U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

# Table of Contents

<b>1. Preface .....</b>	<b>1-1</b>
1.1 Introduction.....	1-1
1.2 Audience.....	1-1
1.3 Documentation Accessibility.....	1-1
1.4 Organization .....	1-1
1.5 Acronyms and Abbreviations.....	1-1
1.6 Related Information Sources .....	1-1
<b>2. Blockchain Adapter for Mutual Fund Transactions .....</b>	<b>2-1</b>
2.1 Scope .....	2-1
2.2 Prerequisites.....	2-1
2.3 Integration Architecture .....	2-2
2.4 Integration Process.....	2-2
2.4.1 Business Process Workflow for FCIS Transaction .....	2-2
2.4.2 Detailed Use Case for FCIS Transaction using Blockchain.....	2-3

---

# 1. Preface

## 1.1 Introduction

This document helps you to get acquainted with the information on inter-connecting any version of Oracle FLEXCUBE Investor Servicing with Blockchain systems. Oracle FLEXCUBE Blockchain adapter enables easy transformation of information between Oracle FLEXCUBE and Blockchain datasets.

## 1.2 Audience

This manual is intended for the following User/ User Roles:

Role	Function
Back office data entry Clerks	Input functions for maintenance related to the interface
Implementation Teams	For setting up integration

## 1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit Oracle Accessibility Program website at: <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

## 1.4 Organization

This chapter is organized into following chapters:

Chapter	Description
Chapter 1	<i>Preface</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual
Chapter 2	<i>Blockchain Adapter for Mutual Fund Transactions</i> gives information on interface between Oracle FLEXCUBE Investor Servicing and Blockchain Adapter

## 1.5 Acronyms and Abbreviations

Abbreviation	Description
System	Unless and otherwise specified, it always refers to Oracle FLEXCUBE Investor Servicing
FCIS	Oracle FLEXCUBE Investor Servicing

## 1.6 Related Information Sources

Along with this user manual you may also refer the following related resources:

- Oracle FLEXCUBE Investor Servicing Installation Manual

---

## 2. Blockchain Adapter for Mutual Fund Transactions

Oracle FLEXCUBE Blockchain Adapter enables Oracle FLEXCUBE to interface to blockchain systems facilitating easy transformation of information between traditional applications and blockchain datasets. You can use this adapter with any version of Oracle FLEXCUBE. Blockchain transactions, generated from the system, can be queried and viewed from Oracle FLEXCUBE itself. The adapter allows transformation and processing of information between Oracle FLEXCUBE and blockchain systems, with minimal human intervention thereby improving process efficiency, reducing risks and enhancing straight through processing. The adapter can be used not only to interface Oracle FLEXCUBE to blockchain systems but also any other similar third party applications to interface to blockchain systems.

A blockchain is an append only distributed data store/ log, in a peer to peer network, where un-trusted parties come to a consensus on the order of data sets (financial or non-financial data), based on previously agreed upon rules. Block chains can be classified, as public or private and permissioned or unpermissioned, based on the read and write access respectively allowed to the participating entities. Block chains allow an immutable record of transaction log, when multiple parties need shared control of data, without the need to depend on a central trusted authority. Smart contracts allow business logic to be triggered and processed based on pre-defined events mutually agreed upon by the contracting parties.

### 2.1 Scope

Oracle FCIS Blockchain Adapter for Mutual Fund Transactions allows you to:

- Transmit real time data across smart contracts allowing simplified and efficient auditing process
- Reduce SWIFT message cost

