Oracle® Communications Diameter Signal Routing

User Data Repository Software Upgrade Procedure Release 8.5.0.2.0

F47122-01

September 2021

Oracle Communications User Data Repository Software Upgrade Procedure, Release 8.5.0.2.0

F47122-01

Copyright © 2014, 2017, 2018, 2019, 2021 Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Chapter 1. Introduction

1.1 Purpose and Scope

This document describes the methods utilized and the procedures performed for a major upgrade to Oracle Communications User Data Repository 12.6.2 release. The audience for this document includes Oracle customers as well as the following internal groups: Software Development, Quality Assurance, Product Verification, Information Development, and Consulting Services including NPX. This document provides step-by-step instructions to perform any Release 12.6.x or later software upgrade. The Oracle Communications User Data Repository software includes all Oracle Tekelec Platform Distribution (TPD) software. Any TPD upgrade necessary is included automatically as part of the software upgrade. Performing this procedure assumes that the Oracle Communications User Data Repository software load (ISO file, CD-ROM, or other form of media) has been delivered or dowwnoaded to the premises. This includes delivery of the software load to the local workstation being used to perform this upgrade.

1.1.1 What is Not Covered by this Document

- Distribution of Oracle Communications User Data Repository 12.6.2 software loads. Visit the Oracle Software Delivery Cloud here: https://edelivery.oracle.com/osdc/faces/Home.jspx
- Distribution of Oracle Communications User Data Repository software that goes with Oracle Communications DSR product is not covered.
- Initial installation of Oracle Communications User Data Repository 12.6.2 software. Refer [1].
- PM&C upgrade. Refer to [3].
- Firmware upgrade. Use the upgrade procedures and release notes documents contained in the Firmware Upgrade Packs to assess whether a firmware upgrade is necessary. Refer to [3].

1.2 References

Oracle documentation is available on the web at the Oracle Help Center (OHC) site, http://docs.oracle.com. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at www.adobe.com.

- 1. Log into the Oracle Technology Network site at http://docs.oracle.com.
- 2. Select Find a product
- 3. Enter User Data Repository

The CGBU Documentation page opens.

- 4. Select **User Data Repository** followed by version
- 5. Select platform/Tekelec for Platform and TVOE documents
 - [1] Oracle Communications User Data Repository 12.6.2 Installation and Configuration Guide, F47121-01, latest revision
 - [2] TVOE 3.4 Software Upgrade Document, E80324, latest revision
 - [3] Oracle Communications PM&C 6.4 Incremental Upgrade Procedure, E82636-01, latest revision.
 - [4] Oracle Communications User Data Repository Cloud Installation and Configuration Guide, F47121-01, latest revision

VPN	Virtual Private Network		
XMI	External Management Interface		
XSI	External Signaling Interface		

1.4 Terminology

This section describes terminology as it is used in this document.

Table 2: Terminology

Term	Meaning		
Upgrade	The process of converting an application from its current release on a system to a new release.		
Major Upgrade	An upgrade from a current release to a new major release.		
Incremental Upgrade	An upgrade from a current build to a new build in the same major release. An example of an incremental upgrade is: release 12.6.x to 12.6.y.		
Release	Release is any particular distribution of software that is different from any other distribution.		
Single Server Upgrade	The process of converting an Oracle Communications User Data Repository server from its current release on a single server to a new release.		
Blade (or Managed Blade) Upgrade	Single server upgrade performed on a blade. This upgrade requires the use of the PM&C GUI.		
Standalone Server Upgrade	Single server upgrade performed on a standalone server. This upgrade requires the use of the platcfg UI.		
Software Only Upgrade	An upgrade that does not require a database schema change, only the software is changed.		
DB Conversion Upgrade	An upgrade that requires a database schema change that is performed during an upgrade that is necessitated by new feature content or bug fixes.		
Backout	The process of converting a single Oracle Communications User Data Repository server a prior version. This could be performed due to failure in single server upgrade or the upgrade cannot be accepted. Backout is a user initiated process.		
Downgrade/Backout	The process of converting an Oracle Communications User Data Repository server from i current release to a prior release. This could be performed due to a misbehaving system. After the upgrade is accepted, servers cannot be backed out to previous release.		
Rollback	Automatic recovery procedure that puts a server into its pre-upgrade status. This procedure occurs automatically during upgrade if there is a failure.		
Source Release	Software release to upgrade from.		
Target Release	Software release to upgrade to.		
Oracle RMS	Oracle Server X5-2 or Netra X5-2		

Term	Meaning		
Primary NOAM Network Element	The network element that contains the active and standby NOAM servers in an Oracle Communications User Data Repository. If the NOAMs are deployed on a rack-mount server (and often not co-located with any other site), that RMS is considered the primary NOAM network element. If the NOAMs are virtualized on a C-class blade that is part of one of the sites, then the primary NOAM network element and the signaling network element hosting the NOAMs are one and the same.		
DR NOAM Network Element	Disaster Recovery NOAMs that are ready to take over as the primary Site if a disaster should occur.		
Site	Physical location where one or more network elements reside.		
Health Check	Procedure used to determine the health and status of the network. This includes status displayed from the GUI. This can be observed Pre-Server Upgrade, In-Progress Server Upgrade, and Post-Server Upgrade.		
Upgrade Ready	State that allows for graceful upgrade of a server without degradation of service. It is a state that a server is required to be in before it can be upgraded. The state is defined by the following attributes:		
,	Server is Forced Standby		
	Server is Application Disabled (signaling servers do not process any traffic)		
UI	User interface. platcfg UI refers specifically to the Platform Configuration Utility User Interface, which is a text-based user interface.		
Management Server	Server deployed with HP c-class or RMS used to host PM&C application, to configure Cisco 4948 switches and to serve other configuration purposes.		
PM&C Application	PM&C is an application that provides platform-level management functionality for HPC/RMS system, such as the capability to manage and provision platform components the system so it can host applications.		
Software Centric	The business practice of delivering an Oracle software product, while relying on the customer to procure the requisite hardware components. Oracle provides the hardware specifications, but does not provide the hardware, and is not responsible for hardware installation, configuration, or maintenance.		
Enablement	The business practice of providing support services (hardware, software, documentation, and so on) that enable a 3rd party entity to install, configuration, and maintain Oracle products for Oracle customers.		
NO	Network OAM for Oracle Communications User Data Repository.		

1.5 How to use this Document

When using this document, there are a few key points which help to understand the intent of the author. These points are as follows;

- 1. Before beginning a procedure, completely read the instructional text (immediately after the section heading for each procedure) and all associated procedural warnings or notes.
- 2. Before performing a step in a procedure, completely read the left and right columns including any step specific warnings or notes.
- 3. If a procedural step fails to run successfully or fails to receive the required output, stop and contact the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for

your local country from the list at http://www.oracle.com/us/support/contact/index.html for assistance before attempting to continue.

1.5.1 Performing Procedures

Familiarize yourself with the structure and conventions used in these procedures before performing them. Table 1 and the details below provide an example of how procedural steps might be displayed in this document.

Column 1: Step

- Column 1 in Table 1 contains the step number and also a checkbox if the step requires an action.
- Sub-steps in a Step X are referred to as Step X.Y. (See example: Step 1 has sub-steps Steps 1.1 to 1.2).
- Mark checkboxes in as steps are performed to keep track of the progress during the procedure.

Column 2: Procedure

Column 2 in Table 1 contains a heading which indicates the server/IP being accessed as well as text
instructions and/or notes. This column may also describe the operations to be performed or
observed during the step.

Column 3: Result

- Column 3 in Table 1 generally displays the results of performing the instructions in column 2.
- The Result column can also display any of the following:
 - o Inputs (commands or responses) required.
 - o Outputs which are displayed on the terminal.
 - o Illustrations or graphic figures related to the step instruction.
 - o Screen captures from the product GUI related to the step instruction.

Table 3: Sample Procedure

Step	Procedure	Result		
1.	Active NOAMP VIP: 1. Access the command prompt. 2. Log into the server as the admusr user.	Login as: admusr Using keyboard-interactive authentication. Password: <password> NOTE: The password does note show on the screen as the characters are entered.</password>		
2. Active NOAMP VIP: Output diaplays as the server returns to a command prompt. *** TRUNCATED OU VPATH=/opt/TKLCcoi PRODPATH= RELEASE=6.3 RUNID=00 VPATH=/var/TKLC/ri KLC/comagent-gui: PRODPATH=/opt/come RUNID=00		RELEASE=6.3 RUNID=00 VPATH=/var/TKLC/rundb:/usr/TKLC/appworks:/usr/TKLC/udr:/usr/TKLC/awpcommon:/usr/TKLC/comagent-gui:/usr/TKLC/comagent:/usr/TKLC/dpi:/usr/TKLC/capm/prod/plugins PRODPATH=/opt/comcol/prod		

Step	Procedure	Result	
3.	Active NOAMP VIP: Verify that the correct date and time are displayed in GMT (+/- 4 min.)	date -u Thu Apr 24 17:13:17 UTC 2014 [admusr@908070109-NO-A filemgmt]\$	
	THIS PROCEDURE HAS BEEN COMPLETED		

1.6 Recommendations

This section provides recommendations to consider when preparing to perform the procedures in this document.

1.6.1 Frequency of Health Checks

You can run the Perform Health Check or View Logs steps freely or repeat as many times as necessary in between procedures during the upgrade process. It is not recommended to do this in between steps in a procedure, unless there is a failure to troubleshoot.

1.6.2 Logging of Upgrade Activities

It is a best practice to use a terminal session with logging enabled to capture command activities and output during the upgrade procedures. These can be used for analysis in the event of issues encountered during the activity. These logs are saved off line at the completion of the activity.

Note that GUI activities are logged in a security log, but it is also recommended to use a screen capture tool to collect a sequence of screen shots before, during, and after the upgrade. This can also be useful for later analysis.

DSR Release 8.5.0.2.0 13 UDR Release 12.6.2

Chapter 2. General Description

This document defines the step-by-step actions performed for a software upgrade of an in-service Oracle Communications User Data Repository from the source release to the target release. A major upgrade advances the Oracle Communications User Data Repository software from 12.2.x source release, or 12.4.x source release to 12.6.x target release. An incremental upgrade advances the software from 12.6.a-b.b.b to 12.6.b-c.c.c.

2.1 Supported Upgrade Paths

Figure 1 shows the supported Oracle Communications User Data Repository upgrade paths.

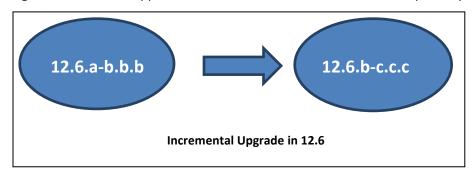

Figure 1: Supported Upgrade Paths

NOTE: Initial installation is not in the scope of this upgrade document. See [1] for initial installation requirements.

2.2 Firmware Updates

Firmware upgrades are not in the scope of this document, but may be required before upgrading Oracle Communications User Data Repository. It is assumed that these are done when needed by the hardware, and there is typically not a dependency between firmware version and the 12.6.2 release. Use the Upgrade Procedures and Release Notes documents contained in the Firmware Upgrade Packs to assess whether a firmware upgrade is necessary. Perform firmware upgrade procedures if required by [3].

2.3 PM&C (Management Server) Upgrades

Each site may have a PM&C (Management server) that provides support for maintenance activities at the site. There is a separate procedure for PM&C upgrade, including TVOE. PM&C must be upgraded before the other servers at the site are upgraded on partially virtualized configurations. Refer to [3].

2.4 TVOE Upgrade

TVOE (Virtual Operating Environment) is an operating system for a server, which hosts multiple virtual servers on the same hardware. It is typically used to make more efficient use of a Hardware server (Rack Mount or Blade), while maintaining application independence, for Oracle Communications User Data Repository applications that do not require the full resources of a modern Hardware server.

In Oracle Communications User Data Repository architecture, TVOE hosts are used to host several functions, including:

- PM&C
- Oracle Communications User Data Repository NOAMP, applications

TVOE host servers (that is, servers running TVOE and one or more Oracle Communications User Data Repository applications) must be upgraded before upgrading the guest applications, to assure compatibility. However, TVOE is backward compatible with older application revs, so the TVOE host and the applications do not have to be upgraded in the same Maintenance window.

The TVOE server hosting PM&C, and the PM&C application, must be upgraded before other TVOE host upgrades, since PM&C is used to perform the TVOE upgrades.

There are three supported strategies for TVOE upgrade (Options A, B and C):

- Option A: Upgrade TVOE environments as a separate activity that is planned and performed days or weeks before the application upgrades (perhaps site-at-a-time)
- Options to Upgrade TVOE and application at the same maintenance window:
 - o Option B: Upgrade TVOE and application, followed by another TVOE and application. Example: for standby NOAMP Upgrade:
 - i. Stop the application
 - ii. Upgrade TVOE
 - iii. Upgrade the application
 - iv. Start the application
 - v. Repeat for the active NOAMP.
 - o Option C: Upgrade multiple TVOE hosts at a site, and then start upgrading the applications (same Maintenance Window)

Note that TVOE upgrades require a brief shutdown of the guest applications on the server. Note also that the TVOE virtual hosts may be hosting NOAMP applications.

The procedure for upgrading TVOE environments before the application upgrades (Option A) is documented in 3.3.6.

2.5 Traffic Management during Upgrade

Upgrade of NOAM servers is not expected to affect traffic-handling servers.

