Open Development Tool Installation
Oracle FLEXCUBE Investor Servicing
Release 14.5.3.0.0
F53508-01
[February] [2022]

Table of Contents

1. Open Development Tool Installation

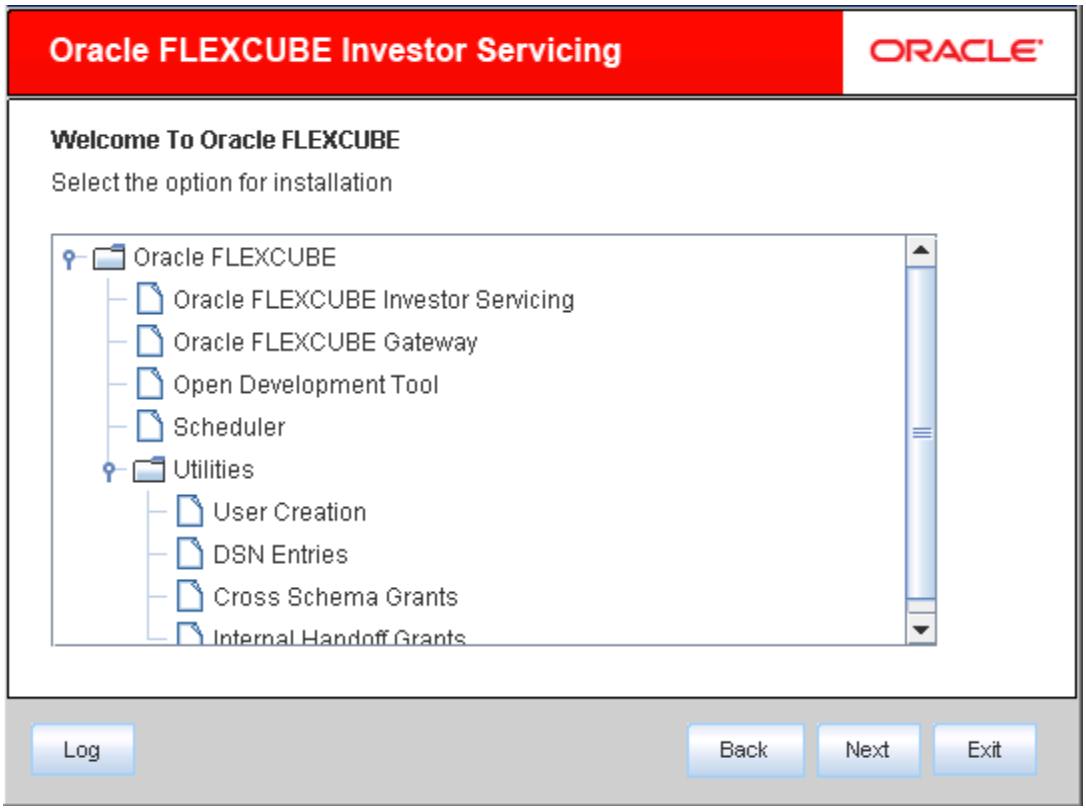
1.1 Introduction

This document explains about the creation of .war file using ODT (Open Development Tool) and setting up database for ODT installation.

1.2 Installing Open Development Tool

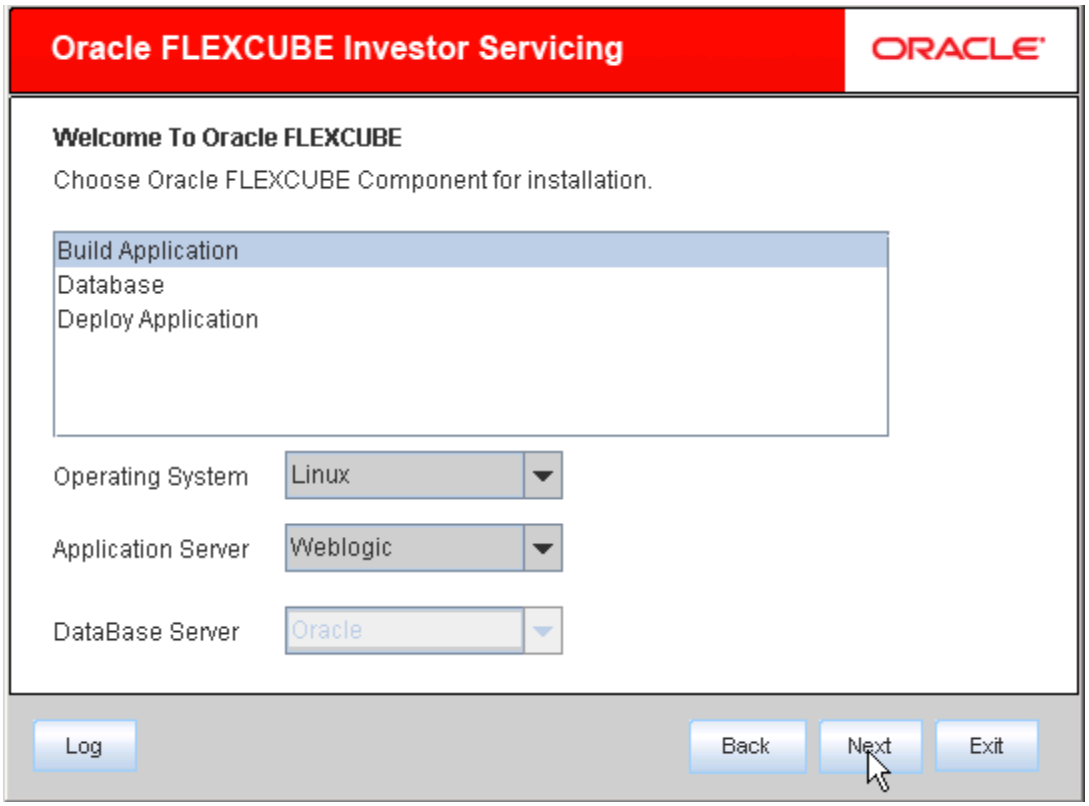
To install ODT, follow the steps given below:

1. Run 'FCUBSInstaller.bat' batch file to launch Oracle FLEXCUBE Investor Servicing Installer.
2. Click 'Next'. The following screen is displayed.



3. Click 'Open Development Tool'.

4. Click ‘Next’. The following screen is displayed.



5. Select ‘Build Application’ as Oracle FLEXCUBE component for installation.
6. Specify the following details.

Operating System

Specify the operating system in which you are installing Oracle FLEXCUBE.

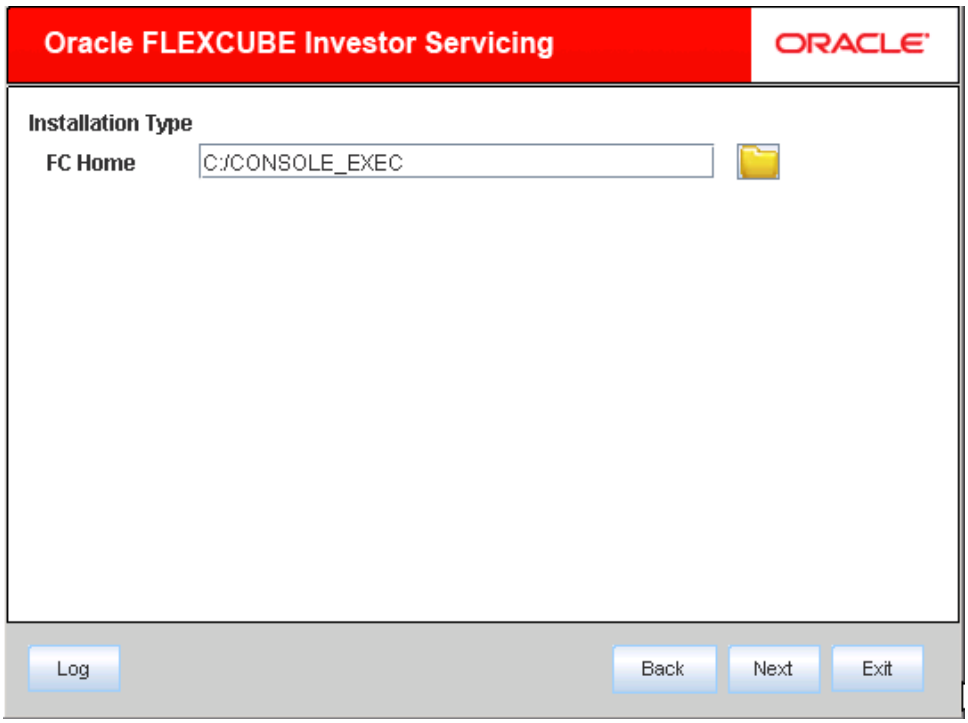
Application Server

Specify the application server on which you are installing Oracle FLEXCUBE.

DataBase Server

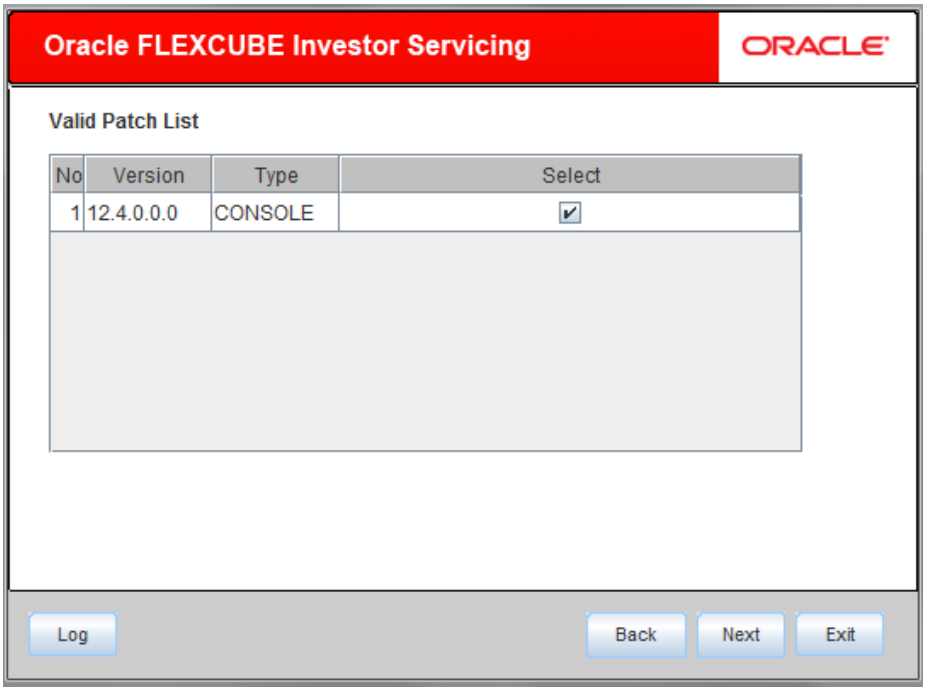
Specify the database server on which you are installing Oracle FLEXCUBE.

7. Click ‘Next’. The following screen is displayed.

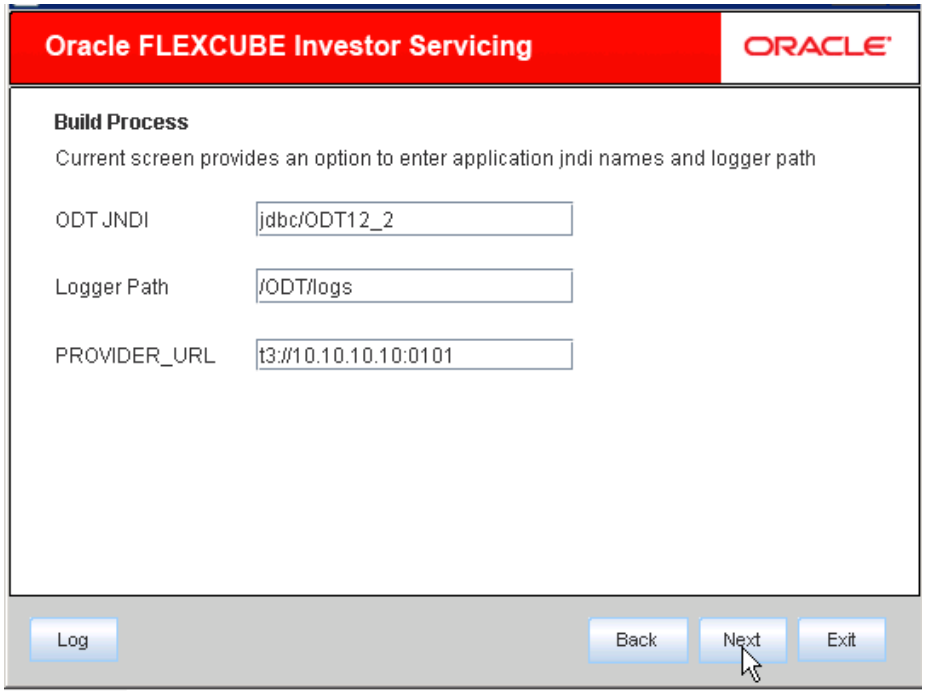


8. Specify the source directory. You can use the directory icon to browse to the directory location. The directory must contain FCHome. If the required folders are not present, then the error message is displayed.

9. Click ‘Next’. The following screen is displayed:



10. Select the Console type and click Next. The following screen is displayed:



11. Specify the following details.

ODT JNDI

Specify the JNDI for the ODT.

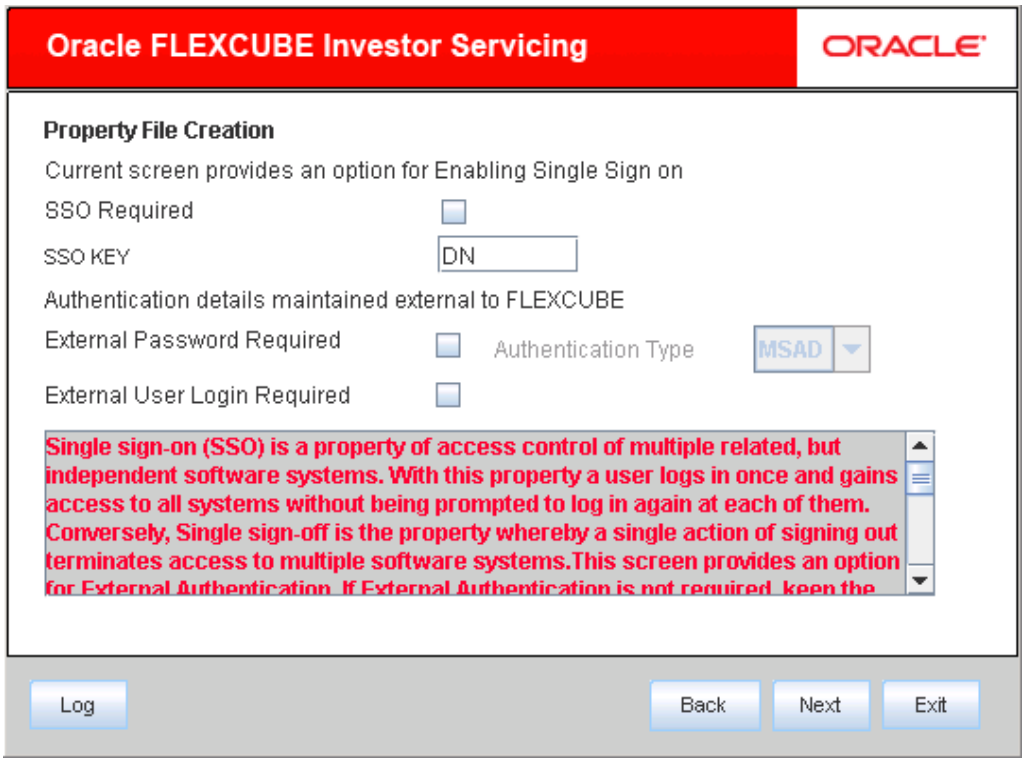
Logger Path

Specify the path where the logs have to be written.

Provider_URL

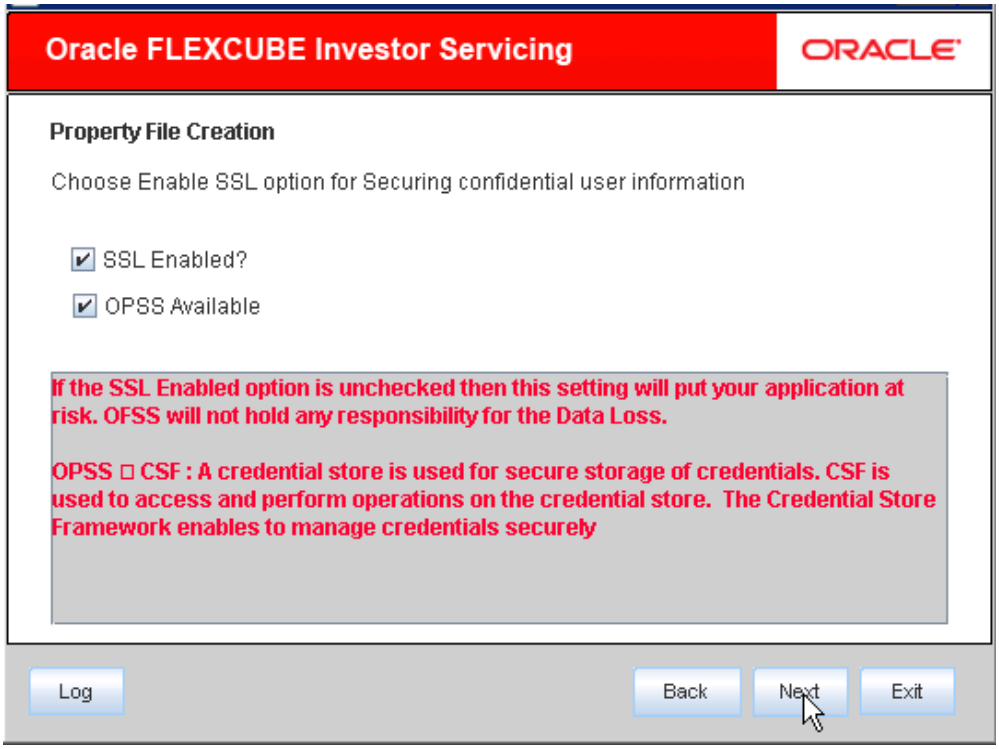
Specify the provider URL.

12. Click ‘Next’. The following screen is displayed.

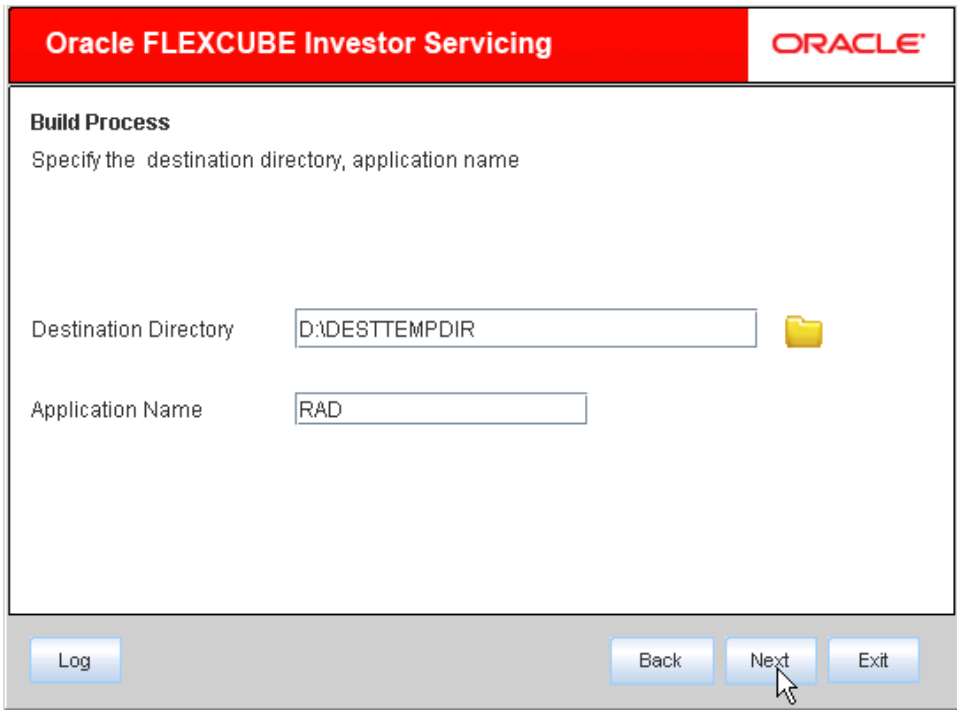


13. Here we set single sign on properties. Click ‘Next’.

This is an external authentication window. If external authentication is not required, then uncheck all the options and click ‘Next’. The following screen is displayed:



Here we enable SSL information and click ‘Next’. The following screen is displayed:



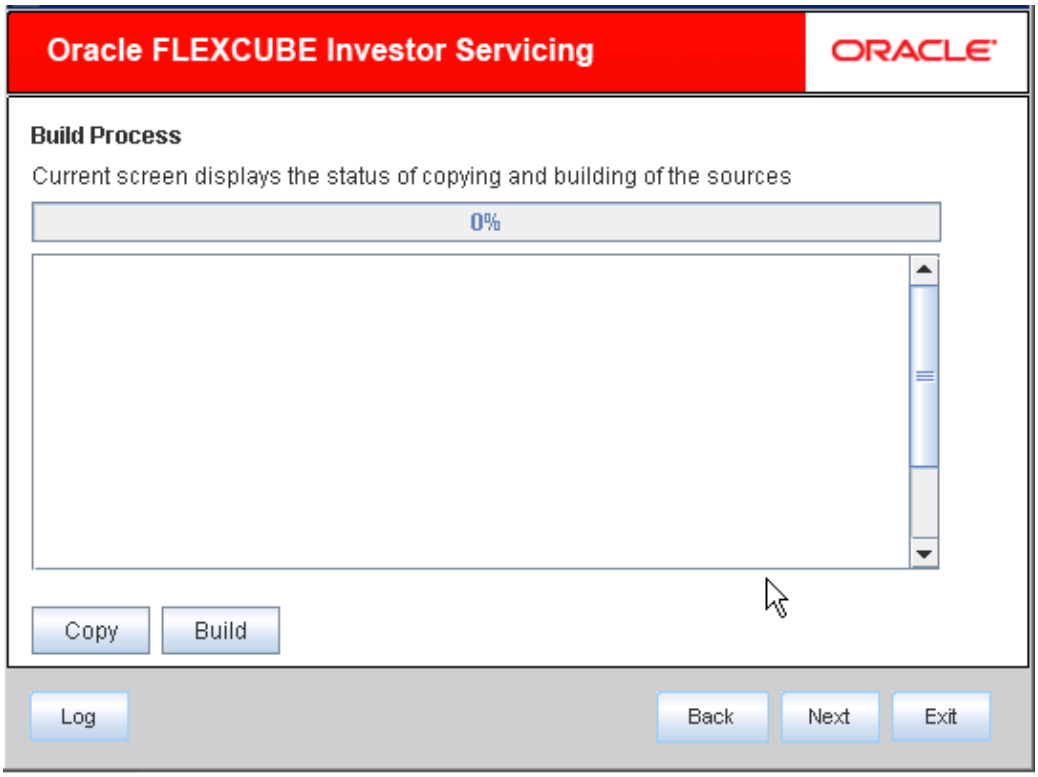
Destination Directory

Specify the destination directory. You can use the directory icon to browse to the source directory location.

Application Name

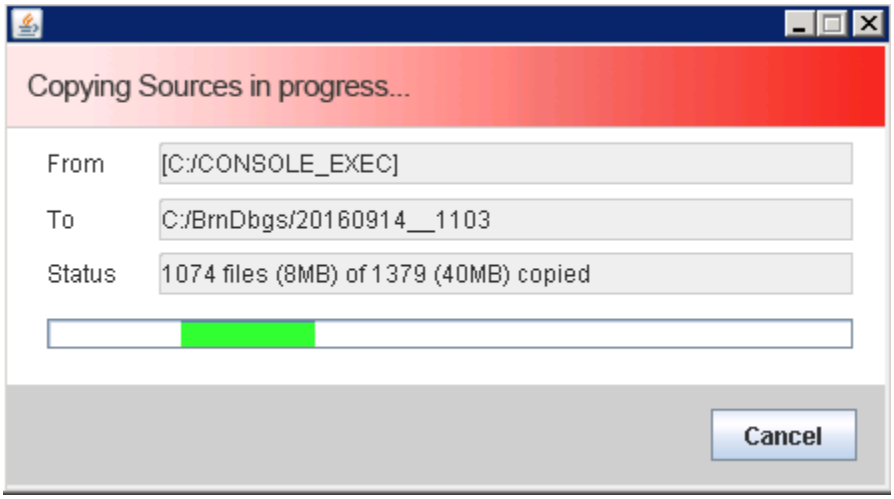
Specify the desired name for the application. For example,: RAD.

Click ‘Next. The following screen is displayed.

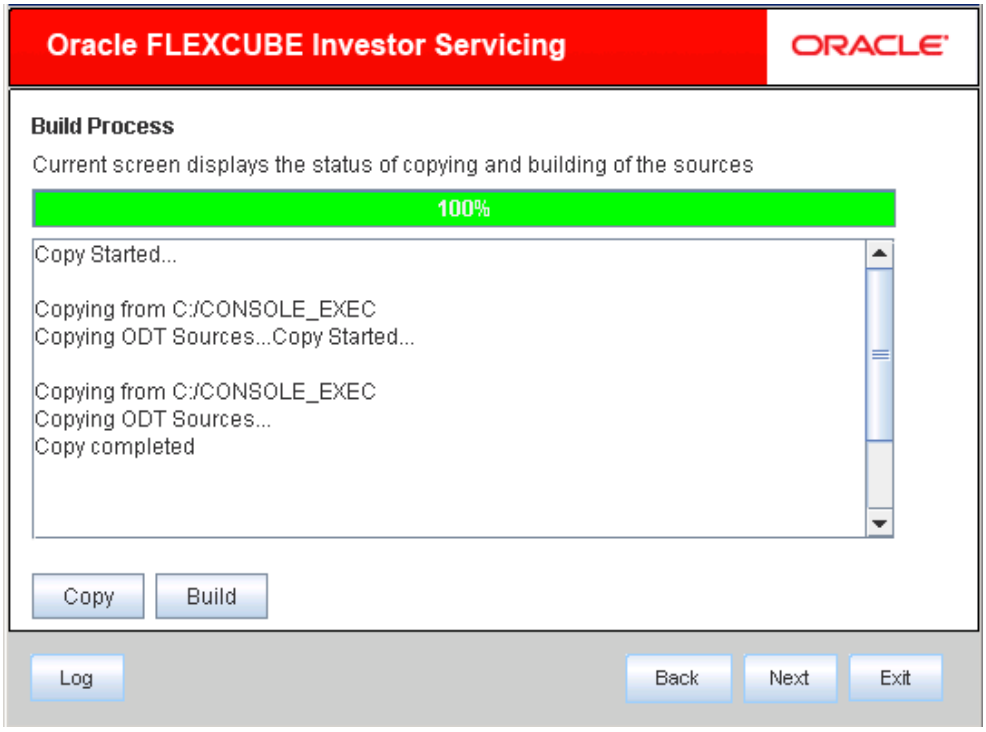


You can select all the source directories in this screen. The Installer will copy the sources from the multiple locations into the destination directory. You can have consolidated sources in the destination directory.

Click ‘Copy’ button to copy sources to the destination location. The following screen is displayed:

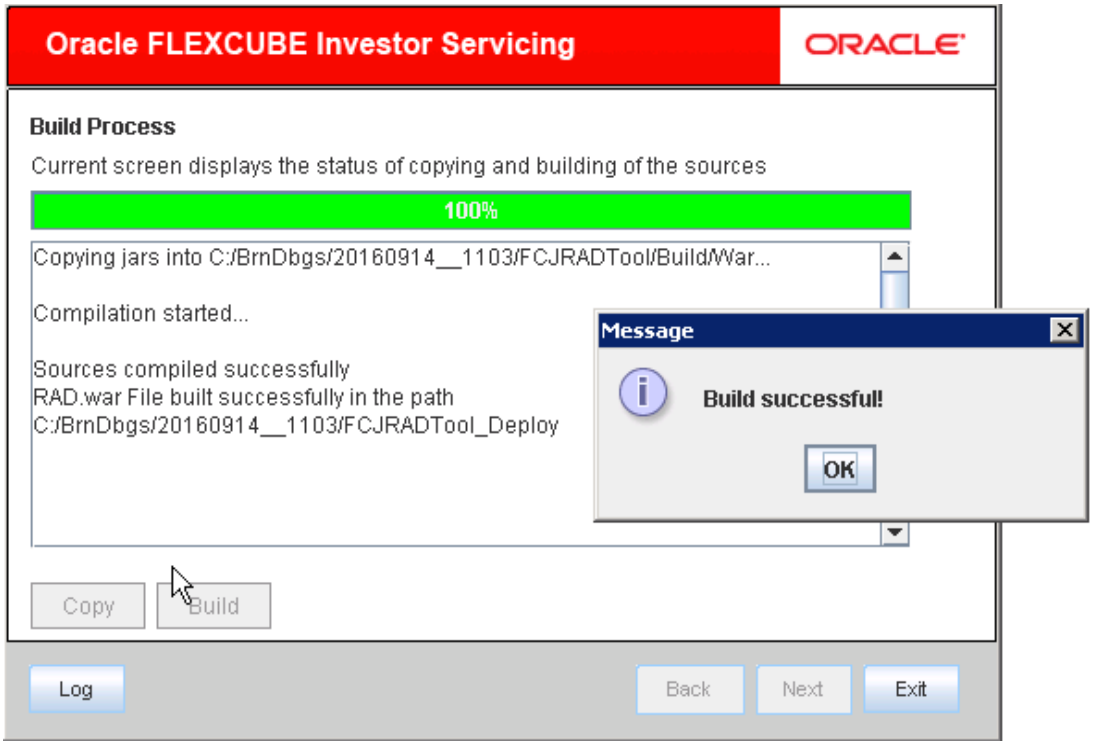


Once the copying process is done, the following screen is displayed:

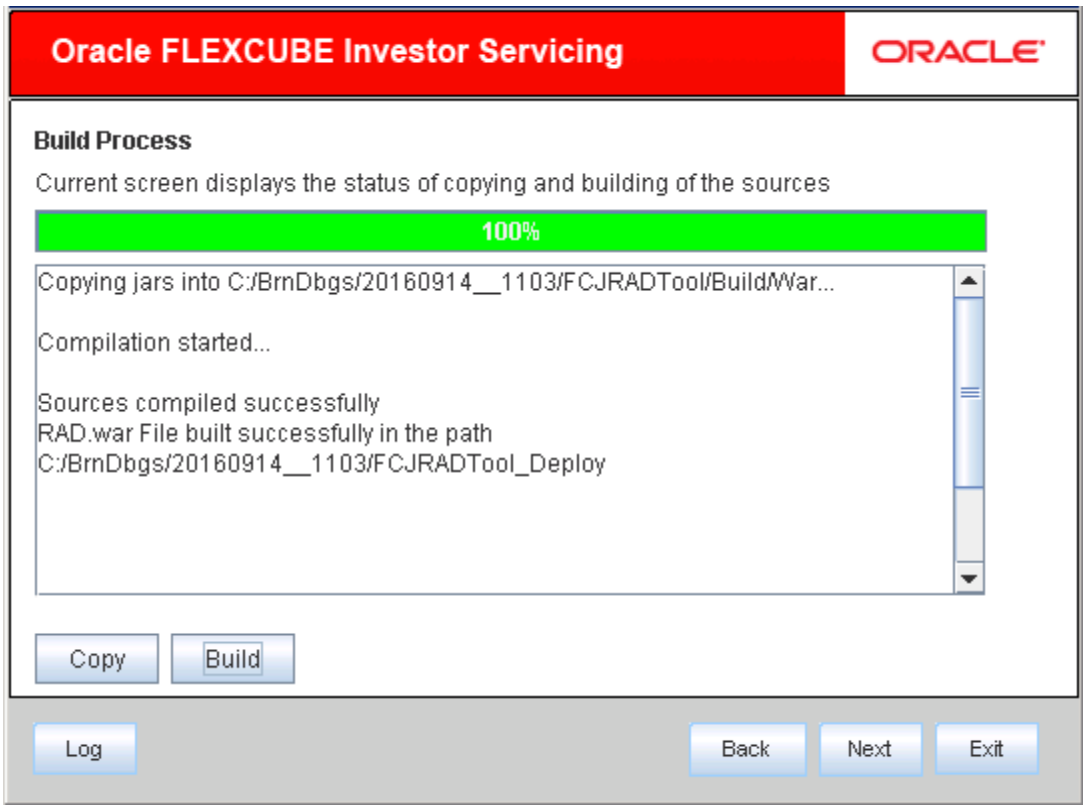


Click ‘Build’ button to build the war file in the destination location.

The system displays the following screen when the copying is complete.



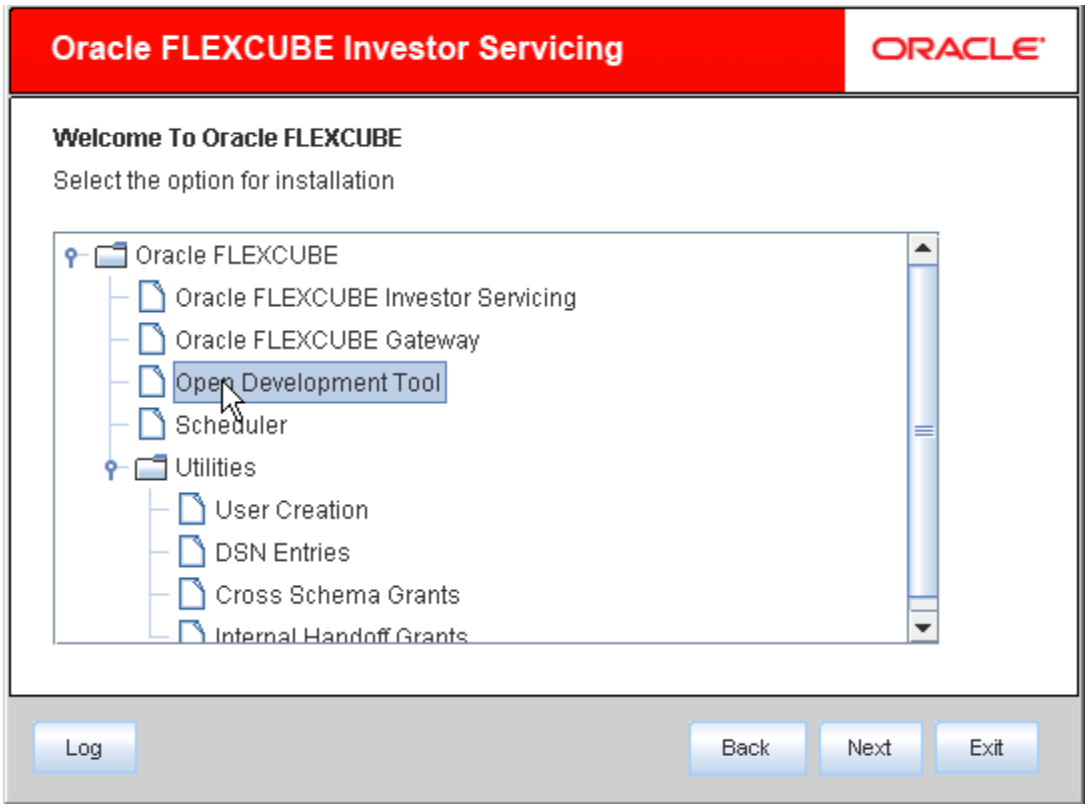
Click OK. The following screen is displayed:



2. Setting up Database for Open Development Tool

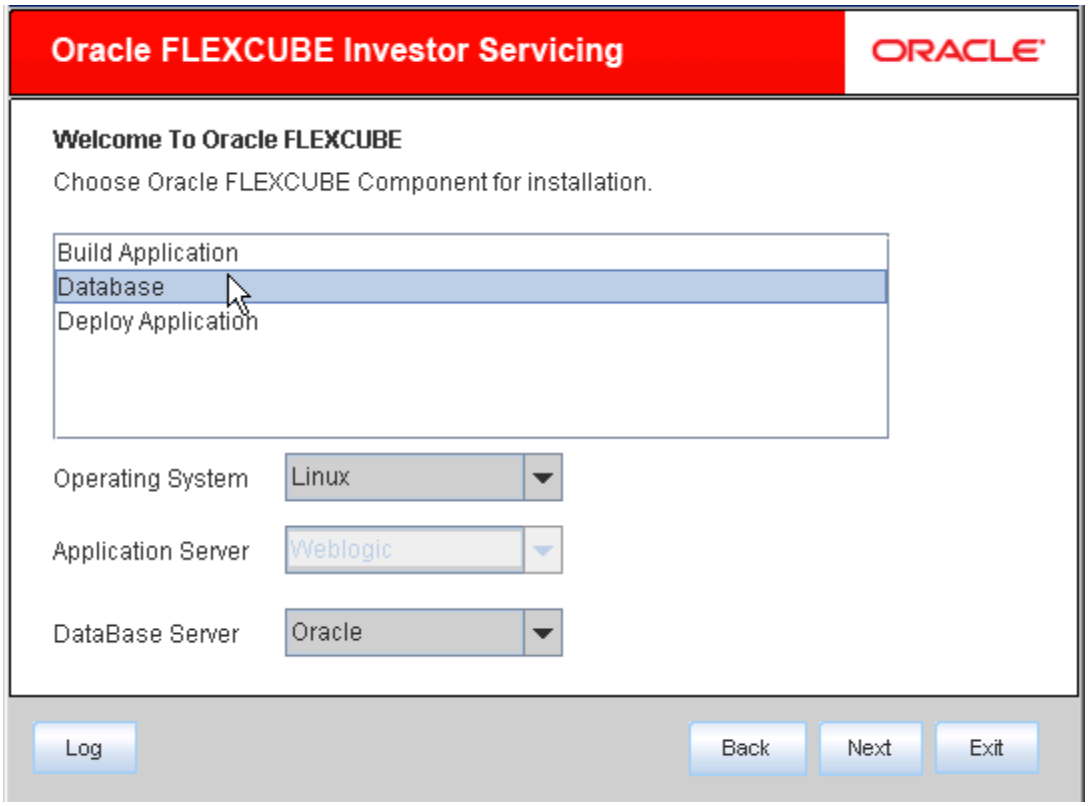
To set up database for Open Development Tool (ODT), follow the steps given below:

1. Run ‘FCUBSInstaller.bat’ batch file to launch Oracle FLEXCUBE Investor Servicing Installer.
2. Click ‘Next’, the following screen will be displayed.



3. Click ‘Open Development Tool’.

4. Click ‘Next’. The following screen is displayed.



5. Select ‘Database’ as Oracle FLEXCUBE component for installation.
6. Specify the following details.

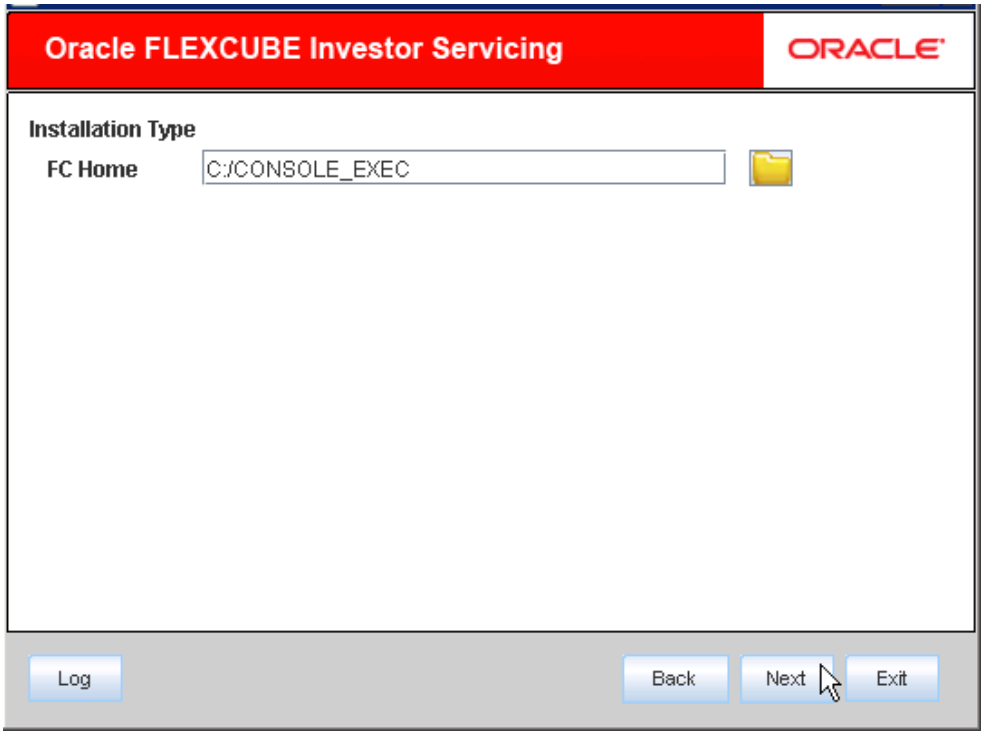
Operating System

Specify the operating system in which you are installing Oracle FLEXCUBE.

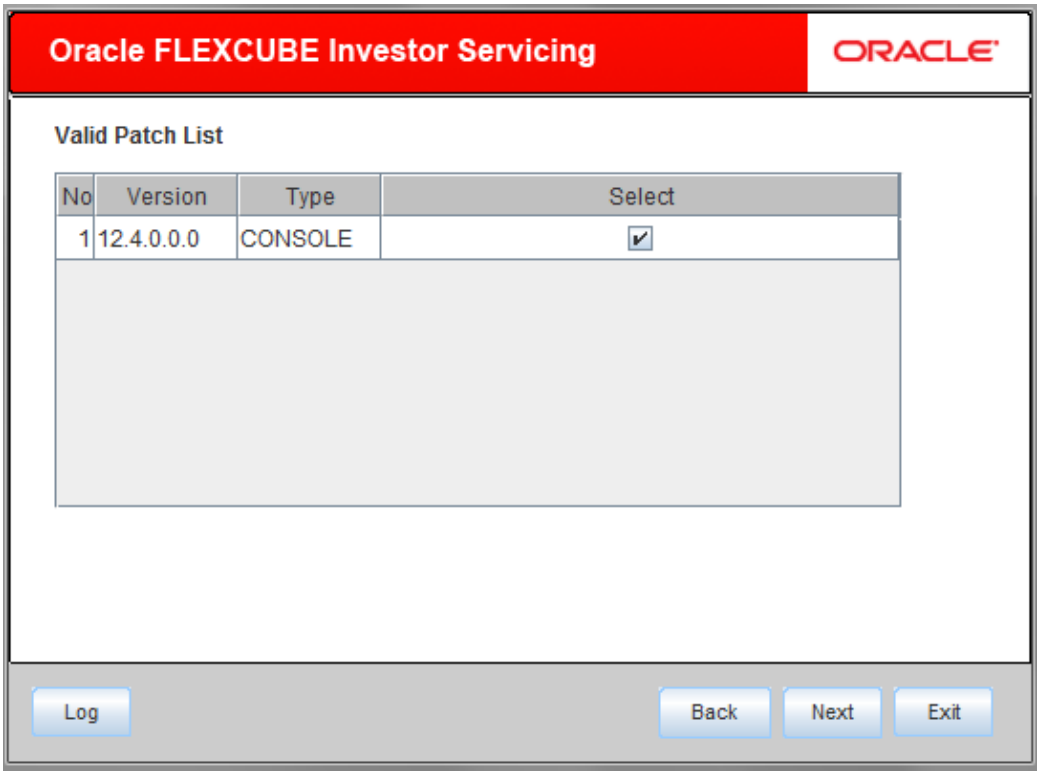
Database Server

Specify the database server on which you are installing Oracle FLEXCUBE.

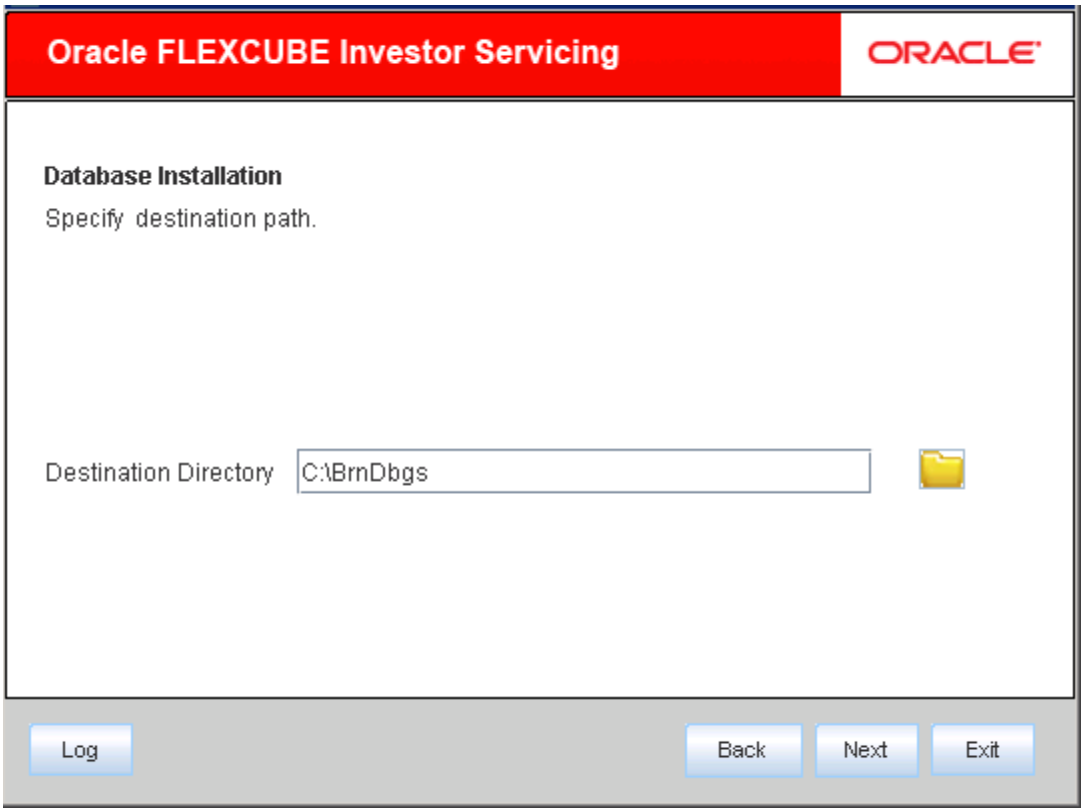
7. Click ‘Next’. The following screen is displayed.



