# 1. Introduction

For the purpose of centralized user provisioning FLEXCUBE is qualified with Oracle Identity Manager - Oracle® Fusion Middleware 11g Release 2 (11.1.2.3.0).

## Scope

This document provides an understanding as to how centralized provisioning through OIM can be enabled for FCIS.

In addition to providing a background to the various components of the deployment, this document provides detailed steps as to how to install the various FCIS components required for the integration with OIM configuration in FCIS and Oracle Identity Manager to enable centralized provisioning.

## Introduction to Oracle Identity Manager

Oracle Identity Manager is an identity management product that automates user provisioning, identity administration, and password management, integrated in a comprehensive workflow engine. It enables organizations to reduce Information Technology (IT) administration costs and improve security. Oracle identity manager achieves this by providing a centralized control mechanism to manage the entire life cycle of user identities and entitlements and to control user access to across all resources in the organization.

## Advantage

Integrating FCIS with Oracle identity Manager provides capability for managing the entire life cycle of FCIS user identities through a centralized point provided by OIM in both scenario- FCIS without single sign on and FCIS with single sign on.

---

## 2. Requirements/ Problem Statement

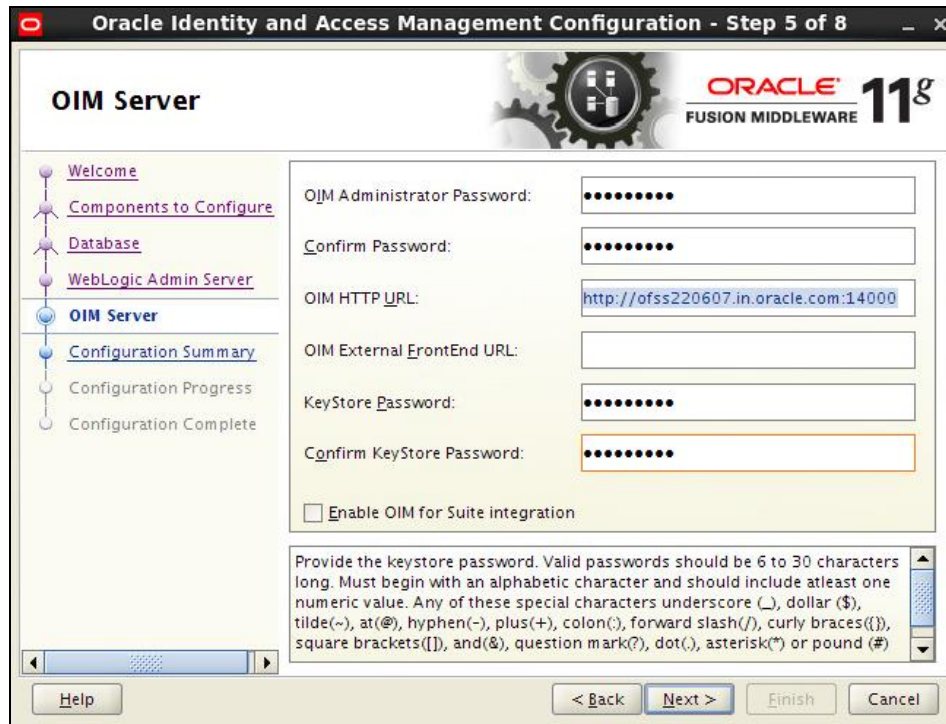

The requirement is to integrate FCIS with Oracle Identity Manager for FCIS user provisioning and de-provisioning services with and without FCIS single sign on.

## 3. Prerequisites

### 3.1 Software Required

Oracle® Fusion Middleware 11g Release 2 (11.1.2.3.0)

Refer [Oracle Identity Manager Document for Installation and configuration of Oracle Identity Manager](#).

Note \*: To get the Keystore Password in the above screen while configuring OIM Console, you should have only Weblogic Admin Server, OIM Server and SOA Server in this OIM Domain. Based on that the below keystore will be created with store password

<Domain\_home>/config/fmwconfig/default-keystore.

- Oracle Internet Directory Connector 11.1.1.6.0
- Refer the below sections:
  - [Installation of Oracle Internet Directory Connector \(Section 2.2.1.1, 2.2.1.2 & 2.3.1.1\)](#)
  - Connector by default will be available with Oracle Identity and Access Management Suite.

The path will be as follows:

<Oracle\_Middleware>/<OIM\_HOME>/connectors/oid

For example:

Linux: /app/oracle/Middleware/Oracle\_IDM1/connectors/oid

Windows: C:\apps\oracle\Middleware\Oracle\_IDM1\connectors\oid

The above directory <oid> has to be copied into

<Oracle\_Middleware>/<OIM\_HOME>/server/ConnectorDefaultDirectory

> [Configuring Oracle Identity Manager Design Console](#)

## 3.2 **Oracle FLEXCUBE Component Required**

Oracle FLEXCUBE Gateway EJB

---

## 4. System Description

### 4.1 About Oracle Identity Manager

Oracle Identity Manager is an identity management product that automates user provisioning, identity administration, and password management, integrated in a comprehensive workflow engine. Key features of Oracle Identity Manager include password management, workflow and policy management, identity reconciliation, reporting and auditing, and extensibility through adapters.

#### 4.1.1 Oracle Identity Manager System Components

Oracle Identity Manager is built on an enterprise-class, modular architecture that is both open and scalable. Each module plays a critical role in the overall functionality of the system:

##### **Identity Administration**

Identity administration includes creation and management of identities in Oracle Identity Manager. Identities include users, organizations, and roles. Identity administration also enables password management and user Oracle Identity Manager Self Service operations. Identity administration is performed by using Oracle Identity Manager Administration and Oracle Identity Manager Self Service Web clients, and the SPML Web service.

##### **Provisioning**

The provisioning transactions are assembled and modified in the provisioning module. This module maintains the "who" and "what" of provisioning. User profiles, access policies, and resources are defined in the provisioning module, as are business process workflows and business rules.

The Provisioning Server is the run-time engine for Oracle Identity Manager. It runs the provisioning process transactions as defined through Oracle Identity Manager Administration and Oracle Identity Manager Design Console and maintained within the provisioning module.

##### **Audit and Reports**

The audit and compliance functions include evaluating a person, organization, system, process, project, or product. This occurs by capturing data generated by the suite's workflow, policy, and reconciliation engines. By combining this data with identity data, an enterprise has all the information it requires to address any identity and to access a related audit inquiry. Audits are performed to ascertain the validity and reliability of information, and also provide an assessment of a system's internal control.

Reporting is the process of generating a formal document, which is created as a result of an audit. The report is subsequently provided to a user, such as an individual, a group of persons, a company, a government, or even the general public, as an assurance service so that the user can make decisions, based on the results of the audit. An enterprise can create reports on both the history and the current state of its provisioning environment. Some captured identity data includes user identity profile history, role membership history, user resource access, and fine-grained entitlement history.

## **Reconciliation and Bulk Load**

The reconciliation engine ensures consistency between the provisioning environment of Oracle Identity Manager and Oracle Identity Manager managed resources within the organization. The reconciliation engine discovers illegal accounts created outside Oracle Identity Manager. The reconciliation engine also synchronizes business roles located inside and outside the provisioning system to ensure consistency.

If you want to load a large amount of data from other repositories in your organization into Oracle Identity Manager, then you can use the Bulk Load utility. The Bulk Load utility reduces the downtime in loading the data. In addition, Bulk Load utility import Oracle Identity Manager users, roles, role memberships, and accounts provisioned to users.

## **Common Services**

Various services are grouped together that are shared and used by other Oracle Identity Manager components. These services are:

### **Form Designer**

A form that allows you to create process and resource object forms that do not come packaged with Oracle Identity Manager.

### **Scheduler**

A service that provides the capability to run specific jobs at specific schedules. This service can be used by users, application developers, connector developer, and administrators to create and configure a Job to be run at specified intervals. In addition, this service provides administrative capabilities to manage the functionality of jobs and their schedules.

### **Notification Templates**

A common notification service is used by other functional components to send notifications to interested parties about events occurring in Oracle Identity Manager. In addition, this service provides the administrative capabilities for notification template management. A notification template is used for sending the outgoing notifications. These templates typically contain the variables that refer to the available data to provide more contextual content.

### **System Properties**

A system property is an entity that controls the configuration aspect of an application. In addition, to the default system properties, you can create and manage system properties in Oracle Identity Manager.

### **Deployment Manager**

The Deployment Manager is a tool for exporting and importing Oracle Identity Manager configurations. The Deployment Manager enables you to export the objects that make up your Oracle Identity Manager configuration.

## Workflow and Request Management

Various operations in Oracle Identity Manager cannot be performed directly. Instead, the operations must be requested. The request management service provides a mechanism to create, approve, and manage requests. A request is an entity created by the users or administrators who want to perform a specific action, which requires a discretionary permission to be obtained from someone or some process before the action can be performed. For example, a user can create a request to gain access to a laptop computer, a manager can approve the request and create an open requisition, and an IT resource administrator can approve the request.

The primary goal of a provisioning solution is to manage requests and provision resources. Request service provides an abstraction layer on the Business Process Execution Language (BPEL) 11g workflow engine. Functional components such as request, provisioning, and attestation interacts with the workflow engine for human approvals. Request service caters to the various functional components in Oracle Identity Manager by managing workflow instances and categories, and provides an abstraction layer on BPEL.

## Infrastructure and Middleware Integration

The Adapter Factory, Kernel Orchestration mechanism, Context Manager, and Plug-in Framework are designed to eliminate the need for hard-coding integrations with these systems.

## Connector Framework

The integration solution strategy of Oracle Identity Manager provides connectors to various heterogeneous identity-aware IT systems. This strategy is designed to minimize custom development, maximize the reuse of code, and reduce deployment time. The tiers of the integration solution are:

- Out-of-the box integration using predefined connectors and predefined generic technology connector providers
  - Identity connectors that are designed to separate the implementation of an application from the dependencies of the system that the application is attempting to connect to
  - Connectors based on custom generic technology connector providers
  - Custom connectors using the Adapter Factory

Following figure illustrates the system components of Oracle Identity Manager.

## 4.2 Integration / Design Architecture

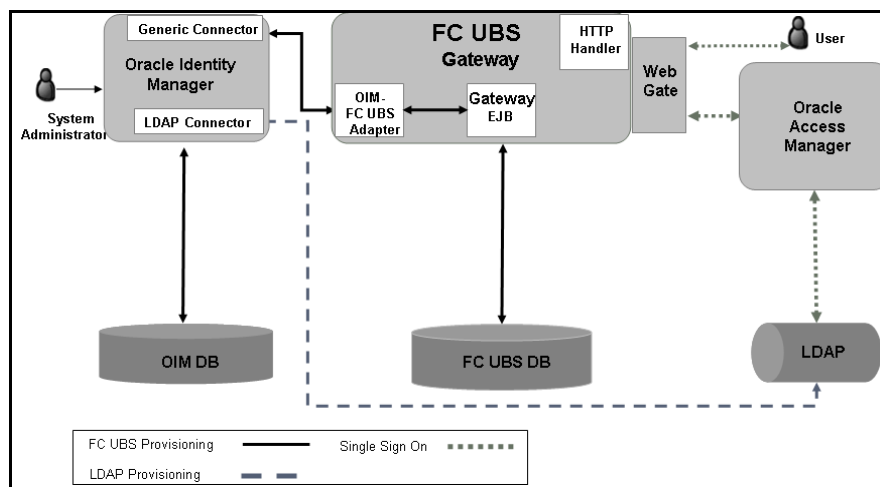

With the integration of FCIS and Oracle Identity Manager, a user can be created, modified, closed, and reopened in FCIS. Oracle Identity Manager acts as the front-end entry point for managing mandatory fields of FCIS user. After users are provisioned, the users can access the FCIS without any interaction with Oracle Identity Manager. This integration also ensures that any change that has been made for corresponding user in FCIS should be reflected in OIM using reconciliation feature of OIM.

### Design

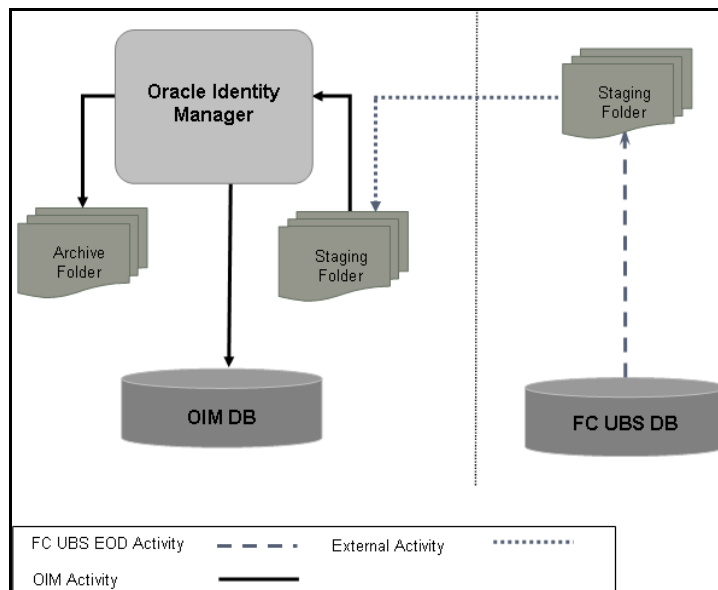

For the purpose of integration of Oracle Identity manager and FCIS “Generic technology connector” (GTC) has been used. GTC provides out of box providers for provisioning and reconciliation.

Following two figures illustrate the design aspect of the provisioning and reconciliation process:

### 4.2.1 Provisioning Design Architecture

### 4.2.2 Reconciliation Design Architecture

### 4.2.3 Design Constraints

The followings are the design constraints for this integration:

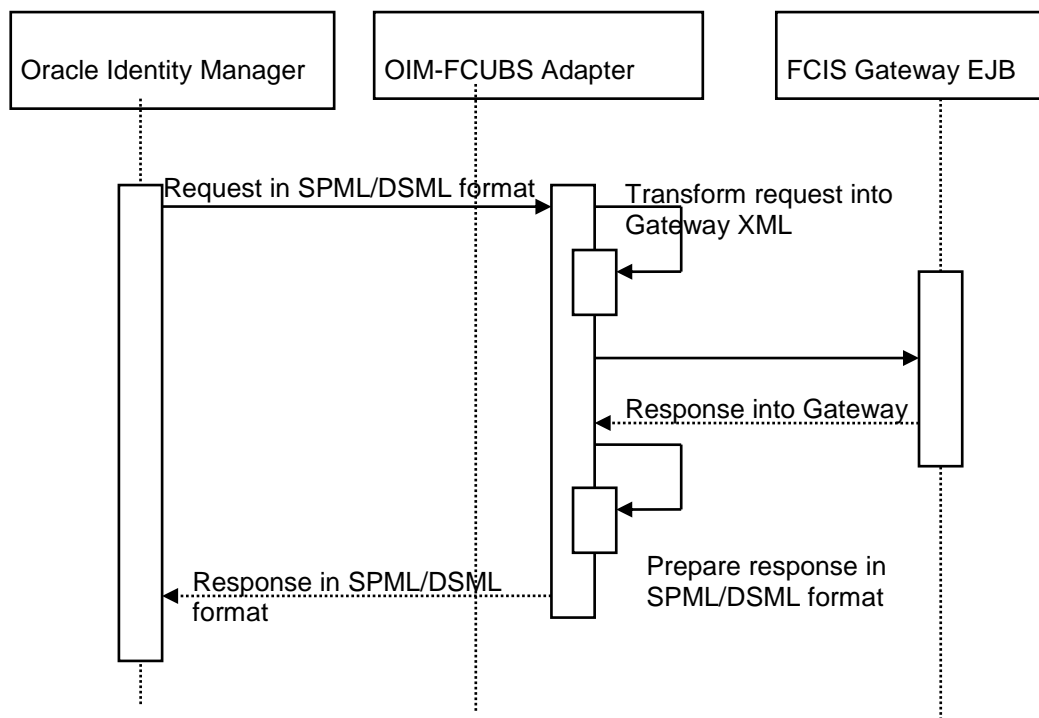

- This integration is based upon sample configuration containing only mandatory fields of FCIS user while defining the GTC. Other fields can be defined in the GTC using the same configurations.
- Due to specific data requirement for FCIS user creation, only manual provisioning method can be used for FCIS provisioning.
- User role is not taken up in this integration and the FCIS user will not be associated with any role at the time of user creation.
- A common FCIS maker id will be used for user creation that is maintained as property in a property file.
- OIM does not allow ASCII special characters e.g. ampersand, colon, braces etc. Apart from this, OIM also does not allow multiple consecutive occurrences of some of special ASCII character like underscore etc.

### 4.2.4 Message Flow

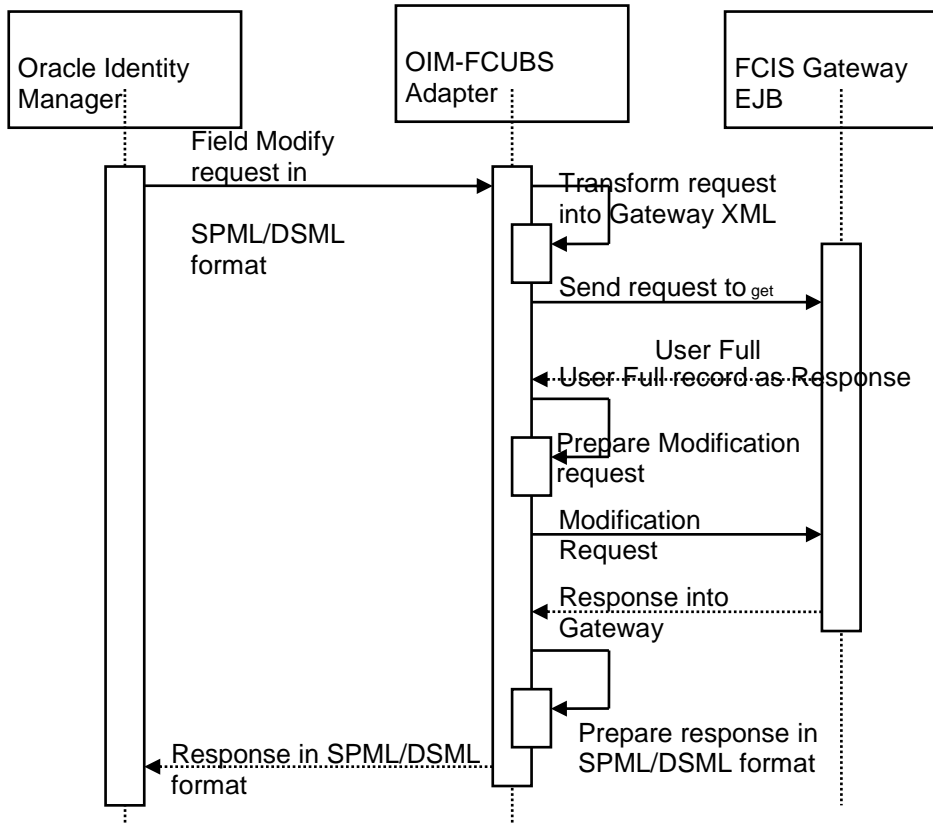

OIM-FCIS adapter would transform the request from the OIM SPML/DSML to FCIS Gateway request using Extensible Style sheet Language Transformation (XSLT). Transformed XML request will be sent to the FCIS Gateway EJB for further processing based on the type of the request. Based on the FCIS Gateway EJB response OIM-FCIS adapter will prepare the response in SPML/DSML format and will send to the OIM.

Following gives the sequence of the message exchanges between the adapter and FCIS Gateway EJB for user provisioning that are initiated from OIM.

#### 4.2.4.1 Message exchange sequence for User Creation

#### 4.2.4.2 Message exchange sequence for User Field Modification/Set Password

#### 4.2.4.3 Message exchange sequence for User Delete/Suspend/Resume Request

---

## 5. Installation / Configuration

### 5.1 Environment Setup/ Configurations

Oracle FLEXCUBE - OIM Integration environment setup requires

- OIM FLEXCUBE Adapter setup and configuration
- OIM setup

Note: This implementation document describes the installation and setup of OIM FLEXCUBE Adapter on Oracle Fusion Middleware 11g Release 2 (11.1.2.3.0).

#### 5.1.1 Enabling SSL for Weblogic and OIM Server

##### 5.1.1.1 Self-Signed Certificate Creation

To enable SSL mode, Weblogic requires a keystore which contains private and trusted certificates. We have to use the same version of JDK (which is used by Weblogic Domain), to create the keystore and certificates, otherwise it may lead to many difficulties (suggested by Oracle Support).

Keytool utility available in Java JDK will be used to create Keystore. In command prompt set PATH to the JDK\bin location. Follow the below steps to create keystore and self-signed certificates:Keystore Creation

##### 5.1.1.1.1 Key Store Creation

```
keytool -genkey -keystore <keystore_name.jks> -alias <alias_name> -dname "CN=<hostname>,
OU=<Organization Unit>, O=<Organization>, L=<Location>, ST=<State>, C=<Country_Code>" -keyalg
<Key Algorithm> -sigalg <Signature Algorithm> -keysize <key size> -validity <Number of Days> -
keypass <Private key Password> -storepass <Store Password>
```

For example:

```
keytool -genkey -keystore AdminFlexcubeKeyStore.jks -alias FlexcubeCert -dname
"CN=ofss00001.in.oracle.com, OU=OFSS, O=OFSS, L=Chennai, ST=TN, C=IN" -keyalg "RSA" -sigalg
"SHA256withRSA" -keysize 2048 -validity 3650 -keypass Password@123 -storepass Password@123
```

**Note:** **CN=ofss00001.in.oracle.com** is the Host Name of the weblogic server

##### 5.1.1.1.2 Export Private key as Certificate

```
keytool -export -v -alias <alias_name> -file <export_certificate_file_name_with_location.cer> -keystore
<keystore_name.jks> > -keypass <Private key Password> -storepass <Store Password>
```

For example:

```
keytool -export -v -alias FlexcubeCert -file AdminFlexcubeCert.cer -keystore AdminFlexcubeKeyStore.jks
-keypass Password@123 -storepass Password@123
```

### 5.1.1.1.3 Import as Trusted Certificate

```
keytool -import -v -trustcacerts -alias rootcert -file <export_certificate_file_name_with_location.cer> -  
keystore <keystore_name.jks> > -keypass <Private key Password> -storepass <Store Password>
```

For example:

```
keytool -import -v -trustcacerts -alias rootcert -file AdminFlexcubeCert.cer -keystore  
AdminFlexcubeKeyStore.jks -keypass Password@123 -storepass Password@123
```

References: Oracle Support Articles (Article ID 1281035.1, Article ID 1218695.1), in case of Certificates issued by the Trusted Authorities

### 5.1.1.2 Configuring Weblogic Console

After domain creation, follow the below steps to enable SSL in Weblogic Admin server, OIM Server and SOA Server.

#### 5.1.1.2.1 Select Admin Server to enable SSL options

The screenshot displays the Oracle WebLogic Server Administration Console interface. The main content area shows the 'Summary of Servers' page, which includes a table of servers. The 'AdminServer(admin)' server is highlighted with a red box. The table lists the following servers:

Name	Cluster	Machine	State	Health	Listen Port
AdminServer(admin)			RUNNING	OK	7001
oim_server1			RUNNING	OK	24000
soa_server1			RUNNING	OK	8001

### 5.1.1.2.2 Follow the steps in General Tab as shown below:

1. Select SSL Listen Port Enabled, Client Cert Proxy Enabled, Weblogic Plug-In Enabled.
2. Click on Save.

The screenshot shows the Oracle WebLogic Server Administration Console. The 'General' tab is selected for the 'AdminServer'. The 'Save' button is highlighted in red. The 'SSL Listen Port Enabled' checkbox is checked and highlighted in red. The 'Client Cert Proxy Enabled' checkbox is checked and highlighted in red. The 'Weblogic Plug-In Enabled' checkbox is checked and highlighted in red. The 'Listen Port' is set to 7001 and the 'SSL Listen Port' is set to 7002. The 'Virtual Machine Name' is iam\_domain\_AdminSe.

### 5.1.1.2.3 Follow the steps in Keystores Tab as shown below:

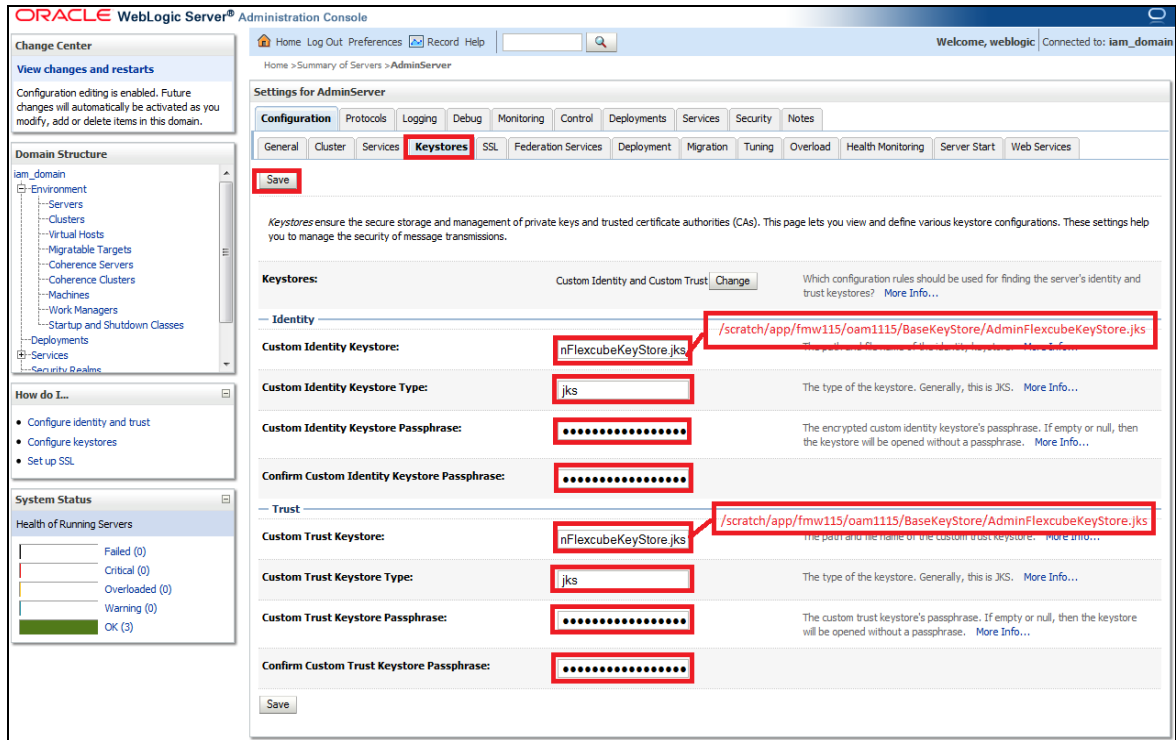

1. Click Change and select Keystores as **Custom Identity and Custom Trust**
2. Click on Save
3. Note: Keystores as **Custom Identity and Custom Trust** is as suggested by Oracle Support Team

The screenshot shows the Oracle WebLogic Server Administration Console. The 'Keystores' tab is selected for the 'AdminServer'. The 'Keystores' dropdown menu is open, showing 'Custom Identity and Custom Trust' selected and highlighted in red. The 'Save' button is highlighted in red.

**5.1.1.2.4 Follow the steps in Keystores Tab as shown below:**

4. Enter Custom Identity Keystore and Custom Trust Keystore as same as the Keystore Name created in step 5.1.1.1.1 with full path.
5. Enter Custom Identity Keystore Type and Custom Trust Keystore Type as jks.
6. Enter Custom Identity Keystore Passphrase, Confirm Custom Identity Keystore Passphrase, Custom Trust Keystore Passphrase and Confirm Custom Trust Keystore Passphrase as same as the Store Password entered in step 5.1.1.1.1.
7. Click on Save.

