- If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the ancillary pricing rule type.

Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type

Procedure

To add the ancillary-specific additional data in an ancillary pricing rule type:

- Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Ancillary-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier Value	Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data.
Billing Non-Eligibility Identifier Value	Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) Note: This field is required when you are adding the ancillary-specific additional data.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.	Yes (Conditional) Note: This field is required when the Markup or Markdown Eligibility Rule Type field is specified.
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Rule Based Markup or Markdown Eligibility Field field, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	
Markup or Markdown Billable Charge Line Type	Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown.	No
	<p>Note:</p> <p>On clicking the Search (🔍) icon corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	
Markup or Markdown Eligibility Rule Type	Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are:	No
	<ul style="list-style-type: none"> • Rule 1 <p>Note: The Markup or Markdown Eligibility Rule Type list includes only those rule-types where the rule type eligibility is ASO Billing Mark Up / Down Eligibility.</p>	

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.

The ancillary-specific additional data is added in the ancillary pricing rule type.

Defining Pricing Arrangements in an Ancillary Pricing Rule Type

Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

Procedure

To add pricing arrangements in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are defining or editing a pricing rule type.

The **Pricing Arrangements** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Pricing Arrangement Identifier	Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) 	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Pricing Arrangement Identifier Value	Used to specify the value for the pricing arrangement identifier. The valid values are: <ul style="list-style-type: none"> Pass Through (Markup or Markdown Optional) Pass Through without Markup or Markdown Rate Based (Markup or Markdown Optional) 	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Line Item	Used to indicate the line item which using the billable charge is created for a pricing arrangement.	Yes (Conditional) Note: This field is required when you are defining pricing arrangements for an ancillary pricing rule type.

2. Enter the required details in the **Pricing Arrangements** section.
3. If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the pricing arrangement identifier.

4. Click **Save**.

The pricing arrangements are defined for the ancillary pricing rule type.

Defining a Characteristic for a Ancillary Pricing Rule Type**Prerequisites**

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an ancillary pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for an ancillary pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for an ancillary pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for an ancillary pricing rule type.

Related Topics

How to define an ancillary pricing rule type	Defining an Ancillary Pricing Rule Type on page 2815
How to edit an ancillary pricing rule type	Editing an Ancillary Pricing Rule Type on page 2840

Editing an Ancillary Pricing Rule Type**Prerequisites**

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
 1. Retention Type Claim Based
 2. Discount Arrangement
 3. Specific Stop-Loss
 4. Aggregate Stop-Loss
 5. Level Funding

Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.

- **Transaction Field Mapping** – Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with the ancillary pricing rule type.
- **Additional Data** – Used to specify the additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define ancillary-specific additional data.

Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the pricing arrangements for the ancillary pricing rule type.
 - **Pass Through (Markup or Markdown Optional)**
 - **Pass Through Without Markup or Markdown**
 - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the ancillary pricing rule type.	Not applicable
Description	Used to specify the description for an ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Ancillary Pricing Rule option from the Pricing Rule Business Object list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	<p>Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.</p> <p>Note: This field is disabled when you select the Flat Fees option from the Pricing Rule Type Category list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the ancillary pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss 	No
	<p>Note: You must select the Ancillary option from the Pricing Rule Type Category list while defining an ancillary pricing rule type.</p>	

Tip: Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

5. Modify the required details in the **Main** section, if required.
6. Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that the **Primary** option is selected in the **Main** section.
8. Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected from the **Main** section.

9. Modify the transaction field mapping in the ancillary pricing rule type, if required.

Note: The **Transaction Field Mapping** section appears when the **Primary** option is selected from the **Main** section.

10. Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

11. Edit generic additional data for the ancillary pricing rule type, if required.
12. Add, edit, or remove price items in an ancillary pricing rule type, if required.
13. Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
14. Add, edit, or remove characteristics in an ancillary pricing rule type, if required.
15. Modify the ancillary-specific data in an ancillary pricing rule type, if required.
16. Modify the pricing arrangements in an ancillary pricing rule type, if required.
17. Click **Save**.

The changes made to the ancillary pricing rule type are saved.

Deleting an Ancillary Pricing Rule Type

Procedure

To delete an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the ancillary pricing rule type that you want to delete.
A message appears confirming whether you want to delete the ancillary pricing rule type.

Note: You can delete an ancillary pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an ancillary pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The ancillary pricing rule type is deleted.

Defining an Ancillary Pricing Rule for a Parent Customer

Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create an ancillary pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer 	Not applicable
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining an ancillary pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining an ancillary pricing rule.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define an ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	
		Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		Note: This field is required while creating a pricing arrangement with the Rate Based option.

Field Name	Field Description	Mandatory (Yes or No)
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Based option is selected.	Note: This field is required when Rate Based option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Yes (Conditional)
	Note: This field is enabled when the Pricing Strategy field is selected.	Note: This field is required when the Pricing Strategy field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule is defined for a parent customer.

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the ancillary pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for an ancillary pricing rule.

Editing an Ancillary Pricing Rule of a Parent Customer

Prerequisites

To edit an ancillary pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit a ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** screen appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Parent Customer Pricing Rules** zone, corresponding to the ancillary pricing rule whose details you want to edit.
The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.

Field Name	Field Description
Parent Customer Information	Displays the parent customer for whom the ancillary pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item that is used to create ancillary pricing rule.	Not applicable
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Not applicable
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	Not applicable
Rate Option	Displays the rate option that you want to use while defining the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	<p>Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.</p>
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with or without the Rate Based option.</p>
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with the Rate Based option.</p>
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	<p>Note: This field is enabled when the Rate Based option is selected.</p>	<p>Note: This field is required when Rate Based option is selected.</p>
Pricing Strategy	<p>Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy field is selected.</p>	<p>Note: This field is required when the Pricing Strategy field is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.
5. Modify the details in the **Main** section.
 6. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
 7. Click **Save**.

The changes made to an ancillary pricing rule for a parent customer are saved.

Deleting an Ancillary Pricing Rule of a Parent Customer

Procedure

To delete an ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** screen appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the ancillary pricing rule that you want to delete.

A message appears confirming whether you want to delete the ancillary pricing rule of a parent customer.

Note: You can delete an ancillary pricing rule when it is not yet used in the system.

5. Click **OK**.

The ancillary pricing rule of a parent customer is deleted.

Defining an Ancillary Pricing Rule for a Bill Group

Prerequisites

To define an ancillary pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Add** link in the upper-right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule. Note: Select the Ancillary Pricing Rule Type option, as the pricing rule.	Yes Note: If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Post Runout Runout 	Yes
	Note: An ancillary pricing rule cannot be created for Runout or Post Runout policy status where the policy run out end date is missing.	

6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the information about the bill group. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that is used to create ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
Rate Option	Used to indicate the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	
		Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	<p>Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.</p>
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.</p>
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with the Rate Based option.</p>
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	<p>Note: This field is enabled when the Rate Based option is selected.</p>	<p>Note: This field is required when Rate Based option is selected.</p>
Pricing Strategy	<p>Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy field is selected.</p>	<p>Note: This field is required when the Pricing Strategy field is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.
7. Enter the required details in the **Main** section.
 8. Define the characteristics for an ancillary pricing rule, if required.
 9. Click **Save**.

The ancillary pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the ancillary pricing rule.

Viewing an Ancillary Pricing Rule of a Bill Group

Procedure

To view an ancillary pricing rule for a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the ancillary pricing rule type whose specific ancillary pricing rule bill group details you want to view.
The **Pricing Rule** screen appears. It contains the following zone:
 - **Ancillary** – Displays the details of an ancillary pricing rule for a bill group. It contains the following sections:
 - **Main** – Displays the basic details of the ancillary pricing rule.
 - **Ancillary Charges** – Displays the details of the ancillary charges defined for an ancillary pricing rule of a bill group.

- **Characteristics** – Displays the characteristics defined for an ancillary pricing rule.
6. View the basic details of an ancillary pricing rule in the **Main** section.
 7. View the ancillary charges in the **Ancillary Charges** section.
 8. View the characteristics of an ancillary pricing rule in the **Characteristics** section.

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.

- If you want to define more than one characteristic for the ancillary pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for an ancillary pricing rule.

Editing an Ancillary Pricing Rule of a Bill Group

Prerequisites

To edit an ancillary pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit an ancillary pricing rule of a bill group:

- Search for a bill group in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View (🔗)** icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
- Click the **Pricing** tab.
The **Pricing** tab appears.
- Click the **Broadcast (📡)** icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
The **Bill Group ASO Policy Pricing Rules** zone appears.
- Click the **Edit (✎)** icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.

Field Name	Field Description
Bill Group Information	Displays the bill group for whom the ancillary pricing rule is define.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you want to define an ancillary pricing rule.
Status	Indicates the status of the bill group.

- **Main** – Used to specify basic details about the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item that is used to create ancillary pricing rule.	Yes
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
	Note: This field by default displays the Policy End Date .	
Rate Option	Indicates the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used to indicate that markup and markdown prices must not be considered when the ancillary transaction is processed.	Yes (Conditional)
	Note: This field is enabled when the Rate Option field is selected.	
		Note: This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Billable Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	<p>Note: This field is required while creating a pricing arrangement with or without rate based billable charge line type.</p>
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with or without the Markup or Markdown Type field and the Rate Based option.</p>
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)
		<p>Note: This field is required while creating a pricing arrangement with the Rate Based option.</p>
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)
	<p>Note: This field is enabled when the Rate Based option is selected.</p>	<p>Note: This field is required when Rate Based option is selected.</p>
Pricing Strategy	<p>Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> • Markup • Markdown • None 	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy field is selected.</p>	<p>Note: This field is required when the Pricing Strategy field is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Amount/Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)
		Note: This field is required when the Markup or Markdown Type field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

6. Modify the details in the **Main** section.
7. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
8. Click **Save**.

The changes made to an ancillary pricing rule for a bill group are saved.

Deleting an Ancillary Pricing Rule of a Bill Group

Procedure

To delete an ancillary pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to delete.
The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Delete** () icon in the **Delete** column corresponding to the **Pricing Group Information** column, whose bill group information you want to delete.
A message appears confirming whether you want to delete the ancillary pricing rule of a bill group.

Note: You can delete an ancillary pricing rule when it is not yet used in the system.

6. Click **OK**.
The ancillary pricing rule of a bill group is deleted.

Discount Pricing

The Administrative Services Only (ASO) provider may offer some discounts to its network hospitals and providers. A portion of these discounts is then charged to the self-funded employer. Oracle Revenue Management and Billing enables you to calculate and bill the discount share or discount guarantee amount to the self-funded employer. The system enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2863
- [Discount Guarantee](#) on page 2864

The pricing for the share or guarantee discount can be defined using the respective discount pricing rules. You can define a share or guarantee discount pricing rule only at the parent customer level. You can define the share or guarantee discount pricing rules for parent customers from the **Customer 360° Information** screen. You can define a share or guarantee discount pricing rule using a discount arrangement pricing rule type.

Once a discount arrangement pricing rule type is defined, you can create discount pricing rules using the discount arrangement pricing rule type. Once a discount pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the parent customer.

The following new batches are introduced in this release:

- **C1-ACDA** – Once the transaction legs and calculation lines are created for discount, this batch is used to accumulate the discount. It also calculates the required minimum or maximum limit on the contract. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCDA** – Once the discount is accumulated, this batch is used to create the credit (if any) and discount billable charges. It is also used to calculate the bill after date. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

Types of Discount Arrangement

The Oracle Revenue Management and Billing enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2863
- [Discount Guarantee](#) on page 2864

Discount Share

In the discount share method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Billable Discount Amount = Discount Savings Amount * Discount Percentage

Note that the discount share percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Discount Guarantee

In the discount guarantee method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Targeted Guaranteed Amount = Covered Charge Amount * Discount Guarantee Percentage

Billable Discount Amount = Discount Savings Amount - Targeted Guaranteed Amount

Note that the discount guarantee percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Defining a Discount Arrangement Pricing Rule Type

Prerequisites

To define a discount arrangement pricing rule type, you should have:

- Discount Arrangement pricing rule type business object defined in the application
- Discount Arrangement pricing rule business object defined in the application

Procedure

To define a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create a discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss (ASL) Pricing Rule Type Ancillary Pricing Rule Type Claim Pricing Rule Type Discount Arrangement Pricing Rule Type Flat Fee Pricing Rule Type Level Funded (LF) Pricing Rule Type Retention Type Claim Based Pricing Rule Type Retention Type Enrollment Based Pricing Rule Type Specific Stop-Loss (SSL) Pricing Rule Type <p>Note: You must select the Discount Arrangement Pricing Rule Type option from the Pricing Rule Type Business Object list while defining a discount arrangement pricing rule type.</p>	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the discount arrangement pricing rule type.
- Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- DA – Specific Additional Data** – Used to specify discount arrangement-specific additional data in the discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the discount arrangement pricing rule type.	Yes
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value are:</p> <ul style="list-style-type: none"> • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p>Note: You must not select the Primary option while defining a discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the category to which the discount arrangement pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss 	Yes
	Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.	

- Enter the required details in the **Main** section.
- Select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list.
- Ensure that **Primary** option is not selected when you are defining a discount arrangement pricing rule type.
- Select the **Discount Arrangement** option from the **Pricing Rule Type Category** list.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

- Define additional data for a discount arrangement pricing rule type, if required.
- Add the required price items in the discount arrangement pricing rule type.
- Add the price item parameters in the discount arrangement pricing rule type, if required.
- Define characteristics for a discount arrangement pricing rule type, if required.
- Add discount arrangement-specific additional data in the discount arrangement pricing rule type.
- Click **Save**.

The discount arrangement pricing rule type is defined.

Associating Algorithms with a Discount Arrangement Pricing Rule Type

Prerequisites

To associate algorithms with a discount arrangement pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to execute the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for the discount arrangement transaction. • Accumulation Billable Charge Post Proc - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Billable Charge Pre Proc - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the C1-BCDA (Create Billable Charge for Discount) batch. • Accumulation Post Processing - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Accumulation Pre Processing - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the C1-ACDA (Accumulate Discount Arrangement) batch. • Pricing Rule Post Processing - Used to introduce a custom logic once the effective discount arrangement pricing rule is derived for the discount arrangement transaction. • Transaction Validation - Used to introduce a custom validation for the discount arrangement transaction. 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>
Sequence	<p>Used to specify the order in which the algorithms with the same system event must be executed.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm that you want to execute on the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDIS	Yes	Information will be available soon...
Accumulation Billable Charge Post Proc	-	No	-
	<p>Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Billable Charge Pre Proc	-	No	-
	<p>Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Post Processing	-	No	-
	<p>Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Pre Processing	-	No	-
	<p>Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Pricing Rule Post Processing	-	No	
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Transaction Validation	-	No	
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

- If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add (+)** icon and then specify the details. However, if you want to remove an algorithm from the discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.
- Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Discount Arrangement Pricing Rule Type

Procedure

To define additional data in a discount arrangement pricing rule type:

- Ensure that the **Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> Yes No 	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: If you do not specify the value for this field, by default, it is set to No.</p>	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received from an external source system. <p>Note: At present, this field is not used in the system.</p>	Not applicable
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the discount charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>For more information, refer to the Write-Off Charges during Post Runout section.</p> <p>Note: By default, the value is set to No.</p>	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment. <p>Note: This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Post Runout Write-Off Adjustment Type field.</p>	Yes (Conditional) <p>Note: This field is required when the Eligible for Write-Off in Post Runout field is set to Yes.</p>

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.	No
	<p>Note:</p> <p>For more information, refer to the Price Item Eligibility on page 3000 section.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p>	
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.	Yes (Conditional)
		<p>Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field field.</p>

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data is defined in the discount arrangement pricing rule type.

Adding a Price Item in a Discount Arrangement Pricing Rule Type

Prerequisites

To add a price item in a discount arrangement pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Price Item	Used to indicate the price item that you want to include in the discount arrangement pricing rule type.	Yes (Conditional) Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.				
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>					
Rate Option	Used to indicate one or more rate options which are valid for a price item.	Not applicable				
	On clicking the Add (➕) icon, the following field appears in a grid:					
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Rate Option
Field Name	Field Description	Mandatory (Yes or No)				
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes				
<p>Note:</p> <p>If you want to define more than one rate option to the price item in the discount arrangement pricing rule type, click the Add (➕) icon. However, if you want to remove a price item from a discount arrangement pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in a discount arrangement pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in a discount arrangement pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a discount arrangement pricing rule type.

Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type

Prerequisites

To add a price item parameter in a discount arrangement pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a discount arrangement pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a discount arrangement pricing for the price item. Note: The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.	Yes (Conditional) Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value. Note: The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field .	Yes (Conditional) Note: This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a discount arrangement pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount arrangement pricing rule type, click the **Delete (🗑)** icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the discount arrangement pricing rule type.

Defining a Characteristic for a Discount Arrangement Pricing Rule Type

Prerequisites

To define a characteristic for a discount arrangement pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount arrangement pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for a discount arrangement pricing rule type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for a discount arrangement pricing rule type.

Editing a Discount Arrangement Pricing Rule Type

Prerequisites

To edit a discount arrangement pricing rule type, you should have:

- Discount arrangement pricing rule type business object defined in the application.
- Discount arrangement pricing rule business object defined in the application.

Procedure

To edit a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the discount arrangement pricing rule type.
- **DA-Specific Additional Data** – Used to specify discount arrangement-specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the discount arrangement pricing rule type.	Not applicable
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value is:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss (ASL) Pricing Rule Ancillary Pricing Rule Claim Pricing Rule Discount Arrangement Pricing Rule Flat Fee Pricing Rule Level Funded (LF) Pricing Rule Retention Type Claim Based Pricing Rule Retention Type Enrollment Based Pricing Rule Specific Stop-Loss (SSL) Pricing Rule <p>Note: You must select the Discount Arrangement Pricing Rule option from the Pricing Rule Business Object list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object used while defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p>Note: You must not select the Primary option while defining the discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the discount arrangement pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> Aggregate Stop-Loss Ancillary Claim Discount Arrangement Flat Fees Level Funded Retention Type Claim Based Retention Type Enrollment Based Specific Stop-Loss 	No
	<p>Note: You must select the Discount Arrangement option from the Pricing Rule Type Category list while defining a discount arrangement pricing rule type.</p>	

Tip: Alternatively, you can edit the details of a discount arrangement pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the required details in the **Main** section.
- Ensure that the **Discount Arrangement Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
- Ensure that **Primary** option is not selected when you are editing a discount arrangement pricing rule type.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

- Modify the additional data for a discount arrangement pricing rule type, if required.
- Add, edit, or remove price items in the discount arrangement pricing rule type, if required.
- Add, edit, or remove price item parameters in the discount arrangement pricing rule type, if required.
- Add, edit, or remove characteristics in the discount arrangement pricing rule type, if required.
- Modify the discount arrangement-specific data in the discount arrangement pricing rule type, if required.
- Click **Save**.

The changes made to the discount arrangement pricing rule type are saved.

Defining a Discount Arrangement Pricing Rule for a Parent Customer

Prerequisites

To define a discount arrangement pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Discount Arrangement**.
- Price items associated with the discount arrangement pricing rule type.

Procedure

To define a discount arrangement pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> Parent Customer 	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a discount arrangement pricing rule.	Yes

- Select the required pricing rule type in the respective field.
- Click **OK**.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays information about the parent customer for whom you are defining the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the discount arrangement pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the discount arrangement pricing rule.

- Main** – Used to specify basic details about the discount arrangement pricing rule.
- Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

Note: The **Discount Details**, **Discount Limits**, and **Exclusion** sections appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. 	Yes
	Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges.	

7. Enter the required details in the **Main** section.
8. Add the required discount details in the discount arrangement pricing rule.
9. Define the minimum and maximum discount limits on the contract in the discount arrangement pricing rule, if required.
10. Add the exclusion details of a network or a provider in the discount arrangement pricing rule, if required.
11. Define characteristics for the discount arrangement pricing rule, if required.
12. Click **Save**.

The discount arrangement pricing rule is defined for the parent customer.

Adding the Discount Details in a Discount Arrangement Pricing Rule

Prerequisites

To add the discount details in a discount arrangement pricing rule, you should have:

- Parameters defined in the application
- Parameters associated with the price item.

Procedure

To add the discount details in a discount arrangement pricing rule:

1. Ensure that the **Discount Details** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to indicate the parameter using which you want to define an eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Price Item Parameter field.</p> <p>You can only select those price item parameters which are effective during the date range specified in the discount arrangement pricing rule.</p> <p>If a parameter associated with the price item is mandatory, then by default, the parameter appears in the Price Item Parameter field.</p>	No
Parameter Value	<p>Used to specify the value for the price item parameter.</p> <p>Note:</p> <p>If you select a predefined parameter, the Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the parameter value, the description of the parameter value appears corresponding to the Parameter Value field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the parameter associated with the price item is mandatory.</p>
Discount Percentage	Used to specify the discount share or discount guarantee percentage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Discount Per Claim	Used to specify the maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	No

Note: The **Discount Details** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Details** section.
- If you want to define a discount percentage for another price item parameter and parameter value combination, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a discount percentage for a price item parameter and parameter value combination from the discount arrangement pricing rule, click the **Delete (🗑)** icon corresponding to the combination.

- Click **Save**.

The discount details are added in the discount arrangement pricing rule.

Defining the Discount Limits in a Discount Arrangement Pricing Rule

Prerequisites

To define the discount limits in a discount arrangement pricing rule, you should have:

- An account, to which you want to credit the discount, defined in the application
- Minimum limit pricing rule type and minimum limit price item defined in the respective discount arrangement pricing rule type when you want to define minimum discount limit on the contract
- Maximum limit pricing rule type and maximum limit price item defined in the respective discount arrangement pricing rule type when you want to define maximum discount limit on the contract

Procedure

To define the discount limits in a discount arrangement pricing rule:

- Ensure that the **Discount Limits** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Limits** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Used to indicate whether you want to define minimum or maximum discount limit on the contract.	No

Field Name	Field Description	Mandatory (Yes or No)
Discount Credit Account	Used to indicate the account to which you want to credit the discount when the minimum or maximum discount limit is defined on the contract.	Yes (Conditional)
	Note: This field is enabled when the No Limit option is not selected.	Note: This field is required when the No Limit option is not selected.
Settlement Days	Used to specify the number of days which helps to calculate the final settlement date (which is pricing end date + the settlement days). The valid values: <ul style="list-style-type: none"> • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days 	Yes

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount Limit	Displays the type of discount limit. The valid values are: <ul style="list-style-type: none"> • Minimum • Maximum 	Not applicable
Select	On clicking the check box corresponding to the type of discount limit, you can define minimum or maximum discount limit on the contract. <p>Note: This field is enabled when the No Limit option is not selected.</p>	Yes
Limit Type	Used to indicate whether you want to define a flat limit or an enrollment based limit. The valid values are: <ul style="list-style-type: none"> • Enrollment Based • Flat 	Yes (Conditional)
	Note: This field is enabled when the No Limit option is not selected. If you select the check box corresponding to the Minimum discount limit, the Limit Type field corresponding to the Minimum discount limit is enabled.	Note: This field is required when you are defining a minimum or maximum discount limit in the discount arrangement pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Amount Limit	Used to specify the flat minimum or maximum discount amount.	Yes (Conditional)
	<p>Note:</p> <p>This field is enabled when:</p> <ul style="list-style-type: none"> The No Limit option is not selected. The minimum or maximum limit type is set to Flat. 	<p>Note: This field is required when the minimum or maximum limit type is set to Flat.</p>

Note: The **Discount Limits** section appears when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Limits** section.
- Click **Save**.

The discount limits are defined in the discount arrangement pricing rule.

Excluding a Network or Provider in a Discount Arrangement Pricing Rule

Procedure

To exclude a network or provider in a discount arrangement pricing rule:

- Ensure that the **Exclusion** section appears when you are defining or editing a discount arrangement pricing rule.

The **Exclusion** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Used to indicate whether you want to exclude the discount offered to certain network hospitals and providers during the discount share or discount guarantee calculation. The valid values are: <ul style="list-style-type: none"> Network Provider 	Yes (Conditional)
	<p>Note: The system creates the transaction legs and calculation lines for such excluded network hospitals and providers, but does not accumulate the discount.</p>	<p>Note: This field is required while excluding a network or provider in the discount arrangement pricing rule.</p>

Field Name	Field Description	Mandatory (Yes or No)
Level Identifier	Used to specify the network or provider ID.	Yes (Conditional)
		Note: This field is required while excluding a network or provider in the discount arrangement pricing rule.

- Enter the required details in the **Exclusion** section.
- If you want to exclude more than one network or provider in the discount arrangement pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a network or provider from the exclusion list, click the **Delete** (🗑️) icon corresponding to the network or provider.

- Click **Save**.

The network or provider is excluded in the discount arrangement pricing rule.

Defining a Characteristic for a Discount Arrangement Pricing Rule

Prerequisites

To define a characteristic for a discount arrangement pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a discount arrangement pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the discount arrangement pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the discount arrangement pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the discount arrangement pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the discount arrangement pricing rule.

Editing a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discount arrangement pricing rule, whose details you want to edit.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Indicates the discount arrangement pricing rule type using which the discount arrangement pricing rule is defined.

- Main** – Used to specify basic details in the discount arrangement pricing rule.
- Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- Characteristics** – Used to define the characteristics for the discount arrangement pricing rule.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCDA batch is stamped on the credit billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. 	Yes
	<p>Note: The bill after date is stamped on the credit billable charges and not on the discount billable charges.</p>	

5. Modify the required details in the **Main** section.
6. Modify the required discount details in the discount arrangement pricing rule.
7. Modify the minimum or maximum discount limit on the contract in the discount arrangement pricing rule, if required.
8. Modify the exclusion list in the discount arrangement pricing rule, if required.
9. Define, edit, or remove characteristics of the discount arrangement pricing rule, if required.
10. Click **Save**.

The changes made to the discount arrangement pricing rule are saved.

Deleting a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To delete a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the discount arrangement pricing rule that you want to delete.

A message appears confirming whether you want to delete the discount arrangement pricing rule.

Note: You can delete a discount arrangement pricing rule when it is not yet used in the system.

- Click **OK**.

The discount arrangement pricing rule of a parent customer is deleted.

Viewing the Discount Arrangement Pricing Rule Details of a Parent Customer

Procedure

To view the discount arrangement pricing rule details of a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the

View () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Discount Arrangement** – Displays the discount arrangement pricing rule of a parent customer. It contains the following sections:
 - **Main** – Displays basic details of the discount arrangement pricing rule.
 - **Discount Details** – Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim.
 - **Discount Limits** – Displays the minimum and maximum discount limit defined on the contract.
 - **Exclusions** – Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule.
 - **Characteristics** – Displays the characteristics defined for the discount arrangement pricing rule.

- View the basic details of the discount arrangement pricing rule in the **Main** section.

6. View the discount details of the discount arrangement pricing rule in the **Discount Details** section.
7. View the discount limits set on the discount arrangement pricing rule in the **Discount Limits** section.
8. View the excluded entity defined for the discount arrangement pricing rule in the **Exclusions** section.
9. View the characteristics of the discount arrangement pricing rule in the **Characteristics** section.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Level Funding Pricing

Level funding is a type of self-funding. It offers all benefits of traditional self-funding. However, it provides one additional benefit which helps to stabilize monthly costs of the self-funded employer to pay off the claim, ancillary, claim based fee, enrollment based fee, and discount charges.

Oracle Revenue Management and Billing enables you to process and bill the funds charges to the self-funded employer in either of the following ways:

- Pay the fixed flat amount in every bill period
- Pay the amount based on the enrollment based limit in every bill period

The system enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some surplus or deficit in funds at the time of settlement which is ideally at the end of year. In such case, the system enables you to configure whether a flat amount or percentage of surplus should be retained by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer.

The pricing for the level funding can be defined using the level funding pricing rules. You can define a level funding pricing rule at the parent customer and bill group levels. The level funding pricing rule at the bill group level takes precedence over the level funding pricing rule at the parent customer level. You can define the level funding pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a level funding

pricing rule using a level funding pricing rule type. It is the level funding pricing rule type which helps the system to determine:

- Business object using which the level funding pricing rule should be created in the system.

Note: You must not select the **Primary** option while defining a level funding pricing rule type.

- Algorithm which should be triggered for deriving the account and price item while creating the funds transaction legs.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective level funding pricing rule is derived.

Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
 - Whether the funds charge should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the level funding pricing rule type.
 - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
 - Value which the output parameter in the rule should return when the price item in the level funding pricing rule type should be considered for processing.
- Price items for which you can define level funding pricing rules using the level funding pricing rule type.
- Rate options that you can use while defining the pricing for the level funded price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional level funding specific information, such as:
 - Whether the level funding premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule.
 - Bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the level funded premium.
 - Price item whose pricing you want to use for calculating the level-funded premium.
 - LF billable charge line type using which you want to create billable charges for level funded premium.
 - GL only contract type which indicates the contract against which the claim, ancillary, claim based fees, enrollment based fees, and discount charges that are settled against the funds must be debited. The distribution code on the GL only contract type will indicate the GL account against which charges settled against the funds must be debited.
 - Liability distribution code will indicate the GL account against which charges settled against the funds must be credited.
 - Number of days before which you want to create a To Do for reminding the self-funded employer to renew the level funded agreement.
 - Surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.

- Deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.
- Domestic provider billable charge line type using which you want to create billable charges for the claim, claim based fees, enrollment based fees, ancillary, and discount charges which are settled against the funds for a domestic provider.
- Markup or markdown billable charge line type using which you want to create billable charges for markup or markdown which are settled against the funds.
- Rule type which indicates the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
- Rule type which indicates the rules that should be executed to determine whether the level funded premium is for a domestic provider.
- Transaction field which you want to use in the rules as the output parameter to determine whether the level funded premium is for a domestic provider.

Once a level funding pricing rule type is defined, you can create level funding pricing rules using the level funding pricing rule type. While defining a level funding pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the level funding. On selecting a specific stop-loss pricing rule, the level funding pricing date range is set automatically. The level funding pricing date range is same as the specific stop-loss pricing rule.
- Rate option which you want to use while defining the level funding pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
 - **Immediately** – If you select this option from the list, the bill after date is not calculated. The funds billable charge is billed immediately in the next bill cycle.
 - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Never** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
 - **Yearly** – If you select this option from the list, the bill after date is set to the pricing end date in the funds billable charge.
 - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the funds billable charge.

Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Whether the customer would like to renew or cancel the level funded agreement.
- Whether a flat amount or percentage of surplus should be retained by the ASO provider at the time of settlement.
- Whether a flat amount or percentage of deficit should be offered as discount to the self-funded employer at the time of settlement.

However, while defining a level funding pricing rule for a bill group, you need to specify the following:

- The policy status in which the level funding pricing rule is applicable.
- Price item for which you want to define the pricing.
- Parent customer's level funding pricing rule from which you want to inherit the accumulation parameters.

Note:

The pricing date range is derived from the parent customer's level funding pricing rule because the level funding pricing rules for parent customer and bill group should have the same date range.

The settlement fund price item is derived from the level funding pricing rule type using which the level funding pricing rule is created.

- Rate option which you want to use while defining the level funding pricing.
- Price items whose charges should be accumulated against the level funded price items so that it can be settled against the funds.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated.

OR

Whether the line items which are associated with the **Level Funded** pricing rule type category should be accumulated.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated.

OR

Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated.

- Whether the discount calculated using a particular discount arrangement pricing rule should be accumulated.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated.

You can also specify a pricing group while defining a level funding pricing rule for a bill group. Once a level funding pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

The following new batches are introduced in this release:

- **C1-ACLF** – This batch is used to accumulate the charges which are to be settled against the funds. During the accumulation post-processing, the level funded billable charges (which are created through the TFM process) are posted against the GL accounts which are derived using the GL only contract type and liability distribution code information in the level funding pricing rule type. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCLF** – Once the level funded billable charges are accumulated, this batch is used to create the accumulated level funded billable charges. It is also used to calculate the bill after date. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Defining a Level Funded Pricing Rule Type

Prerequisites

To define a level funded pricing rule type, you should have:

- Level Funded Pricing Rule Type business object defined in the application.
- Level Funded Pricing Rule business object defined in the application.

Procedure

To define a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a level funded pricing rule type. Note: You can create a discount arrangement pricing rule type using the Level Funded Pricing Rule Type (C1-PricingRuleTypeDA) business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Level Funded (LF) Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the level funded pricing rule type.
- **Algorithms** – Used to associate the algorithms with a level funded pricing rule type.
- **Additional Data** – Used to specify the additional information about the level funded pricing rule type.
- **Price Items** – Used to add the price items for which you can define the level funded pricing rules using the level funded pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a level funded pricing rule type.
- **DA – Specific Additional Data** – Used to define the level funded - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the level funded pricing rule type.	Yes
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> Level Funded (LF) Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the level funded pricing rule type.	Not applicable
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. Note: You must not select the Primary option while defining a level funded pricing rule type.	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Level Funded 	Yes

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a level funded pricing rule type.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRISL	C1_ACCPRIDIS	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

- Define additional data for a level funded pricing rule type, if required.
- Add the required price items in the level funded pricing rule type.
- Add the price item parameters in the level funded pricing rule type, if required.
- Define characteristics for a level funded pricing rule type, if required.
- Add level funded-specific additional data in the level funded pricing rule type.
- Click **Save**.

The level funded pricing rule type is defined.

Associating an Algorithm with a Level Funded Pricing Rule Type

Prerequisites

To associate algorithms with a level funding pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount arrangement pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation • Accumulation Billable Charge Post Proc • Accumulation Billable Charge Pre Proc • Accumulation Post Processing • Accumulation Pre Processing • Pricing Rule Post Processing • Transaction Validation 	Yes Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Sequence	Algorithm
Account and Price Item Derivation	10	C1_ACCPRIDIS

3. If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Level Funded Pricing Rule Type

Procedure

To define additional data in a level funded pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the level funded pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Eligible for Level Funding	Used to indicate whether price items included in the level funded pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the level funded transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the level funded charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: For more information, refer to the Write-Off Charges during Post Runout section.	
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Post Runout Write-Off Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Eligible for Write-Off in Post Runout field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.</p> <p>Note:</p> <p>For more information, refer to the Price Item Eligibility on page 3000 section.</p> <p>This field appears when the Eligible for Write-Off in Post Runout field is set to Yes.</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Price Item Eligibility Field field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the Rule Based Price Item Eligibility Field.</p>	No
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.	Yes (Conditional)
		Note: This field is required when a value is specified in the Rule Based Price Item Eligibility Field field.

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data is defined for the pricing rule type.

Adding a Price Item in a Level Funded Pricing Rule Type

Prerequisites

To add a price item in a level funded pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration

- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a level funded pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the level funded pricing rule type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are adding a rate option and bill to account in the level funded pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (➕) icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in the level funded pricing rule type, click the Add (➕) icon.</p> <p>However, if you want to remove a price item from a level funded pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in a level funded pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in a level funded pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a level funded pricing rule type.

Adding a Price Item Parameter in a Level Funded Pricing Rule Type

Prerequisites

To add a price item parameter in a level funded pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a level funded pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a level funded pricing for the price item. Note: The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.	Yes (Conditional) Note: This field is required when you are adding a price item parameter in a level funded pricing rule type.
Transaction Field	Used to specify the transaction field from where the data should be retrieved. Note: The Search (🔍) icon appears corresponding to the Transaction Field field. On clicking the Search (🔍) icon corresponding to the Transaction Field field, the Transaction Field Search window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the Transaction Field .	Yes (Conditional) Note: This field is required when you are adding a price item parameter in a level funded pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rule.	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a level funded pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a level funded pricing rule type, click the **Delete (🗑)** icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added for a level funded pricing rule type.

Defining a Characteristic for a Level Funded Pricing Rule Type

Prerequisites

To define a characteristic for a level funded pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a level funded pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a level funded pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a level funded pricing rule type.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for a level funded pricing rule type.

Defining the Level Funded Specific Additional Data in a Level Funded Pricing Rule Type

Prerequisites

To define level funded specific additional data in a level funded pricing rule type, you should have:

- A rule type defined for **Markup or Markdown Eligibility Rule Type** and **Domestic Provider Eligibility Rule Type** field.

Procedure

To add the level-funded data in a level funded pricing rule type:

- Ensure that the **Level Funded - Specific Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Level Funded - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Arrangement	Used to indicate whether the level-funded premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule. The valid values are: <ul style="list-style-type: none"> Enrollment Based Premium Flat Rate Based Premium 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Fund Pricing Rule Type	<p>Used to indicate the bill period based recurring flat fee pricing rule type or the retention type enrollment based pricing rule type which you want to use for calculating the level-funded premium.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Settlement Fund Pricing Rule Type field. On clicking the Search (🔍) icon corresponding to the Settlement Fund Pricing Rule Type field, the Contract Type Search window appears.</p> <p>On specifying the contract type, the description of the contact type appears corresponding to the Settlement Fund Pricing Rule Type field.</p>	Yes
Settlement Fund Price Item	<p>Used to indicate the price item that you want to use for calculating the level-funded premium.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Settlement Fund Price Item field. On clicking the Search (🔍) icon corresponding to the Settlement Fund Price Item field, the Price Item Details window appears.</p> <p>On specifying the price item details, the description of the price item details appears corresponding to the Settlement Fund Price Item field.</p>	Yes
LF Billable Charge Line Type	<p>Used to indicate the level funded billable charge line type using which you want to create the billable charges for level-funded settlement purposes.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the LF Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the LF Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type Search field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
GL Only Contract Type	<p>Used to indicate the contract against which the level-funded billable charges for claim, ancillary, claim based fees, enrollment based fees, discount, specific stop-loss, and aggregate stop-loss must be debited.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the GL Only Contract Type field. On clicking the Search (🔍) icon corresponding to the GL Only Contract Type field, the Contract Type Search window appears.</p>	Yes
Liability Distribution Code	<p>Used to indicate the GL account against which the level-funded billable charges (that are settled against the level-funded premium billable charge) must be credited.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Liability Distribution Code field. On clicking the Search (🔍) icon corresponding to the Liability Distribution Code field, the Distribution Code Search window appears.</p> <p>On specifying the distribution code, the description of the distribution code appears corresponding to the Liability Distribution Code field.</p>	Yes
Renewal Decision Lead Time	Used to specify the number of days before which you want to create a To Do for reminding the self-funded employer to renew the level-funded agreement.	Yes
Surplus Billable Charge Line Type	<p>Used to indicate the surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Surplus Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Surplus Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Surplus Billable Charge Line Type field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Deficit Billable Charge Line Type	<p>Used to indicate the deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deficit Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Deficit Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Deficit Billable Charge Line Type field.</p>	Yes
Domestic Provider Billable Charge Line Type	<p>Used to indicate the domestic provider billable charge line type using which you want to create level-funded settlement billable charge for a domestic provider.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Domestic Provider Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Domestic Provider Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Domestic Provider Billable Charge Line Type field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to indicate the markup or markdown billable charge line type using which you want to create the billable charges for markup or markdown which are settled against the level-funded premium.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Markup or Markdown Billable Charge Line Type field. On clicking the Search (🔍) icon corresponding to the Markup or Markdown Billable Charge Line Type field, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Markup or Markdown Billable Charge Line Type field.</p>	No
Markup or Markdown Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.	Yes (Conditional) Note: This field is required when you are specifying a markup or markdown eligibility rule type in a level funded pricing rule type.
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Markup or Markdown Eligibility Field field. On clicking the Search (🔍) icon corresponding to the Rule Based Markup or Markdown Eligibility Field Type field, the Field Search window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the Rule Based Markup or Markdown Eligibility Field field.</p>	
Domestic Provider Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the level-funded premium is for a domestic provider.	No
Rule Based Domestic Provider Claim Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the level-funded premium is for a domestic provider.	Yes (Conditional) Note: This field is required when you are specifying a domestic provider eligibility rule type in a level funded pricing rule type.
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field. On clicking the Search (🔍) icon corresponding to the Rule Based Domestic Provider Claim Eligibility Field field, the Field Search window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the Rule Based Domestic Provider Claim Eligibility Field field.</p>	

2. Enter the required details in the **Level Funded - Specific Additional Data** section.
3. Click **Save**.

The level funded-specific data is added in the level funded pricing rule type.

Editing a Level Funded Pricing Rule Type

Prerequisites

To edit a level funded pricing rule type, you should have:

- Level funded pricing rule type business object defined in the application.
- Level funded pricing rule business object defined in the application.

Procedure

To edit a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount arrangement pricing rule type.
- **Additional Data** – Used to specify the additional information about the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount arrangement pricing rule type.
- **Level Funded - Specific Additional Data** – Used to define the discount arrangement - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the level funded pricing rule type.	Not applicable
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> • Level Funded (LF) Pricing Rule 	Yes
Business Object	Indicates the business object used while defining the level funded pricing rule type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is primary.	Not applicable
	Note: You must not select the Primary option while defining the level funded pricing rule type.	
Pricing Rule Type Category	Indicates the pricing rule type category for the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> Level Funded 	No

Tip: Alternatively, you can edit the details of a level funded pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with the level funded pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIS	C1_ACCPRID	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

- Modify the additional data for a level funded pricing rule type, if required.
- Add, edit, or remove the required price items in the level funded pricing rule type.
- Add, edit, or remove the price item parameters in the level funded pricing rule type, if required.
- Add, edit, or remove characteristics for a level funded pricing rule type, if required.
- Modify the level funded-specific additional data in the level funded pricing rule type, if required.
- Click **Save**.

The changes made to the level funded pricing rule type are saved.

Deleting a Level Funded Pricing Rule Type

Procedure

To delete a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the level funded pricing rule type that you want to delete.
A message appears confirming whether you want to delete the level funded pricing rule type.

Note: You can delete a level funded pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a level funded pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The level funded pricing rule type is deleted.

Defining a Level Funded Pricing Rule for a Parent Customer

Prerequisites

To define a level funded pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.

Procedure

To define a level funded pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a level funded pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> • Parent Customer 	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer for whom you are defining the level funded pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the level funded pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the level funded pricing rule.

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** – Used to define the final settlement rules when the customer decides to renew or cancel the level-funded agreement.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Parameters** and **Final Settlement Rules** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle. • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCLF batch is stamped on the level-funded settlement billable charge. • Monthly - If you select this option from the list, the bill after date is set to the last day of the month. • On Settlement - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge. 	Yes
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No <p>Note: By default the value of this option type is set to Yes.</p>	No

7. Enter the required details in the **Main** section.
8. Define the accumulation parameters in the level funded pricing rule.
9. Define the final settlement rules in the level funded pricing rule.
10. Define characteristics for the level funded pricing rule, if required.
11. Click **Save**.

The level funded pricing rule is defined for the parent customer.

Editing a Level Funded Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Edit** column corresponding to the level funded pricing rule, whose details you want to edit.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the level funded pricing rule is defined.
Pricing Rule Type	Indicates the level funded pricing rule type using which the level funded pricing rule is defined.

- **Main** – Used to specify basic details in the level funded pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** – Used to define the final settlement rules when the customer decides to renew or cancel the level funded agreement.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note: The **Accumulation Parameters** and **Final Settlement Rules** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule which is defined for the parent customer.	Yes
	Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically.	
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective.	Yes
	Note: The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective.	No
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> • Immediately - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle. • Manually (At Regular Intervals) - If you select this option from the list, the bill after date which is specified in the Manual Settlement Bill After Date parameter while executing the C1-BCLF batch is stamped on the level-funded settlement billable charge. • Monthly - If you select this option from the list, the bill after date is set to the last day of the month. • On Settlement - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge. • Yearly - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge. 	Yes
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:	No
	<ul style="list-style-type: none"> • Yes • No <p>Note: By default the value of this option type is set to Yes.</p>	

5. Modify the required details in the **Main** section.

6. Modify the required accumulation parameters in the level funded pricing rule.
7. Modify the final settlement rules in the level funded pricing rule.
8. Define, edit, or remove characteristics of the level funded pricing rule, if required.
9. Click **Save**.

The changes made to the level funded pricing rule are saved.

Deleting a Level Funded Pricing Rule of a Parent Customer

Procedure

To delete a level funded pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the level funded pricing rule that you want to delete.
A message appears confirming whether you want to delete the level funded pricing rule.

Note: You can delete a level funded pricing rule when it is not yet used in the system.

5. Click **OK**.

The level funded pricing rule of a parent customer is deleted.

Viewing the Details of a Level Funded Pricing Rule Defined for a Policy of a Parent Customer

Procedure

To view the level funded pricing rule details of a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Level Funding** – Displays the level funded pricing rule of a parent customer. It contains the following sections:
 - **Main** – Displays basic details of the level funded pricing rule.
 - **Accumulation Parameters** – Displays the accumulation parameters defined for a parent customer in the level funded pricing rule.
 - **Final Settlement Rules** – Displays the final settlement rules defined for the level funded pricing rule.
 - **Characteristics** – Displays the characteristics defined for the level funded pricing rule.

5. View the basic details of the level funded pricing rule in the **Main** section.

6. View the accumulation parameters defined for a parent customer in the **Accumulation Parameters** section.

7. View the final settlement rules defined for the level funded pricing rule in the **Final Settlement Rules** section.

8. View the characteristics of the level funded pricing rule in the **Characteristics** section.

Defining Accumulation Parameters in a Level Funded Pricing Rule

Procedure

To define accumulation parameters in a level funding pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining a level funded pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays a blank field. An accumulation group ID is generated when accumulation parameter values are defined for a level funded pricing rule.	Not applicable
	Note: It is a read-only field.	
Settlement Account ID	Used to indicate the account ID to whom the settlement amount is credited.	Yes
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.	Not applicable
	Note: It is a read-only field.	
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.	Not applicable
	Note: It is a read-only field.	
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.	Not applicable
	Note: It is a read-only field.	
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.	Not applicable
	Note: It is a read-only field.	
Settlement Days	Used to indicate the number of days as the settlement days which help in calculating the settlement date. The valid values are: <ul style="list-style-type: none"> • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days 	Not applicable
	Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later plus the settlement days.	

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the level funded pricing rule.

Defining the Final Settlement Rules in a Level Funded Pricing Rule

Procedure

To define the final settlement rules in a level funded pricing rule:

1. Ensure that the **Final Settlement Rules** section is expanded when you are defining or editing a level funded pricing rule type.

The **Final Settlement Rules** section contains the following sub-sections:

- **Customer Renews** - Used to define the final settlement rules when the customer renews the contract.
- **Customer Cancels** - Used to define the final settlement rules when the customer cancels the contract.
- **Renewal Decision** - Used to indicate the status for the upcoming level funded contract.

The **Customer Renews** sub-section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)									
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement. The valid values are: <ul style="list-style-type: none"> • Final Settlement Surplus • Final Settlement Deficit 	Not applicable									
Final Settlement Option	Used to indicate the final settlement option when the customer renews the level funded agreement.	Not applicable									
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the final settlement option in case of surplus.</td> <td>Yes</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to indicate the final settlement option in case of deficit.</td> <td>Yes</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Final Settlement Surplus	Used to indicate the final settlement option in case of surplus.	Yes	Final Settlement Deficit	Used to indicate the final settlement option in case of deficit.	Yes
	Field Name		Field Description	Mandatory (Yes or No)							
Final Settlement Surplus	Used to indicate the final settlement option in case of surplus.	Yes									
Final Settlement Deficit	Used to indicate the final settlement option in case of deficit.	Yes									

Field Name	Field Description	Mandatory (Yes or No)									
Flat/ Percentage	Used to indicate the final settlement payment type when the customer renews the level funded agreement.	Not applicable									
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the payment type in case of surplus. Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for a level funded pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the level funded pricing rule.

Defining a Level Funded Pricing Rule for a Bill Group

Prerequisites

To define a level funded pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.
- Policy status defined in the application.

Procedure

To define a level funded pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the type of the parent customer.	Not applicable
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be Parent Customer .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule.	Yes
	Note: Select the Level Funded Pricing Rule Type option, as the pricing rule.	Note: If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> In Force/Active Runout 	Yes (Conditional)
		Note: Policy Status is required once the Pricing Rule Type is selected.

6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the bill group. It contains the following columns:

Column Name	Column Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the level funded pricing rule is created.

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a level funded pricing rule.
- **Pricing Information for rule type category : Claim** – Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** – Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** – Used to define the discount arrangement pricing rule which is effective for level funding calculations.
- **Pricing Information for rule type category : Retention** – Used to define the retention pricing rule which is effective for level funding calculations.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Criteria, Pricing Information for rule type category: Claim, Pricing Information for rule type category: Ancillary, Pricing Information for rule type category: Discount, and Pricing Information for rule type category: Retention** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. Note: On selecting the specific stop-loss pricing rule of the parent customer, the level funded Pricing Start Date and Pricing End Date field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective. Note: The pricing start date cannot be later than the pricing end date.	Not applicable
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective. Note: The pricing end date cannot be earlier than the pricing start date.	Not applicable
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Fund Price Item	Used to indicate the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.	Not applicable

7. Enter the required details in the **Main** section.
8. Define the accumulation criteria in the level funded pricing rule for a bill group.
9. Define the pricing information for the claim rule type category for a bill group.
10. Define the pricing information for the ancillary rule type category for a bill group, if required.
11. Define the pricing information for the discount rule type category for a bill group, if required.
12. Define the pricing information for the retention rule type category for a bill group, if required.
13. Define characteristics for the level funded pricing rule for a bill group, if required, if required.
14. Click **Save**.

The level funded pricing rule is defined for a bill group.

Editing a Level Funded Pricing Rule of a Bill Group

Prerequisites

To edit a level funded pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleLevelFunded** defined for the level funded pricing rule.

Procedure

To edit a a level funded pricing rule of a bill group:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears. It consists of the following zones:

- **Parent Customer Pricing Rule Summary**
- **Bill Group ASO Policy Information**
- **Bill Group ASO Policy Pricing Rules**
- **Bill Group Pricing Groups**
- **Pricing Rule Approval Transactions**

4. Click the Broadcast () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit** () icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for the bill group.
- **Main** – Used to specify basic details about the level funded pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a level funded pricing rule.
- **Pricing Information for rule type category : Claim** – Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** – Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** – Used to define the discount arrangement pricing rule which is effective for level funding calculations.
- **Pricing Information for rule type category : Retention** – Used to define the retention pricing rule which is effective for level funding calculations.
- **Characteristics** – Used to define the characteristics for the level funded pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information of the level funded pricing rule.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for the level funded pricing rule. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Post Runout • Runout 	Not applicable
Pricing Rule Type	Indicates the pricing rule type for the level funded pricing rule.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's Pricing Rule	Indicates the pricing rule of the parent customer.	Not applicable
Pricing Start Date	Indicates the pricing rule start date.	Not applicable
Pricing End Date	Indicates the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option to edit the level funded pricing rule for the price item.	Not applicable
Settlement Fund Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.	Not applicable

6. Modify the details in the **Main** section.

7. Modify the accumulation criteria in a level funded pricing rule for a bill group.
8. Modify the pricing information for the claim rule type category for a bill group.
9. Modify the pricing information for the ancillary rule type category for a bill group, if required.
10. Modify the pricing information for the discount rule type category for a bill group, if required.
11. Modify the pricing information for the retention rule type category for a bill group, if required.
12. Add, edit, or remove characteristics for the characteristics for a level funded pricing rule, if required.
13. Click **Save**.

The changes made to a level funded pricing rule for a bill group are saved.

Defining Claim Pricing Information in a Level Funded Pricing Rule

Procedure

To define the claim pricing information in the level funded pricing rule:

1. Ensure that the

Pricing Information for rule type category : Claim zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Claim** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the claim pricing rule type effective for level funded pricing.	Yes
Derive Using	Used to indicate the method through which the claim pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> • LF Line Items • Pricing Rules 	Yes

If **LF Line Items** option is selected from the **Derive Using** field, the following sub-sections appear:

- **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funding line items.
- **Markup or Markdown Values** – Used to define the markup or markdown values for level funding line items.
- **Line Items** – Used to associate the line items which are eligible for billing.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude LF (Percentage)	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	Not applicable
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items.	Not applicable
	Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount .	
Markup or Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Yes • No 	Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.
	Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.	

The **Line Items** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to indicate the line item which is eligible for level funded pricing.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Line Item field. On clicking the Search (🔍) icon corresponding to the Line Item field, the Pricing Rule Line Item Search window appears.</p> <p>On specifying the pricing rule line item, the description of the pricing rule line item appears corresponding to the Line Item field.</p>	

If **Pricing Rule Type** option is selected from the **Derive Using** field, following sub-sections appear:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
 - **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funded pricing.
 - **Markup or Markdown Values** – Used to define the markup or markdown values for the billable charge line items.
 - **Line Items** – Used to associate the line items which are eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for level funded pricing.	No

Note: If you are editing a bill group's level funded pricing rule for the **Claim** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Claim Pricing Rule** field. You can select an effective claim pricing rule and click the **Reapply** button to set a new pricing for the claim rule type that is eligible for level funding.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude (Percentage) LF	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	Not applicable
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage 	Not applicable
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items. Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount .	Not applicable
Markup / Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: <ul style="list-style-type: none"> • Yes • No Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.	Yes (Conditional) Note: This field is required when Flat Amount option is selected from the Markup or Markdown Type field.

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Include in Settlement	Used to indicate whether the line item should be included in the level funded claim pricing settlement.	No
Markup or Markdown Included in Settlement	Used to indicate whether markup or markdown should be included in the level funded claim settlement.	No
Markup or Markdown Percentage Eligibility	Used to indicate whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 	Not applicable
Markup or Markdown Percentage	Used to indicate the percentage for markup or markdown value.	Not applicable

- Enter the required details in the appropriate sections, based on the option that is selected from the **Derive Using** field.
- If you want to add information for more than one claim pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one claim pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

- Click **Save**.

The claim line items are defined in the level funded pricing rule.

Defining Ancillary Pricing Information in a Level Funded Pricing Rule

Procedure

To define the ancillary pricing information in the level funded pricing rule:

- Ensure that the **Pricing Information for rule type category : Ancillary** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Ancillary** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the ancillary pricing rule type effective for level funded pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Derive Using	Used to indicate the method through which the ancillary pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> Ancillary Billable Charge Line Type Pricing Rules 	Yes

If **Ancillary Billable Charge Line Type** option is selected from the **Derive Using** field, the following subsections appear:

- Billable Charge Line Types** – Used to associate the billable charge line items which are eligible for billing.

The **Billable Charge Line Types** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). Note: The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.	Yes
Rate Based	Used to indicate that the billable charge line type is rate based.	No
Rate	Used to specify the rate for the billable charge line type. Note: This field is enabled when the Rate Based option is selected.	Yes (Conditional) Note: This field is required when the Rate Based option is selected.
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	No
Pricing Strategy	Used to indicate the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> Markdown Markup None 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Type	Used to indicate the markup or markdown type for the billable line items. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage 	Yes (Conditional)
	Note: This field is enabled when the Pricing Strategy option is selected either as Markup or Markdown .	Note: This field is required when the Rate Based option is selected either as Markup or Markdown .
Amount/Percentage	Used to specify the amount or percentage for markup or markdown value.	Yes (Conditional)
	Note: This field appears when the Markup or Markdown Type option is selected.	Note: This field is required when the Markup or Markdown Type option is selected.

If **Pricing Rule Type** option is selected from the **Derive Using** field, the following zone appears:

- **Ancillary Pricing Rule** - Used to indicate the ancillary pricing rule. It contains the following sub-section:
 - The **Billable Charge Line Types** - Used to define the billable charge line types for an ancillary pricing rule, eligible for level funding.

The **Ancillary Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Ancillary Pricing Rule	Used to indicate the ancillary pricing rule effective for level funded pricing.	No

Note: If you are editing a bill group's level funded pricing rule for the **Ancillary** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Ancillary Pricing Rule** field. You can select an effective ancillary pricing rule and click the **Reapply** button to set a new pricing for the ancillary rule type that is eligible for level funding.

The **Billable Charge Line Types** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billable Charge Line Type field. On clicking the Search icon, the Billable Charge Line Type Search window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the Billable Charge Line Type field.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Include in Settlement	Used to indicate whether the billable charge line item should be included in the level funded ancillary pricing settlement.	Not applicable
Rate Based	Indicates that the billable charge line type is rate based.	Not applicable
Rate	Displays the rate for the billable charge line type.	Not applicable
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	Not applicable
Pricing Strategy	Displays the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None 	Not applicable
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage <p>Note: This field is enabled when the Pricing Strategy option is selected either as Markup or Markdown.</p>	Not applicable
Amount/ Percentage	Displays the amount or percentage which is specified as the markup or markdown value.	Not applicable

- Enter the required details in the appropriate sections, based on the option selected from the **Derive Using** field.
- If you want to add information for more than one ancillary pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one ancillary pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

- Click **Save**.

The ancillary line items are defined in the level funded pricing rule.

Defining Discount Arrangement Pricing Information in a Level Funded Pricing Rule

Procedure

To define the discount arrangement pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Discount** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Discount** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the discount arrangement pricing rule type which is effective for level funding.	Yes
Derive Using	Used to indicate the method through which the discount arrangement pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> • Pricing Rules 	Yes

On selecting the **Pricing Rule Type** option from the **Derive Using** field, the following sub-section appears:

- **Discount Pricing Rule** - Used to indicate the discount arrangement pricing rule. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discount Pricing Rule	Used to indicate the discount arrangement pricing rule which is effective for level funding.	Yes

2. Select the appropriate discount arrangement pricing rule from the **Discount Pricing Rule** section.

Note:

On selecting the discount arrangement pricing rule, the system does not generate any line items for the discount arrangement pricing information. This discount arrangement pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add information for more than one discount pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove information of more than one discount pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

4. Click **Save**.

The discount arrangement pricing information is defined in the level funded pricing rule.

Defining Retention Type Claim Based and/or Retention Type Enrollment Based Pricing Rule Information in a Level Funded Pricing Rule

Procedure

To define the retention type claim based and/or retention type enrollment based pricing rule information in a level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Retention** zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Retention** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retention Rule Type	Used to indicate the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule.	Yes
Price Item	Used to indicate the price item for the level funded pricing rule. Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon corresponding to the Price Item field, the Get Retention Type Pricing Rules window appears. On specifying the retention type pricing rule, the description of the retention type pricing rule appears corresponding to the Price Item field.	Yes

2. Select the appropriate **Retention Rule Type** and **Price Item** from the **Pricing Information for rule type category : Retention** zone.

Note:

Once the retention type claim based and/or retention type enrollment based pricing rule type is selected along with the price item, the system does not generate line items for the retention type claim/enrollment based pricing rule. This retention type claim/enrollment based pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add more than one retention type claim based and/or retention type enrollment based pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove more than one retention type claim based and/or retention type enrollment based pricing rule type from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the pricing rule type field.

4. Click **Save**.

The retention type claim based and/or retention type enrollment based pricing rules eligible for level funding are defined in the level funded pricing rule.

Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule .	Note: This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a level funded pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the level funded pricing rule.

Terminal Liability Reserve (Run Out) Level Funding Pricing

Oracle Revenue Management and Billing provides a mechanism to maintain terminal liability reserve for a self-funded policy through level funding. Now, the system supports the following types of level funding:

- Regular Enrollment Based Level Funding Without Terminal Liability Reserve (TLR)
- Flat Rate Based Level Funding Without TLR
- Regular Enrollment Based Level Funding With TLR
- Flat Rate Based Level Funding With TLR

The **C1-PricingRuleTypeLF** and **C1-PricingRuleLevelFunded** business objects are extended to support the TLR feature. Therefore, you can now define pricing rule types for the above listed types of level funding. While creating a level funding pricing rule type with TLR feature, you need to specify the following:

- **Terminal Liability Reserve (Run Out) Funding Required** - Used to indicate whether you want to define a level funding pricing rule type with TLR.
- **Claim Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the claim fund.
- **Run Out Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the run out fund.
- **Run Out Fund Pricing Rule Type** - Used to specify a bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the run out fund.
- **Run Out Fund Price Item** - Used to specify the price item which you want to use for calculating the run out fund.
- **Run Out Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create calculation line while settling charges, stop-loss, or discount through run out fund in the runout period.

- **Run Out Surplus Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the surplus run out funds are left with the ASO provider at the time of settlement.
- **Run Out Deficit Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the run out funds are in deficit at the time of settlement.

Now, the system enables you to specify the settlement rules while creating a level funding pricing rule type with or without TLR feature. While defining settlement rules, you need to specify the following:

- The policy status for which the settlement rules are applicable
- The fund type (i.e. claim or run out fund) for which you want to define the settlement rules
- The customer action (i.e. cancel or renew the self-funded policy) based on which you want to either close or roll forward the surplus or deficit claim or run out fund

The system provides an option to indicate whether the settlement rules specified for a claim or run out fund are editable. Accordingly, you can change the settlement rules when you create a pricing rule using the pricing rule type for a parent customer.

Now, the system enables you to create a different level funded pricing rule for each policy status at the parent customer level.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Pricing Rule (Used for Viewing)

The **Pricing Rule** screen allows you to:

- View the details of a claim pricing rule of a parent customer
- View the details of a claim pricing rule of a bill group
- View the details of an aggregate stop-loss pricing rule of a parent customer
- View the details of an aggregate stop-loss pricing rule of a bill group
- View the details of a specific stop-loss pricing rule of a parent customer
- View the details of a specific stop-loss pricing rule of a bill group
- View the details of a retention type claim based pricing rule of a parent customer
- View the details of a retention type claim based pricing rule of a bill group
- View the details of a retention type enrollment based pricing rule of a parent customer
- View the details of a retention type enrollment based pricing rule of a bill group
- View the details of a one-time flat fee pricing rule of a bill group

- View the details of a bill period based recurring flat fee pricing rule of a bill group
- View the details of a frequency based recurring flat fee pricing rule of a bill group
- View the details of an ancillary pricing rule of a parent customer
- View the details of an ancillary pricing rule of a bill group
- View the details of a discount arrangement pricing rule of a parent customer
- View the details of a level funded pricing rule of a parent customer
- View the details of a level funded pricing rule of a bill group
- View the details of an age based pricing rule of a parent customer
- View the details of an age based pricing rule of a bill group
- View the details of a tier based pricing rule of a parent customer
- View the details of a tier based pricing rule of a bill group
- View the details of an additional charge pricing rule of a parent customer
- View the details of an additional charge pricing rule of a bill group

This screen consists of the following zones:

- [Claim](#) on page 2953
- [Aggregate Stop-Loss](#) on page 2957
- [Specific Stop-Loss](#) on page 2962
- [Retention Type Claim Based](#) on page 2968
- [Retention Type Enrollment Based](#) on page 2969
- [Flat Fee](#) on page 2971
- [Ancillary](#) on page 2973
- [Discount Arrangement](#) on page 2974
- [Level Funded](#) on page 2977
- [Age Based Pricing Rule](#) on page 2982
- [Tier Based Pricing Rule](#) on page 2984
- [Additional Charge Pricing Rule](#) on page 2985

Claim

The **Claim** zone displays the details of the claim pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the claim pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the claim pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the claim pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Pricing Start Date	Displays the claim pricing rule start date.
Pricing End Date	Displays the claim pricing rule end date.
Rate Option	Indicates the rate option of the claim pricing rule for the price item.
Claim Template	Indicates the claim template of the claim pricing rule.
Pricing Group	Displays the pricing group of the claim pricing rule.
	<p>Note: This field appears when the claim pricing rule is viewed for pricing group.</p>

- **Claim Handling Fees** – Lists the claim handling fees for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee for the line items.
Fee Significance	Indicates the purpose of the imposing the additional fees on the line items.

Column Name	Column Description						
Fee Applicability	Displays the fee applicability on which the claim handling fees are defined. <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Line Item</td> <td>Indicates the line item that you want to use while defining additional fees for the claim pricing rule.</td> </tr> </tbody> </table>	Column Name	Column Description	Line Item	Indicates the line item that you want to use while defining additional fees for the claim pricing rule.		
Column Name	Column Description						
Line Item	Indicates the line item that you want to use while defining additional fees for the claim pricing rule.						
Rating Information	Displays the rating information that you want to use while defining the rate for the line items. <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the additional fees for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div> </td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type that you want to use while defining the additional fees for the line items.	Rate	Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>
Column Name	Column Description						
Rate Type	Indicates the rate type that you want to use while defining the additional fees for the line items.						
Rate	Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>						

- **Markup or Markdown Values** – Lists the markup or markdown values for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the value for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** – This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.

Field Name	Field Description						
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No) 						
User Defined Billing Option	Displays whether the billing option is user defined, eligible or not eligible.						
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 						
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.						
Rating Information	Displays the rating information that you want to use while defining the rate for the line items. <table border="1" data-bbox="586 921 1463 1310"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1455 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div> </td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1455 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>
Column Name	Column Description						
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.						
Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1455 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>						

- **Characteristics** – Lists the characteristics defined for the claim pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the claim pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Aggregate Stop-Loss

The **Aggregate Stop-Loss** zone displays the details of the aggregate stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p> <p>This field appears when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Parent Customer's SSL or ASL Pricing Rules	Displays the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.
Pricing Start Date	Displays the pricing rule start date.
Pricing End Date	Displays the pricing rule end date.
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.

Field Name	Field Description
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately • Manually (At Required Intervals) • Monthly • Yearly
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the aggregate stop-loss pricing rule.
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..
ASL Credit Account	Indicates the account in which the aggregate stop-loss amount is credited.

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
ASL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.

Column Name	Column Description
ASL Limit (During Policy Period)	Indicates the aggregate stop-loss limit that was set during the policy period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
ASL Limit (During Settlement Period)	Indicates the aggregate stop-loss limit that was set during the settlement period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
Minimum ASL Limit	Displays the minimum ASL limit. Note: This field displays value when the Enrollment Based or Minimum ASL Limit (Whichever is Greater) option appears for the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.
Percentage of Enrollment Based Limit	Displays the percentage of enrollment based limit. Note: This field displays value when the Percentage of Enrollment Based Limit option appears for the ASL Limit (During Policy Period) field.
Policy Based Limit	Displays the policy based limit. Note: This field displays value when the Policy Based Limit option appears for the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.

Note: This section appears when the aggregate stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a aggregate stop-loss.
Price Item Information	Displays the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.

Column Name	Column Description						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="574 262 1183 714"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
 - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating aggregate stop-loss. This section contains the following field:

Field Name	Field Description
Exclude ASL (Percentage)	Displays the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None

Field Name	Field Description
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Aggregate Stop-Loss	Displays whether the line item is eligible or not eligible for aggregate stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> Eligible Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Claim line items for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing
Accumulation Group ID	Displays the accumulation group ID that is generated when the accumulation parameter values were defined for an aggregate stop-loss.
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the aggregate stop-loss. Note: This field displays value when the checkbox for the Run-In field is selected.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the aggregate stop-loss. Note: This field displays value when the checkbox for the Run-In field is selected.

Column Name	Column Description
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the aggregate stop-loss.
	Note: This field displays value when the checkbox for the Run-In field is selected.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the aggregate stop-loss.
	Note: This field displays value when the checkbox for the Run-In field is selected.
Run-In Maximum Limit	Displays the maximum limit of the run-in parameters.
	Note: This field displays value when the checkbox for the Run-In field is selected.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the aggregate stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Specific Stop-Loss

The **Specific Stop-Loss** zone displays the details of the specific stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the specific stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the specific stop-loss pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p> <p>This field appears when the specific stop-loss pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Parent Customer's SSL Pricing Rule	Displays the pricing date range derived from the parent customer's specific stop-loss pricing rule.
	<p>Note: This field appears when the specific stop-loss pricing rule is viewed for bill group.</p>
Pricing Start Date	Displays the specific stop-loss pricing rule start date.
Pricing End Date	Displays the specific stop-loss pricing rule end date.
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.

Field Name	Field Description
Pricing Rule Usage	Indicates whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Accumulation Level	Indicate whether the specific stop-loss is accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately • Manually (At Required Intervals) • Never • Yearly
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the specific stop-loss pricing rule.
	Note: This field appears when the specific stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** – Lists the accumulation parameters in a specific stop-loss pricing rule. It contains the following field:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
SSL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
Compute Aggregate SSL (ASL)	Indicates whether the aggregate specific stop-loss (ASSL) is calculated or not during the C1-BCSSL batch run for each bill group. The valid values are: <ul style="list-style-type: none"> • Yes • No
ASSL Credit Account	Indicates that the aggregate specific stop-loss amount beyond the ASSL limit paid by the insurance company to the ASSL credit account.
ASSL Limit	

Note: This section appears when the specific stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description						
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a specific stop-loss.						
Run-In Maximum Limit	Displays the maximum specific stop-loss limit defined for the member when the claim transactions were received in the run-in period of the policy.						
SSL Limit	Displays whether the SSL limit indicating the specific stop-loss amount beyond this limit is paid by the insurance company.						
Price Item Information	Displays the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="574 1514 1463 1839"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

Note:

This section appears when the specific stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
 - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating specific stop-loss. This section contains the following field:

Field Name	Field Description
Exclude SSL (Percentage)	Displays the domestic provider claim billable charge line excluding the specific stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Specific Stop-Loss	Displays whether the line item is eligible or not eligible for specific stop-loss.

Field Name	Field Description
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the specific stop-loss is created for a bill group.

Claim line items for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the specific stop-loss.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the specific stop-loss.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the specific stop-loss.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the specific stop-loss.

Note: This section appears when the specific stop loss is created for parent customer.

- **Lasering and Exclusion** – Lists the lasering and exclusion information in a specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation parameter values were defined for the specific stop-loss.
Level Identifier	Displays the lasering or exclusion level identifier.
Lasering or Exclusion Level	Indicates the lasering or exclusion level of the specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Main Subscriber • Member • Provider
Exception Type	Indicates the exception type. The valid values are: <ul style="list-style-type: none"> • Lasering • Exclusion

Column Name	Column Description
Comments	Displays the comments.
Lasered Amount	Displays the lasered amount.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the specific stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Retention Type Claim Based

The **Retention Type Claim Based** zone displays the details of the Retention Type Claim Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the parent customer.</p> <p>This field appears when the retention type claim based pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	<p>Displays the price item.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Rate Option	Displays the rate option of the retention type claim based pricing rule.

Field Name	Field Description
Pricing Start Date	Displays the date from when the pricing is effective for retention type claim based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type claim based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type claim based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	Displays the parameter item information for retention type claim based pricing rule.										
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
	Column Name	Column Description									
	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.									
	Parameter Description	Displays the description of the parameter.									
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Retention Type Enrollment Based

The **Retention Type Enrollment Based** zone displays the details of the Retention Type Enrollment Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the parent customer.</p> <p>This field appears when the retention type enrollment based pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	<p>Displays the price item.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Rate Option	Displays the rate option of the retention type enrollment based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type enrollment based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type enrollment based pricing rule.
Exempt Retro Transactions	Indicates whether retro transactions should be a part of retention type enrollment based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type enrollment based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	<p>Displays the parameter item information for retention type enrollment based pricing rule.</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.										
Parameter Description	Displays the description of the parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value for the characteristic type.

Flat Fee

The **Flat Fee** zone displays the details of the one-time, bill period, and frequency based recurring flat fee pricing rule for bill group. It contains the following sections:

- **Main** – Displays basic details of the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.
Policy Information	Displays the policy information. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Price Item Information	Indicates the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Charge Date	Displays the flat fee charge date. Note: This field appears only for the one-time flat fee pricing rule for bill group.
Charge Start Date	Displays the flat fee charge start date. Note: This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.
Charge End Date	Displays the flat fee charge end date. Note: This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.

Field Name	Field Description
Bill To Account Override	Displays the account to which the bill is override. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.
Billable Charge Line Type	Displays the billable charge line type.
Fee	Displays the amount of flat fee.
	Note: This field appears when a value is displayed in the Billable Charge Line Type field.
Bill Period	Indicates the bill period for flat fee.
	Note: This field appears only for the bill period based recurring flat fee pricing rule for bill group.
Frequency	Indicates the frequency for flat fee.
	Note: This field appears only for the frequency based recurring flat fee pricing rule for bill group.
Billable Charge Information	Displays the billable charge information.
	Note: It has a link. On clicking the link, the Bill Charge ID screen appears where you can view the details of the billable charge.