2.6 Provisioning during Upgrade

For Oracle Communications User Data Repository 12.6.2, revisioning (live traffic) continues while the upgrade is being performed. While the standby NOAMP is being upgraded, the active NOAMP receives provisioning requests. After the upgrade is complete, replication is turned on to the standby NOAMP to sync the most recent requests from the active NOAMP. Then the standby NOAMP becomes active to start receiving provisioning requests, while the previous active NOAMP is being upgraded.

2.7 Configurations

2.7.1 Low Capacity Configurations (Fully Virtualized with TVOE)

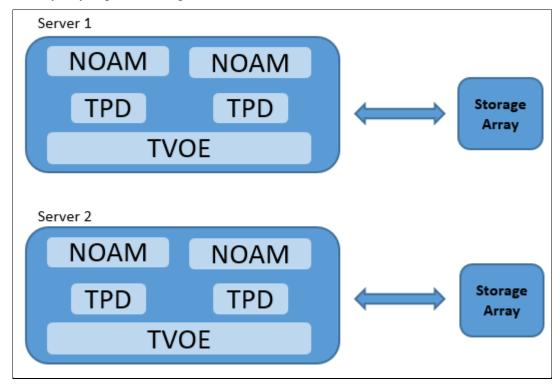

This includes all Oracle Communications User Data Repository software running on a TVOE virtualization environment in each server, resulting in a fully-virtualized, fully-redundant HA configuration. This can be deployed either as a single site or as a geo-redundant deployment, with 2 servers at each site. (Each blade/server hosts 1 NOAMP or 2 NOAMP instance).

DL380 RMS server supports 2 disk configurations: 12 x146GB 15K RPM drives and 6x600GB 10K RPM drives (Low Speed Drive Configuration)

Harware IDs Supported:

- ProLiantBL460Gen8, ProLiantBL460Gen8+ or ProLiantBL460Gen9
- ProLiantDL380Gen8, ProLiantDL380Gen8+ or ProLiantDL380Gen9
- ORACLESERVERX5-2

Figure 2: Low Capacity Single-Site Configuration

2.7.2 Cloud Configurations

This includes all Oracle Communications User Data Repository software running in a cloud environment. This can be deployed either as a single site or as a geo-redundant deployment, with 1 or two 2 servers filling each role at each site. See reference [4] for full details.

No	n HA			
Min number of VMs	Max number of VMs	Min number of VMs	Max number of VMs	HA config
1	2	2	2	Active-Standby
1	2	2	2	Active-Standby
1	1	2	4	Active-Active

2.8 Sequence of Upgrade

Oracle Communications User Data Repository supports fully virtualized configurations, partially virtualized configurations, and cloud configurations. In fully virtualized configurations PM&C, NOAMPs functions are hosted over TVOE on one server. In cloud configurations, TVOE and PM&C upgrade operations do not apply. The upgrade procedures vary slightly between these configurations.

Table 4: Sequence of upgrade

Fully Virtualized configurations	Partially Virtualized configurations	Cloud configurations
Required Materials Check	Required Materials Check	Required Materials Check
Update firmware if required. Use the Upgrade Procedures and Release Notes documents contained in the Firmware Upgrade Packs to assess whether a firmware upgrade is necessary.	Update firmware if required. Refer to Use the Upgrade Procedures and Release Notes documents contained in the Firmware Upgrade Packs to assess whether a firmware upgrade is necessary.	N/A

DSR Release 8.5.0.2.0 17 UDR Release 12.6.2

Chapter 3. Upgrade Planning and pre-upgrade procedures

This section contains all information necessary to prepare for and perform an upgrade. The materials required to perform an upgrade are described and the pre-upgrade procedures that are run to ensure the system is ready for upgrade. Then, the actual procedures for each supported upgrade path are given.

There are overview tables throughout this section that help you plan the upgrade and estimate how long it takes to perform various actions. The stated time durations for each step or group of steps are estimates only. Do not use the overview tables to perform any actions on your system. Only the procedures are used when performing upgrade actions, beginning with Procedure 1: Required Materials Check.

3.1 Required Materials

The following materials and information are needed to perform an upgrade:

- Target-release application ISO image file, or target-release application media.
- GUI access to the Oracle Communications User Data Repository Network OAMP VIP with Administrator privileges.
- User logins, passwords, IP addresses and other administration information. See Section 3.1.2.
- SSH/SFTP access to the Oracle Communications User Data Repository Network OAMP XMI VIP as the admusr user.

NOTE: All logins into the Oracle Communications User Data Repository NO servers are made via the External Management (XMI) VIP unless otherwise stated.

- VPN access to the network is required if that is the only method to log into the OAM servers.
- Direct access to the blades/RMS iLO IP addresses (whichever applicable) from the workstations directly connected to the servers is required.
- Direct access to server IMI IP addresses from the local workstation is preferable in the case of a backout.

NOTE: If direct access to the IMI IP addresses cannot be made available, then target server access can be made via a tandem connection through the active primary NO (that is, An SSH connection is made to the active primary NO XMI first, then from the active primary NO, a 2nd SSH connection can be made to the target IMI IP address of the server).

3.1.1 Application ISO Image File/Media

You must obtain a copy of the target release ISO image file. This file is necessary to perform the upgrade. The Oracle Communications User Data Repository ISO image file is in the format:

```
UDR-12.6.2.0.0.0_18.14.0.iso
```

NOTE: Actual number values may vary between releases.

When performing this upgrade procedure, it is assumed that the Oracle Communications User Data Repository ISO image file has been delivered to the premises. The ISO image file must reside on the local workstation used to perform the upgrade, and anybody performing the upgrade must have access to the ISO image file. If you are at a remote location, it is assumed the ISO file is available to you before starting the upgrade procedure.

3.1.2 Logins, Passwords and Site Information

Obtain all the information requested in the following table. This ensures that the necessary administration information is available before an upgrade starts. Consider the confidential nature of the information recorded in this

DSR Release 8.5.0.2.0 18 UDR Release 12.6.2

table. While all of the information in the table is required to complete the upgrade, there may be security policies in place that require secure disposal after the upgrade completes.

	Description	Recorded Value

¹ The user must have administrator privileges. This means the user belongs to the admin group in Group Administration.

² This is the password for the admusr login on the servers. This is not the same login as the GUI Administrator. The admusr password is required if recovery procedures are needed. If the admusr password is not the same on all other servers, then all root passwords for the servers must also be recorded; use additional space at the bottom of this table.

³ This is the password for the root login on the servers. This is not the same login as the GUI Administrator. The root password is required if recovery procedures are needed. If the root password is not the same on all other servers, then all root passwords for the servers must also be recorded; use additional space at the bottom of this table.

⁴ All logins into the NO servers are made via the External Management VIP unless otherwise stated.

3.2 Maintenance Window for PM&C and TVOE Upgrades

This document includes steps to upgrade PM&C and TVOE as an integrated activity with the upgrades of the Oracle Communications User Data Repository application. However, it is an option to perform these PM&C and TVOE upgrades as separately planned activities.

- PM&C Upgrade procedure is provided in reference [3].
- TVOE host environment upgrade procedures are included in architecture-specific sections this
 document.

Both PM&C and TVOE upgrades are backwards compatible to prior releases on Oracle Communications User Data Repository. It may be done a site-at-a-time.

3.3 Pre-Upgrade Procedures

The pre-upgrade procedures in Table 5 do not have an affect on the live system.

Table 5: Pre-Upgrade Overview

Procedure	Procedure Title	Elapsed Time (Hours:Minutes)		
Number	Troccadie nuic	This Step	Cumulative	
1	Required Materials Check	00:15	00:15	
2	ISO Administration	*	*	
Appendix B	Health Check Procedures (depends on number of servers)	0:10-1:15	00:25-01:30	

^{*}NOTE: ISO transfers to the target systems cannot be estimated because times vary significantly depending on the number of systems and the speed of the network.

The ISO transfers to the target systems must be performed before the scheduled maintenance window. Schedule the required maintenance windows accordingly.

3.3.1 Hardware Upgrade Preparation

Hardware preparation is not necessary when upgrading to release 12.6.2.

3.3.2 Review Release Notes

Before starting the upgrade, review the release notes for the Oracle Communications User Data Repository 12.6.2 release to understand the functional differences and possible traffic impacts of the upgrade.

It is important to check Oracle Communications UDR-PCRF compatibility before performing a major upgrade since all versions are not compatible. Release notes for this and all release are available at https://docs.oracle.com.

3.3.3 Required Materials Check

This procedure verifies that all required materials needed to perform an upgrade have been collected and recorded.

This procedure verifies that all required materials are present.

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 1: Required Materials Check

Step	Procedure	Result
1.	Verify all required materials are present.	Materials are listed in Section 3.1. Verify all required materials are present.
2.	Verify all administration data needed during upgrade.	Double-check that all information in Section 3.1.2 is filled-in and accurate.
3.	Contact Oracle CGBU Customer Care Center	Contact the My Oracle Support and inform them of plans to upgrade this system. See Appendix J for these instructions.

3.3.4 Perform Health Check (Upgrade Preparation)

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 2: Perform Health Check (Upgrade Preparation)

This procedure is part of software upgrade preparation and is used to determine the health and status of the Oracle Communications User Data Repository network and servers. This may be performed multiple times but must also be performed at least once in 24 to 36 hours before the start of the upgrade procedures.	Step	Procedure
Perform Health Check procedures as specified in Appendix B .	1.	the Oracle Communications User Data Repository network and servers. This may be performed multiple times but must also be performed at least once in 24 to 36 hours before the start of the upgrade procedures.

3.3.5 ISO Administration

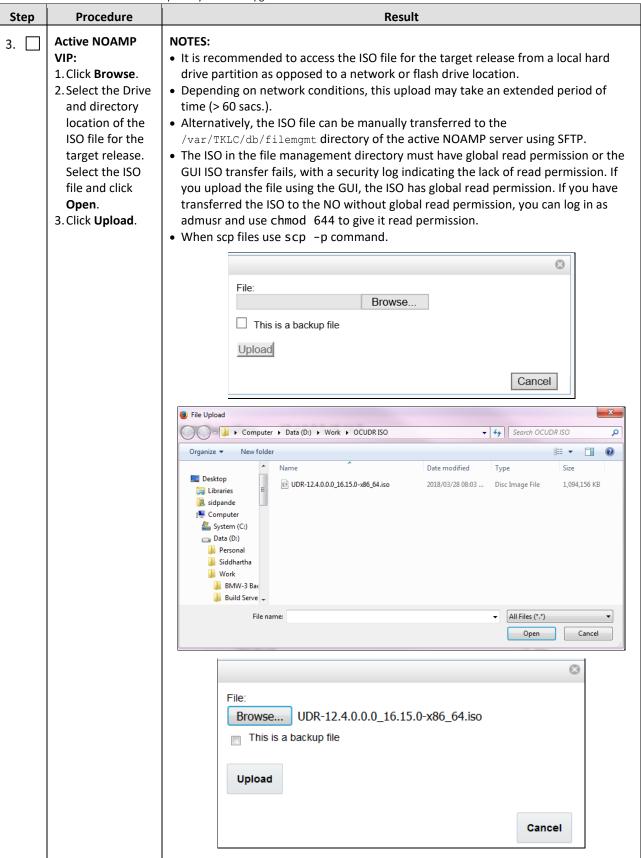

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 3: ISO Administration for Upgrades

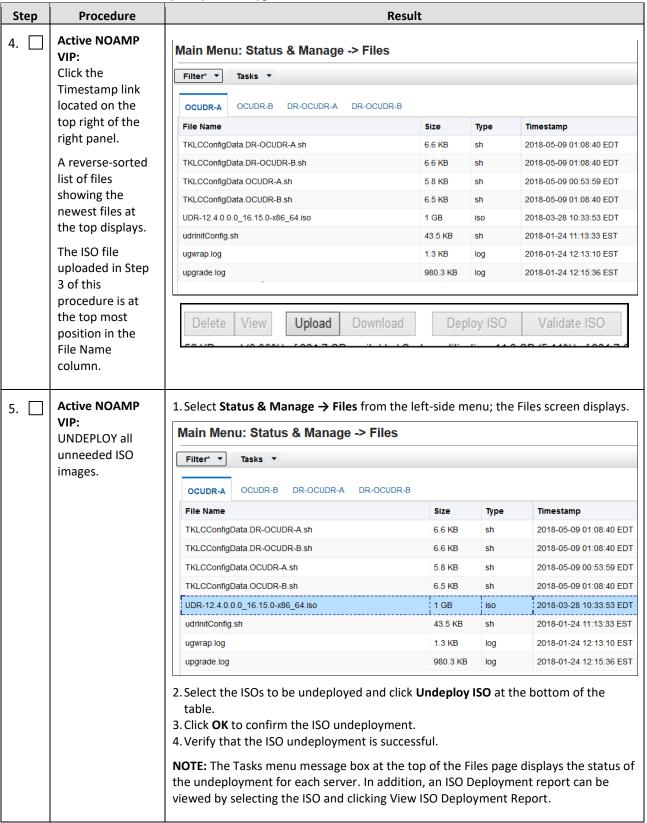

Step	Procedure	Result

	THIS PROCEDURE HAS BEEN COMPLETED					

3.3.6 Upgrade TVOE Hosts at a Site (before application upgrade MW)

This procedure applies if the TVOE hosts at a site (primary or DR) are upgraded before the start of the Oracle Communications User Data Repository 12.6.2 Upgrade of the NOs and other servers. Performing the TVOE upgrade before reduces the time required for Oracle Communications User Data Repository application upgrade procedures.

Precondition: The PM&C application at each site (and the TVOE host running the PM&C Virtual server, must be upgraded before performing TVOE host OS Upgrade for servers that are managed by this PM&C.

