## 1.6 Prerequisites

The prerequisites are as follows:

- Basic understanding of Event platform
- Basic understanding application log analysis using tools.
- Basic understanding DB changes.

The following softwares should be pre-installed.

- Zipkin
- Kafka
- ELK
- Any SQL Database like SQLDEVELOPER
- WinSCP

## 1.7 General Prevention

Do not make changes to Flyway scripts manually.

## 1.8 Best Practices

The best practices are as follows:

- It is ideal to have ELK stack installed on a separate VM outside the product VMs to ensure flow of logs in case of app crash.
- Log levels can be adjusted to INFO and above to enable relevant logs to flow in.

## 1.9 Related Documents

The related documents are as follows:

- Oracle Banking Common Core User Guide
- Getting Started User Guide
- Oracle Banking Security Management System User Guide
- Oracle Banking Virtual Account Management User Guide
- Oracle Banking Virtual Account Management EOD Configuration Guide
- Oracle Banking Virtual Account Management Overview User Guide

## 2 Troubleshooting Technical Flows

This chapter describes various programming issues, possible causes, and solutions to resolve the issues. This topic contains the following sections:

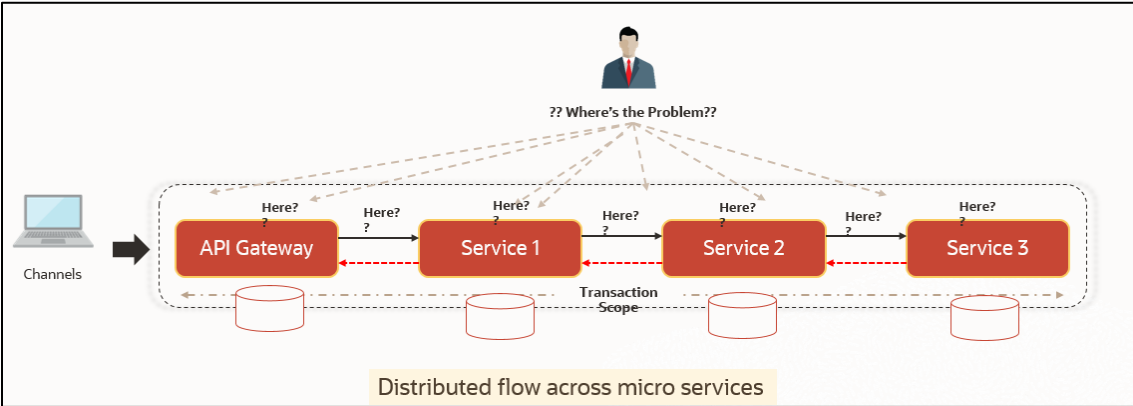

- [2.1 Where is the problem](#)
- [2.2 Preliminary checks from UI](#)
- [2.3 Troubleshooting Environmental Issues](#)

### 2.1 Where is the problem

Troubleshooting the problem in distributed system could be bit challenging if not understood fully. Each product has UI application components and service side application components. Each side requires different troubleshooting techniques and various logs that can be used to corroborate the problem.

The below picture shows that on service side, it is important to establish the area of the problem. This can be achieved by complete understanding of UI, Service side flows along with the data architecture of application.

**Figure 1: Distributed Flow across Micro Services**

## 2.2 Preliminary checks from UI

This section describes how to launch the application and check for the basic errors. Perform the following steps:

- 1. Launch the application with delegated URL.
- 2. Press **F12** key, and select **Inspect and See network** tab.
- 3. Verify that all the calls responses are successful. Usually RED color indicates non 2xx HTTP response.

Figure 2: Call Responses

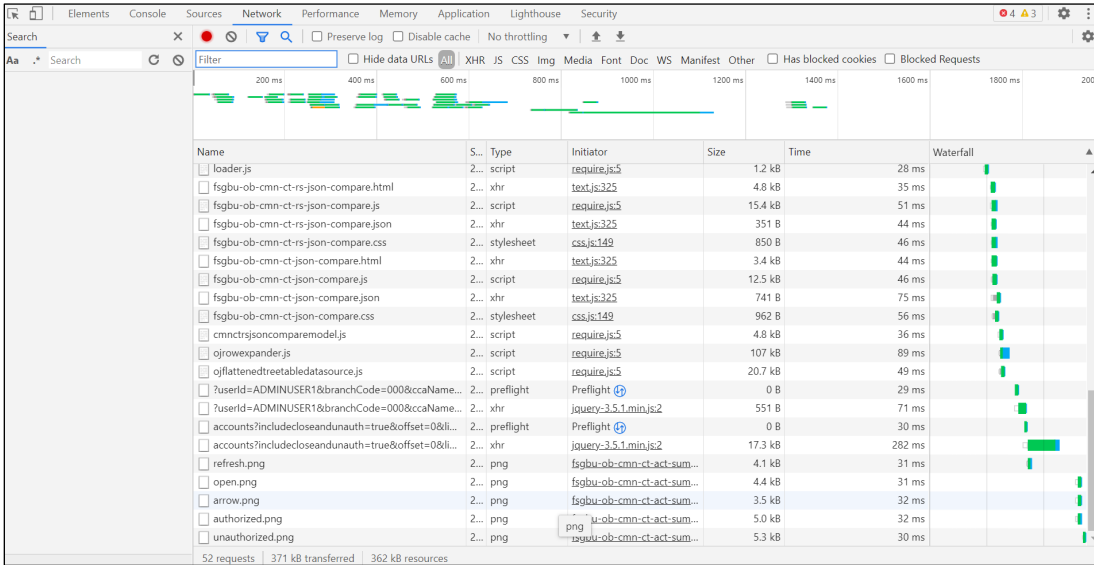

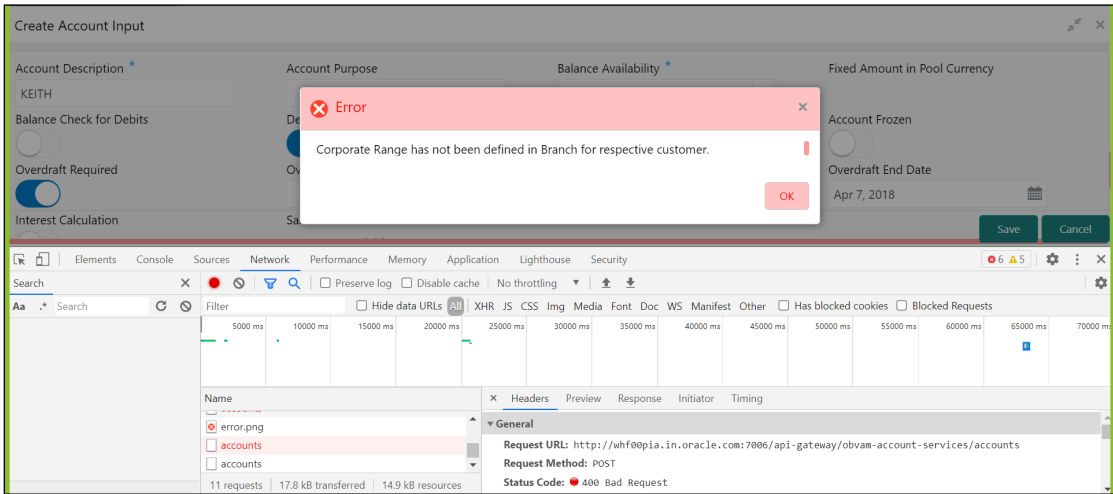

Figure 3: Non 2xx response

4. You can also export the trace using export option in browsers

Example in Chrome you would see this option as below

**Figure 4: Export Option**

**NOTE:** The tools such as **fiddler** and **wireshark** to get the browser to API gateway web traffic. This would help to investigate exact request and response payloads exchanged between UI and API Gateway.

## 2.3 Troubleshooting Environmental Issues

This section contains the following subsections:

- [2.3.1 Possible issues while deploying services](#)
- [2.3.2 Possible issues in login and screen launch](#)

### 2.3.1 Possible issues while deploying services

This subsection describes the possible issues that may occur in the environment.

#### 2.3.1.1 Service deployment is failing due to flyway

If the service deployment is failing due to flyway, verify that the object or record is already present and make changes in the flyway scripts accordingly.

You may check **flyway\_schema\_history** table of the respective schema for finding the flyway script entries.

#### 2.3.1.2 Other possible issues

The other possible issue while deploying services could be multiple versions of dependency jars present in the war file. For example,  
“weblogic.application.naming.EnvironmentException: duplicate persistence units with name PLATO in scope cmc-customer-services-{version}.war.”

### 2.3.2 Possible issues in login and screen launch

This subsection describes the possible issues that may occur while logging in and launching the screens.

#### 2.3.2.1 Login page is not launching

If the login page is not launching, check if the app-shell war file is deployed. If it is deployed, make sure that the war file is up and running in the deployed managed server and try to login. In addition, check if you are logged in with the appshell URL according to the war file deployed.

Also, check if the required component-server wars like cmc-component-server, obvam-component-server etc are also deployed along with the app-shell.

For example, <https://<ip-address>:<port>/appshell/index.jsp> will load the login page of the application.

**Figure 5: Login Page**

### 2.3.2.2 Unable to login after launching the application

If you are not able to login after the application is launched, make sure that the plato-api-gateway service, plato-ui-config service, sms-core-service, and common-core-services are up and running.

**Figure 6: Services**

PLATO-API-GATEWAY	n/a (1)	(1)	UP (1) -

PLATO-UI-CONFIG-SERVICES	n/a (1)	(1)	UP (1) -
SMS-CORE-SERVICES	n/a (1)	(1)	UP (1) -

### 2.3.2.3 Unable to login after restarting the services

If you are not able to login after restarting the services, make sure that the LDAP server is up and running, and check if the entered credentials are correct.

### 2.3.2.4 Menus are not displayed after logging in

After you log in, if the menus are not displayed, map the functional activity codes in the table SMS\_TM\_ROLE\_ACTIVITY. Once it is mapped, check if the corresponding role is assigned to your user id.

### 2.3.2.5 Screens are not launching after logging in

If you are not able to launch the screens after logging in, make sure that the respective services are up and running.

**NOTE:** Verify the VPN connection while trying to troubleshoot the issues related to page launching, etc.

### 3 Troubleshooting Kafka

#### 3.1 Consumer Services

Oracle Banking Virtual Account Management consumer service can be referred at [https://docs.oracle.com/cd/F54502\\_01/PDF/API/Async-API.zip](https://docs.oracle.com/cd/F54502_01/PDF/API/Async-API.zip)

#### 3.2 Producer Services

Oracle Banking Virtual Account Management Producer service can be referred at [https://docs.oracle.com/cd/F54502\\_01/PDF/API/Async-API.zip](https://docs.oracle.com/cd/F54502_01/PDF/API/Async-API.zip)

#### 3.3 Debugging Consumer/Producer health and troubleshooting

##### 3.3.1 Logs to analyze

1. Under the domain folder of Weblogic - Logs related to any issue in Kafka connection and authentication can be found here.
2. On a user defined log path - if we are facing issues in produce/consume operation of event

##### 3.3.2 Tables to analyze

The below table provides the values to be verified to confirm accurate functioning of the consumer/producer service.

Table Name	Column Name	Possible Values
plato_eventhub_in_log		
plato_eventhub_out_log	status	SENT -> Published successfully

#### 3.4 Configurations

For kafka setup, refer to **Oracle Banking Microservices Platform Foundation Installation Guide** and for the application-level setup, all the properties are declared in the yaml file of integration services.

## 4 Health Checks

### 4.1 Eureka Dashboard

Until we get health check APIs implemented, the health needs to be monitored using weblogic JVM managed server status and Eureka instance.

- **User Role Issues**

Role Profile includes access rights to the functional activities that are common to a group of users. A user can be linked to a Role Profile by which you give the user access rights to all the functional activities in the Role Profile.

Go to: **Security Management > Role** screen.

Figure 10: Role Maintenance

Only authorized users can access the system with the help of a unique User Login ID and password. The user profile of a user contains the details of the user in four sections - User details, Status, Other details and User role branches.

Go to: **Security Management > User** screen.

**Figure 11: Users Maintenance**

The screenshot displays the 'Users Maintenance' interface for user 'ESPUSER'. It is divided into several sections:

### 5.1.1 First level issues

This subsection describes the possible issues that may occur during the basic investigation.

#### 5.1.1.1 Error Message not shown

If there is any improper calls, check ERTB\_MSGS table of the respective schema to understand the cause of the error. Open the Networks tab (F12), check the error code in the response.

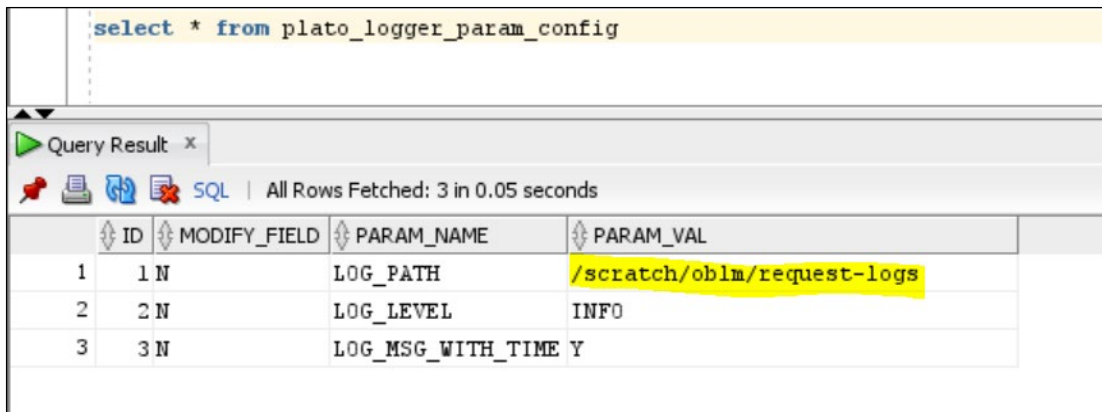

**SELECT \* FROM ERTB\_MSGS WHERE ERR\_CODE='GCS\_AUTH-03'**

#### 5.1.1.2 Setting Log file path

Log generation path needs to be defined in PLATO\_LOGGER\_PARAM\_CONFIG table of PLATO schema.

**Select \* from PLATO\_LOGGER\_PARAM\_CONFIG;**

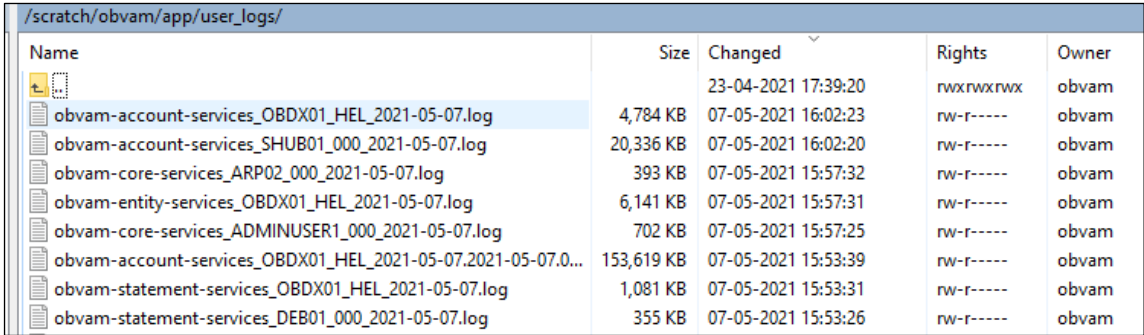

### 5.1.1.3 Dynamic log generation issues

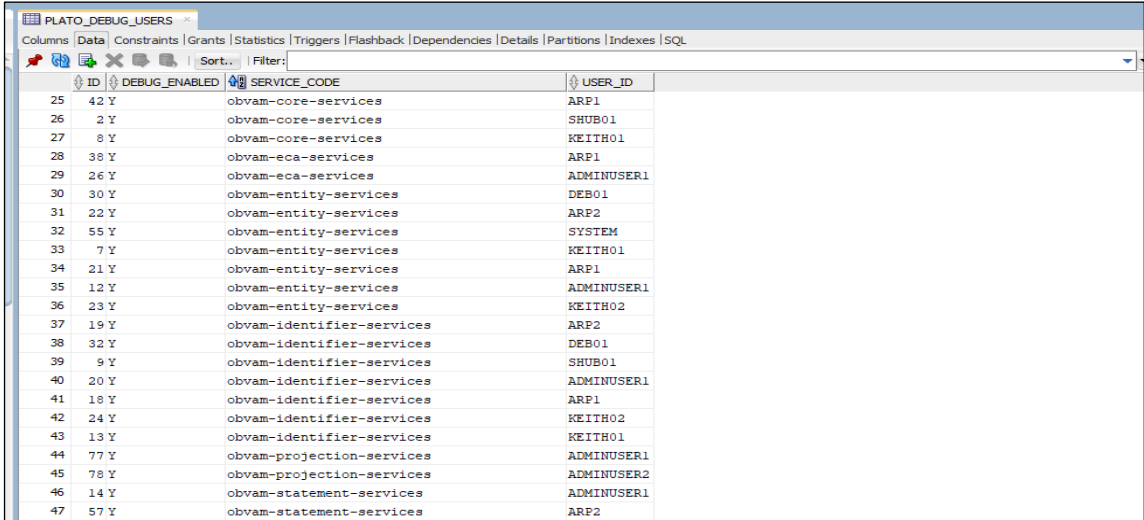

For generating dynamic service logs, you need to insert data to **PLATO\_DEBUG\_USERS** table as shown in below screenshot.

**Select \* from PLATO\_DEBUG\_USERS;**

The screenshot shows a file explorer window titled "/scratch/obvam/app/user\_logs/". It displays a list of log files with columns for Name, Size, Changed, Rights, and Owner. The files are organized by service type and date.

### 5.1.1.4 Call is failing in Gateway

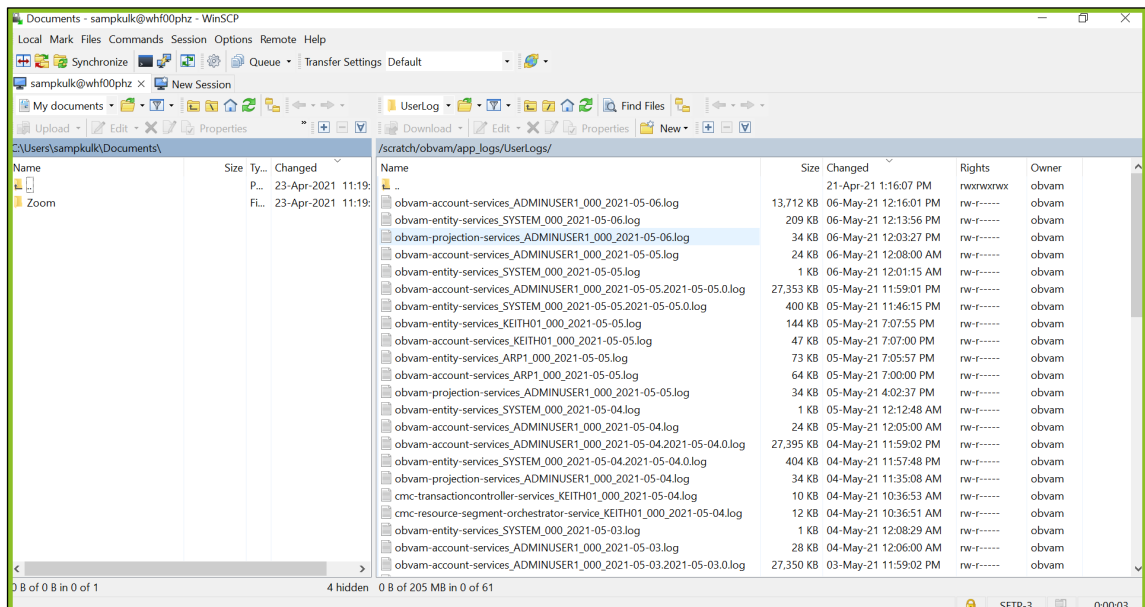

If any API call is failing in Gateway, hit the same API endpoint without passing through api-gateway via postman.

**NOTE:** Restart the specific services if required.

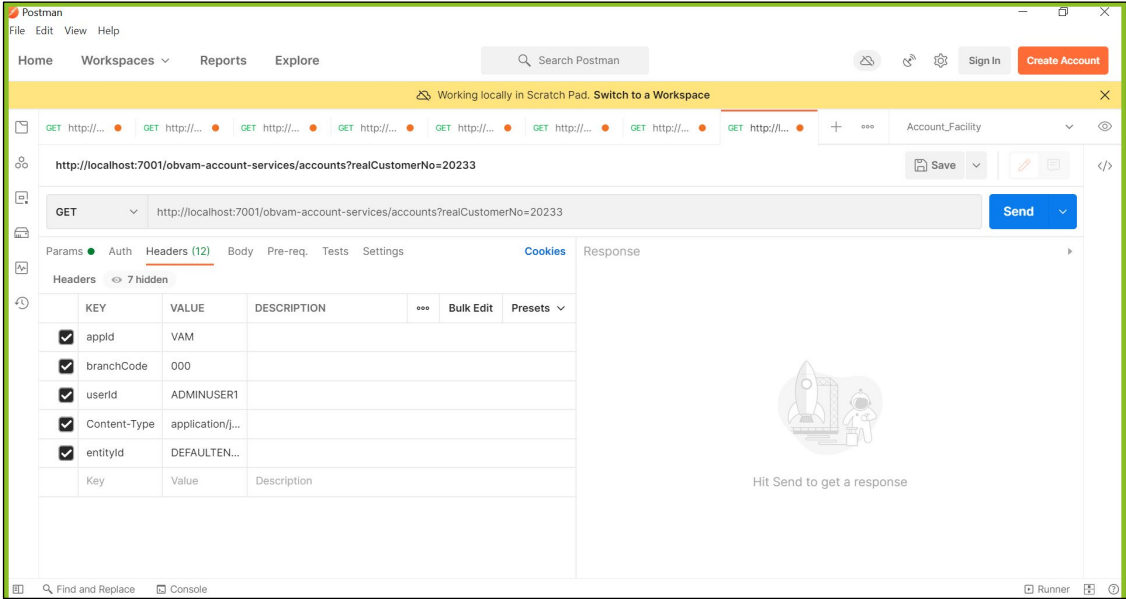

### 5.1.1.5 Exact error through exception log

If there is an exact error through exception log, login to WINSCP and check server logs with NIS credentials. The path is `/scratch/obvam/app_logs/UserLogs`

### 5.1.1.6 Logs are not generated

If you are not getting logs, put the loggers across API, hit through postman, and test again.

## 5.1.2 Call is failing in OBRH/ Accounting call (FCUBS) is failing

If any call is failing in OBRH, open CMC\_RH\_AUDIT\_EVENT\_LOG for getting Gateway response (**SUCCESS** or **FAILED**). Select the following query to verify results:

**select \* from CMC\_RH\_AUDIT\_EVENT\_LOG**

### 5.1.2.1 Code error in GCS side

If there is any error in GCS side codes, use java de-compiler to debug the error.

### 5.1.2.2 404 error

The possible causes for 404 error are as follows:

- Check service is not running on Eureka
- Check service is not deployed in Weblogic

### 5.1.2.3 500 internal error

The possible causes for 500 internal error are as follows:

- Issue with Plato entries
- Issue with Eureka
- Issue with any peace of code

The server-side debugging is needed for the above-mentioned issues, if it is not captured in logs.

### 5.1.3 Transaction data verification

Follow the best practices mentioned below to avoid getting any errors:

3. In the **IN** request and **OUT** response, verify that all the field data is going to service side.
4. If there is any error related to SMS, check for the availability of SMS entries.
5. Validate the endpoints and data.

Verify that the data entered in the screen is accurate. For example, **Account Number** should be valid.

### 5.1.4 OBIC call is failing

## 5.2 Troubleshooting SMS Errors

The possible issues occur in Security Management System are mentioned below.

- Unable to login after launching the application
- Menus are not displayed after logging in

## 5.3 Oracle Banking Routing Hub Configuration

Refer to **Routing Hub Configuration User Guide** for the detailed explanation.

## 6 Troubleshooting OutOfMemory issues

### 6.1 Extracting Heapdump

If there is an error like GC Overhead limit exceeded or OutOfMemoryException is thrown while starting the services, the following details need to be shared.

#### 6.1.1 Heap Dump

A heap dump is a snapshot of objects that are in memory in the JVM at a certain timestamp in a transaction. Heap dumps help to troubleshoot memory-leak problems and optimize memory usage in microservices. Heap dumps are usually stored in binary format hprof files.

The HeapDumpOnOutOfMemoryError command-line option that generates a heap dump when a java.lang.OutOfMemoryError is thrown can be used to generate heap dumps:

```
java -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=<file-or-dir-path>
```

##### 6.1.1.1 Remote Heap Monitor setup

Alternatively, one can setup remote heap monitor to observe the memory leaks in the product. Perform the following steps:

1. To enable jmx, set the following environment variable to start jmx:

- *-Dcom.sun.management.jmxremote*
- *-Dcom.sun.management.jmxremote.port=8888*
- *-Dcom.sun.management.jmxremote.authenticate=false*
- *-Dcom.sun.management.jmxremote.ssl=false*

**NOTE:** If the above variable are set, a jmx service will start on specified port.

2. Setup JVisualVM as follows, to collect heap dumps:

- a) Start *JVisualVM*.
- b) Under "Remote" option, add a host.
- c) Under new host, add new *jmx* connection.

**NOTE:** With this setup, the JAVA process can be monitored remotely.

## 6.2 JFR Tool in Java

**Java Flight Recorder (JFR)** is a **tool** for collecting diagnostic and profiling data about a running **Java** application. It is integrated into the **Java** Virtual Machine (JVM) and causes almost no performance overhead, so it can be used even in heavily loaded production environments.

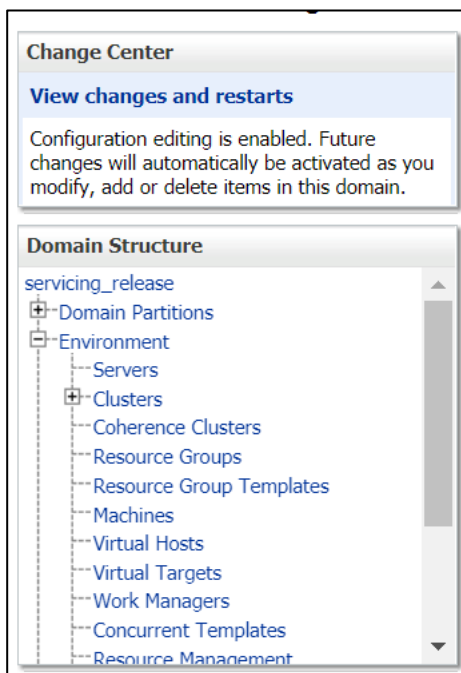

The below documentation provides steps to use JFRs to collect performance details and profiling data of services and can be used to report performance issues for OBMA services.

## 6.3 Quick Recovery

As a quick fix, try to restart the managed server or try to increase the memory allocated to the managed server. Perform the following steps to increase the memory:

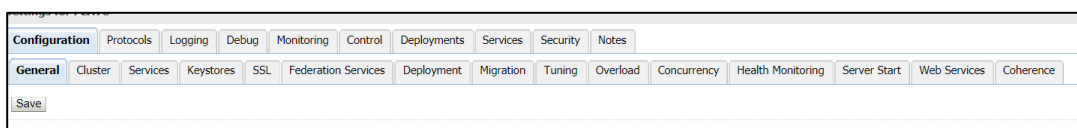

1. Click **Servers**.

**Figure 12: Domain Structure**

2. Select the managed server from which you are getting `OutOfMemoryException` or GC Overhead Limit exceeded, and click **Server Start** tab.

**Figure 13: Server Start**

- 3. Specify the memory (which needs to be increased) according to requirement in 512, 1024, 2048 etc., and restart the managed server to fix the issue.

**Figure 14: Memory Requirements**
