| Source Entity | Source Type | Source Type Code | | | | | | | | | | | | |
| Service Quantity Identifier | — | Lists all service quantity identifiers available in the CI_SQI table. | | | | | | | | | | | | |
| State | Characteristic | Lists all characteristics where the characteristic entity is set to State . | | | | | | | | | | | | |
| State | Field | Lists all fields of the CI_STATE table. | | | | | | | | | | | | |
| Validation Algorithm | <p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p> | No | | | | | | | | | | | | |
| Reference Entity | <p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p> | Yes | | | | | | | | | | | | |

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|---|
| Parameter Values | Used to specify the value for the parameter. | Yes (Conditional) |
| | Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value. | Note: This field is required while defining the predefined parameter values. |
| Description | Used to specify the description for the parameter value. | Yes (Conditional) |
| | | Note: This field is required while defining the predefined parameter values. |

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

| Option Name | Option Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| Price Item | Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing. | Yes (Conditional) |
| | Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list. | Note: This option is required while associating the parameter with a price item. |
| Pricing Eligibility Criteria | Used to indicate whether the parameter is used for defining the pricing eligibility criteria. | Yes (Conditional) |
| | Note: This option does not appear when the Transaction option is selected from the Source Entity list. | Note: This option is required while defining a pricing eligibility criteria using the parameter. |

| Option Name | Option Description | Mandatory (Yes or No) |
|------------------------------------|---|---|
| Pricing Rule Eligibility Criteria | Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria. | Yes (Conditional) |
| | Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list. | Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria. |
| | | |
| Business Rule Eligibility Criteria | Used to indicate whether the parameter is used for defining a business rule criteria. | Yes (Conditional) |
| | Note: This option appears only when the Account, Customer Class, Delinquency Event Type, Division, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan option is selected from the Source Entity list. | Note: This option is required while using the parameter for defining a rule based business eligibility criteria. |
| | | |
| Price List Eligibility Criteria | Used to indicate whether the parameter is used for defining the price list eligibility criteria. | Yes (Conditional) |
| | Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list. | Note: This option is required while defining a price list eligibility criteria using the parameter. |
| | | |
| Product Eligibility Criteria | Used to indicate whether the parameter is used for defining the product eligibility criteria. | Yes (Conditional) |
| | Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list. | Note: This option is required while defining a product eligibility criteria using the parameter. |
| | | |
| Rule Eligibility Criteria | Used to indicate whether the parameter can be used while defining the parameter based rule type. | Yes (Conditional) |
| | Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list. | Note: This option is required while defining a parameter based rule type. |
| | | |

Note: You must select at least one option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

Deleting a Parameter**Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

3. Click **OK**.

The parameter is deleted.

Note:

You can delete a parameter only when:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, business rule, price list, product eligibility, or rule eligibility criteria.

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with the parameter usage details. You can then edit the details, if required.

Note: You cannot change the value type that is stored in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARAM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Parameter | Used to specify the parameter. Note: You cannot specify any special character except underscore (_) in the parameter name. | Yes |
| Source Entity | Used to indicate the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan Note: This option is not applicable for the banking business. <ul style="list-style-type: none"> • Health Product Note: This option is not applicable for the banking business. <ul style="list-style-type: none"> • Membership Note: This option is not applicable for the banking business. <ul style="list-style-type: none"> • Membership Person Note: This option is not applicable for the banking business. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the banking business.</p> </div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction | |
| Description | Used to specify the description for the parameter. | Yes |
| Source Type | <p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p> </div> | Yes |
| Value Type | <p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference | Not applicable |

On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p> | No | | | | | | | | | | | | |
| Reference Entity | <p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p> | Yes | | | | | | | | | | | | |

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|---|
| Parameter Values | Used to specify the value for the parameter. | Yes (Conditional) |
| | Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value. | Note: This field is required while defining the predefined parameter values. |
| Description | Used to specify the description for the parameter value. | Yes (Conditional) |
| | | Note: This field is required while defining the predefined parameter values. |

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

| Option Name | Option Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| Price Item | Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing. | Yes (Conditional) |
| | Note: This option does not appear when the Algorithm , Health Product , or the Service Quantity Identifier option is selected from the Source Entity list. | Note: This option is required while associating the parameter with a price item. |
| Pricing Eligibility Criteria | Used to indicate whether the parameter is used for defining the pricing eligibility criteria. | Yes (Conditional) |
| | Note: This option does not appear when the Transaction option is selected from the Source Entity list. | |

| Option Name | Option Description | Mandatory (Yes or No) |
|------------------------------------|--|---|
| | | <p>Note: This option is required while defining a pricing eligibility criteria using the parameter.</p> |
| Pricing Rule Eligibility Criteria | <p>Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.</p> <p>Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.</p> | <p>Yes (Conditional)</p> <p>Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.</p> |
| Business Rule Eligibility Criteria | <p>Used to indicate whether the parameter is used for defining a rule based business eligibility criteria.</p> <p>Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.</p> | <p>Yes (Conditional)</p> <p>Note: This option is required while using the parameter for defining a rule based business eligibility criteria.</p> |
| Price List Eligibility Criteria | <p>Used to indicate whether the parameter is used for defining the price list eligibility criteria.</p> <p>Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.</p> | <p>Yes (Conditional)</p> <p>Note: This option is required while defining a price list eligibility criteria using the parameter.</p> |
| Product Eligibility Criteria | <p>Used to indicate whether the parameter is used for defining the product eligibility criteria.</p> <p>Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.</p> | <p>Yes (Conditional)</p> <p>Note: This option is required while defining a product eligibility criteria using the parameter.</p> |
| Rule Eligibility Criteria | <p>Used to indicate whether the parameter can be used while defining the parameter based rule type.</p> <p>Note: This option does not appear when the Health Product, Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.</p> | <p>Yes (Conditional)</p> <p>Note: This option is required while defining a parameter based rule type.</p> |

Note: You must select at least one option in the **Parameter Usage** section.

3. Enter the required details in the **Parameter** screen.
4. Click **Save**.

The new parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the parameter whose details you want to view.

The **Parameter** screen appears.

