This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

CAUTION: MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information on My Oracle Support (MOS) in Appendix K.

List of Procedures

Procedure 1. Install DSR on Oracle Linux/KVM **Error! Bookmark not defined.**
 Procedure 2. Create and Install OCDSR VMs via KVM GUI **Error! Bookmark not defined.**
 Procedure 3. (VMware) Import DSR OVA 44
 Procedure 4. (VMware only) Configure NOAM Guests Role Based On Resource Profile and
 Configure Network 44
 Procedure 5. (VMware only) Configure Remaining DSR Guests Based on Resource Profile and
 Configure Network 45
 Procedure 6. Import DSR OVA (KVM/OpenStack Only) 46
 Procedure 7. (KVM/OpenStack Only) Configure NOAM Guests Role Based on Resource Profile 49
 Procedure 8. (KVM/OpenStack Only) Configure Remaining DSR Guests Based on Resource Profile
 and Configure Network 51
 Procedure 9. (OVM-S/OVM-M). Import DSR OVA and prepare for VM creation 54
 Procedure 10. (OVM-S/OVM-M). Configure each DSR VM 58
 Procedure 11. Install DSR on Oracle Linux/KVM 66
 Procedure 12. Create and Install OCDSR VMs via KVM GUI 83
 Procedure 13. Prepare OpenStack Templates and Environment Files for NOAM/Signaling Stacks 91
 Procedure 14. Create OpenStack Parameter File for NOAM 92
 Procedure 15. Create OpenStack Parameter File for Signaling 95
 Procedure 16. Deploy HEAT Templates 100
 Procedure 17. Configure the First NOAM NE and Server 103
 Procedure 18. Configure the NOAM Server Group 109
 Procedure 19. Configure the Second NOAM Server 113
 Procedure 20. Complete Configuring the NOAM Server Group 116

Procedure 21. Configure the DR NOAM NE and Server (Optional)	118
Procedure 22. Configure the DR NOAM Server Group (Optional)	123
Procedure 23. Configure the Second DR NOAM Server (Optional)	126
Procedure 24. Complete Configuring the DR NOAM Server Group (Optional)	129
Procedure 25. Configure the SOAM NE	131
Procedure 26. Configure the SOAM Servers.....	133
Procedure 27. Configure the SOAM Server Group	138
Procedure 28. Activate PCA/DCA (PCA/DCA Only).....	141
Procedure 29. Configure the MP Virtual Machines.....	142
Procedure 30. Configure Places and Assign MP Servers to Places (PCA and DCA Only)	151
Procedure 31. Configure the MP Server Group(s) and Profiles	153
Procedure 32. Configure the Signaling Network Routes	159
Procedure 33. Configure DSCP Values for Outgoing Traffic (Optional)	162
Procedure 34. IP Front End (IPFE) Configuration	166
Procedure 35. Configure SNMP Trap Receiver(s) (Optional).....	173
Procedure 36. (VMware only) Create iDIH Oracle, Mediation, and Application VMs (Optional)	175
Procedure 37. (KVM/OpenStack Only) Create iDIH Oracle, Mediation, and Application VMs (Optional)	177
Procedure 38. (OVM-S/OVM-M). Import Three IDIH OVAs and Create and Configure a VM for Each... ..	182
Procedure 39. Configure iDIH VM Networks (Optional)	190
Procedure 40. Install KVM	194
Procedure 41. Create SDB on KVM	214
IMPORTANT: This Procedure only apply for KVM that has iDIH Database.....	214
Procedure 42. Attach device (SDB) to iDIH Database VM	216
Procedure 43. Fix iDIH Database Script on KVM	219
IMPORTANT: This Procedure only apply to iDIH database over KVM (Not Openstack/KVM).	219
Procedure 44. iDIH DB Installation steps.....	221
Procedure 45. IDIH Application and Mediation Installation steps using CLI.....	224
Procedure 46. Run Post Installation Scripts on iDIH VMs (Optional)	225
Procedure 47. Configure DSR Reference Data Synchronization for iDIH (Optional)	228
Procedure 48. iDIH Configuration: Configuring the SSO Domain (Optional)	231
Procedure 49. Integrate iDIH into DSR (Optional)	239
Procedure 50. iDIH Configuration: Configure the Mail Server (Optional)	240
Procedure 51. iDIH Configuration: Configure SNMP Management Server (Optional)	242
Procedure 52. iDIH Configuration: Change Network Interface (Optional)	243
Procedure 53. Configure ComAgent Connections.....	244
Procedure 54. Complete PCA Configuration (Optional)	250
Procedure 55. Backups and Disaster Prevention	250
Procedure 56. (KVM/OpenStack Only) Configure Port Security.....	254
Procedure 57. Enable/Disable DTLS (SCTP Diameter Connections Only).....	255
Procedure 58. Shared Secret Encryption Key Revocation (RADIUS Only)	256
Procedure 59. DSR Performance Tuning	256
Procedure 60. Change NOAM/SOAM Profile for Increased MP Capacity on a Virtualized Environment.....	256
Procedure 61. Create a Network Port.....	260

Procedure 62. Create and Boot OpenStack Instance.....	261
Procedure 63. Configure Networking for OpenStack Instance	262
Procedure 64. Set Up the Server	262
Procedure 65. Scale a Signaling Node	269
Procedure 66. Multiqueue on IPFE (OL/KVM).....	280
Procedure 67. Ring buffer configuration (OL/KVM)	282

1. Introduction

This document installs the Diameter Signaling Router (DSR) 8.6.0.0.0 and compatible IDIH applications on a supported Cloud platform.

This document assumes platform-related configuration has already been done.

The audience for this document includes Oracle customers as well as these groups: Software System, Product Verification, Documentation, and Customer Service including Software Operations and First Office Application.

1.2 Acronyms

An alphabetized list of acronyms used in the document.

Table 1. Acronyms

Acronym	Definition
CD	Compact Disk
DA-MP	Diameter Agent Message Processor
DSCP	Differentiated Services Code Point
DSR	Diameter Signaling Router
ESXi	Elastic Sky X Integrated
FABR	Full Address Based Resolution
iDIH	Integrated Diameter Intelligence Hub
IPFE	IP Front End
KVM	Kernel-based Virtual Machine
MP	Message Processor
NAPD	Network Architecture Planning Diagram
NE	Network Element
NOAM	Network Operation Administration and Maintenance
OS	Operating System (for example, TPD)
OVA	Open Virtualization Archive
OVM-M	Oracle VM Manager
OVM-S	Oracle VM Server
PDRA	Policy Diameter Routing Agent
PCA	Policy and Charging Application
RBAR	Range Based Address Resolution
SAN	Storage Area Network
SFTP	Secure File Transfer Protocol
SNMP	Simple Network Management Protocol
SOAM	Software Operation Administration and Maintenance
SSO	Single Sign On
TPD	Tekelec Platform Distribution
TSA	Target Set Address
VIP	Virtual IP
VM	Virtual Machine
vSTP	Virtual Signaling Transfer Point

1.3 Terminology

Multiple server types may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies.

Table 2. Terminology

Term	Definition
Site	<p>Applicable for various applications, a site is type of place. A place is configured object that allows servers to be associated with a physical location.</p> <p>A site place allows servers to be associated with a physical site. For example, sites may be configured for Atlanta, Charlotte, and Chicago. Every server is associated with exactly one site when the server is configured.</p> <p>For the Policy and Charging DRA application, when configuring a site, only put DA-MPs and SBR MP servers in the site. Do not add NOAM, SOAM, or IPFE MPs to a site.</p>
Place Association	<p>Applicable for various applications, a Place Association is a configured object that allows places to be grouped together. A place can be a member of more than one place association.</p> <p>The Policy and Charging DRA application defines two place association types: policy binding region and Policy and Charging mated sites.</p>
Policy and Charging SBR Server Group Redundancy	<p>The Policy and Charging application uses SBR server groups to store the application data. The SBR server groups support both two and three site redundancy. The server group function name is Policy and Charging SBR.</p>
Server Group Primary Site	<p>A server group primary site is a term used to represent the principle location within a SOAM or SBR server group. SOAM and SBR server groups are intended to span several sites (places). For the Policy and Charging DRA application, these sites (places) are all configured within a single Policy and Charging Mated Sites place association.</p> <p>For the Diameter custom application, these sites (places) are configured in Applications Region place association.</p> <p>The primary site may be in a different site (place) for each configured SOAM or SBR server group.</p> <p>A primary site is described as the location in which the active and standby servers to reside; however, there cannot be any preferred spare servers within this location. All SOAM and SBR server groups have a primary site.</p>
Server Group Secondary Site	<p>A server group secondary site is a term used to represent location in addition to the Primary Site within a SOAM or SBR Server Group. SOAM and SBR server groups are intended to span several sites (places). For the Policy and Charging DRA application, these sites (places) are all configured within a single Policy and Charging Mated Sites place association.</p> <p>For the Diameter custom application, these sites (places) are configured in Applications Region place association.</p> <p>The secondary site may be in a different sites (places) for each configured SOAM or SBR server group.</p> <p>A secondary site is described as the location in which only preferred spare servers reside. The active and standby servers cannot reside within this location. If two site redundancy is wanted, a secondary site is required for all SOAM and SBR server groups.</p>

Term	Definition
Session Binding Repository Server Group Redundancy	The DCA application may use SBR server groups to store application session data. The SBR server groups support both two and three site redundancy. The server group function name is Session and Binding Repository .
Two Site Redundancy	Two site redundancy is a data durability configuration in which Policy and Charging data is unaffected by the loss of one site in a Policy and Charging Mated Sites Place Association containing two sites. Two site redundancy is a feature provided by server group configuration. This feature provides geographic redundancy. Some server groups can be configured with servers located in two geographically separate sites (locations). This feature ensures there is always a functioning active server in a server group even if all the servers in a single site fail.

2. Installation Overview

This section provides a brief overview of the recommended methods for installing the source release software that is installed and running on a Cloud to the target release software.

2.1 Required Materials

1. One target release DSR OVA Media
2. Three (3) iDIH OVA (Optional iDIH)
 - a. iDIH Application OVA
 - b. iDIH Oracle OVA
 - c. iDIH Mediation OVA

2.2 Installation Overview

This section describes the overall strategy to employ for a single or multi-site DSR and iDIH installation. It also lists the procedures required for installation with estimated times. Section 2.2.1 discusses the overall installation strategy and includes an installation flowchart to determine exactly which procedures should be run for an installation. Section 2.2.3 lists the steps required to install a DSR system. The later sections expand on the information from the matrix and provide a general timeline for the installation.

Additionally, basic firewall port information is included in Appendix F Firewall Ports. It should also be noted that some procedures are cloud platform dependent and not all procedures are performed on all cloud platforms.

2.2.1 Installation Strategy

A successful installation of DSR requires careful planning and assessment of all configuration materials and installation variables.

1. An overall installation requirement is decided upon. The following data are collected:
 - The total number of sites
 - The number of virtual machines at each site and their role(s)
 - What time zone should be used across the entire collection of DSR sites?
 - Will SNMP traps be viewed at the NOAM or will an external NMS be used? (Or both?)

2. A site survey (NAPD) is conducted with the customer to determine exact networking and site details.

Note: XMI and IMI addresses are difficult to change once configured. It is **very important these addresses are well planned and not expected to change after a site is installed.**

DSR currently supports the following installation strategies:

- DSR installation without using HEAT templates

[Figure 1] illustrates the overall process that each DSR installation involves. In summary, this involves creation of guests and configures each guest role based on Resource Profile and Configure Network.

- DSR installation using HEAT templates (OpenStack only)

[Figure 2] illustrates the overall process that each DSR installation involves using the Heat Templates. In summary, this involves creation of parameter files, environment files, template files, DSR Topology Configuration xml and deploys DSR using open stack CLI commands.

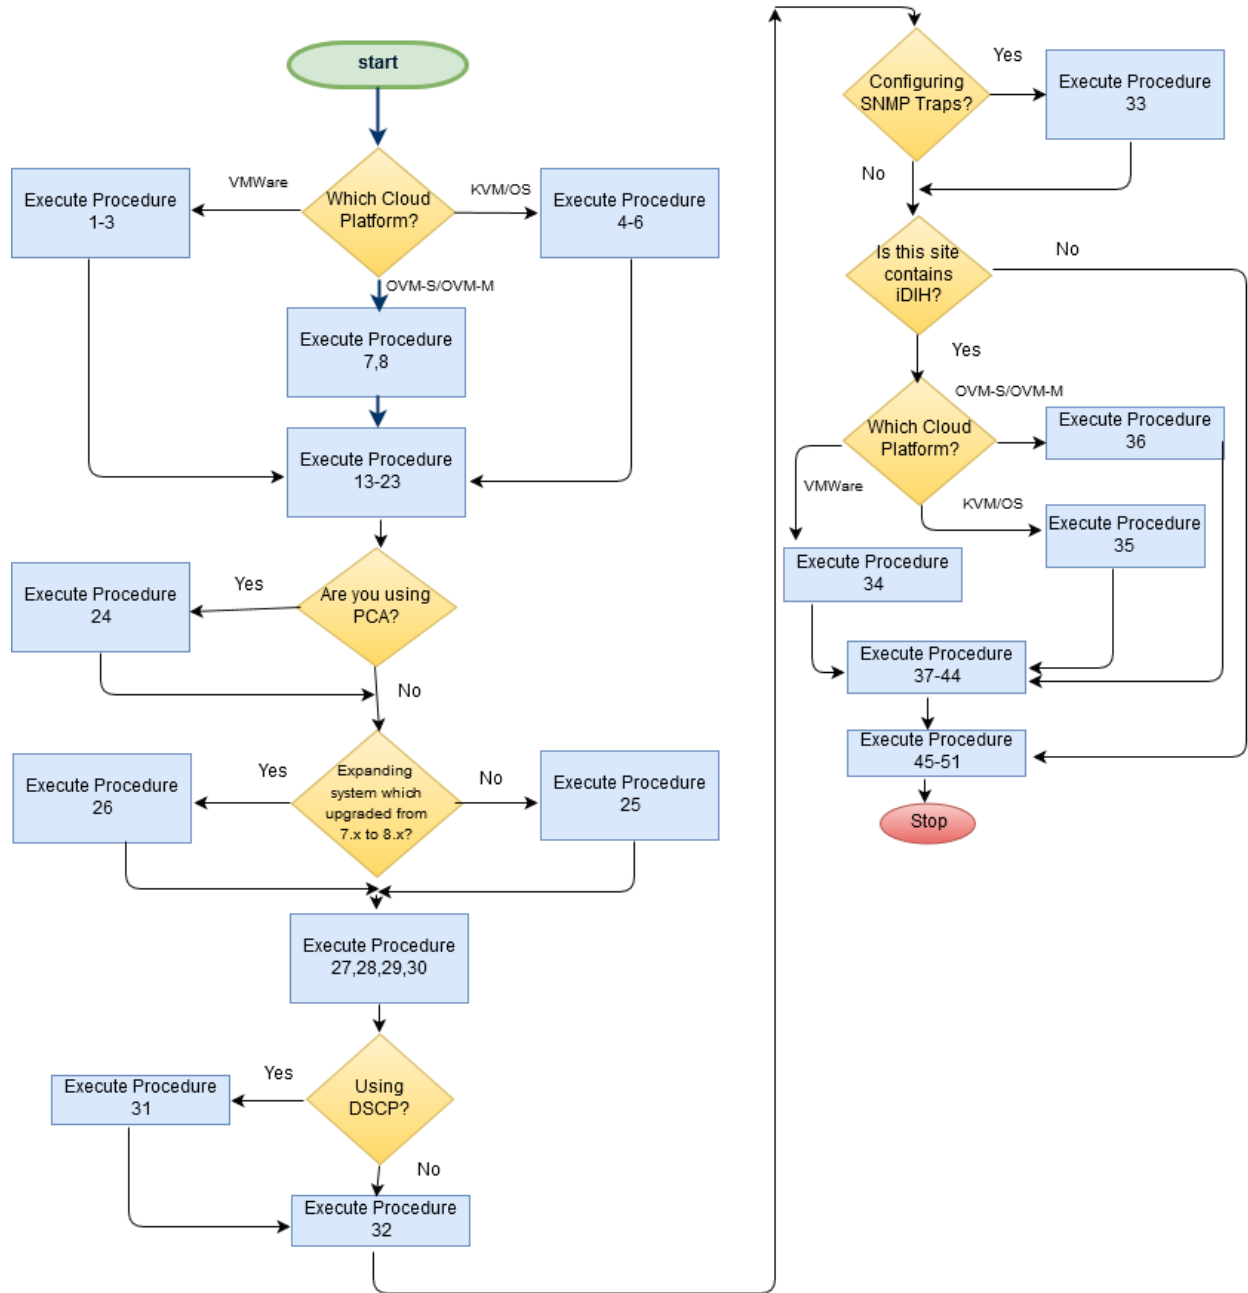

Figure 1: DSR Single Site Installation Procedure Map Without Using HEAT Templates

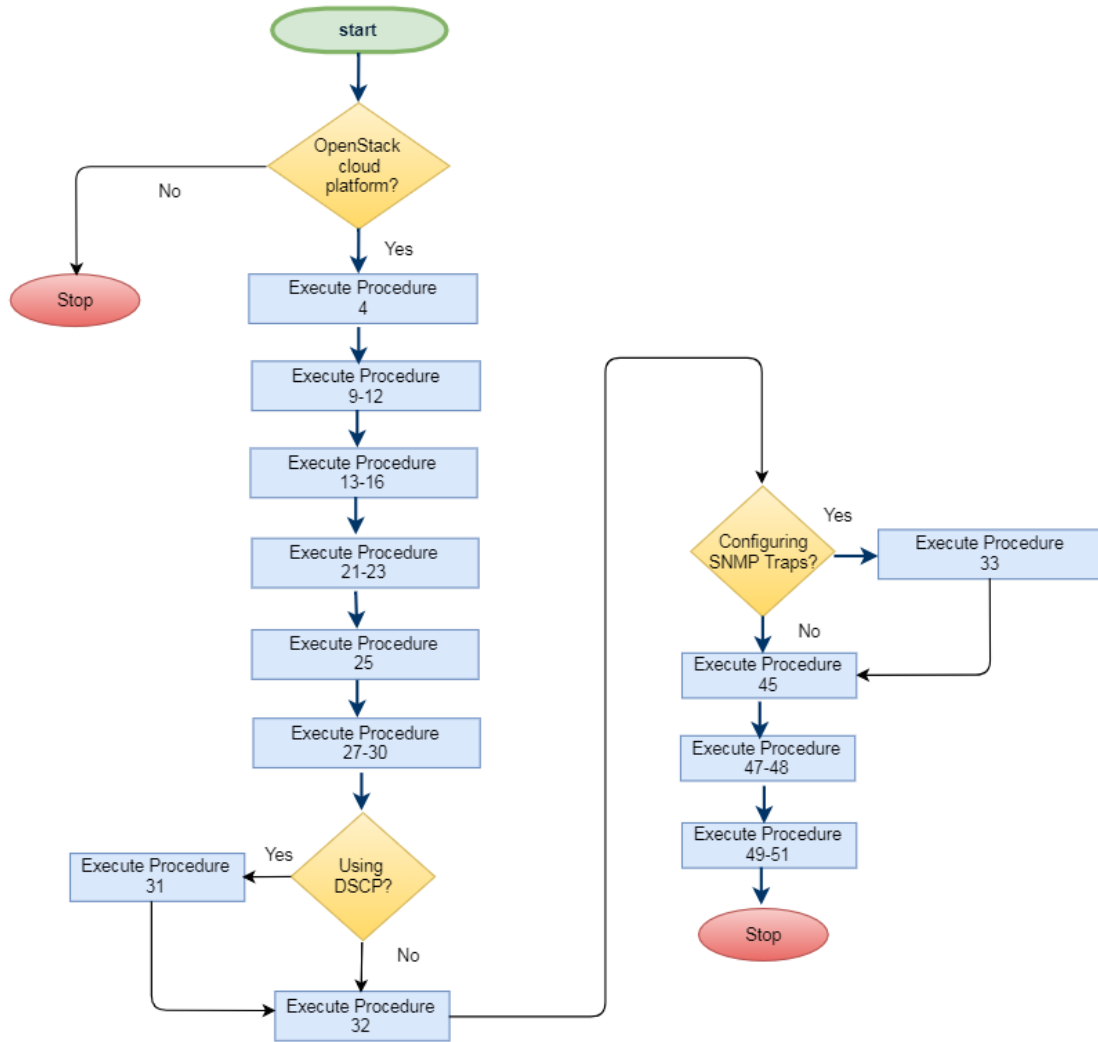

Figure 2: DSR Installation Procedure Map Using HEAT Templates

2.2.2 SNMP Configuration

The network-wide plan for SNMP configuration should be decided upon before DSR installation proceeds. This section provides some recommendations for these decisions.

SNMP traps can originate from DSR Application Servers (NOAM, SOAM, MPs of all types) in a DSR installation.

DSR application servers can be configured to:

1. Send all their SNMP traps to the NOAM by merging from their local SOAM. All traps terminate at the NOAM and are viewable from the NOAM GUI (entire network) and the SOAM GUI (site specific). Traps are displayed on the GUI both as alarms and logged in trap history. **This is the default configuration option and no changes are required for this to take effect.**
2. Send all their SNMP traps to an external Network Management Station (NMS). The traps are seen at the SOAM and/or NOAM as alarms **AND** they are viewable at the configured NMS(s) as traps.

Application server SNMP configuration is done from the NOAM GUI near the end of DSR installation. See the procedure list for details.

2.2.3 Installation Procedures

The following table illustrates the progression of the installation process by procedure with estimated times. The estimated times and the phases that must be completed may vary due to differences in typing ability and system configuration. The phases outlined are to be executed in the order they are listed.

- If installation strategy is **Install DSR without using HEAT templates**, then follow Table 3.
- If installation strategy is **Install DSR using HEAT templates**, then follow Table 4.

Table 3. Installation Overview Without Using HEAT Templates

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
Procedure 3 or Procedure 4 or Procedure 9	Import DSR OVA	5	5
Procedure 4 or Procedure 7	Configure DSR NOAM guest role based on resource profile	10	15
Procedure 5 or Procedure 8	Configure DSR remaining guests role based on resource profile	40	55
Procedure 17	Configure the First NOAM NE and Server	25	80
Procedure 18	Configure the NOAM Server Group	15	95
Procedure 19	Configure the Second NOAM Server	15	110
Procedure 20	Complete Configuring the NOAM Server Group	10	120
Procedure 21 (Optional)	Configure the DR NOAM NE and Server (Optional)	25	145
Procedure 22 (Optional)	Configure the DR NOAM Server Group (Optional)	15	160
Procedure 23 (Optional)	Configure the Second DR NOAM Server (Optional)	15	175
Procedure 24 (Optional)	Complete Configuring the DR NOAM Server Group (Optional)	10	185
Procedure 25	Configure the SOAM NE	15	200
Procedure 26	Configure the SOAM Servers	10	210
Procedure 27	Configure the SOAM Server Group	10	220
Procedure 28	Activate PCA/DCA (PCA/DCA Only)	10	230
Procedure 29	Configure the MP Virtual Machines	5	235
Procedure 30	Configure Places and Assign MP Servers to Places (PCA and DCA Only)	10	255
Procedure 31	Configure the MP Server Group(s) and Profiles	5	260
Procedure 32	Configure the Signaling Network Routes	20	290
Procedure 33 (Optional)	Configure DSCP Values for Outgoing Traffic (Optional)	5	295
Procedure 34	IP Front End (IPFE) Configuration	45	340
Procedure 35 (Optional)	Configure SNMP Trap Receiver(s) (Optional)	15	355

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
Procedure 36	(VMware only) Create iDIH Oracle, Mediation, and Application VMs (Optional)	10	365
Procedure 37	(KVM/OpenStack Only) Create iDIH Oracle, Mediation, and Application VMs (Optional)	10	375
Procedure 38	(OVM-S/OVM-M). Import Three iDIH OVAs and Create and Configure a VM for Each	10	385
Procedure 39 (Optional)	Configure iDIH VM Networks (Optional)	10	395
Procedure 46 (Optional)	Run Post Installation Scripts on iDIH VMs (Optional)	25	420
Procedure 47 (Optional)	Configure DSR Reference Data Synchronization for iDIH (Optional)	30	450
Procedure 48 (Optional)	iDIH Configuration: Configuring the SSO Domain (Optional)	10	460
Procedure 49 (Optional)	Integrate iDIH into DSR (Optional)	10	470
Procedure 50 (Optional)	iDIH Configuration: Configure the Mail Server (Optional)	10	480
Procedure 51	iDIH Configuration: Configure SNMP Management Server (Optional)	20	500
Procedure 52 (Optional)	iDIH Configuration: Change Network Interface (Optional)	30	530
Procedure 53	Configure ComAgent Connections	15	545
Procedure 54	Complete PCA Configuration (Optional)	5	550
Procedure 55	Backups and Disaster Prevention	15	565
Procedure 56	(KVM/OpenStack Only) Configure Port Security	10	575
Procedure 57	Enable/Disable DTLS (SCTP Diameter Connections Only)	10	585
Procedure 58	Shared Secret Encryption Key Revocation (RADIUS Only)	10	595
Procedure 59	DSR Performance Tuning	10	600

Note: Refer section 3 Software Installation Procedure for detailed procedures.

Table 4: Installation Procedures Using HEAT Templates

Procedure	Phase	Elapsed Time (Minutes)	
		This Step	Cum.
Procedure 6	Import DSR OVA	5	5
Procedure 14	Create OpenStack Parameter File for NOAM	10	15
Procedure 15	Create OpenStack Parameter File for Signaling	15	30
Procedure 16	Deploy HEAT Templates	15	45
Procedure 17	Configure the First NOAM NE and Server	10	55
Procedure 18	Configure the NOAM Server Group	25	80
Procedure 19	Configure the Second NOAM Server	15	95
Procedure 20	Complete Configuring the NOAM Server Group	15	110
Procedure 25	Configure the SOAM NE	10	120
Procedure 26	Configure the SOAM Servers	15	135
Procedure 27	Configure the SOAM Server Group	10	145
Procedure 28	Activate PCA/DCA (PCA/DCA Only)	10	155
Procedure 29	Configure the MP Virtual Machines	5	160
Procedure 30	Configure Places and Assign MP Servers to Places (PCA and DCA Only) Error! Reference source not found.	10	170
Procedure 31	Configure the MP Server Group(s) and Profiles	5	175
Procedure 32	Configure the Signaling Network Routes	20	205
Procedure 33 (Optional)	Configure DSCP Values for Outgoing Traffic (Optional)	5	210
Procedure 34	IP Front End (IPFE) Configuration	15	225
Procedure 35 (Optional)	Configure SNMP Trap Receiver(s) (Optional)	15	240
Procedure 53	Configure ComAgent Connections	20	260
Procedure 55	Backups and Disaster Prevention	15	275
Procedure 56	(KVM/OpenStack Only) Configure Port Security	30	305
Procedure 57	Enable/Disable DTLS (SCTP Diameter Connections Only)	15	320
Procedure 58	Shared Secret Encryption Key Revocation (RADIUS Only)	10	330
Procedure 59	DSR Performance Tuning	10	340

Note: Refer section 0

2.3 DSR Installation on OL7 and KVM

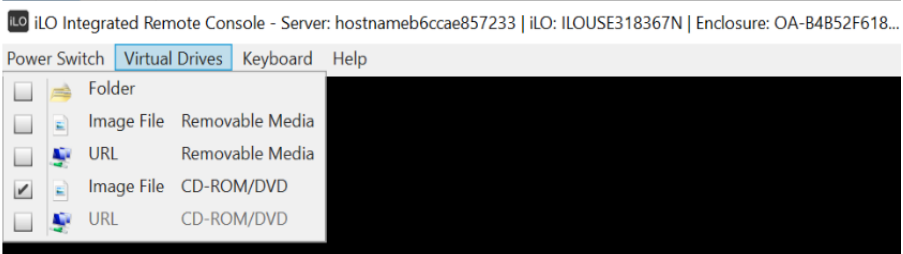

DSR Installation on OL7 and KVM includes the following procedures:

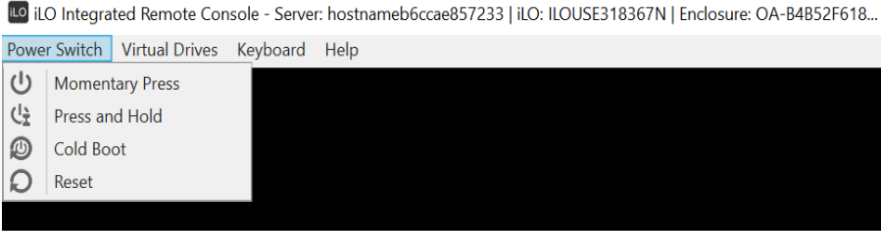

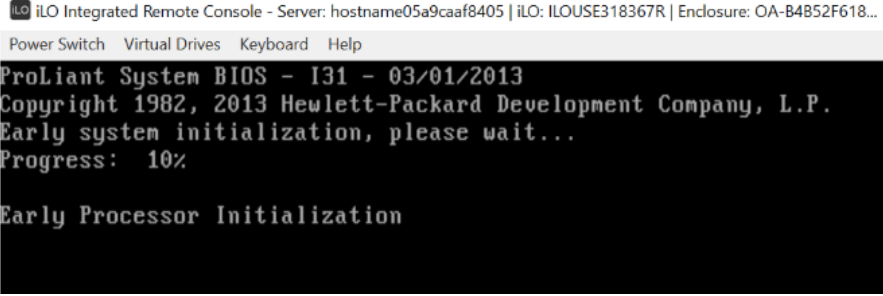

- Install DSR on Oracle Linux/KVM
- Create and Install OCDSR VMs via KVM GUI

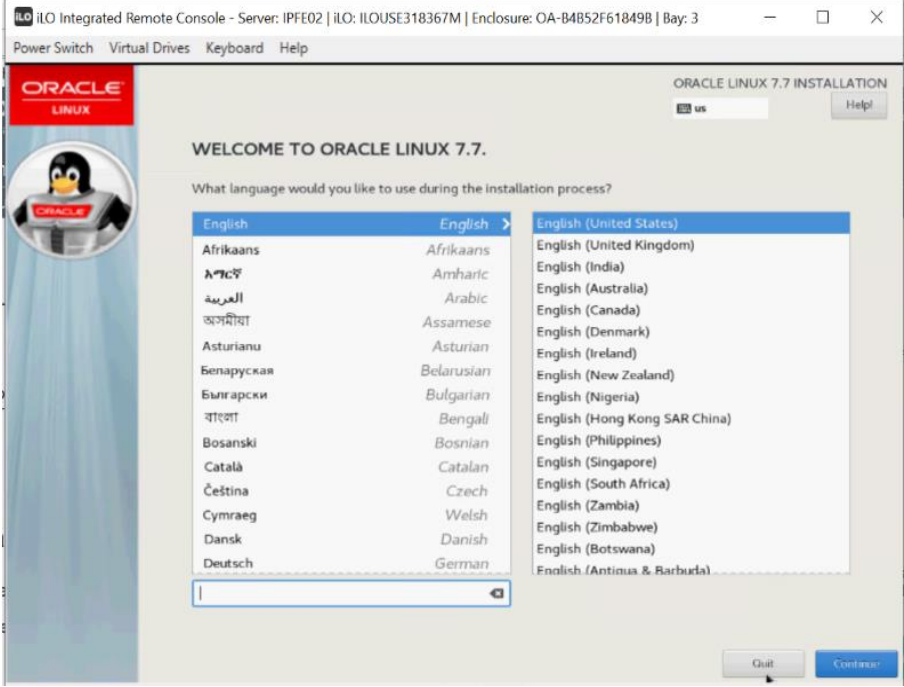

Note: If using a hardware in remote LAB then use a remote windows machine to install Linux. Please ensure that OEL 7 ISO is also located locally in remote windows machine.

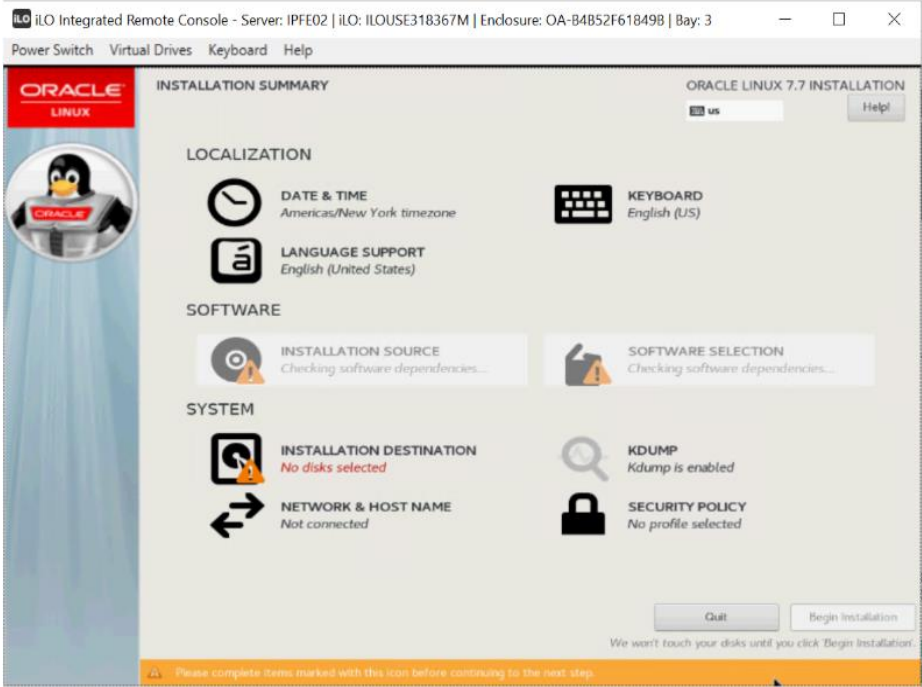

2.3.1 DSR Installation on OL7 and KVM

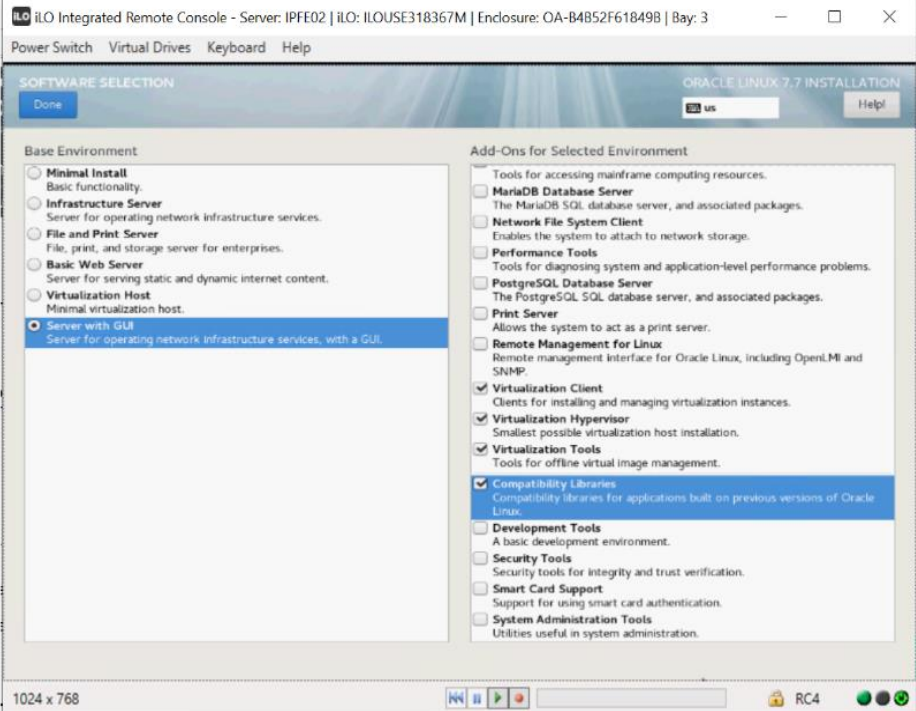

Procedure 1. Install DSR on Oracle Linux/KVM

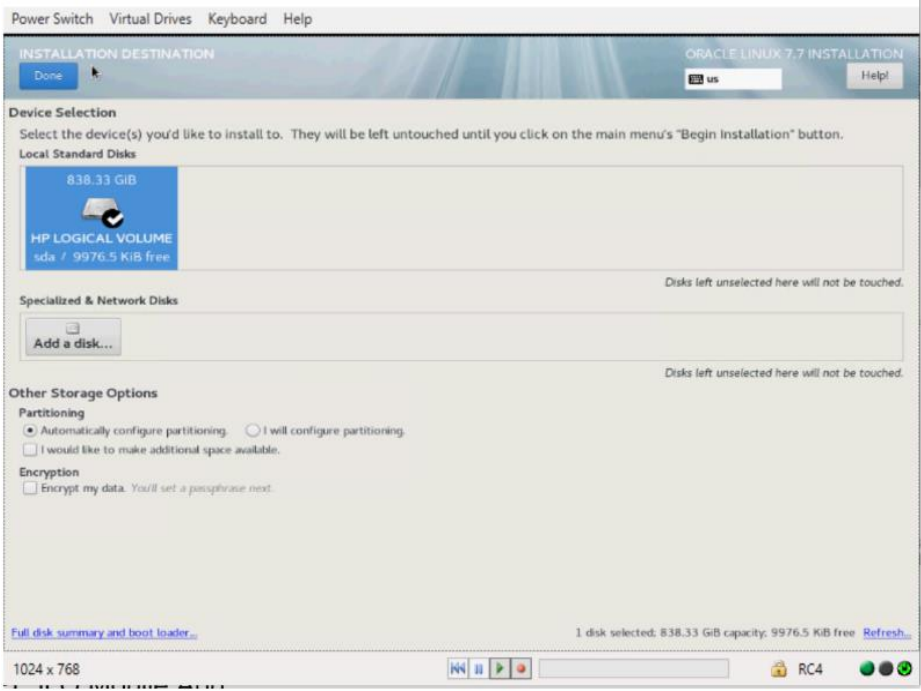

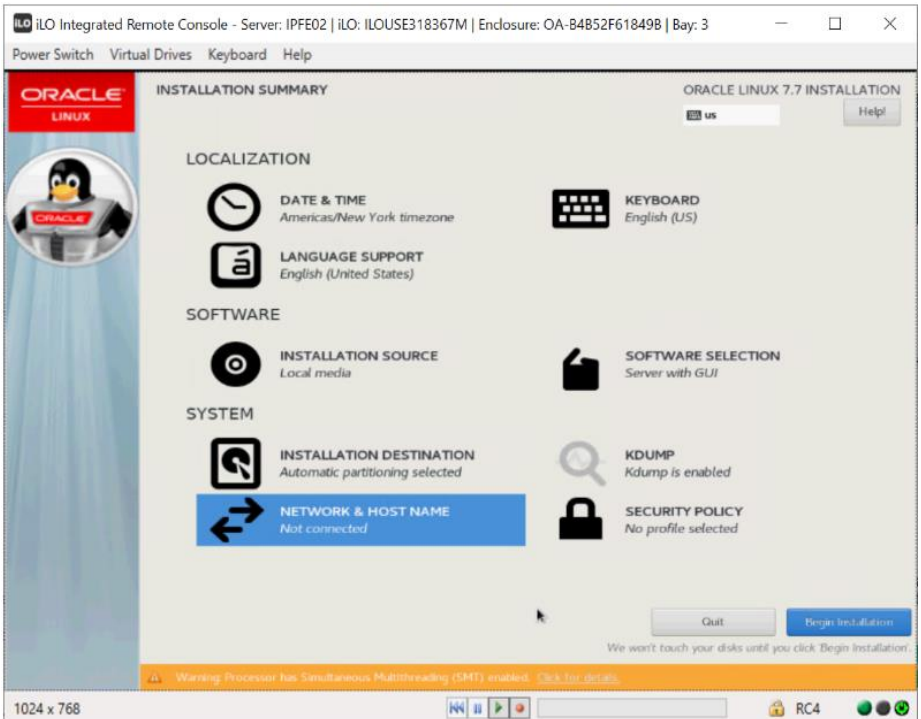

STEP #	Procedure	Description
<p>This procedure will install DSR configuration on Oracle Linux OS with direct KVM as hypervisor.</p> <p>Note:</p> <ul style="list-style-type: none"> • This installation procedure only applies when installing DSR on Oracle Linux OS via direct KVM • For the Oracle Linux OS, Oracle Linux 7.7 release is used and verified OK. • The snapshot used for this procedure has been taken from HP Gen-10 Blade. • This procedure can be executed on any flavor of blade that require DSR install on OL7.7 and KVM. <p>Prerequisite: All the respective infrastructures has to be up and running.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1.</p> <input type="checkbox"/>	<p>For each Blade:</p> <p>Mount virtual media contains Oracle Linux OS software</p>	<p>Follow steps defined in Mounting Virtual Media on Blade:</p> <ul style="list-style-type: none"> • Open the ILO. • Attach the OEL 7.7 ISO in ILOs virtual drives->Image File CD/DVD ROM. <p>To mount the Oracle Linux OS software ISO from ILO GUI:</p> <ul style="list-style-type: none"> • Navigate to Virtual drives -> menu, • Click on Image File then select image from folder. 
<p>2.</p> <input type="checkbox"/>	<p>For each Blade:</p> <p>Reboot host</p> <p>Login to Blade Server</p>	<p>To reboot host:</p> <p>Click Power Switch and select Reset from the dropdown menu.</p>