- **Characteristics** – Lists the characteristics defined for the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the one-time, bill period, and frequency based recurring flat fee pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Ancillary

The **Ancillary** zone displays the details of the ancillary pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.	
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.	
Policy Information	Displays the policy information.	Not applicable
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.	
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item information.	Not applicable
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.	
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Rate Option	Indicates the rate option of the ancillary pricing rule for the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Not applicable

- **Ancillary Charges** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Indicates the billable charge line type using which the ancillary pricing rule type is created.	Not applicable
	Note: It has a link. On clicking the link, the Billable Charge Line Type screen appears where you can view the details of the billable charge line type.	
Billable	Indicates whether the ancillary billable charge is eligible for billing or not.	Not applicable
Rate Based	Indicates whether the ancillary charge is calculated using a particular rate or not.	Not applicable
Rate	Indicates the rate for calculating the ancillary charge.	Not applicable
Pricing Strategy	Indicates the price calculation strategy that is applied while defining the ancillary pricing rule.	Not applicable
Markup or Markdown Type	Indicates the type of charge that is applied while defining the ancillary pricing rule.	Not applicable
Amount / Percentage	Displays the actual proportion of the charge that is applied while defining the ancillary pricing rule.	Not applicable

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the ancillary pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Discount Arrangement

The **Discount Arrangement** zone displays the details of the discount arrangement pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.	
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.	
Policy Information	Displays the policy information.	Not applicable
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.	
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item for which the pricing rule is created.	Not applicable
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.	
Rate Option	Indicates the rate option of the discount arrangement pricing rule for the price item.	Not applicable
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.	Not applicable

- **Discount Details** – Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Displays the parameter using which an eligibility criteria is defined for a discount percentage and maximum amount that is allowed per claim.	Not applicable
Parameter Information	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Not applicable
Parameter Value	Indicates the value of the parameter.	Not applicable
Parameter Value Description	Displays the description of the value, defined as a parameter.	Not applicable
Discount Percentage	Displays the discount share or discount guarantee percentage.	Not applicable
Maximum Discount Per Claim	Displays maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	Not applicable

- **Discount Limits** – Displays the minimum and maximum discount limit defined on the contract. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Indicates the type of discount limit (minimum or maximum) on the contract.	Not applicable
Discount Credit Account	Indicates the account to which the discount is credited, when the minimum or maximum discount limit is defined on the contract.	Not applicable
Settlement Days	Indicates the number of days which help in calculating the final settlement date.	Not applicable

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount	Displays the type of discount.	Not applicable
Select	Indicates the type of discount that is applied on the contract.	Not applicable
Limit Type	Indicates the type of limit defined in the discount arrangement pricing rule.	Not applicable
Amount Limit	Indicates the amount limit (flat minimum or maximum discount) on the contract.	Not applicable

- **Exclusion** – Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Indicates the entity (network hospitals or providers) that are excluded during the discount share or discount guarantee calculation.	Not applicable
Level Identifier	Displays the network or provider ID.	Not applicable

- **Characteristics** – Displays the characteristics defined for the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Displays the date from when the characteristic is effective for the discount arrangement pricing rule.	Not applicable
Characteristic Type	Indicates the characteristic type.	Not applicable
Characteristic Value	Displays the value of the characteristic type.	Not applicable

Level Funded

The **Level Funded** zone displays the details of the level funded pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p>
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p>

Column Name	Column Description
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Status	Indicates the status of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Parent Customer's Pricing Rule	Displays the pricing rule of the parent customer.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option of the level funded pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.
Settlement Fund Price Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.
	Note: The settlement fund price item appears when the level funded pricing rule is created for a bill group.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off.

- **Accumulation Parameters** – Displays the accumulation parameters for a parent customer in the level funded pricing rule. It contains the following fields:

Column Name	Column Description
Accumulation Group ID	Displays an accumulation group ID which is generated when accumulation parameter values are defined for a level funded pricing rule.
Settlement Account ID	Indicates the account ID to whom the settlement amount is credited.
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Settlement Days	Indicates the number of days as the settlement days which help in calculating the settlement date.

Note:

The above section appears when the level funded pricing rule is created for a parent customer.

- **Accumulation Criteria** – Displays the accumulation criteria for a bill group in the level funded pricing rule. It contains the following columns:

Column Name	Column Description								
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a level funding pricing rule type.								
Price Item Information	Displays the price item information.								
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.								
Price Item Parameters	This field contains the following columns:								
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td></td> <td>Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.		Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
	Column Name	Column Description							
	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.							
	Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.								
Parameter Value	Displays the value of the parameter.								

Note:

The above section appears when the level funded pricing rule is created for a bill group.

The accumulation criteria for each rule appears when the level funded pricing rule is created for a bill group using a pricing group.

- The **Pricing Information for rule type category : Claim** zone contains the following sections:
 - The **Claim Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the claim pricing rule type effective for the level funded pricing.
Derive Using	Indicates the method through which the claim pricing rule information is derived.
Effective Claim Pricing Rule	Displays the claim pricing rule effective for pricing.

- The **Domestic Provider Claims** section contains the following columns:

Column Name	Column Description
Exclude LF (Percentage)	Displays the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.

- The **Markup or Markdown Values** section contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy for the claim line items.
Markup or Markdown Type	Indicates the markup or markdown value type for the claim line items.
Markup or Markdown Amount	Displays the markup or markdown amount for the claim line items.
	Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount .
Markup / Markdown Included in Settlement?	Displays whether the markup or markdown amount should be included in the level funding settlement. The valid values are:

- The **Line Items** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Include in Settlement	Indicates whether the line item should be included in the level funded claim pricing settlement.
Markup or Markdown Included in Settlement	Indicates whether markup or markdown should be included in the level funded claim settlement.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible or not eligible for markup or markdown percentage.
Markup or Markdown Percentage	Indicates the percentage for markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Ancillary** zone contains the following sections:
 - The **Ancillary Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the ancillary pricing rule type effective for level funded pricing.
Derive Using	Indicates the method through which the ancillary pricing rule information is derived.
Effective Ancillary Pricing Rule	Displays the ancillary pricing rule effective for pricing.

- The **Billable Charge Line Types** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Billable Charge Line Type	Indicates the billable charge line type using which you want to create the calculation line for the charge (i.e. line item)

Column Name	Column Description
Include in Settlement	Indicates whether the billable charge line item should be included in the level funded ancillary pricing settlement.
Rate Based	Indicates that the billable charge line type is rate based.
Rate	Displays the rate for the billable charge line type.
Markup / Markdown Included in Settlement?	Indicates that markup or markdown amount must be included in the level funding settlement.
Pricing Strategy	Displays the pricing strategy for the billable charge line items.
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items.
Amount/Percentage	Displays the amount or percentage which is specified as the markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Discount** zone contains the following section:

Column Name	Column Description
Pricing Rule Type	Indicates the discount arrangement pricing rule type which is effective for level funding.
Derive Using	Indicates the method through which the discount arrangement pricing rule information is derived.

- Discount Pricing Rule** - Indicates the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description
Discount Pricing Rule	Indicates the discount arrangement pricing rule which is effective for level funding.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Retention** zone contains the following section:

Column Name	Column Description
Retention Rule Type	Indicates the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule. Note: It has a link. On clicking the link, Pricing Rule Type screen appears where you can view the details of the rule type.
Price Item	Indicates the price item for the level funded pricing rule. Note: It has a link. On clicking the link, Price Item screen appears where you can view the details of the price item.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- **Final Settlement Rules** – Displays the final settlement rules when the customer renews or cancels the contract. It contains the following columns:

Column Name	Column Description
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement
Final Settlement Option	Indicates the final settlement option when the customer renews the level funded agreement.
Flat/Percentage	Indicates the final settlement payment type when the customer renews the level funded agreement.
Percentage Retained	Displays the percentage retained by the ASO provider when the customer renews the level funded agreement.
Flat Effective Payout	Displays the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement.

The **Renewal Decision** sub-section contains the following columns:

Column Name	Column Description
Renewal Decision	Indicates the upcoming status of the level funded contract.

- **Characteristics** – Displays the characteristics defined for the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the level funded pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Age Based Pricing Rule

The **Age Based Pricing Rule** zone displays the details of the age based pricing rule for the fully-insured group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.

Column Name	Column Description
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.
Policy Information	Displays the policy information. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional charge or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.

- **Pricing Parameters** – Displays the pricing parameter information for a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description											
Pricing Parameters	Displays the pricing and parameter details for a fully-insured age based pricing rule. It contains the following columns: <table border="1" data-bbox="578 1312 1463 1661"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which an age based eligibility criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Description</td> <td>Value</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Description	Value	Displays the description of the value, defined as a parameter.
Column Name	Column Description											
Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.											
Parameter Description	Displays the description of the price item parameter.											
Parameter Value	Displays the value of the parameter.											
Parameter Description	Value	Displays the description of the value, defined as a parameter.										
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.											

- **Modifier Information** – Displays the modifiers based on which additional charges or discount is offered to an eligible member in a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the fully-insured age based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Tier Based Pricing Rule

The **Tier Based Pricing Rule** zone displays the details of the tier based pricing rule for the fully-insured group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the fully-insured tier based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.
Policy Information	Displays the policy information. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.

Column Name	Column Description
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.

- **Pricing Parameters** – Displays the pricing information defined for the fully-insured tier based pricing rule. It contains the following fields:

Column Name	Column Description										
Pricing Parameters	Displays the pricing parameter details for the fully-insured tier based pricing rule. It contains the following columns: <table border="1" data-bbox="565 495 1463 814"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which the membership tier level based criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which the membership tier level based criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameter	Displays the parameter using which the membership tier level based criteria is defined.										
Parameter Description	Displays the description of the price item parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee applicable on the membership tier level and employee attributes of an eligible member.										

- **Characteristics** – Lists the characteristics defined for the fully-insured tier based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Additional Charge Pricing Rule

The **Additional Charge Pricing Rule** zone displays the details of the additional charge pricing rule for the fully-insured group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the additional charge pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional charge pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional charge pricing rule.

Column Name	Column Description
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the additional charge pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional charge or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.
Pricing Type	Indicates the type of pricing defined for the additional charge pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat • Percentage
	Note: This field appears when the Pricing Type option is selected.

- **Pricing Parameters** – Displays the pricing parameter information for an additional charge pricing rule. It contains the following fields:

Column Name	Column Description										
Pricing Parameters	Displays the pricing and parameter details for an additional charge pricing rule. It contains the following columns:										
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which an age based eligibility criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
	Column Name	Column Description									
	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.									
	Parameter Description	Displays the description of the price item parameter.									
	Parameter Value	Displays the value of the parameter.									
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.										

- **Modifier Information** – Displays the modifiers based on which additional charges or discount is offered to an eligible member in an additional charge pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the an additional charge pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Self-Funded Pricing Rule Versioning

Until now, the system enabled you to edit a self-funded pricing rule when it is not referred for any transaction in the system. If you wanted to edit a referred pricing rule, you had to manually cancel bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts. Once the transactions are disaggregated, the system allowed you to edit the self-funded pricing rule.

Now, the system enables you to edit a self-funded pricing rule even when it is referred for a transaction in the system. On editing a referred self-funded pricing rule, the system will do the following:

- Automatically cancel the bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts
- Increment the version of the referred self-funded pricing rule in the system

Now, the system maintains version numbers for a self-funded pricing rule. On creating a self-funded pricing rule, the version number of the self-funded pricing rule is set to 1. Also, when a self-funded policy is renewed, the version number of each self-funded pricing rule is set to 1.

If a self-funded pricing rule is referred for a transaction, the system creates a new version of the self-funded pricing rule when you edit it. The system does versioning of a self-funded pricing rule when a set of pre-defined fields are edited. For more information about the fields for which versioning is configured, refer to *Oracle Revenue Management and Billing Insurance User Guide*. The system will automatically cancel the bill segments and create the disaggregation and/or reseeding requests for the accounts when you implement the **Entity Audit** feature for the self-funded pricing rules. The entity audit framework is configured for the following business objects in this release:

- C1-PricingRuleAncillary
- C1-PricingRuleClaim
- C1-PricingRuleRetEnroll
- C1-PricingRuleRetTypeClaim
- C1-PricingRuleASL
- C1-PricingRuleSSL

- C1-PricingRuleLevelFunded
- C1-PricingRuleDiscArrangement

The **Eligible for Audit Event** option type in all the above listed business objects is set to **Y** and the **C1-PRVERSION** algorithm is attached to the **Audit** system event of the above listed business objects.

To implement the **Entity Audit** feature, you need to create an active audit event type for the above listed business objects where the audit usage is set to **Disaggregation/Reseeding**. Here, you need to specify a list of fields from the respective business object which you want to audit or monitor. The following audit event types are shipped for the respective pricing rule business object:

Business Object	Audit Event Type
C1-PricingRuleAncillary	ANCIL_DISAGG_AUD
C1-PricingRuleClaim	CLAIM_DISAGG_AUD
C1-PricingRuleRetEnroll	ENROL_RETEN_DISAGG_AUD
C1-PricingRuleRetTypeClaim	CLAIM_RETEN_DISAGG_AUD
C1-PricingRuleASL	ASL_DISAGG_AUD
C1-PricingRuleSSL	SSL_DISAGG_AUD
C1-PricingRuleLevelFunded	LF_DISAGG_AUD
C1-PricingRuleDiscArrangement	DISC_DISAGG_AUD

You can use the above audit event types or create a custom audit event type for the required business object. On editing a referred self-funded pricing rule, the system does the following:

If...	Then...
<p>The approval workflow process is configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Listed in the active audit event type of the respective business object • Configured for versioning 	<p>The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Disaggregation Initiated. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to Pending.</p>
<p>The approval workflow process is not configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Listed in the active audit event type of the respective business object • Configured for versioning 	<p>The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Disaggregation Initiated. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to Pending.</p>
<p>The approval workflow process is configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Not listed in the active audit event type of the respective business object • Configured for versioning 	<p>The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Active and the status of the old version of the self-funded pricing rule is changed to Inactive.</p>

If...	Then...
<p>The approval workflow process is not configured for the respective pricing rule and you edit a field which is:</p> <ul style="list-style-type: none"> • Not listed in the active audit event type of the respective business object • Configured for versioning 	<p>The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to Active and the status of the old version of the self-funded pricing rule is changed to Inactive.</p>
<p>The approval workflow process is configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date</p>	<p>The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the changes are reflected in the existing version of the self-funded pricing rule. Note that the system does not create a new version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the self-funded pricing rule. The status of the audit event is set to Pending.</p>
<p>The approval workflow process is not configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date</p>	<p>The system does not create a new version of the self-funded pricing rule. The changes are reflected in the existing version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the self-funded pricing rule. The status of the audit event is set to Pending.</p>

Note that the new version of the self-funded pricing rule will have the same pricing rule ID. However, on editing a self-funded pricing rule which is not referred for a transaction, the system edits the existing version of the self-funded pricing rule and does not create a new version of the self-funded pricing rule with incremental version number.

A new batch named **C1-DISTA** is introduced in this release. The **C1-DISTA** batch checks whether there are any audit events for the self-funded pricing rules in the **Pending** status. If an audit event for a self-funded pricing rule is in the **Pending** status, the system checks whether the self-funded pricing rule is created using a primary pricing rule type. If so, the system derives the person for whom the self-funded pricing rule is created. If the person type of the derived person is **Parent Customer**, the system fetches all accounts of the parent customer and its bill groups. However, if the person type of the derived person is **Bill Group**, the system fetches all accounts of the bill group. Once the accounts are derived, the system cancels the bill segments of the accounts and creates a disaggregation request for these accounts. The system then confirms whether you want to create reseeding requests for the related pricing rule types (if any). If you click the **OK** button, the system creates the reseeding requests. While creating a reseeding request for a related pricing rule type, the system derives all accounts from the accumulation group and then creates a reseeding request for each such account. Finally, the batch changes the status of the audit event to **Complete**.

Once the disaggregation and reseeding requests are created for the accounts, you need to disaggregate the transactions using the disaggregation batches. On executing the **C1-DRSUA** batch, the system changes the status of the disaggregation or reseeding request to **Complete** and then executes the **C1-UPDAUDEV** algorithm attached to the **Post-Processing** system event of the batch control. This algorithm changes the status of the new version of the self-funded pricing rule (for which disaggregation is completed) to **Active** and changes the status of the old version of the self-funded pricing rule to **Inactive**.

Note that you cannot edit a self-funded pricing rule in the **Active** status when an audit event for the self-funded pricing rule is in the **Pending** status. You cannot edit or delete a self-funded pricing rule which is in the **Disaggregation Initiated** status. Also, you cannot edit the related self-funded pricing rule in the **Active** status when the new version of the primary self-funded pricing rule is in the **Disaggregation Initiated** status.

Chapter 36

Stop-Loss

Topics:

- [Accumulation Data](#)

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date (C1-STAAD)
2. Accumulate Specific Stop-Loss (C1-ACSSL)
3. Create Billable Charge for Specific Stop Loss (C1-BCSSL)
4. Accumulate Aggregate Stop-Loss (C1-ACASL)
5. Create Billable Charge for Aggregate Stop Loss (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Accumulation Data

The **Accumulation Data** screen enables you to view the specific stop-loss, aggregate stop-loss, discount, and level funded accumulation details. It contains the following zones:

- **Search Parent Accumulation Group** - Enables you to search for a parent accumulation group whose accumulation details you want to view. You can search a parent accumulation group which is created for either of the following accumulation category:
 - Specific Stop-Loss
 - Aggregate Stop-Loss
 - Discount Arrangement
 - Level Funded
- **Specific Stop-Loss Accumulation Amount** - Enables you to view how the specific stop-loss is calculated in each accumulation run. In addition, you can view the specific stop-loss billable charge which is created in each accumulation run.
- **Aggregate Stop-Loss Accumulation Amount** - Enables you to view how the aggregate stop-loss is calculated in each accumulation run. In addition, you can view the aggregate stop-loss billable charge which is created in each accumulation run.
- **Discount Arrangement Accumulation Amount** - Enables you to view how the discount is calculated in each accumulation run. In addition, you can view the discount billable charge which is created in each accumulation run.
- **Level Funded Accumulation Amount** - Enables you to view how the charges eligible for level funding are calculated in each accumulation run. In addition, you can view the level funded billable charge which is created in each accumulation run.
- **Off-Process Adjustment/Billable Charges** - Enables you to view the adjustments or billable charges created through an off-process request which are used in the accumulation run.
- **Transaction Information** - Enables you to view the claim transactions for which the specific stop-loss, aggregate stop-loss, discount, or charges eligible for level funding are accumulated.
- **Transaction Leg Calculation Lines** - Enables you to view calculation lines of all legs of the transaction which are rated before billing.
- **Transaction Leg Calculation Line Characteristics** - Enables you to view the characteristics of a calculation line.

You can navigate to the **Accumulation Data** screen from the **Transaction and Audit Event Management** menu.

Chapter 37

Self-Funded Billing

Topics:

- [Pre-requisites](#)
- [Bill Group Derivation and Pricing Parameters](#)
- [Related Pricing Rule Type Eligibility](#)
- [Price Item Eligibility](#)

- [SSL Accumulation across Bill Groups](#)

Administrative Services Only (ASO) is an arrangement in which an organization funds its own employee benefit plan such as a health plan but hires an outside firm to perform specific administrative services. For example, an organization may hire an insurance company to evaluate and process claims under its employee health plan, while maintaining the responsibility to pay the claims itself.

Self-Funded plan specifics vary depending on the agreement a company establishes with insurance companies and third-party administrators (TPA). In the self-funded plan, the insurance company may provide little to no degree of insurance protection. ASO services are gaining popularity because many employers, particularly larger ones, explore that the self-funded plan provides the potential financial advantages at an acceptable cost.

Oracle Revenue Management and Billing (ORMB) provides a complete solution in terms of pricing, billing, and revenue management to support the self-funded plans. It also provides risk coverage for offering self-funded plans through the stop-loss services, such as specific stop-loss and aggregate stop-loss. The specific stop-loss solution in ORMB helps the employer in mitigating high-cost claims for individual members. And, the aggregate stop-loss helps the employer in mitigating risk against high-volume claims.

The **Transaction Feed Management (TFM)** module is enhanced to support the self-funded billing. You can upload the claim, enrollment, and ancillary transactions in the system using the **File Upload Interface** feature. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Once the claim, enrollment, and ancillary transaction data files are uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Price Item
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values

- Clean-up Unwanted Data

The system provides the flexibility to rate the claim, enrollment, and ancillary transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to a price item can be rated at a frequency which is different from the account's billing frequency. For example, daily, weekly, etc.

A new pricing model is introduced for the self-funded health insurance business which enables you to create pricing rules for:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Claim Based Fees
- Enrollment Based Fees
- One-time and Recurring Flat Fees
- Ancillary Charges

Once you create the required pricing structure, you can bill for the claim, enrollment, and ancillary transactions. Once the billable charges for claims, claim based fees, enrollment based fees, and ancillary are created through the transaction aggregation process, you can accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the required billable charges are created, you can bill them using the charge-based billing batches.

Pre-requisites

To setup the Self-Funded Billing feature, you need to do the following:

- Define the parent customers and bill groups in the system.
- Define the required pricing rule types for different pricing rule type categories, such as **Claim**, **Specific Stop-Loss**, **Aggregate Stop-Loss**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, **Flat Fees**, and **Ancillary**.
- Map the transaction fields appropriately in the primary pricing rule types.
- Attach an algorithm created using the **C1_TXNBGDRV** algorithm type to the **Bill Group Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim** or **Retention Type Enrollment Based**.
- Attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.
- Attach an algorithm created using the **C1_BAFTDRV** algorithm type to the **Bill After Date Determination** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **SA_DERV_POPC** algorithm type to the **TFM - Contract Derivation** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1-VRPR_POPC** algorithm type to the **TFM - Verify Pricing Post-Processing** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1_BCHG_POPC** algorithm type to the **TFM - Billable Charge Post-Processing** algorithm spot of the required divisions.
- Map each transaction record type to either the required rule type or primary pricing rule type.
- Define the pricing groups for the required bill groups.
- Define the required pricing rules for the parent customer and bill groups.
- Define the rate schedules with the following calculation algorithms for different price items:

Price item related to....	Calculation Algorithm
Claim	C1-CLAIMCALC
Specific Stop-Loss	C1-SSLRTCALC
Aggregate Stop-Loss	C1-ASLRTCALC
Retention Type Enrollment Based	None
Flat Fees	None
Ancillary	C1-ANCICALC

- Attach an algorithm created using the **C1-RETFLAT** algorithm type to the **TFM – Rate Pre-Processing** algorithm spot of the required divisions.
- Define the TFM information in the rating option for different price items in the following manner:

Price item related to....	Rate Option			
	Aggregate Transaction	Aggregation Schedule	Ignore Transaction	Rating Criteria
Claim	Yes	As Required	No	RITA
Specific Stop-Loss	No	-	Yes	RITX
Aggregate Stop-Loss	No	-	Yes	RITX
Retention Type Claim Based	Yes	As Required	No	RITA
Retention Type Enrollment Based	Yes	As Required	No	RITA
Ancillary	Yes	As Required	No	RITA

- Define the derivation and pricing parameters for each bill group.
- Set the following option types in the **C1-ASOBLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Invoice Type Characteristic Type
 - Pricing Group Rule Parameter
 - Billable Charge Line Type Parameter
 - Pricing Arrangement Parameter

How to set up the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 3616

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group. These parameters are used to derive the bill group against which the billable charges created for the claim, enrollment, and ancillary transactions should be billed in the system. The derived bill group is also used for billing the claim based fees, one-time or recurring fees, specific stop-loss credits, and aggregate stop-loss credits. You can define multiple derivation and pricing parameters for a bill group, but the derivation and pricing parameter combination must be unique for a particular duration.

For example, if you want bill group 1 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Western location of the city
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 1:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	111	X	Western	Grade A	-	-

Example 1: Derivation and Pricing Parameters for Bill Group 1

Similarly, if you want bill group 2 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Eastern location of Mumbai
- Who are the person of Indian origin
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 2:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 2	123	X	Eastern	Grade A	Mumbai	India

Example 2: Derivation and Pricing Parameters for Bill Group 2

In the example 1 and 2, the bill group is derived based on the specified employee attributes when the source system, parameter 1, parameter 2, parameter 3, and parameter 4 are mapped to the appropriate transaction fields in the primary pricing rule type using which the pricing rules are defined for the bill group. For example,

Pricing Rule Type	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PR1	External System	Location	Designation	City	Country

Example 3: Transaction Field Mapping in Primary Pricing Rule Type

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. For example,

Pricing Group	Rule	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PG1	R1	X	Eastern	Grade A	Mumbai	India
	R2	X	Western	Grade A	-	-

Example 4: Rules Defined in a Pricing Group

If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees. For example,

Pricing Rule	Pricing Group	Rule	Rule Criteria	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount
PRRR1	PG1	R1	Source System = X, Parameter 1 = Eastern, Parameter 2 = Grade A, Parameter 3 = Mumbai, Parameter 4 = India	Markup	Flat Amount	\$20
		R2	Source System = X, Parameter 1 = Western, Parameter 2 = Grade A	Markdown	Flat Amount	\$10

Example 5: Defining a Pricing Rule Using a Pricing Group

In the example 5, the system will use the markup strategy on the claim line items for the employees who satisfy the criteria specified in R1. On the other hand, the system will use the markdown strategy on the claim line items for the employees who satisfy the criteria specified in R2.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group. The source system and parameter 1 are mandatory while defining the derivation and pricing parameters for a bill group.

You can define and edit the derivation and pricing parameters for the bill group and sort ID combination from the **Customer 360° Information** screen. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for the bill group and sort ID combinations from the **Customer 360° Information** or **Upload Request** screen. Note that you can upload the derivation and pricing parameters for the bill group and sort ID only using the CSV file format.

Related Pricing Rule Type Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a related pricing rule type in a primary pricing rule type. If the eligibility rule type is defined of a related pricing rule type, the system checks whether the related pricing rule type is eligible for deriving the transaction legs when it is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the primary pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met in a rule, the system calls the respective related pricing rule type for deriving the transaction legs. If none of the rules created using the rule type are satisfied, the system does not call the respective related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_15 is set Employee

- UDF_DATE_1 is set to 11-05-2018
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	CLAIM BASED FEES	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
		SPECIFIC STOP-LOSS	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
		AGGREGATE STOP-LOSS	RT3	R8	01-04-2018	31-12-2018	1	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R9	01-04-2018	31-12-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Director

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to UDF_CHAR_15 and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

Example 1: Related Pricing Rule Type Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for the CLAIM BASED FEES pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers the CLAIM BASED FEES pricing rule type for deriving the transaction legs.

The rules which are created using the RT2 rule type are invoked for the SPECIFIC STOP-LOSS pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers the SPECIFIC STOP-LOSS pricing rule type for deriving the transaction legs.

Similarly, the rules which are created using the RT3 rule type are invoked for the AGGREGATE STOP-LOSS pricing rule type in the specified priority. The claim transaction does not meet the eligibility criteria defined in the R8 rule. Therefore, the system executes the rule with the next priority (i.e. R9). The claim transaction meets the eligibility criteria defined in the R9 rule. But, the output parameter's value specified in the R9 rule does not match the value specified in

the **Rule Based Eligibility Value** field. As none of the rules created using the rule type met the criteria, the system does not consider the AGGREGATE STOP-LOSS pricing rule type for deriving the transaction legs.

Price Item Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a price item in a pricing rule type. If the eligibility rule type is defined of a price item, the system checks whether the price item is eligible for billing when the pricing rule type is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met, the system searches for an effective pricing rule for the respective price item. If none of the rules created using the rule type are satisfied, the system does not map the transaction to the price item. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_20 is set to Employee
- UDF_DATE_1 is set to 05-03-2018
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Price Item	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	P1	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
	P2	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director	
			R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_20	Employee	
			R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee	

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to **UDF_CHAR_20** and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

Example 1: Price Item Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for P1 in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P1 for billing and maps the claim transaction to P1 if an effective pricing rule, account, and active contract are available for P1.

Similarly, the rules which are created using the RT2 rule type are invoked for P2 in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P2 for billing and maps the claim transaction to P2 if an effective pricing rule, account, and active contract are available for P2.

Self-Funded Billing Process

The **Self-Funded Billing** process consists of the following sub-processes:

- [Transaction Aggregation](#) on page 3001
- [Stop Loss Calculation](#) on page 3006
- [Bill Generation](#) on page 3006

Transaction Aggregation

Once the claim, enrollment, and ancillary transactions are uploaded, you can create billable charges for the following using the **Transaction Aggregation** process in the **Transaction Feed Management (TFM)** module:

- Claim
- Claim Based Fees
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- Ancillary

The transaction calculation lines for specific stop-loss and aggregate stop-loss are created during the **Transaction Aggregation** process. Earlier, the **Transaction Aggregation** process was designed to meet the requirements of the **Payments** and **Financial Services** industries. Now, in addition, it is tuned slightly to meet the requirements of the self-funded health insurance business. The changes are made in the following batches which are executed in the **Transaction Aggregation** process:

- **Validate Transaction and Derive Price Item (C1-TXNIP)** - During this batch execution, the system validates the transaction. If the transaction validation fails due to any reason, the status of the transaction is changed to **Error**. If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is not specified in the transaction record type, the system maps the transaction to one or more price item, price item parameters, and account combinations using the rules which are invoked through the rule type. However, if a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
 1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.

- Bill Group Derivation** - For more information, refer to the *Bill Group Derivation* on page 3007 section.
- Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Claim	C1_ACCPRIDRV	<i>Account and Price Item Derivation (for the Claim Pricing Rule Type Category)</i> on page 3010
Retention Type Enrollment Based	C1_ACCPRIDRV	<i>Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)</i> on page 3040
Ancillary	C1_ACCPRIDRV	<i>Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)</i> on page 3050

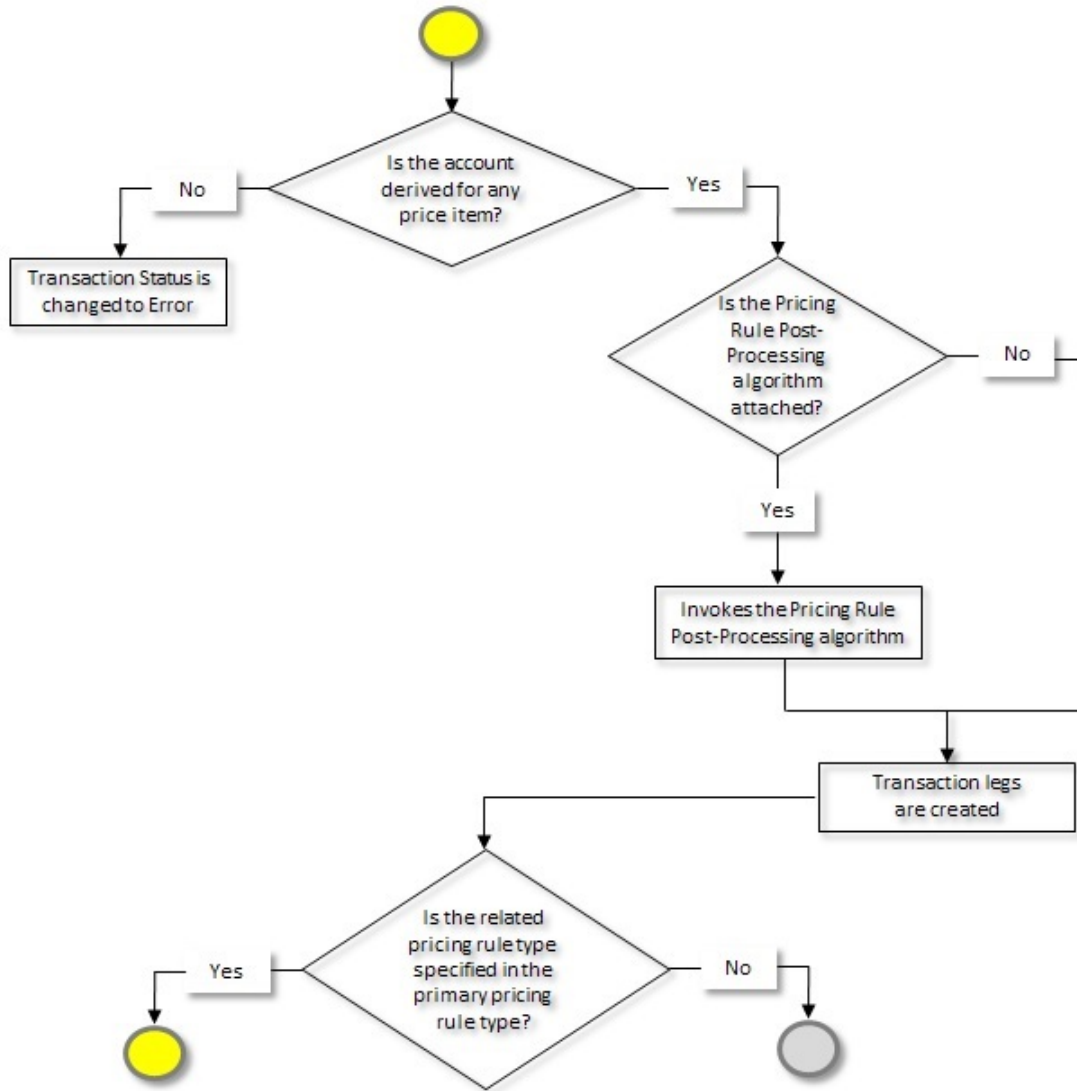

This batch then calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

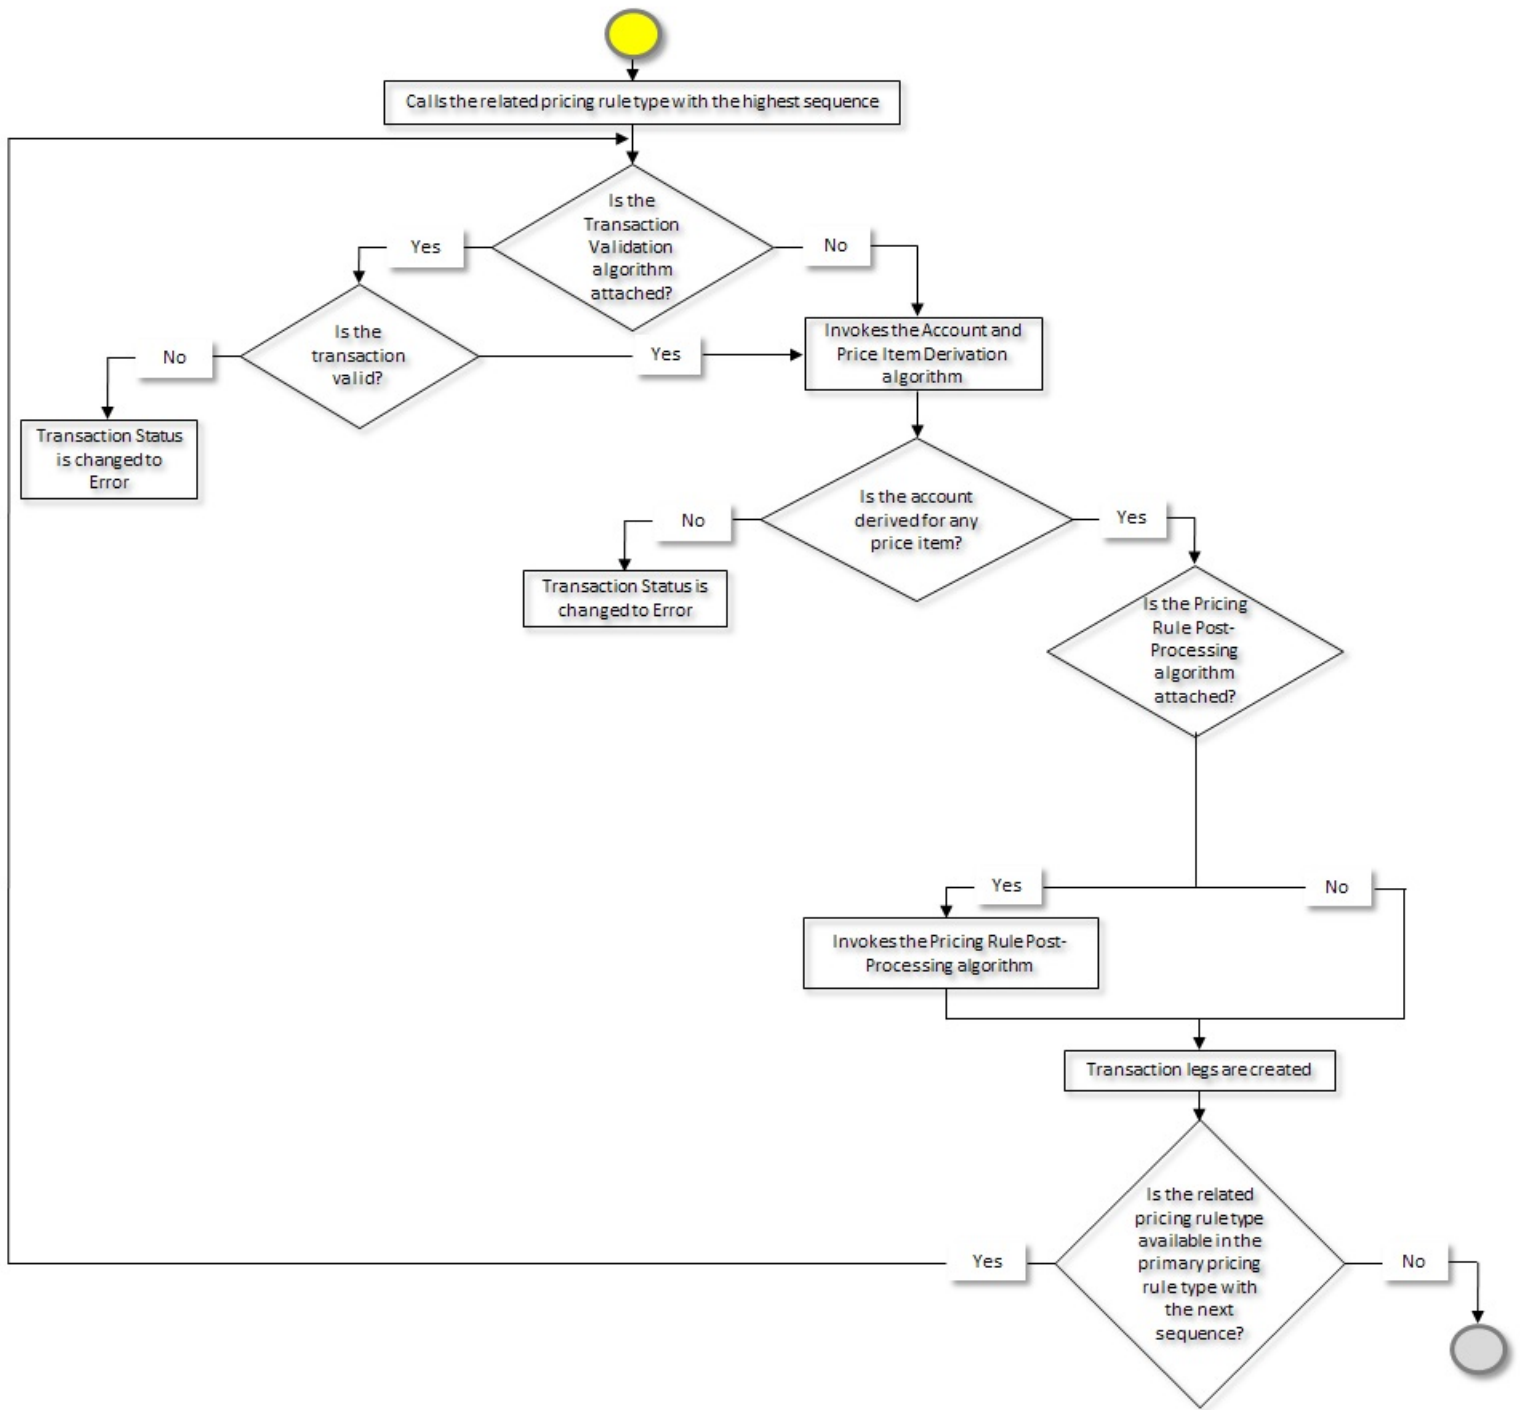

- Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
- Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Specific Stop-Loss	C1_ACCPRISL	<i>Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</i> on page 3015
Aggregate Stop-Loss	C1_ACCPRISL	<i>Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</i> on page 3015
Retention Type Claim Based	C1_ACCPRIDRV	<i>Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)</i> on page 3028

The following figure graphically explains the execution process of the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch:

- **Price Item Pricing Verification (C1-TXNVP)** - During this batch execution, the system derives an effective pricing for each transaction leg on the processing date. For more information, refer to the [Price Item Pricing Verification](#) on page 1199 section. In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health insurance business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the SA_DERV_POPC algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and

maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

If the effective pricing rule stamped against the transaction leg is defined at ...	Then...
The bill group level	The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy.
The parent customer level	The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy.

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.
- **Service Quantity Calculation (C1-TXNSQ)** - During this batch execution, the system aggregates the transaction legs, creates a billable charge, and updates the SQI values in the billable charge. For more information, refer to the [Aggregation](#) on page 1204 section. In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the self-funded health insurance business:
 - **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1_BCHG_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 3058 section.

Stop Loss Calculation

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date Batch (C1-STAAD)
2. Accumulate Specific Stop Loss (C1-ACSSL)
3. Create Specific Stop-Loss Billable Charge (C1-BCSSL)
4. Accumulate Aggregate Stop Loss (C1-ACASL)
5. Create Aggregate Stop-Loss Billable Charge (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Generation

Once the billable charges are created for claim, claim based fees, specific stop-loss credits, aggregate stop-loss credits, enrollment based fees, and ancillary, you need to execute the following charge-based billing batches in the specified sequence to generate bills for the self-funded employer:

1. Pending Bill Generation (C1-PNDBL)
2. Bill Segment Generation (C1-BLGEN)

3. Bill Completion (C1-BLPPR)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Group Derivation

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch derives the bill group, parent customer, and policy for the claim, enrollment, and ancillary transactions. This is possible only when an algorithm created using the **C1_TXNBGDRV** algorithm type is attached to the **Bill Group Derivation** system event of the primary pricing rule type. The derived bill group is used for billing the following (if any):

- Claim Charges
- Claim Based Fees
- Specific Stop-Loss (SSL) Credits
- Aggregate Stop-Loss (ASL) Credits
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- One-time or Recurring Fees
- Ancillary Charges

To derive a bill group, the system first determines the derivation date. The paid date is considered as the derivation date while processing the claim transactions. The coverage end date is considered as the derivation date while processing the retroactive enrollment transactions. And, the coverage start date is considered as the derivation date while processing the non-retroactive enrollment transactions. If the system cannot determine the derivation date, the status of the transaction is changed to **Error**.

Depending on the transaction fields which are mapped to source system, parameter 1, parameter 2, parameter 3, and parameter 4 in the primary pricing rule type, the system derives the data from the transaction. For example, if the source system is mapped to the **External System** field, parameter 1 is mapped to the **Location** field, parameter 2 is mapped to the **Designation** field, parameter 3 is mapped to the **Employee Group** field, and parameter 4 is mapped to the **Nationality** field, the system derives these details from the transaction. Based on the data available in the transaction, the system derives a bill group using the derivation and pricing parameters which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the derivation date. For example, if the following derivation and pricing parameters are defined for the Bill Group 1 and Bill Group 2:

Bill Group Name	Sort ID	Effective Date	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	123	01-01-2018	X	Eastern	Senior Manager	BG1	Indian
Bill Group 1	132	01-04-2018	X	Western	Senior Manager	-	-
Bill Group 1	156	01-07-2018	Y	Eastern	Senior Manager	BG1	Indian
Bill Group 1	163	01-10-2018	Y	Western	Senior Manager	-	-
Bill Group 2	172	01-01-2018	Y	Eastern	-	-	-
Bill Group 2	181	01-04-2018	Y	Western	-	-	-
Bill Group 2	122	01-07-2018	X	Eastern	-	-	-
Bill Group 2	112	01-10-2018	X	Western	-	-	-

Now, if the system receives a claim transaction with the following details:

- External System is set to X
- Location is set to Western
- Designation is set to Senior Manager
- Paid Date is set to 12-05-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 132 (sort ID) combination are effective on the paid date, and therefore the system derives Bill Group 1 for billing the claim transaction. Let us take another example where the system receives a retroactive enrollment transaction with the following details:

- External System is set to X
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 123 (sort ID) combination are effective on the coverage end date, and therefore the system derives Bill Group 1 for billing the retroactive enrollment transaction.

In the above two examples, the system could find the exact match for the bill group in the system. However, if the exact match is not available, the system finds the bill group using the best fit match. For example, if the system receives a claim transaction with the following details:

- External System is set to Y
- Location is set to Western
- Designation is set to Senior Manager
- Employee Group is set to BG2
- Nationality is set to Indian
- Paid Date is set to 01-06-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Western, Designation = Senior Manager, Employee Group = BG2, and Nationality = Indian) on the paid date. Therefore, it searches for the best fit match.

While searching for the best fit match, the system first rules out the optional parameter 4 (i.e. Nationality = Indian) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, Designation = Senior Manager, and Employee Group = BG2, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 3 (i.e. Employee Group = BG2) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, and Designation = Senior Manager, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 2 (i.e. Designation = Senior Manager) and then checks whether the effective derivation and pricing parameters, where Source System = Y and Location = Western, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the status of the transaction is changed to **Error**.

In this example, the derivation and pricing parameters, where Source System = Y and Location = Western, defined for the Bill Group 2 and 181 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the claim transaction. Let us take another example where the system receives a non-retroactive enrollment transaction with the following details:

- External System is set to Y
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Eastern, Designation = Senior Manager, Employee Group = BG1, and Nationality = Indian) on the coverage start date. Therefore, it searches for the best fit match. The derivation and pricing parameters, where Source System = Y and Location = Eastern, defined for the Bill Group 2 and 172 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the non-retroactive enrollment transaction.

Once the bill group is derived, the system derives the parent customer of the bill group. Once the parent customer is derived, the system derives the policy for the transaction in the following manner:

If the transaction is a...	Then...
Claim Transaction	<p>The system checks whether the paid date of the claim transaction falls within the policy start date and runout end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to either of the following: <ul style="list-style-type: none"> • In Force/Active • Runout • Post Runout
Retroactive Enrollment Transaction	<p>The system checks whether the coverage end date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to In Force/Active.
Non-retroactive Enrollment Transaction	<p>The system checks whether the coverage start date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> • The bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration. • The status of the policy is set to In Force/Active.

If the system cannot derive the policy for the transaction, the status of the transaction is changed to **Error**.

Account and Price Item Derivation (for the Claim Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

Note: If you have specified the price item parameters (for which the parameter usage is set to **Pricing**) in the pricing rule types where the pricing rule type category is set to **Claim**, the system does not use these price item parameters while searching for an effective pricing rule for the respective price items. However, you can use these price item parameters while defining the accumulation criteria in the related pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.

This algorithm fetches the effective pricing rule for each price item specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date while fetching the effective pricing rules for the claim transactions. This algorithm first searches for the effective pricing rule for a price item which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR1	CLAIM	P1	C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
		P2	C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the paid date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
P1	PR1	A1	C1	TL1
P2	PR2	A2	C2	TL2
P3	PR3	A3	C3	TL3

Example 3: Transaction Leg Derivation

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Claim**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL1, TL2, and TL3.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.

- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR1	CLAIM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 04-06-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Location = Western, Nationality = Indian, Employee Department = HR, and Employee Status = Permanent)

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 4, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR2	CLM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X and Parameter 1 = Western	Source System = X and Parameter 1 = Eastern
		PP2	PR2	01-01-2018	31-12-2018	PG2	Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLM pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match, and therefore fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

Note: We recommend that you should only include the optional aggregation price item parameters in the pricing rule types where the pricing rule type category is set to **Claim**. Otherwise, erroneous results might occur.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PP1	-	-	-	-
PP2	PR2	-	-	-
PP3	PR3	A3	C3	TL1
PP4	-	-	-	-
PP5	PR5	A2	C1	TL2
PP6	PR6	A1	-	-

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the claim transaction.

If the eligibility rule type is defined of a price item, the system maps the claim transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the claim transaction. For more information, refer to the [Price Item Eligibility](#) on page 3000 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	SPECIFIC STOP-LOSS
	20	AGGREGATE STOP-LOSS

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the SPECIFIC STOP-LOSS pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	SPECIFIC STOP-LOSS	Yes
	20	AGGREGATE STOP-LOSS	No

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

Note: Ideally, the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss** should not have price item parameters for which the parameter usage is set to **Pricing**. This is because the system will not use these price item parameters while searching for an effective pricing rule for the respective price items.

This algorithm fetches an effective pricing rule for each price item specified in the related pricing rule type. It searches for an effective pricing rule for a price item at the bill group level. It derives an effective pricing rule for each price item using the incurred and paid dates specified in the claim transaction. It fetches an effective pricing rule where the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For run-in claim transactions, this algorithm fetches an effective pricing rule where the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer’s pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to BG1
- UDF_DATE_1 is set to 18-02-2018
- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer’s Pricing Rule	Paid Date Range in Associated Parent Customer’s Pricing Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)		
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	C1S1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
				C2S1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
							Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1
				S2	C1S2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)		
				C2S2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Group = UDF_CHAR_2.

Here, the incurred date is mapped to the **UDF_DATE_1** field and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 3: SSL and ASL Effective Pricing Rule Derivation for Claim Transaction

In the example 3, the system fetches the C2S1 and C2S2 pricing rules for S1 and S2, respectively, because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C2S1 and C2S2 pricing rules:
 - Price Item: CLM, Price Item Parameters: Location = Western and Employee Group = BG1

Let us take another example where the system receives a run-in claim transaction with the following details:

- UDF_CHAR_1 is set to Eastern
- UDF_CHAR_3 is set to Active
- UDF_DATE_3 is set to 18-06-2017
- UDF_DATE_4 is set to 01-07-2017
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule	Run-in Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
					(i.e. in Run-in Accumulation Group)		
TR2	CLAIM	AGGREGATE STOP-LOSS	AS1	C1AS1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
			AS2	C1AS2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

Note:
 Price Items in Primary Pricing Rule Type: CLAIM and CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_3.
 Here, the run-in incurred date is mapped to the UDF_DATE_3 field and the run-in paid date is mapped to the UDF_DATE_4 field in the CLAIM pricing rule type.

Example 4: SSL and ASL Effective Pricing Rule Derivation for Run-in Claim Transaction

In the example 4, the system fetches the C1AS1 and C1AS2 pricing rules for AS1 and AS2, respectively, because of the following reasons:

- Run-in incurred date mentioned in the claim transaction falls within the run-in incurred date range (i.e. 01-01-2017 - 31-12-2017) defined in the run-in accumulation group.
- Run-in paid date mentioned in the claim transaction falls within the run-in paid date range (i.e. 01-01-2017 - 28-02-2018) defined in the run-in accumulation group.
- An effective pricing rule exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C1AS1 and C1AS2 pricing rules:
 - Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
 - Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

The system then checks whether the ASSL Credit Account (in case of specific stop-loss pricing rule) and ASL Credit Account (in case of aggregate stop-loss pricing rule) is specified in the associated parent customer's pricing rule. If so, the system considers the respective account for billing. Otherwise, the system derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type. For example,

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
SPECIFIC STOP-LOSS	S1	10	Standard	A1
		20	Retention	A2
	S2	10	Retention	A2
		20	Standard	A1

Example 5: Priority Based Account Derivation

In the example 5, while mapping the claim transaction to S1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to S2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR1	CLAIM	SPECIFIC STOP-LOSS	S3	PRS3	A1	C3	TL3
			S4	PRS4	A2	C4	TL4

Example 6: Transaction Leg Derivation

In the example 6, the system creates two transaction legs — TL3 and TL4 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** and **Aggregate Stop-Loss**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL3 and TL4.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Similarly, the system will fetch the pricing rule for a run-in claim transaction when the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the run-in claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-12-2018

- UDF_DATE_2 is set to 28-02-2019
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 7: Effective Pricing Rule is Defined Using a Pricing Group

In the example 7, the system considers the PR1 pricing rule for S1 because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:
 - Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 7, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 7, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 06-06-2018
- UDF_DATE_2 is set to 27-06-2018
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
TR2	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
			S2	PR2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG2	<p>Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p> <p>Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p> <p>Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p>	<p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2</p> <p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1</p> <p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2</p>

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

Note:

Price Item in Primary Pricing Rule Type: CLAIM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 8, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for S1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 8, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for S1. In addition, a transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:

- Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

Therefore, the system fetches PR1 as the effective pricing rule for S1. In addition, the system fetches PR2 as the effective pricing rule for S2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created,

the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Related Pricing Rule Type	Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
AGGREGATE STOP-LOSS	AS11	-	-	-	-
	AS12	PR12	A1	C1	TL11
	AS13	PR13	-	-	-
	AS14	PR14	A2	-	-
	AS15	PR15	-	-	-
	AS16	-	-	-	-
	AS17	PR17	A2	C2	TL12

Example 9: No. of Transaction Legs Derived

In the example 9, the system could not find the effective pricing rule for AS11 and AS16, the required account for AS13 and AS15, and the active contract for AS14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	SPECIFIC STOP-LOSS	Yes	SS1	Yes	PR1	A1	C1	TL1
			SS2	-	PR2	A2	C2	TL2
			SS3	No	-	-	-	-
20	AGGREGATE STOP-LOSS	No	AS4	-	-	-	-	-
			AS5	-	-	-	-	-
			AS6	-	-	-	-	-

Example 10: Price Item Eligibility for Transaction Leg Derivation

In the example 10, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for SS1 was satisfied, but the eligibility criteria for SS3 was not satisfied. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 2998 and [Price Item Eligibility](#) on page 3000 sections, respectively.

Once a transaction leg is created, the effective pricing rule's start date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	RETENTION TYPE CLAIM BASED
	20	SPECIFIC STOP-LOSS
	30	AGGREGATE STOP-LOSS

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the RETENTION TYPE CLAIM BASED pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	RETENTION TYPE CLAIM BASED	Yes
	20	CLAIM BASED FEES	-
	30	CLAIM FEE CHARGES	No

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the related pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR1	CLAIM	RETENTION TYPE CLAIM BASED	P3	C1P3	01-01-2018	31-12-2018	Parent Customer
				C2P3	01-01-2018	31-12-2018	Bill Group
			P4	C1P4	01-01-2018	31-12-2018	Parent Customer
				C2P4	01-01-2019	30-06-2019	Bill Group

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type.

Example 3: Effective Pricing Rule Derivation

In the example 3, the system fetches C2P3 and C1P4 pricing rules for P3 and P4 respectively, which are effective on the paid date. Note that the effective pricing rule for P3 is derived at the bill group level, whereas the effective pricing rule for P4 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for the exact match for the price item parameters at both the levels. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_DATE_1 is set to 20-03-2018
- Transaction Record Type is set to TR4

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR4	CLAIM	CLAIM BASED CHARGES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Parent Customer
								Location = Eastern and Employee Status = Active	\$12	

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
								Location = Eastern and Employee Status = Retired	\$11	
								Location = Western and Employee Status = Retired	\$9	
					C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$8	Bill Group
								Location = Eastern and Employee Status = Active	\$9	
								Location = Eastern and Employee Status = Retired	\$10	
								Location = Western and Employee Status = Retired	\$9	

Note: Here, the paid date is mapped to the UDF_DATE_1 field in the CLAIM pricing rule type.

Example 4: Exact Match for Price Item Parameters

In the example 4, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 20-03-2018) of the claim transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, it searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 07-06-2018
- Transaction Record Type is set to TR5

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	CLAIM	RETENTION CLAIM BASED FEES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Bill Group
								Location = Eastern and Employee Status = Active	\$12	
								Location = Eastern and Employee Status = Retired	\$11	
								Location = Western and Employee Status = Retired	\$9	

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 5: Best Fit Match for Price Item Parameters

Note: The **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

In the example 5, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the related pricing rule type for which the parameter usage is set to **Pricing**.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type. For example,

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
RETENTION TYPE CLAIM BASED	P3	10	Standard	A1
	P4	10	Retention	A2
		20	Standard	A1

Example 6: Priority Based Account Derivation

In the example 6, while mapping the claim transaction to P3, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P4, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 03-01-2018
- Transaction Record Type is set to TR5

Let us assume that the claim transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	CLAIM	CLAIM BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
			P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2
			P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 7: Transaction Leg Derivation

In the example 7, the system maps the claim transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the claim transaction is not mapped to the **Nationality** price item parameter.

In the example 7, the system creates three transaction legs — TL1, TL2, and TL3 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 7, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the related pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

- The employee attributes specified in the claim transaction match the price item parameters defined within the satisfied rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 s set to BG1
- UDF_DATE_1 03-01-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$10
									Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$12

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$8
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule is Defined Using a Pricing Group

In the example 8, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 03-01-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The employee attributes specified in the claim transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 8, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective

pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	\$20
									Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	\$21
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	\$18

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	\$19
			PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$5
									Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$5
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$6

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 9: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 9, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 9, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the claim transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within the Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Related Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
RETENTION TYPE CLAIM BASED	PP11	Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7	-	-	-	-
	PP12		PR12	A1	C1	TL11
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

Example 10: No. of Transaction Legs Derived

In the example 10, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	RETENTION TYPE CLAIM BASED	Yes	PE1	Yes	PR1	A1	C1	TL1
			PE2	-	PR2	A2	-	-
			PE3	No	-	-	-	-
20	CLAIM BASED FEES	-	PE4	-	PR3	A1	C2	TL2
			PE5	Yes	PR4	-	-	-
			PE6	No	-	-	-	-
30	CLAIM FEE CHARGES	No	PE7	-	-	-	-	-
			PE8	-	-	-	-	-
			PE9	-	-	-	-	-

Example 11: Price Item Eligibility for Transaction Leg Derivation

In the example 11, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for PE1 and PE5 was satisfied, but the eligibility criteria for PE3 and PE6 was not satisfied. Further, the system could not find the required account for PE5 and the active contract for PE2 on A2. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 2998 and [Price Item Eligibility](#) on page 3000 sections, respectively.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps the retroactive and non-retroactive enrollment transactions to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the coverage end date and coverage start date as the derivation date while fetching the effective pricing rules for the retroactive and non-retroactive enrollment transactions, respectively. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_DATE_1 is set to 01-02-2018
- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR3

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR3	RETENTION TYPE ENROLLMENT BASED	P1	C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
		P2	C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the RETENTION TYPE ENROLLMENT BASED pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the coverage start date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for exact match for the price item parameters at both the levels. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active

- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR4

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level	
TR4	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Parent Customer	
							Location = Eastern and Employee Status = Active	\$12		
							Location = Eastern and Employee Status = Retired	\$11		
							Location = Western and Employee Status = Retired	\$9		
				C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$8		Bill Group
							Location = Eastern and Employee Status = Active	\$9		
							Location = Eastern and Employee Status = Retired	\$10		
							Location = Western and Employee Status = Retired	\$9		

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 2: Exact Match for Price Item Parameters

In the example 2, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, the system searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	ENROLLMENT BASED CHARGES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Bill Group
							Location = Eastern and Employee Status = Active	\$12	
							Location = Eastern and Employee Status = Retired	\$11	
							Location = Western and Employee Status = Retired	\$9	

Note:

Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED CHARGES pricing rule type.

Here, the **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

Example 3: Best Fit Match for Price Item Parameters

In the example 3, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item

parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 3, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the primary pricing rule type for which the parameter usage is set to **Pricing**. For retroactive enrollment transactions, the system considers only those effective pricing rules where the **Exempt Retro Transactions** option is not selected.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Example 4: Priority Based Account Derivation

In the example 4, while mapping the enrollment transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the enrollment transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

Let us assume that the non-retroactive enrollment transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1
		P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2
		P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 5: Transaction Leg Derivation

In the example 5, the system maps the non-retroactive enrollment transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the non-retroactive enrollment transaction is not mapped to the **Nationality** price item parameter.

In the example 5, the system creates three transaction legs — TL1, TL2, and TL3 for the non-retroactive enrollment transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 5, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the pricing rule type for which the parameter usage is set to **Pricing**.

The following table describes how the system fetches a pricing rule when a pricing group is used while defining the pricing rule for a bill group:

If the transaction is a...	Then the system fetches the pricing rule when the following conditions are met...
Retroactive enrollment transaction	<ul style="list-style-type: none"> The coverage end date of the retroactive enrollment transaction falls within the pricing rule's date range. The exact or best fit match is available for the price item parameters in the effective pricing rule. The retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.
Non-retroactive enrollment transaction	<ul style="list-style-type: none"> The coverage start date of the non-retroactive enrollment transaction falls within the pricing rule's date range. The exact or best fit match is available for the price item parameters in the effective pricing rule. The non-retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$10

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$12
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$8
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 6: Effective Pricing Rule is Defined Using a Pricing Group

In the example 6, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the PR1 pricing rule’s date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the retroactive enrollment transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)

- The employee attributes specified in the retroactive enrollment transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 6, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A non-retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-05-2018
- UDF_DATE_2 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	\$20
								Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	\$21
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	\$18

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	\$19
		PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$5
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$5
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$6

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 7: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 7, the system could not find exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 7, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the non-retroactive enrollment transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6,	-	-	-	-
	PP2	Employee Status = UDF_CHAR_7	PR2	-	-	-
	PP3		PR3	A3	C3	TL1

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
	PP4		-	-	-	-
	PP5		PR5	A2	C1	TL2
	PP6		PR6	A1	-	-

Example 8: No. of Transaction Legs Derived

In the example 8, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the enrollment transaction.

If the eligibility rule type is defined of a price item, the system maps the enrollment transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 9: Price Item Eligibility for Transaction Leg Derivation

In the example 9, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the enrollment transaction. For more information, refer to the [Price Item Eligibility](#) on page 3000 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps an ancillary transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1

- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Arrangement	Assignment Level
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	C1P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C2P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
				C3P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
		P2		C1P2	01-06-2017	31-12-2017	Pass Through without Markup or Markdown	Bill Group
				C2P2	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C3P2	01-01-2019	30-06-2019	Pass Through without Markup or Markdown	Bill Group

Note:

Here, the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type. This means that the system will consider only effective pricing rules where the pricing arrangement is set to **Pass Through without Markup or Markdown** when the ancillary transaction is received where **UDF_CHAR_7** is set to **PASS**.

Here, the paid date is mapped to the **UDF_DATE_1** field in the ANCILLARY pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, because of the following reasons:

- The paid date (i.e. 15-03-2018) of the ancillary transaction falls within the C2P1 and C2P2 pricing rules' date range (i.e. 01-01-2018 to 31-12-2018).

- The pricing arrangement is set to **Pass Through without Markup or Markdown** in the C2P1 and C2P2 pricing rules.

Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

Note: The price item parameters (i.e. BCHGLINETYPE and PRICINGARRANGEMENT) must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively. Otherwise, erroneous results might occur.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

Let us assume that the ancillary transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Pricing Arrangement	Account	Active Contract	Transaction Leg
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	Pass Through without Markup or Markdown	A1	C1	TL1
		P2		PR2	Pass Through without Markup or Markdown	A2	C2	TL2
		P3		PR3	Pass Through without Markup or Markdown	A3	C3	TL3

Note: Here, the paid date is mapped to the **UDF_DATE_1** field and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 3: Transaction Leg Derivation

In the example 3, the system maps the ancillary transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A1
- Price Item: P2; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A2
- Price Item: P3; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A3

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the ancillary transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 3, the system creates one price item parameter group which contains the following price item parameters:

- BCHGLINETYPE = BC1
- PRICINGARRANGEMENT = PASS

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the primary pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for an ancillary transaction when the following conditions are met:

- The paid date of the ancillary transaction falls within the pricing rule's date range.
- The employee attributes specified in the ancillary transaction match the criteria defined in any one of the pricing group rule.
- The pricing arrangement specified in the ancillary transaction matches the pricing arrangement specified in the pricing rule.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 26-01-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the **ANCILLARY** pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 26-01-2018) of the ancillary transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the ancillary transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	PP1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1= Western)	Pass Through without Markup or Markdown
								Rule 1 (where Source System = X and Parameter 1 = Western)	Pass Through without Markup or Markdown

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown
		PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1 and another contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ANCILLARY	PP11	BCHGLINETYPE = UDF_CHAR_6 and	-	-	-	-
	PP12	PRICINGARRANGEMENT = UDF_CHAR_7	PR12	A1	C1	TL11

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined of a price item, the system maps the ancillary transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the ancillary transaction. For more information, refer to the [Price Item Eligibility](#) on page 3000 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Bill After Date Determination

Once the billable charges are created for claim, claim based fees, enrollment based fees, and ancillary, the system enables you to automatically stamp the bill after date in these billable charges. The system can automatically stamp the bill after date in these billable charges when an algorithm created using the **C1_BAFTDRV** algorithm type is attached to the **Bill After Date Determination** system event of the respective pricing rule type. This algorithm sets the bill after date to the end date of the aggregation schedule period in which the transaction date falls. Note that the system considers the aggregation schedule specified in the rate option which is defined for the respective price item. Let us understand this with the help of an example. If the claim transaction with the transaction date set to 25-06-2018 is mapped to the following price item and account combinations:

Pricing Rule Type	Price Item	Rate Option	Aggregate Transaction	Aggregation Schedule	Schedule Period	Account	Billable Charge
CLAIM	P1	R01	Yes	Monthly	01-01-2018 — 31-01-2018	A1	BC1
					01-02-2018 — 28-02-2018		
					01-03-2018 — 31-03-2018		
					01-04-2018 — 30-04-2018		
					01-05-2018 — 31-05-2018		
					01-06-2018 — 30-06-2018		
					01-07-2018 — 31-07-2018		
					01-08-2018 — 31-08-2018		
	P2	R01	Yes	Monthly	01-09-2018 — 30-09-2018	A2	BC2
					01-10-2018 — 31-10-2018		
					01-11-2018 — 30-11-2018		
					01-12-2018 — 31-12-2018		
	P3	R02	Yes	Yearly	01-01-2018 — 31-12-2018	A3	BC3

Example 1: Bill After Date Determination Using the Aggregation Schedule

In the example 1, the system stamps 30-06-2018 as the bill after date in the BC1 and BC2 billable charges. This is because the transaction date (i.e. 25-06-2018) falls in the 01-06-2018 — 30-06-2018 period of the R01 aggregation schedule.

However, the system stamps 31-12-2018 as the bill after date in the BC3 billable charge. This is because the transaction date (i.e. 25-06-2018) falls in the 01-01-2018 — 31-12-2018 period of the R02 aggregation schedule.

Note: The bill after date for the specific stop-loss and aggregate stop-loss billable charges is calculated using the settlement frequency in the **Create Specific Stop-Loss Billable Charge (C1-BCSSL)** and **Create Aggregate Stop-Loss Billable Charge (C1-BCASL)** batches, respectively.

Advance Billing for Claim Fund Charge

Until now, the system enabled you to configure the pricing for level funding and generate the claim fund charges for a self-funded employer using either of the following approach:

- Flat level funding
- Enrollment based level funding

Now, the system enables you to bill the claim fund charges to a self-funded employer in advance. In case of enrollment based level funding, the system can receive the enrollment transactions for the month of January in the month of December. Once the January enrollment transactions are received in December, the system can create claim fund charges based on the January enrollment in the month of December and accordingly bill the self-funded employer. However, the claim fund charges which are billed in the month of December will be adjusted against the claim, ancillary, or other charges which are eligible for level funding only in the month of January.

To enable this feature, you need to do the following:

- **Set the Advance Level Funding Eligibility Option** – A new field named **Advance Level Funding Eligibility** is available while defining a self-funded policy. You can set the value of the **Advance Level Funding Eligibility** field to either **Yes** or **No**. You can define the **Advance Level Funding Eligibility** field only through a health care inbound message and not from the user interface. When you create a self-funded policy from the user interface, the **Advance Level Funding Eligibility** field is non-editable. By default, the value is set to **No**. You can then change the value through a health care inbound message.
- **Set the Advance Billing Option** – A new field named **Advance Billing** is available while defining a retention type enrollment based pricing rule. You can set the value of the **Advance Billing** field to either **Yes** or **No**.
- **Create a Prospective Bill Period** – You need to create a prospective bill period wherein the bill date falls in a month prior to the month of bill segment end date. For example, if the bill segment end date is 01-31-2021, then you can set the bill date to 12-31-2020. You must use the prospective bill period in the recurring flat fee pricing rule using which you want to create the flat claim fund charge which should be billed in advance.

If the **Advance Level Funding Eligibility** field is set to **Y** through a health care inbound message, the system activates the self-funded policy even if the policy start date is later than the inbound processing date. Accordingly, a log is maintained for the self-funded policy.

On renewing a self-funded policy, the system provides the ability to copy the advance level funding eligibility value of the base policy to the renewed policy. A new field named **Copy Advance Level Funding Eligibility** is available while renewing a self-funded policy. If you select the **Copy Advance Level Funding Eligibility** option, the value is copied from the base policy to the renewed policy. If the **Advance Level Funding Eligibility** field is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date.

To implement this business requirement, the following changes are made in the system:

- While accumulating the charges which are eligible for level funding, the system behaves in the following manner:
 - In case of advance flat level funding, the system considers only those claim fund bill segments where the end date is earlier than or equal to the accumulation run date and then adjusts the accumulation amount against those claim fund charges which were billed in the previous bill period.
 - In case of advance enrollment based level funding, the system considers the enrollment transactions based on their coverage end date. Only those enrollment transactions where coverage end date is earlier than or equal to the accumulation run date are accumulated and then adjusted against the claim fund charges which were billed earlier.
- If the **Advance Level Funding Eligibility** field is set to **Y** for a self-funded policy and the inbound processing date is earlier than the policy start date, the system sets the contract start date to the first day of the month in which the inbound message is processed. Otherwise, the contract start date is set to policy start date.

- The system determines the bill after date depending on the value set for the **Advance Billing** field in the retention type enrollment based pricing rule. If the **Advance Billing** field is set to **Yes**, then the bill after date is set to accounting date – 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction date falls. However, if the **Advance Billing** field is set to **No**, then the bill after date is set to accounting date – 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction's coverage end date falls.

SSL Accumulation across Bill Groups

Specific Stop-Loss (SSL) protects the self-funded employers against the excess claims from a single individual who is a member in the self-funded policy. Oracle Revenue Management and Billing enables the customers to configure the SSL pricing rules wherein the SSL Limit and SSL Payout Limit are defined. For the excess claims from a member, arising on top of the SSL Limit defined for the bill group, the insurer will provide the SSL credits (capped with the SSL Payout Limit) to the self-funded employer.

There can be scenarios in which a member moves from one bill group to another. For example, an employee changes the department or work location. ORMB provides the ability to continue the accumulation of the transaction amount across the bill groups, if both bill groups have the same SSL limit and their accounts have same bill cycle. If the SSL Limits of the bill groups are different or if the bill groups' accounts have different bill cycles, the accumulation is calculated individually for each bill group based on the respective SSL Limit.

To enable the SSL Accumulation across Bill Groups feature, you need to set the **SSL Member Movement Configuration** option type in the **C1-ASOBLNG** feature configuration to either of the following:

- INDIVIDUAL
- PROPORTIONATE
- CURRENTBG

If you do not set the value for the **SSL Member Movement Configuration** option type in the **C1-ASOBLNG** feature configuration, by default, it is set to **INDIVIDUAL**.

While accumulating the SSL charges for a member, the system checks whether the member is associated with more than one bill group. If so, the system derives the value from the **SSL Member Movement Configuration** option type of the **C1-ASOBLNG** feature configuration to determine the manner in which the SSL credits should be given to the bill groups. If the value of the **SSL Member Movement Configuration** option type is set to **PROPORTIONATE**, the system does weighted distribution of the total SSL credits across the associated bill groups based on the cumulative aggregation amount of each bill group. If the value of the **SSL Member Movement Configuration** option type is set to **CURRENTBG**, the system gives the remaining SSL credits to the present bill group irrespective of the bill group for which the transaction is received. If the value of the **SSL Member Movement Configuration** option type is set to **INDIVIDUAL**, the system accumulates the charges which are eligible for SSL and calculates the SSL credits individually for each bill group based on the respective SSL Limit.

Note: In case of a member who has opted for lasering, the system considers the lasered amount instead of the SSL limit during SSL credit calculation.

Chapter 38

Fully-Insured Pricing

Topics:

- [Age Based Pricing](#)
- [Tier Based Pricing](#)
- [Pass-Through Billable Charge](#)
- [Administration Fee Pricing for COBRA Membership](#)
- [Medicare Part D LIS and LEP Pricing](#)
- [Discount Charge Pricing for Retiree Membership](#)
- [Pricing Rule Inactivation](#)

A new pricing model is introduced for the fully-insured group business. In this pricing model, you can define pricing rules using the pricing rule types. At present, you can define the following pricing rule types for the fully-insured group business:

- [Age Based Pricing](#) on page 3064
- [Tier Based Pricing](#) on page 3085
- [Pass-Through Billable Charge](#) on page 3102

Note: You cannot define pricing rules using the pass-through billable charge pricing rule types. However, you can directly create SQI based billable charges using a pass-through billable charge pricing rule type. For more information, refer to the [Pass-Through Billable Charge](#) on page 3102 section.

Age Based Pricing

In the Fully-Insured Pricing, the base rate for premium and fees depend upon the age, member attributes (such as employee type, employee status, etc.) and modifiers (such as tobacco usage, gender, alcohol usage, etc.). Oracle Revenue Management and Billing enables you to offer an age based pricing to a fully-insured group customer. In the Age Based pricing, the premium is calculated for each eligible member based on age, member attributes and modifiers, and then aggregated to derive the total premium for the membership. An age based pricing can be defined using the age based pricing rule. You can define an age based pricing rule for a price item on the policy plan. If the age based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the age based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define an age based pricing rule using an age based pricing rule type. It is the age based pricing rule type which helps the system to determine:

- **C1-PricingRuleAgeBased** Business object using which the age based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for a membership.

Note: You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for calculating the age based premium for a membership.

Note: You must create an algorithm using the **C1_AGEPREM** algorithm type and attach it to the **Premium Calculation** system event.

- Algorithm which should be triggered for identifying eligible member persons for premium calculation.

Note: You must create an algorithm using the **C1_AGEBDELG** algorithm type and attach it to the **Pricing Rule Pre-Processing** system event.

- Algorithm which should be triggered for calculating the premium for each eligible member person.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Billable Charge Creation Post Processing** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note: You must create an algorithm using the **C1-AGEPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.

- Algorithm which should be triggered to configure skip months for an account.