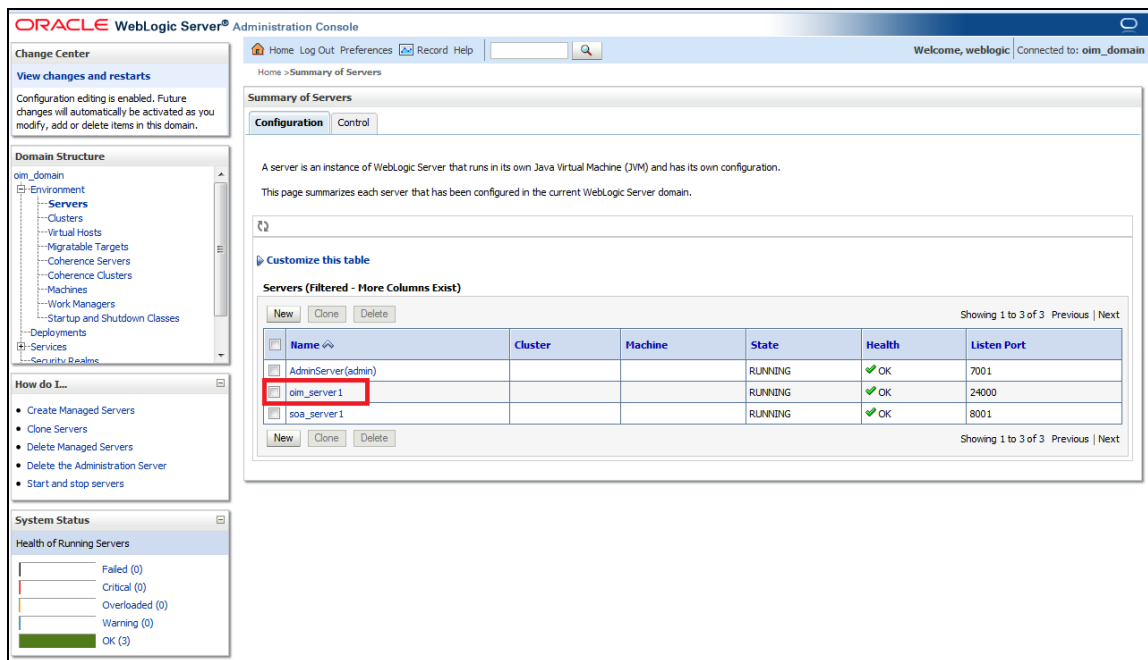

### 5.1.1.2.5 Follow the steps in SSL Tab as shown below:

1. Enter Private Key Alias as same as the alias name entered in step [5.1.1.1.1](#).
2. Enter Private Key Passphrase and Confirm Private Key Passphrase as same as the Private Key Password entered in step [5.1.1.1.1](#).
3. Change the Hostname Verification to None.
4. Use JSSE SSL option should be remain unchecked
5. Click on Save.

The screenshot displays the 'Settings for AdminServer' page in the Oracle WebLogic Administration Console, specifically the 'SSL' tab. The page is titled 'Settings for AdminServer' and includes a 'Save' button at the top left. The main content area is divided into sections for 'Identity and Trust Locations', 'Identity', 'Trust', and 'Advanced'. The 'Private Key Alias' is set to 'FlexcubeCert', and the 'Private Key Passphrase' and 'Confirm Private Key Passphrase' fields are masked with dots. The 'Hostname Verification' dropdown is set to 'None', and the 'Custom Hostname Verifier' is also set to 'None'. The 'Export Key Lifespan' is set to 500. The 'Use Server Certs' checkbox is unchecked. The left sidebar shows the 'Domain Structure' and 'System Status' sections.

### 5.1.1.2.6 Select OIM Server and SOA Server to enable SSL options and Repeat the steps performed in 5.1.1.2.2 to 5.1.1.2.5

5.1.1.2.7 Now the admin\_server, oim\_server and soa\_server are SSL enabled. Restart all three servers.

## 5.1.2 Enabling SSL on GTC Connector Server

To have SSL enabled Provisioning Web Service in [5.1.5.23](#). We have to have a two way handshake between GTC Connector Server and the Application Server, where FCUBSProvisioningAdService web service deployed.

### 5.1.2.1 Export the KeyStore Certificate in [5.1.1.1.1](#)

```
keytool -export -alias <aliasname> -file <exportfilename> -keystore <keystorename> -storetype jks -storepass <keystorepassword> -provider sun.security.provider.Sun
```

For Example:

```
keytool -export -alias FlexcubeCert -file webfile.cer -keystore FlexcubeKeyStore.jks -storetype jks -storepass Password@123 -provider sun.security.provider.Sun
```

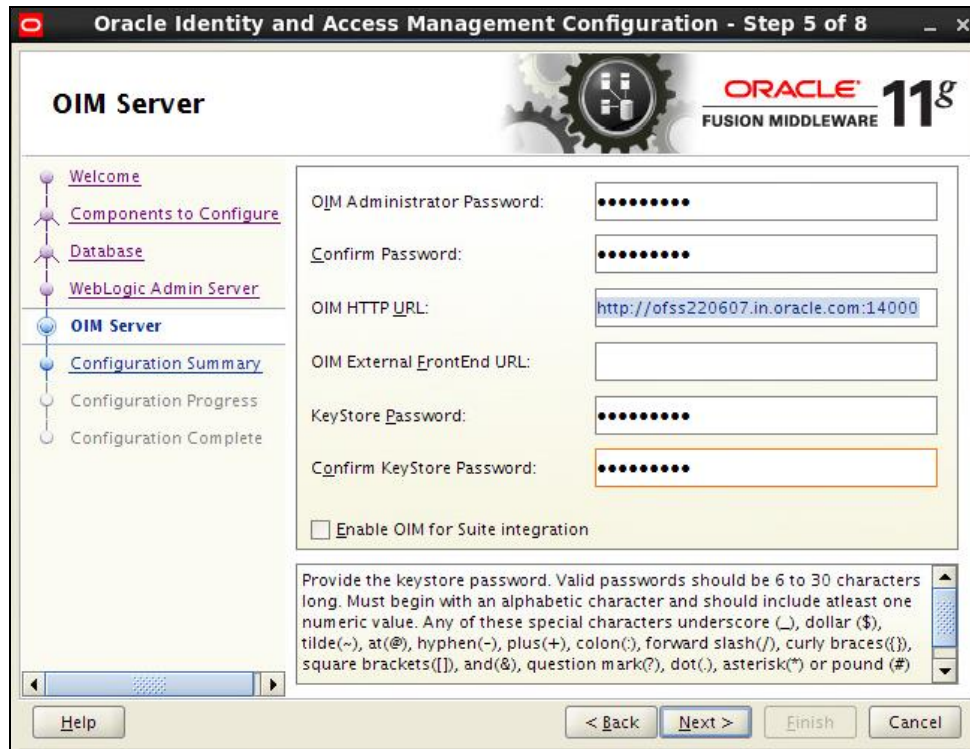

### 5.1.2.2 Import the Certificate to Xellarate Key Store

```
keytool -import -trustcacerts -alias <aliasname> -noprompt -keystore <Domain_home>/config/fmwconfig/default-keystore.jks -file <importfilename> -storepass <keystorepassword>
```

For Example:

```
keytool -import -trustcacerts -alias FlexcubeCert -noprompt -keystore /app/Middleware/user_projects/domains/oim_domain/config/fmwconfig/default-keystore.jks -file webfile.cer -storepass Password123
```

Note \*: <Domain\_home>/config/fmwconfig/default-keystore.jks will be the KeyStore Password while configuring OIM Server. To have this feature, you should have only Weblogic Admin Server, OIM Server and SOA Server in this OIM Domain.

### 5.1.2.3 Export Xellarate KeyStore Certificate

```
keytool -export -alias xell -noprompt -keystore <Domain_home>/config/fmwconfig/default-keystore.jks -file <xellexportfilename> -storetype jks -provider sun.security.provider.Sun
```

For Example:

```
keytool -export -alias xell -noprompt -keystore /app/Middleware/user_projects/domains/oim_domain/config/fmwconfig/default-keystore.jks -file xellcertificate.cer -storetype jks -provider sun.security.provider.Sun
```

### 5.1.2.4 Import the Xellarate Certificate to KeyStore Created in [5.1.1.1](#)

```
keytool -import -alias <aliasname> -trustcacerts -file <xellimportfilename> -keystore <keystorename> -storetype jks -storepass <keystorepassword> -provider sun.security.provider.Sun
```

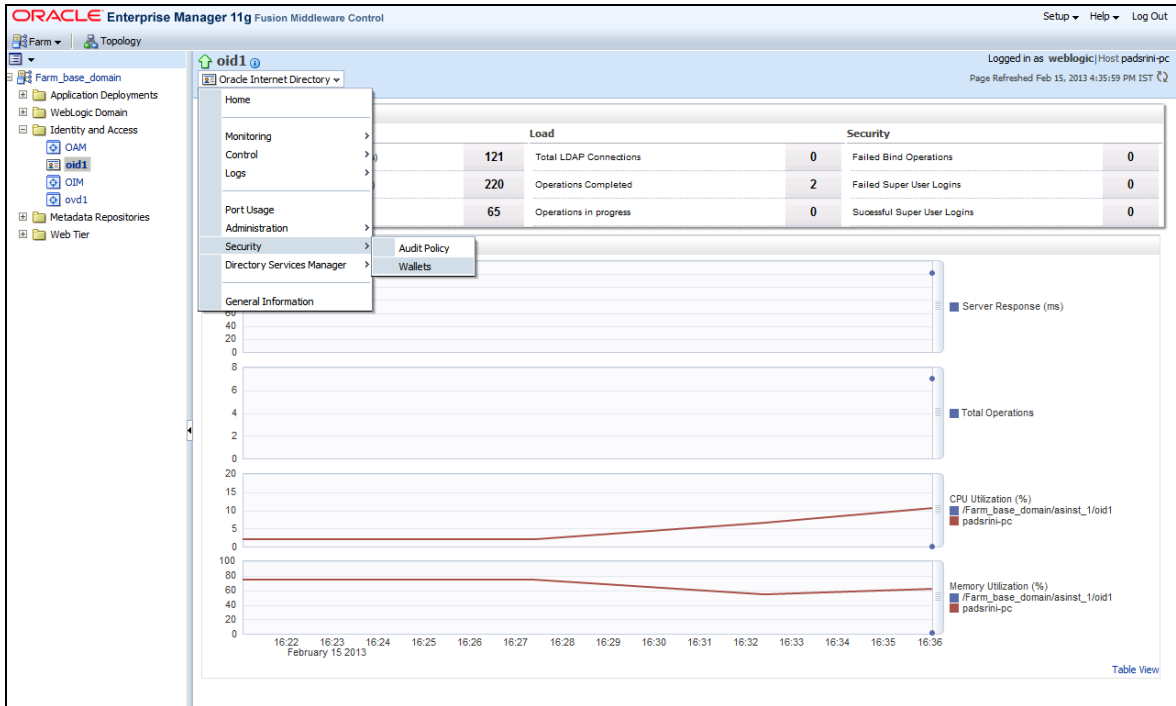

For Example:

```
keytool -import -alias xellcertificate -trustcacerts -file xellcertificate.cer -keystore FlexcubeKeyStore.jks -storetype jks -storepass Password@123 -provider sun.security.provider.Sun
```

### 5.1.3 Configuring SSL Mode in Oracle Internet Directory

To enable SSL for OID LDAP Server refer and follow the below steps:

#### 5.1.3.1 Login to the Enterprise Manager Console of the domain, in which Oracle Internet Directory is associated

#### 5.1.3.2 Click on Create Self-Signed Wallet

### 5.1.3.3 Enter the Details as below and Click on OK

**ORACLE Enterprise Manager 11g Fusion Middleware Control**

Setup Help Log Out

**Walleys > Create Self-Signed Wallet**

**Create Self-Signed Wallet**

A self signed wallet is not signed by a well known CA. A self-signed wallet is not recommended in a production environment. The wallet name should be unique for a given component. The wallet type can be auto-login or password-protected. Passwords, if specified, have a minimum length of eight characters, and contain alphabetic characters combined with numeric or special characters. Auto-login wallet is an obfuscated form of PKCS#12 wallet that provides PKI-based access to services and applications without requiring a password at runtime. Auto-login wallet don't need a password to modify, or delete the wallet. File system permissions provide the necessary security for Auto-login wallets.

**Self-Signed Wallet Details**

\* Wallet Name:

Auto-login

Wallet Password:

Confirm Password:

**Add Self-Signed Certificate**

Add a self-signed certificate that becomes part of the wallet.

\* Common Name:

Organizational Unit:

Organization:

OU=Class 1 Public Primary Certification Authority, O="VeriSign, Inc.", C=US	Trusted Certificate	Valid	1024	January 29, 1996	January 8, 2020

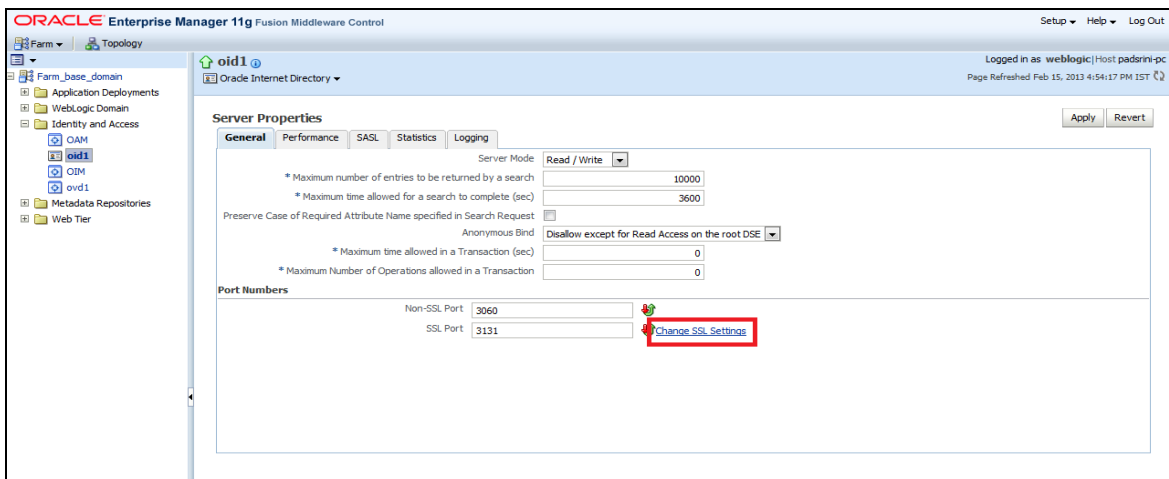

### 5.1.3.6 Click Export Trusted Certificate and save the certificate file

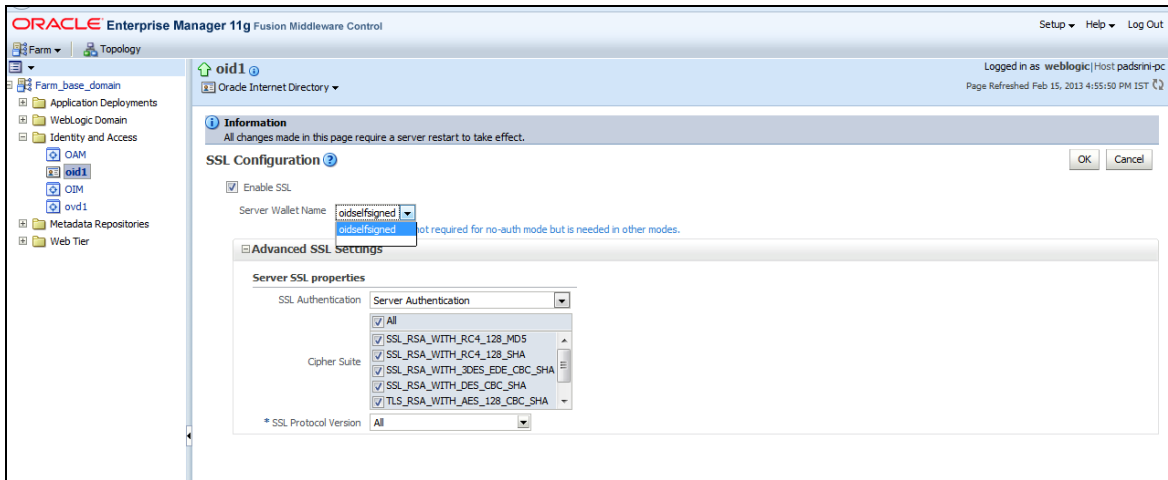

### 5.1.3.7 Click on Server Properties

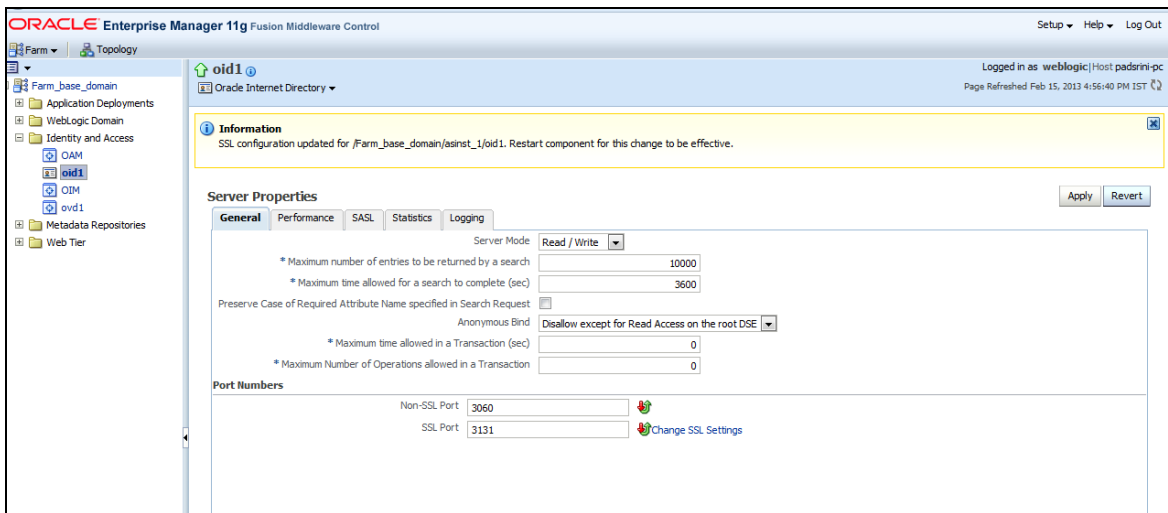

### 5.1.3.8 Click on Change SSL Settings

### 5.1.3.9 Select the Wallet, SSL Authentication as Server Authentication, Cipher Suite, SSL Protocol Version as below and Click on OK

### 5.1.3.10 Click on Apply

### 5.1.3.11 Import LDAP Server SSL Certificate into OIM Server

Import the Exported Certificate into **wlserver\_10.3/server/lib/DemoTrust.jks** of OIM Server Domain using the below command [ Store Password is **DemoTrustKeyStorePassPhrase** ]

```
keytool -import -keystore MW_HOME/wlserver_10.3/server/lib/DemoTrust.jks -file /home/testoc4j/OIM/globalv.crt -storepass DemoTrustKeyStorePassPhrase
```

Restart Both OID & OIM Server.

## 5.1.4 **OIM FLEXCUBE Adapter Setup**

**Prerequisite:** Gateway EJB component

OIM FCIS adapter consists of two web services:

- FCUBSLOVAdService : To fetch list of values from FCIS Database
- FCUBSProvisioningAdService: To handle OIM's request and response for user provisioning and de-provisioning services. This web service requires FCIS Gateway EJB either on same Weblogic Application server or another. If it is on same Weblogic Application server then this web service is deployed as child of Gateway EJB.

OIM FCIS adapter setup is all about deployment of these web services on Oracle Fusion Middleware 11g Release 2 (11.1.2.3.0).

### 5.1.4.1 **Environment Setup**

The following steps to be followed to do the initial environment setup for OIM FCIS adapter deployment:

#### 5.1.4.1.1 **Copy following folders from the FCIS Software Release area**

- <FCIS Release Name>\ADAPTERS\OIM\FCUBSLOVAdService
- <FCIS Release Name>\ADAPTERS\OIM\FCUBSProvisioningAdService
- <FCIS Release Name>\ADAPTERS\OIM\setup

to local machine (say **D:\OIM** for WINDOWS or **/home/kernel/OIM** for UNIX).

Note: If Gateway EJB server and OIM server is on same system, then copy entire folder from FCIS software release area to local machine.

In this document SPMLADAPTER\_INSTALL\_DIR specifies the directory where adapter will be installed.

e.g.

For WINDOWS:

SPMLADAPTER\_INSTALL\_DIR=D:\

For UNIX:

SPMLADAPTER\_INSTALL\_DIR=/home/kernel/

OIM\_SERVER\_INSTALL\_DIR specifies the OIM server installation directory (like D:\Oracle\Middleware\weblogic\Oracle\_IDM1 in windows or /Oracle/Middleware/weblogic/ Oracle\_IDM1 in unix).

#### 5.1.4.1.2 **Create a Data source in WebLogic Server Version: 10.3.6.0.**

[\[Refer Appendix 8.1 Data Source Creation\]](#)

### 5.1.4.1.3 Modify configuration files as below:

Edit **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\src\webcontent\WEB-INF\web.xml**. This XML file shall have a similar section as the one shown below (Change the values given in bold)

```
<resource-ref>
    <res-ref-name>OIMLOVSQA</res-ref-name>
    <res-type>javax.sql.DataSource</res-type>
    <res-auth>Container</res-auth>
</resource-ref>
<env-entry>
    <description>Property File Path</description>
    <env-entry-name>propertyPath</env-entry-name>
    <env-entry-type>java.lang.String</env-entry-type>
    <env-entry-value>D:/OIM/FCUBSLOVAdService/config</env-entry-value>
</env-entry>
```

**Edit resource-ref section:** Mention the JNDI name of the Datasource created in Application server for FLEXCUBE UBS Messaging Database Layer Instance at step 3 as res-ref-name.

**Edit Property File Path:** Give the absolute path for lookup\_prop.xml as env-entry-value. Ideally, this file is residing in **< SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config**.

Note: Give "/" for at the end of the path. Also, note that as separator forward slash has been used instead of backward.

Edit **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config\lookup\_prop.xml**. This XML file shall have a similar section as the one shown below, (Change the values given in bold)

```
<!-- DataBase Connection -->
    <add key="FCUBS_CON_POOLNAME" value="OIMLOVSQA" />
<!-- DataBase Connection -->
<add key="LOGGER_PATH"
value="D:/OIM/FCUBSLOVAdService/config/lookup_logger.xml" />
```

**Edit FCUBS\_CON\_POOLNAME:** Give the same Datasource JNDI name mentioned in above web.xml for FLEXCUBE UBS Messaging Database Layer Instance.

**Edit LOGGER\_PATH:** Give the logging configuration absolute path for lookup\_logger.xml. This file is residing in **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config** folder.

**Note: As separator use forward slash instead of backward slash.**

Edit **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config\lookup\_logger.xml**. This XML file shall have a similar section as the one shown below, (Change the values given in bold)

```
<add key="ADOIM.LOGGER.FPATH" value="D:/OIM/FCUBSLOVAdService/log/" />
```

ADOIM.LOGGER.FPATH: Give the absolute path where log files will be stored. It is recommended that mention the following path **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\log\**

**Note: As separator use forward slash instead of backward slash. Give "/" for at the end of the path.**

Edit **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\src\webcontent\WEB-INF\web.xml**. This XML file shall have a similar section as the one shown below (Change the values given in bold)

```
<ejb-ref>
    <ejb-ref-name>GWEJB_GW_EJB_Bean</ejb-ref-name>
    <ejb-ref-type>Session</ejb-ref-type>
    <home>com.ofss.fcubs.gw.ejb.GWEJBRemoteHome</home>
    <remote>com.ofss.fcubs.gw.ejb.GWEJBRemote</remote>
</ejb-ref>
<env-entry>
    <description>Property File Path</description>
    <env-entry-name>propertyPath</env-entry-name>
    <env-entry-type>java.lang.String</env-entry-type>
    <env-entry-value>D:/OIM/FCUBSProvisioningAdService/config/</env-
entry-value>
</env-entry>
```

**Edit ejb-link:** To refer Gateway EJB from the web service locally the reference of Gateway EJB has been defined in this deployment descriptor file. Give the Gateway EJB name here as ejb-link, mentioned as ejb-name in ejb-jar.xml deployment descriptor file of Gateway EJB.

**Edit Property File Path:** Give the absolute path for ADOIM\_Prop.xml as env-entry-value. This file is residing in **<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\config**.

**Note: Give "/" for at the end of the path. Also, note that as separator forward slash has been used instead of backward.**

Edit <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config\ADOIM\_Prop.xml. This XML file shall have a similar section as the one shown below, (Change the values given in bold)

```
<add key="GW_EJB_JNDI_NAME" value="
GWEJB#com.ofss.fcubs.gw.ejb.GWEJBRemote "/>

  <add key="GW_EJB_CALL_TYPE" value="REMOTE"/>

  <add key="GW_EJB_CTX_FACTORY"
value="weblogic.jndi.WLInitialContextFactory"/>

  <add key="GW_EJB_SERVER_URL" value="t3s://localhost:7102"/>

  <add key="GW_EJB_SECURITY_PRINCIPAL" value=""/>

  <add key="GW_EJB_SECURITY_CREDENTIALS" value=""/>
```

Edit GW\_EJB\_JNDI\_NAME: Give the Gateway EJB JNDI name.

Edit GW\_EJB\_CALL\_TYPE: Give the LOCAL or REMOTE (must be in Upper Case) based on the way EJB is to be referred from web service. If FCIS Gateway EJB is deployed on same Weblogic Application server then it should be REMOTE.

Edit GW\_EJB\_SERVER\_URL: Give the application server URL where Gateway EJB is deployed.

Following are the parts that make this URL:

t3s://HostName:PortNumber

Protocol Host Name Weblogic Port

**Protocol:** This should be t3s as in WebLogic application server.

**Server URL:** This should be the IP address or fully qualified computer name (i.e. <computer name>.<domain>) of the system where the application server is running on which Gateway EJB has been deployed.

**Port:** This should be the same as **request port** mentioned in domain.xml file.

Edit following section in the <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\config\ADOIM\_Prop.xml file: (Change the values given in bold )

```
<add key="MAKER_ID" value="OIMUSER9"/>

<add key="HEAD_OFFICE" value="CHO"/>

<add key="REQ_SOURCE" value="IDM"/>

<add key="UBS_OR_IS" value="FCIS"/>

<add key="LOGGER_PATH"

value="D:/OIM/FCUBSProvisioningAdService/config/adoim_logger.xml"/>

<add key="FCUBS_SPML_ERROR_FILE"

value="D:/OIM/FCUBSProvisioningAdService/config/
FCUBS_SPML_ERROR.properties"/>

<add key="ADOIM_MSG_LOGGING_ENABLED" value="N"/>

<add key="ADOIM_MSG_LOGGING_PATH"

value="D:/OIM/FCUBSProvisioningAdService/log"/>
```

**Edit MAKER\_ID:** Give FCIS user id that can serve as maker id for all OIM requests. Please ensure that this id should be a valid user in FCIS and should have rights for creating, authorizing and modifying user.

**Edit HEAD\_OFFICE:** Give the head office branch code.

**Edit REQ\_SOURCE:** Give the external source name. Please ensure that maintenance of this external source has been done in FCIS.

**Edit UBS\_OR\_IS:** Give the application name to which the user need to be provisioned. The value will be either FCUBS or FCIS.

**Edit LOGGER\_PATH:** Give the logging configuration absolute path for adoim\_logger.xml. This file is residing in <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\config folder.

**Edit FCUBS\_SPML\_ERROR\_FILE:** Give the absolute path for fcubs\_spml\_error.properties. This file is residing in <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\config folder.

**Edit ADOIM\_MSG\_LOGGING\_ENABLED:** Give 'Y' if OIM request and response message is required to be stored separately otherwise give 'N'.

**Edit ADOIM\_MSG\_LOGGING\_PATH:** Give the absolute path where OIM request–response will get stored.

Note: As separator use forward slash instead of backward slash. Give "/" for at the end of the path.

Edit <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\config\adoim\_logger.xml. This XML file shall have a similar section as the one shown below, (Change the values given in bold)

```
<add key="ADOIM.LOGGER.FPATH" value="D:/OIM/FCUBSProvisioningAdService /log"/>
```

**Edit ADOIM.LOGGER.FPATH: Give the absolute path where log files will be stored. It is recommended that mention the following path <SPMLADAPTER\_INSTALL\_DIR>/OIM/FCUBSProvisioningAdService/log/**

**Note: As separator use forward slash instead of backward slash. Give "/" for at the end of the path.**

**Remark:** GW\_EJB\_SECURITY\_PRINCIPAL & GW\_EJB\_SECURITY\_CREDENTIALS can be update using <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\setup\ChangePassword.bat or ChangePassword.sh

#### 5.1.4.1.4 Building the Deployment Units for WINDOWS

##### 5.1.4.1.4.1 Building FCUBSLOVAdService.ear

- Edit <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\setup\WEBLOGIC\ build.xml to set {server\_home} entry to Weblogic Server installed directory
- Eg: D:\Middleware\wlserver\_10.3
- Open a DOS command-prompt and change directory to, D:\OIM\FCUBSLOVAdService\
- Set PATH to JDK\bin and ANT\bin in the command prompt
- Set JAVA\_HOME
- Change the directory to D:\OIM\FCUBSLOVAdService\setup\WEBLOGIC
- To execute the build file, type "ant" on the command-prompt and press enter.

Above step creates an EAR file in D:\OIM\FCUBSLOVAdService\build with the name FCUBSLOVAdService.ear

##### 5.1.4.1.4.2 Building FCUBSProvisioningAdService.ear

- Edit <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\setup\WEBLOGIC\build.xml to set {server\_home} and {JAVA\_HOME} entry to Weblogic Server installed directory and JDK Installed directory.

Eg: D:\Middleware\wlserver\_10.3

C:\Program Files\java\jdk1.7.0\_51

- Change directory to, D:\OIM\FCUBSProvisioningAdService\setup\WEBLOGIC
- To execute the build file, type "ant" on the command-prompt and press enter.

