# About This Guide

---

## Scope

Use this guide to learn more about the types of events that can be triggered when using P6.

## Audience

This guide is intended to be used by system and network administrators.

Within our documentation, some content might be specific for cloud deployments while other content is relevant for on-premises deployments. Any content that applies to only one of these deployments is labeled accordingly.

## About Personal Information

---

Personal information (PI) is any piece of data which can be used on its own or with other information to identify, contact or locate an individual or identify an individual in context. This information is not limited to a person's name, address, and contact details, for example a person's IP address, phone IMEI number, gender, and location at a particular time could all be personal information. Organizations are responsible for ensuring the privacy of PI wherever it is stored, including in back-ups, locally stored downloads, and data stored in development environments.

---

**Caution:** Personal information (PI) may be at risk of exposure.  
Depending on local data protection laws organizations may be responsible for mitigating any risk of exposure.

---

## Overview of Eventing

---

Depending on administrative settings, events can be triggered by changes that take place in the P6 database. These events can be classified into two types of events:

- ▶ **Business object events:** Triggered when the P6, the P6 Integration API (on-premises only), or P6 EPPM Web Services is used to update or create objects in the P6 database.
- ▶ **Special operation events:** Triggered when a supported operation or job service is invoked.

When a change triggers an event, the P6 Event Notification system sends the event message to a user configured message queue. You can use the events in a client application to trigger subsequent actions. You could, for example, launch an external workflow based on the existence of a specific event.

---

**Note:** The content in this section details optional configuration for P6.  
You do not need to configure eventing for P6 in order to enable P6 for

---

users to work in the application.

---

## Event Triggers

An event may be one of two types, a business object event or a special operation event.

- ▶ See **Business Object Events** for a list of business object events.
- ▶ See **Special Operation Events** for a list of special operation events.

### Changes that trigger events

With the exception of the Timesheet object, create and update changes made to supported objects using P6, the P6 Integration API (on-premises only), or P6 EPPM Web Services will trigger an event. When a status change is made to a Timesheet object using P6, a TimesheetUpdated event will be triggered.

### Changes that do not trigger events

The following create and update changes do not trigger events:

- ▶ Create and update changes made to objects that do not support events
- ▶ Create and update changes made to objects that support events but are not configured to send events
- ▶ Changes made in P6 Professional

---

**Note:** Additionally, an event is triggered when you run either the Apply Actuals or Summarize Job service from P6 Professional. Receiving either of these events depends on administrative settings and requires that P6, the P6 Integration API (on-premises only), or P6 EPPM Web Services is running on the same database as P6 Professional.

---

## Business Object vs Special Operation Events

Events are triggered when a supported business object is updated or changed. Forty-seven P6 business objects support both create and update event notification messages.

---

**Note:** Only updates to physical fields trigger events. Updates or changes to calculated fields or BLOBs, GUIDs, or SequenceNumbers do not trigger events.

---

In addition to update and create changes to the database, changes caused by special operations also trigger events. Twenty-two special operations trigger events when the operation specified by the message completes.

- ▶ See **Business Object Events** (on page 9) for additional information about business object events.
- ▶ See **Special Operation Events** (on page 13) for additional information about special operation events.

Administrators can enable and disable event notification messages on a per object basis. Refer to the *P6 EPPM Application Administration Guide* for additional information.

## Business Object Events

Forty-seven P6 business objects support create and update event notification messages. Administrators can enable and disable event notification messages on a per object basis.

The table below lists the business objects that support event notification messages along with the message that is sent when an event is triggered:

Object	Notification Message	Triggered Message
Activity	<b>ActivityCreated Message</b> (on page 20)	<b>ActivityUpdated Message</b> (on page 21)
ActivityCodeAssignment	<b>ActivityCodeAssignmentCreated Message</b> (on page 19)	<b>ActivityCodeAssignmentUpdated Message</b> (on page 19)

## Sample Business Object Event Message

Sample ActivityCreated Message: When an activity is created, the system sends an ActivityCreated message similar to the following message:

```
<?xml version="1.0" encoding="UTF-8"?>
<MessagingObjects
  xmlns="http://xmlns.oracle.com/Primavera/P6/V8.2/Common/Event"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <ActivityCreated>
    <Id>Auto-1</Id>
    <ObjectId>125500</ObjectId>
    <ProjectObjectId>11840</ProjectObjectId>
    <WBSObjectId>36320</WBSObjectId>
  </ActivityCreated>
</MessagingObjects>
```

Sample ActivityUpdated Message: When an activity is updated, the system sends an ActivityUpdated message similar to the following message:

```
<?xml version="1.0" encoding="UTF-8"?>
<MessagingObjects
  xmlns="http://xmlns.oracle.com/Primavera/P6/V8.2/Common/Event"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <ActivityUpdated>
    <Id>Auto-1</Id>
    <Name>t2</Name>
    <ObjectId>125500</ObjectId>
    <ProjectObjectId>11840</ProjectObjectId>
    <WBSObjectId>36320</WBSObjectId>
    <NewValues>
      <Name>t2</Name>
    </NewValues>
    <OldValues>
      <Name>Auto-1</Name>
    </OldValues>
  </ActivityUpdated>
</MessagingObjects>
```

## Special Operation Events

Special operation events are triggered when the operations listed below complete. The special operation event messages contain operation-specific fields that are included with the message depending on which operation triggered the event message. For additional information relating to the messages, refer to the reference section of this document or the p6events.xsd schema file that is shipped on P6 media.

**JobService:** Occurs when the JobService completes. The event message includes a status element that indicates whether the operation completed successfully or not.

**Publication Service:** Occurs when the specified Publish service completes. The event message includes a status element that indicates whether the operation completed successfully or not.

**API:** Occurs after an XML file has been imported regardless of success or failure of the import.

**Content Repository:** Occurs when a document has been successfully checked into the content repository, or when a folder or document has been successfully added to the repository.

**Stored Procedure:** Occurs when the stored procedure completes successfully.

Special Operation Type	Operation	Message
Job Service	ApplyActuals	<b>ApplyActualsInvoked Message</b> (on page 111)
Job Service	CopyProject	<b>CopyProjectInvoked Message</b> (on page 115)
Job Service	CopyorCreateBaseline	<b>CopyBaselineInvoked Method</b> (on page 113) or <b>CreateBaselineInvoked Message</b> (on page 115)
Job Service	Export	<b>ExportInvoked Message</b> (on page 117)
Job Service	GlobalSearchandReplace	<b>GlobalSearchandReplaceInvoked Message</b> (on page 118)
Job Service	Import	<b>ImportInvoked Message</b> (on page 119)
Job Service	Level	<b>LevelInvoked Message</b> (on page 119)
Job Service	PublishAuditdata	<b>PublishAuditdataInvoked Message</b> (on page 120)
Job Service	RecalculateAssignmentCosts	<b>RecalculateAssignmentCosts Invoked Message</b> (on page 124)
Job Service	Schedule	<b>ScheduleInvoked Message</b> (on page 125)

Special Operation Type	Operation	Message
Job Service	StorePeriodPerformance	<b><i>StorePeriodPerformanceInvoked Message</i></b> (on page 126)
Job Service	Summarize	<b><i>SummarizeInvoked Message</i></b> (on page 127)
Job Service	Updatebaseline	<b><i>UpdatebaselineInvoked Message</i></b> (on page 128)
Publication Service	PublishProject	<b><i>PublishProjectInvoked Message</i></b> (on page 121)
Publication Service	PublishEnterpriseData	<b><i>PublishEnterpriseDataInvoked Message</i></b> (on page 120)
Publication Service	PublishSecurity	<b><i>PublishSecurityInvoked Message</i></b> (on page 124)
Publication Service	PublishEnterpriseSummaries	<b><i>PublishEnterpriseSummariesInvoked Message</i></b> (on page 121)
Publication Service	PublishResourceManagement	<b><i>PublishResourceManagementInvoked Message</i></b> (on page 122)
Publication Service	PublishResourceRoleAssignmentSpread	<b><i>PublishResourceRoleAssignmentSpreadInvoked Message</i></b> (on page 123)
API	XML Import	<b><i>XMLImportInvoked Message</i></b> (on page 129)
Content Repository	AddDocument	<b><i>ContentRepositoryDocumentAdded Message</i></b> (on page 112)
Content Repository	AddFolder	<b><i>ContentRepositoryFolderAdded Message</i></b> (on page 112)
Content Repository	CheckIn	<b><i>ContentRepositoryDocumentCheckedIn Message</i></b> (on page 112)
Stored Procedure	ConvertProjectToBaseline	<b><i>ConvertProjectToBaselineInvoked Message</i></b> (on page 112)
Stored Procedure	CreateProjectFromTemplate	<b><i>CreateProjectFromTemplateInvoked Message</i></b> (on page 117)
Stored Procedure	CreateTemplateFromProject	<b><i>CreateTemplatefromProjectInvoked Message</i></b> (on page 117)
Stored Procedure	RestoreBaselineProject	<b><i>RestoreBaselineProjectInvoked Message</i></b> (on page 125)

## JMS Message Properties Support

Using JMS messages properties, you can select event messages that are received for P6 based on the following message properties:

- ▶ Type
- ▶ Group
- ▶ Name
- ▶ Operation

Property Name	Possible Property Values
Type	<ul style="list-style-type: none"><li>▶ Business Objects</li><li>▶ Special Operations</li></ul>
Group	<ul style="list-style-type: none"><li>▶ <b>For business object events:</b> Activity, EPS...</li><li>▶ <b>For special operations events:</b> Job Service, API...</li></ul>

Name	<ul style="list-style-type: none"> <li>▶ <b>For business object events:</b> <ul style="list-style-type: none"> <li>▶ <b>Activity:</b> Activity, ActivityCodeAssignment, ActivityExpense, ActivityNote, ActivityOwner, ActivityStep, Relationship, ResourceAssignment</li> <li>▶ <b>EPS:</b> EPS EPSBudgetChangeLog, EPSPricing, EPSNote</li> <li>▶ <b>Global:</b> Calendar, Timesheet, User, UserOBS</li> <li>▶ <b>Project:</b> BaselineProject, Project, ProjectBudgetChangeLog, ProjectCodeAssignment, ProjectFunding, ProjectIssue, ProjectNote, ProjectPortfolio, ProjectResource, WBS</li> <li>▶ <b>Resource:</b> Resource, ResourceCodeAssignment, ResourceRate, ResourceRole, ResourceTeam, Role, RoleRate, RoleTeam</li> <li>▶ <b>Risk:</b> ActivityRisk, Risk, RiskCategory, RiskImpact, RiskMatrix, RiskMatrixScore, RiskMatrixThreshold, RiskResponseAction, RiskResponseActionImpact, RiskResponsePlan, RiskThreshold, RiskThresholdLevel</li> <li>▶ <b>UDF:</b> UDF</li> </ul> </li> <li>▶ <b>For special operations events:</b> Apply Actuals, Schedule...           <ul style="list-style-type: none"> <li>▶ <b>Job Service:</b> Apply Actuals, Schedule, Store Period Performance, Summarize, Level, Recalculate Assignment Costs</li> <li>▶ <b>Publication Service:</b> Publish Project, Publish Enterprise Data, Publish Enterprise Summaries, Publish Resource Management, Publish Security</li> <li>▶ <b>API:</b> XML Import</li> <li>▶ <b>Content Repository:</b> Add Document, Add Folder, Check In</li> <li>▶ <b>Stored Procedures:</b> Copy Project, Copy Project As Baseline, Create project From Template, Create Copy As Template, Copy Baseline Project, Restore Baseline Project, Convert project to Baseline</li> </ul> </li> </ul>
Operation (only for business object events)	<ul style="list-style-type: none"> <li>▶ Created</li> <li>▶ Updated</li> </ul>

## Sample Special Operation Event Message

A message similar to the following is triggered by the ScheduledInvoked event:

```
<?xml version="1.0" encoding="UTF-8" standalone="no"?>
<MessagingObjects
  xmlns="http://xmlns.oracle.com/Primavera/P6/V8.2/Common/Event"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <ScheduleInvoked>
    <DataDate>2015-01-03T08:00:00</DataDate>
    <Project>
      <Id>Auto-Testproj2</Id>
      <Name>Auto-Testproj2</Name>
      <ObjectId>1001</ObjectId>
    </Project>
    <Status>Completed</Status>
  </ScheduleInvoked>
</MessagingObjects>
```

Business Object Event Message Contents .....	19
Special Operation Event Message Contents .....	111

## Business Object Event Message Contents

### ActivityCodeAssignmentCreated Message

Field	Type	Description
ActivityCodeObjectId	int	The unique ID of the associated activity code.
ActivityCodeTypeObjectId	int	The unique ID of the parent activity code type.
ActivityObjectId	int	The unique ID of the activity to which the activity code is assigned.
ProjectObjectId	int	The unique ID of the associated project.

### ActivityCodeAssignmentUpdated Message

Field	Type	Description
ActivityCodeObjectId	int	The unique ID of the associated activity code.
ActivityCodeTypeObjectId	int	The unique ID of the parent activity code type.
ActivityObjectId	int	The unique ID of the activity to which the activity code is assigned.
ProjectObjectId	int	The unique ID of the associated project.

NewValues	<p>ActivityCodeAssignment Type</p> <p>Refer to the entries in the <b>ActivityCodeAssignmentType</b> Table below.</p> <p>Additional information can be found in the p6events.xsd schema.</p>	The new values of Physical and writable fields that have changed.
OldValues	<p>ActivityCodeAssignment Type</p> <p>Refer to the entries in the <b>ActivityCodeAssignmentType</b> Table below.</p> <p>Additional information can be found in the p6events.xsd schema.</p>	The old values of Physical and writable fields that have changed.

### ActivityCodeAssignmentType Table

Type: ActivityCodeAssignmentType	
Elements	Type
ActivityCodeObjectId	int
ActivityObjectId	int

### ActivityCreated Message

Field	Type	Description
Id	string	The short ID that uniquely identifies the activity within the project.
Name	string	The name of the activity. The activity name does not have to be unique.
ObjectId	int	The unique ID generated by the system.

Field	Type	Description
ProjectObjectId	int	The unique ID of the associated project.
WBSObjectId	int	The unique ID of the WBS for the activity.

### ActivityUpdated Message

Field	Type	Description
Id	string	The short ID that uniquely identifies the activity within the project.
Name	string	The name of the activity. The activity name does not have to be unique.
ObjectId	int	The unique ID generated by the system.
ProjectObject Id	int	The unique ID of the associated project.
WBSObjectId	int	The unique ID of the WBS for the activity.
NewValues	ActivityType Refer to the entries in the <b>ActivityType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	ActivityType Refer to the entries in the <b>ActivityType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

**ActivityType Table**

Type	string restricted to 'Task Dependent' 'Resource Dependent' 'Level of Effort' 'Start Milestone' 'Finish Milestone' 'WBS Summary'
WBSObjectId	int

### ActivityExpenseCreated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the project expense is linked. Every project expense is associated with one activity in the project.
CostAccountObjectId	int	The unique ID of the cost account associated with the project expense.
ExpenseCategoryObjectI	int	The unique ID of the expense category for the project expense.
ExpenseItem	string	The name of the project expense.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.

### ActivityExpenseUpdated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the project expense is linked. Every project expense is associated with one activity in the

Field	Type	Description
		project.
CostAccountObjectId	int	The unique ID of the cost account associated with the project expense.
ExpenseCategoryObjectId	int	The unique ID of the expense category for the project expense.
ExpenseItem	string	The name of the project expense.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.
NewValues	ActivityExpenseType Refer to the entries in the <b>ActivityExpenseType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	ActivityExpenseType Refer to the entries in the <b>ActivityExpenseType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

### ActivityExpenseType Table

Type: ActivityExpenseType	
Elements	Type

AccrualType	string restricted to 'Start of Activity' 'End of Activity' 'Uniform Over Activity'
ActivityObjectId	int
ActualCost	double
AutoComputeActuals	boolean
CostAccountObjectId	int
DocumentNumber	string
ExpenseCategoryObjectId	int
ExpenseItem	string
ObjectId	int
PlannedCost	double
PlannedUnits	double
PricePerUnit	double
RemainingCost	double
UnitOfMeasure	string
Vendor	string

### ActivityNoteCreated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the activity note is assigned.
NotebookTopicObjectId	int	The unique ID of the associated notebook topic.
ObjectId	int	The unique ID generated by the system.

## ActivityNoteUpdated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the activity note is assigned.
NotebookTopicObjectId	int	The unique ID of the associated notebook topic.
ObjectId	int	The unique ID generated by the system.
NewValues	ActivityNoteType Refer to the entries in the <b>ActivityNoteType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	ActivityNoteType Refer to the entries in the <b>ActivityNoteType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

## ActivityNoteType Table

Type: ActivityNoteType	
Elements	Type
ActivityObjectId	int
NotebookTopicObjectId	int
ObjectId	int

## ActivityOwnerCreated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the associated activity.
ProjectObjectId	int	The unique ID of the associated project.
UserObjectId	int	The unique ID of the associated user.

## ActivityOwnerUpdated Message

Field	Type	Description
ActivityObject Id	int	The unique ID of the associated activity.
ProjectObject Id	int	The unique ID of the associated project.
UserObjectId	int	The unique ID of the associated user.
NewValues	ActivityOwnerType Refer to the entries in the <b>ActivityOwnerType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	ActivityOwnerType Refer to the entries in the <b>ActivityOwnerType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

## ActivityOwnerType Table

Type: ActivityOwnerType	
Elements	Type

ActivityObjectId	int
IsActivityFlagged	boolean
UserObjectId	int

### ActivityRiskCreated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the risk is assigned.
ProjectObjectId	int	The unique ID of the associated project.
RiskObjectId	int	The unique ID of the associated risk.

### ActivityRiskUpdated Message

Field	Type	Description
ActivityObject Id	int	The unique ID of the activity to which the risk is assigned.
ProjectObject Id	int	The unique ID of the associated project.
RiskObjectId	int	The unique ID of the associated risk.
NewValues	ActivityRiskType Refer to the entries in the <b>ActivityRiskType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.

OldValues	<p><b>ActivityRiskType</b>            Refer to the entries in the <b>ActivityRiskType</b> Table below.            Additional information can be found in the p6events.xsd schema.</p>	The old values of Physical and writable fields that have changed.

Elements	Type
Lag	double
ObjectId	int
PredecessorActivityObjectId	int
PredecessorProjectObjectId	int
SuccessorActivityObjectId	int
SuccessorProjectObjectId	int
Type	string restricted to 'Finish to Start' 'Finish to Finish' 'Start to Start' 'Start to Finish'

### ResourceAssignmentCreated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the resource is assigned.
CostAccountObjectId	int	The unique ID of the cost account associated with

		this resource assignment.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.
ResourceObjectId	int	The unique ID of the associated resource.
RoleObjectId	int	The unique ID of the role the resource is performing on this activity. A resource may be assigned to the same activity more than once, performing different roles. The project manager controls whether the same resource can be assigned to an activity more than once.

### ResourceAssignmentUpdated Message

Field	Type	Description
ActivityObjectId	int	The unique ID of the activity to which the resource is assigned.
CostAccountObjectId	int	The unique ID of the cost account associated with this resource assignment.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.
ResourceObjectId	int	The unique ID of the associated resource.
RoleObjectId	int	The unique ID of the role the resource is performing on this activity. A resource may be assigned to the same activity more than once, performing different roles. The project manager controls whether the same resource can be assigned to an activity more than once.

## RiskCategoryCreated Message

Field	Type	Description
Name	string	The name of the risk category.
ObjectId	int	The unique ID generated by the system.
ParentObjectId	int	The unique ID of the parent risk type of this risk type in the hierarchy.

## RiskCategoryUpdated Message

Field	Type	Description
Name	string	The name of the risk category.
ObjectId	int	The unique ID generated by the system.
ParentObjectId	int	The unique ID of the parent risk type of this risk type in the hierarchy.
NewValues	<p>RiskCategoryType</p> <p>Refer to the entries in the <b>RiskCategoryType</b> Table below.</p> <p>Additional information can be found in the p6events.xsd schema.</p>	The new values of Physical and writable fields that have changed.
OldValues	<p>RiskCategoryType</p> <p>Refer to the entries in the <b>RiskCategoryType</b> Table below.</p> <p>Additional information can be found in the p6events.xsd schema.</p>	The old values of Physical and writable fields that have changed.

### RiskCategoryType Table

Type: RiskCategoryType	
Elements	Type
Name	string
ObjectId	int
ParentObjectId	int

### RiskCreated Message

Field	Type	Description
Id	string	The ID of the Risk. Must be unique within a project.
IdentifiedByResourceObjectId	int	The unique ID of the resource that identified the risk.
IdentifiedDate	dateTime	The date this risk was identified.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.
ResourceObjectId	int	The unique ID of the associated resource.
RiskCategoryObjectId	int	The unique ID of the category to which the Risk is assigned. e.g. Weather, Health, Legal etc. A Risk can only be associated with a single category.

### RiskUpdated Message

Field	Type	Description
Id	string	The ID of the Risk. Must be unique within a project.
IdentifiedByResourceO	int	The unique ID of the resource

objectId		that identified the risk.
IdentifiedDate	dateTime	The date this risk was identified.
ObjectId	int	The unique ID generated by the system.
ProjectObjectId	int	The unique ID of the associated project.
ResourceObjectId	int	The unique ID of the associated resource.
RiskCategoryObjectId	int	The unique ID of the category to which the Risk is assigned. e.g. Weather, Health, Legal etc. A Risk can only be associated with a single category.
NewValues	RiskType Refer to the entries in the <b>RiskType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.

Roles	

### TimesheetUpdated Message

Field	Type	Description
ResourceId	string	The short code that uniquely identifies the resource.
ResourceName	string	The name of the resource.
ResourceObjectId	int	The unique ID of the associated resource.
StatusDate	dateTime	The date on which the status of the timesheet was last changed.
TimesheetPeriodObjectId	int	The unique ID of the timesheet period.

UserName	string	The user name who updated the timesheet.
UserObjectId	int	The unique ID of the associated user.
NewValues	TimesheetType Refer to the entries in the <b>TimesheetType</b> Table below.  Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	TimesheetType Refer to the entries in the <b>TimesheetType</b> Table below.  Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

### TimesheetType Table

Type: TimesheetType	
Elements	Type
Status	string restricted to 'Submitted' 'Approved' 'Resource Manager Approved' 'Project Manager Approved' 'Active' 'Rejected' 'Not Started' 'Resubmitted' 'Reopened' 'Submitted for RM' 'Resubmitted for RM'

## UDFValueCreated Message

Field	Type	Description
Cost	double	The value of the cost UDF.
Double	double	The value of the double UDF.
FinishDate	dateTime	The value of the finish date UDF.
ForeignObjectId	int	The unique ID of the business object to which the UDF is assigned: ProjectObjectId, ActivityObjectId, ResourceObjectId, etc.
Indicator	string restricted to 'None' 'Red' 'Yellow' 'Green' 'Blue'	The value of the indicator UDF.
Integer	int	The value of the integer UDF.
ProjectObjectId	int	The unique ID of the associated project.
StartDate	dateTime	The value of the start date UDF.
Text	string	The value of the text UDF.
UDFCodeObjectId	int	The unique ID of the associated UDF code.
UDFTypeObjectId	int	The unique ID of the associated UDF type.
UDFTypeSubjectArea	string restricted to 'Activity' 'Activity Expense' 'Activity Step' 'Project' 'Project Issue' 'Project Risk'	The subject area of the associated user-defined field type.

	'Resource' 'Resource Assignment' 'WBS' 'Work Products and Documents' 'Activity Step Template Item'	
--	--	--

### UDFValueUpdated Message

Field	Type	Description
ForeignObjectId	int	The unique ID of the business object to which the UDF is assigned: ProjectObjectId, ActivityObjectId, ResourceObjectId, etc.
ProjectObjectId	int	The unique ID of the associated project.
UDFCodeObjectId	int	The unique ID of the associated UDF code.
UDFTypeObjectId	int	The unique ID of the associated UDF type.
UDFTypeSubjectArea	string restricted to 'Activity' 'Activity Expense' 'Activity Step' 'Project' 'Project Issue' 'Project Risk' 'Resource' 'Resource Assignment' 'WBS' 'Work Products and Documents' 'Activity Step Template Item'	The subject area of the associated user-defined field type..

NewValues	UDFValueType Refer to the entries in the <b>UDFValueType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	UDFValueType Refer to the entries in the <b>UDFValueType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

### UDFValueType Table

Type: UDFValueType	
Elements	Type
Cost	double
Double	double
FinishDate	dateTime
ForeignObjectId	int
Indicator	string restricted to 'None' 'Red' 'Yellow' 'Green' 'Blue'
Integer	int
StartDate	dateTime
Text	string

UDFCodeObjectId	int
UDFTypeObjectId	int

### UserCreated Message

Field	Type	Description
Name	string	The user's login name.
ObjectId	int	The unique ID generated by the system.
PersonalName	string	The user's personal or actual name.