Note: You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define age based pricing rules using the age based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership and C1-PERSON business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.
- Elements of the C1-Membership and C1-PERSON business objects for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership are eligible for premium calculation.
- Following are the additional dependents attributes which can affect the premium calculation if they are considered as part of pricing rules. These additional attributes are defined as characteristics for the policy plan. You must specify the following characteristic types in the age based pricing rule type:
 - **Maximum Number of Dependents** – This characteristic type stores the maximum number of children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Maximum Age Limit for Maximum Dependent Count** – This characteristic type stores the maximum age limit for children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Maximum Number of Dependents Order Priority** – This characteristic type indicates whether the youngest or eldest children should be considered during premium calculation. Each plan may set a limit to consider the number of dependents, either the eldest or youngest one for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Age Calculation Date Basis** – This characteristic type indicates whether the member person's age should be calculated using the member person's enrollment date or policy's start or renewal date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Newborn Gift Days** – This characteristic type stores the number of days you want to offer as gift days from the new born child's enrollment date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Newborn Gift Days Applicability** – This characteristic type indicates whether the gift days should be offered in case of a new born. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Young Adult Max Age Limit** – This characteristic type stores the maximum age limit for young adults which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
 - **Young Adult Inclusion Applicability** – This characteristic type indicates whether the young adults should be considered during the premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.

Once an age based pricing rule type is defined, you can define age based pricing rules using the age based pricing rule type. Note that, at present, you can define age based pricing rules only through a health care inbound message and not from the user interface. However, you can view the age based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating an age based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the age based pricing rule
- Start and end dates of the age based pricing rule
- Age based pricing rule type using which you want to create the age based pricing rule
- Price Item for which you want to define age based pricing
- Rate option using which the price assignment should be created for the age based pricing rule

Note: If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** or **Default Rate Option – Percentage** option type of the **C1-ASOBLLNG** feature configuration depending on whether the modifier method is set to **FLAT**, **EXPT** or **INPT**.

- Whether you want to increase or decrease the premium of an eligible member by a flat amount or in percentage based on some modifier attributes (such as tobacco usage, alcohol usage, and so on).
- Age limit and employee attributes for which the base fee is applicable

Note:

The system defines the lower age limit and upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration.

The employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

- Modifiers based on which you want to charge additional or offer discount to an eligible member

Note: The modifiers can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the age based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining an Age Based Pricing Rule Type

Prerequisites

To define an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.
- Pricing rule type category for the age based defined in the application.

Procedure

To define an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. Note: You can create an age based pricing rule type using the Age Based Pricing Rule Type business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Age Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Related Pricing Rule Type** – Used to define the pricing rule types which are related to the age based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based Specific Additional Data** – Used to define the age based specific additional data in an age based pricing rule type.
- **Attribute Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify an age based pricing rule type.	Yes
Description	Used to specify the description for an age based pricing rule type.	Yes
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> • Age Based Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Age Based 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms with the age based pricing rule type.
- Add the required price items in an age based pricing rule type.
- Add the price item parameters in an age based pricing rule type, if required.
- Define characteristics for an age based pricing rule type, if required.
- Configure the audit in an age based pricing rule type.
- Define an age based specific additional data in an age based pricing rule type.
- Map a characteristic attribute in an age based pricing rule type
- Click **Save**.

The age based pricing rule type is defined.

Adding the Related Pricing Rule Types in an Age Based Pricing Rule Type

Prerequisites

To add related pricing rule types in an age based pricing rule type, you should have:

- Additional charge pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in an age based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an age based pricing rule type.

Note: This section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) Note: This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.	Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility .	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule types are added for the age based pricing rule type.

Associating an Algorithm with an Age Based Pricing Rule Type

Prerequisites

To associate algorithm with an age based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_AGEPREM** algorithm type.
- An algorithm defined using the **C1_AGEBDELG** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-AGEPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate algorithms with an age based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the age based pricing rule type.
The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Premium Calculation - Used to calculate the premium for each eligible member person. • Pricing Rule Pre-Processing - Used to identify the eligible member persons for premium calculation. • Billable Charge Creation Post Processing - Used to create new billable charges for both pre-calculated and post-calculated charges. • Pricing Rule Proration Amount Calculation - Used to calculate proration factor and amount for age based pricing rule based on the policy plan configurations. • Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature) - Used to distribute the total premium in the non-skip months of the coverage period. 	<p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the age based pricing rule type.</p>
Sequence	<p>Used to specify the order in which the algorithms for each system event must be executed.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the age based pricing rule type.</p>
Algorithm	<p>Used to specify the algorithm.</p> <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the age based pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and Price Item Derivation for Membership
Account and Price Item Derivation Post-Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule Pre-Processing	C1_AGEBDELG	C1_AGEBDELG	Get Eligible Member Details from Membership
Billable Charge Creation Post Processing	C1-FICRETBC	C1-FICRETBC	Fully Insured Pass through Billable Charge Creation
Pricing Rule Proration Amount Calculation	C1-AGEPRFC	C1-AGEPRFC	Calculate Proration Factor for Age Based Pricing Rule
Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)	C1-SKPMNTHPC	C1-SKPMNTHPC	Skip Month Premium Calculation

3. If you want to associate more than one algorithm with the age based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the age based pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the age based pricing rule type.

Adding a Price Item in an Age Based Pricing Rule Type

Prerequisites

To add a price item in an age based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type

- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an age based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the age based pricing rule type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are adding a rate option and bill to account in an age based pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (+) icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in an age based pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from an age based pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in an age based pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in an age based pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for an age based pricing rule type.

Adding a Price Item Parameter in an Age Based Pricing Rule Type

Prerequisites

To add a price item parameter in an age based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in an age based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an age based pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in an age based pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for an age based pricing rule type.

Defining a Characteristic for an Age Based Pricing Rule Type

Prerequisites

To define a characteristic for an age based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an age based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an age based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for an age based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for an age based pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an age based pricing rule type.

Adding Elements for Audit in an Age Based Pricing Rule Type

Prerequisites

To add elements for audit in an age based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Procedure

To add elements for audit in an age based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing an age based pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in an age based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.	Yes
Element Type	Used to indicate the type of audit element for an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Not applicable
Element Name	Used to specify the element name for an age based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one element for audit in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The elements for audit are added for an age based pricing rule type.

Defining an Age Based Specific Additional Data in an Age Based Pricing Rule Type

Procedure

To define an age based specific additional data in an age based pricing rule type:

1. Ensure that the **Age Based Specific Additional Data** section is expanded when you are defining or editing an age based pricing rule type.

The **Age Based Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate the relation of the member in an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Children • Main Subscriber • Spouse 	No
Relationship Type	Used to indicate the type of relationship for an age based pricing rule type.	No

2. Enter the required details in the **Age Based Specific Additional Data** section.
3. If you want to add more than one age based specific data in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an age based specific data from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

4. Click **Save**.

The age based specific additional data is defined for the age based pricing rule type.

Mapping Characteristic Attributes in an Age Based Pricing Rule Type

Prerequisites

To map the characteristic attributes in an age based pricing rule type:

- Characteristic type defined in the application

Procedure

To map the characteristic attributes in an age based pricing rule type:

1. Ensure that the **Attribute Characteristic Mapping** section is expanded when you are defining an age based pricing rule type.

The **Attribute Characteristic Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Maximum Number of Dependents	Used to indicate the maximum number of children which are eligible for premium calculation.	No
Maximum Age Limit for Maximum Dependent Count	Used to indicate the maximum age limit for children which are eligible for premium calculation.	No
Maximum Number of Dependents Order Priority	Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are: <ul style="list-style-type: none"> • YOUNGEST • ELDEST 	No
Age Calculation Based On	Used to indicate whether the member person's age should be calculated using the member person's enrollment date or policy's renewal date.	No
Age Recalculation Based On	Used to indicate whether the member person's age should be re-calculated when you add a membership to a policy plan or a member person to a membership.	No
Newborn Gift Days	Used to indicate the number of days you want to offer as gift days from the new born child's enrollment date. As a result, no premium will be calculated for this period.	No
Newborn Gift Days Applicability	Used to indicate whether you want to offer gift days in case of a new born. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Young Adult Maximum Age Limit	Used to indicate the maximum age limit for young adults who are eligible for premium calculation.	No
Young Adult Inclusion Applicability	Used to indicate whether you want to consider the young adults during the premium calculation.	No

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Characteristic Type Search** window appears.

On specifying the characteristic type, the description of the characteristic type appears corresponding to the respective field.

2. Enter the required details in the **Attributes Characteristic Mapping** section.
3. Click **Save**.

The characteristic types are mapped to the appropriate fields in the age based pricing rule type.

Editing an Age Based Pricing Rule Type**Prerequisites**

To edit an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.

Procedure

To edit an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the age based pricing rule type whose details you want to edit.

The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Related Pricing Rule Type** – Used to specify the pricing rule types which are related to the age based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.

- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based-Specific Additional Data** – Used to define an age based specific additional data in an age based pricing rule type.
- **Attributes Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the age based pricing rule type.	Not applicable
Description	Used to specify the description for an age based pricing rule type.	Yes
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> • Age Based Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. Note: The checkbox appears selected, if you have already selected the Primary option while defining an age based pricing rule type.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during the age based premium calculation. Note: The checkbox appears selected, if you have already selected the Non-Covered Subscriber Eligible option while defining an age based pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Indicates the pricing rule type category for an age based pricing rule type. The valid values is: <ul style="list-style-type: none"> Age Based 	No
	Note: It is a read-only field.	

Tip: Alternatively, you can edit the details of an age based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Add, edit, or remove the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms in an age based pricing rule type.
- Add, edit, or remove the required price items in an age based pricing rule type.
- Add, edit, or remove the price item parameters in an age based pricing rule type, if required.
- Add, edit, or remove characteristics for an age based pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in an age based pricing rule type.
- Add, edit, or remove the age based specific additional data in an age based pricing rule type.
- Add, edit, or remove a characteristic attribute in an age based pricing rule type
- Click **Save**.

The changes made to the age based pricing rule type are saved.

Deleting an Age Based Pricing Rule Type

Procedure

To delete an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the age based pricing rule type that you want to delete.
A message appears confirming whether you want to delete the age based pricing rule type.

Note: You can delete an age based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an age based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The age based pricing rule type is deleted.

Tier Based Pricing

The standard tier based pricing structure contains different tiers, such as Employee Only (E), Employee + Spouse (ES), Family (F), Employee + Children (EC). A main subscriber can subscribe his/her dependents to a policy plan and may fall in one of the tier. The fee for a price item can vary based on the membership tier level and employee attributes (such as employee type, employee status, etc.). Oracle Revenue Management and Billing enables you to offer a tier based pricing to a fully-insured group customer. In the Tier Based pricing, the premium for the membership is derived based on tier level and employee attributes.

A tier based pricing can be defined using the tier based pricing rule. You can define a tier based pricing rule for a price item on the policy plan. If the tier based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the tier based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define a tier based pricing rule using a tier based pricing rule type. It is the tier based pricing rule type which helps the system to determine:

- Business object using which the tier based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for a membership.

Note: You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the subscription tier for membership, based on the bill period configured on the account..

Note: You must create an algorithm using the **C1-DERSUBTR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for calculating the premium for membership.

Note: You must create an algorithm using the **C1_TIERPREM** algorithm type and attach it to the **Pricing Rule Premium Calculation** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Algorithm which should be triggered for calculating the proration factor and amount for fully insured tier based pricing rule based on the policy plan configurations.

Note: You must create an algorithm using the **C1-TIERPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.

- Algorithm which should be triggered for distributing the total premium in the non-skip months of the coverage period.

Note: You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define tier based pricing rules using the tier based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership business object using which the audit event should be created whenever a membership is added, updated, or removed from the policy plan.
- Elements of the C1-Membership business object for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the tier based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

Once a tier based pricing rule type is defined, you can define tier based pricing rules using the tier based pricing rule type. Note that, at present, you can define tier based pricing rules only through a health care inbound message and not from the user interface. However, you can view the tier based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating a tier based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the tier based pricing rule
- Start and end dates of the tier based pricing rule
- Tier based pricing rule type using which you want to create the tier based pricing rule
- Price Item for which you want to define tier based pricing
- Rate option using which the price assignment should be created for the tier based pricing rule

Note: If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** option type of the **C1-ASOBLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.

- Tier level and employee attributes for which the fee is applicable

Note: The tier level and employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the tier based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining a Tier Based Pricing Rule Type

Prerequisites

To define a tier based pricing rule type, you should have:

- Tier based pricing rule type business object defined in the application.
- Tier based pricing rule business object defined in the application.
- Pricing rule type category for the tier based defined in the application.

Procedure

To define a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type. Note: You can create a tier based pricing rule type using the Tier Based Pricing Rule Type (C1-PricingRuleTierBased) business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Tier Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about a tier based pricing rule type.
- Related Pricing Rule Type** – Used to define the pricing rule types which are related to the tier based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- Price Items** – Used to add the price items for which you can define the tier pricing rules using the tier based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for a tier based pricing rule type.
- Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the tier based pricing rule type.	Yes
Description	Used to specify the description for the tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about the tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> Tier Based Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the tier based pricing rule type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation.	No
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Tier Based 	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms with the tier based pricing rule type:
- Add the required price items in the tier based pricing rule type.
- Add the price item parameters in the tier based pricing rule type, if required.
- Define characteristics for the tier based pricing rule type, if required.
- Configure the audit in the tier based pricing rule type.
- Click **Save**.

The tier based pricing rule type is defined.

Adding the Related Pricing Rule Types in a Tier Based Pricing Rule Type

Prerequisites

To add related pricing rule types in a tier based pricing rule type, you should have:

- Additional charge pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in a tier based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a tier based pricing rule type.

Note: This section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) Note: This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. Note: On clicking the Search (🔍) icon that appears corresponding to the Pricing Rule Type field, the Pricing Rule Type Search window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.	Yes (Conditional) Note: This field is required when the corresponding Sequence and Eligibility Rule Type field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. Note: The Eligibility Rule Type list includes only those rule-types where the rule type eligibility is Related Pricing Rule Type Eligibility .	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule types are added for the tier based pricing rule type.

Associating an Algorithm with a Tier Based Pricing Rule Type

Prerequisites

To associate an algorithm with a tier based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1-DERSUBTR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-TIERPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate an algorithm with a tier based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the tier based pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Account and Price Item Derivation Post-Processing - Used to derive subscription tier for membership, based on the bill period configured on the account. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Premium Calculation - Used to calculate the premium for each eligible member person. • Billable Charge Creation Post Processing - Used to create new billable charges for both pre-calculated and post-calculated charges. • Pricing Rule Proration Amount Calculation - Used to calculate proration factor and amount for tier based pricing rule based on the policy plan configurations. • Skip Month Premium Calculation - Used to distribute the total premium in the non-skip months of the coverage period. 	<p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the tier based pricing rule type.</p>
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the tier based pricing rule type.</p>
Algorithm	<p>Used to specify the algorithm.</p> <p>Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the tier based pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Account and Price Item Derivation Post-Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Account and Price Item Derivation Post-Processing	C1-DERSUBTR	C1-DERSUBTR	Derive Subscription Tier for Membership
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Premium Calculation	C1_TIERPREM	C1_TIERPREM	Tier Based Premium Calculation
Billable Charge Creation Post Processing	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge Creation for Memberships
Pricing Rule Proration Amount Calculation	C1-TIERPRFC	C1-TIERPRFC	Calculate Proration Factor for Tier Based Pricing Rule
Skip Month Premium Calculation	C1-SKPMNTHPC	C1-SKPMNTHPC	Skip Month Premium Calculation

3. If you want to associate more than one algorithm with the tier based pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the tier based pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the tier based pricing rule type.

Adding a Price Item in a Tier Based Pricing Rule Type

Prerequisites

To add a price item in a tier based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a tier based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Price Item	Used to indicate the price item that you want to include in a tier based pricing rule type.	Yes (Conditional)				
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: This field is required when you are adding a rate option and bill to account in a tier based pricing rule type.</p>				
Rate Option	Used to indicate one or more rate options which are valid for a price item.	Not applicable				
	On clicking the Add (➕) icon, the following field appears in a grid:					
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Rate Option
Field Name	Field Description	Mandatory (Yes or No)				
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes				
<p>Note:</p> <p>If you want to define more than one rate option to the price item in a fully-insured tier based pricing rule type, click the Add (➕) icon.</p> <p>However, if you want to remove a price item from a fully-insured tier based pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in a tier based pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in a tier based pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a tier based pricing rule type.

Adding a Price Item Parameter in a Tier Based Pricing Rule Type

Prerequisites

To add a price item parameter in a tier based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a tier based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a tier based pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in a tier based pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a tier based pricing rule type.

Defining a Characteristic for a Tier Based Pricing Rule Type

Prerequisites

To define a characteristic for a tier based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a tier based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a tier based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a tier based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a tier based pricing rule type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a tier based pricing rule type.

Adding Elements for Audit in a Tier Based Pricing Rule Type

Prerequisites

To add elements for audit in a tier based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Procedure

To add elements for audit in a tier based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing a tier based pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in tier based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.	Yes
Element Type	Used to indicate the type of audit element for a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Not applicable
Element Name	Used to specify the element name for a tier based pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one element for audit in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The elements for audit are added for a tier based pricing rule type.

Editing a Tier Based Pricing Rule Type

Prerequisites

To edit a tier based pricing rule type, you should have:

- Tier Based pricing rule type business object defined in the application.
- Tier Based pricing rule business object defined in the application.

Procedure

To edit a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a tier based pricing rule type.
- **Related Pricing Rule Type** – Used to specify the pricing rule types which are related to the tier based pricing rule type.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- **Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the tier based pricing rules using the tier based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a tier based pricing rule type.
- **Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the tier based pricing rule type.	Not applicable
Description	Used to specify the description for a tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about a tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> Tier Based Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining a tier based pricing rule type.	Not applicable
Status	Used to indicate the status of a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. <p>Note: The checkbox appears selected, if you have already selected the Primary option while defining a tier based pricing rule type.</p>	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation. <p>Note: The checkbox appears selected, if you have already selected the Non-Covered Subscriber Eligible option while defining a tier based pricing rule type.</p>	No
Pricing Rule Type Category	Indicates the pricing rule type category for a tier based pricing rule type. The valid values is: <ul style="list-style-type: none"> Tier Based 	No

Tip: Alternatively, you can edit the details of a tier based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Add, edit, or remove the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

- Associate the required algorithms in a tier based pricing rule type.
- Add, edit, or remove the required price items in a tier based pricing rule type.

9. Add, edit, or remove the price item parameters in a tier based pricing rule type, if required.
10. Add, edit, or remove characteristics for a tier based pricing rule type, if required.
11. Add, edit, or remove the configuration details of the audit in a tier based pricing rule type.
12. Click **Save**.

The changes made to the tier based pricing rule type are saved.

Deleting a Tier Based Pricing Rule Type

Procedure

To delete a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the tier based pricing rule type that you want to delete.
A message appears confirming whether you want to delete the tier based pricing rule type.

Note: You can delete a tier based pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a tier based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The tier based pricing rule type is deleted.

Pass-Through Billable Charge

At times, the system might receive pre-calculated premium for the membership through a health care inbound message. If the price item, account identifier type, and account identifier are given in the billable charge information of a health care inbound message, the system directly creates an SQI based billable charge when you process the health care inbound message. The pre-calculated premium amount is stored as a pass through line in the SQI based billable charge. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). It is the pass-through billable charge pricing rule type which helps the system to determine:

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note:

You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

If the bill period or frequency is given in the billable charge information of the health care inbound message, the system does not derive the bill period for the account.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.

Note: You can add multiple price items in a pass-through billable charge pricing rule type. But, you cannot add the same price item in multiple pass-through billable charge pricing rule types.

- Type of account to which the respective price item should be billed based on the specified priority.

Defining a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a pass-through billable charge pricing rule type, you should have:

- Pass-through billable charge pricing rule type business object defined in the application.

- Pass-through billable charge pricing rule business object defined in the application.

Procedure

To define a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. Note: You can create a pass-through billable charge pricing rule type using the Pass-Through Billable Charge Pricing Rule Type (C1-FIPassthroughBcRuleType) business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Pass-Through Billable Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Pass-Through Billable Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pass-through billable charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with the pass-through billable charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pass-through billable charge pricing rule type.	Yes
Description	Used to specify the description for the pass-through billable charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pass-through billable charge pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	Used to indicate the business object using which you want to create the pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Pass-Through Billable Charge Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the pass-through billable charge pricing rule type.	Not applicable
Status	Used to indicate the status of the pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Pass-Through Billable Charge 	Yes

- Enter the required details in the **Main** section.
- Associate the required algorithms with the pass-through billable charge pricing rule type.
- Add the required price items in the pass-through billable charge pricing rule type.
- Add the price item parameters in the pass-through billable charge pricing rule type, if required.
- Define characteristics for the pass-through billable charge pricing rule type, if required.
- Click **Save**.

The pass-through billable charge pricing rule type is defined.

Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To associate an algorithm with a pass-through billable charge pricing rule type, you should have:

- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.

- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with a pass-through billable charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the pass-through billable charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Pricing Rule BC Creation Pre Processing - Used to derive the bill period for the account. • Pricing Rule Billable Charge Creation - Used to derive the price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type. 	Yes Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Algorithm	Used to specify the algorithm. Note: Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership

System Event	Algorithm	Algorithm Type	Description
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully-Insured Charge creation for Memberships

- If you want to associate more than one algorithm with a pass-through billable charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from a pass-through billable charge pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with a pass-through billable charge pricing rule type.

Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To add a price item in a pass-through billable charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pass-through billable charge pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	Used to indicate the price item that you want to include in a pass-through billable charge pricing rule type.	Yes (Conditional)						
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: This field is required when you are adding a rate option and bill to account in a pass-through billable charge pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (+) icon, the following field appears in a grid:</p> <table border="1" data-bbox="428 800 1276 968"> <thead> <tr> <th data-bbox="428 800 574 884">Field Name</th> <th data-bbox="574 800 1105 884">Field Description</th> <th data-bbox="1105 800 1276 884">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="428 884 574 968">Rate Option</td> <td data-bbox="574 884 1105 968">Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td data-bbox="1105 884 1276 968">Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
	<p>Note:</p> <p>If you want to define more than one invoice type to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in a pass-through billable charge pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>										
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a pass-through billable charge pricing rule type.

Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To add a price item parameter in a pass-through billable charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a pass-through billable charge pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in a pass-through billable charge pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a pass-through billable charge pricing rule type.

Defining a Characteristic for a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a characteristic for a pass-through billable charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pass-through billable charge pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a pass-through billable charge pricing rule type.

Related Topics

Editing a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To edit a pass-through billable charge pricing rule type, you should have:

- Pass-Through Billable Charge pricing rule type business object defined in the application.
- Pass-Through Billable Charge pricing rule business object defined in the application.

Procedure

To edit a pass-through Billable Charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Pass-Through Billable Charge Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a pass-through billable charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a pass-through billable charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the pass-through billable charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pass-through billable charge pricing rule type.	Not applicable
Description	Used to specify the description for a pass-through billable charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about a pass-through billable charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> • Pass-Through Billable Charge 	Yes
Business Object	Indicates the business object using which you are defining a pass-through billable charge pricing rule type.	Not applicable
Status	Used to indicate the status of a pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Indicates the pricing rule type category for a pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Pass-Through Billable Charge 	No
	Note: It is a read-only field, and cannot be edited.	

Tip: Alternatively, you can edit the details of a pass-through billable charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with the pass-through billable charge pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully-Insured Charge creation for Memberships

- Add, edit, or remove the required price items in a pass-through billable charge pricing rule type.
- Add, edit, or remove the price item parameters in a pass-through billable charge pricing rule type, if required.
- Add, edit, or remove characteristics for a pass-through billable charge pricing rule type, if required.
- Click **Save**.

The changes made to the a pass-through billable charge pricing rule type are saved.

Deleting a Pass-Through Billable Charge Pricing Rule Type

Procedure

To delete a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the pass-through billable charge pricing rule type that you want to delete.
A message appears confirming whether you want to delete the pass-through billable charge pricing rule type.

Note: You can delete a pass-through billable charge pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a pass-through billable charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
The pass-through billable charge pricing rule type is deleted.

Viewing the Pass-Through Billable Charge Pricing Rule Type Details

Procedure

To view the details of a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the pass-through billable charge pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the pass-through billable charge pricing rule type in the **Pricing Rule Type** zone.

Administration Fee Pricing for COBRA Membership

In the Fully-Insured Pricing, the base premium for COBRA memberships is calculated either using the **Age Based Pricing Rule Type** or **Tier Based Pricing Rule Type**. In addition to the premium, COBRA membership is also charged with administration fee which can be either defined as flat charges or premium percentage. You can configure the COBRA administration fee by creating an additional charge pricing rule using an additional charge pricing rule type. You must include an additional charge pricing rule type as a related pricing rule type (in the age based or tier based pricing rule type) of the premium pricing rule type defined for the plan with a conditional rule that additional charges are only applicable for those memberships where the membership type is defined as COBRA.

The COBRA administration fee rates are generally not customer specific but remain common across different states or regions. The system provides you with an ability to define the administration fees at a higher level and if required override them at a lower level. You can define the COBRA administration fee at plan, policy, parent customer, and state level. The system checks whether the COBRA administration fee pricing rule definition is defined at the policy plan level. If an effective dated pricing rule does not exist at the policy plan level, the system further checks the administration fee pricing rule definition at policy, parent customer, and state level.

You can define an additional charge pricing rule using an additional charge pricing rule type. It is the additional charge pricing rule type which helps the system to determine:

- **C1-PrcRuleTypeCapitationFee** Business object using which the additional charges pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

Note: You must create an algorithm using the **C1_MEMBDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the subscription tier.

Note: You must create an algorithm using the **C1-DERSUBTR** algorithm type and attach it to the **Derive Subscription Tier for Membership** system event.

- Algorithm which should be triggered for calculating the COBRA administration fees for each eligible member person.

Note: You must create an algorithm using the **C1_TIERPREM** algorithm type and attach it to the **Pricing rule Type Premium Calculation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

Note: You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Bill Period Time Line Creation** system event.

- Algorithm which should be triggered for prorating the calculated COBRA administration fees as per the proration factor.

Note: You must create an algorithm using the **C1-TIERPRFC** algorithm type and attach it to the **Calculate Proration Factor for Tier Based Pricing Rule** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can define pricing rules for COBRA administration fee using the additional charges pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the **C1-Membership** and **C1-PERSON** business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.
- Elements of the **C1-Membership** and **C1-PERSON** business objects for which audit event should be created.

Note: You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership which are eligible for premium calculation. The system will only consider the member with the specified relationship type during premium calculation.

Once an additional charge pricing rule type is defined, you can then define the additional charge pricing rule using the additional charge pricing rule type.

Note: At present, you can define the additional charge pricing rule type only through the healthcare inbound message and not from the user interface. However, you can view the additional charge pricing rule defined for a policy plan or policy, parent customer or state from the **Customer 360° Information** screen.

While creating COBRA Admin Fees Pricing rule through a healthcare inbound message, you need to specify the following information:

- Entity type and Entity ID (i.e. Policy Plan and Policy Plan ID, or Policy and Policy ID, or Parent Customer and Parent Customer ID, or State and State Level) for which you want to define the COBRA additional charge pricing rule.
- Pricing Type – Flat or Percentage
- Start and end dates of the COBRA additional charge pricing rule.
- Additional charge pricing rule type using which you want to create the age based pricing rule
- Price Item for which you want to define the COBRA additional charge pricing rule.
- Rate option using which the price assignment should be created for the COBRA administration fees.

Note: In case you want flat based COBRA administration fees, use the **HC_FRTSC** rate schedule. In case of percentage based pricing, use the **HC_CAPRS** rate schedule.

Defining an Additional Charge Pricing Rule Type

Prerequisites

To define an additional charge pricing rule type, you should have:

- Additional charge pricing rule type business object defined in the application.

Procedure

To define an additional charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the additional charge pricing rule type. Note: You can create an additional charge pricing rule type using the Additional Charge Pricing Rule Type (C1-PrcRuleTypeCapitationFee) business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Additional Charge Pricing Rule Type** business object.
5. Click **OK**.

The **Additional Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the additional charge pricing rule type.
- **Algorithms** - Used to associate the algorithms with the additional charge pricing rule type.
- **Price Items** - Used to add the price items for which you can define the pricing rules using the additional charge pricing rule type.
- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** - Used to define the characteristics for an additional charge pricing rule type.
- **Event Management** - Used to define the audit event type details for an additional charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the additional charge pricing rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the additional charge pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the additional charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the additional charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Additional Charge Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the additional charge pricing rule type.	Not applicable
Status	Used to indicate the status of the additional charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. Note: You must not select the Primary option while defining the additional charge pricing rule type.	Not applicable
Skip Non-Members	Used to indicate whether the non-member membership persons should be used for the age based calculations. Note: This field is not applicable for additional charge pricing rule type.	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the additional charge pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Additional Charge 	Yes
Pricing Rule Type Sub Category	Used to indicate the pricing rule type sub category for the additional charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Per Member Per Subscriber Note: You must select the Per Subscriber option while defining the additional charge pricing rule type.	Not applicable

- Enter the required details in the **Main** section.
- Associate the required algorithms with the additional charge pricing rule type:
- Add the required price items for the additional charge pricing rule type.
- Add price item parameters for the additional charge pricing rule type, if required.
- Define characteristics for the additional charge pricing rule type, if required.
- Configure the audit in the additional charge pricing rule type.

12. Click Save.

The additional charge pricing rule type is defined.

Associating an Algorithm with an Additional Charge Pricing Rule Type**Prerequisites**

To associate an algorithm with an additional charge pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1-DERSUBTR** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1-TIERPRFC** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with an additional charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the additional charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Create Subscription Tier - Used to derive the subscription tier for a membership • Tier Based Premium Calculation - Used to calculate the COBRA administrative fees for each eligible member person. • Fetch Bill Period of Billable Charge of Membership - Used to derive the bill period for an account. • Bill Period Time Line Creation - Used to create the SQI based billable charges for each membership and price item combination. • Calculate Proration Factor for Tier Based Pricing Rule - Used to prorate the calculated COBRA administrative fees as per the proration factor. • Fully Insured Charge Creation for Memberships - Used to create the SQI based billable charges for each membership and price item combination. 	<p>Yes</p> <p>Note: This field is required when you are associating an algorithm with the additional charge pricing rule type.</p>
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the additional charge pricing rule type.</p>
Algorithm	<p>Used to specify the algorithm.</p> <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the additional charge pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Derive Subscription Tier for Membership	C1-DERSUBTR	C1-DERSUBTR	Create Subscription Tier
Pricing Rule Type Premium Calculation	C1_TIERPREM	C1_TIERPREM	Tier Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Calculate Proration Factor for Tier Based Pricing Rule	C1-TIERPRFC	C1-TIERPRFC	Calculate Proration Factor for Tier Based Pricing Rule
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Pass Through Billable Charge Creation

3. If you want to associate more than one algorithm with the additional charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the additional charge pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the additional charge pricing rule type.

Adding a Price Item in an Additional Charge Pricing Rule Type

Prerequisites

To add a price item in an additional charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an additional charge pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an additional charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Price Item	Used to indicate the price item that you want to include in the additional charge pricing rule type.	Yes (Conditional)				
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: This field is required when you are adding a rate option and bill to account in an additional charge pricing rule type.</p>				
Rate Option	Used to indicate one or more rate options which are valid for a price item.	Not applicable				
	On clicking the Add (+) icon, the following field appears in a grid:					
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Rate Option
Field Name	Field Description	Mandatory (Yes or No)				
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes				
<p>Note:</p> <p>If you want to define more than one rate option to the price item in an additional charge pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a price item from an additional charge pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in an additional charge pricing rule type, click the Add (+) icon. However, if you want to remove a invoice type from the price item in an additional charge pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in an additional charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an additional charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for an additional charge pricing rule type.

Adding a Price Item Parameter in an Additional Charge Pricing Rule Type

Prerequisites

To add a price item parameter in an additional charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in an additional charge pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an additional charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an additional charge pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in an additional charge pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an additional charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from an additional charge pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for an additional charge pricing rule type.

Defining a Characteristic for an Additional Charge Pricing Rule Type

Prerequisites

To define a characteristic for an additional charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an additional charge pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an additional charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for an additional charge pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for an additional charge pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an additional charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an additional charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an additional charge pricing rule type.

Adding Elements for Audit in an Additional Charge Pricing Rule Type

Prerequisites

To add elements for audit in an additional charge pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit event type defined in the application.

Procedure

To add elements for audit in an additional charge pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing an additional charge pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in an additional charge pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.	Yes
Element Type	Used to indicate the type of audit element for an additional charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Element Name	Used to specify the element name for an additional charge pricing rule type.	Yes
	Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears.	
Element Value	Used to specify the value for an element name.	Not applicable

- Enter the required details in the **Event Management** section.
- If you want to add more than one element for audit in an additional charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from an additional charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Audit Event Type** field.

- Click **Save**.

The elements for audit are added for an additional charge pricing rule type.

Related Topics

Editing an Additional Charge Pricing Rule Type

Prerequisites

To edit an additional charge pricing rule type, you should have:

- Additional charge pricing rule type business object defined in the application.
- Additional charge pricing rule business object defined in the application.

Procedure

To edit an additional charge pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an additional charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with an additional charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pricing rules using the additional charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an additional charge based pricing rule type.
- **Event Management** – Used to configure the audit in an additional charge based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the additional charge pricing rule type.	Not applicable
Description	Used to specify the description for the additional charge pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the additional charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the additional charge pricing rule type. The valid value is: <ul style="list-style-type: none"> • Additional Charge Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the additional charge pricing rule type.	Not applicable
Status	Used to indicate the status of additional charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. Note: The checkbox appears selected, if you have already selected the Primary option while defining an additional charge pricing rule type.	No
Pricing Rule Type Category	Indicates the pricing rule type category for an additional charge pricing rule type. The valid values is: <ul style="list-style-type: none"> • Additional Charge 	No

Tip: Alternatively, you can edit the details of an additional charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.

6. Associate the required algorithms in an additional charge pricing rule type.
7. Add, edit, or remove the required price items in an additional charge pricing rule type.
8. Add, edit, or remove the price item parameters in an additional charge pricing rule type, if required.
9. Add, edit, or remove characteristics for an additional charge pricing rule type, if required.
10. Add, edit, or remove the configuration details of the audit in an additional charge pricing rule type.
11. Click **Save**.

The changes made to the an additional charge pricing rule type are saved.

Deleting an Additional Charge Pricing Rule Type

Procedure

To delete an additional charge based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the additional charge pricing rule type that you want to delete.
A message appears confirming whether you want to delete the additional charge pricing rule type.

Note: You can delete an additional fee pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete an additional charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The additional charge pricing rule type is deleted.

Medicare Part D LIS and LEP Pricing

Oracle Revenue Management and Billing enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium. A new pricing rule type category named **Benefit** and a new business object named **Benefit Pricing Rule Type (C1-PrcRuleTypeBenefit)** are introduced in this release.

The system refers the benefit pricing rule type associated with the Medicare affiliated policy plan to determine the price items which should be charged for LIS and LEP. While creating a benefit pricing rule type, you must the select the **Benefit Pricing Rule Type** business object and set the pricing rule type category to **Benefit**. Here, you must specify the algorithms for the following system events:

System Event	Algorithm
Account and Price Item Derivation	C1_ACCPRIMEM

System Event	Algorithm
Account and Price Item Derivation Post-Processing	C1-BILLPDRV
Billable Charge Creation Post-Processing	C1-FICRETBC
Bill Group Derivation	C1_MEMBGDRV
Premium Calculation	C1_MEDIPREM

In addition, you must specify the price items for which the charge should be created when the benefit sub type is **LIS** or **LEP**. Here, you must specify the parameter based eligibility rule type for the price item. The system then creates a charge for LIS or LEP when the rule is satisfied.

Defining a Benefit Pricing Rule Type

Prerequisites

To define a benefit pricing rule type, you should have:

- Business Object **C1-PrcRuleTypeBenefit** defined for benefit pricing rule type.
- Pricing rule type category for the benefit defined in the application.

Procedure

To define a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the benefit pricing rule type. Note: You can create a benefit pricing rule type using the Benefit Pricing Rule Type business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Benefit Pricing Rule Type** business object.
5. Click **OK**.

The **Benefit Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the benefit pricing rule type.
- **Algorithms** – Used to associate the algorithms with the benefit pricing rule type.
- **Price Items** – Used to add the price items for which you can define the benefit pricing rules using the benefit pricing rule type.

- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the benefit pricing rule type.
- **Event Management** – Used to define the audit event type details for the benefit pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the benefit pricing rule type.	Yes
Description	Used to specify the description for the benefit pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the benefit pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Age Based Pricing Rule • Tier Based Pricing Rule 	Yes
	Note: You can create a benefit pricing rule type using the age based or tier based pricing rule business object.	
Business Object	Indicates the business object using which you are defining the benefit charge pricing rule type.	Not applicable
Status	Used to indicate the status of the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type.	Not applicable
	Note: You must not select the Primary option while defining the benefit pricing rule type.	
Skip Non-Members	Used to indicate whether the non-member membership persons should be used for the age based calculations.	Not applicable
	Note: This field is not applicable for benefit pricing rule type.	
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> • Benefit 	Yes

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a benefit pricing rule type.
8. Associate the required algorithms with the benefit pricing rule type.
9. Add the required price items for the benefit pricing rule type.

10. Add price item parameters for the benefit pricing rule type.
11. Define characteristics for the benefit pricing rule type.
12. Configure the audit in the benefit pricing rule type.
13. Click **Save**.

The benefit pricing rule type is defined.

Associating Algorithms with a Benefit Pricing Rule Type

Prerequisites

To associate algorithms with a benefit pricing rule type, you should have:

- An Algorithm created using an algorithm type.

Procedure

To associate algorithms with a benefit pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining the benefit pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when the algorithm is invoked. The valid values are: <ul style="list-style-type: none"> • Account and Price Item Derivation Post Processing • Account and Price Item Derivation • Billable Charge Creation Pre Processing • Bill Group Derivation • Billable Charge Creation Post Processing • Premium Calculation 	Yes
		Note: This field is required when you are associating an algorithm for the benefit pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm for the benefit pricing rule type.
Algorithm	Used to specify the algorithm. Note: If you select the system event option, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are associating an algorithm for the benefit pricing rule type.

2. Enter the required details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation Post Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and Price Item Derivation for Membership
Billable Charge Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Billable Charge Creation Post Processing	C1-FICRETBC	C1-FICRETBC	Fully-Insured Charge creation for memberships
Premium Calculation	C1_MEDIPREM	C1_MEDIPREM	Medicare Premium Calculation

3. If you want to associate more than one algorithm for the benefit pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the benefit pricing rule type.

Adding a Price Item in a Benefit Pricing Rule Type

Prerequisites

To add a price item in a benefit pricing rule type, you should have:

- Price item defined in the application
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a benefit pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a benefit based pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that you want to include in a benefit pricing rule type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: This field is required when you are adding a bill to account in a benefit pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add (+) icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> </div>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 73 section.	Yes									
	<p>Note:</p> <p>If you want to define more than one invoice type to the price item in a benefit pricing rule type, click the Add (+) icon.</p> <p>However, if you want to remove a invoice type from the price item in a benefit pricing rule type, click the Delete (🗑️) icon corresponding to the Priority field.</p>										
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a benefit pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Price Item** field.

4. Click **Save**.
- The price items are added for a benefit pricing rule type.

Adding a Price Item Parameter in a Benefit Pricing Rule Type

Prerequisites

To add a price item parameter in a benefit pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a benefit pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a benefit pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a benefit pricing rule type for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in a benefit pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a benefit pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a benefit pricing rule type.

Defining a Characteristic for a Benefit Pricing Rule Type

Prerequisites

To define a characteristic for a benefit pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a benefit pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a benefit pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a benefit pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a benefit pricing rule type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a benefit pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a benefit pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a benefit pricing rule type.

Adding Elements for Audit in a Benefit Pricing Rule Type

Prerequisites

To add elements for audit in a benefit pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit event type defined in the application.

Procedure

To add elements for audit in a benefit pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing a benefit pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in a benefit pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.	Yes
Element Type	Used to indicate the type of audit element for a benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Not applicable
Element Name	Used to specify the element name for a benefit pricing rule type. Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Event Management** section.

- If you want to add more than one element for audit in a benefit pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an element for audit in a benefit pricing rule type, click the **Delete (🗑)** icon corresponding to the audit event type.

- Click **Save**.

The elements for audit are added for a benefit pricing rule type

Editing a Benefit Pricing Rule Type

Prerequisites

To edit a benefit pricing rule type, you should have:

- Benefit pricing rule type business object defined in the application.

Procedure

To define a benefit pricing rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit (✎)** icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Benefit Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the benefit pricing rule type.
- Algorithms** – Used to associate the algorithms with the benefit pricing rule type.
- Price Items** – Used to add the price items for which you can define the benefit pricing rules using the benefit pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the benefit pricing rule type.
- Event Management** – Used to define the audit event type details for the benefit pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the benefit pricing rule type.	Not applicable
Description	Used to specify the description for the benefit pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the benefit pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> Age Based Pricing Rule Tier Based Pricing Rule <p>Note: You can create a benefit pricing rule type using the age based or tier based pricing rule business object.</p>	Yes
Business Object	Indicates the business object using which you are defining the benefit charge pricing rule type.	Not applicable
Status	Used to indicate the status of the benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. <p>Note: You must not select the Primary option while defining the benefit pricing rule type.</p>	Not applicable
Skip Non-Members	Used to indicate whether the non-member membership persons should be used for the age based calculations. <p>Note: This field is not applicable for benefit pricing rule type.</p>	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Benefit <p>Note: This is a read-only field.</p>	Not applicable

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are editing a benefit pricing rule type.
- Associate the required algorithms with the benefit pricing rule type:
- Add, edit, or remove the required price items for the benefit pricing rule type.
- Add, edit, or remove the price item parameters for the benefit pricing rule type.
- Add, edit, or remove the characteristics for the benefit pricing rule type.
- Add, edit, or remove the event management details for the benefit pricing rule type.

12. Click Save.

The changes made to the benefit pricing rule type are saved.

Deleting a Benefit Pricing Rule Type**Procedure**

To delete a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the benefit pricing rule type that you want to delete.
A message appears confirming whether you want to delete the benefit pricing rule type.

Note: You can delete a benefit pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a benefit pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The benefit pricing rule type is deleted.

Viewing the Benefit Pricing Rule Type Details

Procedure

To view the details of a benefit pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the benefit pricing rule type whose details you want to view.
The **Pricing Rule Type** zone appears.
5. View the details of the benefit pricing rule type in the **Pricing Rule Type** zone.

Discount Charge Pricing for Retiree Membership

Oracle Revenue Management and Billing enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership through a discount charge pricing rule. A new pricing rule type category named **Discount Charge** and the new business objects named **Discount Charge Pricing Rule Type (C1-PrcRuleTypeDisChg)** and **Discount Charge Pricing Rule (C1-PricingRuleDiscount)** are introduced in this release. This enables you to create the discount charge pricing rules where you can define different base and modifier fees based on the following pricing parameters:

- Membership attributes
- Member person attributes

For the fully-insured group business, you can create or edit a flat or percentage based discount charge pricing rule through a health care inbound message. You can define a discount charge pricing rule at the policy plan, policy, or parent customer level. The following table describes the information that you need to provide in a health care inbound message while defining or editing a discount charge pricing rule on a policy plan, policy, or parent customer:

Entity Type	Entity Identifiers
Policy Plan	Policy, Plan, and Source System
Policy	Policy and Source System
Parent Customer	Person Identifier Type and Person Identifier Value

For the fully-insured individual business, you can create or edit a flat or percentage based discount charge pricing rule through a health product and plan inbound message. You can define a discount charge pricing rule at the health plan

level. The following table describes the information that you need to provide in a health product and plan inbound message while defining or editing a discount charge pricing rule on a health plan:

Entity Type	Entity Identifiers
Health Plan	Health Plan

You can view a discount charge pricing rule defined for the fully-insured group business through the **Customer 360° View** screen. However, at present, you cannot view a discount charge pricing rule defined for the fully-insured individual business from the user interface.

You can create a discount charge pricing rule using a discount charge pricing rule type. You can create a discount charge pricing rule type from the user interface and not through an inbound message. While creating a discount charge pricing rule type, you must select the **Discount Charge Pricing Rule Type** business object and set the pricing rule type category to **Discount Charge**. The discount is always charged per subscriber and not per member, and therefore you must set the pricing rule type sub category to **Per Subscriber**. Here, you must specify the algorithms for the following system events:

System Event	Algorithm
Account and Price Item Derivation	C1_ACCPRIMEM
Account and Price Item Derivation Post-Processing	C1-BILLPDRV
Account and Price Item Derivation Post-Processing	C1-BILLRPCR
Billable Charge Creation Post-Processing	C1-FICRETBC
Bill Group Derivation	C1_MEMBGDRV
Premium Calculation	C1_TIERPREM

In addition, you must specify the price items for which you can create discount charge pricing rules using the discount charge pricing rule type. A discount charge pricing rule type is not a primary pricing rule type. You must include a discount charge pricing rule type as a related pricing rule type in the age-based or tier based pricing rule types which are used for calculating the retiree membership premium. This is because the discount is offered on the retiree membership premium.

If the pricing type in the discount charge pricing rule is set to **Flat**, the system offers a flat discount on the retiree membership. But, if pricing type in the discount charge pricing rule is set to **Percent**, the system calculates and offers the percentage based discount on the retiree membership premium.

Prerequisites

To setup the discount charge pricing for retiree membership, you need to do the following:

- Define the **Discount Charge Pricing Rule Type (C1-PrcRuleTypeDisChg)** business object in the system.
- Define the **Discount Charge Pricing Rule (C1-PricingRuleDiscount)** business object in the system.
- Define the **Discount Charge** pricing rule type category in the system.
- Define the required algorithms in the system.
- Define the required price items and price item parameters in the system.
- Define the required rate options in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup.
- Define the required rule types (where the rule type usage is set to **Price Item Eligibility**).
- Define the required policy, policy plan, and persons in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.

- Define the **Audit Event Type (C1-AuditEventType)** business object in the system.
- Define the required audit event type in the system.
- Define the required characteristic types (where the characteristic entity is set to **Pricing Rule Type**) in the system.

Discount Charge Pricing Rule

The **Discount Charge Pricing Rule** zone displays the details of the discount charge pricing rule for the fully-insured individual or group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional charge pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional charge pricing rule.
Policy Information	Displays information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Health Plan	Displays the health plan. Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.
Health Product	Displays the health product. Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the discount charge pricing rule is created. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.

Column Name	Column Description
Pricing Type	Indicates the type of pricing defined for the discount charge pricing rule. The valid values are: <ul style="list-style-type: none"> Flat Percentage
	Note: This field appears when the Pricing Type option is selected.

- **Pricing Parameters** – Displays the pricing parameter information for a discount charge pricing rule. It contains the following fields:

Column Name	Column Description										
Pricing Parameters	Displays the pricing and parameter details for an additional charge pricing rule. It contains the following columns: <table border="1" data-bbox="576 699 1469 1050"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which an age based eligibility criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.										
Parameter Description	Displays the description of the price item parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.										

- **Modifier Information** – Displays the modifiers based on which discount is offered to an eligible member in an discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the discount charge pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the discount charge pricing rule.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

Defining a Discount Charge Pricing Rule Type

Prerequisites

To define a discount charge pricing rule type, you should have:

- Discount charge pricing rule type business object defined in the application.
- Discount charge pricing rule business object defined in the application.
- Pricing rule type category for the discount charge defined in the application.

Procedure

To define a discount charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a discount charge pricing rule type.	Yes
	Note: You can create a discount charge pricing rule type using the Discount Charge Pricing Rule Type business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Discount Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Discount Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount charge pricing rules using the discount charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount charge pricing rule type.
- **Event Management** – Used to configure the audit in a discount charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the discount charge pricing rule type.	Yes
Description	Used to specify the description for the discount charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Discount Charge Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the discount charge pricing rule type.	Not applicable
Status	Used to indicate the status of the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Primary	Used to indicate whether the discount charge pricing rule type is a primary pricing rule type.	No
	Note: You must not select the Primary option while defining the discount charge pricing rule type.	
Pricing Rule Type Category	Used to indicate the category to which the discount charge pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> Discount Charge 	Yes
Pricing Rule Type Sub Category	Used to indicate the pricing rule type sub category for the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Per Member Per Subscriber 	No
	Note: You must select the Per Subscriber option while defining the discount charge pricing rule type.	

6. Enter the required details in the **Main** section.
7. Associate the required algorithms with the discount charge pricing rule type.
8. Add the required price items in the discount charge pricing rule type.
9. Add the price item parameters in the discount charge pricing rule type, if required.
10. Define characteristics for the discount charge pricing rule type, if required.
11. Configure the audit in the discount charge pricing rule type.
12. Click **Save**.

The the discount charge pricing rule type is defined.

Associating an Algorithm with a Discount Charge Pricing Rule Type**Prerequisites**

To associate an algorithm with a discount charge pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with a discount charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Account and Price Item Derivation - Used to derive the account and price item for a membership. • Account and Price Item Derivation Post-Processing - Used to derive the bill period for the account. • Account and Price Item Derivation Post-Processing - Used to create the bill period timeline for the account. • Account and Price Item Derivation Post-Processing - Used to derive subscription tier for membership, based on the bill period configured on the account. • Bill Group Derivation - Used to derive the bill group, parent customer, and policy for a membership. • Premium Calculation - Used to calculate the premium for each eligible member person. • Pricing Rule Billable Charge Creation - Used to derive the price items for which you can create the SQI based billable charges using the discount charge pricing rule type. 	Yes
		<p>Note: This field is required when you are associating an algorithm with the discount charge pricing rule type.</p>
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)
		<p>Note: This field is required when you are associating an algorithm with the discount charge pricing rule type.</p>
Algorithm	<p>Used to specify the algorithm.</p> <p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	Yes (Conditional)
		<p>Note: This field is required when you are associating an algorithm with the discount charge pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Account and Price Item Derivation Post-Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Account and Price Item Derivation Post-Processing	C1-DERSUBTR	C1-DERSUBTR	Derive Subscription Tier for Membership
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Premium Calculation	C1_TIERPREM	C1_TIERPREM	Tier Based Premium Calculation
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully-Insured Charge creation for Memberships

- If you want to associate more than one algorithm with the discount charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the discount charge pricing rule type, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the discount charge pricing rule type.

Adding a Price Item in a Discount Charge Pricing Rule Type

Prerequisites

To add a price item in a discount charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a discount charge pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the discount charge pricing rule type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are adding a rate option and bill to account in a discount charge pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the Add (➕) icon, the following field appears in a grid:</p> <table border="1" data-bbox="516 762 1219 991"> <thead> <tr> <th data-bbox="516 762 656 877">Field Name</th> <th data-bbox="656 762 1078 877">Field Description</th> <th data-bbox="1078 762 1219 877">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="516 877 656 991">Rate Option</td> <td data-bbox="656 877 1078 991">Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td data-bbox="1078 877 1219 991">Yes</td> </tr> </tbody> </table> <p>Note:</p> <p>If you want to define more than one rate option to the price item in a discount charge pricing rule type, click the Add (➕) icon.</p> <p>However, if you want to remove a price item from a discount charge pricing rule type, click the Delete (🗑️) icon corresponding to the Rate Option field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the Add () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.</td> <td>Yes</td> </tr> </tbody> </table> <p>Note: The Search () icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</p> <p>Note: If you want to define more than one invoice type to the price item in a discount charge pricing rule type, click the Add () icon. However, if you want to remove a invoice type from the price item in a discount charge pricing rule type, click the Delete () icon corresponding to the Priority field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 73 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									
Sponsored	<p>Used to indicate that the system should consider the sponsor billing arrangement while creating and billing the charge for the price item.</p> <p>Note: If the Sponsored option is not selected, the system considers retiree billing arrangement while creating and billing the charge for the price item.</p>	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount charge pricing rule type, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount charge pricing rule type, click the **Delete** () icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a discount charge pricing rule type.

Adding a Price Item Parameter in a Discount Charge Pricing Rule Type

Prerequisites

To add a price item parameter in a discount charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a discount charge pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a discount charge pricing for the price item.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search (🔍) icon corresponding to the Price Item Parameter field, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the Price Item Parameter field.</p>	<p>Note: This field is required when you are adding a price item parameter in a discount charge pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a discount charge pricing rule type.

Defining a Characteristic for a Discount Charge Pricing Rule Type

Prerequisites

To define a characteristic for a discount charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount charge pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Pricing Rule Type .	Note: This field is required when you are defining a characteristic for a discount charge pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a discount charge pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a discount charge pricing rule type.

Adding Elements for Audit in a Discount Charge Pricing Rule Type

Prerequisites

To add elements for audit in a discount charge pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit event type defined in the application.

Procedure

To add elements for audit in a discount charge pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing a discount charge pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in a discount charge pricing rule type. Note: The Search (🔍) icon appears corresponding to the Audit Event Type field. On clicking the Search (🔍) icon corresponding to the Audit Event Type field, the Audit Event Type Search window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the Audit Event Type field.	Yes
Element Type	Used to indicate the type of audit element for a discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Element Name	Used to specify the element name for a discount charge pricing rule type.	Yes
	Note: The Search (🔍) icon appears corresponding to the Element Name field. On clicking the Search (🔍) icon corresponding to the Element Name field, the Audit Event Type Element Name Search window appears.	
Element Value	Used to specify the value for an element name.	Yes
	Note: If you select either Business Object Status or Characteristic option from the Element Type list, the Search (🔍) icon appears corresponding to the Element Value field. On clicking the Search (🔍) icon corresponding to the Element Value field, the Audit Event Type Element Value Search window appears.	

- Enter the required details in the **Event Management** section.
- If you want to add more than one element for audit in a discount charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an element for audit from a discount charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Audit Event Type** field.

- Click **Save**.

The elements for audit are added for a discount charge pricing rule type.

Editing a Discount Charge Pricing Rule Type

Prerequisites

To edit a discount charge pricing rule type, you should have:

- Discount charge pricing rule type business object defined in the application.
- Discount charge pricing rule business object defined in the application.

Procedure

To edit a discount charge pricing rule type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a discount charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pricing rules using the discount charge pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a discount charge based pricing rule type.
- **Event Management** – Used to configure the audit in a discount charge based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the discount charge pricing rule type.	Not applicable
Description	Used to specify the description for the discount charge pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the discount charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> • Discount Charge Pricing Rule 	Yes
Business Object	Indicates the business object using which you are defining the discount charge pricing rule type.	Not applicable
Status	Used to indicate the status of discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Primary	Used to select whether the discount charge pricing rule type is a primary pricing rule type.	No
	Note: You must not select the Primary option while editing the discount charge pricing rule type.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Indicates the pricing rule type category for a discount charge pricing rule type. The valid value is: <ul style="list-style-type: none"> Discount Charge 	No
Pricing Rule Type Sub Category	Used to indicate the pricing rule type sub category for the discount charge pricing rule type. The valid values are: <ul style="list-style-type: none"> Per Member Per Subscriber 	No
	Note: You must select the Per Subscriber option while defining the discount charge pricing rule type.	

Tip: Alternatively, you can edit the details of a discount charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the required algorithms in a discount charge pricing rule type.
- Add, edit, or remove the required price items in a discount charge pricing rule type.
- Add, edit, or remove the price item parameters in a discount charge pricing rule type, if required.
- Add, edit, or remove characteristics for a discount charge pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in a discount charge pricing rule type.
- Click **Save**.

The changes made to the discount charge pricing rule type are saved.

Deleting a Discount Charge Pricing Rule Type

Procedure

To delete a discount charge pricing rule type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the discount charge pricing rule type that you want to delete.

A message appears confirming whether you want to delete the discount charge pricing rule type.

Note: You can delete a discount charge pricing rule type when it is not yet used in the system.

Tip: Alternatively, you can delete a discount charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The discount charge pricing rule type is deleted.

Viewing the Discount Charge Pricing Rule Details

Procedure

To view the details of a discount charge pricing rule:

1. Do either of the following:

If you want to...	Then...
View the discount charge pricing rule for a Fully-Insured Individual Membership	<ol style="list-style-type: none"> 1. Search for the fully-insured individual membership in the Customer 360° View screen. 2. In the Search Results section, click the View () icon corresponding to the fully-insured individual whose pricing rule details you want to view. The Policy tab appears in the Customer 360° Information screen.
View the discount charge pricing rule for a Fully-Insured Group Membership	<ol style="list-style-type: none"> 1. Search for the fully-insured group membership in the Customer 360° View screen. 2. In the Search Results section, click the View () icon corresponding to the fully-insured group membership whose pricing rule details you want to view. The Policy tab appears in the Customer 360° Information screen.

2. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

3. In the **Fully-Insured Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the fully-insured pricing rule type whose details you want to view.

The **Pricing Rule (Discount Charge)** screen appears. It contains the following zone:

- **Discount Charge Pricing Rule** – Displays the discount charge pricing rule details for an individual membership. It contains the following sections:
 - **Pricing Information** – Displays the basic details about the discount charge pricing rule.
 - **Pricing Parameters** – Displays the pricing parameters defined for the discount charge pricing rule.
 - **Characteristics** – Displays the characteristics defined for the discount charge pricing rule.

4. View the basic details of the discount charge pricing rule in the **Pricing Information** section.
5. View the pricing parameters defined for the discount charge pricing rule in the **Pricing Parameters** section.
6. View the characteristics of the discount charge pricing rule in the **Characteristics** section.

Pricing Rule Inactivation

Earlier, you were not able to inactivate a pricing rule which is referred by a group or individual membership for the charge calculation. Now, the system enables you to change the status of the age based, tier based, additional charge, and discount charge pricing rules from **Active** to **Inactive** even when it is referred by a membership for the charge calculation. On inactivating a pricing rule, the system creates an audit event in the system.

A new batch named **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** is introduced in this release. You must execute the **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** batch in between the following batches - **Audit Event Process Monitor (C1-AUDEV)** and **Identify Entities for Repricing (C1-REPC1)**. The **Process Inactivated Fully-Insured Pricing Rule (C1-CBIPR)** batch considers the repricing entity details records from the **CI_REPRC_ENTITY_DTL** table which are in the **Discard** status due to pricing rule inactivation. It then cancels the billable charges and bill segments (if any) which are created using the pricing rule which you have inactivated. In addition, it changes the status of the records in the **CI_PRCE_CALC** table to **I** where the inactivated pricing rule is referred.

If you inactivate a primary pricing rule, the system will cancel the billable charges and bill segments (if any) which are created using the related pricing rules. If you inactivate a rate guarantee pricing rule, the system will cancel the billable charges and bill segments (if any) which are created using the rate guarantee pricing rule.

Chapter 39

Fully-Insured Group Billing

Topics:

- [Audit Framework for Fully-Insured Group Health Insurance Billing](#)
- [Premium Proration Rules](#)

Audit Framework for Fully-Insured Group Health Insurance Billing

Oracle Revenue Management and Billing calculates the membership premium when you add a membership to a policy plan. It also enables you to recalculate the membership premium in the following scenarios:

- A member person is added or removed from the membership.
- The fields, characteristics, or statuses which are monitored for the auditing purposes are updated at the membership, member person, or pricing rule level.
- A pricing rule is added or updated for the policy plan.
- The derivation and pricing parameters are defined or updated for a bill group.

The membership premium calculation and recalculation (i.e. repricing) is implemented using the **Entity Audit** feature. The entity audit framework is already configured for the following business objects:

- C1-Membership
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased
- C1-BillLevel

To configure the entity audit framework for the above listed business objects, the following changes are made to these business objects:

- The **Eligible for Audit Event** option type is set to **Y** in
- An algorithm created using the **C1-READEVNT** algorithm type is already attached to the **Audit** system event of the **C1-PricingRuleTierBased**, **C1-PricingRuleAgeBased**, and **C1-BillLevel** business objects.
- An algorithm created using the **C1-FIAUDEV** algorithm type is already attached to the **Audit** system event of the **C1-Membership** and **C1_PERSON_BO** business objects.

But, the entity audit framework will work when you define an active audit event type for the above listed business objects. For more information on how to create an audit event type, see [Defining an Audit Event Type](#) on page 3360. While creating an audit event type for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects, you need to attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the **Audit Event Processing** system event of the respective audit event type. And, while creating an audit event type for the **C1-BillLevel** business object, you need to attach an algorithm created using the **C1-AUDBILLVL** algorithm type to the **Audit Event Processing** system event of the audit event type.

In addition, you need to list the following in the pricing rule types where the category is set to **Age Based** and **Tier Based**:

- Audit event types of the **C1-Membership** and **C1_PERSON_BO** business objects using which the audit event should be created whenever a membership and member person is added, updated, or removed from the policy plan, respectively.
- Elements of the **C1-Membership** and **C1_PERSON_BO** business objects for which auditing is required.

Note:

At present, you cannot use an audit event type of the **C1-Membership** and **C1_PERSON_BO** business objects in the **Age Based** and **Tier Based** pricing rule types when the **Update All** option is selected in the audit event type. Therefore, we recommend you to select an audit event type of the **C1-Membership** and **C1_PERSON_BO** business objects where the **Update All** option is not selected.

The system creates an audit event whenever the membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age based or tier based pricing rule types.

You can also configure the entity audit feature for any custom membership or person business objects.

The way in which the audit events are created and processed for a pricing rule, membership, and member person is different. While creating an audit event, the system checks whether an audit event for the entity with the same effective date already exists in the **Pending** status. If so, the system does not create a new audit event for the entity. Instead, the system adds a log in the existing audit event.

How the audit events are created and processed for the derivation and pricing parameters of a bill group	Bill Group Derivation and Pricing Parameters Audit Process on page 3175

Age Based and Tier Based Pricing Rules Audit Process

If you add or edit an age based or tier based pricing rule, the system checks whether an active audit event type exists for the **C1-PricingRuleAgeBased** or **C1-PricingRuleTierBased** business object, respectively. If an active audit event type exists for the business object, the system creates an audit event for the pricing rule using the audit event type. The audit event is created in the **Pending** status. Note that the system creates one audit event for the pricing rule irrespective of the number of changes made to the pricing rule. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the effective date is set to the pricing rule's start date.

On executing the **Audit Event Process Monitor (C1-AUDEV)** batch, the system considers the audit events in the **Pending** or **Error** status. By default, it considers the audit events in the **Pending** status. The system checks whether the **C1-AUDEVMPR** algorithm is attached to the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, it identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates a repricing entity detail record for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event is created while adding the following pricing rule:

Audit Event	AE1	AE2
Pricing Rule	PR1	PR2
Pricing Rule Type Using which the Pricing Rule is Created	PRT1	PRT3

Pricing Rule Start Date	01-01-2019	01-01-2019
Policy Plan for which the Pricing Rule is Defined	PP1	PP2
Pricing Rule Types Associated with the Policy Plan	PRT1, PRT2, PRT3	PRT3
Memberships which Belong to the Policy Plan	M1, M2, M3, and M4	M11 and M12

For the AE1 audit event, the system creates four repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-01-2019
- M2, PRT1, 01-01-2019
- M3, PRT1, 01-01-2019
- M4, PRT1, 01-01-2019

And, for the AE2 audit event, the system creates two repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M11, PRT3, 01-01-2019
- M12, PRT3, 01-01-2019

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Membership Audit Process

If you add or edit a membership, the system checks whether an active audit event type exists for the **C1-Membership** business object. If an active audit event type exists for the business object, the system creates the audit event using the audit event type. The system creates the audit event whenever a membership is added to a policy plan and dependent member person is added to a membership. It also creates the audit event whenever the membership and member person details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age based or tier based pricing rule types is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. membership or member person whichever is updated) date range.

The audit event is created in the **Pending** status. An effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the system creates distinct audit events in the following scenarios:

Scenario	System Behavior
A membership is added to a policy plan	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's start date.</p> <p>For example, two memberships named M1 (with the start date as 01-01-2020) and M2 (with the start date as 01-15-2020) are added to a policy plan named PP1. In such case, the system will create two audit events — one for M1 with the effective date as 01-01-2020 and another for M2 with the effective date as 01-15-2020.</p>

Scenario	System Behavior
A dependent member person is added to a membership	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the dependent member person's start date.</p> <p>For example, one dependent member person named MP1 (with the start date as 06-05-2020) is added to the M1 membership and another dependent member person named MP2 (with the start date as 06-10-2020) is added to the M2 membership. In such case, the system will create two audit events — one for M1 with the effective date as 06-05-2020 and another for M2 with the effective date as 06-10-2020.</p>
A dependent member person is removed from a membership	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the dependent member person's start date.</p> <p>For example, one dependent member person named MP4 (with the start date as 9-15-2020) is removed from the M1 membership. In such case, the system will create one audit event for M1 with the effective date as 9-15-2020.</p>
A membership is added to a policy plan along with a dependent member person	<p>Multiple audit events are created for the membership – one where the effective date is set to membership's start date, another where the effective date is set to dependent member person's start date, and third where the effective date is set to dependent member person's end date +1 Day. Note that the second audit event is created when the dependent member person's start date is later than membership's start date. And, the third audit event is created when the dependent member person's end date is earlier than membership's end date.</p> <p>For example, one membership named M1 (with the start date as 01-01-2020 and end date as 12-31-2020) is added with two member persons — MP1 who is a main subscriber and MP2 (with the start date as 03-01-2020 and end date as 10-31-2020) who is a dependent member person. In such case, the system will create three audit events for M1 — one with the effective date as 01-01-2020, another with the effective date as 03-01-2020, and third with the effective date as 11-01-2020 (i.e. 10-31-2020 + 1 Day).</p>

Scenario	System Behavior																				
<p>Membership characteristics are added or updated in the system</p>	<p>Multiple audit events are created for the membership – one for each set of membership characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the membership’s characteristic is effective.</p> <p>For example, the following characteristics are added or updated for the M1 membership:</p> <table border="1" data-bbox="732 436 1463 848"> <thead> <tr> <th>Characteristic</th> <th>Effective Date</th> <th>Action</th> </tr> </thead> <tbody> <tr> <td>Maximum Number of Dependents</td> <td>9-15-2020</td> <td>Add</td> </tr> <tr> <td>Age Calculation Date Basis</td> <td>9-20-2020</td> <td>Edit</td> </tr> <tr> <td>Young Adult Max Age Limit</td> <td>9-15-2020</td> <td>Add</td> </tr> <tr> <td>Young Adult Inclusion Applicability</td> <td>9-20-2020</td> <td>Edit</td> </tr> </tbody> </table> <p>In such case, the system will create two audit events for M1 — one with the effective date as 9-15-2020 and another with the effective date as 9-20-2020.</p>	Characteristic	Effective Date	Action	Maximum Number of Dependents	9-15-2020	Add	Age Calculation Date Basis	9-20-2020	Edit	Young Adult Max Age Limit	9-15-2020	Add	Young Adult Inclusion Applicability	9-20-2020	Edit					
Characteristic	Effective Date	Action																			
Maximum Number of Dependents	9-15-2020	Add																			
Age Calculation Date Basis	9-20-2020	Edit																			
Young Adult Max Age Limit	9-15-2020	Add																			
Young Adult Inclusion Applicability	9-20-2020	Edit																			
<p>Member person characteristics are added or updated in the system</p>	<p>Multiple audit events are created for the membership – one for each set of member person’s characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the member person’s characteristic is effective.</p> <p>For example, the following characteristics are added or updated for the member persons in the M1 membership:</p> <table border="1" data-bbox="732 1220 1463 1757"> <thead> <tr> <th>Member Person</th> <th>Characteristic</th> <th>Effective Date</th> <th>Action</th> </tr> </thead> <tbody> <tr> <td>MP1</td> <td>Maximum Number of Dependents</td> <td>9-15-2020</td> <td>Add</td> </tr> <tr> <td>MP1</td> <td>Age Calculation Date Basis</td> <td>9-20-2020</td> <td>Edit</td> </tr> <tr> <td>MP2</td> <td>Young Adult Max Age Limit</td> <td>9-15-2020</td> <td>Add</td> </tr> <tr> <td>MP2</td> <td>Young Adult Inclusion Applicability</td> <td>9-20-2020</td> <td>Edit</td> </tr> </tbody> </table> <p>In such case, the system will create two audit events for M1 — one with the effective date as 9-15-2020 and another with the effective date as 9-20-2020.</p>	Member Person	Characteristic	Effective Date	Action	MP1	Maximum Number of Dependents	9-15-2020	Add	MP1	Age Calculation Date Basis	9-20-2020	Edit	MP2	Young Adult Max Age Limit	9-15-2020	Add	MP2	Young Adult Inclusion Applicability	9-20-2020	Edit
Member Person	Characteristic	Effective Date	Action																		
MP1	Maximum Number of Dependents	9-15-2020	Add																		
MP1	Age Calculation Date Basis	9-20-2020	Edit																		
MP2	Young Adult Max Age Limit	9-15-2020	Add																		
MP2	Young Adult Inclusion Applicability	9-20-2020	Edit																		

Scenario	System Behavior
A set of membership fields except membership start and end dates is updated in the system	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's start date.</p> <p>For example, the external membership ID of the M1 membership (with the start date as 9-15-2020) is changed. In such case, the system will create one audit event for M1 with the effective date as 9-15-2020.</p>
The membership start date is updated in the system	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's new start date.</p> <p>For example, the start date of the M1 membership is changed from 9-15-2020 to 9-20-2020. In such case, the system will create one audit event for M1 with the effective date as 9-20-2020.</p>
The membership end date is updated in the system	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to membership's new end date.</p> <p>For example, the end date of the M1 membership is changed from 12-31-2020 to 11-30-2020. In such case, the system will create one audit event for M1 with the effective date as 11-30-2020.</p>
A set of member person's fields except member person start and end dates is updated in the system	<p>One audit event is created for the membership. Here, the effective date in the audit event is set to the member person's start date.</p> <p>For example, the relationship type and status of the MP1 member person (with the start date as 01-01-2020) in the M1 membership is changed. In such case, the system will create one audit event for M1 with the effective date as 01-01-2020.</p>
The dependent member person's start date is updated in the system	<p>Three audit events are created for the membership – one where the effective date is set to the dependent member person's previous start date, another where the effective date is set to the dependent member person's new start date, and third where the effective date is set to dependent member person's end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the third audit event for the membership. In such scenario, it simply creates first two audit events.</p> <p>For example, the Mike's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-15-2019 – 09-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create three audit events for M1 – one with effective date as 04-01-2019, another with effective date as 01-15-2019, and third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to Person. Let us assume that in the above example a characteristic for Mike was effective from 02-01-2019. In such case, the system creates three audit events for the M1 membership (with the effective dates as mentioned above) and one audit event for the person (i.e. Mike) where the effective date is set to 02-01-2019.</p>

Scenario	System Behavior
<p>The dependent member person's end date is updated in the system</p>	<p>Two audit events are created for the membership – one where the effective date is set to dependent member person's previous end date + 1 Day and another where the effective date is set to dependent member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the second audit event for the membership. In such scenario, it simply creates the first audit event.</p> <p>For example, the Garry's effective date range is changed from 04-01-2019 – 09-30-2019 to 04-01-2019 – 12-31-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create one audit event for M1 with the effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day). It will not create another audit event for M1 because the derived effective date (i.e. 12-31-2019 + 1 Day = 01-01-2020) is later than membership end date (i.e. 12-31-2019).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to Person. Let us assume that in the above example a characteristic for Garry was effective from 11-01-2019. In such case, the system creates one audit event for M1 membership (with the effective date as mentioned above) and another audit event for the person (i.e. Garry) where the effective date is set to 11-01-2019.</p>

Scenario	System Behavior
<p>The dependent member person's start and end dates are updated in the system</p>	<p>Four audit events are created for the membership – one where the effective date is set to the dependent member person's previous start date, another where the effective date is set to the dependent member person's new start date, third where the effective date is set to dependent member person's previous end date + 1 Day, and fourth where the effective date is set to dependent member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the fourth audit event for the membership. In such scenario, it simply creates the first three audit events.</p> <p>For example, the Juliet's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-01-2019 – 11-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create four audit events for M1 – one with effective date as 04-01-2019, another with effective date as 01-01-2019, third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day), and fourth with effective date as 12-01-2019 (i.e. 11-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to Person. Let us assume that in the above example two characteristics of Juliet were effective from 03-01-2019 and 10-01-2019, respectively. In such case, the system creates four audit events for M1 membership (with the effective dates as mentioned above), fifth audit event for the person (i.e. Juliet) where the effective date is set to 03-01-2019, and sixth audit event for the person (i.e. Juliet) where the effective date is set to 10-01-2019.</p>

For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event is created while adding the following memberships:

Audit Event	AE11	AE12
Membership	M1	M2
Membership Start Date	01-03-2019	01-02-2019
Policy Plan to which Membership Belongs	PP11	PP12
Pricing Rules Defined on the Policy Plan	PR1 (Using PRT1), PR2 (Using PRT2), PR3 (Using PRT3)	PR11 (Using PRT1), PR13 (Using PRT2)
Pricing Rule Types Associated with the Policy Plan	PRT1, PRT2, PRT3	PRT1, PRT2

For the AE11 audit event, the system creates three repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-03-2019
- M1, PRT2, 01-03-2019
- M1, PRT3, 01-03-2019

And, for the AE12 audit event, the system creates two repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M2, PRT1, 01-02-2019
- M2, PRT2, 01-02-2019

Note: If the audit event's effective date is earlier than the member person's start date, the system sets the effective date in the repricing entity detail record to the member person's start date. Therefore, in such scenarios, the effective date of the audit event and repricing entity detail records will be different.

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Person Audit Process

If you add or edit a person, the system checks whether an active audit event type exists for the **C1_PERSON_BO** business object. If an active audit event type exists for the business object, the system creates an audit event for the person using the audit event type. The audit event is created in the **Pending** status. An effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the system creates distinct audit events in the following scenarios:

Scenario	System Behavior																
Person fields are updated in the system.	<p>One audit event is created for the person. Here, the effective date in the audit event is set to the member person's start date.</p> <p>For example, the following person identifier type is defined for MP1, MP2, and MP3 who are members of the M1 membership:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Member Person</th> <th>Member Person Start Date</th> <th>Person Identifier Type</th> <th>Person Identifier</th> </tr> </thead> <tbody> <tr> <td>MP1</td> <td>03-10-2020</td> <td>Social Security Number</td> <td>987-65-4320</td> </tr> <tr> <td>MP2</td> <td>03-15-2020</td> <td>Social Security Number</td> <td>987-65-4321</td> </tr> <tr> <td>MP3</td> <td>03-25-2020</td> <td>Social Security Number</td> <td>987-65-4322</td> </tr> </tbody> </table> <p>In such case, the system will create three audit events — one for MP1 with the effective date as 03-10-2020, another for MP2 with the effective date as 03-15-2020, and third for MP3 with the effective date as 03-25-2020.</p>	Member Person	Member Person Start Date	Person Identifier Type	Person Identifier	MP1	03-10-2020	Social Security Number	987-65-4320	MP2	03-15-2020	Social Security Number	987-65-4321	MP3	03-25-2020	Social Security Number	987-65-4322
Member Person	Member Person Start Date	Person Identifier Type	Person Identifier														
MP1	03-10-2020	Social Security Number	987-65-4320														
MP2	03-15-2020	Social Security Number	987-65-4321														
MP3	03-25-2020	Social Security Number	987-65-4322														

Scenario	System Behavior																				
Person characteristics are added or updated in the system.	<p>Multiple audit events are created for the person – one for each set of person characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the person’s characteristic is effective.</p> <p>For example, the following characteristics are added or updated for the persons who are members of the M1 membership:</p> <table border="1"> <thead> <tr> <th>Member Person</th> <th>Characteristic</th> <th>Effective Date</th> <th>Action</th> </tr> </thead> <tbody> <tr> <td>MP1</td> <td>Marital Status</td> <td>09-15-2020</td> <td>Add</td> </tr> <tr> <td>MP1</td> <td>Garble Data</td> <td>09-20-2020</td> <td>Edit</td> </tr> <tr> <td>MP2</td> <td>Marital Status</td> <td>09-15-2020</td> <td>Add</td> </tr> <tr> <td>MP2</td> <td>Garble Data</td> <td>09-20-2020</td> <td>Edit</td> </tr> </tbody> </table> <p>In such case, the system will create four audit events — one for MP1 with the effective date as 09-15-2020, another for MP1 with the effective date as 09-20-2020, third for MP2 with the effective date as 09-15-2020, and fourth for MP2 with the effective date as 09-20-2020.</p>	Member Person	Characteristic	Effective Date	Action	MP1	Marital Status	09-15-2020	Add	MP1	Garble Data	09-20-2020	Edit	MP2	Marital Status	09-15-2020	Add	MP2	Garble Data	09-20-2020	Edit
Member Person	Characteristic	Effective Date	Action																		
MP1	Marital Status	09-15-2020	Add																		
MP1	Garble Data	09-20-2020	Edit																		
MP2	Marital Status	09-15-2020	Add																		
MP2	Garble Data	09-20-2020	Edit																		

For each audit event, the system identifies the memberships in which the person is added as a member person. It identifies the policy plan to which each membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event named AE1 is created while updating the MP1 person:

Audit Event	AE1		
Membership to which MP1 belongs	M1	M2	M3
Member Person’s Start Date	01-01-2019	01-01-2019	01-07-2019
Policy Plan to which Membership Belongs	PP1	PP2	PP3
Pricing Rules Defined on the Policy Plan	PR1 (Using PRT1), PR2 (Using PRT2)	PR3 (Using PRT3), PR4 (Using PRT3)	PR5 (Using PRT5), PR6 (Using PRT6)
Pricing Rule Types Associated with the Policy Plan	PRT1, PRT2	PRT3, PRT4	PRT5, PRT6

For the AE1 audit event, the system creates five repricing entity detail records with the following combinations in the **CI_REPRC_ENTITY_DTL** table:

- M1, PRT1, 01-01-2019
- M1, PRT2, 01-01-2019
- M2, PRT3, 01-01-2019
- M3, PRT5, 01-07-2019
- M3, PRT6, 01-07-2019

Note: If the audit event's effective date is earlier than the member person's start date, the system sets the effective date in the repricing entity detail record to the member person's start date. Therefore, in such scenarios, the effective date of the audit event and repricing entity detail records will be different.

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Medicare Benefit Audit Process

Information will be available shortly!

Bill Group Derivation and Pricing Parameters Audit Process

If you add or edit the derivation and pricing parameters for a bill group, the system checks whether an active audit event type exists for the **C1-BillLevel** business object. If an active audit event type exists for the business object, the system creates an audit event for the bill level ID (i.e. bill group and sort ID combination) using the audit event type. The audit event is created in the **Pending** status. Note that the system creates one audit event for a bill group and sort ID combination irrespective of the number of changes made to the bill group and sort ID combination. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the effective date is set to the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.

For example, a parent customer named PC1 has two bill groups — BG1 and BG2 and the derivation and pricing parameters are edited for the following combinations:

Bill Group	Sort ID	Effective Date	Action
BG1	10	01-01-2019	Edit
BG1	20	07-01-2019	Add
BG2	10	01-01-2019	Edit
BG2	20	05-01-2019	Add

In such case, the system will create four audit events — one for BG1 and 10 combination with the effective date as 01-01-2019, another for BG1 and 20 combination with the effective date as 07-01-2019, third for BG2 and 10 combination with the effective date as 01-01-2019, and fourth for BG2 and 20 combination with the effective date as 05-01-2019.

On executing the **Audit Event Process Monitor (C1-AUDEV)** batch, the system considers the audit events in the **Pending** or **Error** status. By default, it considers the audit events in the **Pending** status. The system checks whether the **C1-AUDBILLVL** algorithm is attached to the respective audit event type. If the **C1-AUDBILLVL** algorithm is attached to the audit event type, it identifies the parent customer of the bill group for whom the derivation and pricing parameters are defined or edited. It then considers all policies of the parent customer and its bill groups and extracts a list of memberships defined on the respective policy plans. It also identifies the active pricing rules on these policy plans and the pricing rule types using which these active pricing rules are created in the system. The system then checks whether the characteristic types specified in the bill group derivation algorithm on each pricing rule type are defined on any extracted list of membership. If so, the system then checks whether the characteristic values match the derivation and pricing parameters of the bill group. If one or more characteristic values do not match the derivation and pricing parameters of the bill group, the system creates a repricing entity detail record for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, a parent customer named PC1 has two bill groups — BG1 and BG2. The

•

a parent customer named PC1 has a bill group named BG1 whose the derivation and pricing parameters are changed as mentioned below:

Bill Group	Sort ID	Effective Date	Derivation and Pricing Parameter	From	To
BG1	10	01-01-2019	Parameter 1	Western	Western
			Parameter 2	Active	Active
			Parameter 3	Grade A	IC01
			Parameter 4	-	-
			Source System	X	X
BG1	20	01-01-2019	Parameter 1	Western	Western
			Parameter 2	Active	Active
			Parameter 3	Grade B	IC02
			Parameter 4	-	-
			Source System	X	X
BG2	10	01-01-2019	Parameter 1	Western	Western
			Parameter 2	Active	Active
			Parameter 3	IC01	Grade A
			Parameter 4	-	-
			Source System	X	X
BG2	20	01-01-2019	Parameter 1	Western	Western
			Parameter 2	Active	Active
			Parameter 3	IC02	Grade B
			Parameter 4	-	-
			Source System	X	X

In such case, the system creates four audit events — AE1 for BG1 and 10 combination with the effective date as 01-01-2019, AE2 for BG1 and 20 combination with the effective date as 01-01-2019, AE3 for BG2 and 10 combination with the effective date as 01-01-2019, and AE4 for BG2 and 20 combination with the effective date as 01-01-2019.

Now, let us assume that...

- PC1 has two policies — P1 (where no bill group is associated) and P2 (where BG1 is associated)
- BG1 has one policy named P2 (where PC1 is the policy holder)

- P1 has one plan named PP1 and P2 has one plan named PP2
- PP1 has two memberships — M1 and M2,
- PP2 has three memberships — M3, M4, and M5
- PRT1 and PRT2 are associated with PP1
- PRT3 is associated with PP2
- PP1 has two active pricing rules — PR1 (which is created using PRT1) and PR2 (which is created using PRT2)
- PP2 has one active pricing rule — PR3 (which is created using PRT3)
- The following characteristics are defined for the above mentioned memberships:

Membership	Effective Date	Characteristic Type	Characteristic Value
M1	03-01-2019	Location	Western
		Employee Status	Active
		Job Code	Grade A
		Source System	X
M2	05-10-2019	Location	Western
		Employee Status	Active
		Job Code	IC01
		Source System	X
M3	05-20-2019	Location	Western
		Employee Status	Active
		Job Code	Grade B
		Source System	X
M4	07-20-2019	Location	Western
		Employee Status	Active
		Job Code	IC02
		Source System	X
M5	08-01-2019	Location	Western
		Employee Status	Active
		Job Code	Grade A
		Source System	X

In such case, the system will create the following repricing entity detail records for each audit event in the **CI_REPRC_ENTITY_DTL** table:

Audit Event	The system will create the repricing entity detail records with the following combinations...
AE1	<ul style="list-style-type: none"> • M2, PRT1, 01-01-2019 • M2, PRT2, 01-01-2019
AE2	<ul style="list-style-type: none"> • M4, PRT3, 01-01-2019
AE3	<ul style="list-style-type: none"> • M1, PRT1, 01-01-2019 • M1, PRT2, 01-01-2019 • M5, PRT3, 01-01-2019
AE4	<ul style="list-style-type: none"> • M3, PRT3, 01-01-201

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

Premium Proration Rules

Until now, the system used the service quantity rule named **PR** attached to the **HCPREMP** rate schedule to calculate the proration factor for the membership premium. Now, Oracle Revenue Management and Billing enables you to prorate the membership premium using the proration rules defined on the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. In a proration rule, you need to specify the following:

- **Effective Date** – Used to specify the date from when the proration rule is effective. However, the system considers the latest proration rule and not the effective proration rule while prorating the membership premium.
- **Proration Event Type** – Used to indicate the event when the membership premium should be prorated. The valid values are:
 - **Enrollment** – Used to indicate that you want to prorate the membership premium on enrollment based on the specified proration type.
 - **Termination** – Used to indicate that you want to prorate the membership premium on termination based on the specified proration type.
 - **New Born** – Used to indicate that you want to prorate the membership premium on new born enrollment based on the specified proration type.
 - **Same Month Enrollment and Termination** – Used to indicate that you want to prorate the membership premium when the member person enrolls and terminates in the same month based on the specified proration type.
- **Proration Type** – Used to indicate how you want to prorate the membership premium. The valid values are:
 - **Daily** – Used to indicate that you want to prorate the membership premium from the day the proration event has occurred.
 - **Mid-Month** – Used to indicate that you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: Bill Period Start Date – Specified Number of Days. For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person

is terminated from the membership before the proration date, the system will not charge the premium for the member person.

- **Full Month** – Used to indicate that the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person.
- **Waiver** – Used to indicate that the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership.
- **Coverage Days**– Used to indicate that you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.
- **Enrollment** – Used to indicate that you want to prorate the premium for a member person using the proration type of the enrollment event. You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.
- **Termination** - Used to indicate that you want to prorate the premium for a member person using the proration type of the termination event. You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.
- **Number of Days** – Used to specify the number of days to determine the cutoff date when the proration type is set to Mid-Month or Coverage Days.

The following table indicates the proration types which are applicable for a particular proration event:

Proration Event	Proration Type
Enrollment	Daily, Mid-Month, Full Month, Waiver
Termination	Daily, Mid-Month, Full Month, Waiver
New Born	Daily, Mid-Month, Full Month, Waiver
Same Month Enrollment and Termination	Coverage Days, Enrollment, Termination, Waiver

Note that if the proration rule is not defined for the **New Born** event, the system uses the proration rule of the **Enrollment** event. The system enables you to define and edit the proration rules for a policy plan from the user interface or through a health care inbound message.

Once the membership premium is calculated either using an age based or tier based pricing rule, the system checks whether the proration rules are defined for the respective policy plan. If so, the system sets the base amount of the corresponding record in the **CI_PRCE_CALC_LN** table to the calculated premium amount. However, if the proration rules are not defined for the respective policy plan, the system sets the base amount of the corresponding record in the **CI_PRCE_CALC_LN** table to the calculated premium amount and proration factor is set to 1.

The system then executes the **C1-AGEPRFC** or **C1-TIERPRFC** algorithm attached to the **Pricing Rule Proration Amount Calculation** system event in the respective age based or tier based pricing rule type. The system invokes these algorithms in the **C1-REPC2** batch. These algorithms derive the proration event for a bill period timeline and accordingly updates the proration factor of the bill period timeline to 1 or 0 for all proration types except Daily. The proration factor is set to 1 when the premium for eligible member person (in case of age based pricing) and the premium for the membership (in case of tier based pricing) should be charged for the bill period timeline. And, proration factor is set to 0 when the premium for eligible member person (in case of age based pricing) and the premium for the membership (in case of tier based pricing) should not be charged for the bill period timeline. In case of the Daily proration type, the proration factor is calculated using the following formula: Number of Days Covered in the Coverage Period/Coverage Period

In case of tier based pricing, the system uses the subscription tier characteristic of the membership to determine the proration event.

Age Monitoring

Age is one of the most critical factor in determining health insurance premium. Therefore, Oracle Revenue Management and Billing enables you to monitor age for premium calculation.

In the age based pricing, the premium is calculated for each eligible member person based on age, employee attributes and modifiers, and then aggregated to derive the total premium for the membership. Until now, the age of a member person was calculated using the member enrollment date, plan start date, or policy renewal or start date. Now, in addition, a new predefined value named **MEMNRAGE (Member Enrollment Nearest Age)** is added to the **Age Calculation Date Basis (C1-AGCAL)** characteristic type. If you set the **C1-AGCAL** characteristic type to **MEMNRAGE**, the system considers the number of days specified in the **C1-PPRAMAGE** algorithm to calculate the nearest age of a member person. The system then derives the rate using the nearest age of the member person and accordingly calculates the premium for the member person. For example, a member person with the date of birth as 02-15-1980 has enrolled to the HMO Med Bronze plan from 01-01-2020 to 12-31-2020. And, the **C1-AGCAL** characteristic type is set to **MEMNRAGE** on the HMO Med Bronze plan where the following age based pricing is defined:

Age Group	Rate Value
0-15	\$100.00
16-18	\$120.00
19-20	\$140.00
21-40	\$160.00
41-60	\$180.00
61-65	\$200.00
66-99	\$250.00

Let us assume that the **No. of Days** parameter in the **C1-PPRAMAGE** algorithm is set to **90**. The system will calculate the nearest age of the member person through a cutoff date which is calculated using the following formula: Member Enrollment Date + No. of Days. In this case, the cutoff date is 03-30-2020 (01-01-2020 + 90). If the birthday of the member person falls within the cutoff date, the system charges the premium based on the nearest age. However, if the birthday of the member person does not fall within the cutoff date, the system charges the premium based on the actual age. In this case, the birthday falls within the cutoff date, and therefore the premium will be charged using the rate defined for the 41-60 age group (i.e. \$180) and not using the rate defined for the 21-40 age group (i.e. \$160).

Oracle Revenue Management and Billing enables you to recalculate the age of a member person in a membership in the following scenarios:

- When the policy is renewed
- When the age changes
- From the next month when the age changes

A new characteristic type named **Age Recalculation Date Basis (C1-AGREC)** is introduced in this release. We support the following predefined list of values:

- AGECHNG (Age Changes)
- CHGAGNTMNT (Next Month)
- RENEWAL (Policy Renewal)

If you want to recalculate the membership premium for a plan based on the recalculated age of a member person, you need to do the following:

- Define the **Age Recalculation Date Basis (C1-AGREC)** characteristic for the policy plan or for the policy to which the plan belongs
- Set the **Age Re-Calculation Date Basis** attribute to **Age Recalculation Date Basis (C1-AGREC)** in the age based pricing rule type which is associated with the policy plan

The system does the following when you add a membership to a policy plan or a member person to a membership:

If the Age Recalculation Date Basis characteristic type is set to...	Then,
AGECHNG	The system creates an audit event for a member person when the birthday falls within the enrollment date range. Here, the effective date of the audit event is set to the birth date of the member person.
CHGAGNTMNT	The system creates an audit event for a member person when the birthday falls within the enrollment date range. Here, the effective date of the audit event is set to the billing date of the next month. For example, if the bill date in a bill period starts 1 st of every month and the date of birth of a member person is 05-10-2020, the effective date of the audit event is set to 01-11-2020.
RENEWAL	The system creates an audit event for a member person when the birthday falls within the new enrollment date range (i.e. from original policy end date+1 to new policy end date). Here, the effective date of the audit event is set to the birth date of the member person.

Apart from the membership premium recalculation, the **Age Recalculation Date Basis (C1-AGREC)** characteristic is used to evaluate the member relationship characteristic of each member person and subscription tier characteristic of the membership when the **Young Adult Applicability** characteristic is set to **Y** and the child or dependent enrolling to the membership becomes young adult in the enrollment period.

The **C1-FIAUDEV** algorithm is enhanced to support the age recalculation feature. It creates audit events in the C1_AUDIT_EVENT table and repricing entity detail records in the CI_REPRC_ENTITY_DTL table when the age of a member person changes within the enrollment period.

State of Issue

The State of Issue feature enables you to search for the following characteristics on a state:

- Maximum Number of Dependents
- Maximum Age Limit for Maximum Dependent Count
- Maximum Number of Dependents Order Priority
- Age Calculation Date Basis
- Newborn Gift Days
- Newborn Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Inclusion Applicability

It helps in identifying a list of eligible children in a membership. To enable the State of Issue feature, you need to do the following:

1. Define a predefined characteristic type named **State of Issue** where the characteristic entity is set to **Membership, Policy Plan** and **Policy**.
2. Define the required states as the predefined values for the **State of Issue** characteristic type.

- Set the **State of Issue** characteristic type in the **State of Issue Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.

If the State of Issue feature is enabled, the system checks whether the **State of Issue** characteristic is defined for the membership when any of the above required characteristic is not defined at the membership person and membership levels. If the **State of Issue** characteristic is defined for the membership, the system checks whether the above required characteristic is defined on the state where the membership is issued. For example, if the **State of Issue** characteristic on the M1 membership is set to **California**, then the system will search for any of the above required characteristic on the **California** state. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

If the required characteristic is not defined at the membership person, membership, state where the membership is issued and policy plan levels, the system checks whether the **State of Issue** characteristic is defined for the policy plan. If the **State of Issue** characteristic is defined for the policy plan, the system checks whether the above required characteristic is defined on the state where the policy plan is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

However, if the required characteristic is not defined at the membership person, membership, state where membership is issued, policy plan, state where the policy plan is issued, and policy levels, the system checks whether the **State of Issue** characteristic is defined for the policy. If the **State of Issue** characteristic is defined for the policy, the system checks whether the above required characteristic is defined on the state where the policy is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

Membership Premium Calculation

The membership premium is calculated differently using the following pricing:

- Age-Based Pricing** – The system first identifies a list of members which are eligible for premium calculation in a membership. It derives the main subscriber and member persons (i.e. Spouse and Children) which are related to the main subscriber using the relationship type specified in the **Age Based** pricing rule type. To identify a list of eligible children for premium calculation, the system uses the following characteristics:
 - Maximum Number of Dependents** – Used to indicate the maximum number of children which are eligible for premium calculation.
 - Maximum Age Limit for Maximum Dependent Count** – Used to indicate the maximum age limit for children which are eligible for premium calculation.
 - Maximum Number of Dependents Order Priority** – Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are - **YOUNGEST** and **ELDEST**.
 - Age Calculation Date Basis** – Used to indicate whether the member person’s age should be calculated using the member person’s enrollment date or policy’s start or renewal date.

- **Newborn Gift Days** – Used to indicate the number of days you want to offer as gift days from the new born child’s birth date. As a result, no premium will be calculated for this period.
- **Newborn Gift Days Applicability** – Used to indicate whether you want to offer gift days in case of a new born. The valid values are - **Y** and **N**.
- **Young Adult Max Age Limit** – Used to indicate the maximum age limit for young adults which are eligible for premium calculation.
- **Young Adult Inclusion Applicability** – Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Y** and **N**.

Note: Only the **Age Calculation Date Basis (C1-AGCAL)** characteristic type is shipped with the product. You need to create the remaining characteristic types in the system and set their characteristic entity to the following - **Membership Person, Membership, Policy Plan, Policy,** and/or **State**.

The system searches for these characteristics on the following entities in the specified sequence:

1. Membership Person
2. Membership
3. State where the Membership is issued
4. Policy Plan
5. State where the Policy Plan is Issued
6. Policy
7. State where the Policy is Issued

For example, if the **Maximum Number of Dependents** characteristic is defined for all entities, the system considers the characteristic which is defined at the Member Person level because it is the lowest level. However, if the **Newborn Gift Days Applicability** characteristic is defined at the Policy Plan and Policy levels, the system considers the characteristic which is defined at the Policy Plan level because it is the lowest level. In other words, the system crawls from the lowest to the highest level while searching for the above characteristics. You can also define the above characteristics on the state where the membership, policy plan and/or policy are issued. For more information, refer to the State of Issue section.

Once the eligible members for premium are identified, the system derives the base fee and applicable modifier fee which are defined in the pricing rules. The system then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P1** has the following membership:

Membership	M1
Member Persons	P1 and P2
Membership Start Date	01-01-2019
Membership End Date	31-12-2019
P0 Main Subscriber’s Start Date	01-01-2019
P0 Main Subscriber’s End Date	31-12-2019
P1 Member’s Start Date	01-01-2019
P1 Member’s End Date	30-06-2019
P2 Member’s Start Date	01-10-2019

P2 Member's End Date	31-12-2019
-----------------------------	------------

The **P1** policy plan is associated with an Age Based pricing rule type which contains the **Premium Fee** price item. The Age Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

In this case, the system will create the following timelines when you add **P2** member person in the **M1** membership:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date
M1	Premium Fee	01-01-2019	30-06-2019 (i.e. P1 Member's End Date)
M1	Premium Fee	01-07-2019	30-09-2019
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. Let us assume that the effective pricing rule is configured in the following manner:

Age Band	Fee
0-21	\$50
21-65	\$100
>65	\$150

P0 belongs to the 21-65 age band and P1 and P2 belongs to the 0-21 age band. Therefore, the premium is calculated using the following base fee:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	30-06-2019 (i.e. P1 Member's End Date)	P0: \$100 P1: \$50
M1	Premium Fee	01-07-2019	30-09-2019	P0: \$100
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019	P0: \$100 P2: \$50

Now, let us assume the following characteristics are defined on the **P1** policy plan which offers gift days to a new born child:

Effective Date	Characteristic Type	Characteristic Value
01-01-2019	Newborn Gift Days Applicability	Y
01-01-2019	Newborn Gift Days	30

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	30-06-2019 (i.e. P1 Member's End Date)
M1	Premium Fee	01-07-2019	30-09-2019
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. In this case, the premium is calculated using the following base fee:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)	P0: \$100 P1: \$50
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	30-06-2019 (i.e. P1 Member's End Date)	P0: \$100 P1: \$50 C1: \$50
M1	Premium Fee	01-07-2019	30-09-2019	P0: \$100 C1: \$50
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019	P0: \$100 P2: \$50 C1: \$50

- Tier Based Pricing** – The system first derives the base fee which is defined in the pricing rules. It then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P2** has the following membership:

Membership	M1
Member Persons	P1 and P2
Membership Start Date	01-01-2019
Membership End Date	31-12-2019
Membership Tier	ES (Employee + Spouse)

The **P2** policy plan is associated with a Tier Based pricing rule type which contains the **Premium Fee** price item. The Tier Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

The system will create the following timeline when the **M1** membership is added to the **P2** policy plan:

Membership	Price Item	Timeline Start Date (Effective date)	Timeline End Date
M1	Premium Fee	01-01-2019	31-12-2019

It creates timelines using the membership's start and end dates and effective date. For each timeline, the system calculates premium for the membership. Let us assume that the effective pricing rule is configured in the following manner:

Tier Level	Fee
E (Employee Only)	\$100
ES (Employee + Spouse)	\$200
F (Family)	\$350
EC (Employee+ Children)	\$150

The **M1** membership belongs to the **ES (Employee + Spouse)** tier. Therefore, the premium is calculated using the following base fee:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	31-12-2019	\$200

Now, let us assume the following characteristics are defined on the **P2** policy plan which offers gift days to a new born child:

Effective date	Characteristic Type	Characteristic value
01-01-2019	Newborn Gift Days Applicability	Y
01-01-2019	Newborn Gift Days	30

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

Membership	Price Item	Timeline Start Date (Effective date)	Timeline End Date
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	31-12-2019

In this case, the premium is calculated using the following base fee considering the membership tier has changed from **ES (Employee + Spouse)** to **F (Family)**:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)	200

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	31-12-2019	350

The tasks performed through **Membership Repricing (C1-MEMBREPRICE)** inbound web service are described below:

- **Adding a Membership** - Whenever you are creating a membership for a fully-insured group health plan, you need to specify the plan for which you want to create the membership, a person who is the main subscriber of the membership, and the way in which the main subscriber is related to the membership. Once the membership is created, you can add more members (i.e.persons) to the membership.
- **Editing a Membership** - Once the membership is created for a fully-insured group health plan, you can edit the membership information such as start date, end date, and characteristics.
- **Viewing the Membership Details** - On the **Membership** page, you can view the membership details, member persons which are added to a membership, and the additional plans of the main subscriber.
- **Adding a Member Person to a Membership** - While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership.
- **Removing a Member Person from a Membership** - You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member person whenever required. If you inactivate a member person who is the main subscriber of the membership, the system automatically inactivates the membership and all other member persons which are included in the membership.
- **Simulating Membership Premium Calculation**
 - You can simulate add and update operations carried-out for a membership, and can also calculate the premium derived from the simulation process. Any set of changes conducted as a part of the simulation process would not impact the actual membership and premium calculation process.

Bill Group Derivation for Membership

While deriving a bill group for a membership, the system first checks whether the characteristics specified in the following option types of the **C1-ASOBLLNG** feature configuration are defined for the membership:

- **Account Identifier Type Char Type** – Used to specify the characteristic type which stores the identifier type of the account to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Account Identifier Value Char Type** - Used to specify the characteristic type which stores the corresponding identifier of the account to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

If the above two characteristics are defined for the membership, the system derives the account and then the person (i.e. bill group or parent customer) to which the account belongs. However, if the above two characteristics are not defined for the membership, the system then checks whether the characteristics specified in the following option types of the **C1-ASOBLLNG** feature configuration are defined for the membership:

- **Person Identifier Type Char Type** – Used to specify the characteristic type which stores the identifier type of the person to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

- **Person Identifier Value Char Type** - Used to specify the characteristic type which stores the corresponding identifier of the person to which the membership should be billed. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.

If the above two characteristics are defined for the membership, the system derives the person (i.e. bill group or parent customer) to which the membership should be billed. However, if the above two characteristics are not defined for the membership, the system checks whether the characteristics specified in the following parameters of the **C1_MEMBGDRV** algorithm are defined for the membership:

- **Characteristic Type for Bill level 1** – Used to specify the characteristic type which stores the bill group derivation and pricing parameter 1 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Bill level 2** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 2 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Bill level 3** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 3 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Bill level 4** - Used to specify the characteristic type which stores the bill group derivation and pricing parameter 4 for the membership. Here, you must specify a characteristic type where the characteristic entity is set to **Membership**.
- **Characteristic Type for Source system** - Used to specify the characteristic type which stores the external system from where the fully-insured group policy is received for billing. Here, you must specify a characteristic type where the characteristic entity is set to **Membership, Policy Plan, or Policy**. The system searches for the characteristic on the following entity in the specified order:
 1. Membership
 2. Policy Plan
 3. Policy

If the characteristic is defined at first level (i.e. membership), the system will not search for the characteristic at the subsequent levels. However, if the characteristic is not defined at first level, the system will search for the characteristic at the second level (i.e. policy plan). If the characteristic is defined at second level, the system will not search for the characteristic at the subsequent level. However, if the characteristic is not defined at second level, the system will search for the characteristic at the third level (i.e. policy).

To derive the source system from the membership, policy plan, or policy, the system first derives the policy plan to which membership belongs and then the policy to which the policy plan belongs. The above characteristics indicate the Source System, Parameter 1, Parameter 2, Parameter 3, and Parameter 4. The system derives a bill group using the derivation and pricing parameters (i.e. Source System, Parameter 1, Parameter 2, Parameter 3, and Parameter 4) which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the effective date (which is available corresponding to the record in the **CI_REPRC_ENTITY_DTL** table). It first searches for the bill group using the exact match. For example, a parent customer named PC1 has the following bill groups:

Bill Group	Derivation and Pricing Parameters				
	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
BG1	X	Western	Grade A	Active	-
BG2	X	Western	Grade A	Retiree	-

BG3	Y	Western	-	-	-
-----	---	---------	---	---	---

And, the following characteristics are defined for the M1 membership which belongs to the PP1 policy plan:

Entity	Characteristic Type	Characteristic Value
M1	Location	Western
M1	Grade	Grade A
PP1	External System	X

Now, if the **Location**, **Grade**, and **External System** characteristic types are specified in **Characteristic Type for Bill level 1**, **Characteristic Type for Bill level 2**, and **Characteristic Type for Source system** parameters of the **C1_MEMBGDRV** algorithm, the system searches for a bill group where the following derivation and

If the exact match is not available, the system finds the bill group using the best fit match.

Once the policy and policy plan is derived, the system

Based on the characteristic values on the membership for bill level 1 to bill level 4 and characteristic value of source system, the bill group and parent customer corresponding to the membership is derived. 2. Deriving policy : Policy is derived from the plan to which the membership is linked.

To derive the bill group for a membership to which its premium and other pass-through charges should be billed, you need to attach an algorithm created using the **C1_MEMBGDRV** algorithm type to the **Bill Group Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

Note that while searching for a bill group, the source system and Parameter 1 (i.e. Bill Level 1) are mandatory.

This algorithm contains the following parameters:

- **Characteristic Type for Bill Level 1** – Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 1 for the membership.
- **Characteristic Type for Bill Level 2** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 2 for the membership.
- **Characteristic Type for Bill Level 3** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 3 for the membership.
- **Characteristic Type for Bill Level 4** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 4 for the membership.

Once the bill group is derived, the system derives the parent customer of the bill group. If the system could not derive the policy, bill group, or parent customer, the status of the record is changed to **Error (E)** in the **CI_REPRC_ENTITY_DTL** table.

Account and Price Item Derivation for Membership

A new algorithm type named **C1_ACCPRIMEM** is added in this release. You need to attach an algorithm created using the **C1_ACCPRIMEM** algorithm type to the **Account and Price Item Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

This algorithm fetches the effective pricing rule for each price item specified in the pricing rule type on the effective date. It first searches for effective pricing rules on the policy plan to which the membership belongs. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level. The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. If the system could not derive the effective pricing rule for any price item or if the account or active contract for the account could not be derived, the status of the record is changed to **Error (E)** in the **CI_REPRC_ENTITY_DTL** table.

Bill Cycle and Bill Period Derivation

Oracle Revenue Management and Billing uses the bill cycle of an account to generate the bills for the account and the bill period of an account to create the billable charges for the account. If the bill cycle and bill period used for an account are not in sync, the system will not give the desired output. Therefore, we have introduced a new feature wherein the bill cycle and bill period can be tightly coupled with each other.

You can define a billing preference wherein you pair the bill cycle and bill period. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. The system derives the bill cycle and bill period for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. Note that you must specify a characteristic type where the characteristic entity is set to **Account** in the **Bill Cycle Rule Code** option type. You can define this characteristic for an account from the user interface or through a health care inbound message.

Whenever you create or edit an account through a health care inbound message, the system checks whether the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration is available for the account in the inbound message. If so, the system checks whether the value specified for the billing preference characteristic type is already defined in the system. If so, the system derives the bill cycle from the billing preference when the account is created. In such case, the system ignores the bill cycle available in the inbound message.

In addition, when the billing preference characteristic is updated for an account, the system derives the new bill cycle from the respective billing preference in the system.

If the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration is not available for the account in the inbound message, the system stores the bill cycle received in the inbound message for the account.

Until now, the system derived the bill period for an account using the **Invoice Day (C1OFFRST)** characteristic of the account. Now, you can derive the bill period for an account using the billing preference characteristic of the account. To derive the bill period from the billing preference, you need to attach the **Bill Period Derivation (C1-BILLPDRV)** algorithm to the **Account and Price Item Derivation Post-Processing** system event in the age based, tier based, additional charge, and benefit pricing rule types. The system invokes the **Bill Period Derivation (C1-BILLPDRV)** algorithm in the **C1-REPC1** batch. This algorithm derives the bill period from the billing preference of the account and accordingly updates the **RECURRING_FLG** and **RECURRING_VAL** columns of the corresponding records in the **CI_REPRC_REQ_DTL** table.

Bill Period Timeline

Now, you need to attach the **C1-BILLRPCR** algorithm to the **Account and Price Item Derivation Post-Processing** system event in the age based and tier based pricing rule types. It enables you to create an additional entry in the **CI_REPRC_REQ_DTL** table for the remaining months in the membership coverage period based on the bill period. For example, a record exists with the effective date as 01-01-2020 in the **CI_REPRC_REQ_DTL** table with a bill period where the bill dates start from 1st of every month and with a membership coverage period from 01-01-2020 to 12-31-2020. On executing the **C1-BILLRPCR** algorithm, the system will create the additional entries with the following effective dates in the **CI_REPRC_REQ_DTL** table:

Bill Period	Effective Date
02-01-2020 to 02-29-2020	02-01-2020
03-01-2020 to 03-31-2020	03-01-2020
04-01-2020 to 04-30-2020	04-01-2020
05-01-2020 to 05-31-2020	05-01-2020
06-01-2020 to 06-30-2020	06-01-2020
07-01-2020 to 07-31-2020	07-01-2020
08-01-2020 to 08-31-2020	08-01-2020
09-01-2020 to 09-30-2020	09-01-2020
10-01-2020 to 10-31-2020	10-01-2020
11-01-2020 to 11-30-2020	11-01-2020
12-01-2020 to 12-31-2020	12-01-2020

9/10 Billing (Skip Months)

In the health insurance domain, for a yearly coverage, the membership premium is calculated and billed every month. The fully-insured large groups such as school districts have two-three months of holiday every year. Usually, they prefer to distribute the off months' premium in the remaining months of the coverage period. Oracle Revenue Management and Billing enables you to handle this requirement through the **9/10 Billing (Skip Months)** feature. Note that, in this feature, only the recurring charges for membership premium and administration fees will be considered for distribution in the non-skip months of the coverage period.

You can set the skip months in a billing preference through the **Field Mapping** screen. You can specify one or more skip months in a billing preference which may be continuous or non-continuous. However, you cannot skip all 12 months in a billing preference. The system derives the skip months for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLNG** feature configuration. Note that you must specify a characteristic type where the characteristic entity is set to **Account** in the **Bill Cycle Rule Code** option type. You can define this characteristic for an account from the user interface or through a health care inbound message. You can view a list of accounts for which skip months are defined in the billing preference using the **Skip Months** field in the **360° Search** zone.

A new column named **DIS_AMT** is added to the **CI_PRCE_CALC** and **CI_PRCE_CALC_LN** tables. While calculating the membership premium using the age based or tier based pricing rule, the system checks whether the skip months are defined for the account. If the skip months are not defined for the account, the system stores the calculated premium in the **DIS_AMT** column.

A new algorithm type named **C1-SKPMNTHPC** is introduced in this release. To setup the **9/10 billing** feature, you need to create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation** system event of the required age based and tier based pricing rule types. The system invokes this algorithm in the **C1-REPC3** batch. This algorithm distributes the total premium in the non-skip months of the coverage period. In case of an age based pricing, the system calculates the distributed amount for each eligible member in the membership. And, in case of a tier based pricing, the system calculates the distributed amount for the membership. When a billable charge is created for a non-skip month through the **C1-FIBCR** batch, the distributed amount is stored through an **SQI** on the billable charge.

Repricing

Oracle Revenue Management and Billing extends the Repricing feature for the insurance domain. To enable this feature for fully-insured line of business, you need to setup the audit framework for membership and age based and tier based pricing rules. For more information, refer to the Audit Framework for Membership and Fully-Insured Pricing Rules section.

To recalculate the membership premium, you need to execute the following batches in the specified order:

1. **Identify Entities for Repricing (C1-REPC1)** - Until now, this batch identified a set of accounts which were impacted due to change in a price list and then created a repricing request for such accounts. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch identifies a set of accounts which were impacted due to change in a price list and then creates a repricing request for such account. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the **CI_REPRC_ENTITY_DTL** table. For each record, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:
 - a. **Bill Group Derivation** – Used to derives the policy, bill group, and parent customer of the bill group.
 - b. **Account and Price Item Derivation** – Used to derive the pricing rules for the price items (which are present in the pricing rule type) on the policy plan (to which the membership belongs).

Once the pricing rules are derived, the system creates a repricing request for the membership, pricing rule, and effective date combination. Finally, the status of the corresponding record is set to **Complete (C)** in the **CI_REPRC_ENTITY_DTL** table. If any error occurs while creating a repricing request, the status of the corresponding record is set to **Error (E)** in the **CI_REPRC_ENTITY_DTL** table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

2. **Process Repricing Request (C1-REPC2)** - Until now, this batch calculated and persisted the rate for the account, price item, and effective date combination in the **CI_PRCE_CALC** table. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch calculates and persist the rate for the account, price item, and effective date combination in the

CI_PRCE_CALC table. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the CI_REPRC_REQ_DTL table. If the pricing rule in the record is **Age Based**, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:

- a. **Pricing Rule Pre Processing** – Used to identify the eligible member persons for premium calculation.
- b. **Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once these algorithms are executed, the premium is calculated for each eligible member person and stored in the CI_PRCE_CALC_LN table and the total premium for the membership is stored in the CI_PRCE_CALC table. Finally, the status of the corresponding record is set to **Complete (C)** in the CI_REPRC_REQ_DTL table.

However, if the pricing rule in the record is **Tier Based**, the system invokes the algorithm attached to the following system event of the pricing rule type:

- **Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once the algorithm is executed, the premium is calculated for the membership and stored in the CI_PRCE_CALC table. Finally, the status of the corresponding record is set to **Complete (C)** in the CI_REPRC_REQ_DTL table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Fully-Insured Group Billable Charge Creation

Oracle Revenue Management and Billing enables you to create billable charges for pre-calculated premium amount (which is received through a health care inbound message) and calculated premium amount (which is derived using a pricing rule defined at the policy plan level). Before creating an SQI based billable charge, the system derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.

While creating a billable charge for the pre-calculated premium amount through a health care inbound message, the system creates an SQI based billable charge for the membership and price item combination. Note that if the bill period or frequency is given in the billable charge information in the health care inbound message, the system does not derive the bill period for the account.

However, for creating a billable charge for the calculated premium amount, you need to execute the **Fully-Insured Group Billable Charge Creation (C1-FIBCR)** batch. It creates an SQI based billable charge for calculated premium amount. It considers the timelines in the **Pending (P)** and **Error (E)** status from the CI_PRCE_CALC table. Note that it considers only those timelines where the entity type is set to **Membership**. For each timeline, membership and price item combination, the system does the following:

1. Derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.

- Creates an SQI based billable charge. Here, the start and end dates on the billable charge are set to the timeline start and end dates.

If the premium amount of the two consecutive timelines of a membership and price item combination is same, this algorithm does not create a new billable charge. Instead, it extends the end date of the previous timeline's billable charge. If the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the membership and price item combination with the same start date and amount, then the system behaves in the following manner:

If...	Then...
Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system	The end date in the existing billable charge is updated to 31-10-2019.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the Freezable status	The bill segments for the 01-11-2019 to 31-12-2019 period are deleted and the end date in the existing billable charge is updated to 31-10-2019.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the Frozen or Pending Cancel status	The bill segments for the 01-11-2019 to 31-12-2019 period are canceled and the end date in the existing billable charge is updated to 31-10-2019.

However, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the membership and price item combination with the same start date, but different amount, then the system behaves in the following manner:

If...	Then...
Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system	The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the Freezable status	The bill segments for the 01-01-2019 to 31-12-2019 period are deleted. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the Frozen or Pending Cancel status	The bill segments for the 01-01-2019 to 31-12-2019 period are canceled. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.

And, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge does not exist for the membership and price item combination with the same start date, then a billable charge is created for the 01-01-2019 to 31-10-2019 period. Note that if there are billable charges for the membership and price item combination whose date range is within the timeline, such billable charges are canceled and their corresponding bill segments (if any) are either deleted or canceled in the system.

The pre-calculated or calculated premium amount is stored as a pass through line in the SQI based billable charge. Note that these pass through lines are memo only and no general ledger entries will be created for these pass through lines. This algorithm fetches SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. The SQI value is set to the total amount of the pass through lines in the billable charge. The system prorates the amount when the SQ rule specified in the rate schedule attached to the active contract contains the SQI which is specified in the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.

Once the billable charge is created, the membership ID is stamped as characteristic on the billable charge. This indicates that the billable charge is created for the respective membership. This algorithm fetches the characteristic type, which must be defined on the billable charge, from the **Characteristic Type For Membership Id** option type of the **C1-ASOBLLNG** feature configuration.

Finally, the status of the corresponding timeline is set to **Complete (C)** in the **CI_PRCE_CALC** table. If any error occurs while creating a billable charge, the status of the corresponding timeline is set to **Error (E)** in the **CI_PRCE_CALC** table. In addition, if an error occurs, a To Do is created using the **C1-FIBCR** To Do type and assigned to all users with a To Do role which is specified as characteristic on the parent customer. The system considers the characteristic on the parent customer which is specified in the **To Do Role Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Note that the system does not create a To Do for each error record. Instead, the system creates distinct To Do for each membership and pricing rule combination.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Repricing Request

The **Repricing Request** screen enables you to search for a repricing entity detail record using various search criteria. It contains the following zones:

- [Search Repricing Entity Detail Record](#) on page 3195
- [Repricing Requests](#) on page 3198
- [Timeline and Billable Charge Details](#) on page 3199
- [Pricing Calculation Details](#) on page 3199

There are two ways in which you can navigate to this screen:

- One from the **Audit Event** screen - In this case, the system automatically uses the audit event ID for searching and then lists the repricing entity detail records which are created for the respective audit event in the **Search Repricing Entity Detail Record** zone.
- Another from the **Pricing Management** menu - In this case, the system enables you to search for repricing entity detail records of a particular audit event or for all audit events of a particular membership.

Note: At present, the **Repricing Request** screen is only designed to meet the business requirements of the Fully-Insured Group Health Insurance domain.

Search Repricing Entity Detail Record

The **Search Repricing Entity Detail Record** zone enables you to search for repricing entity detail records which are:

- Created for a particular audit event
- Created for all audit events of a particular membership

It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a repricing entity detail record using the membership details. The valid value is: <ul style="list-style-type: none"> • Membership 	Yes
	Note: By default, the Membership option is selected.	
Created From	Used to search repricing entity detail records which are created for a membership from a particular date.	No
From Effective Date	Used to search repricing entity detail records which are effective from a particular date onwards.	No
Created To	Used to search repricing entity detail records for a membership which are created till a particular date.	No
To Effective Date	Used to search repricing entity detail records which are effective till a particular date.	No
Audit Event ID	Used to search repricing entity detail records of a particular audit event.	Yes (Conditional)
		Note: This field is required when you want to search for a repricing entity detail records using the audit event details.
Status	Used to search repricing entity detail records with a particular status. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending 	No
Membership ID	Used to search repricing entity detail records of a particular membership.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Membership Search window appears.	
Pricing Rule Type	Used to search repricing entity detail records which are created using a particular type of pricing rule.	No

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, a list of repricing request detail records appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Membership Information	Displays information about the membership.
	Note: It has a link. On clicking the link, the Membership screen appears where you can view the details of the respective membership.
Creation Date Time	Displays the date and time when the repricing entity detail record is created in the system.
Effective Date	Displays the date from when the repricing entity detail record is effective for the membership.
Pricing Rule Type	Displays the pricing rule type using which the pricing is defined for the entity.
	Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type.
Status	Displays the status of the repricing entity detail record. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending
Error Message	Displays the error message if any error occurs when the audit event is created for the membership.
	Note: The status of the corresponding membership is set to Error .
Pre processing Request ID	Displays the pre processing request Id.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone. You can also hide the **Filter** area by clicking the **Hide Filters** button in the lower left corner of this zone.

On clicking the **Broadcast** () icon corresponding to the **Membership Information** field, the **Repricing Requests** zone appears where you can view a list of repricing requests created for a specific repricing entity detail record.

Repricing Requests

The **Repricing Requests** zone allows you to view the repricing requests which are created for a particular repricing entity detail record. It contains the following columns:

Column Name	Column Description
Pricing Rule Information	Displays information about the pricing rule using which the repricing request is created for the price item.
	Note: It has a link. On clicking the link, the Pricing Rule screen appears where you can view the details of the respective pricing rule.
Price Item Information	Displays information about the price item for which the repricing request is created in the system.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Account Information	Displays the concatenated string consisting of account information which are separated by a comma (,).
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Status	Displays the status of the repricing request. The valid values are: <ul style="list-style-type: none"> • Completed • Error • Invalid • Pending
Creation Date Time	Displays the date and time when the repricing request was created in the system.
Effective Date	Displays the date from when the repricing is effective for the price item.
Error Message	Displays the error message if any error occurs when the repricing entity detail record is created for the membership.
Request Reference Id	Displays the repricing request reference Id.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Repricing Requests** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to a repricing entity detail record in the **Search Repricing Entity Detail Record** zone.

You can filter the list using various search criteria (such as, **Created From**, **From Effective Date**, **Created To**, **To Effective Date**, **Account ID**, **Status**, and **Pricing Rule**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (🔊) icon corresponding to a particular repricing request, the **Timeline and Billable Charge Details** zone appears where you can view a list of timeline and billable charge details created for a specific repricing request.

Timeline and Billable Charge Details

The **Timeline and Billable Charge Details** zone enables you to view the timelines and billable charges generated for a repricing request. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the timeline.
End Date	Displays the end date of the timeline.
Amount	Displays the premium amount calculated for the timeline.
Billable Charge Information	Displays information about the billable charge for the timeline.
	Note: It has a link. On clicking the link, the Billable Charge ID screen appears where you can view the details of the respective billable charge.
Status	Displays the status of the timeline and billable charge details.
Error Message	Displays the error message if any error occurs when the repricing request is created for the price item in the system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Timeline and Billable Charge Details** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a repricing request in the **Repricing Requests** zone.

You can filter the list using various search criteria (such as, **Start Date**, **Billable Charge ID**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a timeline, the **Pricing Calculation Details** zone appears where you can view a list of pricing details of the entity.

Pricing Calculation Details

The **Pricing Calculation Details** zone enables you to view how the premium is calculated for the membership (in case of tier-based pricing) and how the premium is calculated for each eligible member in the membership (in case of age-based pricing). It contains the following columns:

Column Name	Column Description
Entity Information	If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership.
Description on Bill	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.
Pricing Parameter	Indicates the pricing eligibility criteria which is satisfied while deriving the base fee.
Amount	Displays the base fee or applicable modifier fee.
Total Amount	If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership.

By default, the **Pricing Calculation Details** zone does not appear in the **Repricing Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a **Billable Charge Information** field in the **Timeline and Billable Charge Details** zone.

Searching for a Repricing Entity Detail Record

Prerequisites

To search for a repricing entity detail record, you should have:

- Repricing entity detail records created in the system.

Procedure

To search for a repricing entity detail record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Repricing Request**.
The **Repricing Request** screen appears.
3. Enter the search criteria in the **Search Repricing Entity Detail Record** zone.
4. Click **Search**.

A list of repricing entity detail records that meets the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Membership Premium Calculation Through Inbound Web Service

Oracle Revenue Management and Billing enables you to calculate membership premium through an inbound web service. The following business service is shipped with the product to support the premium calculation operations:

Business Service	Description
C1-MembershipRepricing	Used to create, update, simulate, and trigger membership repricing. For more information, see C1-MembershipRepricing Business Service on page 3204

If you want to send the request in the XML format, you can create a SOAP based inbound web service. For more information on how to setup the **Membership Premium Calculation Through Inbound Web Service** feature, see [Prerequisites](#) on page 3202.

Prerequisites

The following table lists the prerequisites for membership premium calculation through an inbound web service:

If you want to...	Then...
Create adjustments through an inbound web service	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CreateAdjustment business service. • Authorize the ORMB user to access the required application service. • Define the required account identifier types, divisions, contract types, and currencies in the system. • Define the required calculated or non-calculated adjustment types in the system. • Define the required characteristic types where the characteristic entity is set to Adjustment. • Associate the required characteristic types with the required adjustment types. • Include the adjustment type in the adjustment type profile which is associated with the respective contract type. • Define the required exchange rates in the system. • Define a currency conversion algorithm for adjustments using the C1_CURALGAD or C1_EXCRTAD algorithm type. • Attach a currency conversion algorithm to the Currency Conversion For Adjustments algorithm spot of the required divisions.
Cancel adjustments through an inbound web service	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CancelAdjustment business service. • Authorize the ORMB user to access the required application service. • Define the required adjustment cancel reasons in the system.
View adjustments through an inbound web service	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-GetAdjustmentHistory business service. • Authorize the ORMB user to access the required application service. • Define the required account identifier types, divisions, contract types, and adjustment types in the system. • Set the Set Fetch Record Limit option type of the C1-RECLMT feature configuration.

If you want to...	Then...
Enable the Inbound Web Service History feature	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define an outbound message type with the following specifications: <ul style="list-style-type: none"> • Outbound Message Business Object - Web Service History (C1-WebServiceHistory) • Priority - Priority 10 -- Highest • Define an external system and associate the above outbound message type with the external system using the following specifications: <ul style="list-style-type: none"> • Processing Method - Batch • Batch Control - F1-FLUSH • Create an algorithm using the C1-IWSHIST algorithm type and attach it to the Web Service History system event in the installation options. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You need to specify the above outbound message type, using which the outbound message should be created, in the Outbound Message Type parameter of the C1-IWSHIST algorithm.</p> </div>

C1-MembershipRepricing Business Service

Oracle Revenue Management and Billing enables you to do the following through the **C1-MembershipRepricing** business service:

- Define and edit the following types of membership:
 - Active Employee Coverage Membership
 - Employer Sponsored Group Medicare Membership (800 Series Plans)
 - COBRA Membership
- Add a member person to the membership
- Edit the existing member person details of the membership
- Create a person whom you want to add to the membership
- Edit the details of a person who is added to the membership
- Define and edit a benefit of a member person in a medicare membership

Note: While editing a benefit of a member person, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

- Recalculate the membership premium (i.e. trigger repricing) in the following scenarios:
 - A membership is added or edited in the fully-insured group policy plan.
 - A member person is added to the membership.
 - The fields, characteristics, or statuses which are monitored for the auditing purposes are updated at the membership or member person level.
- Recalculate the membership premium in the simulation mode and not in real time

Note: You can use the simulation mode as the What-If Analysis tool. In the simulation mode, you can evaluate the membership premium when a new membership will be added or the existing membership will be updated. However, in the simulation mode, the system neither adds or edits the membership in the system nor creates the billable charge for the membership premium. It only recalculates the membership premium and sends the premium calculation details in the response. Note that membership premium recalculation happens only in the above three listed scenarios.

- View the information of the memberships whose start and end dates fall within the specified date range. The information includes:
 - Details of the membership
 - Details of each member person in the membership
 - Benefit details of a member person in a medicare membership
 - Details of the billable charges created for the membership premium for different price items
 - Pricing rule and price assignment used during the membership premium billable charge creation
 - Account for which the membership premium billable charge is created
 - How premium is calculated for each timeline of the billable charge

Note:

If the age based pricing is used during the membership premium calculation, the premium is calculated for each eligible member of the membership. Here, the premium amount is the sum of the base fee and modifier fee (if any) for the eligible member.

However, if the tier based pricing is used during the membership premium calculation, the premium is calculated at the membership level. Here, the premium amount is the base fee applicable for the membership.

You can also filter the list of membership premium billable charges by specifying price items whose billable charges you want to view.

- View the last billed amount and current balance of the account on which the membership premium is billed.

You can define or edit only one membership at a time through the **C1-MembershipRepricing** business service. You can only create or edit a member person and not a bill group or parent customer through the **C1-MembershipRepricing** business service.

We have shipped a SOAP based inbound web service named **C1-MembRepricing** with the product. You can send the membership repricing request from the external system in the XML format through the **C1-MembRepricing** inbound web service. If you want to send the request in the XML and/or JSON format, you need to create a REST based inbound web service.

C1-MembRepricing Business Service Schema

The following code snippet illustrates how the tags are nested in the membership repricing inbound web service schema:

Membership Premium Calculation Request and Response - Tags in XML Format

Note: We recommend you to refer the **C1-MembRepricing** inbound web service schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-MembRepricing** inbound web service, you need to ensure that the membership repricing service contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)						
schema	Used to specify the tags of a membership repricing inbound web service.	Yes						
simulationSw	<p>Used to specify whether the simulation switch should be set as enabled or disabled in the membership repricing web service.</p> <table border="1" data-bbox="485 407 1183 1150"> <thead> <tr> <th data-bbox="485 407 756 459">If</th> <th data-bbox="756 407 1183 459">Then</th> </tr> </thead> <tbody> <tr> <td data-bbox="485 459 756 890">The simulation switch is set as Y</td> <td data-bbox="756 459 1183 890"> <ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. </td> </tr> <tr> <td data-bbox="485 890 756 1150">The simulation switch is set as N</td> <td data-bbox="756 890 1183 1150"> <ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. </td> </tr> </tbody> </table> <p>Note: If you do not specify the value for the simulation switch, by default, it is set to N.</p>	If	Then	The simulation switch is set as Y	<ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. 	The simulation switch is set as N	<ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. 	Yes
If	Then							
The simulation switch is set as Y	<ul style="list-style-type: none"> Any changes made to the entities like membership, member-person, and billable-charges are not saved in the ORMB application. The billable charge event is not triggered in the ORMB application, and hence the Billable Charge tag is not displayed in the response received from the membership repricing inbound web service. 							
The simulation switch is set as N	<ul style="list-style-type: none"> The billable charge event is triggered in the ORMB application, and the Billable Charge tag is displayed in the response received from the membership repricing inbound web service. 							
action	<p>Used to indicate the execution mode of the membership repricing inbound web service when you want to receive the existing premium calculations in response.</p> <p>Note:</p> <p>If you specify the value for the action flag as READ the system retrieves the membership, pricing, and billable charge details for the membership.</p> <p>The membership information is not updated even if the simulation switch is set to N and the action flag is set as READ.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to receive the existing premium calculations in the response from the membership repricing inbound web service.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
readFilters	Used to specify the filter when you want to view the premium calculations for a particular set of price-items or for a timeline.	Yes (Conditional)
	Note: The execution mode of the membership inbound web service should be set to read-only .	Note: This data is required while viewing the premium calculations for particular set of price-items or for a timeline.
dateFilter	Used to specify the filter when you want to view the premium calculations for a timeline.	Yes (Conditional)
	Note: The execution mode of the membership inbound web service should be set to read-only .	Note: This data is required while viewing the premium calculations for a particular timeline.
startDate	You can use this tag within the following tags:	
	If this tag is used within...	Then the purpose of the sequence tag is...
	dateFilter	Used to indicate the date from when the timeline is effective for premium calculations. Note: The start date cannot be later than the end date. The start date cannot be earlier than the membership start date or later than the membership end date.
	related persons	Used to specify the date from when the person is related to the parent customer.
	membership	Used to indicate the date from when the membership is effective.
	benefitDataList	Used to indicate the date from when the benefit is effective.
		Note: This data is required while viewing the premium calculations for a particular timeline.

Tag Name	Tag Description	Mandatory (Yes or No)										
endDate	You can use this tag within the following tags:	Yes (Conditional)										
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>dateFilter</td> <td>Used to specify the date till when the timeline is effective for premium calculations. Note: The end date cannot be earlier than the start date. division	You can use this tag within the following tags:	No						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>personData</td> <td>Used to indicate the division to which the person belongs.</td> </tr> <tr> <td>accountBalanceData</td> <td>Used to indicate the division to which the account belongs.</td> </tr> </tbody> </table>		If this tag is used within...	Then the purpose of the sequence tag is...	personData	Used to indicate the division to which the person belongs.	accountBalanceData	Used to indicate the division to which the account belongs.
	If this tag is used within...		Then the purpose of the sequence tag is...					
	personData		Used to indicate the division to which the person belongs.					
accountBalanceData	Used to indicate the division to which the account belongs.							
birthDate	Used to specify the date when the person was born.	No						
	Note: You must specify the date in the YYYY-MM-DD format.							
sinceDate	Used to specify the date when the person's record is created in the system. This is purely informational.	No						
	Note: You must specify the date in the YYYY-MM-DD format.							
address	Used to specify the address of the person.	Yes (Conditional)						
		Note: This data is required while defining or editing the address of the person.						
addressEffDate	Used to specify the date from when the address is effective.	Yes (Conditional)						
	Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the health care inbound message.	Note: This data is required while editing the address of a person.						

Tag Name	Tag Description	Mandatory (Yes or No)
addressType	Used to indicate the type of address. The valid values are: <ul style="list-style-type: none"> • MAIN - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account. • SEAS - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person. • OVRD - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account. 	Yes (Conditional)
	<p>Note: If you do not specify the address type, by default, it is set to MAIN. You must specify an address type which is already defined in the ADDRESS_TYPE_FLG lookup field. It must be in the Active status.</p>	<p>Note: This data is required while editing the address of a person or account.</p>
mailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<p>Note: This data is required while defining and editing the address of a person.</p>
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
address4	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the person or account is located.	No
houseType	Used to indicate the type of the house.	No
streetNumber1	Used to specify the numeric information, if any, related to the address.	No
streetNumber2	Used to specify the numeric information, if any, related to the address.	No

Tag Name	Tag Description	Mandatory (Yes or No)
inCityLimit	Used to indicate whether the address is within the city limit. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
taxVendorGeographicalCode	Used to specify the geographic code of the address.	No
county	Used to specify the county name.	No
email	Used to specify the e-mail ID of the person.	No
overrideMailingName1	Used to specify the name using which you want to override the person's mailing name.	No
overrideMailingName2	Used to specify the name using which you want to override the person's override mailing name 1.	No
overrideMailingName3	Used to specify the name using which you want to override the person's override mailing name 2.	No
phones	Used to specify the phone details of the person.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a person.
phoneType	Used to indicate the type of phone. Note: You must specify a phone type which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a person.
phoneValue	Used to specify the phone number of the person.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a person.
extension	Used to specify the extension value of the phone number.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a person.
relatedPersons	Used to list other persons with whom you want to establish the person's relationship.	Yes (Conditional) Note: This data is required while defining or editing a person to person relationship.

Tag Name	Tag Description	Mandatory (Yes or No)
personRelationshipType	<p>Used to indicate how the other person is related to the person.</p> <p>Note:</p> <p>You must specify a person relationship type which is already defined in the system.</p> <p>If you have specified a parent customer as the related person for a bill group, the system, by default, uses the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. It does not considers the value specified in this tag.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating relationship between a bill group and person whose the person type is not Parent Customer.</p>
financialRelationshipSw	<p>Used to indicate whether the other person is financially responsible for the person. The valid values are:</p> <ul style="list-style-type: none"> • True • False <p>Note: If you do not specify the value, by default, it is set to False.</p>	No
parentOrChild	<p>Used to indicate whether the other person is parent or child. The valid values are:</p> <ul style="list-style-type: none"> • P • C 	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a person to person relationship.</p>
relatedPersonsCharacteristic	<p>Used to specify the characteristic details for the related person.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a characteristic of the respective entity.</p>

Tag Name	Tag Description	Mandatory (Yes or No)

Tag Name	Tag Description	Mandatory (Yes or No)						
effectiveDate	You can use this tag within the following tags:	No						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>characteristic</td> <td>Used to specify the date from when the characteristic is effective.</td> </tr> <tr> <td>characteristicList</td> <td>Used to specify the date from when the characteristic details are effective for the account.</td> </tr> </tbody> </table>		If this tag is used within...	Then the purpose of the sequence tag is...	characteristic	Used to specify the date from when the characteristic is effective.	characteristicList	Used to specify the date from when the characteristic details are effective for the account.
	If this tag is used within...		Then the purpose of the sequence tag is...					
characteristic	Used to specify the date from when the characteristic is effective.							
characteristicList	Used to specify the date from when the characteristic details are effective for the account.							
personCharacteristicList	Used to specify the characteristic details for the related person.	Yes (Conditional)						
		Note: This data is required while defining or editing a characteristic of the respective entity.						
accountData	Used to specify the account details of a person.	Yes (Conditional)						
		Note: This data is required while defining or editing an account.						
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account.	Yes (Conditional)						
	Note: The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Note: This data is required while defining or editing an account.						
customerClass	Used to indicate the customer class to which the account belongs.	Yes (Conditional)						
		Note: This data is required while defining an account.						
billCycle	Used to indicate the bill cycle for the account.	No						
	Note: You must specify a bill cycle which is already defined in the system.							
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0).	No						

Tag Name	Tag Description	Mandatory (Yes or No)
currency	Used to indicate the currency in which you want to bill the account.	Yes (Conditional)
	Note: You must specify a currency which is already defined in the system.	Note: This data is required while defining an account.
setUpDate	Used to specify the date when the account was first created. This is purely informational.	No
	Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date.	
acctUsageFlg	Used to indicate the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • INVC- Indicates that the account will be used to bill charges of the usage accounts. • SETL- Indicates that the account will be used only for settlement purposes. • USAG- Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. 	No
comments	Used to specify additional information about the account.	No
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No
collectionClass	Used to specify the collection class using which you want to control the account's debt.	No
	Note: If you do not specify the value, by default, it is set to the collection class which is specified in the customer class of the account. You must specify a collection class which is already defined in the system.	
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
		Note: This data is required while defining the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)						
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 	Yes (Conditional) Note: This data is required while defining the respective information.						
accountIdentifiers	Used to specify the account identifiers for the account.	Yes						
characteristics	Used to specify the characteristics for the account.	No						
characteristicsList	Used to specify the characteristics information for the account.	No						
membership	Used to specify information about the membership.	Yes						
sourceSystem	Used to specify the external system from where the membership information is received for repricing. Note: You must specify a source system which is already defined in the C1-SourceSystemLookup extendable lookup. It must be in the Active status.	Yes						
policyNumber	Used to specify the policy number.	Yes (Conditional) Note: This data is required while defining or editing the respective information.						
planNumber	Used to specify the plan number.	Yes						
healthPlanCode	Used to specify the health plan code.	Yes						
boStatusCd	Used to indicate the status of the membership.	No						
membershipType	You can use this tag within the following tags: <table border="1" data-bbox="483 1312 1185 1843"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>membership</td> <td>Used to indicate the type of membership. Yes
If this tag is used within...	Then the purpose of the sequence tag is...							
membership	Used to indicate the type of membership. The valid values are: <ul style="list-style-type: none"> • COBRA • Medicare • Retiree Note: If you want to define an active employee coverage membership, you must leave this field blank.							
mainSubscriber	Used to indicate the type of membership for the main subscriber.							

Tag Name	Tag Description	Mandatory (Yes or No)
mainSubscriber	Used to indicate whether the person is the main subscriber of the membership. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional) Note: This data is required only while defining the membership details of a person.
mainSubsIdType	Used to specify the type of main subscriber.	Yes (Conditional) Note: This data is required only while defining the membership details of a person.
mainSubsIdValue	Used to specify the value for the main subscriber.	Yes (Conditional) Note: This data is required only while defining the membership details of a person.
autoRenew	Used to indicate whether the individual membership should be automatically renewed.	No
associatedMemberIdentifierType	Used to specify the identifier type of the member who is associated with another individual membership.	No
associatedMemberIdentifier	Used to specify the identification of the member who is associated with another individual membership.	Yes (Conditional) Note: This data is required while defining or editing the individual membership.
exchangeFlag	Used to indicate whether the individual membership is purchased from the exchange. The valid values are: <ul style="list-style-type: none"> • ON • OFF 	Yes
exchangeId	Used to specify the identification number of the exchange from where the individual membership is purchased.	Yes (Conditional) Note: This data is required when the exchangeFlag is set to ON .

Tag Name	Tag Description	Mandatory (Yes or No)
binderLiabilityAmount	Used to specify the binder liability amount.	Yes (Conditional)
	Note: This data is required when the Consider Binder Liability Amount attribute is set to Y in the binder payment preference.	Note: This data is required while defining or editing the individual membership.
binderPayApplicability	Used to indicate that the system should monitor whether the binder payment is received before activating the individual membership. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
binderPayGraceDays	Used to calculate the grace date for the individual membership.	Yes (Conditional)
		Note: This data is required when the binderPayApplicability is set to Y .
binderPayThreshold	Used to specify the threshold percentage using which the threshold amount should be calculated.	Yes (Conditional)
		Note: This data is required when the binderPayApplicability is set to Y .
holdBilling	Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received.	Yes (Conditional)
		Note: This data is required when you have selected the binderPayApplicability to Y .
membershipRenewalDate	Used to indicate the date when the individual membership should be renewed.	Yes (Conditional)
	Note: You must specify the renewal date when you are manually renewing the individual membership.	Note: This data is required while defining or editing the individual membership.
contractPeriod	Used to indicate the period (in months) for which the individual membership should be automatically renewed.	Yes (Conditional)
		Note: This data is required while defining or editing the individual membership.

Tag Name	Tag Description	Mandatory (Yes or No)
membershipIdentifierList	Used to specify the identification details for the membership.	Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership.
membershipIdentifier	Used to specify the identification for the membership.	Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership.
membershipIdentifierType	Used to specify the membership identifier type.	Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership.
membershipIdentifierValue	Used to specify the value for the predefined membership identifier type.	Yes (Conditional) Note: This data is required while defining or editing the membership identifier details for the individual or group membership.
membershipCharacteristicList	Used to specify the characteristic details for the membership.	Yes (Conditional) Note: This data is required only while defining the membership details of a person.
membershipRateGuarantee	Used to specify the rate guarantee information for each individual membership. Note: The rate guarantee information can be specified only while defining or editing the individual membership.	Yes (Conditional) Note: This data is required while defining or editing the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)
membershipRateGuarantee	Used to specify the rate guarantee details for the individual membership. Note: The rate guarantee details can be specified only while defining or editing the individual membership.	Yes (Conditional) Note: This data is required while defining or editing the respective information.
rateGuaranteeStartDate	Used to specify the date from when the rate guarantee is available for the individual membership. Note: You can specify the rate guarantee start date only while defining or editing the individual membership. The rate guarantee start date cannot be later than rate guarantee end date. The rate guarantee start date cannot be earlier than the membership start date or later than membership end date.	Yes
rateGuaranteeEndDate	Used to specify the date till when the rate guarantee is available for the individual membership. Note: You can specify the rate guarantee start date only while defining or editing the individual membership. The rate guarantee end date cannot be earlier than rate guarantee start date. The rate guarantee start end cannot be earlier than the membership start date or later than membership end date.	Yes (Conditional) Note: This data is required if you have specified the rateGuaranteeStartDate while defining or editing the individual membership.
rateGuaranteeStatus	Used to indicate the status of the rate guarantee period. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
memberDataList	Used to specify basic information about the membership.	Yes (Conditional) Note: This data is required while defining or editing the membership details of a person.

Tag Name	Tag Description	Mandatory (Yes or No)
memberData	Used to specify the details of the main subscriber or dependent person.	Yes (Conditional)
	<p>Note:</p> <p>The member data information must be provided along with the enrollment dates whenever a new membership is created.</p> <p>The memberData tag (along with its elements) can only be used once within the schema, when the Type attribute of the memberData is set to Group.</p>	<p>Note: This data is required while defining the membership details of a person.</p>
memberIdType	Used to specify the external membership ID.	Yes
memberIdValue	Used to specify the value for the external membership ID.	Yes
enrollmentStartDate	Used to specify the date from when you want to add the member person to the membership.	Yes (Conditional)
	<p>Note:</p> <p>The enrollment start date cannot be later than the enrollment end date.</p> <p>The enrollment start date cannot be earlier than the membership start date or later than the membership end date.</p>	<p>Note: This data is required while defining the membership details of a person.</p>
enrollmentEndDate	Used to specify the date till when you want to add the member person to the membership.	Yes (Conditional)
	<p>Note:</p> <p>The enrollment end date cannot be earlier than the enrollment start date.</p> <p>The enrollment end date cannot be earlier than the membership start date or later than the membership end date.</p>	<p>Note: This data is required while defining the membership details of a person.</p>
memberRelationship	Used to indicate how the main subscriber is related to the membership.	Yes (Conditional)
		<p>Note: This data is required while defining or editing the membership details of a person.</p>
membershipPersonStatus	Used to indicate the status of the person in the membership. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
memberId	Used to specify the external membership ID.	No
	Note: Here, you need to specify a membership ID which is maintained in the external source system.	
financeRespFlag	Used to indicate whether the person is financially responsible for the membership. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
isMemberSw	Used to indicate whether the person is a member or a non-member in the membership. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
externalMedicareBeneficiaryId	Used to specify the Medicare beneficiary identifier of the person who has availed the Medicare benefit.	No
benefitData	Used to specify information about the Medicare benefit.	Yes (Conditional)
		Note: This data is required while defining or editing a benefit.
benefitDataList	Used to indicate the order in which the benefit charge should be created for the membership.	Yes (Conditional)
		Note: This data is required while defining or editing a benefit.
benefitStatus	Used to search benefits with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Discarded • Inactive 	Yes (Conditional)
		Note: This data is required while defining or editing a benefit.
benefitSourceFlag	Used to indicate the source from where the Medicare benefit is received. The valid values are: <ul style="list-style-type: none"> • Centers for Medicare and Medicaid Services • State 	No

Tag Name	Tag Description	Mandatory (Yes or No)
benefitSubTypeFlag	Used to indicate the type of Medicare benefit. The valid values are: <ul style="list-style-type: none"> • Late Enrollment Penalty • Low Income Subsidy • Part A-Inpatient Hospital Coverage • Part B-Outpatient Hospital Coverage • Part D-Medicare Prescription Drug Coverage 	No
	Note: The list includes only those benefit sub types which are defined in the BENEFIT_SUB_TYPE_FLG lookup field.	
planBenefitPackageId	Used to indicate the medicare plan benefit package (i.e. 800 series plan) which is applicable for Medicare Part A, Part B, or Part D benefit.	Yes (Conditional)
	Note: You must specify a plan benefit package Id when the benefit sub type is set to Part A-Inpatient Hospital Coverage , Part B-Outpatient Medical Coverage , or Part D-Medicare Prescription Drug Coverage .	
benefitAmount	Used to specify the low income subsidy or late enrollment penalty amount for Medicare Part D.	No
	Note: You must specify a benefit amount when the benefit sub type is set to Late Enrollment Penalty or Low Income Subsidy .	

The following table provides information about the response tags in the membership repricing inbound web service:

Tag	Tag Description
responseDetails	Displays the information whether the membership repricing inbound web service was successfully processed or not.
membershipId	Indicates the membershipID for which the repricing should take place.

