# 1. Deploying Oracle FLEXCUBE on WebLogic

## 1.1 Introduction

This chapter explains the steps to deploy Oracle FLEXCUBE UBS application into Oracle WebLogic application server in centralized and decentralized modes. In centralized mode, branch and host are setup in a single PC. In decentralized mode, branch and host are setup in different PCs.

## 1.2 Building Application

For building Oracle FLEXCUBE Application in centralized and decentralized modes, refer to the following chapters.

### 1.2.1 Building Application in Centralized Mode

Refer to the chapter 'Building Application in Centralized Mode'. This includes the following details:

- Creating Property File
- Building Centralized EAR File
- Configuring Plug-ins
- Loading Properties File

### 1.2.2 Building Application in Decentralized Mode

Refer to the chapter 'Building Application in Decentralized Mode'. This includes the following details:

- Creating Property File
- Building Decentralized EAR File
- Configuring Plug-ins
- Loading Properties File

## 1.3 Deploying Application in Oracle WebLogic

This section explains the method of deploying Oracle FLEXCUBE Application into Oracle WebLogic application server.

### 1.3.1 Deploying Integration Adapter EAR from WebLogic Administration Console

To deploy Oracle FLEXCUBE Application from Oracle WebLogic administration console, follow the steps given below.

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.

Eg: <http://10.10.10.10:1001/console>

The following screen is displayed:

2. Specify the WebLogic administrator user name and password. Click 'Log In'.

3. You need to deploy an Integration adapter EAR. For e.g. 'OBCLExtAdapter.ear or ExtAdapter.ear'. Go to 'Deployment'.

Click 'Lock & Edit' button to enable the buttons. This action enables the buttons.

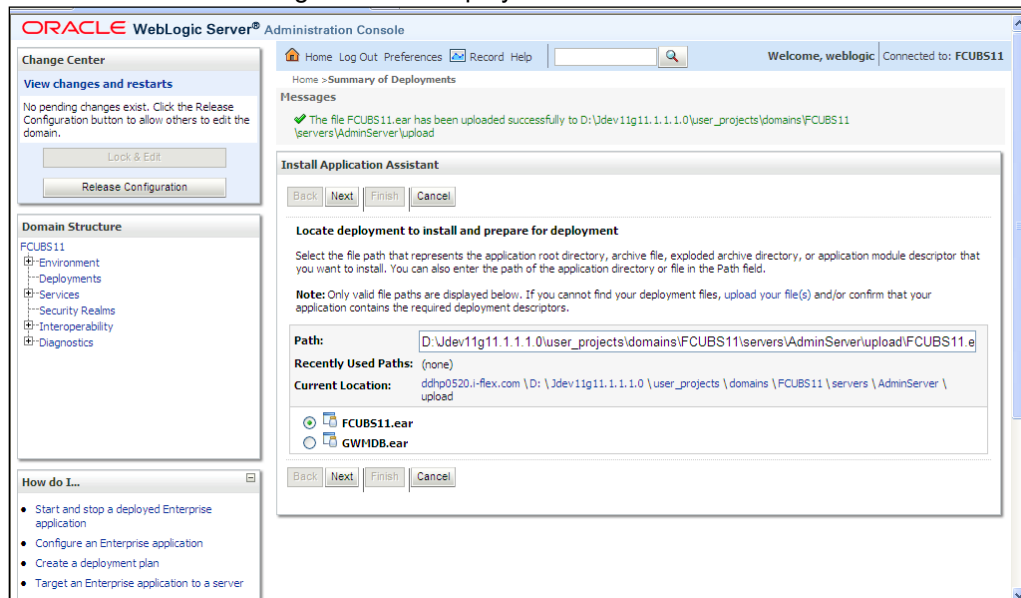

4. Click 'Install' button. The following screen is displayed:

5. In order to specify the path/location of the enterprise archive file, click the link 'upload your file(s)'.

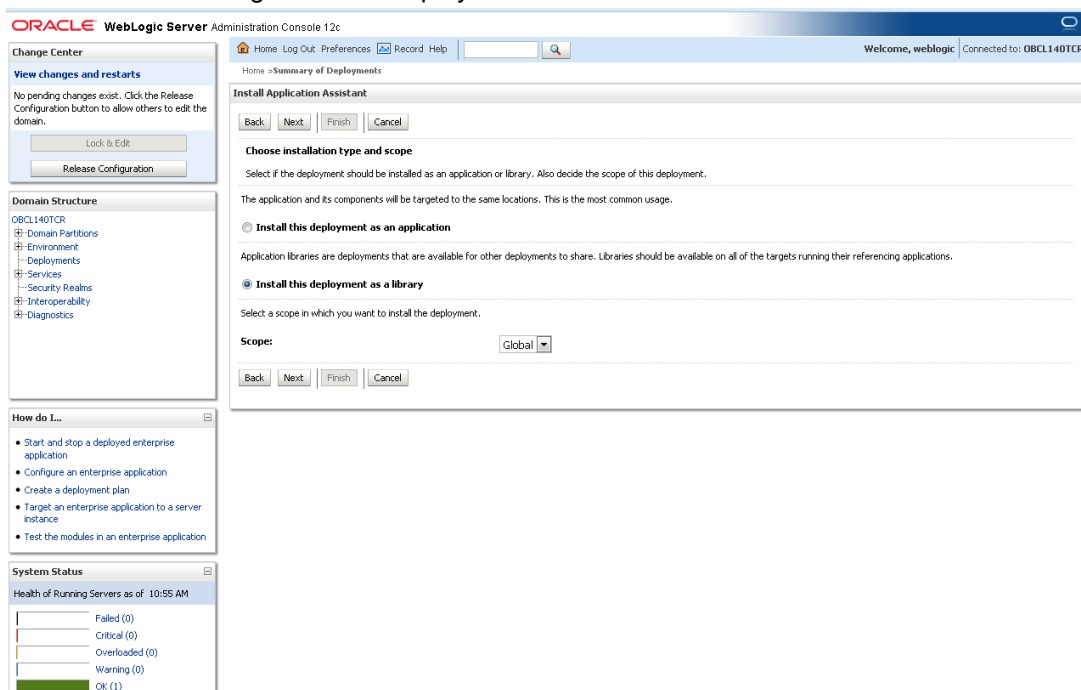

6. Specify the EAR file path. You can use the 'Browse' button to locate the file.

7. Click 'Next'. The following screen is displayed.

8. Select the application Adapter EAR from the list.

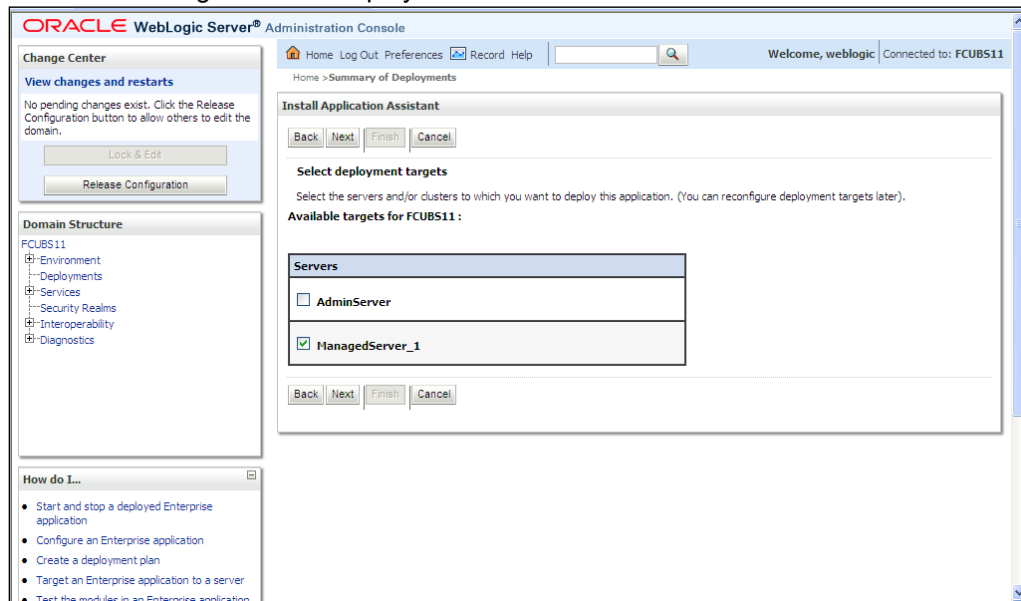

9. Click 'Next'. Following screen is displayed:

10. Choose the targeting style 'Install this deployment as a library'.

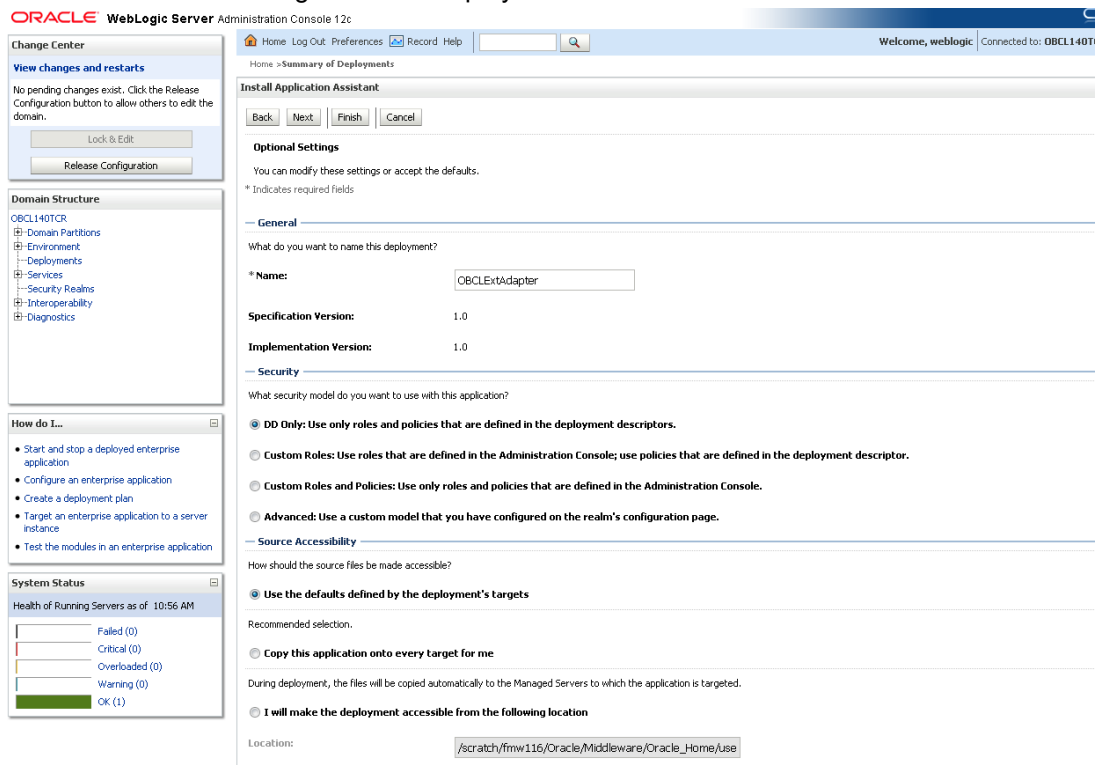

11. Click 'Next'.

12. The following screen is displayed

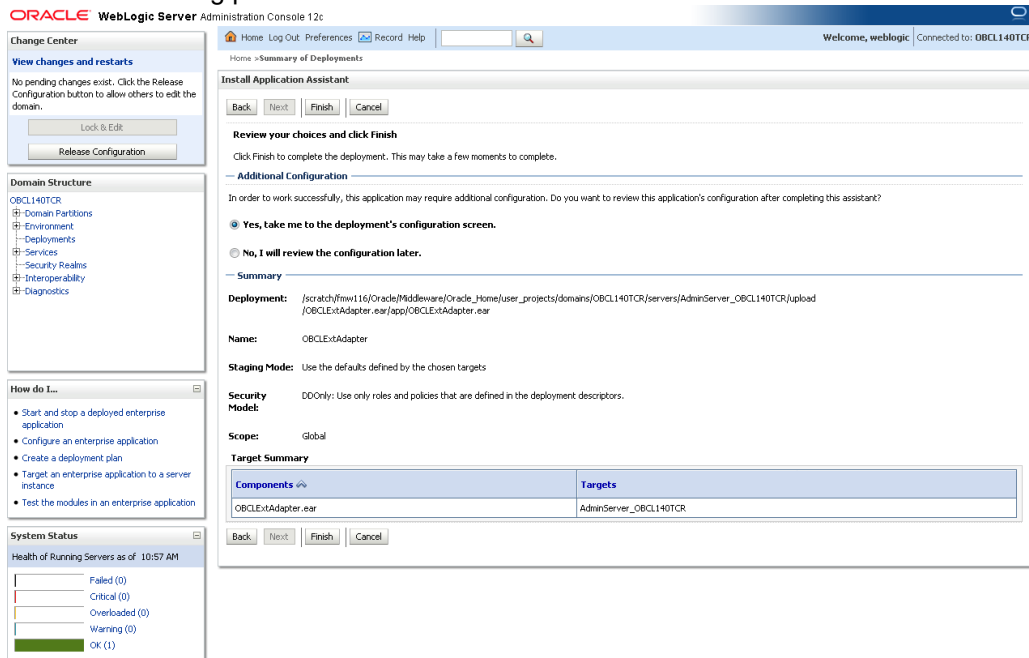

13. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

14. Click 'Next'. The following screen is displayed.

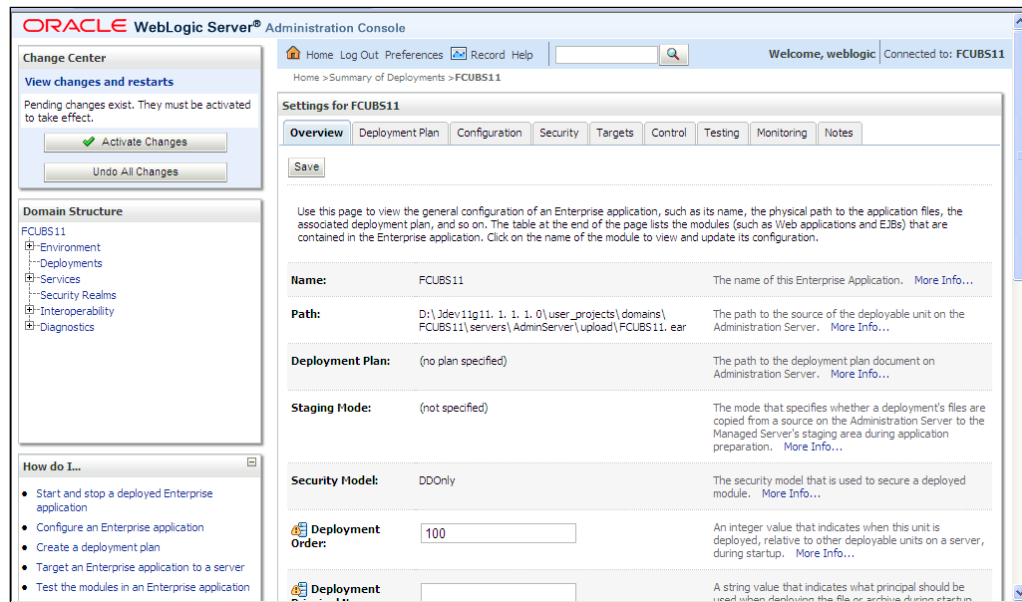

15. Check the deployment name.

## 16. The remaining portion of the screen is shown below:

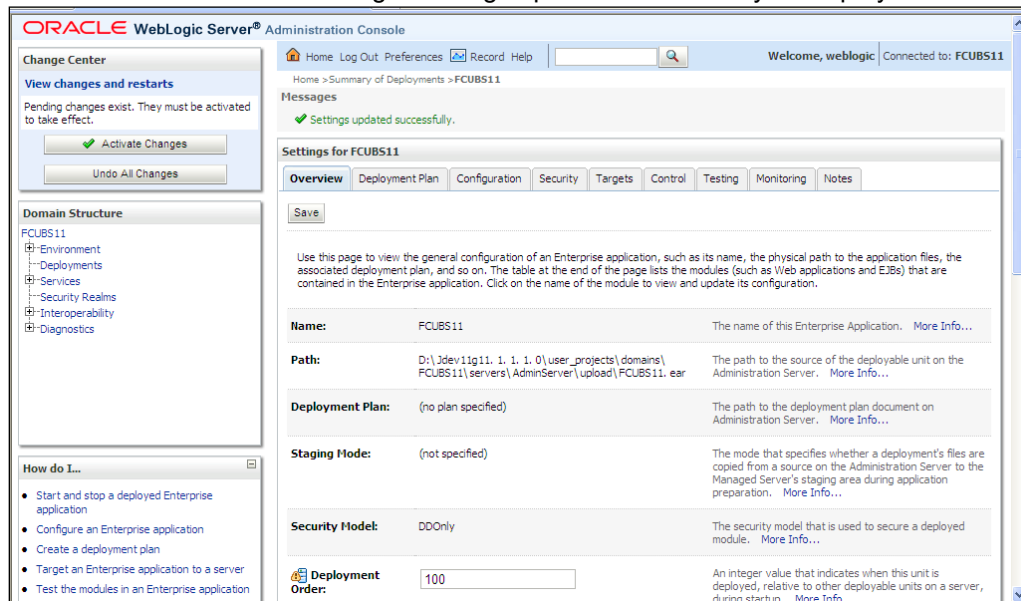

## 17. Click 'Finish' button. The following screen is displayed.

18. Click 'Save' button. The message 'Settings updated successfully' is displayed.

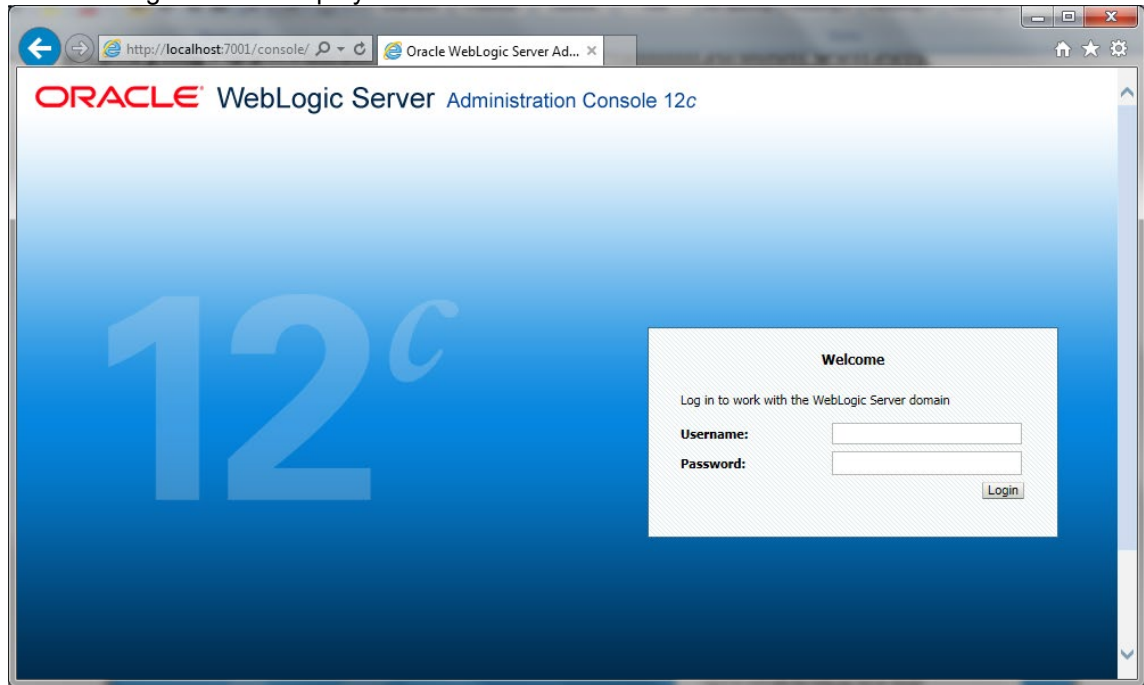

19. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

### 1.3.2 Deploying Dependency Library "Jax-RS"

This library must be installed before deploying FCUBSApp.ear. Follow the below steps

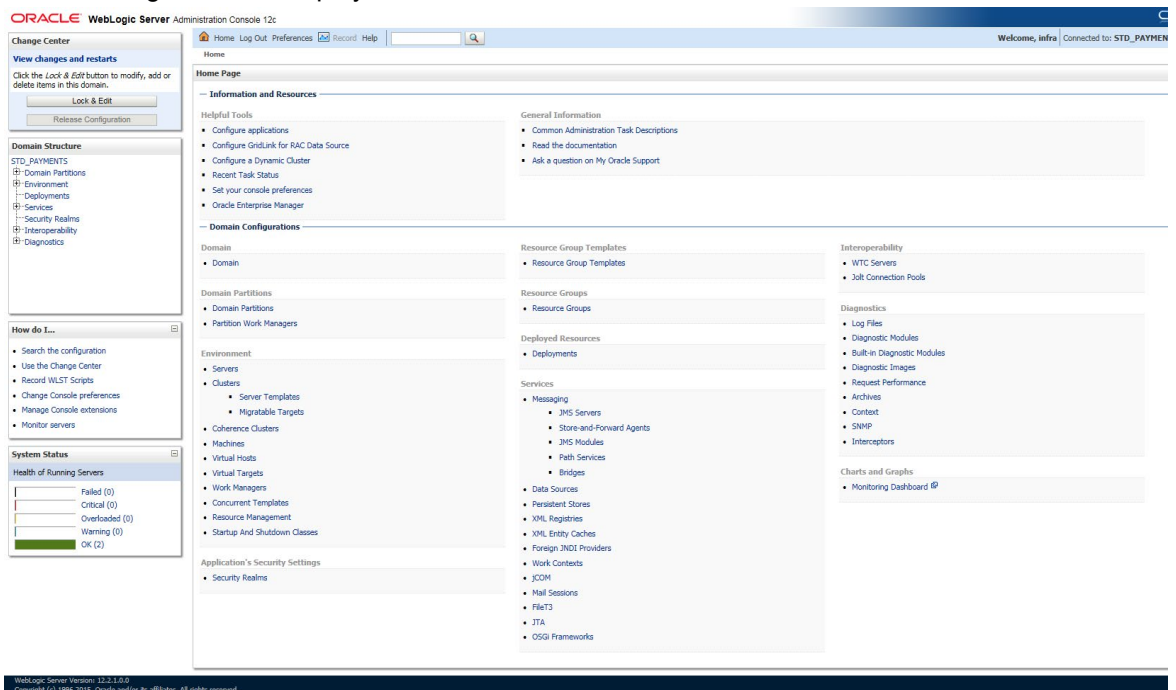

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: <http://10.10.10.10:1001/console>

2. The following screen is displayed:

3. Specify the WebLogic administrator user name and password. Click 'Log In'.

The following screen is displayed:

4. Click install button

Configuration Control Monitoring

This page displays the list of Java EE applications and standalone application modules installed to this domain.

You can update (redploy) or delete installed applications and modules from the domain by selecting the checkbox next to the application name and then using the controls on this page.

To install a new application or module for deployment to targets in this domain, click **Install**.

**Customize this table**

**Locate deployment to install and prepare for deployment**

Select the file path that represents the application root directory, archive file, exploded archive directory, or application module descriptor that you want to install. You can also enter the path of the application directory or file in the Path field.

**Note:** Only valid file paths are displayed below. If you cannot find your deployment files, Upload your file(s) and/or confirm that your application contains the required deployment descriptors.

**Path:** /scratch/app/bpm12212/user\_projects/domains/SOADOM3/servers/AdminServer/upload/jax-rs-2.0.war/app/jax-rs-2.0.war

**Recently Used Paths:** /scratch/app/bpm12212/user\_projects/domains/SOADOM3/servers/AdminServer/upload/FCUBS.ear/app

**Current Location:** 10.184.158.197 / scratch / app / bpm12212 / user\_projects / domains / SOADOM3 / servers / AdminServer / upload / jax-rs-2.0.war / app

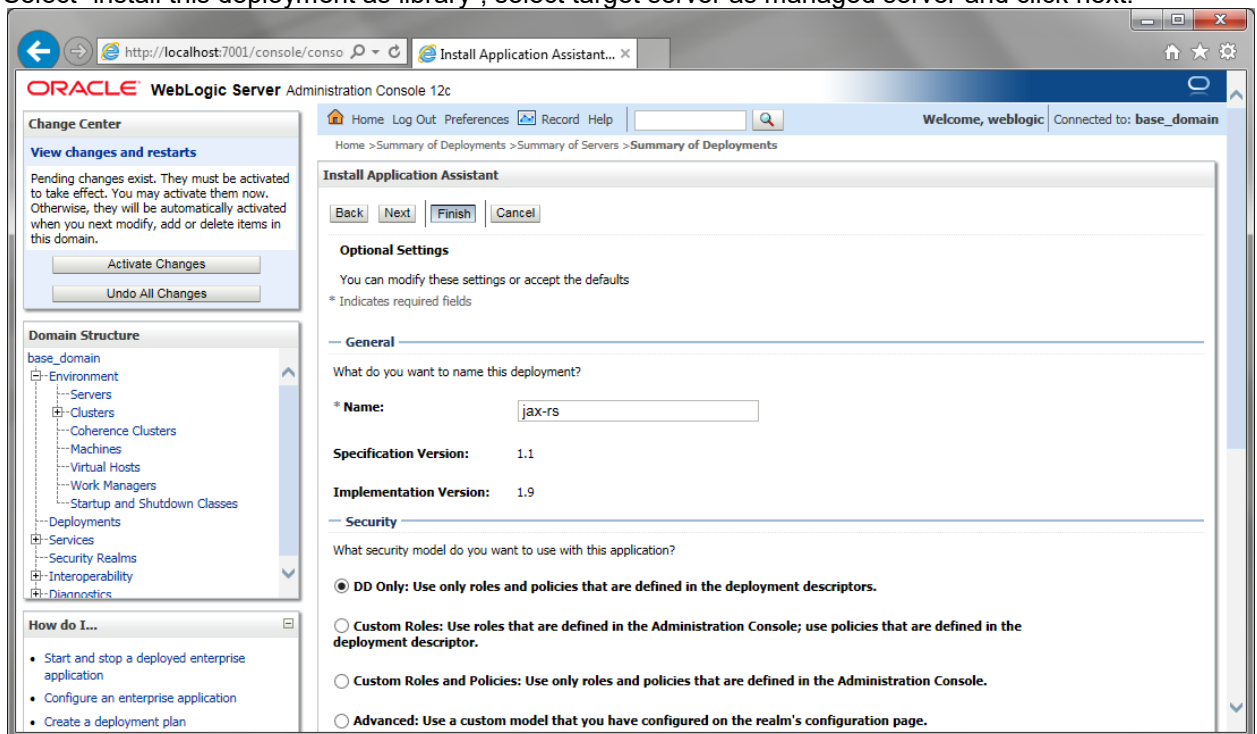

☒ jax-rs-2.0.war

Back Next Finish Cancel

Navigate and select jersey bundle under the path “w\server\common\deployable-libraries\jax-rs-2.0.war” and click next

Select "install this deployment as library", select target server as managed server and click next.

Click finish button

This library must appear in the deployment with Type column as “Library”

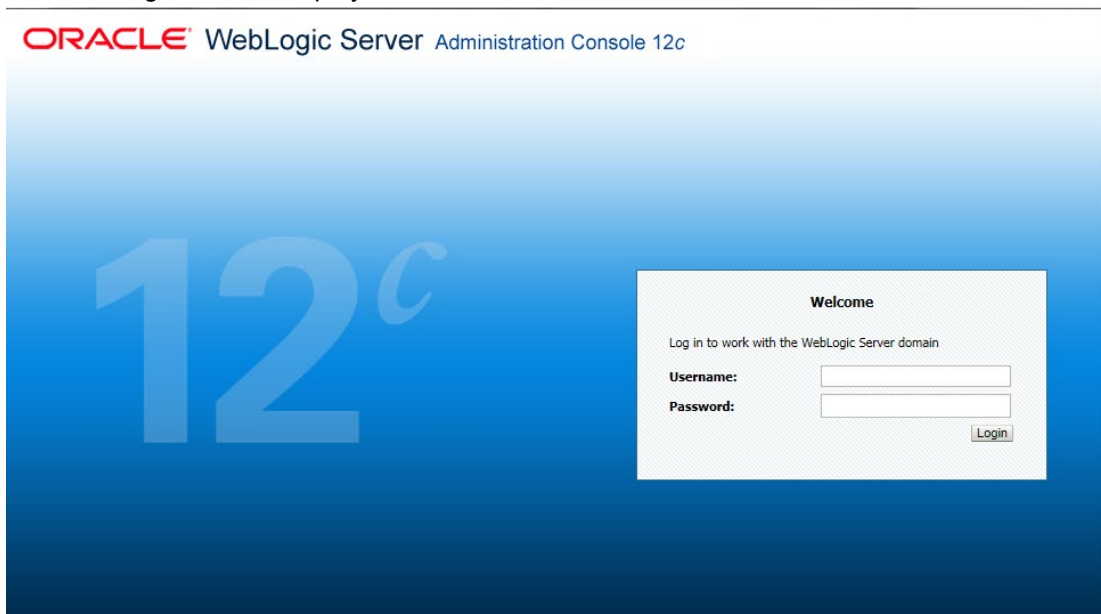

Note :- latest Jax-rs version will be jax-rs(2.0,2.22.1.0)

### 1.3.3 Deploying FCUBS Application from WebLogic Administration Console

To deploy Oracle FLEXCUBE Application from Oracle WebLogic administration console, follow the steps given below.

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: <http://10.10.10.10:1001/console>

The following screen is displayed:

2. Specify the WebLogic administrator user name and password. Click ‘Log In’.

Click 'Lock & Edit' button to enable the buttons. This action enables the buttons.

1-12

4. Click 'Install' button. The following screen is displayed:

5. In order to specify the path/location of the enterprise archive file, click the link 'upload your file(s)'.  
6. Click 'Next'. The following screen is displayed:

7. Specify the EAR file path. You can use the 'Browse' button to locate the file.

8. Click 'Next'. The following screen is displayed.

9. Select the application FCUBS EAR from the list.

10. Click 'Next'. Following screen is displayed:

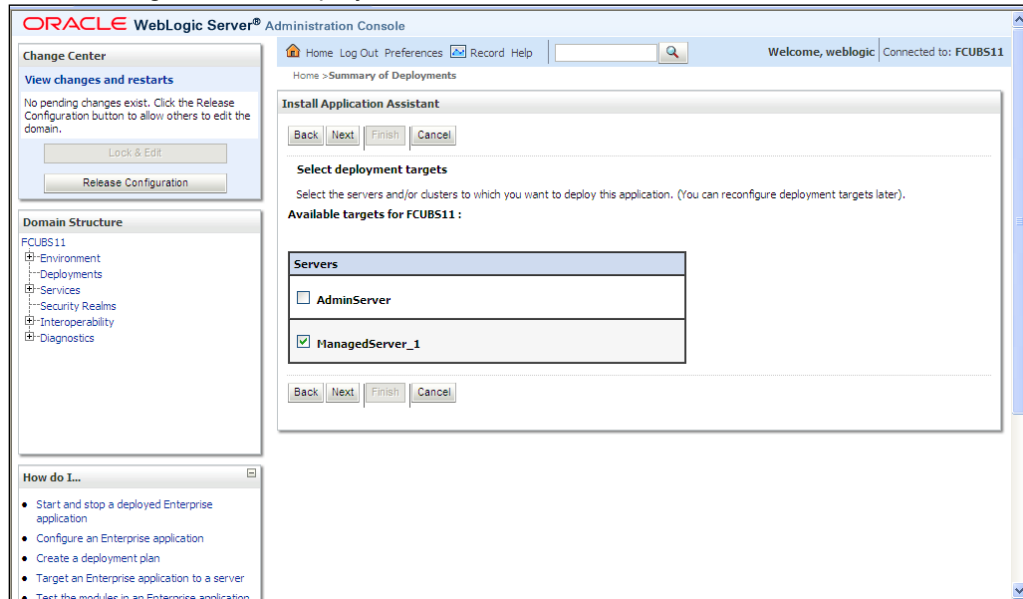

11. Choose the targeting style 'Install this deployment as an application'.

12. Click 'Next'.

The following screen is displayed

13. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

14. Click 'Next'. The following screen appears.

15. Check the deployment name.

The remaining portion of the screen is shown below:

The screenshot shows the 'Security' and 'Source accessibility' configuration screens. On the left, there is a navigation pane with 'Security Realms', 'Interoperability', and 'Diagnostics'. Below it, a 'How do I...' section lists tasks like 'Start and stop a deployed Enterprise application', 'Configure an Enterprise application', 'Create a deployment plan', 'Target an Enterprise application to a server', and 'Test the modules in an Enterprise application'. The 'System Status' section shows 'Health of Running Servers' with a bar chart indicating 'Failed (0)', 'Critical (0)', 'Overloaded (0)', 'Warning (0)', and 'OK (1)'. The main content area is divided into two sections: 'Security' and 'Source accessibility'. The 'Security' section asks 'What security model do you want to use with this application?' and offers four options: 'DD Only' (selected), 'Custom Roles', 'Custom Roles and Policies', and 'Advanced'. The 'Source accessibility' section asks 'How should the source files be made accessible?' and offers two options: 'Use the defaults defined by the deployment's targets' (selected) and 'Copy this application onto every target for me'. A 'Location' field is set to 'D:\Udev11g11.1.1.0\user\_projects\domains\FCUBS11\src'. At the bottom, there are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

16. Check whether the deployment location is accessible or not.

The following screen is displayed.

The screenshot shows the 'Install Application Assistant' screen. On the left, there is a navigation pane with 'Domain Structure', 'How do I...', and 'System Status'. The 'Domain Structure' section shows a tree view for 'FCUBS11' with sub-items: 'Environment', 'Deployments', 'Services', 'Security Realms', 'Interoperability', and 'Diagnostics'. The 'How do I...' section lists the same tasks as in the previous screenshot. The 'System Status' section shows 'Health of Running Servers'. The main content area is titled 'Install Application Assistant' and has 'Back', 'Next', 'Finish', and 'Cancel' buttons. It contains a 'Review your choices and click Finish' section with a 'Click Finish to complete the deployment. This may take a few moments to complete.' message. Below this is an 'Additional configuration' section with a question: 'In order to work successfully, this application may require additional configuration. Do you want to review this application's configuration after completing this assistant?' and two options: 'Yes, take me to the deployment's configuration screen.' (selected) and 'No, I will review the configuration later.'. A 'Summary' section displays the following information: 'Deployment: D:\Udev11g11.1.1.0\user\_projects\domains\FCUBS11\src\upload\FCUBS11.ear', 'Name: FCUBS11', 'Staging mode: Use the defaults defined by the chosen targets', and 'Security Model: DDOnly: Use only roles and policies that are defined in the deployment descriptors.'. A 'Target Summary' table is shown below the summary section:

Components	Targets
FCUBS11.ear	ManagedServer_1

At the bottom, there are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

17. Click 'Finish' button. The following screen is displayed.

Change **Deployment Order** to **400** if the application includes **BPEL plug-in**.

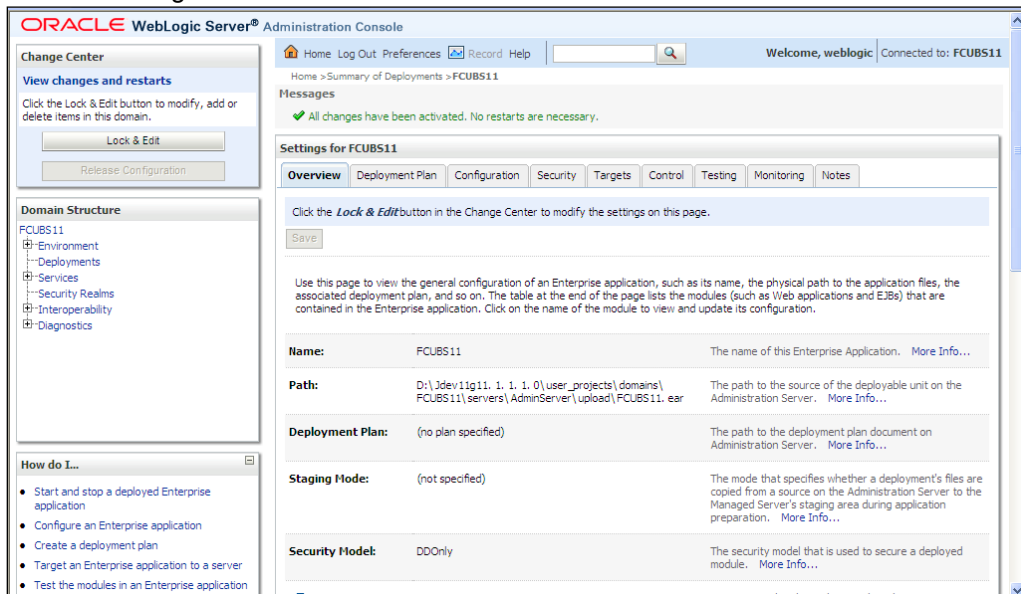

18. Click 'Save' button. The message 'Settings updated successfully' is displayed.

19. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

The screen is given below:

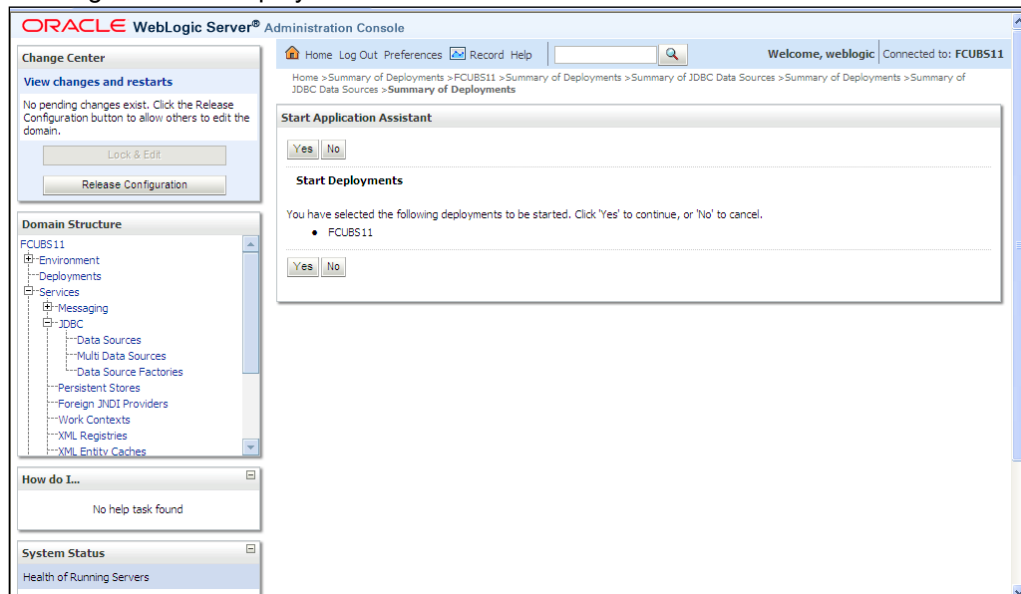

Click 'Deployment' on the left pane. Switch to Control tab .The following screen is displayed.

20. Click 'Start' drop-down button and select 'Servicing all requests'.

The following screen is displayed.

21. Click 'Yes'. The following screen is displayed.

This completes the deployment process.

### 1.3.4 Deploying Gateway/Scheduler Applications from WebLogic Administration Console

To deploy Oracle FLEXCUBE Gateway/Scheduler Application from Oracle WebLogic administration console, follow the steps given below.

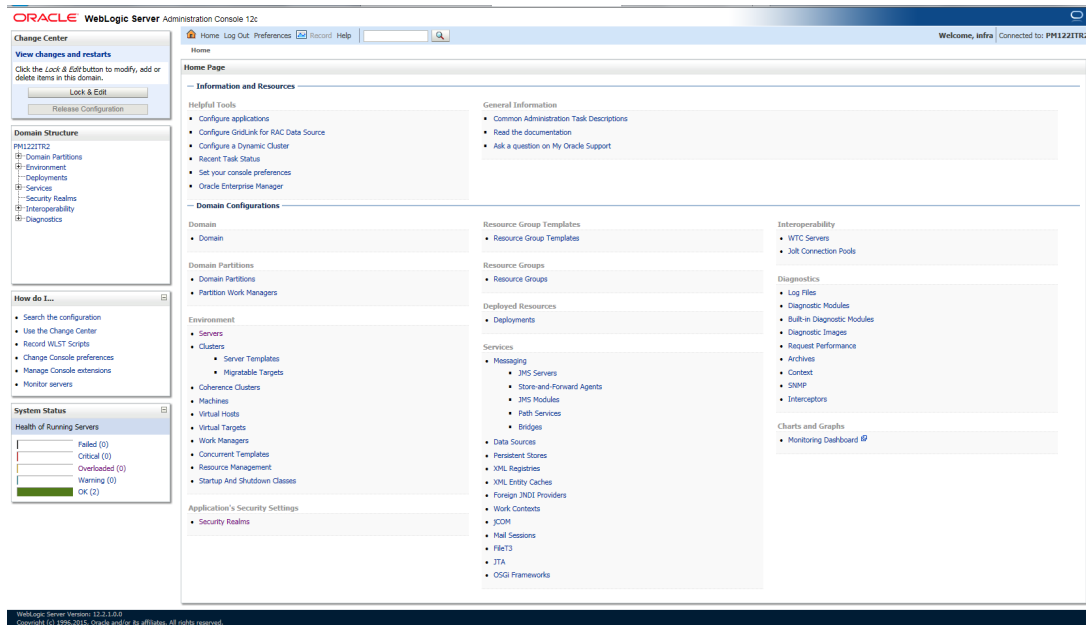

1. Launch Administrative Console of WebLogic application server. You can launch this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser.  
Eg: `http://10.10.10.10:1001/console`

22. The following screen is displayed:

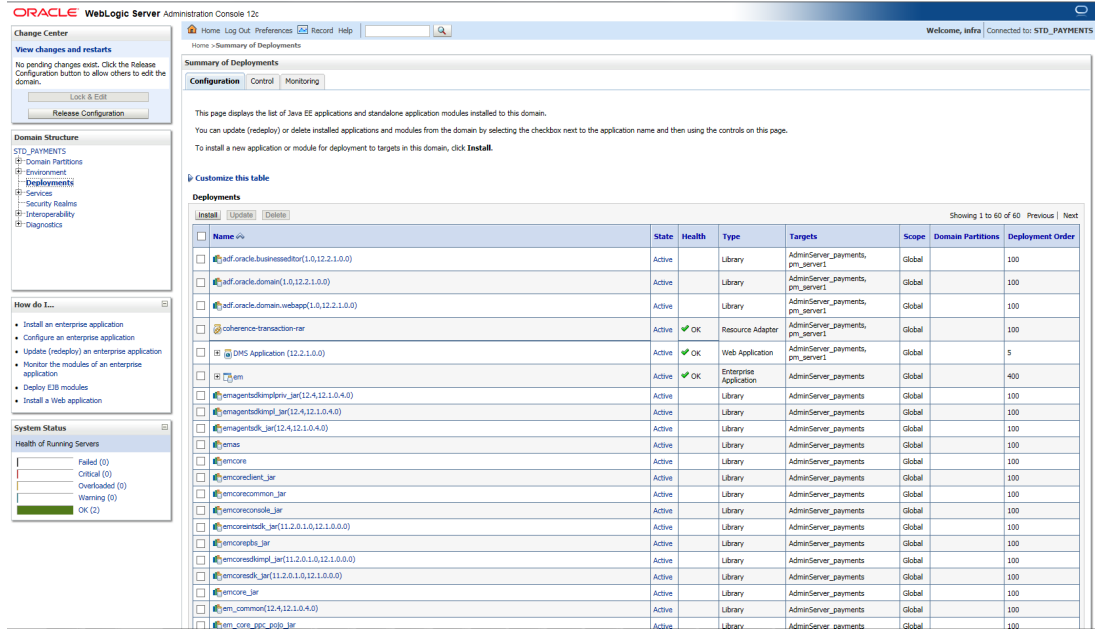

23. Specify the WebLogic administrator user name and password. Click 'Log In'.

The following screen is displayed:

24. You need to deploy an EAR. For e.g. 'GWEJB.ear'. Go to 'Deployment'.

Click 'Lock & Edit' button to enable the buttons. This action enables the buttons.

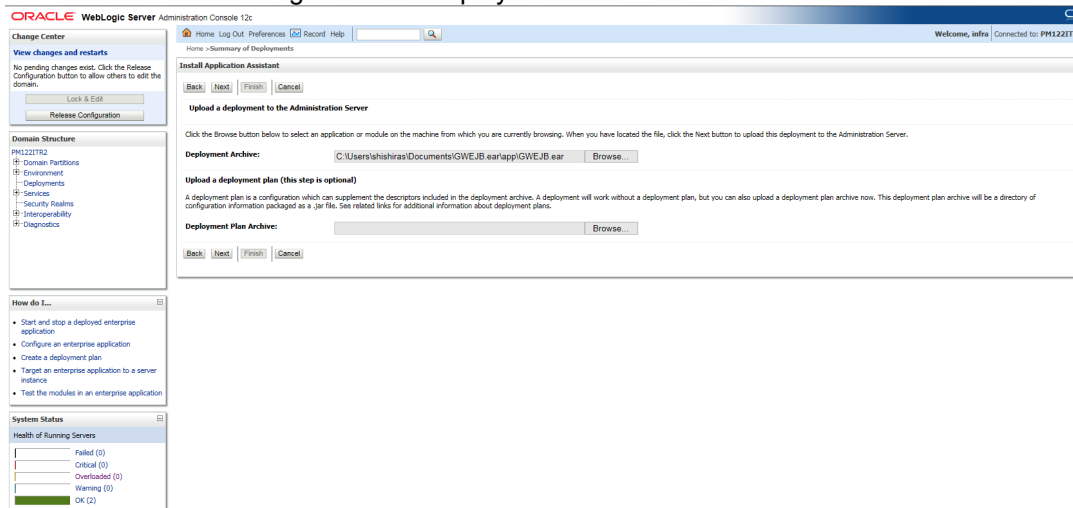

25. Click 'Install' button. The following screen is displayed:

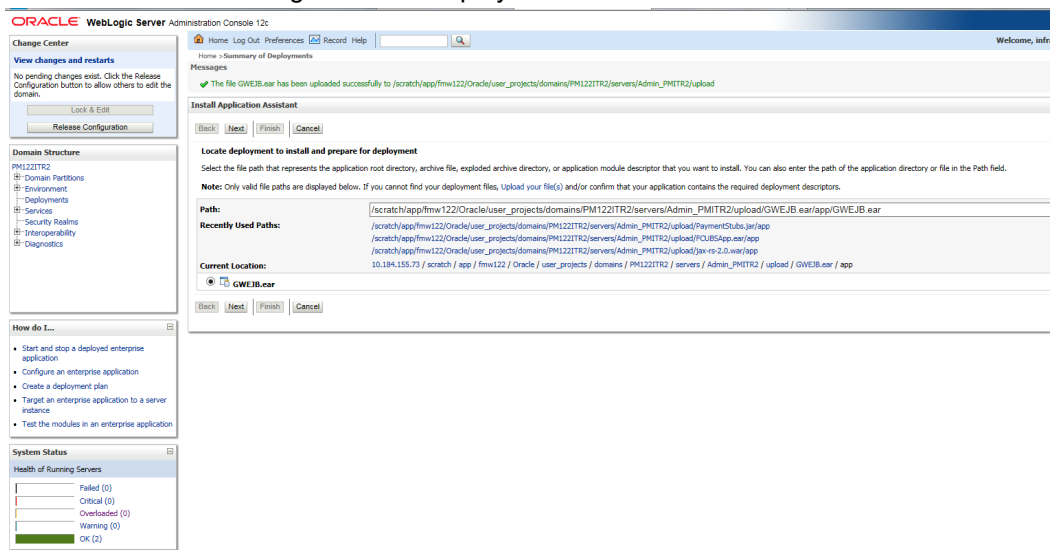

26. In order to specify the path/location of the enterprise archive file, click the link 'upload your file(s)'.

27. Click 'Next'. The following screen is displayed:

28. Specify the EAR file path. You can use the 'Browse' button to locate the file.

29. Click 'Next'. The following screen is displayed:

30. Select the application from the list.

31. Click 'Next'. Following screen is displayed:

**Install Application Assistant**

Back Next Finish Cancel

**Choose installation type and scope**

Select if the deployment should be installed as an application or library. Also decide the scope of this deployment.

The application and its components will be targeted to the same locations. This is the most common usage.

☒ **Install this deployment as an application**

Application libraries are deployments that are available for other deployments to share. Libraries should be available on all of the targets running their referencing applications.

☐ **Install this deployment as a library**

☐ **Install this deployment as an application, but target the components individually**

Useful when one or more of the modules or components must have targets unique from the rest of the application.

Select a scope in which you want to install the deployment.

Scope: Global

Back Next Finish Cancel

32. Choose the targeting style 'Install this deployment as an application'.

33. Click 'Next'.

**Optional Settings**

You can modify these settings or accept the defaults.  
\* Indicates required fields

**General**

What do you want to name this deployment?

\* Name: GWEJB

**Security**

What security model do you want to use with this application?

☒ DD Only: Use only roles and policies that are defined in the deployment descriptors.

☐ Custom Roles: Use roles that are defined in the Administration Console; use policies that are defined in the deployment descriptor.

☐ Custom Roles and Policies: Use only roles and policies that are defined in the Administration Console.

☐ Advanced: Use a custom model that you have configured on the realm's configuration page.

**Source Accessibility**

How should the source files be made accessible?

☒ Use the defaults defined by the deployment's targets

**Recommended selection.**

☒ Copy this application onto every target for me

During deployment, the files will be copied automatically to the Managed Servers to which the application is targeted.

☐ I will make the deployment accessible from the following location

Locations: /scratch/app/wl12212/user\_projects/domains/FCAPACK125/serv

Provide the location from where all targets will access this application's files. This is often a shared directory. You must ensure the application files exist in this location and that each target can reach the location.

**Plan Source Accessibility**

How should the plan source files be made accessible?

☒ Use the same accessibility as the application

36. Check the deployment name.

**Modules and Components** Showing 1 to 1 of 1

| Name               |
|--------------------|
| GWEJB (12.2.0.0.0) |
| EJBs               |
| PCMainProcEJB      |
| PCSRvRouterEJB     |
| GWEJB              |

38. Click 'Save' button. The message 'Settings updated successfully' is displayed.

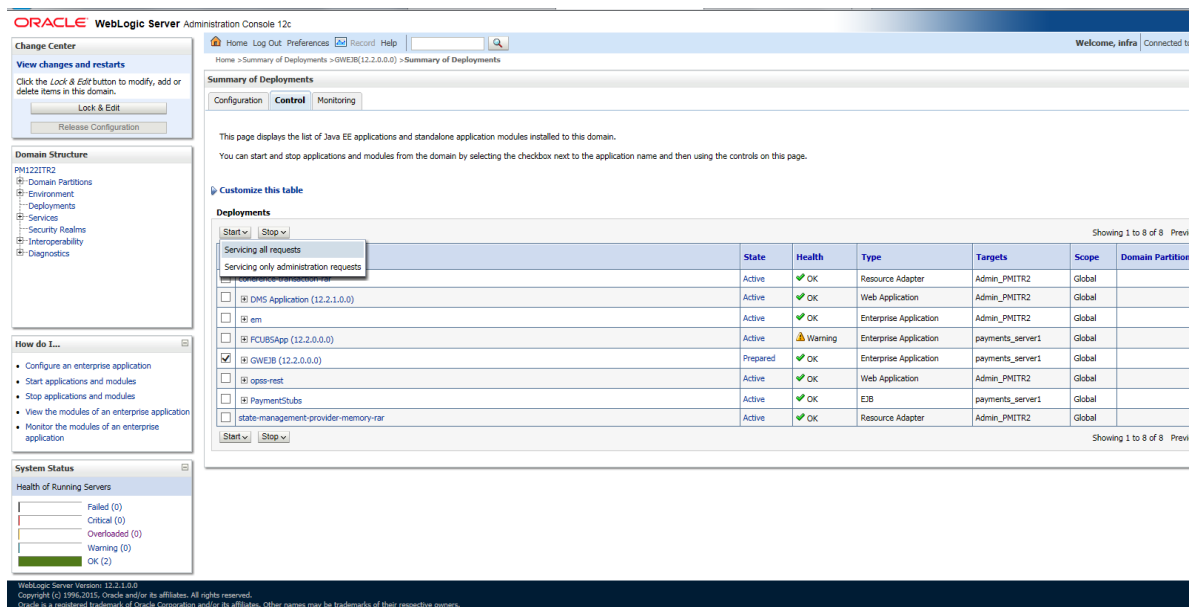

The screenshot shows the Oracle WebLogic Server Administration Console. The main pane displays the 'Settings for GWEJB(12.2.0.0.0)' page. The 'Save' button has been clicked, and a message 'Settings updated successfully' is displayed. The left pane shows the 'Change Center' with 'Activate Changes' button highlighted. The 'Domain Structure' pane shows the hierarchy: PM1221TR2 > Environment > Deployments > GWEJB. The 'System Status' pane shows 'Health of Running Servers' with 'OK (2)'.

39. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

The screen is given below:

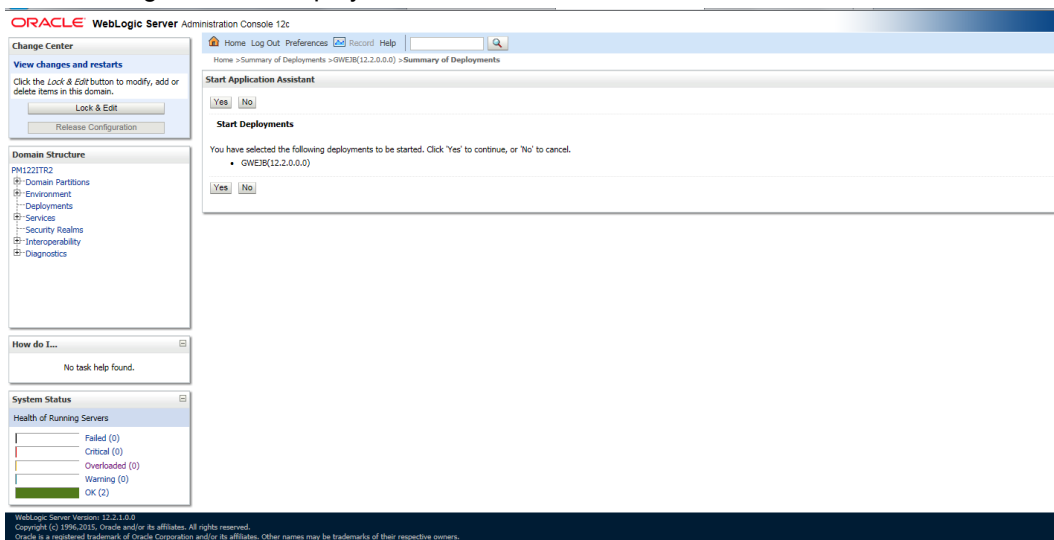

The screenshot shows the Oracle WebLogic Server Administration Console. The main pane displays the 'Settings for GWEJB(12.2.0.0.0)' page. The 'Activate Changes' button has been clicked, and a message 'All changes have been activated. No restarts are necessary' is displayed. The left pane shows the 'Change Center' with 'Lock & Edit' button highlighted. The 'Domain Structure' pane shows the hierarchy: PM1221TR2 > Environment > Deployments > GWEJB. The 'System Status' pane shows 'Health of Running Servers' with 'OK (2)'.

Click 'Deployment' on the left pane. Switch to Control tab. The following screen is displayed.

40. Click 'Start' drop-down button and select 'Servicing all requests'.

41. The following screen is displayed.

42. Click 'Yes'. The following screen is displayed.