### 2.2 Prerequisites

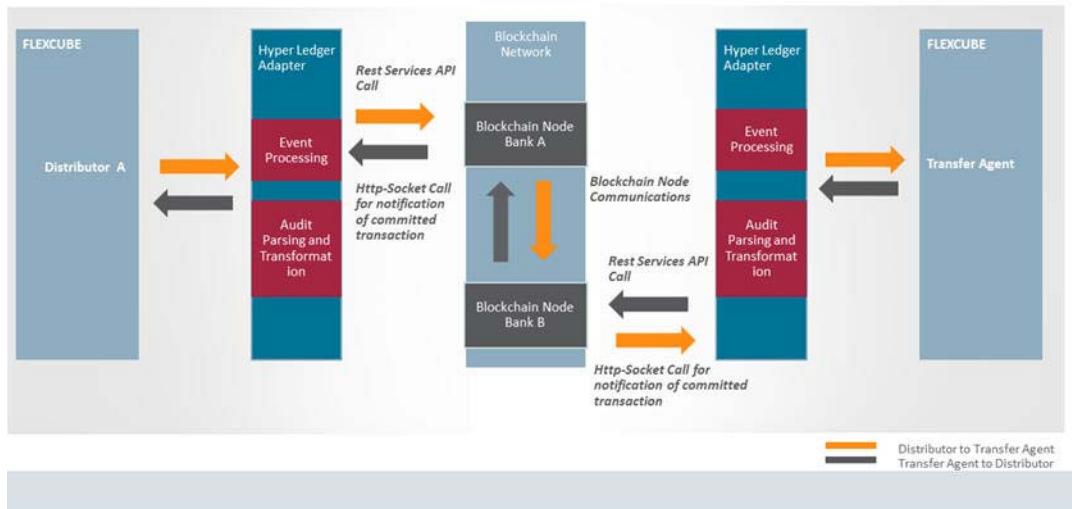

The following are the prerequisites for the interface:

- Set up Oracle FLEXCUBE Investor Servicing
- Set up Blockchain Adapter for Mutual Fund Transactions
- Set up WebLogic server to deploy FCIS Blockchain adaptor

## 2.3 Integration Architecture

The following diagram provides information on technical architecture for Oracle's Blockchain based solution:

### Technical Architecture for Oracle's Blockchain Based Solution

## 2.4 Integration Process

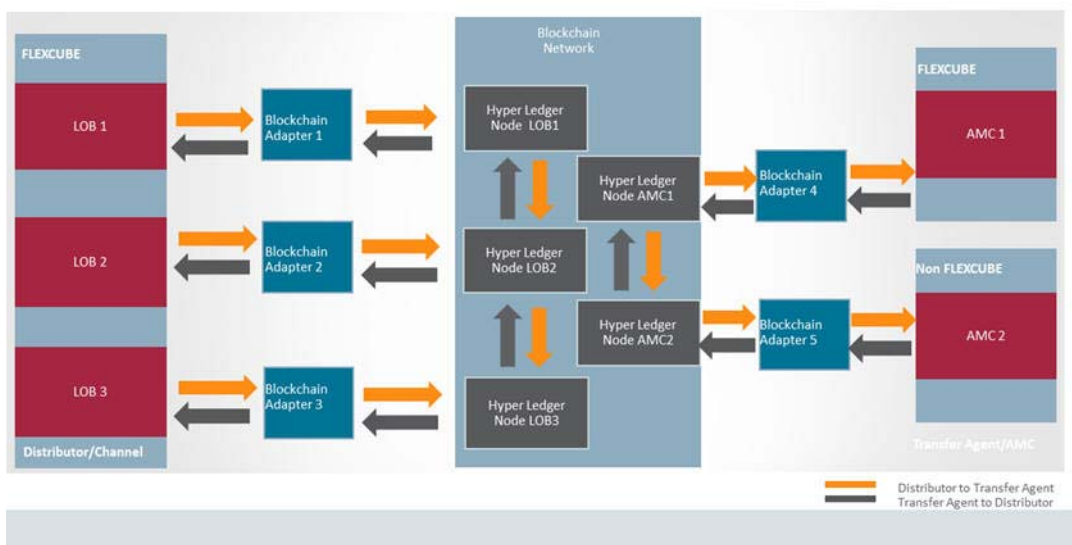

This section describes Oracle FCIS Blockchain technology.