Browse for Console_EXEC folder and click ‘Next’. The following screen is displayed:



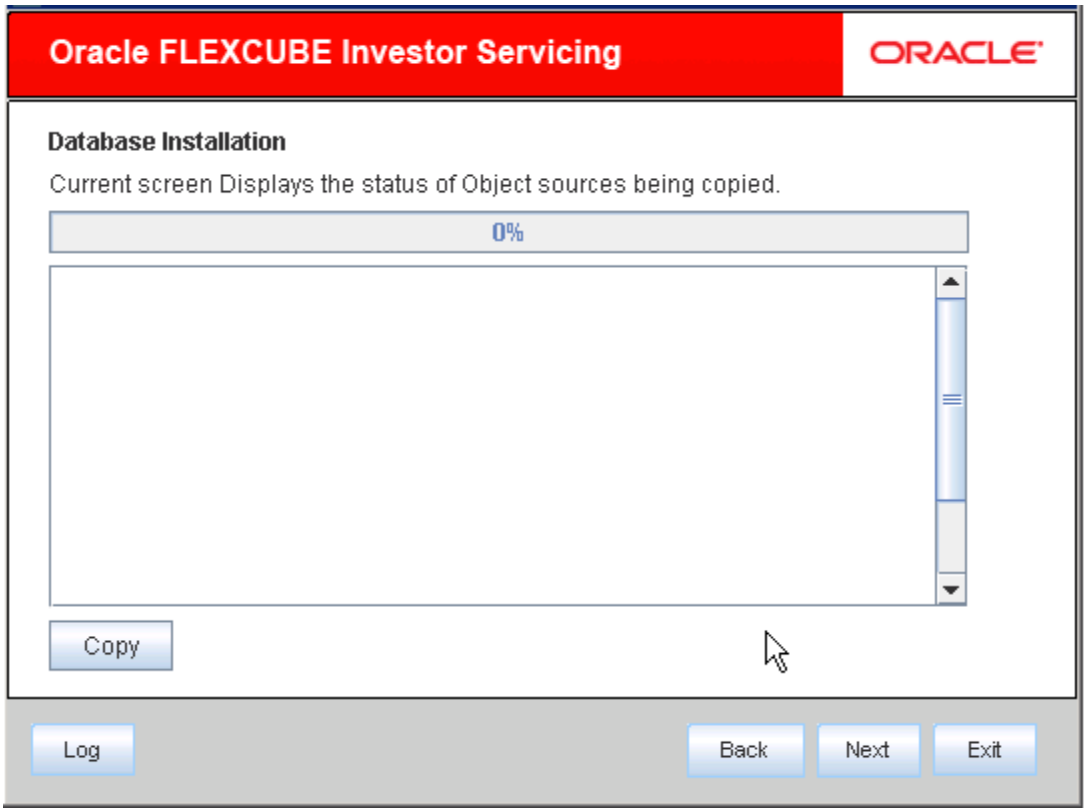
Select the console type and select ‘Next’. The following screen is displayed:



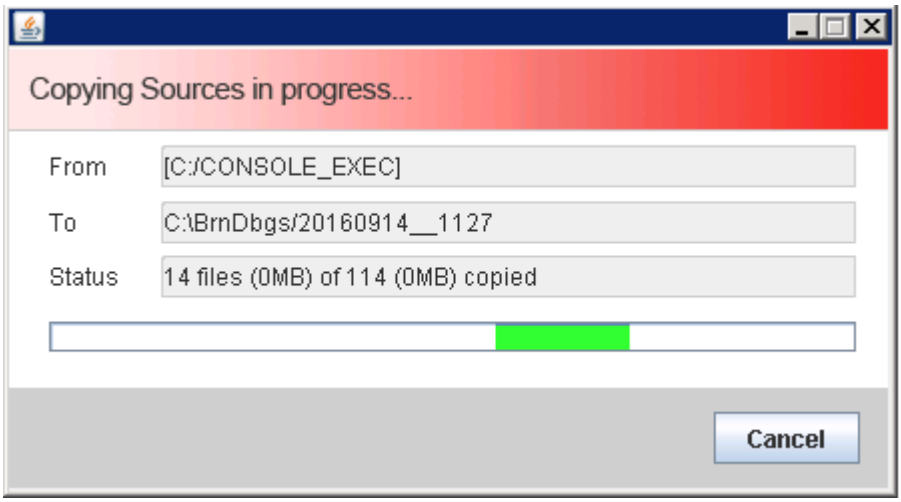
Destination Directory

Specify the destination directory. You can use the directory icon to browse to the source directory location.

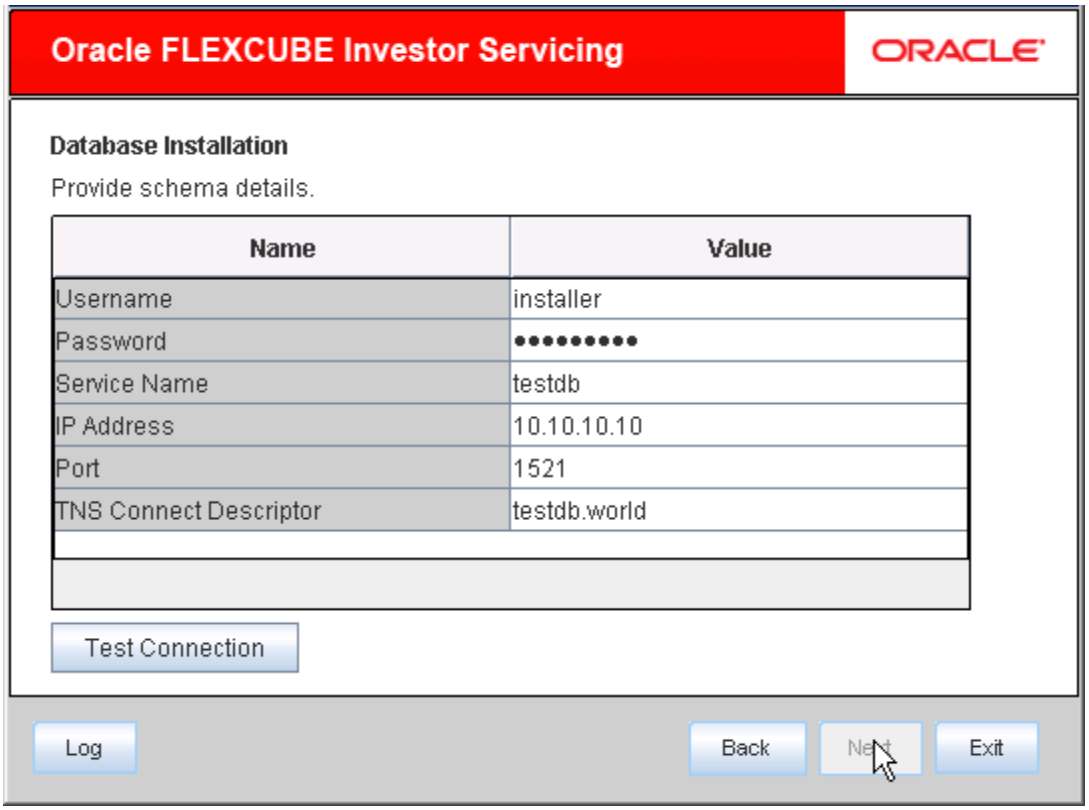
The following screen is displayed:



Click ‘Copy’. The following screen is displayed:



Click ‘Copy’ to copy the source from source directory to the destination directory. Once the source is copied, the following screen is displayed.



8. Specify the following schema details:

User Name

Specify the user name to access the schema.

Password

Specify the schema password for the above user name.

Service Name

Specify service name of database.

IP Address

Specify the IP address of the system where the database schema is installed.

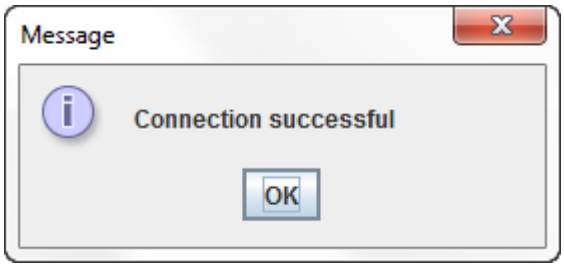
Port

Specify the port number.

TNS Connect Descriptor

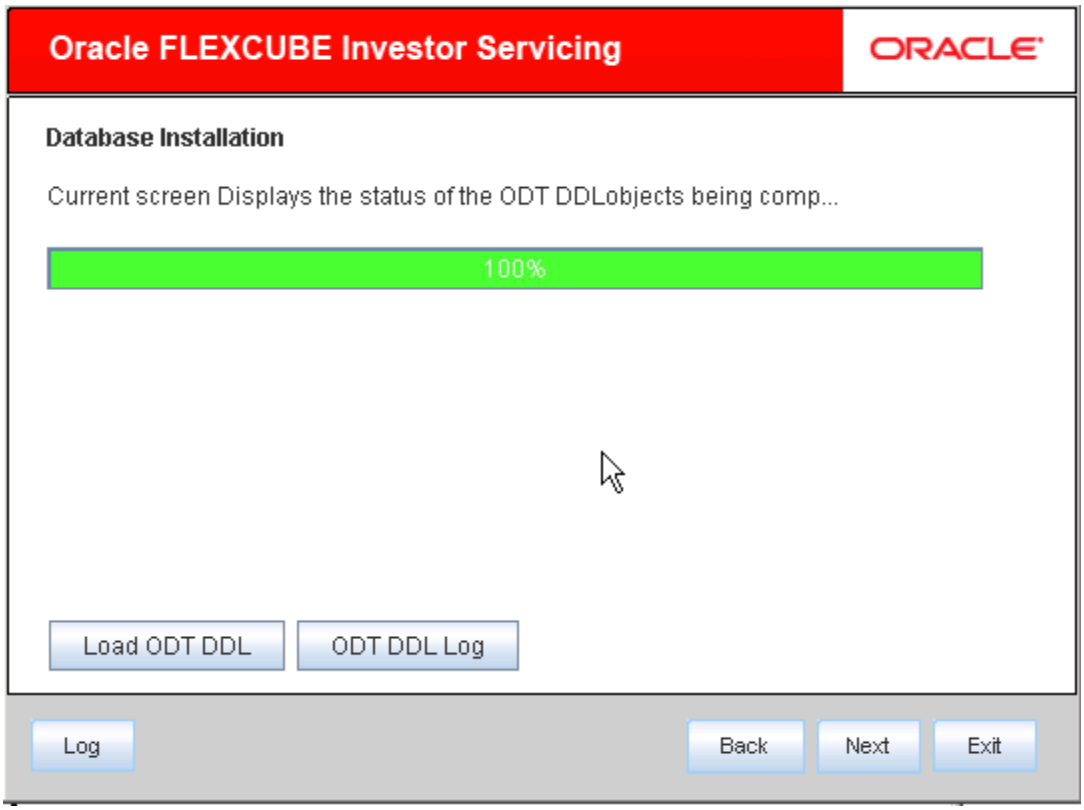
Specify a valid connect string that contains the details for database connectivity.

9. Once you have specified the details, click ‘Test Connection’ button to test the database schema connection.

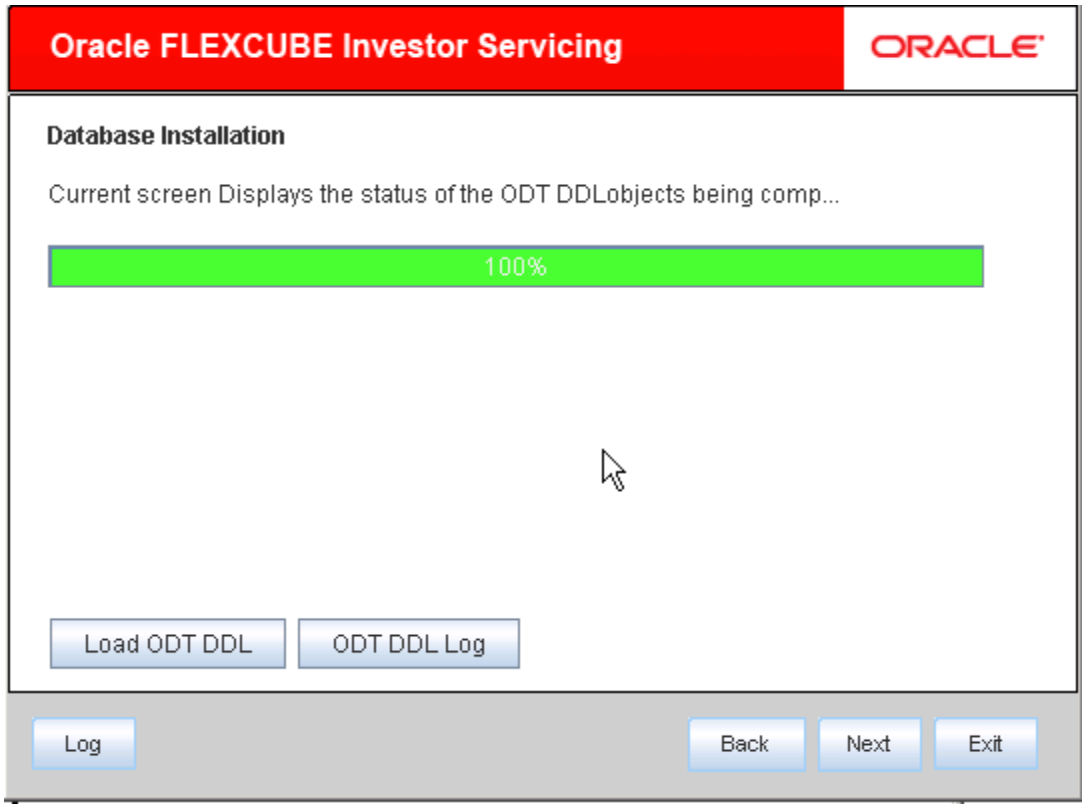


The above message is displayed if the connection is established successfully.

