This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

My Oracle Support

My Oracle Support (https://support.oracle.com) is your initial point of contact for all product support and training needs. A representative at Customer Access Support can assist you with My Oracle Support registration.

Call the Customer Access Support main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at http://www.oracle.com/us/support/contact/index.html. When calling, make the selections in the sequence shown below on the Support telephone menu:

- 1. Select 2 for New Service Request.
- 2. Select **3** for Hardware, Networking and Solaris Operating System Support.
- 3. Select one of the following options:
 - For Technical issues such as creating a new Service Request (SR), select 1.
 - For Non-technical issues such as registration or assistance with My Oracle Support, select **2**.

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

Acronyms and Terminology

Listed below is an alphabetized list of acronyms used in the document:

Acronym	Definition	
BNS	Broadband Networking Solutions	
ComAgent	Communication Agent. An EXG common infrastructure component delivered as part of a common plug-in that uses the COMCOL MX framework in support of communicating Stack Events between EXG application processes on different servers.	
DA-MP	Diameter Agent Message Processor	
DB	Database	
DP	Data Processor	
DSR	Diameter Signaling Router	
FABR	Full-Address Based Resolution	
FOA	First Office Application	
GUI	Graphical User Interface	
НА	High Availability	
IMI	Internal Management Interface	
IP	Internet Protocol	
MP	Message Processing or Message Processor	
NE	Network Element	
NOAM	Network OAM	
OAM	Operations, Administration and Maintenance	
SDS	Subscriber Database Server	
SOAM	System OAM	
SSH	Secure Shell	
UI	User Interface	
VIP	Virtual IP	
VPN	Virtual Private Network	
ХМІ	External Management Interface	

Table Acronyms and Terminology

Whats New in This Guide

No updates made to this document in this release.

1 Purpose and Scope

This document defines the procedure that is executed to activate the Full-Address Based Resolution (FABR) feature on a DSR network element (NE). This procedure is run in either of the following scenarios:

- As part of a new DSR installation, after the standard DSR installation is complete (before the NE is in service).
- On an in-service DSR NE, where the FABR feature is activated during a planned maintenance window to minimize the impact to network traffic.

This document also provides a procedure to deactivate FABR after it has been activated. Refer to Feature Deactivation

Configuration of FABR and Communication Agent (ComAgent) following successful activation is beyond the scope of this document. After successful activation, the crafts person is expected to configure ComAgent and FABR in that order for proper operation of FABR. For more information refer to the document *Diameter Signaling Router Full Address Based Resolution (FABR) User's Guide*.

No additional software installation is required before executing this procedure. The standard DSR installation procedure has loaded all of the required software, even if the FABR feature is activated later.

2 References

• Diameter Signaling Router Full Address Based Resolution (FABR) User's Guide (Latest revision).

3 Feature Activation Overview

This section lists the required materials and information needed to execute the feature activation. In addition, the sections Pre-Feature Activation Overview through Post-Feature De-activation Overview provide estimates of the time required to execute the procedure. These tables can be used to estimate the total time necessary to complete the feature activation. The timing values shown are estimates only – use these tables to plan the timing of the activation, not to execute the procedure. The detailed procedure steps to be executed are described in Feature Activation.

Definition of Activation for the FABR Feature

The precise meaning of activation varies from feature to feature. This section briefly defines what activation means with respect to the FABR feature.

The main components of a FABR system include the FABR (DSR) application, the subscriber database (hosted by the DP/SDS system that supports one or more DPs), and the Communication Agent (ComAgent) which provides reliable connectivity and load sharing of multiple DP servers from the FABR application.

ComAgent is a component, which is also used by other features to enable connectivity to servers required by such features. Hence, ComAgent, as a component, is not unique to FABR. However, certain aspects of this component are used by FABR to provide connectivity to the DP servers. Configuration or provisioning of these aspects of ComAgent is beyond the scope of this document. However, the activation procedure initializes the ComAgent component in such a way that it becomes possible to further configure or provision this component for use by FABR.

