on the Administration Server. [More Info...](#)

**Deployment Plan:** (no plan specified) The path to the deployment plan document on the Administration Server. [More Info...](#)

**Staging Mode:** (not specified) Specifies whether a deployment's files are copied from a source on the Administration Server's staging area during application preparation. [More Info...](#)

**Plan Staging Mode:** (not specified) Specifies whether an application's deployment plan is copied from a source on the Administration Server's staging area during application preparation. [More Info...](#)

**Security Model:** DOOnly The security model that is used to secure a deployed module. [More Info...](#)

**Deployment Order:** 100 An integer value that indicates when this unit is deployed, relative to other deployable units during startup. [More Info...](#)

**Deployment Principal Name:** A string value that indicates the principal that should be used when deploying the file or arc and shutdown. This principal will be used to set the current subject when calling out into interfaces such as ApplicationLifecycleListener. If no principal name is specified, then the arc will be used. [More Info...](#)
