8. After reviewing the customer information, click **Submit**.

→ The system displays the **Checklist** window.

9. Select the **Outcome** as Proceed, and click **Submit**.

→ The system moves the task to the **Review** stage.

In **Review** stage, the final reviewer reviews the customer details and moves the task to Approval stage if the details are appropriate. If the details are inappropriate, the reviewer can send the task back to the previous stage. After the submitting the Review, the system moves the tsk to **Approval** stage.

In **Approval** stage, the head of the division can view the customer information and decide to approve or reject the task based on comments from the Reviewer. If the outcome of this stage is Proceed, the task is automatically moved to the Host system. For more detail on review and Approval stage, please refer to sections – [2.5 Review](#) and [2.6 Approval](#).

2.8 Straight Through Processing for onboarding requests received from Channels

For the onboarding requests received from Channels, there are configuration available to allow straight through processing of retail onboarding and handoff to the core system without waiting for any manual intervention.

Refer below table for details of the configuration:

Table 24: Configurations

Configuration Parameter	Description	Default Value
STP_FLAG	This parameter indicates if straight through processing is allowed for retail onboarding requests received from Channels subject to other mandatory information being available in the request. Accepted values are: TRUE - Straight through processing for Retail Onboarding shall be allowed subject to fulfillment of other mandatory details and business validation. FALSE - Straight through processing for Retail Onboarding shall not be allowed in any case, even if all mandatory and KYC details are sent from Channel.	True
CHANNEL_CONFIRMATION_REQUIRED	This parameter indicates if a confirmation from channel is required before handoff to the core system. Accepted values are: True – System will wait for a confirmation from Channels before triggering the handoff to the core system False – System will go ahead with the handoff to the core system without waiting for any confirmation from Channels	False

On receiving the retail onboarding request from channels, the system will validate the configuration parameters as stated in the above table. If straight through processing is allowed i.e. STP_FLAG is set to True, the system validates if all the mandatory information including the KYC details are available in the request. Following cases are applicable:

- Quick Onboarding - this will be quick onboarding with minimal attributes, equivalent to Quick Initiation. Further enrichment and KYC check for such requests can be done by a Bank user.
- Detailed Onboarding without KYC Check - this will cover onboarding from channel with full customer details but without KYC Check. Such request shall fall under KYC stage. Bank users can pick such request and complete the remaining stages - KYC, review and Approval.
- Detailed Onboarding with KYC Check (Straight **through processing**) - In this case, channel will capture and pass on all the mandatory information and KYC details. This shall be treated as straight through processing if STP_Flag is set to TRUE and the Party details shall be handed over to core system without need of any manual intervention.

2.9 Mask for Party Id Generation

For generation of Party Id, a mask can be created to define the Party Id format. To create/view a mask for Party ID, perform the following steps:

4. From the Home page, click **Party Services**. Under **Party Services**, click **Maintenance – Mask Management**.
5. Under, **Mask Management** click **Create Mask**.

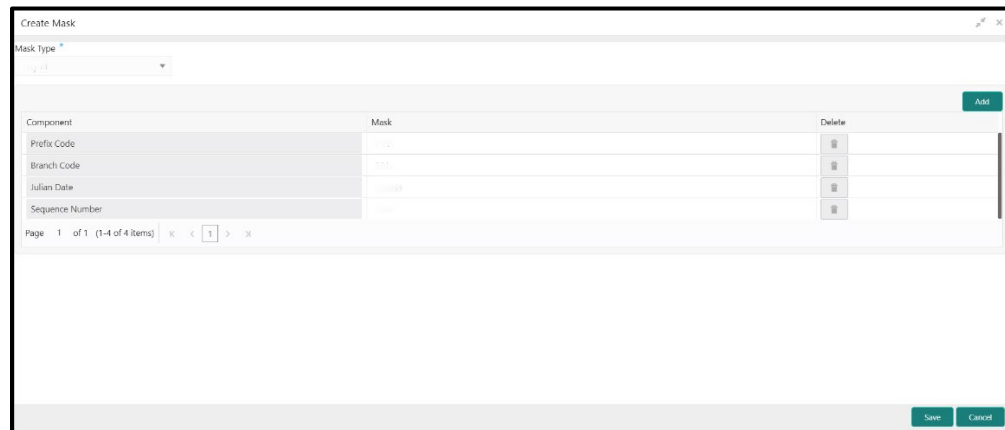

→ The system displays the **Create Mask** screen.

Figure 73: Create Mask

6. Select **Party Id** as the drop-down value for **Mask Type field**, and click on **Add** Button to add the parameters for the Party Id Mask.
7. Add the following attributes:
 - a. Prefix Code (PTY) – a prefix that can be attached to the party id. This attribute is optional and editable.
 - b. Branch Code (bbb) – The branch code of the user logged in branch. This attribute is optional and non-editable.
 - c. Julian Date (dddd) – The Julian date in YYDDD format on which the party is being onboarded. This attribute is optional and non-editable.
 - d. Sequence Number (ssss) – A sequence number that can be appended to the party id. The system will generate the sequence number based on the length defined in the mask. This attribute is mandatory and editable.
8. The total length of the mask, which is the sum of length of all the attributes in the mask cannot exceed 36 characters.

9. If no mask is defined, a default mask – PTYddddssss is applicable which includes:
 - a. Prefix with values PTY
 - b. Julian Date (dddd)
 - c. Sequence Number (ssss) of length 4 characters

Figure 74: Create Mask – Add Attributes

10. Click **Save** to save the party id mask.
11. Once the record is authorized by the checker, click **Party Services**. Under **Party Services**, click **Maintenance – Mask Management**.
12. Under, **Mask Management**, click **View Mask** to view the defined mask.

→ The system displays the **View Mask** screen.

2.10 Onboarding a customer with no KYC details

For requests originating from self-service channels where KYC details are not provided, the customer onboarding process needs to be completed without the KYC details in order to allow opening instantaneous accounts.

For such cases, the system allows onboarding a new customer without the KYC details. The customer onboarding request received from channel will contain a flag to indicate that this request is for onboarding a customer with no KYC details.

A grace period will be allowed to the customer during which the customer can submit the KYC related documents to the bank. The duration of the grace period will be configurable and can be set as per the need of the Bank. If the customer submits all the KYC documents within the grace period, the KYC status is updated as compliant, subject to verification of the details provided.

However, if the customer fails to submit the required documents within the stipulated timeframe, then the system will generate notification few days before the expiration of the grace period. The duration for generation of notification and frequency for generation of notification will be configurable. This notification can be used to prompt the customer for furnishing the KYC details before end of the grace period. If the customer still fails to submit the documents, the KYC status for such customers are updated as Non-Compliant and same will be sent to back office product processor.

Note: Oracle Banking Enterprise Party Management will only be generating the notification. Capturing this notification to send correspondence to customer shall be taken up as implementation activity.
