1 Preface

1.1 Purpose

This document enables the user to integrate Oracle Products with External Product Processor through Oracle Banking Routing Hub Platform.

1.2 Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.3 Document Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.4 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

1.5 Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

The subsequent chapters describe following details:

- Introduction
- Preferences & Database
- Configuration / Installation

2 Introduction

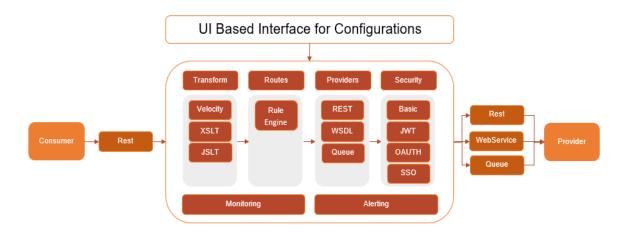

Oracle Banking Routing Hub is routing hub which enables seamless & standardized integrations between FSGBU

Banking Product using configurations provided as part of the product Infrastructure.

Consumer Application does not need to know

- Servicing Providers or Product Processors Product processor to which the integration is required.
- Name of the Service Logical name of the service e.g. Funds Transfer, Letter of Credit Initiation
- Messaging structure of Service Structure of the message e.g JSON, XML.
- Communication Protocol Web services, Rest API, Queue.
- Can be integrated with different versions of a Product processors

In this document we have shown the maintenance of two product i.e." Oracle Service Consumer" as Service Consumer and "External Product Processor" as Service Provider

2.1 Acronyms & Definitions

Following are some of the acronyms and abbreviations you are likely to find in this user manual:

Abbreviation & Definitions	Description
Service Consumers	Are Applications need to integrate with multiple product processors with loosely couple integration layer available as Oracle Banking Routing Hub. Service Consumer integrates with Oracle Banking Routing Hub
Service Providers	This are product processors available to serve the request send by Oracle Banking Routing Hub on behalf of Service Consumer
Service	Are Soap Web Services imported through WSDL or Rest Web Services imported through Swagger
Headers	Are headers require by product processor while sending request

3 Start Maintenance - Login Screen

Open Browser, Hit URL and Launch Oracle Banking Routing Hub.

5 Service Consumer

Service Consumer is Oracle product which will invoke Oracle Banking Routing Hub API, Oracle Banking Routing Hub will analyse, evaluate destination product processor and transform data into format of the same.

Service Consumer comprises of the source and destination integration details.

Navigation: Core Maintenance -> Routing Hub -> Service Consumers

Service Consumers		< ^{عر} ير

Environment Variables	Table Content					
Save	Button				Saves the Service Consumer	

5.1.1 Environment Variables

User will be able to define the group of variables which can be accessed throughout the specific consumer's configuration.

Below is the syntax for accessing environment variables:

\$env.Environment_Group_Name.Environment_Variable_Name

eg: \$env.COMMON.BRANCH_CODE

Service Consumers		,, ¹⁴ ×

Import	Button		Extracts the service information from URL and displays it in the Service list		

6.1.2.1 WSDL

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

NOTE: In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

6.1.2.2 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.

Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

NOTE: In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

6.1.2.3 OTHERS

"OTHERS" option is for adding REST API details manually when provider does not have swagger file.

Queue	Content		Queue content is available only when type is queue.
Save	Button		Saves the Implementation

7.1.1 Authentication

If External Product processor require authentication to connect to it, Oracle Banking Routing Hub provides standard authentication mechanism schemes like BASIC, JWT, OAUTH_TOKEN, SSO, OAUTH_TOKEN_OIC

NOTE: In case of no authentication, NONE needs to be set as Authentication Type. In case of identity propagation, SSO needs to be set as Authentication Type. In case of OIC integration, OAUTH_TOKEN_OIC needs to be set as Authentication Type.

Process of configuration of these is described below.

Service Consumers					$_{\mu}^{\mu}$ \times

7.1.2 Headers

External product processor might require some standard headers to be passed along with the request.

User can specify the headers which are required by service endpoints for specific implementation but not present in swagger file.

These headers can be configured in Oracle Banking Routing Hub using the steps given below

Service Consumers		× **
Oracle_Service_Consumer > Service	Providers > External_Product_Processor 1.0	
Implementation	Add Implementation ×	
Add P Import search	insp , noor

Component briefing								
Component Name	Component Type	Is Mandatory	Comments					
Туре	Combo Box One	Yes	Predefined Values: WSDL / SWAGGER / OTHERS					
URL	Text Box	Yes	Service URL of the file location					
Gateway Prefix	Text Box		Gateway Prefix is context path of below formatted URL http://host:port/gateway- prefix/endpoint					

Import	Button	Extracts the service
		information from URL and
		displays it in the Service list

7.1.3.1 WSDL

The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

NOTE: In case there is a change in wsdl file, then same wsdl file need to be imported again in order to update the provided service information in routing hub.

7.1.3.2 SWAGGER

Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.

Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

NOTE: In case there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in routing hub.

7.1.3.3 OTHERS

"OTHERS" option is for adding REST API details manually when provider does not have swagger file.

Service Consumers						$\times *_{\kappa}$

Response Headers	Collapsible Header & Content		Response Headers is used for specifying additional headers required to be part of routing hub response headers.
			Value can either be hardcoded
			or can be Velocity mapping.
Туре	Combo Box		Predefined Values:
	One		VELOCITY / JSLT / XSLT
Template	Text Area		User has to define the kernel template in which consumer accepts.

			Refer Transformation Type for syntax
Mocking required?	Switch		Predefined Values: YES / NO If flag is marked as yes, then routing hub will return the mocked template output (with extended template output if mentioned) to consumer without invoking provider API.
Mock Template	Text Area		User has to define the kernel mocked template in which consumer accepts. Refer Transformation Type for syntax
Extended Template	Text Area		User has to define the custom template in order to extend the kernel template. Refer Extensibility and Transformation Type for syntax
Save	Button		Saves transformation details

9.2 Import

User can create a transformation by importing the JSON file.

User can also import zip file in order to import all the configuration JSON files together (except parent level configuration JSON files).

Navigation: Transformation -> Import

Component briefing							
Component Name	Component Type	ls Mand atory	Validation	Condition	Comments		
File	File picker	Yes	 Allows only to select one file 	Accepts JSON and ZIP file	Pops up file selection dialog box		
Overwrite extended templates	Radio Button	Yes			 Predefined Values: Yes / No Yes: This option is for overwriting the extended templates in configuration No: This option is for retaining the existing extended templates in configuration. 		
Import	Button				Imports Transformation		

9.3 View

User can view transformation details and can also switch to edit form by clicking on edit icon.

```
Navigation: Transformation -> Operation Menu (3 dot icon) -> View

			Do	you want to delete the record?		1
					Confirm	Cancel

11 Chaining

End-user will be able to define the sequence of transformations for each routing in which request should be processed.

Chaining can be achieved by using snapshot list.

Snapshot list stores the response body and response headers whenever the transformation is processed.

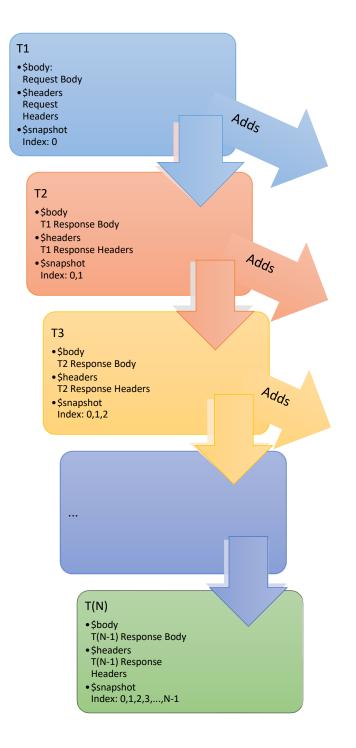

So, end-user can access response body or headers of all processed transformations at any given step.

Syntax:

\$snapshot.get(index).body or \$snapshot.get(index).headers

NOTE: \$body and \$headers will refer the response body and headers of previous step.

Snapshot List							
Index	body	headers					
0	Request Body	Request Headers					
1	T1 Response Body	T1 Response Headers					
2	T2 Response Body	T2 Response Headers					
3	T3 Response Body	T3 Response Headers					

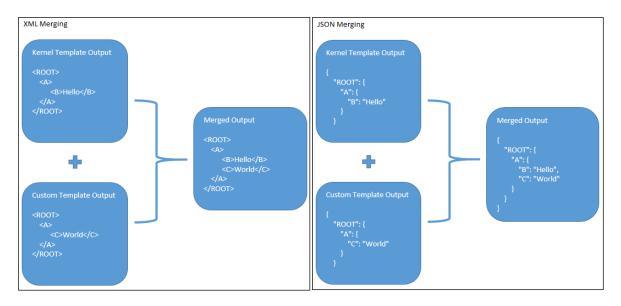

12 Extensibility

Extensibility in Routing Hub refers to template extensibility and is achieved by specifying the extended templates for request and response kernel transformation templates.

And as part of extensibility, Routing Hub merges the output of kernel template and custom template in terms of JSON / XML merging.

In case of request, Routing Hub will send the merged output as request payload to provider. In case of response, Routing Hub will return the merged output as response back to consumer

Example:

13 Audit purging / archiving

Purging/Archiving of audit data is done on the basis of retention policy.

This process uses plato-batch-server for Job execution.

Below steps are required to schedule purging/archiving job (routingHubAuditRetentionJob) once cmc-obrh-services and plato-batch-server is UP and RUNNING:

1. Open "Configure Tasks" screen (Task Management -> Configure Tasks)

2. Select "Schedule" option

3. Select "Task Name" as routingHubAuditRetentionJob and "Task Trigger Name" will be generated automatically

4. Specify the CRON expression to daily EOD

In order to resolve table space issue of Audit table (CMC_RH_AUDIT_EVENT_LOG), Database Management Team has to configure database job which should be triggered after routingHubAuditRetentionJob.

This database job can be redefining the table (DBMS_REDEFINITION) after purging/archiving is done or other approach.

So, unused LOB segment space can be released.

And in order to resolve table space issue of Audit history table (CMC_RH_AUDIT_EVENT_LOG_HISTORY), Database Management Team has to configure database job to truncate table periodically basis.

14 Multipart request

[

Below is the sample template for multipart request:

```
{
    "key": "file",
    "type": "FILE",
    "value": "$body.files.get(0).file"
},
{
    "key": "name",
    "type": "TEXT",
    "content": "$body.name"
}
```

]

15 Configuration

End-user can configure the properties w.r.t. monitoring, alert and export.

End-user can configure the same at System level and granular levels such as Consumer, Consumer Service and Routing.

Navigation: Core Maintenance -> Routing Hub -> Configuration

Configuration			$_{\mu}^{\nu}$ \times
al Monitoring			
Window Type Count Time	Window Size	× ×	
⊿ Alert			
Minimum number of calls	Failure rate threshold		
100 🗸 🗸	50%	× ^	
⊿ Email Alert			
Email Addresses			
⊿ Export			
Mark data as factory shipped			
			Clear Reset Save

Component briefing									
Component Name	Component Type	ls Mandatory	Validation	Comments					
Monitoring	Collapsible Header & Content		Monitoring properties are mandatory if alert properties have been configured.	This section has properties that are required by Breaker for storing and aggregating the outcome of calls using WindowType and WindowSize.					

Window Type	Radio Button	No		Predefined Values: COUNT / TIME The count-based sliding window aggregates the outcome of the last N calls (Window Size). The time-based sliding window aggregates the outcome of the calls of the last N seconds (Window Size).
Window Size	Number Box	No		This property is used to record the outcome of calls when the CircuitBreaker is closed. In case of count-based sliding window, window size will be N calls. In case of time-based sliding window, window size will be N seconds.
Alert	Collapsible Header & Content		Alert properties are mandatory if monitoring properti es have been configured.	This section has properties that are required for transitioning CircuitBreaker.
Minimum number of calls	Number Box	No		If minimumNumberOfCalls is 10, then at least 10 calls must be recorded, before the failure rate can be calculated. If only 9 calls have been recorded the CircuitBreaker will not transition to open even if all 9 calls have failed.

Failure rate threshold	Number Box	No	Configures the failure rate threshold in percentage. When the failure rate is equal or greater than the threshold the CircuitBreaker transitions to open and starts short-circuiting calls.
Email Alert	Collapsible Header & Content		This section has properties that are required for mail notification.
Email Addresses	Text Box	No	Once the failure rate crosses the failureRateThreshold, then end-user will be notified about the event via mail. This property will be semi- colon separated email addresses
Export	Collapsible Header & Content		This section has properties that are required for exporting configuration JSON. This section will be visible at system level only.
Mark data as factory shipped	Switch	Yes	This property is used to mark the exported configuration JSON as factory shipped JSON. So, end-user will not be able to modify or delete the certain data once imported. Default value is false.

Example

Let say

WindowType is Count

WindowSize is 20

Minimum number of calls is 10

Failure rate threshold is 50%

Configured properties will behave as below:

After 10 (min number of calls) calls, routing would get shutdown if 50% (failure rate) of atmost last 20 (window size) calls have failed.

And if email address property is configured, then end-user will be notified as well.

18 Transformation Type

18.1 Velocity

Velocity is a Java-based template engine.

Velocity can be used to generate XML files, SQL, PostScript and most other text-based formats.

NOTE: In routing hub, Velocity will be used to generate JSON and XML.

- Using **\$body**, user can access request/response body.
 Syntax: \$body.fieldName
 Example: \$body.branchCode
- Using \$headers, user can access request/response headers.
 Syntax: \$headers["fieldName"][0]
 Example: \$headers["branchCode"][0]
- Using **\$bodyAsString**, user can access response body as string. Syntax: **\$bodyAsString**
- Below are some available extension methods:
 - Date Conversion
 Syntax: \$dateUtil.convert(inputDate, fromPattern, toPattern)
 Parameters:
 - inputDate String
 - fromPattern String
 - toPattern String

Returns: String

Please refer <u>https://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html</u> for different patterns

Default Value

Syntax: \$custom.defaultValue(inputValue, defaultValue)
Parameters:

- inputValue Object
- defaultValue String

Returns: Object

Null Check

Syntax: \$custom.isNull(inputValue)

Parameters:

inputValue - Object

Returns: Boolean

- Random Number
 Syntax: \$mathUtil.getRandom()
 Returns: Object of Random class (java.util.Random)
- > Xml Tool

Syntax: \$xml.methodName()
Please refer
https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/XmlTool.html

Date Tool

Syntax: \$date.methodName()

Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/DateTool. html

Json Tool

Syntax: \$json.methodName()

Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/JsonTool. html

Math Tool

Syntax: \$math.methodName()

Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/MathTool .html

> Number Tool

Syntax: \$number.methodName()

Please refer

https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/NumberT ool.html

Escape Tool
 Syntax: \$esc.methodName()
 Please refer
 https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/EscapeT
 ool.html

Serialization of object into its equivalent Json representation
 Syntax: \$custom.toJson(src)

Parameters:

src - Object

Returns: String

Get additional field's value based on fieldname

Syntax: \$custom.getFieldValueById(jsonString, fieldname)
Parameters:

- jsonString String
- fieldname String

Returns: String

Get list of additional fields based on fieldname prefix

Syntax: \$custom.getAdditionalFieldSetByType(jsonString,prefixval) **Parameters:**

- jsonString String
- prefixval String

Returns: List

 If issue occurred with hyphen in velocity template of Request or Response Transformation, then use get method.

Example:

<FCUBS_BODY>

<Customer-IO>

<CUSTNO>003942</CUSTNO>

- </Customer-IO>
- </FCUBS_BODY>
- If "\$in.FCUBS_BODY.Customer-IO.CUSTNO" does not work ,

Use "\$in.FCUBS_BODY.get("Customer-IO").CUSTNO" to get customer number.

18.2 XSLT

XSLT is a language for transforming XML documents into other XML documents, or other formats such as HTML for web pages, plain text or XSL Formatting Objects, which may subsequently be converted to other formats, such as PDF, PostScript and PNG.

NOTE: In routing hub, XSLT will be used to transform arbitrary XML to JSON.

18.3 JSLT

JSLT is a complete query and transformation language for JSON.

19 Oracle Banking Routing Hub Integration Specification

19.1 Token Generation

Response Payload

19.2 Synchronous Dispatch API Specification

Dispatch endpoint is the **single** entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch endpoint Signature -

- Method: POST / GET
- Path : /route/dispatch
- Headers:
 - > appld : CMNCORE
 - entityId : DEFAULTENTITY
 - > userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
 - > SERVICE-CONSUMER : <name of service consumer>
 - > SERVICE-CONSUMER-SERVICE : <name of service consumer service>

- Request Body:
 - Any valid JSON payload which shall act as input to the transformation template in request transformer.
- Response Body:

```
{
    "data": {}
    "messages": {}
}
```

- If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it's a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.
- If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

Example - Below are the screenshots of route dispatch for ServiceConsumer Oracle_Service_Consumer and ServiceConsumerService List_Facilities

Headers

Response Payload on Successful Dispatch

Response Payload on Failed Dispatch

19.3 Asynchronous Dispatch API Specification

Dispatch endpoint is the **single** entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch endpoint Signature -

- Path : /route/dispatch
- Query Params:
 - ➢ isAsync : true
- Headers:
 - > appld : CMNCORE
 - entityId : DEFAULTENTITY
 - userId : <user id>
 - branchCode : <branch code>
 - > Authorization : Bearer <Token>
 - > SERVICE-CONSUMER : <name of service consumer>

- > SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- Request Body:
 - Any valid JSON payload which shall act as input to the transformation template in request transformer.
- Response Body:

```
{
    "data": { "correlationId" : "" },
    "messages": {}
}
```

Example - Below are the screenshots of route dispatch for

ServiceConsumer Oracle_Service_Consumer and ServiceConsumerService List_Facilities

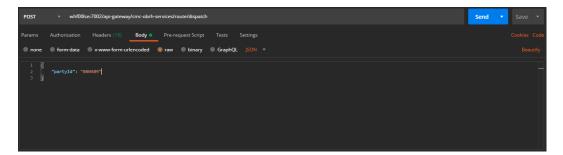

Query Params

Response Payload

19.4 Asynchronous Dispatch Response API Specification

Response endpoint Signature -

- Path : /route/dispatchResponse/{Correlation-Id}
 - > Correlation-Id will be coming from the response of dispatch endpoint.
- Headers:
 - > appld : CMNCORE
 - entityId : DEFAULTENTITY
 - userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
- Response Body:

```
{
```

```
"data": {}
```

```
"messages": {}
```

}

If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it's a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.

If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

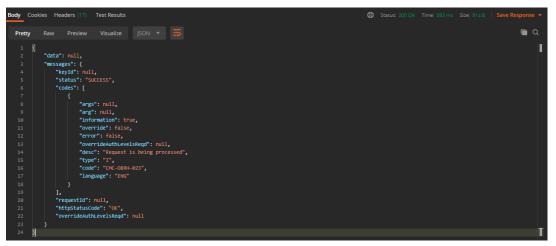

Example - Below are the screenshots of route dispatch for

ServiceConsumer Oracle_Service_Consumer and ServiceConsumerService List_Facilities

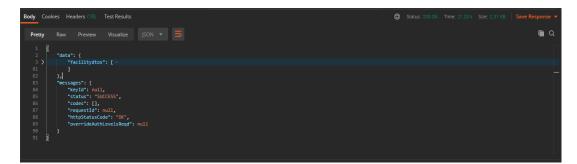

Headers

20 Oracle Banking Routing Hub VM Arguments

Common Core Managed Server

-Dcmc-obrh-services.server.port=<SERVER_PORT> -Dobrh.db.jndi=<CMNCORE_JNDI>

-Dcmc-obrh-services.oic.oauth.scope=<OIC_OAUTH_SCOPE>
-Dcmc-obrh-services.oic.secretStore.url=<OIC_SECRET_STORE_URL>
-Dcmc-obrh-services.oic.idcs.url=<OIC_IDCS_URL>
-Dcmc-obrh-services.audit.retention.days=<AUDIT_RETENTION_POLICY_DAYS>
-Dcmc-obrh-services.audit.retention.archival=<AUDIT_RETENTION_POLICY_APPROACH>
(Y for archiving and N for purging)

In order to receive routing failure mail notification via plato-alerts-management-service, then set the below Property to true, (Default value is false) -Dobrh.alerts.enabled=<ALERTS_ENABLED>

In order to change the behavior of auditing, then set the below property from predefined values (DEFAULT / KAFKA / LOG / OFF), (Default value is DEFAULT) -Dobrh.audit.type=<AUDIT_TYPE>

NOTE: For KAFKA option, cmc-obrh-kafka-consumer service needs to be deployed.

In order to overwrite the customization that is not part of configuration json, -Dobrh.import.overwrite=<IMPORT_OVERWRITE> (Default value is false)

In order to use Custom Keystore and Truststore for HTTPS scheme,

-Dobrh.keystore.password.encoded=<IS_PASSWORD_ENCODED> (true, if password is base 64 encoded)

-Dobrh.truststore.path=<TRUSTSTORE_PATH>

-Dobrh.truststore.password=<TRUSTSTORE_PASSWORD>

-Dobrh.usekeystore=<USE_KEYSTORE> (true, if keystore is required along with truststore)

-Dobrh.keystore.path=<KEYSTORE_PATH>

-Dobrh.keystore.password=<KEYSTORE_PASSWORD>

-Dobrh.keystore.alias=<KEYSTORE_ALIAS>

-Dobrh.keystore.aliaspassword=<KEYSTORE_ALIAS_PASSWORD>

-Dobrh.ssl.protocol=<SSL_PROTOCOL> (Default value is TLS)

In order to do tomcat deployment,

-Dobrh.server.isJavaEE=false (mandatory)

-Dobrh.taskexecutor.corepoolsize=<CORE_POOLSIZE> (default is 50) (optional)

-Dobrh.taskexecutor.maxpoolsize=<MAX_POOLSIZE> (default is 50) (optional) -Dobrh.taskexecutor.queuecapacity=<QUEUE_CAPACITY> (default is 100) (optional)

In order to set Proxy settings for HTTPS,

-Dhttps.proxyHost=<PROXY_HOST_NAME>

-Dhttps.proxyPort=<PROXY_PORT>

-Dhttps.nonProxyHosts=<NON_PROXY_HOST_LIST>

-Dhttp.nonProxyHosts=<NON_PROXY_HOST_LIST>

NOTE: As per the Java Networking documentation, HTTPS protocol handler will use the same as the http handler (i.e. http.nonProxyHosts).

But in case of Weblogic, http.nonProxyHosts will not work for some reason.

So, use https non proxy host argument (i.e. https.nonProxyHosts).

In order to set logger level,

- Dplato.service.logging.level=<LOG_LEVEL>

In order to do SSL based SOAP provider calls and if RoutingHub is deployed on weblogic environment,

-DUseSunHttpHandler=true

Plato Core Managed Server

Oracle Banking Routing Hub is using Multipart for Import feature.

By default, spring supports max 1MB file size and 10MB request size for Multipart.

In order to import bigger files,

plato-api-gateway.multipart.max-file-size=<MAX_FILE_SIZE> (default is 1MB)

plato-api-gateway.multipart.max-request-size=<MAX_REQUEST_SIZE> (default is 10MB)

NOTE: -1 for no size constraint

Example:

plato-api-gateway.multipart.max-file-size=-1

plato-api-gateway.multipart.max-request-size=-1

CMC-OBRH-KAFKA-CONSUMER

-Dcmc-obrh-kafka-consumer.server.port=<SERVER_PORT>

NOTE: This property will enforce WebLogic Server to use SUN SSL implementation (javax package) rather than the WebLogic one.