10. Click ‘Next’. The following screen is displayed.

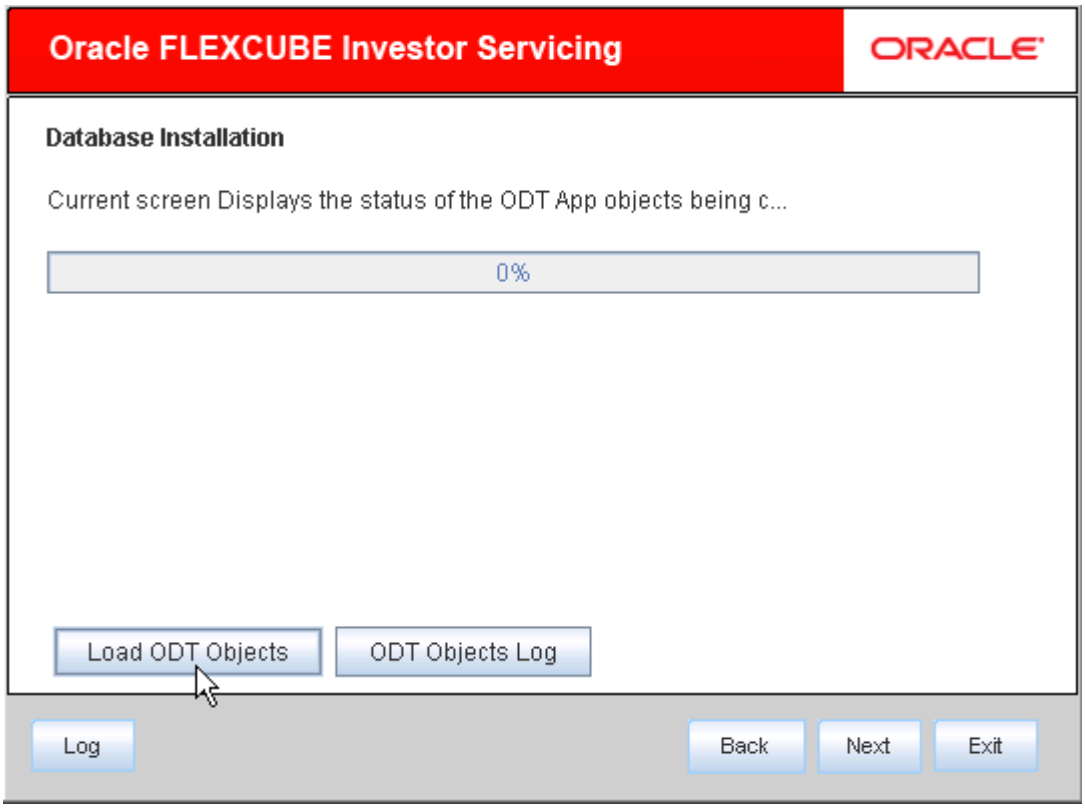


11. Click ‘Load ODT DDL’ button to start compiling. The objects ‘Type’, ‘Table’, and ‘Sequence’ will be compiled and the count will be updated. You can verify the DDL objects compilation by comparing the current count and the release count. The release count is the number of files in the temporary folder to which the files are copied.



12. Click on ODT DDL log to see the log.

13. Click ‘Next’. The following screen is displayed.

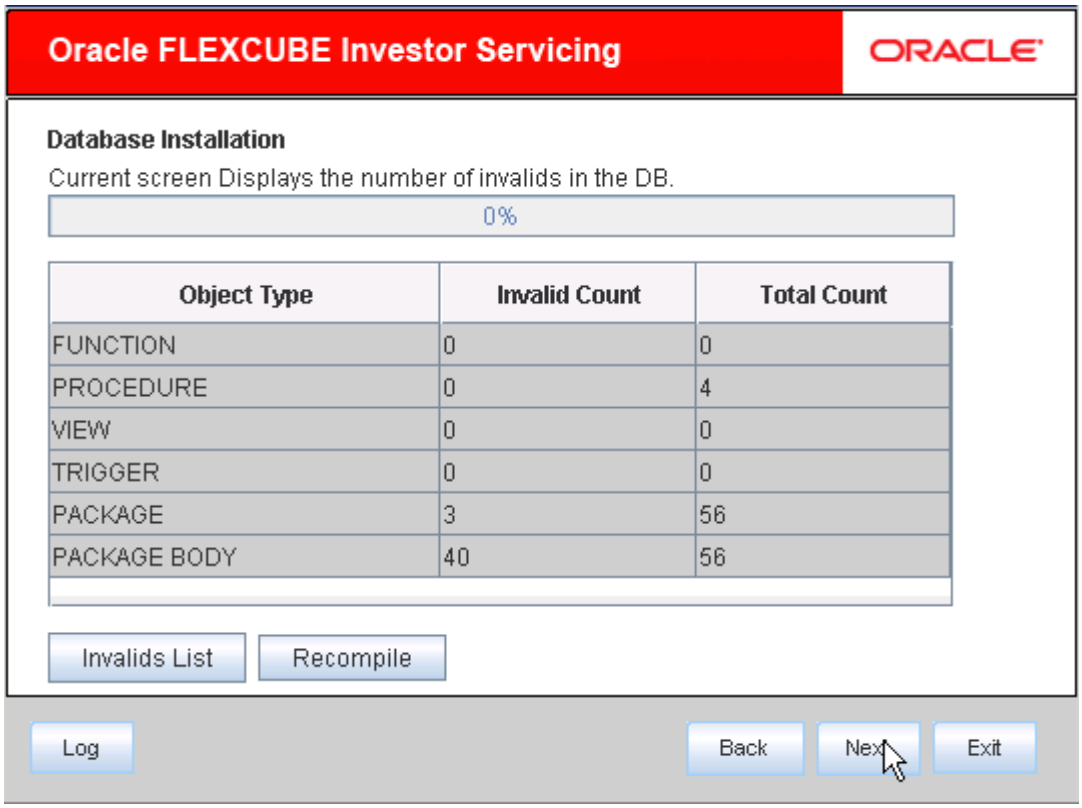


14. Click ‘Load ODT Objects’ button to compile APP objects.
    The installer loads the functions, procedures, views, triggers and packages as per your selection and compiles them.

You can verify the application objects compilation by comparing the count shown in this screen with the release count.

15. Click ‘ODT Objects Log’ to view the log.
    The log file ‘LoadODTObj.log’ will be available in the destination directory under the folder ‘DBLogs’.

16. Click ‘Next’. The following screen is displayed.

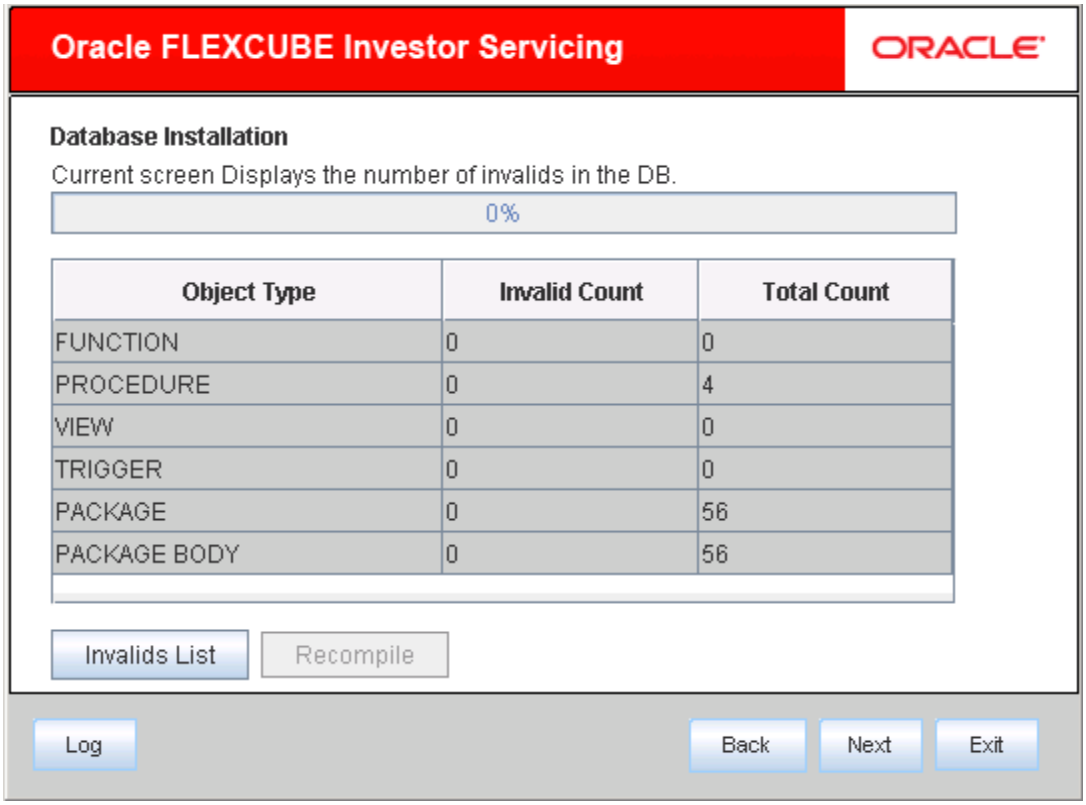


17. Click ‘Invalids List’ button to view the count of invalid objects in the database.
    You can view the file ‘InvalidList.txt’ created by the installer in the destination directory under the folder ‘DBLogs’.

18. Click ‘Recompile’ to re-compile any invalid objects If present. This reduces the invalid object count.

The Installer allows ‘Recompile’ multiple times in order to reduce the invalid objects count.

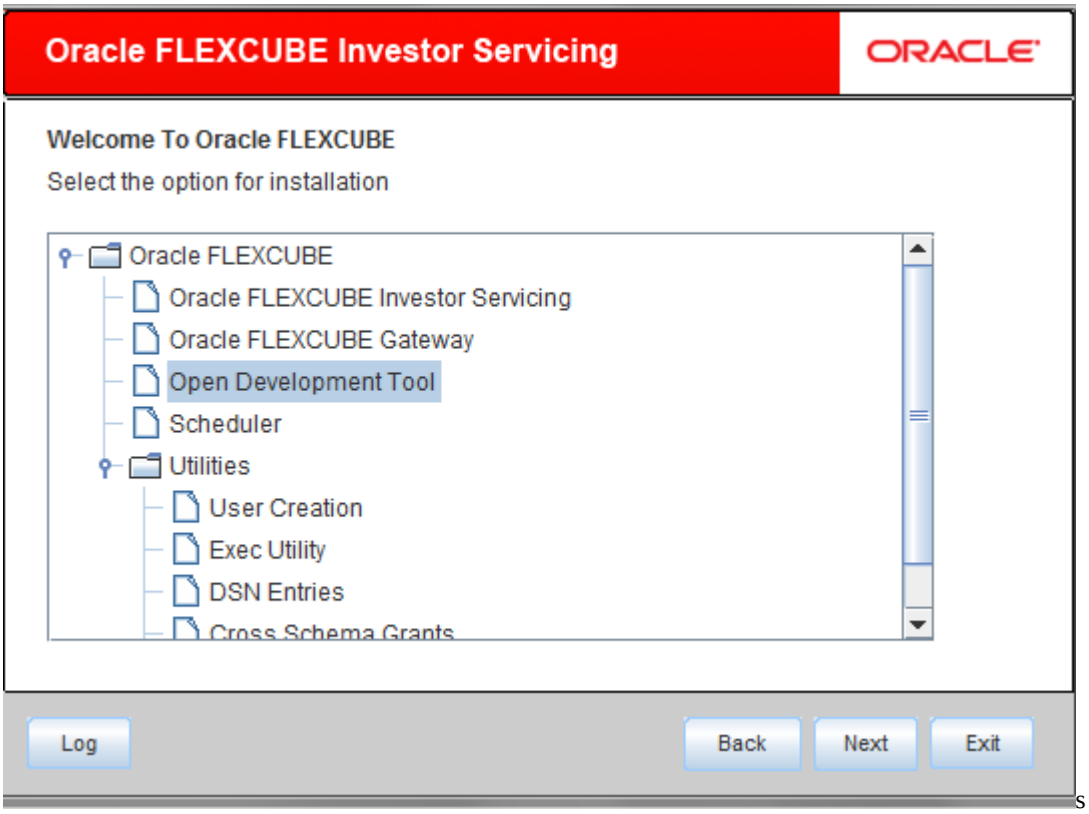
The following screen is displayed on successful re-compilation of ODT Objects.



The database is set up for the ODT installation.

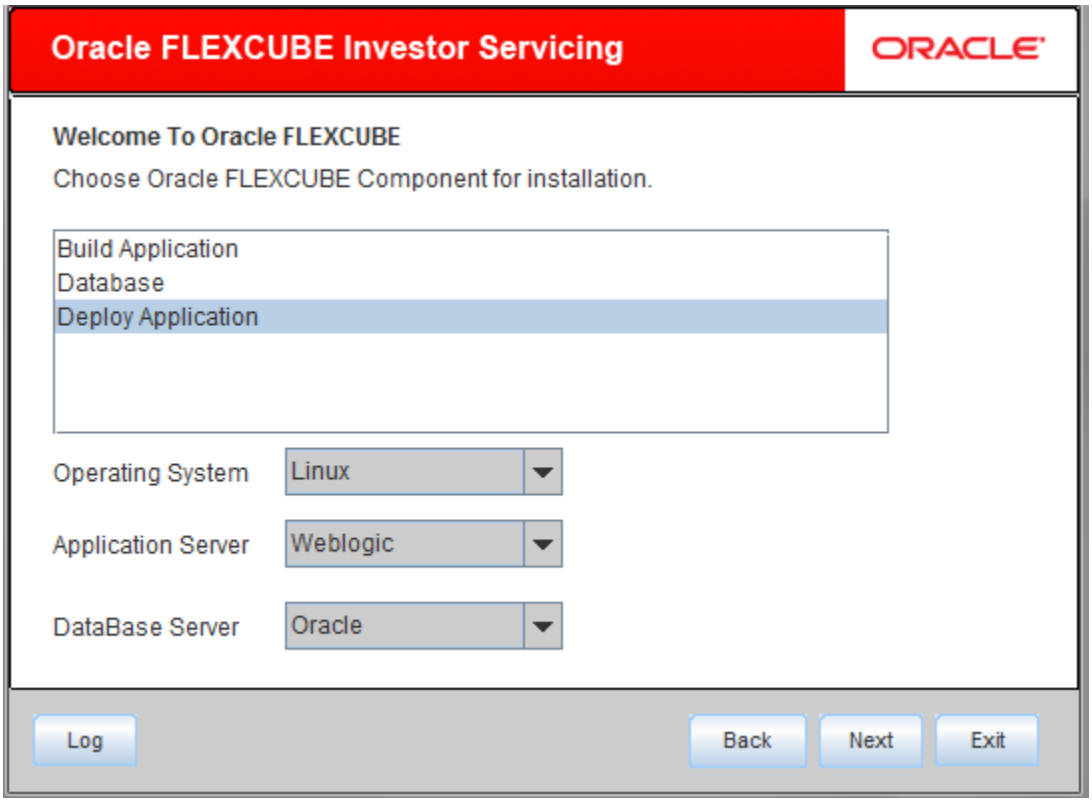
3. Open Development Tool (ODT) Application Full Deployment

1. Launch Oracle FLEXCUBE Investor Servicing Installer.
2. Click on ‘Next’ to display the screen below.



3. Select ‘Open Development Tool’.

4. Click ‘Next’ to display the screen below.



5. Select ‘Deploy Application’.

Operating System

Select the server’s operating system in which you are installing the FCIS application. Select the appropriate one from the adjoining drop-down list.