Impact: TVOE host upgrades require that the Oracle Communications User Data Repository applications running on the host be shut down for up to 30 minutes during the upgrade.

Procedure	This Step	Cum.	Procedure Title	Impact
Appendix B	0:01-0:05	0:01-0:05	Perform Health Check (Upgrade Preparation)	
Refer to [2]	30 min per TVOE host (see note)	0:01- 3:05	Upgrade TVOE Hosts at a Site (before application upgrade MW)	Oracle Communications User Data Repository servers running as virtual guests on the TVOE host is stopped and unable to perform their Oracle Communications User Data Repository role while the TVOE host is being upgraded.
Appendix B	0:01-0:05	0:02- 3:10	Verify health of site	

NOTE: Depending on the risk tolerance, it is possible to perform multiple TVOE upgrades in parallel.

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 4: Upgrade TVOE Hosts at a Site (before application upgrade MW)

Step	Procedure	Result
1.	Record site	Record Site to be upgraded
2.	Select Order of TVOE server upgrades	Record the TVOE hosts to be upgraded, in order: (It is best to upgrade standby servers before active servers, to minimize failovers. Otherwise, any order is OK.) ———————————————————————————————————
		NOTE: The site PM&C Software Inventory form typically lists the TVOE hosts at a site, and their versions.
3.	Upgrade the TVOE hosting the standby servers	Upgrade the TVOE host of a standby server: Perform Appendix G,Upgrade TVOE Platform
4.	Upgrade the TVOE hosting the active servers	Upgrade TVOE of the active server Perform Appendix G,Upgrade TVOE Platform NOTE: This causes a failover of the Oracle Communications User Data Repository on the TVOE.
5.	Repeat for TVOE hosts at a Site	Repeat steps 3 and 4 for multiple TVOE hosts at a site, as time permits.

3.4 Order of Application Upgrade

The following list displays the order to upgrade the servers (primary and DR sites):

- 4. Site 2 NOAMPs (DR spares)
- 5. Primary standby NOAMP
- 6. Primary active NOAMP

DSR Release 8.5.0.2.0 28 UDR Release 12.6.2

3.5 Upgrade Execution Overview for Normal Capacity C-Class Configuration

3.5.1 Primary NOAMP/DR NOAMP Execution Overview

The times in Table 6 and Table 7 are the estimated times for upgrading 2 NOAMPs and 2 DR NOAMPs. The DR NOAMPs are upgraded first, followed by the primary NOAMPs.

Table 6: DR NOAMP Upgrade Procedures for Normal Capacity C-Class Configurations

Chapter 4. Primary NOAMP/DR NOAMP Upgrade Execution

Open A Service Ticket at My Oracle Support (Appendix J) and inform them of your plans to upgrade this system before performing this upgrade.

Before upgrade, perform the system Health Check Appendix B.

This check ensures that the system to be upgraded is in an upgrade-ready state. Performing the system health check determines which alarms are present in the system and if upgrade can proceed with alarms.

**** WARNING *****

If there are servers in the system, which are not in the Normal state, put these servers into the Normal or the Application Disabled state before the upgrade process is started.

The sequence of upgrade is designed so that servers providing support services to other servers are upgraded first.

**** WARNING *****

Read the following notes on this procedure:

Procedure completion times listed in this document are estimates. Times may vary due to differences in database size, user experience, and user preparation.

Where possible, command response outputs are shown as accurately as possible. Exceptions are as follows:

- Session banner information such as time and date.
- System-specific configuration information such as hardware locations, IP addresses and hostnames.
- ANY information marked with XXXX or YYYY. Where appropriate, instructions are provided to determine what output is expected in place of XXXX or YYYY
- Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, toolbars, and button layouts.

After completing each step and at each point where data is recorded from the screen, the technician performing the upgrade must mark the provided checkbox.

For procedures which are performed multiple times, a mark can be made below the checkbox (in the same column) for each additional iteration of the step.

Retention of captured data is required for future support references.

4.1 Perform Health Check (Pre Upgrade)

Procedure 5: Health Check (Pre Upgrade)

1.	This procedure is part of software upgrade preparation and is used to determine the health and status of the
_	Oracle Communications User Data Repository network and servers. This may be performed multiple times
	but must also be performed at least once 24 to 36 hours before the start of a maintenance window.
	Perform Health Check procedures as specified in Appendix B .

DSR Release 8.5.0.2.0 31 UDR Release 12.6.2

4.2 Primary NOAMP/DR NOAMP Upgrade

This procedures detail how to perform upgrades for primary NOAMP and DR NOAMP servers.

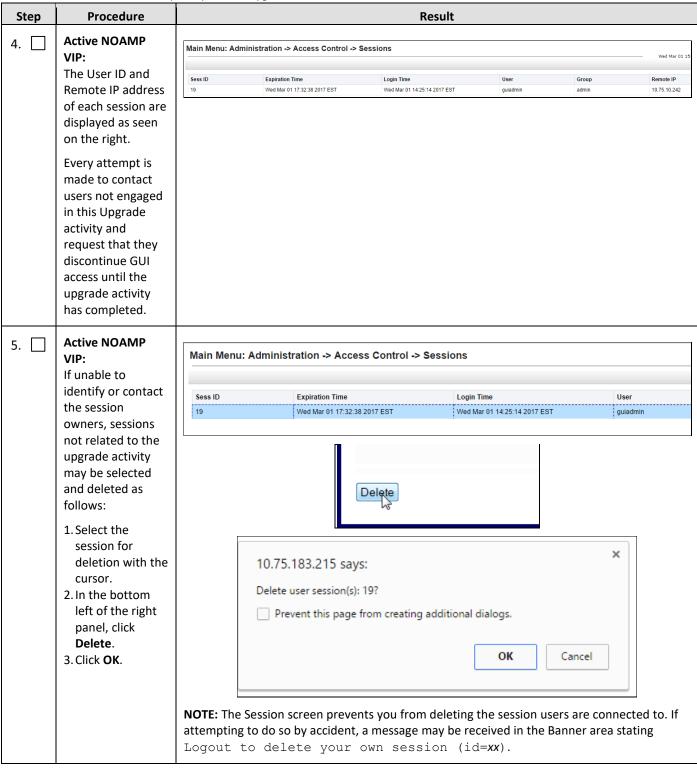

4.2.1 Remove Additional GUI Sessions

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

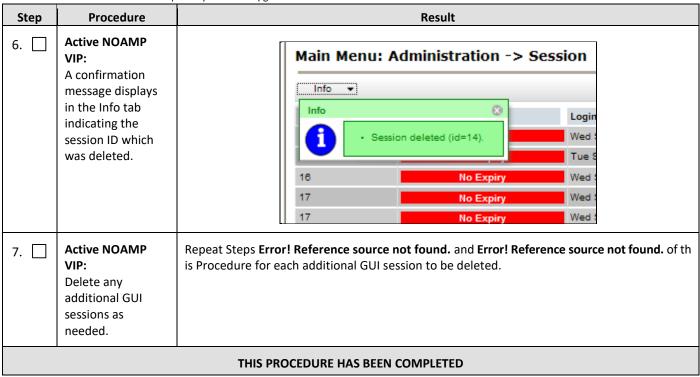

Procedure 6: Remove Additional GUI Sessions

Step	Procedure			Result			
1.	Using the VIP address, access the primary NOAMP GUI.	Access the	primary NOAMP GUI	as specified in Appen o	dix A.