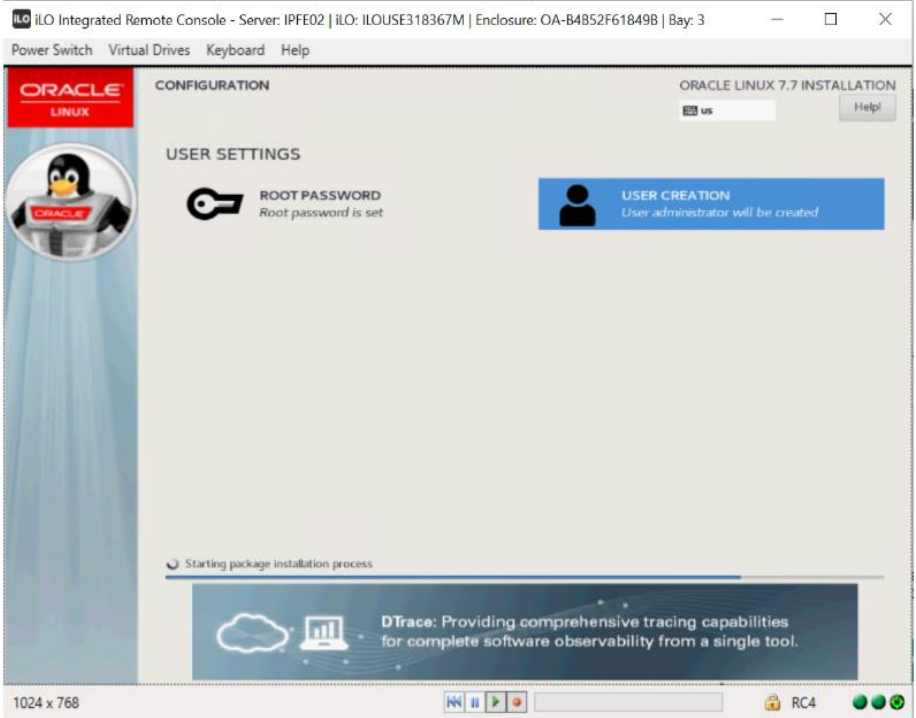

STEP #	Procedure	Description
	<p>ILO GUI browser page and launch remote console</p>	 <p>The remote console window displays that the host is rebooting.</p>  <p>Wait for a couple of minutes for reboot to complete.</p>
<p>3. <input type="checkbox"/></p>	<p>For each Blade: Initiate Oracle Linux Platform installation</p>	<p>Once reboot completes, the host boots with Oracle Linux installation ISO and the GUI screen prompts for the installation options.</p> 

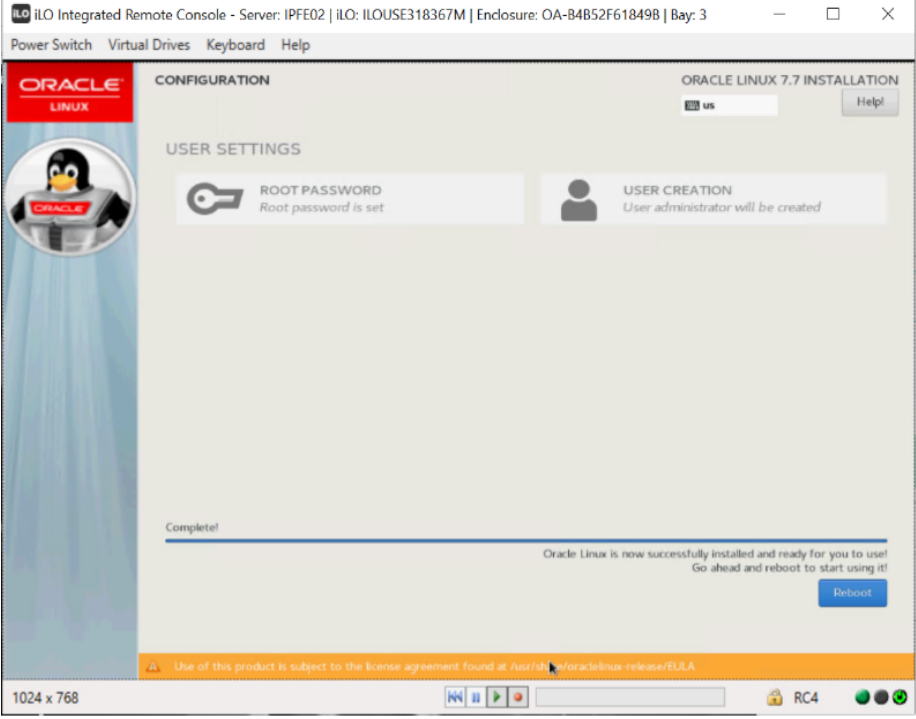

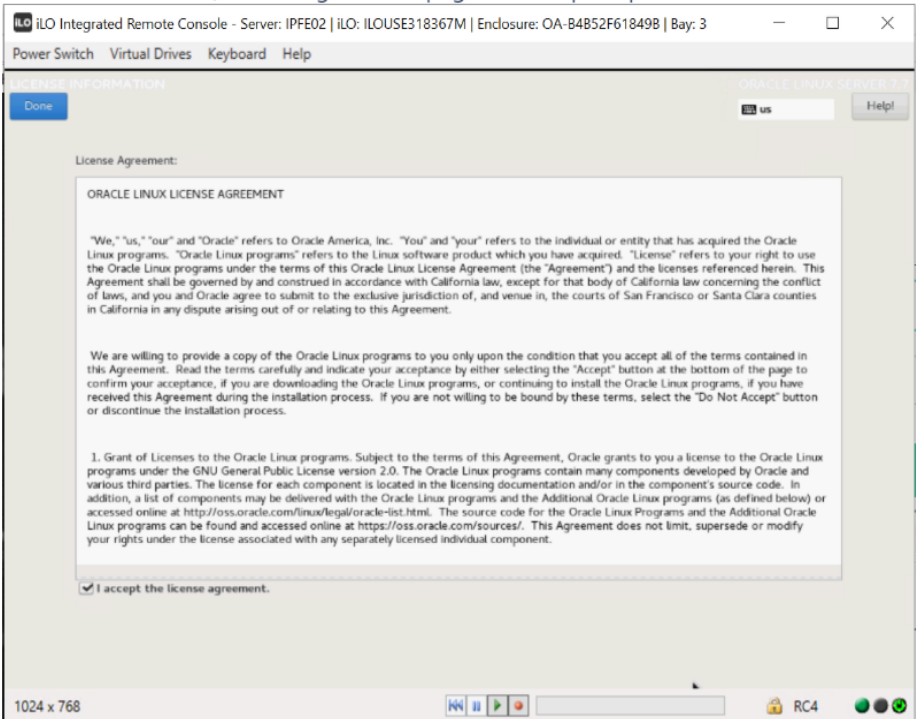

STEP #	Procedure	Description
		Select Install Oracle Linux 7.x to continue.
<p>4.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Choose Oracle Linux OS language</p>	<p>When prompted, select English as Oracle Linux OS language:</p>  <p>Press Continue to go to next step.</p>
<p>5.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Setup time zone</p>	<p>The next page INSTALLATION SUMMARY displays the required information to start installation.</p>

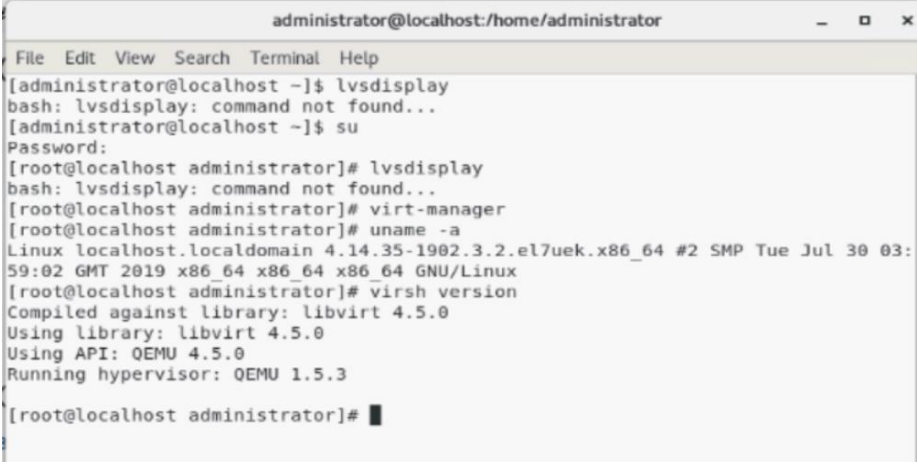

STEP #	Procedure	Description
		 <p>Click LOCALIZATION -> DATE & TIME:</p> <ul style="list-style-type: none"> • Pick a time zone by selecting a region and city from the drop-down lists, or by clicking a location on the map. • Choose a country and city that are in the same time zone as your system. <p>You need to specify a time zone even if you intend to use the Network Time Protocol (NTP) to set the time on the system. Before you can enable NTP, ensure that the system is connected to a network by selecting the Network & Hostname option on the INSTALLATION SUMMARY screen (see Configuring the Host Name and Connecting to a Network).</p> <p>To enable NTP,</p> <ul style="list-style-type: none"> • Switch ON the Network Time • Click the Settings button to display a dialog where you can configure the NTP servers used by the system <p>To set the date and time manually:</p> <ul style="list-style-type: none"> • Switch OFF the Network Time • Adjust the date and time at the bottom of the screen if needed. <p>Click Done to save your configuration and return to the INSTALLATION SUMMARY screen.</p>
6.	<p><input type="checkbox"/> For each Blade:</p> <p>Setup</p>	<p>Click SOFTWARE SELECTION options in the SOFTWARE area. Select Server with GUI from the Base Environment area, and ensure that the following add-ons are selected:</p>

STEP #	Procedure	Description
	installation base environment	<ul style="list-style-type: none"> • Virtualization Client • Virtualization Hypervisor • Virtualization Tools • Compatibility Libraries  <p>Click Done to save the changes and go back to the main configuration page.</p>
7. <input type="checkbox"/>	For each Blade: Setup installation destination	Click INSTALLATION DESTINATION in the SYSTEM area. <ul style="list-style-type: none"> • Select 'sda' (or 'sdb') to use • Check Automatically configure partitioning • Click Done to continue

STEP #	Procedure	Description
		
<p>8. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Review configuration and start installation</p>	<p>Review all the information and click Begin Installation.</p> <p>Note: Network configuration is not mandatory at this point and can be performed after Oracle Linux OS is installed.</p> 

STEP #	Procedure	Description
<p>9. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Create login credential</p>	<p>At the same time Oracle Linux installation software is laying down files into Gen 10 local hard disk, you may configure root credential or any other login credentials as per the requirement:</p>  <p>The screenshot shows the Oracle Linux 7.7 installation configuration interface. The window title is 'iLO Integrated Remote Console - Server: IPFE02 iLO: ILOUSE318367M Enclosure: OA-B4852F61849B Bay: 3'. The main content area is titled 'CONFIGURATION' and 'ORACLE LINUX 7.7 INSTALLATION'. Under 'USER SETTINGS', there is a 'ROOT PASSWORD' section with a key icon and the text 'Root password is set'. To the right, there is a 'USER CREATION' section with a person icon and the text 'User administrator will be created'. At the bottom, there is a progress bar labeled 'Starting package installation process' and a banner for 'DTrace: Providing comprehensive tracing capabilities for complete software observability from a single tool.' The window also shows standard OS window controls and a taskbar with 'RC4' and system icons.</p>
<p>10. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Reboot host after installation completed</p>	<p>Wait for the installation to complete, until the following screen appears:</p>

STEP #	Procedure	Description
		 <p>Click Reboot button to reboot.</p>
<p>11.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Read & Accept license agreement</p>	<p>After reboot is done, license agreement page appears:</p>  <p>Check "I accept the license agreement", following with "Finish"</p>

STEP #	Procedure	Description
		<p>Configuration" to continue.</p> <p>Skip when prompted for ULN settings.</p>
<p>12.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Verify kernel version and KVM version</p>	<p>Open SSH console window and check following:</p> 
<p>13.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Change network interface name pattern to ethx</p>	<p>Edit /etc/default/grub to append 'net.ifnames=0' with option GRUB_CMDLINE_LINUX:</p> <pre>[root@localhost ~]# cat /etc/default/grub</pre> <pre>GRUB_TIMEOUT=5 GRUB_DISTRIBUTOR="\$(sed 's, release .*\$,g' /etc/system-release)" GRUB_DEFAULT=saved GRUB_DISABLE_SUBMENU=true GRUB_TERMINAL_OUTPUT="console" GRUB_CMDLINE_LINUX="crashkernel=auto rd.lvm.lv=ol/root rd.lvm.lv=ol/swap rhgb e iet net.ifnames=0" GRUB_DISABLE_RECOVERY="true"</pre> <p>Recreate the grub2 config file by executing:</p> <pre>grub2-mkconfig -o /boot/grub2/grub.cfg</pre> <p>Restart host and verify that the network interfaces have ethx name pattern, by executing:</p> <pre>shutdown -r</pre>
<p>14.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Create bond0 device</p>	<p>1. Create device bond0 configuration file:</p> <pre>vim /etc/sysconfig/network-scripts/ifcfg-bond0</pre> <pre>[root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-bond0</pre> <pre>DEVICE=bond0 TYPE=Bonding BOND_INTERFACES=eth0,eth1 ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BONDING_OPTS="mode=active-backup primary=eth0 miimon=100"</pre> <p>Save the file and exit.</p>

STEP #	Procedure	Description
		<p>2. Create device eth0 configuration file: <pre>vim /etc/sysconfig/network-scripts/ifcfg-eth0 [root@DSR-Gen10-017 ~]# vim /etc/sysconfig/network-scripts/ifcfg-eth0 DEVICE=eth0 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond0 SLAVE=yes</pre> Save the file and exit.</p> <p>3. Create device eth1 configuration file: <pre>vim /etc/sysconfig/network-scripts/ifcfg-eth1 [root@DSR-Gen10-017 ~]# vim /etc/sysconfig/network-scripts/ifcfg-eth1 DEVICE=eth1 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond0 SLAVE=yes</pre> Save the file and exit.</p> <p>4. Bring up devices into services: <pre>[root@DSR-Gen10-017 ~]# ifup eth0 [root@DSR-Gen10-017 ~]# ifup eth1 [root@DSR-Gen10-017 ~]# ifup bond0 [root@DSR-Gen10-017 ~]# _</pre></p>
<p>15. <input type="checkbox"/></p>	<p>For each Blade: Create IMI bridge</p>	<p>1. Create bond0.<imi_vlan> configuration file: <pre>vim /etc/sysconfig/network-scripts/ifcfg-bond0.<imi_vlan> [root@DSR-Gen10-017 ~]# vim /etc/sysconfig/network-scripts/ifcfg-eth0 DEVICE=eth0 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond0 SLAVE=yes</pre></p> <p>2. Create imi device configuration file: <pre>vim /etc/sysconfig/network-scripts/ifcfg-imi [root@DSR-Gen10-017 ~]# vim /etc/sysconfig/network-scripts/ifcfg-imi DEVICE=imi TYPE=Bridge ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BRIDGE_INTERFACES=bond0.4</pre></p> <p>3. Bring up devices into services: <pre>[root@DSR-Gen10-017 ~]# ifup bond0.4 [root@DSR-Gen10-017 ~]# ifup imi [root@DSR-Gen10-017 ~]# _</pre></p>
<p>16.</p>	<p>For each Blade:</p>	<p>1. Create bond0.<xmi_vlan> configuration file: <pre>vim /etc/sysconfig/network-scripts/ifcfg-</pre></p>

STEP #	Procedure	Description
<input type="checkbox"/>	<p>Create XMI bridge</p>	<pre> bond0.<xmi_vlan> [root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-bond0.3 DEVICE=bond0.3 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BRIDGE=xmi VLAN=yes 2. Create xmi device configuration file: vim /etc/sysconfig/network-scripts/ifcfg-xmi [root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-xmi DEVICE=xmi TYPE=Bridge ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none NETMASK=255.255.255.128 IPADDR=10.75.193.196 NETWORK=10.75.193.128 GATEWAY=10.75.193.129 BRIDGE_INTERFACES=bond0.3 3. Set default route for xmi network: vim /etc/sysconfig/network-scripts/route-xmi default via <xmi_gateway> table main [root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/route-xmi default via 10.75.193.196 table main 4. Bring up the devices into service: [root@DSR-Gen10-ol7 ~]# ifup bond0.3 [root@DSR-Gen10-ol7 ~]# ifup xmi [root@DSR-Gen10-ol7 ~]# </pre>
<p>17.</p> <input type="checkbox"/>	<p>For each Blade: Create bond1 device</p>	<pre> 1. Create device bond1 configuration file: vim /etc/sysconfig/network-scripts/ifcfg-bond1 [root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-bond1 DEVICE=bond1 TYPE=Bonding BOND_INTERFACES=eth2,eth3 ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BONDING_OPTS="mode=active-backup primary=eth2 miimon=100" 2. Create device eth2 configuration file: vim /etc/sysconfig/network-scripts/ifcfg-eth2 [root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-eth2 DEVICE=eth2 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond1 SLAVE=yes </pre>

STEP #	Procedure	Description
		<p>3. Create device eth3 configuration file: <code>vim /etc/sysconfig/network-scripts/ifcfg-eth3</code></p> <pre>[root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-eth3 DEVICE=eth3 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond1 SLAVE=yes</pre> <p>4. Bring up devices into services:</p> <pre>[root@DSR-Gen10-ol7 ~]# ifup eth2 [root@DSR-Gen10-ol7 ~]# ifup eth3 [root@DSR-Gen10-ol7 ~]# ifup bond1 [root@DSR-Gen10-ol7 ~]#</pre>
<p>18. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Create xsi1/xsi2 bridge</p>	<p>1. Create device bond1.<xsi1_vlan> configuration file: <code>vim /etc/sysconfig/network-scripts/ifcfg-bond1.<xsi1_vlan></code></p> <pre>[root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-bond1.5 DEVICE=bond1.5 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BRIDGE=xsi1 VLAN=yes</pre> <p>2. Create device xsi1 configuration file: <code>vim /etc/sysconfig/network-scripts/ifcfg-xsi1</code></p> <pre>[root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-xsi1 DEVICE=xsi1 TYPE=Bridge ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BRIDGE_INTERFACES=bond1.5</pre> <p>3. Bring up devices into services:</p> <pre>[root@DSR-Gen10-ol7 ~]# ifup xsi1 [root@DSR-Gen10-ol7 ~]# ifup bond1.5</pre> <p>Perform similar operations to create network devices for xsi2</p> <p>1. Create device bond1.<xsi1_vlan> configuration file: <code>vim /etc/sysconfig/network-scripts/ifcfg-bond1.<xsi2_vlan></code></p>

STEP #	Procedure	Description
		<pre>[root@DSR-Gen10-ol7 ~]# vim /etc/sysconfig/network-scripts/ifcfg-bond1.6 DEVICE=bond1.6 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BRIDGE=xsi2 VLAN=yes</pre> <p>2. Execute this step on VM.</p> <p>Open the <code>/etc/ntp.conf</code> file and add the NTP servers used in your environment.</p> <p>You can add multiple NTP servers, similar to the examples shown below:</p> <pre># # List of NTP servers and peers # server 10.250.32.10 iburst server ntpserver1 iburst server ntpserver2 iburst server ntpserver3 iburst peer ntppeerA iburst peer ntppeerB iburst</pre> <p>Run the service <code>ntpd start</code> command to start the NTP service and implement the configuration changes:</p> <pre>[admusr@hostnamef37eece35d2c ~]\$ sudo service ntpd restart Shutting down ntpd: [OK] Starting ntpd: [OK]</pre> <p>Verify ntp status:</p> <pre>[admusr@hostnamef37eece35d2c ~]\$ ntpstat synchronised to NTP server (10.250.32.10) at stratum 4 time correct to within 1877 ms polling server every 64 s</pre>

2.3.2 Create and Install OCSR VMs via KVM GUI

Procedure 2. Create and Install OCSR VMs via KVM GUI

STEP #	Procedure	Description
--------	-----------	-------------

This procedure will install DSR VMs NO, SO, and MP using KVM GUI.

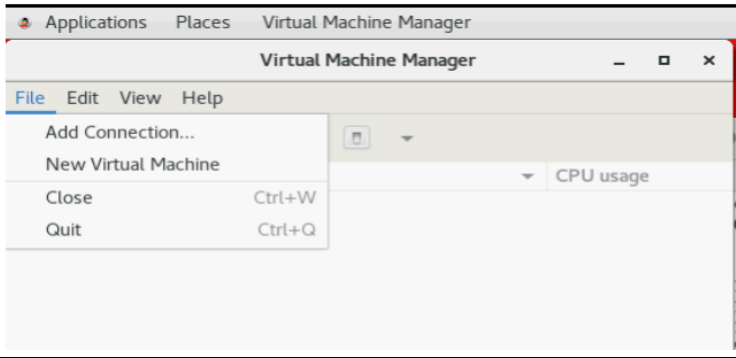

Note:

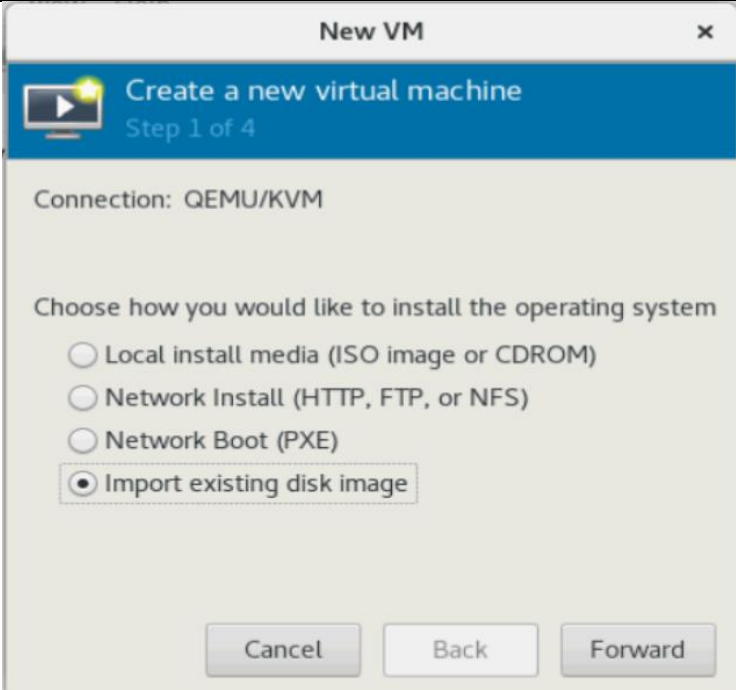

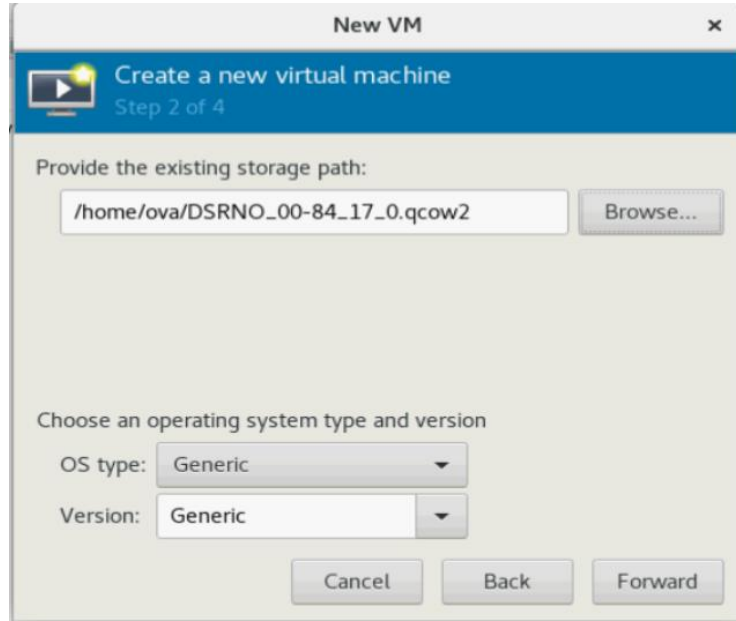

- This installation procedure is only applicable for each VM: NO, SO, MP and so on.

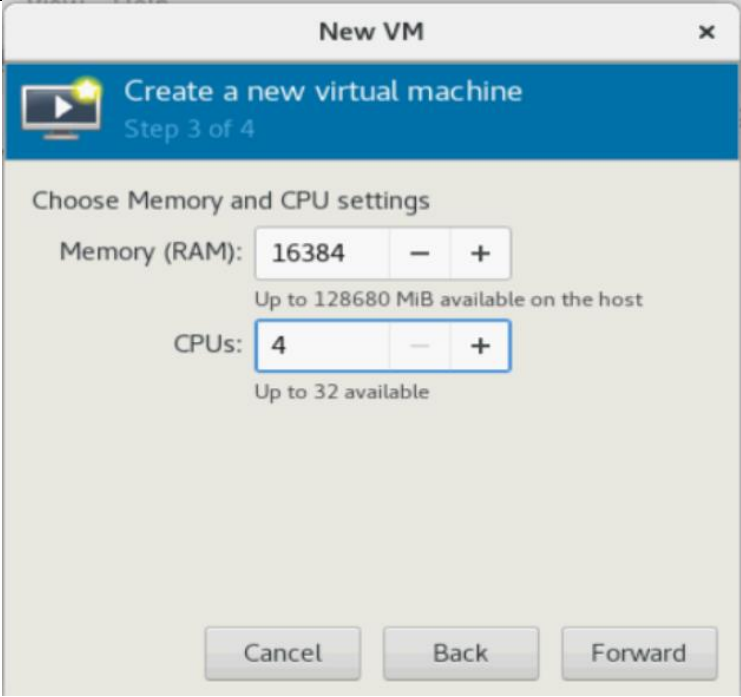

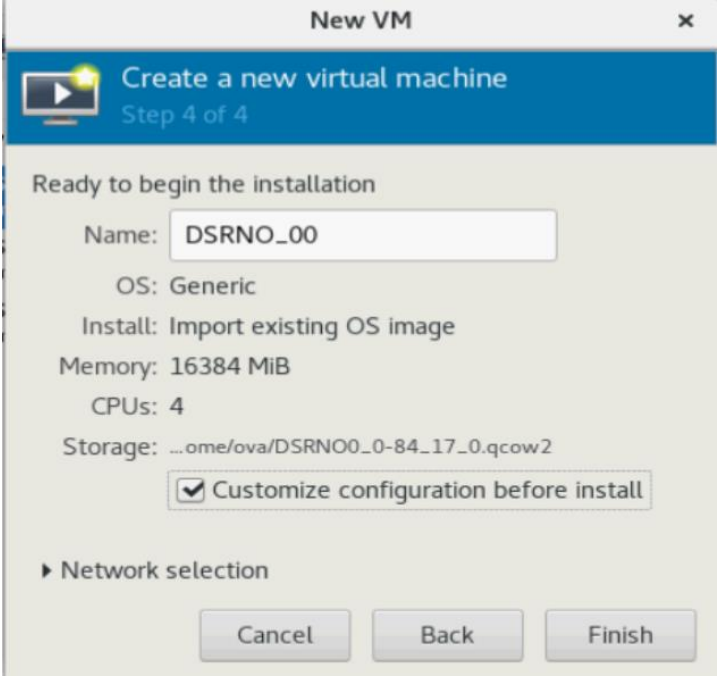

Prerequisite: Install DSR on Oracle Linux OS via KVM (Step 1 to 25 must be complete)

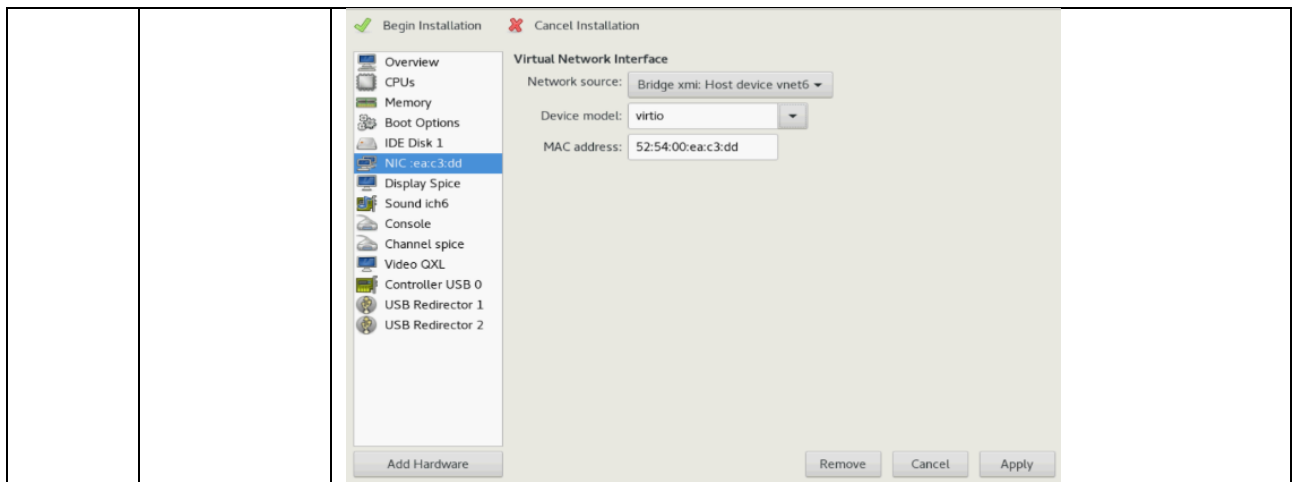

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

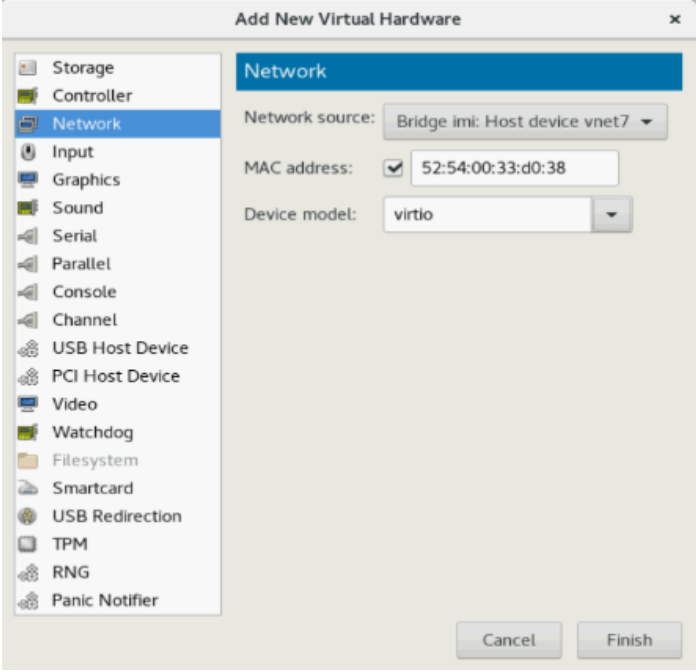

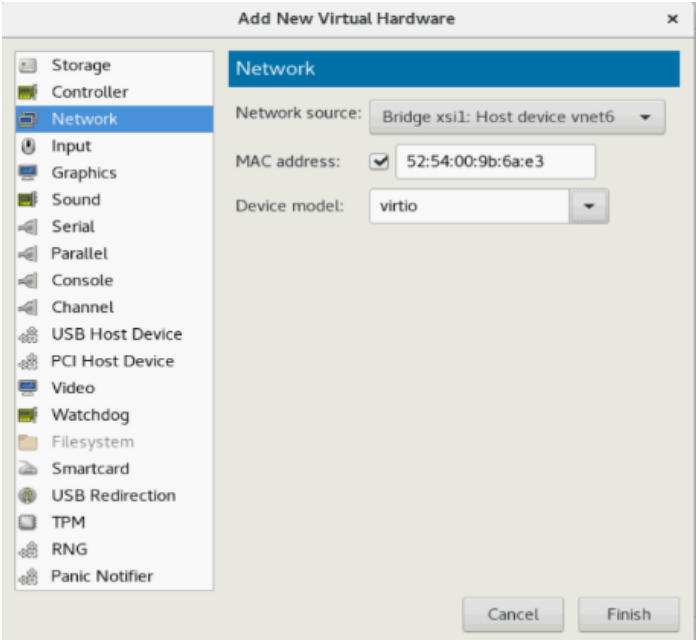

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

<p>1. <input type="checkbox"/></p>	<p>Login to the host machine and open the Virtual Machine Manager</p>	<p>Login to the host machine which has Oracle Linux installed and open the Virtual Machine Manager via cli, by executing:</p> <pre>virt-manager</pre> <p>Note: Make sure X11 forwarding is enabled before running <code>virt-manager</code> command on CLI.</p> 
<p>2. <input type="checkbox"/></p>	<p>Create a new Virtual Machine using the Virtual Manager GUI</p>	<p>On Virtual Manager GUI,</p> <ol style="list-style-type: none"> 1. Click File -> New Virtual Machine 2. Select Import existing disk image

		
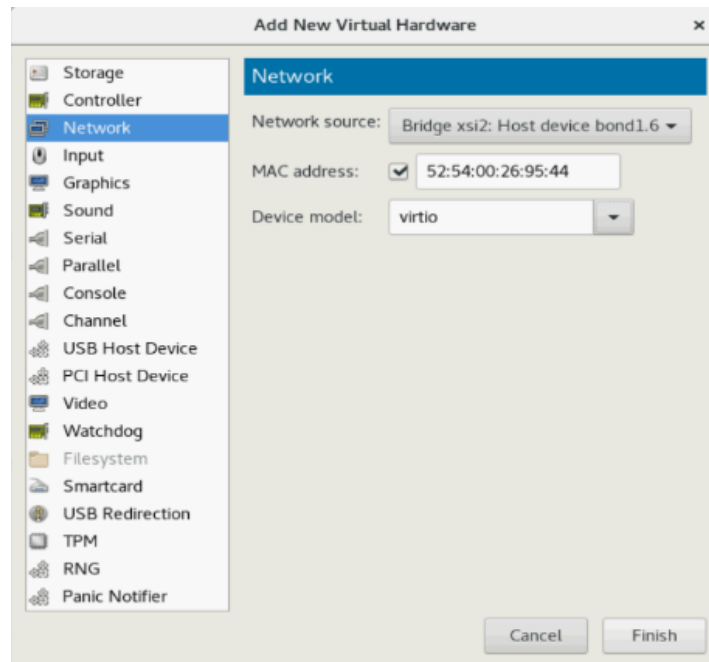

<p>3. <input type="checkbox"/></p>	<p>Select the image file</p>	<p>Select the qcow2 image by browsing the location: <code>/home/ova</code> and Click Forward. See Step 24 and 25 of Install DSR on Oracle Linux/KVM</p> 
<p>4. <input type="checkbox"/></p>	<p>Select RAM and vCPUs for VM</p>	<p>Select RAM and vCPUs for VM. For each VM, select the RAM and vCPUs as per the required resource profile. Refer to VM Resource Profile Flavor section. Click Forward.</p>

		
<p>5. <input type="checkbox"/></p>	<p>Verify and customize VM</p>	<p>Update the VM name and select Customize configuration before install. Under Network selection, select XMI bridge and click Finish.</p> 
<p>6. <input type="checkbox"/></p>	<p>Modify the Device model to virtio for XMI bridge</p>	<p>For XMI bridge, modify the device model to virtio:</p>

<p>7. <input type="checkbox"/></p>	<p>Customize the network configuration</p>	<p>On the next screen, Click Add Hardware.</p> <ul style="list-style-type: none"> • Under Network source, choose the IMI Bridge. • For NO and SO, choose IMI bridge only. • For MP, add XSI1, along with IMI by repeating this step. • Click Finish.  <p>Only for MP, we need to add XSI1 & XSI2 bridge as well. For XSI1 bridge:</p> 
------------------------------------	--	---

For XSI2 bridge:

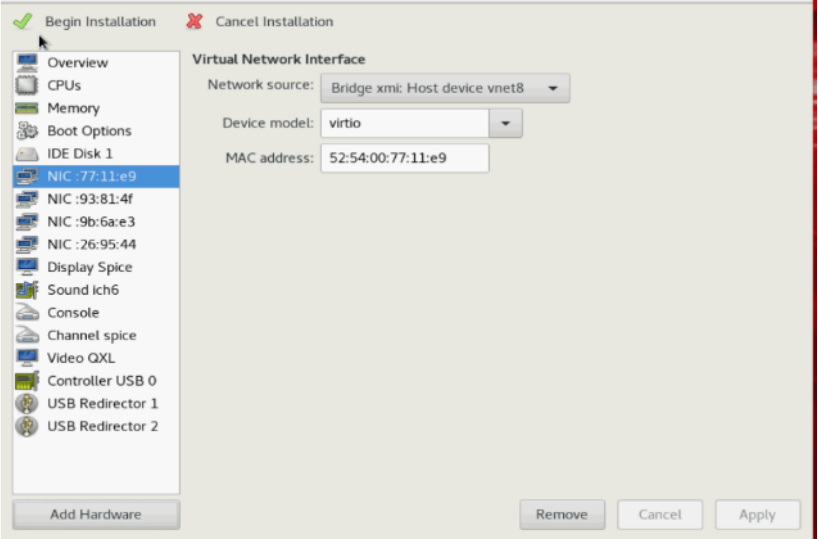

Note:

- For DSR Topology it is recommended to add all interfaces on each VM, even when the VM does not require that interface or does not use a VLAN.
- It is just to use a standard when the topology is created from NOAM GUI.