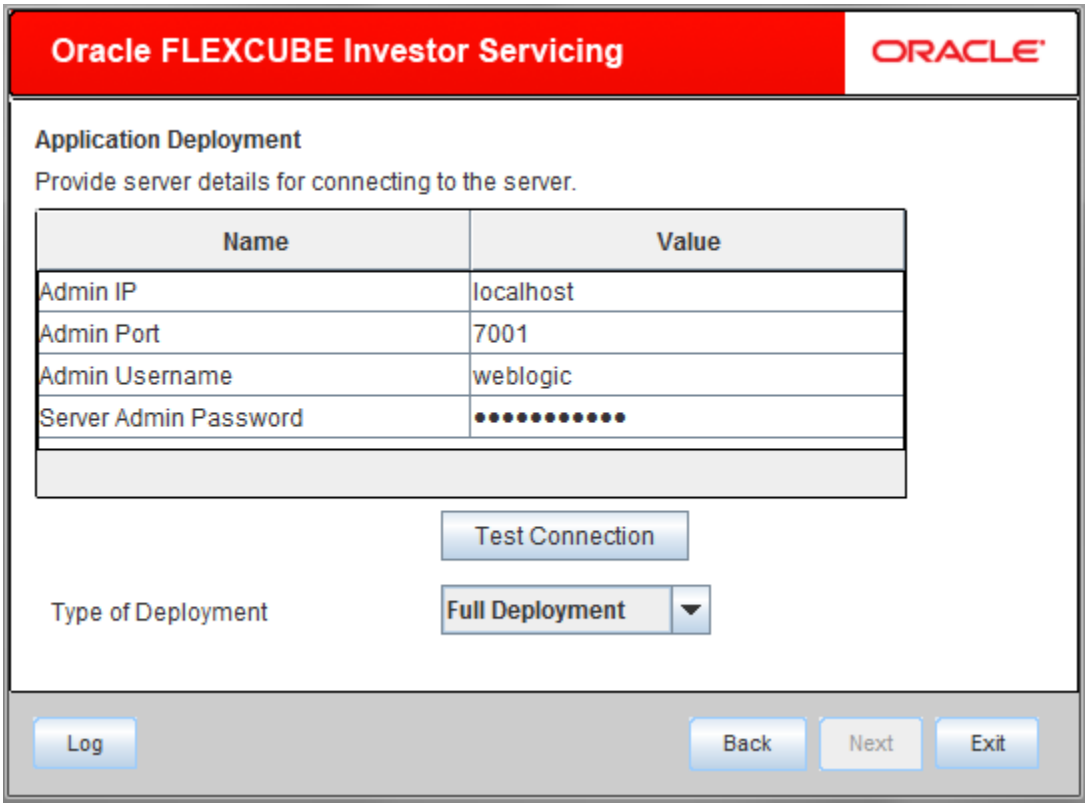
Application Server

Select ‘Weblogic’ from the adjoining drop down list.

Database Server

Select the database server in which you are installing the FCIS application. Select the appropriate one from the adjoining drop-down list.

6. WeblogicClick ‘Next’ to display the screen below.



7. Specify the following details:

Admin IP

By default it will display local host and user can not edit it.

Admin Port

Specify port number of weblogic server.

Admin UserName

Specify the appropriate admin username of the weblogic application server.

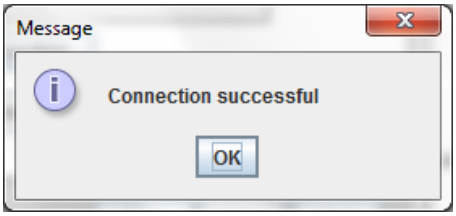
Server Admin Password

Specify the appropriate server admin password of the weblogic application server.

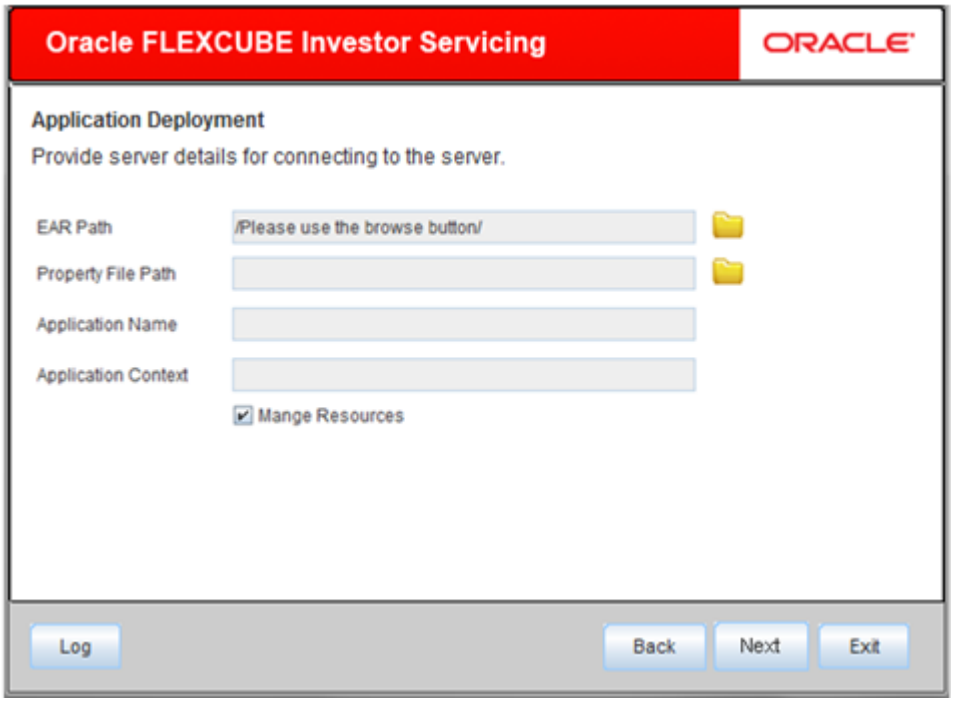
Type of Deployment

Select ‘Full Deployment’.

8. Click ‘Test Connection’ to test the connection with the application server. On successful connection, the following message will be displayed.



9. Click ‘OK’ and click ‘Next’ to display the screen below.



10. Specify the following details

EAR Path

Select the application EAR to be deployed using the browse button.

The Application EAR path cannot be copied and pasted on to the text box, thereby demanding the use of the browse button to the select the EAR.

Property File Path

If the property file is internal to the application EAR, it gets displayed here on selection of EAR path. If the property file is external, specify the location. You can use the directory button to browser and select the directory.

Application Name

Application name gets displayed on selection of EAR path.

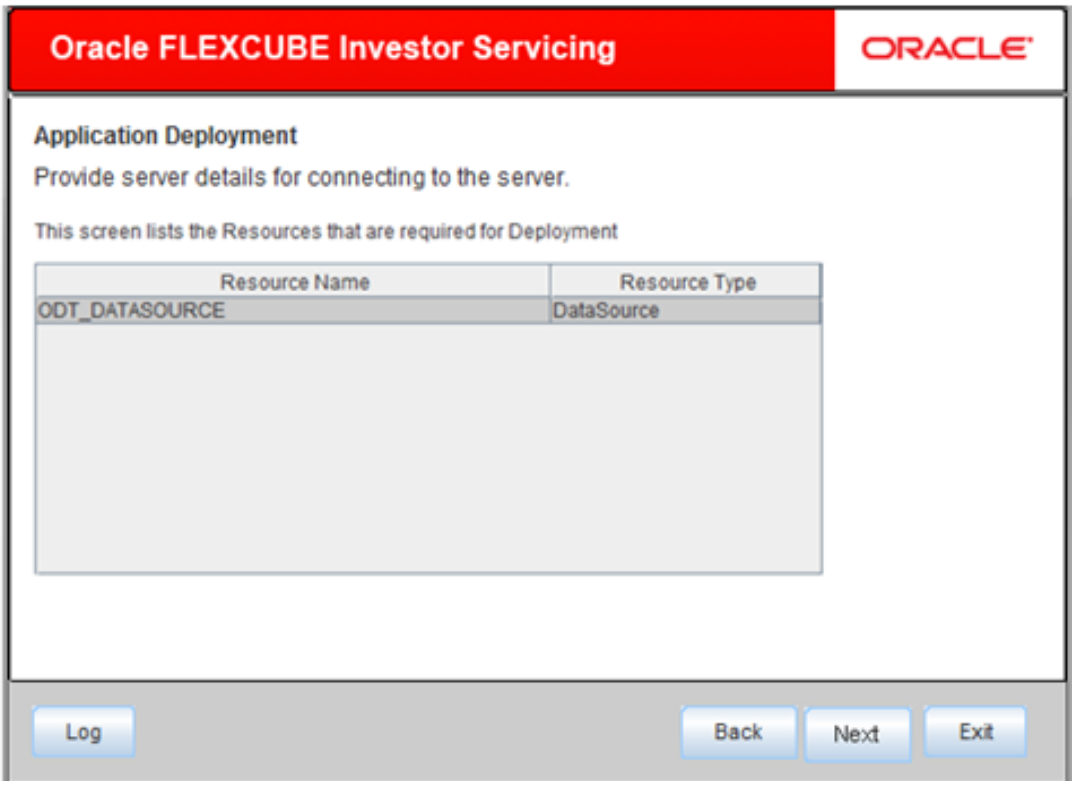
Application Context

Application context gets displayed on selection of EAR path..

Manage Resources

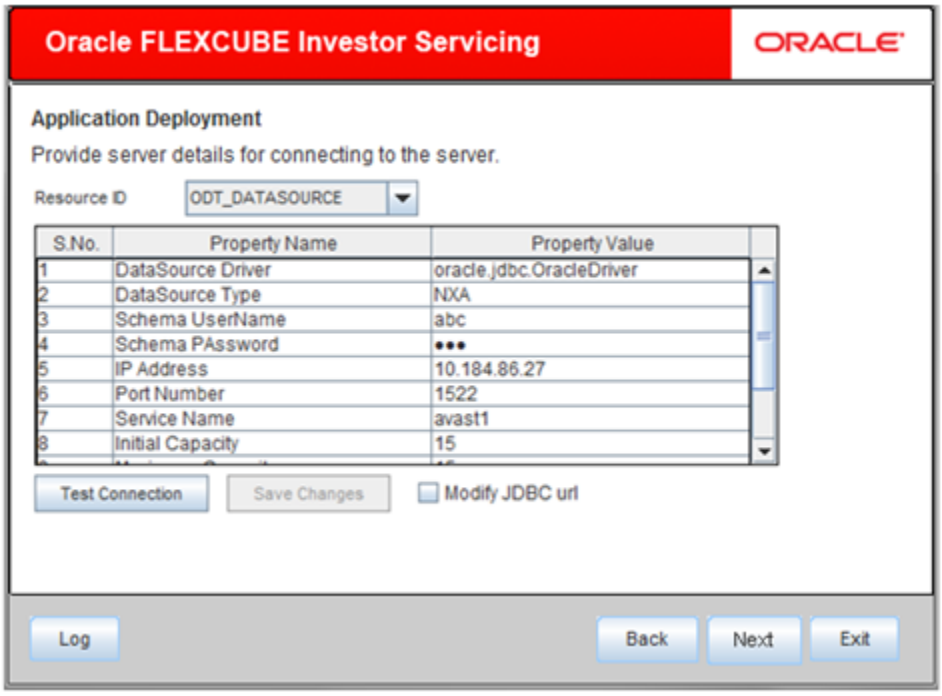
Check this box if resources are to be created along with deployment.

11. Click on ‘Next’ to display the screen below.



The current screen shows a list and type of resources that are created.

12. Click ‘Next’. The following screen will be displayed.



13. Specify the following details

Resource ID

Select the data source needs to get created from the adjoining drop down list.

DataSource Driver

Specify the JDBC driver URL with which the connection is established.
Ex: oracle.jdbc.OracleDriver for Non-XA datasources

DataSource Type

Specify the type of datasource that is to be created, XA or Non-XA.

Schema Username

Specify the username of the schema to which the connection is established.

Schema Password

Specify the password of the schema.

IP Address

Specify to provide the host address of the schema.

Port Number

Specify the port number of schema.

Service Name

Specify the schema name.

Initial Capacity

The number of physical connections to create when creating the connection pool in the data source

Maximum Capacity

The maximum number of physical connections that this connection pool can contain.

Capacity Increment

The increment by which this JDBC connection pool's capacity is expanded.

Shrink Frequency

The number of seconds to wait before shrinking a connection pool that has incrementally increased to meet demand.

Connection Reserve Timeout

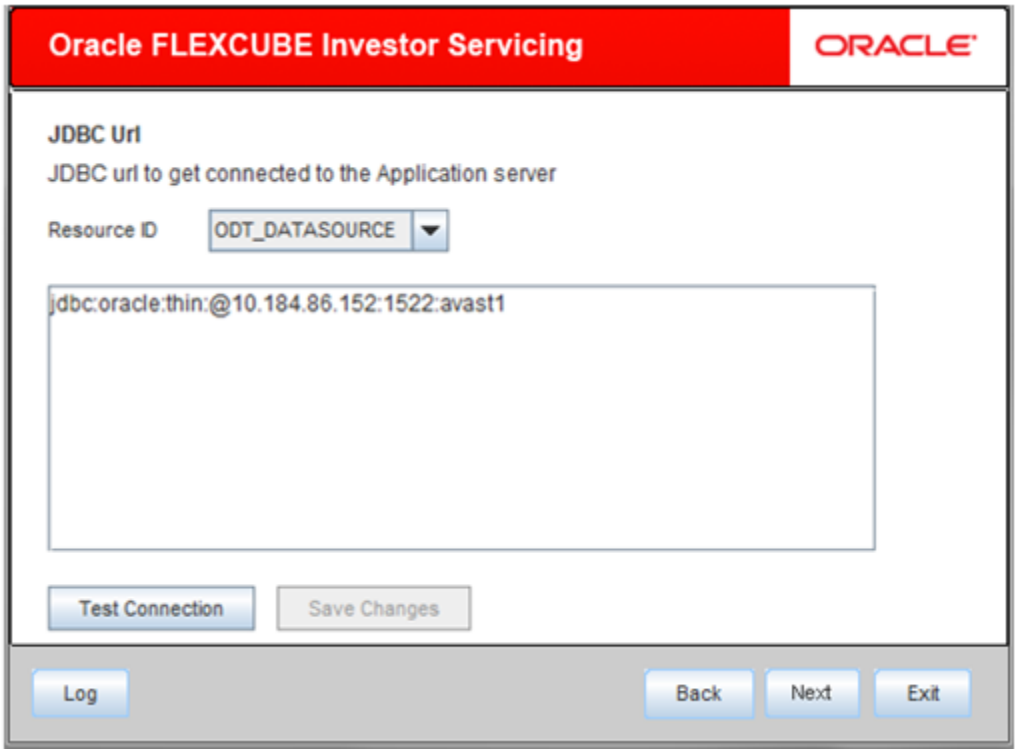
The number of seconds after which a call to reserve a connection from the connection pool will timeout.