### 2.4.1 Business Process Workflow for FCIS Transaction

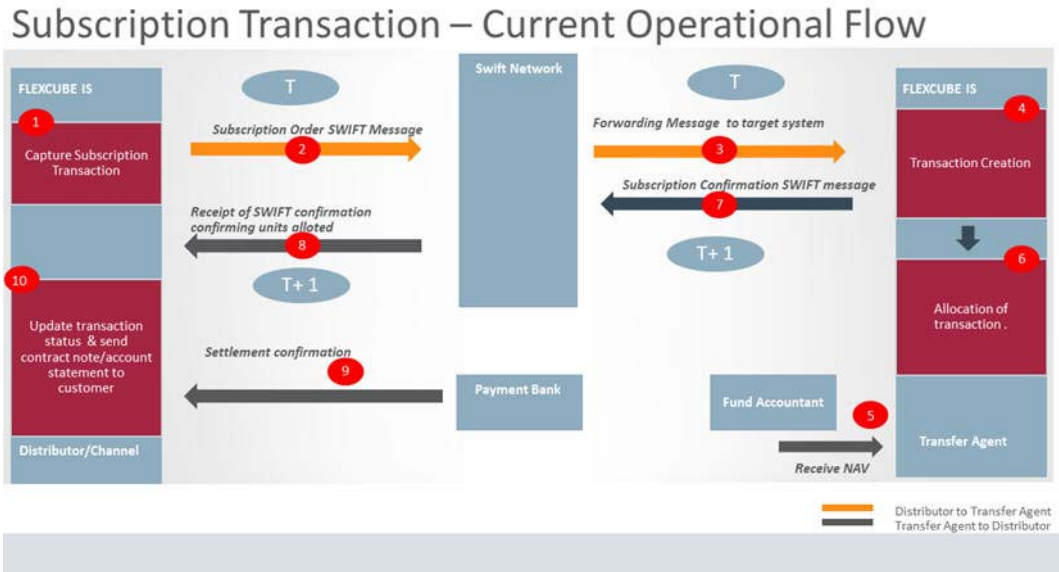

The following image represents the overall functional flow using blockchain for the transaction.

The following image represents the current Transaction flow:

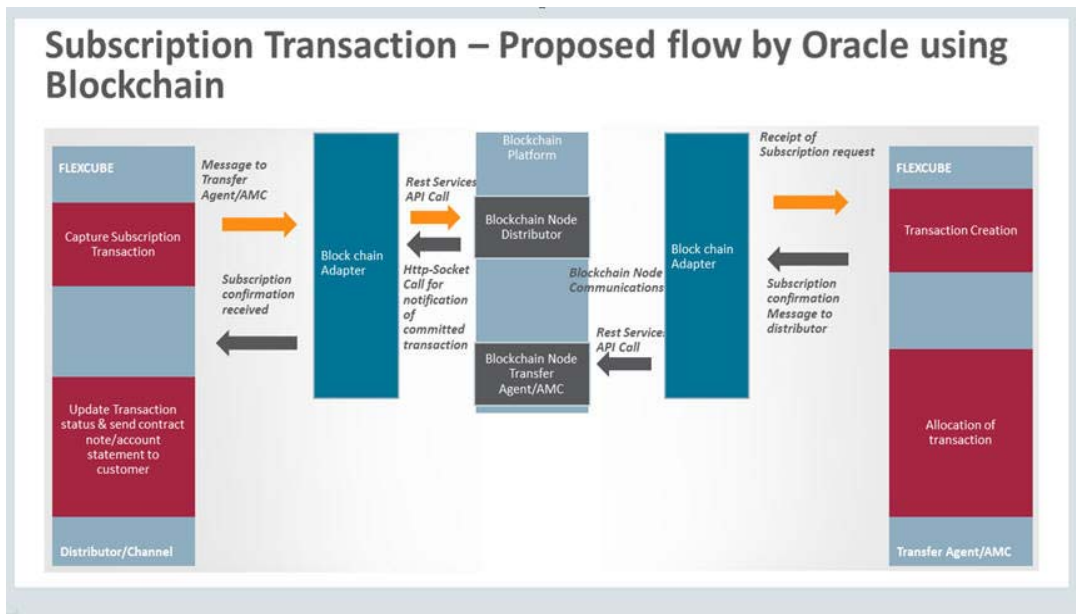

### Blockchain Network – Functional Architecture

The following image represents the current Transaction flow:

The following image represents the proposed Transaction flow:

## 2.4.2 Detailed Use Case for FCIS Transaction using Blockchain

This section describes the Transaction Use case.

