 - 1.3.4 *Server Restart* 1-5

1. Customer Service Installation Guide

1.1 Introduction

This document provides step-by-step instructions to install Customer Services in the Oracle Banking Origination Application Server.

1.2 Prerequisites

- Weblogic domain

1.3 Customer Service

The Customer Services Setup has the following set of services:

- INFRA Services
 - Discovery Service
 - Config Service
- Customer Services

The following table describes the services available in Customer Services Setup:

Table 1: Service Details

Service		Service Name	Usage
INFRA Services	Discovery	plato-discovery-service	This service is required for registering all the Customer Services during start-up. The registered services use the Discovery Service to make inter service calls.
	Config Service	plato-config-service	This service provides required configuration details for the corresponding Customer Services during service start-up, by referring the database table (table name: PROPERTIES). The mentioned database table stores all the configuration related details.
Customer Services		Customer Services	This service is used to fetch the customer details

1.3.1 Server Setup

Before deploying the Customer Services WAR files, the user must setup managed servers for the services.

1. In the Application Server, set up two Managed Servers for **INFRA Service** and **Customer Service**, respectively.
2. Name the Managed Servers as **ConfigServer** and **CustomerServer**, respectively.

NOTE: Any name can be provided to the Managed Servers, and the INFRA Service and Customer Service can be deployed in the any corresponding server created for that service.

3. Create the following Data Sources for **INFRA and Customer Services**:

Data Source JNDI Name	Type	Target
jdbc/UBSCUSTOMER	Non-XA Datasource	Customer Service
jdbc/PLATO	Non-XA Datasource	ConfigServer

4. Include the following line in **setDomainEnv.cmd** or **setDomainEnv.sh** of the Weblogic domain:

For Linux Server:

Syntax

```
JAVA_OPTIONS="${JAVA_OPTIONS} ${JAVA_PROPERTIES} -Dflyway.enabled=false -  
Dspring.flyway.enabled=false -Dplato.services.config.uri=http://<config-server-ip>:<config-server-  
port> -Dplato.service.logging.path=<Debug Path where Logs are to be written>"
```

```
export JAVA_OPTIONS
```

Sample

```
JAVA_OPTIONS="${JAVA_OPTIONS} ${JAVA_PROPERTIES} -Dflyway.enabled=false -  
Dspring.flyway.enabled=false -Dplato.services.config.uri=http://10.10.10.10:1010 -  
Dplato.service.logging.path=/mnt/FC144/ICLogs"
```

```
export JAVA_OPTIONS
```

For Windows Server:

Syntax

```
set JAVA_OPTIONS=%JAVA_OPTIONS% %JAVA_PROPERTIES% -  
Dplato.services.config.uri=http://<config-server-ip>:<config-server-port> -Dflyway.enabled=false -  
Dspring.flyway.enabled=false -Dplato.service.logging.path=<Debug Path where Logs are to be  
written>
```

Sample

```
set JAVA_OPTIONS=%JAVA_OPTIONS% %JAVA_PROPERTIES% -Dflyway.enabled=false -  
Dspring.flyway.enabled=false -Dplato.services.config.uri=http://whf00bir:9005 -  
Dplato.service.logging.path=D:/ICLogs
```

If the Node-Manager is used to start the Managed Servers, the user need to perform the following steps:

1. Navigate to **Servers**. Under **Server**, click **Managed Server**.
2. Under **Managed Server**, click **Server Start**.
3. Set parameters specific to the **Managed Server** in the argument section.

1.3.2 Customer Service Maintenance

After setting up the Managed Servers for the **Customer Services**, the services must be enabled in the **FCUBS Maintenance** page.

1. Launch the **Amend Service Properties (CSDPROP)** screen.

Figure 2: Amend Service Properties

Service Name	Service Description
<input checked="" type="checkbox"/> fcubs-audit-service	fcubs audit service
<input type="checkbox"/> fcubs-co-batch-services	fcubs co batch services
<input type="checkbox"/> fcubs-dda-service	fcubs dda service
<input type="checkbox"/> fcubs-eca-services	fcubs eca services
<input type="checkbox"/> fcubs-ext-accounting-services	fcubs ext accounting services
<input type="checkbox"/> fcubs-ic-accounting-services	fcubs ic accounting services

Primary Key	Value
<input checked="" type="checkbox"/> plato.services.eureka.uri	http://100.70.100.17:9005/plato-services/eureka/
<input type="checkbox"/> server.port	9005
<input type="checkbox"/> plato.services.entityservices.port	9007

2. On **Amend Service Properties** screen, specify the details and perform the actions. For more information on fields, refer to field description table.

Field/Action	Description
Unlock	Click Unlock at the top left corner.
Reference Number	Query the Reference Number from the list of values.
Service URL	Specify the Service URL . The syntax service URL is: http://<config-server-ip>:<config-server-port>/plato-discovery-service/eureka The sample for service URL is: http://10.10.10.10:1010/plato-discovery-service/eureka
Service Port	Specify the port of Managed Server (CustomerServer).
Save	Click to save the specified details.

1.3.3 **WAR Deployment**

While creating a FCUBS EAR build, Customer and INFRA war files are automatically copied into the destination location through installer along with FCUBS EAR.

After the completion of build creation, the following files will be available in the destination folder:

- FCUBS Application EAR and All Adapter EAR
- INFRA
- OBPY

Figure 3: Destination Folder Structure

3. Navigate to **INFRA** in the destination folder and copy the following INFRA Service WAR files:
 - plato-discovery-services-6.0.0.war
 - plato-config-services-6.0.0.war
4. Deploy the copied INFRA Service WAR files in **ConfigServer**.
5. Navigate to the **OBPY** in the destination folder and copy the **Customer Service WAR** files.
6. Deploy the copied Customer Service WAR files in **CustomerServer**.

1.3.4 Server Restart

After deploying the Customer Services or restarting the Application server, start the services in the following sequence:

- plato-config-service
- plato-discovery-service
- Customer Services

NOTE:

- After restarting the Application server, start the ConfigServer first and then start the CustomerServer.
- To enable Discovery service to fetch properties entries for self-registration from plato-config-service, plato-discovery-service must be stopped and started whenever the ConfigServer is restarted.

The deployed Customer Services are listed in the service discovery URL.

To confirm the running status of all the services, check the service discovery URL.

Service Discovery URL Syntax:

http://<config-server-ip>:<config-server-port>/plato-discovery-service

Service Discovery URL Sample:

<http://10.10.10.10:1010/plato-discovery-service>