The configuration and setup of the DP/SDS is beyond the scope of this document. The configuration and setup of FABR (DSR) application and ComAgent (on DSR) post activation is beyond the scope of this document.

All software required to run FABR is available by default as part of a DSR release installation or upgrade (This includes the ComAgent libraries and GUI/OAM code required to configure communication with the subscriber database). The process of activating the feature simply makes proper use of software elements and file system files that are already present, to change the behavior of the DSR NE.

Before FABR feature activation, there are no FABR menu items visible on the SOAM GUI, and there is no FABR related processing taking place on the DA-MP(s).

All ComAgent related menu items are present on the NOAM GUI, allowing full ComAgent configuration and provisioning. The ComAgent managed objects are under the Communication Agent folder on the GUI menu. For the ComAgent, this means that the top level Communication Agent folder is visible on the Main Menu, for example, the ComAgent Configuration screens (Remote servers, Connection Groups, and Routed Services), and the ComAgent Maintenance screens (Connection Status, Routed Services Status, HA Services Status) are visible.

After feature activation, all selectable FABR menu items are present on the SOAM GUI, allowing full FABR configuration and provisioning. Specifically, for FABR application, the top-

level FABR folder is visible on the Main Menu, and a new entry is added to the **Diameter -> Maintenance -> Applications** table, showing FABR and its state. After successful feature activation, a Connection Group named DpSvcGroup is added, to the Connection Groups screen, a Routed Service named DpService is added to the Routed Services screen and is mapped to use the DpSvcGroup Connection Group at default priority 10.

After activation:

The DA-MP(s) are prepared to act on FABR and ComAgent configuration and provisioning information entered at and replication from the NOAM (in case of ComAgent configuration or provisioning) and SOAM (in case of FABR configuration or provisioning).

Note:

Once the FABR feature is activated, it is not automatically enabled. Activation simply means the mechanism for provisioning FABR behavior is in place. But the DA-MP(s) acts on FABR provisioning information only after FABR has been enabled (via the **Diameter -> Maintenance -> Applications** screen). FABR should not be enabled until after the appropriate provisioning data has been entered. FABR provisioning is beyond the scope of this document. Furthermore, for proper operation of FABR, Communication Agent and FABR applications assume the Remote server IP addresses are routable or reachable. However, these networking setup or concerns are beyond the scope of the activation procedure.

Pre-Feature Activation Overview

The pre-activation procedures shown in the following table may be executed outside a maintenance window if desired. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Procedure	F F		Activity Feature Activation Preparation	Impact
	This Step Cum.			

Table 3-1 Pre-Feature Activation Overview

Procedure	Elapsed Time (Ho	ours:Minutes)	Act	tivity Feature tivation eparation	Impact
System Topology Check	0:20	0:20	•	Verify Network Element Configuratio n data. Verify System Group Configuratio n data. Analyze and plan DA-MP restart sequence.	None
Perform Health Check	0:05	0.25	•	Verify DSR release. Verify server status. Log all current alarms.	None

 Table 3-1
 (Cont.) Pre-Feature Activation Overview

Feature Activation Execution Overview

The procedures shown in the following table are executed inside a single maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Procedure			Act	tivity Feature tivation eparation	Impact
	This Step	Cum.			
Perform Health Check (Pre- Feature Activation)	0:05	0:05	•	Verify DSR release. Verify proper FABR feature state. Verify server status. Log all current alarms.	None

 Table 3-2
 Feature Activation Execution Overview

Procedure	Elapsed Time (Hou	urs:Minutes)	Activity Feature Activation Preparation	Impact
Feature Activation	0:20	0.25	 Log out of NOAM or SOAM GUI. SSH to active NOAM. Login as admusr. Change directory to /usr/ TKLC/dsr/ prod/maint/ loaders/. Execute the feature activation script. Log into SOAM GUI. Verify the FABR Folder. Verify Maintenance screen. Log into NOAM GUI. Verify Maintenance screen. Close SSH connections to NOAM. 	FABR is activated

Table 3-2 (0	Cont.) Feature	Activation	Execution	Overview
--------------	----------------	------------	-----------	----------

Post-Feature Activation Overview

The procedures shown in the following table are executed inside a maintenance window. Procedure completion times shown here are estimates. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Pro	ocedure			Activity Feature Activation Completion	Impact
		This Step	Cum.		

Table 3-3 Post-Feature Activation Overview

Procedure			Activity Feature Activation Completion		Impact
Perform Health Check (Post- Feature Activation)	0:05	0:05	• •	Verify server status. Log all current alarms.	FABR has been activated on DSR

 Table 3-3 (Cont.) Post-Feature Activation Overview

4 Pre-Feature Deactivation Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Procedure	Elapsed Time (Hours:Minutes)	Elapsed Time (Hours:Minutes)	Activity Feature Activation Completion	Impact
	This Step	Cum.		
Perform Health Check (Pre- Feature Deactivation)	0:05	0:05	 Verify DSR release. Verify proper FABR feature state. Verify server status. Log current alarms. 	None

Table 4-1 Pre-Feature Deactivation Overview

5 Feature Deactivation Execution Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Procedure			Activity Feature Activation Completion	Impact
	This Step	Cum.		
Deactivation Setup	0:30	0:30	 The reason to deactivate has a direct impact on any additional back-out preparation that must be done. Since not all possible reasons can be predicted ahead of time, only estimates are given here. Execution time will vary. 	

Table 5-1 Feature Deactivation Overview

Procedure	Elapsed Time (Hou	urs:Minutes)	Acti	ivity Feature ivation npletion	Impact
Feature De- Activation	0:20	0:50	•	Log out of active NOAM/ SOAM GUI. SSH into active NOAM. Login as admusr Change directory to /usr/ TKLC/dsr/ prod/maint/ loaders/ Execute the feature deactivation script. Log into NOAM or SOAM GUI. Verify the FABR folder. Log into NOAM GUI Verify Maintenance screen.	FABR is deactivated

 Table 5-1 (Cont.) Feature Deactivation Overview

6 Post-Feature De-activation Overview

The procedures shown in the following table are executed inside a maintenance window. Deactivation procedure times are only estimates as the reason to execute a deactivation has a direct impact on any additional deactivation preparation that must be done. Times may vary due to differences in database size, network configuration and loading, user experience, and user preparation.

Procedure	Elapsed Time (Hou	ırs:Minutes)	Act	ivity Feature ivation npletion	Impact
	This Step	Cum.			
Perform Health Check (Post- Feature Deactivation)	0:05	0:05	•	Verify server status. Log all current alarms.	None

Table 6-1 Post-Feature Deactivation Overview

7 Feature Activation Preparation

This section provides detailed procedures to prepare a system for FABR feature activation. These procedures are executed outside a maintenance window.

System Topology Check

This procedure is part of feature activation preparation and is used to verify the system topology of the DSR network and servers.

- 1. Log in to the NOAM VIP GUI, establish a GUI session on the NOAM server by using the VIP address of the NOAM server.
- 2. Open the web browser and enter the URL, http://<Primary_NOAM_VIP_IP_Address>
- 3. Log in as the guiadmin user.

Print Save Back

9. Verify the server configuration. Expand the **Configuration** and click the **Server Groups** option.

10. Click Report

Figure 7-7 Report

Insert	Edit	Lock/Unlock	Delete	Report
--------	------	-------------	--------	--------

11. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

Print Save Back

12. Analyze and plan the DA-MP re-start sequence. Analyze the system topology and plan for any DA-MPs, which will be out-of-service during the feature activation

sequence. Analyze system topology gathered in Step 5 and Step 9. Determine exact sequence which DA-MP servers will be restarted (with the expected out-of-service periods).**Note:** It is recommended that no more than 50% of the MPs be restarted at once.

If this procedure fails, contact My Oracle Support (MOS) for assistance.

Perform Health Check

This procedure is part of feature activation preparation and is used to determine the health and status of the DSR release network and servers. This step may be executed multiple times, but must also be executed at least once within the time frame of 24 to 36 hours before the start of the maintenance window in which the feature activation takes place.

Log in to the NOAM VIP GUI, establish a GUI session on the NOAM server by using the VIP address of the NOAM server.

- 1. Open the web browser and enter the URL, http://<Primary_NOAM_VIP_IP_Address>
- 2. Log in as the guiadmin user.

			Network Elements
			Server
			HA
			Database
			KPIs
			Processes

4. Verify if Server Status is Normal (Norm) for:Alarm (Alm), Database (DB), Replication Status, and Processes (Proc).

Figure 7-11 Server Status

Appl State	Alm	08	Reporting Status	Proc
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm
Enabled	Norm	Norm	Norm	Norm

Do not proceed to feature activation if any of the above states are not Norm. If any of these are not Norm, corrective action should be taken to restore the non-Norm status to Norm before proceeding with the feature activation. If the Alarm (Alm) status is not Norm but only Minor alarms are present, it is acceptable to proceed with the feature activation. If there are Major or Critical alarms present, these alarms should be analyzed prior to proceeding with the feature activation. The activation may be able to proceed in the presence of certain Major or Critical alarms.

5. Log current alarms, Expand Alarms & Events option and click View Active.

6. Click Report

Export	Report	Clear Selections

7. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

If this procedure fails, contact My Oracle Support (MOS) for assistance.

8 Feature Activation

Before feature activation, perform the system health check in Perform Health Check. This check ensures that the system is ready for feature activation. Performing the system health check determines which alarms are present in the system and if feature activation can proceed with alarms.

Figure 8-1 Warning

Read the following notes on feature activation procedures:

- Where possible, command response outputs are shown as accurately as possible. EXCEPTIONS are as follows:
 - Session banner information such as time and date.
 - System-specific configuration information such as hardware locations, IP addresses, and host names.
 - ANY information marked with "XXXX" or "YYYY" where appropriate, instructions are provided to determine what output should be expected in place of "XXXX or YYYY".
 - Aesthetic differences unrelated to functionality such as browser attributes: window size, colors, tool bars, and button layouts.
- After completing each step and at each point where data is recorded from the screen, the technician performing the feature activation must track each step. The technician must track each iteration of the step that is executed.
- Captured data is required for future support reference.

9 Pre-Activation Procedures

Perform Health Check

This procedure is used to determine the health and status of the network and servers. This must be executed at the start of every maintenance window.

Note:

The health check procedure below is the same as the health check procedure described in Perform Health Check when preparing for feature activation, but it is repeated here to emphasize that it is being re-executed if the procedure was performed outside the maintenance window.

Perform Health Check (Pre-Feature Activation)

Procedure 1: System Topology Check

This procedure provides steps to perform the required health checks.

Log in to the SOAM VIP GUI, establish a GUI session on the SOAM server by using the VIP address of the SOAM server.

- 1. Open the web browser and enter the URL, http://<Primary_SOAM_VIP_IP_Address>
- 2. Log in as the guiadmin user.

Export Clear Selections

11. Verify if the configuration data is correct for your network. **Save** or **Print** this report to keep copies for future reference.

If this procedure fails, contact My Oracle Support (MOS) for assistance.

10 Activation Procedures

This section provides the detailed procedure for the feature activation. These procedures are executed inside a maintenance window.

Feature Activation

Detailed steps for FABR feature activation are provided in this procedure.

1. Log out from any active NOAM and/or SOAM GUI sessions.

Figure 10-1 Logout

Pause Updates	I	Help	I	Logged in Account guiadmin 💌 Log Out
				Fri Aug 12 13:13:00 2016 EDT

- 2. Establish an SSH session to the NOAM VIP. Log in as admusr.
- 3. Navigate to the feature activation directory by executing the following command \$ cd /usr/TKLC/dsr/prod/maint/loaders/
- **4.** Execute the feature activation script, run the feature activation script by executing the following command:

<pre>\$./featureActivateDeactivate</pre>
Select Activate.
You want to Activate or Deactivate the Feature : 1.Activate 2.Deactivate Enter your choice :
Select FABR.
List of Feature you can Activate : 1.RBAR 2.FABR 3.Mediation 4.LoadGen 5.GLA 6.MAP Interworking 7.DTLS 8.DCA Framework 9.DCA Application
Select the SOAM site for which the application will be activated: Note: As an alternative, you can also activate on all SOAM sites:
The Active SO server configured in the Topology are

Figure 10-2 Feature Activation Script

Refer to Sample Output of Activation (Active NOAM) for output example.

- 5. Establish a GUI session on the Active SOAM Server by using IP address of the SOAM server. Open the web browser and enter the following URL http:// <Active_SOAM_IP_Address>
- 6. Login as the guiadmin user.

	Unauthorized access is prohibited.

12. Restart DA-MPs. Multiple iterations of this step may be executed during the feature activation procedure. This is dependent on the number of DA-MP servers within your system. Make a written record of the number of times the step was performed. It is recommended that no more than 50% of the DA-MPs be restarted at once. Expand the **Status & Manage** and click the option **Server**.

Figure 10-7 Server Folder

Select the desired DA-MPs, use the **Ctrl** button to select multiple DA-MPs at once.

13. Click Restart.

Fi	gu	re :	Re	start	
Sto	p	Restart	Reboot	NTP Sync	Report

Click OK to confirm.

Verify the server changes to the Err state and wait until it returns to the Enabled/ Norm state.

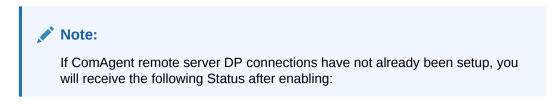

Repeat for the additional DA-MPs.

14. Enable the application. Expand the **Diameter** option, click **Maintenance** and select **Applications**. Select the MP servers on which FABR is present, press **Ctrl** to select multiple servers at once. Click **Enable**.

Figure	10-9	Enable
Enable	Disable	Pause update

15. Click **OK** to confirm the operation.

Note:

If not already done so, refer Diameter Signaling Router Full Address Based Resolution (FABR) User's Guide to configure the needed ComAgent connections.

- **16.** Complete the FABR configuration. Follow the instructions in Diameter Signaling Router Full Address Based Resolution (FABR) User's Guide to complete FABR configuration.
- In the SOAM VIP GUI, verify if the application maintenance screen is visible. Assuming SDS is installed, and ComAgent remote server connections are configured, the following should be displayed. Expand the **Diameter** option, click **Maintenance** and select **Applications**.

Verify if the FABR status is initialized. The following data should be displayed:

- Admin State = Enabled
- Operational Status = Available
- Operational Reason = Normal
- Congestion Level = Normal

Figure 10-12 FABR Status

FABR ZombleDAM Enabled Available Normal Normal 2016-Aug-16.09:57:53 EDT

If this procedure fails, contact My Oracle Support (MOS) for assistance.

11 Post-Activation Procedures

This section describes the procedures to be followed after FABR feature activation.

Perform Health Check (Post-Feature Activation)

This procedure is used to determine the health and status of the DSR release network and servers. If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

Procedure 5: Perform Health Check (Post-Feature Activation)

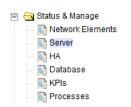

- 1. Log in to the NOAM VIP GUI. Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. Open the web browser and enter the URL http://
- 2. Log in as the guiadmin user.

4. Log current alarms. Expand Alarms & Events option and click View Active

View Trap Log

5. Click Report.

Figure 11-5 Report

Export Report Clear Selections

6. Click Save or Print. Keep the report copies for future reference.

Print Save Back

Compare this alarm report with those gathered in the pre-activation procedures. If this procedure fails, contact My Oracle Support (MOS) for assistance.

12 Feature Deactivation

This section describes the FABR feature deactivation procedure. Execute this section only if there is a problem and it is desired to revert back to the pre-activation version of the software. In general, as long as there are no Application Routing Rules using the FABR application, it will have no impact on the system and does not need to be deactivated. The deactivation procedure will cause all the FABR related configuration data (including the ComAgent DP service related configuration and Application Routing Rules using FABR) to be removed. The crafts person must ensure that this is acceptable.

Pre-Deactivation Procedures

Pre-Deactivation Procedures

Before beginning the feature deactivation, complete the pre-deactivation procedure described below.

Perform Health Check (Pre-Feature Deactivation)

This procedure is used to determine the health and status of the DSR network and servers. This procedure performs a health check. If this procedure fails, contact My Oracle Support (MOS) for assistance.

- 1. Log in to the SOAM VIP GUI. Establish a GUI session on the SOAM server by using the VIP address of the SOAM server. Open the web browser and enter the URL http:// <Primary_SOAM_VIP_IP_Address>
- 2. Log in as the guiadmin user

10. Save or Print this report to keep copies for future reference.

Compare this alarm report with those gathered in the pre-activation procedures.

If this procedure fails, contact My Oracle Support (MOS) for assistance.

De-activation Procedures

This chapter describes the FABR feature de-activation procedures.

Feature De-Activation

This section provides the detailed steps of the FABR de-activation procedures.

- Log in to the SOAM VIP GUI. Establish a GUI session on the SOAM server by using the VIP address of the SOAM server. Open the web browser and enter the URL http:// <Active_SOAM_IP_Address>
- 2. Log in as the guiadmin user.

4. Select the FABR applications to disable, click **Disable**.

6. Log out of any active NOAM and/or SOAM GUI sessions.

Figure 12-13 Log out GUI

Pause Updates | Help | Logged in Account guiladmin 💌 | Log Out

- 7. Establish a SSH session to the NOAM VIP. Log in as admusr.
- 8. Navigate to the feature activation directory by executing the command \$ cd /usr/ TKLC/dsr/prod/maint/loaders/
- **9.** In the NOAM VIP GUI, run the feature activation script by executing the following command:

Figure 12-14 Run Script

Refer ro Sample Output of Deactivation (Active NOAM) for sample output.

- 10. Log in to the active SOAM GUI, establish a GUI session on the active SOAM server by using IP address of the SOAM server. Open the web browser and enter the URL http:// <Primary_SOAM_VIP_IP_Address>
- **11.** Log in as the guiadmin user.

16. In the SOAM VIP GUI, restart the DA-MPs. Multiple iterations of this step may be executed during the feature deactivation procedure. This is dependent on the number of DA-MP servers within your system. Make a written record of the number of times the step was performed. It is recommended that no more than 50% of the DA-MPs be restarted at once. Expand Status & Manage option and click Server.

Figure 12-17 Server Folder

Verify if the FABR application is not present.

If this procedure fails, contact My Oracle Support (MOS) for assistance.

Post-Deactivation Procedures

To de-activate the FABR feature, follow the procedures in this chapter.

Perform Health Check (Post-Feature Deactivation)

This procedure performs a post deactivation health check. This procedure is used to determine the health and status of the network and servers. If this procedure fails, contact My Oracle Support (MOS) for assistance.

- Log in to the NOAM VIP GUI. Establish a GUI session on the NOAM server by using the VIP address of the NOAM server. Open the web browser and enter the URL http://<Primary NOAM VIP IP Address>
- 2. Login as the guiadmin user.

Compare this alarm report with those gathered in the pre-deactivation procedures.

Note:

No routed service alarms should exist. These include the following alarms:

Alarm - ID	Alarm Condition
19820	Communication Agent Routed Service Unavailable
19821	Communication Agent Routed Service Degraded
19822	Communication Agent Routed Service Congested
19823	Communication Agent Routed Service Using Low-Priority Connection Group

Table 12-1 Alarm Condition

If this procedure fails, contact My Oracle Support (MOS) for assistance.

13 Engineering Notes

FIPS integrity verification test failed: In DSR 7.1+, you may see 'FIPs integrity verification test failed' message displayed during the activation/deactivation output, this message is expected and harmless.