Above step creates an EAR file in build D:\OIM\FCUBSProvisioningAdService folder with the name FCUBSProvisioningAdService.ear

### 5.1.4.1.5 Building the Deployment Units for UNIX / Linux

#### 5.1.4.1.5.1 Building FCUBSLOVAdService.ear

- Modify {server\_home} entry in the build.xml to where Weblogic Server is installed ( for example /home/kernel/Middleware/wlserver\_10.3 )
- Open a UNIX shell prompt and change directory to, /home/OIM/FCUBSLOVAdService
- Set PATH environment variable with JDK/bin path and ANT\bin path in the command prompt.
- Change the directory to <SPMLADAPTER\_INSTALL\_DIR>/FCUBSLOVAdService/setup/WEBLOGIC
- To execute the build file, type “ant” on the shell prompt and press enter.

Above step creates an EAR file in /home/kernel/OIM/FCUBSLOVAdService/build folder with the name FCUBSLOVAdService.ear

#### 5.1.4.1.5.2 Building FCUBSProvisioningAdService.ear

- Edit  
<SPMLADAPTER\_INSTALL\_DIR>/OIM/FCUBSProvisioningAdService/setup/WEBLOGIC/build.xml  
to set {server\_home} entry to Weblogic Server installed directory

Eg: home/Oracle/Middleware/wlserver\_10.3

home/java/jdk1.7.0\_51

- Change directory to, /home/kernel/OIM/FCUBSProvisioningAdService/setup/WEBLOGIC
- To execute the build file, type “ant” on the command-prompt and press enter.

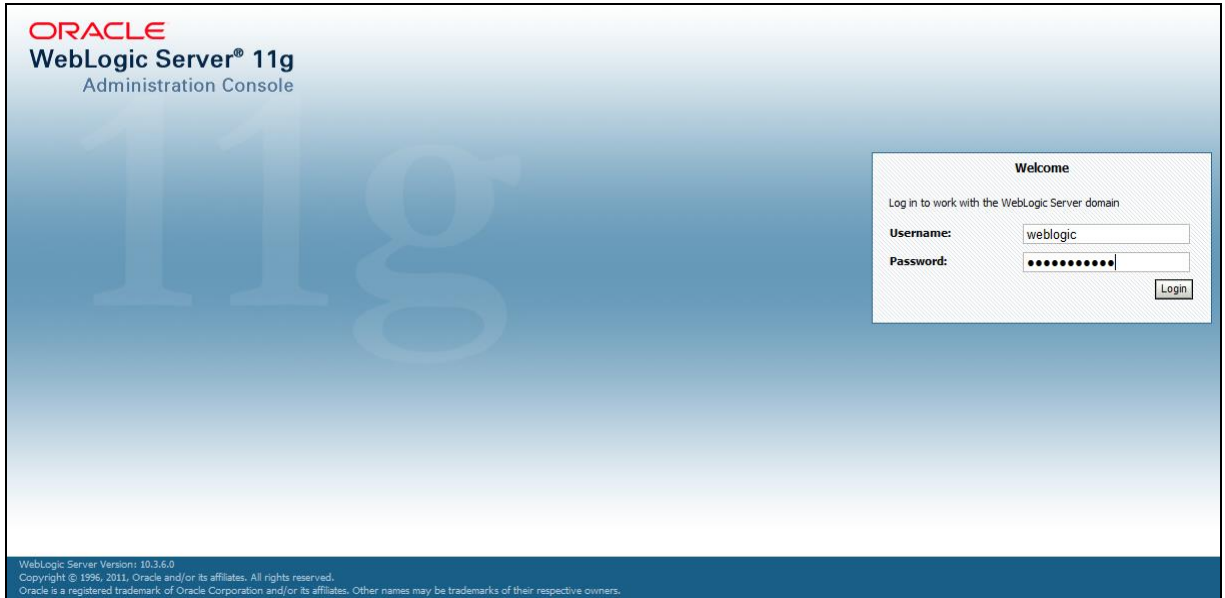

Above step creates an EAR file in /home/kernel/OIM/FCUBSProvisioningAdService/build folder with the name FCUBSProvisioningAdService.ear

## 5.1.4.2 Deployment

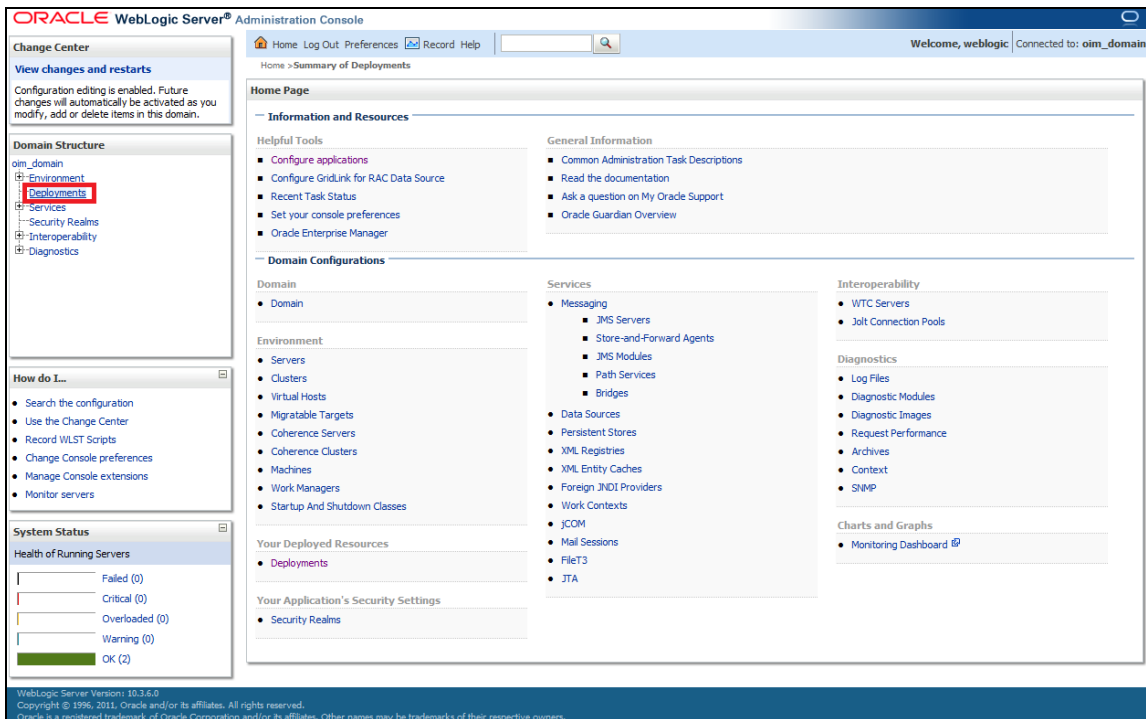

### Deploy FCUBSLOVAdService

#### 5.1.4.2.1 Login to Administrative Console

#### 5.1.4.2.2 Enter Weblogic administrator username/password and press Login

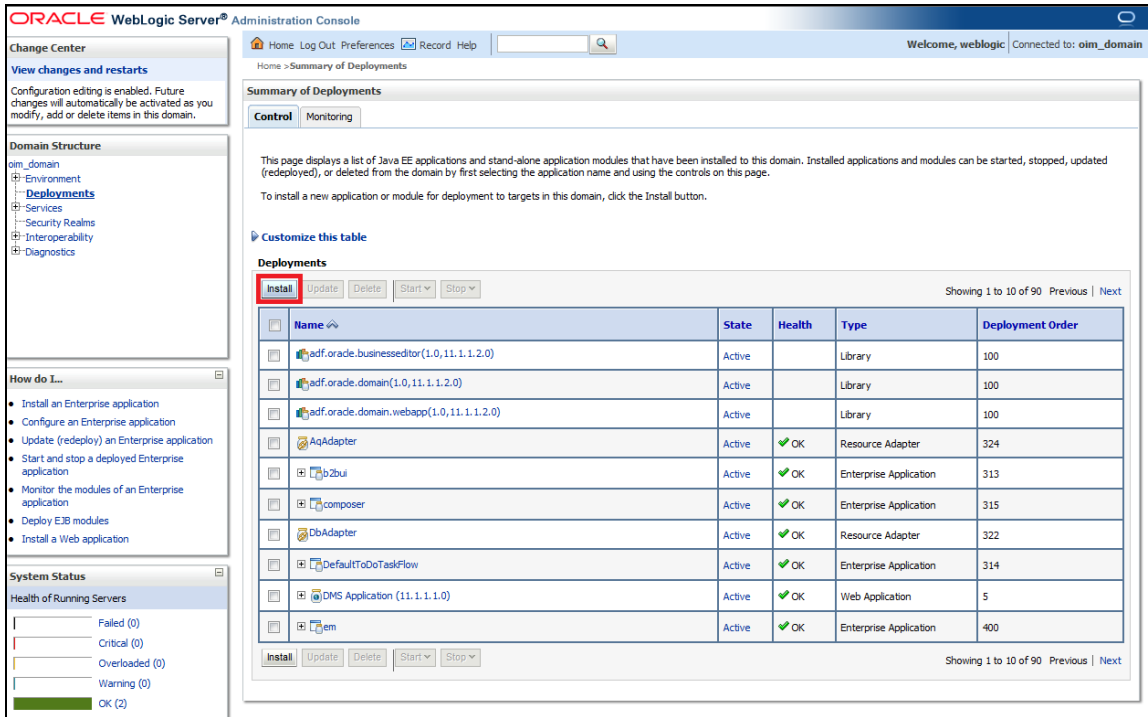

#### 5.1.4.2.3 Click on Deployments as shown in below screen

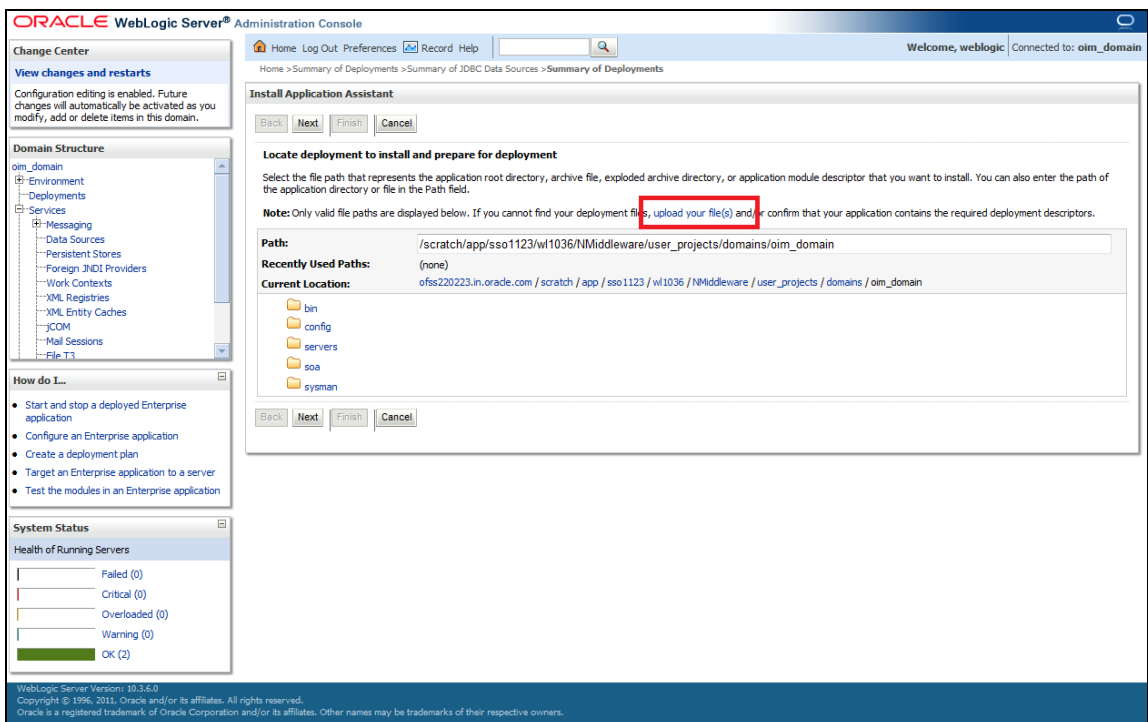

5.1.4.2.4 Click on the Install as shown below

5.1.4.2.5 The following screen is displayed

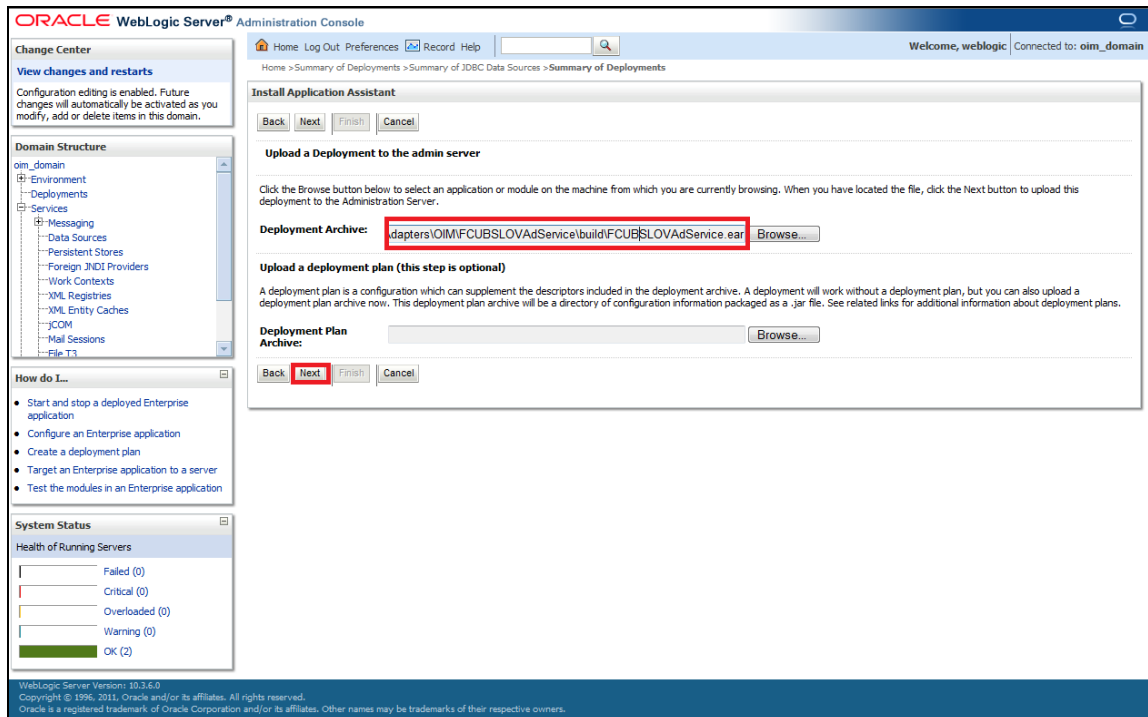

a. Click on upload your file(s)

### 5.1.4.2.6 Choose the enterprise archive file from the build path:

<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSLOVAdService\build\

- a. Click on Next

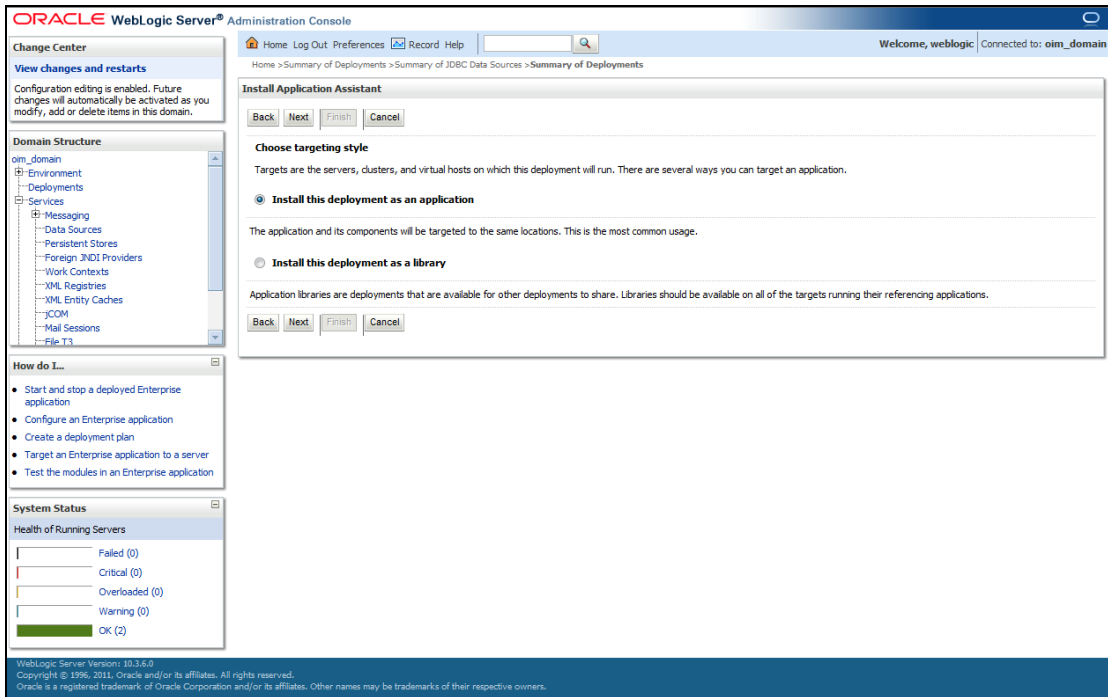

### 5.1.4.2.7 Select the enterprises archive file FCUBSLOVAdService.ear

- a. Click on Next

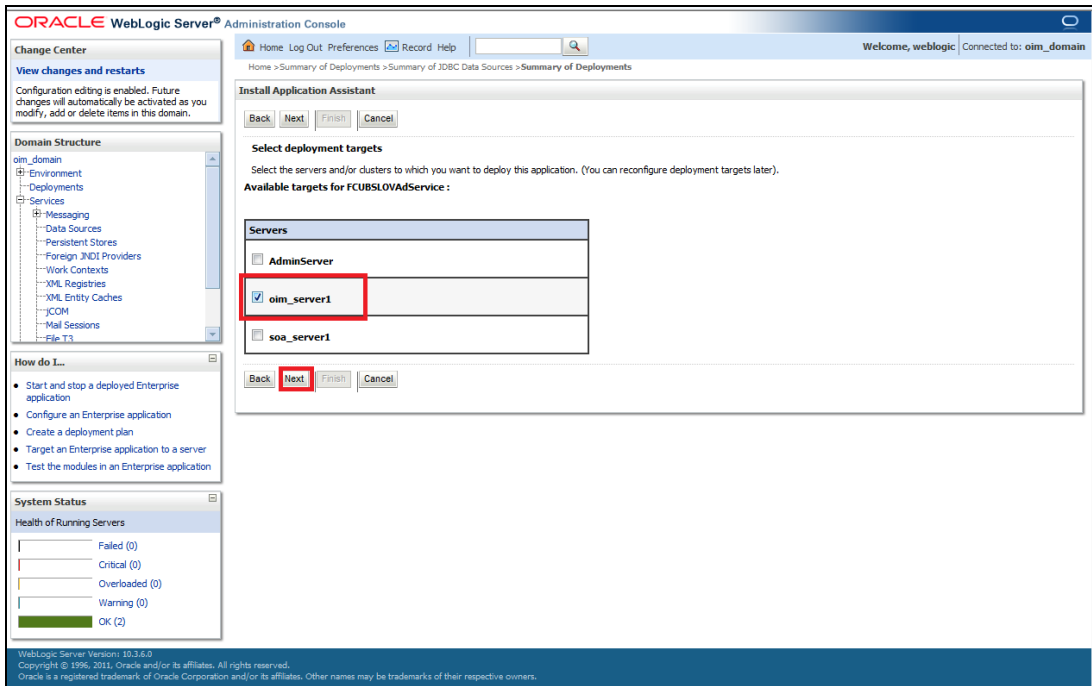

### 5.1.4.2.8 The following screen is displayed

- a. Select – Install this deployment as an application.
- b. Click on Next.

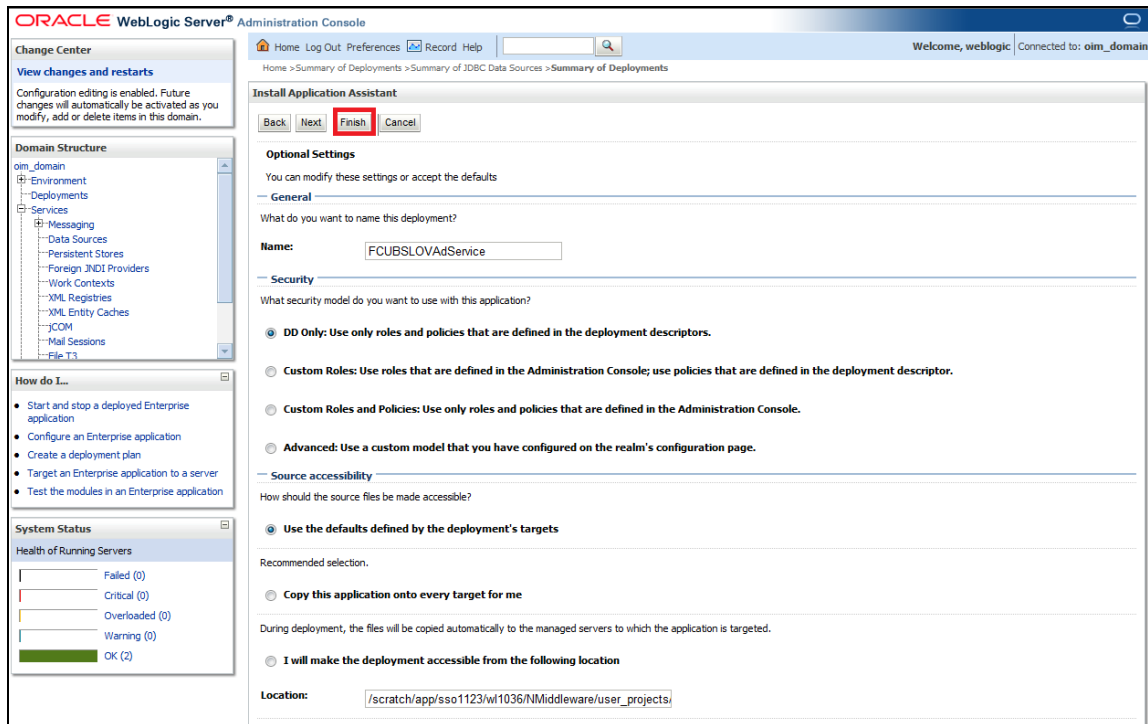

### 5.1.4.2.9 The following screen is displayed

- a. Select the Application Server Instance in which the FCUBSLOVAdService needs to be deployed.
- b. Click on Next.

#### 5.1.4.2.10 The following screen is displayed

- b. Click on Finish.

#### 5.1.4.2.11 Deploy FCUBSProvisioningAdService

If the **GW\_EJB\_CALL\_TYPE** is set as **REMOTE** in the **ADOIM\_Prop.xml** then follow the same step as above (Section 5.1.4.2.1) to deploy the FCUBSProvisioningAdService web service with following changes

- Select the ear file from the path <SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\build\FCUBSProvisioningAdService.ear
- Give the application name as FCUBSProvisioningAdService.

If the **GW\_EJB\_CALL\_TYPE** is set as **REMOTE** in the **ADOIM\_Prop.xml**, follow the below steps

The following screen is displayed.

1. Make sure that Gateway EJB bean has been deployed there as shown in below screen shot.

The screenshot displays the Oracle WebLogic Server Administration Console. The main content area is titled "Summary of Deployments" and shows a table of installed applications and modules. The table has columns for Name, State, Health, Type, and Deployment Order. The application "GWEJB" is highlighted with a red box. Its state is "Active" and its health is "OK". The application structure is expanded to show its components: Modules (GW\_EJB\_Bean.jar), EJBs (GWEJB\_GW\_EJB\_Bean), and Web Services.

Name	State	Health	Type	Deployment Order
emai	Active		Library	100
emas	Active		Library	100
emcore	Active		Library	100
FCUBSLOVAdService	Active	OK	Enterprise Application	100
FileAdapter	Active	OK	Resource Adapter	321
FMW Welcome Page Application (11.1.0.0.0)	Active	OK	Enterprise Application	5
FtpAdapter	Active	OK	Resource Adapter	325
<b>GWEJB</b>	<b>Active</b>	<b>OK</b>	<b>Enterprise Application</b>	<b>100</b>
Modules				
GW_EJB_Bean.jar			EJB Module	
EJBs				
GWEJB_GW_EJB_Bean			EJB	
Web Services				
None to deploy				

Refer 5.1.4.2.1 to know more about the deployment steps.

2. Choose the enterprise archive file Path from the build path:

<SPMLADAPTER\_INSTALL\_DIR>\OIM\FCUBSProvisioningAdService\build\

3. Select the enterprises archive file FCUBSProvisioningAdService.ear

4. Click on Finish.

### 5.1.5 Build GWEJB

- To execute the FCIS Installer for GWEJB build following folder/files should be created/copied at **\ADAPTERS\OIM\FCUBSGW** along with the compiled sources.
- MAIN (Blank folder)
- FCHome.ini (copy from OSDC sources, file will be present at parallel to ADAPTERS folder)
- 
- After this GWEJB ear can be build with the source location as **\ADAPTERS\OIM\FCUBSGW** .
- For GWEJB build kindly refer the doc **Gateway\_EAR\_Building.doc**.

Deploy the created GWEJB ear in OIM server.

### 5.1.6 OIM Setup

**Prerequisite:** Oracle Identity Server & Oracle Design Console.

OIM side setup should be done on the system where OIM server is running. This setup includes

Java code deployment of OIM's pre-populate adapter, entity adapter and schedule task & importing integration specific configuration files into OIM.

The following steps to be followed to do the initial environment setup:

#### 5.1.6.1 **Copy following folders from the FCIS Software Release area**

- <FCIS Release Name>\ADAPTERS\OIM\OIM-Config
- <FCIS RELEASE NAME>\ADAPTERS\OIM\setup

to local machine (say D:\OIM for WINDOWS or /home/kernel/OIM for UNIX).

### 5.1.6.2 Building the Lookup Search Scheduled Task deployment units for WINDOWS.

- Change directory to, D:\OIM\OIM-Config\Sch-Task\setup
- Modify the OIM\_SERVER\_INSTALL\_DIR entry in the build.xml to where OIM Server is installed ( for example D:\Oracle\Middleware\weblogic\Oracle\_IDM1) and JAVA\_HOME entry.
- In the below section of build.xml change the WSDL location hostname and port.

```
<exec executable="{JAVA_HOME}/bin/wsimport">  
  
<arg line="-keep -p com.iflex.fcubs.integration.oim.ws.client http://  
<hostname>:<port>/FCUBSLOVAdService/FCUBSLOVAdServiceSEI?WSDL"/>  
  
</exec>
```

- To execute the build file, type “ant” on the command-prompt and press enter.

Above step creates a JAR file in D:\OIM\OIM-Config\Sch-Task\build\ FCUBSLOVSchTask folder with the name **FCUBSLOVSchTask.Jar**

- Copy this FCUBSLOVSchTask.Jar to the <OIM\_SERVER\_INSTALL\_DIR>\server\ScheduleTask folder and <OIM\_SERVER\_INSTALL\_DIR>\server\apps\oim.ear\APP-INF\lib

### 5.1.6.3 Building the Lookup Search Scheduled Task deployment units for UNIX

- Change directory to /home/kernel/OIM/OIM-Config/Sch-Task/setup
- Modify the OIM\_SERVER\_INSTALL\_DIR entry in the build.xml to where OIM Server is installed ( for example /Oracle/Middleware/weblogic/Oracle\_IDM1 ) and JAVA\_HOME entry.
- In the below section of build.xml change the WSDL location hostname and port.

```
<exec executable="{JAVA_HOME}/bin/wsimport">  
  
<arg line="-keep -p com.iflex.fcubs.integration.oim.ws.client  
http://<hostname>:<port>/FCUBSLOVAdService/FCUBSLOVAdServiceSEI?WSDL"/>  
  
</exec>
```

- To execute the build file, type “ant” on the shell and press enter.