DSR VMs	
XMI	eth0
IMI	eth1
XSI1	eth2
XSI2	eth3

Add all interfaces as needed. After adding the other networks, you will see the NICs appear.

<p>8.</p> <p><input type="checkbox"/></p>	<p>Verify and begin installation</p>	<p>After adding all bridges, verify and begin the VM installation:</p> 
<p>9.</p>	<p>Disable TSO GSO features (Optional)</p>	<p>To disable the TSO GSO features for SBR server, see Appendix I.5.</p>

Software Installation Using HEAT Templates (OpenStack) for detailed procedures.

2.4 Optional Features

When DSR installation is complete, further configuration and/or installation steps are needed for optional features that may be present in this deployment. Please refer to Table 5 for the post-DSR installation configuration documentation needed for their components.

Table 5. Post-DSR Installation Configuration Step

Feature	Document
Diameter Mediation	DSR Meta Administration Feature Activation Procedure
Full Address Based Resolution (FABR)	DSR FABR Feature Activation Procedure
Range Based Address Resolution (RBAR)	DSR RBAR Feature Activation Procedure
SCEF Feature Activation	DSR SCEF Feature Activation Guide
Policy and Charging Application (PCA)	PCA Activation Procedure
Host Intrusion Detection System (HIDS)	DSR Security Guide, Section 3.2
Diameter Custom Applications (DCA)	DCA Framework and Application Activation and Deactivation Procedures

3. Software Installation Procedure

As mentioned earlier, the host configuration and virtual networks should be done before executing the procedures in this document. It is assumed that at this point the user has access to:

- Consoles of all guests and hosts at all sites
- ssh access to the guests at all sites
- GUI access to hosts at all sites
- A configuration station with a web browser, ssh client, and scp client
- VM Manager Privileges to add OVA's to catalog (VMware only)
- KVM/OpenStack admin and tenant privileges
- OVM-S/OVM-M credentials and privileges, OVM-M cli tool must be installed and is accessible

SUDO

As a non-root user (**admusr**), many commands (when run as admusr) now require the use of **sudo**.

VIP/TSA (OpenStack Only)

OpenStack release Kilo or later is required to configure VIP and target set addresses. Kilo release 2015.1.2 or later is preferred.

IPv6

IPv6 configuration of XMI and IMI networks has been introduced in DSR. Standard IPv6 formats for IPv6 and prefix can be used in all IP configuration screens, which enable the DSR to be run in an IPv6 only environment. When using IPv6 for XMI and management, you must place the IPv6 address in brackets (highlighted in red below), example as followed:

```
https://[<IPv6 address>]
```

If a dual-stack (IPv4 and IPv6) network is required, configure the topology with IPv4 first, and then **migrate** to IPv6. Reference [18] DSR IPv6 Migration Guide for instructions on how to accomplish this migration.

3.1 Create DSR Guests (VMware)

Procedure 3. (VMware) Import DSR OVA

STEP #	Procedure	Description
<p>This procedure adds the DSR OVA to the VMware catalog or repository. Check off (✓) each step as it is completed. Steps with shaded boxes require user input. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Add DSR OVA image	1. Launch the VMware client of your choice. 2. Add the DSR OVA image to the VMware catalog or repository. Follow the instructions provided by the Cloud solutions manufacturer.

Procedure 4. (VMware only) Configure NOAM Guests Role Based On Resource Profile and Configure Network

STEP #	Procedure	Description
<p>This procedure configures networking on VMs. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Create the NOAM1 VM from the OVA image	1. Browse the library or repository that you placed the OVA image. 2. Deploy the OVA Image using vSphere Client or vSphere Web Client . 3. Name the NOAM1 VM and select the data store.
2. <input type="checkbox"/>	Configure resources for the NOAM1 VM	Configure the NOAM1 per the resource profiles defined in [24] DSR Cloud Benchmarking Guide for the DSR NOAM using the vSphere Client or vSphere Web Client .
3. <input type="checkbox"/>	Power on NOAM1	Use the vSphere Client or vSphere Web Client to power on the NOAM1 VM.

STEP #	Procedure	Description
<input type="checkbox"/> 4.	Configure NOAM1	1. Access the NOAM1 VM console via the vSphere Client or vSphere Web Client . 2. Login as the admusr user. 3. Set the <ethX> device: Note: Where ethX is the interface associated with the XMI network. <pre>\$ sudo netAdm add --device=<ethX> --address=<IP Address in External management Network> --netmask=<Netmask> --onboot=yes --bootproto=none</pre> 4. Add the default route for ethX: <pre>\$ sudo netAdm add --route=default --gateway=<gateway address for the External management network> --device=<ethX></pre> 5. Ping the XMI gateway for network verification. <pre>\$ ping -c3 <Gateway of External Management Network></pre>
<input type="checkbox"/> 5.	Configure NOAM2	Repeat steps 1 through 4 for the NOAM2 VM.

Procedure 5. (VMware only) Configure Remaining DSR Guests Based on Resource Profile and Configure Network

STEP #	Procedure	Description
This procedure adds network addresses for all VMs. Note: This procedure provides an example for creating an SOAM. Follow the same steps to create other guests with their respective VM names and profiles. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.		
<input type="checkbox"/> 1.	Create the SOAM1 VM from the OVA image	1. Browse the library or repository that you placed the OVA image. 2. Deploy the OVA image using vSphere Client or vSphere Web Client . 3. Name the SOAM1 VM and select the data store.
<input type="checkbox"/> 2.	Configure resources for the SOAM1 VM	Configure the SOAM1 VM per the resource profiles defined in [24] DSR Cloud Benchmarking Guide for the DSR SO using the vSphere Client or vSphere Web Client . Interfaces must be added per the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide.
<input type="checkbox"/> 3.	Power on SOAM1 VM	1. Power on the DSR SOAM1 VM with the vSphere Client or vSphere Web Client . 2. Monitor the vApps screen's Virtual Machines tab until the DSR VM reports Powered On in the Status column.

STEP #	Procedure	Description
<input type="checkbox"/> 4.	Configure XMI interface	1. Access the VM console via the vSphere Client or vSphere Web Client . 2. Login as the admusr user. 3. Set the ethX device: Note: Where ethX is the interface associated with the XMI network. <pre>\$ sudo netAdm add --device=<ethX> --address=<IP Address in External Management Network> --netmask=<Netmask> --onboot=yes --bootproto=none</pre> 4. Add the default route for ethX: <pre>\$ sudo netAdm add --route=default --gateway=<gateway address for the External management network> --device=<ethX></pre>
<input type="checkbox"/> 5.	Verify network connectivity	1. Access the SOAM1 VM console using the vSphere Client or vSphere Web Client . 2. Login as the admusr user. 3. Ping the NOAM1. <pre>\$ ping -c3 <IP Address in External Management Network></pre>
<input type="checkbox"/> 6.	Procedure overview	Repeat steps 1 through 5 for the following VMs. Use unique labels for the VM names: MP(s) IPFE(s) SOAM(s) Session SBRs, Binding SBR (Optional Components) DR NOAMs (Optional Components)

3.2 Create DSR Guests (KVM/OpenStack)

Procedure 6. Import DSR OVA (KVM/OpenStack Only)

STEP #	Procedure	Description
		This procedure adds the DSR image to the glance image catalog. Check off (✓) each step as it is completed. Steps with shaded boxes require user input. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

STEP #	Procedure	Description
1. <input type="checkbox"/>	Preparation	<p>1. Create instance flavors.</p> <p>If not yet done, use the resource profiles defined in [24] DSR Cloud Benchmarking Guide values to create flavors for each type of VM. Flavors can be created with the Horizon GUI in the Admin section, or with the <code>nova flavor-create</code> command line tool. Make the flavor names as informative as possible. As flavors describe resource sizing, a common convention is to use a name like "0406060" where the first two figures (04) represent the number of virtual CPUs, the next two figures (06) might represent the RAM allocation in GB and the final three figures (060) might represent the disk space in GB.</p> <p>2. If using an Intel 10 Gigabit Ethernet ixgbe driver on the host nodes, please note that the default LRO (Large Receive Offload) option must be disabled on the host command line. Please see the Intel release notes for more details. This action can be performed with the following command.</p> <pre>\$ sudo ethtool -K <ETH_DEV> lro off</pre> <p>3. If using IPFE Target Set Addresses (TSA):</p> <ol style="list-style-type: none"> Read and understand the Disable Port Security procedure in Appendix G.6, including the warning note. Enable the Neutron port security extension. <p>Note: This step is NOT applicable for HEAT deployment.</p>

STEP #	Procedure	Description
2. □	Add DSR OVA image	<p>1. Copy the OVA file to the OpenStack control node.</p> <pre>\$ scp DSR-x.x.x.x.x.ova admusr@node:~</pre> <p>2. Log into the OpenStack control node.</p> <pre>\$ ssh admusr@node</pre> <p>3. In an empty directory, unpack the OVA file using tar.</p> <pre>\$ tar xvf DSR-x.x.x.x.x.ova</pre> <p>4. One of the unpacked files has a .vmdk suffix. This is the VM image file that must be imported.</p> <pre>DSR-x.x.x.x.x-disk1.vmdk</pre> <p>5. Source the OpenStack admin user credentials.</p> <pre>\$. keystone_admin</pre> <p>6. Select an informative name for the new image.</p> <pre>dsr-8.6.x.x.x-original</pre> <p>7. Import the image using the glance utility from the command line.</p> <pre>\$ glance image-create --name dsr-x.x.x.x-original --visibility private --protected false --progress --container-format bare --disk-format vmdk --file DSR-x.x.x.x-disk1.vmdk</pre> <p>This process takes about 5 minutes depending on the underlying infrastructure.</p> <p>8. (Optional – Steps 8 and 9 are not needed if VMDK is used.) Convert VMDK to QCOW2 format.</p> <p>Use the qemu-img tool to create a qcow2 image file using this command.</p> <pre>qemu-img convert -f vmdk -O qcow2 <VMDK filename> <QCOW2 filename></pre> <p>For example:</p> <pre>qemu-img convert -f vmdk -O qcow2 DSR-82_12_0.vmdk DSR-82_12_0.qcow2</pre> <p>Install the qemu-img tool (if not already installed) using this yum command.</p> <pre>sudo yum install qemu-img</pre> <p>9. Import the converted qcow2 image using the “glance” utility from the command line.</p> <pre>\$ glance image-create --name dsr-x.x.x.x-original --is-public True --is-protected False --progress --container-format bare --disk-format qcow2 --file DSR-x.x.x.x-disk1.qcow2</pre> <p>This process take about 5 minutes depending on the underlying infrastructure.</p>

Procedure 7. (KVM/OpenStack Only) Configure NOAM Guests Role Based on Resource Profile

STEP #	Procedure	Description
<p>This procedure configures networking on VMs. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1. <input type="checkbox"/></p>	<p>Name the new VM instance</p>	<p>1. Create an informative name for the new instance: NOAM1. 2. Examine the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide.</p>
<p>2. <input type="checkbox"/></p>	<p>Create and boot the NOAM VM instance from the glance image</p>	<p>1. Get the following configuration values.</p> <ul style="list-style-type: none"> c. The image ID. <code>\$ glance image-list</code> d. The flavor ID. <code>\$ nova flavor-list</code> e. The network ID(s) <code>\$ neutron net-list</code> f. An informative name for the instance. NOAM1 NOAM2 <p>2. Create and boot the VM instance. The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Use one --nic argument for each IP/interface. Number of IP/interfaces for each VM type must conform with the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide. Note: IPv6 addresses should use the v6-fixed-ip argument instead of v4-fixed-ip. <code>\$ nova boot --image <image ID> --flavor <flavor id> --nic net-id=<first network id>,v4-fixed-ip=<first ip address> --nic net-id=<second network id>,v4-fixed-ip=<second ip address> <instance name></code></p> <p>3. View the newly created instance using the nova tool. <code>\$ nova list --all-tenants</code></p> <p>The VM takes approximately 5 minutes to boot and may be accessed through both network interfaces and the Horizon console tool.</p>

STEP #	Procedure	Description
3. <input type="checkbox"/>	Configure NOAM VIP (Optional)	<p>Note:</p> <p>For information about Firewall Ports, Refer to DSR IP flow document. Application VIP Failover Options (OpenStack) in Appendix G for more information on VIP.</p> <p>If an NOAM VIP is needed, execute the following commands:</p> <ol style="list-style-type: none"> Find the port ID associated with the NOAM instance XMI interface. <pre>\$ neutron port-list</pre> Add the VIP IP address to the address pairs list of the NOAM instance XMI interface port. <pre>\$ neutron port-update <Port ID> --allowed_address_pairs list=true type=dict ip_address=<VIP address to be added></pre>
4. <input type="checkbox"/>	Check if interface is configured	<p>If DHCP is enabled on the Neutron subnet, VM configures the VNIC with the IP address provided in step 2. To verify, ping the XMI IP address provided with the nova boot command from step 2:</p> <pre>\$ ping <XMI-IP-Provided-During-Nova-Boot></pre> <p>If the ping is successful, ignore step 5. to configure the interface manually.</p>
5. <input type="checkbox"/>	Manually configure interface, if not already done (Optional)	<p>Note: If the instance is already configured with an interface and has successfully pinged (step 4.), then ignore this step to configure the interface manually.</p> <ol style="list-style-type: none"> Log into the Horizon GUI as the DSR tenant user. Go to the Compute/Instances section. Click the Name field of the newly created instance. Select the Console tab. Login as the admusr user. Configure the network interfaces, conforming with the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide. <pre>\$ sudo netAdm add --onboot=yes --device=eth0 --address=<xmi ip> --netmask=<xmi net mask></pre> <pre>\$ sudo netAdm add --route=default --device=eth0 --gateway=<xmi gateway ip></pre> <p>Verify network connectivity by pinging Gateway of XMI network.</p> <pre>\$ ping -c3 <XMI Gateway></pre> <p>Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</p> Reboot the NOAM VM. It takes approximately 5 minutes for the VM to complete rebooting. <pre>\$ sudo init 6</pre> <p>The new VM should now be accessible via both network and Horizon consoles.</p>
6. <input type="checkbox"/>	Configure NOAM2	Repeat steps 1 through 5 for NOAM2.

Procedure 8. (KVM/OpenStack Only) Configure Remaining DSR Guests Based on Resource Profile and Configure Network

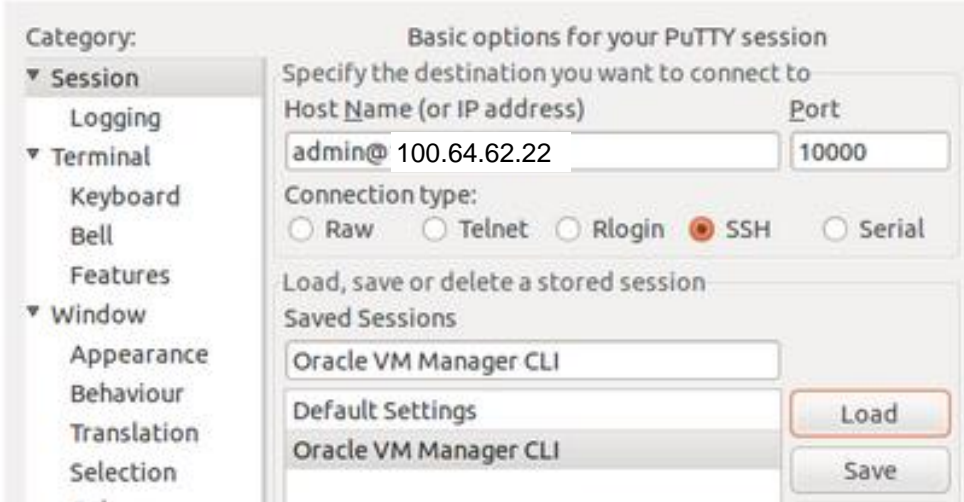

STEP #	Procedure	Description
<p>This procedure adds network addresses for all VMs.</p> <p>Note: This procedure provides an example for creating an SOAM. Follow the same steps to create other guests with their respective VM names and profiles.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1.</p> <p><input type="checkbox"/></p>	<p>Name the new VM instance</p>	<p>1. Create an informative name for the new instance: SOAM1.</p> <p>2. Examine the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide.</p>
<p>2.</p> <p><input type="checkbox"/></p>	<p>Create and boot the SOAM VM instance from the glance image</p>	<p>1. Get the following configuration values.</p> <p>g. The image ID.</p> <pre>\$ glance image-list</pre> <p>h. The flavor ID.</p> <pre>\$ nova flavor-list</pre> <p>i. The network ID(s)</p> <pre>\$ neutron net-list</pre> <p>j. An informative name for the instance.</p> <p>SOAM1</p> <p>SOAM2</p> <p>2. Create and boot the VM instance.</p> <p>The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Use one --nic argument for each IP/interface. Number of IP/interfaces for each VM type must conform with the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide.</p> <p>Note: IPv6 addresses should use the v6-fixed-ip argument instead of v4-fixed-ip.</p> <pre>\$ nova boot --image <image ID> --flavor <flavor id> --nic net-id=<first network id>,v4-fixed-ip=<first ip address> --nic net-id=<second network id>,v4-fixed-ip=<second ip address> <instance name></pre> <p>3. View the newly created instance using the nova tool.</p> <pre>\$ nova list --all-tenants</pre> <p>The VM takes approximately 5 minutes to boot and may be accessed through both network interfaces and the Horizon console tool.</p>

STEP #	Procedure	Description
3. <input type="checkbox"/>	Configure SOAM VIP (Optional)	<p>Note: Refer to Allowed Address Pairs in Appendix G.2 for more information on VIP.</p> <p>If an SOAM VIP is needed, execute the following commands:</p> <ol style="list-style-type: none"> Find the port ID associated with the SOAM instance XMI interface. <pre>\$ neutron port-list</pre> Add the VIP IP address to the address pairs list of the SOAM instance XMI interface port. <pre>\$ neutron port-update <Port ID> --allowed_address_pairs list=true type=dict ip_address=<VIP address to be added></pre>
4. <input type="checkbox"/>	Check if interface is configured	<p>If DHCP is enabled on Neutron subnet, VM configures the VNIC with the IP address provided in step 2 above.</p> <p>To verify, ping the XMI IP address provided with nova boot... command (step 2): <pre>\$ ping <XMI-IP-Provided-During-Nova-Boot></pre> </p> <p>If the ping is successful, ignore step 5 to configure the interface manually.</p>
5. <input type="checkbox"/>	Manually configure interface, if not already done (Optional)	<p>Note: If the instance is already configured with an interface and successfully pinging (step 4), then ignore this step to configure the interface manually.</p> <ol style="list-style-type: none"> Log into the Horizon GUI as the DSR tenant user. Go to the Compute/Instances section. Click the Name field of the newly created instance. Select the Console tab. Login as the admusr user. Configure the network interfaces, conforming with the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide. <pre>\$ sudo netAdm add --onboot=yes --device=eth0 --address=<xmi ip> --netmask=<xmi net mask></pre> <pre>\$ sudo netAdm add --route=default --device=eth0 --gateway=<xmi gateway ip></pre> <p>Verify network connectivity by pinging Gateway of XMI network.</p> <pre>\$ ping -c3 <XMI Gateway></pre> <p>Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</p> Reboot the SOAM VM. It takes approximately 5 minutes for the VM to complete booting. <pre>\$ sudo init 6</pre> <p>The new VM should now be accessible via both network and Horizon consoles.</p>

STEP #	Procedure	Description
<p>6.</p> <input type="checkbox"/>	<p>Verify network connectivity</p>	<ol style="list-style-type: none"> 1. Access the SOAM1 VM console using the openstack. 2. Login as the admusr user. 3. Ping the NOAM1. <pre>\$ ping -c3 <IP Address in External Management Network></pre>
<p>7.</p> <input type="checkbox"/>	<p>Procedure overview</p>	<p>Repeat steps 1 through 6 for the following VMs. Use unique labels for the VM names. Assign addresses to all desired network interfaces:</p> <ul style="list-style-type: none"> MP(s) IPFE(s) MP vSTP (For vSTP configuration) (Optional Components) SOAM(s) Session SBRs, Binding SBR (Optional Components) DR NOAMs (Optional Components)

3.3 Create DSR Guests (OVM-S/OVM-M)

Procedure 9. (OVM-S/OVM-M). Import DSR OVA and prepare for VM creation

STEP #	Procedure	Description
<p>This procedure imports the DSR image. This procedure requires values for these variables:</p> <ul style="list-style-type: none"> • <OVM-M IP> = IP address to access a sh prompt on the OVM server • <URL to OVA> = link to a source for downloading the product image (.ova) • <MyRepository name> = name of the repository in the OVM to hold the product image (.ova) <p>Execution of this procedure discovers and uses the values of these variables:</p> <ul style="list-style-type: none"> • <Virtual Appliance OVA ID> • <OVA VM name_vm_vm> • <OVM network id for (each subnet)> • <OVM network name for (each subnet)> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1. <input type="checkbox"/></p>	<p>Preparation: Access command line of OVM</p>	<p>Refer to Common OVM Manager Tasks (CLI) in Appendix D for setting up the platform.</p> <ol style="list-style-type: none"> 1. Get the site-specific values for these variables (overwrite example). <OVM-M IP> = 100.64.62.221 2. Use the respective value for <OVM-M IP> into the command. <pre>ssh -l admin <OVM-M IP> -p 10000</pre> Example: <pre>ssh -l admin 100.64.62.221 -p 10000</pre> Alternatively, use a terminal emulation tool like putty. 

STEP #	Procedure	Description
<p>2.</p> <p>□</p>	<p>OVM-M CLI: Import the VirtualAppliance/OVA</p>	<p>1. Get the site-specific values for these variables (overwrite example).</p> <p><URL to OVA> = <code>http://10.240.155.70/iso/DSR/8.6/ova/DSR-8.6.0.0.0_95.14.0.ova</code></p> <p><MyRepository name> = <code>XLab Utility Repo01</code></p> <p>2. Use the respective values for <MyRepository name> and <URL to OVA> into the command.</p> <pre>OVM> importVirtualAppliance Repository name='<MyRepository name>' url="<URL to OVA>"</pre> <p>Example:</p> <pre>OVM> importVirtualAppliance Repository name='XLab Utility Repo01' url=http://10.240.155.70/iso/DSR/8.6/ova/DSR- 8.6.0.0.0_95.14.0.ova</pre> <p>3. Execute the command and validate success.</p> <p>4. Examine the screen results to find site-specific text for variables in these locations:</p> <pre>Command: importVirtualAppliance Repository name='XLab Utility Repo01' url=http://10.240.155.70/iso/DSR/8.6/ova/DSR- 8.6.0.0.0_95.14.0.ova Status: Success Time: 2017-04-18 15:23:31,044 EDT JobId: 1492543363365 Data: id: 1128a1c6ce name: DSR-8.6.0.0.0_95.14.0.ova</pre> <p>5. 3.4 Configure Virtual Machines

Procedure 10. (OVM-S/OVM-M). Configure each DSR VM

STEP #	Procedure	Description
<p>This procedure creates virtual machines. Repeat this procedure for each DSR VM guest that needs to be created. This procedure requires values for these variables:</p> <ul style="list-style-type: none"> • <OVA VM name_vm_vm> • <ServerPool name> • <VM name> • <OVM network ID for XMI> • <OVM network ID for IMI> • <OVM network ID for XSI#> where # is a numeric from 1-16, for the signaling networks • <OVM network ID for Replication XSI#> • <URL for OVM GUI> • <VM IP in XMI> from the NAPD • <Gateway for XMI> from the NAPD • <NetMask for XMI> from the NAPD <p>Execution of this procedure discovers and uses the values of these variables:</p> <ul style="list-style-type: none"> • <VM ID> • <vCPUs Production> • <VNIC 1 ID> • <interface name> defined in [24] DSR Cloud Benchmarking Guide <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1. <input type="checkbox"/></p>	<p>OVM-M CLI: Create a VM for each guest from the VM in the OVA virtual appliance</p>	<ol style="list-style-type: none"> 1. Get the site-specific text for these variables (overwrite example). <OVA VM name_vm_vm> = 11145510c0_vm_vm 2. Use the respective values for <OVA VM name> into the command. <pre>OVM> createVmFromVirtualApplianceVm VirtualApplianceVm name=<OVA VM name></pre> Example: <pre>OVM> createVmFromVirtualApplianceVm VirtualApplianceVm name=11145510c0_vm_vm</pre> 3. Execute the command and validate success. 4. Examine the screen results to find site-specific text for variables in these locations: <pre>Command: createVmFromVirtualApplianceVm VirtualApplianceVm name=11145510c0_vm_vm Status: Success</pre>

STEP #	Procedure	Description
		<p>Time: 2017-04-18 16:02:09,141 EDT</p> <p>JobId: 1492545641976</p> <p>Data:</p> <p>id: 0004fb00000600004a0e02bdf9fc1bcd name: DSR-8.6.0.0.0_95.14.0.ova_vm</p> <p>5. Use the respective values for these variables (overwrite example).</p> <p><VM ID> = 0004fb00000600004a0e02bdf9fc1bcd</p>

STEP #	Procedure	Description
11. <input type="checkbox"/>	OVM-M GUI: Configure the XMI network interface for this VM	<ol style="list-style-type: none"> Get the site-specific text for these variables (overwrite example). <URL for OVM GUI> = https://100.64.62.221:7002/ovm/console/faces/resource/resourceView.jspx <interface name> = from the table in [24] DSR Cloud Benchmarking Guide <VM IP in XMI> = from the NAPD <Gateway for XMI> = from the NAPD <NetMask for XMI> = from the NAPD Access the CLI of the console for the VM: Log into the OVM-M GUI by typing the <URL for OVM GUI> into a browser. <ol style="list-style-type: none"> Navigate to the Servers and VMs tab. Expand and select the <ServerPool name>. From the Perspective list, select Virtual Machines. Select the <VM name> from the rows listed, and click the Launch Console icon. In the Console window, log into the VM as the admusr. Use the respective values for <interface name>, <VM IP in XMI>, <Gateway for XMI>, and <NetMask for XMI> into the commands XMI: <pre>\$ sudo netAdm set --onboot=yes --device=<interface name> --address=<VM IP in XMI> --netmask=<NetMask for XMI></pre> <pre>\$ sudo netAdm add --route=default --device=<interface name> -gateway=<Gateway for XMI></pre> Example: <pre>\$ sudo netAdm set --onboot=yes --device=eth0 -- address=10.75.158.189 --netmask=255.255.255.128</pre> Example: <pre>\$ sudo netAdm add --route=default --device=eth0 -- gateway=10.75.158.129</pre> Execute the command and validate success Verify network connectivity by pinging Gateway of network <pre>\$ ping -c3 <Gateway for XMI></pre> Reboot the VM. It takes approximately 5 minutes for the VM to complete rebooting. <pre>\$ sudo init 6</pre> <p>The new VM should now be accessible via both network and console.</p>

3.5 DSR Installation on OL7 and KVM

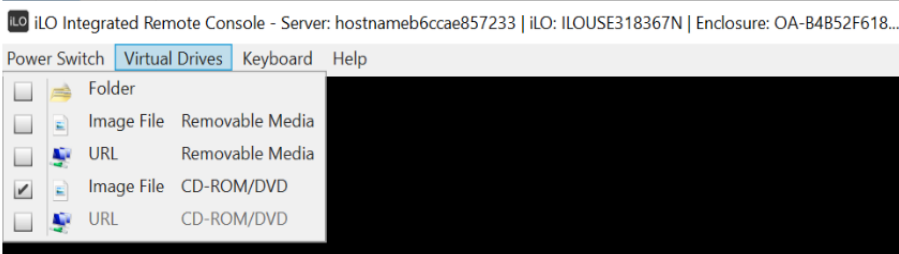

DSR Installation on OL7 and KVM includes the following procedures:

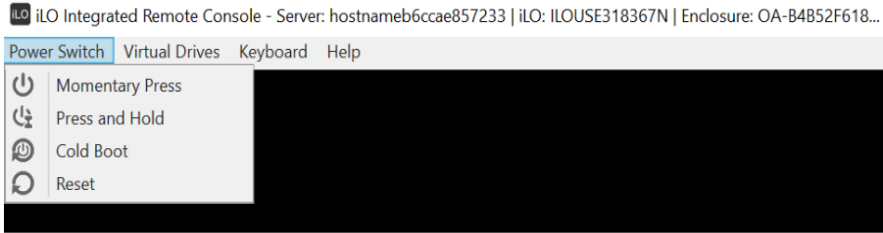

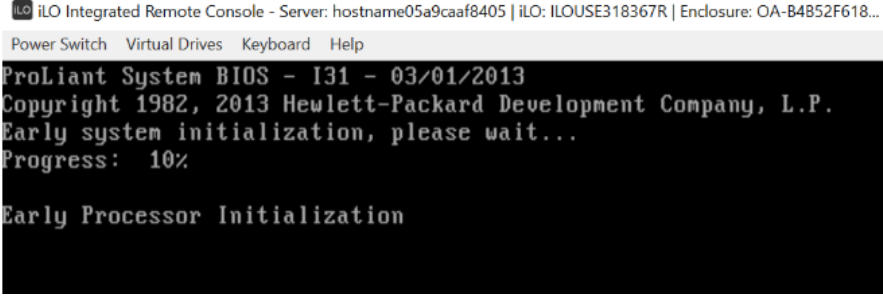

- Install DSR on Oracle Linux/KVM
- Create and Install OCDSR VMs via KVM GUI

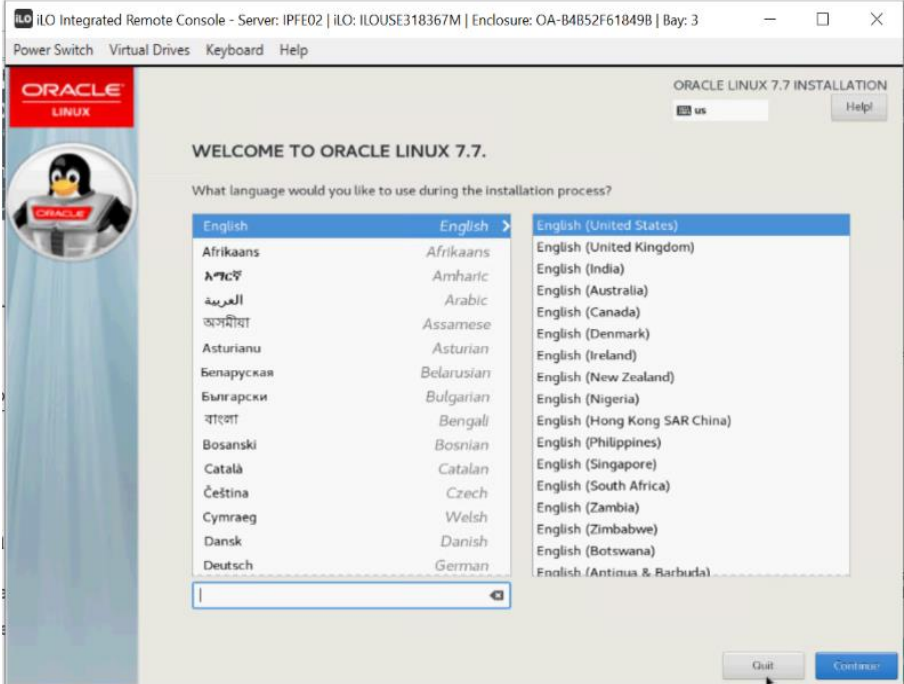

Note: If using a hardware in remote LAB then use a remote windows machine to install Linux. Please ensure that OEL 7 ISO is also located locally in remote windows machine.

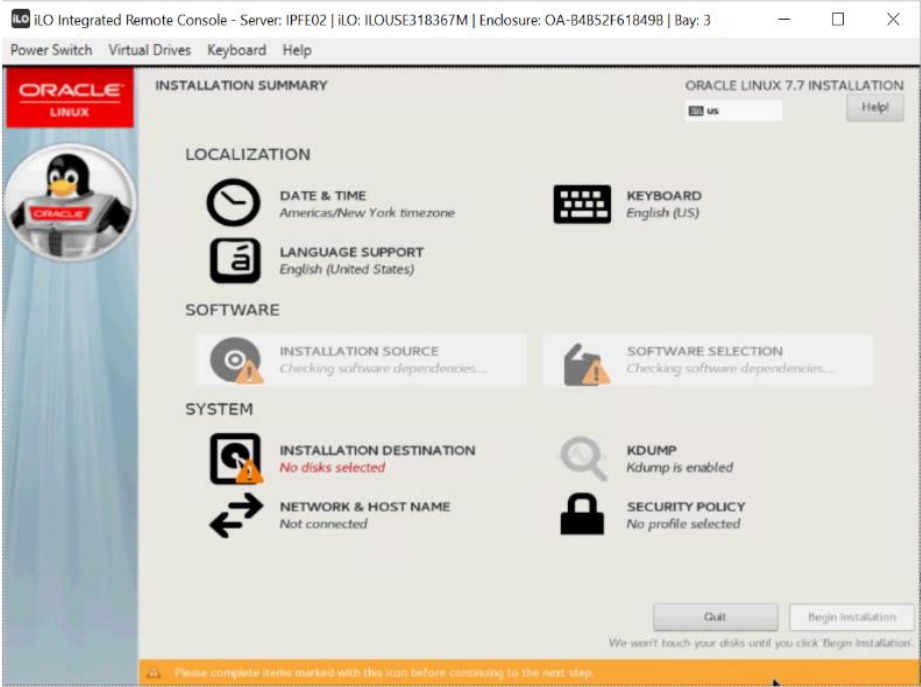

3.5.1 DSR Installation on OL7 and KVM

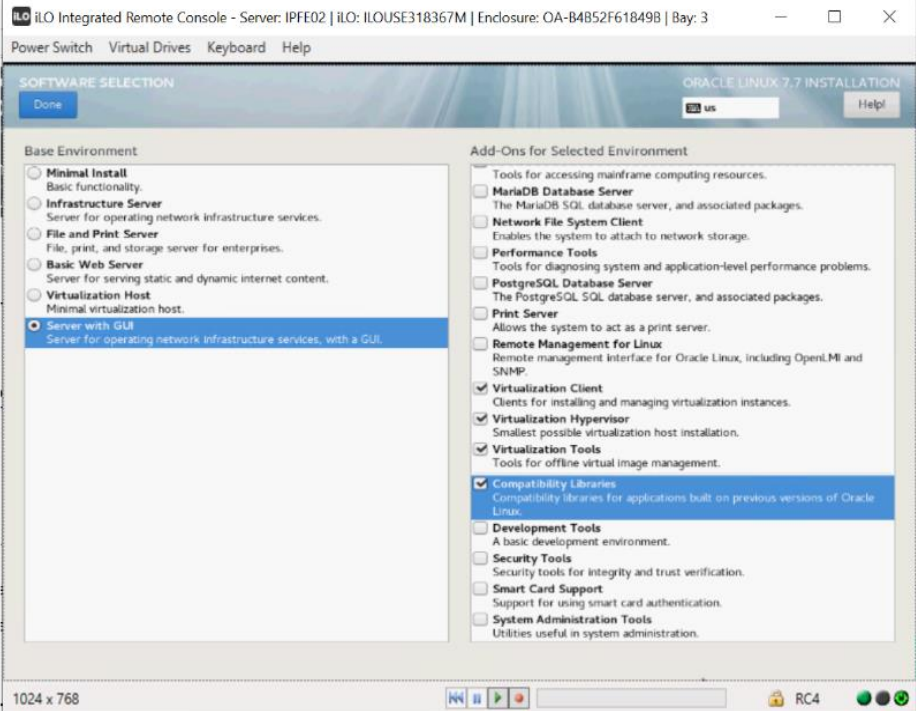

Procedure 11. Install DSR on Oracle Linux/KVM

STEP #	Procedure	Description
<p>This procedure will install DSR configuration on Oracle Linux OS with direct KVM as hypervisor.</p> <p>Note:</p> <ul style="list-style-type: none"> • This installation procedure only applies when installing DSR on Oracle Linux OS via direct KVM • For the Oracle Linux OS, Oracle Linux 7.7 release is used and verified OK. • The snapshot used for this procedure has been taken from HP Gen-10 Blade. • This procedure can be executed on any flavor of blade that require DSR install on OL7.7 and KVM. <p>Prerequisite: All the respective infrastructures has to be up and running.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>12.</p> <input type="checkbox"/>	<p>For each Blade:</p> <p>Mount virtual media contains Oracle Linux OS software</p>	<p>Follow steps defined in Mounting Virtual Media on Blade:</p> <ul style="list-style-type: none"> • Open the ILO. • Attach the OEL 7.7 ISO in ILOs virtual drives->Image File CD/DVD ROM. <p>To mount the Oracle Linux OS software ISO from ILO GUI:</p> <ul style="list-style-type: none"> • Navigate to Virtual drives -> menu, • Click on Image File then select image from folder. 
<p>13.</p> <input type="checkbox"/>	<p>For each Blade:</p> <p>Reboot host</p> <p>Login to Blade Server</p>	<p>To reboot host:</p> <p>Click Power Switch and select Reset from the dropdown menu.</p>

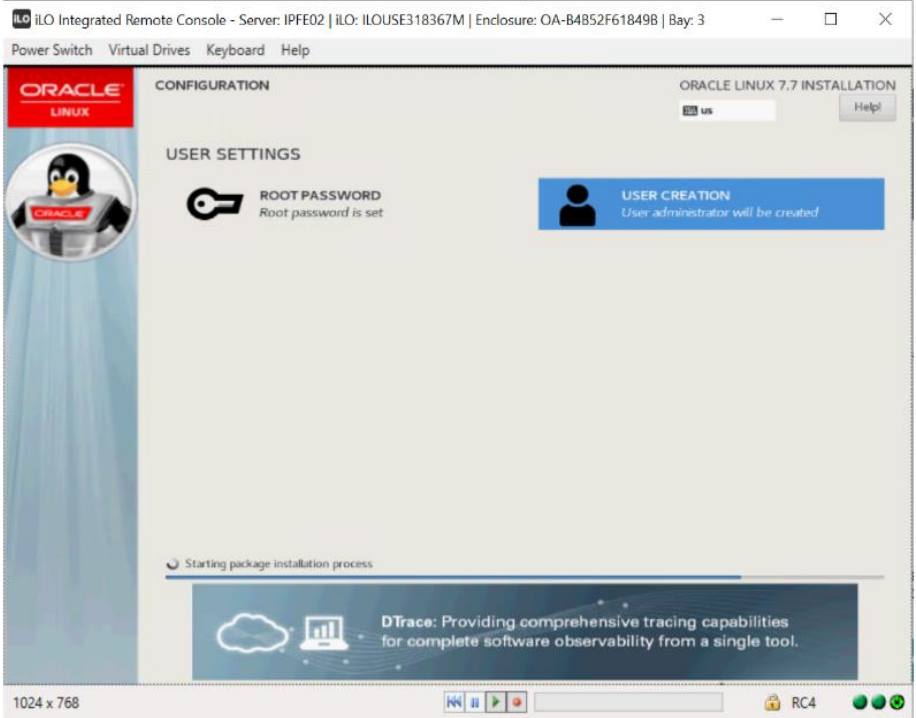

STEP #	Procedure	Description
	ILo GUI browser page and launch remote console	 <p>The remote console window displays that the host is rebooting.</p>  <p>Wait for a couple of minutes for reboot to complete.</p>
14. <input type="checkbox"/>	For each Blade: Initiate Oracle Linux Platform installation	<p>Once reboot completes, the host boots with Oracle Linux installation ISO and the GUI screen prompts for the installation options.</p> 

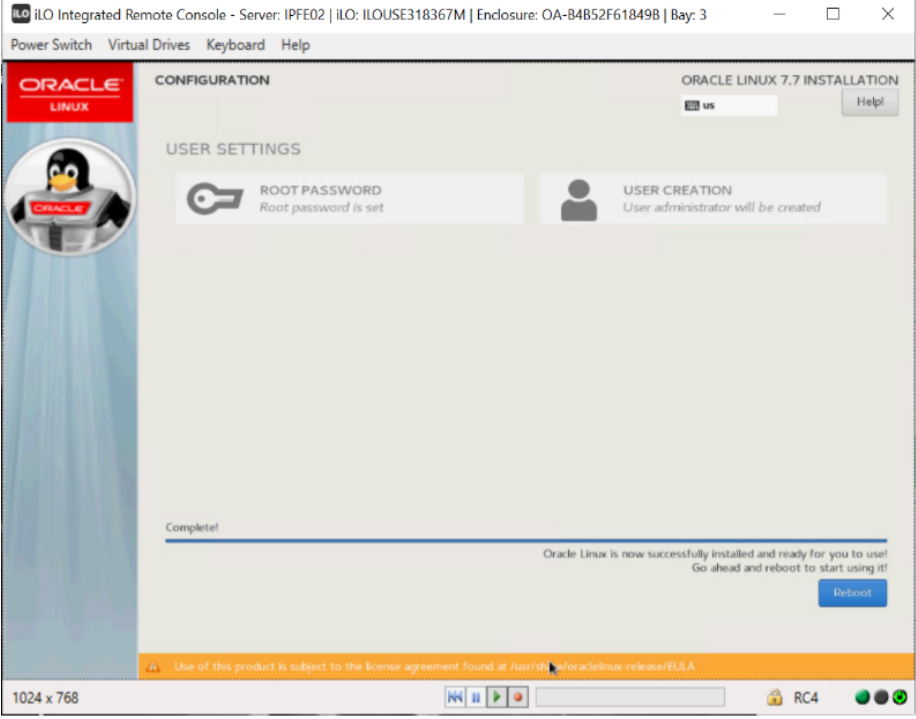

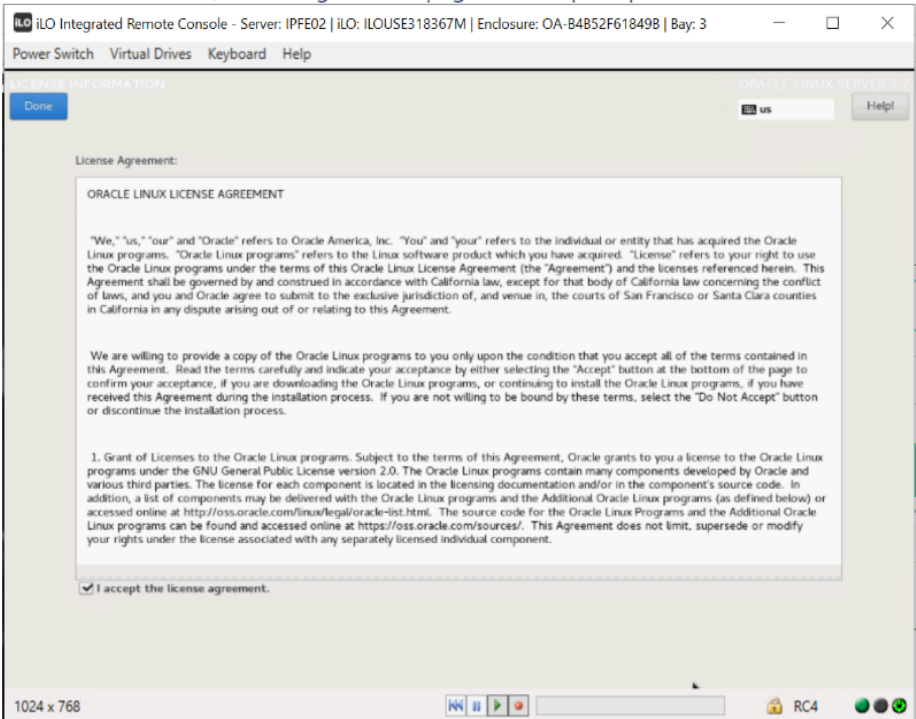

STEP #	Procedure	Description
		Select Install Oracle Linux 7.x to continue.
<p>15.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Choose Oracle Linux OS language</p>	<p>When prompted, select English as Oracle Linux OS language:</p>  <p>Press Continue to go to next step.</p>
<p>16.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Setup time zone</p>	<p>The next page INSTALLATION SUMMARY displays the required information to start installation.</p>

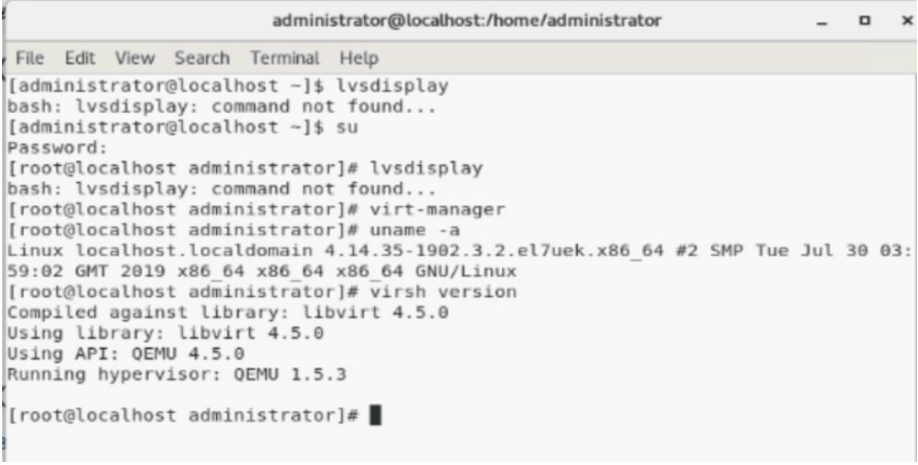

STEP #	Procedure	Description
		 <p>Click LOCALIZATION -> DATE & TIME:</p> <ul style="list-style-type: none"> • Pick a time zone by selecting a region and city from the drop-down lists, or by clicking a location on the map. • Choose a country and city that are in the same time zone as your system. <p>You need to specify a time zone even if you intend to use the Network Time Protocol (NTP) to set the time on the system. Before you can enable NTP, ensure that the system is connected to a network by selecting the Network & Hostname option on the INSTALLATION SUMMARY screen (see Configuring the Host Name and Connecting to a Network).</p> <p>To enable NTP,</p> <ul style="list-style-type: none"> • Switch ON the Network Time • Click the Settings button to display a dialog where you can configure the NTP servers used by the system <p>To set the date and time manually:</p> <ul style="list-style-type: none"> • Switch OFF the Network Time • Adjust the date and time at the bottom of the screen if needed. <p>Click Done to save your configuration and return to the INSTALLATION SUMMARY screen.</p>
<p>17. <input type="checkbox"/></p>	<p>For each Blade: Setup</p>	<p>Click SOFTWARE SELECTION options in the SOFTWARE area. Select Server with GUI from the Base Environment area, and ensure that the following add-ons are selected:</p>

STEP #	Procedure	Description
	installation base environment	<ul style="list-style-type: none"> • Virtualization Client • Virtualization Hypervisor • Virtualization Tools • Compatibility Libraries  <p>Click Done to save the changes and go back to the main configuration page.</p>
18. <input type="checkbox"/>	For each Blade: Setup installation destination	Click INSTALLATION DESTINATION in the SYSTEM area. <ul style="list-style-type: none"> • Select 'sda' (or 'sdb') to use • Check Automatically configure partitioning • Click Done to continue

STEP #	Procedure	Description
		
<p>19.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Review configuration and start installation</p>	<p>Review all the information and click Begin Installation.</p> <p>Note: Network configuration is not mandatory at this point and can be performed after Oracle Linux OS is installed.</p> 

STEP #	Procedure	Description
<p>20. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Create login credential</p>	<p>At the same time Oracle Linux installation software is laying down files into Gen 10 local hard disk, you may configure root credential or any other login credentials as per the requirement:</p>  <p>The screenshot shows the Oracle Linux 7.7 installation configuration window. The title bar reads 'iLO Integrated Remote Console - Server: IPFE02 iLO: ILOUSE318367M Enclosure: OA-B4852F61849B Bay: 3'. The main content area is titled 'CONFIGURATION' and 'ORACLE LINUX 7.7 INSTALLATION'. Under 'USER SETTINGS', there is a 'ROOT PASSWORD' section with a key icon and the text 'Root password is set'. To the right, there is a 'USER CREATION' section with a person icon and the text 'User administrator will be created'. At the bottom, there is a progress bar labeled 'Starting package installation process' and a banner for 'DTrace: Providing comprehensive tracing capabilities for complete software observability from a single tool.' The window also shows a 'Power Switch' menu, 'Virtual Drives', 'Keyboard', and 'Help' options.</p>
<p>21. <input type="checkbox"/></p>	<p>For each Blade:</p> <p>Reboot host after installation completed</p>	<p>Wait for the installation to complete, until the following screen appears:</p>

STEP #	Procedure	Description
		 <p>Click Reboot button to reboot.</p>
<p>22.</p> <p><input type="checkbox"/></p>	<p>For each Blade:</p> <p>Read & Accept license agreement</p>	<p>After reboot is done, license agreement page appears:</p>  <p>Check "I accept the license agreement", following with "Finish"</p>

STEP #	Procedure	Description
		<p>Configuration" to continue.</p> <p>Skip when prompted for ULN settings.</p>

3.5.2 Create and Install OCDSR VMs via KVM GUI

Procedure 12. Create and Install OCDSR VMs via KVM GUI

STEP #	Procedure	Description
--------	-----------	-------------

This procedure will install DSR VMs NO, SO, and MP using KVM GUI.

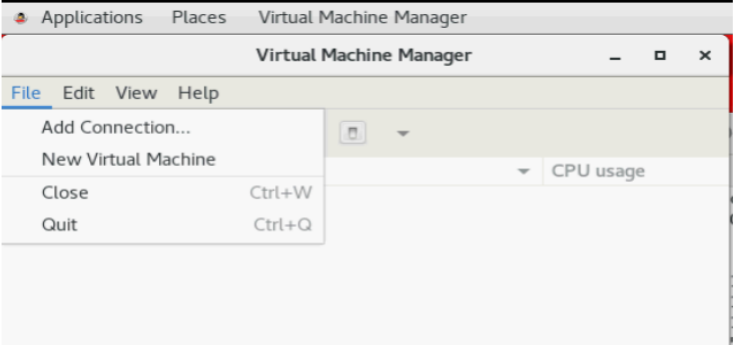

Note:

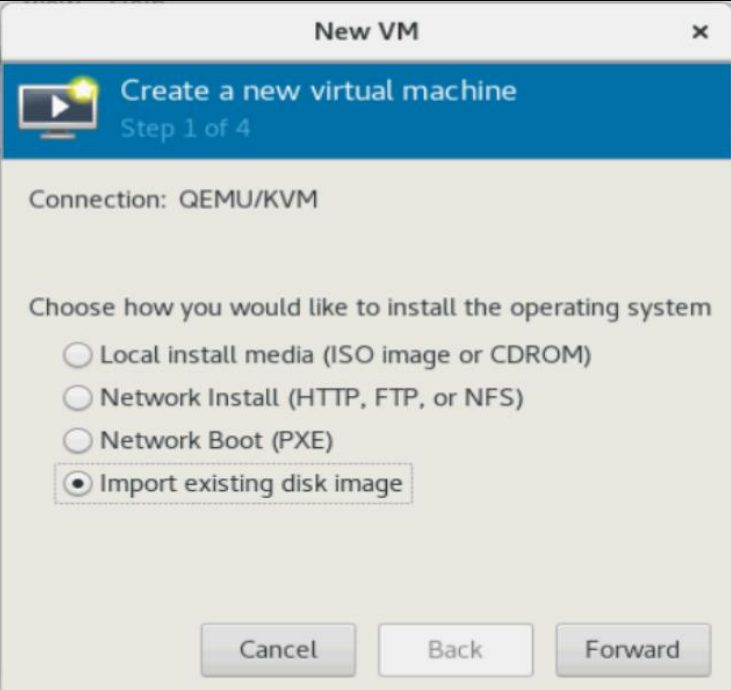

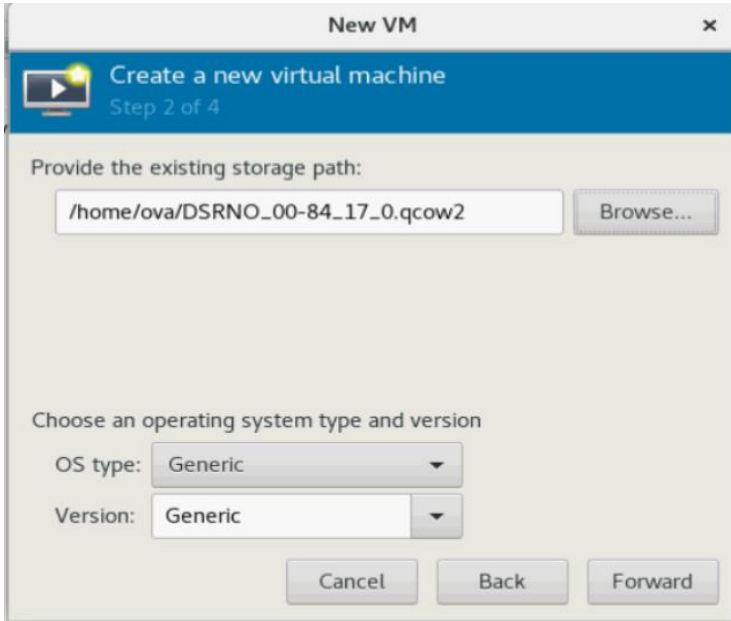

- This installation procedure is only applicable for each VM: NO, SO, MP and so on.

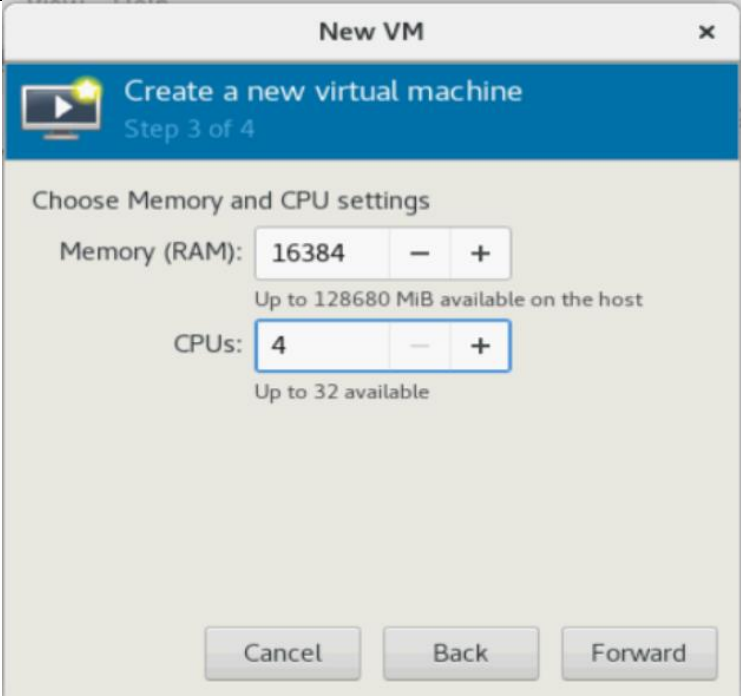

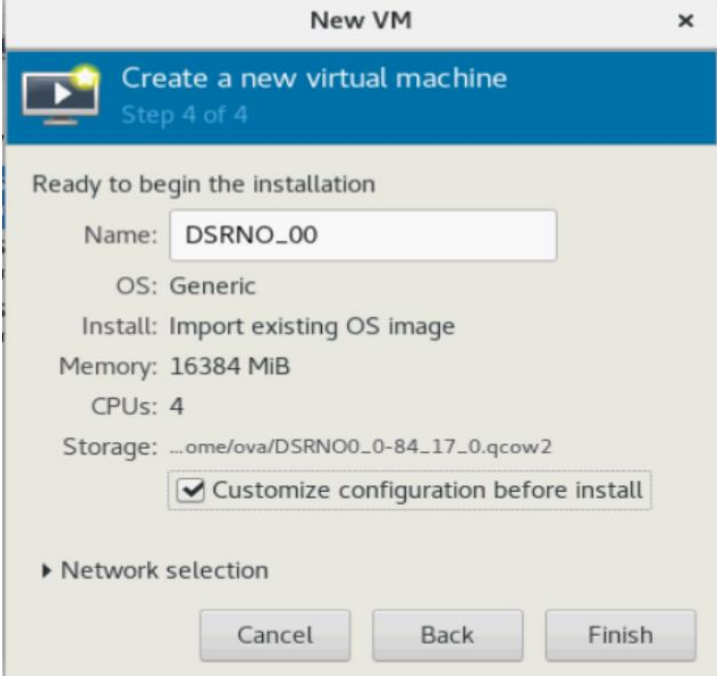

Prerequisite: Install DSR on Oracle Linux OS via KVM (Step 1 to 25 must be complete)

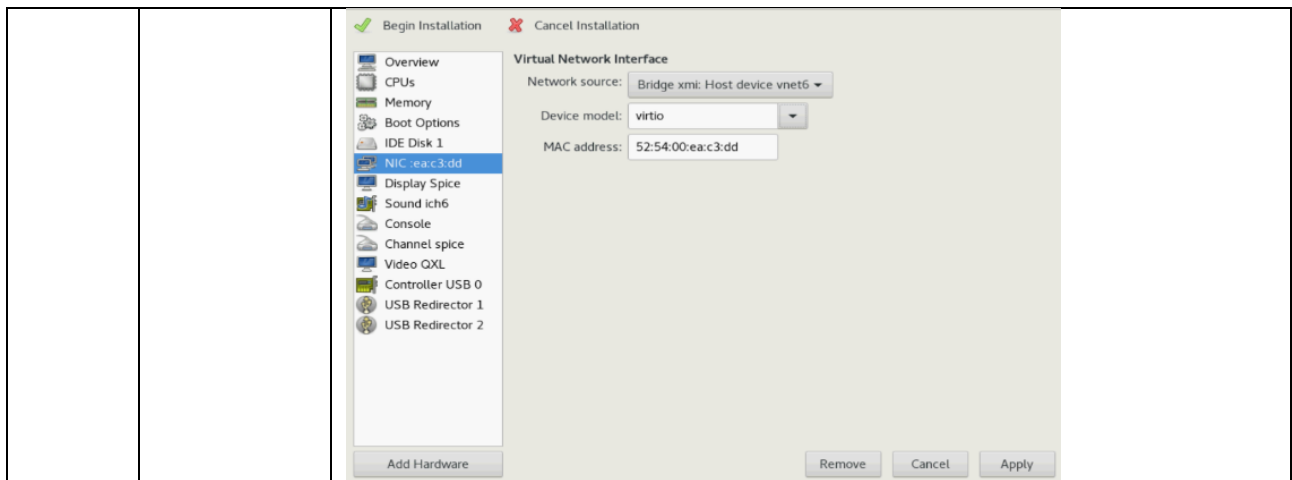

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

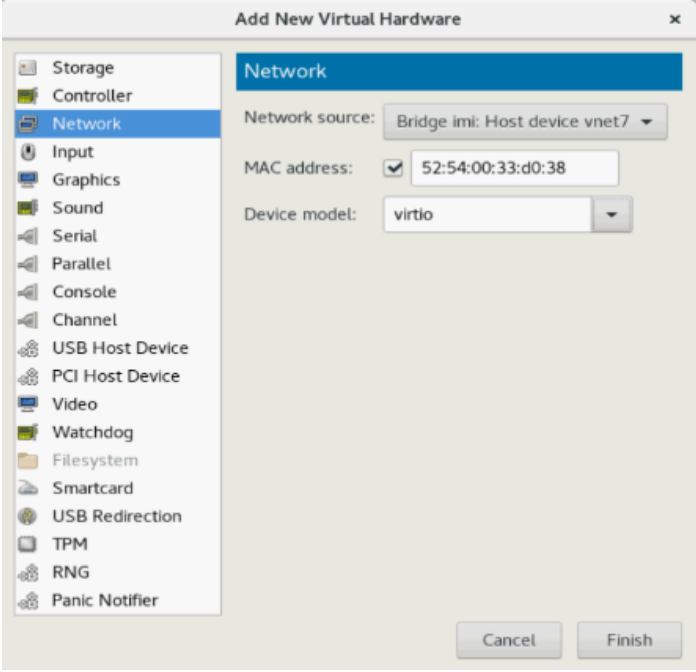

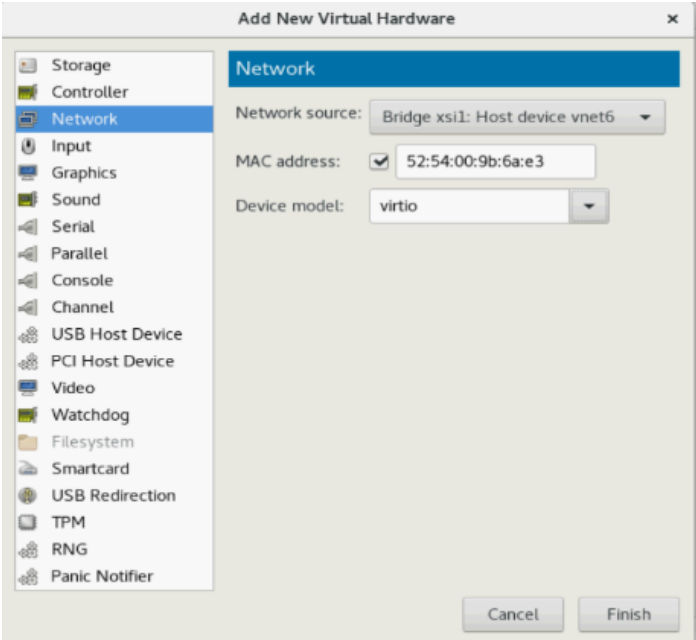

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

<p>47. <input type="checkbox"/></p>	<p>Login to the host machine and open the Virtual Machine Manager</p>	<p>Login to the host machine which has Oracle Linux installed and open the Virtual Machine Manager via cli, by executing:</p> <pre>virt-manager</pre> <p>Note: Make sure X11 forwarding is enabled before running <code>virt-manager</code> command on CLI.</p> 
<p>48. <input type="checkbox"/></p>	<p>Create a new Virtual Machine using the Virtual Manager GUI</p>	<p>On Virtual Manager GUI,</p> <ol style="list-style-type: none"> 3. Click File -> New Virtual Machine 4. Select Import existing disk image

		
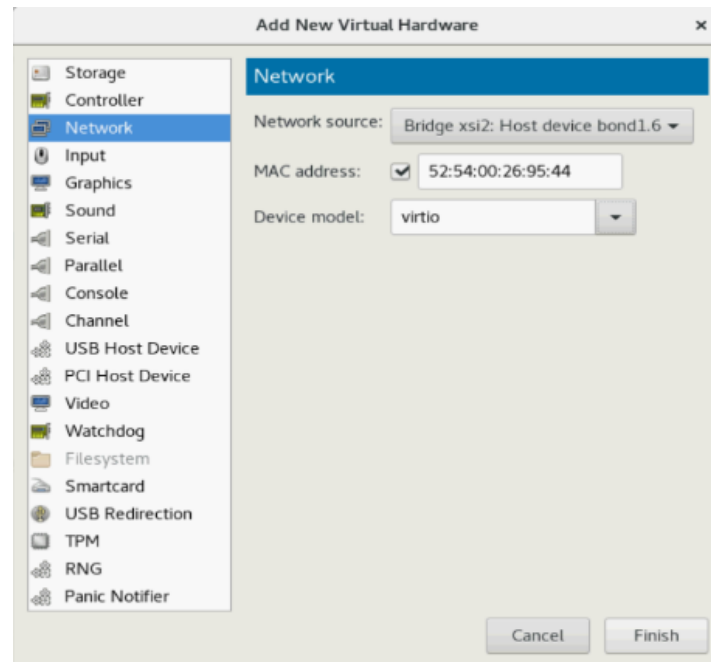

<p>49. <input type="checkbox"/></p>	<p>Select the image file</p>	<p>Select the qcow2 image by browsing the location: <code>/home/ova</code> and Click Forward. See Step 24 and 25 of Install DSR on Oracle Linux/KVM</p> 
<p>50. <input type="checkbox"/></p>	<p>Select RAM and vCPUs for VM</p>	<p>Select RAM and vCPUs for VM. For each VM, select the RAM and vCPUs as per the required resource profile. Refer to VM Resource Profile Flavor section. Click Forward.</p>

		
<p>51. <input type="checkbox"/></p>	<p>Verify and customize VM</p>	<p>Update the VM name and select Customize configuration before install. Under Network selection, select XMI bridge and click Finish.</p> 
<p>52. <input type="checkbox"/></p>	<p>Modify the Device model to virtio for XMI bridge</p>	<p>For XMI bridge, modify the device model to virtio:</p>

<p>53. <input type="checkbox"/></p>	<p>Customize the network configuration</p>	<p>On the next screen, Click Add Hardware.</p> <ul style="list-style-type: none"> • Under Network source, choose the IMI Bridge. • For NO and SO, choose IMI bridge only. • For MP, add XSI1, along with IMI by repeating this step. • Click Finish.  <p>Only for MP, we need to add XSI1 & XSI2 bridge as well. For XSI1 bridge:</p> 
-------------------------------------	--	---

For XSI2 bridge:

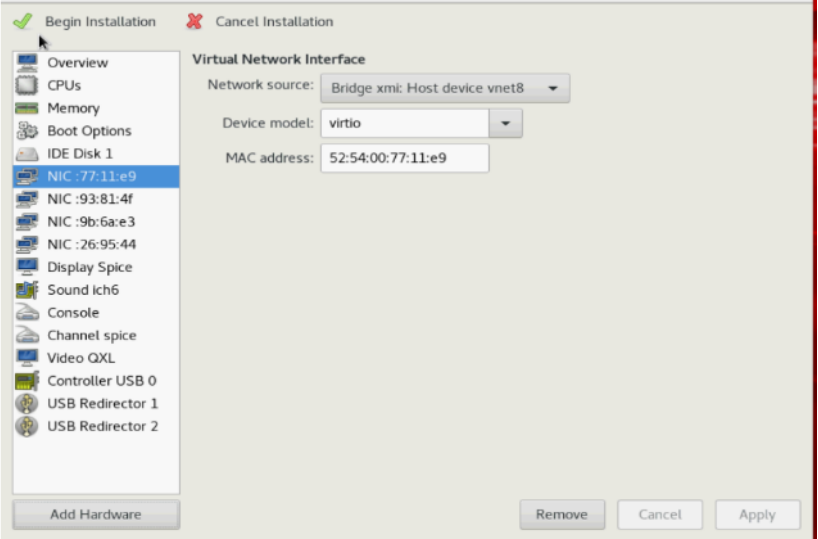

Note:

- For DSR Topology it is recommended to add all interfaces on each VM, even when the VM does not require that interface or does not use a VLAN.
- It is just to use a standard when the topology is created from NOAM GUI.

DSR VMs	
XMI	eth0
IMI	eth1
XSI1	eth2
XSI2	eth3

Add all interfaces as needed. After adding the other networks, you will see the NICs appear.

<p>54.</p> <p><input type="checkbox"/></p>	<p>Verify and begin installation</p>	<p>After adding all bridges, verify and begin the VM installation:</p> 
<p>55.</p>	<p>Disable TSO GSO features (Optional)</p>	<p>To disable the TSO GSO features for SBR server, see Appendix I.5.</p>

4. Software Installation Using HEAT Templates (OpenStack)

4.1 Prepare OpenStack Template and Environment files

Procedure 13. Prepare OpenStack Templates and Environment Files for NOAM/Signaling Stacks

STEP #	Procedure	Description
<p>This procedure gathers required templates and environment files to provide while deploying NOAM/signaling stacks.</p> <p>Prerequisite: All the respective infrastructures has to be up and running.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
56. <input type="checkbox"/>	Login to Oracle document repository - OTN	Log into the Oracle Document Repository at http://docs.oracle.com/en/industries/communications/diameter-signaling-router/index.html
57. <input type="checkbox"/>	Select the DSR Release	Select the respective release folder. For example, Release 8.6.0.0.0.
58. <input type="checkbox"/>	Download HEAT templates	Download the HEAT Templates zip file under Cloud Installation and Upgrade section.
59. <input type="checkbox"/>	Unzip the HEAT templates to a folder	<ol style="list-style-type: none"> 1. Create a new folder with any name for storing the HEAT templates under the home directory. Example : /home/heat_templates 2. Store the downloaded HEAT templates zip file in the folder. Example : /home/heat_templates/exampleHeat.zip 3. Unzip the downloaded heat templates. unzip /home/heat_templates/exampleHeat.zip

<p>60. <input type="checkbox"/></p>	<p>Determine the template and environment files</p>	<p>Below are possible deployment use cases of DSR. The HEAT templates contain files for all scenarios. Determine the appropriate template and environment files with respect to your requirement. Note: Currently, SS7 MPs are not supported. Refer to Appendix J.2 Example Parameter File.</p>

4.2 Create OpenStack Parameters files

Procedure 14. Create OpenStack Parameter File for NOAM

STEP #	Procedure	Description
		<p>This procedure instructs how to manually create input parameters file to be provided while deploying NOAM stacks.</p> <p>Prerequisite: All the respective infrastructures has to be up and running</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>

STEP #	Procedure	Description
1. □	Login to OpenStack server CLI	Log into the OpenStack server through command line.
2. □	Create the parameter file	<ol style="list-style-type: none"> Go to the folder created in Procedure 13, step 59. for storing the templates. Create an empty NOAM parameter file in this folder following this naming convention to identify the purpose of the file. <DSR Name>_<Site Name>_NetworkOam_Params.yaml For example: dsrCloudInit_Site00_NetworkOam_Params.yaml
3. □	Sample file	<p>Refer to Appendix J.1 Example Template File for a sample file with values.</p> <p>Note: It is important to keep the example file ready since this helps you understand the use of each key value pair described in the next step while creating the parameter file.</p>
4. □	Populate the parameters file	<p>Refer to Appendix J.1 Example Template File to create the parameter file in YAML format.</p> <p>Note: Follow these guidelines while working with the YAML files.</p> <ul style="list-style-type: none"> The file must end with .yaml extension. YAML must be case-sensitive and indentation-sensitive. YAML does not support the use of tabs. Instead of tabs, it uses spaces. This file is in YAML format and it contains key:value pairs. The first key should be parameters: and then the remaining required key/value pairs for the topology. <p>This table lists all required key:value pairs.</p>

		Key Name	Type	Description
		numPrimaryNoams	number	<p>The number of NOAMs that receive and load DSR topology information.</p> <p>Note: In DSR 8.6.0.0.0, use 1 as valid value.</p> <p>This NOAM represents active NOAM.</p>
		numNoams	number	<p>The number of NOAMs in the DSR topology other than primary NOAM.</p> <p>Note: In DSR 8.6.0.0.0, use 1 as valid value.</p> <p>This NOAM represents standby NOAM.</p>
		noamImage	string	<p>The VM image for the NOAM.</p> <p>Note: This image is used for both active and standby NOAMs.</p>
		noamFlavor	string	<p>The flavor that defines the VM size for the NOAM.</p> <p>Note: This flavor is used for both active and standby NOAMs.</p>
		primaryNoamVmNames	comma_delimited_list	<p>List of Primary NOAM VM names</p> <p>Note: Number of VMnames must be equal to the numPrimaryNoams value.</p>
		noamVmNames	comma_delimited_list	<p>List of NOAM VM names other than primary NOAM VMs.</p> <p>Note: Number of VMnames must be equal to the numNoams value.</p>
		noamAZ	string	<p>The availability zone into which NOAM servers should be placed.</p> <p>Note: In DSR 8.6.0.0.0, all NOAM servers are placed in the same availability zone.</p>
		noamSG	string	<p>The server group where NOAMs at this site belong.</p>
		xmiPublicNetwork	string	<p>External management interface.</p>

STEP #	Procedure	Description																								
		<table border="1"> <tr> <td>imiPrivateNetwork</td> <td>string</td> <td>Internal management interface.</td> </tr> <tr> <td>imiPrivateSubnet</td> <td>string</td> <td>Name of the IMI network.</td> </tr> <tr> <td>imiPrivateSubnetCidr</td> <td>string</td> <td>The address range for the subnet.</td> </tr> <tr> <td>ntpServer</td> <td>string</td> <td>IP of the NTP server.</td> </tr> <tr> <td colspan="3">Note: The below 3 keys are ONLY applicable for fixed IP scenario.</td> </tr> <tr> <td>primaryNoamXmilps</td> <td>comma_delimited_list</td> <td>Previously reserved IP for the primary NOAM to talk to external devices.</td> </tr> <tr> <td>noamXmilps</td> <td>comma_delimited_list</td> <td>Previously reserved IP for non-primary NOAMs to talk to external devices.</td> </tr> <tr> <td>noamVip</td> <td>string</td> <td>VIP for NOAMs.</td> </tr> </table>	imiPrivateNetwork	string	Internal management interface.	imiPrivateSubnet	string	Name of the IMI network.	imiPrivateSubnetCidr	string	The address range for the subnet.	ntpServer	string	IP of the NTP server.	Note: The below 3 keys are ONLY applicable for fixed IP scenario.			primaryNoamXmilps	comma_delimited_list	Previously reserved IP for the primary NOAM to talk to external devices.	noamXmilps	comma_delimited_list	Previously reserved IP for non-primary NOAMs to talk to external devices.	noamVip	string	VIP for NOAMs.
imiPrivateNetwork	string	Internal management interface.																								
imiPrivateSubnet	string	Name of the IMI network.																								
imiPrivateSubnetCidr	string	The address range for the subnet.																								
ntpServer	string	IP of the NTP server.																								
Note: The below 3 keys are ONLY applicable for fixed IP scenario.																										
primaryNoamXmilps	comma_delimited_list	Previously reserved IP for the primary NOAM to talk to external devices.																								
noamXmilps	comma_delimited_list	Previously reserved IP for non-primary NOAMs to talk to external devices.																								
noamVip	string	VIP for NOAMs.																								

Procedure 15. Create OpenStack Parameter File for Signaling

STEP #	Procedure	Description
<p>This procedure manually creates the input parameters file to provide while deploying signaling stacks.</p> <p>Prerequisite: All the respective infrastructures has to be up and running.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Log into the OpenStack server CLI	Log into the OpenStack CLI.
2. <input type="checkbox"/>	Create the parameter file	<p>1. Go to the folder created in Procedure 13, step 59. for storing the templates.</p> <p>2. Create an empty signaling parameter file in this folder following this naming convention to identify the purpose of the file.</p> <p><DSR Name>_<Site Name>_SignalingNode_Params.yaml</p> <p>For example:</p> <p>dsrCloudInit_Site00_SignalingNode_Params.yaml</p>
3. <input type="checkbox"/>	Sample file	<p>Refer to Appendix J.1 Example Template File for a sample file with values.</p> <p>Note: It is important to keep the example file ready since this helps you understand the use of each key value pair described in the next step while creating the parameter file.</p>
4. <input type="checkbox"/>	Populate the parameters file	<p>Refer to Appendix J.1 Example Template File to create the parameter file in YAML format.</p> <p>Note: Follow these guidelines while working with the YAML files.</p> <ul style="list-style-type: none"> • The file must end with .yaml extension. • YAML must be case-sensitive and indentation-sensitive. • YAML does not support the use of tabs. Instead of tabs, it uses spaces.

- This file is in YAML format and it contains **key:value** pairs.
- The first key should be **parameters:** and then the remaining required key/value pairs for the topology.

This table lists all required key:value pairs.

Key Name	Type	Description
numSoams	number	The number of SOAMs at this signaling node.
soamImage	string	The VM image for an SOAM.
soamFlavor	string	The flavor that defines the VM size for an SOAM.
soamVmNames	comma_delimited_list	List of SOAM VM names.
soamAZ	string	The availability zone into which SOAM servers should be placed Note: In DSR 8.6.0.0.0, all SOAM servers are placed in the same availability zone
soamSG	string	Server group for the SOAM VMs.
numDas	number	The number of DAs at this signaling node.
daImage	string	The VM image for a DA.
daFlavor	string	The flavor that defines the VM size for a DA.
daVmNames	comma_delimited_list	List of DA VM names.
daAZ	string	The availability zone into which DA servers should be placed. Note: In DSR 8.6.0.0.0, all DA-MP servers are placed in the same availability zone.
daSG	string	Server group for the DA VMs.
daProfileName	string	The MP profile to be applied to all DAs. Possible values are: VM_Relay, VM_Database, VM_6K_Mps, VM_8K_Mps, VM_10K_Mps, VM_12K_Mps, VM_14K_Mps, VM_16K_Mps, VM_18K_Mps, VM_21K_Mps, VM_24K_Mps, VM_27K_Mps, VM_30K_Mps
numIpfes	number	The number of IPFEs at this signaling node.
ipfelImage	string	The VM image for an IPFE.

		ipfeFlavor	string	The flavor that defines the VM size for an IPFE.
		ipfeVmNames	comma_delimited_list	List of IPFE VM names.
		ipfeAZ	string	The availability zone into which IPFE servers should be placed. Note: In DSR 8.6.0.0.0, all IPFE servers are placed in the same availability zone.
		ipfeSGs	comma_delimited_list	Server group for each IPFE VM.
		numStps	number	The number of STPs at this signaling node.
		stpImage	string	The VM image for an STP.
		stpFlavor	string	The flavor that defines the VM size for an STP.
		stpVmNames	comma_delimited_list	List of STP VM names.
		stpAZ	string	The availability zone into which STP servers should be placed. Note: In DSR 8.6.0.0.0, all STP servers are placed in the same availability zone.
		stpSG	string	Server group for the STP VMs.
		xmiPublicNetwork	string	External management interface.
		imiPrivateNetwork	string	Internal management interface.
		imiPrivateSubnet	string	Name of the IMI network.
		imiPrivateSubnetCidr	string	The address range for the subnet.
		xsiPublicNetwork	string	External signaling interface.
		primaryNoamVmName	string	Name of NOAM VM that the config XML was loaded onto Note: NOT used in 8.6.0.0.0. In DSR 8.6.0.0.0, user should NOT provide any value to this key.
		noamXmilps	comma_delimited_list	The XMI IPs for all NOAM servers, excluding VIPs. Note: NOT used in 8.6.0.0.0. In DSR 8.6.0.0.0, user should NOT provide any value to this key.

		ntpServer	string	IP of the NTP server.
		Note: The below keys are ONLY applicable for fixed IP scenario, with or without IDIH nodes		
		soamXmilps	comma_delimited_list	Previously reserved IP for non-primary SOAMs to talk to external devices.
		soamVip	string	VIP for SOAMs.
		daXmilps	comma_delimited_list	Previously reserved IP for DA MP to talk to external devices.
		daXsilps	comma_delimited_list	Previously reserved IP for DA MP to talk to signaling devices.
		ipfeXmilps	comma_delimited_list	Previously reserved IP for IPFE to talk to external devices.
		ipfeXsilps	comma_delimited_list	Previously reserved IP for IPFE to talk to signaling devices.
		stpXmilps	comma_delimited_list	Previously reserved IP for STP to talk to external devices.
		stpXsilps	comma_delimited_list	Previously reserved IP for STP to talk to signaling devices.
		ipfeXsiPublicIp	string	Reserved single IP address on signaling network to which remote diameter hosts route packets for load balancing over set of message processors.
		stpSctpPorts	comma_delimited_list	<p>The SCTP ports to be associated with STP.</p> <p>Note: If there is no STP in topology then provide empty list, for example, []</p> <p>Note: Open these ports beforehand on which STP connections are going to be created while doing configuration.</p>
		<p>These two parameters are applicable for TCP/SCTP to use with the Diameter connection.</p> <p>Note: Open these ports beforehand on which Diameter connections are going to be created while doing Diameter configuration.</p>		
		diameterTcpPorts	comma_delimited_list	The TCP ports to be associated with. If this parameter is not provided, then default ports are assigned.

		diameterSctpPorts	comma_delimited_list	The SCTP ports to be associated with. If this parameter is not provided, then default ports are assigned.																		
The below keys are applicable only for scenarios which include IDIH nodes.																						
		idihAppImage	string	The VM image for the IDIH Application VM																		
		idihAppFlavor	string	The flavor that defines the size for the IDIH Application VM																		
		idihAppVmName	string	The IDIH Mediation VM name.																		
		idihMedImage	string	The flavor that defines the size for the IDIH Mediation VM																		
		idihMedVmName	string	The IDIH Mediation VM name																		
		idihDbImage	string	The VM image for the IDIH Database VM																		
		idihDbFlavor	string	The flavor that defines the size for the IDIH Database VM																		
		idihDbVmName	string	The IDIH Database VM name																		
		idihAZ	string	The availability zone into which IDIH VMs should be placed																		
		idihIntPrivateNetwork	string	Name of the internal tenant network (that will be created) for communication between IDIH VMs																		
		idihIntPrivateSubnet	string	Name of the subnet (that will be created) on the IDIH internal tenant network (idihIntPrivateNetwork)																		
<p>Note: At least one is mandatory (either TCP/SCTP parameter). Refer to this table to determine the valid combinations for SCTP/TCP port configurations.</p> <table border="1"> <thead> <tr> <th>diameterTcpPorts</th> <th>diameterSctpPorts</th> <th>Is Valid?</th> </tr> </thead> <tbody> <tr> <td>[]</td> <td>[]</td> <td>NO</td> </tr> <tr> <td>[""]</td> <td>[""]</td> <td>NO</td> </tr> <tr> <td>["<port(s)>"]</td> <td>[]</td> <td>YES</td> </tr> <tr> <td>[]</td> <td>["<port(s)>"]</td> <td>YES</td> </tr> <tr> <td>["<port(s)>"]</td> <td>["<port(s)>"]</td> <td>YES</td> </tr> </tbody> </table>					diameterTcpPorts	diameterSctpPorts	Is Valid?	[]	[]	NO	[""]	[""]	NO	["<port(s)>"]	[]	YES	[]	["<port(s)>"]	YES	["<port(s)>"]	["<port(s)>"]	YES

STEP #	Procedure	Description								
		<p>application servers. This address MUST NOT be a real interface address (that is, must not be associated with a network interface card).</p> <p>Active IPFE: IPFE to handle the traffic for the target set address.</p> <p>Secondary Public IP Address: If this target set supports either multi-homed SCTP or Both TCP and SCTP, provide a Secondary IP Address.</p> <div data-bbox="516 464 1105 800" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;"> <p>Alternate Public IP Address[†]</p> <p>Alternate Address <input type="text"/></p> <hr/> <p>Active IPFE for alternate address</p> <p> <input checked="" type="radio"/> IPFE A1 ----- IPFE A2 <input type="radio"/> <input type="radio"/> IPFE B1 ----- IPFE B2 <input type="radio"/> </p> </div> <p>Note: A secondary address is required to support SCTP multi-homing. A secondary address can support TCP, but the TCP connections are not multi-homed.</p> <p>Note: If SCTP multi-homing is to be supported, select the mate IPFE of the Active IPFE for the Active IPFE for secondary address to ensure SCTP failover functions as designed.</p> <p>Target Set IP List: Select an IP address, a secondary IP address if supporting SCTP multi-homing, a description, and a weight for the application server.</p> <div data-bbox="516 1129 1252 1262" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;"> <p>Target Set IP List</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 25%;">IP Address</th> <th style="width: 25%;">Alternate IP Address</th> <th style="width: 40%;">Description</th> <th style="width: 10%;">Weighting</th> </tr> </thead> <tbody> <tr> <td>01 - Select -</td> <td>- Select -</td> <td></td> <td>100 X</td> </tr> </tbody> </table> <p><input type="button" value="Add"/> Weighting range is 0 - 65535.</p> </div> <p>Note:</p> <ul style="list-style-type: none"> The IP address must be on the XSI network since they must be on the same network as the target set address. This address must also match the IP version of the target set address (IPv4 or IPv6). If the Secondary Public IP Address is configured, it must reside on the same application server as the first IP address. A port must be created to associate the IP that needs to be used as TSA IP in cloud. Create a port using the following command: <pre>neutron port-create <xsi network-id></pre> The command results in an IP that can be used as TSA IP. <p>Note: If all application servers have an equal weight (for example, 100, which is the default), they have an equal chance of being selected. Application servers with larger weights have a greater chance of being selected.</p> <p>2. Click Add to add more application servers (up to 16).</p>	IP Address	Alternate IP Address	Description	Weighting	01 - Select -	- Select -		100 X
IP Address	Alternate IP Address	Description	Weighting							
01 - Select -	- Select -		100 X							

STEP #	Procedure	Description
		3. Click Apply . 
5. <input type="checkbox"/>	SOAM VIP: Repeat for additional configuration of IPFE target sets	Repeat for steps 3 and 4 for each target set (up to 16). At least one target set must be configured.

5.4 Configure the Desired MTU value

By default DSR defines MTU size of all its management and/or signaling networks as 1500 bytes. If the configured virtual network(s) on cloud is VXLAN based and MTU size defined/negotiated on it is 1500 bytes, then we need to accommodate VXLAN header (size 65 bytes) within these 1500 bytes.

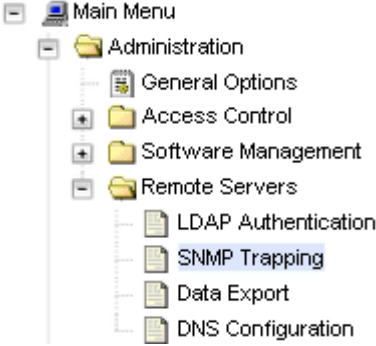

STEP #	Procedure	Description
<p>This procedure configures the desired MTU value.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1.</p> <p><input type="checkbox"/></p>	<p>Verify the MTU on DSR system</p>	<p>Verify the MTU on DSR system, by executing:</p> <pre>iqt -pE NetworkDeviceOption</pre> <p>Sample output:</p> <pre>DeviceOption ID=0 Keyword=MTU Device ID=0 Value=1500 DeviceOption ID=1 Keyword=bootProto Device ID=0 Value=none DeviceOption_ID=2 Keyword=onboot Device_ID=0 Value=yes DeviceOption_ID=3 Keyword=MTU Device_ID=1 Value=1500 DeviceOption_ID=4 Keyword=bootProto Device_ID=1 Value=none DeviceOption_ID=5 Keyword=onboot Device_ID=1 Value=yes DeviceOption_ID=6 Keyword=MTU Device_ID=2 Value=1500 DeviceOption ID=7 Keyword=bootProto Device ID=2 Value=none DeviceOption_ID=8 Keyword=onboot Device_ID=2 Value=yes DeviceOption_ID=9 Keyword=MTU Device_ID=3 Value=1500 DeviceOption_ID=10 Keyword=bootProto Device_ID=3 Value=none DeviceOption_ID=11 Keyword=onboot Device_ID=3 Value=yes DeviceOption ID=12 Keyword=MTU Device ID=4 Value=1500 DeviceOption ID=13 Keyword=bootProto Device ID=4 Value=none DeviceOption_ID=14 Keyword=onboot Device_ID=4 Value=yes</pre>

5.5 SNMP Configuration (Optional)

Procedure 35. Configure SNMP Trap Receiver(s) (Optional)

STEP #	Procedure	Description
		This procedure configures forwarding of SNMP.

STEP #	Procedure	Description
<p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>4. <input type="checkbox"/></p>	<p>NOAM VIP: Configure system-wide SNMP trap receiver(s)</p>	<ol style="list-style-type: none"> Using a web browser, log into the NOAM VIP as the guiadmin user. Navigate to Administration > SNMP.  <ol style="list-style-type: none"> Click Insert. Type the IP address or Hostname of the Network Management Station (NMS) to forward traps to. This IP should be reachable from the NOAM's XMI network. Continue to add secondary manager IPs in the corresponding fields, if needed. <p>Manager 1 <input type="text"/></p> <p>Traps Enabled checkboxes can be marked on a per manager basis.</p> <p>Traps Enabled</p> <ul style="list-style-type: none"> <input type="checkbox"/> Manager 1 <input type="checkbox"/> Manager 2 <input type="checkbox"/> Manager 3 <input type="checkbox"/> Manager 4 <input type="checkbox"/> Manager 5 <p>Type the SNMP Community Name.</p> <p>SNMPv2c Read-Only Community Name <input type="text" value="....."/></p> <p>SNMPv2c Read-Write Community Name <input type="text"/></p> <ol style="list-style-type: none"> Leave all other fields with their default values. Click OK.
<p>5. <input type="checkbox"/></p>	<p>NOAM VIP: Enable traps from individual servers (Optional)</p>	<p>Note: By default, SNMP traps from MPs are aggregated and displayed at the active NOAM. If instead, you want every server to send its own traps directly to the NMS, then execute this procedure.</p> <p>This procedure requires all servers, including MPs, have an XMI interface on which the customer SNMP Target server (NMS) is reachable.</p>

STEP #	Procedure	Description
		<p>1. Using a web browser, log into the NOAM VIP as the guiadmin user. Navigate to Administration > SNMP.</p>  <p>2. Make sure the Enabled checkbox is marked, if not, mark it as shown below:</p>  <p>3. Click Apply and verify the data is committed.</p>

5.6 Create iDIH Virtual Machines - VMware (Optional)

Procedure 36. (VMware only) Create iDIH Oracle, Mediation, and Application VMs (Optional)

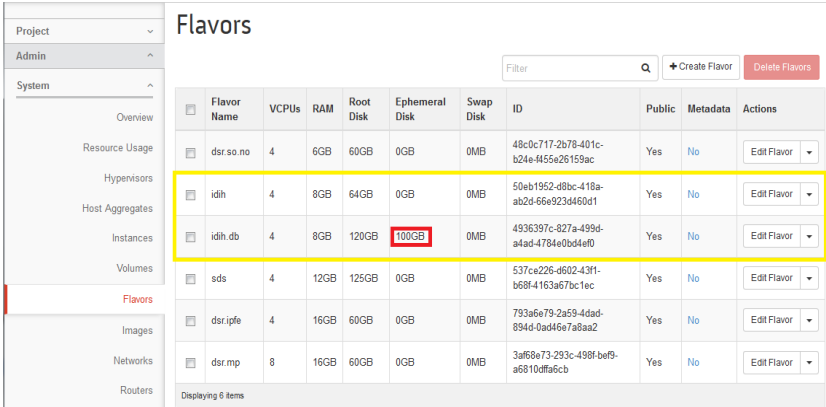

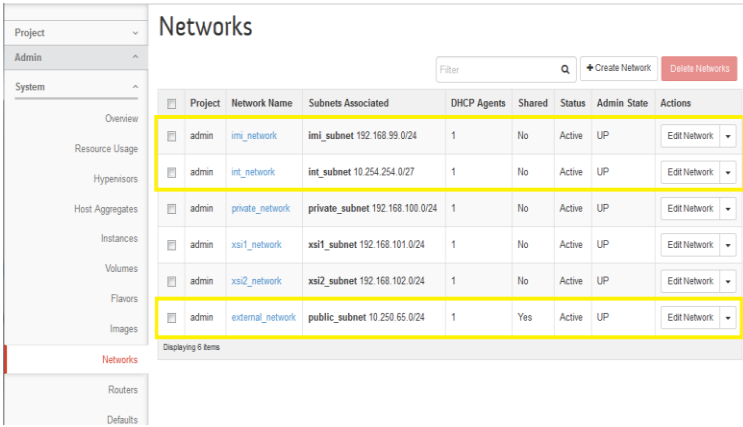

STEP #	Procedure	Description
<p>This procedure creates the iDIH Oracle, Mediation, and Application guest.</p> <p>Needed material: iDIH Oracle OVA, iDIH Mediation OVA, and iDIH Application OVA.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Add the iDIH Oracle OVA to VMware	<p>1. Launch the VMware client of your choice.</p> <p>2. Add the iDIH Oracle OVA image to the VMware catalog or repository. Follow the instructions provided by the Cloud solutions manufacturer.</p>
2. <input type="checkbox"/>	Create the Oracle VM from the OVA image	<p>1. Browse the library or repository that you placed the iDIH Oracle OVA image.</p> <p>2. Deploy the OVA Image using vSphere Client or the vSphere Web Client.</p> <p>3. Name the iDIH Oracle VM and select the data store.</p>

STEP #	Procedure	Description
<input type="checkbox"/> 3.	Configure resources for the iDIH Oracle VM	1. Configure the iDIH Oracle VM per the resource profiles defined in [24] DSR Cloud Benchmarking Guide using the vSphere client or the vSphere web client. 2. Record the Ethernet addresses associated with each interface and the virtual network with which it is associated. Note: Make sure the order of the interface creation is XMI, INT, and then IMI, if there is any. Only the Mediation VM requires the IMI interface.
<input type="checkbox"/> 4.	iDIH Oracle VM Only: Create a raw storage block device (external device)	Note: This step is ONLY required for iDIH Oracle VM. Create an extra disk for the Oracle VM. Add the second disk using the vSphere client or the vSphere web client.
<input type="checkbox"/> 5.	Power on the iDIH Oracle VM	Use the vSphere client or vSphere web client to power on the iDIH Oracle VM .
<input type="checkbox"/> 6.	iDIH Oracle VM Only: Verify the extra/second disk exists	Note: This step is ONLY required for iDIH Oracle VM. Check if the raw storage block device (external disk) added in step 3 exists by executing any of these commands: <pre>\$ ls /dev/[sv]db \$ fdisk -l \$ df -h</pre> Note: Please DO NOT mount or format the added raw block device. Oracle ASM (Automatic Storage Management) automatically manages it. If you see it has been mounted, unmount it and make sure to completely remove the entry in the /etc/fstab.
<input type="checkbox"/> 7.	Repeat	Repeat steps 1 through 6 for the following VMs. Use unique labels for the VM names: iDIH Application iDIH Mediation

5.7 Create iDIH Virtual Machines - KVM/OpenStack (Optional)

Procedure 37. (KVM/OpenStack Only) Create iDIH Oracle, Mediation, and Application VMs (Optional)

STEP #	Procedure	Description
<p>This procedure creates the iDIH Oracle, Mediation, and Application guest.</p> <p>Needed material: iDIH Oracle OVA, iDIH Mediation OVA, and iDIH Application OVA</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1.</p> <p><input type="checkbox"/></p>	<p>Add the iDIH Oracle OVA to KVM/Open Stack</p>	<ol style="list-style-type: none"> 1. Copy the OVA file to the OpenStack control node. <pre>\$ scp oracle-8.6.x.x.x.ova admusr@node:~</pre> 2. Log into the OpenStack control node. <pre>\$ ssh admusr@node</pre> 3. In an empty directory, unpack the OVA file using tar. <pre>\$ tar xvf oracle-8.6.x.x.x.ova</pre> 4. One of the unpacked files has a .vmdk suffix. This is the VM image file that must be imported. <pre>oracle-8.6.x.x.x-disk1.vmdk</pre> <p>Note: The OVA format only supports files with a max size of 8GB, so a vmdk file larger than that is split. You should be able to concatenate the files together to merge them back into one file:</p> <pre>\$ cat ORA-80_x_x.vmdk.000000000 ORA-80_x_x.vmdk.000000001 > ORA-80_x_x.vmdk</pre> 5. Source the OpenStack admin user credentials. <pre>\$. keystone_admin</pre> 6. Select an informative name for the new image. <pre>ORA-8.6_x_x</pre> 7. Import the image using the glance utility from the command line. <pre>\$ glance image-create --name oracle-8.6.x.x.x-original --visibility public --protected false --progress --container-format bare --disk-format vmdk --file oracle-8.6.x.x.x-disk1.vmdk</pre> <p>This process takes about 5 minutes depending on the underlying infrastructure.</p> 8. (Optional – Steps 8 and 9 are not needed if VMDK is used.) Convert VMDK to QCOW2 format. <p>Use the <code>qemu-img</code> tool to create a qcow2 image file using this command.</p> <pre>qemu-img convert -f vmdk -O qcow2 <VMDK filename> <QCOW2 filename></pre> <p>For example:</p> <pre>qemu-img convert -f vmdk -O qcow2 DSR-82_12_0.vmdk DSR-82_12_0.qcow2</pre>

STEP #	Procedure	Description																																																																						
		<p>Install the qemu-img tool (if not already installed) using this yum command.</p> <pre>sudo yum install qemu-img</pre> <p>9. Import the converted qcow2 image using the glance utility from the command line.</p> <pre>\$ glance image-create --name dsr-x.x.x-original --is-public True --is-protected False --progress --container-format bare --disk-format qcow2 --file DSR-x.x.x-disk1.qcow2</pre> <p>This process take about 5 minutes depending on the underlying infrastructure.</p>																																																																						
<p>2.</p> <p><input type="checkbox"/></p>	<p>Create flavors for iDIH</p>	<p>Examine the storage recommendations in the resource profiles defined in [24] DSR Cloud Benchmarking Guide. A block storage must be created and attached for the Oracle VM. For example, create an idih.db for the Oracle database with a 100GB ephemeral disk.</p>  <table border="1"> <caption>Flavors</caption> <thead> <tr> <th>Flavor Name</th> <th>VCPUs</th> <th>RAM</th> <th>Root Disk</th> <th>Ephemeral Disk</th> <th>Swap Disk</th> <th>ID</th> <th>Public</th> <th>Metadata</th> <th>Actions</th> </tr> </thead> <tbody> <tr> <td>dsr.so.no</td> <td>4</td> <td>6GB</td> <td>60GB</td> <td>0GB</td> <td>0MB</td> <td>48c0c717-2b78-401c-b24e-4455a26159ac</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> <tr> <td>idih</td> <td>4</td> <td>8GB</td> <td>64GB</td> <td>0GB</td> <td>0MB</td> <td>50eb1952-d8bc-418a-ab2d-66e923d460d1</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> <tr> <td>idih.db</td> <td>4</td> <td>8GB</td> <td>120GB</td> <td>100GB</td> <td>0MB</td> <td>4936397c-827a-499d-a4ad-4784e0bd4ef0</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> <tr> <td>sds</td> <td>4</td> <td>12GB</td> <td>125GB</td> <td>0GB</td> <td>0MB</td> <td>537ce226-4602-43f1-b68f4163a67bc1ec</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> <tr> <td>dsr.ipfe</td> <td>4</td> <td>16GB</td> <td>60GB</td> <td>0GB</td> <td>0MB</td> <td>793a6e79-2a59-4dad-894d-0ad46e7a8aa2</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> <tr> <td>dsr.mp</td> <td>8</td> <td>16GB</td> <td>60GB</td> <td>0GB</td> <td>0MB</td> <td>3af69e73-293c-498f-bef9-a6810dffaf5c-b</td> <td>Yes</td> <td>No</td> <td>Edit Flavor</td> </tr> </tbody> </table>	Flavor Name	VCPUs	RAM	Root Disk	Ephemeral Disk	Swap Disk	ID	Public	Metadata	Actions	dsr.so.no	4	6GB	60GB	0GB	0MB	48c0c717-2b78-401c-b24e-4455a26159ac	Yes	No	Edit Flavor	idih	4	8GB	64GB	0GB	0MB	50eb1952-d8bc-418a-ab2d-66e923d460d1	Yes	No	Edit Flavor	idih.db	4	8GB	120GB	100GB	0MB	4936397c-827a-499d-a4ad-4784e0bd4ef0	Yes	No	Edit Flavor	sds	4	12GB	125GB	0GB	0MB	537ce226-4602-43f1-b68f4163a67bc1ec	Yes	No	Edit Flavor	dsr.ipfe	4	16GB	60GB	0GB	0MB	793a6e79-2a59-4dad-894d-0ad46e7a8aa2	Yes	No	Edit Flavor	dsr.mp	8	16GB	60GB	0GB	0MB	3af69e73-293c-498f-bef9-a6810dffaf5c-b	Yes	No	Edit Flavor

STEP #	Procedure	Description
		<p>If the extra disk does not exist, revisit the procedures for respective hypervisors. (Procedure 36 for VMware, Procedure 37 for KVM, and Procedure 38 for OVM-M).</p> <p>Note: Please DO NOT mount or format the added raw block device. Oracle ASM (Automatic Storage Management) automatically manages it. To verify it, execute the following command:</p> <pre>\$ df</pre> <p>If you see it has been mounted, unmount it and completely remove the entry in the /etc/fstab.</p> <p>For example:</p> <ol style="list-style-type: none"> 1. If any external drive (such as, /dev/vdb) is mounted, then unmount the external drive by executing the following command on oracle server: <code>umount /dev/vdb</code> 2. Edit the /etc/fstab file on oracle server and if any entry for /dev/vdb is present in the file, then remove the entry and save the file.
<p>3.</p> <input type="checkbox"/>	<p>Delete the eth0 interface</p>	<pre>\$ sudo netAdm delete --device=eth0</pre> <p>Note: Note down the MAC address before the eth0 is deleted. This helps in identifying the MAC address of eth0 in case the persistence net rules file is not generated.</p>
<p>4.</p> <input type="checkbox"/>	<p>Trigger net rules file creation</p>	<p>Run the udevadm command to recreate net rules file.</p> <pre>\$ sudo udevadm trigger --subsystem-match=net</pre> <p>Note: If this command does not create the net rules file, create it manually. Refer to Sample Net Rules File.</p>
<p>5.</p> <input type="checkbox"/>	<p>Modify the ethernet interface names in the net rules file</p>	<ol style="list-style-type: none"> 1. Update the net rules file to replace the default interfaces names ethX with XML and INT interfaces names. Replace eth0 with xmi; and eth1 with int interface. Also, respective MAC addresses should be updated for each interface in lower case. MAC addresses can be determined using <code>ifconfig -a</code> command from the console. <p>Note: The Mediation VM requires the user to rename a third interface: eth2 as imi interface.</p> <ol style="list-style-type: none"> 2. Refer to Sample Net Rules File for a sample net rules file. <pre>\$ sudo vi /etc/udev/rules.d/70-persistent-net.rules</pre> <pre># PCI device 0x15ad:0x07b8 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="*", ATTR(address)="08:58:56:b9:2d:b b", ATTR(type)="1", KERNEL=="eth*", NAME="eth1" # PCI device 0x15ad:0x07b8 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="*", ATTR(address)="08:58:56:b9:ea:b 2", ATTR(type)="1", KERNEL=="eth*", NAME="eth0" # PCI device 0x15ad:0x07b8 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="*", ATTR(address)="08:58:56:b9:2d:b b", ATTR(type)="1", KERNEL=="eth*", NAME="int" # PCI device 0x15ad:0x07b8 (vmxnet3) SUBSYSTEM=="net", ACTION=="add", DRIVERS=="*", ATTR(address)="08:58:56:b9:ea:b 2", ATTR(type)="1", KERNEL=="eth*", NAME="xmi"</pre> <ol style="list-style-type: none"> 3. Reboot the VM. <pre>\$ sudo init 6</pre>

STEP #	Procedure	Description
<p>6.</p> <p><input type="checkbox"/></p>	<p>As admusr on the Oracle VM configure the networks with netAdm</p>	<ol style="list-style-type: none"> Log into the iDIH Oracle VM console as the admusr user. The XMI network should already exist, but it can be created with the following command. <pre>\$ sudo netAdm add --device=xmi --address=<IP Address in External Management Network> --netmask=<Netmask> --onboot=yes</pre> Configure the int network IP address and netmask. <pre>\$ sudo netAdm add --device=int --address=10.254.254.2 --netmask=255.255.255.224</pre> <p>Note: It is advisable to use the following IP as internal IP addresses defined for: Oracle VM internal IP = 10.254.254.2; the Mediation VM internal IP = 10.254.254.3; and the application internal IP address = 10.254.254.4. The netmasks for all is 255.255.255.224.</p> Mediation Only. If this is a Mediation VM, configure the Mediation internal management network. <pre>\$ sudo netAdm add --device=imi --address=<IP Address in Internal Management Network> --netmask=<Netmask></pre> Configure the default gateway. <pre>\$ sudo netAdm add --route=default --gateway=<gateway address for the External Management Network> --device=xmi</pre> <p>The VM network configuration has been completed. You should be able to ssh into the server through XMI interface.</p>
<p>7.</p> <p><input type="checkbox"/></p>	<p>As admusr on the Oracle VM configure NTP and the Oracle VM hostname</p>	<ol style="list-style-type: none"> On the Oracle VM console, launch the platform configuration menu. <pre>\$ sudo su - platcfg</pre> From the platform configuration menu configure ntpserver1 with the IP address supplied for NTP. <p>Navigate to Network Configuration > NTP > Edit > ntpserver1. Click Yes when asked to restart NTP.</p> <p>Note: Properly configure the NTP on the controller node to reference lower stratum NTP servers.</p> Exit the network configuration menu. Configure the Oracle VM hostname. <p>Navigate to Server Configuration > Hostname > Edit.</p> <p>Note:</p> <ul style="list-style-type: none"> Typically, we select hostname and identify the host as iDIH application, iDIH Mediation, and iDIH Oracle. Remove any occurrence of "." and the ".<availability zone>" name, such as ".novalocal" from the hostname that might have got appended. Exit the platform configuration menu.

STEP #	Procedure	Description
8. <input type="checkbox"/>	Repeat	<p>Repeat Steps 1 through 7 for the following VMs. Use unique labels for the VM names:</p> <ul style="list-style-type: none"> iDIH Mediation iDIH Application <p>Note: Logout and Login to each VM to update the environment variable before executing the next procedure (Procedure 38: Post Installation Scripts on iDIH VMs).</p>

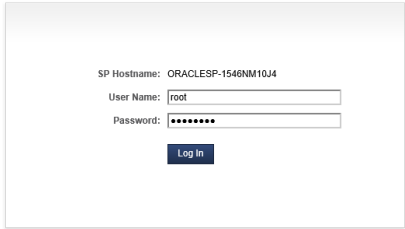

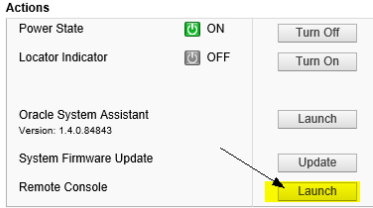

5.10 iDIH Installation on OL7 and KVM

iDIH Installation on OL7 and KVM includes the following procedures:

- [Install KVM](#)
- [Create SDB on KVM](#)
- [Attach device \(sdb\) to iDIH database VM](#)
- [Fix iDIH database script on KVM](#)

5.10.1 Install KVM

Procedure 40. Install KVM

STEP #	Procedure	Description
1	Logon to the ILOM as root.	<p>Please Log In</p> 
2	Launch the remote console	<p>On the main Summary Page – select the Launch button next to remote console.</p>  <p>Select 'continue' on the JAVA security warning pop-up</p>
3	Connect the Oracle Linux ISO Image (If FW Upgrade is required,	In the KVMS menu, select the Storage... option.

apply same procedure)

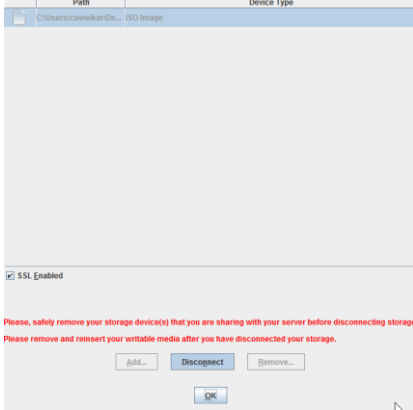

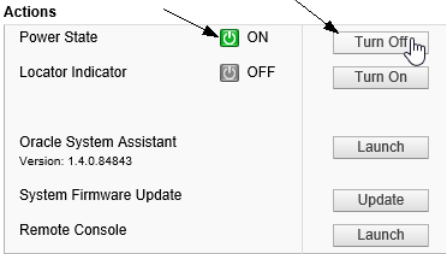

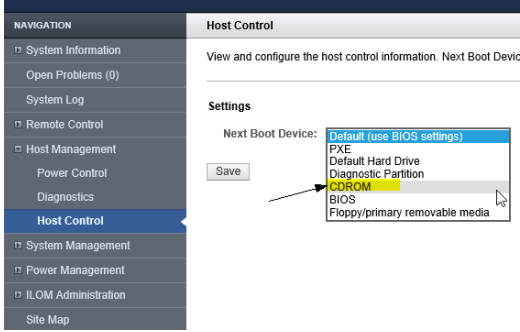

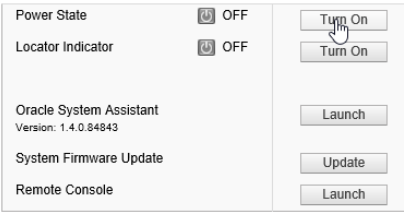

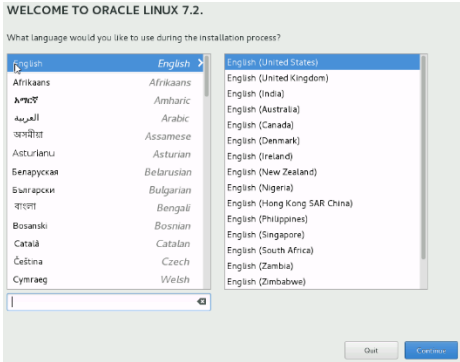

A window entitled **Storage Devices** will open up. Click **Add** and navigate to the location of the ISO on the local workstation. Select the ISO and then click **Select**.

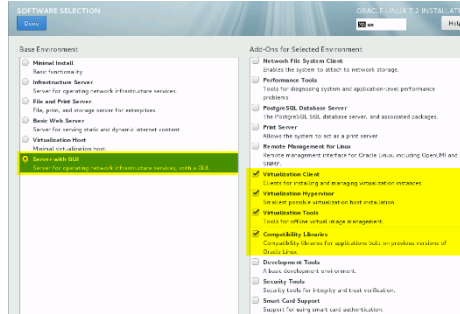

The ISO file will now be included in the list of available storage devices. Select it in the **Storage Devices** window and then click **Connect**.

	<p>Message when the ISO is connected will be displayed</p>	 <p>Click OK to confirm and close the window.</p>
<p>4</p>	<p>Shut down the server gracefully</p>	<p>On the System Summary page click the Power State Turn Off button in the Actions Pane. Click OK at the confirmation prompt.</p>  <p>NOTE: This will perform a graceful shutdown of the operating system prior to powering off the host server. Wait for the indicator to signify that the server is powered down before proceeding to the next step.</p> <p>**Note: If at any point the internet connection on the local workstation is lost or the browser being used is closed and the OSA has not yet been updated, the Oracle System Assistant Updater ISO must be remounted using the previous steps.</p>
<p>5</p>	<p>Set CDROM as the next boot device</p>	<p>Under the Host Management tab select the Host Control option. From the drop-down menu for Next Boot Device, select the CDROM option and then click Save.</p> 
<p>6</p>	<p>Power ON the server</p>	<p>On the System Summary page click on the Power State Turn On button in the Actions Pane to boot into the Oracle System Assistant Updater ISO. Click OK at the confirmation prompt.</p>

		<p>Actions</p> 
<p>7</p>	<p>Oracle Linux OS installation</p>	<p>Go back to the window that contains the Remote Console. If the window was closed, re-launch the console in the Actions Pane.</p> <p>The system will boot into the installation.</p> <ol style="list-style-type: none"> Select 'install Oracle Linux xx' and <enter>.  <ol style="list-style-type: none"> Select Language and continue.  <ol style="list-style-type: none"> Select Date and Time – confirm and then select done. 

4. Select Software selection with the following options
 - I. Basic Environment: Server with GUI
 - II. Add-ons for Selected Environment:
 - Virtualization Client
 - Virtualization Hypervisor
 - Virtualization Tools
 - Compatibility Libraries

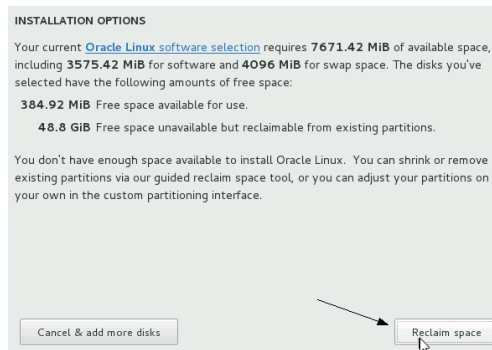

Confirm and then click **Done**.

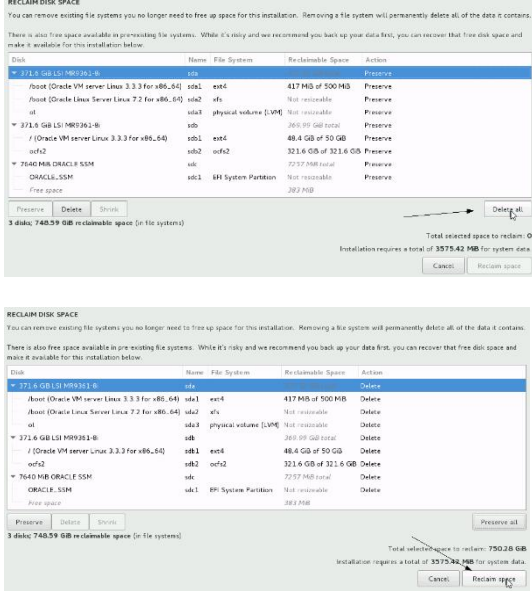

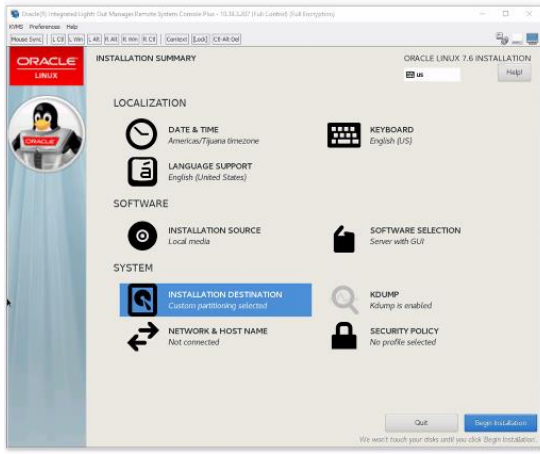

5. Select Installation Destination
 - a. Select all hard drives to be installed.
 - b. Under **Other Storage Options**, ensure **Automatically configure partitioning** is selected.
 - c. Click **Done**.

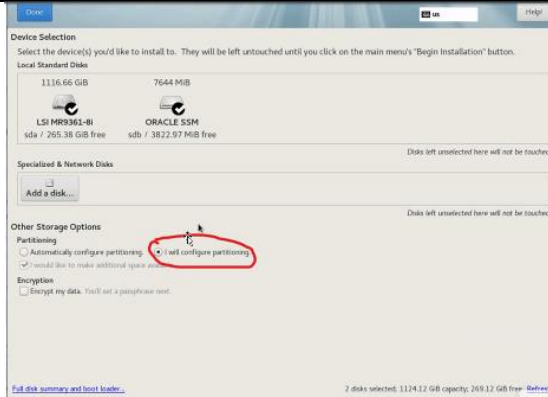

When prompted with **INSTALLATION OPTIONS** screen, select **Reclaim space**.

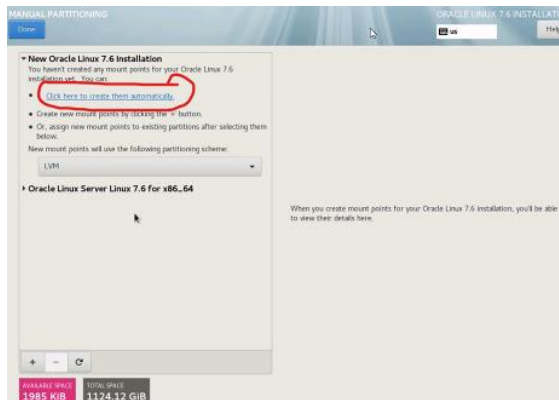

When prompted with **RECLAIM DISK SPACE** screen, select **Delete all**, followed by **Reclaim space**.

		 <p>RECLAIM DISK SPACE</p> <p>You can remove existing file systems you no longer need to free up space for this installation. Free space			283 MB																																																																																																					
7.1	Reduce Home space on KVM (IDIH Database) - Optional	<p>IMPORTANT NOTE: The steps from 6 to 9 only apply for KVM that will store the VM for IDIH Database.</p> <p>6. Once again Select Installation Destination</p> <ol style="list-style-type: none"> Select all hard drives to be installed. Under Other Storage Options, ensure I will configure partitioning. Click Done. 																																																																																																						

7. Select **Click here to create them automatically.**

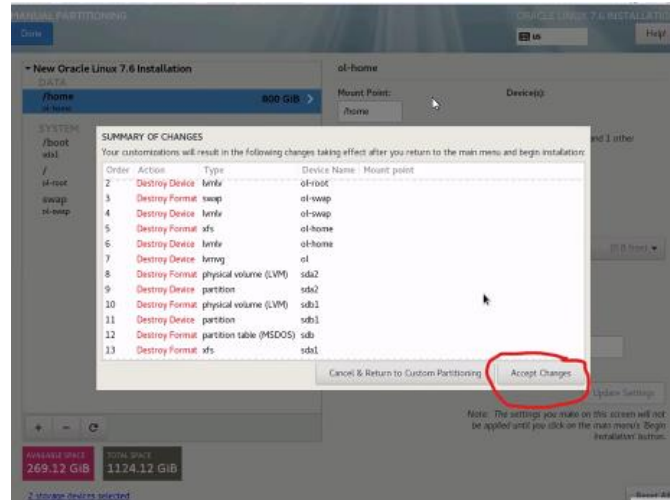

8. **⚠ IMPORTANT:** Modify “home” to 800Gi and click **Update Settings.**

Adjust to 800Gib

NOTE: The Desired Capacity field is customizable. In the above scenario, 800GB has been allocated to /home directory out of 1TB space. It is expected to retain about 200GB of free space out of total memory. This space can later be utilized for adding ephemeral disk.

9. Click **Accept Changes** and **Done**.

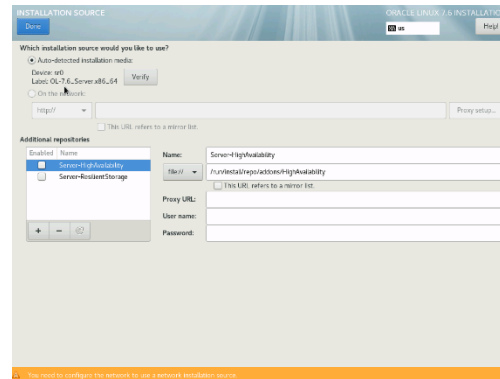

7.2

Run Installation on KVM

10. Verify Installation Source

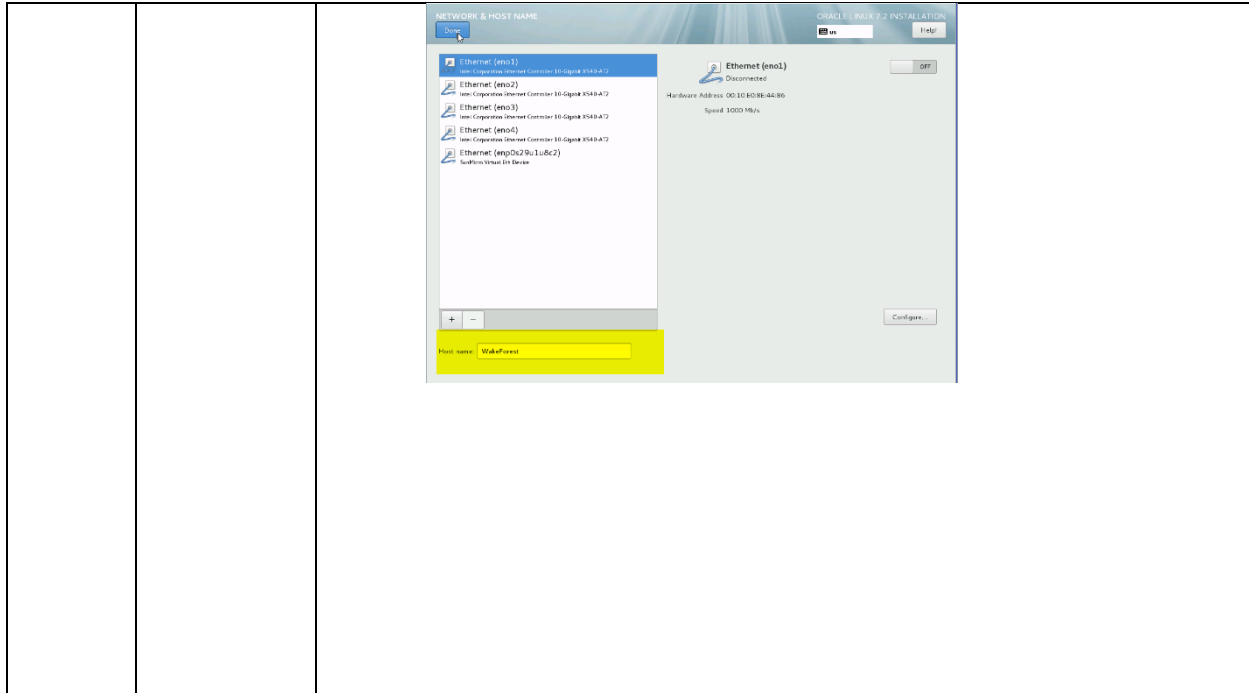

'Auto-detected' should be automatically selected with the correct IMAGE

NOTE: Verify the media if needed, but, it takes a very long time to do so.

11. Select Network and host name.

NOTE: Update server Host Name, but don't worry about networking at this time, as it will be configured later. Click **Done** after editing the host name.

8

Begin installation

Click **begin installation** to start the install.

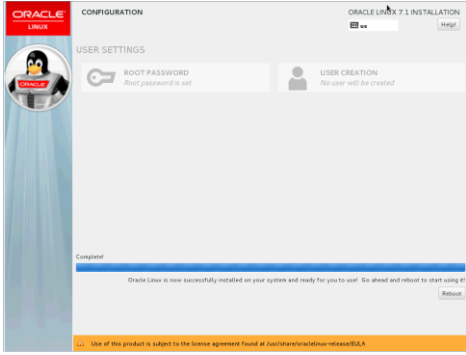

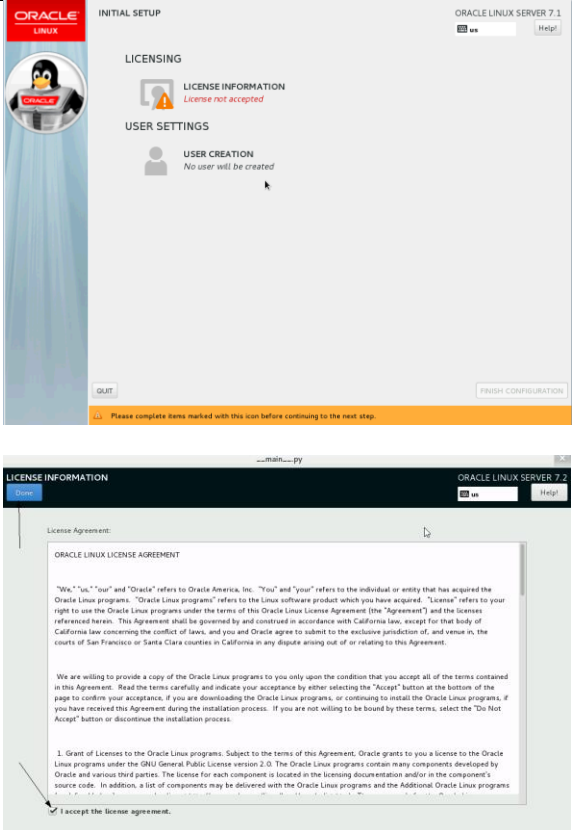

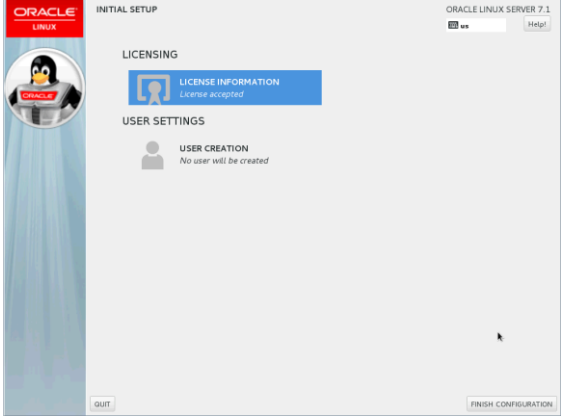

Installation will begin....

If needed, select and enter information for 'root password' and user creation.

Create an Administrative user. (NextGen)

<p>9</p>	<p>Reboot after installation</p>	<p>When OL7.x installation is complete, and you are prompted, reboot server to start OL7.x.</p> 
<p>10</p>	<p>Accept the license</p>	 <p>Then select finish installation.</p>

		
<p>11</p>	<p>Disconnect the ISO from storage</p>	<p>From KVMs→storage, select the ISO and then select disconnect.</p>
<p>12</p>	<p>Revert KVM Hypervisor host interface naming convention to ETHx</p>	<p>I. edit /etc/default/grub using vi editor</p> <pre>\$cd /etc/default</pre> <pre>\$sudo vi grub</pre> <p>II. Add the following to the GRUB_CMDLINE_LINUX parameter, inside the double quotes: "... rhgb quiet net.ifnames=0"</p> <pre>GRUB_TIMEOUT=5 GRUB_DISTRIBUTOR="\$(sed 's, release .*\$,g' /etc/system-release)" GRUB_DEFAULT=saved GRUB_DISABLE_SUBMENU=true GRUB_TERMINAL_OUTPUT="console" GRUB_CMDLINE_LINUX="crashkernel=auto rd.lvm.lv=ol/root rd.lvm.lv=ol/swap rhgb quiet net.ifnames=0" GRUB_DISABLE_RECOVERY="true"</pre> <p>Recreate the grub2 config file, execute ... <code>grub2-mkconfig -o /boot/grub2/grub.cfg</code></p> <pre>[admusr@WakeForest default]\$ sudo grub2-mkconfig -o /boot/grub2/grub.cfg Generating grub configuration file ... Found linux image: /boot/vmlinuz-3.10.0-327.el7.x86_64 Found initrd image: /boot/initramfs-3.10.0-327.el7.x86_64.img Found linux image: /boot/vmlinuz-3.8.13-98.7.1.el7uek.x86_64 Found initrd image: /boot/initramfs-3.8.13-98.7.1.el7uek.x86_64.img Found linux image: /boot/vmlinuz-0-rescue-4619ece62c09419a8971fb20e8bdc1b3 Found initrd image: /boot/initramfs-0-rescue-4619ece62c09419a8971fb20e8bdc1b3.img done [admusr@WakeForest default]\$ █</pre> <p>III. Restart server, execute ... <code>shutdown -r now</code></p> <pre>[admusr@WakeForest default]\$ sudo shutdown -r now</pre> <p>After server restart, devices should be shown as ETHx.</p>

<p>13</p>	<p>Create KVM Hypervisor HOST MGMT interface</p>	<p>I. Create bond0 interface configuration file (/etc/sysconfig/network-scripts/ifcfg-bond0):</p> <pre>\$sudo vi /etc/sysconfig/network-scripts/ifcfg-bond0 DEVICE=bond0 TYPE=Bonding BOND_INTERFACES=eth0,eth1 ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none BONDING_OPTS="mode=active-backup primary=eth0"</pre> <p>II. Create eth0 interface configuration file (/etc/sysconfig/network-scripts/ifcfg-eth0):</p> <pre>\$sudo vi /etc/sysconfig/network-scripts/ifcfg-eth0 DEVICE=eth0 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond0 SLAVE=yes</pre> <p>III. Create eth1 interface configuration file (/etc/sysconfig/network-scripts/ifcfg-eth1):</p> <pre>\$sudo vi /etc/sysconfig/network-scripts/ifcfg-eth1 DEVICE=eth1 TYPE=Ethernet ONBOOT=yes NM_CONTROLLED=no BOOTPROTO=none MASTER=bond0 SLAVE=yes</pre> <p>Identify VLANs that apply for the system VM (IDIH)</p> <table border="1" data-bbox="516 1734 1065 1852"> <thead> <tr> <th>VLAN NAME</th> <th>VLAN ID (example)</th> </tr> </thead> <tbody> <tr> <td>OAM/Mgt</td> <td>1982</td> </tr> </tbody> </table>	VLAN NAME	VLAN ID (example)	OAM/Mgt	1982
VLAN NAME	VLAN ID (example)					
OAM/Mgt	1982					

XMI	1983
IMI	405
INT	406

According the architecture OAM & XMI could be a unique VLAN.

IV. Create bond0.<vlan> OAM/Mgmt interface configuration file (/etc/sysconfig/network-scripts/ifcfg-bond0.<vlan>):

```
$sudo vi /etc/sysconfig/network-scripts/ifcfg-bond0.1982
DEVICE=bond0.<vlan>
TYPE=Ethernet
ONBOOT=yes
NM_CONTROLLED=no
BOOTPROTO=none
VLAN=yes
IPADDR= <OAM/Mgmt IP>
NETMASK= <OAM/Mgmt netmask>
GATEWAY= <OAM/Mgmt gateway>
```

Save → :wq!

V. Create bond0.<vlan> OAM/Mgmt route file (/etc/sysconfig/network-scripts/route-bond0.<vlan>) default via <bond0.<vlan> gateway>

```
$sudo vi /etc/sysconfig/network-scripts/route-bond0.1982
default via 10.x.x.x.
```

Save → :wq!

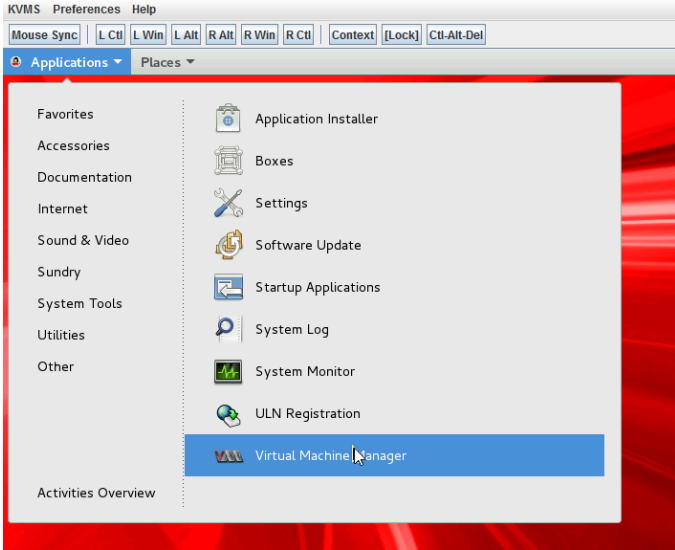

```
$sudo more route-bond0.1982
default via 10.x.x.x.
```

VI. Bring KVM hypervisor host OAM/Mgmt interfaces into service ... ifup eth0 ifup eth1 ifup bond0 ifup bond0.<vlan>

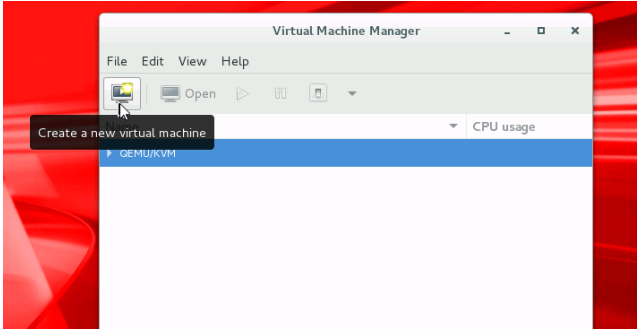

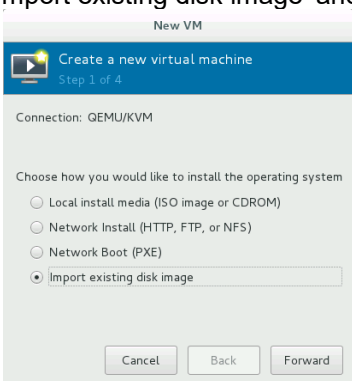

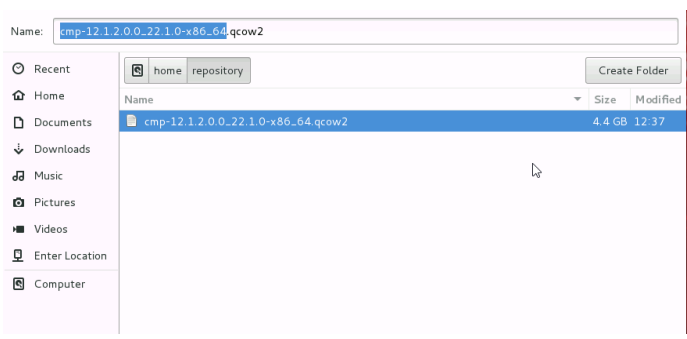

Example:

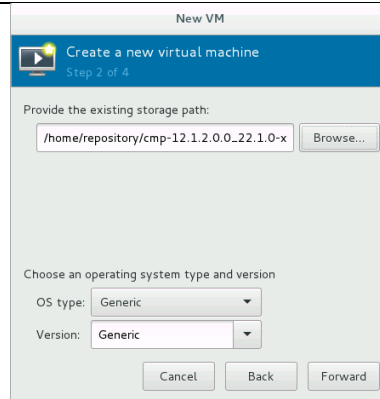

```
[admusr@WakeForest network-scripts]$ sudo ifup eth0
[admusr@WakeForest network-scripts]$ sudo ifup eth1
[admusr@WakeForest network-scripts]$ sudo ifup bond0
[admusr@WakeForest network-scripts]$ sudo ifup bond0.17
RTNETLINK answers: File exists
[admusr@WakeForest network-scripts]$
```

<p>14</p>	<p>Create interface bridges</p>	<p>I. Create XML interface bridge (/etc/sysconfig/network-scripts ifcfg-br_XMI):</p> <pre>\$sudo vi /etc/sysconfig/network-scripts/XMI</pre> <p>DEVICE=br_XMI</p> <p>TYPE=Bridge</p> <p>BOOTPROTO=none</p> <p>ONBOOT=yes</p> <p>NM_CONTROLLED=no</p> <p>Repeat above step for all identify interfaces. For IDIH, we need XMI,IMI and INT interfaces.</p>
<p>15</p>	<p>Create VLAN interfaces and bond them to the appropriate bridge</p>	<p>I. Create guests XML vlan interface (/etc/sysconfig/network-scripts ifcfg-bond0.<XMI Vlan>)</p> <pre>\$sudo vi /etc/sysconfig/network-scripts/ifcfg-bond0.1983</pre> <p>ONBOOT=yes</p> <p>NM_CONTROLLED=no</p> <p>BOOTPROTO=none</p> <p>VLAN=yes</p> <p>BRIDGE=XMI</p> <p>TYPE=Ethernet</p> <p>DEVICE=bond0.1983</p> <p>Repeat above step for all identify interfaces. For IDIH, we need XMI,IMI and INT interfaces.</p>
<p>16</p>	<p>Verify interfaces and Restart the network</p>	<p>Verify that all interfaces have been created with ls command</p> <pre>\$sudo ls -l /etc/sysconfig/network-scripts/</pre> <p>Example</p> <pre>[root@MXPTLM01DRA01S05KVM03 ~]# sudo ls /etc/sysconfig/network-scripts/ ifcfg-bond0 ifcfg-br_XMI ifdown ifdown-tunnel ifup-routes ifcfg-bond0.1504 ifcfg-br_XSI1 ifdown-bnep ifup ifup-sit ifcfg-bond0.1982 ifcfg-br_XSI2 ifdown-eth ifup-aliases ifup-Team ifcfg-bond0.1983 ifcfg-br_XSI3 ifdown-ib ifup-bnep ifup-TeamPort ifcfg-bond0.405 ifcfg-br_XSI4 ifdown-ipppp ifup-eth ifup-tunnel ifcfg-bond0.406 ifcfg-eno1 ifdown-ipv6 ifup-ib ifup-wireless ifcfg-bond0.74 ifcfg-eno2 ifdown-isdn ifup-ipppp init.ipv6-global ifcfg-bond0.75 ifcfg-eno3 ifdown-post ifup-ipv6 network-functions ifcfg-bond0.76 ifcfg-eno4 ifdown-ppp ifup-isdn network-functions-ipv6 ifcfg-bond0.77 ifcfg-enp0s29ulu8c2 ifdown-routes ifup-plip route-bond0.1982 ifcfg-br_IDIH ifcfg-eth0 ifdown-sit ifup-plusb ifcfg-br_IMI ifcfg-eth1 ifdown-Team ifup-post ifcfg-br_SBRREP ifcfg-lo ifdown-TeamPort ifup-ppp</pre> <p>Execute the following;</p> <pre>\$sudo service network restart</pre>

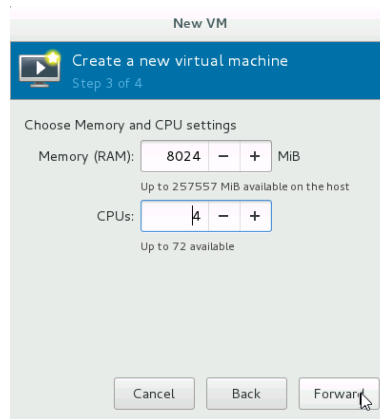

<p>17</p>	<p>Create image repository</p>	<p>Verify disk space.</p> <pre>\$df -h</pre> <p>Create an "images" directory called "repository" for IMGs and ISOs in "/home" partition</p> <pre>\$cd /home</pre> <pre>\$sudo -i</pre> <pre>\$mkdir repository</pre>
<p>18</p>	<p>Copy Image to the repository on the management server</p>	<p>Copy one of the two image types to the directory created.</p> <pre>.qcow2</pre> <p>NOTE1: The IMAGE pack for OCPM is located on the Oracle Software Delivery Site. NOTE2: Copy IDIH Oracle, Mediation and application images to the repository.</p>
<p>19</p>	<p>Launch the virtual manager from the ILOM console</p>	<p>virt-manager from the OS (virt-manager and its dependencies are included in Oracle Linux ISO and installed on the host).</p>  <p>The screenshot shows a desktop environment with a menu open. The menu is titled 'Applications' and lists various system tools. 'Virtual Machine Manager' is highlighted in blue at the bottom of the list. Other items include Application Installer, Boxes, Settings, Software Update, Startup Applications, System Log, System Monitor, and ULN Registration.</p>

20	Resize ORA (database) ova Image on KVM	<p>a. Resize ova from KVM to 120G. Run the following commands:</p> <pre>cd /home/repository/ qemu-img resize <image_name.qcow2> +<New_Size></pre> <pre>cd /home/repository qemu-img resize ORA-82_32_0.qcow2 +56G</pre> <p>b. Verify actual size. Apply command → virtual size: 120G</p> <pre>[root@MXMERM01DRA01S05KVM03 repository]# qemu-img info ORA-82_32_0.qcow2</pre> <pre>image: ORA-82_32_0.qcow2 file format: qcow2 virtual size: 120G (68719476736 bytes) disk size: 20G cluster_size: 65536</pre> <p>Format specific information:</p> <pre>compat: 1.1 lazy refcounts: false</pre> <pre>[root@MXMERM01DRA01S05KVM03 repository]#</pre> <p>c. Initiate VM using the following command:</p> <pre>[root@MXTIJM01DRA01S05KVM03 admusr]# virsh start TIJDRA01S05PCIDHD01</pre> <p>d. Validate sdb is attached to VM. Login to Database VM and run the following command:</p> <pre>\$sudo df -h</pre>
----	--	---

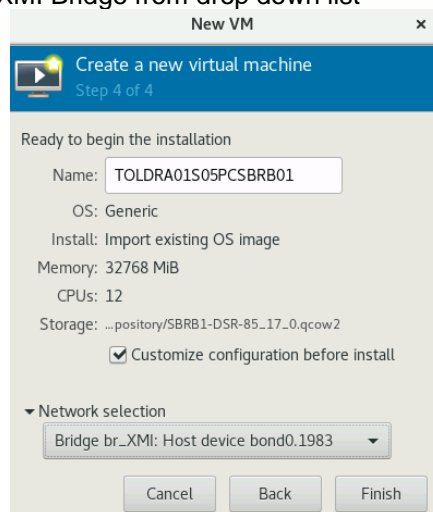

<p>21</p>	<p>Create VM</p>	<p>From the Virtual Machine Manager, select the Monitor ICON to create the new virtual machine.</p>  <p>Select 'Import existing disk image' and select forward</p>  <p>Next, select the path where the .qcow2 image resides Browse local to add the repository</p>  <p>OPTIONS OS type = generic Version = generic Select forward when complete</p>
-----------	------------------	--

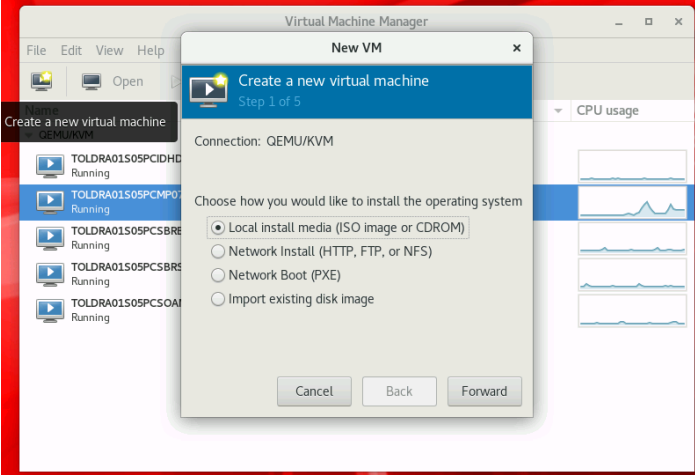

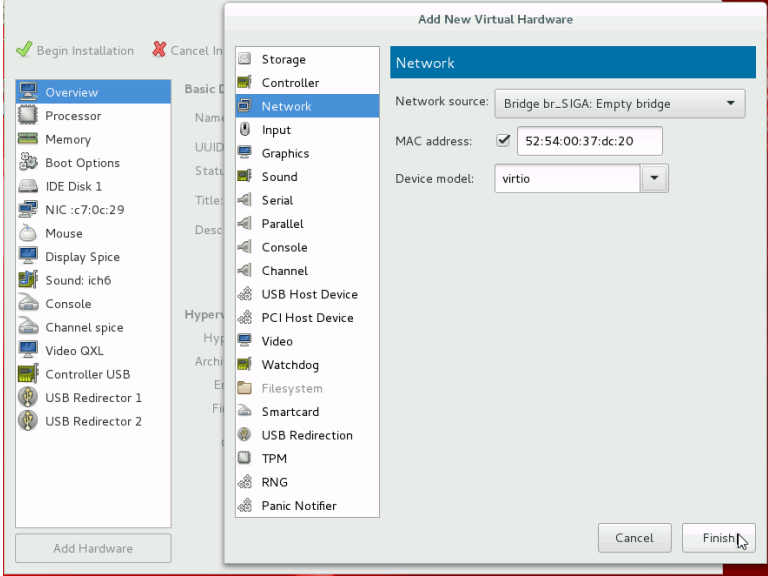

Next select the memory and CPU settings. Refers to pinning tool to setup correct information:

Name the Virtual Machine and select finish
Choose "Customize configuration before install"
Select XMI Bridge from drop down list

NOTE: In case the bridges are not listed, it is recommended to check the network parameters configured in the KVM

		
<p>21</p>	<p>Create VMs using .qcow2 image</p>	<p>Click on 'Add Hardware', select "Network"</p>  <p>Interfaces for IDIH VMs:</p> <p>Oracle: XMI and INT</p> <p>Mediation: XMI, INT and IMI</p> <p>Application: XMI and INT</p> <p>NOTE: Ensure that all 3 IDIH VMs are created and corresponding interfaces have been added to them (as listed above). The interfaces naming convention XMI, IMI, INT must be used in place of eth0, eth1, eth2. This change must be done in 70-persistent-net.rules file. Check HWaddr of each interface using ifconfig command and edit the file to change interface names accordingly. Ensure that interface names are not interchanged while editing the file. Caution is advised.</p>

IDIH VM interfaces	
XMI	eth0
IMI	eth1
IN	eth2

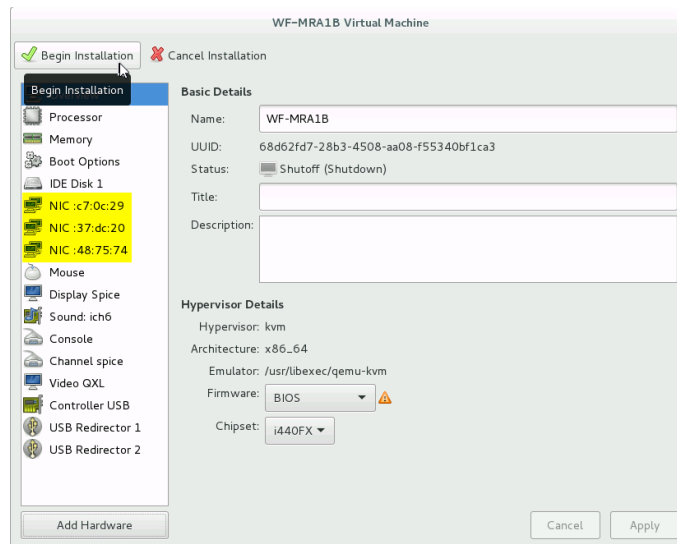

PARAMETERS:

Network source = XMI (select appropriate network source from the dropdown)

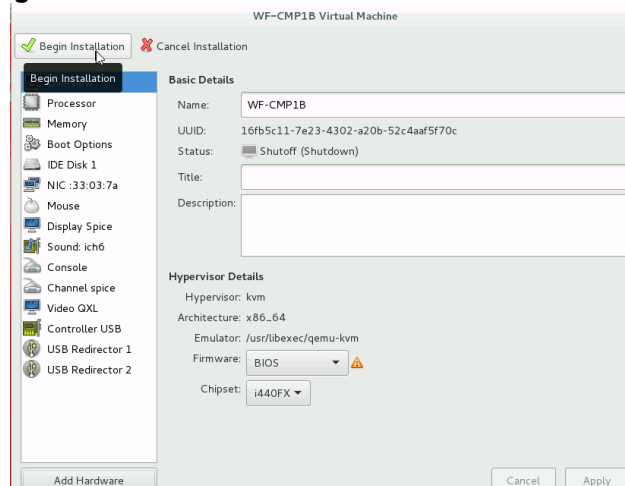

Device Model = virtio

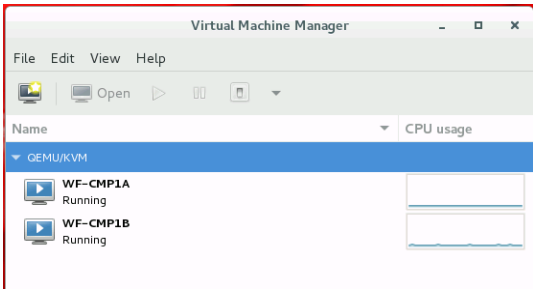

Click **finish**.

Add all interfaces as needed. After adding the other networks, you will see the NICs appear.

Click **Begin Installation**.

		<p>Installation only takes a few minutes. From the Virtual Machine Manager – you will see the newly created VM</p> 
--	--	---

5.10.2 Create SDB on KVM

Procedure 41. Create SDB on KVM

IMPORTANT: This Procedure only apply for KVM that has iDIH Database.

STEP #	Procedure	Description
1	Logon to the KVM as root.	<p>Please Log In</p> 

<p>2</p>	<p>Check partitions and disk space</p>	<p>Execute "lsblk" command</p> <pre>[root@MXTIJM01DRA01S05KVM03 admusr]# lsblk NAME MAJ:MIN RM SIZE RO TYPE MOUNTPOINT sdb 8:16 1 7.5G 0 disk └─sdb1 8:17 1 3.7G 0 part └─o100-swap 252:1 0 4G 0 lvm [SWAP] sr0 11:0 1 4.3G 0 rom /run/media/admusr/0L-7.6 Server.x86_64 sda 8:0 0 1.1T 0 disk ├─sda2 8:2 0 850.3G 0 part │ └─o100-swap 252:1 0 4G 0 lvm [SWAP] │ └─o100-home 252:2 0 800G 0 lvm /home │ └─o100-root 252:0 0 50G 0 lvm / └─sda1 8:1 0 1G 0 part /boot</pre> <p>NOTE: In case that sda has not free space to add a new device is recommended re-install KVM as detailed on procedure 1 (Important apply step 7)</p> <p>sda → 1TG sda2 →850.3G home → 800G</p> <p>Please note that the above values depend on environment where IDIH is installed. Customer's machine might have greater or lesser memory. Please adjust accordingly.</p>
<p>3</p>	<p>Create sdb</p>	<p>Execute fdisk and enter options highlighted in yellow, as detailed below:</p> <pre>[root@mxtolm01dra01s05kvm03 ~]# fdisk /dev/sda</pre> <p>Welcome to fdisk (util-linux 2.23.2).</p> <p>Changes will remain in memory only, until you decide to write them. Be careful before using the write command.</p> <p>Command (m for help): n</p> <p>Partition type:</p> <ul style="list-style-type: none"> p primary (2 primary, 0 extended, 2 free) e extended <p>Select (default p): p</p> <p>Partition number (3,4, default 3): 3</p> <p>First sector (1785249792-2341795839, default 1785249792): (press enter)</p> <p>Using default value 1785249792</p> <p>Last sector, +sectors or +size{K,M,G} (1785249792-2341795839, default 2341795839): +100G</p> <p>Partition 3 of type Linux and of size 100 GiB is set</p>

4	Verify sdb was created	<p>Verify sdb config save and reboot.</p> <p>Command (m for help): p</p> <p>Disk /dev/sda: 1199.0 GB, 1198999470080 bytes, 2341795840 sectors Units = sectors of 1 * 512 = 512 bytes Sector size (logical/physical): 512 bytes / 512 bytes I/O size (minimum/optimal): 512 bytes / 512 bytes Disk label type: dos Disk identifier: 0x000d0c0e</p> <pre> Device Boot Start End Blocks Id System /dev/sda1 * 2048 2099199 1048576 83 Linux /dev/sda2 2099200 1785249791 891575296 8e Linux LVM /dev/sdb 1785249792 1994964991 104857600 83 Linux </pre> <p>Command (m for help): w</p> <p>The partition table has been altered!</p> <p>Calling ioctl() to re-read partition table.</p> <p>WARNING: Re-reading the partition table failed with error 16: Device or resource busy.</p> <p>The kernel still uses the old table. The new table will be used at the next reboot or after you run partprobe(8) or kpartx(8)</p> <p>Syncing disks.</p> <p>[root@mxtolm01dra01s05kvm03 ~]# partprobe</p>
---	------------------------	--

5.10.3 Attach device (sdb) to iDIH Database VM

Procedure 42. Attach device (SDB) to iDIH Database VM

IMPORTANT: This Procedure only apply to iDIH Database.