3. View the details of the parameter in the **Parameter** zone.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 863

Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** – Displays basic information about the parameter. It contains the following fields:

| Field Name | Field Description |
|-------------------|--|
| Parameter | Displays the parameter name. |
| Description | Displays the description of the parameter. |

| Field Name | Field Description |
|----------------------|--|
| Value Type | <p>Indicates the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference |
| Validation Algorithm | <p>Indicates the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: This field appears when the Adhoc option is selected from the Value Type list. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |
| Referenced Table | <p>Indicates the table whose primary key (i.e. column) is used to validate the parameter value.</p> <p>Note: This field appears when the Reference option is selected from the Value Type list. It has a link. On clicking the link, the Table screen appears where you can view the details of the respective table.</p> |
| Source Entity | <p>Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Health Product <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Membership <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Membership Person <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Person |

| Field Name | Field Description |
|------------------|--|
| | <ul style="list-style-type: none"> Policy Policy Plan <div style="border: 1px solid black; padding: 2px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> Product <div style="border: 1px solid black; padding: 2px;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> Service Quantity Identifier State Transaction |
| Source Type | <p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> Characteristic Field Usage Amount Usage Counter <div style="border: 1px solid black; padding: 2px;">Note: This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy Plan, Product, or State option is selected from the Source Entity list. The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</div> |
| Source Type Code | <p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <div style="border: 1px solid black; padding: 2px;">Note: This field does not appear when the Transaction option is selected from the Source Entity list.</div> |

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns:

| Column Name | Column Description |
|-----------------|--|
| Parameter Value | Displays the value of the parameter. |
| Description | Displays the description of the parameter value. |

Note: The **Parameter Values** section appears when the **Predefined** option is selected from the **Value Type** list.

- **Parameter Usage** – Indicates where you can use the parameter in the system. It contains the following options:

| Option Name | Option Description |
|------------------------------------|--|
| Price Item | <p>Indicates whether the parameter is associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <p>Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list.</p> |
| Pricing Eligibility Criteria | <p>Indicates whether the parameter is used for defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p> |
| Pricing Rule Eligibility Criteria | <p>Indicates whether the parameter is used for defining a rule based pricing eligibility criteria.</p> <p>Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.</p> |
| Business Rule Eligibility Criteria | <p>Indicates whether the parameter is used for defining a rule based business eligibility criteria.</p> <p>Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.</p> |
| Price List Eligibility Criteria | <p>Indicates whether the parameter is used for defining the price list eligibility criteria.</p> <p>Note:</p> <p>This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.</p> |
| Product Eligibility Criteria | <p>Indicates whether the parameter is used for defining the product eligibility criteria.</p> <p>Note:</p> <p>This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.</p> |
| Rule Eligibility Criteria | <p>Indicates whether the parameter is used while defining the parameter based rule type.</p> <p>Note:</p> <p>This option does not appear when the Health Product, Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.</p> |

Price Item (Health Insurance Business)

The various charges that are to be charged to the customer (for example, premium or optional administration fees to a fully-insured group customer and claim based fees or enrollment based fees to a self-funded customer) are defined as price items in the system. Similarly, various charges credited to the customer are also defined as price items. Stop-loss arrangements for a self-funded customer (for example, specific stop-loss that is calculated and credited to customer) is represented using a price item in the system.

Once you define a price item, you can also define the pricing for the price item at various levels using pricing rules based on the requirements. For a fully-insured group customer, the pricing is defined at the policy plan level. Whereas, for a self-funded customer, the pricing can be defined either at the bill group policy level or at the parent customer level. For more information about the fully-insured pricing, see [Fully-Insured Pricing](#) on page 3175. And, for more information about the self-funded pricing, see [Self-Funded Pricing](#) on page 2647.

The system enables you to create price items which can be used for pricing and billing. It means that pricing can be defined for the price item and charges can be created against it in the system. The system enables you to create the following type of price items:

- **Fees Based Price Items** - The fees based services would include services on which fees is charged to the customers either annually or at regular intervals (for example, for the administrative services offered to the self-funded customer, the admin fees will be charged). You can create fees based price items which can be used for pricing and billing in the system.

You need to associate a contract type with a price item. The system allows you to create a charge (i.e. billable charge) for a price item on an account when a contract of the contract type which is associated with the price item is already present on the account.

You can create price items which can be assigned to any price list except global price list or which can assigned to only global price lists. For more information about global price list, see [Price List](#) on page 926.

You can associate one or more parameters where the parameter usage is set to **Price Item** with a price item. These parameters can then be used for:

- Aggregating transactions which are mapped to the price item
- Defining multi parameter based pricing for the price item

If the parameter usage is set to **Aggregation** while associating a parameter with a price item, the parameter is only used for aggregating transactions which are mapped to the price item. However, if the parameter usage is set to **Pricing** while associating a parameter with a price item, the parameter is used for aggregating transactions as well as for defining multi parameter based pricing for the price item.

You can associate a price item to one or more divisions. In addition, you can do the following when a price item is associated to a division:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item for the Division
- Define the Division-Specific Characteristics for the Price Item

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It also allows you to create and copy a price item or price item bundle. It contains the following zone:

- [Search Price Item](#) on page 868

Through this screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 909
- [Price Item Relationship](#)
- [Price Item Assignments](#)

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> • Price Item Details | Yes |
| | Note: By default, the Price Item Details option is selected. | |
| Price Item | Used to search a particular price item or price item bundle. | No |
| Description | Used to search price items or price item bundles with a particular description. | No |
| Division | Used to search price items or price item bundles which are associated with a particular division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Global Price List | Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Price Item Usage | Used to search price items or price item bundles which is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing | No |
| | Note: By default, the Pricing and Billing option is selected. | |
| Bundle | Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Price Item Type | Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> • Fees • Rate | No |
| | Note: This field appears when the Pricing option is selected from the Price Item Usage list. | |