4.3 Perform Health Check (Post Primary NOAMP/DR NOAMP Upgrade)

Procedure 12: Health Check (Post Primary NOAMP/DR NOAMP Upgrade)

Troccaure	2 12. Health Check (1 03t 1 Hillary NOAM) / DK NOAM) Opgrade/
1.	This procedure is part of software upgrade preparation and is used to determine the health and status
1	of the Oracle Communications User Data Repository network and servers.
	Perform Health Check procedures as specified in Appendix B .

DSR Release 8.5.0.2.0 45 UDR Release 12.6.2

Chapter 5. Single server upgrade

A 1-RMS server configuration is used for lab setup and virtualization demonstration only. This configuration does not support HA and is not intended for production network. This one server lab RMS supports the ability to perform and upgrade which allows all configuration data and database records to be carried forward to the next release.

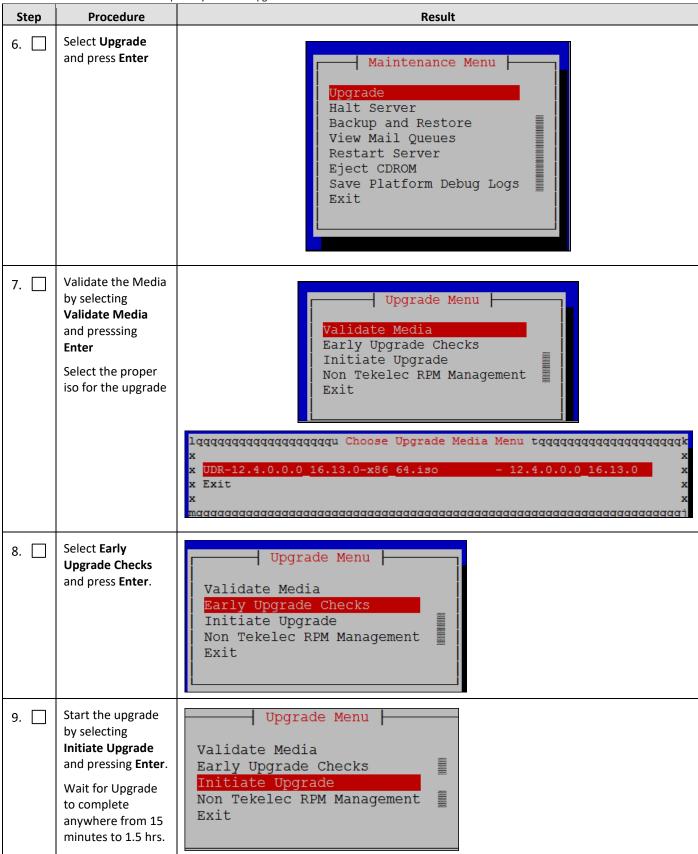

5.1 Upgrading a Single Server

This procedure is for upgrading a one server Lab RMS only.

Procedure 13: Upgrade Single Server

Step	Procedure	Result
1.	Identify NOAMP IP Address	Identify IP Address of the single NOAMP server to be upgraded.
2.	Server IMI IP (SSH): SSH to server and login as root user	Use your SSH client to connect to the server (ex. ssh, putty): ssh <server address=""> login as: admusr password: <enter password=""> Switch to root su - password: <enter password=""></enter></enter></server>
3.	Open the platcfg tool	su - platcfg
4.	Exit /var/TKLC/db/fil emgmt directory on server to be upgraded	Verify that there is not a user in the /var/TKLC/db/filemgmt directory
5.	Select Maintenance and press Enter	Maintenance Diagnostics Server Configuration Network Configuration Security Remote Consoles NetBackup Configuration Exit

DSR Release 8.5.0.2.0 46 UDR Release 12.6.2

Step	Procedure	Result				
10.	Accept the upgrade	Accept upgrade as specified in Procedure 15:Accept Upgrade.				
	THIS PROCEDURE HAS BEEN COMPLETED					

DSR Release 8.5.0.2.0 48 UDR Release 12.6.2

Chapter 6. Upgrade Acceptance

The upgrade must be accepted or rejected before any subsequent upgrades are performed.

The Alarm 32532 (Server Upgrade Pending Accept/Reject) displays for each server until one of these two actions (accept or reject) is performed.

An upgrade is only accepted after it is determined to be successful beacuse the accept action is final. This frees up file storage but prevents a backout from the previous upgrade.

6.1 Accept Upgrade

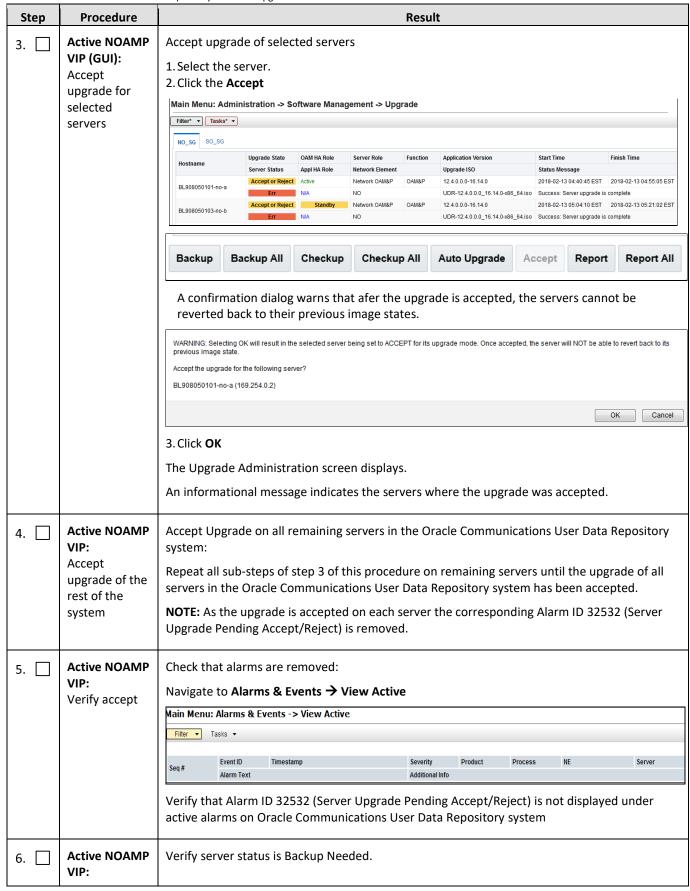

NOTE: After the upgrade is accepted for a server, that server is not allowed to backout to previous release from which the upgrade was done

This procedure details how to accept a successful upgrade of Oracle Communications User Data Repository system.

Procedure 14: Accept Upgrade

Step	Procedure		Result						
1.	Using the VIP IP, access the primary NOAMP GUI.	Access the pr	Access the primary NOAMP GUI as specified in Appendix A.

Chapter 7. TVOE Performance tuning

This script is necessary because it can be modified by the build. By making this script part of the upgrade, it is ensuring that new changes and tuning are applied after the upgrade is complete.

NOTE: This procedure does not apply to Oracle Communications User Data Repository Cloud based systems.

Procedure 15: TVOE Performance Tuning

Step	Procedure	Result
1.	NOAMP: Transfer file to TVOE host	Login to NOAMP and transfer file to TVOE HOST # scp /var/TKLC/db/filemgmt/udrInitConfig.sh \ admusr@ <tvoe_host_name>:/var/tmp admusr@<tvoe_host_name>'s password:<admusr_password> If an error message such as scp: /var/tmp/udrInitConfig.sh: Permission denied displays, delete the old file from TVOE or copy the old file with a new name such as udrInitConfig_1.sh and attempt the transfer again.</admusr_password></tvoe_host_name></tvoe_host_name>
2.	Login to TVOE host: 1. SSH to server. 2. Log into the server as the admusr user.	<pre># ssh admusr@<tvoe_host_name> admusr@<tvoe_host_name>'s password:<admusr_password></admusr_password></tvoe_host_name></tvoe_host_name></pre>
3.	TVOE host: Switch to root user.	[admusr@hostname1326744539 ~]\$ su - password: <root_password></root_password>
4.	TVOE host: Change directory.	# cd /var/tmp
5.	TVOE host: Update script permissions.	# chmod 555 udrInitConfig.sh
6.	TVOE host: Run configuration script as root	# ./udrInitConfig.sh Verify that failures are not reported. A trace to display the settings for all VM Guests on this server are listed in the output. If a failure occurrs, save the log file /var/TKLC/log/udrVMCfg/udrInitConfig.log and contact My Oracle Support (Appendix J) for assistance.

DSR Release 8.5.0.2.0 52 UDR Release 12.6.2

Step	Procedure	Result				
7.	TVOE host: Reboot the server.	# init 6 NOTE: Rebooting the TVOE host brings down the Oracle Communications User Data Repository servers running there. Be advised that this operation can affect traffic processing and HA status of related Oracle Communications User Data Repository servers in the network.				
	THIS PROCEDURE HAS BEEN COMPLETED					

DSR Release 8.5.0.2.0 53 UDR Release 12.6.2

Chapter 8. Recovery Procedures

Upgrade procedure recovery issues are directed to the My Oracle Support (Appendix J). Persons performing the upgrade are familiar with these documents.

Recovery procedures are covered under the Disaster Recovery Guide. Perfrom this procedure only if there is a problem and it is required to revert back to the pre-upgrade version of the software.

!! WARNING !!

Do not attempt to perform these backout procedures without first contacting the My Oracle Support. Refer to Appendix J.

!! WARNING !!

Backout procedures cause traffic loss.

NOTES:

These recovery procedures are provided for the backout of an upgrade only. (that is, for the backout from a failed target release to the previously installed release).

Backout of an initial installation is not supported.

8.1 Order of Backout

The following list displays the order to backout the servers (primary and DR sites):

- 1. DR NOAMPs (spares)
- 2. Primary standby NOAMP
- 3. Primary active NOAMP
- 4. TVOE and/or PM&C (if necessary, if upgraded as part of this procedure)

8.2 Backout Setup

Identify IP addresses of all servers that need to be backed out.

- 1. Select Administration → Software Management → Upgrade
- 2. Based on the Application Version column, identify all the hostnames that need to be backed out.
- 3. Select **Configuration** → **Servers**
- 4. Identify the IMI IP addresses of all the hostnames identified in step 2. These addresses are required to access the server when performing the backout.

The reason to perform a backout has a direct impact on any additional backout preparation that must be done. The backout procedure causes traffic loss.

NOTE: Verify that the two backup archive files created using the procedure in 4.2.2Full Database Backup (All Servers) are present on every server that is to be backed-out.

These archive files are located in the /var/TKLC/db/filemgmt directory and have different filenames than other database backup files.

The filenames have the format:

- Backup.<application>.<server>.FullDBParts.<role>.<date_time>.UPG.tar.bz2
- Backup.<application>.<server>.FullRunEnv.<role>.<date time>.UPG.tar.bz2

Appendix F. Determine if TVOE Upgrade is Required

When upgrading a server that exists as a virtual guest on a TVOE host, it is first necessary to determine whether the TVOE host (that is, bare-metal) server must first be upgraded to a newer release of TVOE.

NOAM servers are often implemented as TVOE guests in C-class deployments, so the TVOE upgrade check is necessary. MPs are deployed as guests on the same TVOE host as the OAM servers, and so by the time the MP servers are being upgraded, TVOE has been upgraded and there is no need to do so again.

NOTE: This procedure does not apply to Oracle Communications User Data Repository Cloud based systems.

This procedure checks if TVOE upgrade is required.

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 23: Determine if TVOE Upgrade is Required

Step	Procedure	Result					
1.	Determine the version of TVOE 1. Log into the host server where TVOE is installed. 2. Run the following command to get the current TVOE installed version.						
	running on the server that hosts	[root@udrTVOEblade2 ~]# appRev					
	the virtual guest	Install Time: Tue Aug 7 08:17:52 2012					
	being upgraded.	Product Name: TVOE					
		Product Release: 2.0.0_80.16.0					
		Part Number ISO: 872-2290-104					
		Part Number USB: 872-2290-104					
		Base Distro Product: TPD					
		Base Distro Release: 6.0.0_80.16.0					
		Base Distro ISO: TPD.install-6.0.0_80.16.0-CentOS7.4 -x86_64.iso					
		OS: CentOS 6.2					
2.	Check the TVOE release version required for target release	Contact My Oracle Support referring Appendix J of this document to determine the appropriate release version.					
3.	If the release in Step 1 is less than what is required in Step 2 then upgrade of TVOE is required	The procedure to upgrade TVOE on the host server is in Appendix G.					

DSR Release 8.5.0.2.0 85 UDR Release 12.6.2

Appendix G. Upgrade TVOE Platform

This appendix provides the procedure for upgrading TVOE on a host server that supports one or more Oracle Communications User Data Repository virtual guests.

If upgrading an Oracle Communications User Data Repository server that is deployed as a virtual guest on a bare-metal server running the TVOE host software, then TVOE itself may have to be upgraded first. Refer to Appendix F to determine if a TVOE upgrade is required.