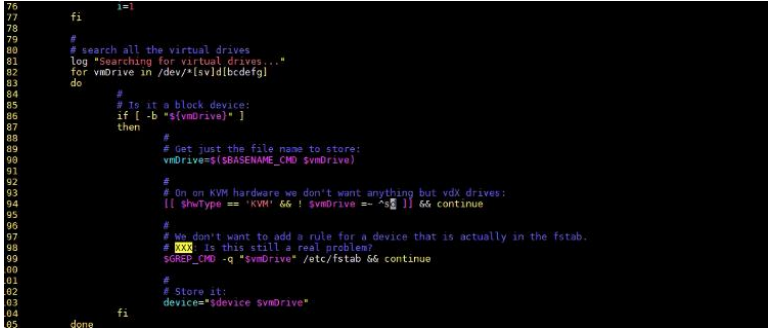

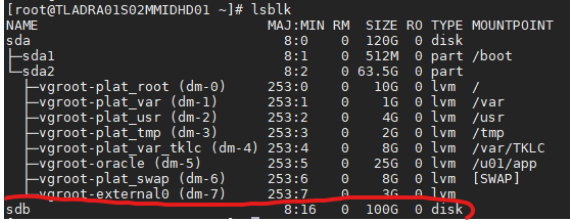

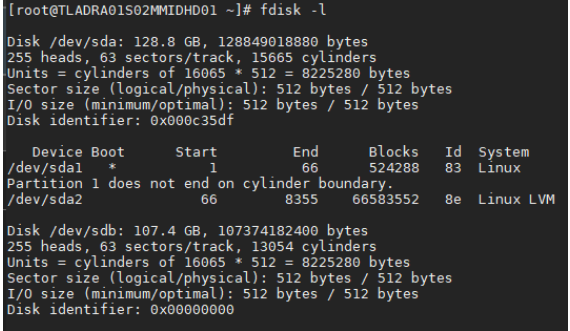

STEP #	Procedure	Description																					
1	List existing vm	<p>Excecute "virsh list --all" on KVM</p> <pre>[root@MXTIJM01DRA01S05KVM03 admusr]# virsh list --all</pre> <table border="1"> <thead> <tr> <th>Id</th> <th>Name</th> <th>State</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>TIJDRA01S05PCMP07</td> <td>running</td> </tr> <tr> <td>2</td> <td>TIJDRA01S05PCMP06</td> <td>running</td> </tr> <tr> <td>3</td> <td>TIJDRA01S05PCSB RB01</td> <td>running</td> </tr> <tr> <td>4</td> <td>TIJDRA01S05PCSBRS03</td> <td>running</td> </tr> <tr> <td>6</td> <td>TIJDRA01S05PCSOAM01</td> <td>running</td> </tr> <tr> <td>7</td> <td>TIJDRA01S05PCIDHD01</td> <td>running</td> </tr> </tbody> </table>	Id	Name	State	1	TIJDRA01S05PCMP07	running	2	TIJDRA01S05PCMP06	running	3	TIJDRA01S05PCSB RB01	running	4	TIJDRA01S05PCSBRS03	running	6	TIJDRA01S05PCSOAM01	running	7	TIJDRA01S05PCIDHD01	running

7	Execute steps in Procedure 37 and Procedure 39 of DSR 8.5 Cloud Installation guide	<p>Procedure: Configure DSR Reference Data Synchronization for iDIH</p> <p>Procedure: Integrate iDIH into DSR</p>
8	Other Optional Steps	<p>There are few more IDIH procedures in DSR 8.5 cloud installation guide which are optional and may be followed if there is a requirement in customer environment</p> <p>Procedure: iDIH Configuration: Configuring the SSO Domain</p> <p>Procedure: iDIH Configuration: Configure the Mail Server</p> <p>Procedure: iDIH Configuration: Configure SNMP Management Server</p> <p>Procedure: iDIH Configuration: Change Network Interface</p>

Note:

1. Run `fdisk -l` command and examine the output. If the customer setup shows `vd[a|b ..]` disks, then it is not required to edit ASMSsetup file. This file must be edited only if customer setup shows `sd[a|b ..]` in `fdisk-l` output.
2. Kindly ensure that disks in customer setup are `sd[a|b ..]` or `vd[a|b ..]`. It must not be a combination of `sd` and `vd` disks that means the disks cannot have different controllers.

5.11 iDIH DB Installation

Procedure 44. iDIH DB Installation steps

STEP #	Procedure	Description
1	Login to the host machine	Log in to the host machine as a “root” user where you need to install the IDIH DB.

2	Delete existing VM.	<p>a. Identify the VM by its domain:</p> <pre># virsh list -all</pre> <p>b. Remove the VM</p> <pre># virsh destroy <VM Name> # virsh undefine <VM Name></pre> <p>c. Remove the VM qcow2 file by deleting the file from path /home/repository</p> <p>d. Refresh storage pool dedicated for DSR.</p> <pre># virsh pool - --list # virsh pool-refresh <pool_name></pre>
---	---------------------	--

3	Create a VM on the host machine.	<p>a. Copy the iDIH Oracle ova's zip file to path /home/repository.</p> <p>b. Convert the resulting '.vmdk' file to a 'qcow2'.</p> <pre>qemu-img convert -f vmdk -O qcow2 ORA-XX_XX_XX.vmdk ORA-XX_XX_XX.qcow2</pre> <p>c. Refresh storage pool dedicated for DSR.</p> <pre># virsh pool --list</pre> <pre># virsh pool-refresh <pool_name></pre> <p>d. Resize ORA (database) ova image on KVM</p> <pre># qemu-img info ORA-XX_XX_XX.qcow2</pre> <p>The output of above command would reflect "virtual size" as 64 GB</p> <pre># qemu-img resize ORA-82_40_0.qcow2 +56G</pre> <pre># qemu-img info ORA-82_40_0.qcow2</pre> <p>The output of above command would reflect "virtual size" as 120 GB</p> <pre># chown qemu:qemu ORA-82_40_0.qcow2</pre> <p>e. Create additional disk of 100GB required for Oracle database as mentioned in the cloud installation doc Procedure 41. Create SDB on KVM.</p> <p>f. Create a VM with following command:</p> <pre>virt-install --name=<VM-NAME> --ram=8192 --vcpus=4 --cpuset=32-35 --disk path=/var/lib/libvirt/images/ORA-82_40_0.qcow2,format=qcow2,bus=<scsi/virtio> --network bridge:<XMI-BRIDGE>,model=virtio --network bridge:<INT-BRIDGE>,model=virtio --graphics none --autostart --watchdog i6300esb,action=reset --import</pre> <p>g. Execute "virsh list --all" on KVM to verify whether VM has been created.</p> <p>h. Shutdown Oracle VM</p> <pre>virsh shutdown <VM-NAME></pre> <p>i. Attach the additional 100GB disk created in step 3 of Procedure 42 - Attach device (SDB) to iDIH Database VM.</p>
---	----------------------------------	--

		j. Follow the steps in Procedure 46 and Procedure 47 for Oracle VM configuration and post installation.
--	--	---

5.12 IDIH Application and Mediation Installation

Procedure 45. IDIH Application and Mediation Installation steps using CLI

STEP #	Procedure	Description
1	Delete the existing VM.	<p>a. Identify the VM by its domain:</p> <pre># virsh list -all</pre> <p>b. Remove the VM</p> <pre># virsh destroy <VM Name></pre> <pre># virsh undefine <VM Name></pre> <p>c. Remove the VM qcow2 file by deleting the file from path /home/repository</p> <p>d. Refresh storage pool dedicated for DSR.</p> <pre># virsh pool - -list</pre> <pre># virsh pool-refresh <pool name></pre>
2	Create a VM on the host machine.	<p>a. Copy the iDIH Oracle ova's zip file to path /home/repository.</p> <p>b. Convert the resulting '.vmdk' file to a 'qcow2' for mediation and application server.</p> <pre>qemu-img convert -f vmdk -O qcow2 <IMAGE_NMAE>.vmdk Med.qcow2</pre> <pre>qemu-img convert -f vmdk -O qcow2 <IMAGE_NMAE>.vmdk App.qcow2</pre>
3	Refresh storage pool dedicated for DSR.	<p>Run the following commands:</p> <pre># virsh pool - -list</pre> <pre># virsh pool-refresh <pool name></pre>

4	Create a VM for App server and mediation server	<p>For App server, run the following command:</p> <pre>virt-install --name=< APP_VM_Name > --ram=8192 --vcpus=4 --disk path=< /home/repository/App.qcow2>,format=raw,bus=<scsi/virtio> --network bridge:<br_XMI>,model=virtio --network bridge:<br_INT>,model=virtio --graphics none --autostart --watchdog i6300esb,action=reset -import</pre> <p>For mediation server:</p> <pre>virt-install --name=<MED-VM-NAME> --ram=8192 -- vcpus=4 --disk path=</home/repstitory/ Med.qcow2>,format=raw,bus=<scsi/virtio> --network bridge:<br_XMI>,model=virtio --network bridge:<br_IMI>,model=virtio --network bridge:<br_INT>,model=virtio --graphics none --autostart --watchdog i6300esb,action=reset --import</pre>
5	Verify if the VM has been created.	<ol style="list-style-type: none"> Run <code>virsh list --all</code> on KVM to verify whether VM has been created. Follow the steps in Procedure 46 and Procedure 47 for Oracle VM configuration and post installation.

5.13 Post iDIH Installation Configuration (Optional)

Procedure 46. Run Post Installation Scripts on iDIH VMs (Optional)

STEP #	Procedure	Description
<p>This procedure runs post installation scripts on the iDIH VMs.</p> <p>Prerequisite: Procedure 5 has been completed.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
<p>1.</p> <input type="checkbox"/>	<p>Log into the iDIH Oracle VM Console</p>	<ol style="list-style-type: none"> Access the iDIH Oracle VM console. Login as the admusr user.

STEP #	Procedure	Description
2. <input type="checkbox"/>	Run the iDIH Oracle post installation script	<ol style="list-style-type: none"> Wait for the software upgrades to complete on all iDIH VMs. Note: Verify the /etc/hosts file before, and after the execution of the script configureOracle.sh, having internal IP address for all the three guests. As admusr on the iDIH Oracle VM console, run the Oracle post installation script. <pre>\$ sudo /opt/xIH/oracle/configureOracle.sh</pre> Note: The Oracle post installation script runs for 5 to 15 minutes depending on the Oracle version and patch level. Wait for it to complete before the next step is executed. Once the script execution is over, it will come out without any message. Note: To verify the install status, check the /var/TKLC/xIH/log/oracle/post_image_install.log file for any errors. The error stating: Cannot use backup/restore functions while using dispatcher can safely be ignored.
3. <input type="checkbox"/>	Log into the iDIH Mediation VM Console as admusr	<ol style="list-style-type: none"> Access the iDIH Mediation VM console. Login as the admusr user.

STEP #	Procedure	Description
<p>4.</p> <input type="checkbox"/>	<p>Run the iDIH Mediation VM post installation script</p>	<p>The Oracle post installation script must come to completion before the Mediation post installation script is run.</p> <ol style="list-style-type: none"> As the admusr user on the iDIH Mediation VM console, run the Mediation post installation script. <pre>\$ sudo /opt/xIH/mediation/install.sh</pre> <p>Note: The Mediation post installation script runs for 2 to 10 minutes. Wait for it to complete before the next step is executed. To verify the install status, check the <code>/var/TKLC/xIH/log/mediation/post_image_install.log</code> file for any errors.</p> <p>Note: It is assumed network configuration and functionality is correct before installation. If you encounter an issue of the mediation post installation script <code>/opt/xIH/mediation/install.sh</code> hanging at the beginning as shown below, but you are still able to ssh to Oracle VM using internal IP, make sure the internal interface (int) MTU has the correct setting - 1500 MTU. If yes, MTU size adjustment may be needed. For verification, connect to oracle using sqlplus using the following commands:</p> <ol style="list-style-type: none"> Log into the Mediation server as admusr. Execute the command sudo su - tekelec. Execute the command sqlplus /@NSP. As tekelec on the iDIH Mediation VM console, run the following commands: <pre>\$ sudo su - tekelec</pre> <pre>\$ iset -fnodeName='hostname' -fhostName='hostname' NodeInfo where 1=1</pre> <p>Note: Replace hostname with the actual hostname of Mediation VM.</p>
<p>5.</p> <input type="checkbox"/>	<p>Log into the iDIH application VM console as admusr</p>	<ol style="list-style-type: none"> Access the iDIH Application VM console. Login as the admusr user.
<p>6.</p> <input type="checkbox"/>	<p>Run the iDIH Application post installation script</p>	<p>The Mediation post installation script must come to completion before the Application post installation script is run.</p> <p>As the admusr user on the iDIH Application VM console, run the Application post installation script.</p> <pre>\$ sudo /opt/xIH/apps/install.sh</pre> <p>Note:</p> <ul style="list-style-type: none"> The application post installation script runs for 2 to 10 minutes. Wait for it to complete before executing the next step. Verify the <code>/etc/hosts</code> file before, and after the execution of the script <code>configureOracle.sh</code>, having internal IP address for all the three guests.

STEP #	Procedure	Description
7. <input type="checkbox"/>	Run the iDIH health check script on each of the iDIH VMs	<p>Once all of the iDIH VMs have restarted. Run the health check scripts on each iDIH VM.</p> <ol style="list-style-type: none"> As the admusr user on the iDIH Oracle VM console, run the health check script and verify the results. Ignore the NTP message stating the tvoe-host is not integrated. <pre>\$ sudo /usr/TKLC/xIH/plat/bin/analyze_server.sh -i</pre> <ol style="list-style-type: none"> As admusr on the iDIH Application VM console, run the health check script and verify the results. Ignore the NTP message stating tvoe-host is not integrated. <pre>\$ sudo /usr/TKLC/xIH/plat/bin/analyze_server.sh -i</pre> <ol style="list-style-type: none"> As admusr on the iDIH Mediation VM console, run the health check script and verify results. Ignore the NTP message stating tvoe-host is not integrated. <pre>\$ sudo /usr/TKLC/xIH/plat/bin/analyze_server.sh -i</pre> <p>Note: Ignore NTP message stating the tvoe-host is not integrated.</p>

Procedure 47. Configure DSR Reference Data Synchronization for iDIH (Optional)

STEP #	Procedure	Description
<p>This procedure configures DSR reference data synchronization for iDIH.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	iDIH Application Server: Login	<ol style="list-style-type: none"> Establish an SSH session to the iDIH Application Server. Login as the admusr user. Issue the following command to login as a tekelec user. <pre>\$ sudo su - tekelec</pre>
2. <input type="checkbox"/>	iDIH Application Server: Execute configuration script	<ol style="list-style-type: none"> Execute the following script using SOAM VIP address: <code>Apps/trda-config.sh</code> <p>Note: The SO IP address to be used here is the internal xmi address of the SO and not the floating-ip or external address (if used any).</p> <p>Example output:</p> <pre>corsair-app:/usr/TKLC/xIH apps/trda-config.sh dos2unix: converting file /usr/TKLC/xIH/boa/user_projects/domains/tekelec/nsp/trace-refdata-ad Please enter DSR oam server IP address: 10.240.39.175 SQL*Plus: Release 12.1.0.2.0 Production on Thu Oct 1 15:04:40 2015 Copyright (c) 1982, 2014, Oracle. Procedure 48. iDIH Configuration: Configuring the SSO Domain (Optional)

STEP #	Procedure	Description
		<p>This procedure configures the SSO domain for iDIH.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>

STEP #	Procedure	Description
<p>1. <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<p>1. Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and type https://<Primary_NOAM_VIP_IP_Address> as the URL.</p> <p>2. Login as the admusr user.</p> 

2.

NOAM VIP GUI:
Configure DNS

1. Navigate to **Main Menu > Administration**

a. Verify / Edit the parameter Certificate Domain Name

2. Navigate to **Administration > Remote Servers > DNS Configuration.**

3. Select the NOAM tab.

Main Menu: Administration -> Remote Servers -> DNS Configuration

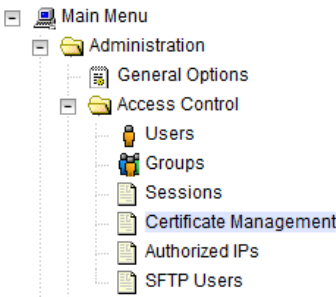

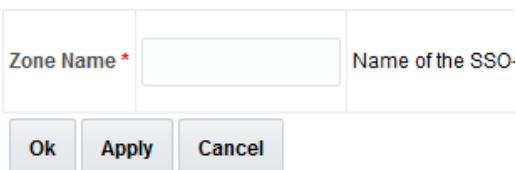

4. Configure values for the following fields:

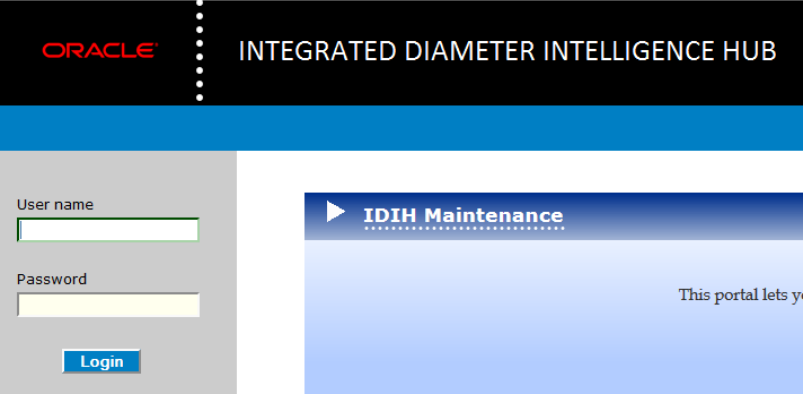

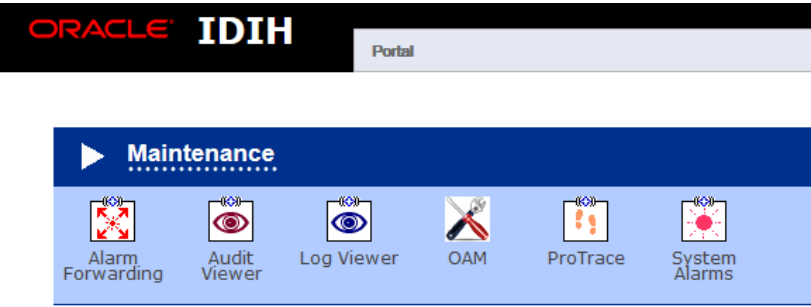

- Domain Name
- Name Server
- Search Domain 1

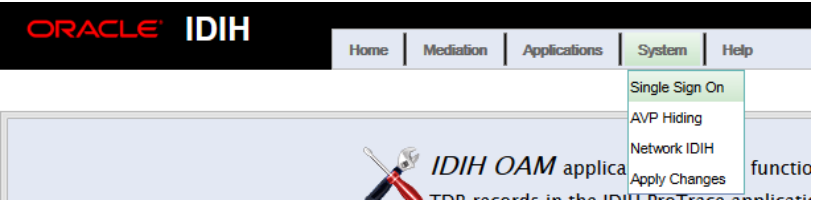

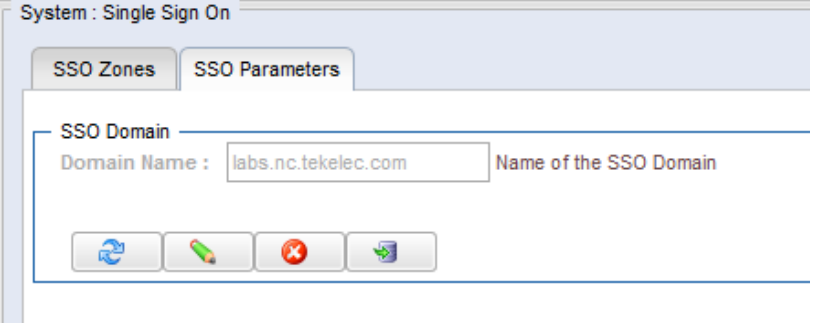

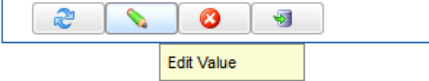

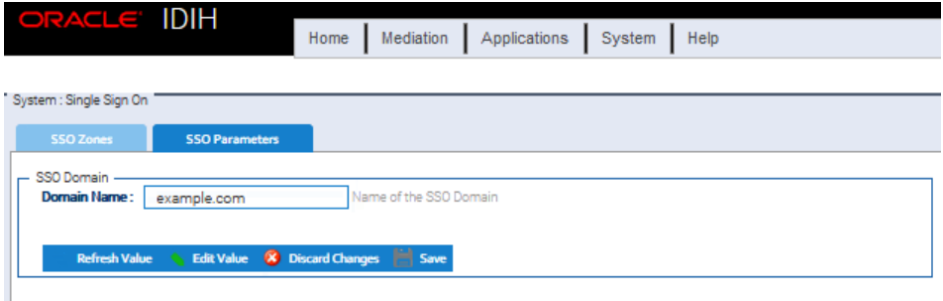

External DNS Name Server	
	Address
Configuration Mode *	<input checked="" type="radio"/> Global <input type="radio"/> Per-site
Name Server	<input type="text"/>
Domain Search Order	
	Domain Name
Search Domain 1	<input type="text"/>
Search Domain 2	<input type="text"/>

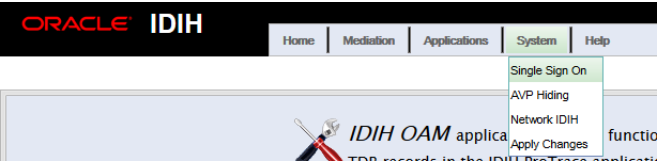

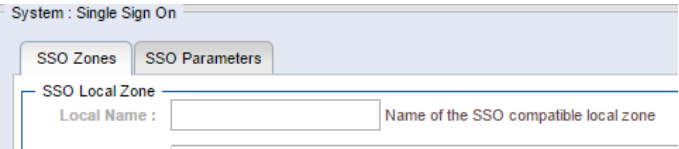

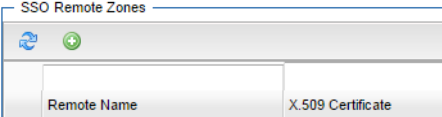

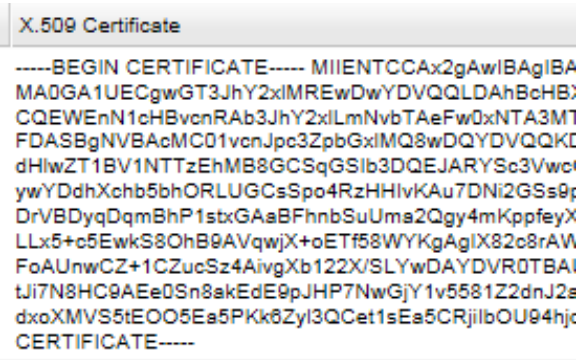

5. If values have already been configured, click **Cancel**; otherwise configure the values and click **OK**.

STEP #	Procedure	Description								
		<div style="text-align: right; margin-bottom: 10px;"> <input type="button" value="Ok"/> <input type="button" value="Cancel"/> </div> <p>6. The Certificate Management window is updated with the SSO Certificate.</p>  <p>The screenshot shows a software interface with a tree view on the left and a main content area on the right. The tree view includes 'Main Menu', 'Administration', 'General Options', 'Access Control', 'Users', 'Groups', 'Sessions', 'Certificate Manage', and 'Authorized IPs'. Procedure 50. iDIH Configuration: Configure the Mail Server (Optional)

<p>S T E P #</p>	<p>This procedure configures the SMTP mail server.</p> <p>Note: This procedure is optional; however, this option is required for security (password initialization set to AUTOMATIC) and forwarding (forwarding by mail filter defined), and is available only on the Application server.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	<p>1. Establish an SSH session to the iDIH Application server.</p> <p>2. Login as the admusr user.</p>
<p>1. <input type="checkbox"/></p>	<p>iDIH Application Server: Login</p>	<p>1. Establish an SSH session to the iDIH Application server.</p> <p>2. Login as the admusr user.</p>

Procedure 50. iDIH Configuration: Configure the Mail Server (Optional)

<p>2. <input type="checkbox"/></p>	<p>iDIH Application Server: Configure the authenticated mail server</p>	<ol style="list-style-type: none"> 1. From the platcfg menu, type the following command: <pre>\$ sudo su - platcfg</pre> 2. Select Application Server Configuration.  3. Select SMTP Configuration.  4. Select Edit. 5. Enter the following parameters: <ul style="list-style-type: none"> • Mail Server IP Address • User • Password • Email Address (From) • Mail smtp timeout • Mail smtp connectiontimeout • SNMP over SSL used? 6. Select OK. 7. Select Exit to exit the platcfg menu.
------------------------------------	--	--

Procedure 51. iDIH Configuration: Configure SNMP Management Server (Optional)

S T E P #	<p>This procedure configures the SNMP management server.</p> <p>Note: This procedure is optional; however, this option is required for forwarding (forwarding by SNMP filter defined), and is available only on the Application server.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
1. <input type="checkbox"/>	<p>iDIH Application Server: Login</p>	<ol style="list-style-type: none"> 1. Establish an SSH session to the iDIH Application server. 2. Login as the admusr user.
2. <input type="checkbox"/>	<p>iDIH Application Server: Configure the authenticated mail server</p>	<ol style="list-style-type: none"> 1. From the platcfg menu, type the following command: <code>\$ sudo su - platcfg</code> 2. Select Application Server Configuration.  <ol style="list-style-type: none"> 3. Select SNMP Agent Configuration.  <ol style="list-style-type: none"> 4. Select Edit. 5. Enter the IP Address of the SNMP management server. Note: The SNMP agent configuration is updated and the SNMP management server automatically restarts. 6. Select OK. 7. Select Exit to exit the platcfg menu.

Procedure 52. iDIH Configuration: Change Network Interface (Optional)

S T E P #	<p>This procedure changes the default network interface.</p> <p>Note: Initially, the default network interface used to transport TTRs from DSR to DIH uses the internal IMI network; however, this can be changed, if required. It should be noted that changing this interface could degrade performance of TTR transmission.</p> <p>Note: A script is provided to manage the settings so the operator does not need to know the details required to apply the settings. There are two settings interface.name and interface.enabled.</p> <p>When interface.enabled=True, then communications over the interface.name =value, where value is the name of the network interface as defined on the platform, is the only specified interface used for communications.</p> <p>When interface.enabled=False then communications over the named interface is not enforced, that is, all interfaces configured on the platform are allowed to be used for communications.</p> <p>For example, if it is required to use the XMI interface for communication instead of the default internal IMI interface, then the operator would supply XMI when asked for the interface name and True when asked if interface filtering should be applied.</p> <p>Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
1. <input type="checkbox"/>	iDIH Mediation Server: Login	<ol style="list-style-type: none"> 1. Establish an SSH session to the iDIH Mediation server. 2. Login as the admusr user. 3. Type the following command to login in as the Tekelec user. <pre style="margin-left: 20px;">\$ sudo su - tekelec</pre>
2. <input type="checkbox"/>	iDIH Mediation Server: Execute the change interface script	<ol style="list-style-type: none"> 1. Procedure 56. (KVM/OpenStack Only) Configure Port Security

S T E P #	<p>This procedure configures port security on TSA.</p> <p>Prerequisite: Perform Enable the Neutron port security extension first. We require this extension to disable the Neutron anti-spoofing filter rules for a given port. Refer to Disable Port Security in Appendix G.6 where this is discussed.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>	
1. <input type="checkbox"/>	<p>IPFE with TSA only. Remove allowable address pair security on IPFE XSI network and DAMP XSI interfaces on IPFE and MP instances</p>	<p>If stacks are deployed using HEAT template, follow this step.</p> <ol style="list-style-type: none"> Determine the TSA IP address used in Procedure 34, step 2. Determine the corresponding XSI interface IP address assigned to that TSA used in Procedure 34, step 2. Determine the XSI IP address of IPFE used in Procedure 34, step 2. Log into the OpenStack control node as the admusr user. Source the tenant user credentials. Determine the port ID of the XSI interface IP address. <pre>\$ neutron port-list -F id -F fixed_ips grep <XSI network></pre> <p>Note: <port ID> is the value in first column of the output to this command.</p> <ol style="list-style-type: none"> Remove allowed_address_pairs: <pre>\$ neutron port-update <Port ID> --no-allowed-address-pairs</pre> <p>Note: Execute neutron port-show command to verify allowed_address_pairs attribute is empty.</p>
2. <input type="checkbox"/>	<p>IPFE with TSA only. Remove port security on TSA XSI network interfaces on IPFE and MP instances</p>	<p>If using IPFE with Target Set Addresses (TSA).</p> <ol style="list-style-type: none"> Determine the TSA IP address as used in section 5.3, Procedure 34. Determine the corresponding XSI interface IP address as used in section 5.3, Procedure 34. Log into the OpenStack control node as the admusr user. Source the tenant user credentials. Determine security groups associated with the IPFE instance. <pre>\$ nova list-secgroup <VM instance ID></pre> <p>Note: <VM instance ID> can be queried from the output of nova list command in the ID column for the given VM.</p> <ol style="list-style-type: none"> Save the ID and names of the listed security groups for later use. Remove all listed security groups. <pre>\$ nova remove-secgroup <VM instance ID> <Security group ID></pre> <p>Note: Use the <VM instance ID> and <Security group ID> as noted down in the step-6 above.</p>

Procedure 56. (KVM/OpenStack Only) Configure Port Security

		<p>Alternatively, use the following syntax:</p> <pre>\$ nova remove-secgroup <VM instance name> <Security group name></pre> <p>8. Determine the port ID of the XSI interface IP address from step 2 above.</p> <pre>\$ neutron port-list -F id -F fixed_ips grep <instance IP on TSA/XSI network></pre> <p>Note: <port ID> is the value in first column of the output to this command.</p> <p>9. Disable port security for the port found in step 7.</p> <pre>\$ neutron port-update <Port ID> --port-security-enabled=false</pre> <p>10. Re-enable port security for all the interfaces not on the TSA/XSI port used in step 9, including XMI, IMI, and others.</p> <p>11. Determine the port IDs of the instance IP addresses not associated with the TSA/XSI network.</p> <pre>\$ neutron port-list -F id -F fixed_ips grep <instance IP not on TSA/XSI network></pre> <p>12. For each of the non TSA/XSI instance ports perform the following command for each of the security groups from step 6.</p> <pre>\$ neutron port-update <Port ID> --security-group <Security group ID></pre> <p>Note: Use the <Security Group ID> as noted down in the step-6 above.</p>
--	--	---

Procedure 57. Enable/Disable DTLS (SCTP Diameter Connections Only)

S T E P #		<p>This procedure prepares clients before configuring SCTP Diameter connections. Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>
1. <input type="checkbox"/>	<p>Enable/Disable DTLS (SCTP Diameter connections only)</p>	<p>Oracle's SCTP Datagram Transport Layer Security (DTLS) has SCTP AUTH extensions by default. SCTP AUTH extensions are required for SCTP DTLS. However, there are known impacts with SCTP AUTH extensions as covered by the CVEs referenced below. It is highly recommended that customers prepare clients before the DSR connections are established after installation. This ensures the DSR to client SCTP connection establishes with SCTP AUTH extensions enabled. See RFC 6083. If customers DO NOT prepare clients to accommodate the DTLS changes, then the SCTP connections to client devices WILL NOT establish after the DSR is installed.</p> <ul style="list-style-type: none"> • https://access.redhat.com/security/cve/CVE-2015-1421 • https://access.redhat.com/security/cve/CVE-2014-5077 <p>Execute procedures in [19] DSR DTLS Feature Activation Procedure to disable/enable the DTLS feature.</p>

Procedure 58. Shared Secret Encryption Key Revocation (RADIUS Only)

STEP #	This procedure changes the shared secret encryption key on DSR RADIUS setup. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.	
1. <input type="checkbox"/>	Revoke RADIUS shared secret encryption key	Refer to RADIUS Shared Secret Key revocation MOP to change the encryption key on the DSR installed setup. Refer to [20] DSR RADIUS Shared Secret Encryption Key Revocation MOP MO008572. Note: It is highly recommended to change the key after installation due to security reasons.

Procedure 59. DSR Performance Tuning

STEP #	This procedure changes tuning parameters for the system to achieve better performance. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.	
1. <input type="checkbox"/>	Performance tuning (Optional)	Refer Appendix I Performance Tuning Recommended for performance tuning on DSR.

Procedure 60. Change NOAM/SOAM Profile for Increased MP Capacity on a Virtualized Environment

STEP #	This procedure describes how to change NOAM and SOAM VM profile when the MP capacity is increased on OpenStack and VMware. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.	
1. <input type="checkbox"/>	Log in to OpenStack/VMware	<ul style="list-style-type: none"> • To change the VM profile when the MP capacity is increased on OpenStack, log in to Openstack GUI horizon dashboard. • To change the VM profile when the MP capacity is increased on VMware, log in to VM manager.
2. <input type="checkbox"/>	Refer to the section Change NOAM/SOAM VM Profile for Increased MP Capacity in [25] DSR Cloud Upgrade Guide.	

Appendix A. Sample Network Element and Hardware Profiles

To enter all the network information for a network element into an AppWorks-based system, a specially formatted XML file needs to be filled out with the required network information. The network information is needed to configure both the NOAM and any SOAM network elements.

It is expected that the maintainer/creator of this file has networking knowledge of this product and the customer site at which it is being installed. The following is an example of a network element XML file.

The SOAM network element XML file needs to have same network names for the networks as the NOAM network element XML file has. It is easy to accidentally create different network names for NOAM and SOAM network elements, and then the mapping of services to networks are not possible.

```
<?xml version="1.0"?>
<networkelement>
  <name>NE</name>
  <networks>
    <network>
      <name>XMI</name>
      <vlanId>3</vlanId>
      <ip>10.2.0.0</ip>
      <mask>255.255.255.0</mask>
      <gateway>10.2.0.1</gateway>
      <isDefault>true</isDefault>
    </network>
    <network>
      <name>IMI</name>
      <vlanId>4</vlanId>
      <ip>10.3.0.0</ip>
      <mask>255.255.255.0</mask>
      <nonRoutable>true</nonRoutable>
    </network>
  </networks>
</networkelement>
```

Figure 3. Example Network Element XML File

Note: NetworkElement Name shall be unique while creating multiple Network Element.

Appendix B. List of Frequently Used Time Zones

This table lists several valid time zone strings that can be used for the time zone setting in a CSV file, or as the time zone parameter when manually setting a DSR time zone.

Table 6. List of Selected Time Zone Values

Time Zone Value	Description	Universal Time Code (UTC) Offset
UTC	Universal Time Coordinated	UTC-00
America/New_York	Eastern Time	UTC-05
America/Chicago	Central Time	UTC-06
America/Denver	Mountain Time	UTC-07
America/Phoenix	Mountain Standard Time — Arizona	UTC-07

Time Zone Value	Description	Universal Time Code (UTC) Offset
America/Los Angeles	Pacific Time	UTC-08
America/Anchorage	Alaska Time	UTC-09
Pacific/Honolulu	Hawaii	UTC-10
Africa/Johannesburg		UTC+02
America/Mexico City	Central Time — most locations	UTC-06
Africa/Monrovia		UTC+00
Asia/Tokyo		UTC+09
America/Jamaica		UTC-05
Europe/Rome		UTC+01
Asia/Hong Kong		UTC+08
Pacific/Guam		UTC+10
Europe/Athens		UTC+02
Europe/London		UTC+00
Europe/Paris		UTC+01
Europe/Madrid	mainland	UTC+01
Africa/Cairo		UTC+02
Europe/Copenhagen		UTC+01
Europe/Berlin		UTC+01
Europe/Prague		UTC+01
America/Vancouver	Pacific Time — west British Columbia	UTC-08
America/Edmonton	Mountain Time — Alberta, east British Columbia & west Saskatchewan	UTC-07
America/Toronto	Eastern Time — Ontario — most locations	UTC-05
America/Montreal	Eastern Time — Quebec — most locations	UTC-05
America/Sao Paulo	South & Southeast Brazil	UTC-03
Europe/Brussels		UTC+01
Australia/Perth	Western Australia — most locations	UTC+08
Australia/Sydney	New South Wales — most locations	UTC+10
Asia/Seoul		UTC+09
Africa/Lagos		UTC+01
Europe/Warsaw		UTC+01
America/Puerto Rico		UTC-04
Europe/Moscow	Moscow+00 — west Russia	UTC+04
Asia/Manila		UTC+08

Time Zone Value	Description	Universal Time Code (UTC) Offset
Atlantic/Reykjavik		UTC+00
Asia/Jerusalem		UTC+02

Appendix C. Common KVM/OpenStack Tasks

Appendix C.1 Create a Network Port

Procedure 61. Create a Network Port

<p>1. <input type="checkbox"/></p>	<p>Create the network ports for the NO network interfaces</p>	<ol style="list-style-type: none"> Each network interface on an instance must have an associated network port. An instance usually has at least eth0 and eth1 for a public and private network respectively. Some configurations require 6 or more interfaces and corresponding network ports. Determine the IP address for the interface. For eth0, the IP might be 10.x.x.157. For eth1, the IP might be 192.168.x.157 Identify the neutron network ID associated with each IP/interface using the neutron command line tool. <pre>\$ neutron net-list</pre> Identify the neutron subnet ID associated with each IP/interface using the neutron command line tool. <pre>\$ neutron subnet-list</pre> Create the network port using the neutron command line tool, being sure to choose an informative name. Note the use of the subnet ID and the network ID (final argument). Port names are usually a combination of instance name and network name. NO1-xmi SO2-imi MP5-xsi2 The ports must be owned by the DSR tenant user, not the admin user. Either source the credentials of the DSR tenant user or use the DSR tenant user ID as the value for the —tenant-id argument. <pre>\$. keystone_rc_dsr_user</pre> <pre>\$ keystone user-list</pre> <pre>\$ neutron port-create --name=NO1-xmi --tenant-id <tenant id> --fixed-ip subnet_id=<subnet id>,ip_address=10.x.x.157 <network id></pre> <pre>\$ neutron port-create --name=NO1-imi --tenant-id <tenant id> --fixed-ip subnet_id=<subnet id>,ip_address=192.168.x.157 <network id></pre> View your newly created ports using the neutron tool. <pre>\$ neutron port-list</pre>
------------------------------------	---	--

Appendix C.2 Create and Boot OpenStack Instance

Procedure 62. Create and Boot OpenStack Instance

<p>1. <input type="checkbox"/></p>	<p>Create a VM instance from a glance image</p>	<p>1. Get the following configuration values.</p> <p>The image ID.</p> <pre>\$ glance image-list</pre> <p>The flavor ID.</p> <pre>\$ nova flavor-list</pre> <p>The network ID(s)</p> <pre>\$ neutron net-list</pre> <p>An informative name for the instance.</p> <p>NO1 SO2 MP5</p> <p>2. Create and boot the VM instance.</p> <p>The instance must be owned by the DSR tenant user, not the admin user. Source the credentials of the DSR tenant user and issue the following command. Number of IP/interfaces for each VM type must conform with the OCDSR Network to Device Assignments defined in [24] DSR Cloud Benchmarking Guide.</p> <p>Note: IPv6 addresses should use the v6-fixed-ip argument instead of v4-fixed-ip.</p> <pre>\$ nova boot --image <image ID> --flavor <flavor id> --nic net-id=<first network id>,v4-fixed-ip=<first ip address> --nic net-id=<second network id>,v4-fixed-ip=<second ip address> InstanceName</pre> <p>View the newly created instance using the nova tool.</p> <pre>\$ nova list --all-tenants</pre> <p>The VM takes approximately 5 minutes to boot. At this point, the VM has no configured network interfaces and can only be accessed by the Horizon console tool.</p>
------------------------------------	---	--

Appendix C.3 Configure Networking for OpenStack Instance

Procedure 63. Configure Networking for OpenStack Instance

<p>1. <input type="checkbox"/></p>	<p>Verify/Configure the network interface</p>	<ol style="list-style-type: none"> 1. Check if the interface is configured automatically. 2. If DHCP is enabled on Neutron subnet, VM configures the VNIC with the IP address. To verify, ping the XMI IP address provided with the nova boot command: <pre>\$ping <XMI-IP-Provided-During-Nova-Boot></pre> <p>If the ping is successful, ignore the next part to configure the interface manually.</p> <p>Manually configure the interface, if not already done (optional).</p> <ol style="list-style-type: none"> a. Log into the Horizon GUI as the DSR tenant user. b. Go to the Compute/Instances section. c. Click on the Name field of the newly created instance. d. Select the Console tab. e. Login as the admusr user. f. Configure the network interfaces, conforming with the interface-to-network mappings defined in [24] DSR Cloud Benchmarking Guide. <pre>\$ sudo netAdm add --onboot=yes --device=eth0 --address=<xmi ip> --netmask=<xmi net mask></pre> <pre>\$ sudo netAdm add --route=default --device=eth0 --gateway=<xmi gateway ip></pre> <p>Under some circumstances, it may be necessary to configure as many as 6 or more interfaces.</p> 3. Reboot the VM. It takes approximately 5 minutes for the VM to complete rebooting. <pre>\$ sudo init 6</pre> <p>The new VM should now be accessible using both network and Horizon console.</p>
------------------------------------	---	---

Appendix D. Common OVM Manager Tasks (CLI)

Appendix D.1 Set Up the Server

Note: This section sets up the server using the command line interface of OVM Manager. All configurations/setup **can also be done** from the GUI/dashboard of OVM Manager.

Procedure 64. Set Up the Server

<p>1. <input type="checkbox"/></p>	<p>Log into the OVM-M command line interface</p>	<pre>ssh -l admin <OVM-M IP> -p 1000</pre> <p>Example:</p> <pre>[root@manager01 ~]# ssh -l admin 10.240.16.138 -p 10000</pre> <pre>admin@10.240.16.138's password:</pre>
------------------------------------	--	--

Procedure 64. Set Up the Server

<p>2. <input type="checkbox"/></p>	<p>OVM-M CLI: Discover Oracle VM server</p>	<pre>discoverServer ipAddress=value password=value takeOwnership= { Yes No }</pre> <p>Example:</p> <pre>OVM>discoverServer ipAddress=10.240.16.139 password=password takeOwnership=Yes</pre>
<p>3. <input type="checkbox"/></p>	<p>OVM-M CLI: Create an ethernet-based network with the VM role</p>	<pre>create Network [roles= { MANAGEMENT LIVE_MIGRATE CLUSTER_HEARTBEAT VIRTUAL_MACHINE STORAGE }] name=value [description=value] [on Server instance]</pre> <p>Example:</p> <pre>OVM>create Network name=XMI roles=VIRTUAL_MACHINE</pre>
<p>4. <input type="checkbox"/></p>	<p>OVM-M CLI: Add a port from each Oracle VM server to the network</p>	<p>Note: Skip this step and proceed to step 5 for bonded interfaces.</p> <ol style="list-style-type: none"> Find the ID of an Ethernet port. <pre>OVM> show Server name=MyServer1</pre> <p>...</p> <pre>Ethernet Port 1 = 0004fb00002000007711332ff75857ee [eth0 on MyServer3.virtlab.info] Ethernet Port 2 = 0004fb0000200000d2e7d2d352a6654e [eth1 on MyServer3.virtlab.info] Ethernet Port 3 = 0004fb0000200000c12192a08f2236e4 [eth2 on MyServer3.virtlab.info]</pre> Add a port from each Oracle VM Server to the network. <pre>OVM>add Port instance to { BondPort Network } instance</pre> <p>Example:</p> <pre>OVM>add Port id=0004fb0000200000d2e7d2d352a6654e to Network name=MyVMNetwork</pre>

Procedure 64. Set Up the Server

<p>5. <input type="checkbox"/></p>	<p>OVM-M CLI: Create Bondport (For Bonded Interfaces)</p>	<p>1. Find the ID of an Ethernet port.</p> <pre>OVM>list Port Status: Success Time: 2016-08-22 04:43:02,565 EDT Data: id:0004fb0000200000045b4e8dc0b3acc6 name:usb0 on vms01.test.com id:0004fb00002000005fde208ce6392c0a name:eth4 on vms01.test.com id:0004fb0000200000b1dceeb39006d839 name:eth5 on vms01.test.com id:0004fb000020000027e3a02bc28dd153 name:eth2 on vms01.test.com id:0004fb0000200000fce443e0d30cd3d5 name:eth3 on vms01.test.com id:0004fb0000200000a908e402fc542312 name:eth0 on vms01.test.com id:0004fb0000200000247b03c2a4a090ec name:eth1 on vms01.test.com</pre> <p>2. --	--	--

Appendix D.2 Server Pool

A server pool is a required entity in Oracle VM, even if it contains a single Oracle VM Server. In practice, several Oracle VM servers form a server pool, and an Oracle VM environment may contain one or several server pools. Server pools are typically clustered, although an unclustered server pool is also possible. Server pools have shared access to storage repositories and exchange and store vital cluster information in the server pool file system. Refer [22] Oracle VM Concepts Guide for more information.

Appendix E. Scale a Signaling Node

Execute this procedure only if an additional signaling node(s) needs to be deployed to an existing DSR deployment.

Procedure 65. Scale a Signaling Node

S T E P #	Note: This procedure is ONLY required if additional Signaling Node(s) needs to be deployed to an existing DSR deployment.	
	Prerequisite: DSR topology is already deployed and configured as per Software Installation Using HEAT Templates (OpenStack) .	
	Check off (√) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.	
1. <input type="checkbox"/>	Create new signaling stack	<ol style="list-style-type: none"> 1. Prepare OpenStack templates and environment files for signaling stacks by following instructions in Procedure 13 for signaling stacks. 2. Create OpenStack parameter file for signaling stacks by following instructions in Procedure 15. Note: Change the number of signaling node(s) as per the requirement. 3. Deploy the stacks by following instructions in Procedure 16. Note: New stack is created as part of this procedure.
2. <input type="checkbox"/>	Configure new site in the existing topology	<ol style="list-style-type: none"> 1. Create a new network element by following Procedure 25 to define the network for new site being configured. 2. Configure the SOAM servers by following Procedure 26 to create the SOAM servers. 3. Configure the SOAM server group by following Procedure 27 to create SOAM server group. 4. Configure the MP virtual machines by following Procedure 28. 5. Configure the MP server group(s) and profiles by following Procedure 31. 6. Configure the signaling network routes by following Procedure 32. 7. If deployed stack contains IPFE servers, then configure the IPFE by following Procedure 34.
3. <input type="checkbox"/>	Repeat	Repeat this procedure if more signaling nodes are required.

Appendix F. Firewall Ports

Flow Description	Purpose	Protocol/Port	IP Protocol Version
NTP flow for time sync	XMI network	UDP:123	IPv4 , IPv6
hostname resolution (dns)	XMI, IMI Network	UDP/TCP: 53	IPv4, IPv6
LightWeight Directory Access Protocol (LDAP)	XMI Network	UDP/TCP: 389	IPv4, IPv6
SSH	XMI Network	TCP: 22	IPv4, IPv6
GUI	XMI Network	TCP: 80, TCP:443	IPv4, IPv6

For information about Firewall Ports, Refer to DSR IP flow document.

Appendix G. Application VIP Failover Options (OpenStack)

Appendix G.1 Application VIP Failover Options

Within an OpenStack cloud environment, there are several options for allowing applications to manage their own virtual IP (VIP) addresses as is traditionally done in telecommunications applications. This document describes two of those options:

- Allowed address pairs
- Disable port security

Each of these options is covered in the major sub-sections that follow. The last major sub-section discusses how to utilize application managed virtual IP addresses within an OpenStack VM instance.

Both of these options effectively work around the default OpenStack Networking (Neutron) service anti-spoofing rules that ensure that a VM instance cannot send packets out a network interface with a source IP address different from the IP address Neutron has associated with the interface. In the Neutron data model, the logical notion of networks, sub-networks and network interfaces are realized as networks, subnets, and ports as shown in Figure 4:

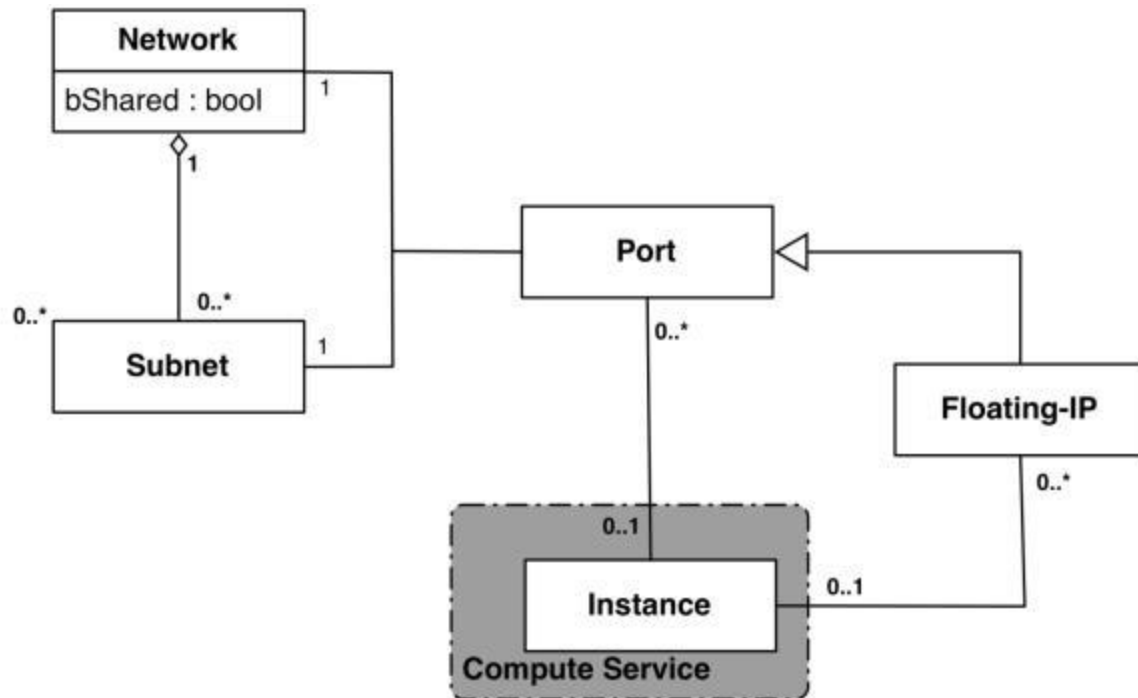

Figure 4. Neutron High-Level Data Model

Note how a port in the Neutron data model maps to at most one VM instance where internal to the VM instance, the port is represented as an available network device such as eth0. VM instances can have multiple network interfaces in which case there are multiple Neutron ports associated with the VM instance, each with different MAC and IP addresses.

Each Neutron port by default has one MAC Address and one IPv4 or IPv6 address associated with it. The IP address associated with a port can be assigned in two ways:

- Automatically by Neutron when creating a port to fulfill an OpenStack Compute (Nova) service request to associate a network interface with a VM instance to be instantiated

OR

- Manually by a cloud administrator when creating or updating a Neutron port

The anti-spoofing rules are enforced at the Neutron port level by ensuring that the source IP address of outgoing packets matches the IP address Neutron has associated with the corresponding port assigned to the VM instance. By default if the source IP address in the outgoing packet does not match the IP address associated with the corresponding Neutron port then the packet is dropped.

These anti-spoofing rules clearly create a complication for the use of application managed virtual IP addresses since Neutron is not going to know about the VIPs being applied by the application to VM instance network interfaces without some interaction between the application (or a higher level management element) and Neutron. Which is why the two options in this document either fully disable the port security measures within Neutron, including the anti-spoofing rules, or expand the set of allowable source IP addresses to include the VIPs that may be used by the application running within a VM instance.

Note that for both of the options described in the following sub-sections, there is a particular Neutron service extension or feature that must be enabled for the option to work. For one option (allowed address pairs) the required Neutron extension is enabled in most default deployments whereas for the other option (allow port security to be disabled) it is not.

Within this document when describing how to use either of these two options, there is example command line operations that interact with the OpenStack Neutron service using its command line utility, simply

named `neutron`. However, be aware that all of the operations performed using the `neutron` command line utility can also be performed through the Neutron REST APIs, see the [Networking v2.0 API documentation](#) for more information.

Appendix G.2 Allowed Address Pairs

This section describes an option that extends the set of source IP addresses that can be used in packets being sent out a VM instance's network interface (which maps to a Neutron port). This option utilizes a Neutron capability, called the `allowed-address-pairs` extension, which allows an entity (cloud administrator, management element, etc.) to define additional IP addresses to be associated with a Neutron port. In this way, if an application within the VM instance sends an outgoing packet with one of those additional IP addresses, then Neutron anti-spoofing rules enforcement logic does not drop those packets. The Neutron `allowed-address-pairs` extension is available starting with the OpenStack Havana release.

The three sub-sections that follow describe the OpenStack configuration requirements for this option, how to use this option after a VM instance has already booted, and how to utilize this option before a VM instance has booted.

Appendix G.3 OpenStack Configuration Requirements

The Neutron `allowed-address-pairs` extension needs to be enabled for this option to work. For most OpenStack cloud deployments this extension should be enabled by default but to check, run the following command (after sourcing the appropriate user credentials file):

```
# neutron ext-list
```

alias	name
<code>security-group</code>	<code>security-group</code>
<code>l3_agent_scheduler</code>	<code>L3 Agent Scheduler</code>
<code>net-mtu</code>	<code>Network MTU</code>
<code>ext-gw-mode</code>	<code>Neutron L3 Configurable external gateway mode</code>
<code>binding</code>	<code>Port Binding</code>
<code>provider</code>	<code>Provider Network</code>
<code>agent</code>	<code>agent</code>
<code>quotas</code>	<code>Quota management support</code>
<code>subnet_allocation</code>	<code>Subnet Allocation</code>
<code>dhcp_agent_scheduler</code>	<code>DHCP Agent Scheduler</code>
<code>l3-ha</code>	<code>HA Router extension</code>
<code>multi-provider</code>	<code>Multi Provider Network</code>
<code>external-net</code>	<code>Neutron external network</code>
<code>router</code>	<code>Neutron L3 Router</code>
<code>allowed-address-pairs</code>	<code>Allowed Address Pairs</code>
<code>extraroute</code>	<code>Neutron Extra Route</code>
<code>extra_dhcp_opt</code>	<code>Neutron Extra DHCP opts</code>
<code>dvr</code>	<code>Distributed Virtual Router</code>

The `allowed-address-pairs` extension should appear in the list of extensions as shown in the bold line above.

Appendix G.4 After a VM Instance has been Booted: Allowed Address Pairs

If a VM instance has already been booted, that is, instantiated, and you need to associate one or more additional IP addresses with the Neutron port assigned to the VM instance then you need to execute a command of the following form:

```
# neutron port-update <Port ID> --allowed_address_pairs list=true type=dict
ip_address=<VIP address to be added>
```

Where the bolded items have the following meaning:

- **<Port ID>**
Identifies the ID of the port within Neutron which can be determined by listing the ports, `neutron port-list`, or if the port is named then the port ID can be obtained directly in the above command with a sequence like `$(neutron port-show -f value -F id <Port Name>)` to replace the **<Port ID>** placeholder.
- **<VIP address to be added>**
Identifies the IP address, a virtual IP address in this case, that should additionally be associated with the port where this can be a single IP address, for example, 10.133.97.135/32, or a range of IP addresses as indicated by a value such as 10.133.97.128/30.

So for example if you wanted to indicate to Neutron that the allowed addresses for a port should include the range of addresses between 10.133.97.136 to 10.133.97.139 and the port had an ID of 8a440d3f-4e5c-4ba2-9e5e-7fc942111277 then you would type the following command:

```
# neutron port-update 8a440d3f-4e5c-4ba2-9e5e-7fc942111277 --
allowed_address_pairs list=true type=dict ip_address=10.133.97.136/30
```

Appendix G.5 Before a VM Instance has been Booted: Allowed Address Pairs

If you want to associate additional allowed IP addresses with a port before it is associated with a VM instance then you need to first create the port and then associate one or more ports with a VM instance when it is booted. The command to create a new port with defined allowed address pairs is of the following form:

```
# neutron port-create --name <Port Name> --fixed-ip subnet-id=$(neutron
subnet-show -f value -F id <Subnet name>),ip_address=<Target IP address>
$(neutron net-show -f value -F id <Network name>) --allowed_address_pairs
list=true type=dict ip_address=<VIP address to be added>
```

Where the bolded items have the following meaning:

- **<Port Name>**
This is effectively a string alias for the port that is useful when trying to locate the ID for the port but the **--name <Port Name>** portion of the command is completely optional.
- **<Subnet name>**
The name of the subnet to which the port should be added.
- **<Target IP address>**
The unique IP address to be associated with the port.
- **<Network Name>**
The name of the network with which the port should be associated.
- **<VIP address to be added>**
This parameter value has the same meaning as described in the previous section.

So for example if you wanted to indicate to Neutron that a new port should have an IP address of 10.133.97.133 on the **ext-subnet** subnet with a single allowed address pair, 10.133.97.134, then you would type a command similar to the following:

```
# neutron port-create -name foo --fixed-ip subnet-id=$(neutron subnet-show -f
value -F id ext-subnet),ip_address=10.133.97.133 $(neutron net-show -f value
-F id ext-net) --allowed_address_pairs list=true type=dict
ip_address=10.133.97.134/32
```

Once the port or ports with the additional allowed addresses have been created, when you boot the VM instance use a nova boot command similar to the following:

```
# nova boot --flavor m1.xlarge --image testVMimage --nic port-id=$(neutron
port-show -f value -F id <Port Name>) testvm3
```

where the flavor, image, and VM instance name values need to be replaced by values appropriate for your VM. If the port to be associated with the VM instance is not named, then you need to obtain the port's ID using the neutron port-list command and replace the `$(neutron port-show -f value -F id <Port Name>)` sequence in the above command with the port's ID value.

Appendix G.6 Disable Port Security

This section describes an option that rather than extending the set of source IP addresses that are associated with a Neutron port, as is done with the allowed-address-pairs extension, to disable the Neutron anti-spoofing filter rules for a given port. This option allows all IP packets originating from the VM instance to be propagated no matter whether the source IP address in the packet matches the IP address associated with the Neutron port or not. This option relies upon the Neutron port security extension that is available starting with the OpenStack Kilo release.

The three sub-sections that follow describe the OpenStack configuration requirements for this option, how to use this option after a VM instance has already booted, and how to use this option before a VM instance has booted.

OpenStack Configuration Requirements

The Neutron port security extension needs to be enabled for this method to work. For the procedure to enable the port security extension see the [ML2 Port Security Extension Wiki page](#).

Note: Enabling the port security extension when there are already existing networks within the OpenStack cloud causes all network related requests into Neutron to fail due to a [known bug in Neutron](#). There is a fix identified for this bug that is part of the Liberty release and is scheduled to be backported to the Kilo 2015.1.2 release. In the meantime, this option is only non-disruptive when working with a new cloud deployment where the cloud administrator can enable this feature before any networks and VM instances that use those networks are created. The port security extension can be enabled in an already deployed OpenStack cloud, but all existing networks, subnets, ports, etc., need to be deleted before enabling the port security extension. This typically means all VM instances also need to be deleted as well, but a knowledgeable cloud administrator **may** be able to do the following to limit the disruption of enabling the port security extension:

- Record the current IP address assignments for all VM instances,
- Remove the network interfaces from any existing VM instances,
- Delete the Neutron resources,
- Enable the port security extension,
- Re-create the previously defined Neutron resources (networks, subnets, ports, etc.), and then
- Re-add the appropriate network interfaces to the VMs.

Depending on the number of VM instances running in the cloud, this procedure may or may not be practical.

Appendix G.7 After a VM Instance has been Booted: Port Security

If you need to disable port security for a port after it has already been associated with a VM instance, then you need to execute one or both of the following commands to use the port security option. First, if the VM instance with which the existing port is associated has any associated security groups (run `nova list-secgroup <VM instance name>` to check), then you first need to run a command of the following form for each of the security group(s) associated with the VM instance:

```
# nova remove-secgroup <VM instance name> <Security group name>
```

where the bolded item has the following meaning:

- **<VM instance name>**
Identifies the name of the VM instance for which the identified security group name should be deleted.
- **<Security group name>**
Identifies the name of the security group that should be removed from the VM instance.

So for example if you wanted to remove the default security group from a VM instance named 'testvm4' then you would type a command similar to the following:

```
# nova remove-secgroup testvm4 default
```

Once any security groups associated with VM instance to which the Neutron port is assigned have been removed, then the Neutron port(s) associated with the target VM instance need to be updated to disable port security on those ports. The command to disable port security for a specific Neutron port is of the form:

```
# neutron port-update <Port ID> -- port-security-enabled=false
```

where the bolded item has the following meaning:

- **<Port ID>**
Identifies the ID of the port within Neutron which can be determined by listing the ports, `neutron port-list`, or if the port is named then the port ID can be obtained directly in the above command with a sequence such as `$(neutron port-show -f value -F id <Port Name>)`.

So for example if you wanted to indicate to Neutron that port security should be disabled for a port with an ID of 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 then you would type the following command:

```
# neutron port-update 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 --port-security-enabled=false
```

If the port-update command succeeds, within the VM instance with which the 6d48b5f2-d185-4768-b5a4-c0d1d8075e41 port is associated, application managed VIPs can now be added to the network interface within the VM instance associated with the port and network traffic using that VIP address should now propagate.

Appendix G.8 Before a VM Instance has been Booted: Port Security

If you want to disable port security for a port before it is associated with a VM instance, then you need to first create the port at which time you can specify that port security should be disabled. The command to create a new port with port security disabled is of the following form:

```
# neutron port-create --name <Port Name> --port-security-enabled=false --fixed-ip subnet-id=$(neutron subnet-show -f value -F id <Subnet
```

```
name>), ip_address=<Target IP address> $(neutron net-show -f value -F id
<Network name>)
```

where the bolded items have the following meaning:

- **<Port Name>**
This is effectively a string alias for the port that is useful when trying to locate the ID for the port but the **—name <Port Name>** portion of the command is completely optional.
- **<Subnet name>**
The name of the subnet to which the port should be added.
- **<Target IP address>**
The unique IP address to be associated with the port.
- **<Network Name>**
The name of the network with which the port should be associated.

So for example if you wanted to indicate to Neutron that a new port should have port security disabled and an IP address of 10.133.97.133 on the **ext-subnet** subnet then you would type a command similar to the following:

```
# neutron port-create -name foo --port-security-enabled=false --fixed-ip
subnet-id=$(neutron subnet-show -f value -F id ext-
subnet), ip_address=10.133.97.133 $(neutron net-show -f value -F id ext-net)
```

Once the port or ports with port security disabled have been created, when you boot the VM instance, you need to execute a command similar to the following:

```
# nova boot --flavor m1.xlarge --image testVMimage --nic port-id=$(neutron
port-show -f value -F id <Port Name>) testvm3
```

where the flavor, image, and VM instance name values need to be replaced by values appropriate for your VM. If the port to be associated with the VM instance is not named, then you need to obtain the port's ID using the neutron port-list command and replace the `$(neutron port-show -f value -F id <Port Name>)` sequence in the above command with the port's ID value.

Appendix G.9 Managing Application Virtual IP Addresses within VM Instances

Once either of the previously described options is in place to enable applications to manage their own virtual IP addresses, there should be no modifications required to how the application already manages its VIPs in a non-virtualized configuration. There are many ways that an application can add or remove virtual IP addresses but as a reference point, here are some example command line operations to add a virtual IP address of 10.133.97.136 to the eth0 network interface within a VM and then send four gratuitous ARP packets to refresh the ARP caches of any neighboring nodes:

```
# ip address add 10.133.97.136/23 broadcast 10.133.97.255 dev eth0 scope
global
# arping -c 4 -U -I eth0 10.133.97.136
```

As the creation of virtual IP addresses typically coincides with when an application is assigned an active role, the above operations would be performed both when an application instance first receives an initial active HA role or when an application instance transitions from a standby HA role to the active HA role.

Appendix H. Sample Net Rules File

Udev uses rules files that determine how it identifies devices and creates device names. The udev daemon (udev) reads the rules files at system startup and stores the rules in memory. If the kernel discovers a new device or an existing device goes offline, the kernel sends an event action (uevent) notification to udevd, which matches the in-memory rules against the device attributes in /sys to identify the device. As part of device event handling, rules can specify additional programs that should run to configure a device. Rules file, which have the file extension .rules, is located in the following directory: /etc/udev/rules.d/*.rules

Sample File:

```
# eth0 interface with MAC address "fa:16:3e:cc:12:d6" will be assigned "xmi"
SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*",
ATTR{address}=="fa:16:3e:cc:12:d6", ATTR{dev_id}=="0x0", ATTR{type}=="1",
KERNEL=="eth*", NAME="xmi"

# eth1 interface with MAC address "fa:16:3e:1a:8d:8a" will be assigned "int"
SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*",
ATTR{address}=="fa:16:3e:1a:8d:8a", ATTR{dev_id}=="0x0", ATTR{type}=="1",
KERNEL=="eth*", NAME="int"
```

Note: If you need a 3rd interface add respective entry also. The iDIH Mediation VM needs an imi interface too.

```
# eth1 interface with MAC address "fa:16:3e:1a:8d:8a" will be assigned "int"
SUBSYSTEM=="net", ACTION=="add", DRIVERS=="?*", ATTR{address}=="
fa:16:3e:8a:1a:12", ATTR{dev_id}=="0x0", ATTR{type}=="1", KERNEL=="eth*",
NAME="imi":
```

Notes:

1. MAC address of each interfaces can be determined using the following command issued from the console: `ifconfig -a`
2. Update MAC address for each interface. The MAC addresses must be entered in all lower case.
3. Update the interface names as in the above example

Appendix I. Performance Tuning Recommended

Appendix I.1 KVM/OpenStack

For the DSR system to achieve 50K MPS or more through IPFE, a few tuning parameters need to be changed.

txqueuelen

Tuned on the compute hosts.

Purpose: default value of 500 is too small. Our recommendation is to set to 30000. Increases the network throughput of a VM.

How/What to change:

On each compute host, do the following as root.

```
# cat > /etc/udev/rules.d/60-tap.rules << EOF
KERNEL=="tap*", RUN+="/sbin/ip link set %k txqueuelen 30000"
EOF
```

Reload and apply to the running system

```
# udevadm control --reload-rules
# udevadm trigger --attr-match=subsystem=net
```

Ring buffer increase on the physical ethernet interfaces

Tuned on the compute hosts.

Purpose: Improves the overall network throughput of the host.

How/What to change: This varies depending on the Host OS. The following steps are applicable to centos/fedora/rhel.

Add the following line into the network script of the interface you want to change. For example: To change the ring buffer on the eth2 interface. Edit /etc/sysconfig/network-scripts/ifcfg-eth2 to add the `ETHTOOL_OPTS=` line as shown.

```
DEVICE=eth2
TYPE=Ethernet
ETHTOOL_OPTS="--set-ring eth2 rx 4096 tx 4096"
```

Restart the network using "service network restart" as root. Check the setting using `ethtool -g eth2`.

Multiqueue [on IPFE]

To be enabled on the openstack flavor and glance image for IPFE instance.

Purpose: Improves the network throughput of a VM.

How/What to change:

You need to update the flavor and the image to enable multiqueue. All guests using that image will be created with multiqueue.

```
# openstack flavor set m1.large --property hw:vif_multiqueue_enabled=true
# glance image-update b5592ed4-8f41-48a9-9f0c-e0e46cb3dd6c --property
hw_vif_multiqueue_enabled=true
```

On the Guest set the number of queues to number of vcpus.

Add the following line into the network script of the interface you want to change.

For example: To set the number of queues to number of vcpus.

Edit /etc/sysconfig/network-scripts/ifcfg-eth_interface to set the multiqueue value to the number of vCPUs:

```
DEVICE=eth
TYPE=Ethernet
ETHTOOL_OPTS="-L ${DEVICE} combined <no_of_vCPUs>
```

Restart the network using "service network restart" as root.

Check the setting using `ethtool -l <eth_interface>`.

Appendix I.2VMware

txqueuelen

Tuned on the ESXi hosts.

Purpose: Default value of 500 is too small. The recommendation is to set to 10000 which increases the network throughput of a VM. ESXi defaults the value to 500 and permits a max value of 10000

How/What to change:

Log into the cli console of the ESX host and execute the below esxcli command:

```
#esxcli system settings advanced set -i=10000 -o=/Net/MaxNetifTxQueueLen
```

Ring buffer increase on the physical Ethernet interfaces

Tuned on the ESXi hosts.

Purpose: Improves the overall network throughput of the host. On an ESXi host Rx buffer defaults to 512 and Tx buffer defaults to 1024 and the max value for both is 4096

How/What to change:

Log into the cli console of the ESX host and execute the below esxcli commands:

```
#esxcfg-nics -l      (lists all the physical NICs attached to the host)
```

```
#ethtool -g <interface name>  (shows the current ring buffer size)
```

```
#ethtool -G <interface name> rx 4096  (increases the rx buffer size to 4096)
```

```
#ethtool -G <interface name> tx 4096  (increases the tx buffer size to 4096)
```

Multiqueue

Already enabled on ESXi for vmxnet3 adapters.

Purpose: Improves the network throughput of a VM.

Advanced NUMA settings

Tuned on ESXi hosts.

Purpose: Prevents the ESXi scheduler to move VMs around from one NUMA node to another.

How/What to change:

Log into the cli console of the ESX host and execute the below esxcli commands:

```
#esxcli system settings advanced set -i=0 -o=/Numa/SwapLoadEnable
```

```
#esxcli system settings advanced set -i=0 -o=/Numa/SwapLocalityEnable
```

Appendix I.3 Multiqueue on IPFE (OL/KVM)

To be enabled on the KVM flavor and glance image for IPFE instance.

Purpose: Improves the network throughput of a VM.

How/What to change:

You need to update the flavor and the image to enable multiqueue. All guests using that image is created with multiqueue. By default, the combined number of queues for a VM is 1. The KVM only supports a maximum of 8 queues per VM in it is TAP devices.

Note: The max can be increased in the VM's configuration XML but must be set to max inside the VM during runtime.

Procedure 66. Multiqueue on IPFE (OL/KVM)

Step No.	Procedure	Description
1. <input type="checkbox"/>	Enabling Multiqueue on IPFE: Increase the number of multi queues	Increase the number of multi queues on the VM, by default the combined number of queues for a VM is 1. The KVM only supports a maximum of 8 queues per VM in it's TAP devices. Note: The max can be increased in the VM's configuration XML but must be set to max inside the VM during runtime.
2. <input type="checkbox"/>	List the names of all the VMs	View the list of all the VMs: <pre>#virsh list --all</pre>
3. <input type="checkbox"/>	Open the XML configuration of the VM	Edit the XML configuration of the VM that needs to be modified for the maximum number of combined RX and TX queues. <pre># virsh edit <VM Name></pre> For example: <code>virsh edit DSRMP</code>
4. <input type="checkbox"/>	Find the XML tag for <pre><interface ..> .. </interface></pre>	Find the XML tag for <code><interface ..> .. </interface></code> Note: Follow this process for all the interfaces in the XML. The existing interface tag appears as below: <pre><interface type='bridge'> <mac address='52:54:00:f7:eb:7d' /> <source bridge='xsi1' /> <model type='virtio' /> <driver name='vhost' queues='6' /> <address type='pci' domain='0x0000' bus='0x00' slot='0x05' function='0x0' /> </interface></pre>

Step No.	Procedure	Description
5. <input type="checkbox"/>	Modify the XML and add number of queues	<p>Modify the XML and add the following line to the interface.</p> <pre><driver name='vhost' queues='6' /></pre> <p>Here, 6 represents the number of queues and can be maximum upto 8.</p> <p>The updated tag appears as below:</p> <pre><interface type='bridge'> <mac address='52:54:00:bf:2f:a0' /> <source bridge='xsi1' /> <model type='virtio' /> <driver name='vhost' queues='6' /> <address type='pci' domain='0x0000' bus='0x00' slot='0x05' function='0x0' /> </interface></pre>
6. <input type="checkbox"/>	Reboot the VM	Once the XML has been modified, reboot the VM for the changes to take effect.
7. <input type="checkbox"/>	Login to the VM	<p>Login to the VM using the IP or virsh console and set the number of multiqueues as required for the interfaces</p> <pre># virsh console <VM Name></pre>
8.	Set the number of multiqueues	<p>List the current number of combined queues for the interface:</p> <pre>[root@DSR-Gen10-ol7 administrator]# ethtool -l eth2</pre>
9.	Verify that the Multiqueue value is set	<p>Set the number of combined queues to 6:</p> <pre># ethtool -L eth2 combined 6</pre> <p>Note: Perform this for all the interfaces (xsi1 and xsi2). The number of combined queues can vary from 1 to the value set in the guest XML in Step 5.</p>

Appendix I.4 Ring buffer configuration

To be enabled on the KVM flavor and glance image for ring buffer configuration.

Purpose: Improves the network throughput of a VM.

How/What to change:

Procedure 67. Ring buffer configuration (OL/KVM)

Step No.	Procedure	Description
1.	Ring buffer sizes are set to max on all the ether-net devices	<p>Ensure that the ring buffer sizes are set to max on all the ether-net devices on the host machine.</p> <ol style="list-style-type: none"> 1. Create <code>"/sbin/ifup-local"</code> file: <pre>[root@DSR-Gen10-ol7 ova]# touch /sbin/ifup-local</pre> 2. Change the permission: <pre>[root@DSR-Gen10-ol7 ova]# chmod +x /sbin/ifup-local</pre> 3. Change file security context: <pre>[root@DSR-Gen10-ol7 ova]# chcon --reference /sbin/ifup /sbin/ifup-local</pre> <p>Add the below script to file <code>/sbin/ifup-local</code>:</p> <pre>#!/bin/bash /sbin/ethtool -G eth0 rx 4078 tx 4078 /sbin/ethtool -G eth1 rx 4078 tx 4078 /sbin/ethtool -G eth2 rx 4078 tx 4078 /sbin/ethtool -G eth3 rx 4078 tx 4078</pre>
2.	Verify the ring buffer sizes are set to max	<p>Verify that the ring buffer sizes are set to max on all the ether-net devices on the host machine:</p> <pre># ethtool -g <ethernet adapter></pre> <p>Verify the same for eth1, eth2 and eth3</p>
3.	Restart all interfaces	<p>Restart all ethernet adapter eth0, eth1, eth2,eth3, one by one, by using the following command:</p> <pre>[root@DSR-Gen10-ol7 ova]# ifdown <ethernet adapter></pre> <pre>[root@DSR-Gen10-ol7 ova]# ifup <ethernet adapter></pre> <p>Verify again by using above Step 37.</p>

Appendix I.5 Disabling TSO GSO features for SBR server

Purpose: To disable the TSO GSO features. This is applicable for SBR servers installed on KVM.

How/What to change: Run the following command to disable TSO GSO features on SBR VM:

```
ethtool -K eth<X> tso off gso off
```

After disabling the TSO GSO features, the TCP queue is cleared and replication should come up.

Appendix J. Example Files

Appendix J.1 Example Template File

Basic guidelines to follow while working with YAML files:

- The file must be ended with .yaml extension.
- YAML must be case-sensitive and indentation-sensitive.
- YAML does not support the use of tabs. Instead of tabs, it uses spaces.

YAML is a human-friendly data serialization standard for all programming languages.

The values of the **key:value** can be broadly classified into the following types:

Type	Description	Examples
string	A literal string.	"String param"
number	An integer or float.	"2"; "0.2"
comma_delimited_list	An array of literal strings that are separated by commas. The total number of strings should be one more than the total number of commas.	["one", "two"]; "one, two"; Note: "one, two" returns ["one", "two"]
json	A JSON-formatted map or list.	{"key": "value"}
boolean	Boolean type value, which can be equal "t", "true", "on", "y", "yes", or "1" for true value and "f", "false", "off", "n", "no", or "0" for false value.	"on"; "n"

Appendix J.2 Example Parameter File

The parameter file defines the topology details. This includes all VM details such as the number of VMs, flavors, network names, etc. It is a list of key/value pairs. By referring to the **parameters** definition section in the template file, the initialization of the parameters has to be done in this section.

File Naming Convention

It is not mandatory to have a specific name for the file; but just to provide a self-explanatory name for the file, it is recommended to follow this convention:

<DSR Name>_<Site Name>_<NetworkOam/SignallingNode>_Params.yaml

For example:

- dsrCloudInit_Site00_NetworkOam_Params.yaml
- dsrCloudInit_Site00_SignalingNode_Params.yaml

Sample File

Network OAM params file

parameters:

```
numPrimaryNoams: 1
```

Appendix K. My Oracle Support (MOS)

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at **1-800-223-1711** (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select **2** for New Service Request.
2. Select **3** for Hardware, Networking and Solaris Operating System Support.
3. Select one of the following options:
 - For technical issues such as creating a new Service Request (SR), select 1.

For non-technical issues such as registration or assistance with MOS, select 2.

You are connected to a live agent who can assist you with MOS registration and opening a support ticket. MOS is available 24 hours a day, 7 days a week, 365 days a year.

Emergency Response

In the event of a critical service situation, emergency response is offered by the CAS main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

Locate Product Documentation on the Oracle Help Center

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the **Oracle Help Center** site at <http://docs.oracle.com>.
2. Click Industries.
3. Under the **Oracle Communications** subheading, click the **Oracle Communications documentation** link. The Communications Documentation page appears. Most products covered by these documentation sets display under the headings **Network Session Delivery and Control Infrastructure** or **Platforms**.
4. Click on your Product and then the Release Number. A list of the entire documentation set for the selected product and release displays. To download a file to your location, right-click the PDF link, select `Save target as` (or similar command based on your browser), and save to a local folder.