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Price Item Information | Displays information about the price item or price item bundle. |
| | Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. |
| Bundle Type | Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular However, if the price item bundle is available for pricing and its price item type is set to Fees , the valid value is: <ul style="list-style-type: none"> • Regular |
| Price Item Type | Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees |
| Price Item Usage | Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing |
| Duplicate | On clicking the Duplicate  icon, the Price Item screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle. |
| Price Item Assigned To | On clicking the View  icon in the Price Item Assigned To column, the Price Item Assignments screen appears where you can view the persons, accounts, and active price lists to which the price item or price item bundle is assigned. |

| Column Name | Column Description |
|-------------------------|---|
| Price Item Relationship | On clicking the View () icon in the Price Item Relationship column, the Price Item Relationship screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle
- Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Price Item | Used to specify the price item or price item bundle. | Yes |
| Description | Used to specify the description for the price item or price item bundle. | Yes |
| Price Item Usage | <p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <p>Note: By default, the Pricing and Billing option is selected.</p> | Yes |
| Price Item Type | <p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> Fees - Used when you want to create a fee based price item or price item bundle. For | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|--|
| | <p>example, debit credit service (i.e. price item) is a fee based price item.</p> <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. By default, the Fees option is selected. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> | |
| Bundle | <p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected. This field is not applicable for the health insurance business.</p> | Yes |
| Bundle Type | <p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> • <i>Phantom Bundle</i> • <i>Ratio Bundle</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are creating a price item bundle.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| | <p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p> | |
| Global Price List | <p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p> | Yes |
| Contract Type | <p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p> | Yes |
| Price Item Manager To Do Type | <p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|--|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p> | |
| Price Item Manager To Do Role | <p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p> |
| Average Price Floor and Ceil Type | <p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|---|-----------------------|
| | <p>Note:</p> <ul style="list-style-type: none"> Incase of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. This field is not applicable for the health insurance business. | |
| Sort Sequence | Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module. | No |
| Variable Price | <p>Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.</p> <p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p> | No |

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

- Enter the required details in the **Main** section.
- Associate the parameters with the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

- Associate the price item or price item bundle with the required divisions.
- Associate the SQIs with the price item or price item bundle for the required divisions.
- Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define the division-specific characteristics for the price item or price item bundle, if required.

14. Define the characteristics for the price item or price item bundle, if required.

15. Click **Save**.

The price item is defined.

Note: While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

You can define multi parameter based pricing for a price item or price item bundle when the parameters using which you want to define the price item pricing are associated with the respective price item or price item bundle during the pricing date range. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a financial institution can offer different price for a price item based on the return codes:

| Service | Price Item | Parameter | Parameter Value | Price |
|--------------------------|------------|-----------------------|-----------------|--------|
| SEPA Direct Debit Return | SEPADDR | Return Code (RTURNCD) | AC01 | 0.1\$ |
| | | | AC04 | 0.2\$ |
| | | | AC06 | 0.3\$ |
| | | | AG01 | 0.10\$ |

In such case, you need to first define a predefined parameter named Return Code where the parameter usage is set to **Price Item**). In the Return Code parameter, you must specify the above listed return codes (i.e. AC01, AC04, AC06, and AG01) as the predefined values. Then, in order to define multi parameter based pricing for the SEPADDR price item using the Return Code parameter, you must associate the Return Code parameter with the SEPADDR price item using the following specifications:

| Parameter | Display Order | Mandatory (Yes or No) | Optional Priority |
|-------------|---------------|-----------------------|-------------------|
| Return Code | 10 | Yes | - |

Let us understand this with the help of another example from the health insurance domain.

The following table illustrates how a self-funded customer can be charged different admin fee for the services based on health coverage class and network type:

| Service | Price Item | Health Coverage Class | Network Type | Fees |
|------------------|------------|-----------------------|--------------|-------|
| Claim Based Fees | CLBDFS | Medical | In | \$100 |
| | | Medical | Out | \$150 |
| | | Dental | In | \$50 |
| | | Dental | Out | \$75 |

In such case, you need to first define two predefined parameters named Health Coverage Class and Network Type where the parameter usage is set to **Price Item**). In the Health Coverage Class parameter, you must specify the above listed values (i.e. Medical and Dental) as the predefined values. And, in the Network Type parameter, you must specify the above listed values (i.e. In and Out) as the predefined values. Then, in order to define parameter based pricing for the CLBDFS price item using the Health Coverage Class and Network Type parameters, you must associate these parameters with the CLBDFS price item using the following specifications:

| Parameter | Display Order | Mandatory (Yes or No) | Optional Priority |
|-----------------------|---------------|-----------------------|-------------------|
| Health Coverage Class | 10 | Yes | - |
| Network Type | 20 | Yes | - |

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the parameter usage is set to **Price Item**)

Procedure

To associate a parameter with a price item or price item bundle:

- Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Effective Start Date | Used to specify the date from when the parameter is associated with the price item or price item bundle. | Yes |
| Effective End Date | Used to specify the date till when the parameter is associated with the price item or price item bundle. | No |
| Parameter | <p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> <p>In the Parameter Search window, the system allows you to search only those parameters where the parameter usage is set to Price Item.</p> <p>If you select a predefined parameter, the Add (➕) icon appears corresponding to the Parameter field. On clicking the Add icon, a grid appears where you can specify a list of predefined parameter values which are valid for the price item or price item bundle while defining its pricing. If you do not list any predefined parameter value in this grid, the system enables you to specify any predefined value of the parameter while defining the pricing for the price item or price item bundle.</p> | Yes |
| Business Label | Used to specify a business label for the parameter. If you specify the business label for a parameter, the business label appears | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|---|
| | throughout the application instead of the parameter name. | |
| Display Order | Used to indicate the order in which the parameter and its value should appear in the pricing parameter information string across the application. | Yes |
| Parameter Usage | Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation – Used when you want to use the parameter for aggregating transactions. • Pricing – Used when you want to use the parameter for aggregating transactions as well as for defining the price item pricing. | Yes |
| Mandatory | Used to indicate whether the parameter is mandatory while defining the price item pricing. | No |
| Priority | Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle. | Yes (Conditional) |
| | Note: This field is disabled when the Mandatory option is selected. | Note: This field is required when the Mandatory option is not selected. |

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

2. Enter the required details in the **Parameters** section.
3. If you want to associate more than one parameter with the price item or price item bundle, click the **Add (+)** icon and then repeat step 2.

Note:

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

4. For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

5. Click **Save**.

The parameters are associated with the price item or price item bundle.

Note: By default, the priority of all parameters which are mandatory is set to 0.

|---|--|
| How to define a price item or price item bundle | Defining a Price Item or Price Item Bundle on page 871 |
| How to edit a price item or price item bundle | Editing a Price Item or Price Item Bundle on page 919 |
| How to copy a price item or price item bundle | Copying a Price Item or Price Item Bundle on page 900 |
| How to define the valid predefined parameter values for a price item or price item bundle | Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle on page 881 |

Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle

A predefined parameter may have hundreds of values defined in the system. But, there might be situations when only certain predefined parameter values are applicable for a price item or price item bundle while defining its pricing. In such case, you can define a set of valid predefined parameter values for a price item or price item bundle. For example, the Return Code parameter has the following predefined parameter values:

| Parameter Value | Description |
|-----------------|--|
| AC01 | Account Identifier Incorrect (i.e. invalid IBAN) |
| AC04 | Account Closed |
| AC06 | Account Blocked |
| AG01 | Direct Debit Forbidden for Regulatory Reasons |
| AG02 | Operation/Transaction Code Incorrect |
| AM04 | Insufficient Funds |
| AM05 | Duplicate Collection |
| MD01 | Unauthorized Transaction |
| MD06 | Disputed Authorized Transaction |

If only the MD01 and MD06 predefined parameter values are applicable for the SEPA Debit Refund (SEPADRF) price item, you can define MD01 and MD06 as the valid predefined parameter values for the SEPADRF price item. In such case, the system will allow you to define the pricing for the SEPADRF price item only using the MD01 or MD06 parameter value. However, if all the above listed predefined parameter values are applicable for the SEPA Direct Debit Return (SEPADDR) price item, you must not define the valid predefined parameter values for the SEPADDR price item. In such case, the system will allow you to define the pricing for the SEPADDR price item using any of the above listed parameter value.

Another example, the Health Coverage Class parameter has the following predefined parameter values:

| Parameter Value | Description |
|-----------------|-------------|
| MEDICAL | Medical |
| DENTAL | Dental |
| VISION | Vision |

If only the MEDICAL and DENTAL predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you can define MEDICAL and DENTAL as the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item only using the MEDICAL or DENTAL parameter value. However, if all the above listed predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you must not define the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item using any of the above listed parameter value.

Prerequisites

To define the valid predefined parameter values for a price item or price item bundle, you should have:

- Predefined values defined for the parameter which is associated with the price item or price item bundle
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

2. Click the **Add** () icon in the **Parameter** column corresponding to the predefined parameter which is associated with the price item or price item bundle.

The following field appears in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|---|
| Parameter Value | Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search () icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the predefined parameter value appears corresponding to the Parameter Value field.</p> | <p>Note: This field is required when you are defining the valid predefined parameter values for the price item or price item bundle.</p> |

3. Enter a predefined parameter value which is valid for the price item or price item bundle while defining its pricing.
4. If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

Note: However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter value. You can remove a valid predefined parameter value from the price item or price item bundle when the parameter value is not yet used for defining the price item pricing.

5. Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

Associating a Price Item or Price Item Bundle with a Division

You can assign a price item or price item bundle to a person or account when the price item or price item bundle is associated with the division to which the person or account belongs. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a price item can be associated with one or more divisions in the financial institution domain:

| Price Item | Division |
|------------------------------------|-----------------|
| SEPA Direct Debit Return (SEPADDR) | 001-AL |
| | 002-CA |
| | 003-FL |
| | 004-IN |
| Stop Payment (STPPMT) | 002-CA |
| | 003-FL |
| | 004-IN |

In such case, you can assign the SEPADDR price item to any person or account which belongs to the 001-AL, 002-CA, 003-FL, or 004-IN division. However, you can assign the STPPMT price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Let us understand this with the help of an example from the health insurance domain.

The following table illustrates how a price item can be associated with one or more divisions in the health insurance domain:

| Price Item | Division |
|---------------------------|-----------------|
| Claim Based Fees (CLBDFS) | 002-CA |
| | 003-FL |
| | 004-IN |

In such case, you can charge the CLBDFS price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application
- Divisions associated with the access group to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| SQIs | On clicking the Add (⊕) icon, you can associate an SQI with the price item or price item bundle for the division. | Not applicable |
| Division Characteristics | On clicking the Add (⊕) icon, you can define a division-specific characteristic for the price item or price item bundle. | Not applicable |
| Accrual Type Criteria | On clicking the Add (⊕) icon, you can define the accrual type criteria of the price item or price item bundle for the division. | Not applicable |
| | Note: This feature is not applicable for the health insurance business. | |
| Entity Hierarchy | On clicking the Add (⊕) icon, you can associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the division. | Not applicable |
| | Note: This feature is not applicable for the health insurance business. | |
| Costs | On clicking the Add (⊕) icon, you can define the cost of the price item or price item bundle for the division. | Not applicable |
| | Note: This feature is not applicable for the health insurance business. | |
| Average Price Floor and Ceil Limits | On clicking the Add (⊕) icon, you can define the average price floor and ceil limits of the price item or price item bundle for the division. | Not applicable |
| | Note: This feature is not applicable for the health insurance business. | |
| Negotiability | On clicking the Add (⊕) icon, you can define the negotiability floor and ceil limits of the price item or price item bundle for the division. | No |
| | Note: This feature is not applicable for the health insurance business. | |
| Division | Used to indicate the division to which you want to associate the price item or price item bundle. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| | Note: You can only view those divisions to which you have access in the Division list. | Note: This field is required while associating the price item or price item bundle with a division. |
| | | |

- Select the division from the respective field.
- If you want to associate the price item or price item bundle with more than one division, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove the price item or price item bundle from a division, click the **Delete (🗑)** icon corresponding to the division. You cannot remove the price item or price item bundle from a division when it is assigned to a person or account which belongs to the division.

- Associate the SQIs with the price item or price item bundle for the required divisions.
- Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

- Associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the required divisions.

Note: This step is not applicable for the health insurance business object.

- Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

- Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

- Define the rate negotiability floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

- Define the division-specific characteristics for the price item or price item bundle. if required.

- Click **Save**.

The price item or price item bundle is associated with the divisions.

Tip: Alternatively, you can associate a price item or price item bundle with a division using the **Division** screen. For more information, see [Associating a Price Item or Price Item Bundle with a Division](#) on page 1030.

| How to define the average price floor and ceil limits of a price item or price item bundle for a division | Defining the Average Price Floor and Ceil Values of a Price Item or Price Item Bundle for a Division on page 896 |
| How to define a division-specific characteristic for a price item or price item bundle | Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle on page 888 |

Associating an SQI with a Price Item or Price Item Bundle for a Division

In the transaction aggregation process, an SQI based billable charge is created for a price item or price item bundle (to which a transaction is mapped) when:

- The SQIs are associated with the price item or price item bundle for the division to which the account (i.e. for which the billable charge is created) belongs.
- The transaction aggregation rules are defined for such SQIs in the system.

