1. Introduction

1.1 Background

This document provides an overview of setting up the UCM server for capturing of all documents received from/given to customer in a central content management repository. Oracle documentation are to be referred for HA and other configuration patterns.

1.2 Organization of the Document

The first chapter of this document gives an introduction with brief background and organization of the document.

Subsequent chapters of this document will give the implementation details.

1.3 Acronyms and Abbreviations

UCM	Universal Content Management
IPM	Imaging and Process Management
RCU	Repository Creation Utility

2. Prerequisites

Oracle Weblogic 11gR1 (10.3.6)

Download Oracle Weblogic from Oracle Website.

- 1. Download based on your needs (Windows/Linux/Generic).
- The installation process might slightly vary depending on the platform / mode if installation (package/net).

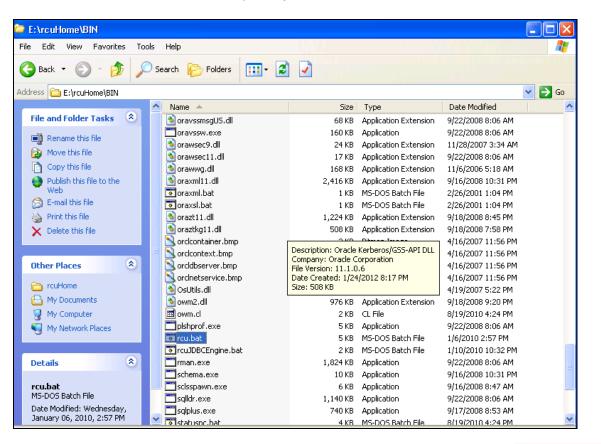

2.1 Create Repository in order to Configure the Application

Oracle Repository Creation Utility (RCU) is used to create schemas that are required for UCM server Installation.

- 1. Install Database.
- 2. Navigate to the directory into which RCU is installed. For Example

<rcu_home>\BIN Where rcu_home is the directory in which RCU is installed.

3. Click on rcu.bat file to create the repository.

The Repository Creation Welcome Screen appears.

📓 Repository Creation Utility - Welcome

3. UCM Server Setup

1. Download Oracle Webcenter Content 11gR1(Version: 11.1.1.9.0), formerly known as (Oracle Enterprise Content Management) from

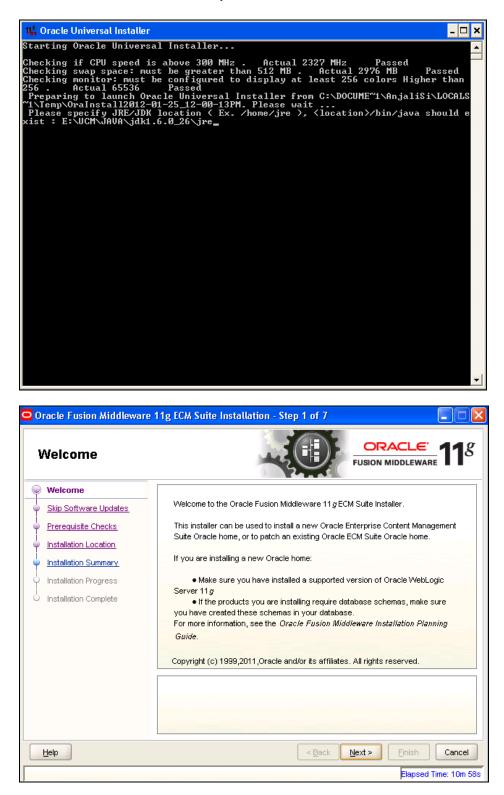

https://sac.us.oracle.com/download/index.html

- 2. At the right top corner there is a search box, where searching for string <11.1.1.9.0>
- 3. Search for <Enterprise Content> in the result page and find a zip which is downloadable and download it
- 4. Extract all the files and Install them on the server machine.

 Click on Setup.exe available in Disk1. It will ask you for a JRE location. Specify the location as E:\UCM\JAVA\Jdk1.7.0.80\jre.

6. Click 'Next' to navigate to skip software updates