### 2.4.2.1 TA - Transactions

Transactions captured in the TA will be handed over to the AMC using block chain adapter.

The following transaction attributes will be shared to AMC via network. The assumption is TA and AMC will be having same FUNDID.

- FCISTRANSACTIONNUMBER

- TRANSACTIONDATE
- FUNDID
- UNITHOLDERIDTYPE
- UNITHOLDERIDNUMBER
- TOFUNDID
- TOUNITHOLDERIDTYPE
- TOUNITHOLDERIDNUMBER
- TRANSACTIONCCY
- TRANSACTIONMODE
- TRANSACTIONVALUE
- GROSSORNET

Unitholder ID Type which is maintainable in the TA side can be either 'U' –Unitholder ID or 'C' – Cash Nominee

- Unitholder ID Number will be either Unitholder ID or Cash Nominee ID which will be maintained in the AMC
- Unitholder ID Type will be used as 'C' – Cash nominee for Subscription, Redemption and Switch Transactions. Transfer transaction will not be posted if the Unitholder ID Type is 'C'.
- For transfer transaction ID type will be 'U' – Unitholder for both From and To unitholders.

#### **2.4.2.2 Authorization of a Transaction**

The following actions will be performed by default if transaction gets authorized:

- The data will be passed to blockchain network for validation and creation of Smart Contract
- The smart contract will be notified to AMC by the blockchain network. The receiver will be identified based on the Destination Entity.
- The smart contract will have a status to identify current status of the transaction

#### **2.4.2.3 Receiving Data at AMC**

AMC is notified about the smart contract by the blockchain adapter. When the notification is received:

- A new transaction will be created automatically
- Below are the status which will be updated in Smart Contract

<b>Status</b>	<b>Transaction Status</b>
1	Transaction Initiated
2	Transaction Acknowledged
3	Transaction Confirmed by AMC
4	Transaction Completed
5	Transaction Failed

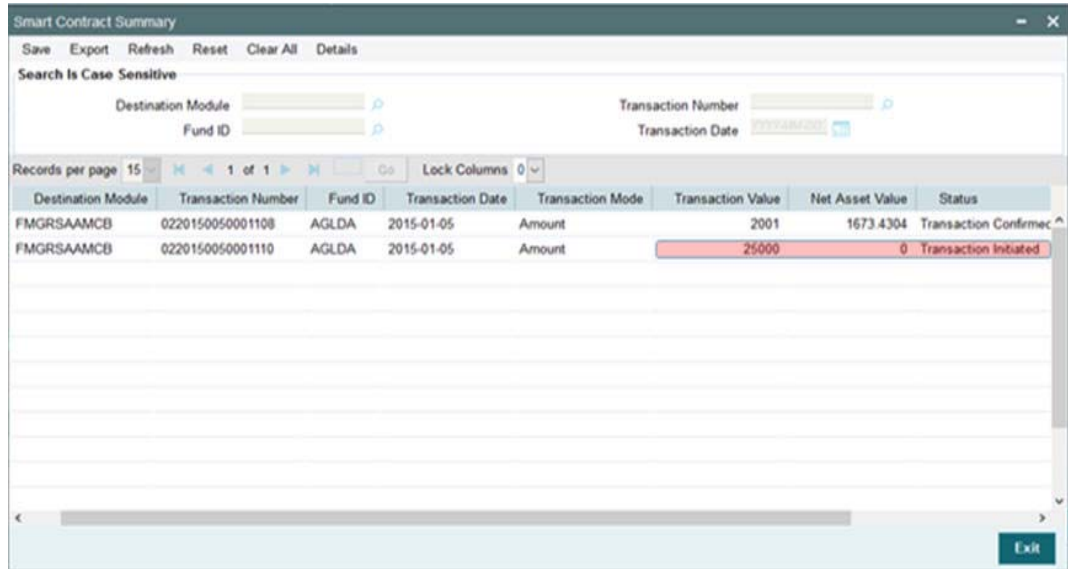

The Transaction status will be notified to the TA using Block Chain Adapter.

## 2.4.2.4 Smart Contract Summary

At AMC/ TA, a facility is required to see the list of transactions which are posted along with the status

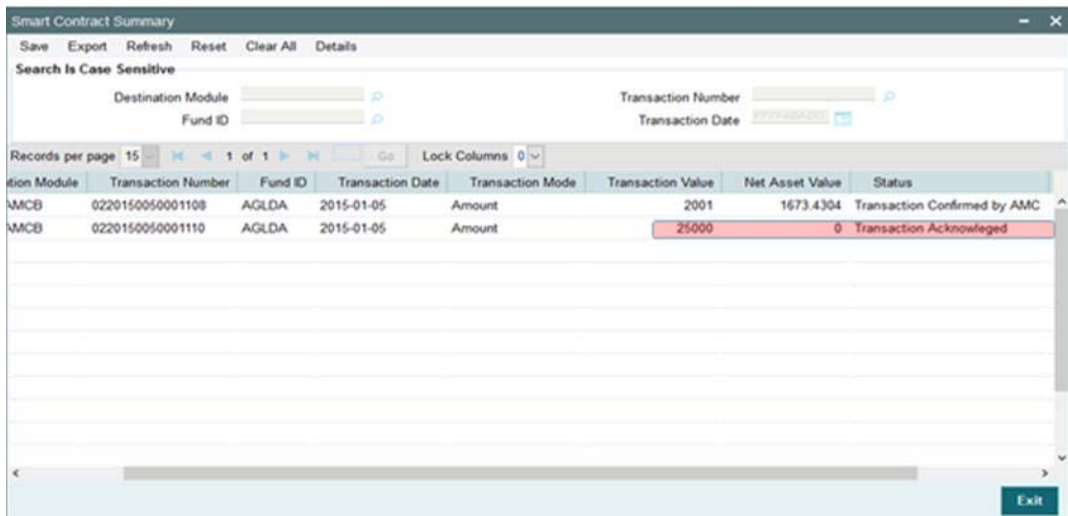

A Smart Contract Summary screen (DLSTXNFL) is provided to view the details of the transaction. The smart contract capture status in TA screen is displayed as follows:

The screenshot shows the 'Smart Contract Summary' window with a search bar and a table of transactions. The table has columns for Destination Module, Transaction Number, Fund ID, Transaction Date, Transaction Mode, Transaction Value, Net Asset Value, and Status. Two rows are visible: one for transaction 0220150050001108 with status 'Transaction Confirmed' and another for 0220150050001110 with status 'Transaction Inbated'.

Destination Module	Transaction Number	Fund ID	Transaction Date	Transaction Mode	Transaction Value	Net Asset Value	Status
FMGRSAAMCB	0220150050001108	AGLDA	2015-01-05	Amount	2001	1673.4304	Transaction Confirmed
FMGRSAAMCB	0220150050001110	AGLDA	2015-01-05	Amount	25000	0	Transaction Inbated

The smart contract capture status update by AMC screen is displayed as follows:

The screenshot shows the 'Smart Contract Summary' window with the same search bar and table. The table now shows two rows: the first row for transaction 0220150050001108 has status 'Transaction Confirmed by AMC' and the second row for 0220150050001110 has status 'Transaction Acknowledged'.

Destination Module	Transaction Number	Fund ID	Transaction Date	Transaction Mode	Transaction Value	Net Asset Value	Status
AMCB	0220150050001108	AGLDA	2015-01-05	Amount	2001	1673.4304	Transaction Confirmed by AMC
AMCB	0220150050001110	AGLDA	2015-01-05	Amount	25000	0	Transaction Acknowledged

The smart contract capture status in AMC screen is displayed as follows:

Smart Contract Summary

Save Export Refresh Reset Clear All Details