Above step creates a JAR file in /home/kernel/OIM/OIM-Config/Sch-Task/build/FCUBSLOVSchTask folder with the name **FCUBSLOVSchTask.Jar**

- Copy this FCUBSLOVSchTask.Jar to the <OIM\_SERVER\_INSTALL\_DIR>/server/ScheduleTask folder and <OIM\_SERVER\_INSTALL\_DIR>/server/apps/oim.ear/APP-INF/lib

#### 5.1.6.4 Deployment of Pre-population Adapters

Below Steps will be valid In case of different name used to create the form in [5.1.5.35](#)

- Change the directory to

```
<AdapterSource>/OIM/OIM-Config/PrePopulateAdapter
```

- Edit the plugin.xml and update the FlexcubeForm into the form name entered in [5.1.5.35](#)

```
<?xml version="1.0" encoding="UTF-8" ?>

<oimplugins xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">

<plugins pluginpoint="oracle.iam.request.plugins.PrePopulationAdapter">

<plugin pluginclass="com.oracle.oim.utility.eventhandler.UserIDPrepopulateAdapter" version="1.0"

    name="UserIDPrepopulateAdapter">

<metadata name="PrePopulationAdapater">

<value>FlexcubeForm::USERID</value>

</metadata>

</plugin>

<plugin pluginclass="com.oracle.oim.utility.eventhandler.UserNamePrepopulateAdapter" version="1.0"

    name="UserNamePrepopulateAdapter">

<metadata name="PrePopulationAdapater">

<value>FlexcubeForm::USERNAME</value>

</metadata>

</plugin>

<plugin pluginclass="com.oracle.oim.utility.eventhandler.UserPasswordPrepopulateAdapter" version="1.0"

    name="UserPasswordPrepopulateAdapter">

<metadata name="PrePopulationAdapater">

<value>FlexcubeForm::USERPASSWORD</value>

</metadata>

</plugin>

<plugin pluginclass="com.oracle.oim.utility.eventhandler.EmailPrepopulateAdapter" version="1.0"

    name="EmailPrepopulateAdapter">

<metadata name="PrePopulationAdapater">

<value>FlexcubeForm::EMAIL</value>

</metadata>
```

```

</plugin>

<plugin pluginclass="com.oracle.oid.utility.eventhandler.LdapUserPrepopulateAdapter" version="1.0"
    name="LdapUserPrepopulateAdapter">
    <metadata name="PrePopulationAdapter">
    <value>FlexcubeForm::LDAPUSR</value>
    </metadata>
</plugin>

<plugin pluginclass="com.oracle.oid.utility.eventhandler.StartDatePrepopulateAdapter" version="1.0"
    name="StartDatePrepopulateAdapter">
    <metadata name="PrePopulationAdapter">
    <value>FlexcubeForm::STARTDATE</value>
    </metadata>
</plugin>
</plugins>

<plugins pluginpoint="oracle.iam.platform.kernel.spi.EventHandler">

<plugin pluginclass="com.oracle.oid.utility.eventhandler.UserPasswordPreProcessHandler" version="1.0"
    name="UserPasswordPreProcessHandler"></plugin>

</plugins>

</oimplugins>

```

- Change the directory to

```
<AdapterSource>/OIM/OIM-Config/PrePopulateAdapter /setup
```

- Modify the OIM\_SERVER\_INSTALL\_DIR entry in the build.xml to where OIM Server is installed ( for example D:\Oracle\Middleware\weblogic\Oracle\_IDM1) and JAVA\_HOME entry
- To execute the build file, type "ant" on the shell and press enter.

Above step creates a zip file in <AdapterSource>/OIM/OIM-Config/PrePopulateAdapter/build/ folder with the name **prepopulateadapter.zip**

- Copy the <AdapterSource>/OIM/OIM-Config/PrePopulateAdapter/build/prepopulateadapter.zip into <OIM\_SERVER\_INSTALL\_DIR>/server/plugins/
- <OIM\_SERVER\_INSTALL\_DIR>/server/plugin\_utility/ant.properties should be changed from

```
#####  
## The installation directory for WLS or WAS  
  
#####  
#wls.home=@wls_home  
  
#was.home=@was_home  
  
#####  
# The OIM server directory for OIM. For example: MW_HOME/Oracle_IDM1/server  
  
#####  
#oim.home@oim_home  
  
#####  
#login file name with path for WAS or WLS  
  
#####  
#login.config=${oim.home}/config/authwl.conf  
  
#login.config=${oim.home}/config/authws.conf  
  
#####  
# Represents the directory where Oracle Fusion Middleware is installed.  
  
#####  
#mw.home=@mw_home
```

To

```
#####  
## The installation directory for WLS or WAS  
#####  
wls.home=<Installation_DIR>/Middleware/wlserver_10.3  
#was.home=@was_home  
  
#####  
# The OIM server directory for OIM. For example: MW_HOME/Oracle_IDM1/server  
#####  
oim.home=<OIM_INSTALLATION_DIR>/server/  
  
#####  
#login file name with path for WAS or WLS  
#####  
login.config=${oim.home}/config/authwl.conf  
#login.config=${oim.home}/config/authws.conf  
  
#####  
# Represents the directory where Oracle Fusion Middleware is installed.  
#####  
mw.home=<Installation_DIR>/Middleware
```

- Set the ANT\_HOME & JAVA\_HOME
  - In Command Prompt / SHELL type the below command and Press Enter
  - ant -f pluginregistration.xml register
  - Following Information has to be provided
    - > OIM Admin User – xelsysadm
    - > OIM Admin User – Password
    - > OIM Admin server URL : t3://hostname:portname
- e.g :: t3://whf00bmc.in.oracle.com:14000
- > Full path of adapter which needs to be imported  
<OIM\_SERVER\_INSTALL\_DIR>/server/plugins/prepopulateadapter.zip

- Result will be displayed like

Plugin com.oracle.oim.utility.eventhandler.LdapUserPrepopulateAdapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.UserIDPrepopulateAdapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.StartDatePrepopulateAdapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.UserNamePrepopulateAdapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.UserPasswordPrepopulateadapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.EmailPrepopulateAdapter version 1.0 Registered

Plugin com.oracle.oim.utility.eventhandler.UserPasswordPreProcessHandler version 1.0 Registered

- Modify the weblogic.properties under < OIM\_SERVER\_INSTALL\_DIR >/server/bin

```
wls_servername=@servername
application_name=@appname
metadata_from_loc=@metadata_from_loc
```

to

```
wls_servername=oim_server1
application_name=OIMMetadata
metadata_from_loc=<AdapterSource>/OIM/OIM-Config/PrePopulateAdapter/oim
```

- Type **sh weblogicImportMetadata.sh** in shell or **weblogicImportMeteData.bat** in command prompt and press enter to execute the command.
- You have to enter Weblogic Admin Server – user name, password and URL ( like t3://localhost:7001 )
- Type **sh PurgeCache.sh all** in shell or **PurgeCache.bat all** in command prompt and press enter to execute the command.
- Now you have to enter oim admin user name ( xelsysadm ), password and oim server URL ( like t3://localhost:14000 )
- Restart the OIM Server to impact the changes done.

#### 5.1.6.5 Create folders for Reconciliation

- For reconciliation, there should be different folder for staging files (yet to be reconciled) and for processed files (after reconciliation). These folders can be anywhere that OIM should be able to access. If it is other than the OIM server system then that network path should be mapped as network drive.
- Create folder to keep staging file, for example

<OIM\_SERVER\_INSTALL\_DIR>\xellerate\GTC\Recon\Staging

- Create folder to keep processed file, for example

<OIM\_SERVER\_INSTALL\_DIR>\xellerate\GTC\Recon\Archive

### 5.1.6.6 Importing Configuration Files

This step involves import of integration specific configuration files into OIM using OIM provided Deployment Manager.

Prerequisite: Ensure that OIM setup steps have been followed properly.

Note: Do the import in the same order as it is described below.

Open the Oracle Identity Manager Administrative console. (Give the following URL in the browser: `http://<hostname>:<oimport>/sysadmin`)

### 5.1.6.7 Login to Administrative Console

### 5.1.6.8 Enter OIM administrator username/password and press Sign In

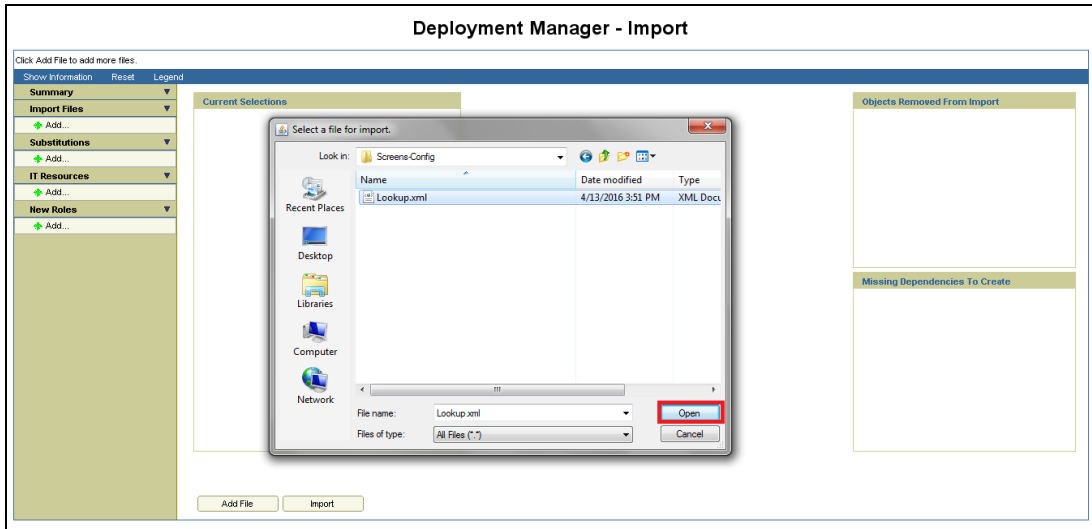

The screenshot shows the Oracle Identity System Administration web interface. The page title is "ORACLE Identity System Administration". In the top right corner, there are links for "Accessibility", "Help", and "About Oracle". The main content area is a "Sign In" form with the heading "Sign in with your account". It contains two input fields: "User ID" with the text "xelsysadm" and "Password" with masked characters "\*\*\*\*\*". A "Sign In" button is located below the password field. At the bottom left of the page, there is a copyright notice: "Copyright © 2001, 2015, Oracle and/or its affiliates. All rights reserved."

### 5.1.6.9 Click on Import option under System Configuration

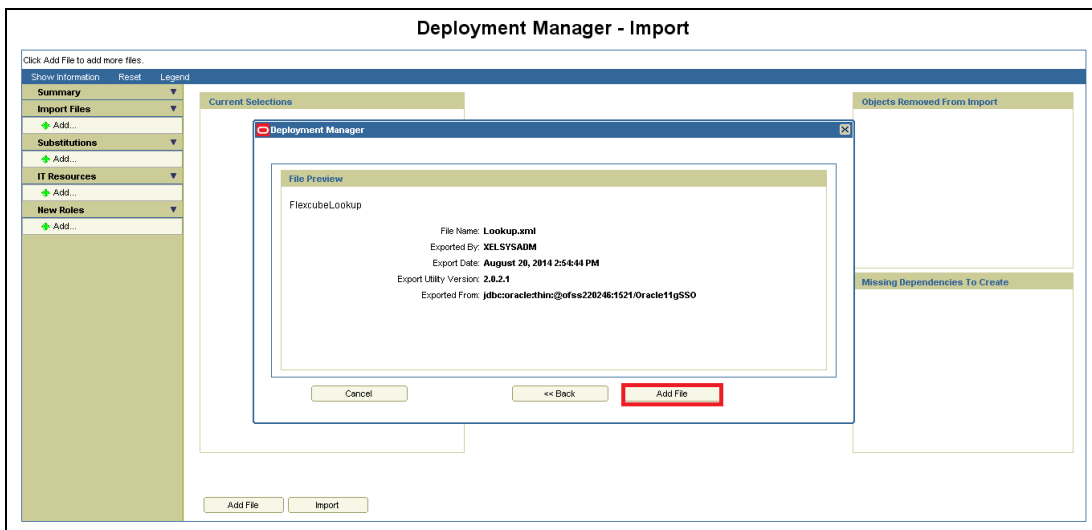

### 5.1.6.10 The following screen will get displayed with Add File option

- a. Select Lookup.xml file from the folder <SPMLADAPTER\_INSTALL\_DIR>\OIM\OIM-Config\Screens-Config.
- b. Click on Open.

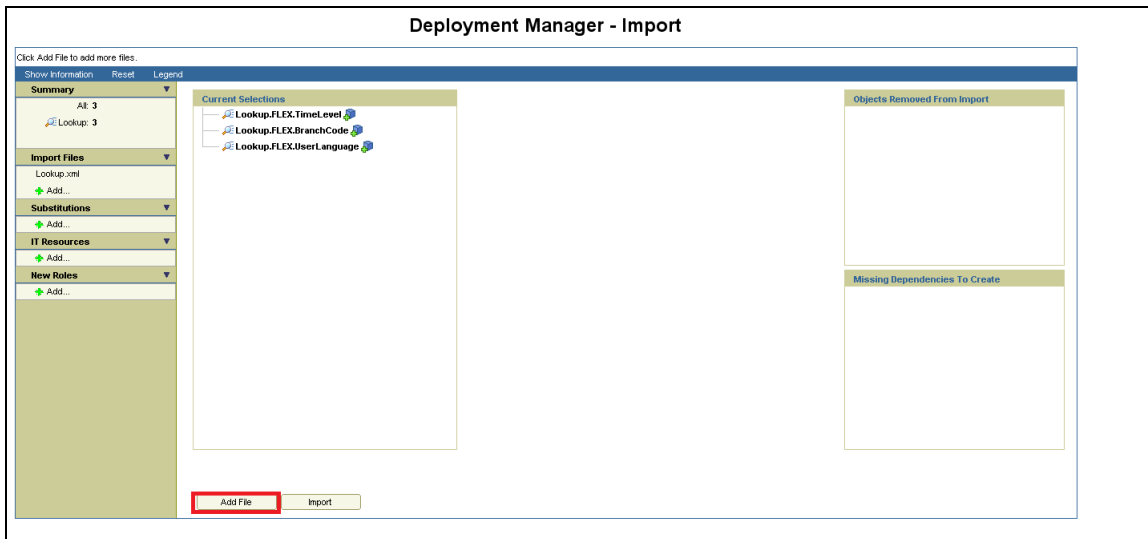

### 5.1.6.11 We will get File preview screen

- a. Click on Add file.

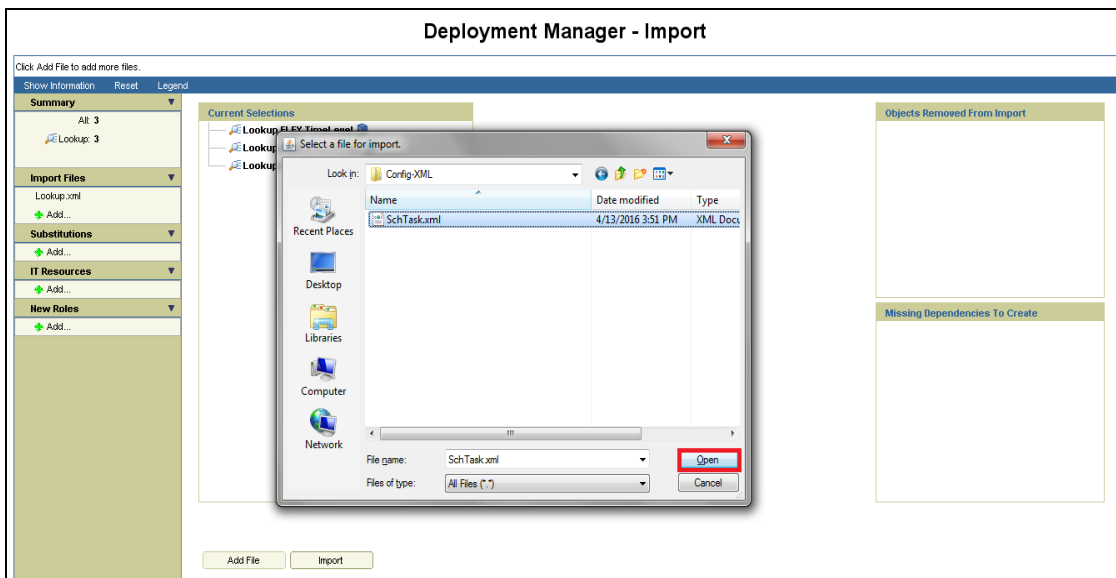

### 5.1.6.12 Click on Add File

### 5.1.6.13 Select SchTask.xml file from the folder

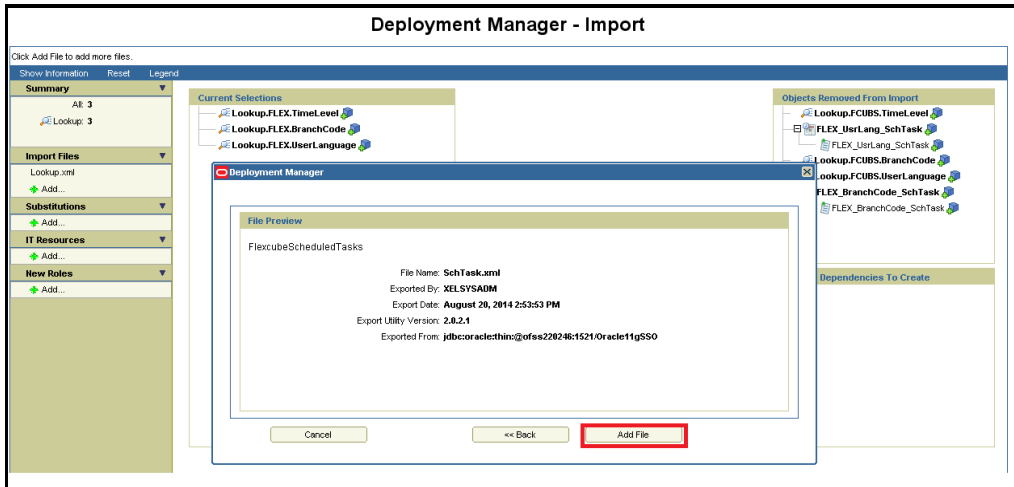

<SPMLADAPTER\_INSTALL\_DIR>\OIM\OIM-Config\Sch-Tasks\Config-XML.

- a. Click on Open.

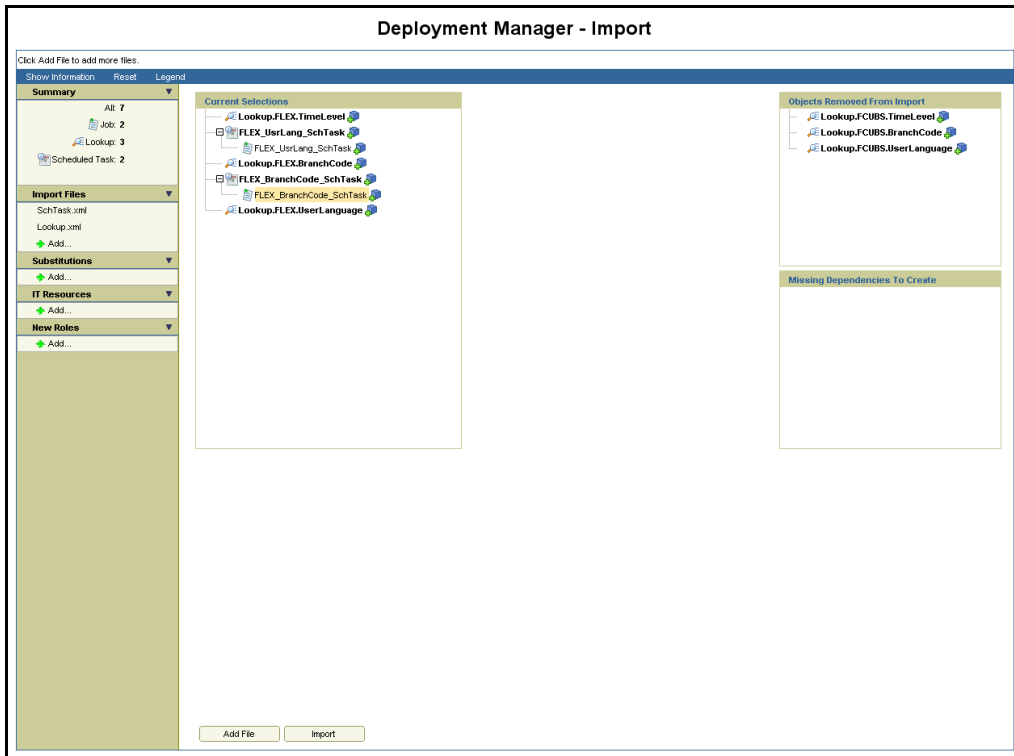

### 5.1.6.14 We will get File preview screen

- a. Click on Add file.

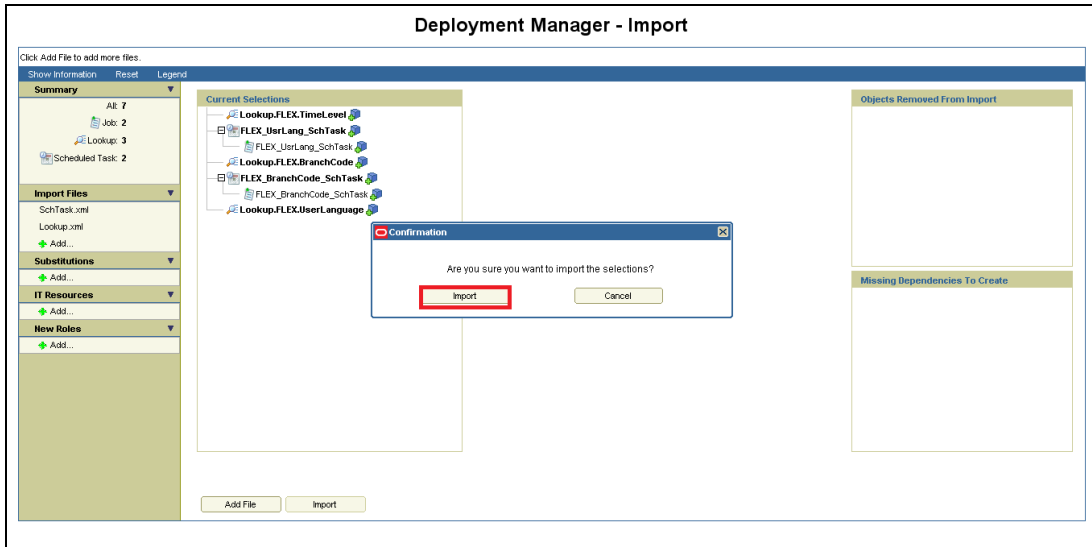

### 5.1.6.15 Click on Import

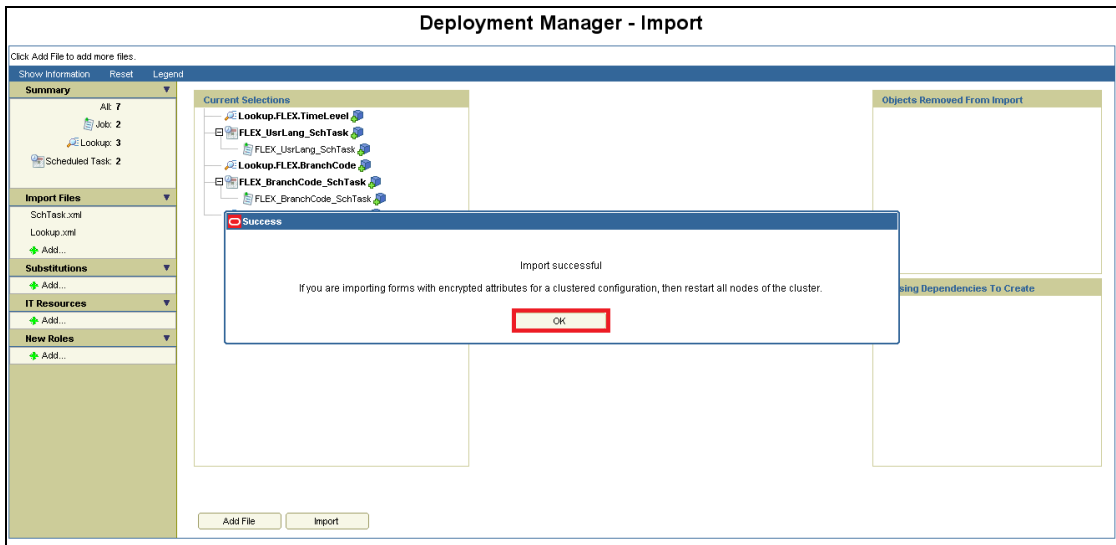

### 5.1.6.16 Above will prompt for Import Confirmation

- a. Click on Import to start import.

### 5.1.6.17 On successful import following screen will come

- a. Ensure that import is successful and click on ok.

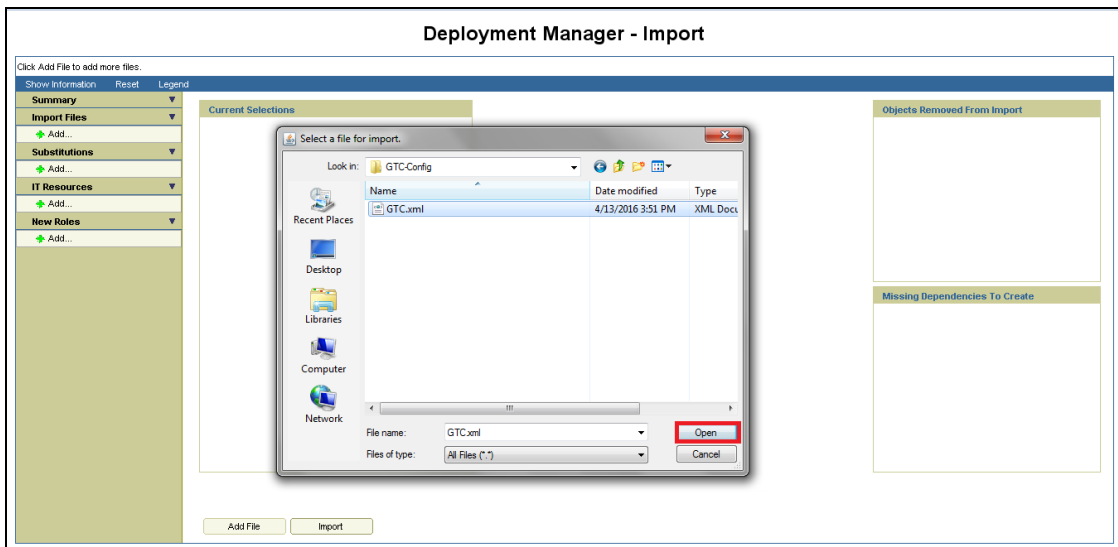

**5.1.6.18 The following screen will get displayed.**

- a. Click on Add File.

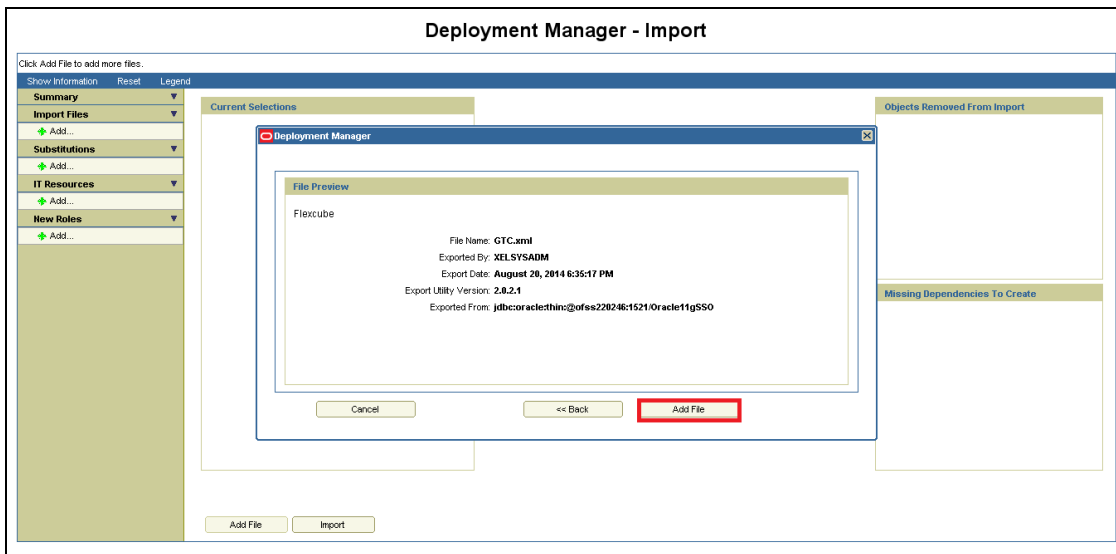

**5.1.6.19 Open file window will get appeared**

- b. Select GTC.xml file from the folder <SPMLADAPTER\_INSTALL\_DIR>\OIM\OIM-Config\GTC-Config\.
- c. Click on Open.

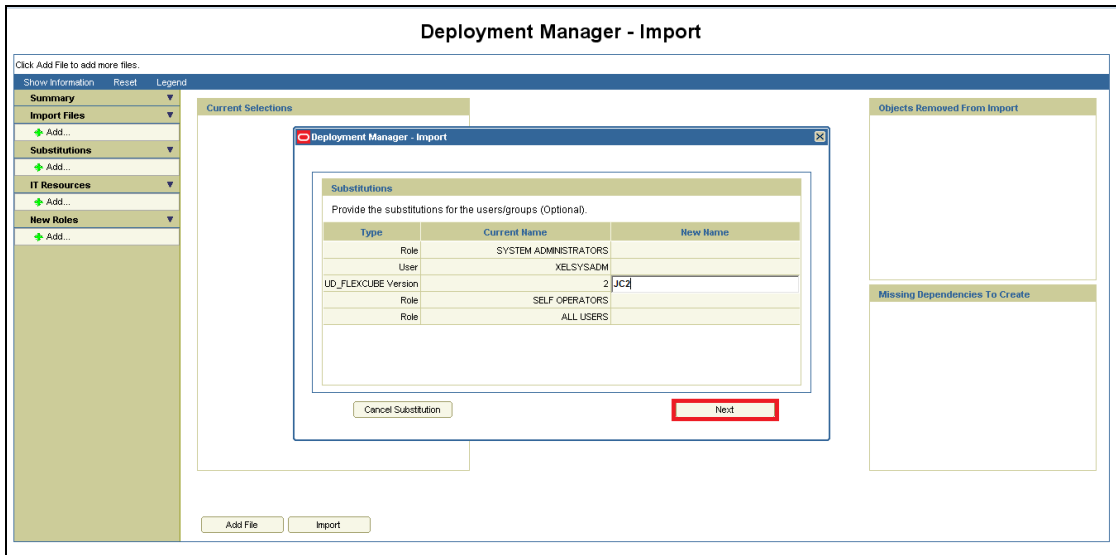

### 5.1.6.20 We will get File preview screen

- d. Click on Add file.

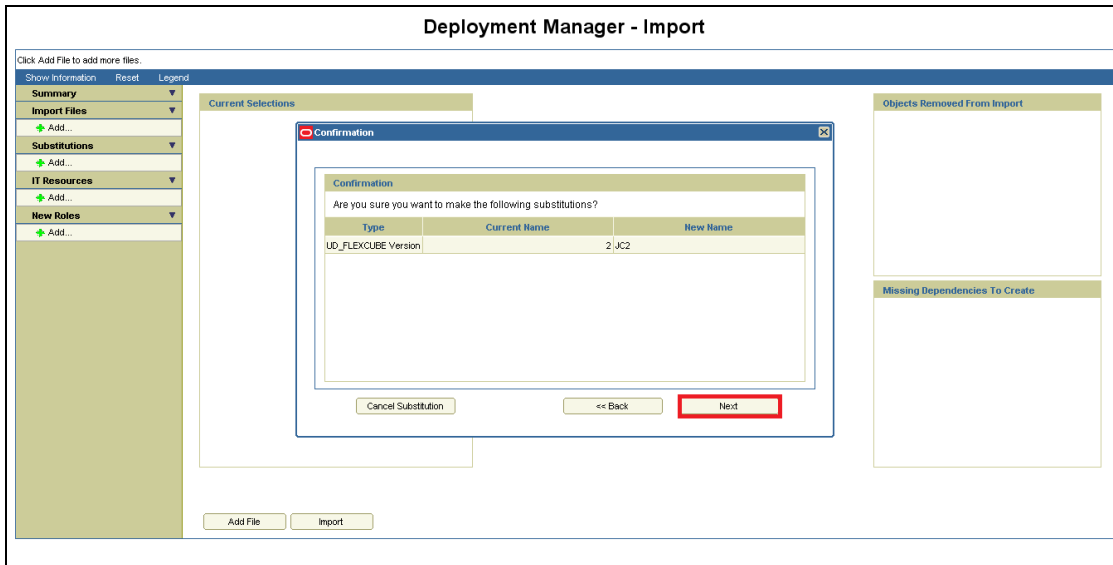

### 5.1.6.21 Next screen will be the substitution screen.

- e. If the GTC is imported first time then click on Next.
- f. If GTC have been already imported once successfully, change the Version name for example UD\_FLEXCUBE Version = FLEXCUBE V2.
- g. Click on Next.

### 5.1.6.22 Above will prompt for substitution Confirmation

- h. If any value has been changed on previous screen it will list those substitution otherwise below screen will get displayed. Click on Next.

### 5.1.6.23 Next, Provide IT resource instance data screen will get displayed.

- i. Ensure that the green arrow should point to FLEXCUBE\_GTC.
- j. Provide followings to the right hand table:

Parameter Name	Parameter Value
SPML_targetID	Oracle FLEXCUBE
SharedDrive_filePrefix	SMOIMHOFF
SharedDrive_stageDirParent	Full path of the staging folder created in step 4 of OIM setup Eg: /home/Oracle/Oracle/Middleware/FCUBS-OIM-Config/Staging
Webservices_webserviceURL	Provisioning web service <b>FCUBSProvisioningAdService</b> URL deployed in step . Typically it should be like https://<hostName>:<port>/FCUBSProvisioningAdService/FCUBSProvisioningAdServiceSEI  Eg: https://ofss000000:14001/FCUBSProvisioningAdService/FCUBSProvisioningAdServiceSEI
SharedDrive_archiveDir	Full path of the archiving folder created in step 4 of OIM setup Eg: /home/Oracle/Oracle/Middleware/FCUBS-OIM-Config/Archive

SharedDrive_delimeter	, [Comma ]
SharedDrive_uniqueAttrParent	USERID

k. Click on Next.

### 5.1.6.24 The following screen will get displayed

- I. Click on Skip.

### 5.1.6.25 A confirmation window for parameter values will get displayed

- m. Confirm the values and click on View Selections.

### 5.1.6.26 We will get Selection screen that will show all components of GTC

- n. Make sure that there should be no items in Missing Dependencies to create box on right below of the screen. If so, probably some previous imports has been missed out or not imported successfully. Repeat the earlier imports again.
- o. Otherwise click on Import.

### 5.1.6.27 Above will prompt for Import Confirmation

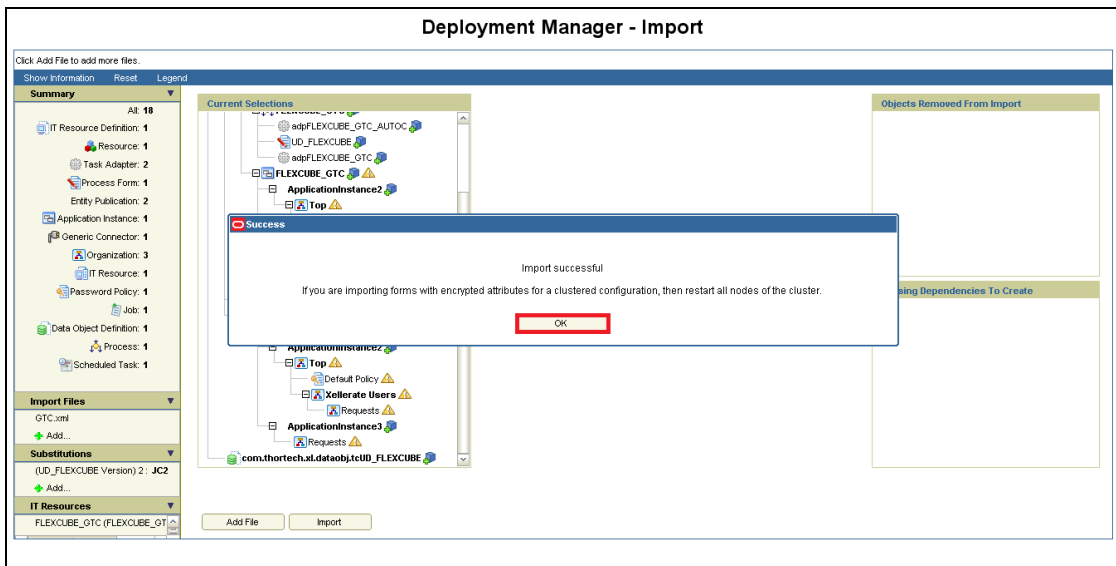

- p. Click on Import to start import.

**Note:** Import of GTC.xml may take more time as compare to other imports.

### 5.1.6.28 On successful import following screen will come

q. Ensure that import is successful and click on ok.

### 5.1.6.29 Click on Sandboxes

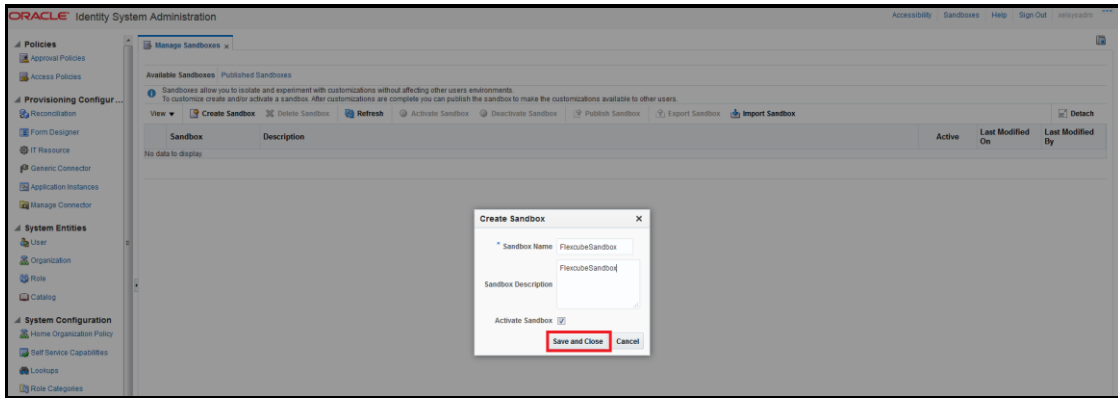

### 5.1.6.30 Click on Create Sandbox

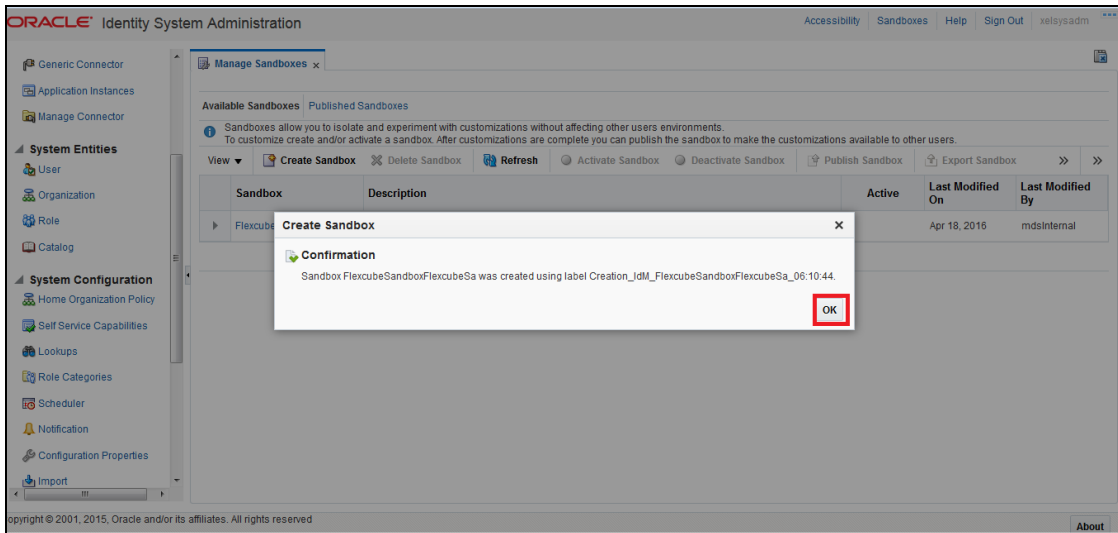

### 5.1.6.31 Enter the Below Details and Click on Save and Close

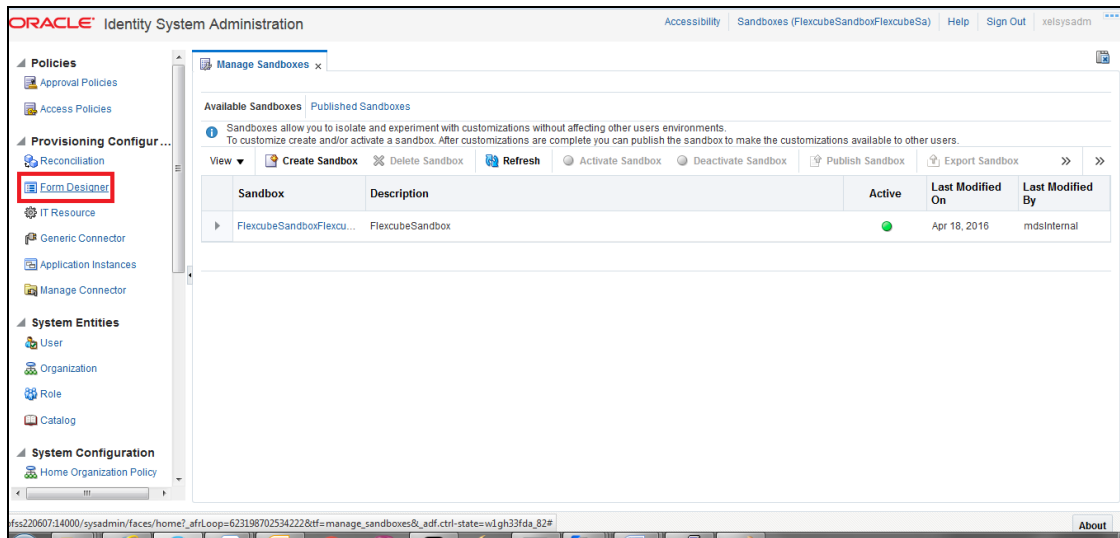

- r. Sandbox Name : Oracle FLEXCUBESANDBOX
- s. Sandbox Description : Oracle FLEXCUBESANDBOX

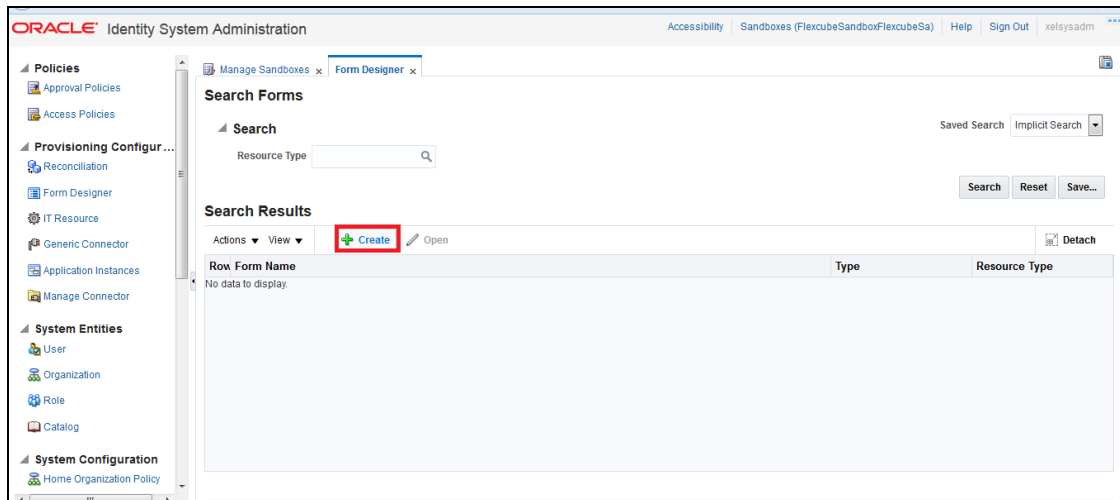

### 5.1.6.32 Click on Ok

### 5.1.6.33 Click on Form Designer under Provisioning Configuration

### 5.1.6.34 Click on Create

### 5.1.6.35 Enter the below details and Click on Create

- Resource Type : FLEXCUBE\_GTC
- Form Name : FLEXCUBEFORM

Note\*: Form Name should be same as above

The screenshot shows the Oracle Identity System Administration interface. The main content area is titled "New form for FLEXCUBE\_GTC". It contains two input fields: "Resource Type" with the value "FLEXCUBE\_GTC" and "Form Name" with the value "FlexcubeForm". A red box highlights the "Create" button in the top right corner. Below the input fields is a section titled "Available form fields" which includes a table with the following data:

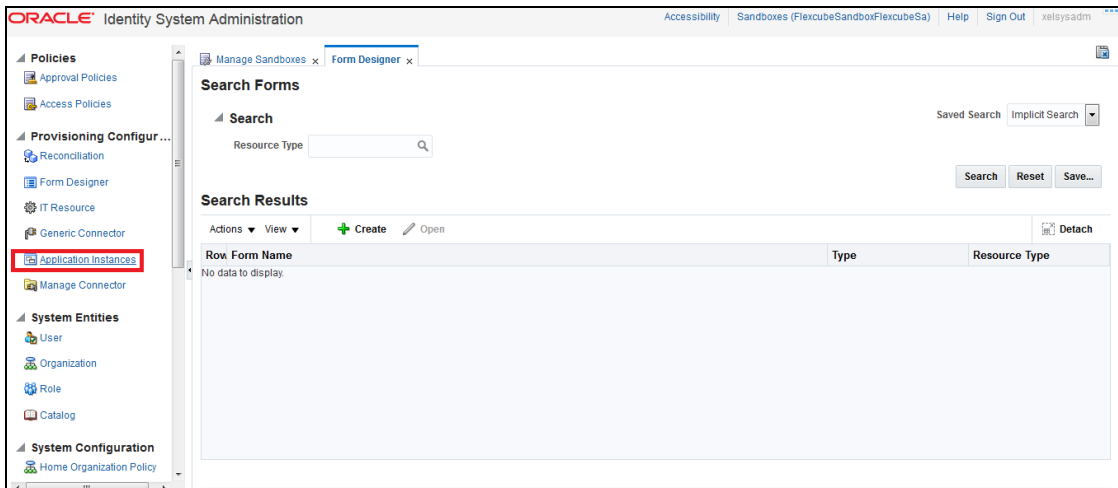

#	Display Name	Name	Description	Bulk Update
1	containerID	UD_FLEXCUBE_CONTAINERID	containerID	<input type="checkbox"/>

### 5.1.6.36 Successful form creation will be like below:

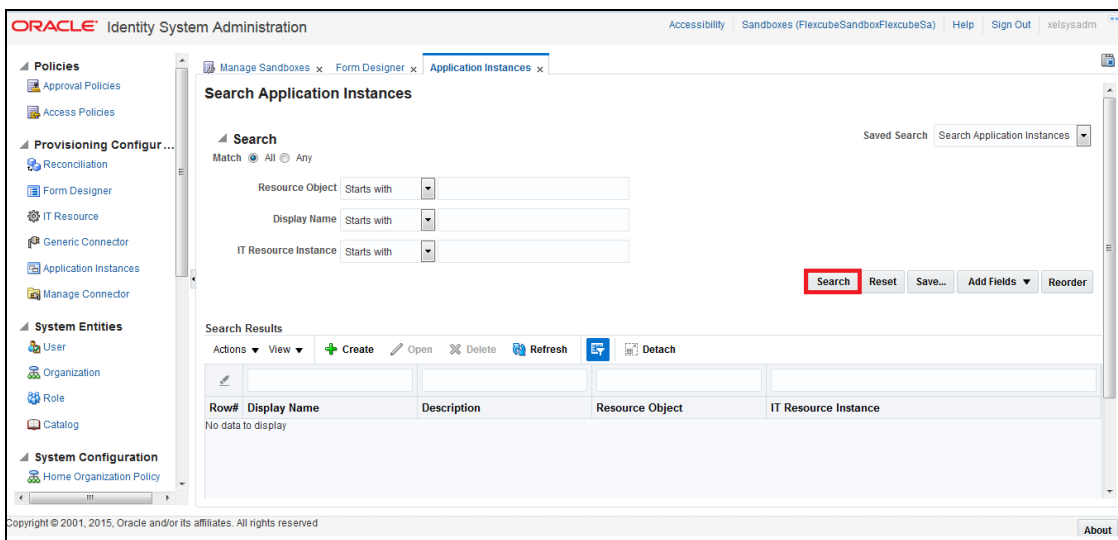

The screenshot shows the Oracle Identity System Administration interface after successful form creation. A green checkmark and the message "Form created successfully" are visible at the top. The main content area is titled "Search Forms" and includes a search bar with "Resource Type" and a search button. Below the search bar is a "Search Results" section with a table that currently displays "No data to display".

Row	Form Name	Type	Resource Type
No data to display.			

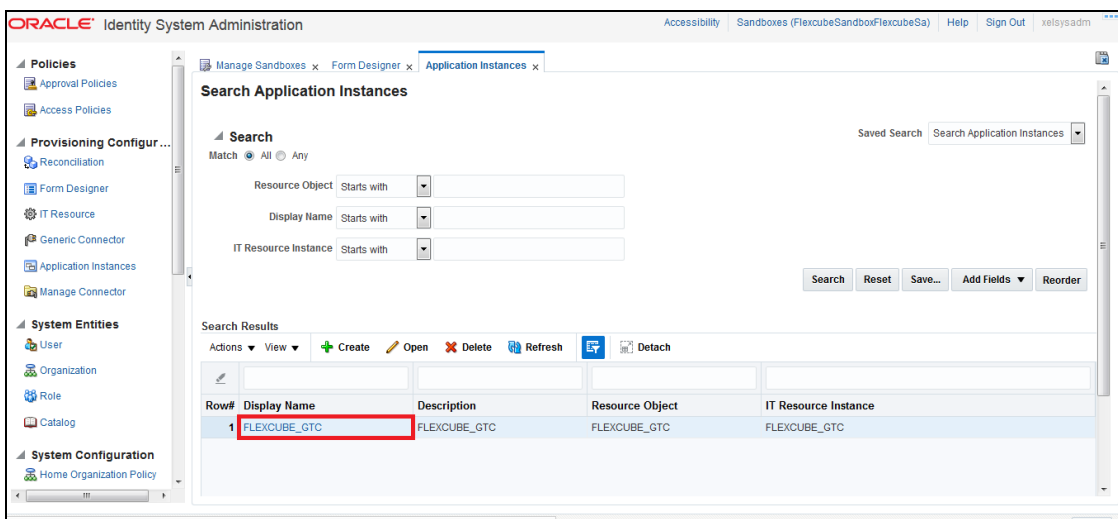

### 5.1.6.37 Click on Application Instances under Provisioning Configuration

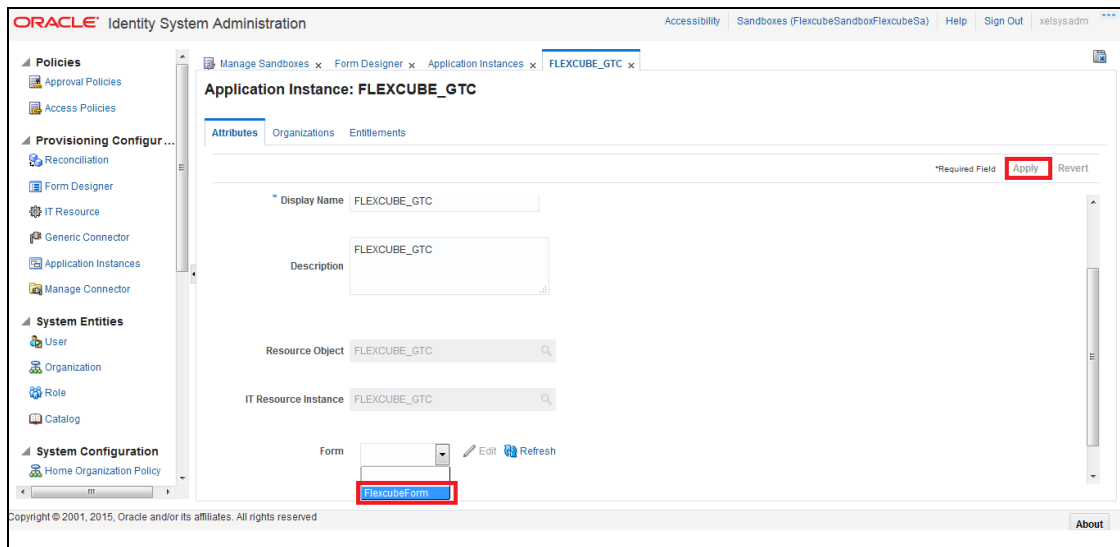

### 5.1.6.38 Click on Search

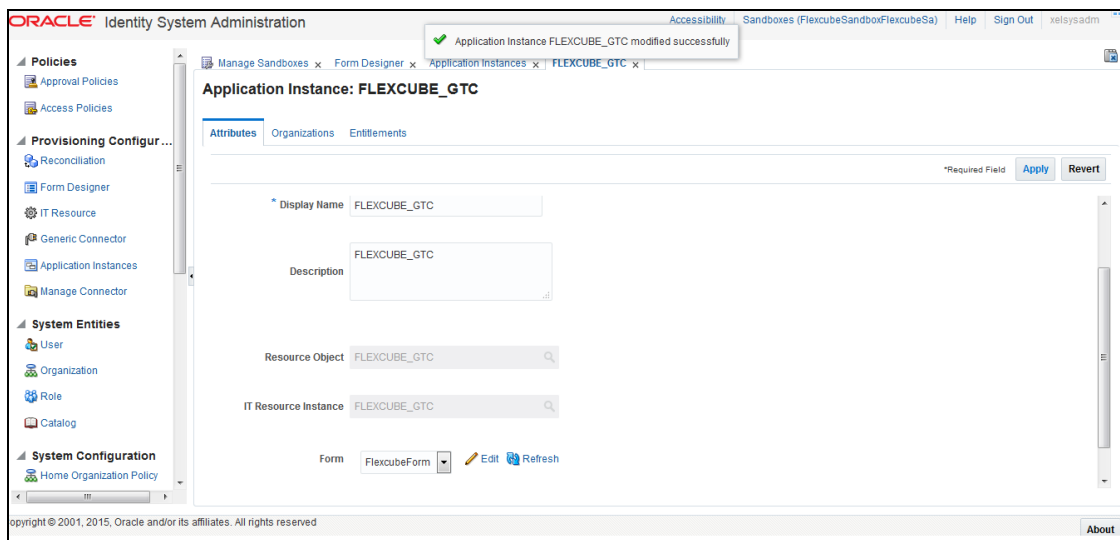

### 5.1.6.39 Click on FLEXCUBE\_GTC

### 5.1.6.40 Choose the Form as FlexcubeForm and Click on Apply

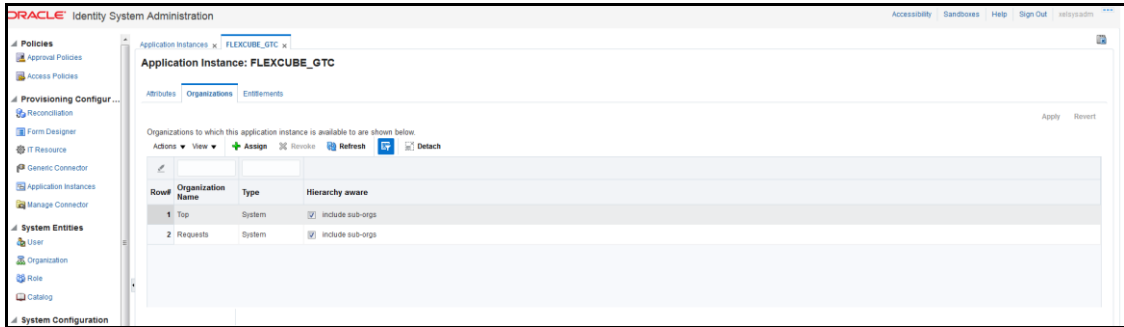

### 5.1.6.41 On Successful modification will be shown like below:

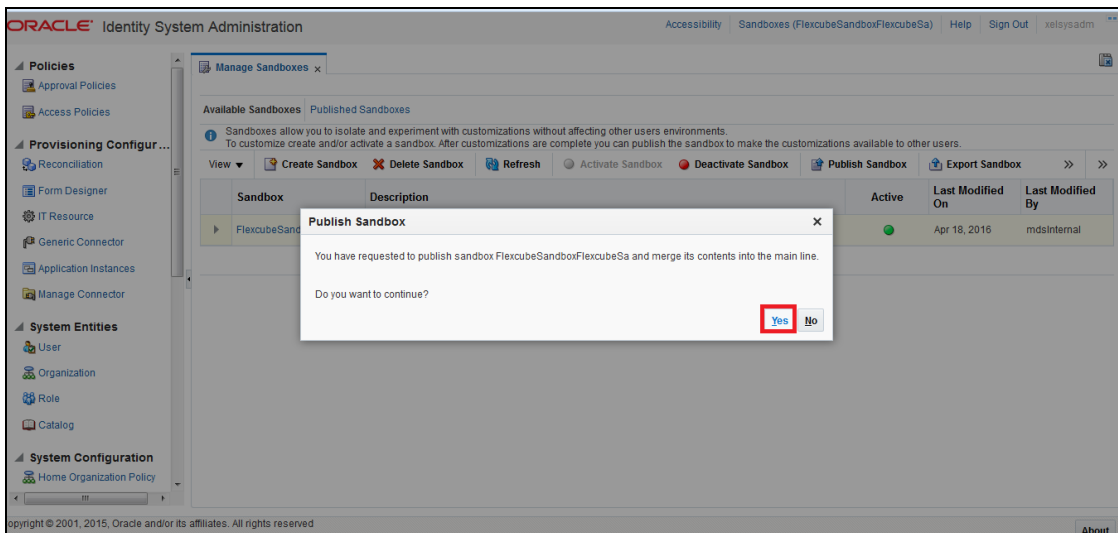

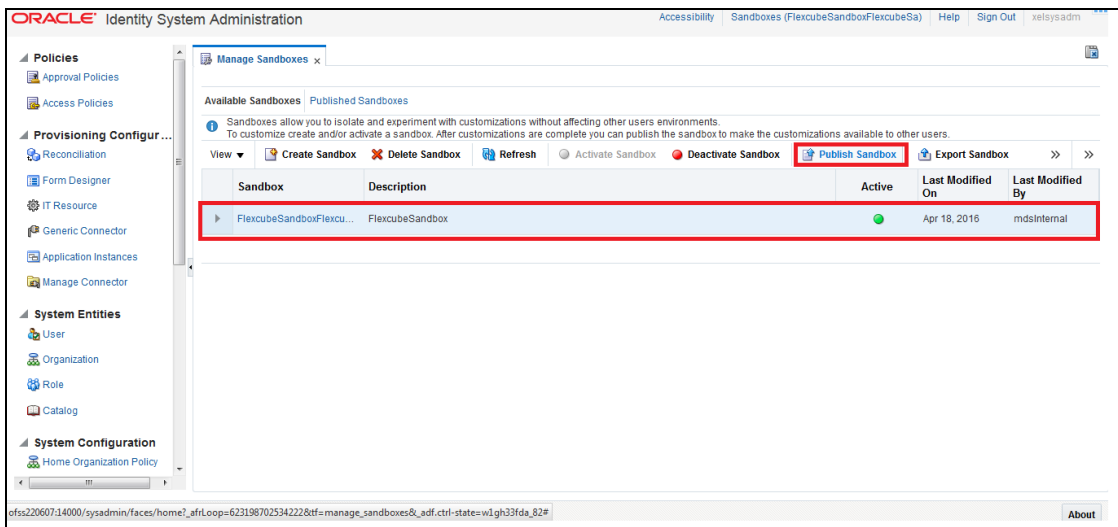

Application Instance belongs to the following Organizations

Note: In case provisioning has to be applied for different Organizations then Create the Organizations under System Entities and map those Organizations to the Application Instance.