### UserUpdated Message

Field	Type	Description
Name	string	The user's login name.
ObjectId	int	The unique ID generated by the system.
PersonalName	string	The user's personal or actual name.
NewValues	UserType Refer to the entries in the <b>UserType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	UserType Refer to the entries in the <b>UserType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

**UserType Table**

Type: UserType	
Elements	Type
AllResourceAccessFlag	boolean
CurrencyObjectId	int
EmailAddress	string
EmailProtocol	string restricted to 'Internet Mail' 'MAPI Mail'
EnableUserToModifyViewSettingsFlag	boolean
GlobalProfileObjectId	int
MailServerLoginName	string
Name	string
ObjectId	int
OfficePhone	string
OutgoingMailServer	string
PersonalName	string
ReportingFlag	boolean
UserInterfaceViewObjectId	int

**UserOBSCreated Message**

Field	Type	Description
OBSObjectId	int	The unique ID of the OBS to which the user is granted access.

UserObjectId	int	The unique ID of the user who is assigned to the project OBS.
--------------	-----	---

### UserOBSUpdated Message

Field	Type	Description
OBSObjectId	int	The unique ID of the OBS to which the user is granted access.
UserObjectId	int	The unique ID of the user who is assigned to the project OBS.
NewValues	UserOBSType Refer to the entries in the <b>UserOBSType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	UserOBSType Refer to the entries in the <b>UserOBSType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

### UserOBSType Table

Type: UserOBSType	
Elements	Type
OBSObjectId	int
ProjectProfileObjectId	int
UserObjectId	int

## WBSCreated Message

Field	Type	Description
Code	string	The short code assigned to each WBS element for identification. Each WBS element is uniquely identified by concatenating its own code together with its parents' codes.
Name	string	The name of the WBS element.
ObjectId	int	The unique ID generated by the system.
ParentObjectId	int	The unique ID of the parent WBS of this WBS in the hierarchy.
ProjectObjectId	int	The unique ID of the associated project.
StatusReviewerObjectId	int	The unique ID generated by the system.

## WBSUpdated Message

Field	Type	Description
Code	string	The short code assigned to each WBS element for identification. Each WBS element is uniquely identified by concatenating its own code together with its parents' codes.
Name	string	The name of the WBS element.
ObjectId	int	The unique ID generated by the system.
ParentObjectId	int	The unique ID of the parent WBS of this WBS in the hierarchy.
ProjectObjectId	int	The unique ID of the associated project.
StatusReviewerObjectId	int	The unique ID generated by the

Field	Type	Description
d		system.
NewValues	WBSType Refer to the entries in the <b>WBSType</b> Table below. Additional information can be found in the p6events.xsd schema.	The new values of Physical and writable fields that have changed.
OldValues	WBSType Refer to the entries in the <b>WBSType</b> Table below. Additional information can be found in the p6events.xsd schema.	The old values of Physical and writable fields that have changed.

### WBSType Table

Type: WBSType	
Elements	Type
AnticipatedFinishDate	dateTime
AnticipatedStartDate	dateTime
Code	string
EarnedValueComputeType	string restricted to 'Activity Percent Complete' '0 / 100' '50 / 50' 'Custom Percent Complete' 'WBS Milestones Percent Complete' 'Activity Percent Complete Using Resource Curves'

EarnedValueETCComputeType	string restricted to 'ETC = Remaining Cost for Activity' 'PF = 1' 'PF = Custom Value' 'PF = 1 / CPI' 'PF = 1 / (CPI * SPI)'
EarnedValueETCUserValue	double
EarnedValueUserPercent	double
IndependentETCLaborUnits	double
IndependentETCTotalCost	double
IntegratedType	string restricted to 'ERP' 'Fusion' 'Gateway'
IntegratedWBS	Boolean
Name	string
OBSObjectId	int
ObjectId	int
OriginalBudget	double
ParentObjectId	int
ProjectObjectId	int
Status	string restricted to 'Planned' 'Active' 'Inactive' 'What-If' 'Requested' 'Template'
StatusReviewerObjectId	int

WBSCategoryObjectId	int
---------------------	-----

## Special Operation Event Message Contents

### ApplyActualsInvoked Message

Field	Type	Description
DataDate	dateTime	The DataDate field that is associated with the project.
Project	ProjectIdentityType Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

### ProjectIdentityType Table

ProjectIdentityType	
Id	string
Name	string
ObjectId	int

### JobStatusType Table

JobStatusType
string restricted to 'Completed' 'Failed'

## ContentRepositoryDocumentAdded Message

Field	Type	Description
UUID	string	The Universal Unique Identifier of the document in the content repository.
UserName	string	The user name who performed the operation.
DocumentObjectId	int	The object ID of the document that's involved in the operation.

## ContentRepositoryDocumentCheckedIn Message

Field	Type	Description
UUID	string	The Universal Unique Identifier of the document in the content repository.
UserName	string	The user name who performed the operation.
DocumentObjectId	int	The object ID of the document that's involved in the operation.

## ContentRepositoryFolderAdded Message

Field	Type	Description
UUID	string	The Universal Unique Identifier of the document in the content repository
UserName	string	The user name who performed the operation.
DocumentObjectId	int	The object ID of the document that's involved in the operation.

## ConvertProjectToBaselineInvoked Message

Field	Type	Description

NewBaselineProjectObjectld	int	The object ID of the new Baseline project (it's the same as the object ID of the project that has been converted).
Objectld	int	The object ID of the project to which the new baseline project belongs.

### CopyBaselineInvoked Method

Field	Type	Description
NewBaselineProjectObjectld	int	The project id generated for the newly created baseline.
SourceProject	SourceProjectType Refer to the entries in the <b>SourceProjectType</b> table below.	The complex element that identifies the source project from which the baseline was copied.
TargetEPS	TargetEPSType Refer to the entries in the <b>TargetEPSType</b> table below.	The complex element that identifies the target EPS under which the baseline was copied.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> table below.	Describes the state of the job after completion.

### SourceProjectType Table

SourceProjectType	
Id	string
Name	string
ProjectObjectld	Objectld

**TargetEPSType Table**

TargetEPSType	
Id	string
Name	string
ProjectObjectId	ObjectId
WBSObjectId	ObjectId

**JobStatusType Table**

JobStatusType
string restricted to completed or failed.

**CopyBaselineProjectInvoked Message**

Field	Type	Description
NewBaselineProjectObjectld	int	The object ID of the project created by the stored procedure.
ObjectId	int	The object ID of the parent EPS of the new project.
BaselineProjectObjectld	int	The object ID of the project that was copied.

**CopyProjectAsBaselineInvoked Message**

Field	Type	Description
NewBaselineProjectObjectld	int	The object ID of the project created by the stored procedure.
EPSObjectld	int	The object ID of the parent EPS of the new project.
ObjectId	int	The object ID of the project that was copied.

## CopyProjectInvoked Message

Field	Type	Description
NewProjectObjectId	int	The object ID of the project created by the stored procedure.
EPSObjectId	int	The object ID of the parent EPS of the new project.
ObjectId	int	The object ID of the project that was copied.

## CreateBaselineInvoked Message

Field	Type	Description
NewBaselineProjectObjectId	int	The project id generated for the newly created baseline.
SourceProject	SourceProjectType Refer to the entries in the <b>SourceProjectType</b> table below.	The complex element that identifies the source project for which the baseline was created.
TargetProject	TargetProjectType Refer to the entries in the <b>TargetProjectType</b> table below.	The complex element that identifies the target project for which the baseline was created.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> table below.	Describes the state of the job after completion.

**SourceProjectType Table**

SourceProjectType	
Id	string
Name	string
ProjectObjectId	ObjectId

**TargetProjectType Table**

TargetProjectType	
Id	string
Name	string
ProjectObjectId	ObjectId
WBSObjectId	ObjectId

**JobStatusType Table**

JobStatusType	
	string restricted to completed or failed.

**CreateCopyAsTemplateInvoked Message**

Field	Type	Description

NewTemplateProjectObject	int	The object ID of the template project that was created by the stored procedure.
EPSObjectId	int	The object ID of the parent EPS of the new template project
ObjectId	int	The object ID of the project or template project that was copied.

### CreateProjectFromTemplateInvoked Message

Field	Type	Description
NewProjectObjectId	int	The object ID of the project created by the stored procedure.
EPSObjectId	int	The unique ID of the associated EPS.
ObjectId	int	The unique ID generated by the system.

### CreateTemplatefromProjectInvoked Message

Field	Type	Description
NewTemplateProjectObjectI	int	The project id generated for the newly created template.
EPSObjectId	int	The unique id of the EPS under which the template was created.
ObjectId	int	The unique id generated for the newly created template.

### ExportInvoked Message

Field	Type	Description

ProjectObjectI d	int	The object ID of the project exported by the stored procedure.
ExportedAs	String  Refer to the entries in the <b>ExportedAs</b> Table below.	The export type of the project.
Success	Boolean.	Export Status (1 = success, 0 = failure)

### ExportedAs Table

ExportedAs
string restricted to 'MSP' 'Primavera'

### GlobalSearchandReplaceInvoked Message

Field	Type	Description
UserId	int	The object ID of the user who invoked the Global Search and Replace Job.
Status	String  Refer to the entries in the <b>Status</b> Table below.	The status of the job.

### Status Table

Status
string restricted to 'Completed' 'Failed' 'COMPLETEDWITHERRORS'

## ImportInvoked Message

Field	Type	Description
ImportFile	String	The name of the file which is imported.
EPSObjectld	int	The object ID of the EPS in which the project is imported by the stored procedure.
ProjectObjectld	int	The object ID of the project imported by the stored procedure.
Success	Boolean	Export Status (1 = success, 0 = failure)

## LevelInvoked Message

Field	Type	Description
Project	ProjectIdentityType Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
Status	JobStatusType Refer to the entries in the <b>JobStatus</b> Type Table below.	Describes the state of the job after completion.

## ProjectIdentityType Table

ProjectIdentityType	
Id	string
Name	string
Objectld	int

**JobStatusType Table**

JobStatusType
string restricted to 'Completed' 'Failed'

**PublishAuditdataInvoked Message**

Field	Type	Description
Status	String Refer to the entries in the <b>Status</b> Table below.	The status of the publishing audit job.

**Status Table**

Status
string restricted to 'Completed' 'Failed' 'COMPLETEDWITHERRORS'

**PublishEnterpriseDataInvoked Message**

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

**JobStatusType Table**

JobStatusType
string restricted to 'Completed' 'Failed'

**PublishEnterpriseSummariesInvoked Message**

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

**JobStatusType Table**

JobStatusType
string restricted to 'Completed' 'Failed'

**PublishProjectInvoked Message**

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Project	ProjectIdentityType Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.

Status	<p>JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.</p>	Describes the state of the job after completion.
--------	--	--

**ProjectIdentityType Table**

ProjectIdentityType	
Id	string
Name	string
ObjectId	int

**JobStatusType Table**

JobStatusType	
	<p>string restricted to 'Completed' 'Failed'</p>

**PublishResourceManagementInvoked Message**

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Status	<p>JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.</p>	Describes the state of the job after completion.

**JobStatusType Table**

JobStatusType	

string  
restricted to  
'Completed'  
'Failed'

### PublishResourceRoleAssignmentSpreadInvoked Message

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Project	ProjectType Refer to the ProjectType table below.	The complex element that identifies the project.
Status	JobStatusType Refer to the JobStatusType table below.	Describes the state of the job after completion.

### ProjectType Table

ProjectType	
Id	string
Name	string
ObjectId	int

### JobStatusType Table

JobStatusType	
string restricted to completed or failed.	

## PublishSecurityInvoked Message

Field	Type	Description
CompletedOn	dateTime	The date and time at which publishing completed.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

## JobStatusType Table

JobStatusType
string restricted to 'Completed' 'Failed'

## RecalculateAssignmentCostsInvoked Message

Field	Type	Description
Project	ProjectIdentityType Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
SyncOTFactor	boolean	The flag to synchronize the overtime factor.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	The state of the job after completion.

## ProjectIdentityType Table

ProjectIdentityType
Id

Name	string
ObjectId	int

### JobStatusType Table

JobStatusType
string restricted to 'Completed' 'Failed'

### RestoreBaselineProjectInvoked Message

Field	Type	Description
ObjectId	int	The object id of the baseline project, which is the same as the object id of the project after the restore.

### ScheduleInvoked Message

Field	Type	Description
DataDate	dateTime	The DataDate field that is associated with the project.
Project	ProjectIdentityType Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
Status	JobStatusType Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

### ProjectIdentityType Table

ProjectIdentityType	
Id	string
Name	string
ObjectId	int

### JobStatusType Table

JobStatusType	
string restricted to 'Completed' 'Failed'	

### StorePeriodPerformanceInvoked Message

Field	Type	Description
FinancialPeriod	FinancialPeriodIdentityType  Refer to the entries in the <b>FinancialPeriodIdentityType</b> Table below.	The complex element that identifies the FinancialPeriod.
Project	ProjectIdentityType  Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
Status	JobStatusType  Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

### FinancialPeriodIdentityType Table

FinancialPeriodIdentityType
-----------------------------

EndDate	dateTime
Name	string
ObjectId	int
StartDate	dateTime

### ProjectIdentityType Table

ProjectIdentityType	
Id	string
Name	string
ObjectId	int

### JobStatusType Table

JobStatusType	
	<p>string          restricted to          'Completed'          'Failed'</p>

### SummarizeInvoked Message

Field	Type	Description
Project	ProjectIdentityType  Refer to the entries in the <b>ProjectIdentityType</b> Table below.	The complex element that identifies the project.
Status	JobStatusType  Refer to the entries in the <b>JobStatusType</b> Table below.	Describes the state of the job after completion.

**ProjectIdentityType Table**

ProjectIdentityType	
Id	string
Name	string
ObjectId	int

**JobStatusType Table**

JobStatusType	
string restricted to 'Completed' 'Failed'	

**UpdatebaselineInvoked Message**

Field	Type	Description
BaselineProjId	int	The object ID of the baseline project created by the stored procedure.
ParentProjId	int	The object ID of the parent project created by the stored procedure.
Status	String Refer to the entries in the <b>JobStatusType</b> Table below.	The status of the Update Baseline job.

**Status Table**

Status
--------

```

string
restricted to
'Completed'
'Failed'
'COMPLETEDWITHERRORS'

```

## XMLImportInvoked Message

Field	Type	Description
ImportFile	string	The file name of the XML file imported.
CreateNewProject		This complex element is included in the message if created new project has been specified for the XML import. It contains the EPSObjectId (the EPS where the project is imported to) and the ProjectObjectId (the object ID of the project created by the import). This element is mutually exclusive with the UpdateExistingProject element.
UpdateExistingProject		UpdateExistingProject: This complex element is included in the message if update existing project has been specified for the XML import. It contains the ProjectObjectId which is the object ID of the project that has been updated.
Success	boolean	The boolean that indicates if the import is successful or failed.
ErrorMessage	string	Contains the exception message if the import fails.