14. Click ‘Save Changes’ to save the values provided In the table against corresponding value of Resource ID.
15. Click ‘Test Connection’ to try to establish connection with required details provided in the table.
16. Click on ‘Next’ to get the following screen.

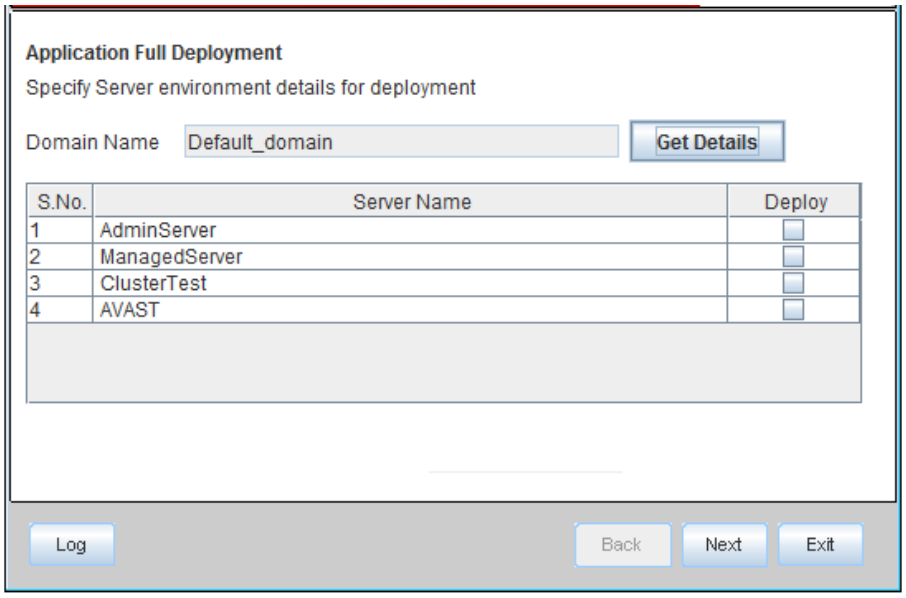
Modify JDBC URL

17. Select ‘Modify JDBC URL’ for editing the generated URL.

18. If ‘Modify JDBC URL’ is selected, on click of ‘Next’ , the following screen will be displayed.

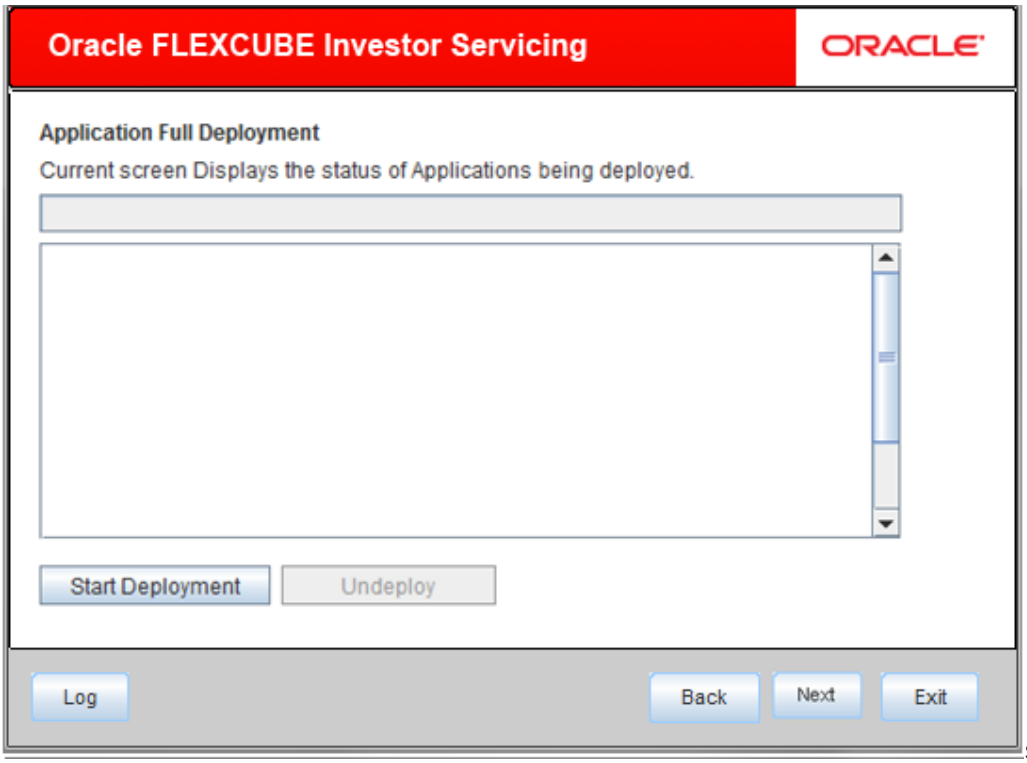


19. Click ‘Next’, the following screen will be displayed.



20. The Domain Name shows the weblogic domains name.
21. Click ‘Get Details’, the list of available servers are displayed in the table. Atleast one server should be selected to proceed to next screen.

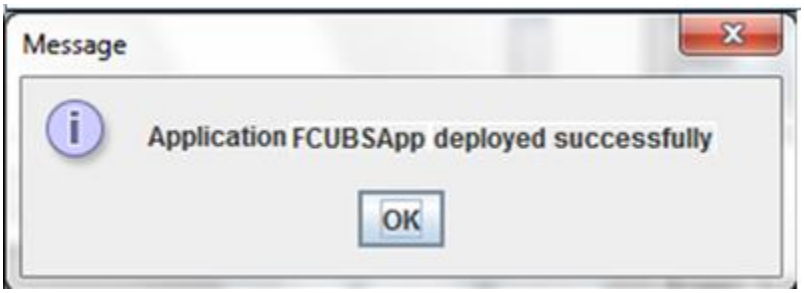
22. Click ‘Next’ to display the screen below.



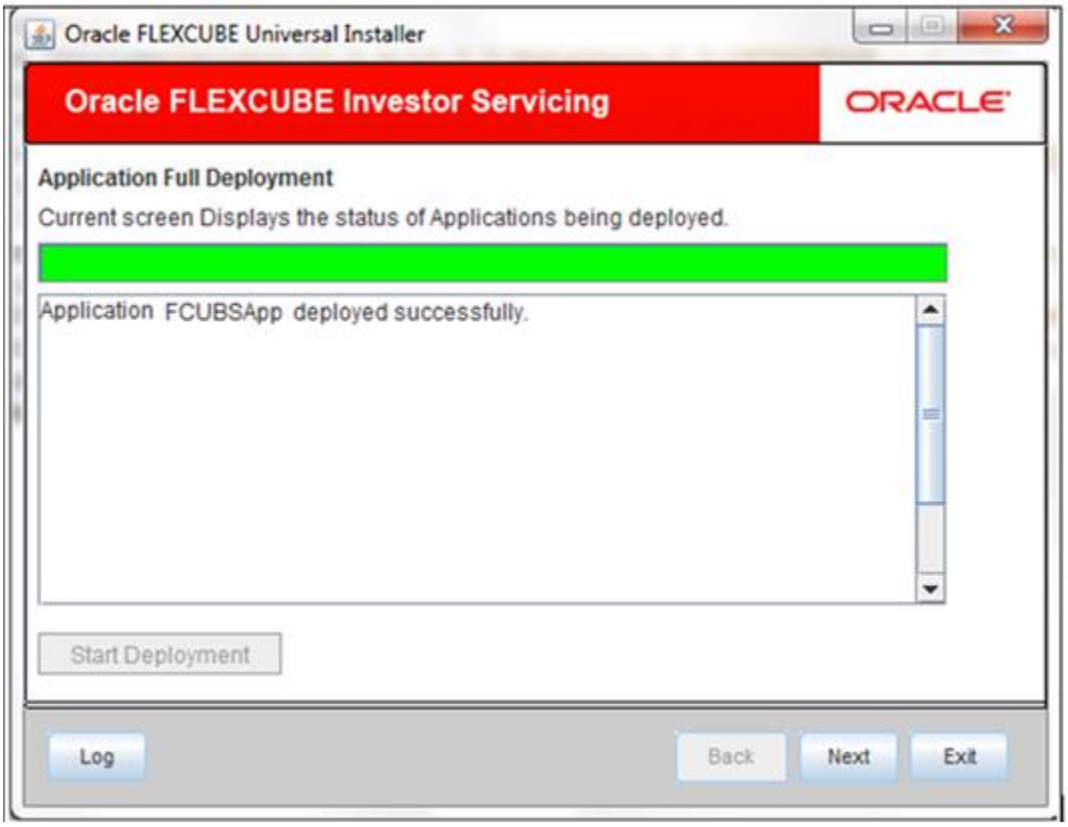
s

23. Click ‘Start Deployment’ to begin the process of application deployment.

On successful deployment, you will get the following message and the screen is expected to look like below.

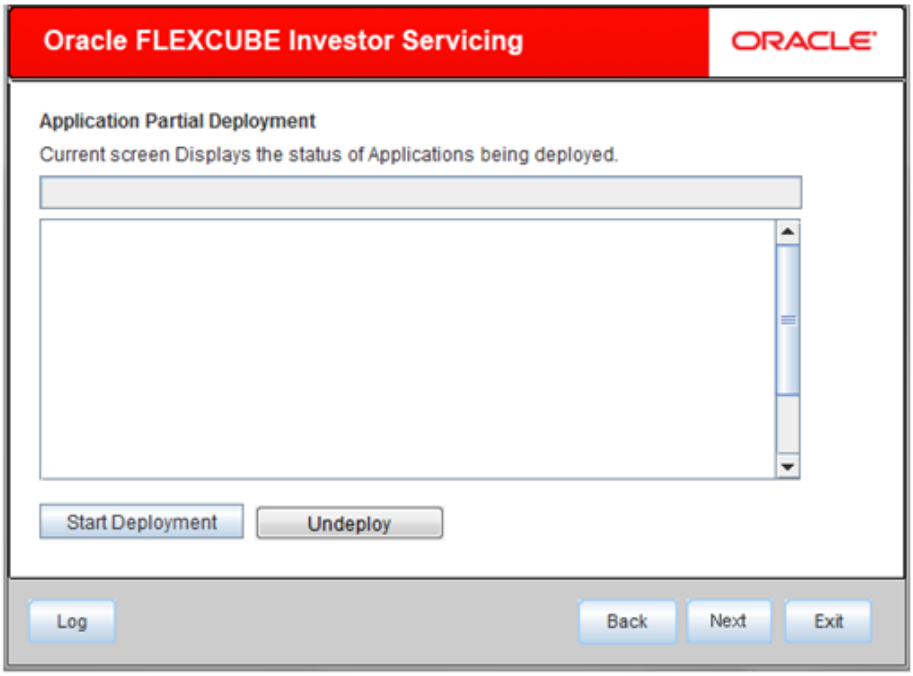


24. Click ‘OK’ and the following screen is displayed:



s

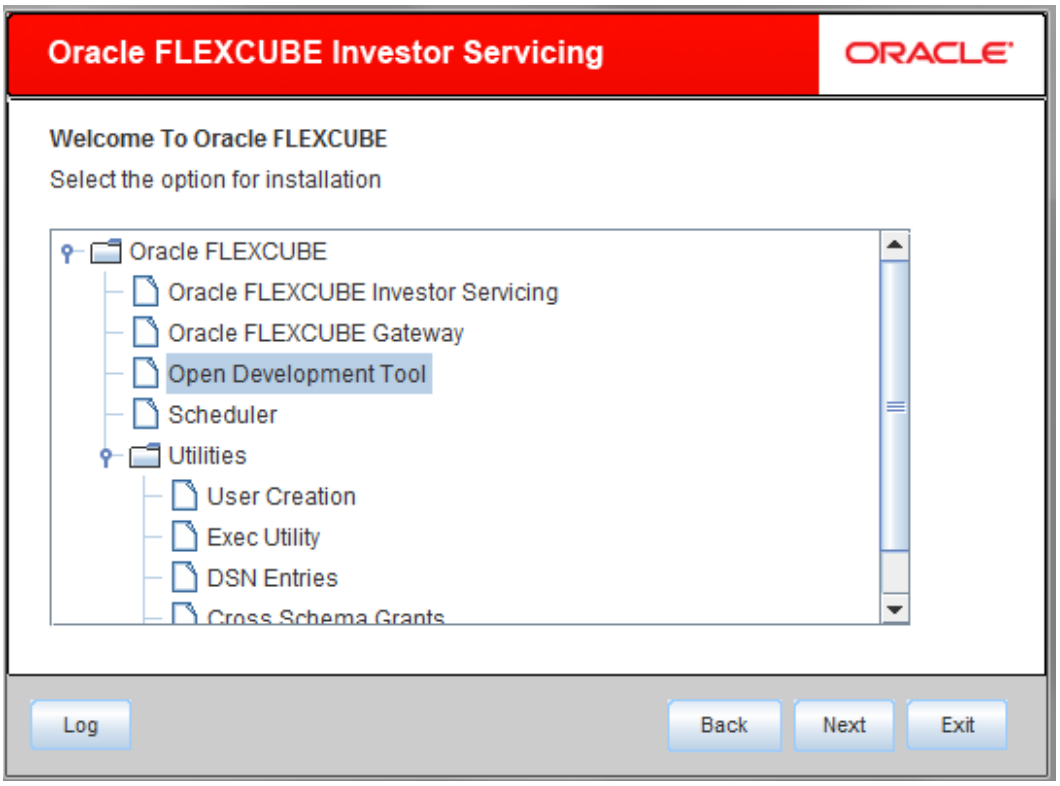
25. If the deployment is not sucessfull, the ‘Undeploy’ button will be enabled.



26. Click ‘Undeploy’ for undeploying the partially deployed EAR from the server.

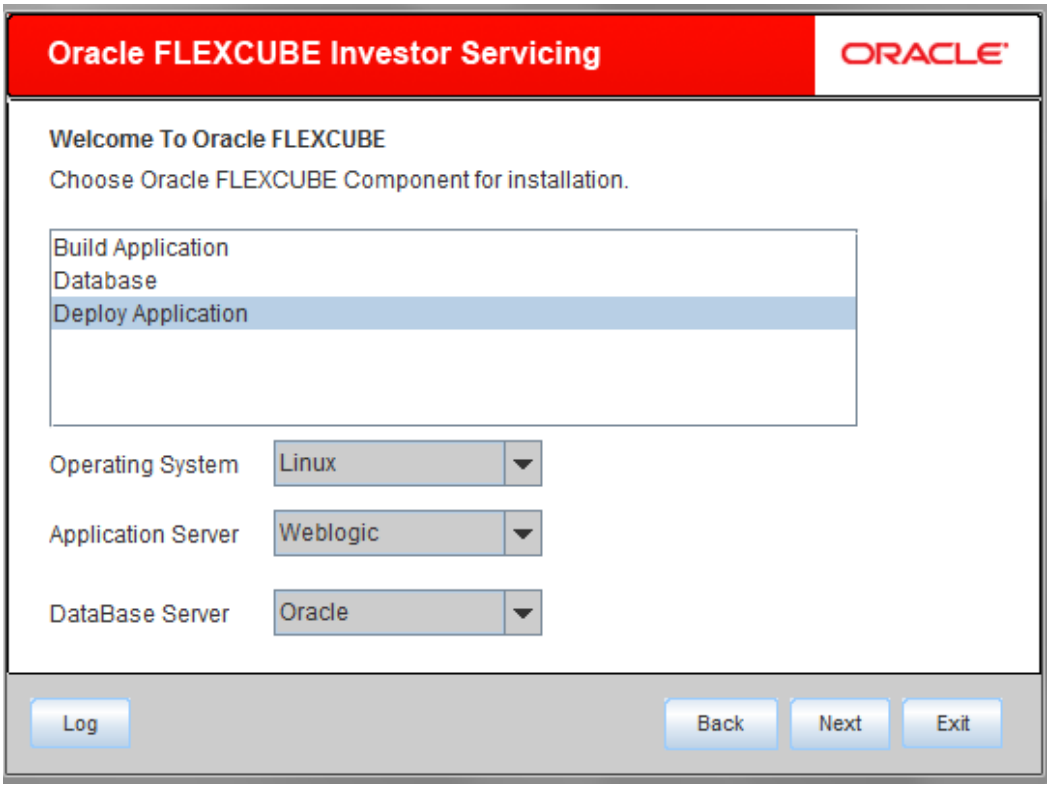
4. Development Tool (ODT) Application Full Deployment

1. Launch Oracle FLEXCUBE Investor Servicing Installer.
2. Click on ‘Next’ to display the screen below.



3. Select ‘Open Development Tool’.

4. Click ‘Next’ to display the screen below.



5. Select ‘Deploy Application’.

6. Specify the following details:

Operating System

Select the server’s operating system in which you are installing the FCIS application. Select the appropriate one from the adjoining drop-down list.