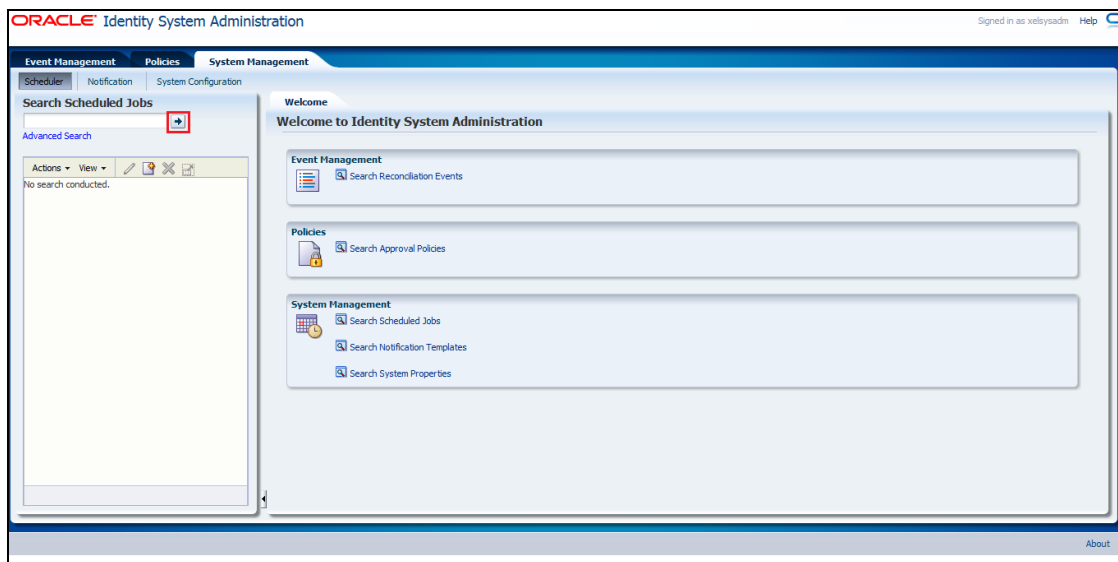

### 5.1.6.42 Select and click on Publish Sandbox

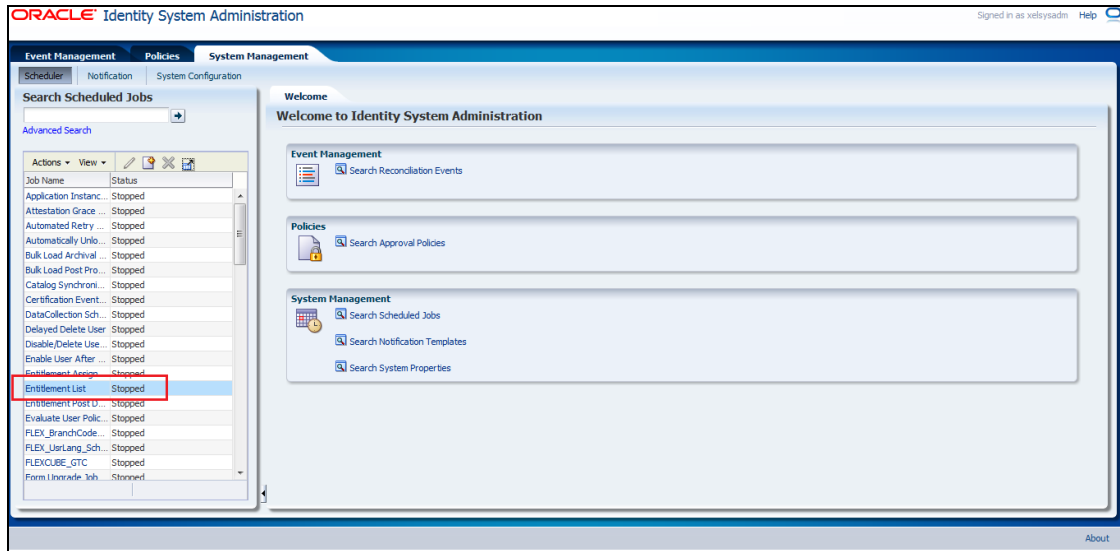

### 5.1.6.43 Click on Scheduler under System Configuration

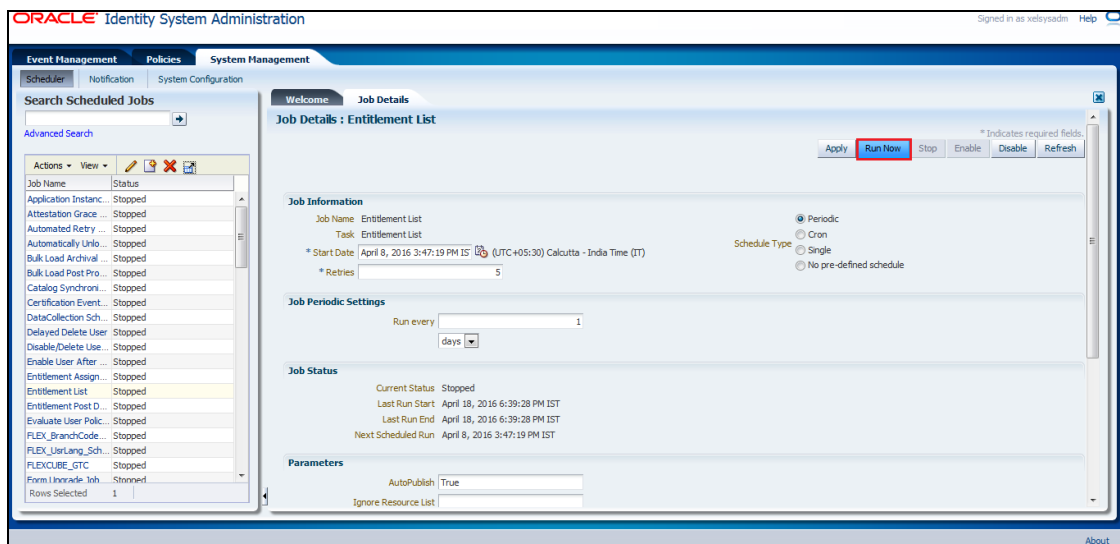

### 5.1.6.44 Click on to Search for Scheduled Job List

### 5.1.6.45 Click on Entitlement List

### 5.1.6.46 Click on Run Now

### 5.1.6.47 Schedule Task Setup

This step involves setting up Schedule task parameters.

5.1.6.47.1 **Open the Oracle Identity Manager Administrative console. (Give the following URL in the browser: <http://<hostname>:<oimport>/sysadmin>)**

5.1.6.47.2 **Enter OIM administrator username/password and press Login**

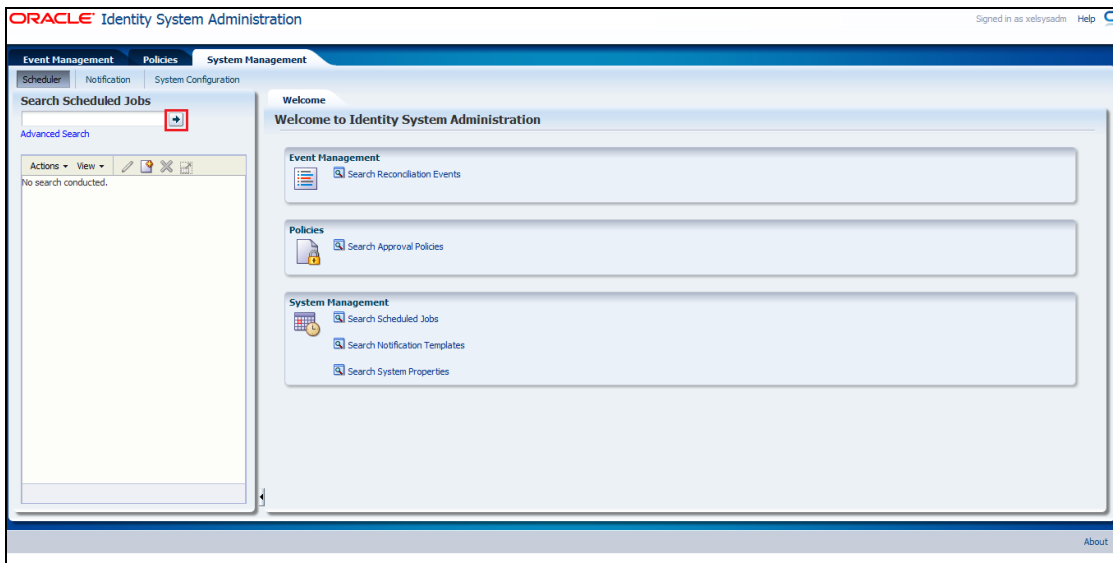

The screenshot shows the Oracle Identity System Administration Sign In page. The page title is "ORACLE Identity System Administration" and it includes links for "Accessibility", "Help", and "About Oracle". The main content area is titled "Sign In" and contains the text "Sign in with your account". Below this, there are two input fields: "User ID" with the value "xelsysadm" and "Password" with masked characters "\*\*\*\*\*". A "Sign In" button is located below the password field. At the bottom of the page, there is a copyright notice: "copyright © 2001, 2015, Oracle and/or its affiliates. All rights reserved."

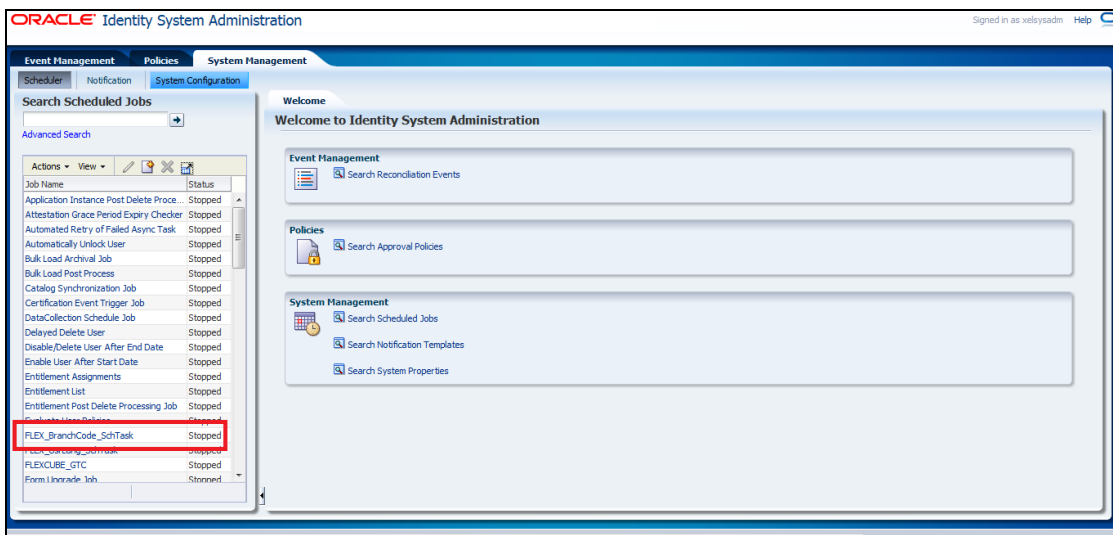

5.1.6.47.3 **Click on Scheduler under System Configuration**

5.1.6.47.4 Click on  to Search for Scheduled Job List

5.1.6.47.5 Click on FLEX\_BranchCode\_SchTask

5.1.6.47.6 On the Edit Schedule Task screen

- WebService Url : FCUBSLOVAdService deployed in section [5.1.4.2.1](#)

https://<hostname>:<ssl\_port>/FCUBSLOVAdService/FCUBSLOVAdServiceSEI

- Query :

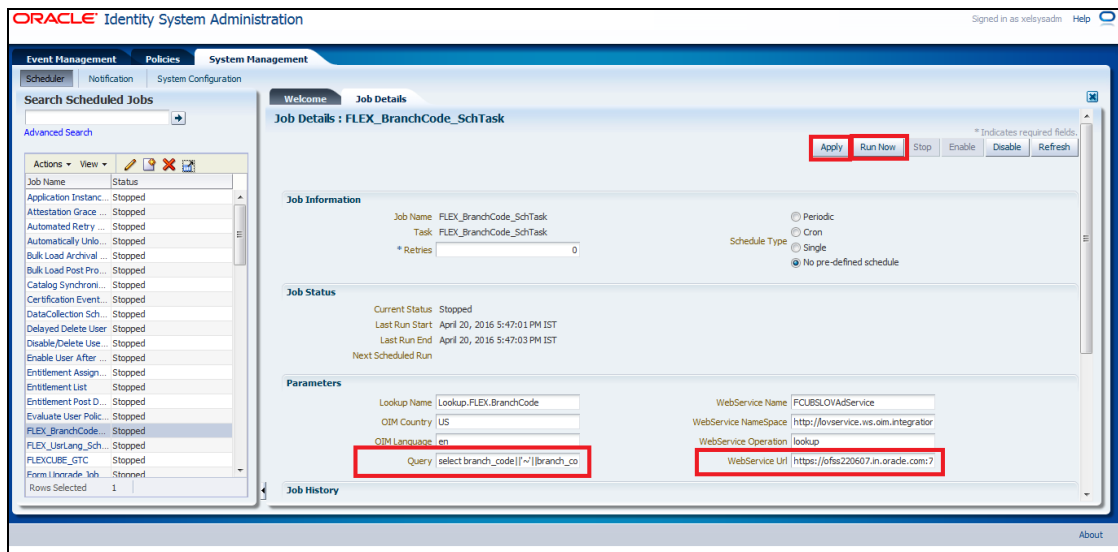

FCUBS :

```
select branch_code||'~'||branch_code from sttm_branch order by branch_code
```

FCIS :

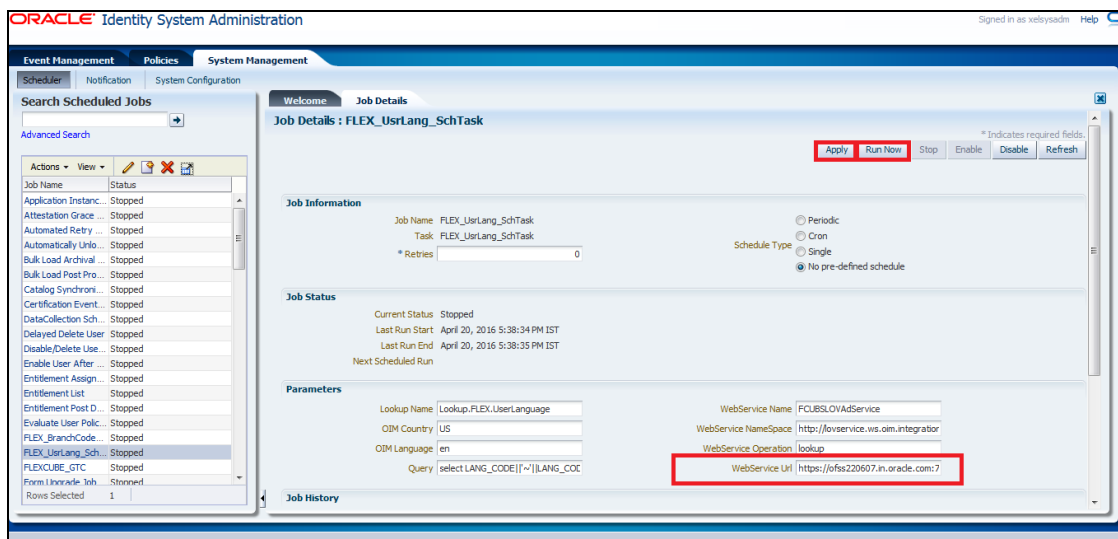

```
select moduleid||'~'||moduleid from moduleprofilebasetbl where once_auth='Y' order by moduleid
```

- Click on Apply and Click on Run.

#### 5.1.6.47.7 Modify FLEX\_UsrLang\_SchTask job

- WebService Url : FCUBSLOVAdService deployed in section 5.1.4.2.1  
[https://<hostname>:<ssl\\_port>/FCUBSLOVAdService/FCUBSLOVAdServiceSEI](https://<hostname>:<ssl_port>/FCUBSLOVAdService/FCUBSLOVAdServiceSEI)
- Click on Apply and Click on Run.

## 5.1.7 System Configurations

### 5.1.7.1 Integration Specific Configurations

#### 5.1.7.1.1 FCIS Configurations

On FCIS side following configurations need to be done:

- Maintenance of Maker ID
- Maintenance of External Source

Both configurations can be done using FCJ provided screens.

#### 1. Maintenance of Maker ID

The FCJ screen can be open through Security Maintenance >> Users >> Detailed menu or using the function SMDUSRDF.

#### 2. Maintenance of External Source

For OIM request and response handling, an external source should be maintained in FCIS database.

The FCJ screen can be open through Gateway >> External System >> Detailed menu or using the function 'GWDEXSYS'.

This external source should be able to do all operations like Create	Modify	Close	Open	View. This can be maintained through function GWDEXFUN or through Gateway >> External System Functions >> Detailed. Required actions and their corresponding details are given as below.
----------------------------------------------------------------------	--------	-------	------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Action	Function	Service Name	Operation Code
NEW	SMGUSRDF	FCISSMService	CreateUserMaint
UNLOCK	SMGUSRDF	FCISSMService	ModifyUserMaint
DELETE	SMGUSRDF	FCISSMService	DeleteUserMaint
CLOSE	SMGUSRDF	FCISSMService	CloseUserMaint
REOPEN	SMGUSRDF	FCISSMService	ReopenUserMaint
VIEW	SMQUSRDF	FCISSMService	QueryUserMaint

Ensure that required maintenance has been done for function CODSORCE (Gateway >> Source>>

Detailed) and for function CODUPLDM (Gateway >> Source Preferences >> Detailed menu)

For maintenance of amendable fields in GWTM\_AMEND\_NODES and GWTM\_AMEND\_FIELDS entries can be made using the function STDAMDMT or through Gateway >> Amendment Maintenance >> Detailed. Following table gives the amendable node and fields details that should be maintained.

Field Name	Value
Amend Nodes section	
Node Name	SMTB_USER
New Allowed	Checked
Delete Allowed	Checked
All Records	Checked
Amend Fields section	
Field Name	HOME_BRANCH
Field Name	START_DATE
Field Name	TIME_LEVEL
Field Name	USER_LANGUAGE
Field Name	USER_NAME
Field Name	USER_PASSWORD
Field Name	SALT

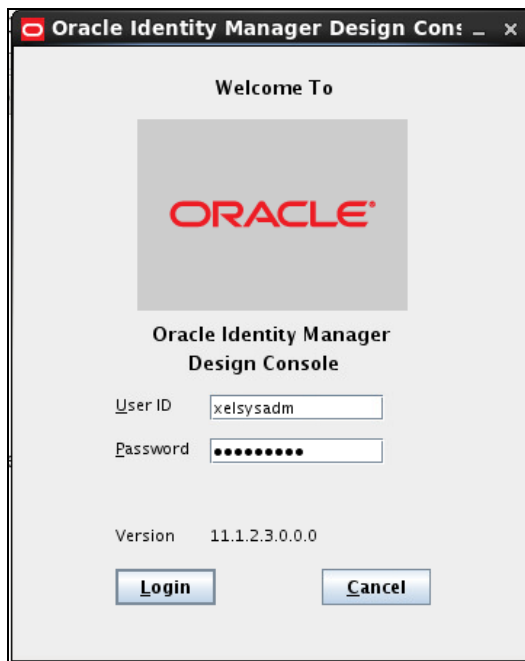

### 5.1.7.2 OIM Configurations

#### 5.1.7.2.1 OID Connector Configuration

For Oracle FLEXCUBE single sign on mode, the provisioning process consist of user creation in underlying LDAP directory and then provsioining into FLEXCUBE. OIM porvides out of box connectors for LDAP directories. This connectors provides facility to connect with LDAP and to do the operation through OIM console.

In this integration, the underlying directory for Oracle access manager is Oracle Internet Directory. OIM porvides out of box connector for it that need to be imported as the connector document provided by OIM. After import, following steps should be followed :

#### 5.1.7.2.1.1 Login to the Design Console

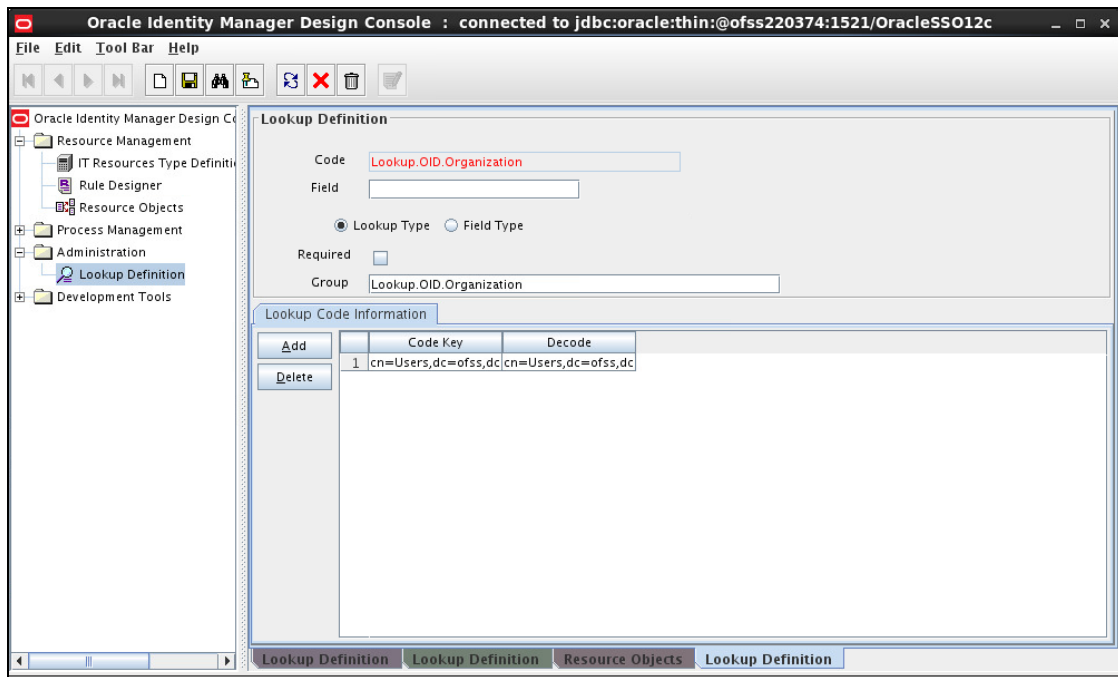

#### 5.1.7.2.1.2 Navigate to the Administration>>Lookup Definition menu

a. Enter the below details:

- Code: Lookup.OID.Organization
- Click on **Search**  Icon
- Click on **Add**  button
- Enter the below details:
  - Code Key : cn=Users,dc=in,dc=oracle,dc=com
  - Decode : cn=Users,dc=in,dc=oracle,dc=com

b. Click on Save 

#### 5.1.7.2.1.3 Navigate to the Administration>>Lookup Definition menu

a. Enter the below details:

- Code: Lookup.OID.UM.ProvAttrMap
- Click on Search  Icon
- Modify the Decode value for Code Key Name:
- From : \_\_NAME\_\_="uid=\${User\_ID},\${Container\_DN}"
- To : \_\_NAME\_\_="cn=\${User\_ID},\${Container\_DN}"

b. Click on Save .

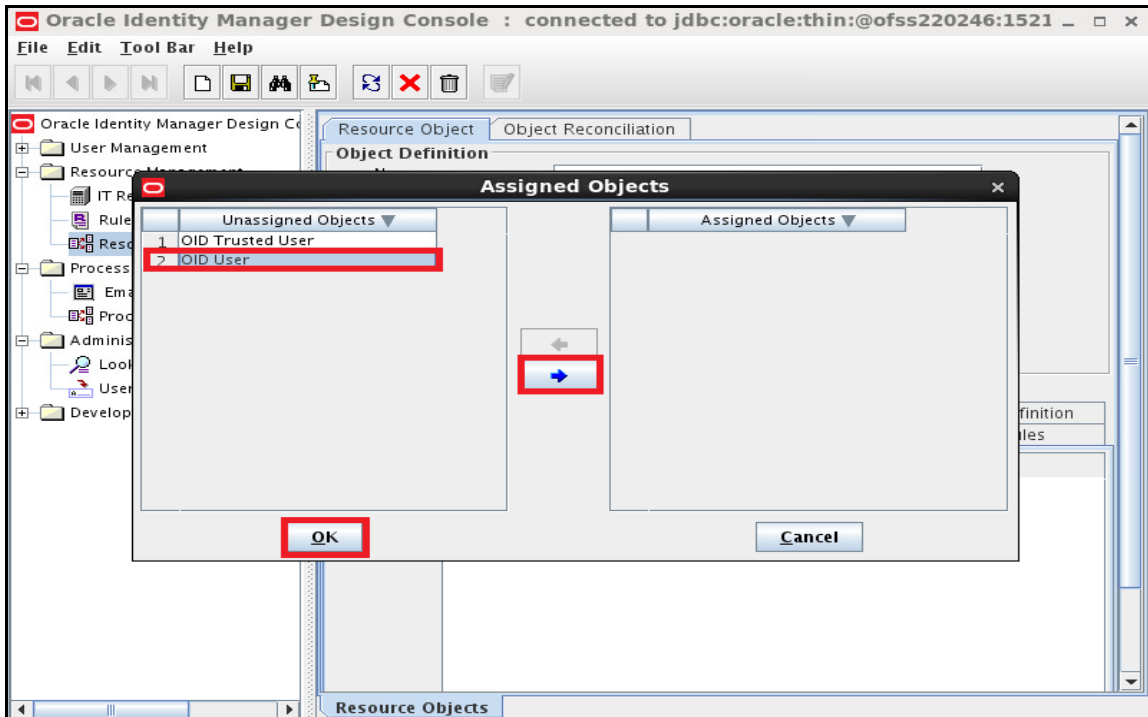

- 5.1.7.2.1.4 Navigate to the Resource Management>>Resource Objects menu. This will open a blank screen.
- Enter FLEXCUBE\_GTC in Name box.
  - Click on Search icon.
  - This will show the definition for resource FLEXCUBE\_GTC. Click on Assign button in Depends On tab.

5.1.7.2.1.5 Select the OID User from the Unassigned Objects list. Click on the arrow pointed to Assigned objects.

a. Click on OK. This will move OID user resource to Assigned objects.

5.1.7.2.1.6 Ensure that OID User will be shown under Object.

a. Click on Save.

## 5.1.7.2.2 Access Policy Creation for OID

5.1.7.2.2.1 Open the Oracle Identity Manager Administrative console. (Give the following URL in the browser: `http://<hostname>:<oimport>/sysadmin`)

5.1.7.2.2.2 Login to Administrative Console

- a. Enter OIM administrator username/password and press Sign In.

The screenshot shows the Oracle Identity System Administration web interface. At the top, the title is "ORACLE Identity System Administration" with links for "Accessibility", "Help", and "About Oracle". The main content area features a "Sign In" form with the heading "Sign in with your account". The form contains two input fields: "User ID" with the value "xelsysadm" and "Password" with masked characters "\*\*\*\*\*". A "Sign In" button is located below the password field. At the bottom of the page, there is a copyright notice: "Copyright © 2001, 2015, Oracle and/or its affiliates. All rights reserved."

5.1.7.2.2.3 Click on Access Policies under Policies

#### 5.1.7.2.2.4 Click on Create Access Policy

**Manage Access Policies**  
Enter your search criteria to search for access policies.

#### 5.1.7.2.2.5 Enter the below details and Click on Continue

- Access Policy Name : OIDAccessPolicy
- Access Policy Description : OIDAccessPolicy
- Policy Owner : Role in Dropdown and ALL USERS from LOV.
- Retrofit Access Policy : Yes
- Priority : 1

### 5.1.7.2.2.12 Login to Identity Self Services

<http://<hostname>:<oimport>/oim/console> or <http://<hostname>:<oimport>/identity>

**5.1.7.2.2.13 Click on Roles under Manage**

#### 5.1.7.2.2.14 Select ALL USERS to Edit

The screenshot shows the Oracle Identity Self Service interface. At the top, there's a header with the Oracle logo and 'Identity Self Service'. On the right, there are links for 'Sandboxes', 'Customize', and 'xelsysadm'. Below the header, there are tabs for 'Home' and 'Roles x'. The main content area is titled 'Roles' and contains a search bar with 'Name' selected. Below the search bar, there are action buttons: 'Create', 'Open', 'Delete', 'Refresh', and 'Detach'. A table lists several roles, with 'ALL USERS' highlighted by a red box. The table has two columns: 'Name' and 'Role Description'. The 'ALL USERS' role has the description 'Default role for all users'.

Name	Role Description
ALL USERS	Default role for all users
Administrators	Administrators role for SOA
BIReportAdministrator	Administrators role for BI Publisher Reports
OPERATORS	Operator role
SELF OPERATORS	Operator role for self registration
SYSTEM ADMINISTRATORS	System Administrator role for OIM

#### 5.1.7.2.2.15 Click on Access Policy

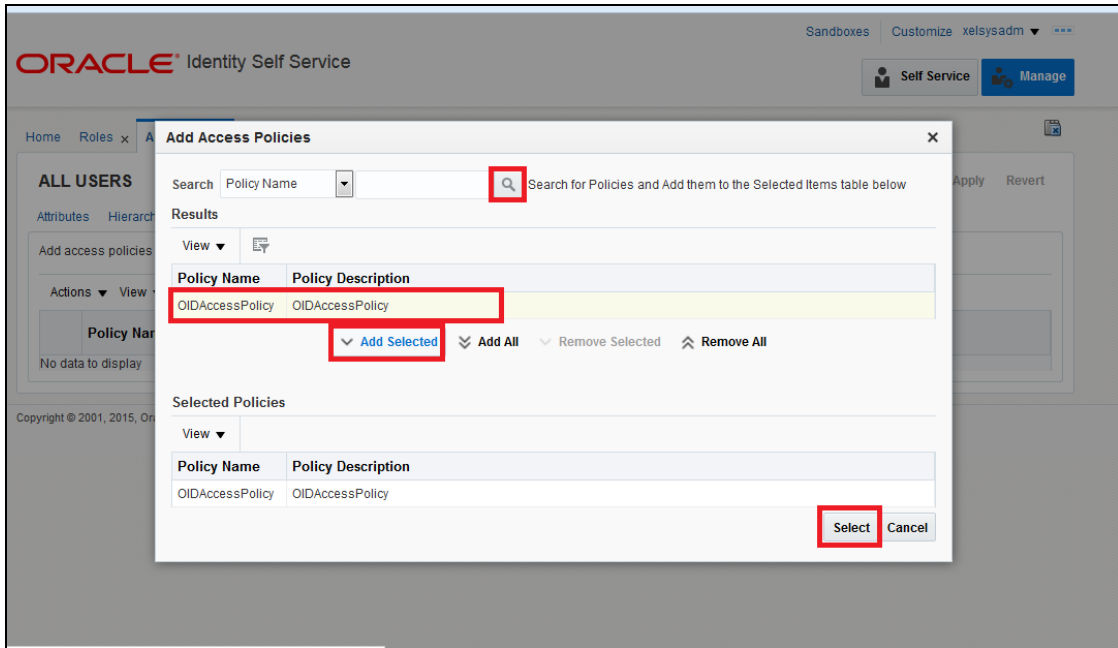

The screenshot shows the Oracle Identity Self Service interface for the 'ALL USERS' role. The breadcrumb trail is 'Home Roles x ALL USERS x'. The main content area is titled 'ALL USERS' and has tabs for 'Attributes', 'Hierarchy', 'Access Policy', 'Members', and 'Organizations'. The 'Access Policy' tab is highlighted with a red box. Below the tabs, there are several fields: 'Name' (ALL USERS), 'Role Namespace' (Default), 'Display Name' (ALL USERS), 'Role E-mail' (empty), 'Role Description' (Default role for all users), and 'Owned By' (System Administrator).

#### 5.1.7.2.2.16 Click on + Add to Add Access Policy

The screenshot shows the Oracle Identity Self Service interface for the 'ALL USERS' role. The breadcrumb trail is 'Home Roles x ALL USERS x'. The main content area is titled 'ALL USERS' and has tabs for 'Attributes', 'Hierarchy', 'Access Policy', 'Members', and 'Organizations'. The 'Access Policy' tab is selected. Below the tabs, there's a message: 'Add access policies to define access rights of this role.' Below the message, there are action buttons: 'Add', 'Remove', 'Undo', 'Refresh', and 'Detach'. The 'Add' button is highlighted with a red box. Below the buttons, there's a table with columns: 'Policy Name', 'Policy Description', and 'Pending Action'. The table is currently empty, with the text 'No data to display' below it.

5.1.7.2.2.17 Search for the Access Policy and Select the Access Policy Created

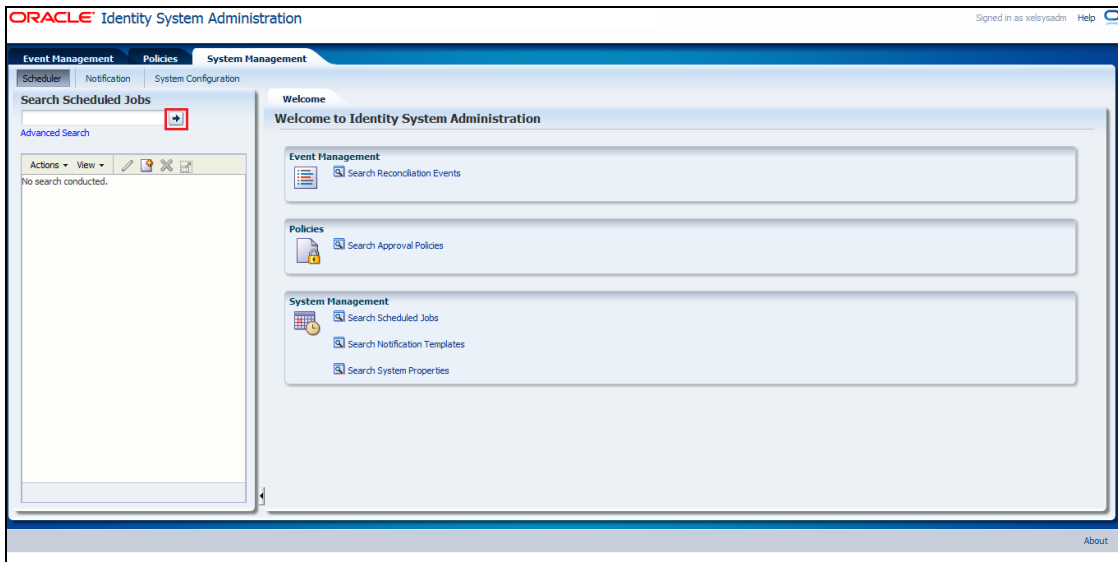

5.1.7.2.2.18 Click on Apply to Save

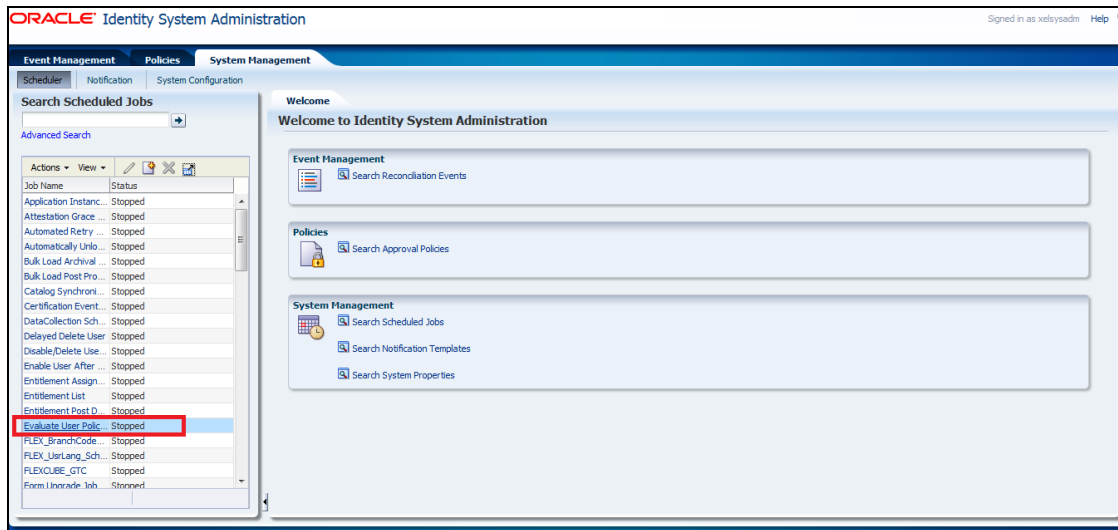

5.1.7.2.2.19 Click on Scheduler under System Configuration

5.1.7.2.2.20 Click on Search shown below

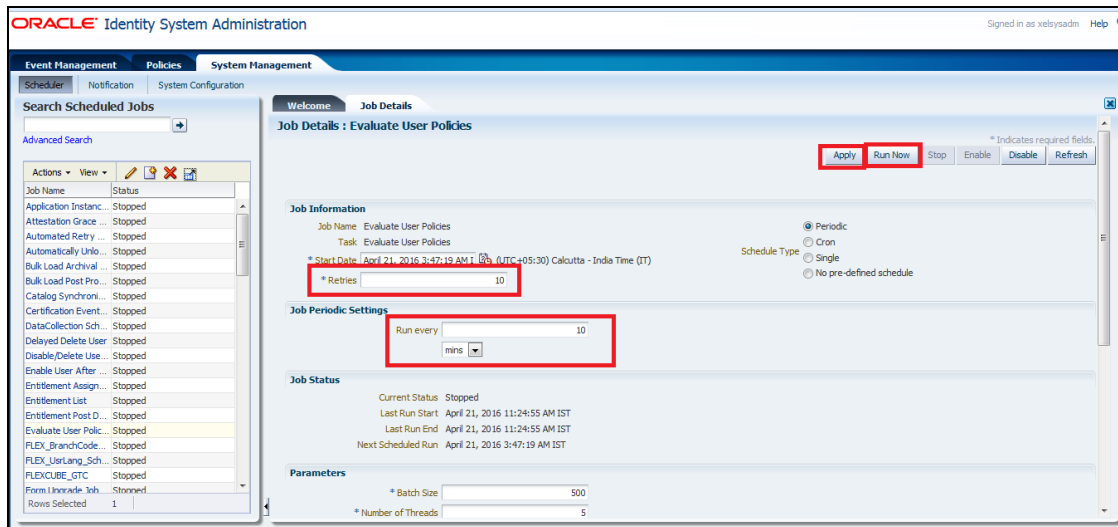

### 5.1.7.2.2.21 Select Evaluate User Policies

3. Change the Schedule Type under Job Information, also change Run Every under Job Periodic Setting.

a. Click on Apply.

Job will be scheduled in a periodic manner and it will evaluate the New User Created in Oracle Identity Management Server against the access policies created. If the new user satisfied by the access policy then it will Provision the user to User Account. In this case it's Oracle Internet Directory.

---

## 6. Solution / Usage Guidelines

### 6.1 Working with OIM

#### 6.1.1 Creating a user in Oracle FLEXCUBE through OIM

To create a user in Oracle FLEXCUBE through OIM, first a user must be created in OIM itself. After creating a user in OIM, a user can be created in Oracle FLEXCUBE by assigning a resource named FLEXCUBE\_GTC.

Open the Oracle Identity Manager Administrative console. (Give the following URL in the browser: <http://<hostName>:<oimport>/identity>)

##### 6.1.1.1 Login to Administrative Console

- a. Enter OIM administrator username/password and press **Login**.

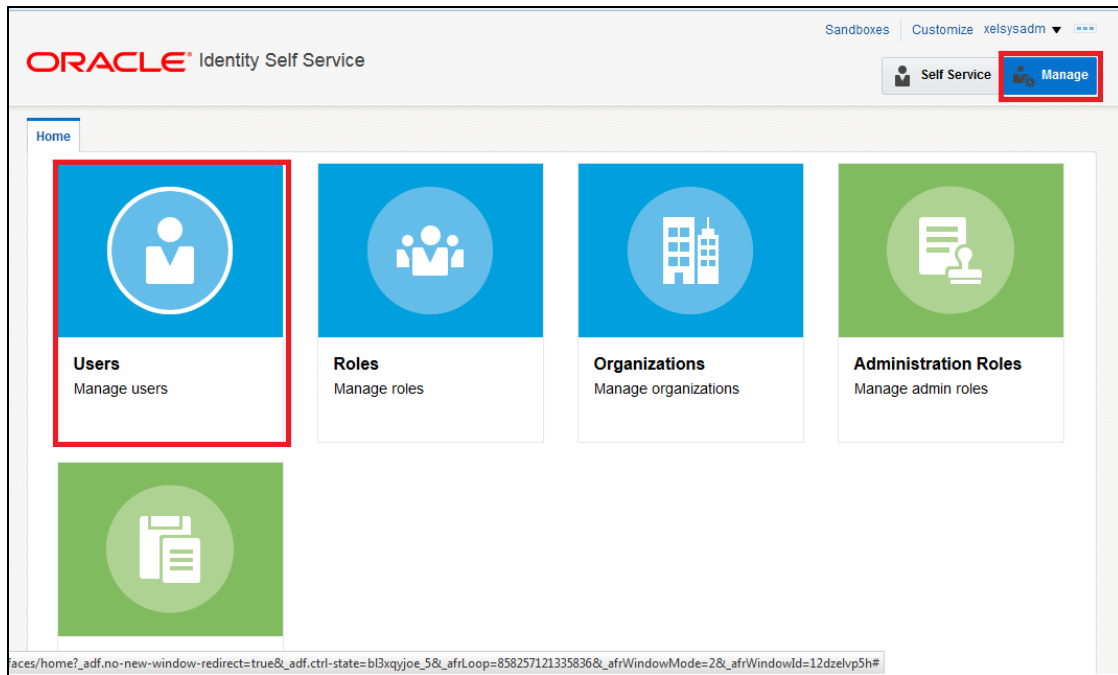

The screenshot shows the Oracle Identity Self Service Sign In page. The page header includes the Oracle logo and "Identity Self Service" text, along with links for "Accessibility", "Help", and "About Oracle \*\*\*". The main content area features a "Sign In" form with the following elements:

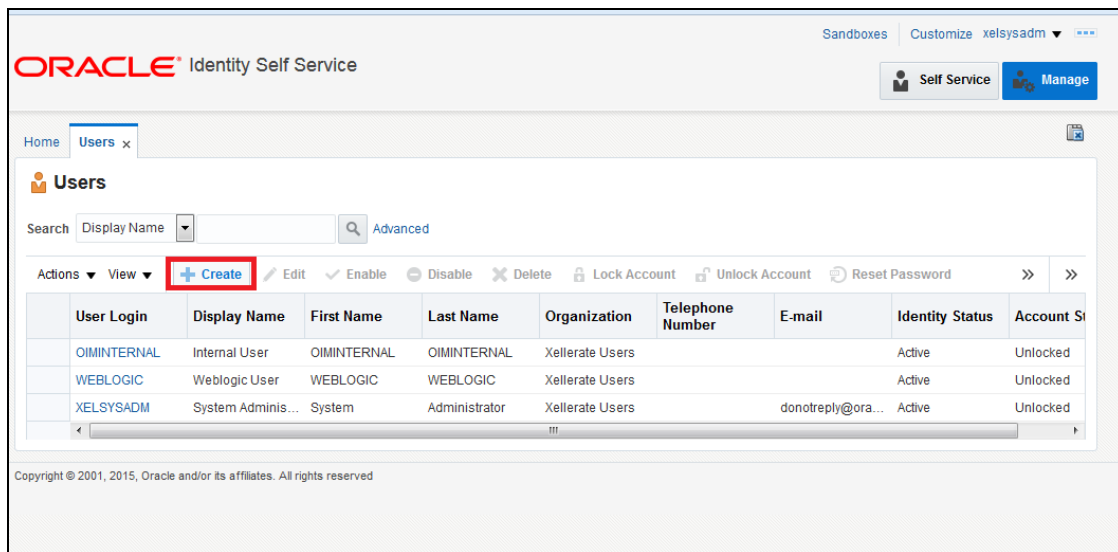

- Text: "Sign in with your account"
- Form field: "User ID" with the value "xelsysadm" entered.
- Form field: "Password" with masked characters "\*\*\*\*\*" entered.
- Button: "Sign In"
- Links: "Forgot User Login?", "Forgot Password?", "New User Registration", and "Track My Registration".

The footer contains the copyright notice: "Copyright © 2001, 2015, Oracle and/or its affiliates. All rights reserved."

### 6.1.1.2 Click on Users under Manage

### 6.1.1.3 Click on Create

### 6.1.1.4 The Create User screen will get displayed

a. Below are the mandatory fields, which needs to be entered to Create the User in Oracle Identity Manager

- i. First Name
- ii. Last Name
- iii. Organization
- iv. User Type
- v. E-mail
- vi. Display Name
- vii. User Login
- viii. Password
- ix. Confirm Password
- x. Start Date

Note: Password and Confirm Password are not entered then System will generate some random password & it will mailed to the email address entered.

b. Click on Submit.

USERNAME Nandhakumar Vemban EMAIL nandhakumarvemban@oracle.com

USERPASSWORD \*\*\*\*\* LDAPUSR cn=NVEMBAN-IN,cn=Users,dc=ofss,dc=

### 6.1.2.3 Navigate to the Accounts >> Select FLEXCUBE\_GTC >> Resource History

The screenshot shows the Oracle Identity Self Service interface. At the top, it says 'ORACLE Identity Self Service' and 'xelsysadm'. The user 'Nandhakumar Vemban' is selected. The 'Accounts' tab is active, displaying a table with columns: Application Instance, Resource, Account Name, Provisioned On, Status, Account Type, and Request ID. Two accounts are listed: 'FLEXCUBE\_GTC' (Account Name: 24, Provisioned On: 4/25/2016, Status: Provisioned, Account Type: Primary) and 'OID User' (Account Name: NVEMBAN-IN, Provisioned On: 4/25/2016, Status: Provisioned, Account Type: Primary). A context menu is open over the first row, with options: Enable, Disable, Refresh, Resource History (highlighted in red), and Reset Password.

### 6.1.2.4 The following screen is displayed

- Based on the modification done it will show the individual field change status (In case of more than one field like User Name, User Password changes it will show USERNAME Updated, HOMEBRANCH Updated etc.).

The screenshot shows the 'Resource Provisioning Details' page for user 'Nandhakumar Vemban[NVEMBAN-IN]'. It displays provisioning tasks for the resource 'FLEXCUBE\_GTC'. The table has columns: Task Name, Task Status, Date Assigned, Assigned To, and Retry. All tasks are completed.

Task Name	Task Status	Date Assigned	Assigned To	Retry
TIMELEVEL Updated	Completed	April 25, 2016	System Administrator [XELSYSADM]	<input type="checkbox"/>
Create User	Completed	April 25, 2016	System Administrator [XELSYSADM]	<input type="checkbox"/>
System Validation	Completed	April 25, 2016	System Administrator [XELSYSADM]	<input type="checkbox"/>

Buttons: Exit, Add Task, Retry

### 6.1.3 Disable/Remove Accounts in FCIS through OIM

There is a slight difference between Disable and Remove Accounts option. If the account disabled then the same account can be enabled using the Enable option. If the account is Removed then the account cannot be enabled through OIM. But in FCIS, both Disable and Remove option will close the existing user record.

Remove Accounts will show the Last Known Status

#### 6.1.3.1 Accounts>>Select FLEXCUBE\_GTC >>Click on Disable/Remove Accounts

The screenshot shows the Oracle Identity Self Service interface. The user details for Nandhakumar Vemban are displayed. The 'Accounts' tab is selected, showing a table with columns: Application Instance, Resource, Account Name, Provisioned On, Status, Account Type, and Request. Two accounts are listed: FLEXCUBE\_GTC (Account Name: 24) and OID User (Account Name: NVEMBAN-IN). The 'Remove Accounts' button is highlighted in red. A dropdown menu is open, showing the 'Disable' button also highlighted in red.

Application Instance	Resource	Account Name	Provisioned On	Status	Account Type	Request
FLEXCUBE_GTC	FLEXCUBE_GTC	24	4/25/2016	Provisioned	Primary	
OID User	OID User	NVEMBAN-IN	4/25/2016	Provisioned	Primary	

#### 6.1.3.2 Disable Confirmation Screen will get displayed

b. Click on Submit.

The screenshot shows the 'Disable Accounts' confirmation screen. The 'Target Users' section shows the user Nandhakumar Vemban. The 'Cart Items' section shows the account 24@FLEXCUBE\_GTC. The 'Submit' button is highlighted in red.

### 6.1.3.3 Go to Accounts Tab and Click on Refresh

- a. On successful processing, it will display the FLEXCUBE\_GTC status as Disabled.

The screenshot shows the Oracle Identity Self Service interface for user Nandhakumar Vemban. The 'Accounts' tab is active, displaying a table of application instances. The first row, representing the FLEXCUBE\_GTC account, is highlighted with a red border. The table columns are: Application Instance, Resource, Account Name, Provisioned On, Status, Account Type, Request ID, Start Date, and End Date.

Application Instance	Resource	Account Name	Provisioned On	Status	Account Type	Request ID	Start Date	End Date
FLEXCUBE_GTC	FLEXCUBE_GTC	24	4/25/2016	Disabled	Primary		4/25/2016	
OID User	OID User	NVEMBAN-IN	4/25/2016	Provisioned	Primary		4/25/2016	

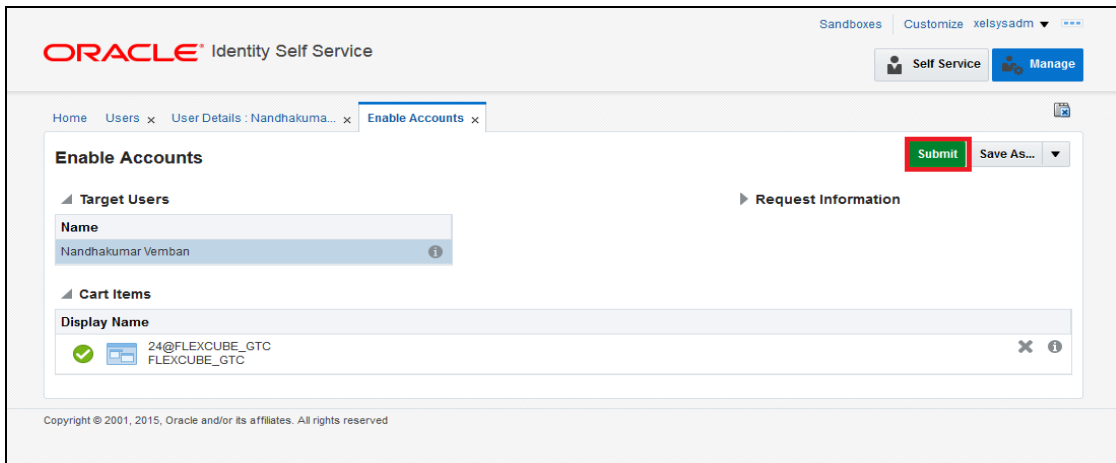

## 6.1.4 Enabling a Disabled user in FCIS through OIM

### 6.1.4.1 Accounts>>Select FLEXCUBE\_GTC >>Click on Enable

The screenshot shows the Oracle Identity Self Service interface for user Nandhakumar Vemban. The 'Accounts' tab is active, and a context menu is open over the FLEXCUBE\_GTC instance. The 'Enable' option is highlighted with a red box. The table below shows the account details.

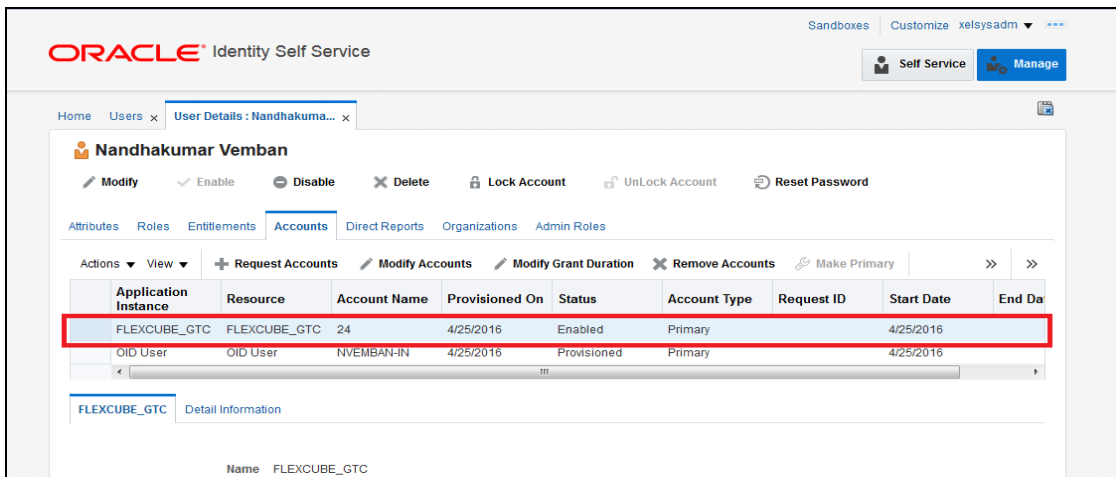

Application Instance	Resource	Account Name	Provisioned On	Status	Account Type	Request ID	Start Date	End Date
FLEXCUBE_GTC	FLEXCUBE_GTC	24	4/25/2016	Disabled	Primary			
OID User	OID User	NVEMBAN-IN	4/25/2016	Provisioned	Primary			

### 6.1.4.2 Enable Confirmation Screen will get displayed and Click on Submit

### 6.1.4.3 Go to Accounts TAB and Click on Refresh

- a. On successful processing, it will display Oracle FLEXCUBE\_GTC status as Enabled.

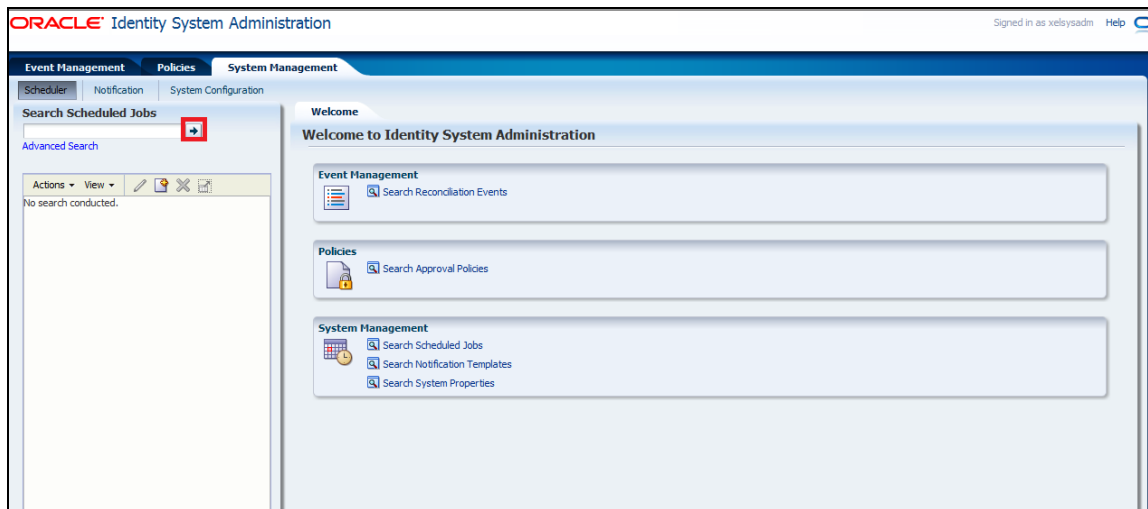

## 6.1.5 Running Reconciliation in OIM

Copy the reconciliation staging file that is created by function id SMBOIMHF as EOD day activity to the OIM server's staging directory.

### 6.1.5.1 Login to OIM Admin Console and Click on Scheduler under System Management

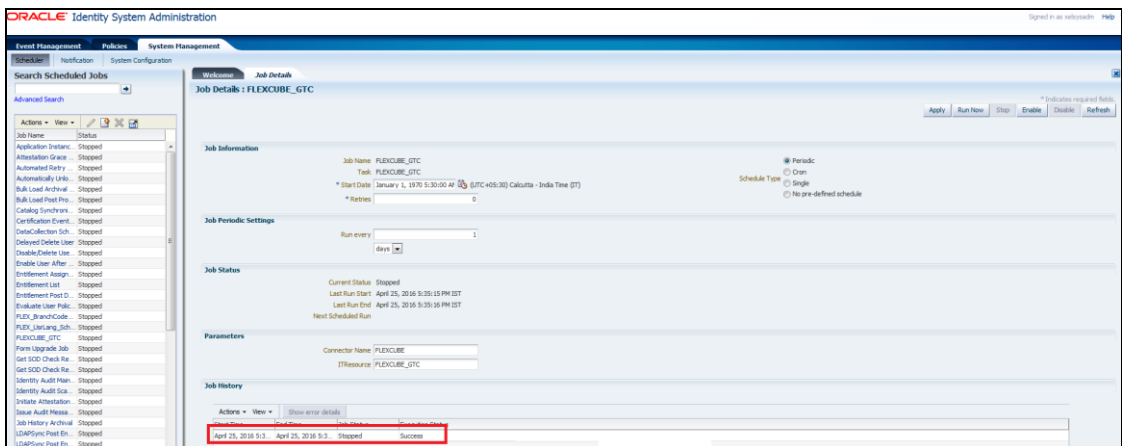

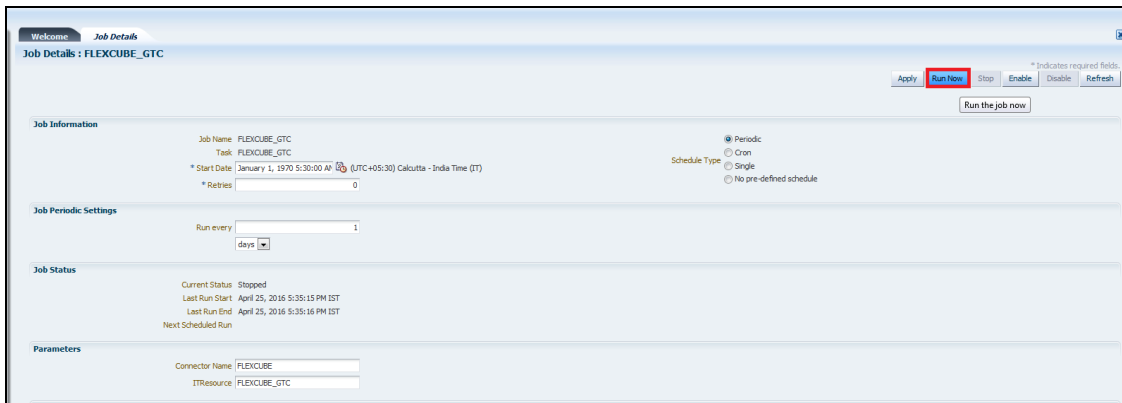

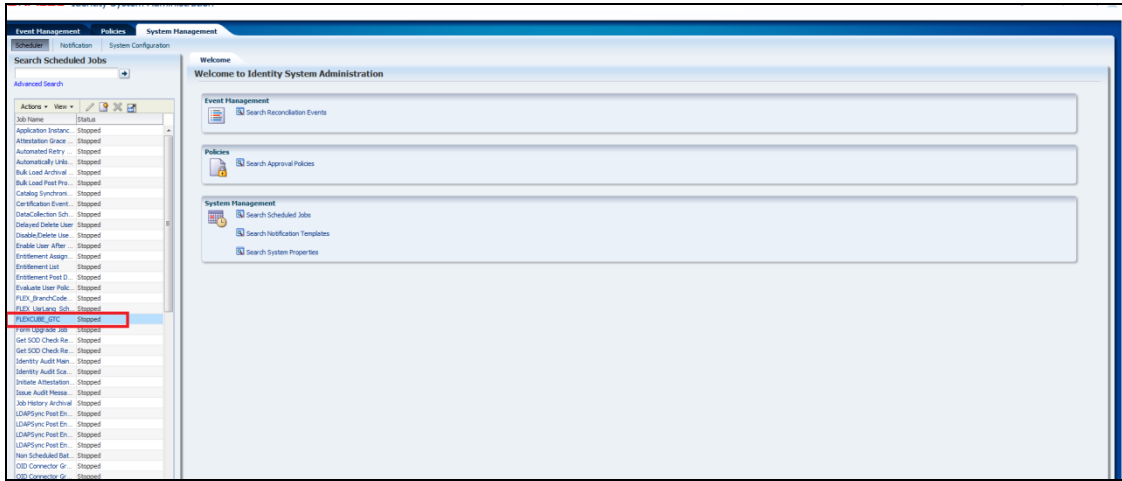

### 6.1.5.2 Under System Management tab and search for FLEXCUBE\_GTC Scheduled Job by clicking Search Button

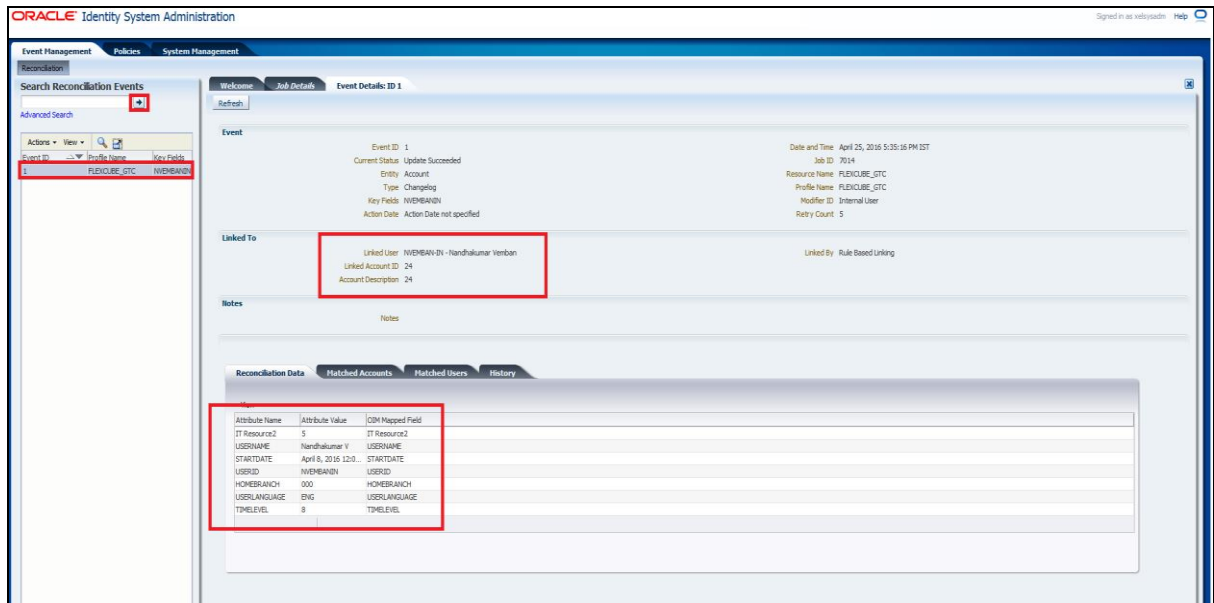

- a. If the job is scheduled periodically, based on the frequency and scheduled time, system will automatically process the reconciliation. If it not scheduled, user can manually initiate the reconciliation process by clicking the Run Now button.

- b. After running the process, click Refresh button to view the status of the initiated job. The job history section available in the screen will show whether the job is in progress or it is completed.

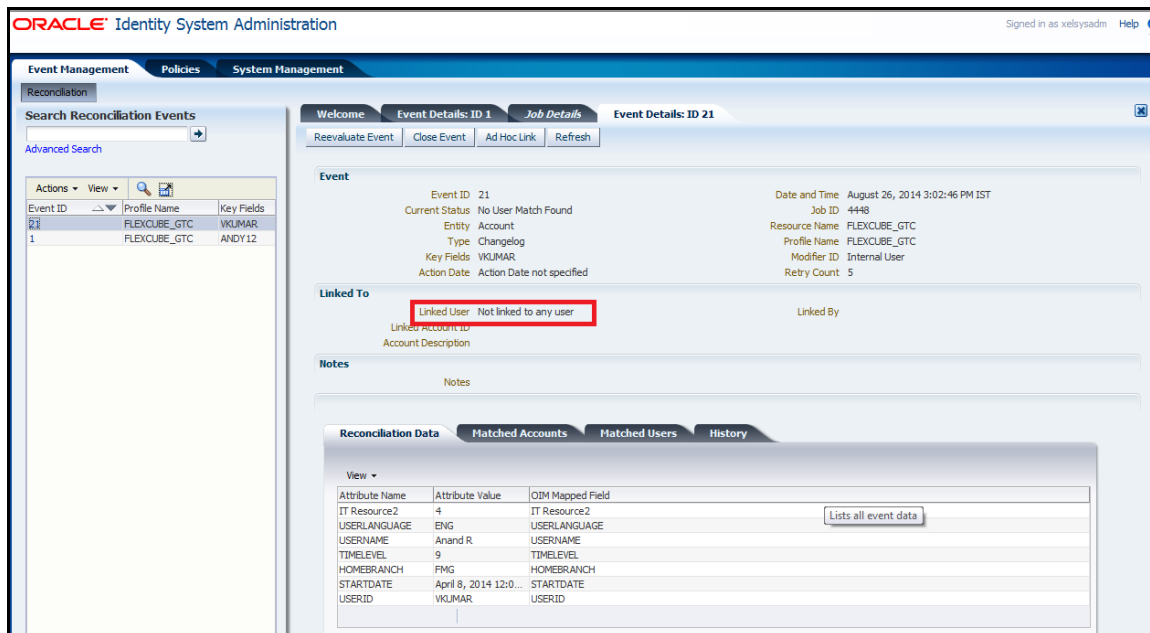

**6.1.5.3 To Check the Status of Reconciliation Process, Click on Event Management Tab and Click the Search button and Click on the Latest Event ID. The screen will show the reconciliation data and the user ID matched for the reconciliation.**

In the Event details screen

- Check the Status: If it is "Update Succeeded" then it means the reconciliation process was able to find a matching user. It also shows the reconciliation data that has been affected.
- If the Liked User is "Not Licked to any user" then it means the reconciliation process was not able to find a matching user.

---

## 7. Reference

Document Number	Title
1	<a href="#">Oracle Identity Manager Document.</a>
2	<a href="#">SPML specification Document.</a>

## 8. Appendix

### 8.1 Data Source Creation

1. Open the application server console in the browser by typing Console URL of Weblogic application server

<http://<hostname>:<port>/console/>

2. Login to Administrative Console
3. Enter Weblogic administrator username/password and press Login.

4. Expand Services and click on Data Sources as shown in below screen:

**Summary of JDBC Data Sources**

A JDBC data source is an object bound to the JNDI tree that provides database connectivity through a pool of JDBC connections. Applications can look up a data source on the JNDI tree and then borrow a database connection from a data source.

This page summarizes the JDBC data source objects that have been created in this domain.

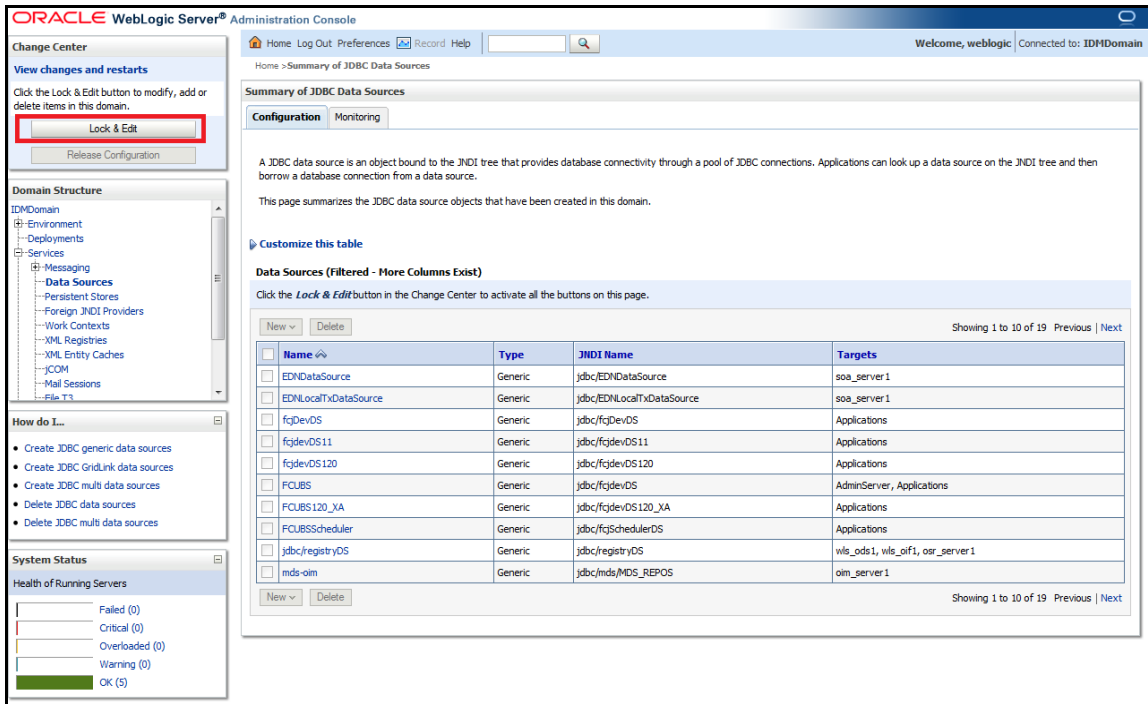

**Customize this table**

Data Sources (Filtered - More Columns Exist)

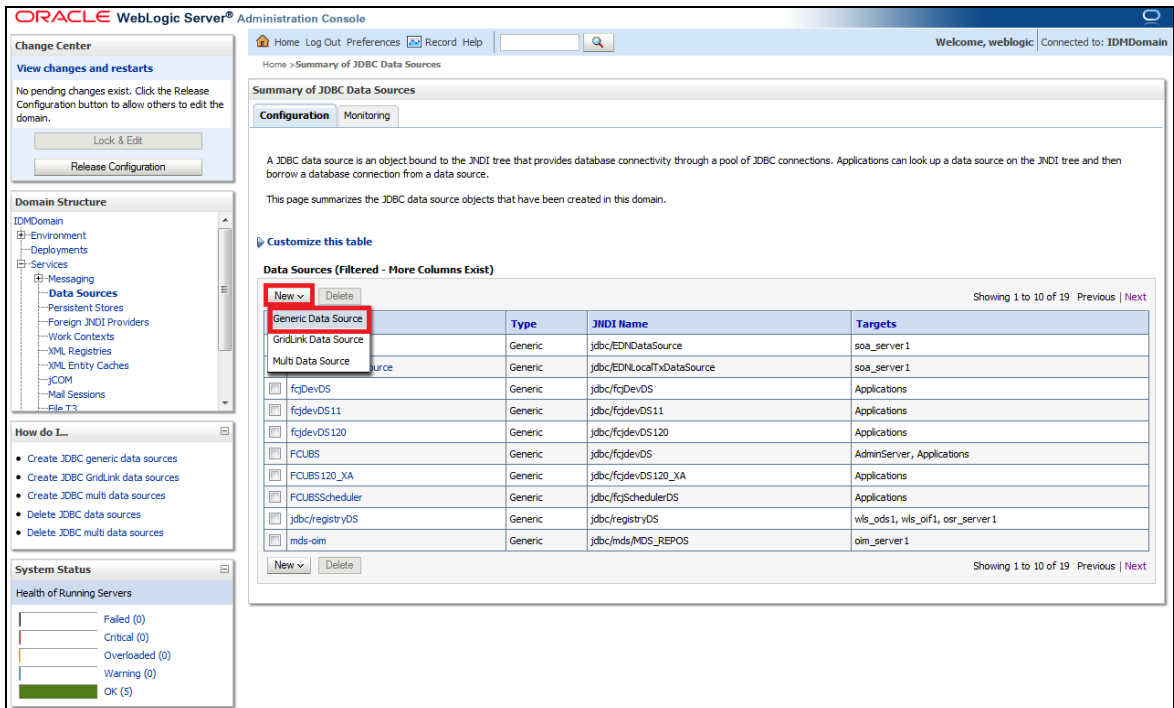

Click the **Lock & Edit** button in the Change Center to activate all the buttons on this page.

Name	Type	JNDI Name	Targets
<input type="checkbox"/> EDNDataSource	Generic	jdbc/EDNDataSource	soa_server1
<input type="checkbox"/> EDNLocalTxDataSource	Generic	jdbc/EDNLocalTxDataSource	soa_server1
<input type="checkbox"/> fgDevDS	Generic	jdbc/fgDevDS	Applications
<input type="checkbox"/> fgDevDS11	Generic	jdbc/fgDevDS11	Applications
<input type="checkbox"/> fgDevDS120	Generic	jdbc/fgDevDS120	Applications
<input type="checkbox"/> FCUBS	Generic	jdbc/fgDevDS	AdminServer, Applications
<input type="checkbox"/> FCUBS120_XA	Generic	jdbc/fgDevDS120_XA	Applications
<input type="checkbox"/> FCUBSScheduler	Generic	jdbc/fgSchedulerDS	Applications
<input type="checkbox"/> jdbc/registryDS	Generic	jdbc/registryDS	wls_ods1, wls_of1, oas_server1
<input type="checkbox"/> mds-aim	Generic	jdbc/mds/MDS_REPOS	aim_server1

5. Click on Lock & Edit as shown below.

6. Expand New and click on Generic Data Source.

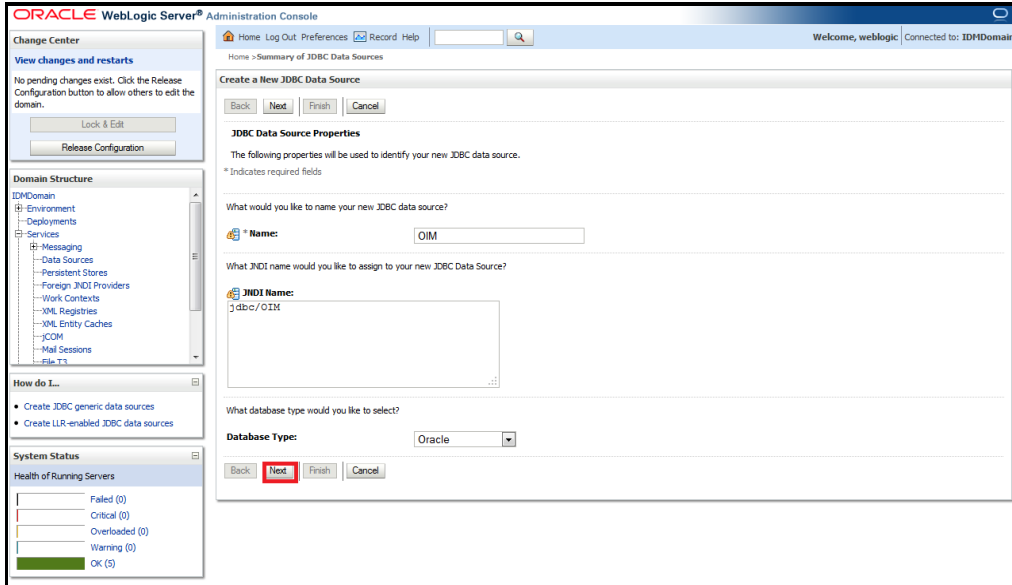

The following screen will get displayed.

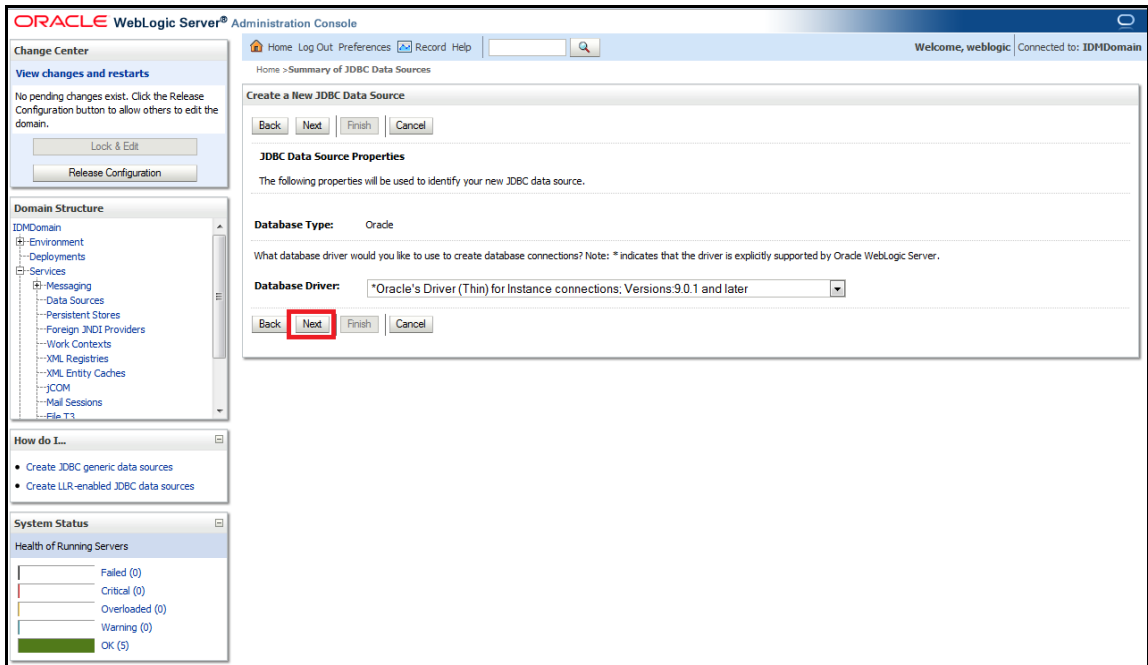

Enter the Data Source Name and JNDI Name as mentioned in the <FCIS Release Name>\ADAPTERS\OIM\FCUBSLOVAdService\config\lookup\_prop.xml → value of the key FCUBS\_CON\_POOLNAME.

For example value of the key FCUBS\_CON\_POOLNAME is OIM then:

Name                    OIM  
JNDI Name                jdbc/OIM  
Database Type            Oracle

The following screen will get displayed. Select Database Driver as Oracle's Driver (Thin) for Instance connections: Versions 9.0.1 and later. Click on Next.

We get the following screen in which un-check Supports Global Transactions and click on Next.

ORACLE WebLogic Server® Administration Console

Home > Summary of JDBC Data Sources

Create a New JDBC Data Source

Back Next Finish Cancel

**Transaction Options**

You have selected non-XA JDBC driver to create database connection in your new data source.

Does this data source support global transactions? If yes, please choose the transaction protocol for this data source.

Supports Global Transactions

Select this option if you want to enable non-XA JDBC connections from the data source to participate in global transactions using the *Logging Last Resource (LR)* transaction optimization. Recommended in place of Emulate Two-Phase Commit.

Logging Last Resource

Select this option if you want to enable non-XA JDBC connections from the data source to emulate participation in global transactions using JTA. Select this option only if your application can tolerate heuristic conditions.

Emulate Two-Phase Commit

Select this option if you want to enable non-XA JDBC connections from the data source to participate in global transactions using the one-phase commit transaction processing. With this option, no other resources can participate in the global transaction.

One-Phase Commit

Back Next Finish Cancel

The following screen will get displayed. Enter the Database Name, Host Name, Port, Database User Name, Password and Confirm Password. Click on Next.

**Connection Properties**

Define Connection Properties.

What is the name of the database you would like to connect to?

**Database Name:**

What is the name or IP address of the database server?

**Host Name:**

What is the port on the database server used to connect to the database?

**Port:**

What database account user name do you want to use to create database connections?

**Database User Name:**

What is the database account password to use to create database connections?

**Password:**

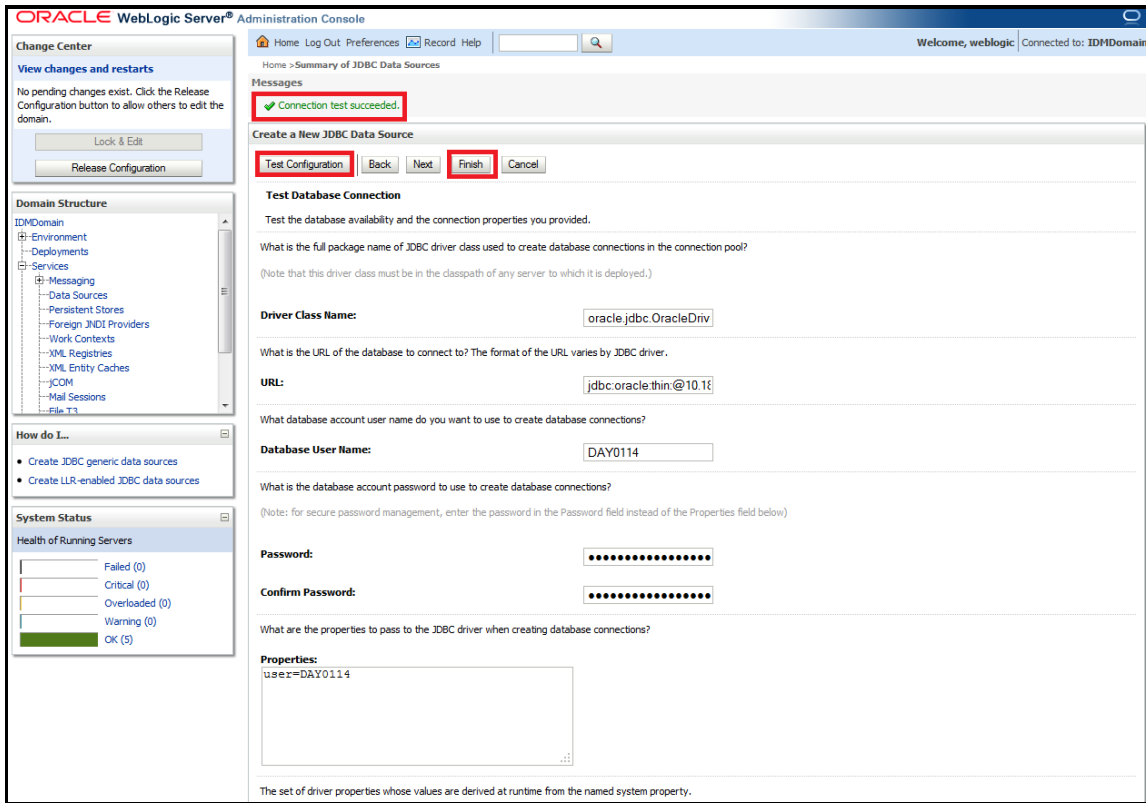

**Confirm Password:**

Back Next Finish Cancel

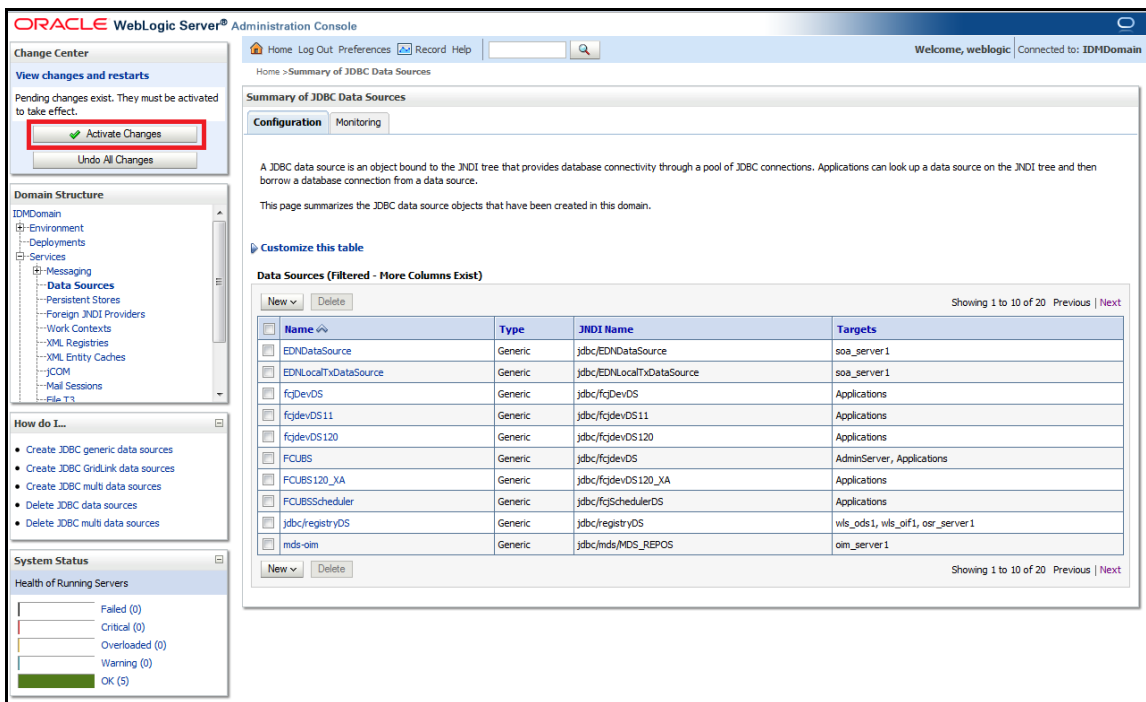

The following screen will get displayed. Click on 'Test Configuration'.

It will display “Connection test succeeded” as shown below. If it is not getting displayed then verify the correctness of all data source properties entered. Click on Finish button.

The following screen will get displayed. Click on Activate Changes.
