

Multi-Entity Deployment Models

Oracle Banking Liquidity Management

Release 14.5.3.0.0

Part Number F50376-01

November 2021

Table of Contents

- 1. PREFACE..... 1-1**
 - 1.1 INTRODUCTION 1-1
 - 1.2 AUDIENCE..... 1-1
 - 1.3 DOCUMENTATION ACCESSIBILITY 1-1

- 2. OVERVIEW 2-1**
 - 2.1 MODEL 1: MULTIPLE ENTITIES 2-1
 - 2.2 MODEL 2: SINGLE CENTRAL/GLOBAL LIQUIDITY MANAGEMENT ENTITY 2-1

1. Preface

1.1 Introduction

This guide describes the Oracle Banking Liquidity Management deployment models with multi-entity set up. The Bank can choose either of the below models.

1.2 Audience

This guide is intended for WebLogic admin or ops-web team who are responsible for installing the OFSS banking products.

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

2. Overview

Banks may have multiple implementations across geographies that necessitates the need to support multiple entities.

Multi Entity feature, introduced in Oracle Banking Microservices Architecture products, will enable a single instance of the product (and the underlying Oracle Banking Microservices Architecture platform) to onboard multiple entities of the bank onto the platform.

For Multi-Entity deployment and set up process, refer to the **Oracle Banking Multi-Entity Deployment Guide**.

2.1 Model 1: Multiple Entities

- In this model, multiple independent entities would be set up across the different entities in which the bank would be operating ex: Entity_1, Entity_2 and Entity_3 entities
- Each of these entities would be distinct and independent from each other.
- Each entity would have its own distinct Common Core, SMS and Oracle Banking Microservices Architecture set ups
- Each entity would have its own Liquidity static data\maintenances ex: Frequency codes
- Similarly, each of these entities would have its own branches.
- An entity would be able to view only its own set of branches and account details.
- In an entity if required other entity details can be captured but only as external banks.
- Integrations with DDA and Payments engines would be through Oracle Banking Routing Hub.

2.2 Model 2: Single Central/Global Liquidity Management Entity

- In this model, single entity would be set up across the different countries in which the bank would be operating ex: Entity_1, Entity_2 and Entity_3 entities.
- A Group Entity (not a real entity) code would be set up ex GLM as the node.
- All the other entities (True Entities) would be added to the node as branches.
- All these entities would have a single shared Common Core, SMS and Oracle Banking Microservices Architecture set ups.
- Similarly, all these entities would share the same static data\maintenances.
- Customers and accounts across all the entities would be present in the same set up.
- Integrations with DDA and Payments engines would be through Oracle Banking Routing Hub.