NOTES:

- If you are upgrading a server that is not virtualized by TVOE, then this Appendix does not apply.
- This procedure does not apply to Oracle Communications User Data Repository Cloud based systems.

This procedure verifies that all required materials are present.

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 24: Upgeade TVOE Platform

Step	Procedure	Result					
1.	Disable all the applications	 Access the primary NOAMP GUI as specified in Appendix A Navigate to Status & Manage → Server 					
	running on current TVOE.	The Server Status screen is displayed					
		3. Identify the SO or MP (virtual) servers that are running on the TVOE environment to be upgraded, and select these 4. Click Stop . 5. Confirm the operation by clicking OK					
		6. Verify that the Appl State for all the selected servers changed to Disabled					
2.	Find out the guests running on TVOE host.	List the guests running on the TVOE host by using following command: # ssh admusr@ <tvoe ip=""> login as: admusr password: <enter password=""> Switch to root su - password: <enter password=""> # virsh listall NOTE: The output of the virsh list command lists all the guests running on current TVOE host.</enter></enter></tvoe>					
3.	Shutdown each	Run the following command for each guest identified in Step 2:					
	guest running on TVOE host.	<pre># virsh shutdown <guestname></guestname></pre>					
	TVOE HOSE.	NOTES					
		 Alternatively, you can use the Manage software inventory screen on PM&C to shutdown the guests. Server is not listed on the Status & Manage screen after being shutdown from the TVOE host. 					

DSR Release 8.5.0.2.0 86 UDR Release 12.6.2

Step	Procedure	Result					
4.	Upgrade TVOE	Periodically run the following command until the command displays no entries. This means that all VMs have been shut down: # virsh list After all VMs are down, upgrade TVOE using PM&C Aided TVOE Upgrade Procedure from TVOE 3.4 Software Upgrade Document, E80324, latest revision. NOTE: If active NO is hosted on the TVOE which is being upgraded, then VIP may be lost until TVOE is successfully upgraded.					
5.	After completed	After the TVOE upgrade is completed on the host server, the applications may not be started automatically. Proceed with the next step to restore service.					
6.	Verify Enable Virtual Guest Watchdog is set for VM	From the PM&C VM Management form, verify that Enable Virtual Watchdog is selected. Virtual Machine Management View VM Guest Name: minilab-PMAC Host: fe80c/7ae7/dffffeec:9540 Virtual Machine Management View VM Guest Name: minilab-PMAC Host: fe80c/7ae7/dffffeec:9540 VM UIID: b7aa504d-3326-190c-57a6-0defb381b4cb Enable Virtual Watchdog: Virtual Disks Prim Size (IB) Virtual Nics Host Bridge Guest Dev Name minilab-PMAC_grog minilab-grog					
7.	Enable all the applications disabled in step1	 Enable all applications running on current TVOE: Log into the NOAM VIP GUI Navigate to Status & Manage → Server. The Server Status screen is displayed Select all the applications (NOs/SOs) running on current TVOE, excluding the server which is in upgrade Ready state. The Upgrade State can be verified from the Administration → Upgrade screen. Click Restart. Confirm the operation by clicking OK. Verify that the Appl State for all the selected servers is Enabled. 					

DSR Release 8.5.0.2.0 87 UDR Release 12.6.2

Appendix H. Change Resources Allocated To VM Guests H.1 CHANGE VCPU CORES AND RAM ALLOCATED TO NOAMP GUESTS

This Appendix provides the procedure for changing VCPU cores and RAM allocated to NOAMP virtual guests.

This needs PM&C GUI screen.

This procedure has to be followed only if it is being done for either of the following cases:

- 1. upgrade is being done from G8 profile to G9 profile;
- 2. upgrade is being done from Oracle Communications User Data Repository 10.2.x Oracle RMS low capacity setup;

NOTE: If you are upgrading to a G8 profile then this appendix does not apply.

NOTE: This procedure does not apply to Oracle Communications User Data Repository Cloud based systems.

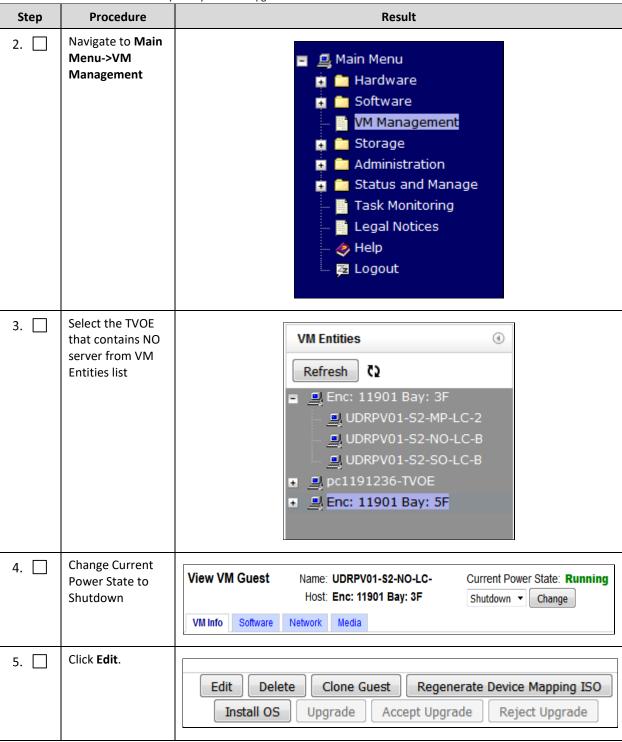

This procedure verifies that all required materials are present.

Check off ($\sqrt{}$) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure 25: Change VCPU Cores and RAM Allocated To NOAMP Guests

Step	Procedure	Result

Appendix J. My Oracle Support

My Oracle Support (https://support.oracle.com) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with My Oracle Support registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at http://www.oracle.com/us/support/contact/index.html. When calling, make these selections on the Support telephone menu:

- 1. Select **2** for New Service Request
- 2. Select **3** for Hardware, Networking and Solaris Operating System Support
- 3. Select one of the following options:
 - o For Technical issues such as creating a Service Request (SR), Select 1
 - o For Non-technical issues such as registration or assistance with My Oracle Support, Select 2

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

DSR Release 8.5.0.2.0 94 UDR Release 12.6.2

Appendix K. Locate Product Documentation on the Oracle Help Center SITE

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, http://docs.oracle.com. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at http://www.adobe.com.

- 1. Log into the Oracle Technology Network site at http://docs.oracle.com.
- 2. Select the **Find a product**
- 3. Enter User Data Repository

Takes you to CGBU Documentation.

A list of the documentation set for the selected product and release displays.

- 4. Select **User Data Repository** followed by version
- 5. To download a file to your location, right-click the **PDF**, select **Save target as** (or similar command based on your browser), and save to a local folder.