Let us assume that the A1 account belongs to the 201-NJ division and the A2 account belongs to the 209-CA division.

The following table illustrates how you can define division-specific SQIs for a price item in the financial institution domain:

| Price Item | Division | Service Quantity Identifiers (SQIs) |
|----------------------|----------|-------------------------------------|
| Stop Payments (STPY) | 201-NJ | Number of Transactions (NBRTXN) |
| | | Transaction Volume (TXNVOL) |
| | | Transaction Amount (TXNAMT) |
| | 209-CA | Number of Transactions (NBRTXN) |
| | | Transaction Amount (TXNAMT) |

Now, when an SQI based billable charge is created for the A1 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Volume (TXNVOL)
- Transaction Amount (TXNAMT)

And, when an SQI based billable charge is created for the A2 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Amount (TXNAMT)

Another example, you can calculate the enrollment based fees for a self-funded customer based on Per Subscriber Per Month or Per Member Per Month for the 201-NJ and 209-CA divisions. Therefore, you need to associate two SQIs — Subscriber Count and Member Count with the Enrollment Based Fees (ERBDFS) price item.

The following table illustrates how you can define division-specific SQIs for a price item in the health insurance domain:

| Price Item | Division | Service Quantity Identifiers (SQIs) |
|--------------------------------|----------|-------------------------------------|
| Enrollment Based Fees (ERBDFS) | 201-NJ | Subscriber Count (SUBCNT) |
| | | Member Count (MEMCNT) |
| | 209-CA | Subscriber Count (SUBCNT) |
| | | Member Count (MEMCNT) |

Prerequisites

To associate an SQI with a price item or price item bundle for a division, you should have:

- Service Quantity Identifiers (SQIs) defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate an SQI with a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** (+) icon in the **SQIs** column corresponding to the division for which you want to associate SQIs with the price item or price item bundle.

The following field appears in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|--|
| SQI | Used to indicate the SQI that you want to associate with the price item or price item bundle for the division. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the SQI field. On clicking the Search icon, the Service Quantity Identifier Search window appears.</p> <p>On specifying the SQI, the description of the SQI appears corresponding to the SQI field.</p> | <p>Note: This field is required while associating an SQI with the price item or price item bundle for the division.</p> |

3. Enter the required details in the **SQIs** grid.
4. If you want to associate more than one SQI with the price item or price item bundle for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an SQI from the price item or price item bundle for the division, click the **Delete** (🗑️) icon corresponding to the SQI. You cannot remove an SQI from the price item or price item bundle for the division when an SQI based billable charge is created using the SQI.

5. Click **Save**.

The SQIs are associated with the price item or price item bundle for the division.

Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a division-specific characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define a division-specific characteristic for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** (➕) icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| Effective Date | Used to specify the date from when the price item or price item bundle characteristic is effective for the division. | Yes (Conditional) Note: This field is required while defining a division-specific characteristic for the price item or price item bundle. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination . | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| | | Note: This field is required while defining a division-specific characteristic for the price item or price item bundle. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required while defining a division-specific characteristic for the price item or price item bundle. |

- Enter the required details in the **Divisions** section.
- If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

Defining the Accrual Type Criteria of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

The accrual type criteria of a price item or price item bundle is referred when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

| If the accrual type criteria of a price item or price item bundle is set to... | Then... |
|---|---|
| Actual | The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> • The price item is not excluded in the accrual type. • The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual. |
| Historical | The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> • The price item is not excluded in the accrual type. • The accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical. |
| Not Applicable | The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> • The price item is not excluded in the accrual type • The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual or Historical. |

The system enables you to define accrual type criteria of a price item or price item bundle for each division. For example, you can maintain different accrual type criteria of the Stop Payments (STPY) price item for each division as shown below:

The following table illustrates how you can define different accrual type criteria for a price item in each division:

| Price Item | Division | Accrual Type Criteria |
|----------------------|-----------------|------------------------------|
| Stop Payments (STPY) | 201-NJ | Actual |
| | 209-CA | Historical |
| | 210-FL | Not Applicable |
| | 215-OX | Actual |
| | 220-AL | Historical |
| | 223-NJ | Not Applicable |

Prerequisites

To define the accrual type criteria of a price item or price item bundle for a division, you should have:

- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the accrual type criteria of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Accrual Type Criteria** column corresponding to the division for which you want to define accrual type criteria of the price item or price item bundle.

The following field appears in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|---|
| Accrual Type Criteria | Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual. • Historical - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Historical. • Not Applicable - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual or Historical. | Yes (Conditional) |
| | | Note: This field is required while defining the accrual type criteria of the price item or price item bundle for the division. |
| | Note: By default, the Not Applicable option is selected. | |

3. Select the accrual type criteria from the respective field.
4. Click **Save**.

The accrual type criteria of the price item or price item bundle is defined for the division.

Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division

Note: This topic is not applicable for the health insurance business.

Once you design the structure of an entity hierarchy relationship, you can associate a price item or price item bundle with a hierarchy entity at any level in the entity hierarchy relationship. You can associate a price item or price item bundle with a hierarchy entity only from the **Price Item** screen. The system enables you to define division-specific hierarchy for a price item or price item bundle. Therefore, while associating a price item or price item bundle with a

hierarchy entity, you can select a hierarchy entity from any entity hierarchy relationship which is created for the division. However, the system checks whether the association date range is within the entity hierarchy relationship date range.

For example, you can associate the ACH Transfer (ACHTRN) price item with the Payments hierarchy entity in the Cash Management entity hierarchy relationship as shown below:

```
Cash Management
  Payments
    ACH Transfer
```

Associating a price item or price item bundle with a hierarchy entity does not have any impact on the billing module. At present, the price item hierarchy is only displayed in the Deal Modelling and Simulation module.

Prerequisites

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division, you should have:

- Entity hierarchy relationships defined for the required divisions
- Hierarchy entities included at the required levels in the entity hierarchy relationship
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Entity Hierarchy** column corresponding to the division for which you want to define price item or price item bundle hierarchy.

