#### 1 Preface

#### 1.1 Purpose

This document enables the user to integrate Oracle Products with External Product Processor through Oracle Banking Routing Hub Platform.

#### **1.2 Intended Audience**

This document is intended for the following audience:

- Customers
- Partners

#### **1.3 Document Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <a href="http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc">http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc</a>.

#### 1.4 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

#### 1.5 Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

The subsequent chapters describe following details:

- Introduction
- Preferences & Database
- Configuration / Installation

## 2 Introduction

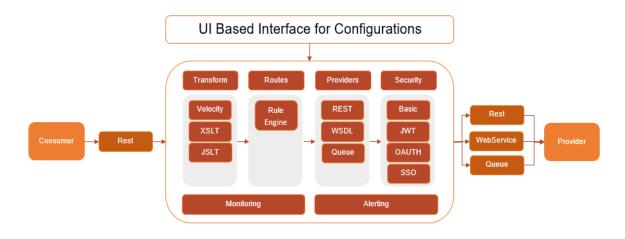

Oracle Banking Routing Hub is routing hub which enables seamless & standardized integrations between FSGBU

Banking Product using configurations provided as part of the product Infrastructure.

Consumer Application does not need to know

- Servicing Providers or Product Processors Product processor to which the integration is required.
- Name of the Service Logical name of the service e.g. Funds Transfer, Letter of Credit Initiation
- Messaging structure of Service Structure of the message e.g Json, XML.
- Communication Protocol Web services, Rest API, Queue.
- Can be integrated with different versions of a Product processors

In this document we have shown the maintenance of two product i.e." Oracle Service Consumer" as Service Consumer and "External Product Processor" as Service Provider

# 2.1 Acronyms & Definitions

Following are some of the acronyms and abbreviations you are likely to find in this user manual:

Abbreviation & Definitions	Description
Service Consumers	Are Applications need to integrate with multiple product processors with loosely couple integration layer available as Oracle Banking Routing Hub. Service Consumer integrates with Oracle Banking Routing Hub
Service Providers	This are product processors available to serve the request send by Oracle Banking Routing Hub on behalf of Service Consumer
Service	Are Soap Web Services imported through WSDL or Rest Web Services imported through Swagger
Headers	Are headers require by product processor while sending request

# 3 Start Maintenance - Login Screen

Open Browser, Hit URL and Launch Oracle Banking Routing Hub.

Request Audit	Sub menu option	Navigates to Request Audit screen		

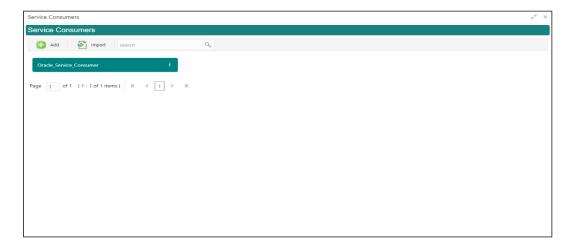

#### 5 Service Consumer

Service Consumer is Oracle product which will invoke Oracle Banking Routing Hub API, Oracle Banking Routing Hub will analyse, evaluate destination product processor and transform data into format of the same.

Service Consumer comprises of the source and destination integration details.

#### Navigation: Core Maintenance -> Routing Hub -> Service Consumers

#### 5.1 Add

User can create Service Consumer manually.

Service Consumers					×*	×
Service Consumers						
Add         Import         search           No items to display.         Page         1         of 0         (1 - 0 of 0 items)         K         <>>         X	Add Service Consumer		Enter 0 or more characters, up to a maximum of 255. No numeric value allowed at beginning.No space allowed.			
	Oracle_Service_Consume	v Name Value				
			Sav	re		

Navigation: Service Consumers -> Add

Component briefing							
Component Name	Component Type	ls Mandatory	Data type	Validation	Comments		
Name	Text Box	Yes	Alphanumeric with special characters	<ul> <li>Name cannot be blank</li> <li>Enter 0 or more characters, up to a maximum of 255</li> <li>No numeric value at beginning and no space allowed</li> </ul>	Unique Service Consumer name		
Environment Variables	Table Content						
Save	Button				Saves the Service Consumer		

#### 5.1.1 Environment Variables

User will be able to define the group of variables which can be accessed throughout the specific consumer's configuration.

Below is the syntax for accessing environment variables:

\$env.Environment\_Group\_Name.Environment\_Variable\_Name

eg: \$env.COMMON.BRANCH\_CODE

Service Consumers		,, <sup>14</sup> ×

		×	
	Do you want to delete the record?	1	
		Confirm Cancel	

#### 5.6 JSON Export

User can export the consumer configuration as JSON file.

Navigation: Service Consumers -> Operation Menu (3 dot icon) -> Export -> JSON

Service Consumers	1	×
Service Consumers		
Add 🔂 Import ora	Export Service Consumer ×	
Oracle_Service_Consumer     i       Page 1 of1 (1-1 of1items)     K	Name Service Providers       Service Providers       Image: Service Providers	
	Export	

#### Note:

• User has an option to select service providers from the list which needs to be exported or can click on "Select All" option for all service providers.

• JSON Export feature will export below data:

- Selected service consumer
- All consumer services
- Selected service providers with services
- All implementations of selected service providers with services (without Host, Port and Authentication Password)
- All transformations
- All routes

#### 5.7 SQL Export

User can export the consumer configuration as SQL file.

Navigation: Service Consumers -> Operation Menu (3 dot icon) -> Export -> SQL

Service Consumers		* ×
Service Consumers		
Add 🔂 Import ora	٩	
Oracle_Service_Consumer :		
	x CONFIRMATION ×	
	Do you want to export? Note: Sensitive data such as Implementation Host, Port and Password will not be exported	
	Continn	

**NOTE:** SQL Export feature will export entire configuration without Host, Port and Authentication Password details.

#### 6 Service Providers

Service Providers are the product processors configure to process request send by Oracle Banking Routing Hub on behalf of service consumers.

Service Provider comprises of destination integration details.

Navigation: Core Maintenance -> Routing Hub -> Service Consumers -> <Specific Service Consumer> -> Service Providers

Component Name	Component Type	ls Mandatory	Comments
Туре	Combo Box One	Yes	Predefined Values: WSDL / SWAGGER / OTHERS
URL	Text Box	Yes	Service URL of the file location
Gateway Prefix	Text Box		Gateway Prefix is context path of below formatted URL http://host:port/gateway-prefix/endpoint
Import	Button		Extracts the service information from URL and displays it in the Service list

#### 6.1.2.1 WSDL

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

**NOTE:** In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

#### 6.1.2.2 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.

Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

**NOTE:** In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

#### 6.1.2.3 OTHERS

"OTHERS" option is for adding REST API details manually when provider does not have swagger file.

Service Consumers				× **

Queue	Content		Queue content is available only when type is queue.
Save	Button		Saves the Implementation

### 7.1.1 Authentication

If External Product processor require authentication to connect to it, Oracle Banking Routing Hub provides standard authentication mechanism schemes like BASIC, JWT, OAUTH\_TOKEN, SSO.

**NOTE:** In case of no authentication, NONE needs to be set as Authentication Type. In case of identity propagation, SSO needs to be set as Authentication Type.

Process of configuration of these is described below.

Service Consumers							$_{\mu}^{\mu}$ $\times$
Oracle_Service_Consumer > Service Pro	Edit Implement	ation		×			
Implementation	Default Implem	entation		^			
Actions Name	Scheme *	Host *	Port *		ervice Name	Host	Port

Username	Text Box		Alphanum eric with special characters	<ul> <li>Username cannot be blank</li> <li>Enter 0 or more characters, up to a maximum of 255.</li> </ul>	Username is mandatory if authentication type is BASIC / JWT_TOKEN / OAUTH_TOKEN				

			<ul> <li>No numeric value at beginning and no space allowed.</li> </ul>	
Password	Text Box	Alphanum eric with special characters	Password cannot be blank	Password is mandatory if authentication type is BASIC / JWT_TOKEN / OAUTH_TOKEN

#### 7.1.2 Headers

External product processor might require some standard headers to be passed along with the request.

User can specify the headers which are required by service endpoints for specific implementation but not present in swagger file.

These headers can be configured in Oracle Banking Routing Hub using the steps given below

Service Consumers						,, <sup>16</sup> ×
Oracle_Service_Consumer > Service Pro	viders > External	_Product_Proce	essor 1.0			
Implementation	Add Implementation			×

	Service	Operation				
	No data to display.					
			Save			
				J		

Component briefing								
Component Name	Component Type	Is Mandatory	Comments					
Туре	Combo Box One	Yes	Predefined Values: WSDL / SWAGGER / OTHERS					
URL	Text Box	Yes	Service URL of the file location					
Gateway Prefix	Text Box		Gateway Prefix is context path of below formatted URL http://host:port/gateway- prefix/endpoint					
Import	Button		Extracts the service information from URL and displays it in the Service list					

#### 7.1.3.1 WSDL

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

**NOTE:** In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

#### 7.1.3.2 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.

Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

**NOTE:** In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

#### 7.1.3.3 OTHERS

"OTHERS" option is for adding REST API details manually when provider does not have swagger file.

Service Consumers						$\times *_{\kappa}$

			Do	you want to delete the record?		1
					Confirm	Cancel

# 11 Chaining

End-user will be able to define the sequence of transformations for each routing in which request should be processed.

Chaining can be achieved by using snapshot list.

Snapshot list stores the response body and response headers whenever the transformation is processed.

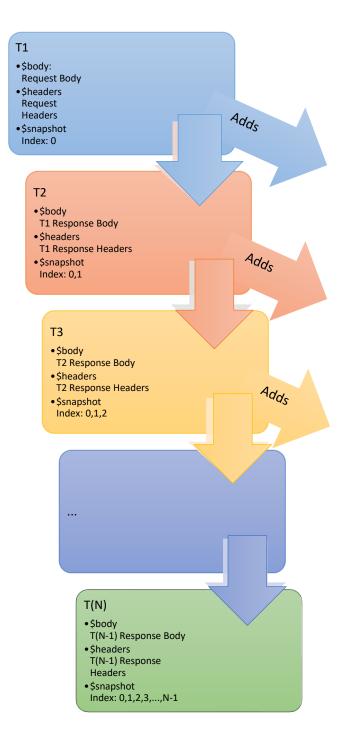

So, end-user can access response body or headers of all processed transformations at any given step.

## Syntax:

\$snapshot.get(index).body or \$snapshot.get(index).headers

NOTE: \$body and \$headers will refer the response body and headers of previous step.

Snapshot	List	
Index	body	headers
0	Request Body	Request Headers
1	T1 Response Body	T1 Response Headers
2	T2 Response Body	T2 Response Headers
3	T3 Response Body	T3 Response Headers

# **12 Configuration**

End-user can configure the properties w.r.t. monitoring and alerting.

End-user can configure the same at System level and granular levels such as Consumer, Consumer Service and Routing.

## Navigation: Core Maintenance -> Routing Hub -> Configuration

Configuration			$_{\mu}$ $^{\rm sc}$ $\times$
al Monitoring			
Window Type Count Time	Window Size	¥ *	
⊿ Alert			
Minimum number of calls	Failure rate threshold		
100 ~ ^	50%	~ ~	
⊿l Email Alert			
Email Addresses			
Export			
Mark data as factory shipped			
			Clear Reset Save

Component b	riefing			
Component Name	Component Type	ls Mandatory	Validation	Comments
Monitoring	Collapsible Header & Content		Monitoring properties are mandatory if alert properties have been configured.	This section has properties that are required by Breaker for storing and aggregating the outcome of calls using WindowType and WindowSize.
Window Type	Radio Button	No		Predefined Values: COUNT / TIME The count-based sliding window aggregates the outcome of the last N calls (Window Size). The time-based sliding window aggregates the outcome of the calls

				of the last N seconds (Window Size).
Window Size	Number Box	No		This property is used to record the outcome of calls when the CircuitBreaker is closed. In case of count-based sliding window, window size will be N calls. In case of time-based sliding window, window size will be N seconds.
Alert	Collapsible Header & Content		Alert properties are mandatory if monitoring properti es have been configured.	This section has properties that are required for transitioning CircuitBreaker.
Minimum number of calls	Number Box	No		If minimumNumberOfCalls is 10, then at least 10 calls must be recorded, before the failure rate can be calculated. If only 9 calls have been recorded the CircuitBreaker will not transition to open even if all 9 calls have failed.
Failure rate threshold	Number Box	No		Configures the failure rate threshold in percentage. When the failure rate is equal or greater than the threshold the CircuitBreaker transitions to open and starts short-circuiting calls.
Email Alert	Collapsible Header & Content			This section has properties that are required for mail notification.

Email Addresses	Text Box	No	Once the failure rate crosses the failureRateThreshold, then end-user will be notified about the event via mail. This property will be semi- colon separated email addresses
Export	Collapsible Header & Content		This section has properties that are required for exporting configuration json. This section will be visible at system level only.
Mark data as factory shipped	Switch	Yes	This property is used to mark the exported configuration json as factory shipped json. So, end-user will not be able to modify or delete the certain data once imported. Default value is false.

#### Example

Let say

WindowType is Count

WindowSize is 20

Minimum number of calls is 10

Failure rate threshold is 50%

Configured properties will behave as below:

After 10 (min number of calls) calls, routing would get shutdown if 50% (failure rate) of atmost last 20 (window size) calls have failed.

And if email address property is configured, then end-user will be notified as well.

# **15 Transformation Type**

## 15.1 Velocity

Velocity is a Java-based template engine.

Velocity can be used to generate XML files, SQL, PostScript and most other text-based formats.

NOTE: In routing hub, Velocity will be used to generate JSON and XML.

- Using **\$body**, user can access request/response body.
   Syntax: \$body.fieldName
   Example: \$body.branchCode
- Using **\$headers**, user can access request/response headers.
   Syntax: \$headers["fieldName"][0]
   Example: \$headers["branchCode"][0]
- Using **\$bodyAsString**, user can access response body as string. Syntax: **\$bodyAsString**
- Below are some available extension methods:
  - Date Conversion
     Syntax: \$dateUtil.convert(inputDate, fromPattern, toPattern)
     Parameters:
    - inputDate String
    - fromPattern String
    - toPattern String

### Returns: String

Please refer <u>https://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html</u> for different patterns

Default Value

Syntax: \$custom.defaultValue(inputValue, defaultValue)
Parameters:

- inputValue Object
- defaultValue String

### Returns: Object

Null Check

Syntax: \$custom.isNull(inputValue)

Parameters:

inputValue - Object

Returns: Boolean

- Random Number
   Syntax: \$mathUtil.getRandom()
   Returns: Object of Random class (java.util.Random)
- > Xml Tool

Syntax: \$xml.methodName() Please refer <u>https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/XmlTool.</u> <u>html</u>

Date Tool

Syntax: \$date.methodName()

Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/DateTool. html

Json Tool

Syntax: \$json.methodName()

### Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/JsonTool. html

Math Tool

Syntax: \$math.methodName()

### Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/MathTool .html

> Number Tool

Syntax: \$number.methodName()

### Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/NumberT ool.html

Escape Tool
 Syntax: \$esc.methodName()
 Please refer
 <a href="https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/EscapeT">https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/EscapeT</a>
 ool.html

Serialization of object into its equivalent Json representation
 Syntax: \$custom.toJson(src)

Parameters:

src - Object

Returns: String

Get additional field's value based on fieldname

Syntax: \$custom.getFieldValueById(jsonString, fieldname)
Parameters:

- jsonString String
- fieldname String

### Returns: String

Get list of additional fields based on fieldname prefix

**Syntax:** \$custom.getAdditionalFieldSetByType(jsonString,prefixval) **Parameters:** 

- jsonString String
- prefixval String

## Returns: List

 If issue occurred with hyphen in velocity template of Request or Response Transformation, then use get method.

## Example:

<FCUBS\_BODY>

<Customer-IO>

<CUSTNO>003942</CUSTNO>

- </Customer-IO>
- </FCUBS\_BODY>
- If "\$in.FCUBS\_BODY.Customer-IO.CUSTNO" does not work ,

Use "\$in.FCUBS\_BODY.get("Customer-IO").CUSTNO" to get customer number.

## 15.2 XSLT

XSLT is a language for transforming XML documents into other XML documents, or other formats such as HTML for web pages, plain text or XSL Formatting Objects, which may subsequently be converted to other formats, such as PDF, PostScript and PNG.

**NOTE:** In routing hub, XSLT will be used to transform arbitrary XML to JSON.

## 15.3 JSLT

JSLT is a complete query and transformation language for JSON.

# **16 Oracle Banking Routing Hub Integration Specification**

## **16.1 Token Generation**

PlatoJWTAuth endpoint Signature -

- Path : /platojwtauth
- Headers:
  - > appld : SECSRV001
  - Content-Type : application/json
- Request Body:

```
{
```

"username": "",

"password": ""

}

- > Username and password will be base64 encoding of plaintext.
- Response Body:

```
{
  "token": "",
  "userAlreadyLoggedIn": "Y",
  "expires_in": 3180,
  "home_entity_id": "DEFAULTENTITY",
  "multi_entity_admin": "N",
  "multi_entity_admin_locale": ""
}
```

Example - Below are the screenshots

### **Response Payload**

## **16.2 Synchronous Dispatch API Specification**

Dispatch endpoint is the **single** entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch endpoint Signature -

- Path : /route/dispatch
- Headers:
  - > appld : CMNCORE
  - > entityId : DEFAULTENTITY
  - > userId : <user id>
  - branchCode : <branch code>
  - Authorization : Bearer <Token>
  - > SERVICE-CONSUMER : <name of service consumer>
  - > SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- Request Body:
  - Any valid JSON payload which shall act as input to the transformation template in request transformer.

```
Response Body:
{
    "data": {}
    "messages": {}
}
```

•

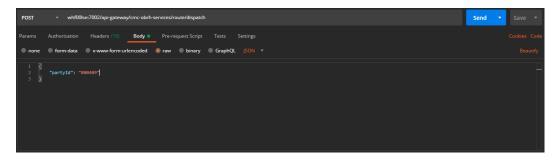

- If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it's a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.
- If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

Example - Below are the screenshots of route dispatch for ServiceConsumer **Oracle\_Service\_Consumer** and ServiceConsumerService **List\_Facilities** 

### Headers

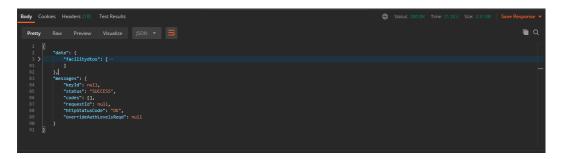

POS	r v whf00lse:7002/api-gateway/cmc-obrh-services/route/dispatch				Send ~

### **Response Payload on Failed Dispatch**

## **16.3 Asynchronous Dispatch API Specification**

Dispatch endpoint is the **single** entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch endpoint Signature -

- Path : /route/dispatch
- Query Params:
  - ➢ isAsync : true
- Headers:
  - > appld : CMNCORE
  - entityId : DEFAULTENTITY
  - userId : <user id>
  - branchCode : <branch code>
  - Authorization : Bearer <Token>
  - > SERVICE-CONSUMER : <name of service consumer>

- > SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- Request Body:
  - Any valid JSON payload which shall act as input to the transformation template in request transformer.
- Response Body:

```
{
    "data": { "correlationId" : "" },
    "messages": {}
}
```

Example - Below are the screenshots of route dispatch for

ServiceConsumer Oracle\_Service\_Consumer and ServiceConsumerService List\_Facilities

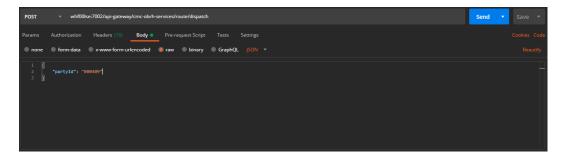

### **Query Params**

### **Response Payload**

## 16.4 Asynchronous Dispatch Response API Specification

Response endpoint Signature -

- Path : /route/dispatchResponse/{Correlation-Id}
  - > Correlation-Id will be coming from the response of dispatch endpoint.
- Headers:
  - > appld : CMNCORE
  - entityId : DEFAULTENTITY
  - > userId : <user id>
  - branchCode : <branch code>
  - Authorization : Bearer <Token>
- Response Body:

```
{
```

```
"data": {}
```

```
"messages": {}
```

}

If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it's a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.

If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

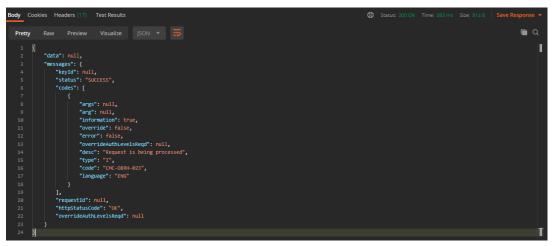

Example - Below are the screenshots of route dispatch for

ServiceConsumer Oracle\_Service\_Consumer and ServiceConsumerService List\_Facilities

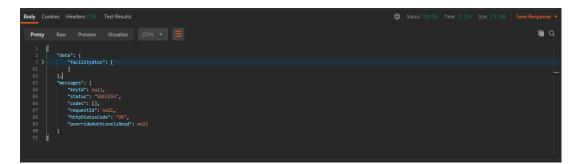

Headers

Response Payload when request is processed (on Failed Dispatch)

# **17 Oracle Banking Routing Hub VM Arguments**

### Common Core Managed Server

-Dcmc-obrh-services.server.port=<SERVER\_PORT> -Dobrh.db.jndi=<CMNCORE\_JNDI>

In order to receive routing failure mail notification via plato-alerts-management-service, then set the below property to true, Otherwise set it to false

-Dcmc-obrh-services.kafka.enabled=<KAFKA\_ENABLED>

-Dcmc-obrh-services.kafka.server.path=<KAFKA\_SERVER\_PATH>

-Dcmc-obrh-services.zookeeper.server.path=<ZOOKEEPER\_SERVER\_PATH>

In order to use Custom Keystore and Truststore for HTTPS scheme,

-Dobrh.keystore.password.encoded=<IS\_PASSWORD\_ENCODED> (true, if password is base 64 encoded)

-Dobrh.truststore.path=<TRUSTSTORE\_PATH>

-Dobrh.truststore.password=<TRUSTSTORE\_PASSWORD>

-Dobrh.usekeystore=<USE\_KEYSTORE> (true, if keystore is required along with truststore)

-Dobrh.keystore.path=<KEYSTORE\_PATH>

-Dobrh.keystore.password=<KEYSTORE\_PASSWORD>

-Dobrh.keystore.alias=<KEYSTORE\_ALIAS>

-Dobrh.keystore.aliaspassword=<KEYSTORE\_ALIAS\_PASSWORD>

In order to do tomcat deployment,

-Dobrh.server.isJavaEE=false (mandatory)

-Dobrh.taskexecutor.corepoolsize=<CORE\_POOLSIZE> (default is 50) (optional)

-Dobrh.taskexecutor.maxpoolsize=<MAX\_POOLSIZE> (default is 50) (optional)

-Dobrh.taskexecutor.queuecapacity=<QUEUE\_CAPACITY> (default is 100) (optional)

In order to set Proxy settings for HTTPS,

-Dhttps.proxyHost=<PROXY\_HOST\_NAME>

-Dhttps.proxyPort=<PROXY\_PORT>

-Dhttps.nonProxyHosts=<NON\_PROXY\_HOST\_LIST>

-Dhttp.nonProxyHosts=<NON\_PROXY\_HOST\_LIST>

**NOTE:** As per the Java Networking documentation, HTTPS protocol handler will use the same as the http handler (i.e. http.nonProxyHosts).

But in case of Weblogic, http.nonProxyHosts will not work for some reason.

So, use https non proxy host argument (i.e. https.nonProxyHosts).

In order to configure for SSL/Authentication enabled Kafka broker,

-Dspring.cloud.stream.kafka.binder.jaas.options.username=<Zookeeper user created for clients>

-Dspring.cloud.stream.kafka.binder.jaas.options.password=<Zookeeper user encrypted password for clients>

-Dspring.cloud.stream.kafka.binder.configuration.ssl.truststore.location=<location of client trust store certificate>

-Dspring.cloud.stream.kafka.binder.configuration.ssl.truststore.password=<Pass code of client truststore certificate>

## NOTE: Please refer Oracle Banking Microservices Platform Foundation Installation Guide.

In order to set logger level,

- Dplato.service.logging.level=<LOG\_LEVEL>

In order to do SSL based SOAP provider calls and if RoutingHub is deployed on weblogic environment,

-DUseSunHttpHandler=true

**NOTE:** This property will enforce WebLogic Server to use SUN SSL implementation (javax package) rather than the WebLogic one.

### Plato Core Managed Server

Oracle Banking Routing Hub is using Multipart for Import feature. By default, spring supports max 1MB file size and 10MB request size for Multipart. In order to import bigger files, plato-api-gateway.multipart.max-file-size=<MAX\_FILE\_SIZE> (default is 1MB) plato-api-gateway.multipart.max-request-size=<MAX\_REQUEST\_SIZE> (default is 10MB)

**NOTE:** -1 for no size constraint

Example: plato-api-gateway.multipart.max-file-size=-1 plato-api-gateway.multipart.max-request-size=-1