Tag	Tag Description								
responseStatus	<p>Indicates the status of the response received from the membership repricing inbound web service.</p> <table border="1"> <thead> <tr> <th>If</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>An error occurs while processing the membership repricing inbound web service</td> <td>The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag.</td> </tr> <tr> <td>The membership repricing inbound web service is correctly processed</td> <td>The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service.</td> </tr> <tr> <td>A transaction results in an error</td> <td>The changes requested as a part of the transaction are not processed and a rollback is performed.</td> </tr> </tbody> </table>	If	Then	An error occurs while processing the membership repricing inbound web service	The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag.	The membership repricing inbound web service is correctly processed	The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service.	A transaction results in an error	The changes requested as a part of the transaction are not processed and a rollback is performed.
If	Then								
An error occurs while processing the membership repricing inbound web service	The responseStatus tag contains ERROR as a response message received from the membership repricing inbound web service, and the error message is displayed in the message tag.								
The membership repricing inbound web service is correctly processed	The responseStatus tag contains SUCCESS as a response message received from the membership repricing inbound web service.								
A transaction results in an error	The changes requested as a part of the transaction are not processed and a rollback is performed.								
message	Indicates the reason why the membership repricing inbound web service failed.								
responseType	<p>Indicates the type of response received from the inbound web service. The valid values are:</p> <ul style="list-style-type: none"> • DT - Indicates that the response contains detailed information. • SMRY - Indicates that the response contains summary information. 								
paidThroughDate	Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 326.								
premiumCalculationDetails	<p>Displays the premium calculation details for the membership.</p> <p>Note: The premiumCalculationDetails tag (along with its elements) can be used only once within the schema when the Type attribute of the premiumCalculationDetails is set to Group.</p>								
premiumCalculation	<p>Displays the total premium of all the members for the timeline.</p> <p>Note: The premiumCalculation tag (along with its elements) can be used more than once within the schema when the Type attribute of the premiumCalculation is set to List.</p>								
priceItemCd	Indicates the price item for which the billable charge is created.								
startDt	<p>Displays the start date of the timeline.</p> <p>Note: The startDt cannot be later than the endDt. The startDt cannot be earlier than the membership start date or later than the membership end date.</p>								

Tag	Tag Description						
endDt	<p>Displays the end date of the timeline.</p> <p>Note:</p> <p>The endDt cannot be earlier than the startDt.</p> <p>The endDt cannot be earlier than the membership start date or later than the membership end date.</p>						
calcAmt	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>premiumCalculation</td> <td>Displays the premium amount calculated for the timeline.</td> </tr> <tr> <td>premiumCalcLines</td> <td>Displays the premium amount calculated for each eligible member in the membership.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the sequence tag is...	premiumCalculation	Displays the premium amount calculated for the timeline.	premiumCalcLines	Displays the premium amount calculated for each eligible member in the membership.
If this tag is used within...	Then the purpose of the sequence tag is...						
premiumCalculation	Displays the premium amount calculated for the timeline.						
premiumCalcLines	Displays the premium amount calculated for each eligible member in the membership.						
distAmt	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>premiumCalculation</td> <td>Displays the discount amount calculated for the timeline.</td> </tr> <tr> <td>premiumCalcLines</td> <td>Displays the discount amount calculated for each eligible member in the membership.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the sequence tag is...	premiumCalculation	Displays the discount amount calculated for the timeline.	premiumCalcLines	Displays the discount amount calculated for each eligible member in the membership.
If this tag is used within...	Then the purpose of the sequence tag is...						
premiumCalculation	Displays the discount amount calculated for the timeline.						
premiumCalcLines	Displays the discount amount calculated for each eligible member in the membership.						
currencyCd	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>premiumCalculation</td> <td>Indicates the currency in which the premium is calculated for the timeline.</td> </tr> <tr> <td>premiumCalcLines</td> <td>Indicates the currency in which the premium is calculated for each eligible member in the membership.</td> </tr> </tbody> </table> <p>Indicates the currency in which the premium is calculated.</p> <p>Note: Here, the system chooses those currencies in which the bills added to the membership are created.</p>	If this tag is used within...	Then the purpose of the sequence tag is...	premiumCalculation	Indicates the currency in which the premium is calculated for the timeline.	premiumCalcLines	Indicates the currency in which the premium is calculated for each eligible member in the membership.
If this tag is used within...	Then the purpose of the sequence tag is...						
premiumCalculation	Indicates the currency in which the premium is calculated for the timeline.						
premiumCalcLines	Indicates the currency in which the premium is calculated for each eligible member in the membership.						
acctIdType	Indicates the account identifier type.						
acctIdVal	Indicates the value of the account identifier type.						
accountId	Indicates the account to which the membership is billed.						
billableChgId	Indicates the billable charge ID.						
pricingRuleId	Indicates the pricing rule using which the premium amount is calculated.						
priceAsgnId	Indicates the price item pricing which is assigned to a membership.						
premiumCalcLineDetails	Displays the premium calculated line details for each eligible member in the membership.						

Tag	Tag Description						
premiumCalcLines	Displays the premium calculated line information for each eligible member in the membership.						
proFactor	Indicates the proration factor used to calculate the billable charges for the membership contract.						
month	Displays the month of the premium calculation.						
totalCalcAmt	Displays the total calculated amount for premium calculation.						
entityTypeFlg	Indicates the type of entity created for premium calculation.						
entityId	Indicates the entity ID.						
referenceIdType	Indicates the reference type used for premium calculation.						
referenceIdValue	Indicates the value of the reference identifier type.						
pricingParameters	Indicates the pricing eligibility criteria which is satisfied while deriving the premium for the membership.						
description	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.						
accountBalance	Displays the amount balance in the account.						
accountBalanceData	Displays the account balance data information.						
accountIdentifierType	Indicates the account identifier type for the account.						
accountNumber	Indicates the bank account through which automatic payment is made.						
accountId	Indicates the account which made the payment.						
division	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the sequence tag is...</th> </tr> </thead> <tbody> <tr> <td>personData</td> <td>Displays the division to which the person belongs</td> </tr> <tr> <td>accountBalanceData</td> <td>Displays the division to which the account belongs</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the sequence tag is...	personData	Displays the division to which the person belongs	accountBalanceData	Displays the division to which the account belongs
If this tag is used within...	Then the purpose of the sequence tag is...						
personData	Displays the division to which the person belongs						
accountBalanceData	Displays the division to which the account belongs						
sourceSystem	Indicates the external system from where the membership information is received for repricing.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the customer inbound message.						
externalSourceId	Displays the external source system ID.						
accountInfoDtls	Displays the account information details of an account.						
currentBalance	Displays the total amount of funds in the account.						
lastBillAmount	Indicates the last bill amount generated for the membership.						
statusCd	<p>Indicates whether the membership repricing incoming message is successfully processed or not. The valid values are:</p> <ul style="list-style-type: none"> • Success • Fail 						

Tag	Tag Description
messageText	Indicates the reason for an error occurrence.

Chapter 40

Off-Process Request

Topics:

- [Prerequisites](#)
- [Off-Process Request \(Without Approval\) Status Transition](#)
- [Off-Process Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffProcessRequest](#)
- [Off-Process Request Type](#)
- [Off-Process Request \(Used for Searching\)](#)
- [Off-Process Request \(Used for Viewing\)](#)

There might be situations in the Administrative Services Only (ASO) business wherein the insurance company or health insurance customer (i.e. Employer) would like to change agreed limits or funds within the policy period. For example, a need may arise to change the ASL limit, minimum or maximum discount limit, or settlement or runout funds. This will impact the stop-loss, discount arrangement, and level funding calculation, respectively. In addition, there might be situations wherein the aggregated amount might require a change due to corrections in the claim transactions or due to migration of customers for whom the stop-loss is pre-accumulated and billed in the legacy system.

Oracle Revenue Management and Billing provides a mechanism through which the following agreed limits, funds, or calculated amounts can be amended within the policy period:

Accumulation Category	Field Value
Specific Stop-Loss (SSL)	Aggregated Amount
Aggregate Stop-Loss (ASL)	Aggregated Amount
	ASL Limit
	SSL Cumulative Credits
Level Funded	Aggregated Amount
	Settlement Fund
	SSL Cumulative Credits
	ASL Cumulative Credits
	Runout Fund
Discount Arrangement	Aggregated Amount
	Minimum Discount Limit
	Maximum Discount Limit

The system enables you to amend the above mentioned accumulation field values through an off-process request. As its name suggests, an off-process request is an adhoc request to create an adjustment or billable charge through which the system can amend the above mentioned accumulation field values.

While creating an off-process request, you need to specify an off-process request type using which you want to create the off-process request. It is the off-process request type which helps the system to determine:

- The business object using which the off-process request should be created in the system
- Whether the system should create an adjustment or billable charge to amend the above mentioned accumulation field values
- Whether the approval is required for the off-process request
- The accumulation categories whose field values can be amended through the respective off-process requests
- The accumulation fields whose values can be amended through the respective off-process requests
- The default adjustment type using which the adjustment should be created when the amendment mode is set to **Adjustment**
- The default billable charge line type using which the billable charge should be created when the amendment mode is set to **Billable Charge**
- The type of contract against which the adjustment or billable charge should be created for the account

Once you specify the off-process request type, you need to specify the following:

- The parent customer (i.e. person whose person type is set to **Parent Customer**) for which you want to create an off-process request
- The accumulation category whose field value you want to amend through the off-process request
- The accumulation field whose value you want to amend through the off-process request

Note: Here, you can select only those accumulation categories and fields for which the contract type and adjustment type or billable charge line type information is available in the respective off-process request type.

- The accumulation group for which the changes should be reflected in the system

Note: If the accumulation category is set to **Specific Stop-Loss**, you can only select the accumulation group defined at the bill group level. However, if the accumulation category is set to **Aggregate Stop-Loss**, **Discount Arrangement**, or **Level Funded**, you can only select the accumulation group defined at the parent customer level.

- The account for which the adjustment or billable charge should be created in the system
- The amount which you want amend through the off-process request
- The adjustment type using which the adjustment should be created when the amendment mode is set to **Adjustment** in the respective off-process request type
- The billable charge line type using which the billable charge should be created when the amendment mode is set to **Billable Charge** in the respective off-process request type

- The member or main subscriber for whom the field value should be amended in the system

Note: You need to specify the member or main subscriber when the accumulation category is set to **Specific Stop-Loss**.

- The date (i.e. effective date) when the field value should be amended in the system

Note: If the amendment mode is set to **Adjustment**, the above date is stamped as the accounting date. However, if the amendment mode is set to **Billable Charge**, the above date is stamped as the billable charge start and end dates.

- The coverage period for which the amendment is applicable

Note: The coverage period is stored for the informational purposes only and is not considered during accumulation.

Once an off-process request is created in the **Draft** status, you can edit, delete, or submit the off-process request. On submitting an off-process request, the system creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to **Processed**.

Note: The off-process request through which the adjustment is created is stored in the **Comments** field. And, the off-process request through which the billable charge is created is stored in the **GRP_REF_VAL** column.

You can optionally configure the approval process for the off-process request. If the **Approval Required** flag is set to **Yes** in the off-process request type, the status of the off-process request is changed to **Approval In Progress** when you submit the off-process request. Once the approver approves the off-process request, the status of the off-process request is changed to **Approved**. The system then creates the adjustments or billable charges to amend the accumulation field values. Finally, the status of the off-process request is changed to **Processed**. However, if the approver rejects an off-process request, the status of the off-process request is changed to **Rejected**.

These adjustments or billable charges are then considered in the accumulation run when the adjustment date or billable charge start and end dates fall within the accumulation cycle. Depending on the accumulation category, the adjustment or billable charge is considered when the **C1-ACSSL**, **C1-ACASL**, **C1-ACDA**, or **C1-ACLF** batch is executed.

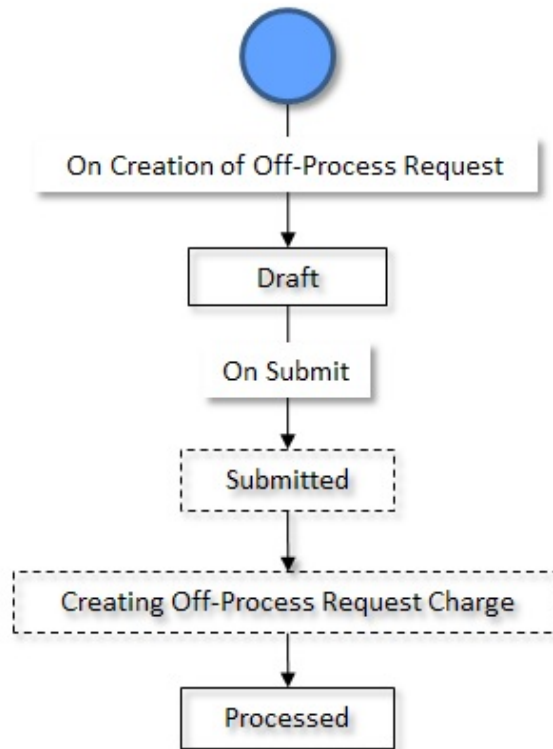

For more information on how to setup the off-process request feature, see [Prerequisites](#) on page 3272.

Prerequisites

Information will be available soon...

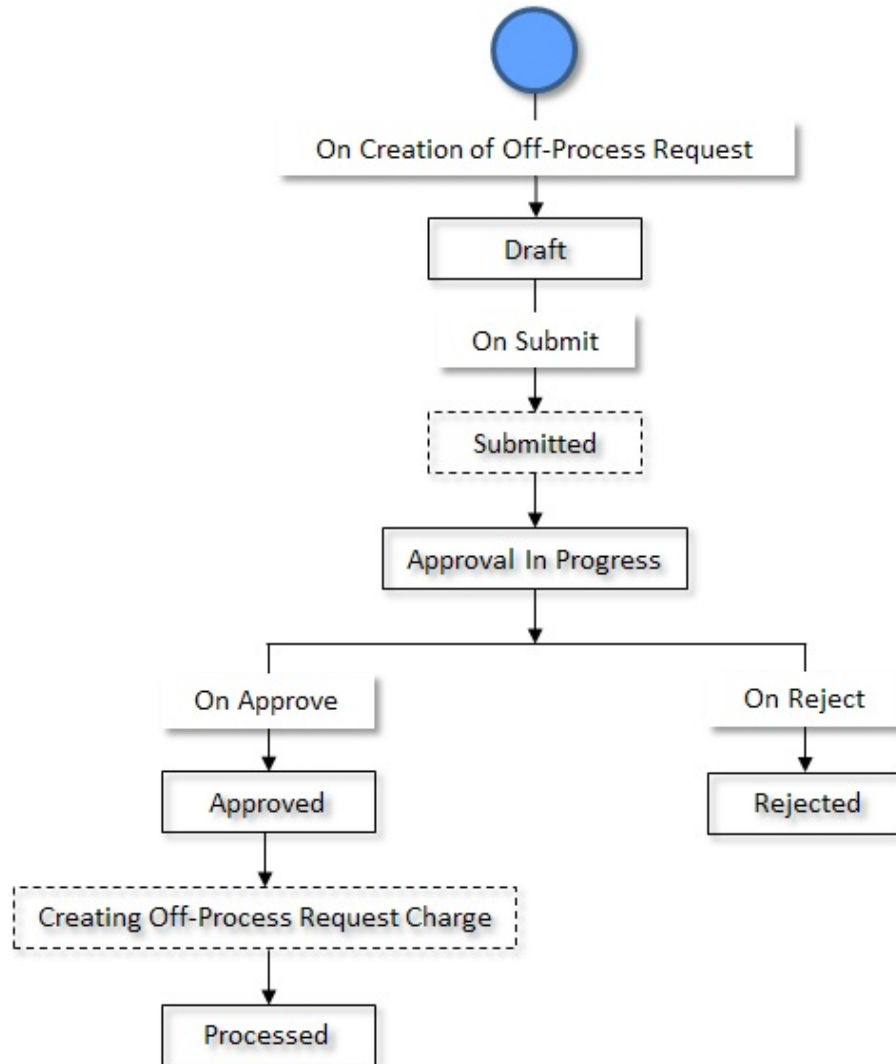

Off-Process Request (Without Approval) Status Transition

The following figure graphically indicates how an off-process request moves from one status to another when the approval process is not configured in the off-process request type:

Off-Process Request (With Approval) Status Transition

Algorithms Used in C1-OffProcessRequest

Information will be available soon...

Off-Process Request Type

Oracle Revenue Management and Billing allows you to define an off-process request type using which you can create an off-process request. It is the off-process request type which helps the system to determine the following:

- The business object using which the off-process request should be created in the system.
- Whether the system should create the adjustment or billable charge to amend the accumulation field values.
- Whether approval is required for an off-process request.
- The accumulation categories and their respective amendment fields whose field values can be amended through the off-process requests.

- The default adjustment type or the billable charge line type using which the adjustment should be created in the system.
- The type of contract against which the adjustment or billable charge should be created for the account.

The **Off-Process Request Type** screen allows you to define, edit, delete, and copy an off-process request type. It contains the following zones:

- [Off-Process Request Type List](#) on page 3274
- [Off-Process Request Type](#) on page 3274

Off-Process Request Type List

The **Off-Process Request Type List** zone lists the off-process request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Off-Process Request Type	Displays the off-process request type.
Description	Displays the description of the off-process request type.
Edit	On clicking the Edit (✎) icon, the Off-Process Request Type screen appears where you can edit the details of the off-process request type.
Duplicate	On clicking the Duplicate (📄) icon, the Off-Process Request Type screen appears where you can define a new off-process request type using an existing off-process request type.
Delete	On clicking the Delete (🗑) icon, you can delete the off-process request type.
	Note: You can delete an off-process request type when you have not created an off-process request using the off-process request type.

On clicking the **Broadcast** (📡) icon corresponding to an off-process request type, the **Off-Process Request Type** zone appears with the details of the respective off-process request type.

Off-Process Request Type

The **Off-Process Request Type** zone displays the details of the off-process request type. It contains of the following sections:

- **Main** - Displays the basic information about the off-process request type. It contains the following fields:

Column Name	Column Description
Off-Process Request Type	Displays the off-process request type.

Column Name	Column Description
Business Object	Indicates the business object using which the off-process request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the off-process request type.
Detailed Description	Displays additional information about the off-process request type.
Off-Process Request Business Object	Indicates the business object using which an off-process request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status	Indicates the status of the off-process request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Amendment Mode	Indicates whether adjustments or billable charges should be created using the off-process request type.
Approval Required	Indicates whether approval is required while creating the adjustments or billable charges using the off-process request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the off-process request type.
	Note: The Approval Profile field appears when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an off-process request is submit for approval.
	Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. This field appears when the Approval Required option is selected.

Column Name	Column Description
Approval To Do Role	Indicates that users with the specified To Do role can only approve an off-process request which is submitted for approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> <p>This field appears when the Approval Required option is selected.</p>

- **Accumulation Amendment Details** - Lists the types of accumulation defined for the off-process type. It contains the following columns:

Column Name	Column Description
Accumulation Category	Indicates the category for which the adjustment or billable charge is created.
Amendment Field	Indicates the field for which the adjustment or billable charge is created.
Contract Type	Indicates the contract type which is associated while defining the off-process request type.
Adjustment Type/Billable Charge Line Type	Indicates the adjustment or billable charge line type using which the adjustment or billable charge should be created through the off-process request.

- **Characteristics** - The **Characteristics** section lists the characteristics of the off-process request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the off-process request type.
Delete	Used to delete the off-process request type.
	<p>Note: You can delete a off-process request type when you have not created a off-process request using the off-process request type.</p>
Duplicate	Used to create a new off-process request type using an existing off-process request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the off-process request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Off-Process Request Type** zone does not appear in the **Off-Process Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the off-process request type in the **Off-Process Request Type List** zone.

Defining an Off-Process Request Type

Prerequisites

To define an off-process request type, you should have:

- Off-process request type business objects defined in the application
- Off-process request business objects defined in the application
- Required approval profiles defined in the application
- Required To Do role assigned to the **C1-OFPPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Adjustment type and billable charge line type defined in the application
- Off-process request type status defined in the application

Procedure

To define an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Off-Process Request Type** sub-menu.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.
- **Accumulation Amendment Details** - Used to specify the accumulation amendment details for the off-process request type.
- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Off-Process Request Type	Used to specify the off-process request type.	Yes
Business Object	Indicates the business object using which you are defining the off-process request type.	Not applicable
Description	Used to specify the description for the off-process request type.	Yes
Detailed Description	Used to specify additional information about the off-process request type.	No
Off-Process Request Business Object	Used to indicate the business object using which you want to create the off-process request.	Yes
Status	Used to indicate the status of the off-process request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected.</p> <p>By default, the Active option is selected.</p> </div>	Not applicable
Amendment Mode	Used to indicate the amendment mode selected for the off-process request type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Billable Charge 	Yes
Approval Required	Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field. This field appears when the Approval Required option is selected.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The list includes only those To Do roles which are associated to the specified approval To Do type. This field appears only when the Approval Required option is selected.	

4. Enter the required details in the **Main** section.
5. Define the accumulation amendment details for the off-process request type, if required.
6. Define characteristics for the off-process request type, if required.
7. Click **Save**.

The off-process request type is defined.

Adding the Accumulation Amendment Details in an Off-Process Request Type

Prerequisites

To add accumulation amendment details in an off-process request type, you should have:

- Accumulation categories defined in the application
- Amendment fields defined in the application

- Contract types defined in the application
- Adjustment type and billable charge line type defined in the application

Procedure

To add accumulation amendment details in an off-process request types:

1. Ensure that the

Accumulation Amendment Details section is expanded when you are adding the accumulation amendment details in an off-p

The **Accumulation Amendment Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Category	Used to indicate the category that you want to use for accumulation. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop Loss • Discount Arrangement • Level Funded • Specific Stop-Loss 	Yes
Amendment Field	Used to indicate the field that you want to use for accumulation purposes. The valid values are: <ul style="list-style-type: none"> • ASL Limit • Aggregated Amount • Cumulative ASL Credit • Cumulative SSL Credit • Maximum Limit • Minimum Limit • Run Out Fund • Settlement Fund 	Yes
Contract Type	Used to indicate the contract that you want to use for accumulation and amendment purposes. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search  icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required when you are defining accumulation amendment details in an off-process request type.</p> </div>
Adjustment Type/Billable Charge Line Type	Used to indicate the type of charge using which you want to create adjustments or billable charges. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>The Search  icon appears corresponding to the Adjustment Type/Billable Charge Line Type field. On clicking the Search icon, the Adjustment Type/Billable Charge Line Type Search window appears.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required when you are defining accumulation amendment details in an off-process request type.</p> </div>

2. Enter the required details in the **Accumulation Amendment Details** section.

- If you want to define more than one accumulation amendment details for the off-process request type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an accumulation amendment detail(s) from the off-process request type, click the **Delete (🗑)** icon corresponding to the accumulation amendment details.

Defining a Characteristic for an Off-Process Request Type

Prerequisites

To define a characteristic for an off-process request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Off-Process Request**)

Procedure

To define a characteristic for an off-process request type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an off-process request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Off-Process Request .	Note: This field is required when you are defining a characteristic for the off-process request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the off-process request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the off-process request type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the off-process request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy an off-process request type	Copying an Off-Process Request Type on page 3285

Editing an Off-Process Request Type

Prerequisites

To edit an off-process request type, you should have:

- Off-process request business objects defined in the application
- Adjustment type and billable charge line type defined in the application
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-OFPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Off-process request type status defined in the application

Procedure

To edit an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the off-process request type whose details you want to edit.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.
- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Off-Process Request Type	Displays the off-process request type.	Not applicable
Business Object	Indicates the business object using which you are defining the off-process request type.	Not applicable
Description	Used to specify the description for the off-process request type.	Yes
Off-Process Request Business Object	Used to indicate the business object using which you want to create the off-process request.	Yes
Detailed Description	Used to specify additional information about the off-process request type.	No
Status	Used to indicate the status of the off-process request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	<p>Note:</p> <p>You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected.</p> <p>If you do not specify the status, by default, it is set to Active.</p>	
Amendment Mode	Used to indicate the amendment mode selected for the off-process request type. The valid values are: <ul style="list-style-type: none"> Adjustment Billable Charge 	Yes
Approval Required	Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p>	
	<p>Note: This field is required when the Approval Required option is selected.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Tip: Alternatively, you can edit the details of a off-process request type by clicking the **Edit** button in the **Off-Process Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove accumulation amendment details from the off-process request type, if required.
7. Define, edit, or remove characteristics of the off-process request type, if required.
8. Click **Save**.

The changes made to the off-process request type are saved.

Deleting an Off-Process Request Type

Procedure

To delete an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the off-process request type that you want to delete.
A message appears confirming whether you want to delete the off-process request type.

Note: You can delete an off-process request type when you have not created an off-process request using the off-process request type.

Tip: Alternatively, you can delete an off-process request type by clicking the **Delete** button in the **Off-Process Request Type** zone.

5. Click **OK**.

The off-process request type is deleted.

Copying an Off-Process Request Type

Instead of creating an off-process request type from scratch, you can create a new off-process request type using an existing off-process request type. This is possible through copying an off-process request type. On copying an off-process request type, the details including the characteristics are copied to the new off-process request type. You can then edit the details, if required.

Prerequisites

To copy an off-process request type, you should have:

- Off-process request type (whose copy you want to create) defined in the application
- Off-process request business objects defined in the application
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-OFPPAP** To Do type in the application
- Accumulation category defined in the application
- Amendment field and amendment mode defined in the application
- Contract type defined in the application
- Adjustment type and billable charge line type defined in the application
- Off-process request type status defined in the application

Procedure

To copy an off-process request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Off-Process Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request Type** sub-menu.
The **Off-Process Request Type** screen appears.
4. In the **Off-Process Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the off-process request type whose copy you want to create.

The **Off-Process Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request type.
- **Characteristics** - Used to define the characteristics for the off-process request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Off-Process Request Type	Used to specify the off-process request type.	Yes
Business Object	Indicates the business object using which you are defining the off-process request type.	Not applicable
Description	Used to specify the description for the off-process request type.	Yes
Off-Process Request Business Object	Used to indicate the business object using which you want to create the off-process request.	Yes
Detailed Description	Used to specify additional information about the off-process request type.	No
Off-Process Request Business Object	Used to indicate the business object using which you want to create the respective off-process request type.	Yes
Status	<p>Used to indicate the status of the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an off-process request type to Inactive when the corresponding off-process request is in a status other than Processed or Rejected. If you do not specify the status, by default, it is set to Active.</p>	Yes
Amendment Mode	<p>Used to indicate the amendment mode selected for the off-process request type. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment • Billable Charge 	Yes
Approval Required	Used to indicate whether the approval is required before generating adjustments or billable charges through an off-process request.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an off-process request is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	<p>Note:</p> <p>The Search  icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an off-process request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	<p>Note:</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p>	

Tip: Alternatively, you can copy an off-process request type by clicking the **Duplicate** button in the **Off-Process Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove the accumulation amendment details from the off-process request type, if required.
7. Define, edit, or remove characteristics of the off-process request type, if required.
8. Click **Save**.

The new off-process request type is defined.

Off-Process Request (Used for Searching)

The **Off-Process Request** screen allows you to search for an off-process request using various search criteria. It also allows you to define an off-process request. It contains the following zone:

- [Search Off-Process Request](#) on page 3288

Through this screen, you can navigate to the following screen:

- [Off-Process Request \(Used for Viewing\)](#) on page 3294

Search Off-Process Request

The **Search Off-Process Request** zone allows you to search for an off-process request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an off-process request using the off-process request or adjustment/billable charge details. The valid values are: <ul style="list-style-type: none"> Request Details Adjustment/Billable Charge Details 	Yes
	Note: By default, the Request Details option is selected.	
Off-Process Request ID	Used to search a particular off-process request.	No
Created From	Used to search off-process requests which are created from a particular date onwards.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Created Until	Used to search off-process requests which are created till a particular date.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Off-Process Request Type	Used to search off-process requests using a particular off-process request type.	No
Status	Used to search off-process requests with a particular status. The valid values are: <ul style="list-style-type: none"> Approval In Progress Draft Processed Rejected 	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Parent Person ID	Used to search off-process requests which include adjustments or billable charges of a particular parent person.	No
	Note: The Search  icon appears corresponding to the Parent Person ID field. On clicking the Search icon, the Person Search window appears. This field appears when the Request Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Creation Mode	Used to search off-process requests which are created using a particular mode. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual 	No
	Note: This field appears when the Request Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an off-process request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the off-process request is created.
Off-Process Request Information	Indicates the information about the off-process request. Note: It has a link. On clicking the link, the Off-Process Request screen appears where you can view the details of the respective off-process request.
Parent Person Information	Indicates the information about the parent person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Off-Process Request screen appears where you can view the details of the respective off-process request.
Created By	Indicates the user who has created the off-process request.
Status	Indicates the status of the off-process request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Draft • Processed • Rejected
Creation Mode	Indicates how the off-process request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Off-Process Request

Prerequisites

To search for an off-process request, you should have:

- Off-process request types defined in the application

Procedure

To search for an off-process request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Off-Process Request**.
A sub-menu appears.
3. Click the **Search** option from the **Off-Process Request** sub-menu.
The **Off-Process Request** screen appears.
4. Enter the search criteria in the **Search-Off Process Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of off-process requests that meet the search criteria appears in the **Search Results** section.

Defining an Off-Process Request

Prerequisites

To create an off-process request, you should have:

- Off-Process request types defined in the application
- Accumulation category and accumulation group defined in the application
- Amendment field defined in the application
- Persons defined in the application
- Account ID defined in the application

- Characteristic types defined in the application
- Adjustment types or billable charge line types defined in the application

Procedure

To create an off-process request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Off-Process Request**.
A sub-menu appears.
3. Click the **Add** option from the **Off-Process Request** sub-menu.

The **Add Off-Process Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Off-Process Request Type	Used to indicate the off-process request type using which you want to create the off-process request.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Off-Process Request** screen.

4. Select the required off-process request type from the **Off-Process Request Type** field.
5. Click **OK**.

The **Off-Process Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the off-process request.
- **Off-Process Request Information** - Used to specify the off-process request information.
- **Characteristics** - Used to define the characteristics for the off-process request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Off-Process Request Type	Indicates the off-process request type using which you want to create the off-process request.	Not applicable
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Person Id	Used to indicate the parent customer (.e. person whose person type is set to Parent Customer) for which you want to create an off-process request.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parent Person ID field. On clicking the Search icon, the Parent Customer Search window appears.</p> <p>On specifying the parent person, the description of the parent person appears corresponding to the Parent Person ID field.</p>	
Comments	Used to specify the comments for an off-process request.	No

- Enter the required details in the **Main** section.
- Add the accumulation amendment details in the off-process request, if required.
- Define characteristics for the off-process request, if required.
- Click **Save**.

The off-process request is created in the **Draft** status.

Off-Process Request

The **Off-Process Request** zone displays the details of the off-process request. It contains the following sections:

- **Main** - Displays basic information about the off-process request. It contains the following fields:

Field Name	Field Description
Off-Process Request Information	Displays information about the off-process request.

Field Name	Field Description
Off-Process Request Type	Indicates the off-process request type using which the off-process request is created.
	Note: It has a link. On clicking the link, the Off-Process Request Type screen appears where you can view the details of the respective off-process request type.
Parent Person	Indicates the parent person for whom the off-process request is created.
Status	Indicates the status of the off-process request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Draft • Processed • Rejected
Creation Mode	Indicates whether the off-process request is created automatically or manually. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the off-process request.
	Note: The Edit button appears when the off-process request is in the Draft status.
Delete	Used to delete the off-process request.
	Note: The Delete button appears when the off-process request is in the Draft status.
Submit	Used to submit the off-process request.
	Note: The Submit button appears when the off-process request is in the Draft status.
Approve	Used to approve the off-process request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> • The off-process request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the off-process request.
Reject	Used to reject the off-process request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> • The off-process request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the off-process request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the off-process request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the off-process request status is updated
Create Date/Time	Displays the date and time when the off-process request is created.

- **Characteristics** - Lists the characteristics defined for the off-process request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the off-process request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Off-Process Request Details

The **Off-Process Request Details** zone lists the accumulation and amendment details of the off-process request. This zone contains the following columns:

Column Name	Column Description
Accumulation Category	Displays the category whose field value is amended through an off-process request. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop Loss • Discount Arrangement • Level Funded • Specific Stop-Loss
Accumulation Group ID	Indicates the accumulation group for which the (accumulation and amendment) changes are reflected in the system.

Column Name	Column Description
Amendment Field	Indicates the accumulation field whose value is amended through the off-process request. The valid values are: <ul style="list-style-type: none"> • ASL Limit • Aggregated Amount • Cumulative ASL Credit • Cumulative SSL Credit • Maximum Limit • Minimum Limit • Run Out Fund • Settlement Fund
Off-Process Amount	Displays the amount which is amended through the off-process request.
Member/Subscriber ID	Displays the member or the main subscriber for whom the field value is amended in the system.
Status	Displays the current status of the off-process request.
Account Information	Indicates the account for which the adjustment or billable charge is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Effective Date	Indicates the date when the field value is amended in the system.
Coverage Start Date	Indicates the date from when the amendment is applicable for the off-process request.
Coverage End Date	Indicates the date till when the amendment is applicable for the off-process request.
Adjustment Type	Indicates the adjustment type using which the adjustment should be created when the amendment mode is set to Adjustment in the respective off-process request type.
Adjustment Information	Displays information about the adjustment. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.
Billable Charge Line Type	Indicates the billable charge line type using which the billable charge should be created when the amendment mode is set to Billable Charge in the respective off-process request type.
Billable Charge Information	Displays information about the billable charge. Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.

On clicking the **Broadcast** () icon corresponding to an off-process request detail record, the **Error Message** zone is displayed.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using **Record Status** field as the search criteria available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Adding the Off-Process Request Details in an Off-Process Request

Prerequisites

To add the off-process request details in an off-process request, you should have:

- Off-process request types defined in the application
- Categories defined in the application (where the characteristic entity is set to **Off-Process Request**)
- Applicable adjustments and billable charge line types defined in the application.

Procedure

To add the off-process request details in an off-process request:

1. Ensure that the **Off-Process Request Details** section is expanded when you are editing an off-process request.

The **Off-Process Request Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Category	Used to indicate the accumulation category whose field value you want to amend through the off-process request. The valid values are: <ul style="list-style-type: none"> • Aggregate Stop Loss • Discount Arrangement • Level Funded • Specific Stop-Loss 	Yes
Accumulation Group ID	Used to indicate the accumulation group for which the (accumulation and amendment) changes should be reflected in the system. Note: The Search (🔍) icon appears corresponding to the Accumulation Group ID field. On clicking the Search icon, the Accumulation Group Search window appears. On specifying the accumulation group Id, the description of the accumulation group Id appears corresponding to the Accumulation Group ID field. If the accumulation category is set to Specific Stop-Loss , you can only select the accumulation group defined at the bill group level. However, if the accumulation category is set to Aggregate Stop-Loss, Discount Arrangement, or Level Funded , you can only select the accumulation group defined at the parent customer level.	No

Field Name	Field Description	Mandatory (Yes or No)
Amendment Field	<p>Used to indicate the accumulation field whose value you want to amend through the off-process request. The valid values are:</p> <ul style="list-style-type: none"> • ASL Limit • Aggregated Amount • Cumulative ASL Credit • Cumulative SSL Credit • Maximum Limit • Minimum Limit • Run Out Fund • Settlement Fund 	Yes (Conditional)
	<p>Note: You can select only those accumulation categories and fields for which the contract type and adjustment type or billable charge line type information is available in the respective off-process request type.</p>	<p>Note: This field is required when you select the Accumulation Category for the off-process request.</p>
Account ID	<p>Used to indicate the account for which the adjustment or billable charge should be created in the system.</p>	Yes (Conditional)
	<p>Note:</p> <p>The account ID and the account information appear automatically when you select the appropriate option from the Amendment Field field.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> <p>On specifying the account ID, the description of the account appears corresponding to the Account ID field.</p>	<p>Note: This field is required when you select the Accumulation Group ID for the off-process request.</p>
Off-Process Amount	<p>Used to specify the amount which you want amend through the off-process request.</p>	Yes (Conditional)
		<p>Note: This field is required when you select the Accumulation Category for the off-process request.</p>

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type/ Billable Charge Line Type	Used to indicate the adjustment type or billable charge line type using which the adjustment or billable charge should be created when the amendment mode is set to Adjustment or Billable Charge in the respective off-process request type.	Yes (Conditional)
	<p>Note:</p> <p>The Search () icon appears corresponding to the Adjustment Type/Billable Charge Line Type field. On clicking the Search icon, the Adjustment Type/Billable Charge Line Type Search window appears.</p> <p>On specifying the value for a predefined adjustment type or billable charge line type, the description of the adjustment type or billable charge line type appears corresponding to the Adjustment Type/Billable Charge Line Type Search field.</p> <p>Once the Amendment Field is selected, its respective adjustment type or billable charge line type appears in the Adjustment Type/Billable Charge Line Type field.</p>	<p>Note: This field is required when you select the Accumulation Category for the off-process request.</p>
Member/Subscriber ID	Used to specify member or the main subscriber for whom the field value should be amended in the system.	No
Effective Date	Used to indicate the date from when the field value should be amended in the system.	Yes (Conditional)
		<p>Note: This field is required when you select the Accumulation Category for the off-process request.</p>
Coverage Start Date	Used to indicate the date from when the amendment is applicable for the off-process request.	No
Coverage End Date	Used to indicate the date till when the amendment is applicable for the off-process request.	No

- Enter the required details in the **Off-Process Request Details** section.
- If you want to define more than one off-process request detail for the off-process request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an off-process request detail from the off-process request, click the **Delete** () icon corresponding to the off-process request detail.

Defining a Characteristic for an Off-Process Request

Prerequisites

To define a characteristic for an off-process request, you should have:

- Off-process request types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Off-Process Request**)

Procedure

To define a characteristic for an off-process request:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an off-process request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the off-process request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the off-process request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Off-Process Request . Note: This field is required when you are defining a characteristic for the off-process request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the off-process request.

2. Enter the required details in the **Characteristic** section.
3. If you want to define more than one characteristic for the off-process request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the off-process request, click the **Delete (🗑)** icon corresponding to the off-process request information.

Chapter 41

Individual Health Insurance Pricing

Topics:

- [Business Rules](#)
- [Young Adult Coverage in an Individual Membership](#)

Oracle Revenue Management and Billing enables you to define pricing for different services offered in a health plan. Each service offered in a health plan should be defined as a price item in the system. For example, services may include medical insurance, home care, hospital visits, etc.

You can define the age based, tier based, or additional charge pricing for a price item using the respective pricing rule. You can create an age based, tier based, and additional charge pricing rule using the respective pricing rule type. The following pricing rule type and pricing rule business objects are enhanced to support the fully-insured individual business:

- C1-PrcRuleTypeAgeBased
- C1-PricingRuleAgeBased
- C1-PrcRuleTypeTierBased
- C1-PricingRuleTierBased
- C1-PrcRuleTypeCapitationFee
- C1-PricingRuleCapitationFee
- C1-PrcRuleTypeBenefit

You can create a pricing rule for a health plan using a pricing rule type only when the pricing rule type is associated with the health plan. The system enables you to define pricing rules for various services offered in the health plan. You must add the required price items in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type. While defining an age based pricing rule for a price item, you can offer different rates to different member persons based on the age, member relationship, geographic rating area, member person attributes, etc. You can also charge additional fee or given discount to a member person based on modifier attributes. For example, you may charge more premium to an alcoholic person compared to a non-alcoholic person for the same service (i.e. price item). While defining a tier based pricing rule for a price item, you can offer different rates to different memberships based on the subscription tier, geographic rating area, member person attributes, etc.

You can associate one or more pricing rule types with a health plan through a health product and plan inbound message. You can define one or more pricing rules for a health plan through a health product and plan inbound message. The system creates the pricing rule for a price item using the business object which is specified in the pricing rule type. While creating a pricing rule for a health plan, you can define pricing eligibility rules for a pricing rule. The system considers the pricing rule for an individual membership when the pricing eligibility rule (i.e. eligibility criteria) is satisfied.

The system enables you to define a pricing rule for a price item without the pricing rule eligibility. Such pricing rule is considered as a default pricing rule for the price item. If an individual membership is not eligible for any pricing rule, the system uses the default pricing rule of the price item for the individual membership.

Note: On inactivating a health plan, the system will not automatically inactivate the pricing rules defined for the health plan.

Business Rules

Oracle Revenue Management and Billing facilitates you to calculate the premium for each individual membership differently based on various health product, health plan, membership, or member person attributes. You can define different set of business rules for the following categories:

- **Fully-Insured Pricing** - If an individual membership meets the criteria of a fully-insured pricing business rule, the system derives the following information from the business rule:
 - Maximum Age Limit of Dependents
 - Dependent Order Priority
 - Age Calculation Date
 - Age Recalculation Date
 - Young Adult Applicability
 - Young Adult Max Age Limit
 - Member Relationship Derivation Date
- **New Born** - If an individual membership meets the criteria of a new born business rule, the system derives the following information from the business rule:
 - Gift Days Applicability
 - New Born Gift Days

A business rule contains a criteria. If the criteria of the business rule is met, the information is derived from the business rule. This information is used while deriving the member relationship for a member person, subscription tier for an individual membership, and while deriving eligible member persons for premium calculation.

You can define criteria for a business rule using a set of parameters which are associated with a business rule type. The system enables you to associate only those parameters in a business rule type where the parameter usage is set to **Business Rule Eligibility Criteria**.

To implement the business rule feature, the following new screens are introduced in this release:

- **Business Rule Type** - Used to specify a list of parameters where the parameter usage is set to **Business Rule Eligibility Criteria**. You can then use the parameter while defining a criteria in the business rule.
- **Business Rule** - Used to search business rules of a particular category (i.e. Fully-Insured Pricing or New Born).

At present, there is no user interface or inbound web service available from where you can define and edit the business rules for each category. You will have to design and develop a custom user interface to create and edit the business rules.

Business Rule Type

The **Business Rule Type** screen allows you to search for a business rule type using various search criteria. It also allows you to define, edit and delete a business rule type. It contains the following zone:

- [Search Business Rule Type](#) on page 3313
- [Business Rule Type](#) on page 3317

Search Business Rule Type

The **Search Business Rule Type** zone allows you to search for a business rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Rule Type	Used to search a particular business rule type.	No
Priority	Used to search a business rule type based on the priority.	No
	Note: If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20.	
Description	Used to search a business rule type having a particular description.	No
Criteria Sequence	Used to search a business rule type where the business rule criteria has a specific order of execution.	No
	Note: This field appears when you click the Advanced Search link.	
Criteria Description	Used to search a business rule type where the business rule criteria has a specific description.	No
	Note: This field appears when you click the Advanced Search link.	
Parameter 1	Used to search a business rule type with a parameter code.	No
	Note: This field appears when you click the Advanced Search link. You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria . You must not specify the ampersand (&) character in this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.	
Parameter 1 Value	Used to search a business rule type with a parameter value.	Yes (Conditional)
		Note: This field is required if Parameter 1 is specified.

Field Name	Field Description	Mandatory (Yes or No)
Parameter 2	<p>Used to search a business rule type with a parameter code.</p> <p>Note: This field appears when you click the Advanced Search link. You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria. You must not specify the ampersand (&) character in this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p>	No
Parameter 2 Value	Used to search a business rule type with a parameter value.	Yes (Conditional) <p>Note: This field is required if Parameter 2 is specified.</p>
Parameter 3	<p>Used to search a business rule type with a parameter code.</p> <p>Note: This field appears when you click the Advanced Search link. You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria. You must not specify the ampersand (&) character in this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p>	No
Parameter 3 Value	Used to search a business rule type with a parameter value.	Yes (Conditional) <p>Note: This field is required if Parameter 3 is specified.</p>

Field Name	Field Description	Mandatory (Yes or No)
Parameter 4	<p>Used to search a business rule type with a parameter code.</p> <p>Note: This field appears when you click the Advanced Search link. You can specify the parameter code where the parameter usage is set to Business Rule Eligibility Criteria. You must not specify the ampersand (&) character in this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p>	No
Parameter 4 Value	Used to search a business rule type with a parameter value.	Yes (Conditional)
		Note: This field is required if Parameter 4 is specified.

Note: While searching for the business rule type, always ensure that you provide the parameter and the parameter value in a sequential order.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Rule Type	Displays the business rule type which is associated with the parameters of the usage type Business Rule Eligibility Criteria .
Description	Displays the description of the business rule type.
Priority	Displays the priority of the business rule type.
Parameters	Indicates the parameters which are associated with the business rule type.
Edit	On clicking the Edit (✎) icon, the Business Rule Type screen appears where you can edit the business rule type details.
Delete	On clicking the Delete (🗑) icon, you can delete the business rule type.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔼) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a business rule type, the **Business Rule Type** zone appears where you can view the details of the respective business rule type.

Business Rule Type

The **Business Rule Type** zone displays the details of the business rule type. It contains the following sections:

- **Main** - Displays basic information about the business rule type. It contains the following fields:

Field Name	Field Description
Business Rule Type	Displays the business rule type.
Priority	Displays the priority of the business rule type.
Description	Displays the description of the business rule type.

- **Parameters** - The parameters section lists the parameters associated with the business rule type where the parameter usage is set to **Business Rule Eligibility Criteria**. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the business rule criteria should be executed in the business rule.
Parameter	Indicates the parameter which is associated with the business rule type.

- **Characteristics** - The characteristics section lists the characteristics defined for the business rule type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the business rule type.
Delete	Used to delete the business rule type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the business rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Note: By default, the **Business Rule Type** zone does not appear in the **Business Rule Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a business rule type in the **Search Business Rule Type** zone.

Business Rule Criteria

The **Business Rule Criteria** zone displays the criteria details of the business rule. It contains the following columns:

Column Name	Column Description
Criteria Sequence	Displays the order in which the criteria is executed in the business rule.
Criteria Description	Displays the description of the criteria.
Criteria	Displays the details of the criteria.
Edit	On clicking the Edit (✎) icon, the Business Rule Criteria screen appears where you can edit the business rule criteria details.
Delete	On clicking the Delete (🗑) icon, you can delete the business rule criteria.

Note:

By default, the **Business Rule Criteria** zone does not appear in the **Business Rule Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a business rule type in the **Search Business Rule Type** zone.

You can either edit or delete all the business criterias by clicking the **Select All** check box available in the first column of the table in the **Business Rule Criteria** zone.

You can also add a new business criteria by clicking the **Add** link in the upper right corner of the **Business Rule Criteria** zone.

Searching for a Business Rule Type**Prerequisites**

To search for a business rule type, you should have:

- Parameters defined in the application where the parameter usage is set to **Business Rule Eligibility Criteria**

Procedure

To search for a business rule type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, click **B** and then click **Business Rule Type**.
A sub-menu appears.

- Click the **Search** option from the **Business Rule Type** sub-menu.

The **Business Rule Type** screen appears.

- Enter the search criteria in the **Search Business Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of business rule types that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Defining a Business Rule Type

Prerequisites

To define a business rule type you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Type**).

Procedure

To define a business rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Business Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Business Rule Type** sub-menu.

The **Business Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the business rule type.
- **Parameters** - Used to associate the parameters with the business rule type.
- **Characteristics** - Used to define the characteristics for the business rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Rule Type	Used to specify the business rule type.	Yes
Priority	Used to specify the priority for the business rule type. Note: If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20. The priority cannot be less than or equal to zero.	Yes
Description	Used to specify the description for the business rule type.	Yes

Tip: Alternatively, you can access the **Business Rule Type** screen by clicking the **Add** button in the **Page Title** area of the **Business Rule Type** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the business rule type, if required.
6. Define the characteristics for the business rule type, if required.
7. Click **Save**.

The business rule type is defined.

Associating a Parameter with a Business Rule Type

Prerequisites

To associate a parameter with a business rule type, you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)

Procedure

To associate a parameter with a business rule type:

- Ensure that the **Parameters** section is expanded when you are defining, editing, or copying a business rule type.

The **Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the parameter.	Yes (Conditional)
	Note: The sequence cannot be less than or equal to zero.	Note: This data is required while associating the parameters with the business rule type.
Parameter	Used to indicate the parameter which you want to associate with the business rule type.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears. On specifying the value for a parameter, the description of the parameter appears corresponding to the Parameter field.	Note: This data is required while associating the parameters with the business rule type.

- Enter the required details in the **Parameters** section.
- If you want to associate more than one parameter with the business rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate a parameter from the business rule type, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameter is associated with the business rule type.

Defining a Characteristic for a Business Rule Type

Prerequisites

To define a characteristic for a business rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Definition**)

Procedure

To define a characteristic for a business rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a business rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	No
	Note: The list includes only those characteristic types where the characteristic entity is set to Business Rule Definition .	
Characteristic Value	Used to specify the value for the characteristic type.	No
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the business rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the business rule type, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the business rule type.

Editing a Business Rule Type

Prerequisites

To edit a business rule type you should have:

- Parameters defined in the application (where the **Business Rule Eligibility Criteria** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Business Rule Type**).

Procedure

To edit a business rule type:

1. Search for the business rule type in the **Business Rule Type** screen.

- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the business rule type whose *details* you want to edit.

The **Business Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the business rule type.
- **Parameters** - Used to associate the parameters with the business rule type.
- **Characteristics** - Used to define the characteristics for the business rule type

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Rule Type	Displays the business rule type.	Not applicable
Priority	Used to specify the priority for the business rule type. Note: If you set the priority to a lowest number, the system crawls from the lowest number to the highest, whenever you perform a search for a business rule type. For example, a business rule type with the priority 10 will be searched before a business rule type with the priority 20. The priority cannot be less than or equal to zero.	Yes
Description	Used to specify the description for the business rule type.	Yes

- Modify the required details in the **Main** section.
- Associate or disassociate parameters from the business rule type, if required.
- Define, edit, or remove characteristics of the business rule type, if required.
- Click **Save**.

The changes made to the business rule type are saved.

Tip: Alternatively, you can edit the details of a business rule type by clicking the **Edit** button in the **Business Rule Type** zone.

Defining a Business Rule Criteria for a Business Rule Type

Procedure

To define a business rule criteria for a business rule type, you should have:

- Business rule type defined in the application.
- Parameters defined in the application where the parameter usage is set to **Business Rule Eligibility Criteria**.

Procedure

To define a business rule criteria for a business rule type:

1. Search for the business rule type in the **Business Rule Type** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the business rule type whose business rule criteria details you want to edit.

The following zones appear:

- [Business Rule Type](#) on page 3317
- [Business Rule Criteria](#) on page 3318

3. In the **Business Rule Criteria** zone, click the **Add** link in the upper-right corner of this zone.

The **Business Rule Criteria** screen appears. It contains the following columns:

Column Name	Column Description
Business Rule Type	Displays the business rule type for which you want to define the criteria.
Description	Displays the description of the business rule type.

In addition to these columns, this screen contains additional fields:

Field Name	Field Description
Criteria Sequence	Used to specify the order in which the criteria is executed in the business rule.
Criteria Description	Used to specify the description of the criteria.

Field Name	Field Description						
Criteria	In addition, this column contains some more additional fields: <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Parameter</td> <td>Displays the parameter code associated with the criteria. Note: This is a read-only field.</td> </tr> <tr> <td>Parameter Value</td> <td>Used to indicate the value of the parameter code. Note: This is a read-only field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter Value field.</td> </tr> </tbody> </table>	Field Name	Field Description	Parameter	Displays the parameter code associated with the criteria. Note: This is a read-only field.	Parameter Value	Used to indicate the value of the parameter code. Note: This is a read-only field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter Value field.
Field Name	Field Description						
Parameter	Displays the parameter code associated with the criteria. Note: This is a read-only field.						
Parameter Value	Used to indicate the value of the parameter code. Note: This is a read-only field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter Value field.						

- Enter the required business rule criteria details.
- If you want to add more than one criteria to the business rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a criteria from the business rule type, click the **Delete** (🗑️) icon corresponding to the criteria sequence field.

- Click **Save**.

The business rule criteria is defined for the business rule type.

Searching for a Business Rule

Prerequisites

To search for a business rule, you should have:

- Business rule criteria defined in the application
- Business rule types associated with the business rule
- Parameters associated with the business rule types and their corresponding vales defined in the application
- Business rules defined in the application

Procedure

To search for a business rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, click **B** and then click **Business Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Business Rule** sub-menu.
The **Business Rule** screen appears.
4. Enter the search criteria in the **Search Business Rule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of business rules that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Young Adult Coverage in an Individual Membership

Oracle Revenue Management and Billing enables you to calculate premium for the young adults who are covered in an individual membership. While creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership through a health care inbound message or through membership repricing inbound web service, the system derives the fully-insured pricing business rule for the individual membership. The system enables you to define the following young adult related output parameters in the fully-insured pricing business rules:

- **Young Adult Applicability** – Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Yes** and **No**.
- **Young Adult Max Age Limit** – Used to indicate the maximum age limit for young adults who are eligible for premium calculation. This output parameter is mandatory when the **Young Adult Applicability** parameter is set to **Yes**.

While deriving member relationship for each member person of the individual membership from a member relationship structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Similarly, while deriving subscription tier for the individual membership from a subscription tier structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Thus, while calculating the premium for an individual membership using an age based or tier based pricing rule, the system considers the young adult for the premium calculation based on the above two parameters set in the fully-insured pricing business rule.

Chapter 42

Individual Health Insurance Billing

While calculating the premium for an individual membership using an age based pricing rule, the system derives the rate for each eligible member person. The system identifies members which are eligible for premium calculation using the fully-insured pricing and new born business rules.

On creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, the system determines the fully-insured pricing and new born business rules which are applicable for the individual membership. The system enables you to define business rules of the following categories:

- Fully-Insured Pricing
- New Born

While determining the business rules which are applicable for an individual membership, the system executes the business rules of each category which are effective on the inbound processing date based on the priority of the business rule. If an individual membership meets the criteria of the business rule, the system stamps the respective business rule corresponding to the individual membership. In this way, the system derives two business rules – one fully-insured pricing business rule and another new born business rule.

While calculating the premium for an individual membership using a tier based pricing rule, the system derives the subscription tier using the fully-insured pricing and new born business rules.

Once the premium is calculated for an individual membership, the system creates a billable charge for the premium. If the account is defined for the individual membership using the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLNG** feature configuration, the system uses the account to bill the charge for the premium. However, if these characteristics are not defined for the individual membership, the system considers the account of the financially responsible member person to the charge for the premium.

Chapter 43

Entity Audit

Topics:

- [Audit Event Status Transition](#)
- [Prerequisites](#)
- [Entity Audit Process](#)
- [Algorithms Used in the Entity Audit Process](#)
- [Audit Event Type](#)
- [Audit Event \(Used for Searching\)](#)
- [Audit Event \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides a mechanism wherein auditors can track various actions, such as add, update, and delete for an entity. If the entity audit feature is enabled for a business object, the system creates audit events whenever you define, edit, or delete an entity (which is created using the respective business object). For example, if the entity audit feature is enabled for the **C1-Membership** business object, the system creates an audit event whenever you define, edit, or delete a membership in a policy plan or whenever you add or remove persons from a membership. For more information on how to enable the entity audit feature for a business object, see [Prerequisites](#) on page 3352.

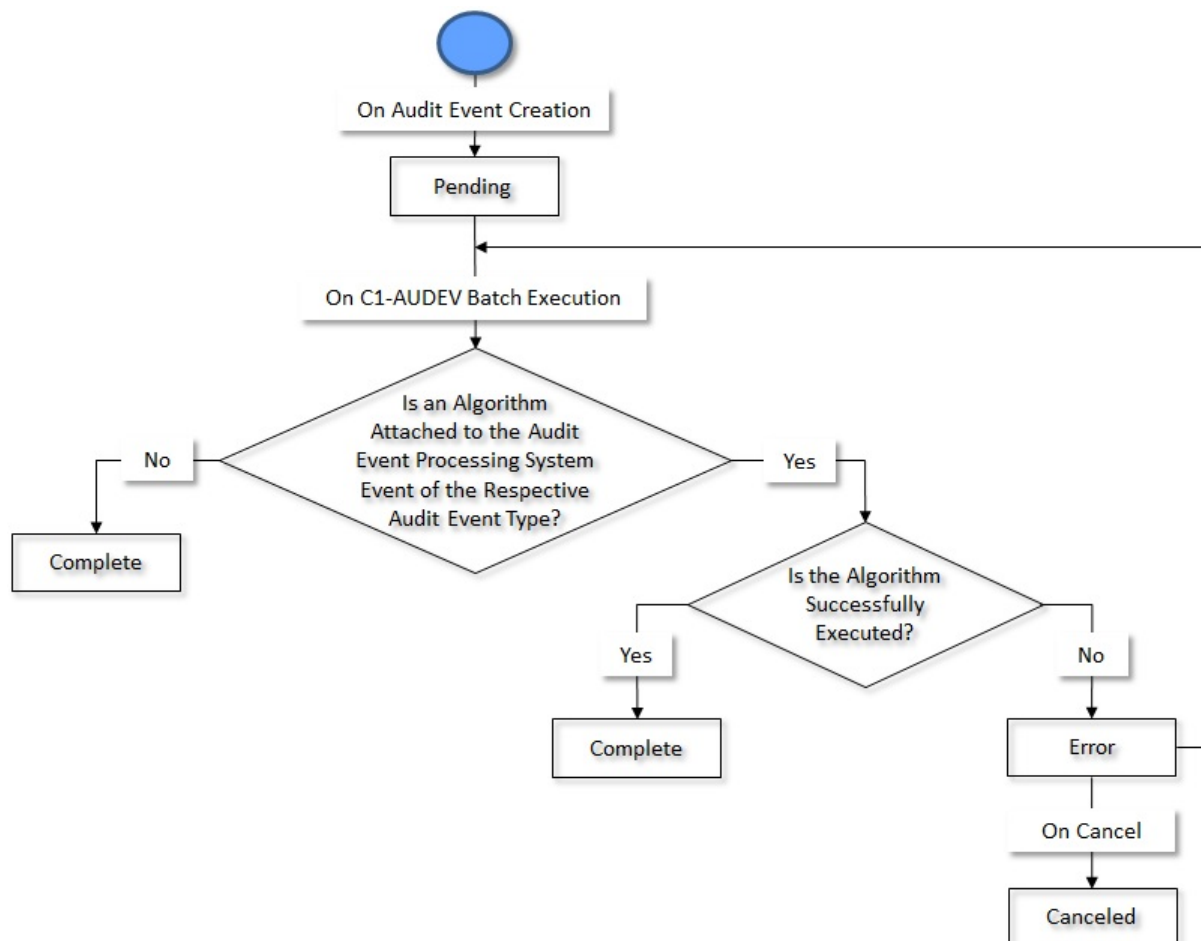

The entity audit process is a two-step process, wherein the system creates the audit events and then processes them whenever the **Audit Event Processing (C1-AUDEV)** batch is executed. For more information about these processes, see the following sections:

- [Audit Event Creation](#) on page 3353
- [Audit Event Processing](#) on page 3354

During the entity audit process, each audit event goes through various statuses in its lifecycle. For more information about the audit event statuses, see [Audit Event Status Transition](#) on page 3352.

Audit Event Status Transition

The following figure graphically indicates how an audit event moves from one status to another in its lifecycle:

Prerequisites

To setup the entity audit feature for a business object, you need to do the following:

- Set the **Eligible for Audit Event** option type of the entity business object to **Y**.

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **C1AT**.

- Attach an algorithm created using the **C1-READEVNT** algorithm type to the **Audit** system event of the entity business object.

Note:

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

- Define an active audit event type for the entity business object in the system.
- Define the required algorithm types where the algorithm entity is set to **Audit Event Processing**.
- Create the required algorithms and attach them to the **Audit Event Processing** system event of the audit event type.

Note: The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

- Define the values for the **AUDIT_USAGE_FLG** lookup field
- Define the required characteristic types where the characteristic entity is set to **Audit Event Type**.

Entity Audit Process

The entity audit process consists of the following two sub-processes:

- [Audit Event Creation](#) on page 3353
- [Audit Event Processing](#) on page 3354

Audit Event Creation

If you add, edit, or delete an entity which is created using a business object for which the entity audit feature is enabled, the system checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

For more information about the audit event type, see [Audit Event Type](#) on page 3355.

The audit event is created in the **Pending** status. Note that the system creates one audit event for the entity irrespective of the number of changes made during the entity update. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. For example, if the audit event is created

while adding or updating a pricing rule, then the entity type is set to **Pricing Rule** and entity ID is set to the pricing rule ID. In addition, an effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

At a time, you can have only two audit events for the entity in the **Pending** status — one audit event which is created during the **Add** action and another audit event which is created during the **Update** action.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

Audit Event Processing

On executing the **Audit Event Processing (C1-AUDEV)** batch, the system checks whether there are any audit events in the **Pending** status. If there is an audit event in the **Pending** status, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If an algorithm is not attached to the **Audit Event Processing** system event of the respective audit event type, the status of the audit event is set to **Complete**.

However, if an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system executes the algorithm and accordingly changes the status of the audit event to **Complete**. For example, while processing the audit events of the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of these entries is set to **P**. Finally, the status of the audit event is set to **Complete**.

If any error occurs, the status of the audit event is set to **Error**. The system enables you to either reprocess or cancel the audit events which are in the **Error** status. On canceling an audit event, the status of the audit event is changed to **Canceled**.

For more information about the **Audit Event Processing (C1-AUDEV)** batch and its parameters, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in the Entity Audit Process

The following table lists the algorithms which are designed to implement the entity audit process:

Algorithm	Algorithm Type	Attached To	System Event	Algorithm Description
C1-REAUDEVNT	C1-REAUDEVNT	Entity Business Object	Audit	Refer to C1-REAUDEVNT on page 3354.
C1-AUDEVMPR	C1-AUDEVMPR	Audit Event Type of the C1-PricingRuleAgeBased and C1-PricingRuleTierBased business objects	Audit Event Processing	Refer to C1-AUDEVMPR on page 3355.

C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-AUDEVMPR

You must attach this algorithm to the **Audit Event Processing** system event while creating an audit event type for the **C1-PricingRuleAgeBased** and **C1-PricingRuleTierBased** business objects.

This algorithm is invoked when the **Audit Event Processing (C1-AUDEV)** batch is executed. If this algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of these entries is set to **P** in the **CI_REPRC_ENTITY_DTL** table.

Audit Event Type

Oracle Revenue Management and Billing enables you to define an audit event type for an entity business object. However, at a time, only one audit event type of the entity business object can be in the **Active** status. The system

creates an audit event using the active audit event type whenever you define, edit, or delete the respective entity. The audit event type helps the system to determine:

- **Entity Business Object** – The business object for which you want to define the audit event type.
- **Audit Usage** – The usage indicates the purpose of auditing an entity which is created using the entity business object. For example, membership premium charges might change due to change in pricing and therefore you may want to audit the pricing rules for premium calculation.
- **Audit Actions** – The various options, such as **Add Action**, **Delete Action**, and **Update All** are available while defining an audit event type. The system creates an audit event while defining, editing or deleting an entity depending on whether the respective option is selected in the audit event type. For example, if you create the active audit event types for the following entity business objects where the below listed options are selected:

Audit Event Type	Entity Business Object	Add Action	Update All	Delete Action
AETY1	C1-POLICY	Y	N	N
AETY2	C1-ASOPolicy	Y	Y	Y

Then, the system will create an audit event using the **AETY1** audit event type when you define a fully-insured group policy. But, the system will not create an audit event when you edit or delete a fully-insured group policy. However, the system will create an audit event using the **AETY2** audit event type when you define, edit, or delete a self-funded policy.

- **Audit Elements During Update** – Alternatively, you can list the elements of the entity business object which should be monitored for the auditing purpose while editing an entity in the audit event type. You can list the elements of the entity business object when the **Update All** option is not selected. The system enables you to monitor a set of the business object statuses, characteristic types, and fields and accordingly creates an audit event while editing an entity. For example, if you create the audit event types for the following entity business objects:

Audit Event Type	Entity Business Object	Update All	Audit Elements During Update
AETY3	C1_PERSON_BO	Y	Not applicable
AETY4	C1-PricingRuleTierBased	N	Pricing Start Date, Rate Option, Base Fee for a Price Component
AETY5	C1-PricingRuleAgeBased	N	Rate Option, Base Fee for a Price Component

Then, the system will create an audit event using the **AETY3** audit event type when you edit any details of a person. But, the system will create an audit event using the **AETY4** audit event type when the following fields in a tier based pricing rule are edited:

- Pricing Start Date
- Rate Option
- Base Fee for a Price Component

Similarly, the system will create an audit event using the **AETY5** audit event type when the following fields in an age based pricing rule are edited:

- Rate Option
- Base Fee for a Price Component

The **Audit Event Type** screen allows you to define, edit, copy, and delete an audit event type. It contains the following zones:

- [Audit Event Type List](#) on page 3357
- [Audit Event Type](#) on page 3358

Audit Event Type List

The **Audit Event Type List** zone lists the audit event types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type.
Description	Displays the description of the audit event type.
Entity Business Object	Indicates the business object for which the audit event type is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status	Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Audit Usage	Indicates the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation.
Edit	On clicking the Edit () icon, the Audit Event Type screen appears where you can edit the details of the audit event type. Note: You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following: <ul style="list-style-type: none"> • Change the status from Active to Inactive and vice-versa • Attach algorithms (if required) to the audit event type • Define, edit, or remove characteristics of the audit event type
Duplicate	On clicking the Duplicate () icon, the Audit Event Type screen appears where you can define a new audit event type using an existing audit event type.
Delete	On clicking the Delete () icon, you can delete the audit event type. Note: You can delete an audit event type when an audit event is not yet created using the audit event type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Entity Business Object**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to an audit event type, the **Audit Event Type** zone appears with the details of the respective audit event type.

Audit Event Type

The **Audit Event Type** zone displays the details of the audit event type. It contains the following sections:

- **Main** - Displays basic information about the audit event type. It contains the following fields:

Field Name	Field Description
Audit Event Type	Displays the audit event type.
Description	Displays the description of the audit event type.
Detailed Description	Displays additional information about the audit event type.
Status	Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Entity Business Object	Indicates the business object for which the audit event type is defined. In addition, this field has a context menu which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> </div>
Audit Usage	Indicates the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request.
Update All	Indicates whether an audit event must be created whenever any field, characteristic, or status of the entity is updated.
Add Action	Indicates whether an audit event must be created whenever an entity is added.
Delete Action	Indicate whether an audit event must be created whenever an entity is deleted.

- **Algorithms** - Lists the algorithms associated with the audit event type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event when the algorithm must be triggered. The valid value is: <ul style="list-style-type: none"> • Audit Event Processing
Sequence	Indicates the order in which the algorithms with the same system event must be triggered.
Algorithm	Indicates the algorithm attached to the system event. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.

- **Audit Elements for Entity Update** - Lists the elements which must be monitored for auditing while updating the entity. It contains the following columns:

Column Name	Column Description						
Element Type	Indicates the type of element. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 						
Element Name	Displays the element which must be monitored for auditing. Note: If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the policyPerRole element of the C1-ASOPolicy business object, the system displays the <code>policyPersons/policyPerRole</code> in the Element Name field. Here, the policyPersons is the element list.						
Element Value	The following table lists the element value depending on the element type: <table border="1" data-bbox="609 1297 1461 1516"> <thead> <tr> <th>Element Type</th> <th>Element Value</th> </tr> </thead> <tbody> <tr> <td>Business Object Status</td> <td>Indicates the status of the entity business object which must be monitored for auditing.</td> </tr> <tr> <td>Characteristic</td> <td>Indicates the characteristic type which must be monitored for auditing.</td> </tr> </tbody> </table> Note: The data does not appear in this column when the element type is set to Field .	Element Type	Element Value	Business Object Status	Indicates the status of the entity business object which must be monitored for auditing.	Characteristic	Indicates the characteristic type which must be monitored for auditing.
Element Type	Element Value						
Business Object Status	Indicates the status of the entity business object which must be monitored for auditing.						
Characteristic	Indicates the characteristic type which must be monitored for auditing.						

- **Characteristics** - Lists the characteristics which are defined for the audit event type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the audit event type.
	<p>Note: You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following:</p> <ul style="list-style-type: none"> • Change the status from Active to Inactive and vice-versa • Attach algorithms (if required) to the audit event type • Define, edit, or remove characteristics of the audit event type
Delete	Used to delete the audit event type.
	<p>Note: You can delete an audit event type when an audit event is not yet created using the audit event type.</p>
Duplicate	Used to create a new audit event type using an existing audit event type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the audit event type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

By default, the **Audit Event Type** zone does not appear in the **Audit Event Type** screen. It appears when you click the **Broadcast** () icon corresponding to an audit event type in the **Audit Event Type List** zone.

Defining an Audit Event Type

Prerequisites

To define an audit event type, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To define an audit event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
3. Click the **Add** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type.	Yes
	Note: You cannot specify any special characters except hyphen and underscore in the audit event type.	
Business Object	Indicates the business object using which you are defining the audit event type.	Not applicable
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You can create only one audit event type in the Active status for an entity business object.	

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate the business object for which you want to define the audit event type.	Yes
	Note: The list includes only those business objects where the Eligible for Audit Event option type is set to Y .	
Audit Usage	Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. 	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional)
		Note: This field is required when you want to create an audit event while adding the entity.
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional)
		Note: This field is required when you want to create an audit event while deleting the entity.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Audit Event Type** screen.

4. Enter the required details in the **Main** section.
5. Associate the required algorithms with the audit event type.
6. Add elements (such as, field, characteristic, or status) which you want to monitor for auditing while updating the entity.

Note: You can list the elements for auditing when the **Update All** option is not selected in the **Main** section.

7. Define characteristics for the audit event type, if required.
8. Click **Save**.

The audit event type is defined.

Associating an Algorithm with an Audit Event Type

Prerequisites

To associate an algorithm with an audit event type, you should have:

- Algorithms defined in the application (which are created using an algorithm type where the algorithm entity is set to **Audit Event Processing**)

Note: The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

Procedure

To associate an algorithm with an audit event type:

- Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying an audit event type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to trigger the algorithm. The valid value is: <ul style="list-style-type: none"> Audit Event Processing - Used when you want to trigger the attached algorithm while executing the Audit Event Process Monitor (C1-AUDEV) batch. 	Yes (Conditional) <p>Note: This field is required when you are associating an algorithm with the audit event type.</p>
Sequence	Used to indicate the order in which the algorithms with the same system event should be triggered.	Yes (Conditional) <p>Note: This field is required when you are associating an algorithm with the audit event type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to indicate the algorithm that you want to attach to the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the audit event type.</p>

- Enter the required details in the **Algorithms** section.
- If you want to associate more than one algorithm with the audit event type, click the **Add** (+) icon, and then repeat step 2.

Note: However, if you want to remove an algorithm from the audit event type, click the **Delete** (🗑️) icon corresponding to the algorithm.

Adding an Element for Auditing in an Audit Event Type

Prerequisites

To add an element for auditing in an audit event type, you should have:

- Required elements defined in the entity business object schema
- Required statuses defined in the lifecycle of the entity business object
- Required characteristic types defined in the application (where the characteristic entity is set to the respective entity)

Procedure

To add an element for auditing in an audit event type:

- Ensure that the **Audit Elements for Entity Update** section is expanded when you are defining, editing, or copying an audit event type.

The **Audit Elements for Entity Update** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)								
Element Type	Used to indicate the type of element. The valid values are: <ul style="list-style-type: none"> • Business Object Status • Characteristic • Field 	Yes (Conditional) Note: This field is required when you want to create an audit event whenever the specified element is updated.								
Element Name	Used to specify the element which you want to monitor while updating the entity. The following table lists the elements which you must select for the respective element type: <table border="1" data-bbox="544 611 1179 1482" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th data-bbox="544 611 776 663">Element Type</th> <th data-bbox="776 611 1179 663">Element Name</th> </tr> </thead> <tbody> <tr> <td data-bbox="544 663 776 743">Business Object Status</td> <td data-bbox="776 663 1179 743">boStatus</td> </tr> <tr> <td data-bbox="544 743 776 825">Characteristic</td> <td data-bbox="776 743 1179 825">characteristics/characteristicsList/characteristicType</td> </tr> <tr> <td data-bbox="544 825 776 1482">Field</td> <td data-bbox="776 825 1179 1482"> Any field from the entity business object schema Note: Here, you must not specify a element whose type is set to group or list. If the element is a part of a group or list, the system displays the element name along with the element group and/or list. Defining a Characteristic for an Audit Event Type

Prerequisites

To define a characteristic for an audit event type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Audit Event Type**)

Procedure

To define a characteristic for an audit event type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an audit event type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Audit Event Type .	Note: This field is required when you are defining a characteristic for the audit event type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears where you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the audit event type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the audit event type, click the **Add** (+) icon, and then repeat step 2.

Note: However, if you want to remove a characteristic from the audit event type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to define an audit event type	Defining an Audit Event Type on page 3360
How to edit an audit event type	Editing an Audit Event Type on page 3368
How to copy an audit event type	Copying an Audit Event Type on page 3370

Editing an Audit Event Type

You can edit an audit event type when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following:

- Change the status from **Active** to **Inactive** and vice-versa
- Attach algorithms (if required) to the audit event type
- Define, edit, or remove characteristics of the audit event type

Prerequisites

To edit an audit event type, you should have:

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To edit an audit event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
3. Click the **Search** option from the **Audit Event Type** sub-menu.
The **Audit Event Type** screen appears.
4. In the **Audit Event Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the audit event type whose details you want to edit.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Displays the audit event type.	Not applicable
Business Object	Indicates the business object which is used while defining the audit event type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You can create only one audit event type in the Active status for an entity business object.	
Entity Business Object	Indicates the business object for which the audit event type is defined.	Not applicable
Audit Usage	Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. 	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional)
		Note: This field is required when you want to create an audit event while adding the entity.
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional)
		Note: This field is required when you want to create an audit event while deleting the entity.

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Audit Event Type** zone.

- Modify the required details in the **Main** section.
- Associate or disassociate the required algorithms from the audit event type.

Note: If an audit event is created using the audit event type, you cannot edit or remove algorithms from the audit event type. In such case, you can only associate additional algorithms with the audit event type.

- Add, edit, or remove elements from the audit event type, if required.

Note:

The **Audit Elements for Entity Update** section is enabled when the **Update All** option is not selected in the **Main** section.

You cannot add, edit, or remove elements from the **Audit Elements for Entity Update** section when an audit event is already created using the audit event type.

- Define, edit, or remove characteristics of the audit event type, if required.

Note: You cannot define, edit, or remove characteristics of the **Characteristics** section when an audit event is already created using the audit event type.

- Click **Save**.

The changes made to the audit event type are saved.

Copying an Audit Event Type

Instead of creating an audit event type from scratch, you can create a new audit event type using an existing audit event type. This is possible through copying an audit event type. On copying an audit event type, the details including the algorithms, audit elements, and characteristics are copied to the new audit event type. You can then edit the details, if required.

Prerequisites

To copy an audit event type, you should have:

- Audit event type (whose copy you want to create) defined in the application
- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT_USAGE_FLG** lookup field

Procedure

To copy an audit event type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Audit Event Type**.

A sub-menu appears.

- Click the **Search** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears.

- In the **Audit Event Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the audit event type whose copy you want to create.

The **Audit Event Type** screen appears. It contains the following sections:

- Main** - Used to specify basic information about the audit event type.
- Algorithms** - Used to associate algorithms with the audit event type.
- Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

Note: The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- Characteristics** - Used to define the characteristics for the audit event type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type.	Yes
	Note: You cannot specify any special characters except hyphen and underscore in the audit event type.	
Business Object	Indicates the business object which is used while defining the audit event type.	Not applicable
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You can create only one audit event type in the Active status for an entity business object.	
Entity Business Object	Used to indicate the business object for which you want to define the audit event type.	Yes
	Note: The list includes only those business objects where the Eligible for Audit Event option type is set to Y .	

Field Name	Field Description	Mandatory (Yes or No)
Audit Usage	Used to indicate the purpose of auditing an entity which is created using the entity business object. The valid values are: <ul style="list-style-type: none"> • Premium Calculation - Used when you want to audit an entity which has an impact on membership premium calculation. • Disaggregation/Reseeding - Used when you want to audit an entity for which the system should automatically create disaggregation or reseeding request. 	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional) Note: This field is required when you want to create an audit event while adding the entity.
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional) Note: This field is required when you want to create an audit event while deleting the entity.

Tip: Alternatively, you can copy an audit event type by clicking the **Duplicate** button in the **Audit Event Type** zone.

5. Enter the required details in the **Main** section.
6. Associate or disassociate the required algorithms from the audit event type.
7. Add, edit, or remove elements from the audit event type, if required.

Note: The **Audit Elements for Entity Update** section is enabled when the **Update All** option is not selected in the **Main** section.

8. Define, edit, or remove characteristics of the audit event type, if required.
9. Click **Save**.

The new audit event type is defined.

Deleting an Audit Event Type

Procedure

To delete an audit event type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.
A sub-menu appears.
3. Click the **Search** option from the **Audit Event Type** sub-menu.
The **Audit Event Type** screen appears.
4. In the **Audit Event Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the audit event type that you want to delete.
A message appears confirming whether you want to delete the audit event type.

Note: You can delete an audit event type when an audit event is not yet created using the audit event type.

Tip: Alternatively, you can delete an audit event type by clicking the **Delete** button in the **Audit Event Type** zone.

5. Click **OK**.
The audit event type is deleted.

Search Audit Event

The **Search Audit Event** zone allows you to search for an audit event using various search criteria. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an audit event using the entity or audit event details. The valid values are: <ul style="list-style-type: none"> Entity Details Audit Event Details 	Yes
	Note: By default, the Entity Details option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to search audit events which are created for a particular entity business object.	No
	<p>Note:</p> <p>This field appears when the Entity Details option is selected from the Search By list.</p> <p>The list includes only those entity business objects where the Eligible for Audit Event option type is set to Y.</p>	
Created From	Used to search audit events which are created from a particular date onwards.	No
Created To	Used to search audit events which are created till a particular date.	No
Entity ID	Used to search audit events which are created for a particular entity.	No
	<p>Note:</p> <p>This field appears when the following conditions are met:</p> <ul style="list-style-type: none"> • The Entity Details option is selected from the Search By list. • The entity business object is selected from the Entity list. <p>You can search for an audit event by clicking the Search (🔍) icon corresponding to the field.</p>	
Status	<p>Used to search audit events with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending 	No
	<p>Note:</p> <p>This field appears in the search criteria by default, when the Audit Event Details option is selected from the Search By list.</p> <p>In case you choose the Entity Details option, this field appears only when the entity business object is selected from the Entity list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
From Effective Date	Used to search audit events whose effective date is equal to or later than the specified date.	No
	Note: This field appears only when you choose the Entity Details option from the Search By list and entity business object from the Entity list.	
To Effective Date	Used to search audit events whose effective date is equal to or earlier than the specified date.	No
	Note: This field appears only when you choose the Entity Details option from the Search By list and entity business object from the Entity list.	
Audit Event ID	Used to search a particular audit event.	No
	Note: This field appears when the Audit Event Details option is selected from the Search By list.	
Audit Event Type	Used to search audit events which are created using a particular audit event type.	No
	Note: This field appears when the Audit Event Details option is selected from the Search By list.	
Audit Action	Used to search audit events which are created while adding, updating, or deleting an entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row 	No
	Note: This field appears when the Audit Event Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an audit event.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the audit event is created.
Audit Event Information	Displays information about the audit event.
	Note: It has a link. On clicking the link, the Audit Event screen appears where you can view the details of the respective audit event.
Entity ID	Indicates the entity for which the audit event is created.
Entity	Indicates the entity business object for which the audit event is created.

Column Name	Column Description
Effective Date	Displays the effective date which is stamped corresponding to the audit event.
	Note: The effective date is used later to derive the timeline for premium calculation.
Status	Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending
Audit Action	Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row
Pricing Requested	Indicates whether the repricing entity detail records are created for the audit event. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: It has a link. On clicking the link, if the repricing entity record exist, the Repricing Request screen appears where you can view the details of the repricing entity. In case the record does not exist, the system displays a warning message.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Audit Event

Prerequisites

To search for an audit event, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object set to **Y**

Note: The **Eligible for Audit Event** option type is available for the entity business object when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

Procedure

To search for an audit event:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Audit Event**.
The **Audit Event** screen appears.
3. Enter the search criteria in the **Search Audit Event** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of audit events that meet the search criteria appears in the **Search Results** section.

Audit Event

The **Audit Event** zone displays the details of the audit event. It contains the following sections:

- **Main** - Displays basic information about the audit event. It contains the following fields:

Field Name	Field Description
Audit Event Information	Displays information about the audit event.
Audit Event Type	Indicates the audit event type using which the audit event is created. Note: It has a link. On clicking the link, the Audit Event Type screen appears where you can view the details of the respective audit event type.
Status	Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> • Canceled • Complete • Error • Pending
Entity ID	Indicates the entity for which the audit event is created.
Effective Date	Displays the effective date which is stamped corresponding to the audit event in the C1_AUDIT_EVENT table. Note: If the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.
Audit Action Flag	Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> • Add Row • Change Row • Delete Row

Field Name	Field Description
Maintenance Object	Indicates the maintenance object of the entity business object for which the audit event is created.
	Note: It has a link. On clicking the link, the Maintenance Object screen appears where you can view the details of the respective maintenance object.

- **Characteristics** - Lists the characteristics defined for the audit event. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Cancel	Used to cancel the audit event.
	Note: The Cancel button appears when the audit event is in the Error status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the audit event is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the audit event status is updated.

How to view the log of an audit event	Viewing the Log of an Audit Event on page 3382

Canceling an Audit Event

There might be situations when an erroneous audit event is created in the system. In such case, the system provides you with an ability to cancel such audit events. However, note that you can cancel an audit event when the audit event is in the **Error** status.

Prerequisites

To cancel an audit event, you should have:

- Cancel reasons defined in the application

Note: While cancelling an audit event, you need to specify the reason why you want to cancel the audit event. You can select the appropriate cancel reason when you have defined the reasons for the **Canceled** status of the **C1-AuditEvent** business object in the **Status Reason** screen.

Procedure

To cancel an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event which you want to cancel.

The **Audit Event** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Audit Event** zone.

The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the audit event.	Yes

Note: The **Cancel** button appears when the audit event is in the **Error** status.

5. Select the cancel reason from the **Status Reason** list.
6. Click **Save**.

The status of the audit event is changed to **Canceled**.

Viewing the Log of an Audit Event

Procedure

To view the log of an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event whose log you want to view.

The **Audit Event** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the audit event in the **Audit Event Log** zone.

Chapter 44

Invoice Request

Topics:

- [Prerequisites](#)
- [Types of Invoice Request](#)
- [Invoice Request Manual Trial Bill Generation \(Without Approval\) Status Transition](#)
- [Invoice Request Manual Regular Bill Generation \(Without Approval\) Status Transition](#)
- [Invoice Request Manual Regular Bill Generation \(With Approval\) Status Transition](#)
- [Invoice Request Automatic Regular Bill Generation \(Without Approval\) Status Transition](#)
- [Invoice Request Type](#)
- [Invoice Request \(Used for Searching\)](#)
- [Invoice Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to generate an adhoc regular or trial bill for an account through an invoice request. The system enables you to create an invoice request manually or automatically. It enables you to create an invoice request for a person or an account. You can create an invoice request for an account where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

If you create an invoice request for a person, the system will consider all those accounts of the person where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**. You can then exclude an account from the invoice request, if required. The system also enables you to consider all accounts of the person and its child persons where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

Note: The system searches for the characteristic type which is specified in the **Invoice Request Account Eligibility Char Type** option type of the **C1-INVREQ** feature configuration. By default, this option type is set to **INVRACTE**. You can change the characteristic type, if required.

In other words, the system enables you to create the following types of invoice request:

- **Manual Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can create a manual regular bill generation invoice request for a person or an account from the user interface.
- **Manual Trial Bill Generation Invoice Request** - It is used to generate an adhoc trial bill for an account. You can create a manual trial bill generation invoice request for a person or an account from the user interface.
- **Automatic Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can configure the system such that an automatic regular bill generation invoice request is created for an account automatically when a fully-insured group policy is activated, terminated, reinstated, or renewed from the user interface or through a health care inbound message.

Note:

The automatic invoice request creation feature is only designed to work for the fully-insured group health insurance business and not for the financial services or self-funded health insurance business.

You cannot create an automatic regular bill generation invoice request for a person.

At present, the system is not designed to create an automatic trial bill generation invoice request.

While creating an invoice request, you need to specify an invoice request type using which you want to create the invoice request. The system enables you to create the invoice request types with the following combinations:

Invoice Mode	Bill Generation Type	Approval Process
Manual	Regular	On
Manual	Regular	Off
Manual	Trial	Off
Automatic	Regular	Off

It is the invoice request type which helps the system to determine:

- The business object using which the invoice request should be created in the system

Note: Two invoice request business objects named **Invoice Request - Regular Bill Generation (C1-InvoiceRequest)** and **Invoice Request - Trial Bill Generation (C1-InvoiceRequestTrial)** are introduced in this release. If the **Bill Generation Type** field is set to **Regular**, you must select the **Invoice Request - Regular Bill Generation** business object from the **Invoice Request Business Object** list. However, if the **Bill Generation Type** field is set to **Trial**, you must select the **Invoice Request - Trial Bill Generation** business object from the **Invoice Request Business Object** list.

- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode

Note:

The system will process a manual regular bill generation invoice request for an account in the deferred mode when the number of billable charges of the account exceeds the defer processing billable charge count.

The defer processing billable charge count is not considered when a manual regular bill generation invoice request is created for a person.

You can specify the defer processing billable charge count when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- Whether the approval is required for the invoice request

Note: You can only set the **Approval Required** flag when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- The wait days which is used to calculate the processing date for an invoice request

Note:

If the invoice request is processed in the online mode, the system will process the invoice request when the processing date is earlier than or equal to the system date. However, if the invoice request is processed in the deferred mode, the system will process the invoice request when the processing date is earlier than or equal to the batch business date.

If required, you can configure the system such that the processing date does not fall on a holiday. To implement this requirement you need to specify the work calendar which helps to determine the working day.

- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: In addition, you can configure threshold days for automatic invoice request creation. It is used to determine whether the number of days between the bill cycle date and processing date is greater than the threshold days. This parameter is used in Invoice Request Date Calculation algorithm to check whether the processing date of the invoice request is within threshold period. If so, the automatic invoice request is not created for the account. This parameter is only applicable while activating or renewing a fully-insured group policy.

While creating a manual invoice request, you need to specify the following – invoice request type, entity (i.e. person or account for which the invoice request should be created), cutoff date, accounting date, and bill date.

Note: The cutoff date, accounting date, and bill date are derived while creating an automatic invoice request for an account.

For more information about the types of invoice request, see [Types of Invoice Request](#) on page 3386.

For more information on how to setup the invoice request feature, see [Prerequisites](#) on page 3386.

Prerequisites

To setup the invoice request process, you need to do the following:

- Define the required invoice request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Invoice Request Type**
- Define the required characteristic types where the characteristic entity is set to **Invoice Request**
- Assign the **C1-INVRA** To Do type to a To Do role whose users must receive To Do generated while submitting an invoice request for approval
- Assign the **C1-INVRS** To Do type to a To Do role whose users must receive To Do generated while resubmitting an invoice request
- Set the batch control type of the **Invoice Request Periodic Monitor (C1-INVQR)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about the **Invoice Request Periodic Monitor (C1-INVQR)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

- Set the batch control type of the **Pending Bill Generation (BILLOPEN)**, **Bill Segment Generation (BSGENREG)**, and **Bill Completion (POSTPROC)** batches to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Set the following feature configuration in the system:

- **Invoice Request Configuration (C1-INVREQ)**

Types of Invoice Request

The system allows you to create the following types of invoice requests:

- [Manual Regular Bill Generation Invoice Request](#) on page 3386
- [Manual Trial Bill Generation Invoice Request](#) on page 3388
- [Automatic Regular Bill Generation Invoice Request](#) on page 3388

Manual Regular Bill Generation Invoice Request

Once a manual regular bill generation invoice request is created in the **Draft** status, the system checks whether it is created for a person or an account. If a manual regular bill generation invoice request is created for an account,

you can submit the invoice request. On submitting the invoice request, the system checks whether the number of the billable charges of the account exceed the defer processing billable charge count. If the number of the billable charges of the account exceed the defer processing billable charge count, the status of the invoice request is changed to **Defer Processing Batch**. However, if the number of the billable charges of the account does not exceed the defer processing billable charge count, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request is changed to **Defer Processing**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Defer Processing** status. If there is an invoice request in the **Defer Processing** status, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request remains as **Defer Processing**.

Note: The system enables you to cancel an invoice request which is in the **Defer Processing Batch** or **Defer Processing** status.

However, if the processing date is earlier than or equal to the system date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the online mode. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

However, if a manual regular bill generation invoice request is created for a person, the system checks whether the number of accounts of the person (if the **Include Person Hierarchy** option is not selected) or the number of accounts of the person and its child persons (if the **Include Person Hierarchy** option is selected) exceeds the limit defined in the **Account Limit** option type of the **C1-INVREQ** feature configuration. If the number of accounts does not exceed the account limit, the system derives the account of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

However, if the number of accounts exceeds the account limit, the status of the invoice request is changed to **Account Derivation Pending**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Account Derivation Pending** status. If there is an invoice request in the **Account Derivation Pending** status, the system derives the accounts of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

When you execute the **BILLOPEN** batch with the **Off Cycle Switch** parameter set to **Y**, the system checks whether the account that meets the search criteria is included in any invoice request which is in the **Defer Processing Batch** status. If the account is included in the invoice request, the system checks whether the processing date of the invoice request is earlier than or equal to the batch business date. If processing date is earlier than or equal to the batch business date, the system checks whether there is any record in the **Processing** status for the account in the invoice request. If so, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the **Pending** status. When you execute the **BSGENREQ** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the bill segments for the adhoc regular bill. When you execute the **POSTPROC** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the post-processing bill segments (if any) and completes the adhoc regular bill of the account. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, or if a To Do is generated for the bill review, the status of the record in the invoice request is changed to **Error**. If all records in the invoice request are in the **Error** status, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

You can optionally configure the approval process for the manual regular bill generation invoice request. If the **Approval Required** flag is set to **Yes** in the invoice request type, the status of the manual regular bill generation invoice request is changed to **Approval In Progress** when you submit the invoice request. The approver can then approve or reject the manual regular bill generation invoice request based on the observations.

Manual Trial Bill Generation Invoice Request

The manual regular bill generation invoice request and manual trial bill generation invoice request are created and processed identically with the following exceptions:

- On submitting the manual trial bill generation invoice request for an account, the system does not check whether the number of the billable charges of the account exceed the defer processing billable charge count. Therefore, the manual trial bill generation invoice request is always processed in the deferred mode.
- You need to specify the following parameters while executing the **BILLOPEN**, **BSGENREQ**, and **POSTPROC** batches:
 - Bill Generation Type (set to **Trial**)
 - Description for Trial Billing Batch Run
 - Off Cycle Switch (set to **Y**)
- The **BSGENREQ** batch will not freeze and complete a trail bill for the account.
- At present, a To Do is not generated for a trial bill review, and therefore the system does not check whether a To Do is generated for a trial bill review.

Automatic Regular Bill Generation Invoice Request

To enable the automatic invoice request creation feature for the fully-insured group health insurance business, you need to attach the following algorithms:

If you want to create an automatic invoice request for an account while...	Then attach the algorithm....			
	Business Object	Status	System Event	Algorithm
Activating a Fully-Insured Group Policy <div style="border: 1px solid black; padding: 5px;"> <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> </div>	C1-POLICY	In Force/ Active	Enter	C1- INVREQCRE
Terminating a Fully-Insured Group Policy		Terminated	Enter	C1- INVREQPT
Reinstating a Fully-Insured Group Policy		Reinstated	Enter	C1- INVREPRIN
Renewing a Fully-Insured Group Policy		-	Audit	C1- IRPOLREW

If you want to create an automatic invoice request for an account while...	Then attach the algorithm....			
	Business Object	Status	System Event	Algorithm
Creating an Account for a Parent Customer or Bill Group who is the Main Customer of the Fully-Insured Group Policy <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> </div>	C1-AccountBO	-	Post-Processing	C1-INVRACTPO

The above algorithms contain a parameter wherein you can specify the invoice request type using which the automatic invoice request should be created in the system.

If the automatic invoice request creation feature is configured for the fully-insured group health insurance business, the system creates an automatic regular bill generation invoice request in the **Defer Processing Batch** status for an account when:

- A fully-insured group policy is activated, terminated, reinstated, or renewed
- An account is created for a parent customer or bill group who is the main customer of the fully-insured group policy

The deferred mode processing for manual regular bill generation invoice request and automatic regular bill generation invoice request is identical.

Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual trial bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

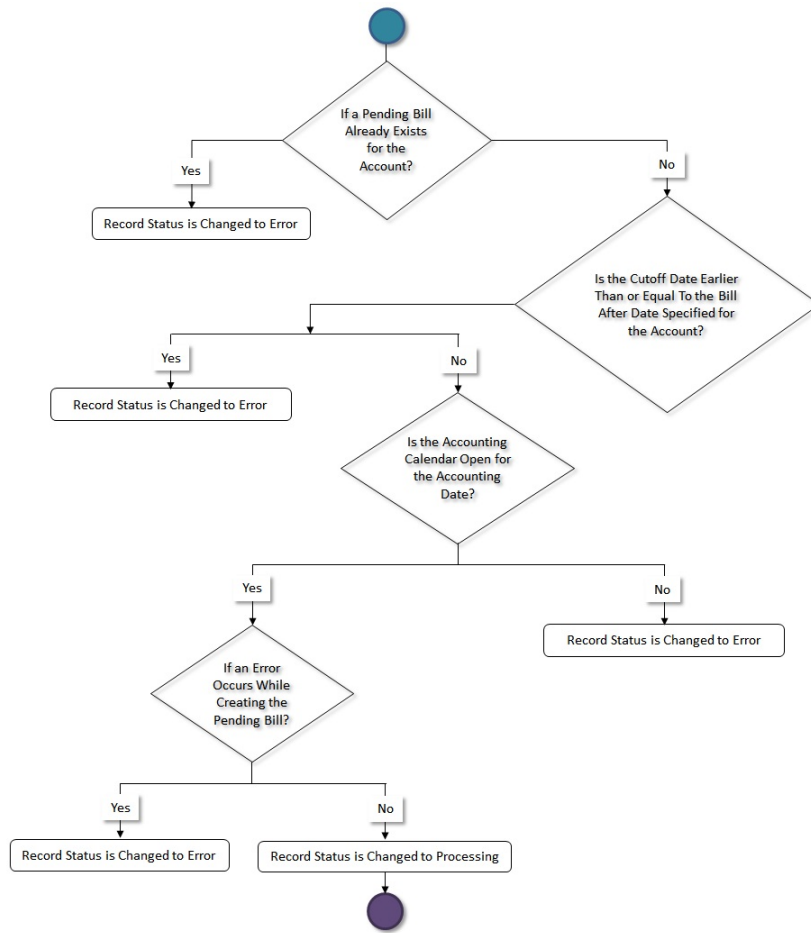

Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

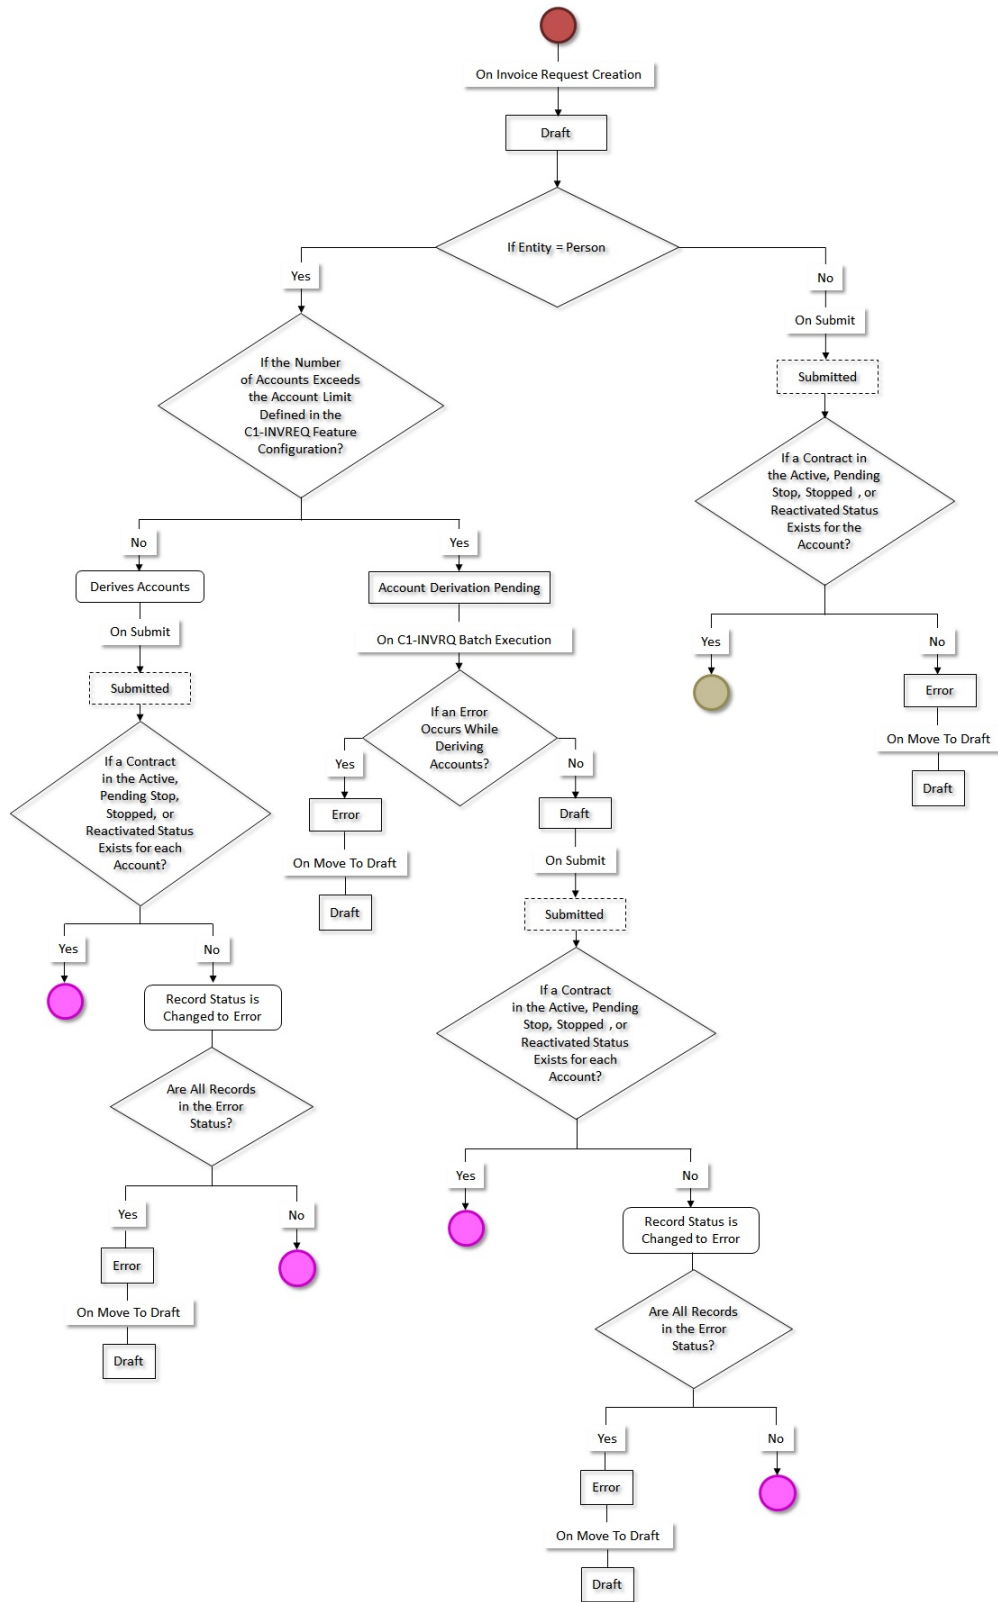

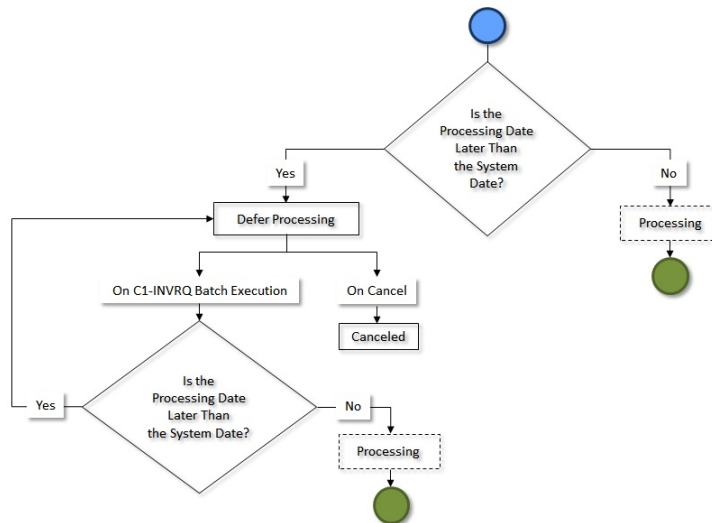

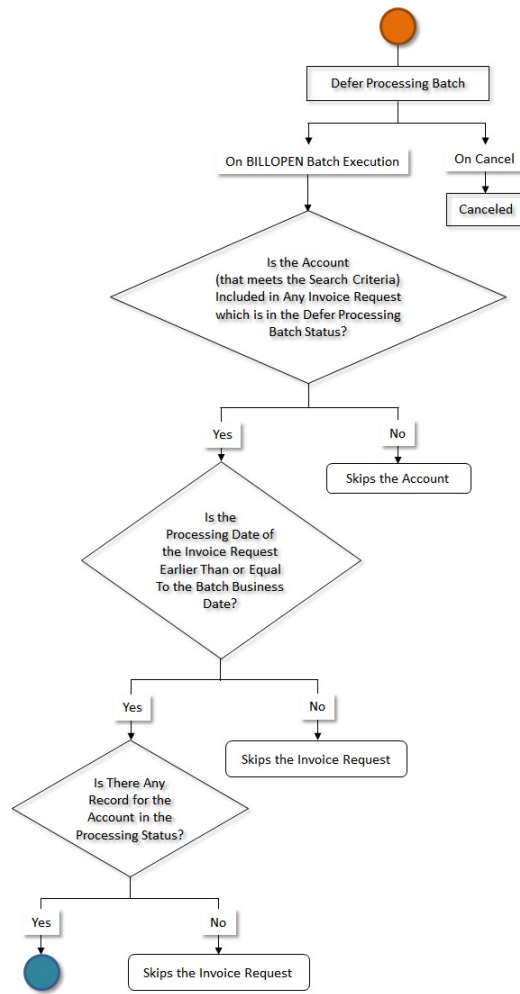

Invoice Request Manual Regular Bill Generation (With Approval) Status Transition

The following figure graphically indicates how an invoice request created through the manual regular bill generation process moves from one status to another when the approval process is configured in the invoice request type:

Invoice Request Automatic Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request created through the automatic regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

Invoice Request Type

Oracle Revenue Management and Billing enables you to define an invoice request type using which you can create an invoice request. The invoice request type helps the system to determine:

- The business object using which the invoice request should be created in the system
- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode
- Whether the approval is required for the invoice request
- The wait days which is used to calculate the processing date for an invoice request
- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: The automatic invoice request is only designed to work for the fully-insured group and individual health insurance businesses and not for the financial services or self-funded health insurance businesses.

The **Invoice Request Type** screen allows you to define, edit, copy, and delete an invoice request type. It contains the following zones:

- [Invoice Request Type List](#) on page 3407
- [Invoice Request Type](#) on page 3408

Invoice Request Type List

The **Invoice Request Type List** zone lists the invoice request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Edit	On clicking the Edit (✎) icon, the Invoice Request Type screen appears where you can edit the details of the invoice request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Invoice Request Type screen appears where you can define a new invoice request type using an existing invoice request type.
Delete	On clicking the Delete (🗑️) icon, you can delete the invoice request type.
	Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.

On clicking the **Broadcast** (📡) icon corresponding to an invoice request type, the **Invoice Request Type** zone appears with the details of the respective invoice request type.

Invoice Request Type

The **Invoice Request Type** zone displays the details of the invoice request type. It contains the following sections:

- **Main** - Displays basic information about the invoice request type. It contains the following fields:

Field Name	Field Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Invoice Request Business Object	Indicates the business object using which an invoice request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the invoice request type.
Status	Indicates the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Invoice Mode	Indicates the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Field Name	Field Description
Bill Generation Type	<p>Indicates the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p>
Defer Processing Billable Charge Count	<p>Displays the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>
Date Calculation Algorithm	<p>Indicates the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>This field appears when the Automatic option is selected from the Invoice Mode list.</p>
Invoice Request Approval Required	<p>Indicates whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>

Field Name	Field Description
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p> <p>This field appears when the Approval Required option is selected.</p>
Approval To Do Role	Indicates that users with the specified To Do role can only approve an invoice request which is submitted for approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role.</p> <p>This field appears when the Approval Required option is selected.</p>
Submitter To Do Type	Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an invoice request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the invoice request type.
	<p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	Indicates that users with the specified To Do role cannot approve an invoice request which is submitted for approval.
	<p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Freeze and Complete	Indicates whether the invoice request raised through an automatic or manual invoice mode should be freeze and complete.
	<p>Note:</p> <p>This field is not mandatory if the Invoice Mode - Manual option is selected.</p> <p>By default, this field is selected and disabled when the Invoice Mode - Automatic option is selected.</p> <p>The field should not be checked when the Bill Generation Type - Trial option is selected.</p> <p>Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.</p> <p>For the Batch mode, this field value will be passed to the batch parameter Freeze and Complete.</p>

Field Name	Field Description
Wait Days	Displays the maximum wait period (in days) after which the bills in an invoice request are processed.
	Note: You cannot specify a negative value in the Wait Days field.

- **Characteristics** - Lists the characteristics defined for the invoice request type. It contains the following columns:

Field Name	Field Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the invoice request type.
Delete	Used to delete the invoice request type.
	Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.
Duplicate	Used to create a new invoice request type using an existing invoice request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Invoice Request Type** zone does not appear in the **Invoice Request Type** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to an invoice request type in the **Invoice Request Type List** zone.

Defining an Invoice Request Type

Prerequisites

To define an invoice request type, you should have:

- Invoice request type business objects defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To define an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the invoice request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Generation Type	<p>Used to indicate the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p>	Yes
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Date Calculation Algorithm	Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	<p>Note:</p> <p>This field is required when Invoice mode is Automatic.</p>
Invoice Request Approval Required	Used to indicate whether approval is required while invoicing bills through an invoice request.	No
	<p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search () icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field. The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated.	No
	Note: By default, the value displayed for wait days is 0 .	

4. Enter the required details in the **Main** section.
5. Define characteristics for the invoice request type, if required.
6. Click **Save**.

The invoice request type is defined.

How to define a characteristic for an invoice request type	Defining a Characteristic for an Invoice Request on page 3442

Defining a Characteristic for an Invoice Request Type

Prerequisites

To define a characteristic for an invoice request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request Type**)

Procedure

To define a characteristic for an invoice request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request Type .	Note: This field is required when you are defining a characteristic for the invoice request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the invoice request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Invoice Request Type

Prerequisites

To edit an invoice request type, you should have:

- Invoice request type business objects defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To edit an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
The **Invoice Request Type** screen appears.
4. In the **Invoice Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the invoice request type whose details you want to edit.

The **Invoice Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Displays the invoice request type.	Not applicable
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	
Bill Generation Type	Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial 	Yes
	Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No
Date Calculation Algorithm	<p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	Yes (Conditional) Note: This field is required when Invoice mode is Automatic .
Invoice Request Approval Required	<p>Used to indicate whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p>	<p>Note:</p> <p>This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to specify the maximum wait period (in days) after which the bills in an invoice request are processed.	No
	Note: You cannot specify a negative value in the Wait Days field.	

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Invoice Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the invoice request type, if required.
7. Click **Save**.

The changes made to the invoice request type are saved.

Deleting an Invoice Request Type

Procedure

To delete an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears.

4. In the **Invoice Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the invoice request type that you want to delete.

A message appears confirming whether you want to delete the invoice request type.

Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.

Tip: Alternatively, you can delete an invoice request type by clicking the **Delete** button in the **Invoice Request Type** zone.

5. Click **OK**.

The invoice request type is deleted.

Copying an Invoice Request Type

Instead of creating an invoice request type from scratch, you can create a new invoice request type using an existing invoice request type. This is possible through copying an invoice request type. On copying an invoice request type, the details including the characteristics are copied to the new invoice request type. You can then edit the details, if required.

Prerequisites

To copy an invoice request type, you should have:

- Invoice request type (whose copy you want to create) defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To copy an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears.

4. In the **Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the invoice request type whose copy you want to create.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type. It contains the following fields:

- **Characteristics** - Used to define the characteristics for the invoice request type.

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	
Bill Generation Type	Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial 	Yes
	Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No
Date Calculation Algorithm	<p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	Yes (Conditional) Note: This field is required when Invoice mode is Automatic .
Invoice Request Approval Required	<p>Used to indicate whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p>	<p>Note:</p> <p>This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated.	No
	Note: By default, the value displayed for wait days is 0 .	

Tip: Alternatively, you can copy an invoice request type by clicking the **Duplicate** button in the **Invoice Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the invoice request type, if required.
7. Click **Save**.

The new invoice request type is defined.

Invoice Request (Used for Searching)

The **Invoice Request** screen allows you to search for an invoice request using various search criteria. It also allows you to define an invoice request. It contains the following zone:

- [Search Invoice Request](#) on page 3427

Through this screen, you can navigate to the following screen:

- [Invoice Request \(Used for Viewing\)](#) on page 3434

Search Invoice Request

The **Search Invoice Request** zone allows you to search for an invoice request using various search criteria. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an invoice request using the invoice request or bill details. The valid values are: <ul style="list-style-type: none"> Invoice Requests for Accounts Invoice Requests for Persons <p>Note: By default, the Invoice Requests for Accounts option is selected.</p>	Yes
Invoice Request ID	Used to search a particular invoice request.	No
Created From	Used to search invoice requests which are created from a particular date onwards.	No
Created To	Used to search invoice requests which are created till a particular date.	No
Cutoff From	Used to indicate the date from when the billable charges are considered for processing the invoice request.	No

Field Name	Field Description	Mandatory (Yes or No)
Cutoff To	Used to indicate the date till when the billable charges are considered for processing the invoice request.	No
Invoice Request Type	Used to search invoice requests which are created using a particular invoice request type.	No
Status	Used to search invoice requests with a particular status. The valid values are: <ul style="list-style-type: none"> Account Derivation Pending Approved Approval In Progress Canceled Deferred Processing Deferred Processing Batch Draft Error Processed Rejected 	No
Person ID	Used to search invoice requests which include bills of a particular person. Note: The Search  icon appears corresponding to Person ID field. On clicking the Search icon, the Person Search window appears.	No
Account ID	Used to search invoice requests which include bills of a particular account. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	No
Bill Generation Type	Used to indicate the bill generation type. The valid values are: <ul style="list-style-type: none"> Regular Trial Note: This field appears when the Invoice Requests for Accounts option is selected from the Search By list.	No

Field Name	Field Description	Mandatory (Yes or No)
External Reference Type	Used to indicate the external reference type. The valid value is: <ul style="list-style-type: none"> Policy 	No
	Note: This is a read-only field. This field is populated when the invoice request is created with the invoice mode option as Automatic .	
External Reference ID	Used to specify the external reference ID of the invoice request.	No
	Note: The Search  icon appears corresponding to the External Reference ID field. On clicking the Search icon, the Policy Search window appears.	

Note: You must specify at least one search criterion while searching for an invoice request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the invoice request is created.
Invoice Request Information	Displays information about the invoice request.
	Note: It has a link. On clicking the link, the Invoice Request screen appears where you can view the details of the respective invoice request.
Created By	Indicates the user who has created the invoice request.
Cutoff Date	Displays the date till when all the billable charges are considered for processing the invoice request.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when the Invoice Requests for Accounts option is selected from the Search By list.

Column Name	Column Description						
Person Information	<p>Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. Searching for an Invoice Request

Prerequisites

To search for an invoice request, you should have:

- Invoice request types defined in the application

Procedure

To search for an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request** sub-menu.
The **Invoice Request** screen appears.
4. Enter the search criteria in the **Search Invoice Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of invoice requests that meet the search criteria appears in the **Search Results** section.

Manually Creating an Invoice Request

Prerequisites

To create an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To create an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
A sub-menu appears.
3. Click the **Add** option from the **Invoice Request** sub-menu.

The **Add Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to indicate the invoice request type using which you want to create the invoice request.	Yes

Tip: Alternatively, you can access this window by clicking the **Add** button in the **Page Title** area of the **Invoice Request** screen.

4. Select the required invoice request type from the **Invoice Request Type** list.
5. Click **OK**.

The **Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Indicates the invoice request type using which the invoice request is created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to indicate the entity using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> Account Person <p>Note: By default, the Account option is selected.</p>	Not applicable
Account ID	Used to indicate the account for which you want to create an invoice request. <p>Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p>	Yes
Person ID	Used to indicate the person for whom the invoice request is generated. <p>Note: The Search (🔍) icon appears corresponding to Person ID field. On clicking the Search icon, the Person Search window appears.</p>	Yes
Cutoff Date	Used to specify the date till when the billable charges are considered for processing the invoice request. <p>Note: By default, the current date appears in this field.</p>	No
Accounting Date	Used to specify the accounting date of the bill. <p>Note: By default, the current date appears in this field.</p>	No
Bill Date	Used to specify the processing date on which the bill is completed. <p>Note: The bill date cannot be on or earlier than the last bill date of the account. By default, the current date appears in this field.</p>	No
Comments	Used to specify additional information about the invoice request.	No

- Enter the required details in the **Main** section.
- Define characteristics for the invoice request, if required.
- Click **Save**

The invoice request is created in the **Draft** status, and the status of all the records (in the invoice request) is set to **Pending**.

Invoice Request (Used for Viewing)

The **Invoice Request** screen allows you to:

- View the details of the invoice request
- Edit the details of the invoice request
- Delete the invoice request
- Submit the invoice request for processing
- Approve or reject the invoice request
- Cancel the invoice request
- View the log of the invoice request
- Add a log entry for the invoice request

It consists of the following tabs:

- [Invoice Request - Main](#) on page 3434
- [Invoice Request - Log](#) on page 3439

Invoice Request - Main

The **Main** tab displays information about the invoice request. It contains the following zones:

- [Invoice Request](#) on page 3435

- [Invoice Request Details/Account List](#) on page 3438

Invoice Request

The **Invoice Request** zone displays the details of the invoice request. It contains the following sections:

- **Main** - Displays basic information about the invoice request. It contains the following fields:

Field Name	Field Description
Invoice Request Information	Displays information about the invoice request.
Invoice Request Type	Indicates the invoice request type using which the invoice request is created. Note: It has a link. On clicking the link, the Invoice Request Type screen appears where you can view the details of the respective invoice request type.
Entity	Indicates the entity using which an invoice request is created.
Account Information	Indicates the account using which an invoice request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Cutoff Date	Indicates the date till when the billable charges are considered for processing the invoice request. Note: This field is applicable only for Entity Type as Account .
Accounting Date	Indicates the accounting date for which the financial transaction of the bill is created.
Bill Date	Indicates the date when the bill is completed. Note: The bill date must not be equal to or earlier than the last bill date of the account for which the invoice request is generated.
Processing Date	Indicates the date when the invoice request is processed. Note: Processing Date = Invoice Request Creation Date + Wait Day + Work Days

Field Name	Field Description
Status	<p>Indicates the status of the invoice request. The valid values are:</p> <ul style="list-style-type: none"> • Draft • Account Derivation Pending • Submitted • Approval In Progress • Approved • Deferred Processing • Deferred Processing - Batch • Rejected • Cancelled • Error • Processing • Processed • Return to Submitter
Status Reason	<p>Indicates the reason why the status of the invoice request is changed.</p> <p>Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status.</p>

- **Characteristics** - Lists the characteristics defined for the invoice request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the invoice request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the invoice request.</p> <p>Note: The Edit button appears when the invoice request is in the Draft status.</p>
Delete	<p>Used to delete the invoice request.</p> <p>Note: The Delete button appears when the invoice request is in the Draft status.</p>
Submit	<p>Used to submit the invoice request.</p> <p>Note: The Submit button appears when the invoice request is in the Draft status.</p>

Button Name	Button Description
Cancel	Used to cancel the invoice request.
	Note: The Cancel button appears when the invoice request is in the Deferred Processing Batch status.
Approve	Used to approve the invoice request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.
Reject	Used to reject the invoice request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.
Re Submit	Used to request for resubmitting the invoice request.
	Note: The Re Submit button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the invoice request status is updated.
Create Date/Time	Displays the date and time when the invoice request is created.

- **External Reference** - Lists the external references defined for the invoice request. This section contains the following columns:

Note: This section appears when the invoice request is in the **Deferred Processing Batch** or **Canceled** status.

Column Name	Column Description
External Reference Type	Indicates the external reference type of the invoice request.
External Reference Information	Displays additional information about the external reference type.
	Note: It has a link. On clicking the link, the Policy screen appears with the details of the respective policy.

Invoice Request Details/Account List

The **Invoice Request Details/Account List** zone lists the bills or the accounts which are added to the invoice request. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Record Status	Indicates the status of the bills in the invoice request. The valid values are: <ul style="list-style-type: none"> • Pending • Error • Processing
Bill Information	Indicates the bill which is added to the invoice request. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Error Message	Displays the error message indicating the error that occurred while processing the bills in the invoice request.
Recent Billed Date	Displays the date of the bill that has been recently processed from the invoice request.

A check box appears corresponding to each account. On selecting the check box, and clicking the **Exclude** button, you can exclude the account from the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to exclude all accounts listed in the respective page from the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Excluded Accounts

The **Excluded Accounts** zone lists the accounts which are excluded from the invoice request. It appears when **Invoice Requests for Persons** option is selected from the **Search By list** in the **Search Invoice Request** zone. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.

A check box appears corresponding to each account. On selecting the check box, and clicking the **Include** button, you can include the account to the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all accounts listed in the respective page to the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Invoice Request - Log

The **Log** tab contains the following zone:

- [Invoice Request Log](#) on page 3439

Invoice Request Log

The **Invoice Request Log** zone lists the complete trail of actions performed on the invoice request. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the invoice request.
Details	Displays the details of the action performed on the invoice request.
User	Indicates the user who has performed the action on the invoice request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the invoice request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the invoice request was rejected by the approver.
	Note: The data appears in this column when the invoice request is in the Rejected status.

Note: You can manually add a log entry for the invoice request by clicking the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

Editing an Invoice Request

Prerequisites

To edit an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To edit an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose details you want to edit.

The **Invoice Request** screen appears.

3. Click the **Edit** button in the **Invoice Request** zone.

The **Edit Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Information	Displays information about the invoice request.	Not applicable
Invoice Request Type	Indicates the invoice request type using which the invoice request is created.	Not applicable
Entity	Used to indicate the entity using which you want to edit an invoice request. The valid values are: <ul style="list-style-type: none"> Account Person 	Not applicable
	Note: This field is in the read-only mode.	
Account ID	Used to indicate the account using which you want to edit an invoice request.	Yes
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.	
Cutoff Date	Used to specify the date till when the billable charges are considered for processing the invoice request.	No
	Note: If the cutoff date is not mentioned, the system considers current date as the cutoff date.	
Accounting Date	Used to specify the accounting date of the bill.	No
	Note: If the accounting date is not mentioned, the system considers current date as the accounting date.	
Bill Date	Used to specify the processing date on which the bill is completed.	No
	Note: The bill date cannot be on or earlier than the last bill date of the account. If the bill date is not mentioned, the system considers current date as the bill date.	
Comments	Used to specify additional information about the invoice request.	No

Note: The **Edit** button appears when the invoice request is in the **Draft** status.

4. Modify the details of the invoice request, if required.

5. Define, edit, or remove characteristics of the invoice request, if required.
6. Click **Save**.

The changes made to the invoice request are saved.

Defining a Characteristic for an Invoice Request

Prerequisites

To define a characteristic for an invoice request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request**)

Procedure

To define a characteristic for an invoice request:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the invoice request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the invoice request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request .
		Note: This field is required when you are defining a characteristic for the invoice request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the invoice request.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the invoice request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the invoice request.

Request for resubmitting an invoice request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-INVRATODO in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the invoice request that you want to review.

The **Invoice Request** screen appears.

2. Review the details in the **Invoice Request** screen.
3. If the information in the invoice request is incomplete and you want the submitter to make the required changes and resubmit the invoice request for approval, then click the **ReSubmit** button in the **Invoice Request** zone.

The **Resubmit Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the invoice request before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the invoice request type. In addition, the status of the invoice request is changed to **Draft**.

Viewing the Log of an Invoice Request

Procedure

To view the log of an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose log you want to view.

The **Invoice Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the invoice request in the **Invoice Request Log** zone.

Adding a Log Entry for an Invoice Request

Procedure

To add a log entry for an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose log you want to edit.

The **Invoice Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the invoice request.	Not applicable
Log Details	Used to specify additional comments for the invoice request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click Save.

The log entry is added in the **Invoice Request Log** zone.

Chapter 45

Hold Request Creation, Modification, Release, and View Through Inbound Web Service

Topics:

- [Prerequisites](#)
- [C1-CreateHoldRequest Business Service](#)
- [C1-GetHoldRequestHistory Business Service](#)
- [C1-ReleaseHoldRequest Business Service](#)
- [C1-UpdateHoldRequest Business Service](#)

Oracle Revenue Management and Billing enables you to create, edit, and release a hold request through a web service. It also enables you to view the details of a hold request through a web service. You can send the hold request creation, modification, release, or view request from the external system through an inbound web service. The following business services are shipped with the product to support different hold request operations:

Business Service	Description
C1-CreateHoldRequest	Used to create a hold request for a single entity (i.e. for a particular person, account, or bill). For more information, see C1-CreateHoldRequest Business Service on page 3455
C1-UpdateHoldRequest	Used to edit an active hold request. For more information, see C1-UpdateHoldRequest Business Service on page 3492
C1-GetHoldRequestHistory	Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see C1-GetHoldRequestHistory Business Service on page 3471
C1-ReleaseHoldRequest	Used to release an active hold request with a single entity (i.e. person, account, or bill). For more information, see C1-ReleaseHoldRequest Business Service on page 3483

You can create one inbound web service which supports all four operations - hold request creation, hold request update, hold request release, and hold request view. Alternatively, you can create four different inbound web services - one for hold request creation, another for hold request update, third for hold request release, and fourth for hold request view.

You can create a SOAP or REST based inbound web service. If you want to send the request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service. However, if you want to send the request in the XML format, you can create a SOAP or REST based inbound web service.

For more information on how to setup this feature, see [Prerequisites](#) on page 3454.

Prerequisites

The following table lists the prerequisites for hold request creation, modification, release, and view through an inbound web service:

If you want to...	Then...
C1-CreateHoldRequest	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define a REST or SOAP based inbound web service to call the C1-CreateHoldRequest business service. • Authorize the ORMB user to access the required application service • Define the required hold request type for the hold request where the Approval Required flag is configured as No. • Define the required hold reason and comments • Define the required values for the HOLD_ENTITY_LVL_FLG lookup field. • Define the required values for the HOLD_PROCESS_FLG lookup field. • Define the required characteristic types where the characteristic entity is set to Hold Request
C1-UpdateHoldRequest	<p>Used to edit an active hold request. Through this service, you can edit the following details of an active hold request:</p> <ul style="list-style-type: none"> • End date, comments, and characteristics of a hold request • End date of a single hold entity in a hold request • End date of multiple hold processes in a hold request <p>It also allows you to delete a characteristic of a hold request. While sending the request for hold request modification, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold entity ID (i.e. person ID, account ID, or bill ID) <p>Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request modification response sent to the external system using the Inbound Web Service History feature.</p>
C1-GetHoldRequestHistory	<p>Used to fetch the details of an active hold request with a single entity (i.e. person, account, or bill). The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature.</p>
C1-ReleaseHoldRequest	<p>Used to release an active hold request with a single entity (i.e. person, account, or bill). While sending the request for hold request release, you need to specify the following details:</p> <ul style="list-style-type: none"> • Hold request ID • Hold release reason and comments <p>Once the hold request is released through the service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature.</p>

C1-CreateHoldRequest Business Service

The **Create Hold Request (C1-CreateHoldRequest)** business service enables you to create a hold request for a single entity (i.e. for a particular account, bill, or person). You can call this business service from an external system through an inbound web service. If you want to send the hold request creation request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request creation request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the request for hold request creation, you need to specify the following details:

- Hold request type, hold request start date, and hold request end date or hold days (which is used to calculate hold request end date if not specified)
- Entity (i.e. ACCT, BILL, or PERS) for which you want to create the hold request
- Hold reason and comments
- Entity identifiers when the entity is an account or a person, and the entity ID when the entity is a bill.
- Hold entity and hold process end dates
- Business processes (i.e. ATPY, BILL, FNDG, OVDU, REFD) which you want to hold for the entity
- Characteristics of the hold request

Points to Note:

- You must specify an active hold request type where the approval process is not configured for activation and release.
- If you do not specify the hold request type, the system, by default, considers the hold request type specified in the **Default Hold Request Type for IWS** option type of the **C1-HOLDSRCH** feature configuration.
- This business service does not allow you to create past dated or future dated hold request. Therefore, you must always set the hold request start date to the system date.
- Even if you explicitly specify a value for the defer processing count in the hold request type, it is no longer considered by this business service while creating a hold request.
- The upstream system may provide the hold request type to override the default hold request type, mentioned in the hold request inbound web service.
- If the hold request is in **DRAFT** status, this business service continues to operate in the background until the status of the hold request is set to **ACTIVE**.

On creating a hold request, the status of the hold request is set to **ACTIVE**. Once the hold request is created through the service, the hold request ID is sent in the response along with its status. The system enables you to track the hold request creation response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Creation Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Creation Request in the XML Format](#) on page 3456 and [Hold Request Creation Response in the XML Format](#) on page 3457 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-CreateHoldRequest** business service through an inbound web service, you need to ensure that the hold request creation request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-CreateHoldRequest	Used to indicate that you want to invoke the C1-CreateHoldRequest business service.	Yes
holdRequest	Used to specify the details of the hold request.	Yes
sourceSystem	Used to indicate the external system from which the hold creation request is sent. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request creation request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
externalTransactionId	Used to indicate the transaction in the external system through which the hold request creation request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
holdStartDate	Used to specify the date from when the hold request is effective.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)								
holdEndDate	Used to specify the date till when the hold request is effective.	Yes (Conditional)								
	Note: The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status.	Note: This data is required if the holdDays is not specified.								
holdDays	Used to specify the number of days an entity should be kept on hold in the hold request.	Yes (Conditional)								
	Note: If the holdEndDate is not specified, the system calculates the holdEndDate by adding the holdDays to the holdStartDate . The system considers the holdDays as calendar days which include all the 7 days in a week.	Note: This data is required if holdEndDate is not specified.								
holdRequestType	Used to specify an active hold request type where the approval process is not configured for activation and release.	No								
	Note: If an active hold request type is used where the approval process is configured, the system throws an error with a failure response.									
holdEntity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT - Used when you want to specify the account. • BILL - Used when you want to specify the bill. • PERS - Used when you want to specify the person. 	Yes								
	Note:									
	<table border="1"> <thead> <tr> <th>If...</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>You are creating the hold request for an ACCT entity</td> <td>You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.</td> </tr> <tr> <td>You are creating the hold request for a BILL entity</td> <td>You can only add Funding process in the hold request.</td> </tr> <tr> <td>You are creating the hold request for a PERS entity</td> <td>You can add Bill Generation and Funding process in the hold request.</td> </tr> </tbody> </table>		If...	Then	You are creating the hold request for an ACCT entity	You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request.	You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.	You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.
	If...		Then							
You are creating the hold request for an ACCT entity	You can add Auto Pay , Bill Generation , Funding , and Overdue process in the hold request.									
You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.									
You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.									
You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It must be in the Active status.										

Tag Name	Tag Description	Mandatory (Yes or No)
holdReason	Used to specify the reason for the hold request.	Yes
	Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.	
holdComments	Used to specify additional information about the hold request.	No
entityIdentifierType	Used to specify the entity type.	Yes (Conditional)
	Note: You cannot specify BILL as a type for the entity identifier.	
entityIdentifierValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	
entityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entity ID when the hold entity is BILL .	
holdEntityEndDate	Used to specify the date till when the entity is effective for hold request.	No
hierarchySwitch	Used to associate the hold entity with the entity hierarchy relationship.	No
holdProcessData	Used to specify process information for the hold request.	Yes
holdProcess	Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. 	Yes
	Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.	
holdProcessEndDate	Used to specify the date till when the entity is effective for hold request.	No
characteristics	Used to specify a characteristic for the hold request.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicType	Used to indicate the characteristic type.	Yes
	Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.	
characteristicValue	Used to specify the value for the characteristic type.	Yes
effectiveDate	Used to specify the date from when the characteristic is effective.	Yes

The following table lists and describes the tags which appear in the hold request creation response in the XML format:

Tag Name	Tag Description
statusCd	Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.
holdStatus	Indicates the current status of the hold request.
messageText	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the statusCd tag is set to Failure .

	If...		Then							
	You are creating the hold request for an ACCT entity		You can add Auto Pay, Bill Generation, Funding, and Overdue process in the hold request.							
You are creating the hold request for a BILL entity	You can only add Funding process in the hold request.									
You are creating the hold request for a PERS entity	You can add Bill Generation and Funding process in the hold request.									
You must specify a value which is already defined in the HOLD_ENTITY_LVL_FLG lookup field. It must be in the Active status.										
holdReason	Used to specify the reason for the hold request.	Yes								
	Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field. It must be in the Active status.									
holdComments	Used to specify additional information about the hold request.	No								
entityIdentifierType	Used to specify the entity type.	Yes (Conditional)								
	Note: You cannot specify BILL as a type for the entity identifier.									
		Note: This data is required while defining or editing a hold request.								

Attribute Name	Attribute Description	Mandatory (Yes or No)
entityIdentifierValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	Note: This data is required while defining or editing a hold request.
entityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entityId when BILL is used as a hold entity.	Note: This data is required while defining or editing a hold request.
holdEntityEndDate	Used to specify the date till when the entity is effective for hold request.	No
hierarchySwitch	Used to associate the hold entity with the entity hierarchy relationship.	No
holdProcessData	Used to specify process information for the hold request.	Yes
holdProcess	Used to specify the process that you want to keep on hold in the hold request. The valid values are: <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. 	Yes
	Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.	
holdProcessEndDate	Used to specify the date till when the entity is effective for hold request.	No
characteristics	Used to specify a characteristic for the hold request.	Yes
characteristicType	Used to indicate the characteristic type.	Yes
	Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.	
characteristicValue	Used to specify the value for the characteristic type.	Yes
effectiveDate	Used to specify the date from when the characteristic is effective.	Yes

The following table lists and describes the tags which appear in the hold request creation response in the JSON format:

Attribute Name	Attribute Description
statusCd	Indicates whether the hold request creation request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.
holdStatus	Indicates the current status of the hold request.
messageText	Indicates the error that occurred while creating the hold request. <p>Note: This tag appears when the value in the statusCd tag is set to Failure.</p>

C1-GetHoldRequestHistory Business Service

The **Inquire Hold Request Details (C1-GetHoldRequestHistory)** business service enables you to view the details of an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request view request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request view request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request view request, you need to specify the following details:

- Either the entity identifier type and entity identifier value or the entity ID.

Note: Specify a valid entity ID in the hold request view request which is used in the system.

The system enables you to track the hold request view response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request View Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request View Request in the XML Format](#) on page 3472 and [Hold Request View Response in the XML Format](#) on page 3473 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-GetHoldRequestHistory** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-GetHoldRequestHistory	Used to indicate that you want to invoke the C1-GetHoldRequestHistory business service.	Yes
getHoldReqHistRequest	Used to specify the details of the hold request which you want to view.	Yes
sourceSystem	Used to indicate the external system from which the hold view request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
c1ExternalTransactionId	Used to indicate the transaction in the external system through which the hold request view request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
getHoldReqStartDt	Used when you want to view hold request details which are created from a particular date onwards.	Yes
getHoldReqEndDt	Used when you want to view hold request details which are created till a particular date.	No
getHoldReqEntity	Used when you want to view the hold request details for a particular entity. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
getHoldReqReason	Used when you want to view the hold request details based on a specific reason. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
getHoldReqEntIdentType	Used to specify the entity type.	Yes (Conditional)
	Note: You cannot specify BILL as a type for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntIdentValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entityId when BILL is used as a hold entity.	Note: This data is required while viewing a hold request.
getHoldReqProcess	Used when you want to view the hold request details for a specific process. The valid values are: <ul style="list-style-type: none"> • ATPY • BILL • FNDG • OVDU 	Yes

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
holdReqHistResponse	Displays the response returned by the business service in relation to the hold request.
statusCd	Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
messageText	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the statusCd tag is set to Failure .
holdReqHistList	Displays the details of a hold request.
holdRequestId	Displays the hold request ID.
holdReqStartDt	Displays the date from when the hold request was effective.
holdReqEndDt	Displays the date till when the hold request was effective.
holdStatus	Indicates the current status of the hold request.

Tag Name	Tag Description
holdReqType	Indicates the type using which the hold request was created.
holdReqReason	Indicates the reason which was specified when the hold request was created.
holdReqEntity	Indicates the entity for which the hold request was created.
holdReqProcesses	Indicates the process which was kept on hold in the hold request.

Hold Request View Request and Response - Attribute/Value Pairs in JSON Format

Note: We recommend you to refer the [Hold Request View Request in the JSON Format](#) on page 3476 and [Hold Request View Response in the JSON Format](#) on page 3476 topics in parallel while understanding the below mentioned attributes. This will help you to understand how the attribute/value pairs are structured in the JSON format.

Before calling the **C1-GetHoldRequestHistory** business service through an inbound web service, you need to ensure that the hold request view request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-GetHoldRequestHistory	Used to indicate that you want to invoke the C1-GetHoldRequestHistory business service.	Yes
getHoldReqHistRequest	Used to specify the details of the hold request which you want to view.	Yes
sourceSystem	Used to indicate the external system from which the hold view request is received. Note: You must specify an external system which is already defined in the system. The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request view request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History .	No
c1ExternalTransactionId	Used to indicate the transaction in the external system through which the hold request view request is sent. Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.	No
externalSourceId	Used to specify the external source system ID. Note: The external source system ID is used when the Inbound Web Service History feature is enabled.	No
getHoldReqStartDt	Used when you want to view hold request details which are created from a particular date onwards.	Yes
getHoldReqEndDt	Used when you want to view hold request details which are created till a particular date.	No
getHoldReqEntity	Used when you want to view the hold request details for a particular entity. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
getHoldReqReason	Used when you want to view the hold request details based on a specific reason. Note: You must specify a value which is already defined in the HOLD_REASON_FLG lookup field and is in the Active status.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
getHoldReqEntIdentType	Used to specify the entity type.	Yes (Conditional)
	Note: You cannot specify BILL as a type for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntIdentValue	Used to specify the entity identifier (i.e. account or person).	Yes (Conditional)
	Note: You cannot specify BILL as a value for the entity identifier.	Note: This data is required while viewing a hold request.
getHoldReqEntityId	Used to specify a list of entities for which you want to create a hold request.	Yes (Conditional)
	Note: You need to specify the entityId when BILL is used as a hold entity.	Note: This data is required while viewing a hold request.
getHoldReqProcess	Used when you want to view the hold request details for a specific process. The valid values are: <ul style="list-style-type: none"> • ATPY • BILL • FNDG • OVDU 	Yes

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
holdReqHistResponse	Displays the response returned by the business service in relation to the hold request.
statusCd	Indicates whether the hold request view request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
messageText	Indicates the error that occurred while creating the hold request.
	Note: This tag appears when the value in the statusCd tag is set to Failure .
holdReqHistList	Displays the details of a hold request.
holdRequestId	Displays the hold request ID.
holdReqStartDt	Displays the date from when the hold request was effective.
holdReqEndDt	Displays the date till when the hold request was effective.
holdStatus	Indicates the current status of the hold request.

Tag Name	Tag Description
holdReqType	Indicates the type using which the hold request was created.
holdReqReason	Indicates the reason which was specified when the hold request was created.
holdReqEntity	Indicates the entity for which the hold request was created.
holdReqProcesses	Indicates the process which was kept on hold in the hold request.

Sample Hold Request View Request and Response in the XML Format

Using the below example, you can view a hold request for the **ACCT** account entity where **ATPY** auto pay process is on hold.

Sample Hold Request View Request in the XML Format

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <clExternalTransactionId>ETI1</clExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
</C1-GetHoldRequestHistory>
```

Sample Hold Request View Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_HOLD</sourceSystem>
    <externalSourceId>ESI1</externalSourceId>
    <clExternalTransactionId>ETI1</clExternalTransactionId>
    <getHoldReqStartDt>2022-01-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>ACCT</getHoldReqEntity>
    <getHoldReqReason>TORNADO_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4321</getHoldReqEntIdentValue>
    <getHoldReqEntityId>003526636627</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>SUCCESS</statusCd>
    <messageText></messageText>
    <holdReqHistList>
      <holdReqId>006046575162</holdReqId>
```

```

    <holdReqStartDt>2022-01-01</holdReqStartDt>
    <holdReqEndDt></holdReqEndDt>
    <holdReqStatus>ACTIVE</holdReqStatus>
    <holdReqType>HOLD_WITHOUT_APPROVAL</holdReqType>
    <holdReqReason>TORNADO_IN_TX</holdReqReason>
    <holdReqEntity>003526636627</holdReqEntity>
    <holdReqProcesses>ATPY</holdReqProcesses>
  </holdReqHistList>
</holdReqHistResponse>
</C1-GetHoldRequestHistory>

```

The following information is received from the hold request when the requested search parameters fail to return any search results.

```

<C1-GetHoldRequestHistory>
  <getHoldReqHistRequest>
    <sourceSystem>SIMPLE_PRIME_TEST</sourceSystem>
    <externalSourceId>ESI55</externalSourceId>
    <c1ExternalTransactionId>ETI33</c1ExternalTransactionId>
    <getHoldReqStartDt>2021-12-01</getHoldReqStartDt>
    <getHoldReqEndDt></getHoldReqEndDt>
    <getHoldReqEntity>PERS</getHoldReqEntity>
    <getHoldReqReason>FLOODS_IN_TX</getHoldReqReason>
    <getHoldReqEntIdentType>SSN_NO</getHoldReqEntIdentType>
    <getHoldReqEntIdentValue>987-65-4323</getHoldReqEntIdentValue>
    <getHoldReqEntityId>004556623427</getHoldReqEntityId>
    <getHoldReqProcess>ATPY</getHoldReqProcess>
  </getHoldReqHistRequest>
  <holdReqHistResponse>
    <statusCd>FAILURE</statusCd>
    <messageText>The system could not retrieve hold request ID based on
the search parameters.
    </messageText>
    <holdReqHistList>
      <holdReqId></holdReqId>
      <holdReqStartDt></holdReqStartDt>
      <holdReqEndDt></holdReqEndDt>
      <holdReqStatus></holdReqStatus>
      <holdReqType></holdReqType>
      <holdReqReason></holdReqReason>
      <holdReqEntity></holdReqEntity>
      <holdReqProcesses></holdReqProcesses>
    </holdReqHistList>
  </holdReqHistResponse>
</C1-GetHoldRequestHistory>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold view request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

C1-ReleaseHoldRequest Business Service

The **Release Hold Request (C1-ReleaseHoldRequest)** business service enables you to release an active hold request for a single entity (i.e. person, account, or bill). You can call this business service from an external system through an inbound web service. If you want to send the hold request release request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request release request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request release request, you need to specify the following details:

- Hold request ID

- Hold release reason and comments

Once the hold request is released through this business service, the hold request ID is sent in the response along with its status and end date. Note that the hold request end date is set to the system date. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Sample Hold Request Release Request and Response in the XML Format

Using the below example, you can release a hold request with an **Active** status for the **22559977334488** hold request ID.

Sample Hold Request Release Request in the XML Format

```
<C1-ReleaseHoldRequest>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
</C1-ReleaseHoldRequest>
```

Sample Hold Request Release Response in the XML Format

The following information is received as response when the hold request is processed successfully.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>SUCCESS</requestProcessStatus>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>22559977334488</holdRequestId>
  <holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
  <holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
  <holdEndDate>2022-31-01</holdEndDate>
  <holdRequestStatus>RELEASE</holdRequestStatus>
  <errormsg></errormsg>
</C1-ReleaseHoldRequest>
```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
<C1-ReleaseHoldRequest>
  <requestProcessStatus>FAILURE</requestProcessStatus>
  <sourceSystem>SRC_AMER_PRIME</sourceSystem>
  <externalTransactionId>ETI44</externalTransactionId>
  <externalSourceId>ESI77</externalSourceId>
  <holdRequestId>790420762397</holdRequestId>
```

```
<holdReleaseReason>TROPICAL_CYCLONE</holdReleaseReason>
<holdComments>CYCLONE PHENOMENON WAS SEEN</holdComments>
<holdEndDate></holdEndDate>
<holdRequestStatus></holdRequestStatus>
<errmsg>The hold request ID 790420762397 is invalid</errmsg>
</C1-ReleaseHoldRequest>
```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold release request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Hold Request Release Request and Response in the JSON Format

Using the below example, you can release a hold request with an **Active** status for the **44776611339988** hold request ID.

Sample Hold Request View Request in the JSON Format

```
{
  "C1-ReleaseHoldRequest" :
  {
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
  }
}
```

Sample Hold Request Release Response in the JSON Format

```
{
  "C1-ReleaseHoldRequest" :
  {
    "requestProcessStatus": "SUCCESS"
    "sourceSystem": "SRC_PANAMER_PRIME"
    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "44776611339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
    "holdEndDate": "2022-02-28"
    "holdRequestStatus": "RELEASE"
    "errmsg": ""
  }
}
```

The following information is received from the hold request when the hold request ID passed in the release request is invalid.

```
{
  "C1-ReleaseHoldRequest" :
  {
    "requestProcessStatus": "FAILURE"
    "sourceSystem": "SRC_PANAMER_PRIME"
  }
}
```

```

    "externalTransactionId": "ETI01"
    "externalSourceId": "ESI05"
    "holdRequestId": "55772211339988"
    "holdReleaseReason": "FLOODS"
    "holdComments": "HEAVY FLOODS IN DOWNTOWN"
    "holdEndDate": ""
    "holdRequestStatus": ""
    "errorMsg": "The hold request ID 55772211339988 is invalid"
  }
}

```

C1-UpdateHoldRequest Business Service

The **Update Hold Request (C1-UpdateHoldRequest)** business service enables you to edit an active hold request. You can call this business service from an external system through an inbound web service. If you want to send the hold request update request in the XML and/or JSON format, you need to ensure that you create a REST based inbound web service in Oracle Revenue Management and Billing. However, if you want to send the hold request update request in the XML format, you can create a SOAP or REST based inbound web service in Oracle Revenue Management and Billing.

While sending the hold request update request, you need to specify the following details:

- Hold request ID
- Hold entity ID (i.e. person ID, account ID, or bill ID)

Through this service, you can edit the following details of an active hold request:

- End date, comments, and characteristics of a hold request
- End date of a single hold entity in a hold request
- End date of multiple hold processes in a hold request

Once the hold request is edited through the service, the hold request ID is sent in the response. The system enables you to track the hold request release response sent to the external system using the Inbound Web Service History feature. For more information, see [Inbound Web Service History](#)

Hold Request Update Request and Response - Tags in XML Format

Note: We recommend you to refer the [Hold Request Update Request in the XML Format](#) on page 3493 and [Hold Request Update Response in the XML Format](#) on page 3493 topics in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the XML format.

Before calling the **C1-UpdateHoldRequest** business service through an inbound web service, you need to ensure that the hold request update request contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-UpdateHoldRequest	Used to indicate that you want to invoke the C1-UpdateHoldRequest business service.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
sourceSystem	<p>Used to indicate the external system from which the hold update request is received.</p> <p>Note: You must specify an external system which is already defined in the system.</p> <p>The external system is used when the Inbound Web Service History feature is enabled. The specified external system should match the external system which is associated with the outbound message type specified in the C1-IWSHIST algorithm. If the external system is not specified in the hold request update request, the system, by default, stamps the external system associated with the outbound message type (specified in the C1-IWSHIST algorithm) corresponding to the record in the C1_IWS_HIST table. For more information, see Inbound Web Service History.</p>	No
externalTransactionId	<p>Used to indicate the transaction in the external system through which the hold request update request is sent.</p> <p>Note: The external transaction ID is used when the Inbound Web Service History feature is enabled.</p>	No
externalSourceId	<p>Used to specify the external source system ID.</p> <p>Note: The external source system ID is used when the Inbound Web Service History feature is enabled.</p>	No
holdRequestId	<p>Used to specify the hold request ID of the hold request for which the hold request update request is sent.</p> <p>Note: You must specify the hold request ID which is already defined in the system.</p>	Yes
holdComments	Used to specify additional information about the hold request.	No
holdEndDate	<p>Used to specify the date till when the hold request is effective.</p> <p>Note: The hold request end date must be either derived or provided by the upstream system before creating a hold request in an Active status.</p> <p>The hold request end date cannot be earlier than the hold process end date.</p>	No
entityId	<p>Used to specify a list of entities for which you want to create a hold request.</p> <p>Note: You need to specify the entity ID when the hold entity is BILL.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
entityEndDate	<p>Used to specify the date till when the entity is effective for hold request.</p> <p>Note:</p> <p>The entity end date cannot be later than the hold end date and earlier than the hold process end date.</p> <p>The entity end date cannot be later than the system date.</p> <p>At present, you can only update the end date of a single entity specified in the hold request update request. If there are two or more entities on hold, you need to initiate a separate hold request update request for each entity in order to update its respective end date.</p>	No
holdProcessData	Used to specify the details of the hold process.	No
holdProcess	<p>Used to specify the process that you want to keep on hold in the hold request. The valid values are:</p> <ul style="list-style-type: none"> • ATPY - Used when you want to specify the auto pay process. • BILL - Used when you want to specify the bill generation process. • FNDG - Used when you want to specify the funding process. • OVDU - Used when you want to specify the overdue process. <p>Note: You must specify a value which is already defined in the HOLD_PROCESS_FLG lookup field. It must be in the Active status.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p>
holdProcessEndDate	<p>Used to specify the date till when the entity is effective for hold request.</p> <p>Note:</p> <p>The hold process end date cannot be later than the hold end date.</p> <p>At present, you can only update the end date of a single process specified in the hold request update request. If there are two or more processes on hold, you need to initiate a separate hold request update request for each process in order to update its respective end date.</p>	No
characteristics	Used to specify a characteristic for the hold request.	<p>Yes (Conditional)</p> <p>Note: This data is required while updating the hold request information.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
action	Used to specify the action to be performed on the characteristic. The valid values are: <ul style="list-style-type: none"> • Update • Delete 	Yes (Conditional) Note: This data is required while updating the hold request information.
characteristicType	Used to indicate the characteristic type. Note: You must specify a characteristic type where the characteristic entity is set to Hold Request and which is associated with the hold request type.	Yes (Conditional) Note: This data is required while updating the hold request information.
characteristicValue	Used to specify the value for the characteristic type. Note: You must specify a characteristic value which is associated with the characteristic type and is present in the system.	Yes (Conditional) Note: This data is required while updating the hold request information.
effectiveDate	Used to specify the date from when the characteristic is effective.	Yes (Conditional) Note: This data is required while updating the hold request information.

The following table lists and describes the tags which appear in the hold request view response in the XML format:

Tag Name	Tag Description
requestProcessStatus	Indicates whether the hold request update request is successfully processed or not. The valid values are: <ul style="list-style-type: none"> • Success • Failure
holdRequestId	Displays the hold request ID.
errormsg	Indicates the error that occurred while updating the hold request. Note: This tag appears when the value in the requestProcessStatus tag is set to Failure .

    <characteristicType>INVOICE_TYPE</characteristicType>
    <characteristicValue>CMR</characteristicValue>
```

```

    <effectiveDate>2022-01-01</effectiveDate>
  </characteristics>
</C1-UpdateHoldRequest>

```

The following information is received from the hold request when the hold request is not longer present in the **Active** status.

```

<C1-UpdateHoldRequest>
  <requestProcessStatus>Failure</requestProcessStatus>
  <sourceSystem>SMALL_NSC_PRIME</sourceSystem>
  <externalTransactionId>ETI22</externalTransactionId>
  <externalSourceId>ESI99</externalSourceId>
  <holdRequestId>10101252262623</holdRequestId>
  <holdComments>Update the fields based on the request ID</holdComments>
  <holdEndDate>2022-01-31</holdEndDate>
  <entityId>1133224455</entityId>
  <entityEndDate>2022-01-25</entityEndDate>
  <holdProcessData>
    <holdProcess>BILL</holdProcess>
    <holdProcessEndDate>2022-01-23</holdProcessEndDate>
  </holdProcessData>
  <holdProcessData>
    <holdProcess>FNDG</holdProcess>
    <holdProcessEndDate>2022-01-23</holdProcessEndDate>
  </holdProcessData>
  <characteristics>
    <action>UPDATE</action>
    <characteristicType>STATE_OF_ISSUE</characteristicType>
    <characteristicValue>TX</characteristicValue>
    <effectiveDate>2022-01-01</effectiveDate>
  </characteristics>
  <errmsg>The hold request is not in the active status.</errmsg>
</C1-UpdateHoldRequest>

```

Note: We have given the above request and response samples to illustrate how the tags should be nested while sending a hold update request from the external system. However, you should not seamlessly use this request sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Chapter 46

Hold Direct Debit Instruction

Topics:

- [Prerequisites](#)
- [Algorithms Used in C1-AutoPayRequest](#)
- [Auto Pay Request Status Transition without Approval](#)
- [Auto Pay Request Status Transition with Approval](#)
- [Auto Pay Request Type](#)
- [Auto Pay Request \(Used for Searching\)](#)
- [Auto Pay Request \(Used for Viewing\)](#)

In the financial services and health insurance domains, there might be scenarios wherein the customers would like to review their invoices before the charges are directly debited from their accounts. In such scenarios, there is a need to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer.

Oracle Revenue Management and Billing provides the ability to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. A new field named **Auto Pay Review Required** is added in the **Auto Pay** tab of the **Account** screen. On completing a bill for an account, the system creates the automatic payment records in the **CI_BILL_ACH** table as per the auto pay instructions defined for the account. If the **Auto Pay Review Required** option is selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **N**. However, if the **Auto Pay Review Required** option is not selected, the system sets the **EXTRACT_ELIG_SW** column corresponding to the automatic payment records in the **CI_BILL_ACH** table to **Y**. The **EXTRACT_ELIG_SW** column indicates whether the automatic payment record is eligible for the extraction. If the **EXTRACT_ELIG_SW** column is set to **N**, the **APAYCRET** batch does not consider the automatic payment record in the **CI_BILL_ACH** table for automatic payment creation.

Once the confirmation is received for one or more bills, the system enables you to create an automatic payment request for the bills. While creating an automatic payment request, you need to specify an automatic payment request type using which you want to create the automatic payment request. It is the automatic payment request type which helps the system to determine:

- The business object using which the automatic payment request should be created in the system
- Whether the approval is required for the automatic payment request

Once you specify the automatic payment request type, the system creates the automatic payment request in the **Draft** status. You can then include the bills for which invoice confirmation is received from the customers in the automatic payment request. At least one bill should be included in the automatic payment request. Before submitting an automatic payment request, you need to do the following:

- Edit the Schedule Extract Date (if required) of each bill
- Set the **Eligible for Extraction** field of each bill to **Y**

You can also delete a bill from an automatic payment request when it is in the **Draft** status. Once you edit the required details of the bills in an automatic payment request, you can submit the automatic payment request. If the approval

process is not configured in the respective automatic payment request type, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approval process is configured in the respective automatic payment request type, the system changes the status of the automatic payment request to **Approval In Progress**. A To Do notification is created for the approver using the approval To Do type (specified in the respective automatic payment request type) and assigned to the users with the approval To Do role (specified in the respective automatic payment request type). Once the approver reviews an automatic payment request, the approver can approve, reject, or resubmit the automatic payment request based on the observations. If the approver approves the automatic payment request, the system does the following:

- Updates the **ELIG_EXTRACT_SW** and **APAY_CRE_DT** columns corresponding to the automatic payment records in the **CI_BILL_ACH** table
- Changes the status of the automatic payment request to **Processed**

If the approver rejects an automatic payment request, the status of the automatic payment request is changed to **Rejected**. However, if the approver requests the submitter to resubmit an automatic payment request, the status of the automatic payment request is changed to **Draft**. A To Do notification is created for the submitter using the submitter To Do type (specified in the respective automatic payment request type) and assigned to the users with the submitter To Do role (specified in the respective automatic payment request type). While rejecting or resubmitting an automatic payment request, the approver needs to specify the reason for rejection or resubmission.

To implement the hold direct debit feature, the following new screens are introduced in this release:

- **Auto Pay Request Type** - Enables you to create, edit, delete, and copy an automatic payment request type.
- **Auto Pay Request (Used for Searching)** - Enables you to search for an automatic payment request. It also enables you to create an automatic payment request.
- **Auto Pay Request (Used for Viewing)** - Enables you to edit, delete, submit, approve, reject, and resubmit the automatic payment request. It also enables you to add, edit, and delete bills from the automatic payment request.

In addition, the following changes are made to the system:

- **Auto Pay Review Required** - This field is added in the **Auto Pay** tab of the **Account** screen. It indicates whether you want to hold direct debit (i.e. automatic payment) for the bills of the account until the confirmation is received from the customer.
- **Eligible for Extraction** - This column is added in the **Auto Pay** tab of the **Bill** screen. It indicates whether the automatic payment record for the bill is eligible for extraction.

Prerequisites

To setup the auto pay request feature, you need to do the following:

- Auto pay request type business object defined in the application
- Auto pay request types defined in the system.
- Approval To Do types and To Do roles defined in the application
- Submitter To Do types and To Do roles defined in the application
- Characteristic types defined in the application

Algorithms Used in C1-AutoPayRequest

The following table lists the algorithm which is attached to the **C1-AutoPayRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-APAYRQINF	C1-APAYRQINF	Refer to C1-APAYRQINF on page 3509

The following table lists the algorithms which are used in the lifecycle of the **C1-AutoPayRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1517
Submitted	Enter	C1-APAYSUB	C1-APAYSUB	Refer to C1-APAYSUB on page 3510
Approval In Progress	Enter	C1-APAYAPP	C1-APAYAPP	Refer to C1-APAYAPP on page 3510
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1517
Update Auto Pay Record	Enter	C1-UPDAPAY	C1-UPDAPAY	Refer to C1-UPDAPAY on page 3510
Approved	Enter	C1-APAYAPRVD	C1-APAYAPRVD	Refer to C1-APAYAPRVD on page 3510
Return to Submitter	Enter	C1-APAYRESUB	C1-APAYRESUB	Refer to C1-APAYRESUB on page 3511
Processed	-	-	-	-
Rejected	-	-	-	-

C1-APAYRQINF

The **C1-APAYRQINF** algorithm generates the auto pay request information string and is plugged in at **System Event**:

Information of business object: **C1-AutoPayRequest**.

It concatenates the following fields:

- Auto Pay Request Type Description
- Auto Pay Request Status Description
- Auto Pay Request ID

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-APAYSUB

The **C1-APAYSUB** algorithm will be plugged at the **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **SUBMITTED**.

This algorithm checks the following:

1. Whether the approval is required for the auto pay request based on the configuration in auto pay request type (**IS_APPR_REQ = Y**).
 - a. If the approval is required for the auto pay request, the status of the auto pay request is changed to **Approval In Progress**.
 - b. If the approval is not required for the auto pay request, the status of the auto pay request is changed to **UPDATEAPAY**.
2. At least one auto pay record is selected in the auto pay request.
3. Updated scheduled extraction date cannot be less than system date.
4. **Auto Pay Request** cannot be created for any auto pay record if the same auto pay record is selected in another request which is in the **Approval In Progress** status.

C1-APAYAPP

The **C1-APAYAPP** algorithm creates the following:

1. A To Do using the To Do type specified in the approval profile which is attached to the **Auto Pay Request Type**. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
2. A log entry is added when a To Do is created using the To Do type. It will create To Do Entry when **Auto Pay Request** enters in the **Approval in Progress** status from **Submit** status.

C1-UPDAPAY

The **C1-UPDAPAY** algorithm will be plugged in at **“Enter” System event** of the business object (**C1-AutoPayRequest**) life cycle status: **UPDATEAPAY**.

1. The **Extract Eligible Switch** and **Auto Pay Creation Date** are updated in the **CI_BILL_ACH** table with the latest values present in **Auto Pay Request Details** table. The auto pay request status is then changed to **PROCESSED**.
2. If the bill which is present in the **Auto Pay Request** is cancelled then the latest details of **Extract Eligible Switch** and **Auto Pay Creation Date** are not updated in the **CI_BILL_ACH** table and the auto pay request status is changed to **PROCESSED**.

C1-APAYAPRVD

The **C1-APAYAPRVD** algorithm is the **Enter** status algorithm. This algorithm is invoked when you approve an **Auto Pay Request**. It confirms whether the approval flag is true and the status of the **Auto Pay request** is **APPROVED** to transit it to the next level.

C1-APAYRESUB

The **C1-APAYRESUB** algorithm is invoked on the **Re-Submit** button. It moves the status of the **Auto Pay Request** to **Draft**.

A To Do is generated for the user as submitter whose To Do type and To Do role are fetched from the **Auto Pay Request Type**. This algorithm creates the To Do entry when the **Auto Pay Request** enters into the **Return to Submitter** status from the **Approval In Progress** status.

Auto Pay Request Status Transition without Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is not configured in the auto pay request type:

Auto Pay Request Status Transition with Approval

The following figure graphically indicates how an auto pay request moves from one status to another when the approval process is configured in the auto pay request type:

Auto Pay Request Type

The **Auto Pay Request Type** screen allows you to define, edit, copy, and delete an auto pay request type. It also allows you to view the details of an auto pay request type. It contains the following zones:

- [Auto Pay Request Type List](#) on page 3512
- [Auto Pay Request Type](#) on page 3513

Auto Pay Request Type List

The **Auto Pay Request Type List** zone lists the auto pay request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Auto Pay Request Type	Displays the auto pay request type.
Description	Displays the description of the auto pay request type.
Edit	On clicking the Edit (✎) icon, the Auto Pay Request Type screen appears where you can edit the details of the auto pay request type.
Duplicate	On clicking the Duplicate (📄) icon, the Auto Pay Request Type screen appears where you can define an auto pay request type using an existing auto pay request type.
Delete	On clicking the Delete (🗑) icon, you can delete the auto pay request type. Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type.

On clicking the **Broadcast** (📡) icon corresponding to an auto pay request type, the **Auto Pay Request Type** zone appears with the details of the respective auto pay request type.

Auto Pay Request Type

The **Auto Pay Request Type** zone displays the details of the auto pay request type. It contains the following sections:

- **Main** - Displays basic information about the auto pay request type. It contains the following fields:

Field Name	Field Description
Auto Pay Request Type	Displays the auto pay request type.
Description	Displays the description of the auto pay request type.
Related Transaction BO	Indicates the business object using which the auto pay transaction is performed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the auto pay request type.
Auto Pay Request Action	Indicates the action which is performed on the auto pay request using the auto pay request type.

Field Name	Field Description
Status	Indicates the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Approval Required	Indicates whether approval is required for the auto pay request which is created using the auto pay request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do Type is created when you submit the auto pay request for an approval. <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type. This field appears only when the Approval Required option is selected.</p>
Approval To Do Role	Indicates that the users which belong to the specified To Do role can only approve the auto pay request when it is submitted for an approval. <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. This field appears only when the Approval Required option is selected.</p>
Submitter To Do Type	Indicates that the To Do entry of the specified To Do task is created when an auto pay request is resubmitted by an approver. <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	Indicates that the approvers which belong to the specified To Do role can only resubmit the auto pay request. <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristic** - Lists the characteristics defined for the auto pay request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the auto pay request type.

Button Name	Button Description
Delete	Used to delete the auto pay request type.
	Note: You can delete an auto pay request type only when an auto pay request is not yet created using the auto pay request type.
Duplicate	Used to create a new auto pay request type using an existing auto pay request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the auto pay request type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Auto Pay Request Type** zone does not appear in the **Auto Pay Request Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to an auto pay request type in the **Auto Pay Request Type List** zone.

Defining an Auto Pay Request Type

Prerequisites

To define an auto pay request type, you should have:

- Auto pay request type business objects defined in the application
- Approval To Do Types and To Do roles defined in the application
- Submitter To Do Types and To Do roles defined in the application

Procedure

To define an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.

A sub-menu appears.

- Click the **Add** option from the **Auto Pay Request Type** sub-menu.

Tip: Alternatively, you can access the **Auto Pay Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Auto Pay Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple auto pay request type business objects defined in the application. If there is only one auto pay request type business object defined in the application, the **Auto Pay Request Type** screen appears.

- Select the required auto pay request type business object from the respective field.
- Click **OK**.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the auto pay request type.
- Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Used to specify the auto pay request type.	Yes
Business Object	Indicates the business object using which the auto pay request type is defined in the system.	Not applicable
Description	Used to specify the description for the auto pay request type.	Yes
Related Transaction BO	Used to indicate the business object using which the auto pay transaction is performed. The valid value is: <ul style="list-style-type: none"> Auto Pay Request 	Yes
Detailed Description	Used to specify additional information about the auto pay request type.	No
Auto Pay Request Action	Indicates the action which is performed on the auto pay request using the auto pay request type. The valid value is: <ul style="list-style-type: none"> Update 	Not applicable
	Note: By default, the Update option is selected and cannot be edited.	
Status	Used to indicate the current status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of an auto pay request type to Inactive when an auto pay request created using the auto pay request type is in the Draft or Rejected status.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type.	No
Approval To Do Type	Used to specify the To Do entry of the specified To Do Type that is created when you submit the auto pay request for an approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required check box is selected.</p>	<p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p>
Approval To Do Role	Used to indicate the users which belong to the specified To Do role who can approve the auto pay request when it is submitted for an approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the specified Approval To Do Type.</p> <p>This field appears only when the Approval Required check box is selected.</p>	<p>Note: This field is required while approving an auto pay request which is created using the auto pay request type.</p>
Submitter To Do Type	Used to indicate the To Do entry of the specified To Do Type that is created when an auto pay request is resubmitted by an approver.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>This field appears only when the Approval Required check box is selected.</p>	<p>Note: This field is required while resubmitting an auto pay request which is created using the auto pay request type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate the users which belong to the specified To Do role who can resubmit the auto pay request when it is submitted for an approval.	Yes (Conditional) Note: This field is required while resubmitting an auto pay request which is created using the auto pay request type.
	Note: The list includes only those To Do roles which are associated with the specified Submitter To Do Type . This field appears only when the Approval Required check box is selected.	

6. Enter the required details in the **Main** section.
7. Define a list of characteristics for the auto pay request type, if required.
8. Click **Save**.

The auto pay request type is defined.

Auto Pay Request Type screen	Auto Pay Request Type on page 3512
How to define a characteristic for an auto pay request type	Defining a Characteristic for an Auto Pay Request Type on page 3518

Defining a Characteristic for an Auto Pay Request Type

Prerequisites

To define a characteristic for an auto pay request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Pay Request Type**)

Procedure

To define a characteristic for an auto pay request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an auto pay request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) Note: This field is required while defining a characteristic for the auto pay request type.
	Note: The list includes only those characteristic types where the characteristic entity is set to Auto Pay Request Type .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for the respective characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for the auto pay request type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the auto pay request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the auto pay request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Auto Pay Request Type

Prerequisites

To edit an auto pay request type, you should have:

- Auto pay request type that you want to edit defined in the application

Procedure

To edit an auto pay request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Auto Pay Request Type** sub-menu.
The **Auto Pay Request Type** screen appears.
- In the **Auto Pay Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the auto pay request type whose details you want to edit.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the auto pay request type.
- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Displays the auto pay request type.	Not applicable
Business Object	Indicates the business object using which the auto pay request type is defined in the system.	Not applicable
Description	Used to specify the description for the auto pay request type.	Yes
Related Transaction BO	Used to indicate the business object using which the auto pay transaction is performed.	Yes
Detailed Description	Used to specify additional information about the auto pay request type.	No
Auto Pay Request Action	Displays the action which is performed on the auto pay request using the auto pay request type.	Not applicable
Status	Used to indicate the status of the auto pay request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Approval Required	Used to indicate whether approval is required for the auto pay request which is created using the auto pay request type.	No
Approval To Do Type	Used to indicate the To Do task which is performed by the approver while approving the auto pay request. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search (🔍) icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate the users with the specified To Do role who can approve the auto pay request.	Yes
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	
Submitter To Do Type	Used to indicate the To Do task created when an auto pay request is submitted by an approver.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p>	
Submitter To Do Role	Used to indicate the users with the specified To Do role who can submit the auto pay request for approval.	Yes
	<p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p>	

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Auto Pay Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the auto pay request type, if required.
7. Click **Save**.

The changes made to the auto pay request type are saved.

Copying an Auto Pay Request Type

Instead of creating an auto pay request type from scratch, you can create a new auto pay request type using an existing auto pay request type. This is possible through copying an auto pay request type. On copying an auto pay request type, the details including the characteristics are copied to the new auto pay request type. You can then edit the details, if required.

Prerequisites

To copy an auto pay request type, you should have:

- Auto pay request type (whose copy you want to create) defined in the application
- Auto pay request business objects defined in the application

Procedure

To copy an auto pay request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Auto Pay Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Auto Pay Request Type** sub-menu.

The **Auto Pay Request Type** screen appears.

4. In the **Auto Pay Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the auto pay request type whose copy you want to create.

The **Auto Pay Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the auto pay request type.
- **Characteristics** - Used to define the characteristics for the auto pay request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request Type	Used to specify the auto pay request type.	Yes

Searching for an Auto Pay Request

Prerequisites

To search for an auto pay request, you should have:

- Auto pay request types defined in the application

Procedure

To search for an auto pay request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Auto Pay Request**.
A sub-menu appears.
3. Click the **Search** option from the **Auto Pay Request** sub-menu.
The **Auto Pay Request** screen appears.
4. Enter the search criteria in the **Search Auto Pay Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of auto pay requests that meet the search criteria appears in the **Search Results** section.

To approve an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request which you want to approve.

The **Auto Pay Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Approve** button in the **Auto Pay Request** zone.

A message appears confirming whether you want to approve the auto pay request.

5. Click **OK**.

The auto pay request is approved.

Note:

You can approve the auto pay request only in the **Approval In Progress** status.

You can approve the auto pay request only when the auto pay request is assigned to you for an approval.

The **Approve** button appears only when the auto pay request is in the **Approval In Progress** status.

Rejecting an Auto Pay Request**Prerequisites**

To reject an auto pay request, you should have:

- At least one bill added to the auto pay request

Procedure

To reject an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request which you want to reject.

The **Auto Pay Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Reject** button in the **Auto Pay Request** zone.

A message appears confirming whether you want to reject the auto pay request.

5. Click **OK**.

The auto pay request is rejected.

Note:

You can reject the auto pay request only in the **Approval In Progress** status.

You can reject the auto pay request only when the auto pay request is assigned to you for an approval.

The **Reject** button appears only when the auto pay request is in the **Approval In Progress** status.

Resubmitting an Auto Pay Request for Approval**Prerequisites**

To resubmit an auto pay request, you should have:

- At least one bill added to the auto pay request

Procedure

To resubmit an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request which you want to resubmit.
The **Auto Pay Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Resubmit** button in the **Auto Pay Request** zone.
A message appears confirming whether you want to resubmit the auto pay request.
5. Click **OK**.
The auto pay request is resubmitted.

Note:

At least one auto pay record is required for resubmitting the auto pay request.

The **Resubmit** button appears only when the auto pay request is in the **Approval In Progress** status.

Searching for a Bill**Prerequisites**

To search for a bill in the search bills zone, you should have:

- Persons, Accounts, and Bills defined in the application

Procedure

To search for a bill in the search bills zone:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
A list of auto pay requests that meet the search criteria appears in the **Search Results** section.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose details you want to view.
The **Auto Pay Request** screen appears.
3. Ensure that the **Bills** tab is selected.
4. Search for the bills in the **Search Bills** zone of the **Auto Pay Request** screen.
A list of bills that meet the search criteria appears in the **Search Results** section.

Adding an Auto Pay Line Item in an Auto Pay Request

Prerequisites

To add an auto pay line item in an auto pay request, you should have:

- Bills defined in the application

Procedure

To add an auto pay line item in an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.

A list of auto pay requests that meet the search criteria appears in the **Search Results** section.

2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose details you want to view.

The **Auto Pay Request** screen appears.

3. Ensure that the **Bills** tab is selected.

4. Search for the bills in the **Search Bills** zone of the **Auto Pay Request** screen.

5. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

6. Click the **Broadcast** (📡) icon corresponding to the bill that you want to add in an auto pay request.

The **Auto Pay Line Items** zone appears.

7. Select the check box corresponding to the bill that you want to add in an auto pay request.

8. Click the **Add** button in the **Auto Pay Line Items** zone, to add the auto pay line item in an auto pay request.

Note:

The **Add** button appears only when the auto pay request is in the **Draft** status.

Deleting an Auto Pay Line Item from an Auto Pay Request

Prerequisites

To delete an auto pay line item from an auto pay request, you should have:

- Bills added in the auto pay request

Procedure

To delete an auto pay line item from an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.

A list of auto pay requests that meet the search criteria appears in the **Search Results** section.

2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose auto pay line items you want to delete.
The **Auto Pay Request** screen appears.
3. Ensure that the **Auto Pay Details** zone in the **Main** tab of **Auto Pay Request** screen is expanded.
A list of auto pay line appears in the **Auto Pay Details** zone.
4. Select the check box corresponding to the auto pay line item which you want to delete from the auto pay request.
5. Click the **Delete** button in the **Auto Pay Details** zone, to delete the auto pay line item from an auto pay request.
A message appears confirming whether you want to delete the auto pay line items from an auto pay request.
6. Click **OK**.
The auto pay line items is deleted.

Note:

At least one auto pay record is required for deleting the auto pay request.

The **Delete** button appears only when the auto pay request is in the **Draft** status.

Editing the Auto Pay Line Item Details in an Auto Pay Request**Prerequisites**

To edit an auto pay line item in an auto pay request, you should have:

- Bills added in the auto pay request

Procedure

To edit an auto pay line item from an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
A list of auto pay requests that meet the search criteria appears in the **Search Results** section.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request whose auto pay line items you want to delete.
The **Auto Pay Request** screen appears.
3. Ensure that the **Auto Pay Details** zone in the **Main** tab of **Auto Pay Request** screen is expanded.
A list of auto pay line appears in the **Auto Pay Details** zone.
4. Select the Check box corresponding to the auto pay line item which you want to edit.
5. Click the **Edit** button in the **Auto Pay Delete** zone, to edit the auto pay line item from an auto pay request.
On clicking **Edit** button, the **Edit Auto Pay Request Details** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Auto Pay ID	Displays the auto pay ID.	Not applicable
Account Number	Displays the account number.	Not applicable
Account ID	Displays the account ID.	Not applicable
Bill ID	Displays the bill ID.	Not applicable
Auto Pay Amount	Displays the amount of the automatic payment.	Not applicable
Schedule Extract Date	Used to specify date when you want to schedule the auto pay request for the auto pay line item.	Yes
Eligible For Extraction	Used to indicate whether the auto pay amount is debited from the account on a specified and scheduled extract date. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

6. Enter the required details in the **Edit Auto Pay Request Details** screen.
7. Click **Save**.

The auto pay line item is modified.

Note:

At least one auto pay record is required for deleting the auto pay request.

The **Edit** button appears only when the auto pay request is in the **Draft** status.

Adding a Log Entry for an Auto Pay Request**Procedure**

To add a log entry for an auto pay request:

1. Search for the auto pay request in the **Search Auto Pay Request** zone of the **Auto Pay Request** screen.
2. In the **Search Results** section, click the link in the **Auto Pay Request Information** column corresponding to the auto pay request for which you want to add a log entry.

The **Auto Pay Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Auto Pay Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Request ID	Displays the auto pay request ID.	Not applicable
Log Details	Used to specify additional comments for the auto pay request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Auto Pay Request Log** zone.

Chapter 47

Garbling Customer Information

Oracle Revenue Management and Billing enables you to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on. On receiving the data erasure request from a customer, the data controller will garble the personal information of the customer by masking the data with random characters and then cease the access to the customer records.

To garble the information of one or more persons, you need to do the following:

1. Define the **Garble Data (C1-GRBL)** characteristic for each person whose data needs to be garbled and set its value to **Y**.
2. Execute the **Garble Person Information (C1-GRBPI)** batch. For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

On executing the **Garble Person Information (C1-GRBPI)** batch, the system identifies the persons where the **Garble Data (C1-GRBL)** characteristic is set to **Y** and the **Garbling Completed (C1-GBCM)** characteristic is either not defined or set to **N**. Note that the system considers the **Garble Data (C1-GRBL)** characteristic value which is effective on the batch business date.

Once the persons are identified, the data in the following fields is masked with random characters across all records in the system:

- ACCOUNT_NBR
- ACCT_NBR
- ADDRESS1
- ADDRESS1_UPR
- ADDRESS2
- ADDRESS3
- ADDRESS4
- BIRTH_DT
- BROKER_NAME
- CITY
- COUNTRY
- COUNTY
- CUSTOMER_NAME
- EMAILID

- ENTITY_NAME
- ENTITY_NAME1
- ENTITY_NAME2
- ENTITY_NAME3
- GEO_CODE
- HOUSE_TYPE
- IN_CITY_LIMIT
- NAME1
- OVRD_MAIL_NAME1
- OVRD_MAIL_NAME2
- OVRD_MAIL_NAME3
- PER_ID_NBR
- PHONE
- POSTAL
- POSTAL_UPR
- STATE

In other words, the personal and account related information of a customer is garbled across the system. In addition, this batch allows you to garble the required characteristics and identifiers of a person and account.

Note: An account may have one or more persons linked to it. The information of an account is garbled when the data erasure request is received for the main customer of the account.

Once the personal and account related information of a customer is garbled, the access group of the person is changed to **C1GB** (which does not have any data access role). This ensures that the data of the person and his or her accounts cannot be accessed from any screens in the system. If an approval transaction contains personal and account related information of a customer, you cannot even view the approval transaction in the system.

Note: The access is forbidden for performing any transaction for the person and account only from the user interface and web services and not through the background process.

You can also garble the data of a person using the **C1-GRBPI** inbound web service. However, you can garble the data of only one person at a time using this inbound web service.

Chapter 48

Deleting Inactive Customer or Closed Account Information

Oracle Revenue Management and Billing enables you to delete all records of a person or account from the system. A new batch named **C1-GDPR** is introduced in this release. It enables you to delete all records of a person or account from the system. You can either delete the records of a particular person or account using its ID or delete the records of a set of persons or accounts at once using its characteristic. A new characteristic type named **C1-GDPRE** is shipped with the product. While executing the batch, the system first checks whether the person or account ID is specified in the batch. If so, the batch deletes the records of the respective person or account from the system. You cannot specify both the person and account ID at the same time while executing the batch.

If the person or account ID is not specified while executing the batch, the system checks whether the **Delete Characteristic Type** parameter is defined in the **C1-GDPR** batch. You can define the **C1-GDPRE** characteristic for the persons or accounts whose records you want to delete from the system. If you set the **Delete Characteristic Type** parameter in the **C1-GDPR** batch to **C1-GDPRE**, the batch considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

The system deletes all records of a particular account only when the following conditions are met:

- Account's closing date is earlier than or equal to system date
- All contracts of the account should either be in the **Closed** or **Canceled** status

The system deletes all records of a particular person only when the following conditions are met:

- The closing date of all its accounts is earlier than or equal to system date
- All contracts of all its accounts should either be in the **Closed** or **Canceled** status

The **C1-GDPR** batch contains the following parameters:

- **Account ID** – Used to indicate the account whose records you want to delete from the system.
- **Person ID** – Used to indicate the person whose records you want to delete from the system.
- **Delete Characteristic Type** – Used to specify the characteristic type. Here, you must specify the **C1-GDPRE** characteristic type. The system then considers those person or accounts for deletion where the **C1-GDPRE** characteristic is set to **Y**.

- **Clear CLOB Data** – Used to indicate whether you want to delete the references of the persons or accounts considered for deletion from the CLOB data. The valid values are **Y** and **N**. Note that if you set the value for this parameter to **Y**, the performance of the batch would be impacted when there is voluminous data.
- **Thread Pool Name** – Used to specify the thread pool on which you want to execute the batch.

The **C1-GDPR** batch is a multi-threaded batch. The multi-threading is based on the person or account **ID** and chunks for multi-threading are created based on numerical distribution of person or account **ID**.

Chapter 49

Automatic Refund Process

Until now, the system considered the records with the debit amount in the **CI_BILL_ACH** table during the **Create Automatic Payments and Refunds (APAYCRET)** batch execution. Now, the system considers the records with the debit and credit amount in the **CI_BILL_ACH** table during the **Create Automatic Payments and Refunds (APAYCRET)** batch execution. If the automatic payment amount stamped against a bill is in debit, the batch creates automatic payment and payment event for such bill. It also creates a clearing record for each automatic payment in the **CI_APAY_CLR_STG** table. The payment freeze date in the clearing records is set to NULL. The automatic payment is created when an algorithm using the **APAY-CREATE** algorithm type is created and attached to the **Automatic Payment Creation** system event in the installation options.

However, if the automatic payment amount stamped against a bill is in credit, the batch creates a refund request against the bill. The refund request is created when an algorithm using the **C1-AREF-CRET** algorithm type is created and attached to the **Automatic Adjustment Creation** system event in the installation options. This algorithm indicates the refund request type using which the refund request must be created. If the approval workflow is configured for the refund request type, the status of the refund request is set to **Pending for Approval**. However, if the approval workflow is not configured for the refund request type, the status of the refund request is set to **Processed** and the refund adjustment is created in the **Frozen** status. In addition, it creates a clearing record for each automatic refund in the **CI_ADJ_CLR_STG** table.

The refund request and refund adjustments are created when the automatic payment amount is in credit irrespective of whether the **Autopay Creation Option** field in the installation options is set to **Create At Bill Completion**, **Create On Extract Date**, or **Freeze Payment on Notification**.

Note: In the **Freeze Payment on Notification** feature, the automatic payments and refunds are created. However, at present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to develop the custom logic to activate and extract automatic refund clearing records in a flat file.

If required, you can void the refund request and cancel the refund adjustments from the user interface. If the **Autopay Creation Option** field in the installation options is set to **Freeze Payment on Notification**, you can void the refund request and cancel the refund adjustments using the **Cancel Automatic Refunds (AREFRA)** batch once the review comments are stored in the staging tables.

Chapter 50

Payment Distribution

Topics:

- [Account Level Payment Distribution](#)
- [Statement Level Payment Distribution](#)

Until now, you were able to distribute payments against a particular bill and/or contract. Now, the system enables you to distribute payments against the unpaid bills of the account or statement. For more information, refer to the following topics:

- [Account Level Payment Distribution](#) on page 3554
- [Statement Level Payment Distribution](#) on page 3555

Account Level Payment Distribution

Until now, you were able to match a payment against a particular bill of an account. Oracle Revenue Management and Billing now provides the ability to apply a payment on an account which will get matched against the unpaid bills of the account. This feature is only applicable for accounts which practice open item accounting. The system supports the account level payment distribution through the following modes:

- Inbound web service
- EDI 820 file
- Payment request
- Payment upload

While creating a match type for the account level payment distribution, you must set the entity type of the match type to **Account**. Earlier, the manual distribution algorithm of a match type was invoked only when the payment distribution was done through the payment request feature. Now, the manual distribution algorithm of a match type is invoked when the payment distribution is done using any of the above modes. The existing manual distribution algorithm spot of a match type is enhanced to support the account level payment distribution. In case of the account level payment distribution, the manual distribution algorithm spot receives the account ID as the input parameter. When this algorithm spot is invoked through the payment request feature, the account ID is passed as the match value. However, when this algorithm spot is invoked through the inbound web service, EDI 820, and payment upload feature, the account ID is not passed as the match value. Instead, the payment is distributed using the payee account ID. The manual distribution algorithm spot then returns a list of unpaid bills of the account.

A new manual distribution algorithm named **C1-MD-ACCT** is introduced in this release. It distributes the payment amount against the unpaid bills of the account in the ascending order of due date (i.e. bill with the oldest due date will have high priority). If there are multiple unpaid bills with the same due date, the system distributes the payment amount against the unpaid bills in the ascending order of the unpaid amount (i.e. bill with the lowest amount will have high priority). And, if there are two or more unpaid bills with the same due date and unpaid amount, the system will randomly distribute the payment amount against any of the unpaid bills of the account.

Once the system distributes the payment amount against the unpaid bills of the account, the system creates a payment for each unpaid bill. Here, all these payments would be created under the same payment event.

Any excess amount that is left after distributing the payments on the unpaid bills of the account should be applied on the on-account contract of the account. The system derives the on-account contract using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. If the on-account contract of the specified contract type is not available for the account, the system creates on-account contract using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. The system then parks the excess credit payment on the on-account contract of the account.

While creating the excess credit payment, the system uses the match type which is specified in the **On-Account Match Type** option type of the **C1-ADJ-PAY** feature configuration.

Once all payments including the excess credit payment is created, the system will store the payee account ID on all payments when the payment is applied at the account level. The payee account ID is stored as a characteristic using the characteristic type which is specified in the **Account Level Payment Characteristic Type** option type of the **C1-ADJ-PAY** feature configuration. The **C1-ACPAY** characteristic type is shipped with the product.

Note that you can apply payments on the account level using the single-step approach of the **PUPL** batch and not using the three-step approach of the **PUPL** batch. Also, note that multi tender distribution is not supported for the account level payment distribution.

Statement Level Payment Distribution

Until now, you were able to match a payment against a particular bill of an account. Oracle Revenue Management and Billing now provides the ability to apply a payment on a statement which will get matched against the unpaid bills on the statement. The bills on a statement may belong to the same or different accounts of the person for whom the statement is created using the statement construct. Note that the system supports the statement level payment distribution for those statements:

- Which are created using the statement constructs comprising of one or more accounts and no contracts (under construct details)
- Which are in the **Printed** status

This feature is only applicable for accounts which practice open item accounting. The system supports the statement level payment distribution through the following modes:

- Inbound web service
- EDI 820 file
- Payment request
- Payment upload

While creating a match type for the statement level payment distribution, you must set the entity type of the match type to **Statement**. Earlier, the manual distribution algorithm of a match type was invoked only when payment distribution was done through the payment request feature. Now, the manual distribution algorithm of a match type is invoked when the payment distribution is done using any of the above modes. The existing manual distribution algorithm spot of a match type is enhanced to support the statement level payment distribution. In case of the statement level payment distribution, the manual distribution algorithm spot receives the statement ID as the input parameter. When this algorithm spot is invoked through the payment request feature, the statement ID is passed as the match value. However, when this algorithm spot is invoked through the inbound web service, EDI 820, or payment upload feature, the statement ID is not passed as the match value. Instead, the statement ID is directly fetched from the dataset. The manual distribution algorithm spot then returns a list of unpaid bills on the statement.

A new manual distribution algorithm named **C1-MD-STMT** is introduced in this release. It distributes the payment amount against the unpaid bills of the statement in the ascending order of due date (i.e. bill with the oldest due date will have high priority). If there are multiple unpaid bills with the same due date, the system distributes the payment amount against the unpaid bills in either of the following two ways:

- In the ascending order of the unpaid amount (i.e. bill with the lowest amount will have high priority)
- Using the weighted distribution based on the unpaid amount of each bill

If you want to distribute the payment amount using the former method, you must set the **Weighted distribution of payments among bills of same age. (Valid Values :Y,N)** parameter of the **C1-MD-STMT** algorithm to **N**. However, if you want to distribute the payment amount using the latter method, you must set the **Weighted distribution of payments among bills of same age. (Valid Values :Y,N)** parameter of the **C1-MD-STMT** algorithm to **Y**.

Once the system distributes the payment amount against the unpaid bills of the statement, the system creates a payment for each unpaid bill. Here, all these payments would be created under the same payment event.

Any excess amount that is left after distributing the payments on the unpaid bills of the statement should be applied on the on-account contract of the account. The person linked to the statement construct using which the statement is created should have an account which will be used to park the excess amount paid on a statement. If the account is not available and the payment against a statement is in excess of the total unpaid balance of the statement, then the entire payment on the statement ID will be errored out and won't be applied on any of the bills.

The system derives the on-account contract of the account using the contract type specified in the **On-Account Contract Type** option type of the **C1-ADJ-PAY** feature configuration. If the on-account contract of the specified contract type is not available for the account, the system creates on-account contract using the contract type specified in the **On-**

Account Contract Type option type of the **C1-ADJ-PAY** feature configuration. The system then parks the excess credit payment on the on-account contract of the account. While creating the excess credit payment, the system uses the match type which is specified in the **On-Account Match Type** option type of the **C1-ADJ-PAY** feature configuration.

Once all payments including the excess credit payment is created, the system will store the statement ID on all payments when the payment is applied at the statement level. The statement ID is stored as a characteristic using the characteristic type which is specified in the **Statement Level Payment Characteristic Type** option type of the **C1-ADJ-PAY** feature configuration. The **C1-STPAY** characteristic type is shipped with the product.

Note that you can apply payments on the statement level using the single-step approach of the **PUPL** batch and not using the three-step approach of the **PUPL** batch. Also, note that multi tender distribution is not supported for the statement level payment distribution.

Note: At the moment, you can delete a statement which is used for the payment distribution from the user interface. The system neither performs any validation during the statement deletion nor cancels any payments when a statement is deleted. Therefore, you need to ensure that you do not delete any statements which are used for payment distribution in the system.

Chapter 51

Mass Payment Transfer

Topics:

- [Full Payment Transfer](#)
- [Partial Payment Transfer](#)
- [Mass Payment Transfer Process](#)
- [CSV File Format for Mass Payment Transfer](#)
- [Sample CSV File for Mass Payment Transfer](#)

Oracle Revenue Management and Billing facilitates mass payment transfer using the **File Upload Interface** feature. In the mass payment transfer, you can transfer multiple payments at once. You can transfer payments at the payment or payment event level (i.e. transfer an individual payment or all payments of a payment event at once). However, note that you can transfer only those payments which are in the **Frozen** status.

You can upload the data for either full or partial payment transfer in the CSV format through the **File Transformation and Upload (C1-FTRAN)** batch. While executing the **File Transformation and Upload (C1-FTRAN)** batch, you need to specify a file request type which indicates the XPath of the fields where the data from the CSV record should be stored while transforming the data in the XML format using the **C1-TransferPaymentService** business service. Once each CSV file record is transformed in the XML format, you can transfer payments through the **File Request Processing (C1-FREQP)** batch.

Full Payment Transfer

You can upload the data for full payment transfer from the CSV file using the **File Upload Interface** utility. Ideally, you should not specify the transfer amount during the full payment transfer. If you do not specify the transfer amount or if the transfer amount is equal to the payment amount or to the sum of all frozen payments in the payment event, the system does the full payment transfer. However, if the transfer amount is less than the payment amount or the sum of all frozen payments in the payment event, the system does the partial payment transfer. Note that the payment transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event. Also, note that you should only transfer positive payments which are in the **Frozen** status and where the payment amount is greater than zero using the **File Upload Interface** utility.

While doing full payment transfer at the payment level, the system cancels the old payment and creates one new payment using the specified match type in the **Frozen** status. For example, the P1 payment is created against the contract of the A1 account, as shown in the following table:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$200	Frozen

Now, when you fully transfer the payment using the match type as Bill from the A1 to A2 account, the system will cancel the old payment and create a new payment as shown in the following table:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$200	Canceled
A2	PE2	P2	Bill	Bill1	\$200	Frozen

While doing full payment transfer at the payment event level, the system fetches the list of frozen payments linked to the payment event and then adds them in the **C1_PAY_DETAILS** table. In addition, the system sets the **PY_CANCEL_SW** column corresponding to the payments in the **C1_PAY_DETAILS** table to **Y**. Let us assume that the following payments are made to the A1 account through the PE1 payment event:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$100	Frozen
		P2	On Account Contract	C2	\$50	Frozen
		P3	Suspense Contract	C3	\$100	Frozen
		P4	Overpayment on Bill	C4	\$100	Frozen
		P5	On Account Contract	C5	\$100	Frozen

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
		P6	Suspense Contract	C1	\$100	Frozen
		P7	On Account Contract	C5	\$100	Frozen
		P8	Overpayment on Bill	C4	\$75	Canceled
		P10	Bill	Bill1	\$200	Frozen
		P11	Bill	Bill2	\$100	Frozen
		P12	Bill	Bill3	\$350	Frozen
		P13	Bill	Bill2	\$25	Canceled

Now, if you want to fully transfer the payments from the A1 account to the A2 account using the match type as Bill, the system considers the following payments for transfer from the payment list:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$100	Frozen
		P2	On Account Contract	C2	\$50	Frozen
		P3	Suspense Contract	C3	\$100	Frozen
		P4	Overpayment on Bill	C4	\$100	Frozen
		P5	On Account Contract	C5	\$100	Frozen
		P6	Suspense Contract	C1	\$100	Frozen
		P7	On Account Contract	C5	\$100	Frozen
		P10	Bill	Bill1	\$200	Frozen
		P11	Bill	Bill2	\$100	Frozen
		P12	Bill	Bill3	\$350	Frozen

Then, the system will cancel the old payments and create a new payment, as shown in the following table:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$100	Canceled
		P2	On Account Contract	C2	\$50	Canceled
		P3	Suspense Contract	C3	\$100	Canceled
		P4	Overpayment on Bill	C4	\$100	Canceled
		P5	On Account Contract	C5	\$100	Canceled
		P6	Suspense Contract	C1	\$100	Canceled
		P7	On Account Contract	C5	\$100	Canceled
		P10	Bill	Bill1	\$200	Canceled
		P11	Bill	Bill2	\$100	Canceled
		P12	Bill	Bill3	\$350	Canceled
		A2	PE2	P1	Bill	Bill4

Partial Payment Transfer

You can upload the data for partial payment transfer from the CSV file using the **File Upload Interface** utility. The transfer amount is required for partial payment transfer. Therefore, the **Transfer Amount** column should be added in the CSV file while uploading the data for partial payment transfer. You should update the existing file request type to include the **Transfer Amount** field in the **Field Transformation** section.

You can specify the transfer amount either less than or equal to the payment amount or to sum of all frozen payments in the payment event depending on whether payment transfer is done at the payment or payment event level. If you do not specify the transfer amount or if the transfer amount is equal to the payment amount or to the sum of all frozen payments in the payment event, the system does the full payment transfer. However, if the transfer amount is less than the payment amount or the sum of all frozen payments in the payment event, the system does the partial payment transfer. Note that the payment transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event. Also, note that you should only transfer positive payments which are in the **Frozen** status and where the payment amount is greater than zero using the **File Upload Interface** utility.

While doing partial payment transfer at the payment level, the system cancels the old payment and creates two new payments in the **Frozen** status - one with the transfer amount using the specified match type and another with the remaining amount (if any) using the match type of the old payment. For example, the P1 payment is created against the contract of the A1 account, as shown in the following table:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$200	Frozen

Now, when you partially transfer \$150 of payment using the match type as Bill from the A1 to A2 account, the system will cancel the old payment and create the new payments as shown in the following table:

Account	Payment Event	Payment Details	Match Type	Match Value	Amount	Status
A1	PE1	P1	Suspense Contract	C1	\$200	Canceled
A2	PE2	P2	Bill	Bill1	\$150	Frozen
A1	PE1	P3	Suspense Contract	C1	\$50	Frozen

While doing partial payment transfer at the payment event level, the system fetches the list of frozen payments linked to the payment event and then identifies the payments which are eligible for transfer from the payment list in the following manner:

1. If the payments are created against the contracts, the system considers the following option types of the **C1_CMO** feature configuration to determine the payments which are eligible for transfer from the payment list:
 - Suspense Contract Type
 - On Account Contract Type
 - Excess Credit Contract Type

For more information about the **C1_CMO** feature configuration, see [Setting the C1_CMO Feature Configuration](#) on page 3637.

2. However, if the payments are created against the bills, the system considers the bill date and bill amount to determine the payments which are eligible for transfer from the payment list.

The payments which are eligible for transfer from the payment list are added in the **C1_PAY_DETAILS** table. The system stamps the transfer priority corresponding to eligible payments in the **TRANSFER_PRIORITY** column of the **C1_PAY_DETAILS** table. The system assigns transfer priority to each eligible payment in the following sequence:

1. Considers payments against the contracts which are created using the contract type specified in the **Suspense Contract Type** option type of the **C1_CMO** feature configuration. If there are multiple payments which are created on the suspense contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1 and P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, and C1 and C2 are both suspense contracts, then the system sets the transfer priority of P1 and P2 to 1 in the payment transfer request.
2. Considers payments against the contracts which are created using the contract type specified in the **On Account Contract Type** option type of the **C1_CMO** feature configuration. For example, if you partially transfer P1 and P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, C1 is a suspense contract, and C2 is an on account contract, then the system sets the transfer priority of P1 to 1 and P2 to 2 in the payment transfer request. However, if you partially transfer P3 from the A1 account to the A2 account through a payment transfer request where P3 is created against C3 and C3 is an on account contract, then the system sets the transfer priority of P3 to 1 in the payment transfer request. If there are multiple payments on the on account contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, and P3 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, P3 is created against C3, C1 is a suspense contract, and C2 and C3 are both on account contracts, then the system sets the transfer priority of P1 to 1 and P2 and P3 to 2 in the payment transfer request.
3. Considers payments against the contracts which are created using the contract type specified in the **Excess Credit Contract Type** option type of the **C1_CMO** feature configuration. For example, if you partially transfer P1 and

P2 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, C1 is an on account contract, and C2 is an excess credit contract, then the system sets the transfer priority of P1 to 1 and P2 to 2 in the payment transfer request. However, if you partially transfer P3 from the A1 account to the A2 account through a payment transfer request where P3 is created against C3 and C3 is an excess credit contract, then the system sets the transfer priority of P3 to 1 in the payment transfer request. If there are multiple payments on the excess credit contracts, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, and P3 from the A1 account to the A2 account through a payment transfer request where P1 is created against C1, P2 is created against C2, P3 is created against C3, C1 is a suspense contract, and C2 and C3 are both excess credit contracts, then the system sets the transfer priority of P1 to 1 and P2 and P3 to 2 in the payment transfer request.

4. Considers payments created against the bills in the descending order of the bill date (i.e. bill with the latest date). If there are multiple payments which are created against the bills having the same bill date, the system considers the payments which are created against the bills in the descending order of the bill amount (i.e. bill with the highest amount). However, if there are multiple payments which are created against the bills having the same bill date and bill amount, the system assigns the same transfer priority to these payments. For example, if you partially transfer P1, P2, P3, and P4 from the A1 account to the A2 account through a payment transfer request where P1 is created against B1 (with the bill date 01-Jan-2020 and bill amount \$100), P2 is created against B2 (with the bill date 01-Feb-2022 and bill amount \$20), P3 is created against B3 (with the bill date 01-Mar-2022 and bill amount \$30), and P4 is created against B4 (with the bill date as 01-Mar-2022 and bill amount \$40), the system sets the transfer priority of P4 to 1, P3 to 2, P2 to 3, and P1 to 4, respectively, in the payment transfer request.
5. Considers payments which are created against entities other than contracts or bills and assigns the same transfer priority to these payments.

In addition, the system sets the **PY_CANCEL_SW** column corresponding the payments in the **C1_PAY_DETAILS** table to **Y** or **N** depending on whether these eligible payments are considered for transfer or not. Let us assume that the following payments are made to the A1 account through the PE1 payment event:

Payment Details	Match Type	Match Value	Contract Type	Bill Date	Amount	Status
P1	Suspense Contract	C1	CT1		\$100	Frozen
P2	On Account Contract	C2	CT2		\$50	Frozen
P3	Suspense Contract	C3	CT3		\$100	Frozen
P4	Overpayment on Bill	C4	CT4		\$100	Frozen
P5	On Account Contract	C5	CT5		\$100	Frozen
P6	Suspense Contract	C1	CT1		\$100	Frozen
P7	On Account Contract	C5	CT5		\$100	Frozen
P8	Overpayment on Bill	C4	CT4		\$75	Canceled
P10	Bill	Bill1		21-Mar-2021	\$200	Frozen

Payment Details	Match Type	Match Value	Contract Type	Bill Date	Amount	Status
P11	Bill	Bill2		21-Feb-2021	\$100	Frozen
P12	Bill	Bill3		21-Jan-2021	\$350	Frozen
P13	Bill	Bill2		22-Feb-2021	\$25	Frozen

And, let us assume that the **Suspense Contract Type**, **On Account Contract Type**, and **Excess Credit Contract Type** option types of the **C1_CMO** feature configuration are set to CT1, CT5, and CT4, respectively.

Now, if you want to partially transfer \$900 of payment from the A1 account to the A2 account using the match type as Bill, the system considers the following payments for transfer from the payment list using the given transfer priority:

Payment Details	Match Type	Match Value	Contract Type	Bill Date	Amount	Eligible for Transfer	Transfer Priority	Cancel Switch
P1	Suspense Contract	C1	CT1		\$100	Y	1	Y
P2	On Account Contract	C2	CT2		\$50	N		N
P3	Suspense Contract	C3	CT3		\$100	N		N
P4	Overpayment on Bill	C4	CT4		\$100	Y	3	Y
P5	On Account Contract	C5	CT5		\$100	Y	2	Y
P6	Suspense Contract	C1	CT1		\$100	Y	1	Y
P7	On Account Contract	C5	CT5		\$100	Y	2	Y
P8	Overpayment on Bill	C4	CT4		\$75	N		N
P10	Bill	Bill1		21-Mar-2021	\$200	Y	4	Y
P11	Bill	Bill2		21-Feb-2021	\$100	Y	6	Y
P12	Bill	Bill3		21-Jan-2021	\$350	Y	7	Y

Payment Details	Match Type	Match Value	Contract Type	Bill Date	Amount	Eligible for Transfer	Transfer Priority	Cancel Switch
P13	Bill	Bill2		22-Feb-2021	\$25	Y	5	Y

If the remaining transfer amount is greater than zero after considering frozen payments against the above mentioned contracts and bills of the account, the system will randomly consider other payments from the payment list which are created against entities other than the above mentioned contracts and bills of the account and assign the same transfer priority to all such payments.

While partially transferring at the payment event level, the system will cancel all payments which are transferred and then create new payments using the specified match type. Here, the status of the old payments is changed to **Canceled** and the status of the new payments is set to **Frozen**. In addition, if there is a remaining balance on any payment which is considered for transfer, the system will create a new payment for the remaining amount using the match type which is specified in the old payment. The payment for the remaining amount is created in the **Frozen** status. In the above example, the system will cancel the old payments and create the new payments, as shown in the following table:

Payment Details	Match Type	Match Value	Contract Type	Bill Date	Amount	Status
P1	Suspense Contract	C1	CT1		\$100	Canceled
P4	Overpayment on Bill	C4	CT4		\$100	Canceled
P5	On Account Contract	C5	CT5		\$100	Canceled
P6	Suspense Contract	C1	CT1		\$100	Canceled
P7	On Account Contract	C5	CT5		\$100	Canceled
P10	Bill	Bill1		21-Mar-2021	\$200	Canceled
P11	Bill	Bill2		21-Feb-2021	\$100	Canceled
P12	Bill	Bill3		21-Jan-2021	\$350	Canceled
P13	Bill	Bill2		22-Feb-2021	\$25	Canceled
P14	Bill	Bill4		21-Jan-2021	\$900	Frozen
P15	Bill	Bill3		21-Jan-2021	\$275	Frozen

Mass Payment Transfer Process

The following are the different steps involved in the Mass Payment Transfer process:

1. [Defining a File Request Type for Payment Transfer](#) on page 3565
2. [Uploading a Payment Transfer File](#) on page 3566
3. [Transferring Payments](#) on page 3567

Defining a File Request Type for Payment Transfer

Procedure

To define a file request type for payment transfer:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Do the following in the **Main** section:
 - a) Enter the file request type and description in the respective fields.
 - b) Select the **Data Transformation Required** option.
The **File Format** and **File Extension** fields are enabled. In addition, the **Root XML Tag** field appears in the **Main** section.
 - c) Select the **Comma Separated Values** option from the **File Format** list.
 - d) Enter `csv` in the **File Extension** field.
 - e) Ensure that the **C1-FRTA** algorithm is attached to the **Data Transformation Algorithm** field.
5. Do the following in the **Services** section:
 - a) Enter the sequence number in the respective field.
 - b) Select the **Business Service** option from the **Service Type** list.
 - c) Enter the **C1-TransferPaymentService** business service in the **Service Name** field.
 - d) Select the **Update** option from the **Operation** list.
6. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
7. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
8. In the **Field Transformation** section, you need to specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which you want to upload the data in the system.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

While creating a file request type for mass payment transfer, you need to specify the following field mappings in the **Field Transformation** section:

Sequence	Field Name	Map Field XPath
1	PAY_EVENT_ID	C1-TransferPaymentService/ paymentEventId
2	PAY_ID	C1-TransferPaymentService/ paymentId
3	TRANSFER_TYPE	C1-TransferPaymentService/ transferType
4	TRANSFER_REASON	C1-TransferPaymentService/ transferReason
5	MATCH_TYPE	C1-TransferPaymentService/ matchType
6	MATCH_TYPE_VALUE	C1-TransferPaymentService/ matchTypeValue
7	SRC_SYSTEM	C1-TransferPaymentService/ sourceSystem
8	EXT_TXN_ID	C1-TransferPaymentService/ externalTransactionId
9	EXT_SRC_ID	C1-TransferPaymentService/ externalSourceId
10	TRANSFER_AMT	C1-TransferPaymentService/ transferAmount

9. Click **Save**.

The file request type is defined for mass payment transfer.

Uploading a Payment Transfer File

You can upload the mass payment transfer file in the CSV format through the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you need to specify a file request type using which you want to upload the payment transfer data from the CSV file in the respective fields. For more information about the batch, refer to *Oracle Revenue Management and Billing File Upload Interface Batch Execution Guide*.

Once the CSV file is uploaded in the system, you can download the file or move the file to a different directory on the SFTP server using the **File Management System** screen. You can also view whether the CSV file records are successfully uploaded or not, whether an error occurred while uploading the file, and the header and footer details of the file using the **File Upload Dashboard** screen. In addition, if the CSV file records are successfully added in the system, you can view the status of the file records and their original and transformed payloads through the **File Record Details** screen. For more information about these screens, refer to *Oracle Revenue Management and Billing File Upload Interface User Guide*.

Transferring Payments

You can transfer multiple payments at once through the **File Request Processing (C1-FREQP)** batch. While executing this batch, you need to specify a file request type using which the payment transfer data is transformed in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing File Upload Interface Batch Execution Guide*.

Once the CSV file record is successfully processed, the payment is transferred from one account to another. To view the details of the payment, you can navigate to the **Payment** screen through the **File Record Details** screen. For more information about the **File Record Details** screen, refer to *Oracle Revenue Management and Billing File Upload Interface User Guide*.

CSV File Format for Mass Payment Transfer

Before uploading a payment transfer file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Payment Event ID	Used to indicate the payment event whose frozen payments you want to transfer.	Yes (Conditional) Note: This data is required when you want to transfer all frozen payments of a particular payment event.
Payment ID	Used to indicate the payment that you want to transfer. Note: The system allows you to transfer a payment which is in the Frozen status.	Yes (Conditional) Note: This data is required when you want to transfer a particular payment.
Transfer Type	Used to indicate whether you want to transfer payments at the payment or payment event level. The valid values are: <ul style="list-style-type: none"> E — Used when you want to transfer all frozen payments of a particular payment event. P — Used when you want to transfer a particular payment. 	Yes
Transfer Reason	Used to indicate the reason why you want to transfer the payment. Note: Here, you must specify the payment cancel reason where the Payment Transfer option is selected.	Yes
Match Type	Used to indicate the match type using which you want to transfer the payment. Note: You must specify the match type which is already defined in the system.	Yes

Data	Description	Mandatory (Yes or No)
Match Value	Used to indicate the entity against which you want to transfer the payment. Note: Here, the entity can be account, bill, or contract. You must specify an entity which already exists in the system.	Yes
Source System	Used to indicate the external system from where the payment transfer data is received. Note: You must specify an external system which is already defined in the system.	No
External Transaction ID	Used to indicate the transaction in the external system through which the payment transfer data is received.	No
External Source System ID	Used to specify the external source system ID.	No
Transfer Amount	Used to specify the transfer amount. Note: Here, you must specify a positive value. The transfer amount should not be more than the payment amount or the sum of all frozen payments in the payment event.	Yes (Conditional) Note: This data is required when you want to make a partial payment transfer.

For more information on...	See...
Sample CSV File for Mass Payment Transfer	Sample CSV File for Mass Payment Transfer on page 3568

Sample CSV File for Mass Payment Transfer

```
,436878000000,P,ROBL,HCMATCH,770018000000,,,,,120
,436229000000,P,ENTR,HCMATCH,770018000000,,,,,100
436560000000,,E,NSF,HCMATCH,770018000000,,,,,180
,436912000000,P,ACCT,HCMATCH,770018000000,,,,,200
```

Let us assume that the payment transfer file is uploaded and transformed using a file request type with the following field transformation details:

Sequence	Field Name	Map Field XPath
1	Payment Event ID	C1-TransferPaymentService/paymentEventId
2	Payment ID	C1-TransferPaymentService/paymentId
3	Transfer Type	C1-TransferPaymentService/transferType
4	Transfer Reason	C1-TransferPaymentService/transferReason

Sequence	Field Name	Map Field XPath
5	Match Type	C1-TransferPaymentService/matchType
6	Match Type Value	C1-TransferPaymentService/matchTypeValue
7	Source System	C1-TransferPaymentService/sourceSystem
8	External Transaction Id	C1-TransferPaymentService/externalTransactionId
9	External Source system Id	C1-TransferPaymentService/externalSourceId
10	Transfer Amount	C1-TransferPaymentService/transferAmount

On successfully uploading and transforming the data, the system creates a transformed payload for each CSV file record. The transformed payload stores the payment transfer data in the following tags:

Service Payload	Tag Name	CSV File Record 1	CSV File Record 2	CSV File Record 3	CSV File Record 4
C1-Transfer Payment Service	paymentEventId	-	-	436560000000	-
	paymentId	436878000000	436229000000	-	436912000000
	transferType	P	P	E	P
	transferReason	ROBL	ENTR	NSF	ACCT
	matchType	HCMATCH	HCMATCH	HCMATCH	HCMATCH
	matchTypeValue	770018000000	770018000000	770018000000	770018000000
	sourceSystem	-	-	-	-
	externalTransactionId	-	-	-	-
	externalSourceId	-	-	-	-
	transferAmount	120	100	180	200

Reporting

Topics:

- [Report Creation Using Apache FOP Framework](#)
- [FOP Reports](#)

Oracle Revenue Management and Billing provides best-in-class enterprise reporting feature which enables its customers to uncover new sights for taking faster and more informed business decisions. The reporting feature is a unique platform which easily integrates with the existing infrastructure and provides reusable design, data elements, and easy access to the application programming interface.

Oracle Revenue Management and Billing Reporting feature provides its customers the following benefits:

- Allows to generate and deliver customized reports to users in various departments and customers on time.
- Allows the implementers to efficiently create and update document templates.
- Supports output in the CSV, JSON, PDF, XML, and XLS formats using custom Formatting Objects Processor (FOP) templates.

Report Creation Using Apache FOP Framework

Oracle Revenue management and Billing allows you to create reports in the CSV, JSON, PDF, XML, and XLS formats using the Apache FOP (Formatting Objects Processor) framework. Apache FOP is an output arrangement which is driven by the XSL formatting object. It is a Java application that reads the XSL formatting object tree conforming to the XSL 1.1 Recommendation (05 December 2006) and then converts it into a document in the required output format. It allows you to preview the output directly on the screen.

To understand more about the framework, refer to the official Apache FOP site at <https://xmlgraphics.apache.org/fop/> or you can also refer GitHub at <https://github.com/apache/fop>.

Prerequisites

To use the Apache FOP reporting feature in ORMB, you should have:

- Properties set in the configuration files
- SPL template file updated
- spl-reporting.ear file deployed
- Reporting changes in WebLogic activated

Setting Properties in Configuration Files

To generate reports, the configuration files must have valid details. To set properties in the configuration files, you should:

1. Open the `spl.properties.template` file available in `/scratch/rmbbuild/spl/<Install DIR>/templates/` location.
2. Comment `ouaf.runtime.billView.directoryPath=@force_forward_slash(SPLEBASE)/splapp/reportView` in the `spl.properties.template` file.
3. Save the `spl.properties.template` file.

Note:

Alternatively, you can verify and update the `spl.properties` and `environ.ini` configuration files.

The `spl.properties` file lists the parameters and directory path name used by the report generating algorithm.

To comment a line, type `##` at the beginning of the line. For example:

```
##ouaf.runtime.billView.directoryPath=@force_forward_slash(SPLEBASE)/splapp/reportView/
```

Updating an SPL Template File

Procedure

You need to update the `spl` template file to create FOP reports in the batch mode. To update the `spl` template file:

1. Open the `spl.properties.standalone.template` template file from `/<Installation Home>/<Installation Directory>/templates/` location.
2. Add the below code in the `spl.properties.standalone.template` template file:

```
## EJB properties
#ifdef SPLWAS=WLS
spl.serviceBean.jndi.name = @WEB_CONTEXT_ROOT@/servicebean
spl.ejbContainer.contextFactory = weblogic.jndi.WLInitialContextFactory
```

```

#ifdef !WEB_WLSSLPORT=[NULL]
spl.ejbContainer.url = t3s://@BSN_WLHOST@:@WEB_WLSSLPORT@
#endif
#ifdef WEB_WLSSLPORT=[NULL]
spl.ejbContainer.url = t3://@BSN_WLHOST@:@WEB_WLPORT@
#endif
spl.ejbContainer.user = @WEB_WLSYSUSER@
spl.ejbContainer.password = @WEB_WLSYSPASS@
#endif

```

3. Save the `spl.properties.standalone.template` template file.

The SPL template file is updated.

Deploying the spl-reporting.ear File

Procedure

To deploy the `spl-reporting.ear` file:

1. Log in to the **WebLogic Administration** console.
A list appears.
2. Click on the **Deployments** link in the **Domain Configurations** section.
The **Summary of Deployments** page appears.
3. Click the **Lock & Edit** button in the **Section** pane.
The **Install** button is enabled in the **Deployments** section of the **Summary of Deployments** page.
4. Click **Install**.
The **Install Application Assistant** page appears.
5. Enter `/scratch/rmbbuild/spl/<INSTALL_DIRECTORY>/splapp/applications` in the **Path** field.
6. Select **spl-reporting.ear** option.
7. Click **Next**.
8. In the **Choose Targeting Style** section, select **Install this deployment as an application** option.
9. Click **Next**.
10. In the **Optional Settings** section, enter default values in all fields.
11. Click **Next**.
12. In the **Additional Configuration** section, select **No, I will review the configuration later** option.
13. Click **Finish**.
The `spl-reporting.ear` file is deployed.

Activating the Reporting Changes in WebLogic

Procedure

To activate the reporting changes in WebLogic:

1. Ensure that the `spl-reporting.ear` file is deployed.
2. Click the **Activate Changes** button in the **Section** pane.

In the list of **Deployments**, the state of `spl-reporting` changes to **Prepared**.

3. Select the `spl-reporting` node.
4. Select **Servicing all requests** option from the drop-down list of the **Start** button.

The **Start Application Assistant** page appears.

5. Click **Yes**.

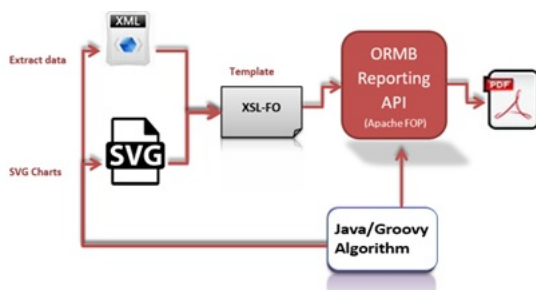

In the list of **Deployments**, the state of `spl-reporting` changes from **Prepared** to **Active**.

The reporting changes in WebLogic are activated.

PDF Generation Using Apache FOP

For generating a PDF from an XML file you need an XSLT stylesheet which converts the XML file to an XSL-FO file. The created XSL-FO file is also an XML file which contains all the formatted objects. The ORMB FOP reporting framework reads the XSL-FO file and formats it to a PDF document.

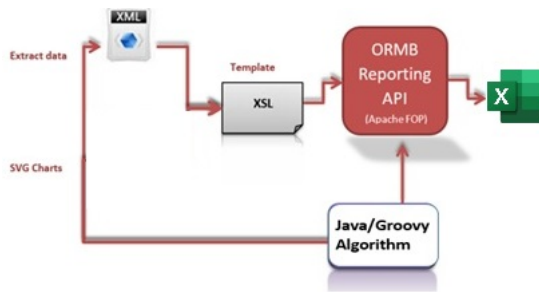

The process overview of PDF generation from an XML file is shown in the below image:

Excel (XLS) Generation Using XSL Transformation

For generating an Excel (XLS) from an XML file you need an XSLT stylesheet which converts the XML file to an XSL file. The created XSL file is also an XML file which contains all the formatted objects. The ORMB reporting framework reads the XSL file and formats it to an Excel (XLS) document.

The process overview of Excel (XLS) generation from an XML file is shown in the below image:

Sample XML Format for FOP Reporting

Using the below example, you can create an XML which contains name and a list of friends with contact numbers:

Sample XML Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<root>
<name>Ryan</name>
<friend>
  <name>David</name>
  <phNo>+1.603.555.0100</phNo>
</friend>
<friend>
  <name>John</name>
  <phNo>+1.603.555.0101</phNo>
</friend>
</root>
```

Note: This is how an XML should be generated with encoded UTF-8 format.

Sample XSL Format for FOP Reporting

Using the below example, you can create an XSL format which renders the table that contains details of friends given in the above sample XML format:

Sample XSL Format for FOP Reporting

```
<?xml version="1.0" encoding="utf-8"?>
<xsl:stylesheet version="1.1"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:fo="http://www.w3.org/1999/XSL/Format"
  exclude-result-prefixes="fo">
<xsl:template match="root">
<fo:root xmlns:fo="http://www.w3.org/1999/XSL/Format">
  <fo:layout-master-set>
    <fo:simple-page-master master-name="my-page">
      <fo:region-body margin="1in"/>
    </fo:simple-page-master>
  </fo:layout-master-set>
  <fo:page-sequence master-reference="my-page">
    <fo:flow flow-name="xsl-region-body">
      <fo:block>Hello, <xsl:value-of select="name" />!</fo:block>
      <fo:block>
        <fo:table>
          <fo:table-body>
            <fo:table-row>
              <fo:table-cell border="solid 1px black" text-align="center" font-weight="bold">
                <fo:block>No.</fo:block>
              </fo:table-cell>
            </fo:table-row>
          </fo:table-body>
        </fo:table>
      </fo:block>
    </fo:flow>
  </fo:page-sequence>
</fo:root>
```

```

        <fo:table-cell border="solid 1px black" text-align="center" font-
weight="bold">
        <fo:block>Name</fo:block>
        </fo:table-cell>
        <fo:table-cell border="solid 1px black" text-align="center" font-
weight="bold">
        <fo:block>Phone Number</fo:block>
        </fo:table-cell>
    </fo:table-row>
    <xsl:for-each select=" ./friend">
    <fo:table-row>
    <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
    <xsl:value-of select="position()" />
    </fo:block>
    </fo:table-cell>
    <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
    <xsl:value-of select="name" />
    </fo:block>
    </fo:table-cell>
    <fo:table-cell border="solid 1px black" text-align="center">
    <fo:block>
    <xsl:value-of select="phNo" />
    </fo:block>
    </fo:table-cell>
    </fo:table-row>
    </xsl:for-each>
    </fo:table-body>
    </fo:table>
    </fo:block>
    </fo:flow>
    </fo:page-sequence>
    </fo:root>
    </xsl:template>
    </xsl:stylesheet>

```

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

Create XSL Template for an FOP Report

The XSL template is required to create an FOP report in the PDF or Excel (XLS) format. The XSL template converts the XML file into XSL-FO file. This XSL-FO is further read by the ORMB FOP reporting framework and formats the XSL-FO file into a PDF/Excel (XLS) file.

Note: For more information on XSL Format, refer below links:

- <https://www.netjstech.com/2015/07/how-to-create-pdf-from-xml-using-apache-fop.html>.
- <https://xmlgraphics.apache.org/fop/>

XSL Templates shipped with ORMB

The following XSL templates for the corresponding FOP reports are shipped with ORMB:

XSL Template	FOP Report
FOPAGEBPDF	AgingReport.xml
FOPAGEOPDF	
FOPAGEHCBPDF	AgingReportHC.xml
FOPAGEHCOPDF	
FOPAGEHCBXLS	AgingReportHCExcel.xml
FOPAGEHCOXLS	
RPT_LETTER	AutoPay_Letter.xml
FOPAPAYHBPDF	AutoPayResponseReport.xml
FOPAPAYHOPDF	
FOPAPAYHBXLS	AutoPayResponseReportExcel.xml
FOPAPAYHOXLS	
PLSM_DETEXL	billExtract_Banking_Individual.xml
PLSM_SMRYEXL	
FOPBIPAHBPDF	BinderPaymentReport.xml
FOPBIPAHOPDF	
FOPBIPAHBXLS	BinderPaymentReportExcel.xml
FOPBIPAHOXLS	
DCMR	Deal_Compare_Exl.xml
DLDWLD	Deal_Extract_For_Upload.xml
DEEEXCEL	Deal_Internal_Exl.xml
DEIEXCEL	
DEIPDF	Deal_Internal_Version2.xml
DLPRTEXLR	Deal_Profitability_Exl.xml
DEEPDF	DealExtract_External_Type.xml
FOPDDROPDF	DirectDebitRejection.xml
EFPR_EXT_PDF	Effective_Pricing_Extract.xml
EFPR_EXT_EXL	Effective_Pricing_Extract_Exl.xml
REP_CODE2	ExpiringCreditCard_Letter.xml

XSL Template	FOP Report
FOPASLHCBPDF	FOPAggregateStoplossHCReport.xml

FOPTRSMBXLS	TransactionRejectionSummaryExcel.xml
FOPTRSMOXLS	
FOPUSROPDF	UserAccessReport.xml

Create an Algorithm for an FOP Report

Before creating any new custom FOP report an algorithm is created which contains the following content:

- Query for the report
- XML formation code
- Input parameter validation
- Call to report generation algorithm

The algorithm is then associated with the FOP report while defining the FOP report in the application. When the FOP report is generated, the algorithm which is attached to the FOP report does the following:

- Extract data from the system in an XML file
- Present the extracted data in CSV, JSON, PDF, XML, or XLS format using the XSL file associated with the FOP report

The following algorithms for the corresponding FOP reports are shipped with ORMB:

FOP Report	Report Generation Algorithm
FOPADJBXLS	C1_FOPADJUST
FOPADJOXLS	
FOPAGEBPDF	C1_FOPAGING

FOP Report	Report Generation Algorithm
FOPAGEOPDF	
FOPAGEHCBPDF	C1_FOPAGEHC
FOPAGEHCOPDF	
FOPAGEHCBXLS	C1_FOPAGEHC
FOPAGEHCOXLS	
FOPAPAYHBPDF	C1_FOPAPAY
FOPAPAYHOPDF	
FOPAPAYHBXLS	C1_FOPAPAY
FOPAPAYHOXLS	
PLSM_DETEXL	C1-PLDETXCL
PLSM_SMRYEXL	C1-PLSMEXCL
FOPBIPAHBPDF	C1_FOPBIPA
FOPBIPAHOPDF	
FOPBIPAHBXLS	C1_FOPBIPA
FOPBIPAHOXLS	
DCMR	C1-DLCMPRRPT
DLDWLD	C1-DLDWLD
DEEEXCEL	C1-DLEXTEXCL
DEIEXCEL	C1-DLINTEXCL
DEIPDF	C1-DLINTPDF
DLPRTEXLR	C1-DLPRTEXLR
DEEPDF	C1-DLEXTPDF
FOPDDROPDF	C1_FOPDEBIT
EFPR_EXT_PDF	C1-EFFPRPDF

Creating a Message for an FOP Report

Prerequisite

To create a message for an FOP report you should have:

- Error message added in the MessageRepository.java file. For example:

```
public static ServerMessage searchByIsNull()
{
    MessageRepository repo = MessageRepository.getInstance();
    MessageParameters messageParms = new MessageParameters();
    return repo.getMessage(SEARCH_BY_IS_NULL, messageParms);
}
```

- Error code added in the ReportingMessage.java file. For example:

```
public static final int SEARCH_BY_IS_NULL = 2039;
```

Procedure

To create a message for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Message**.
A sub-menu appears
3. Click the **Add** option from the **Message** sub-menu.

The Select Business Object screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Message Business Object	Used to indicate that you want to create a message for a business object.	Yes

- Select **Message** from the **Message Business Object** list.
- Click **OK**.

The **Message** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Message Category	Used to indicate the category for which you want to create a message. The valid value is: <ul style="list-style-type: none"> Reports 	Yes
Message Number	Used to specify the error code which you have added in the ReportingMessage.java file.	Yes
Message Text	Used to specify the error message.	Yes
Detailed Description	Used to specify additional information about the message.	No

- Click **Save**.

The message is created.

Calling the ORMB FOP Reporting API

Procedure

To call the ORMB FOP reporting API:

- You should use the ORMB provided business component to call the below reporting API which generates the FOP reports:
com.splwg.ccb.domain.reportsubmission.FOPReportGenerationComponent_Impl
- Call the reporting API method in the below format:
public String generateReport(String xslTemplateName, String xmlContent, String outputFileName)

The parameters for the reporting API method is defined as below:

Parameter Name	Parameter Description
xslTemplateName	Used to pass the XSL-FO/XSL file name. It is given in the below format: <code><name of report>.xsl</code>
xmlContent	Used to pass the XML content generated by the algorithm.
outputFileName	Used to pass the PDF/Excel (XLS) file name that you want to generated. It is given in the below format: <code><name_of_report>.pdf/xls</code>

Setting Master Configuration for Email Notification

Procedure

Email notification is configured for FOP reports which are generated in the batch mode. To set master configuration for email notification:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **M** and then click **Master Configuration**.

The **Master Configuration** screen appears.

3. Search for **Reporting Email Sender Configuration** in the **Master Configuration List** zone.

4. Click the **Add**  icon in the **Action** column corresponding to **Reporting Email Sender Configuration**.

The **Master Configuration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Master Configuration	Displays the master configuration	Not Applicable
SMTP Host Name	Used to specify the SMTP application to send and receive emails.	Yes
SMTP Port	Used to specify the communication endpoint to transfer email data over SMTP through a network, from one server to another. The valid value is: <ul style="list-style-type: none"> • 25 	Yes
Username	Used to specify the username of the user.	Yes
Password	Used to specify the password for the user.	Yes
Secure Sockets Layer	Used to indicate whether you want to transfer the email data securely across a network.	No
Test	Used to configure the sender's and receiver's email ID.	Yes
From Email Address	Used to specify the user's email ID. Note: This field appears only when you select the check box corresponding to the Test field.	Yes
To Recipient Email ID	Used to specify the receiver's email ID. Note: This field appears only when you select the check box corresponding to the Test field.	Yes

5. Enter the required details in the **Master Configuration** screen.

6. Click **Save**.

The master configuration for email notification is set.

Creating a Custom Algorithm for FOP Reports

Prerequisite

To create a custom algorithm for FOP reports you should have:

- The **ReportDataExtractAlgorithmSpot** algorithm spot defined in the application

Procedure

To create a custom algorithm for FOP reports:

1. Log into **Eclipse**.
2. In the navigation pane, right click on the **C1** folder.

A list appears.

3. From the list, select **New** and then click **Others**.

The **Select a Wizard** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Wizard	Used to filter the Algorithm Implementation wizard.	No

Note: You can also navigate to the **Algorithm Implementation** wizard in the **Oracle Utilities** section through the navigation window provided below the **Wizard** field.

4. Select **Algorithm Implementation** from the navigation window.
5. Click **Next**.

The **New Algorithm Implementation** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source Folder	Displays the source from where the algorithm spot is called. The valid value is: C1/Java	Not Applicable
Package	Used to specify the directory in the source folder where you want the algorithm to appear. The valid value is: com.splwg.ccb.domain.reports	Yes submission.custom
Name	Used to specify the algorithm that you want to create.	Yes
Soft Parameters	Used to specify parameters for the algorithm.	No

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Spot Interface	Used to specify the algorithm spot used to create custom data extract in the PDF or XLS format. The valid value is: <code>com.splwg.ccb.domain.reports</code>	Yes
	Note: You can also extract data in the XML, CSV, or JSON formats by calling the CommonUtil_Impl API while generating the respective report.	

6. Click **Finish**.

The custom algorithm for FOP report is created.

Configuring the Custom Algorithm from the User Interface

Prerequisites

To configure the custom algorithm from the user interface you should:

- Define custom algorithm JAVA code
- Generate artifacts, do Web Build and start the WebLogic server to bring the ORMB application up and running

Procedure

To configure the custom algorithm from the user interface you should:

- Create an algorithm type and associate it with the custom algorithm java code
 - Create an algorithm and associate it with the algorithm type
1. To create an algorithm type, click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Algorithm Type**.

A sub-menu appears

3. Click the **Add** option from the **Algorithm Type** sub-menu.

The **Algorithm Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Type	Used to specify the algorithm type that you want to create in the system.	Yes
Description	Used to specify the description for the algorithm type.	Yes
Detailed Description	Used to specify additional information about the algorithm type	No
Algorithm Entity	Used to indicate the algorithm entity for which you want to create the algorithm type. The valid value is: <ul style="list-style-type: none"> • Report-Data Extract Algorithm 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Program Type	Used to indicate the program code using which the custom algorithm is created. The valid value is: <ul style="list-style-type: none"> JAVA 	Yes
Program Name	Used to specify the custom algorithm java code. The valid value is: com.splwg.ccb.domain.reportsubmission.ReportDataExtractAlgor	Yes

In addition, the **Algorithm Type** screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the parameter is considered for the algorithm type.	No
Parameter	Used to specify the parameter using which you want to create the algorithm type.	No
Required	Used to indicate whether the parameter is required or not.	No
Owner	Indicates the user who associated the parameter with the algorithm type.	No

- Enter the required details in the **Algorithm Type** screen.
- Click **Save**.
The algorithm type is saved.
- To create an algorithm, click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Algorithm**.
A sub-menu appears
- Click the **Add** option from the **Algorithm** sub-menu.

The **Algorithm** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Algorithm Code	Used to specify the algorithm that you want to create in the system	Yes
Description	Used to specify the description for the algorithm.	Yes
Algorithm Type	Used to specify the algorithm type to which you want to associate the algorithm.	Yes
Algorithm Type Description	Displays the description of the algorithm type.	Not Applicable
Parameter	Displays the parameter of the algorithm.	Not Applicable
Effective Date	Displays the date from when the algorithm type is effective for the algorithm.	Not Applicable

9. Enter the required details in the **Algorithm** screen.

10. Click **Save**.

The custom algorithm is configured in the user interface.

Report Creation

The **Report Creation** screen allows you to define reports for extracting data of a person and/or its accounts using the Apache FOP framework. It also enables you to view, edit, or delete an existing report. It contains the following zone:

[Report Search](#) on page 3588

Report Search

The **Report Search** zone allows you to search for an existing FOP report using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to search for a particular FOP report.	No
Description	Used to search FOP reports with a particular description.	No

Note: You must specify at least one search criterion while searching for an FOP report.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Report	Displays the FOP report.
Description	Displays the description of the FOP report.
Output Format	Indicates the format in which the FOP report is extracted from the system. Note: At present, you can extract an FOP report in PDF, CSV, and XML formats.
Report Type	Indicates the type of information which is extracted using the FOP report. The valid values are: <ul style="list-style-type: none"> • Bill • Custom • Letter
View	On clicking the View button you can view the details of the FOP report.
Edit	On clicking the Edit (✎) icon, the Report Creation screen appears where you can edit the details of the FOP report.
Delete	On clicking the Delete (🗑) icon, you can delete the FOP report.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an FOP Report**Procedure**

To search for an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Creation**.
The **Report Creation** screen appears.
3. Enter the search criteria in the **Report Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of FOP reports that meet the search criteria appears in the **Search Results** section.

Defining an FOP Report**Prerequisites**

To define an FOP report you should have:

- FOP reporting framework configured in the system
- **C1_FOPONBL** algorithm defined in the system to create FOP reports for bill templates
- Parameters defined for the **C1_FOPONBL** algorithm
- **C1_FOPONBL** algorithm attached to the **Online Bill Display** system event
- **C1_FOPLTRALG** algorithm defined in the system to create FOP reports for letter templates
- Parameters defined for the **C1_FOPLTRALG** algorithm
- **C1_FOPLTRALG** algorithm attached to the **Online Letter Image** system event
- Algorithms defined in the application for creating custom FOP reports

Procedure

To define an FOP report:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Report Creation**.

The **Report Creation** screen appears.

3. Click the **Add** button available at the upper right corner of the **Report Creation** screen.

The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	No
Description	Used to specify the description for the FOP report	No
Output Format	<p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • CSV • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p>	Yes
Script	<p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Report Type	<p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter 	Yes
	<p>Note: This field is disabled when you select the Web option from the Output Format list.</p>	
Report Template	<p>Used to indicate the template using which the FOP report is uploaded in the system.</p>	Yes
	<p>Note: This field appears only when you select the Bill or Letter option from the Report Type list.</p>	
XSL Template	<p>Used to indicate the XSL template file using which you want to create the FOP report.</p>	Yes
	<p>Note:</p> <p>The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the Web option from the Output Format list.</p>	
Report Generation Algorithm	<p>Used to indicate the algorithm defined for creating a custom FOP report.</p>	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the Custom option from the Report Type list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Reporting Mode	Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are: <ul style="list-style-type: none"> • Batch • Online 	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field.	

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

4. Enter the required details in the **Report Creation** screen.
5. Click **Save**.

The FOP report is defined.

Editing an FOP Report

Prerequisites

To edit an FOP report you should have:

- FOP report (whose details you want to edit) defined in the application
- Algorithms defined in the application for creating custom FOP reports

Procedure

To edit an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the FOP report whose details you want to edit.

The **Report Creation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to specify the FOP report	Not Applicable
Description	Used to specify the description for the FOP report	No

Field Name	Field Description	Mandatory (Yes or No)
Output Format	<p>Used to indicate the format in which you want to generate the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • CSV • DOCX • JSON • PDF • Web • XLS • XML <p>Note: At present, the system supports extraction of an FOP report in the CSV, JSON, PDF, XML, and XLS formats. You can customize the algorithm to support the extraction of an FOP report in the DOCX and Web formats.</p>	Yes
Script	<p>Used to indicate the script using which the FOP report is extracted in the Web format.</p> <p>Note: This field is enabled only when you select the Web option from the Output Format list.</p>	No
Report Type	<p>Used to indicate the type of information that you want to extract using the FOP report. The valid values are:</p> <ul style="list-style-type: none"> • Bill • Custom • Letter <p>Note: This field is disabled when you select the Web option from the Output Format list.</p>	Yes
Report Template	<p>Used to indicate the template using which the FOP report is uploaded in the system.</p> <p>Note: This field appears only when you select the Bill or Letter option from the Report Type list.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
XSL Template	Used to indicate the XSL template file using which you want to create the FOP report.	Yes
	<p>Note:</p> <p>The Upload button appears corresponding to the XSL Template field. On clicking the Upload button, the Upload XSL Template window appears where you can choose the required XSL template.</p> <p>This field is disabled when you select the Web option from the Output Format list.</p>	
Report Generation Algorithm	Used to indicate the algorithm defined for creating a custom FOP report.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Report Generation Algorithm field. On clicking the Search icon, the Algorithm Code/Description window appears where you can search for the required algorithm.</p> <p>This field is enabled only when you select the Custom option from the Report Type list.</p>	
Reporting Mode	<p>Used to indicate whether you want to generate the FOP report in the batch mode or online mode. The valid values are:</p> <ul style="list-style-type: none"> • Batch • Online 	Yes
Email ID	Used to specify the email ID where you want to send the notification of the FOP report generation.	Yes (Conditional)
	<p>Note: This field is enabled only when you select the Batch option from the Reporting Mode list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Subject	Used to specify the text which you want to appear in the subject line of the email.	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.
Email Body Content	Used to specify the content which you want to appear in the email body,	Yes (Conditional)
	Note: This field is enabled only when you select the Batch option from the Reporting Mode list.	Note: The field is required for generating FOP report in the batch mode.

In addition, the **Report Creation** screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Display Sequence	Used to indicate the sequence of the parameter.	No
Report Parameter	Used to indicate the parameter which you want to define while generating the FOP report.	No
	Note: The Search (🔍) icon appears corresponding to the Report Parameter field. On clicking the Search icon, the Field Details window appears where you can search for the required parameter. On specifying the parameter, the description of the parameter appears corresponding to the Report Parameter field.	

Note: The above columns do not appear when you select the **Web** option from the **Output Format** list.

3. Modify the required details in the **Report Creation** screen.
4. Click **Save**.

The changes made to the FOP report are saved.

Deleting an FOP Report

Procedure

To delete an FOP report:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the FOP report that you want to delete.
A message appears confirming whether you want to delete the FOP report from the system.
3. Click **OK**.
4. The FOP report is deleted.

Viewing the FOP Report Details

Prerequisites

To view the FOP report details you should have:

- FOP report (whose details you want to view) defined in the system

Procedure

To view the FOP report details:

1. Search for the FOP report in the **Report Search** zone of the **Report Creation** screen.
2. In the **Search Results** section, click the **View** button in the **View** column corresponding to the FOP report whose details you want to view.
The **Report Details** screen appears.
3. View the details of the FOP report in the **Report Details** screen.

Report Audit

The **Report Audit** screen allows you to track the records of the generated FOP reports in the system. It also allows you to do the following:

- Download the FOP reports which are generated successfully in the system
- View the error message of the FOP report which did not generate successfully

The **Report Audit** screen contains the following zone:

[Report Generation List](#) on page 3598

Report Generation List

The **Report Generation List** zone allows you to view a list of FOP reports which are generated in the system. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the generated FOP report.
Report ID	Displays the unique identification number which is created automatically by the system for a particular FOP report during report generation process.
Report	Displays the FOP report which is generated in the system.
Created By	Displays the user who has generated the FOP report in the system.
Creation Date Time	Displays the date and time when the FOP report is generated in the system.
Generation Successful	Indicates whether the FOP report generation is successful or not. The valid values are: <ul style="list-style-type: none"> • No • Yes
Message Text	Displays information about the FOP report generation. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>If the FOP report generation is successful, then, this column displays the following message:</p> <p>Report Generation Success</p> <p>However, if the FOP report generation is not successful, then, this column displays the reason why the FOP reports is not generated successfully in the system.</p> </div>
Download Report	On clicking the Download link, you can download the FOP report. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: The Download link does not appear for FOP reports which are not generated successfully in the system.</p> </div>

Downloading an FOP Report

Prerequisites

To download an FOP report you should have:

- FOP reports generated successfully in the system

Procedure

To download an FOP report:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Report Audit**.
The **Report Audit** screen appears.
3. Ensure that the **Report Generation List** zone is expanded in the **Report Audit** screen.
4. Click the **Filters** (🔍) icon available at the upper right corner of the **Report Generation List** zone.
The **Report** field appears below the report list.
5. Specify the FOP report which you want to download in the **Report** field.
6. Click **Search**.
The specified FOP report is filtered in the **Report Generation List** zone.
7. Click the **Download** link in the **Download** column corresponding to the FOP report that you want to download.
The FOP report is downloaded.

Report Generation

The **Report Generation** screen allows you to extract the details of an FOP report.

Generating an FOP Report

Prerequisites

To generate an FOP report you should have:

- FOP reports created in the system

Procedure

To generate an FOP report:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Reports** and then click **Report Generation**.

The **Report Generation** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Report	Used to indicate the FOP report that you want to generate.	Yes
Description	Displays the description of the FOP report	Not Applicable

In addition, the **Report Generation** screen contains the following columns:

Column Name	Column Description
Display Sequence	Displays the sequence in which the parameter is defined for the FOP report.
Report Parameter	Displays the parameter which is defined for the FOP report.
Report Parameter Value	Used to specify the value of the parameter for generating the FOP report.

3. Select the required FOP report from the **Report** list.
4. Specify the values of the parameters defined for the FOP report in the **Report Parameter Value** column.
5. Click **Generate**.

The FOP report is generated.

For more information about these FOP reports, refer to *Oracle Revenue Management and Billing FOP Reports Guide*

Adjustment Detail Report

The **Adjustment Detail** report enables you to view the adjustments which are created for persons or accounts, or which are created against bills. While generating the adjustment detail report, you can specify the following parameters – Start Date, End Date, Division, Entity Type, and Entity ID. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2022 and entity type as Account, the system will extract all adjustments which are created for the accounts from 01-01-2022 till the current date.

You can generate the adjustment detail report from the user interface or through a batch process in the Excel format. We have shipped the following adjustment detail reports in this release:

- **FOPADJBXLS** - Used when you want to generate the adjustment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPADJOXLS** - Used when you want to generate the adjustment detail report from the user interface in the Excel format.

Aggregate Stop-Loss Report

The **Aggregate Stop-Loss** report enables you to view the aggregate stop-loss which is billed to a parent customer. At a time, it enables you to view the aggregate stop-loss information of a particular parent customer which belongs to a particular division. While generating the aggregate stop-loss report, you can specify the following parameters – Division, Parent Customer, Claim Billed Through, Policy Start Date, and Policy End Date. The division and parent customer are mandatory. If you specify the claim billed until date, you need to specify the policy start and end dates. For example, if you specify 04-01-2021 in the **Claim Billed Through** parameter, 01-01-2021 in the **Policy Start Date** parameter, and 12-31-2021 in the **Policy End Date** parameter, the system fetches the aggregate stop-loss charges which are billed to the parent customer between 01-01-2022 to 04-01-2022.

This report can be used for the self-funded business. You can generate the aggregate stop-loss report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following aggregate stop-loss reports in this release:

- **FOPASLHCBPDF** - Used when you want to generate the aggregate stop-loss report through the **C1-RPTGN** batch in the PDF format.
- **FOPASLHCBXLS** - Used when you want to generate the aggregate stop-loss report through the **C1-RPTGN** batch in the Excel format.
- **FOPASLHCOPDF** - Used when you want to generate the aggregate stop-loss report from the user interface in the PDF format.
- **FOPASLHCOXLS** - Used when you want to generate the aggregate stop-loss report from the user interface in the Excel format.

Entity Hold Detail Report

The **Entity Hold Detail** report enables you to view the entities, such as persons, accounts, or bills for which the business processes, such as bill generation, automatic payment, funding, overdue, or refund, are on hold for a given period. While generating the entity hold detail report, you can specify the following parameters – Start Date, End Date, Division, Hold Entity, Entity ID, Hold Process, and Hold Status. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 01-01-2021 and hold entity as Bill, the system will extract all hold requests which are created for the bills from 01-01-2021 till the current date.

You can generate the entity hold detail report from the user interface or through a batch process in the Excel format. We have shipped the following entity hold detail reports in this release:

- **FOPHLDBXLS** - Used when you want to generate the entity hold detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPHLDOXLS** - Used when you want to generate the entity hold detail report from the user interface in the Excel format.

Invoice Aging Report

The **Invoice Aging** report enables you to view the invoices which are due for payment in different age buckets. At a time, it enables you to view the invoice aging data of all customers which belong to a particular division. While generating the invoice aging report, you can specify the following parameters – Start Date, End Date, Division, and Customer Class. The start date and division are mandatory. If you do not specify the end date, the system by default sets it to the system date. While generating the invoice aging report, the system does the currency conversion when the accounts' invoice currency is different from the customer's division currency.

This report can be used for the self-funded, fully-insured group, and fully-insured individual business. In case of the self-funded and fully-insured group business, the aging data is grouped at the bill group and parent customer levels. However, in case of the fully-insured individual business, the aging data is grouped at the individual customer level.

You can generate the invoice aging report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following invoice aging reports in this release:

- **FOPAGEHCBPDF** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the PDF format.
- **FOPAGEHCBXLS** - Used when you want to generate the invoice aging report through the **C1-RPTGN** batch in the Excel format.
- **FOPAGEHCOPDF** - Used when you want to generate the invoice aging report from the user interface in the PDF format.
- **FOPAGEHCOXLS** - Used when you want to generate the invoice aging report from the user interface in the Excel format.

Payment Detail Report for Fully-Insured Individual Business

The **Payment Detail** report for fully-insured individual business enables you to view the payment details of each account. At a time, it enables you to view the payments of all accounts which belong to a particular division. While generating the payment detail report for the fully-insured individual business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Payment Status, Payment Amount Range, Health Plan ID, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. While filtering the data using the payment amount range, you need to specify the lower and upper range value separated by the hyphen (-) symbol. For example, if you set the start date to 01-01-2021, division to D10, and payment amount range to 150-200, the system will extract all payments which are created from 01-01-2021 till the current date, whose payment amount is between 150 and 200, and which are created for the accounts belonging to the D10 division. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment detail reports for the fully-insured individual business in this release:

- **FOPPADTHBPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPADTHBXLS** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPPADTHOPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.
- **FOPPADTHOXLS** - Used when you want to generate the payment detail report from the user interface in the Excel format.

Payment Detail Report for Self-funded and Fully-Insured Group Business

The **Payment Detail** report for self-funded and fully-insured group business enables you to view the payment details of each account. At a time, it enables you to view the payments of all accounts which belong to a particular division. While generating the payment detail report for the self-funded or fully-insured group business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Payment Status, Payment Amount Range, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. While filtering the data using the payment amount range, you need to specify the lower and upper range value separated by the hyphen (-) symbol.

For example, if you set the start date to 01-01-2020, division to D1, and payment amount range to 50-100, the system will extract all payments which are created from 01-01-2020 till the current date, whose payment amount is between 50 and 100, and which are created for the accounts belonging to the D1 division. The payments are shown in the payment currency.

You can generate the payment detail report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment detail reports for the self-funded and fully-insured group business in this release:

- **FOPPADGHBPDF** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the PDF format.
- **FOPPADGHBXLS** - Used when you want to generate the payment detail report through the **C1-RPTGN** batch in the Excel format.
- **FOPPADGHOPDF** - Used when you want to generate the payment detail report from the user interface in the PDF format.
- **FOPPADGHOXLS** - Used when you want to generate the payment detail report from the user interface in the Excel format.

Payment Summary Report for Fully-Insured Individual Business

The **Payment Summary** report for fully-insured individual business enables you to view the total payment made for each account. At a time, it enables you to view the total payment of each account which belongs to a particular division. While generating the payment summary report for the fully-insured individual business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, Health Plan ID, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment summary reports for the fully-insured individual business in this release:

- **FOPPASMHBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPASMHBXLS** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the Excel format.
- **FOPPASMHOPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.
- **FOPPASMHOXLS** - Used when you want to generate the payment summary report from the user interface in the Excel format.

Payment Summary Report for Self-funded and Fully-Insured Group Business

The **Payment Summary** report for self-funded and fully-insured group business enables you to view the total payment made for each account. At a time, it enables you to view the total payment of each account which belongs to a particular division. While generating the payment summary report for the self-funded or fully-insured group business, you can specify the following parameters – Division, Start Date, End Date, Person Identifier Type, Person Identifier, Account Identifier Type, Account Identifier, and Customer Class. The division and start date are mandatory. If you do not specify the end date, the system by default sets it to the system date. The payment total is shown in the customer's division currency. While generating the payment summary report, the system does the currency conversion when the payment currency is different from the customer's division currency.

You can generate the payment summary report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following payment summary reports for the self-funded and fully-insured group business in this release:

- **FOPPASGHBPDF** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the PDF format.
- **FOPPASGHBXLS** - Used when you want to generate the payment summary report through the **C1-RPTGN** batch in the Excel format.

- **FOPPASGHOPDF** - Used when you want to generate the payment summary report from the user interface in the PDF format.
- **FOPPASGHOXLS** - Used when you want to generate the payment summary report from the user interface in the Excel format.

Specific Stop-Loss Report

The **Specific Stop-Loss** report enables you to view the specific stop-loss which is billed for each member to a bill group. At a time, it enables you to view the specific stop-loss information of a particular parent customer which belongs to a particular division. While generating the specific stop-loss report, you can specify the following parameters – Division, Parent Customer, Claim Billed Through, Policy Start Date, and Policy End Date. The division and parent customer are mandatory. If you specify the claim billed until date, you need to specify the policy start and end dates. For example, if you specify 03-01-2022 in the **Claim Billed Through** parameter, 01-01-2022 in the **Policy Start Date** parameter, and 12-31-2022 in the **Policy End Date** parameter, the system fetches the specific stop-loss charges which are billed to different bill groups of the parent customer between 01-01-2022 to 03-01-2022.

This report can be used for the self-funded business. You can generate the specific stop-loss report from the user interface or through a batch process in either PDF or Excel format. We have shipped the following specific stop-loss reports in this release:

- **FOPSSLHCBPDF** - Used when you want to generate the specific stop-loss report through the **C1-RPTGN** batch in the PDF format.
- **FOPSSLHCBXLS** - Used when you want to generate the specific stop-loss report through the **C1-RPTGN** batch in the Excel format.
- **FOPSSLHCOPDF** - Used when you want to generate the specific stop-loss report from the user interface in the PDF format.
- **FOPSSLHCOXLS** - Used when you want to generate the specific stop-loss report from the user interface in the Excel format.

To Do Report

The **To Do** report enables you to view the notifications (i.e. To Dos) assigned to a user and its current status. While generating the To Do report, you can specify the following parameters – Start Date, End Date, To Do Type, To Do Type Description, Assigned User, Created By, Status, Operator, and To Do Age. The start date is mandatory. If you do not specify the end date, the system by default sets it to the system date. For example, if you specify the start date as 06-01-2022 and To Do type as C1-ACCL, the system will extract all To Dos which are created using the C1-ACCL To Do type from 06-01-2022 till the current date. While filtering the data using the To Do age, you need to specify the operator along with the To Do age. The system supports the following operators: Greater Than (>), Less Than (<), Less Than Equal To (<=), Greater Than Equal To (>=), and Equal To (=). For example, if you specify the start date as 06-01-2022, To Do age as 50, and operator as >, the system will extract all To Dos which are open in the system since more than 50 days.

You can generate the To Do report from the user interface or through a batch process in the PDF format. We have shipped the following To Do reports in this release:

- **FOPTODOBPDF** - Used when you want to generate the To Do report through the **C1-RPTGN** batch in the PDF format.
- **FOPTODOOPDF** - Used when you want to generate the To Do report from the user interface in the PDF format.

User Access Report

The **User Access** report enables you to view the permissions granted to different users for accessing the data. While generating the user access report, you can specify the following parameters – User Group, User Group Description, To Do Role, and To Do Role Description.

You can generate the user access report from the user interface in the PDF format. We have shipped the following user access report in this release:

- **FOPUSROPDF** - Used when you want to generate the user access report from the user interface in the PDF format.

Quick Response Code Generation

A Quick Response (QR) code is a type of matrix barcode (or two-dimensional barcode). A barcode is a machine-readable optical label that can contain information about the item to which it is attached. Oracle Revenue Management and Billing provides a QR code generator using which you can generate a QR code. At the moment, the QR code is only supported for the FOP reports which are generated in the PDF format. You can define dataset for the QR string using which you want to generate the QR code. You can insert a QR code on any page in the Portable Document Format (PDF) file.

To insert a QR code in an FOP report, you need to add QR related code snippets in the respective XSL file. Only then, the system will insert the QR code when you generate the FOP report in the PDF format.

Appendix

A

Most Commonly Used Tasks

Topics:

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 3608
- [Adding a Column to the Zone](#) on page 3608
- [Rearranging Columns in the Zone](#) on page 3608

Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration** () icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

Note: The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

How to change the layout of the zone	Changing the Layout on page 3608

Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

How to change the layout of the zone	Changing the Layout on page 3608

Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete** () icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

Note: Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

Appendix

B

Administration

Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

UI Maps

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

Procedure

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.
The changes are saved.

How to define an approval workflow group	Defining an Approval Workflow Group on page 1066
How to edit an approval workflow group	Editing an Approval Workflow Group on page 1076

Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The `<approvalTransactionId/>` tag is used in the schema to retrieve the approval transaction ID of the respective business object. The `<action/>` tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace `<Approval Workflow Group Code>` with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in Oracle Revenue Management and Billing.

Setting the C1_ACCTINFO Feature Configuration

Prerequisites

To set the **C1_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

Procedure

To set the **C1_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_ACCTINFO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the Account screen.	Yes
	Note: By default, the C1_F_ATY characteristic type is specified. If you want to use account types other than the ones defined in the C1_F_ATY characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the Account screen.	Yes
	Note: By default, the C1_F_IGA characteristic type is specified. If you want to use any other characteristic type other than C1_F_IGA , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Invoicing Group	<i>Invoicing Group</i>

Setting the C1-ASOBLNG Feature Configuration

The **C1-ASOBLNG** feature configuration enables the system to determine the following:

- Whether the approval transaction should be created while defining, editing, or deleting a self-funded pricing rule.
- Various parameters, characteristic types, and extendable lookup business objects which should be used for the fully-insured group, fully-insured individual, and self-funded business.
- Person relationship type using which the bill group should be related to the parent customer.
- Policy person roles using which the parent customer and bill groups should be associated with the fully-insured group and self-funded policies.
- Status to which a policy should be transitioned on terminating, reinstating, or renewing the fully-insured group policy.
- Status to which a group membership should be transitioned on inactivating the main subscriber of the group membership.
- Status to which a member person of a group membership should be transitioned on inactivating the group membership.
- Status to which an individual membership should be transitioned on canceling the main subscriber of the individual membership.
- Status to which a member person of an individual membership should be transitioned on canceling the individual membership.
- Whether the plan-specific contracts should be created on the accounts for the fully-insured group policies.

Prerequisites

To set the **C1-ASOBLNG** feature configuration, you should have:

- Required policy person roles, account relationship types, and person relationship types defined in the application
- Approval workflow settings configured for the **C1PRCANC**, **C1PRCASL**, **C1PRCRLCLM**, **C1PRCDA**, **C1PRFLTFFEE**, **C1PRCLVLFN**, **C1PRETCLM**, **C1PRRETENR**, and **C1PRCSSL** approval workflow groups
- Required approval workflow group defined for the Minimum Premium Program (MPP) pricing rule and approval workflow settings configured for the MPP approval workflow group
- Required characteristic types defined in the application
- Values defined for the **C1-ExtLookClaimTemplate**, **C1-ExtLookPricingRuleLineItem**, and **C1-ExtLookRetTypeRateOpt** extendable lookups
- Predefined values defined for the **C1INVTYP** characteristic type
- Required SQIs defined in the application
- Pricing arrangement parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Billable charge line type parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Pricing group rule parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- A predefined characteristic type named **Active Employee Coverage Billing Arrangement** defined with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing

You must set the characteristic entity of the **Active Employee Coverage Billing Arrangement** characteristic type to **Person**.

- A predefined characteristic type named **Benefit Billing Arrangement** defined with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing

You must set the characteristic entity of the **Benefit Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- A predefined characteristic type named **COBRA Billing Arrangement** defined with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing
TPA	TPA Billing

You must set the characteristic entity of the **COBRA Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- Required billing preference, binder payment preference, geographic rating area preference for fully-insured group and individual, medicare preference, member relationship and subscription tier preference, and membership status reason preference defined in the application.

Procedure

To set the **C1-ASO BLLNG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-ASO BLLNG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Identifier Type Char Type	Used to specify the characteristic type which stores the account identifier type. It is used to determine the account to which you want to bill the group or individual membership.	Yes (Conditional) Note: This data is required while billing a group or individual membership.
	Note: You must specify a characteristic type where the characteristic entity is set to Membership .	
Account Identifier Value Char Type	Used to specify the characteristic type which stores the account identifier. It is used to determine the account to which you want to bill the group or individual membership.	Yes (Conditional) Note: This data is required while billing a group or individual membership.
	Note: You must specify a characteristic type where the characteristic entity is set to Membership .	
Age Based Parameter	Used to specify the parameter using which you want to define the lower age limit and upper age limit pricing eligibility criteria in an age based pricing.	Yes (Conditional) Note: This data is required while defining an age based pricing rule.
	Note: The AGEBASED parameter is shipped with the product. By default, the value is set to AGEBASED . You can change the value, if required. However, note that you must specify an adhoc parameter where source entity is set to Algorithm , source type code is set to Calculate membership person's age , and the parameter usage is set to Pricing Eligibility Criteria .	
Approval Workflow Group for ASL	Used to specify the approval workflow group for an aggregate stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an aggregate stop-loss pricing rule.	Yes (Conditional) Note: This data is required while enabling the approval workflow process for an aggregate stop-loss pricing rule.
	Note: The C1PRCASL approval workflow group for an aggregate stop-loss pricing rule is shipped with the product. By default, the value is set to C1PRCASL . You can change the value, if required.	

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for Ancillary	Used to specify the approval workflow group for an ancillary pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an ancillary pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRCANC approval workflow group for an ancillary pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRCANC. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for an ancillary pricing rule.</p>
Approval Workflow Group for Claim	Used to specify the approval workflow group for a claim pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a claim pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRCRLCLM approval workflow group for a claim pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRCRLCLM. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for a claim pricing rule.</p>
Approval Workflow Group for Flat Fees	Used to specify the approval workflow group for the one-time and recurring flat fees pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the one-time and recurring flat fees pricing rules.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRFLTFFEE approval workflow group for the one-time and recurring flat fees pricing rules is shipped with the product.</p> <p>By default, the value is set to C1PRFLTFFEE. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for the one-time and recurring flat fees pricing rules.</p>

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for Level Funded	Used to specify the approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the enrollment based premium and flat rate based premium level funded pricing rules.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRCLVLFN approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules is shipped with the product.</p> <p>By default, the value is set to C1PRCLVLFN. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for the enrollment based premium and flat rate based premium level funded pricing rules.</p>
Approval Workflow Group for MPP	Used to specify the approval workflow group for a minimum premium program pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a minimum premium program pricing rule.	Yes (Conditional)
Approval Workflow Group for Retention Type Claim Based	Used to specify the approval workflow group for a retention type claim based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type claim based pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRETCLM approval workflow group for a retention type claim based pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRETCLM. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for a retention type claim based pricing rule.</p>
Approval Workflow Group for Retention Type Enrollment Based	Used to specify the approval workflow group for a retention type enrollment based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type enrollment based pricing rule.	Yes (Conditional)
	<p>Note:</p> <p>The C1PRRETENR approval workflow group for a retention type enrollment based pricing rule is shipped with the product.</p> <p>By default, the value is set to C1PRRETENR. You can change the value, if required.</p>	<p>Note: This data is required while enabling the approval workflow process for a retention type enrollment based pricing rule.</p>

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for SSL	<p>Used to specify the approval workflow group for a specific stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a specific stop-loss pricing rule.</p> <p>Note: The C1PRCSSL approval workflow group for a specific stop-loss pricing rule is shipped with the product. By default, the value is set to C1PRCSSL. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for a specific stop-loss pricing rule.</p>
Approval Workflow Group-Discount Arrangement	<p>Used to specify the approval workflow group for the discount share and discount guarantee pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the discount share and discount guarantee pricing rules.</p> <p>Note: The C1PRCDA approval workflow group for the discount share and discount guarantee pricing rules is shipped with the product. By default, the value is set to C1PRCDA. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while enabling the approval workflow process for the discount share and discount guarantee pricing rules.</p>
Base Fee PC Sequence Characteristic	<p>Used to specify the characteristic type where you want to store the sequence number of the eligible base fee's price component. This characteristic is then passed to the rating engine for further processing.</p> <p>Note: The C1BSFESE characteristic type is shipped with the product. By default, the value is set to C1BSFESE. You can change the value, if required. However, note that you must specify an adhoc characteristic type where the characteristic entity is set to Rate Component.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p>
Benefit Billing Arrangement	<p>Used to specify the characteristic type which indicates whom to bill the premium for a Medicare group membership. This characteristic type is defined for a policy plan, policy, and/or parent customer. The system then uses this characteristic type to determine whom to bill the Medicare group membership premium.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing the premium for a Medicare group membership.</p>

Option Type	Description	Mandatory (Yes or No)
Bill Cycle Rule Code	Used to specify the characteristic type which stores the billing preference of the account. This characteristic type is defined for an account. The system then uses this characteristic type to derive the bill cycle and bill period for the account.	Yes (Conditional)
	Note: You must specify a characteristic type where the characteristic entity is set to Account .	Note: This data is required when you want the bill cycle and bill period to be tightly coupled with each other.
Bill Group Policy Person Role	Used to specify the policy person role using which a bill group should be associated with a fully-insured group or self-funded policy when the policy information is given for the bill group in an inbound message.	Yes
	Note: You must specify a policy person role which is already defined in the system.	
Bill Seg Req Reference Id Char Type	Used to indicate the characteristic type where you want to store the request reference ID. During the fully-insured group and individual bill segment generation, this characteristic is stamped on a bill segment calculation line which indicates the repricing request for which the bill segment calculation line is created.	Yes (Conditional)
	Note: You must specify a characteristic type where the characteristic entity is set to Bill Segment Calc Line .	Note: This data is required while billing fully-insured group and individual health plans.
Billable Charge Line Type Parameter	Used to specify the parameter in which you want to store the billable charge line type. This parameter can then be used while defining an ancillary pricing rule type.	Yes (Conditional)
	Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item .	Note: This data is required while defining an ancillary pricing rule type.
Billing Arrangement	Used to specify the characteristic type which indicates whom to bill the premium for an active employee coverage group membership. This characteristic type is defined for a parent customer and/or bill group. The system then uses this characteristic type to determine whom to bill the active employee coverage group membership premium.	Yes (Conditional)
		Note: This data is required while billing the premium for an active employee coverage group membership.
Binder Payment Field Mapping	Used to specify a binder payment preference. The system considers the various attributes of the binder payment preference while creating and monitoring binder payments for an individual membership.	Yes (Conditional)
	Note: You must specify a binder payment preference which is already defined in the system.	Note: This data is required while creating and monitoring binder payments for an individual membership.

Option Type	Description	Mandatory (Yes or No)
Claim Template Extendable Lookup Business Object	<p>Used to specify the claim template extendable lookup business object. The system displays the values of the specified extendable lookup in the Claim Template list while defining or editing a claim pricing rule type.</p> <p>Note:</p> <p>The C1-ExtLookClaimTemplate extendable lookup for claim template is shipped with the product.</p> <p>By default, the value is set to C1-ExtLookClaimTemplate. You can change the value, if required.</p>	Yes
Cobra Billing Arrangement	<p>Used to specify the characteristic type which indicates whom to bill the premium for a COBRA group membership. This characteristic type is defined for a policy plan, policy, and/or parent customer. The system then uses this characteristic type to determine whom to bill the COBRA group membership premium.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing the premium for a COBRA group membership.</p>
Customer Registration ID Characteristic for Inbound Log	<p>Used to specify the characteristic type where you want to store the customer registration ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the customer registration object which is created through the health care inbound message.</p> <p>Note:</p> <p>The C1CRLOG characteristic type is shipped with the product.</p> <p>By default, the value is set to C1CRLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a person, account, policy, and/or policy plan through a health care inbound message.</p>
Default Flat Rate Option	<p>Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either FLAT or NULL in the pricing rule data of a health care inbound message.</p> <p>Note: You must specify a rate option where the rate schedule is set to HC_FRTSC.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating an age based and tier based pricing.</p>
Default Percentage Rate Option	<p>Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either EXPT or INPT in the pricing rule data of a health care inbound message.</p> <p>Note: You must specify a rate option where the rate schedule is set to HC_PRTSC.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating an age based and tier based pricing.</p>

Option Type	Description	Mandatory (Yes or No)
Invoice Type Characteristic Type	<p>Used to specify the characteristic type which indicates the type of account. This characteristic type is defined for the account. The system then uses this characteristic type to determine the account on which the claim, specific stop-loss credits, aggregate stop-loss credits, claim based fee, enrollment based fee, one-time flat fees, recurring flat fees, ancillary, discount, or level funded billable charges should be created in the system. For more information, refer to <i>Bill Group's Account</i> on page 73.</p> <p>Note: The CIINVTYP characteristic type is shipped with the product. By default, the value is set to CIINVTYP. You can change the value, if required. However, note that you must specify a predefined characteristic type where the characteristic entity is set to Account.</p>	Yes
Line Item Extendable Lookup Business Object	<p>Used to specify the line item extendable lookup business object. The system displays the values of the specified extendable lookup in the Line Item list while defining, editing, or copying a claim template.</p> <p>Note: The C1-ExtLookPricingRuleLineItem extendable lookup for line item is shipped with the product. By default, the value is set to C1-ExtLookPricingRuleLineItem. You can change the value, if required.</p>	Yes
Medicare	<p>Used to specify a Medicare preference. The system considers the various attributes of the Medicare preference while creating charges for Medicare Part D Low Income Subsidy (LIS) and Late Enrollment Penalty (LEP).</p> <p>Note: You must specify a Medicare preference which is already defined in the system.</p>	Yes (Conditional) Note: This data is required while creating charges for Medicare Part D LIS and LEP.
Membership Cancel Status	<p>Used to specify the status to which an individual membership should be transitioned when the status of its main subscriber is set to Canceled.</p> <p>Note: You must specify a status which is defined in the lifecycle of the C1-IndMembership business object.</p>	Yes (Conditional) Note: This data is required while canceling an individual membership.

Option Type	Description	Mandatory (Yes or No)
Membership Characteristic for Inbound Log	<p>Used to specify the characteristic type where you want to store the membership ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the group or individual membership which is created through the health care inbound message.</p> <p>Note: The CIMBRLOG characteristic type is shipped with the product. By default, the value is set to CIMBRLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a group or individual membership through a health care inbound message.</p>
Membership ID for Billable Charge	<p>Used to specify the characteristic type where you want to store the membership ID. During the fully-insured group and individual billable charge creation process, this characteristic is stamped on a billable charge which indicates the group or individual membership for which the billable charge is created.</p> <p>Note: You must specify a foreign key characteristic type where the characteristic entity is set to Billable Charge.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing a group or individual membership.</p>
Membership Inactive Status	<p>Used to specify the status to which a group membership should be transitioned when its main subscriber is inactivated.</p> <p>Note: You must specify a status which is defined in the lifecycle of the C1-Membership business object.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while inactivating a group membership.</p>
Membership Person Cancel Status	<p>Used to specify the status to which the member persons of an individual membership should be transitioned when the individual membership is canceled.</p> <p>Note: You must specify a status which is defined in the MEMBER_PER_STATUS_FLG lookup field.</p>	<p>Note: This data is required while canceling an individual membership.</p>
Membership Person Inactive Status	<p>Used to specify the status to which the member persons of a group membership should be transitioned when the group membership is inactivated.</p> <p>Note: You must specify a status which is defined in the MEMBER_PER_STATUS_FLG lookup field.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while inactivating a group membership.</p>
Off-process Request Detail Maximum Count	<p>Used to indicate the maximum number of amendment details you can specify in an off-process request.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating an off-process request.</p>

Option Type	Description	Mandatory (Yes or No)
Override Proration Applicability Characteristic Type	Used to specify the characteristic type which indicates whether the proration rule should be overridden for a member person. At present, the override proration feature is used for a new born when the gift days are offered to a new born. This characteristic type can be defined for the group membership, policy plan, policy, and state.	Yes (Conditional) Note: This data is required when you want to override the proration rule.
	Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, Policy, and State . Here, the predefined values for the characteristic type can be Y and N .	
Override Proration Effective Date Characteristic Type	Used to specify the characteristic type where you want to store the date from when the premium should be calculated for the new born. This characteristic is used during the bill segment generation to determine the bill period in which the date falls. The system then accordingly prorates the premium amount for the new born.	Yes (Conditional) Note: This data is required when you want to override the proration rule.
	Note: You must specify a characteristic type where the characteristic entity is set to Membership Person .	
Override Proration Rule Characteristic Type	Used to specify the characteristic type where you want to store the override SQ rule for a new born. This characteristic type can be defined for the group membership, policy plan, policy, and state. If this characteristic is not defined at any level, the system uses the SQ rule of the rate schedule attached to the active contract to prorate the premium amount of a new born child.	Yes (Conditional) Note: This data is required when you want to override the proration rule.
	Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, Policy, and State .	
Parent Customer Policy Person Role	Used to specify the policy person role using which the parent customer should be associated with a fully-insured group or self-funded policy when the policy information is given for the bill group or parent customer in an inbound message.	Yes
	Note: You must specify a policy person role which is already defined in the system.	

Option Type	Description	Mandatory (Yes or No)
Person Characteristic ID for Inbound Log	Used to specify the characteristic type where you want to store the person ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the person whose record is created through the health care inbound message.	Yes (Conditional)
	<p>Note:</p> <p>The CIPERLOG characteristic type is shipped with the product.</p> <p>By default, the value is set to CIPERLOG. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log.</p>	<p>Note: This data is required while creating a person through a health care inbound message.</p>
Person Identifier Type Char Type	Used to specify the characteristic type which stores the person identifier type. It is used to determine the person to whom you want to bill the group or individual membership.	Yes (Conditional)
	<p>Note: You must specify a characteristic type where the characteristic entity is set to Membership.</p>	<p>Note: This data is required while billing a group or individual membership.</p>
Person Identifier Value Char Type	Used to specify the characteristic type which stores the person identifier. It is used to determine the person to whom you want to bill the group or individual membership.	Yes (Conditional)
	<p>Note: You must specify a characteristic type where the characteristic entity is set to Membership.</p>	<p>Note: This data is required while billing a group or individual membership.</p>
Person Relationship Type	Used to indicate how a bill group should be related to a parent customer. The system uses the person relationship type while: <ul style="list-style-type: none"> • Creating a bill group for a parent customer through an inbound message • Viewing the 360° information of a parent customer <p>Note: You must specify a person relationship type which is already defined in the system.</p>	Yes
Plan Based Contract Characteristic Type	Used to specify the characteristic type which helps to determine whether the system should create plan-specific contracts for a price item. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts.	Yes (Conditional)
	<p>Note: You must specify a characteristic type where the characteristic entity is set to Person.</p>	<p>Note: This data is required when you want to enable the plan-specific contract creation feature for specific persons in the fully-insured group health plan business.</p>

Option Type	Description	Mandatory (Yes or No)
Plan Based Contract Characteristic Value	Used to specify the characteristic value which indicates that the system should create plan-specific contracts for a price item on the accounts.	Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for specific persons in the fully-insured group health plan business.
Plan Based Contract Creation Eligibility	Used to indicate whether the system should create plan-specific contract for a price item on the account. The valid value is Yes .	Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for the fully-insured group health plan business.
Plan Id Characteristic Type	Used to specify the characteristic type where you want to store the plan for which the contract is created. During the fully-insured group policy plan contract creation, this characteristic is defined on the contract. Note: You must specify a characteristic type where the characteristic entity is set to Contract .	Yes (Conditional) Note: This data is required when you want to enable the plan-specific contract creation feature for the fully-insured group health plan business.
Policy Reinstatement Status	Used to specify the status to which the policy must be transitioned when it is reinstated. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object.	Yes (Conditional) Note: This data is required while reinstating a fully-insured group policy.
Policy Renewal Status	Used to specify the status to which the policy must be transitioned when it is renewed. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object.	Yes (Conditional) Note: This data is required while renewing a fully-insured group policy.
Policy Termination Status	Used to specify the status to which the policy must be transitioned when it is terminated. Note: You must specify a status which is defined in the lifecycle of the C1-POLICY business object.	Yes (Conditional) Note: This data is required while terminating a fully-insured group policy.

Option Type	Description	Mandatory (Yes or No)
Pricing Arrangement Parameter	Used to specify the parameter in which you want to store the pricing arrangement. This parameter can then be used while defining an ancillary pricing rule type.	Yes (Conditional)
	Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item .	Note: This data is required while defining an ancillary pricing rule type.
Pricing Group Rule Parameter	Used to specify the parameter in which you want to store the pricing group rule. The system stamps this parameter on the price assignment which is created through a pricing rule using a pricing group. It indicates that the price assignment is created using the respective rule in the pricing group.	Yes (Conditional)
	Note: You must specify an adhoc parameter where the source entity is set to Transaction and the parameter usage is set to Price Item .	Note: This data is required while defining a claim, specific stop-loss, aggregate stop-loss, retention type claim based, or retention type enrollment based pricing rule for a bill group using a pricing group.
Pricing Rule ID for Inbound Log Characteristic	Used to specify the characteristic type where you want to store the pricing rule ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the pricing rule which is created through the health care inbound message.	Yes (Conditional)
	Note: The C1PRLOG characteristic type is shipped with the product. By default, the value is set to C1PRLOG . You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Inbound Message Log .	Note: This data is required while creating a pricing rule through a health care inbound message.

Option Type	Description	Mandatory (Yes or No)
Pricing Rule Type Category Characteristic	<p>Used to specify the characteristic type which indicates the pricing rule type category. This characteristic type is defined for a billable charge line type. The system uses this characteristic to lists the billable charge line types which are valid while defining a pricing rule type or pricing rule of a particular category.</p> <p>Note: The CIPRTCAT characteristic type is shipped with the product. By default, the value is set to CIPRTCAT. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to Billable Charge Line Type.</p>	Yes
Proration Distributed SQI	<p>Used to specify the SQI where you want to store the distributed premium amount for the non-skip billing period. The system uses this SQI while creating the SQI based billable charge for the group membership premium.</p> <p>Note: You must specify an SQI which is already defined in the system.</p>	<p>es (Conditional)</p> <p>Note: This data is required when the 9/10 Billing (Skip Months) feature is enabled for an account.</p>
Proration SQI	<p>Used to specify the SQI where you want to store the pre-calculated or calculated premium amount. The system uses this SQI while creating the SQI based billable charge for the group or individual membership premium.</p> <p>Note: You must specify an SQI which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p>
Rate Component Base Fee Characteristic	<p>Used to specify the characteristic type which indicates whether the rate component is a base fee rate component. This characteristic type is defined for the rate component.</p> <p>Note: The C1RCBFMA characteristic type is shipped with the product. By default, the value is set to C1RCBFMA.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Rate Option Extendable Lookup Business Object	<p>Used to specify the rate option extendable lookup business object. The system displays the values of the specified extendable lookup in the Rate Option list while defining, editing, or copying a pricing rule type.</p> <p>Note: The C1-ExtLookRetTypeRateOpt extendable lookup for rate option is shipped with the product. By default, the value is set to C1-ExtLookRetTypeRateOpt. You can change the value, if required.</p>	Yes
Rating Area Field Mapping for Group	<p>Used to specify a geographic rating area preference. The system considers the various attributes of the geographic rating area preference while deriving the geographic rating area for a group membership.</p> <p>Note: You must specify a geographic rating area preference which is already defined in the system.</p>	Yes (Conditional) Note: This data is required while deriving the geographic rating area for a group membership.
Rating Area Field Mapping for Individual	<p>Used to specify a geographic rating area preference. The system considers the various attributes of the geographic rating area preference while deriving the geographic rating area for an individual membership.</p> <p>Note: You must specify a geographic rating area preference which is already defined in the system.</p>	Yes (Conditional) Note: This data is required while deriving the geographic rating area for an individual membership.
Relation Structure Code Field Mapping	<p>Used to specify a member relationship and subscription tier preference. The system considers the various attributes of the member relationship and subscription tier preference while deriving the member relationship for a member person and the subscription tier for a group or individual membership.</p> <p>Note: You must specify a member relationship and subscription tier preference which is already defined in the system.</p>	Yes (Conditional) Note: This data is required while deriving the member relationship for a member person and the subscription tier for a group or individual membership.
Sponsored Switch Characteristic for Billable Charge	<p>Used to specify the characteristic type which indicates whether the billable charge is a reverse charge for a benefit. This characteristic type is defined while creating the reverse charge for a benefit.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Billable Charge.</p>	Yes (Conditional) Note: This data is required while creating the reverse charge for a benefit.

Option Type	Description	Mandatory (Yes or No)
State of Issue Characteristic Type	<p>Used to specify the characteristic type where you store the state for which the group or individual membership, policy plan, or policy is issued. This characteristic type can be defined for the group or individual membership, policy plan, or policy. This characteristic is used while identifying a list of eligible children in a group or individual membership for premium calculation.</p> <p>Note: You must specify a characteristic type where the characteristic entity is set to Membership, Policy Plan, and Policy.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while identifying a list of eligible children for premium calculation.</p>
Status Reason Mapping	<p>Used to specify a membership status reason preference. The system considers the various attributes of the membership status reason preference while deriving the individual membership or member person status reason.</p> <p>Note: You must specify a membership status reason preference which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while maintaining an individual membership.</p>
To Do Role Characteristic Type	<p>Used to specify the characteristic type where you want to store the To Do role. This characteristic type is defined for the parent customer. The system uses this characteristic to determine the users to whom the To Dos created using the C1-REPC1, C1-REPC2, and C1-FIBCR To Do types should be assigned.</p> <p>Note:</p> <p>A To Do is created using the C1-REPC1 To Do type when an error occurs while creating a repricing request. A To Do is created using the C1-REPC2 To Do type when an error occurs while calculating group or individual membership premium. A To Do is created using the C1-FIBCR To Do type when an error occurs while creating a billable charge for a group and individual membership.</p> <p>You must specify an adhoc characteristic type where the characteristic entity is set to Person.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while billing fully-insured group and individual health plans.</p>
TPA Account Relationship Type	<p>Used to indicate how a third party administrator (TPA) person should be related to its account. The system uses this account relationship type while creating a TPA account for a TPA person through a health care inbound message.</p> <p>Note: You must specify an account relationship type which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while creating a TPA account through a health care inbound message.</p>

Option Type	Description	Mandatory (Yes or No)
TPA Person Relationship Type	Used to indicate how a third party administrator (TPA) person should be related to its parent customer. The system uses this person relationship type while creating a TPA person for a parent customer through a health care inbound message.	Yes (Conditional)
	Note: You must specify a person relationship type which is already defined in the system.	Note: This data is required while creating a TPA person through a health care inbound message.
TPA Policy Person Role	Used to specify the policy person role using which a third party administrator (TPA) person should be associated with a fully-insured group policy when the policy information is given for the TPA person in a health care inbound message.	Yes (Conditional)
	Note: You must specify a policy person role which is already defined in the system.	Note: This data is required while associating a TPA person with a fully-insured group policy through a health care inbound message.

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_AXENTITY Feature Configuration

The **C1_AXENTITY** feature configuration enables you to configure various settings related to the **Approval Workflow** feature.

Prerequisites

To set the **C1_AXENTITY** feature configuration, you should have:

- An algorithm defined using the **C1-APPTXN** algorithm type in the application
- To Do types defined in the application
- Fields defined in the application
- XSL files that you want to use for the Input and Display UI maps

Procedure

To set the **C1_AXENTITY** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_AXENTITY** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which you want to highlight the new record or new additions made to the existing record. This helps in comparing the existing and new data while reviewing an approval transaction.	Yes
	Note: You must specify a hexadecimal value for this option type.	
Approval Transaction Compare Value Changed Color	Used to indicate the color in which you want to highlight the modifications made to the existing data. This helps in comparing the existing and new data while reviewing an approval transaction.	Yes
	Note: You must specify a hexadecimal value for this option type.	
Approval Transaction Entity Access Algorithms	Used to specify the algorithm which controls access to the maintenance objects based on the access group and division.	Yes
	Note: By default, the value is set to C1-APPTXN . If you create new maintenance objects and want to control the access of these new maintenance objects based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you will have to define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.	

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Resolve To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an approver at any level in the hierarchy rejects an approval transaction.	Yes
	Note: You must specify a To Do type which is already defined in the system.	
Approval Transaction screen timeout	Used to indicate the time (in minutes) in which the screen timeout message should appear in the Comparison: New versus Existing screen when the system takes longer time to display an approval transaction.	Yes
Disable Approval Transaction Fields in Input UI Maps	Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.	Yes
	Note: You must specify a field which is already defined in the application.	
Display Existing Panel on Left Side (Y/N)	Used to indicate whether you want to view the existing or new data in the left panel while reviewing an approval transaction. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want the existing data to appear in the left panel of the Comparison: New versus Existing screen. • N - Used when you want the new data to appear in the left panel of the Comparison: New versus Existing screen. 	No
	Note: If you do not specify the value for this option type, by default, it is set to N.	
Display Information String	Used to indicate whether the approval transaction information string should appear in the Comparison: New versus Existing screen when you are reviewing an approval transaction of a construct. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Display only Differences of fields on UI	Used to indicate whether you want to view only those fields of a record where the data is added or updated or all fields of a record while reviewing an approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to view only those fields of a record where the data is added or updated in the Comparison: New versus Existing screen. • No - Used when you want to view all fields of a record in the Comparison: New versus Existing screen. 	Yes

Option Type	Description	Mandatory (Yes or No)
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-BILLADJSQ Feature Configuration

Prerequisites

To set the **C1-BILLADJSQ** feature configuration, you should have:

- Service quantity identifiers (SQIs) defined in the application

Procedure

To set the **C1-BILLADJSQ** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-BILLADJSQ** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Billable Charge SQI	Used to specify the service quantity identifier (SQI) which you want to use while creating a billable charge for the state assessment fee.	Yes (Conditional)
	Note: You must specify an SQI which is already defined in the system.	Note: This data is required when you want to create billable charges for the state assessment fee.

Option Type	Description	Mandatory (Yes or No)
Coverage End Date SQI	Used to specify the service quantity identifier (SQI) which you want use to derive the coverage end date from the account's last billed charge. The system uses the derived coverage end date in calculating the future retro adds (debits) for the respective account.	Yes
	Note: You must specify an SQI which is already defined in the system.	
Premium Amount SQI	Used to specify the service quantity identifier (SQI) based on which you want to calculate the catch up premium for each eligible billable charge. The value derived is finally used to calculate the future retro adds (debits) for the respective account.	Yes
	Note: You must specify an SQI which is already defined in the system. The future retro adds (debits) appears in the Billing and Adjustment Summary zone of the Account tab on the Customer 360° Information screen.	

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_CMO Feature Configuration

The **C1_CMO** feature configuration enables the system to determine the following:

- Administrative contracts and excess credit transactions which should be listed in the **Customer 360° Information** screen
- Payments against the suspense, on account, and excess credit contracts which are eligible for partial payment transfer from the payment list

Prerequisites

To set the **C1_CMO** feature configuration, you should have:

- Required contract types defined in the application

Procedure

To set the **C1_CMO** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_CMO** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Administrative Contract Type	<p>Used to specify the contract type. The contracts of the specified contract type are then listed in the Administrative Contracts zone of the Account tab on the Customer 360° Information screen.</p> <p>Note:</p> <p>If you want to specify multiple contract types, you need to set the Administrative Contract Type option type multiple times with a unique sequence number.</p> <p>If you do not specify the value for this option type, the data does not appear in the Administrative Contracts zone.</p>	No
On Account Contract Type	<p>Used to specify the contract type. The excess credit transactions on the contracts of the specified contract type are then listed in the Billed Vs Paid zone of the Account tab on the Customer 360° Information screen. It also helps the system to determine the payments against the on account contracts (created using the specified contract type) which are eligible for partial payment transfer from the payment list.</p> <p>Note:</p> <p>If you want to specify multiple contract types, you need to set the On Account Contract Type option type multiple times with a unique sequence number.</p> <p>If you do not specify the value for this option type, the data does not appear in the Billed Vs Paid zone.</p>	No

Option Type	Description	Mandatory (Yes or No)
Excess Credit Contract Type	Used to specify the contract type. It helps the system to determine the payments against the excess credit contracts (created using the specified contract type) which are eligible for partial payment transfer from the payment list. Ideally, these excess credit contracts of the accounts should be used to park overpayments on the bills.	No
	Note: If you want to specify multiple contract types, you need to set the Excess Credit Contract Type option type multiple times with a unique sequence number.	
Suspense Contract Type	Used to specify the contract type. It helps the system to determine the payments against the suspense contracts (created using the specified contract type) which are eligible for partial payment transfer from the payment list.	No
	Note: If you want to specify multiple contract types, you need to set the Suspense Contract Type option type multiple times with a unique sequence number.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_DIVFUNCT Feature Configuration

Procedure

To set the **C1_DIVFUNCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1_DIVFUNCT** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the Person , Account and Contract screens. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-EHRCONFIG Feature Configuration

The **C1-EHRCONFIG** feature configuration enables the system to determine the maximum number of levels that can be included in an entity hierarchy relationship. Accordingly, the system enables you to create hierarchy entities for upto one level less than the level specified in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. For example, if you set the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

Procedure

To set the **C1-EHRCONFIG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1-EHRCONFIG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Maximum Hierarchy Level	Used to indicate the maximum number of levels that you want to include in an entity hierarchy relationship. Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels. The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. By default, the value is set to 10. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in this option type.	Yes

7. Enter the value for the required option type in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXCHRATE Feature Configuration

Procedure

To set the **C1_EXCHRATE** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_EXCHRATE** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> • Y • N By default, the value of this option type is set to N .	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXP_OVRD Feature Configuration

Procedure

To set the **C1_EXP_OVRD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_EXP_OVRD** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FINTRANOP Feature Configuration

The **C1_FINTRANOP** feature configuration enables the system to determine various options which should be considered while creating billable charges, determining a price item pricing, generating bill segments, and while creating an actual bill using a trial bill.

Procedure

To set the **C1_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1_FINTRANOP** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Financial History Details Switch	<p>Used to indicate whether detailed or summarized information should be displayed for an account in the Account Financial History screen. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to list all financial transactions of a bill, payment, or adjustment for an account in the Account Financial History screen. • N - Used when you want to summarize all financial transactions of a particular type on an entity (i.e. bill, payment, or adjustment) and display the total amount in the Account Financial History screen. <p>Note: If you do not specify the value for this option type, by default, it is set to Y.</p>	No
Allow Caching Of Rule Based Autopay List	<p>Used to indicate whether you want to cache the rule based auto pay instructions of an account when the C1-APRULEEVL algorithm is invoked. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Avoid Pricing Crawling if Rate Schedule present at Contract	<p>Used to indicate that the system should not determine the price item pricing using the price assignment search algorithm (which is attached on the account's division) when the effective rate schedule is present on the contract. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

Option Type	Description	Mandatory (Yes or No)
Bill Segment Regeneration on Freeze	<p>Used to indicate whether you want to regenerate the bill segments before freezing them. The valid value is:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to N.</p> <p>If the Freeze and Complete option is selected for the respective window period in the bill cycle and the Bill Segment Regeneration on Freeze option type is set to Y, then the bill segments are regenerated and the status of the bill segments is set to Frozen. However, if the Freeze and Complete option is not selected for the respective window period in the bill cycle, then the bill segments are always regenerated irrespective of whether the Bill Segment Regeneration on Freeze option type is set to Y or N.</p>	No
Billable Charges Date	<p>Used to indicate whether you want to consider the non-recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S - Used when you want to consider the non-recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the non-recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to S.</p> <p>The system always considers the recurring billable charges whose start date is earlier than the cut-off date and end date is later than the cut-off date irrespective of whether the Billable Charges Date option type is set to S or E.</p>	No

Option Type	Description	Mandatory (Yes or No)
Skip Priceitem Contract Type Validation	<p>Used to indicate whether you want to skip the price item's and billable charge's contract's contract type validation. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you to create a billable charge for a price item on the contract which is created using a contract type to which the price item is not associated. • N - Used when you to create a billable charge for a price item on the contract which is created using a contract type to which the price item is associated. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Rate Component Step Optimization	<p>Used to indicate whether you want to determine the rate for all tiering ranges of a step tiered rate component or for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to determine the rate for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. It helps to improve the performance of the billing batches. If you set this option type to Y, always ensure that you define the price components with the tiering ranges in the ascending order. • N - Used when you want to determine the rate for all tiering ranges of a step tiered rate component. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Trial Bill Characteristics Conversion	<p>Used to indicate whether you want to copy the trial bill's characteristics when an actual bill is created using a trial bill. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FM Feature Configuration

Procedure

To set the **C1_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_FM** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNIP for this option type.	
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNCU for this option type.	
Disaggregation - Price Assignment	Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: You can use this feature when an algorithm which is created using the TXNDISAGGPRA algorithm type is attached to the Post-Processing system event of the C1_PRASGN_BO business object.	

Option Type	Description	Mandatory (Yes or No)
Allow Duplicate Summary ID	<p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the Service Quantity Calculation (C1-TXNSQ) batch. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note:</p> <p>If you set this option type to false, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 5 • 6 • 7 <p>Note:</p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2⁴) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p>	No

Option Type	Description	Mandatory (Yes or No)
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, Validate Transaction and Derive Price Item . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns Rule Is True irrespective of whether the rule true action is set to Next Dependent, Next Rule by Priority, or Success and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the Ignore Transaction, Aggregate Transaction, and Aggregation Schedule fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Use Materialized Views	<p>Used to indicate whether the price item pricing information must be cached in the CI_PRC_AGRD, CI_PRC_PL, and CI_PRC_INH_PL tables. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
Maximum Price Item Parameters Cache Size	Used to indicate the maximum number of price items whose parameter information can be cached in the memory.	Yes
Maximum Price Item Parameter Groups Cache Size	Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.	Yes

Option Type	Description	Mandatory (Yes or No)
SQ Recalculation Required	<p>Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the C1-TXNCU batch. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No
Transaction Detail Account Validation	<p>Used to indicate whether the account must be validated during the transaction validation process. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	<p>Used to specify the description for the batch which is used for adding a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. For example, Populate CI_TXN_DTL_PRITM_SUMMARY Table. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when the Use C1-TXNPS During Transaction Aggregation option type is set to true.</p>
Find Price Item Pricing Batch Description	<p>Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, Price Item Pricing Verification. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes
Update Transaction Status Batch Description	<p>Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, Update Status. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Service Quantity Calculation Batch Description	Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, Service Quantity Calculation . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Transaction Completion Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, Mark Completion . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, Clean Up . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Use C1-TXNPS During Transaction Aggregation	<p>Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you set this option type to true, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> 1. Flush All Caches (F1-FLUSH) 2. Refresh Pricing (C1-TXNRP) 3. Header Validation (C1-TXNHV) 4. Validate Transaction and Derive Price Item (C1-TXNIP) 5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS) 6. Price Item Pricing Verification (C1-TXNVP) 7. Update Status (C1-TXNEX) 8. Service Quantity Calculation (C1-TXNSQ) 9. Mark Completion (C1-TXNCM) 10. Clean Up (C1-TXNCU) with the Request Type parameter set to EROR 	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

Procedure

To set the **C1-OFFSETREQ** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-OFFSETREQ** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Allow Offsetting Across Persons	Used to indicate whether you want to offset bills across main customer’s hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons. • N - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer. 	Yes

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYPORTAL Feature Configuration**Procedure**

To set the **C1-PAYPORTAL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-PAYPORTAL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> • true • false 	Yes
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the Edit Payment Amount screen. Note: The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.	Yes

Option Type	Description	Mandatory (Yes or No)
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the Edit Payment Amount screen.	Yes
	Note: The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the Edit Payment Amount screen.	Yes
	Note: The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the Edit Payment Amount screen.	No
	Note: At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PER_REL Feature Configuration

You can define person to person relationship type sequence in the **C1_PER_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

Procedure

To set the **C1_PER_REL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.

- In the **Feature Configuration Search** zone, enter **C1_PER_REL** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type. Note: If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PERSTYPE Feature Configuration

The **C1_PERSTYPE** feature configuration enables the system to determine whether the entities should be created directly or through a customer registration object whenever a health care inbound message is processed. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type**, **Parent Person Type**, or **TPA Person Type** option type of the **C1_PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type**, **Parent Person Type**, or **TPA Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object.

Prerequisites

To set the **C1_PERSTYPE** feature configuration, you should have:

- Values defined for the **PER_OR_BUS_FLG** lookup field

Procedure

To set the **C1_PERSTYPE** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PERSTYPE** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill Group Person Type	Used to specify the person type which indicates that the person is a bill group.	Yes (Conditional)
	Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status.	Note: This data is required while creating a bill group through a health care inbound message.
Parent Person Type	Used to specify the person type which indicates that the person is a parent customer.	Yes (Conditional)
	Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status.	Note: This data is required while creating a parent customer through a health care inbound message.
TPA Person Type	Used to specify the person type which indicates that the person is a third party administrator.	Yes (Conditional)
	Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status.	Note: This data is required while creating a TPA person through a health care inbound message.

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1_PPARM_FLG Feature Configuration

The **C1_PPARM_FLG** feature configuration enables the system to determine whether the multi parameter based pricing or variance parameter based pricing feature is enabled. For more information on how to define pricing for a price item or price item bundle based on multiple parameters, see [Multi Parameter Based Pricing](#). For more information on how to define pricing for a price item or price item bundle based on variance parameter, see [Variance Parameter Based Pricing](#).

Procedure

To set the **C1_PPARM_FLG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PPARM_FLG** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to enable the multi parameter or variance parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> • True - Used when you want to enable the multi parameter based pricing feature. • False - Used when you want to enable the variance parameter based pricing feature. 	Yes

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PR_REC Feature Configuration

Procedure

To set the **C1_PR_REC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Query** screen appears.

4. In the **Feature Configuration Search** zone, enter **C1_PR_REC** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of feature configurations that meet the search criteria appears in the search results.

6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Effective Pricing Record Set Limit	Used to specify the number of records that can be displayed in the Search Results section of the Effective Price Assignment zone. The value must be an integer and not in decimals. The maximum number of records that can be displayed are 5000.	Yes
	Note: If you enter the value as 0 or if you do not specify the value for the Effective Pricing RecordSet Limit option type, no records will be displayed in the Search Results section.	

7. Enter the values for the required option types in the **Feature Configuration** screen.

8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRASNORDR Feature Configuration

The **C1_PRASNORDR** feature configuration enables the system to determine the manner in which price assignments should be searched for a global customer. For more information on how effective price item pricing is derived, see [Price Assignment Search Mechanism](#).

Prerequisites

To set the **C1_PRASNORDR** feature configuration, you should have:

- An algorithm defined using the **C1_PRASN_PP** algorithm type in the application

Procedure

To set the **C1_PRASNORDR** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PRASNORDR** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Price Assignment Algorithm	Used to specify the algorithm using which the price assignment should be searched for a global customer.	Yes
	Note: You must specify an algorithm which is already defined in the system.	

7. Enter the value for the required option type in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRICING Feature Configuration

The **C1_PRICING** feature configuration enables the system to determine the following:

- The contract type that should be associated with a price item or price item bundle which is available for pricing.
- The priority that should be defaulted while assigning a price list to a person or an account from the user interface or through a business service.
- Whether the logs should be maintained when the **C1-GetAllAssignedPriceLists**, **C1-AssignPriceList**, **C1-GetEffectivePricing**, **C1-GetAccountRate**, **C1_PRICEASSIGN_SERVICE**, **C1-PriceAccount**, and **C1-GetPricing** business services are invoked.

Prerequisites

To set the **C1_PRICING** feature configuration, you should have:

- Contract types defined in the application

Procedure

To set the **C1_PRICING** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_PRICING** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Default Contract Type	Used to indicate the contract type that you want to associate with a price item or price item bundle which is available for pricing.	Yes
	Note: You must specify a contract type which is already defined in the system. You must ensure that the specified contract type is defined for all divisions in the system.	
Default Price List Priority	Used to indicate the default priority that should appear in the Price List Assignment screen when you assign a price list to a person or an account. You can then edit the priority, if required. It is also used when both the priority and priority indicator are not passed to the C1-AssignPriceList business service.	No
	Note: The value for this option type must be a positive integer.	
Enable Service Logging	Used to indicate whether you want to maintain logs when the C1-GetAllAssignedPriceLists , C1-AssignPriceList , C1-GetEffectivePricing , C1-GetAccountRate , C1_PRICEASSIGN_SERVICE , C1-PriceAccount , and C1-GetPricing business services are invoked. The valid values are: <ul style="list-style-type: none"> • True • False 	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-TXNDMYID Feature Configuration

For manually added transactions, the system can generate header details including the header ID automatically if you set the option types in the **C1-TXNDMYID** feature configuration.

Procedure

To set the **C1-TXNDMYID** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-TXNDMYID** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.

- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Dummy File Name	Used to specify the dummy file name.	Yes
Dummy Header ID	Used to specify the dummy header ID.	Yes
Dummy Transaction Source	Used to specify the dummy transaction source.	Yes
Dummy Header Date	Used to specify the dummy header date.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-HOLDSRCH Feature Configuration

The **C1-HOLDSRCH** feature configuration enables the system to create active hold requests in the **MANL** (manual) mode by accessing the hold request creation, modification, release, and view through inbound web service.

Prerequisites

To set the **C1-HOLDSRCH** feature configuration, you should have:

- Values defined for the **HLRQ_OPT_TYP_FLG** lookup field.

Procedure

To set the **C1-HOLDSRCH** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Query** screen appears.
- In the **Feature Configuration Search** zone, enter **C1-HOLDSRCH** in the **Feature Name** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.
A list of feature configurations that meet the search criteria appears in the search results.
- In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account FK Ref	Used to indicate the foreign key reference for an account.	Yes (Conditional)
	Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status.	Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service.
Bill FK Ref	Used to indicate the foreign key reference for a bill.	Yes (Conditional)
	Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status.	Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service.
Funding Exclusion Reason	Used to indicate the exclusion reason code for a bill in the funding request when the bill is put on hold through the Funding Request screen for the entire outstanding amount.	Yes (Conditional)
	Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG and CAN_RSN_CD_FLG lookup field. It must be in the Active status.	Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service.
Person FK Ref	Used to indicate the foreign key reference for a person.	Yes (Conditional)
	Note: You must specify a value which is already defined in the HLRQ_OPT_TYP_FLG lookup field. It must be in the Active status.	Note: This data is required while creating an active hold request in the manual mode by accessing the hold request creation, modification, release, and view through inbound web service.

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