The following fields appear in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|--|
| Hierarchy | Used to indicate the entity hierarchy relationship in which you want to include the price item or price item bundle. | Yes (Conditional) |
| | Note: The Search  icon appears corresponding to the Hierarchy field. On clicking the Search icon, the Hierarchy Search window appears. | Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division. |
| Parent Entity | Used to indicate the hierarchy entity to which you want to associate the price item or price item bundle. | Yes (Conditional) |
| | Note: The list appears when the entity hierarchy relationship is specified in the Hierarchy field. It contains the hierarchy entities which are included at the root and subsequent levels in the entity hierarchy relationship. | Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division. |
| Start Date | Used to specify the date from when the price item or price item bundle is associated with | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| | <p>the hierarchy entity in the entity hierarchy relationship.</p> <p>Note: The start date cannot be later than the end date. The start date cannot be earlier than the entity hierarchy relationship start date.</p> | <p>Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.</p> |
| End Date | <p>Used to specify the date till when the price item or price item bundle is associated with the hierarchy entity in the entity hierarchy relationship.</p> <p>Note: The end date cannot be earlier than the start date. The end date cannot be later than the entity hierarchy relationship end date.</p> | No |

- Enter the required details in the **Entity Hierarchy** grid.
- If you want to associate the price item or price item bundle to more the one hierarchy entity in the same or different entity hierarchy relationship, click the **Add (+)** icon and then repeat step 3.

Note:

You cannot associate the price item or price item bundle to multiple hierarchy entities in the same or different entity hierarchy relationship for the same or overlapping date range.

However, if you want to disassociate the price item or price item bundle from a hierarchy entity of an entity hierarchy relationship, click the **Delete (X)** icon corresponding to the hierarchy and parent entity combination.

- Click **Save**.

The price item or price item bundle is associated with a hierarchy entity in an entity hierarchy relationship of the division.

Defining the Cost of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

Oracle Revenue Management and Billing enables you to maintain the different types of fixed and variable costs of a price item or price item bundle for each division. The system uses the fixed and variable cost information while calculating

the cost of a price item or price item bundle in a deal. It considers the cost which is defined for the division to which the account or person belongs. It derives the fixed and/or variable cost which is effective on the deal start date.

The system enables you to maintain the following types of costs in different currencies:

- Additional Fixed Cost
- Additional Variable Cost
- Fixed Third Party Cost
- Fixed Internal Cost
- Variable Internal Cost
- Variable Third Party Cost

While calculating the cost of a price item or price item bundle in a deal, the system converts the cost in the deal currency when the cost currency is different from the deal currency. As the name implies, the fixed cost is an expense that does not change with the increase or decrease in the price item volume or commitments. Therefore, the total fixed cost is equal to the sum of fixed cost which is effective on the deal start date for the division. However, the variable cost is an expense that change with the increase or decrease in the price item volume or commitments. Therefore, the total variable cost is equal to the sum of multiplication of variable cost (which is effective on the deal start date for the division) and price item volume or commitments.

Let us understand this with the help of an example:

The following table illustrates how you can define division-specific costs for a price item:

| Price Item | Division | Cost Type | Cost Amount |
|------------|----------|---------------------------|-------------|
| PI1 | 201-NJ | Fixed Third Party Cost | \$5 |
| | | Fixed Internal Cost | \$3 |
| | | Additional Fixed Cost | \$1 |
| | | Variable Third Party Cost | \$0.1 |
| | | Variable Internal Cost | \$0.65 |
| | | Additional Variable Cost | \$0.5 |

If a deal is created for a person who belongs to the 201-NJ division and if the PI1 price item is assigned to the person in the deal and if the original volume and proposed commitment of the PI1 price item in the deal is set to 100 and 200, respectively, the system calculates the cost of the PI1 price item in the following manner:

The following table illustrates how the original and proposed cost is calculated for a price item in a deal:

| | |
|----------------------|---|
| Original Cost | |
| Total Fixed Cost | $\$5 + \$3 + \$1 = \9 |
| Total Variable Cost | $(100 * \$0.1) + (100 * \$0.65) + (100 * \$0.5) = \$10 + \$65 + \$50 = \$125$ |
| Total Cost | $\$9 + \$125 = \$134$ |
| Proposed Cost | |
| Total Fixed Cost | $\$5 + \$3 + \$1 = \9 |

| | |
|---------------------|---|
| Total Variable Cost | $(200 * \$0.1) + (200 * \$0.65) + (200 * \$0.5) = \$20 + \$130 + \$100 = \$250$ |
| Total Cost | $\$9 + \$250 = \$259$ |

Here, the assumption is the deal and cost currency is same (i.e. USD). The system then uses the total original and proposed costs for calculating the original and proposed profitability of the deal.

Prerequisites

To define the cost of a price item or price item bundle for a division, you should have:

- Currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the cost of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** (⊕) icon in the **Costs** column corresponding to the division for which you want to define the costs of the price item or price item bundle.

The following fields appear in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|---|---|
| Effective Date | Used to specify the date from when the cost of the price item or price item bundle is effective for the division. | Yes (Conditional) Note: This field is required while defining the cost of the price item or price item bundle for the division. |
| Cost Type | Used to indicate the type of cost incurred in the division for the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost | Yes (Conditional) Note: This field is required while defining the cost of the price item or price item bundle for the division. |
| Cost Value | Used to specify the cost amount. | Yes (Conditional) Note: This field is required while defining the cost of the price item or price item bundle for the division. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|--|
| Cost Currency | Used to specify the currency in which you want to define the cost. The system does currency conversion when the cost currency is different from the deal currency. | Yes (Conditional) |
| | Note: The list includes only those currencies which are already defined in the system. | Note: This field is required while defining the cost of the price item or price item bundle for the division. |

- Enter the required details in the **Costs** grid.
- If you want to define more than one cost of the price item or price item bundle for the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the cost of the price item or price item bundle from the division, click the **Delete (🗑)** icon corresponding to the cost.

- Click **Save**.

The cost of the price item or price item bundle is defined for the division.

Defining the Average Price Floor and Ceil Values of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

Oracle Revenue Management and Billing enables you to define the average price floor and ceil limits of a price item or price item bundle for each division. Before you define the average price floor and ceil limits, you need to specify the floor and ceiling type for the price item or price item bundle. At present, the system supports the following floor and ceiling types for a price item or price item bundle:

- Absolute Value Range

Once the floor and ceiling type of a price item or price item bundle is set to **Absolute Value Range**, you can define the average price floor and ceil limits of the price item or price item bundle for the required divisions. The system enables you to define different average price floor and ceil limits for different To Do roles. The system uses the average price floor and ceil limits while approving the average price of the price item or price item bundle in a deal. The deal creator or an approver at any level in the division or deal approval hierarchy can approve the average price of a price item or price item bundle when the average price is within the floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the average price of the P1 price item in a deal is \$25 and the floor and ceil limits of the deal creator's To Do role is set to \$10-\$15, then the deal creator cannot approve the average price of the P1 price item in the deal.