Application Server

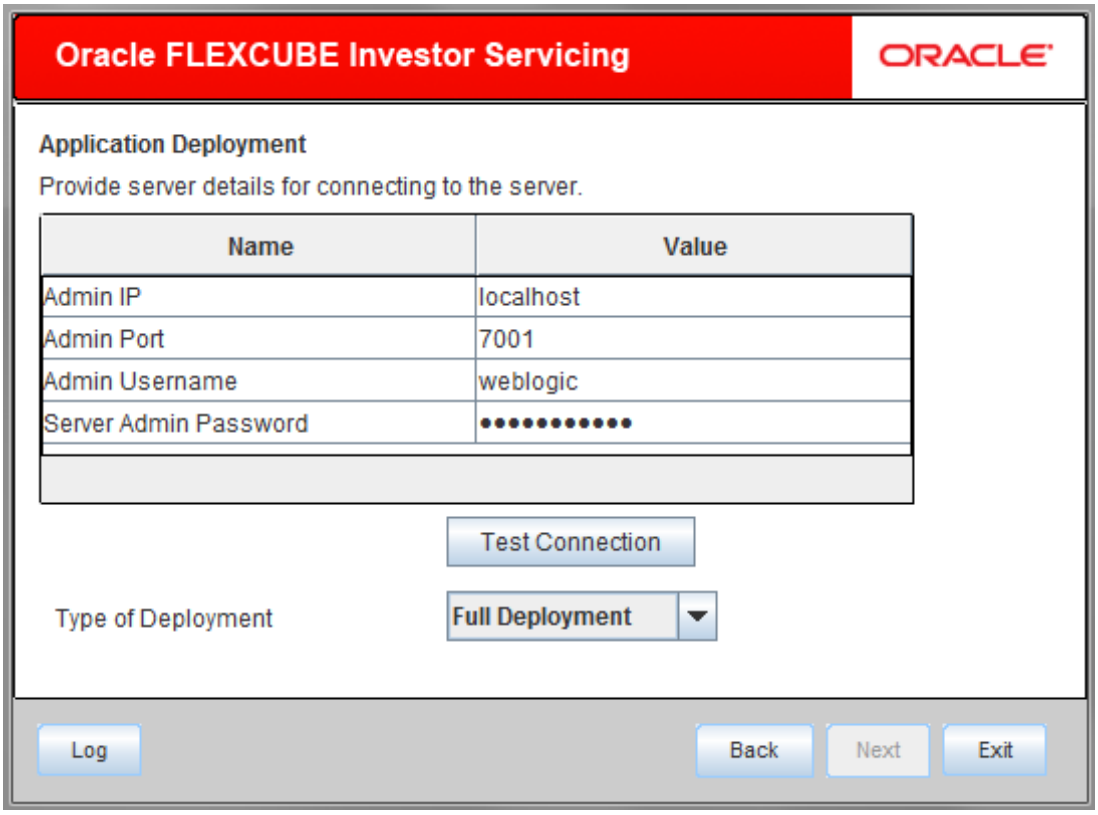
Select ‘Websphere’ from the adjoining drop down list.

Database Server

Select the database server in which you are installing the FCIS application. Select the appropriate one from the adjoining drop-down list.

SelectSelectWebsphere

7. Click on ‘Next’ to display the screen below.



8. Specify the following details:

Admin IP

Not applicable.

Admin Port

Not applicable.

Admin UserName

Specify the appropriate admin username of the websphere application server.

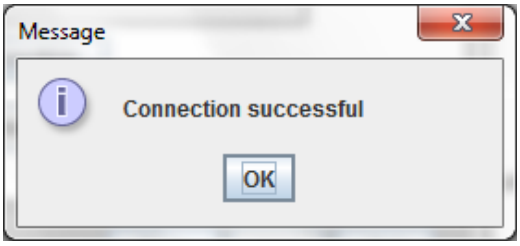
Admin Password

Specify the appropriate admin password of the websphere application server.

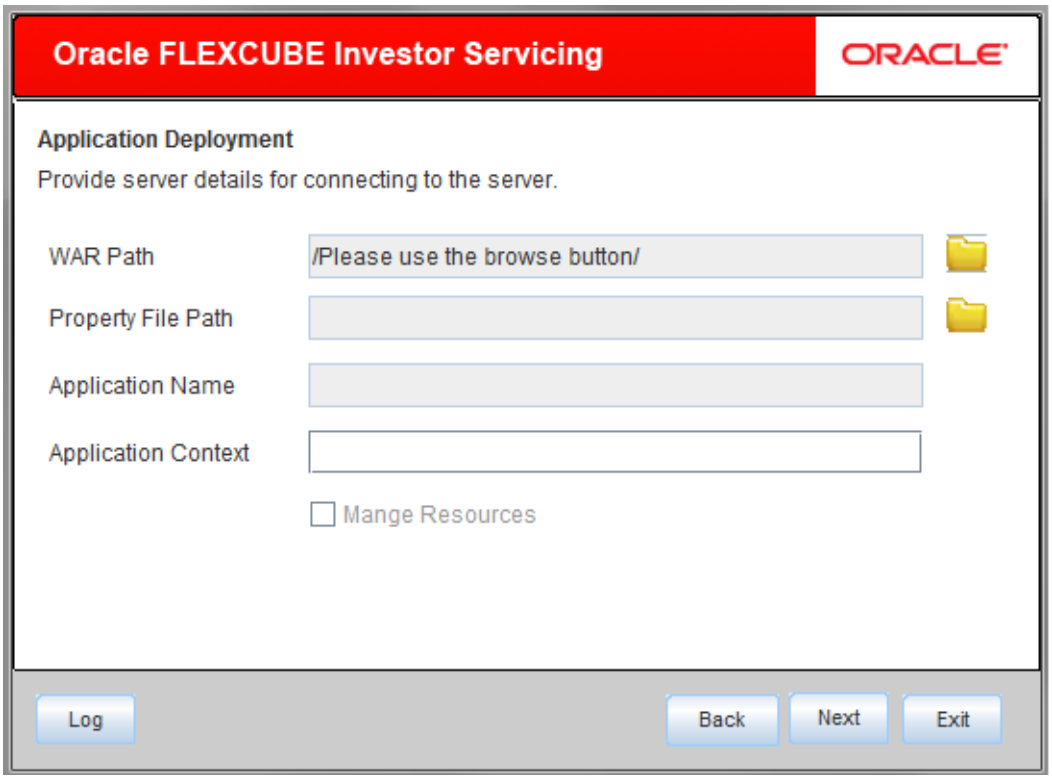
Type of Deployment

Select ‘Full Deployment’.

9. Click on ‘Test Connection’ to test the connection with the application server. On successful connection, the following message will be displayed.



10. Click on ‘OK’ and click on ‘Next’ to display the screen below.



s

11. Specify the following details:

WAR Path

Select the application WAR to be deployed using the browse button.

The Application WAR path cannot be copied and pasted on to the text box, thereby demanding the use of the browse button to the select the WAR.

Property File Path

If the property file is internal to the application EAR, it gets displayed here on selection of EAR path. If the property file is external, specify the location. You can use the directory button to browser and select the directory..

Application Name

Application name gets displayed on selection of EAR path.

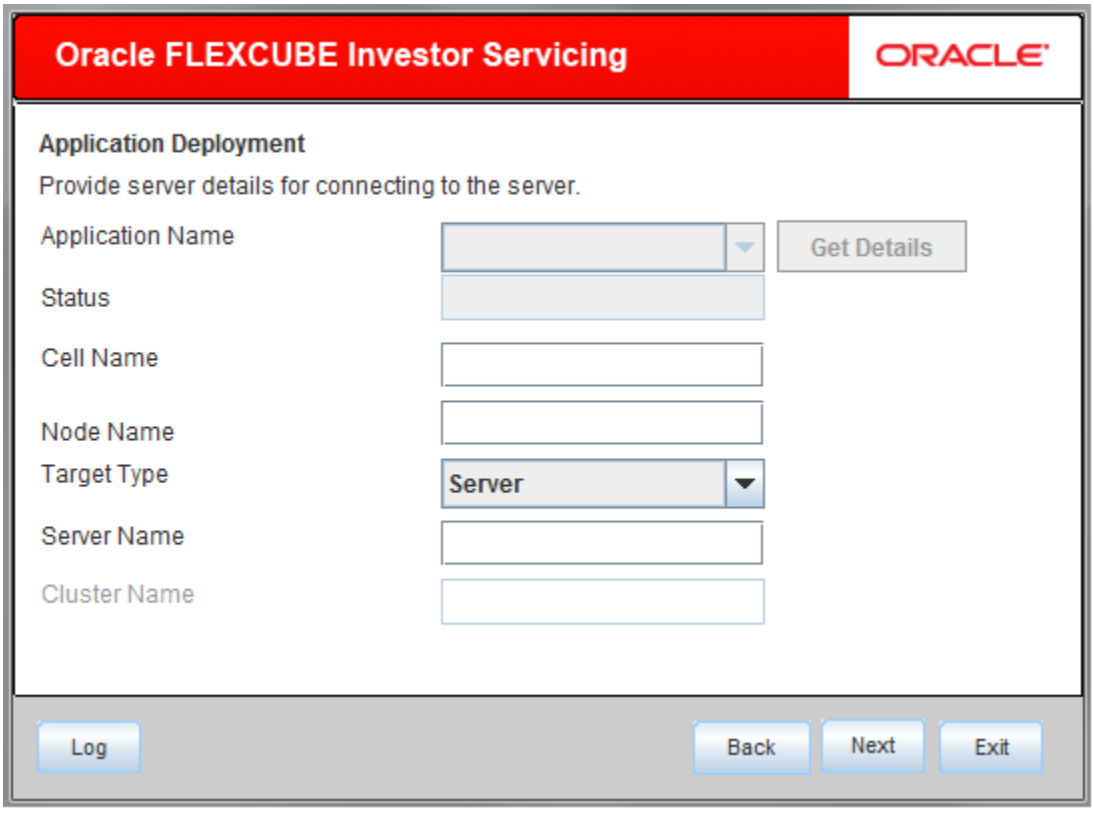
Application Context.

Application context gets displayed on selection of EAR path.

Manage Resources

Not Applicable for websphere application server.

12. Click ‘Next’ to display the screen below.



s

13. Specify the following details:

Application Name

Not applicable for application full deployment.

Status

Not applicable for application full deployment.

Cell Name

Specify the appropriate cell name.

Node Name

Specify the appropriate node name.

Target Type

Select the appropriate target type.

Server Name

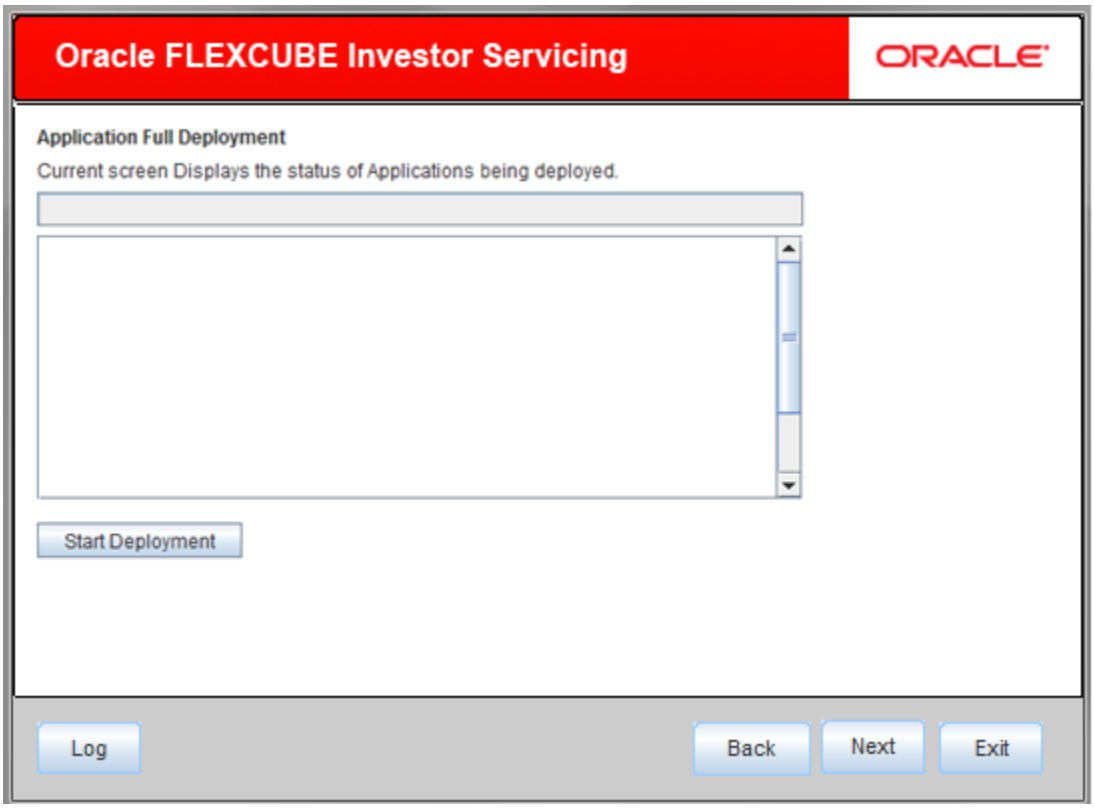
Specify the appropriate server name if the selected target type is ‘Server’.

Cluster Name

Specify the appropriate cluster name if the selected target type is ‘Cluster’.

The values fed in the above screen are not validated at the screen level as a result of a limitation and hence, specify accurate information.

14. Click ‘Next’ to display the screen below.



s

15. Click ‘Start Deployment’ to begin the process of application deployment.

16. On successful deployment, you will get the following message is displayed:.

17. Click ‘OK’ and following screen is displayed:
