## 1. Preface

## 1.1 Introduction

This user guide is designed to help you quickly get acquainted with the many functions routinely executed every day.

## 1.2 Audience

This user guide is intended for the central administrator of the Bank who controls the system and application parameters and ensures smooth functionality and flexibility of the banking application.

## 1.3 **Document Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <a href="http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc">http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc</a>.

## 1.4 Acronyms and Abbreviations

Following are some of the acronyms and abbreviations you are likely to find in this user manual:

Abbreviation	Description
System	Core Maintenance Module
NLP	Natural Language Processing
REST	Representational State Transfer

#### Table 1: Acronyms and Abbreviations

## 1.5 List of Topics

This user guide is organized as follow:

#### Table 2: List of Topics

Topics	Description
Core Maintenance	This topic describes about Core Maintenance module.
NLP Framework	This topic describes about NLP Framework.

Topics	Description
Machine Learning Framework	This topic describes about Machine Learning Framework.
File Upload	This topic describes about the various file upload features supported in common core maintenances.
Error Codes and Messages	This topic describes list of error codes and messages.
Glossary	This topic provides list of glossary and their definitions.
List of Menus	This topic has alphabetical list of Core Maintenance processes with page references for quick navigation.
Reference and Feedback	This topic provides the reference documents and information about feedback and support.

## 1.6 Related Documents

For more information on any related features, you can refer to the following documents:

- Oracle Banking Security Management System User Guide
- Getting Started User Guide

## 1.7 Symbols and Icons

The following are some of the Symbols you are likely to find in the guide:

Table 3: Symbols and Icons - Common
-------------------------------------

Symbol/Icon	Function

## 1.8 Basic Actions

Most of the screens contain buttons to perform all or few of the basic actions. The table below gives a snapshot of them:

Table 0. Basic Actions			
Actions	Description		
New		Click to add a new record. When you click New, system displays a new record enabling you to specify the required data. It is mandatory to specify details for the fields marked with '*' symbol.	
	NOTE:	This button is displayed only for the records that are already created.	
Save		Click to save the details entered or selected in the screen.	
Unlock		Click to update the details of an existing record. System displays an existing record in editable mode.	
	NOTE:	This button is displayed only for the records that	
		are already created.	
Authorize		Click to authorize the record created. A maker of the screen is not allowed to authorize the same. Only a checker can authorize a record.	
	NOTE: This button is displayed only for the already		
	created records. For more information on the		
		process, see Authorization Process.	
Approve		Click to approve the initiated record.	
	NOTE:	This button is displayed, once you click Authorize.	
Audit		Click to view the maker details, checker details of the particular record.	
	NOTE:	This button is displayed only for the records that	
		are already created.	
Close		Click to close a record. This action is available only when a record is created.	
Confirm		Click to confirm the action you performed.	

#### Table 6: Basic Actions

Actions	Description	
	becomption	
Cancel	Click to cancel the action you performed.	
Compare	Click to view the comparison through the field values of old record and the current record.	
	<b>NOTE:</b> This button is displayed in the widget, once you click <b>Authorize.</b>	
View	Click to view the details in a particular modification stage.	
	<b>NOTE:</b> This button is displayed in the widget, once you click <b>Authorize.</b>	
View Difference only	Click to view a comparison through the field element values of old record and the current record, which has undergone changes.	
	<b>NOTE:</b> This button is displayed, once you click <b>Compare.</b>	
Expand All	Click to expand and view all the details in the sections.	
	<b>NOTE:</b> This button is displayed, once you click <b>Compare.</b>	
Collapse All	Click to hide the details in the sections.	
	NOTE: This button is displayed, once you click Compare.	
ок	Click to confirm the details in the screen.	

## 2. Core Maintenance

This section is designed to help you quickly get acquainted with the many functions routinely executed everyday.

This section contains the following topics:

- Additional Field Maintenance
- Advice
- Amount Text Language
- BIC Directory
- Branch EOD
- Country Code
- Currency Definition
- Currency Exchange Rate
- Currency Holiday Master
- Currency Pair Definition
- Currency Rate Type
- Customer Category
- ECA System
- External Bank Parameters
- External Branch Parameters
- External Chart Account
- External Customer
- External Customer Account
- External Customer Account Structured Address
- External Virtual Account Structured Address
- Forget Process
- Host Code
- Language Code
- Local Holiday
- Media
- Multi-Currency Account Linkage

- Process Code
- System Dates
- Transaction Code
- Upload Source
- Upload Source Preference
- Pricing Source System
- Integrating Bureau Integration Service with Oracle Banking Routing Hub
- Bureau Integration Service
- Credit Bureau Display
- Lookup
- Criteria
- System Parameter
- Integrating Decision Service with Oracle Banking Routing Hub
- Decision Service
- Scoring Feature and Scoring Model
- Decision Grade Matrix
- Pricing
- Execution Summary

## 2.1 Additional Field Maintenance

This screen is used to configure and maintain the additional fields for the transaction screens. To process this screen, perform the following steps:

# 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Additional Field Maintenance.

The Additional Field Maintenance Summary screen is displayed.

#### Figure 1: Additional Field Maintenance Summary

Edit Arguments	Click this icon to edit the fields in the row.

4. Click **Save**. You can view the confirmation advice details in the Additional Field Maintenance Summary.

## 2.2 Advice

You can configure various BIP advices that are available for the process.

This section contains following subsections:

- Advice Summary
- Advice Maintenance

## 2.2.1 Advice Summary

The summary screen provides a list of configured advice. You can configure an advice for a process using the Advice Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Advice.
- 2. Under Advice, click View Advice.

The View Advice screen is displayed.

3. On **Create Advice** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
Advice Name	Specify the name of the advice.
Advice Description	Specify the information about the advice.
Micro Service Name	Specify the name of the micro service.
Swift Micro Service	Specify the information about the swift micro service.
Micro Service Endpoint	Specify the endpoint micro service.
Application Name	Specify the application name for which advice is generated.
Application Description	Specify the additional information about the application.
Media	Search and select the required media.
Branch	Search and select the required branch.
Currency	Search and select the required currency.
Report Locale	Specify the locale report details.
Report Absolute Path	Specify the report absolute path.

### Table 10: Create Advice – Field Description

Field	Description	
Format	Select a download file format for an advice from the dropdown list. The formats available are, PDF, PPTX, HTML, XLS, and RTF.	
Swift Endpoint	Specify the swift endpoint.	

4. Click Save. You can view the confirmation advice details in the Advice Summary.

## 2.3 Amount Text Language

You can configure an amount text language.

This section contains following subsections:

- Amount Text Language Summary
- Amount Text Language Maintenance

### 2.3.1 Amount Text Language Summary

The summary screen provides a list of configured amount text language. You can configure an amount text language using the Amount Text Language Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Amount Text Language.
- 2. Under Amount Text Language, click View Amount Text Language.

The View Amount Text Language screen is displayed.

3. On **Create Amount Text Language** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
Language Code	Search and select the required language code.
Amount Word Currency List	Specify the amount word currency details.

Field	Description
CCY Symbol	Specify the CCY symbols.
Decimals As Fraction	Select a decimals as fraction value from the drop-down list.
Final Text	Specify the final text for the amount word currency list.
ССҮ	Search and select the CCY.
Post Decimal	Specify the post decimal details.
Pre Decimal	Specify the pre decimal details.
Text Before	Select an option for the before text.
Text Between	Specify the text that must appear between the amount word currency list.
Amount Word Text List	Specify the amount word text details.
Amount	Select the amount details.
One Flag	Select an option for the amount word text list.
Text	Specify the text for the amount word.

4. Click **Save**. You can view the configured amount text language details in the Amount Text Language Summary.

## 2.4 BIC Directory

As part of setting up basic information, you must maintain Bank Identifier Codes (BIC). You can configure the BIC directory for a customer.

This section contains following subsections:

- BIC Directory Summary
- BIC Directory Maintenance

### 2.4.1 BIC Directory Summary

The summary screen provides a list of configured BIC directory. You can configure the BIC directory using the BIC Directory Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click BIC Directory.
- 2. Under **BIC Directory**, click **View BIC Directory**.

The View BIC Directory screen is displayed.

3. On **Create BIC Directory** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
BIC Code	Specify the unique BIC Code by which the bank is identified by SWIFT.
Bank Name	Specify the name for the bank.
Customer Number	Search and select the required customer number.
Customer Name	Based on the <b>Customer Number</b> selected, the information is auto-populated.
Bank Address 1-3	Based on the <b>Customer Number</b> selected, the information is auto-populated.
SWIFT Key	Specify the swift key details.

#### Table 14: Create BIC Directory – Field Description

Field	Description	
Telex Key	Specify the unique telex key for the BIC directory.	
SWIFT Key Arrangement	Select the SWIFT key arrangement from the drop-down list.	
Relationship	Select one of the following options:	
	<ul> <li>No: If selected, indicates that the BIC Entity is not a customer of your bank</li> </ul>	
	• Mail: If selected, the BIC entity is not a recognized SWIFT entity but an address internal to your bank. In such cases, all correspondence directed to the particular BIC entity is sent as mail messages.	
	• Keys: If selected, a SWIFT/Telex connectivity exists between your bank and the bank for which you are maintaining details. Subsequently, you must specify the SWIFT/Telex Key in the adjacent field.	
Sub-type Code	Search and select the required sub-type code.	
BEI Indicator	Based on the <b>Sub-type Code</b> selected, the information is auto- populated.	
ADB Member	Select the ADB member from the drop-down list.	
Payment Message	Specify the payment message details.	
MT103+ Preferred	By default, this is disabled. If selected, indicates the counter party whose BIC code details you are capturing capacitate to receive payment messages in the MT 103 format.	
Blacklisted	By default, this is disabled. If selected, indicates the BIC entity is blacklisted.	
CUG Member	By default, this is disabled. If selected, indicates the BIC entity is a closed user group member. Remit Member: By default, this is disabled. If selected, indicates the customer is registered with MT 103 extended remittance information multiple user group.	
Update During Upload	By default, this is disabled. If selected, updated the BIC directory during an upload.	
Multi-Customer Credit Transfer	Specify the Multi-Customer Credit Transfer details.	

Field	Description
Multi-Customer Credit Transfer	By default, this is disabled. If selected, indicates multiple credit transfer feature [MT102 support] exists between the bank and the BIC entity.
Generate 102+	By default, this is disabled. If selected, generates 102+ message.
Maximum Size in Bytes	Specify the maximum size.
Request for Transfer	Specify the Request for Transfer details.
Generate MT101	By default, this is disabled. If selected, indicates MT101 can be sent/received from this BIC. Select to generate MT101 message.
Number of Transactions Per Page	Specify the number of transactions to view per page. If you do not specify a value it is defaulted to 10.
Real Customer Number	Search and select the required real customer number.
Real Customer Name	Based on the <b>Real Customer Number</b> selected, the information is auto- populated.

4. Click **Save**. You can view the configure BIC directory in the BIC Directory Summary.

## 2.5 Branch EOD

You can invoke End of Day (EOD) to indicate that all the activities for the day are complete. Activities can be performed on the system only after the system date is changed to the next working day and authorized.

Most of the automated functions are part of the beginning of day operations. Thereafter, some of them must be executed when the system is in the EOTI (End of Transaction Input) stage.

This section contains following subsections:

- Branch EOD Summary
- Branch EOD Maintenance
- Branch EOD Invoke

#### 2.5.1 Branch EOD Summary

The summary screen provides list of branch workflow mappings. You can configure branch workflow mapping using the Branch EOD Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Branch EOD.
- 2. Under Branch EOD, click View EOD.

The **View EOD** screen is displayed.

3. On **Configure EOD** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

#### Table 16: Configure EOD – Field Description

Field	Description
Branch Code	Specify the branch code that is associated with the logged in user.
Description	Displays the description of the branch.
Workflow Name	Specify the workflow name that is already created.

For more information on EOD Workflow creation and related terminologies please refer to EOD Configuration Guide of the respective products.

## 2.5.3 Branch EOD Invoke

The action screen allows you to invoke the branch EOD process as per branch and workflow mapping configured using Branch EOD Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Branch EOD.
- 2. Under Branch EOD, click Invoke EOD.

The Invoke EOD screen is displayed.

#### Figure 15: Invoke EOD

Invoke EOD		
Branch Code * Q. Start Bertry Reset	Description	Current Branch Date
View End of Cycle Processes	Auto Refresh(15s)	
MS-CHKAFTEREOT	HECKPENDINGMAINTENANCE	
	EOD GENERATE_INTE	

3. On **Invoke EOD** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
Branch Code	Specify the branch code that is associated with the logged in user.
Description	Displays the description of the branch.
Current Branch Date	Displays the current branch date.

 Click Start to invoke EOD for selected branch and Click Refresh to view the current status of batch.

- 5. Click **Retry** to restart the EOD workflow from the failed task.
  - NOTE: Retry button will be enabled only if the failed task status is encountered.
- 6. Click **Reset** to clear the branch selected.
- 7. Click **Refresh** to view the current status of batch.
- 8. Mouse-hover on the task to view the relevant details such as Start time, End time and Error if any.

Status	Description
Green	Task is completed
Yellow	Task is in progress
Red	Task failed due to some error.
Grey	Task is scheduled but not executed
Diamond Shape	Task has reached a milestone stage where execution will be paused. Right-click on milestone stage and select "Proceed" to resume batch execution.

#### Table 18: EOD Task – Status Description

For more information on EOD stages, please refer to EOD Configurations Guide of the respective products.

## 2.6 <u>Country Code</u>

You can configure a country code.

This section contains following subsections:

- Country Code Summary
- Country Code Maintenance

#### 2.6.1 Country Code Summary

The summary screen provides a list of configured country code. You can configure a country code using the Country Code Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Country Code.
- 2. Under Country Code, click View Country Code.

The View Country Code screen is displayed.

#### Figure 12: View Country Code

Intra European			
			Save Cancel

3. On **Create Country Code** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
Country Code	Specify the country code.
Country Name	Specify the name of the country.
Alternate Country Code	Specify the alternate country code.
Region Code	Specify the region code.
ISO Country Code	Specify the ISO country code.
ISO Code	Specify the ISO code.
Limit Currency	Specify the limit currency.
Overall Limit	Specify the overall limit.

Field	Description
Blacklist	By default, this is disabled. If selected, indicates the country is blacklisted.
EU Member	By default, this is disabled. If selected, indicates the country is recognized by Swift as a part of the Intra European countries.
Generate 205	By default, this is disabled. If selected, indicates the cover message 205COV or 205 need to be generated for transactions involving this country. If you do not select this option, RTGS, 202 or 202COV message is generated.
IBAN Check Required	By default, this is disabled. If selected, indicates check required for an IBAN is mandatory.
BIC Clearing Code	By default, this is disabled. If selected, indicates the National ID in the BIC plus file is the clearing code. During upload of clearing codes from BIC plus file, the records belong to countries against which this box is selected.
Intra European	By default, this is disabled. If selected, indicates the country is an intra European country.

4. Click Save. You can view the configured country code details in the Country Code Summary.

## 2.7 <u>Currency Definition</u>

You can define the attributes of the currencies in which the bank can deal. For each currency, you can define attributes such as, the SWIFT code for the currency, the country the currency belongs, the interest method, the spot days, the settlement days, and so on.

Currencies can be maintained only at the Head Office. The list of currencies are available to the branches based on the currencies defined for the country linked to the branch.

This section contains following subsections:

- Currency Definition Summary
- Currency Definition Maintenance

## 2.7.1 Currency Definition Summary

The summary screen provides a list of defined currency. You can define a currency using the Currency Definition Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Currency Definition.
- 2. Under Currency Definition, click View Currency Definition.

The View Currency Definition screen is displayed.

3. On **Create Currency Definition** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description
Currency Code	Specify the currency code.
Maintenance Country	Search and select the required maintenance country.
Currency Name	Specify the name of the currency.
Alternate Currency Code	Specify the code of the alternate currency.
Currency Type	Specify the currency type.
ISO Numerical Currency Code	Specify the International Standardization Organization numerical currency code.
Currency Country	Search and select the required currency country.
Currency Decimals	Select the currency decimals.
Currency Interest Method	Select the currency interest method from the drop-down list.
Currency Spot Days	Select the number of spot working days applicable for the currency.
Foreign Exchange Netting Days	Select the number of days for the foreign exchange netting.
Settlement Message Days	Select the settlement message days.
Position GL	Search and select the required position GL.
Position Equivalent GL	Search and select the required position equivalent GL.
Currency Tolerance Limit	Specify the currency tolerance limit.
Index Base Currency	Search and select the required index base currency.
Commodity Code	By default, this is disabled. If selected, enables a commodity code.
Cut Off Time	Specify the cut off time details.

 Table 22: Create Currency Definition – Field Description

Field	Description
Cut Off Days	Select the cut off days for the payment transaction involving the currency.
Cut Off Hour	Select the hour of the day for the cut off.
Cut Off Min	Select the minute of the hour for the cut off.
CLS Currency	By default, this is disabled. If selected, allow customers of your bank to settle their FX deals via the CLS (Continuous Linked Settlements) Bank, you can identify the currency to be a CLS Currency. FX deals in the CLS currency is only eligible to be routed through the CLS bank.
Generate 103+	By default, this is disabled. If selected, generate outgoing MT 103 messages in the MT 103 + format.
Index Flag	By default, this is disabled. If selected, derives index rate of the currency.
Euro Conversion Required	By default, this is disabled. If selected, indicates the Euro conversion is required.
New Cover Message Format Required	By default, this is disabled. If selected, indicates a new cover message format is required.
Validate Tag-50F	By default, this is disabled. If selected, indicates validations must be performed for the 50F details captured for the ordering customer during contract input.
Rounding	Specify the Rounding details of currency.
Currency Round Rule	Select the currency round rule from the dropdown list.
Currency Round Unit	Select the currency round unit.
Currency Format Mask	Specify the currency format mask details.
Currency Format Mask	Select one of the currency format.
Euro Type	Specify the Euro Type details.
Currency Euro Type	Select one of the currency Euro type.
Auto Exchange Rate	Specify the Auto exchange rate details.

Field	Description
Credit Auto Exchange Rate Limit	Specify the credit automatic exchange rate limit.
Debit Auto Exchange Rate Limit	Specify the debit automatic exchange rate limit.
Currency Country Mapping	Specify the currency country mapping details.
Country Code	Search and select the required country code.
Country Name	Specify the name of the country.
Currency Code	Search and select the required currency code.

#### Cut Off Time

Refers to the time by which all transactions involving a currency should be generated. For a currency, you can indicate the cut-off hour and minute. This time should be expressed in the local time of the bank.

The maintenance of a cut-off time for a currency has particular reference to outgoing funds transfers involving it.

Example: The value date of a funds transfer transaction (incoming payment) involving USD, is 3rd June 2018. The number of cut-off days specified for the currency is 2. This means that the payment must be received on or before 1st June 2018. If the payment is received on 1st June, it must be received before the cut-off time specified for USD.

If the USD cut-off time is 1200 hrs, if the payment is received on 1st June 2018, it must be received before 1200 hrs.

4. Click **Save**. You can view the defined currency in the Currency Definition Summary.

## 2.8 <u>Currency Exchange Rate</u>

You can maintain exchange rates for a currency pair, the rates at which you buy and sell one currency for another. A bank determines its buy and sell rate for a currency pair by applying a spread (that is, its profit margin) to the mid-rate of the currency pair. Mid-rate is the basic rate at which a currency pair is exchanged.

The spread applied for a currency pair varies with the transaction type, while the mid-rate usually remains constant. Consequently, different rates are applicable to different transaction types. For instance dollars in currency are purchased at a certain rate, while USD traveler's checks are bought at a different rate. You can define a rate type which you would like to associate with a transaction type example: CASH, TRAVCHKS, and so on.

You can define the mid-rate, buy and sell spread applicable to each rate type; the buy and sell exchange rates are computed by the system. Buy rates and sell rates can either be maintained by individual branches or can be input by the HO and propagated to all the branches.

If the branch for which the rate is being uploaded or maintained is the head office branch, then the rate would be copied to all those branches that have the same country code as the head office branch.

If the branch for which the rate is being uploaded or maintained is not the head office branch, but it has the same country code as the head office branch, then the rate being uploaded or maintained would be specific to the branch and would not be copied to any other branch.

If the branch for which the rate is being uploaded or maintained is not the head office branch and also does not have the same country code as the head office branch, then the rate being maintained would be copied to all the branches that has the same country code linked as the branch for which the rate is being maintained or uploaded.

This section contains following subsections:

- Currency Exchange Rate Summary
- Currency Exchange Rate Maintenance

### 2.8.1 <u>Currency Exchange Rate Summary</u>

The summary screen provides a list of configured currency exchange rates. You can configure a currency exchange rate using the Currency Exchange Rate Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Currency Exchange Rate.
- 2. Under Currency Exchange Rate, click View Currency Exchange Rate.

The View Currency Exchange Rate screen is displayed.

4. Click **Save**. You can view the configured currency exchange rate details in the Currency Exchange Rate Summary.

# 2.9 <u>Currency Holiday Master</u>

You can configure a yearly list of holidays, for the currencies, defined in the currency screen. The system uses the information maintained to check if any settlement involving a foreign currency (in the foreign Exchange, Money market, and Funds Transfer, Loans and Deposit modules) falls on that currency's holiday. If yes, the system displays a message stating and ask the user for an override.

For any schedule or contract maturing at a future date, five years hence, you can input the future date, only if the calendar for that year is maintained. The currency holiday is maintained at the bank level by the Head Office.

This section contains following subsections:

- Currency Holiday Master Summary
- Currency Holiday Master Maintenance

### 2.9.1 <u>Currency Holiday Master Summary</u>

The summary screen provides a list of configured currency holiday. You can configure a currency holiday using the Currency Holiday Master Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Currency Holiday Master.
- 2. Under Currency Holiday Master, click View Currency Holiday Master.

The View Currency Holiday Master screen is displayed.

- 4. Select the dates using the calendar. The selected dates appear in blue highlighted circle.
- 5. Click **Save**. You can view the configured currency holidays in the Currency Holiday Master Summary.

# 2.10 Currency Pair Definition

In the foreign exchange markets, the exchange rates for some currency pairs such as the USD-GBP or USD-JPY are easily obtainable, since these are frequently traded. The exchange rates of other currencies such as the ZAR-INR (South African Rand - Indian Rupee), which is not traded very often, is determined through a third currency. The third currency is usually the US dollar, since the US dollar is quoted in all trading centers.

You can define the static attributes of currency pairs for which a regular market quote is readily available. For other pairs, which do not have a regular market quote, you need to specify the third currency through which the system should compute the exchange rate. The currency pair is maintained at the bank level by the Head Office branch.

This section contains following subsections:

- 3.10.1 Currency Pair Definition Summary
- 3.10.2 Currency Pair Definition Maintenance

# 2.10.1 Currency Pair Definition Summary

The summary screen provides a list of define a currency pair. You can define a currency pair using the Currency Pair Definition Maintenance. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Currency Pair Definition.
- 2. Under Currency Pair Definition, click View Currency Pair Definition.

The View Currency Pair Definition screen is displayed.

4. Click Save. You can view the configured media details in the Media Summary.

# 2.28 Multi-Currency Account Linkage

The Multi-Currency Account (MCA) linkage enables the user to link the sub-accounts to a core multicurrency account. This section contains following subsections:

- Create MCA Linkage
- View MCA Linkage

## 2.28.1 Create MCA Linkage

This maintenance screen allows you to link the sub-accounts to a core multi-currency account. To process this screen, perform the following steps:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Multi-Currency Account Linkage.
- 2. Under Multi-Currency Account Linkage, click Create MCA Linkage.

The Create MCA Linkage screen is displayed.

 Table 73: Oracle Banking Routing Hub Configuration

This section contains the following subsections:

- Add
- Environment Variables
- Import
- View
- Edit
- Delete
- JSON Export
- SQL Export

## 2.35.1.1 Add

You can create service consumer manually.

On Service Consumers screen, click Add to create service consumer.

### Figure 68: Add

Service Consumers					,, <sup>16</sup> ×
Service Consumers					
Add Import search No items to display. Page 1 of 0 (1 - 0 of 0 items) K < > 31	Add Service Consumer	25 No all	ater 0 or more characters, 55. o numeric value allowed a lowed.

	Confirm Cancel	

Note: SQL Export feature will export entire configuration without Host, Port and Authentication Password details.

### 2.35.2 Service Providers

Service Providers are the product processors configure to process request send by oracle banking routing hub on behalf of service consumers.

The Service Provider comprises of destination integration details.

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Routing Hub.
- 2. Under Routing Hub, click Service Consumers. Under Service Consumers, click <Specific Service Consumer>.

The **Service Providers** screen is displayed.

Gateway Prefix	Text Box		Gateway Prefix is context path of below formatted URL http://host:port/gateway-prefix/endpoint
Import	Button		Extracts the service information from URL and displays it in the Service list

### 2.35.2.4 **WSDL**

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service. Currently, non-SSL WSDL URL is only supported.

Note: In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

### 2.35.2.5 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON. Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

Note: In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

### 2.35.2.6 Import

You can create a service provider by importing the JSON file. On **Service Providers** screen, click **Import**.

### 2.35.5 Document Configuration

Bureaus usually send applicants credit reports in PDF or encrypted format. The product processors prefers the PDF reports for easy readability and usability. In addition, product processors want to display PDF reports in their system and share these reports with the applicants. In such cases, the PDF credit reports are stored in the document server, which can be accessed by the bureau integration service and the product processor.

#### 2.35.5.1 Content Management Server

The Oracle content management server is used to store and manage documents. It can accept encoded strings of data and stores them in the provided extension format like (pdf, jpeg, png). The content management server allows to view the document online.

The latest available version is 12.2.1.4.

The cmc-document-service is a gateway to access the oracle content management server. Using this service, other applications can store, manage and process the document with ease.

#### 2.35.5.2 Environment Configuration

To install cmc-document-services, additional configuration is added. This includes the moc domain.

Dflyway.domain.locations=db/migration/domain/plato,db/migration/domain/sms,db/migration/domain/mo c,db/migration/domain/cmc

-Dflyway.domain.placeHolders.moc.cmc-comments-services.server.port=<MOC\_PORT>

-Dflyway.domain.placeHolders.moc.cmc-document-services.server.port=<MOC\_PORT>

-Dflyway.domain.placeHolders.dmsServiceUrl=<CONTENT\_SERVER\_URL>

-Dflyway.domain.placeHolders.dmsServiceUsrname=<CONTENT\_SERVER\_USERNAME>

-Dflyway.domain.placeHolders.dmsServicePwd=<CONTENT\_SERVER\_PASSWORD>

-Dflyway.domain.placeHolders.cmc-document-services.schema=<SCHEMA\_NAME>

-Dflyway.domain.placeHolders.cmc-document-services.server.port=<SCHEMA\_PORT>

-Dflyway.domain.placeHolders.cmc-document-services.username=<SCHEMA\_USERNAME>

-Dflyway.domain.placeHolders.cmc-document-services.password=<SCHEMA\_PASSWORD>

-Dflyway.domain.placeHolders.cmc-document-services.domain.jndi=jdbc/CMNCORE

-Dflyway.domain.placeHolders.cmc-document-services.jndi=jdbc/CMNCORE

-Dflyway.domain.placeHolders.cmc-document-services.db.jndi=jdbc/CMNCORE

-Dflyway.domain.placeHolders.cmc-documentservices.jdbcUrl=jdbc:oracle:thin:@//<SCHEMA\_IP>:<SCHEMA\_PORT>/<SERVICE\_NAME>

-Dflyway.domain.placeHolders.cmc-documentservices.db.jdbcUrl=jdbc:oracle:thin:@//<SCHEMA\_IP>:<SCHEMA\_PORT>/<SERVICE\_NAME>

### 2.35.6 Troubleshooting

# 2.35.6.1 Oracle FLEXCUBE Onboarding issues faced during cmc-obcbs-service and cmc-obrh-services integration

Experian password expired

The password for the Experian account had expired

The solution is to login to the Experian website and reset the password. The new password is generated via mail and you can configure in oracle banking routing hub for token generation.

### 2.35.6.2 Unable to connect to external server

The oracle banking routing hub server is unable to connect to the experian server. The proxy is not configured

The VM arguments were added for oracle banking routing hub's managed server.

-Dhttps.proxyHost=www-proxy-idc.in.oracle.com

-Dhttps.proxyPort=80

https://confluence.oraclecorp.com/confluence/pages/viewpage.action?pageId=2863487960

### 2.35.6.3 Oracle Banking Routing Hub environment variable value not found

The environment variable for the Bureau Integration Service product processor is improper. (\$.headers["bureauType"][0])

The correct path was provided(\$.headers["bureauType"][0]

### 2.36 **Bureau Integration Service**

### 2.36.1 Overview

Bureau integration service facilitates financial institutions to send requests to the credit bureau agencies for credit scores and reports. It also facilitates viewing reports received from the bureaus.

The credit report presents the credit information of an individual or a company, which is fetched by credit bureaus from various financial institutions. It is a detailed report, which contains the history of borrowings, repayment routine, defaults, and delays. This report contains vital information about a customer's credit score, personal information, employment details, contact information, and details of accounts in various banks of a given geographical region. The objective of this report is to present the financial history of an individual or a company, which further helps a bank to take a decision on granting a loan based on the credit score of a company or an individual.

For requesting and receiving the credit reports, bureau integration service is integrated with the financial institution or the product processor.

The oracle banking routing hub facilitates routing and transforming the information between the product processor, the underlying integration service and the bureau. The flow is as follows:

- 1. The product processor requests bureau integration service for credit reports. It provides the required customer information for whom the report is requested.
- 2. The routing hub transforms the data and forwards the request to the bureau integration service.
- Once the integration service receives the request, the data is processed based on various criteria. The criteria contain the rules and facts of the product processor that are maintained in the rules engine.
- 4. Bureaus to be called are identified based on evaluation of the rules.
- 5. The integration service then sends the request to the routing hub, which transforms the data and sends the request to the respective credit bureaus.
- 6. The bureau processes the request and sends the credit report back.
- 7. The routing hub receives the report and transforms the report as per the defined template and sends it back to bureau integration service.
- 8. Bureau integration service then saves the data, displays the credit report, and sends the same to the product processor through the routing hub.

One or more bureaus can be called based on evaluation of the rules. The bureaus can be either called simultaneously or based on the response from the previous bureau call.

Bureau integration service maintains aging for credit report of an applicant. History service allows to store and pull existing credit report of an individual customer. The integration service retrieves report from history for those applicants if subsequent call to same bureau is made within defined period, beyond which a new credit report is called from the bureau. Existing credit reports from history are sent back to the product processor.

In case of multiple applicants being received by bureau integration service as a part of a lending application, based on the evaluation of criteria, the integration service consolidates all the multiple bureau responses into one and sends it to the product processor.

A new bureau can be added with only a configuration and without any change in the code. Two lookup types are required to be created in the bureau integration service. One for bureau and another for bureau product type. The additional maintenance required is configuration of the new bureau in the routing hub.

Bureau integration service supports override of criteria rules if the product processor wants to call a specific bureau or bureau product, for an applicant. In such cases, bureau service will not check criteria for rules evaluation. Instead, bureau service will call the bureau as intimated by the product processor in the request. Here, product processor can list one or more bureau's to be called.

Bureau Integration service supports decoding of encoded pdf string from a bureau response to a pdf report using web content document server. The document server generates a unique document ID for each record stored. Bureau service can access the pdf reports using this document ID.

The below flow diagram depicts how bureau integration service works with the integrated product processor and interfaces with the routing hub for fetching and displaying the credit bureau reports:

### Figure 94: Bureau Integration Service

### Authorization process

To authorize and approve record, you need to perform the following actions:

- 1. Navigate to the required screen.
- 2. Click **Authorize**. The record pending for authorization are displayed.
- 3. Select the required record and click **Approve.**
- 4. The records are displayed in a widget. If you have modified the lookup, criteria twice, system displays two widgets with respective modification number along with the modified details.
- 5. Specify remarks for approving the record in the **Remarks** field.
- 6. Click **Confirm** and authorize the record. The record is authorized successfully.

### 2.37 Credit Bureau Display

The credit bureau display screen facilitates to view the reports received from the various bureaus. The report includes credit history details of the customer and the credit score of the customer based on these details.

This section contains the following subsection:

• View Credit Bureau Report

### 2.37.1 View Credit Bureau Report

The **Credit Bureau Display** screen allows the user to view the credit bureau report based on the various filter options provided.

### To view a credit bureau report:

- 1. From Home screen, click Credit Bureau. Under Credit Bureau, click Operations.
- 2. Under Operations, click Credit Bureau Display.

The Credit Bureau Display screen is displayed.

### 2.38 Lookup

Lookup is the service for mapping of keys and values that is used to enrich the description of the data displayed to the user. The lookup screen facilitates to define the contents for drop-down or list of value fields. Lookup fields are used throughout the system. The identified fields will only accept entries stored in this screen. Below are some examples of the lookup fields.

- Static/Enumeration values
  - > Credit Bureau: For example, credit bureau1, credit bureau 2, and credit bureau 3.
  - > Comparison Operator: Equals, Greater than.
- Dependent lookups based on another selection
  - > Based on Country, State should have different values in the lookup.
  - > Based on Country, Currency should have different values in the lookup.

This section contains the following subsections:

- Create Lookup
- View Lookup

### 2.38.1 Create Lookup

The **Create Lookup** screen allows the user to create lookup definitions by updating various details.

To create lookup:

- 1. From Home screen, click Core maintenance. Under Core Maintenance, click Credit Bureau.
- 2. Under Credit Bureau, click Maintenance. Under Maintenance, click Lookup.
- 3. Under Lookup, click Create Lookup.

The Create Lookup screen is displayed.

### 2.39 Criteria

The Criteria screen facilitates to setup criteria definition, which are used in evaluating request and response criteria (business rules) to identify which bureau is to be called for the request.

#### Examples:

- Call credit bureau 1, for personal loan product, and call credit bureau 1 and 2 for home loan products.
- Call credit bureau 1, if zip code of the applicant is between 70000 80000 and call credit bureau 2, if zip code of the applicant is between 30000 40000.
- Call credit bureau 3, if score from credit bureau 1 is less than 600.

This section contains the following subsections:

- Create Bureau Criteria
- View Bureau Criteria

### 2.39.1 Create Bureau Criteria

The Create Bureau Criteria screen allows the user to create bureau criteria by updating various details.

#### To create bureau criteria:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Credit Bureau.
- 2. Under Credit Bureau, click Maintenance. Under Maintenance, click Criteria.
- 3. Under Criteria, click Create Bureau Criteria.

The Create Bureau Criteria screen is displayed.

### 2.40 System Parameter

System parameters define the information or values used throughout the system and drives the behavior of the features. They control the way task is executed, or whether the system performs a particular task. Some of the parameters are set when the system is installed, but the values associated with the parameter needs to be reviewed and is to be maintained.

#### Example:

Set minimum days to pull credit bureau report from same bureau from initial pull.

Credit bureau report purge days.

This section contains the following subsections:

- Create System Parameter

URL	Text Box	Yes	Service URL of the file location
Gateway Prefix	Text Box		Gateway Prefix is context path of below formatted URL http://host:port/gateway-prefix/endpoint
Import	Button		Extracts the service information from URL and displays it in the Service list

### 2.41.2.4 **WSDL**

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service. Currently, non-SSL WSDL URL is only supported.

Note: In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

# 2.41.2.5 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON. Currently, Swagger 2.0 & Open API 3.0 both are supported.

Note: In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

## 2.41.2.6 Import

You can create a service provider by importing the JSON file. On **Service Providers** screen, click **Import.**

# 2.42 Decision Service

# 2.42.1 <u>Overview</u>

The decision service provides automatic decision making capabilities that can allow lenders to develop simple business processes and strengthen the decision-making process.

It gives flexibility to adjust the credit scoring model according to the lending policy.

When an organization calls the decision service to make a decision based on data attributes shared, system solves the best fit scoring model and provide scores and decisions.

Decision Service is a robust and scalable system that can be easily integrated with any product processor providing auto decision capability and risk based pricing.

### Figure 140 : Decision Service Overview

Decision service can be called from various product processor such as Collections, Deposits, Loans, Insurance, Trade Finance or Payment etc. This product processor calls the decision service and the decision service intern uses the rule engine to configure various complex rules.

The decision service can calculate behavioral scores and suggest the best recommended collection strategy accordingly. For lending products, it can offer a credit score, a decision based on the score, the recommended rate of interest and the ability to calculate which is the maximum amount that can be borrowed by the applicant.

# 2.42.2 Process Flow

The below diagram depicts the entire process flow of how decision service works.

### Figure 141 : Decision Service Process Flow

#### 2.42.2.1 Questionnaire

The first step is to get the questionnaire. The product processor sends the data of all the applicants in the application. A qualitative scoring model is resolved for each applicant and this information along with the details of the questionnaire is sent back to the product processor. The product processor captures the response to the questions and sends back as part of the second step which is the execution of the credit decision.

#### 2.42.2.2 Logical Model

First step in execution of the credit decision is logical screening. In this application pre screening is done to check the basic eligibility of the application as per the bank's policy. For example, if the bank's policy is not to fund to property in flood prone area, then as a part of this step, if the property is in flood prone area then the application will be rejected and the application will not be processed further. Or the applicants minimum age should be more then 18 and the applicant applying is of less than 18, in that case the application is rejected and it will not be processed further.

#### 2.42.2.3 Borrowing Capacity

Once eligibility is checked, the next step is borrowing capacity. This is the maximum loan amount the applicant is eligible for. The stage at which it is to be calculated depends on the configuration made. It can be calculated before the scoring after the decision. The loan amount considered for decision is minimum of requested loan amount or the amount calculated for scoring, decision and pricing.

#### 2.42.2.4 Qualitative Score

After borrowing capacity, the next step is qualitative scoring done using the feedback from the applicants for questionnaire.

#### 2.42.2.5 Quantitative Score

After qualitative scoring next step is quantitative scoring where scoring is done using application and bureau attributes such as salary, number of credit lines, bureau score etc.

#### 2.42.2.6 Decision and Grade

The decision on the application is done based on the quantitative and qualitative scores. The decision can be approve, manual or decline.

The borrowing capacity can also be calculated after the decision, in this case, the amount calculated will be used only for pricing.

#### 2.42.2.7 Pricing

The last step is to determine the recommended interest rate. This is a risk-based price that refers to offering different interest rates to different customers depending on their risk exposure.

# 2.42.3 Strategy Configuration

Decision service is used for multiple purposes such as borrowing capacity, borrowing capacity plus pricing, only pricing, only decision, logical plus decision etc. System should have an ability to configure the strategy like when the decision service is being called for borrowing capacity, should the request pass through the logical check. In addition, the product processor can configure different strategies for different product types or customer types. Strategy configuration allows the product processor to configure the strategy can be defined for origination, servicing or collection. In addition, multiple strategy can be defined for the same module like for origination i.e. multiple strategy can be defined. This maintenance allows the product processor to configure the strategy according to its need for all the modes for which the decision service can be called for the same module like for origination i.e. multiple strategy can be defined. This maintenance allows the product processor to configure the strategy according to its need for all the modes for which the decision service can be called for.

The various request types using which the product processor can call the decision service are mentioned below:

Score, Decsion and Pricing

Score and Decision

Scores

Pricing and Borrowing Capacity

Pricing

Borrowing Capacity

Decision

**Qualitative Score** 

Quantitative Score

# 2.43 Product Processor

The source system calling the decision system for decisioning the credit application is defined as product processor. There are multiple data segments like account information, customer details, collateral details, credit bureau information or any additional notes if any is received from the product processor for credit decisioning and pricing in decision service.

This section contains the following subsections:

- Create Product Processor
- View Product Processor

# 2.43.1 Create Product Processor

The **Create Product Processor** screen allows the user to create product processor by updating various details.

#### To Create Product Processor:

- 1. From Home screen, click Core Maintenance, Under Core Maintenance, click Credit Decision.
- 2. Under Credit Decision, click Maintenance. Under Maintenance, click Product Processor.
- 3. Under Product Processor, click Create Product Processor.

The Create Product Processor screen is displayed.

#### Figure 142 : Create Product Processor

Create Product Processor		, <sup>2</sup> ×
Basic Details		
Product Processor Code *	Product Processor Description *	
Effective Date *	Expiry Date *	
<b>a</b>		
		Save Cancel

#### 4. Specify the fields on **Create Product Processor** screen.

The fields, which are marked with asterisk, are mandatory.

For more information on fields, refer to the field description table below.

#### Table 110 : Create Product Processor - Field Description

Field	Description	
Basic Details		
Product Processor Code	Specify the unique product processor code.	
Product Processor Description		
Effective Date	Specify the effective date.	
Expiry Date	Specify the expiry date.	

5. Click Save to save the details.

The product processor is created successfully and can be viewed using the **View Product Processor** screen.

# 2.43.2 View Product Processor

The **View Product Processor** screen allows the user to view the product processor created using the **Create Product Processor** screen. The status of the created product processor is displayed as **Unauthorized** and **Open**. Once the checker authorizes the product processor, the status is updated to **Authorized** and **Open**.

To view created product processor:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Credit Decision.
- 2. Under Credit Decision, click Maintenance. Under Maintenance, click Product Processor.
- 3. Under Product Processor, click View Product Processor.

The View Product Processor screen is displayed.

#### Figure 143 : View Product Processor

# 2.44 Lookup

Lookup are the service for mapping of keys and values that is used to enrich the description of the data displayed to the user. The lookup screen facilitates to define the contents for drop-down or list of value fields. Lookup fields are used throughout the system. The identified fields will only accept entries stored in this screen. Below are some examples of the lookup fields.

- Static/Enumeration values
  - > Credit Bureau: Like Credit Bureau 1, Credit Bureau 2 and Credit Bureau 3.
  - > Comparison Operator: Equals, Greater than.
- Dependent lookups based on another selection
  - > Based on Country, State should have different values in the lookup.
  - > Based on Country, Currency should have different values in the lookup.

This section contains the following subsections:

- Create Lookup
- View Lookup

# 2.44.1 Create Lookup

The **Create Lookup** screen allows the user to create lookup definitions by updating various details.

To create lookups:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click Lookup.
- 3. Under Lookup, click Create Lookup.

The Create Lookup screen is displayed.

# 2.45 System Parameter

System Parameter define the information or values used throughout the system and drives the behavior of the features. They control the way task is executed, or whether the system performs a particular task. Some of the parameters are set when the system is installed, but the values associated with the parameter needs to be reviewed and is to be maintained.

### Example:

Set minimum days to pull credit bureau report from same bureau from initial pull.

Credit bureau report purge days.

This section contains the following subsections:

- Create System Parameter
- View System Parameter

# 2.45.1 Create System Parameter

The Create System Parameter screen allows the user to create parameters by updating various details.

#### To Create System Parameter:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click System Parameters.
- 3. Under System Parameter, click Create System Parameter.

The Create System Parameter screen is displayed.

# 2.46 Strategy Configuration

Decision service is used for multiple purposes such as borrowing capacity, borrowing capacity plus pricing, only pricing, only decision, logical plus decision etc. System should have an ability to configure the strategy like when the decision service is being called for borrowing capacity, should the request pass through the logical check. In addition, the product processor can configure different strategies for different product types or customer types. Strategy configuration allows the product processor to configure the strategy can be defined for origination, servicing or collection. In addition, multiple strategy can be defined for origination i.e. multiple strategy can be defined. This maintenance allows the product processor to configure the strategy according to its need for all the modes for which the decision service can be called strategy can be defined.

This section contains the following subsections:

- Create Strategy Configuration
- View Strategy Configuration

# 2.46.1 Create Strategy Configuration

The Create Strategy Configuration screen allows user to configure the strategy as per the requirement.

## To Create Strategy Configuration:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click Strategy Configuration.
- 3. Under Strategy Configuration, click Create Strategy Configuration.

The Create Strategy Configuration screen is displayed.

# 2.47 Logical Model

During credit decision, system evaluates a credit score that represents the creditworthiness of an individual. Banks also do an initial evaluation by using some rules to decide whether to proceed with credit decisioning process or not. A bank can perform this evaluation by maintaining a logical model. Multiple levels of rule can be setup in logical model. The system will process the next step of credit decisioning only if all the rules are satisfied. If any rule fails, then system will stop the processing and decline the request.

This section contains the following subsections:

- Create Logical Model
- View Logical Model

# 2.47.1 Create Logical Model

The Create Logical Model screen allows user to create logical model based on the various input.

User can configure the strategy as per the requirement.

#### To create Logical Model:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click Logical Model.
- 3. Under Logical Model, click Create Logical Model.

The Create Logical Model screen is displayed.

# 2.48 Borrowing Capacity

Borrowing capacity describes the total amount the applicant is eligible to borrow. Maximum loan amount are used for loans, credit cards, and line of credit accounts. The maximum credit amount depends on a number of factors including the borrower's credit worthiness i.e. financial profile and debt to income, loan term, loan purpose, whether the loan is supported by a collateral etc.

Using this screen, we can link a rule for calculating borrowing capacity. We can calculate the maximum lendable amount based on the various criteria of the lender such as debt to income ratio, credit score, credit history etc.

A sample rule to calculate borrowing capacity is given below:

Scenario: Based on Income and FICO score

## Rule 1:

IF MIN(FICO\_SCORE) >= 500 AND MIN(EMPLOYMENT\_PERIOD )< 1 YEAR THEN MULTIPLIER = 5 ELSEIF MIN(FICO\_SCORE) < 500 AND MIN(EMPLOYMENT\_PERIOD) > 1 YEAR THEN MULTIPLIER = 4

Rule2: Max Lendable Amount

MIN(Income) \* Rule1

This section contains the following subsections:

- Create Borrowing Capacity
- View Borrowing Capacity

# 2.48.1 Create Borrowing Capacity

The Create Borrowing Capacity screen allows the user to define the borrowing capacity based on the various input.

#### To Create a Borrowing Capacity:

- 1. From Home screen, click Core Maintenance, Under Core Maintenance, click Credit Decision.
- 2. Under Credit Decision, click Maintenance. Under Maintenance, click Borrowing Capacity.
- 3. Under Borrowing Capacity, click Create Borrowing Capacity.

The Create Borrowing Capacity screen is displayed.

#### Figure 169 : Create Borrowing Capacity

# 2.49 Questionnaire

Credit analysis includes analysis of more information and data. Considering that, some of them have quantitative character and others qualitative, credit analysis are viewed from two aspects such as:

Quantitative analysis involves, an assessment of the financial position based on the customer's income and monthly expenses. It may also include a cash flow analysis of the customer's accounts and credit history.

While qualitative assessment, among others takes into account marital status, education or employment form.

Banks usually grant loan based on a credit scoring model that combines quantitative and qualitative analysis.

This section contains the following subsections:

- Create Questionnaire
- View Questionnaire

# 2.49.1 Create Questionnaire

The **Create Questionnaire** screen allows the user to define qualitative questionnaire based on the various parameters. This questionnaire can be further linked to define qualitative scoring model.

#### To Create Questionnaire:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click Questionnaire.
- 3. Under Questionnaire, click Create Questionnaire.

The Create Questionnaire screen is displayed.

# 2.50 Qualitative Scoring Model

Financial institution use different models for different product or use case. The qualitative scoring model used for home loan would be different then the personal loan. Banks usually grant loan based on a credit scoring model that combines quantitative and qualitative analysis.

This section contains the following subsections:

- Create Qualitative Scoring Model
- View Qualitative Scoring Model

# 2.50.1 Create Qualitative Scoring Model

The **Create Qualitative Scoring Model** screen allows user to define qualitative scoring model based on the various scoring parameters.

#### To create a qualitative scoring Model:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance, click Qualitative Scoring Model.
- 3. Under Qualitative Scoring model, click Create Qualitative Scoring Model

The Create Qualitative Scoring Model screen is displayed.

#### Figure 181 : Create Qualitative Scoring Model

# 2.51 Scoring Feature

Lending institution have complex credit scoring models. The model uses the information contained in an application such as salary, credit commitments, and past loan performances to determine a credit score of an application or an existing customer. The model generates a score and based on that score, system takes the decision like approve, referred or to reject the application. To achieve these, in the decision service, you need to define maintenances of scoring feature. A feature can be either fact based or rule based. The features created in this maintenance can be linked in quantitative score model and decision grade matrix screen.

This section contains the following subsections:

- Create Scoring Feature
- View Scoring Feature

# 2.51.1 Create Scoring Feature

The **Create Scoring Feature** screen allows user to define scoring feature for determining the credit score. This score applies to applications during origination and based on the information received from the product processor.

#### To create a Scoring Feature:

- 1. From Home screen, click Core Maintenance, Under Core Maintenance, click SCredit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance click, Scoring Feature.
- 3. Under Scoring Feature, click Create Scoring Feature.

The Create Scoring Feature screen is displayed.

#### Figure 190 : Create Scoring Feature

Create Scoring Feature		2 ×
Basic Details		
Feature Code * Pada Pada Vites  No	Feature Description " Fact Code " Jailect *	Product Processor * Select w Fact Name
		Sive Casel

4. Specify the fields on **Create Scoring Feature** screen.

The fields, which are marked with asterisk, are mandatory.

Field	Description	
Basic Details		
Feature Code	Specify the unique feature code.	
Feature Description	Specify a short description for the feature.	
Product Processor	Specify the product processor for which the feature is being created.	
Rule	Select the rule, if it is required to define the feature.	
	This option is used to decide whether the feature is rule based or fact based.	
	The options are:	
	• Yes	
	• No	
Fact Code	Select the fact code to be mapped to the feature from the drop-down list.	
	This field is enabled if the <b>Rule</b> is selected as <b>No.</b>	
Fact Name	Displays the fact name for the selected fact.	
	This field is enabled if the <b>Rule</b> is selected as <b>No</b> .	
Rule Code	Select the rule code to be mapped to the feature from the drop-down list.	
	This field is enabled, if the <b>Rule</b> is selected as <b>Yes</b> .	
0	Click this icon to get the information about the rule.	
Rule Name	Displays the rule name for the selected rule.	
	This field is enabled if the <b>Rule</b> is selected as <b>Yes</b> .	

Table 158 : Create Scoring Feature - Field Description

- 5. Click **Save** to save the details.
- 6. The scoring feature is successfully created and can be viewed using the **View Scoring Feature** screen.

## 2.51.2 View Scoring Feature

The View Scoring Feature screen allows user to view the scoring feature created using the Create Scoring Feature screen. The status of the uploaded feature is displayed as Unauthorized and Open. Once the checker authorizes the model, the status is updated to Authorized and Open.

To view an uploaded scoring feature:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Credit Decision.
- 2. Under Credit Decision click, Maintenance. Under Maintenance click, Scoring Feature.
- 3. Under Scoring Feature, click View Scoring Feature.

The View Scoring Feature screen is displayed.

View Scoring Feature	,* ×

# 2.52 Quantitative Scoring Model

Quantitative analysis involves, an assessment of the financial position based on the customer's income and monthly expenses. It may also include a cash flow analysis of the customer's accounts and credit history.

Banks usually grant loan based on a credit scoring model that combines quantitative and qualitative analysis.

This section contains the following subsections:

- Create Quantitative Scoring Model
- View Quantitative Scoring Model

## 2.52.1 Create Quantitative Scoring Model

The **Create Quantitative Scoring Model** screen allows user to define quantitative scoring model based on the various scoring parameters. The parameters driving the scoring models are configurable. You can create quantitative scoring model by updating various details.

#### To create a Quantitative Scoring Model:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance, click Credit Decision.
- 2. Under Credit Decision, click Maintenance. Under Maintenance, click Quantitative Scoring Model.
- 3. Under Quantitative Scoring Model, click Create Quantitative Scoring Model.

The Create Quantitative Scoring Model screen is displayed.

4. Specify the fields on Create Quantitative Scoring Model screen.

The fields, which are marked with asterisk, are mandatory.

For more information on fields, refer to the field description table below.

Field	Description	
Basic Details		
Scoring Model	Select the scoring model from the drop-down list.	
	The options are:	
	Application Scoring Model	
	Applicant Scoring Model	
	Multi-Applicant Scoring Model	
Scoring Model code	Specify the unique scoring model code.	
Scoring Model Description	Specify a short description for the scoring model.	
Effective Date	Specify the effective date.	
Expiry Date	Specify the expiry date.	
Product Processor	Specify the product processor for which the model is being created.	
Priority	Specify the priority of the model.	

5. Click the Selection Criteria tab to define scoring model.

	On click of <b>Add Column</b> , all the features are shown in the drop down list. Select the feature to be added. Click save to add the feature.
	If the feature is numeric type, two columns gets added in the table From and To. If the feature is character/alphanumeric type one column Value gets added.
	System should not save, if no feature have been added. User can click Cancel to close the window.
Link a Rule?	User can link a rule to the features.
	The options are:
	• <b>Yes</b> : If this option is selected, system displays the list of rules and based on rule mapped the decision is provided.
	• No: If this option is selected, system displays the list of decision lookup values.
×	Click to delete a column.
+ button	Click to add a new row.
- button	Click to delete an existing row.
Score From	Specify the minimum range of score for the decision.
Score To	Specify the maximum range of score for the decision.
Decision	Specify the decision of an application from the drop-down list. The values are configurable based on the look up values maintained
	The options are:
	Approved
	• Manual
	Rejected
Rule	Displays the rules based on which decision is to be made.
	This field is enabled if Link a Rule? Option is update as Yes.

7. Click the **Grade Matrix** tab to assign the grade to the application that is used during the pricing of the application. You can select the feature for which the grade needs to be maintained like Quantitative/Qualitative.

Field	Description
Grade	Specify the grade of the application based on the score scored. The values are configurable based on the look up values maintained.
	The options are:
	• A
	• B
	• C
Value	In case the data type of feature is numeric such as Age, FICO score the below field appears. , specify the value for which the grade has to be maintained.
Rule	Displays the rules based on which decision is to be made.
	This field is enabled if Link a Rule? Option is updated as Yes.

8. Click **Save** to save the details.

The decision grade matrix is successfully created and can be viewed using the **View Decision and Grade Matrix** screen.

# 2.53.2 View Decision Grade Matrix

The View Decision Grade Matrix screen allows the user to view the decision grade matrix created using the Create Decision Grade Matrix screen. The status of the uploaded model is displayed as Unauthorized and Open. Once the checker authorizes the matrix, the status is updated to Authorized and Open.

To view an uploaded decision grade matrix:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision, click Maintenance. Under Maintenance, click Decision Grade Matrix.
- 3. Under Decision Grade Matrix, click View Decision Grade Matrix.

The View Decision Grade Matrix screen is displayed.

# 2.54 Pricing

Risk-based pricing refers to the offering of different interest rates to different customers depending on their credit worthiness. Thus, not all borrowers for the same product receives the same interest rate and credit terms. This means that high-risk borrowers who are less likely to repay their loans in full and on time will be charged higher rate of interest. While the low risk borrowers, having greater capacity to make payments will be charged lower rate of interest.

This section contains the following subsections:

- Create Pricing Model
- View Pricing Model

# 2.54.1 Create Pricing Model

The **Create Pricing Model** screen allows user to create pricing model based on various pricing parameter by updating various details.

### To create a pricing set up:

- 1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.
- 2. Under Credit Decision click Maintenance. Under Maintenance, click Pricing.
- 3. Under Pricing, click Create Pricing Model.

The Create Pricing Model screen is displayed.

# 2.55 View Execution Summary

**Execution Summary** screen enables the user to view the details of the processed application. Based on the request mode it displays details related to logical model, borrowing capacity, quantitative score, qualitative score, decision and grade details and pricing details. It also provides different type of filters to perform search for a specific record.

This section contains following subsection:

• View Execution Summary

# 2.55.1 View Execution Summary

The **View Execution Summary** screen allows user to view the execution summary based on the various filter options provided.

#### To view execution summary:

1. From Home screen, click Core Maintenance. Under Core Maintenance click, Credit Decision.

2. Under Credit Decision click, Operations. Under Operations, click Execution Summary.

The **Execution Summary** screen appears.

For more information on fields, refer to the field description table below.

Field	Description
Scoring Decision Summary	
Product Processor	Displays the name of the product processor that sent the request.
Request Type	Displays the request type sent by product processor.
Contract ID	Displays the contract ID sent by the product processor.
Request Reference Number	Displays the request reference number sent by product processor.
Internal Reference Number	Displays the internal reference number of the application.
Execution Date	Displays the execution date of the processing application.
Mode	Displays the mode of execution of the application.
Status	Displays the status of the processed application.

#### Table 188 : Execution Summary- Search option- Field Description

5. Click the kick icon corresponding to the required record to view the decision related details on each widget. Only one record is viewed at a time. If you need to view another record, you have to click on

to close the already open record and then the next record can be viewed. The widgets are arranged in the flow in which the execution is done and is indicated by showing the sequence 1, 2, 3 numbers in the top right corner. The widgets are clickable on hover the color of the widget changes to indicate the widget is clickable.

6. When the status of processed application is **Failure**, on click of the Failure message is displayed in the step that is failed. For example, in case of **Qualitative Score Model** is not resolved, then the error message is displayed in the **Qualitative Score Model** widget and the previous widget will show the data which was processed. Where in if the logical processing fails, then the status **Fail** is shown in the **Logical Model** widget and reason for failure is displayed on click of the widget.

#### Figure 221 View Execution Summary

Table 189 : View Execution Su	mmary Field Description
-------------------------------	-------------------------

Field	Description		
Logical Model Widget	Displays the status of the logical model processed.		
The following fields appear in Logical Model widget.			
Logical Model Code			
Displays the logical model code, resolved for credit decision.			
Description	Displays the logical model description, resolved for the credit decision.		
Status	Displays the status of the logical model processed.		
	• For status <b>Pass</b> , the color is shown as <b>Green</b> .		
	• For status, <b>Fail</b> the color is shown as <b>Red</b> .		
Borrowing Capacity Widget			
Displays the maximum lend	able amount that can be given for an application.		
The following fields appear in Borrowing Capacity widget.			

Field	Description
Eligibility Code	Displays the eligibility model code, resolved for calculating the borrowing capacity.
Description	Displays the eligibility model description, resolved for calculating the borrowing capacity.
Requested Amount	Displays the requested amount for the lending application.
Borrowing Capacity	Displays the maximum lendable amount that can be given for the application.
Qualitative Score Widget	
Displays the qualita	tive credit score, post credit decision of the application.
The following fields appear	in <b>Qualitative Score</b> widget.
Scoring Model Code	Displays the scoring model code, resolved for credit decision.
	• When <b>Is Application Decision Required</b> is <b>Yes</b> , the application level decision scoring code is displayed.
	• When <b>Is Application Decision Required</b> is <b>No</b> , the applicant level decision scoring code is displayed.
	• When <b>Is Application Decision Required</b> is <b>No</b> , and <b>Is</b> <b>Primary Applicant</b> is <b>No</b> , the application level decision scoring code is displayed.
Description	Displays the scoring model description, resolved for credit decision.
Score	Displays the qualitative credit score post credit decision of the application.
	• When <b>Is Application Decision Required</b> is <b>Yes</b> , the system performs the aggregation, which can be minimum, maximum or average of all applicant's score. The aggregation performed is defined as rules and linked at the application level scoring model and this aggregated score is displayed.
	• When <b>Is Application Decision Required</b> is <b>No</b> , the score is displayed by resolving the applicant level scoring model.
	• When Is Application Decision Required is No, and Is Primary Applicant is No, the system performs the aggregation, which can be minimum, maximum or average of all applicant's score. The aggregation performed is defined as rule and linked at the application level scoring model and this aggregated score is displayed.

Field	Description
Quantitative Score Widge	t
Displays the quanti	tative credit score post credit decision of the application.
The following fields appear	in Quantitative Score widget.
Scoring Model Code	Displays scoring model code, resolved for credit decision.
	• When <b>Is Application Decision Required</b> is <b>Yes</b> , the application level decision scoring code is displayed.
	• When <b>Is Application Decision Required</b> is <b>No</b> , the applicant level decision scoring code is displayed.
	• When Is Application Decision Required is No, and Is Primary Applicant is No, the multi applicant level scoring code is displayed.
Description	Displays the scoring model description, resolved for credit decision.
Score	Displays the quantitative credit score, post credit decision of the application.
	• When <b>Is Application Decision Required</b> is <b>Yes</b> , the system performs the aggregation, which can be minimum, maximum or average of all applicant's score. The aggregation performed is defined as rules and linked at the application level scoring model and this aggregated score is displayed.
	• When <b>Is Application Decision Required</b> is <b>No</b> , the score is displayed by resolving the applicant level scoring model.
	• When Is Application Decision Required is No, and Is Primary Applicant is No, score is displayed by resolving the multi applicant level scoring model.
Decision and Grade Widg	et
Displays the credit	decision and scoring grade, taken for the application.
The following fields appear	in Quantitative Score widget.
Model Code	Displays the model code, resolved for credit decision and grade.
Description	Displays the model description, resolved for credit decision and grade.
Decision	Displays the credit decision, taken for the application.

Field	Description
Grade	Displays the scoring grade, post credit decision of the application.
Pricing Widget	
Displays the rate ap	oplicable post credit decision.
The following fields appear	in Quantitative Score widget.
Pricing Model Code	Displays the pricing model code, resolved for credit decision.
Description	Displays the pricing model description, resolved for credit decision.
Rate Type	Displays the rate type applicable post credit decision.
Rate %	Displays the rate applicable post credit decision.

The following fields are displayed once you click the **Logical Model** widget. The details for the request which was clicked on the landing page is displayed.

Field	Description
Weightage Score	<ul> <li>Displays the weightage score post credit decision of the application.</li> <li>When Is Application Decision Required is Yes, the system performs the aggregation, which can be minimum, maximum or average of all applicant's score. The aggregation performed is defined as rules and linked at the application level scoring model and this aggregated score is displayed.</li> <li>When Is Application Decision Required is No, the score is displayed by resolving the applicant level scoring model.</li> <li>When Is Application Decision Required is No, and Is Primary Applicant is No, the score is displayed by resolving model.</li> <li>In case of Is Application Decision Required is Yes, system displays the hyperlink on the weightage score value. It shows the aggregate rule details.</li> </ul>
Applicant details a	re shown at the left panel.
<applicant name=""></applicant>	Displays the applicant names present in the application.
<score></score>	Displays the weighted credit score post credit decision of the application. The score is calculated for each applicant by resolving the applicant level scoring model. In case of multi applicant scenario, weightage score per applicant is not shown.
Below details are	shown at the right panel.
<applicant name=""></applicant>	Displays the applicant names present in the application.

Field	Description
Scoring Model Code	Displays the applicant level scoring model code resolved for credit decision.
	Applicant level scoring model is applicable for below case.
	If Is Application Decision required is Yes
	<ul> <li>If Is Application Decision Required is No, and Is Primary Applicant is Yes</li> </ul>
	Multi applicant level scoring model is applicable in the below case.
	<ul> <li>If Is Application Decision Required is No, and Is Primary Applicant is No</li> </ul>
	Click the hyperlink to view the rule executed to resolve the quantitative score.
Show Rule Log	Click to see the rule log.
	Click to expand the rule.
Expression	Displays the expression of the rule.
Input	Displays the input of the rule.
Value	Displays the value of the rule.
Description	Displays the applicant scoring model description.
Weightage Score	Displays the weighted credit score post credit decision of the application.
	The weightage score is calculated for each applicant by resolving the applicant scoring model.
	In case of multi applicant scoring model, for both the applicant the same score is shown since the score is not calculated per applicant.
0	Click to get the information about the formula for calculation of score.

Field	Description
Graph View	Two graphical views are available.
	Bar Graphs
	The details are shown as a graphical representation as bar charts.
	<ul> <li>List of features on the X-axis</li> </ul>
	<ul> <li>Weightage Score on the Y-axis.</li> </ul>
	Based on the evaluation of the category, the feature are shown in a particular color based on the maintenance done in the lookups screen.
	Note: For Multi Applicant scoring model all graphs is shown in the same color, as category evaluation is not applicable.
	Pie Charts
	The details are shown as a graphical representation as pie charts.
	The calculation logic for the feature is (Weighted score of the feature/ Weightage score of the applicant)*100. The pie is shown from a pool of colors available/defined in the code.
Data View	The scoring details are shown as mentioned below in data view.
Scoring Details	
Feature	Displays the features resolved for the applicant in the scoring model.
	Click the hyperlink to view the rule executed to resolve the quantitative score.
Show Rule Log	Click to see the rule log.
•	Click to expand the rule.
Expression	Displays the expression of the rule.
Input	Displays the input of the rule.
Value	Displays the value of the rule.
Value	Displays the value of the feature.
Range Type	Displays the range type for the feature.
Range	Displays the range resolved for the feature value for score resolution.

Field	Description
Weightage %	Displays the weightage defined for the feature in the scoring model.
Score	Displays the score calculated for the feature based on the range and feature value.
Weightage Score	Displays the weighed credit score post credit decision of the application.

The following fields are displayed once you click the **Decision and Grade** widget.

## Figure 230 : Decision and Grade Widget

Rate Type	Displays the rate type applicable post credit decision.			
Rate Percentage	Displays the rate applicable post credit decision.			
Loan Amount	Displays the eligible loan amount for the application.			
Loan Tenure	Displays the loan tenure for the application.			
Loan Amount Range	Displays the range resolved for the loan amount value.			
Loan Tenure Range	Displays the range resolved for the loan tenure value.			
Rate %	Displays the rate applicable post credit decision.			

# 3. NLP Framework

This section of the user guide is designed to help you quickly get acquainted with the Machine Learning, Natural Language Processing (NLP) framework.

#### **Pre-requisites**

Specify User Id and Password, and login to Home screen.

This section contains the following topics:

- Toolkit
- Operation
- 3P Service Integration

# 3.1 <u>Toolkit</u>

The Toolkit is used to design and train NLP/Named Entity Recognition (NER) Model(s).

This section contains following subsections:

- Use Case Definition
- Use Case Definition Summary
- Use Case Definition Maintenance
- Annotator
- Model Training
- Model Management
- Model Management Summary
- Model Management Maintenance

# 3.1.1 Use Case Definition

Use cases are defined by the business domain. The information that is required to be extracted from documents are driven by business consideration against the context of the use case being defined.

Tags/entities are required for annotating or tagging of information in the source document in order to create training files for a use case model training. These tags or entities will always be driven by business considerations for a particular use case.

The use case definition maintenance screen allows the user to define use case(s) and maintain specific list of tags for the use case.

# 3.1.1.1 Use Case Definition Summary

The summary screen displays the list of defined use cases. To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click NLP Toolkit.
- 2. Under NLP Toolkit, click Use Case Definition.

The Use Case Definition screen is displayed.

Figure 232: Use Case Definition

		_						

Figure 233: Use Case Definition Maintenance

On **Tag Maintenance** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

Field	Description			
Use Case Name	Unique use case name. It gets populated on Save, from the last folder name from the "Training Corpus Path (DOC)"			
Description	Use Case Description			
Mod No	Automatic Modification Number			
Straight Through Processing	yes = Unattended / No = Attended			
Use Case Tags/Entities	Specifies the use case tags entities.			
Tag Display Sequence	The sequence in which the tags get displayed.			
Tag Screen Display	Business Name of the Tag			
Tag Name	Technical Name of the Tag			
Annotation Tag	To identify tags to be used in Training			

Table 197: Tag Maintenance – Field Description

Field	Description
Default Value	Default value for tags not used for training

# 3.1.2 Annotator

Annotation is the process of identifying information within a document content and tagging them as a specific type of information. Of course, each use case defined, will have their own relevant maintained list of tags/entities, which will be used to annotate source documents for a use case.

#### Figure 234: Annotator

	LOAN DRAW DOWN
Description: USD 550 Million Cred	It Facilities   Organization  Convertion IND has elected to borrow under the Tranche B  Corporation Operation Please see details below:  Amount

Annotator helps you to perform the annotations on a source document for a use case. To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click NLP Toolkit.
- 2. Under NLP Toolkit, click Annotator.

The Annotator screen is displayed.

13. After all the tags are assigned relevant information click **Create Annotated** File to create the annotated file and end the process.

### 3.1.3 Model Training

Model training is done on the annotated training corpus. The annotated training corpus is a collection of annotated training files created using the annotator.

Model training is iterative and is carried out over increasing corpus size depending on the model parameters.

Each defined use case will have its own training corpus available in the path set up in the use case definition. To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click NLP Toolkit.
- 2. Under NLP Toolkit, click Model Training.

The **Model Training** screen is displayed.

#### Figure 245: Model Training

	CHEQUE LEAVES	0.982	0.9561	0.9689	
				Train Model Save I	Model

#### Training NER Models:

- 3. Select the Model Type as NLP(NER).
- 4. Choose the use case name.
- 5. Click Train Model.

Each model for a use case is identified by a unique run reference.

#### **Training Document Classifier Model:**

- 6. Select the Model Type as Document Classification.
- 7. Click Train Model.

If you find the model parameters acceptable, you may want to save the model by clicking **Model Save**.

The alternative is to add more annotated training files for the use case and repeat model training, till satisfactory parameters are achieved.

### 3.1.4 Model Management

All the run reference of models saved from model training for a use case can be seen here. For each model run reference, you can view the parameters for the model as well as individual tag/entities

You may choose the active model run reference to be used as part of business processing.

This section contains following subsections:

- 3.1.4.1 Model Management Summary
- 3.1.4.2 Model Management Maintenance

#### 3.1.4.1 Model Management Summary

The summary screen displays the list of use case models. To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click NLP Toolkit.
- 2. Under NLP Toolkit, click Model Management.

The Model Management screen is displayed.

#### Figure 246: Model Management Summary

Run Reference	Precision	Recall	F1 score	Active	
					Tag Parameters
					Tag Parameters
			0.902		Tag Parameters
					Tag Parameters
					Tag Parameters

3. On **Model Management** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

#### Table 200: Model Management Maintenance – Field Description

Field	Description
Use Case Name	Displays the name of the Use Case.
Model Type	Displays the NER or Classification type of Model.
Run Reference	Unique Model Version Identifier.
Precision	Value between 0 to 1. Closer to 1 is better.
Recall	Value between 0 to 1. Closer to 1 is better.
F1 Score	Value between 0 to 1. Closer to 1 is better.
Active	The model run reference that is currently active.

For each model run reference you could view the individual tag parameters.

Figure 248: Tag Parameters

Case Name	Tag Parameters Detail				×	:
vinv	Model Name corpinat	Model Type NER		Run Reference 2twicht.B		^
Run Reference	Tag Name	Precision	Recall	F1 Score		
	supplierName	0.954	0.932	0.943	^	Tag Parameters
	buyerCode	0.975	0.886	0.929		Tag Parameters
	Invoice Due Date	1	0	0		Tag Parameters
	noNumber	0 070	0.919	0.880		✓ Tag Parameters
					Close	Tag Parameters

At this stage you have defined a new use case with the tags/entities to be recognized by the model and trained and exported the use case model to be used by business.

## 3.2 **Operation**

This is where the trained models are consumed for business processing.

This section contains following subsections:

- 4.2.1 Document Upload
- 4.2.2 Transaction Log

### 3.2.1 Document Upload

This is the screen where you upload the source document which is consumed by the NLP model and defined tags/entities are recognized.

The information that is extracted by the model is seamlessly used in further business processing. To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click Operation.
- 2. Under Operation, click Document Upload.

The **Document Upload** screen is displayed.

#### Figure 249: Document Upload

Document Upload				$\mu^{tr}$ $\times$
Scan and Upload Document				
± Select File		Document Type Corporate Invoice	v	Upload
Ankita_Sample_9.pdf		Corporate invoice	Ť	
Original Document				
				i i

		Phone- (209) 763-2737	PO No. # - P0952091 PO Date - 15/09/2018	
	Phone- (641) 791-9080	Email barry smith@vanc.com	Due Date - 20/10/2018	

- 3. Click Select File to select the source document.
- 4. Chose the Document Type from the pick list.
- 5. Click **Upload** to initiate business process.

## 3.2.2 <u>Transaction Log</u>

This is the screen where you can see all the uploaded transactions that has been interpreted by the NLP models.

You can filter the displayed transactions based on the following:

- Document Type
- Status

To process this screen, perform the following steps:

- 1. From Home screen, click Machine Learning. Under Machine Learning, click Operation.
- 2. Under Operation, click Transaction Log.

The Transaction Log screen is displayed.

#### Figure 250: Transaction Log

ument Type	Stat	us

## 3.3 <u>3P Service Integration</u>

Any model execution or training service(s) built using any 3P NLP library can be integrated in the NLP framework.

The only requirement being the REST services must confirm to the payload definition detailed in the following section.

Building model training and execution services using other 3P NLP libraries would involve consulting effort.

This section contains following subsections:

- 4.3.1 Classification Training Service
- 4.3.2 NER Training Service
- 4.3.3 Classification Processing Service
- 4.3.4 NER Processing Service
- 4.3.5 Service Mapping
- 4.3.6 Business Service Mapping

### 3.3.1 Classification Training Service

This section elaborates the payload details for document classification model training service.

#### Input Payload

#### Table 202: Input Payload

name	in	type	required	Remarks
trainCorpusPath	formData	string	true	Training Corpus path
modelType	formData	File	true	Type of model being trained
runRef	formData	string	true	Unique running reference number

- name: " trainCorpusPath"

in: "formData"

type: string

required: true

- name: " modelType"

in: "formData"

type: string

value for document classification training: "docClassification"

required: true

- name: " runRef "

in: "formData"

type: string

required: true

#### **Output Payload:**

{

## 3.3.5 Service Mapping

After creation of the model services, entries must be made into the table CMC\_TM\_ML\_SERVICE\_DEFN to enable the NLP framework to use these services.

#### Existing use case:

Update the highlighted column in table CMC\_TM\_ML\_SERVICE\_DEFN with the new service API.

Column name	Remarks	Model Training	Model Processing
ID	Unique ID		
USECASE_NAME	Use Case Name	<existing case="" use=""></existing>	<existing case="" use=""></existing>
DESCRIPTION	Use Case Description		
SERVICE_TYPE	Service Type	Training	Processing
SERVICE_DEFN	Mapped Service API	<new api="" service=""></new>	<new api="" service=""></new>
METHOD_TYPE	Method Type	POST	POST
APP_ID	Sub Domain ID		
RECORD_STAT	Record Status	0	0
AUTH_STAT	Authorized Status	А	А
MOD_NO	Modification Number	1	1
ONCE_AUTH	Once Authorized	Υ	Υ
MAKER_ID	Maker Name	SYSTEM	SYSTEM

#### Table 206: Existing Use Case

Column name	Remarks	Model Training	Model Processing
MAKER_DT_STAMP	Maker Date stamp	<application date=""></application>	<application date=""></application>
CHECKER_ID	Authorizer Name	SYSTEM	SYSTEM
CHECKER_DT_STAM	Authorizer Date stamp	<application date=""></application>	<application date=""></application>

#### New use case

Insert a new record into the table CMC\_TM\_ML\_SERVICE\_DEFN.

#### Table 207: New Use Case

Column name	Description	Remarks for Data		
ID	Unique ID	Ensure a Unique ID		
USECASE_NAME	Use Case Name	Must be one of the usecase_name from the table CMC_TM_ML_NER_TAG_MAS		
DESCRIPTION	Use Case Description			
		'Training'	Use this value for model Training Service	
SERVICE_TYPE	Service Type	'Processing'	Use this value for model execution Service	
		'Business'	Use this value for business Service	
SERVICE_DEFN	Mapped Service API	<the 3p="" api="" created="" newly="" nlp="" service=""></the>		
METHOD_TYPE	Method Type	POST		
APP_ID	Sub Domain ID	NULL		
RECORD_STAT	Record Status	0		
AUTH_STAT	Authorized Status	A		
MOD_NO	Modification Number	1		
ONCE_AUTH	Once Authorized	Y		
MAKER_ID	Maker Name	SYSTEM		
MAKER_DT_STAMP	Maker Date stamp	<application date=""></application>		
CHECKER_ID	Authorizer Name	SYSTEM		
CHECKER_DT_STAMP	Authorizer Date stamp	<application date=""></application>		

## 3.3.6 Business Service Mapping

If straight through processing is enabled in use case definition, then entries must be made into the table CMC\_TM\_ML\_BUS\_SERVICE\_DEFN to enable the NLP framework to call the Business Service.

Insert a new record into the table CMC\_TM\_ML\_BUS\_SERVICE\_DEFN for each use-case with straight through processing enabled.

Column name	Description	Remarks for Data	
ID	Unique ID	Ensure a Unique ID	
USECASE_NAME	Use Case Name	Must be one of the usecase_name from the table CMC_TM_ML_NER_TAG_MAS	
DESCRIPTION	Use Case Description		
SERVICE_TYPE	Service Type	'Business'	Use this value for business Service
ADAPTER_CLASS	Fully qualified name of the adapter class	Use oracle.fsgbu.cmc.nlp.pipeline.services.adaptor.G ricAdaptor for all the business service calls Use oracle.fsgbu.cmc.nlp.pipeline.services.adaptor.O HAdaptor if you want to call business service via Oracle Banking Routing Hub	
SERVICE_DEFN	Mapped Service API	API, which will be called for Business service execution	
HEADERS	Comma separated headers key value separated by colon (:)	Eg : docld:123 , branchCode : 000	
METHOD_TYPE	Method Type	POST	
APP_ID	Sub Domain ID	NULL	

Table 208: For Each Use Case

Column name	Description	Remarks for Data
RECORD_STAT	Record Status	0
AUTH_STAT	Authorized Status	А
MOD_NO	Modification Number	1
ONCE_AUTH	Once Authorized	Y
MAKER_ID	Maker Name	SYSTEM
MAKER_DT_STAMP	Maker Date stamp	<application date=""></application>
CHECKER_ID	Authorizer Name	SYSTEM
CHECKER_DT_STAMP	Authorizer Date stamp	<application date=""></application>

If you are Integrating Business Service via Oracle Banking Routing Hub then in service definition column, you need to provide URL of Oracle Banking Routing Hub dispatch API and the additional headers in headers column.

Since there are some common headers, which are required for calling Oracle Banking Routing Hub as well (like appld, branchCode, uderld) and to avoid the conflict for these headers, the ML\_ prefix is appended in header keys by Oracle Banking Routing Hub adaptor. You need to configure transformation logic of these headers in Oracle Banking Routing Hub.

# 4. Machine Learning Framework

This section is designed to help you quickly get acquainted with how to on-board business cases on the Machine Learning framework in Oracle Banking.

The assets used to build the Machine Learning framework is available by default with Oracle database.

Oracle Database 19c and above.

#### Prerequisites

Specify User Id and Password, and login to Home screen.

Make sure that Machine Learning framework is already deployed and available as part of the application menu. Refer to **Common Core Services Installation Guide** for more details.

### 4.1 Use Case On-Boarding

On-boarding a new business case onto the Machine Learning framework involves two broad stages as highlighted below.

#### Model Definition

One-time setup of use case definition captures the data source, target columns and type of use case.

#### Model Training

Model training is use case specific and has the intelligence to evaluate multiple algorithms and discover the best fit algorithm to the data pattern.

The onset of these two stages assumes that you have already decided on the business use case that you would want to on-board.

## 4.2 Frameworks Supported

### 4.2.1 <u>Timeseries</u>

Timeseries are the use cases involving the date sequence data to forecast for future dates.

Example:

CASE ID	CCY	BALANCE
17-Aug	USD	6723.00
18-Aug	USD	250.00
19-Aug	USD	2654.00
20-Aug	USD	20.00
21-Aug	USD	?

**NOTE:** CASE ID can either be a DATE or a Sequence

## 4.2.2 <u>Timeseries Algorithms Supported</u>

By default, the framework uses Exponential Smoothing to forecast from timeseries data. It evaluates 14 different algorithmic combinations to best fit the patterns of

- Error type (additive or multiplicative),
- Trend (additive, multiplicative, or none), including damped trends
- and Seasonality (additive, multiplicative, or none)

**Note:** User is not required to select any algorithmic combinations. The framework evaluates and selects the best fit combination for you.

## 4.2.3 <u>Regression</u>

Regression is a statistical technique to discover relationships using independent variables to estimate/predict a target variable of NUMBER or INTEGER type.

Example: User needs to predict the value of LUXURY SPEND for a new CASE ID, given the data of branch, marital status, income and savings

CASE ID	BRANCH	MARITAL STATUS	INCOME	SAVING	LUXURY SPEND
12345	BRT	Y	15000	6723	1000
12346	BRT	Ν	17500	250	750
12347	CSR	D	25000	2654	1900
12348	CSR	Ν	16567	20	2500

Note: CASE ID MUST uniquely identify a row

### 4.2.4 Regression Algorithms Supported

The following algorithm are available as part of the framework.

S No	ALGORITHM	REMARKS
1	GENRALIZED LINEAR REGRESSION	Also handles RIDGE regression depending on the underlying pattern of data
2	SUPPORT VECTOR MACHINES	Supports both linear and gaussian kernels
3	NEURAL NETWORK	Uses default 1 layer with number of nodes <= 50

**Note:** Users have the flexibility to select a specific algorithm or keep it as NULL for the framework to evaluate and best fit the algorithm to the underlying data.

## 4.2.5 Classification

Classification is a statistical technique to discover relationships using independent variables to classify a target variable into a number of GROUPS or CLASSES. Mostly used for decision making.

Example: User needs to predict if a new CASE ID will churn(1) or not (0), given the data of branch, marital status, income and savings

CASE ID	BRANCH	MARITAL STATUS	INCOME	SAVING	CHURN
12345	BRT	Υ	15000	6723	0
12346	BRT	Ν	17500	250	1
12347	CSR	D	25000	2654	1
12348	CSR	Ν	16567	20	0

Note: CASE ID MUST uniquely identify a row

## 4.2.6 Classification Algorithms Supported

The following algorithms are available as part of the framework.

S No	ALGORITHM	REMARKS
1	DECISION TREE	
2	NAÏVE BAYES	
3	RANDOM FOREST	
4	GENRALIZED LINEAR REGRESSION	Also handles RIDGE regression depending on the underlying pattern of data
5	SUPPORT VECTOR MACHINES	Supports both linear and gaussian kernels
6	NEURAL NETWORK	Uses default 1 layer with number of nodes <= 50

**Note:** Users have the flexibility to select a specific algorithm or keep it as NULL for the framework to evaluate and best fit the algorithm to the underlying data.

### 4.3 Partitioned Model

Oracle in-Database machine learning allows the user to design partitioned models.

Partitioned model organizes and represents multiple models as partitions in a single model entity, enabling you to easily build and manage models tailored to independent slices of data.

Example:

CUSTOMER ID	BRANCH	MARITAL STATUS	INCOME	SAVING	LUXURY SPEND
12345	BRT	Y	15000	6723	1000
12346	BRT	Ν	17500	250	750
12347	CSR	D	25000	2654	1900
12348	GRF	Ν	16567	20	2500

In this above example of data, user could build a single partitioned model on independent slices of data based on branch code.

The user has the advantage of having a single partitioned model instead of having multiple models for each individual branch.

## 4.4 On-Boarding Use Case

### 4.4.1 Model Definition

Use cases are defined by the business domain of the product processor to which it is mapped. They are unique and machine learning models are named after the use case.

The model definition screen allows you to define the use case and configure the data source to be used for model training.

#### 4.4.1.1 Model Definition Summary

The summary screen displays the list of defined use cases. To access the screen, perform the following steps:

1. From Home screen, click Machine Learning. Under Machine Learning, click Model Definition.

The Model Definition Summary screen is displayed.

#### Figure 255: Model Definition Summary

Model Definition						s* 3
Usecale Name: RETEST1 Mod No: 4 Correlation: •	Usecare Name: PRED_TXN_GAP Mod No: 9 Correlation: 0	Usecase Name: E ClustTest1 Mod No: 7 Correstion: 9	Usecase Name: I TEST13 Mod No: 2 Correlation: 0	Unicase Name: RMSETest Mod No: 3 Correlation: ©	Usecare Name: Test_Class Mod No: 7 Correlation: •

For more information on fields, refer to the field description table below.

#### Table 209: Model Definition Summary – Field Description

Field	Description
Usecase Name	Displays the name of the use case
Mod No	Displays the modification number
Correlation	Displays the default orange colour for New records. On correlation validation in Model definition screen, it will change to green colour.
Authorized Status	Displays the Authorized or Unauthorized status
Record Status	Displays the status of the record.

#### 4.4.1.2 Model Definition Maintenance

**Model Definition Maintenance** screen enables the user to maintain the use case details and define the use case type and data source details.

1. From **Model Definition Summary** screen, click button on the Use case tile to **Unlock** or click

+ to create the new model definition.

The Model Definition Maintenance screen is displayed.

Figure 256: Model Definition Maintenance

Model Definition						,,* ×
Use Case Name *	Description		Use Case Type * Select Usecase Type	Y		
Training and Scoring						
Product Processor * Select Product Processor Target Column * Select Target Column	Training Data Source * Positive Target Value * Select Positive Target Value	•	Unique Case Identifier * Select Unique Case ID Tablespace	×		
Model Partitioning						
Partition Column Names Select Partition Column	Selected Algorithm Select Algorithm	٠	Model Error Statistic * Select Model Error Statistic	¥	Cost Matrix	Correlation
					Sa	ive Cancel

2. On **Model Definition Maintenance** screen, specify the fields. The fields which are marked with asterisk are mandatory. For more information on fields, refer to the field description table below.

 Table 210: Model Definition Maintenance – Field Description

Field	Description			
Use Case Name	Specify the name of the Use Case.			
Description	Specify the description of the Use Case.			
Use Case Type	Select the type of Use Case – Regression or classification from the drop down.			
Product Processor	Select the product to which the use case belongs.			
Training Data Source	Specify the Table or View name used as data source to train the model.			
Unique Case Identifier	Select the column name to uniquely identify a record. <b>NOTE:</b> Column name is a function of table/view design and has to have unique constraint defined			

Field	Description			
Target Column	Select the value of the column which is to be predicted by training the model. It has to have unique constraint defined <b>NOTE:</b> Column name is a function of table/view design			
Positive Target Value	If Use Case Type selected is CLASSIFICATION, then this field is enabled else disabled for REGRESSION. It will display distinct values from the target column			
Tablespace	Specify the valid tablespace and all model related data will be persisted in this table space			
Partition Column Names	Specify the column names to slice data. Refer Partitioned Model for details			
Selected Algorithm	Select the algorithm from the list and build the model. This field should be null to allow the framework to select the best fit algorithm to build the model.			
Model Error Statistics	Select the model error statistics. By Default, the value is selected as 'RMSE' for REGRESSION. The user can also select 'MAE'. It will be disabled for CLASSIFICATION			

#### **Cost Matrix:**

This button is enabled ONLY for CLASSIFICATION type of use cases.

Any classification model can make two kinds of error

Actual Value	Predicted Value	Error Type
1	0	False Negative
0	1	False Positive

This screen is used to bias the model into minimizing one of the error types, by adding a penalty cost. All penalty cost has to be positive.

Actual Value	Predicted Value	Penalty Cost
1	0	6

0 1 2	0	1	2
-------	---	---	---

The default is zero cost for all combinations.

Biasing the model is a trade-off with accuracy of prediction. Business determines if a classification model is required to be biased or not.

3. Click **Cost Matrix** button to launch the screen.

The Cost Matrix screen is displayed.

#### Figure 257: Cost Matrix

misclassification or incorrect prediction	
Predicted Value	Cost
0	0
1	0
0	0
1	0
	Predicted Value 0 1

- 4. On Cost Value screen, specify the relevant penalty cost.
- 5. Click **Save** to save and close the **Cost Matrix** screen and back to the **Model Definition Maintenance** screen.

#### **Correlation:**

Multicollinearity occurs when two or more independent variables are highly correlated with one another in a model.

			Corre	lated	
Unique Case ID					Dependent Variable
CUST ID	BRANCH	MARITAL STATUS	INCOME	SAVING	CHURN
12345	BRT	Single	1500	6723	1
12346	BRT	Married	17500	250	0
12347	CSR	Married	25000	2654	0
12348	GRF	Divorced	16567	20	1
$\gamma$					
Independent Variables					

Multicollinearity may not affect the accuracy of the model as much, but we might lose reliability in model interpretation

Irrespective of CLASSIFICATION or REGRESSION, all use cases must be evaluated for Correlation.

This button will display Orange mark if evaluation is pending.

6. Click **Correlation** button to launch the screen.

The Correlation Analysis screen is displayed.

Figure 258: Correlation Analysis

Corr	Correlation Analysis								
Note	Note - You should aim to have empty pairwise correlation by adding to the Ignore columns list and Iteratively refreshing. Start by refreshing to get the latest position								
Th	Threshold Value Type Of Correlation								
0						Pearson     Spearman     Kendall			
Γ	Pairwise Cor	rrelation			Analysed Features		Ignore Features		
	*	Feature 1	Feature 2	Correlation	No items to display.		No items to display.		
	No data to d	isplay.				) (			
								Cancel OK	

7. On **Correlation Analysis** screen, select the required fields. For more information on fields, refer to the field description table below.

Field	Description
Threshold Value	Select the threshold value. By default, the value is set as 0.5. The Value can be set between 0.1 to 0.9.
Type of Correlation	Select the type of correlation. By default, the option is selected as Pearson. The formula used for calculation is different for each type
Pairwise Correlation	Displays the output of the Correlation Validation.
Analyzed Features	Displays the distinct analysed Features from Pairwise Correlation.
Ignore Features	User defined list created from Analysed Features.

8. Click **c** to initiate the evaluation process.

The Correlation Analysis - Pairwise Correlation screen is populated.

shold Value						Type Of Corre	lation	
sinora value	$\sim$							arman 🔿 Kendall
			1 0.5 C			<ul> <li>rea/S011</li> </ul>	⊖ spa	
Pairwise Correla	ition				Analysed Features			Ignore Features
# Fe	ature 1	-	Feature 2	Correlation	AGE	=		No items to display.
Υ_	BOX_GAMES		AGE	-0.72639	HOME THEATER PACKAGE			
Υ_	BOX_GAMES		YRS_RESIDENCE	-0.58853	Y BOX GAMES			
Υ_	BOX_GAMES		HOME_THEATER_PACKAGE	-0.77005			>

A	3E		HOME_THEATER_PACKAGE	0.79938	FLAT_PANEL_MONITOR			
YF	IS_RESIDENCE		HOME_THEATER_PACKAGE	0.62899	BULK_PACK_DISKETTES	=		
BL	JLK_PACK_DISKETTES		FLAT_PANEL_MONITOR	0.87842				

#### Figure 259: Correlation Analysis - Pairwise Correlation

- 9. Move ONE of the Analyzed Features to Ignore Features List
- 10. Click c and re-evaluate Correlation as mentioned in Step 8.
- 11. Rinse & repeat Step 9 & 10 for each feature addition to the **Ignore feature** list, until **Pairwise Correlation** displays zero correlated pair.
- 12. Attempting to exit the screen midway without achieving zero Pairwise Correlation, will display the following error message.

#### Figure 260: Error Message

- 13. After successful **Correlation Evaluation**, the orange highlight on the **Correlation** button is removed.
- 14. After **Correlation Evaluation** and **Cost Matrix** definition (for CLASSIFICATION), click **Save** to create the new Model Definition. The user can view the configured details in the **Model Definition Summary**.

#### **Model Metrices**

Once the user has successfully trained Machine Learning model, the user can score/predict the model outcomes as required by the use case. The user can view the **Model Metrices** tab only after training the model successfully. Refer to **Model Training and Scoring** section for training the model.

15. Click Model Metrices tab to view the Model Metrices details.

The Model Metrices screen is displayed.

#### Figure 261: Model Metrices

Model Definition	ı				
Use Case Setup	Model Metrices				
Model Metrice	S				
Model Partitions *					
	v				
Metrices			Value		
Model Name					
Algorithm					
YRS_RESIDENCE					
AUC					

16. For more information on fields, refer to the field description table below.

Field	Description
Model Partitions	Select the model partitions from the dropdown.
	If the model has been designed to have partitions, it will display the partitioned values based on underlying data of the defined partition column else display FULL MODEL.
Metrices	Displays the various model attributes, as per the best model identified and trained. The number of model attributes is a function of algorithm and underlying pattern of data Some attributes are common for all models, Model Name Algorithm INF_TIME (Inference Time) <model metric="">(Train) <model metric="">(Test)</model></model>

Table 212: Model Metrices – Field Description

Value	Displays the value of the attribute.
-------	--------------------------------------

# 4.4.2 Model Training and Scoring

Model Training and Scoring screen enables the user to train the model for the selected use case and use the trained model to predict and score multiple records at a time. The predicted values persist in the database and are available in the prediction column maintained for the user case.

1. From Home screen, click Machine Learning. Under Machine Learning, click Model Training and Scoring.

The Model Training and Scoring screen is displayed.

#### Figure 262: Model Training and Scoring

Model Training And Scoring							
Model Training and Scoring							
Use Case Name Select Usecase Name	Y	Description	Use Case Type				
Model Training							
Training Data Source Partition Column(s)		Unique Case Idenifier	Target Column Train Model				
Model Batch Scoring							
Model Name			Batch Scoring				

For more information on fields, refer to the field description table below.

Field	Description			
Use Case Name	Select the Use Case name from the dropdown.			
Description	Displays the description of the use case.			
Use Case Type	Displays the type of use case.			
Model Training				
Training Data Source	Displays the training data source.			
Unique Case Identifier	Displays the unique case identifier.			
Target Column	Displays the target column of the model.			
Partition Column(s)	Displays the partition column of the model.			

Field	Field Description					
Model Batch Scoring						
Model Name	Displays the name of the model.					

- 2. Select the use case name from the dropdown.
- 3. Click **Train Model** to train the model for the selected use case.
- 4. Click **Batch Scoring** to predict the score for the data source records.

The predictions of batch scoring are now available for business consumption.

### 4.5 Online Single Record Prediction

This is made available as a REST API and allow you to predict for a single record. The predictions do not persist in the database.

These can be invoked directly from application user interface, to retrieve and display the results.

The explainability of the model outcome is also made available.

### 4.6 Use Case Modifications

Use case definition may undergo the following modification and would require model re-training. After each re-training run, you should review the model details discussed under Model Explainability.

Use Case Modification		Correlation Analysis Required
Data Source replaced by another data source	Yes	Yes
New column Added to existing data source	Yes	Yes
New columns Added to custom data source	Yes	Yes
Existing column removed from existing data source	Yes	Yes
Selected Algorithm Changed	Yes	No
Model Error statistic Changed	Yes	No
Partition Column Name list altered (added / removed)	Yes	Yes

#### Table 214: Use Case Modifications

### 4.7 Data Extensibility

To address the requirement of banks to add new data points to the factory shipped data source, we have provided the facility of data extensibility.

Figure 263: Data Extensibility

Banks can add any number of new data columns to the customer data source

The defined data source view is mapped to a use case in the Model definition.

Machine Learning will automatically consider all the available data points in the data source View.

### 4.8 Model Explainability

The details of the Regression models built using the framework is made available under the 'Model Metrices' tab in Use Case Definition for better understanding and transparency.

The available details are

- Model Name
- Algorithm Name
- Inference Time
- Training Error Metric
- Testing Error Metric
- List of data attributes that make up the model depending on the framework and algorithm used

## 4.9 Time Series Forecast

Timeseries forecast is unique as it consumes sequential data to forecast.

This uniqueness necessitates model training and forecast to be executed in a single processing routine. This is very unlike regression model approach where model training and model prediction are separate distinct actions.

# 4.9.1 Forecast REST Service

Timeseries framework is made available as an independent REST service to be consumed by products and use cases as required.

The following information is required to be provided.

Field	Description
Use Case Name	Specify the Unique Use Case Name.
Data Source	Specify the Table or View name used as data source to train the model.
Target Column	Specify the model will train and forecast future values of this column.
	NOTE: Column name is a function of table/view design
Unique Identifier	Specify the column name to uniquely identify a sequence
	<b>Note:</b> Column name is a function of table/view design. Must be Date or a sequence
Model Partitioning	Specify the column names to slice data. Refer Partitioned Model for details
	Note: Column name is a function of table/view design
Partitioned Value	Specify the actual Value of the Model Partition
Forecast Window	Specify the number of forecasts required as an outcome
Tablespace	Specify the valid tablespace and all model related data will be persisted in this table space

#### Table 215: Forecast REST Service – Field Description

# 5. File Upload

The following File Upload features are available in the respective common core maintenances

- Country Code File Upload
- Bank Core Parameters File Upload
- Branch Core Parameters File Upload
- Currency Definition File Upload
- BIC Directory File Upload
- Local Holiday File Upload
- Currency Holiday File Upload
- External Customer File Upload
- External Customer Account File Upload
- Exchange Rate File Upload

### 5.1 Country Code File Upload

Country Code File Upload is used to perform country code maintenance in common core.

File Type Supported - CSV

#### File Naming Convention - CmcCountryMaint\_<UniqueName>.csv

Note: Replace the <UniqueName> for each file upload.

#### Table 216: Country Code File Upload – Records

Sequence	Attribute Name	Туре	Size	Description		
Master reco	Master record					
1	Action	String	10	Denotes file operation type. Allowed values are new/modify		
2	Country Code	String	3	Country Code		
3	Description	String	105	Name of the country		
4	Alt Country Code	String	10	Alternate Country Code		
5	Region Code	String	3	Region Code		

Sequence	Attribute Name	Туре	Size	Description
6	Blacklisted	String	1	Indicates the country is blacklisted
7	IBAN Check Reqd	String	1	Indicates check required for an IBAN is mandatory
8	Intra European	String	1	Denotes the country is an intra European country.
9	Clr Code Bic	String	1	BIC Clearing Code Indicates the National ID in the BIC plus file is the clearing code.
10	Clearing Network	String	6	Indicates the Clearing Network
11	ISO Num Country Code	String	3	Denotes the ISO Country Code
12	Gen Mt205	String	1	Indicates the cover message 205COV or 205
13	ISD Code	Number	10	Denotes the ISD Code
14	EU Country	String	1	Indicates the country is recognized by Swift as a part of the Intra European countries

### 5.2 Bank Core Parameters File Upload

Bank Core Parameters File Upload is used to perform bank core maintenance in common core.

#### File Type Supported - CSV

#### File Naming Convention - CmcBankMaint\_<UniqueName>.csv

Note: Replace the <UniqueName> for each file upload.

#### Table 217: Bank Core Parameters File Upload – Records

Sequence	Attribute Name	Туре	Size	Description		
Master reco	Master record					
1	Action	String	10	Denotes file operation type. Allowed values are new/modify		
2	Days To Forget Customer	Number	4	Denotes Number of Days to inactive/Forget Customer		
3	HO Branch	String	3	Head Office Branch		
4	Bank Name	String	35	Name of the bank		
5	Bank Code	String	4	Denotes code for the bank		

- Action
- Days To Forget Customer
- HO Branch
- Bank Name
- Bank Code

# 5.3 Branch Core Parameters File Upload

Branch Code Parameters File Upload is used to perform branch code maintenance in common core.

File Type Supported - CSV

#### File Naming Convention - CmcBranchMaint\_<UniqueName>.csv

Note: Replace the <UniqueName> for each file upload.

#### Table 218: Branch Core Parameters File Upload – Records

Sequence	Attribute Name	Туре	Size	Description
Master reco	ord			•
1	Discriminator	String	1	Denotes master record type. Default value is always "P"
2	Action	String	10	Denotes file operation type. Allowed values are new/modify
3	Source Branch Code	String	20	Code of the Source Branch
4	Source System	String	35	Source System
5	Week Hol2	String	1	Denotes the weekly holiday 2
6	Week Hol1	String	1	Denotes the weekly holiday 1
7	Auto Auth	String	1	Auto Authorization
8	Walkin Customer	String	20	Denotes Walk-in customer
9	Branch Lcy	String	3	Branch Local Currency
10	Branch Addr3	String	105	Denotes the branch address details - Address Line 1
11	Branch Addr2	String	105	Denotes the branch address details - Address Line 2
12	Branch Addr1	String	105	Denotes the branch address details - Address Line 3
13	Branch Name	String	105	Name of the branch

Sequence	Attribute Name	Туре	Size	Description		
14	Country Code	String	3	Country Code		
15	Host Code	String	8	Host Code		
16	Branch Code	String	3	Denotes the Code of Branch		
Child record 1						
1	Discriminator	String	10	Denotes the first child record type. Default value is always "BranchPref"		
2	Report DSN	String	35	Denotes the details of the report DSN		
3	DSN Name	String	35	Name of the DSN		
4	Host Name	String	35	Host Name		
5	Branch Code	String	3	Denotes the Branch Code		
Child record	12					
1	Discriminator	String	12	Denotes the second child record type. Default value is always "SwiftAddress"

# 5.9 External Customer Account File Upload

External Customer Account File Upload is used to perform external customer account maintenance in common core.

#### File Type Supported - CSV

#### File Naming Convention - CmcAccountMaint\_<UniqueName>.csv

Note: Replace the <UniqueName> for each file upload.

#### Table 224: External Customer Account File Upload – Records

Sequence	Attribute Name	Туре	Size	Description		
Master record						
1	Action	String	10	Denotes file operation type. Allowed values are new/modify		
2	Country Code	String	10	Country Code		
3	Address4	String	105	Denotes the address details - Address Line 4		
4	Address3	String	105	Denotes the address details - Address Line 3		
5	Address2	String	105	Denotes the address details - Address Line 2		
6	Address1	String	105	Denotes the address details - Address Line 1		
7	Eca Check Req	String	1	Indicates External Credit Approval Required check is required for the external customer account		
8	Account Class	String	6	Denotes the Account Class		
9	Ac Stat Dormant	String	1	Indicates the account status is dormant		
10	Ac Stat Frozen	String	1	Indicates the account status is frozen		
11	GI Stat Blocked	String	1	Indicates the account status is blocked		

Sequence	Attribute Name	Туре	Size	Description
12	Ac Stat No Dr	String	1	Indicates the account does not have any debit facility
13	Ac Stat No Cr	String	1	Indicates the account does not have any credit facility
14	Ac Open Date	String	35	Denotes the Account Open Date (Date format should be yyyy-MM-dd, i.e. 2018-03-30)
15	Cust Ac Name	String	105	Account Name of the customer
16	Cust Ac Ccy	String	3	Account Currency of the customer
17	Customer No	String	20	Indicates the Customer Number
18	Source System Acc Brn	String	20	Denotes the Source Account Branch
19	Source System Acc No	String	35	Denotes the Source Customer Account Number
20	Source System	String	35	Source System
21	Cust Ac IBAN	String	35	Indicates the account IBAN details
22	Host Code	String	8	Denotes the host code details
23	Cust Account No	String	20	Indicates the Customer Account Number

## 5.10 Exchange Rate File Upload

Exchange Rate File Upload is used to perform exchange rate maintenance in common core.

#### File Type Supported - CSV

File Naming Convention - CmcCurrencyExchangeRate\_<UniqueName>.csv

Note: Replace the <UniqueName> for each file upload.

#### Table 225: Exchange Rate File Upload – Records

Sequence	Attribute Name	Туре	Size	Description
Master reco	rd			
1	Discriminator	String	1	Denotes master record type. Default value is always "P"
2	Action	String	10	Denotes file operation type. Allowed values are new/modify

Sequence	Attribute Name	Туре	Size	Description
3	Branch Code	String	3	Branch for which exchange rate is applicable
4	Currency1	String	3	From currency pair
5	Currency2	String	3	To currency pair
Child record	1	1	L	
1	Discriminator	String	1	Denotes child record type. Default value is always "C"
2	Branch Code	String	3	Branch for which exchange rate is applicable
3	Currency1	String	3	From currency pair
4	Currency2	String	3	To currency pair
5	Rate Type	Number	8	Denotes rate type defined in the system
6	Mid Rate	Number	25	Mid rate applicable for the current pair
7	Buy Spread	Number	40	Buy spread applicable for the currency
8	Sale Spread	Number	40	Sell spread applicable for the currency
9	Buy Rate	Number	25	Buy rate applicable for the currency
10	Sale Rate	Number	25	Sell rate applicable for the currency
11	Rate Date	String	35	Effective date applicable for the rate

# 6. Error Codes and Messages

This topic contains the error codes and messages:

Table 226:	Error	Codes and	Messages
------------	-------	-----------	----------

Error Codes	Messages
CC-01015	Default BIC Is Checked For More Than One BIC
CC-01016	Swift Address is Mandatory
CC-01017	Default BIC Is Not Checked For any BIC
CC-01018	Same Swift Address is present more than once
CC-01019	Mismatch in bank code
CC-ACC-002	Currency should be null for Multi-Currency Account
CC-ACC-102	Record already exist for Source Branch and Source Account No combination
CC-ACC-169	Reopen not allowed for a closed Customer No
CC-BIC-010	Bic code is being used in branch maintenance. Close not allowed.
CC-BIC02	The BIC code does not conform to SWIFT standards
CC-BIC05	Record already maintained for the customer no
CC-BNK-001	Branch code is in Open status. Close not allowed.
CC-BNK-002	Reopen not allowed for a closed Branch Code
CC-BNK-003	Only one Bank Code is allowed.
CC-BRN-101	Active account / accounts exist for the branch code. Close not allowed.
CC-BRN-102	This is HO branch. Close not allowed.
CC-BRN-103	Record for Source Branch Code already exists
CC-C00100	Relationship cannot be No for a Customer Linked BIC Code

Error Codes	Messages
CC-CUS-167	Record already exist for customer no and source_system_cust_no combination
CC-CUS-169	Active account/accounts exist for the customer no
CC-CUS-17	Kindly Enter a Valid Walkin Customer
CC-EC-002	Record already exist for Account IBAN
CC-ECA-001	Active \$1 exist for the Source System
CC-HST-001	Active \$1 exist for the Host Code
CC-MOD-001	\$1 cannot be modified
CC-MOD-INV	\$1 is invalid
CC-NUL-001	\$1 cannot be null
CC-TXN-001	\$1 is closed. Reopen not allowed.
CMC-ACC-FOR01	Cannot reopen forgotten account
CMC-ACC-PII01	User doesnt have access to PII data, cannot perform create or modify operations
CMC-ACC-SUBAC01	No SubAccounts available for Multi-Currency Account
CMC-ACC-SUBAC02	Exactly one account should be primary account
CMC-ACC-SUBAC03	Sub Accounts should have unique currency code
CMC-BRN-018	Exception occurred in ICFlipDate
CMC-BRN-019	Unable to get branch date
CMC-BRN-020	Branch code is null
CMC-BRN-100	Branch Status retrieved Successfully
CMC-BRN-101	Branch doesnot exist
CMC-BRN-CD01	Date changed successfully
CMC-BRN-CD02	Failed to change date, holiday list not maintained properly

Error Codes	Messages
CMC-BRN-EOD01	Branch Status not in TI, cannot initiate EOD
CMC-BRN-EOD02	EOD invoked for the branch
CMC-BRN-EOD03	Invalid Branch Code
CMC-BRN-EOD04	Eod Requested on Date is not Branch's Today
CMC-BRN-EOD05	EOD cannot be invoked on a holiday
CMC-BRN-EOD06	Date changed successfully
CMC-BRN-EOD07	EOD not invoked, cannot initiate change date
CMC-BRN-EOD08	EOFI job not completed, cannot initiate change date
CMC-BRN-EOD09	EOD not invoked, cannot initiate mark TI
CMC-BRN-EOD10	Date Change job not completed, cannot initiate TI for next day
CMC-BRN-EOD11	Mark TI successful
CMC-BRN-EOD12	Branch status not in TI, cannot initiate Mark EOFI
CMC-BRN-EOD13	Branch status not in EOFI, cannot change Date
CMC-BRN-EOD14	Branch status for next working date update to BOD
CMC-BRN-EOD15	Branch status not in BOD, cannot mark TI
CMC-BRN-EOD16	Branch status for next working date update to TI
CMC-BRN-EOD17	Branch Status Changed to EOFI
CMC-BRN-EOD18	Invoke Mark TI failed
CMC-BRN-EOD19	Date change completed cannot retrigger
CMC-BRN-EOD20	Mark TI completed cannot retrigger
CMC-BRN-EOD21	Date changed failed
CMC-BRN-EOD30	Invalid requested date, failed to parse
CMC-BRN-EOD31	Mark Eoti retry intiated

Error Codes	Messages
CMC-BRN-EOD32	Cannot retry Mark EOFI which has not failed
CMC-BRN-EOD33	Date Changed successfully. \$1
CMC-BRN-EOD34	BOD Batches completed successfully.
CMC-BRN-EOD35	BOD Batches retriggered successfully. \$1
CMC-BRN-EOD36	\$1. Hence EOFI Failed.
CMC-BRN-EOD37	Failed in getting current date
CMC-CCY-001	Duplicate records exists in Amount word currency Mapping
CMC-CCY-002	Duplicate records exists in Amount Text Mapping
CMC-CCY-003	Cannot change Currency Decimal for once authorized currencies
CMC-CCY-004	Cannot Change round unit if the round rule is Truncate (T)
CMC-CCY-005	Mandatory field Interest Method is not entered
CMC-CCY-006	Mandatory field Spot Days is not entered
CMC-CCY-007	Mandatory field Settlement Days is not entered
CMC-CCY-008	Mandatory field Country is not entered
CMC-CCY-009	Mandatory field Rule is not entered
CMC-CCY-010	Value should be in range of 0 and 999 for Settlement Days
CMC-CCY-011	Mandatory field Unit is not entered
CMC-CCY-012	Decimals/ Rounding Unit Mismatch
CMC-CCY-013	Numerator of Interest Method is not Actual
CMC-CCY-014	Duplicate Alternate Currency Code
CMC-CCY-015	Duplicate ISO Numeric Currency Code
CMC-CCY-016	Duplicate Euro currency

Messages
Euro Conversion required cannot be changed for the currency types out, Euro and Euro closed
Spot days is less than fx netting days
Currency Cut Off days cannot be greater than spot days for currency
Spot Days for currency cannot be lesser than cut off days for currency
Value should be in range of 1 and 99 for Cut Off Days
Value should be in range of 1 and 23 for Cut Off Hour
Value should be in range of 1 and 59 for Cut Off Min
Value cannot be less than .00000 for Currency Total limit
Value should be in range of 0 and 3 for Currency Decimal
Country Code is Mandatory
Duplicate records exists in Currency Country Mapping
Mandatory field Country is not entered in Currency Country Mapping
Currency Code is NULL
Date is NULL
Date is Invalid (should be in yyyy-mm-dd format)
No record found
Next/Previous indicator is NULL (should be either N or P)
Next/Previous indicator is Invalid (should be either N or P)
Lower Limit Date is Invalid (should be in yyyy-mm-dd format)
Upper Limit Date is Invalid (should be in yyyy-mm-dd format)
Offset is NULL
Offset is Invalid (should be > 0)

Error Codes	Messages
CMC-CCY-039	Input date should be between Upper limit date and Lower limit date
CMC-CCY-040	Duplicate records exists in CurrencyHolidays
CMC-CCY-041	Mandatory Through Currency Code is not entered
CMC-CCY-042	Cannot change spread definition option for through currency pair
CMC-CCY-043	Through currency should be blank if the through currency is unchecked
CMC-CCY-044	Through currency has to be of type Euro
CMC-CCY-045	Through Currency is not allowed for Euro In Currency Pair
CMC-CCY-046	Points multiplier should be in the range 0 - 1
CMC-CCY-047	MidRate is invalid
CMC-CCY-048	BuySpread is invalid
CMC-CCY-049	SaleSpread is invalid
CMC-CCY-050	Atleast one Currency Rate Should be Maintained
CMC-CCY-051	Duplicate records exists in Rate
CMC-CCY-052	Currency Code is NULL
CMC-CCY-053	Currency Code is Empty
CMC-CCY-054	Amount is NULL
CMC-CCY-055	Option is NULL
CMC-CCY-056	Option is Empty
CMC-CCY-057	Method is NULL
CMC-CCY-058	Method is Empty
CMC-CCY-059	Decimal is NULL
CMC-CCY-060	Units is NULL

Error Codes	Messages
CMC-CCY-061	Maintenance Country is NULL
CMC-CCY-062	Maintenance Country is Empty
CMC-CCY-063	Currency1/Currency2/branch Code is NULL
CMC-CCY-065	Error in conversion
CMC-CCY-066	Rate is not handled for currency1 and currency2
CMC-CCY-067	Rate is not handled for currency2 and currency1
CMC-CCY-068	Error in Amount rounding
CMC-CCY-069	Currency definition is not maintaned for given currency and maintenance country
CMC-CCY-070	Error in getting branch currency and country
CMC-CCY-071	Error in getting currency pair for currency1 and currency2
CMC-CCY-072	Error in getting Premium points for currency1 and currency2
CMC-CCY-073	Error in getting rate with through currency
CMC-CCY-074	Error in getting Rate
CMC-CCY-075	Rate History is not handled for currency1 and currency2
CMC-CCY-076	Rate History is not handled for currency2 and currency1
CMC-CCY-077	Currency Pair is not maintained
CMC-CCY-078	Error in purging
CMC-CCY-079	Data inadequate in currency Pair Definition
CMC-CCY-080	Currency Pair already exists for the given Maintenance Country
CMC-CCY-081	MidRate is mandatory
CMC-CCY-082	Either buySpread/buyRate are mandatory
CMC-CCY-083	Either saleSpread/saleRate are mandatory

Error Codes	Messages
CMC-CUS-FOR01	Record successfully deleted
CMC-CUS-PII01	User doesnt have access to PII data, cannot perform create or modify operations
CMC-EOD-001	Invoked EOD successfully
CMC-EOD-002	Failed while resolving current date
CMC-EOD-003	EOD flow is not maintained for \$1 branch
CMC-EOD-004	EOD already invoked for today
CMC-EOD-005	Unable to invoke EOD
CMC-EOD-006	Retried EOD successfully
CMC-EOD-007	Failed to retry EOD
CMC-EOD-008	Pending maintenances exist. Failed to start EOD
CMC-EOD-009	Failed during pending maintenance check
CMC-EOD-010	Pending transactions exist. Failed to start EOD
CMC-EOD-011	Failed during pending transaction check
CMC-EOD-012	Marked cutoff for the branch successfully
CMC-EOD-013	Branch not in Transaction Input. Cannot mark cutoff
CMC-EOD-014	Branch not in BOD stage. Cannot release cutoff
CMC-EOD-015	Released cutoff for the branch successfully
CMC-EOD-016	Branch cutoff not released. Cannot mark Transaction Input
CMC-EOD-017	Branch cutoff not marked. Cannot mark End of Transaction Input
CMC-FORC-001	Request is null, not valid.
CMC-FORC-002	Forget customers request created successfully.
CMC-FORC-003	Failed to create forget entities request.

Error Codes	Messages
CMC-FORC-004	Invalid id sent, id null
CMC-FORC-005	Already authorized
CMC-FORC-006	Authorized successfully
CMC-FORC-007	Record not found, invalid id.
CMC-FORC-008	Cannot delete authorized record
CMC-FORC-009	Record successfully deleted
CMC-FORC-010	Invalid Customer \$1 added, customer should be valid and in closed and authorized state without pending maintenance
CMC-FORC-011	Invalid request. Duplicate requests for customer number \$1
CMC-INDBML-001	Usecase already exists with a same name
CMC-INDBML-002	Target Column cannot be null
CMC-INDBML-003	Unique Case Identifier Column cannot be null
CMC-INDBML-004	Invalid Partition column value
CMC-INDBML-005	Duplicate Column Values
CMC-INDBML-006	Partition Columns cannot be same as either of target, usecase identifier or prediction column.
CMC-LOV-001	Invalid Source Code
CMC-LOV-002	Invalid Currency
CMC-LOV-003	Cannot Close the record for which rates are maintained
CMC-LOV-004	Invalid Language Code
CMC-LOV-005	Invalid Country
CMC-LOV-006	Invalid GLCode
CMC-LOV-007	Invalid Limit Currency
CMC-LOV-008	Invalid Year

Error Codes	Messages
CMC-LOV-009	Invalid Month
CMC-LOV-010	Amount Limit Exceeds
CMC-LOV-011	Invalid Version
CMC-LOV-012	Rate Type \$1 is invalid
CMC-NLP-000	System is unable to process the request
CMC-NLP-001	Training File created successfully
CMC-NLP-002	Training File creation failed
CMC-NLP-003	Service definition not found for \$1 for use case \$2
CMC-NLP-004	Unsupported file type uploaded please upload supported file type
CMC-NLP-005	You don't have sufficient number of training files for use case \$1 to train the model
CMC-NLP-006	Invalid training files are present in the training corpus
CMC-NLP-007	Error in processing step \$1
CMC-NLP-008	Successfully completed the processing of process \$1
CMC-OBRH-001	Record already exists.
CMC-OBRH-002	Record saved successfully.
CMC-OBRH-003	Record does not exist.
CMC-OBRH-004	Invalid Payload
CMC-OBRH-005	Record deleted successfully.
CMC-OBRH-006	Record modified successfully.
CMC-OBRH-007	Data fetched successfully.
CMC-OBRH-008	Data exported successfully.
CMC-OBRH-009	Failed to get data.

Error Codes	Messages
CMC-OBRH-010	Cannot start disabled route.
CMC-OBRH-011	Data imported successfully.
CMC-OBRH-012	Failed to import.
CMC-OBRH-013	Failed to parse [\$1]
CMC-OBRH-014	Data extracted successfully.
CMC-OBRH-015	Route state cannot be changed to Start as Consumer Service / Provider is inactive.
CMC-OBRH-016	Modified/Deleted attribute is already in use by route.
CMC-OBRH-017	Something went wrong!
CMC-OBRH-018	Imported WSDL successfully
CMC-OBRH-019	Imported Swagger successfully
CMC-OBRH-020	Failed to import [\$1]
CMC-OBRH-021	Failed to export [\$1]
CMC-OBRH-022	Request failed [\$1]
CMC-OBRH-023	Request is being processed
CMC-ORCH-001	Failed to initiate.
CMC-ORCH-002	Transaction is successfully initiated.
CMC-ORCH-003	Invalid action, failed to initiate.
CMC-ORCH-004	\$1 is not submitted, transaction remains the same.
CMC-ORCH-005	Cannot proceed with submit as the action is not initiated.
CMC-ORCH-006	Cannot proceed with submit as the information is incomplete.
CMC-ORCH-007	Failed to submit.
CMC-ORCH-008	Record successfully submitted.

Error Codes	Messages
CMC-ORCH-009	\$1 is in-progress, failed to initiate.
CMC-ORCH-010	Aw, snap! An unexpected exception occurred, try again.
CMC-ORCH-011	Invalid request.
CMC-ORCH-012	Cannot proceed with submit as the action is not initiated.
CMC-ORCH-013	Cannot find the provided information.
CMC-ORCH-014	Record is not yet submitted by \$1, cannot initiate the action.
CMC-ORCH-015	Record already unlocked by \$1.
CMC-ORCH-016	One record can be authorized at a time. Please close the screen and try again
CMC-ORCH-017	Current operation terminated
CMC-ORCH-018	Current operation could not be terminated
CMC-OV-001	Override Codes must not be empty
CMC-OV-002	Business Overrides Saved Successfully
CMC-OV-003	Business Overrides Updated Successfully

Error Codes	Messages
CMC-OV-013	Client Error Occurred during API call
CMC-OV-014	Illegal State Exception Occurred
CMC-OV-015	JTA Transaction unexpectedly rolled back
CMC-OV-016	Exception Occurred while creating Bean
CMC-OV-017	Unexpected Exception Occurred
CMC-OV-018	Exception Occurred while Executing Query
CMC-STR-001	mandatory fields are missing
CMC-STR-002	invalid real account number
CMC-STR-003	Real Account No cannot be modified
CMC-STR-004	Structured Address is already created for this Real Account
CMC-STR-005	Structured Address is already created for this External Virtual Account
CMC-STR-006	invalid virtual account number
CMC-STR-007	Virtual Account No cannot be modified
CMC-VAM-001	Rolled Back Due to Exception
ERR_DEF_CODE	System is unable to process the request
GCS-AUTH-01	Record Successfully Authorized
GCS-AUTH-02	Valid modifications for approval were not sent. Failed to match
GCS-AUTH-03	Maker cannot authorize
GCS-AUTH-04	No Valid unauthroized modifications found for approval.
GCS-CLOS-002	Record Successfully Closed
GCS-CLOS-01	Record Already Closed
GCS-CLOS-02	Record Successfully Closed

Error Codes	Messages
GCS-CLOS-03	Unauthorized record cannot be closed, it can be deleted before first authorization
GCS-COM-001	Record does not exist
GCS-COM-002	Invalid version sent, operation can be performed only on latest version
GCS-COM-003	Please Send Proper ModNo
GCS-COM-004	Please send makerId in the request
GCS-COM-005	Request is Null. Please Resend with Proper SELECT
GCS-COM-006	Unable to parse JSON
GCS-COM-007	Request Successfully Processed
GCS-COM-008	Modifications should be consecutive.
GCS-COM-009	Resource ID cannot be blank or "null".
GCS-COM-010	Successfully cancelled \$1.
GCS-COM-011	\$1 failed to update.
GCS-DEL-001	Record deleted successfully
GCS-DEL-002	Record(s) deleted successfully
GCS-DEL-003	Modifications didnt match valid unauthorized modifications that can be deleted for this record
GCS-DEL-004	Send all unauthorized modifications to be deleted for record that is not authorized even once.
GCS-DEL-005	Only Maker of first version of record can delete modifications of record that is not once authorized.
GCS-DEL-006	No valid unauthroized modifications found for deleting
GCS-DEL-007	Failed to delete. Only maker of the modification(s) can delete.
GCS-MOD-001	Closed Record cannot be modified

Error Codes	Messages
GCS-MOD-002	Record Successfully Modified
GCS-MOD-003	Record marked for close, cannot modify.
GCS-MOD-004	Only maker of the record can modify before once auth
GCS-MOD-005	Not amendable field, cannot modify
GCS-MOD-006	Natural Key cannot be modified
GCS-MOD-007	Only the maker can modify the pending records.
GCS-REOP-003	Successfully Reopened
GCS-REOP-01	Unauthorized Record cannot be Reopened
GCS-REOP-02	Failed to Reopen the Record, cannot reopen Open records
GCS-REOP-03	Successfully Reopened
GCS-REOP-04	Unauthorized record cannot be reopened, record should be closed and authorized
GCS-SAV-001	Record already exists
GCS-SAV-002	Record Saved Successfully.
GCS-SAV-003	The record is saved and validated successfully.
GCS-VAL-001	The record is successfully validated.
ML-RG-001	Regression Model Build Failed
ML-RG-002	Regression Model Statistics Calculation Failed
ML-RG-003	Cross Validation Failed
ML-RG-004	Model Selection Failed
ML-RG-005	Model Successfully Trained
ML-RG-006	Invalid Use Case Selected
ML-RG-007	No Trained Model found

Error Codes	Messages
ML-RG-008	Batch Scoring Failed
ML-RG-009	Successfully completed Batch scoring
ML-UTIL-003	Failed in Random Sampling
ML-UTIL-004	Too less data for model building
ML-UTIL-005	Failed in Splitting Data
ML-UTIL-006	Failed in Selecting Feature
ML-UTIL-007	Failed to Drop Model(s)
ST-CUS-167	Record already exist for customer no and source_system_cust_no combination
ST-SAVE-027	Request Successfully Processed
CBS-CRITERIA-001	Criteria Code cannot be blank
CBS-CRITERIA-002	Criteria Description cannot be blank
CBS-CRITERIA-003	Select valid Product Processor
CBS-CRITERIA-004	Atleast one Rule should be selected in Criteria Definition
CBS-CRITERIA-005	Rule Description cannot be blank
CBS-CRITERIA-006	Select a Rule ID from the list
CBS-CRITERIA-007	Enter a valid number for Priority
CBS-CRITERIA-008	Enter a valid number for Priority
CBS-CRITERIA-009	Duplicate entries found for Rule ID
CBS-CRITERIA-010	Duplicate entries found for Priority
CBS-CRITERIA-011	Enter valid Parent Rule ID for
CBS-CRITERIA-012	Duplicate entries found for Rule ID
CBS-CRITERIA-013	Cannot add child Rule when Call All Bureau is enabled

Error Codes	Messages
CBS-CRITERIA-014	Duplicate entries found for Priority
CBS_ERR_004	Parameter description cannot be modified
CBS_LKUP_01	Duplicate entries found for Lookup Code
CBS_500	Error occurred at Bureau Call
000_000	Response structure from Bureau is different
CBS_SYSPAR_001	System parameter not maintained for the bureau for history call
	Facts not found for Bureau identification Rule
CBS_400	Empty response from criteria for given PPcode
003_400	Empty response from Oracle Banking Routing Hub from bureau call

Error Codes	Messages
CDS-PRC-0010	Fact or rule not found
CDS-PRC-007	Pricing Rate definition should be greater than or equal to minimum rate and less than or equal to maximum rate
CDS-PRC-009	rate percentage of range cannot be equal to zero or less than the previous one
CDS-PRC-005	\$1 should be equal to or greater than the System date
CDS-PRC-010	Invalid product processor
CDS-PRC-004	Maintain at least one record \$1
CDS-PRC-001	Min Rate cannot be less than zero or not be more than max rate
CDS-PRC-003	Overlapping price range definition not allowed \$1
CDS-PRC-002	Rate Type cannot any other keyword
CDS-PRC-008	\$1 cannot be less than or equal to zero
CDS-DML-009	Unable to resolve any scoring model
CDS-PPR-001	\$1 should be equal to or greater than the System date
CDS-DML-005	Overlapping range definition not allowed in \$1
CDS-QFT-003	Invalid product processor
CDS-DML-001	\$1 should be equal to or greater than the Posting date
CDS-DML-019	Unable to resolve the best fit scoring model. Multiple scoring model resolved
CDS-DML-016	Unable to resolve the best fit pricing model. Multiple pricing model resolved
CDS-DML-004	The sum of weightage assigned to the feature code should be 100
CDS-PPR-002	Effective date should be less than Expiry Date
CDS-PRC-013	Rate definition should be greater than or equal to minimum rate and less than or equal to maximum rate

Error Codes	Messages
CDS-DML-020	Unable to resolve the best fit application scoring model Multiple application scoring model resolved
CDS-DML-021	Unable to resolve the best fit decision and grade matrix. Multiple decision and grade matrix resolved
CDS-BWC-001	\$1 should be equal to or greater than the System date
CDS-BWC-002	Maintain at least one record in \$1
CDS-BWC-003	Effective date should be less than the Expiry Date
CDS-BWC-014	Effective date cannot be less than the Product Processor Effective date
CDS-STG-006	Effective Date cannot be null or blank
CDS-STG-007	Expiry Date cannot be null or blank
CDS-STG-008	Industry cannot be null or blank
CDS-STG-009	Module cannot be null or blank
CDS-STG-010	Line of Business cannot be null or blank
CDS-STG-011	Effective date should be less than the Expiry Date
CDS-STG-012	Expiry Date should be equal to or greater then the System date
CDS-STG-013	Invalid Strategy Code
CDS-STG-014	Invalid Industry
CDS-STG-015	Invalid Module
CDS-STG-016	Invalid Line of Business
CDS-STG-017	Invalid product processor
CDS-STG-018	Invalid Account Category
CDS-STG-019	Invalid modes for the selected module
CDS-STG-020	Invalid combination of steps for selected modes

Error Codes	Messages
CDS-STG-021	Record already exists
CDS-STG-022	Effective date cannot be less than the Product Processor Effective Date
CDS-RUL-002	Fact already exists
CDS-STG-023	Invalid combination of modes and steps
CDS-DML-043	Invalid \$1 sent
CDS-DML-040	FeatureDTO missing. Kindly enter the details
CDS-LML-029	Logical Model Reason Code is Invalid
CDS-DML-024	Negative values not allowed
CDS-DML-025	Category not allowed in case of multi applicant scoring model
CDS-DML-026	Percenatge cannot be greater than 100
CDS-DML-027	For multi-applicant max value not allowed
CDS-DML-028	Max value not required for range type Value
CDS-DML-029	Range type cannot be null
CDS-DML-030	Max value cannot be null
CDS-DML-031	Please enter a valid scoring model type
CDS-DML-032	Please enter a valid range type
CDS-DML-033	Feature list not required for application model
CDS-DML-034	Scoring rule id not required for the scoring model type
CDS-DML-035	Please enter a valid feature type
CDS-DML-036	Only range Type Value is allowed, for fact type feature
CDS-DML-037	Only range Type ParamPercent is allowed, for rule based feature
CDS-DML-038	Only range Type Value is allowed, for Text type fact

Error Codes	Messages
CDS-DML-039	Category code missing
CDS-LML-015	Logical Model Code size must be between 1 and 30
CDS-LML-016	Logical Model Description size must be between 1 and 240
CDS-LML-017	Logical Model Effective Date cannot be null
CDS-LML-018	Logical Model Expiry Date cannot be null
CDS-LML-019	Logical Model Rule Id size must be between 1 and 80
CDS-LML-020	Logical Model Details Rule Id cannot be null
CDS-LML-021	Reason Code cannot be null
CDS-LML-022	Logical Model comments size must be between 1 and 80
CDS-LML-023	Logical Model Sequence must be in the range of 1 to 999
CDS-LML-024	Logical Model Sequence is Incorrect
CDS-LML-025	Logical Model Priority must be in the range of 1 to 100
CDS-LML-026	Logical Model Details cannot be null or empty
CDS-LML-027	Rule Id cannot be duplicate
CDS-LML-028	Invalid Rule Id
CDS-QUR-001	Invalid Input for QuestionnaireId, can not be null or blank
CDS-QUR-002	Invalid Input for QuestionnaireId, null or blank required
CDS-QUR-003	Invalid Input for QuestionId, null or blank required
CDS-QUR-004	Invalid Input for QuestionId, can not be null or blank
CDS-QUR-005	Questionnaire Code cannot be null or empty
CDS-QUR-006	Questionnaire Description cannot be null or empty
CDS-QUR-007	Product Processor cannot be null or empty
CDS-QUR-008	Question Code cannot be null or empty

Error Codes	Messages
CDS-QUR-009	Question Short Name cannot be null or empty
CDS-QUR-010	Question Description cannot be null or empty
CDS-QUR-011	Question Type cannot be null or empty
CDS-QUR-012	Answer Description cannot be null or empty
CDS-QUR-013	Questionnaire Code size must be between 1 and 30
CDS-QUR-014	Questionnaire Description size must be between 1 and 240
CDS-QUR-015	Question Code cannot be duplicate for a product processor
CDS-QUR-016	Question Sequence Number cannot be null, empty or zero, negetive
CDS-QUR-017	Answer Option Sequence Number cannot be null, empty or zero, negetive
CDS-QUR-018	Question Sequence Number cannot be duplicate for a questionnaire
CDS-QUR-019	Answer Option Sequence Number cannot be duplicate for a Question
CDS-QUR-020	Answer OptionId cannot be null or empty
CDS-QUR-021	Answer OptionId cannot be duplicate for a question
CDS-BWC-004	Incorrect execution stage
CDS-BWC-005	\$1 fact or rule not found
CDS-QUR-022	Input for whether Question Mandatory cannot be null or empty
CDS-QUR-023	System will not allow to add questions where response choice has not been captured, At least 2 record should be available
CDS-QUR-024	System will not allow to save the questionnaire without any question configured, Atleast 1 question should be configured in the questionnaire
CDS-QUR-025	Question Code cannot be duplicate for a questionnaire.
CDS-STG-024	Invalid type and value for additional info

Error Codes	Messages
CDS-STG-025	Selection of atleast 1 mode is mandatory
CDS-STG-026	Effective date cannot be updated after authorisation
CDS-STG-027	Multiple values of same type are not allowed under Additional Information
CDS-LOOKUP-001	Lookup Type must be alphanumeric
CDS-LOOKUP-002	Lookup Type must be between 1 and 30
CDS-LOOKUP-003	Lookup Description must be between 1 and 240
CDS-LOOKUP-004	Duplicate lookup codes not allowed
CDS-STG-001	Strategy Code cannot be null or blank
CDS-STG-002	Strategy Code Description cannot be null or blank
CDS-STG-003	Product Processor cannot be null or blank.
CDS-STG-004	Product Processor Description cannot be null or blank.
CDS-STG-005	Account Category cannot be null or blank.
CDS-DML-041	Multiple Range definitions not allowed in case of MultiApplicant Scoring Model
CDS-DML-042	Incorrect Range Definition. \$1

# 7. Glossary

This section provides a glossary of all terms and abbreviations used in the user manual.

#### Accounts

Continuing financial relationship between a bank and a customer, in which deposits and debts are held and processed within a framework of established rules and procedures.

### Reports

A page containing information organized in a narrative, graphic, or tabular format, prepared on ad-hoc, periodic, recurring, regular, or as required basis. Reports may refer to specific periods, events, occurrences, or subjects.

## **Pareto Chart**

It is a type of chart that consists of both bars and a line graph, where individual values are represented in descending order by bars, and the cumulative total is represented by the line.

### **Sunburst Chart**

It is a type of chart that is ideal for displaying hierarchical data. Each level of the hierarchy is represented by one ring or circle with the innermost circle as the top of the hierarchy. A sunburst chart without any hierarchical data (one level of categories), looks similar to a doughnut chart.

#### **Virtual Account**

Virtual accounts are provided to a corporate by its banking partner. Each account is a subsidiary or subaccount of the client's own physical account with the bank; they cannot exist outside of the immediate relationship; hence they are virtual.

#### **Virtual Identifier**

Virtual identifier serves to segregate any funds from any other funds in the same main account and yet is inextricably linked to the virtual account.