If the average price floor and ceil limits is not defined for the deal creator's or approver's To Do role, the status of the price item or price item bundle in the deal is changed to **Error**. If the average price floor and ceil limits is defined for the deal creator's or approver's To Do role, but the average price of the price item or price item bundle is not within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Pending for Approval**. However, if the average price floor and ceil limits is defined for the deal creator's or approver's To Do role and the

average price of the price item or price item bundle is within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Approved**.

Here, you can also define the average price floor and ceil limits for the price item manager's To Do role. Note that the price item manager can approve the average price of the price item or price item bundle in a deal when the average price of the price item or price item bundle is within the floor and ceil limits of the price item manager's To Do role.

- Spread Amount

Once the average price floor and ceil type of a price item or price item bundle is set to **Spread Amount**, the system calculates the average price floor and ceil limits based on the average price and spread amount. The system calculates the average price of the price item or price item bundle. The system searches for the eligible price list in the price assignments assigned to the To Do roles. If a flat pricing is defined in the price assignment, then the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread amount specified for the relationship manager's To Do role in the price item. Using the spread amount and average price, the system calculates the average price floor and ceil limit values. The deal creator or an approver at any level in the division or deal approval hierarchy can approve the average price of a price item or price item bundle when the average price is within the floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the spread amount set by you is 10 and the system calculated average price of the P1 price item in a deal is \$25 then the system sets the floor and ceil limits of the deal creator's To Do role to \$15-\$35. In this case the deal creator can approve the average price of the P1 price item in the deal.

The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

- Spread Percentage

Once the average price floor and ceil type of a price item is set to the **Spread Percentage**, the system calculates the average price floor and ceil limits based on the average price and spread percentage. The system calculates the average price of the price item or price item bundle. The system searches for the eligible price list in the price assignments assigned to the To Do roles. If a flat pricing is defined in the price assignment, then the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread percentage specified for the relationship manager's To Do role in the price item. Using the spread percentage and average price, the system calculates the average price floor and ceil values. The deal creator or an approver at any level in the division or approver system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the spread percentage set by you is 10 and the system calculated average price of the P1 price item in a deal is \$50 then the system sets the floor and ceil limits of the deal creator's To Do role to \$45-\$55. In this case the deal creator can approve the average price of the P1 price item in the deal.

The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

Prerequisites

To define the average price floor and ceil limits of a price item or price item bundle for a division, you should have:

- To Do roles and currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the average price floor and ceil limits of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Average Price Floor and Ceil Limits** column corresponding to the division for which you want to define the average price floor and ceil limits of the price item or price item bundle.

The following fields appear in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|--|
| To Do Role | Used to indicate that users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search  icon appears corresponding to the To Do Role field. On clicking the Search icon, the To Do Role Search window appears.</p> <p>On specifying the To Do role, the description of the To Do role appears corresponding to the To Do Role field.</p> | <p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p> |
| Floor Value | Used to specify the floor (i.e. lower) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is below the floor limit. | Yes (Conditional) |
| | <p>Note: The floor value cannot be greater than the ceil value.</p> | <p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p> |
| Ceil Value | Used to specify the ceil (i.e. upper) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is above the ceil limit. | Yes (Conditional) |
| | <p>Note: The ceil value cannot be lower than the floor value.</p> | <p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p> |
| Spread Amount | Used to specify the spread amount specified while defining a price item or price item bundle or assigned to a To Do role. | Yes (Conditional) |
| | <p>Note: This column appears when you select the Spread Amount option from the Average Price Floor and Ceil Type list for a price item or price item bundle.</p> | <p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|---|
| Spread Percentage | Used to specify the spread percentage specified while defining a price item or price item bundle or assigned to a To Do role. | Yes (Conditional) |
| | Note: This column appears only when you select the Spread Percentage option from the Average Price Floor and Ceil Type list for a price item or price item bundle. | Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division. |
| Floor and Ceil Currency | Used to indicate the currency in which you want to define the floor and ceil limits. The system does the currency conversion when the pricing currency is different from the floor and ceil currency. | Yes (Conditional) |
| | Note: The list includes only those currencies which are already defined in the system. | Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division. |

- Enter the required details in the **Average Price Floor and Ceil Limits** grid.
- If you want to define the average price floor and ceil limits for more than one To Do role, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the average price floor and ceil limits of a To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do role.

- Click **Save**.

The average price floor and ceil limits of the price item or price item bundle are defined for the division.

Defining a Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item or price item bundle:

- Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the price item or price item bundle. | Yes (Conditional) |
| | | Note: This field is required while defining a characteristic for the price item or price item bundle. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Price Item . | Note: This field is required while defining a characteristic for the price item or price item bundle. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required while defining a characteristic for the price item or price item bundle. |

- Enter the required details in the **Price Item Characteristics** section.
- If you want to define more than one characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

Copying a Price Item or Price Item Bundle

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle.

On copying a price item or price item bundle, the details including the following are copied to the new price item or price item bundle:

- Parameters and Divisions associated with the price item or price item bundle
- SQIs associated with the price item or price item bundle for the divisions
- Division-specific characteristics of the price item or price item bundle
- Accrual type criteria of the price item or price item bundle for the divisions
- Hierarchy entity to which the price item or price item bundle is associated in the divisions
- Cost of the price item or price item bundle for the divisions
- Average price floor and ceil limits of the price item or price item bundle for the divisions
- Negotiability floor and ceil values of the price item or price item bundle for the required divisions

You can then edit the details, if required.

