1. Resources to be created on Application Server

1.1 Introduction

This chapter explains list of resources to be created for OBTR application.

1.2 <u>Resource Types</u>

Configure the application server for Oracle Banking Treasury Management Application. Ensure that the following resources are available before deployment:

- Data source
- JMS resources
- Debug paths for host and branch

Note the following:

In case of Multi Entity, all data sources must be created separately for each entity. The JNDI name will be differentiated by suffixing entity name.

Examples: If Data source is 'jdbc/fcjDevDs' then jdbc/fcjDevDs+entity name will be lookup the application. (jdbc/fcjDevDs+entity name) jndi should be presented in application server

1.3 Resource prerequisites for Plug-ins

Resource prerequisites for different plug-ins are explained below. In case you wish to include a plug-in, ensure that the corresponding resources are created.

1.3.1 Oracle Banking Treasury Management

OBTR needs below resources before deployment. Create the following queues and connection factories in the application server.

Data source

Datasource Name	Datasource Label	Туре	Default Value
INIT_DATASOURCE	Data Source	NON-XA	jdbc/fcjdevDS
SCHEDULER_DS	Scheduler Datasource	ХА	jdbc/fcjSchedulerDS

You need to create two more data sources for Oracle FCUBS

- <u>Scheduler</u>: You need to create XA data source for Oracle FCUBS with the JNDI name '_XA' for scheduler. For example, if the Oracle FCUBS HOST Non XA data source JNDI name is 'jdbc/fcjdevDS', then you need to create another data source for FCUBS with the JNDI name 'jdbc/fcjdevDS_XA'.
- <u>Batch Process:</u> You need to create data source for Oracle FCUBS with the JNDI name '_ASYNC for batch process. For example, if the Oracle FCUBS HOST Non XA data source JNDI name is 'jdbc/fcjdevDS', then you need to create another data source for FCUBS with the JNDI name 'jdbc/fcjdevDS_ ASYNC.

1.3.2 <u>SMS</u>

SMS needs below Data sources before deployment.

DataSource

Datasource Name	Datasource Label	Туре	Default Value
FCUBS_SMS_POOL_NAME	DataSource	NON-XA	jdbc/fcjdevDS

1.3.3 <u>Scheduler</u>

If scheduler is included in the property file, create the following queues and connection factories in the application server.

In case of Remote Scheduler, create the following queues, connection factories and Datasources in the application server where scheduler EAR will be deployed.

Connection Factories

Create the following connection factories:

QCF Label	QCF
Notify Destination QCF	NotifyDestQCF
Deferred QCF	DefferedDestQCF
Notify QCF	NOTIFY_MDB_QCF
Incoming QCF	EmsQcf
BIP QCF	BIPQCF
Sanction Check QCF	SNCKREQQCF
GI Upload QCF	GI_UPLOAD_QCF

All these must be XA enabled.

Queues

Create the following queues:

QUEUE Label	QUEUE
Notify Destination Queue Name	NOTIFY_DEST_QUEUE
Deferred Queue Name	DEFFERED_DEST_QUEUE
Notify Queue Name	NOTIFY_QUEUE
Dead Letter Queue name	NOTIFY_QUEUE_DLQ
Incoming BackupQueue name	EMS_QUEUE_BACK

Topic Connection Factory

NotifyDestTCF

Topic

• NOTIFY_DEST_TOPIC

To configure scheduler and EMS with MQ series, follow the steps given below.

- Create queues in MQ Series
- Create binding file
- Copy the MQ series JAR files to Oracle WebLogic domain library folder Datasources

Datasource Name	Datasource Label	Туре	Default Value
INIT_DATASOURCE	Data Source	NON-XA	jdbc/fcjdevDS
SCHEDULER_DS	Scheduler Datasource	ХА	jdbc/fcjSchedulerDS

 You need to create another XA data source for Oracle FCUBS with the JNDI name '_XA' for Scheduler. For example, if the Oracle FCUBS HOST Non XA data source JNDI name is 'jdbc/fcjdevDS', then you need to create another data source for FCUBS with the JNDI name 'jdbc/fcjdevDS_XA'.

Security Provider Libraries

If you wish to include signing process for SFMS messages, you need to set the following library.

File Name	Download Location	Instructions
bcprov- jdk(Latest Qualified Version).jar	http://www.bouncycastle.org/latest_releases.html	Copy the file 'bcprov- jdk(Latest Qualified Version).jar' to the directory '{WL_JAVA_HOME}/jre/lib/ext'
		Here, 'WL_JAVA_HOME' is the Java root directory from which WebLogic server is running.
		Restart Oracle WebLogic server.

For details on latest version of the software qualified with Oracle Banking Treasury Management, refer to the release certificate.

1.3.4 Gateway

If scheduler is included in the property file, create the following queues and connection factories in the application server.

Connection Factories

Create the following connection factories:

QCF Label	QCF
MDB QCF	MDBQCF

All these must be XA enabled.

Queues

Create the following queues:

QUEUE Label	QUEUE
MDB Request Queue	MDB_QUEUE
MDB Response	
Queue	MDB_QUEUE_RESPONSE
MDB DL Queue	MDB_QUEUE_DLQ

DataSource

Datasource Name	Datasource		Default Value

1.3.5 <u>ELCM</u>

If ELCM application has to be deployed, create the following queues and connection factories in the application server.

JMS Connection Factories

Create the following connection factories:
