

FLEXCUBE UBS Oracle GL EJB Adapter Installation
Oracle FLEXCUBE Universal Banking
Release 14.4.0.0.0
[May] [2020]

Table of Contents

1. INSTALLATION STEPS 3

1.1 PREREQUISITE 3

1.2 STEPS 3

1. Installation Steps

1.1 Prerequisite

- ✓ Ensure that the basic KERNEL Oracle GL Adapter Environment Setup is done.

[Please refer [ADOGL_Installation.doc.](#)]

1.2 Steps

A. Configure FLEXCUBE UBS Oracle GL EJB Adapter Properties

Edit `<KERNEL_INSTALL_DIR>/ADOGL_EJB/config/ADOGL_EJB_Prop.properties` file to give appropriate values for the properties as described below,

1. DTD_PATH: This property specifies the path where the GLHANDOFF.DTD is stored.

e.g. DTD_PATH=<KERNEL_INSTALL_DIR>/ADOGL_EJB/DTD/

[NOTE: Give DTD file path with forward slash (/) as file separator and remember to give a slash at the end.]

2. OGL_ADAPTER_DTD: This property specifies the name of the DTD against which incoming OGL request are validated against.

e.g. OGL_ADAPTER_DTD=GLHANDOFF.DTD

3. XSL_PATH: This property specifies the path where the OGL_ADAPTER_XSL.xml is stored.

e.g. XSL_PATH=<KERNEL_INSTALL_DIR>/ADOGL_EJB/XSL/

[NOTE: Give XSL file path with forward slash (/) as file separator and remember to give a slash at the end.]

4. OGL_ADAPTER_XSL: This property specifies the name of the DTD against which incoming OGL request are validated against.

e.g. OGL_ADAPTER_XSL=OGL_ADAPTER_XSL.xml

5. ADOGL_EJB_JMS_QCF: This property is the Queue Connection Factory name.

e.g. ADOGL_EJB_JMS_QCF=MDBQCF

6. ADOGL_EJB_JMS_QUEUE_NAME: This property is the Queue name.

e.g. ADOGL_EJB_JMS_QUEUE_NAME=MDB_QUEUE

7. LOGGER_PATH: This property specifies the path of the logger property file. This file can be found at <KERNEL_INSTALL_DIR>/ADOGL_EJB/config.

[NOTE: Give the logger path with forward slash(/).]

The ADOGL_EJB_Prop.properties will look similar as follows,

```
DTD_PATH=D:/Kernel7.2/ADOGL_EJB/DTD/
```

```
OGL_ADAPTER_DTD=GLHANDOFF.DTD
```

```
XSL_PATH=D:/Kernel7.2/ADOGL_EJB/XSL/
```

```
OGL_ADAPTER_XSL=OGL_ADAPTER_XSL.xsl
```

```
ADOGL_EJB_JMS_QCF=MDBQCF
```

```
ADOGL_EJB_JMS_QUEUE_NAME=MDB_QUEUE
```

```
LOGGER_PATH=D:/Kernel7.2/GW_EJB/config/adogl_ejb_logger.cfg
```

B. Configure logger parameters

Edit <KERNEL_INSTALL_DIR>/ADOGL_EJB/config/adogl_ejb_logger.cfg file to change the value of the property “AD.LOGGER.FPATH” to <KERNEL_INSTALL_DIR>/ADOGL_EJB/log/.

e.g. If the value of your <KERNEL_INSTALL_DIR> is D:/Kernel7.2, then the entry for this property will be,

```
AD.LOGGER.FPATH=D:/Kernel7.2/ADOGL_EJB/log/
```

[NOTE: Give AD.LOGGER.FPATH with forward slash (/) as file separator and remember to give a slash (/) at the end.]

C. Run the build file

✓ For WINDOWS

- Go to the folder <KERNEL_INSTALL_DIR>\setup in the command prompt, type “**set_env**” and press enter.
- Change directory to <KERNEL_INSTALL_DIR>\ADOGL_EJB\setup\WAS in the command prompt, type “**ws_ant**” and press enter.

✓ For UNIX

- Go to the folder <KERNEL_INSTALL_DIR>/setup in the shell prompt, type “**set_env.sh**” and press enter.
- Change directory to <KERNEL_INSTALL_DIR>/ADOGL_EJB/setup/WAS in the shell prompt, type “**ws_ant**” and press enter.

[NOTE: Please make sure that you get a message BUILD SUCCESSFUL after compilation.]

D. Deploy ADOGL EJB in WebSphere Application Server (WAS)

1. Stop the application server.

If the application server is already running, then stop the application server as follows:

- ✓ For Windows
 - Go to the <APP_SERVER_HOME>/bin directory in the command prompt, type **stopServer.bat server1** and press enter.

2. Start the application server.

- ✓ For Windows
 - Go to the <APP_SERVER_HOME>/bin .i.e the application server installation directory in the command prompt, type **startServer.bat server1** and press enter.
 - This will start the server. Ensure that you get no error during start up. If the server start up is proper we shall get the following screen.

```
C:\Program Files\IBM\WebSphere\AppServer\bin>startServer.bat server1
ADMU0116I: Tool information is being logged in file C:\Program
Files\IBM\WebSphere\AppServer\profiles\default\logs\server1\startServer.log
ADMU0128I: Starting tool with the default profile
ADMU3100I: Reading configuration for server: server1
ADMU3200I: Server launched. Waiting for initialization status.
ADMU3000I: Server server1 open for e-business; process id is 1852
```

3. Open the administrative console of the application server

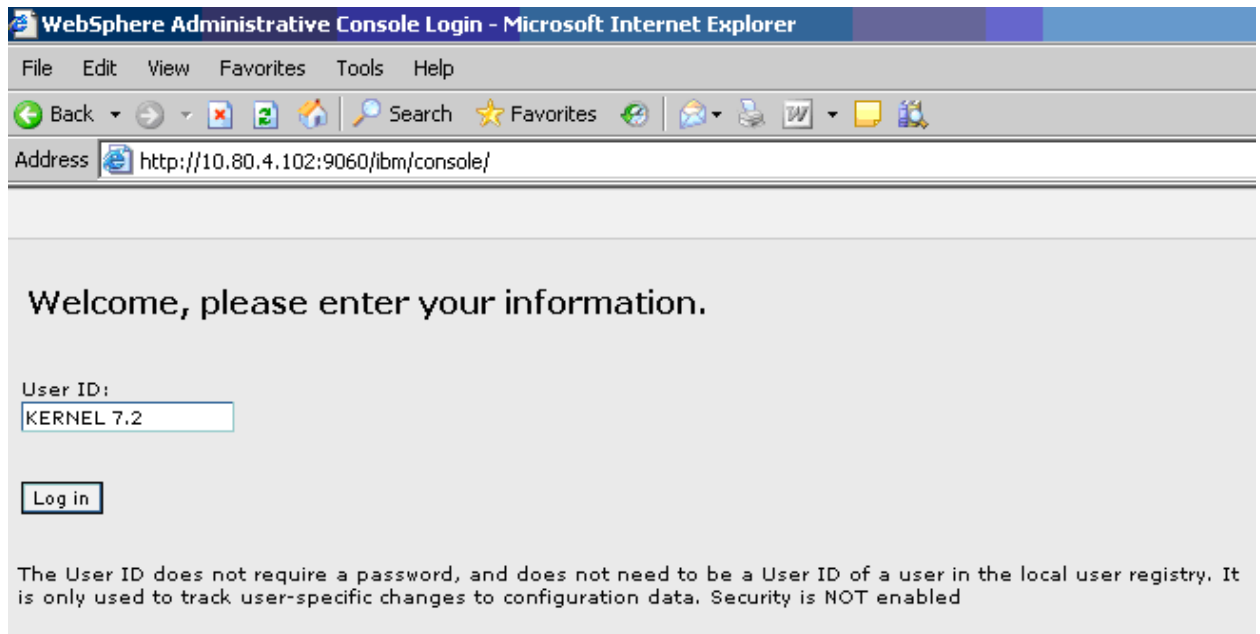

- ✓ Open an internet browser and type the WAS Admin Console URL Address of the server.

e.g. <http://10.80.4.102:9060/ibm/console>

where, 10.80.4.102 is the machine IP Address on which WAS is running.

- ✓ Enter a user id for launching the WAS Admin Console window.

The user id can be any name e.g.: KERNEL 7.2

4. Create an XA QueueConnectionFactory with the name MDBQCF

[Refer: [WAS_ADOGL_WebSphereMQ_Installation.doc](#)]

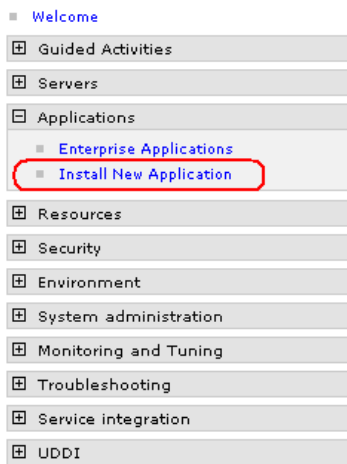

5. Create Websphere MQ Queue Destinations with the following names

- a. MDB_QUEUE

[Refer: [WAS_ADOGL_WebSphereMQ_Installation.doc](#)]

6. Deploying ADOGL_EJB_FACADE_Bean.ear

- ✓ Click on **Applications -> Install New Application**.
- ✓ Following screen will be displayed. Specify the local path of the enterprise archive file
(i.e. <KERNEL_INSTALL_DIR>/ADOGL_EJB/build/ADOGL_EJB_FACADE_Bean.ear) and click on Next.

Enterprise Applications

Preparing for the application installation

Specify the EAR, WAR or JAR module to upload and install.

Path to the new application.

☒ Local file system

Specify path
D:\Kernel7.2Lot1\ADOGL

☐ Remote file system

Specify path

Context root
 Used only for standalone Web modules (.war files)

7. Following screen will be displayed. Click on Next.

Enterprise Applications

[Close](#)

Preparing for the application installation

Choose to generate default bindings and mappings.

☐ Generate Default Bindings

Prefixes:

☒ Do not specify unique prefix for beans

☐ Specify Prefix:

Prefix
ejb

Override:

☒ Do not override existing bindings

☐ Override existing bindings

Specific bindings file

8. Following screen will be displayed. Click on Next.

Enterprise Applications

Install New Application

Specify options for installing enterprise applications and modules.

→ Step 1: Select installation options

[Step 2](#) Map modules to servers

[Step 3](#) Provide options to perform the EJB Deploy

[Step 4](#) Provide JNDI Names for Beans

[Step 5](#) Map resource references to resources

[Step 6](#) Map resource env entry references to resources

[Step 7](#) Ensure all unprotected 2.x methods have the correct level of protection

[Step 8](#) Summary

Select installation options

Specify the various options that are available to prepare and install your application.

☐ Pre-compile JSP

Directory to install application

☒ Distribute application

☐ Use Binary Configuration

☒ Deploy enterprise beans

Application name

ADOGL_EJB_FACADE_Bea

☒ Create MBeans for resources

☐ Enable class reloading

Reload interval in seconds

☐ Deploy Web services

Validate Input off/warn/fail

warn

☐ Process embedded configuration

Next

Cancel

9. Following screen will be displayed. Click on Next.

Enterprise Applications [Close page](#)

Install New Application

Specify options for installing enterprise applications and modules.

[Step 1](#) Select installation options

→ **[Step 2: Map modules to servers](#)**

[Step 3](#) Provide options to perform the EJB Deploy

★ [Step 4](#) Provide JNDI Names for Beans

★ [Step 5](#) Map resource references to resources

★ [Step 6](#) Map resource env entry references to resources

[Step 7](#) Ensure all unprotected 2.x methods have the correct level of protection

[Step 8](#) Summary

Map modules to servers

Specify targets such as application servers or clusters of application servers where you want to install the application. The application can be installed on the same application server or dispersed among several application servers. Also, specify the routers for requests to this application. The plug-in configuration file (plugin-cfg.xml) for each Web service is routed through it.

Clusters and Servers:

Select	Module	URI	Server
<input type="checkbox"/>	ADOGLEJB_FACADE_Bean.jar	ADOGLEJB_FACADE_Bean.jar,META-INF/ejb-jar.xml	WebSphere:cell=cvrhp1455Node01Cell,node=cvrhp1455Node01,server=server1

10. Following screen will be displayed.

Select the database type as “ORACLE_V10G” from the drop down list and click on NEXT.

Install New Application

Specify options for installing enterprise applications and modules.

Step 1 Select installation options

Step 2 Map modules to servers

→ **Step 3: Provide options to perform the EJB Deploy**

✱ **Step 4** Provide JNDI Names for Beans

✱ **Step 5** Map resource references to resources

Step 6 Ensure all unprotected 2.x methods have the correct level of protection

Step 7 Summary

Provide options to perform the EJB Deploy

Specify the options to deploy enterprise beans.

EJB Deployment Options	Enable
Deploy EJB option - Class path	<input type="text"/>
Deploy EJB option - RMIC	<input type="text"/>
Deploy EJB option - Database type	ORACLE_V10G
Deploy EJB option - Database schema	<input type="text"/>

Previous **Next** Cancel

11. Following screen will be displayed.

Specify the JNDI name of the EJB Bean i.e. “ADOGL_EJB_FACADE_Bean” and click on NEXT.

Install New Application

?

Specify options for installing enterprise applications and modules.

Step 1 Select installation options

Step 2 Map modules to servers

Step 3 Provide options to perform the EJB Deploy

→ Step 4: Provide JNDI Names for Beans

★ Step 5 Map resource references to resources

★ Step 6 Map resource env entry references to resources

Step 7 Ensure all unprotected 2.x methods have the correct level of protection

Step 8 Summary

Provide JNDI Names for Beans

Each non-message-driven enterprise bean in your application or module must be bound to a Java Naming and Directory Interface (JNDI) name.

EJB module	EJB	URI	JNDI name
ADOGL_EJB_FACADE_Bean.jar	ADOGL_EJB_FACADE_Bean	ADOGL_EJB_FACADE_Bean.jar,META-INF/ejb-jar.xml	ADOGL_EJB_FACADE_Bea

Previous

Next

Cancel

12. Following screen will be displayed.

Specify the JNDI name for Resource Reference i.e. XAQueueConnectionFactory name and click on Next.

resource references to resources

Step 6 Map resource env entry references to resources

Step 7 Ensure all unprotected 2.x methods have the correct level of protection

Step 8 Summary

To modify Resource Authentication method (if Authorization type is 'container'):

- Select one or more checkboxes in the table
- Select either 'none', 'default', or 'custom login configuration'
 - if 'none' is selected:
 - Select one or more checkboxes in the table
 - if 'default' is selected:
 - select an authentication data entry from the dropdown menu
 - Click Apply
 - if 'custom login configuration' is selected:
 - select a custom login configuration from the dropdown menu
 - Click Apply
 - To edit the properties of the custom login configuration, click Mapping Properties in the table

Specify authentication method:

☐ none

☒ Use default method

Select authentication data entry

☐ Use custom login configuration

Select application login configuration

Select	Module	EJB	URI	Reference binding	JNDI name
<input checked="" type="checkbox"/>	ADOGL_EJB_FACADE_Bean.jar	ADOGL_EJB_FACADE_Bean	ADOGL_EJB_FACADE_Bean.jar,META-INF/ejb-jar.xml	MDBQCF	MDBQCF

13. Following screen will be displayed. Click Continue.

Application Resource Warnings

ADMA8019E: The resources that are assigned to the application are beyond the deployment target scope. Resources are within the deployment target scope if they are defined at the cell, node, server, or application level when the deployment target is a server, or at the cell, cluster, or application level when the deployment target is a cluster. Assign resources that are within the deployment target scope of the application or confirm that these resources assignments are correct as specified.

Step 5 - Map resource references to resources resulted in the following resource warnings. If Application Resource Validation is set to fail, you will not be able to continue past.

Module:

Name: ADOGL_EJB_FACADE_Bean.jar

URI: ADOGL_EJB_FACADE_Bean.jar,META-INF/ejb-jar.xml

Target: WebSphere:cell=cvrhp1455Node01Cell,node=cvrhp1455Node01,server=server1

Resource Reference:

Name: MDBQCF

Type: javax.jms.XAQueueConnectionFactory

Resource Assignment:

Name: MDBQCF

Scope: WebSphere:cell=cvrhp1455Node01Cell,node=cvrhp1455Node01,server=server1

Type: JMSProvider

JNDI: MDBQCF

14. Following screen will be displayed.

- ✓ Type the JNDI name of the Queue i.e. MDB_QUEUE
- ✓ Select the Check box beside it
- ✓ Click on **Next**.

Enterprise Applications Close

Install New Application

Specify options for installing enterprise applications and modules.

[Step 1](#) Select installation options

[Step 2](#) Map modules to servers

[Step 3](#) Provide options to perform the EJB Deploy

[Step 4](#) Provide JNDI Names for Beans

[Step 5](#) Map resource references to resources

→ **Step 6: Map resource env entry references to resources**

[Step 7](#) Ensure all unprotected 2.x methods have the correct level of protection

[Step 8](#) Summary

Map resource env entry references to resources

Each resource environment reference defined in your application must map to a resource.

☒ Apply Multiple Mappings

Select	Module	EJB	URI	Reference binding	JNDI name
<input checked="" type="checkbox"/>	ADOGL_EJB_FACADE_Bean.jar	ADOGL_EJB_FACADE_Bean	ADOGL_EJB_FACADE_Bean.jar,META-INF/ejb-jar.xml	MDB_QUEUE	MDB_QUEUE

0 Errors, 0 Warnings, 0 Informational Messages

ADMA5007I: The EJBDeploy command completed on D:\Program Files\IBM\WebSphere\AppServer\profiles\default\wstemp\app_10b6b6eefda\dpl\dpl_ADOGL_EJB_FACADE_Bean.ear

ADMA5005I: The application ADOGL_EJB_FACADE_Bean is configured in the WebSphere Application Server repository.

ADMA5053I: The library references for the installed optional package are created.

ADMA5005I: The application ADOGL_EJB_FACADE_Bean is configured in the WebSphere Application Server repository.

ADMA5001I: The application binaries are saved in D:\Program Files\IBM\WebSphere\AppServer\profiles\default\wstemp\1134867395\workspace\cells\cvrhp1455Node01 Cell\applications\ADOGL_EJB_FACADE_Bean.ear\ADOGL_EJB_FACADE_Bean.ear

ADMA5005I: The application ADOGL_EJB_FACADE_Bean is configured in the WebSphere Application Server repository.

SECJ0400I: Successfully updated the application ADOGL_EJB_FACADE_Bean with the appContextIDForSecurity information.

ADMA5011I: The cleanup of the temp directory for application ADOGL_EJB_FACADE_Bean is complete.

ADMA5013I: Application ADOGL_EJB_FACADE_Bean installed successfully.

Application ADOGL_EJB_FACADE_Bean installed successfully.

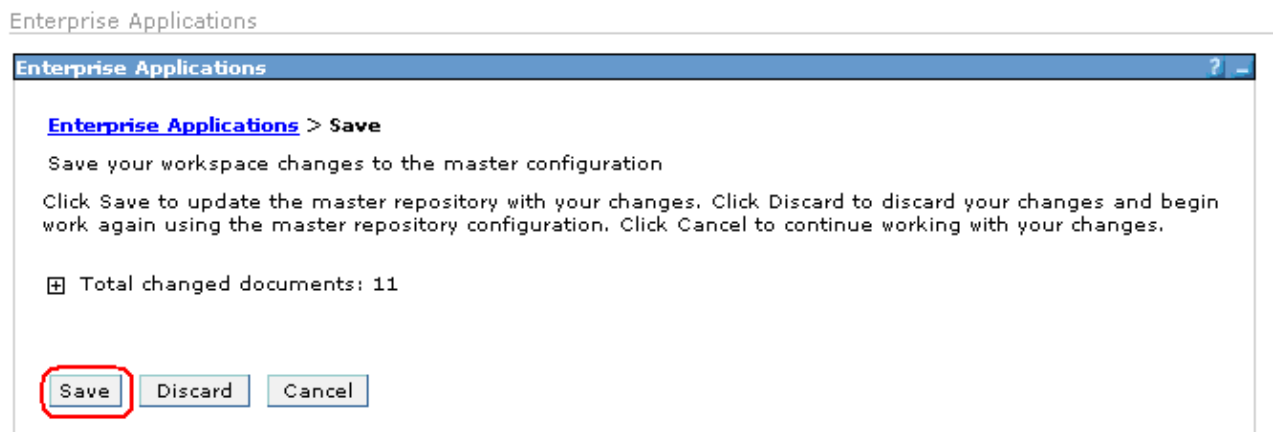

To start the application, first save changes to the master configuration.

Save to Master Configuration

To work with installed applications, click the "Manage Applications" button.

Manage Applications

19. Following screen will be displayed. Click on Save.

20. Browse to Application -> Enterprise Applications.

- ✓ The deployed ADOGL_EJB_FACADE_Bean will be displayed on the screen.
- ✓ Click the check box beside it and click on **Start**.