Prerequisites

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user (i.e. who is performing this action) belongs
- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To copy a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the price item or price item bundle whose copy you want to create.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle

- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Price Item | Used to specify the price item or price item bundle. | Yes |
| Description | Used to specify the description for the price item or price item bundle. | Yes |
| Price Item Usage | <p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. | Yes |
| Price Item Type | <p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <p>Note: This option is not applicable for the health insurance business.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|--|
| | <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list.</p> <p>You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> | |
| Bundle | <p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This field is not applicable for the health insurance business.</p> | Yes |
| Bundle Type | <p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> • <i>Phantom Bundle</i> • <i>Ratio Bundle</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are creating a price item bundle.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|--|-----------------------|
| | <p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p> | |
| Global Price List | <p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | Yes |
| Contract Type | <p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p> | Yes |
| Price Item Manager To Do Type | <p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|--|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p> | |
| Price Item Manager To Do Role | <p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p> |
| Floor and Ceiling Type | <p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|---|-----------------------|
| | <p>Note:</p> <ul style="list-style-type: none"> Incase of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. This field is not applicable for the health insurance business. | |
| Sort Sequence | Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module. | No |
| Variable Price | <p>Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.</p> <p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p> | No |

- Enter the required details in the **Main** section.
- Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

- Associate or disassociate the price item or price item bundle from the required divisions.
- Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.
- Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

- Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

9. Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define, edit or remove the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.

13. Define, edit, or remove characteristics of the price item or price item bundle, if required.

14. Click **Save**.

The new price item is defined.

Note:

While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

Viewing the Price Item or Price Item Bundle Details

Procedure

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 910
 - [Price Item Characteristics](#)
 - [Parameters](#) on page 912
 - [Predefined Parameter Values for Price Item](#) on page 913
 - [Divisions](#) on page 913
 - [Division-Specific SQIs for Price Item](#) on page 914
 - [Division-Specific Characteristics for Price Item](#) on page 914
 - [Division-Specific Accrual Type Criteria for Price Item](#) on page 915
 - [Division-Specific Hierarchy for Price Item](#) on page 915
 - [Division-Specific Cost for Price Item](#) on page 916
 - [Division-Specific Average Price Floor and Ceil Values for Price Item](#) on page 917
 - [Division-Specific Negotiability Floor and Ceil Values for Price Item](#)
 - [Price Item Relationship](#) on page 918
3. View the basic details of the price item or price item bundle in the **Price Item** zone.
 4. View the characteristics of the price item or price item bundle in the **Price Item Characteristics** zone.
 5. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
 6. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
 7. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.

8. View the SQIs associated with the price item or price item bundle for a division in the **Division-Specific SQIs for Price Item** zone.
9. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
10. View the accrual type criteria of the price item or price item bundle for a division in the **Division-Specific Accrual Type Criteria for Price Item** zone.

Note: This step is not applicable for the health insurance business.

11. View the hierarchy entity to which the price item or price item bundle is associated in a division in the **Division-Specific Hierarchy for Price Item** zone.

Note: This step is not applicable for the health insurance business.

12. View the cost of the price item or price item bundle for a division in the **Division-Specific Cost for Price Item** zone.

Note: This step is not applicable for the health insurance business.

13. View the average price floor and ceil limits of the price item or price item bundle for a division in the **Division-Specific Floor and Ceil Values for Price Item** zone.

Note: This step is not applicable for the health insurance business.

14. View the negotiability floor and ceil values of the price item or price item bundle for a division in the **Division-Specific Negotiability Floor and Ceil Values for Price Item** zone.

Note: This step is not applicable for the health insurance business.

15. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

Note: This step is not applicable for the health insurance business.

- [Price Item Relationship](#) on page 918

Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

| Field Name | Field Description |
|-------------------|---|
| Price Item | Displays the price item or price item bundle. |
| Description | Displays the description of the price item or price item bundle. |
| Price Item Usage | Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing |
| Price Item Type | Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees |
| | Note: This field appears when the Pricing option is selected from the Price Item Usage list. |
| Bundle | Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Bundle Type | Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular |
| | Note: This field appears when the Yes option is selected from the Bundle list. |
| Global Price List | Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Contract Type | Displays the contract type to which the price item or price item bundle is associated. |

| Field Name | Field Description |
|-----------------------------------|--|
| Price Item Manager To Do Type | <p>Indicates the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p> |
| Price Item Manager To Do Role | <p>Indicates that users with the specified To Do role can approve the average price of the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits of the To Do role.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |
| Average Price Floor and Ceil Type | <p>Indicates the manner in which you want to define the average price floor and ceil limits of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Absolute Value Range • Spread Amount • Spread Percentage |
| Sort Sequence | Displays the sequence in which the price item appears in the price item hierarchy of the deal pricing management module. |
| Variable Price | <p>Indicates whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal management module.</p> <p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p> |

- **Record Actions** – The **Record Actions** section contains the following button:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the price item or price item bundle. |

- **Record Information** – The **Record Information** section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the price item or price item bundle is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |

| Field Name | Field Description |
|------------|---|
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Parameters

The **Parameters** zone lists the parameters which are associated with the price item or price item bundle. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Effective Start Date | Displays the date from when the parameter is associated with the price item or price item bundle. |
| Effective End Date | Displays the date till when the parameter is associated with the price item or price item bundle. |
| Parameter | Indicates the parameter which is associated with the price item or price item bundle. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter. |
| Business Label | Displays the business label of the parameter. |
| Display Order | Indicates the order in which the parameter and its value should appear in the pricing parameter information string across the application. |
| Parameter Usage | Indicates whether you can use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation • Pricing |
| Mandatory | Indicates whether the parameter is mandatory while defining the price item pricing. |
| Priority | Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle. |

On clicking the **Broadcast** () icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Parameter Value | Displays the predefined parameter value. |
| Description | Displays the description of the predefined parameter value. |

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📢) icon corresponding to a parameter in the **Parameters** zone.

Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

| Column Name | Column Description |
|-------------|---|
| Division | Indicates the division to which the price item or price item bundle is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division. |

On clicking the **Broadcast** (📢) icon corresponding to a division, the **Division-Specific SQIs for Price Item**, **Division-Specific Characteristics for Price Item**, **Division-Specific Accrual Type Criteria for Price Item**, **Division-Specific Hierarchy for Price Item**, **Division-Specific Cost for Price Item**, **Division-Specific Average Price Floor and Ceil Values for Price Item** and **Division-Specific Negotiability Floor and Ceil Values for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Division-Specific SQIs for Price Item

The **Division-Specific SQIs for Price Item** zone lists the SQIs associated with the price item or price item bundle for the division. It contains the following column:

| Column Name | Column Description |
|-------------|--|
| SQI | Indicates the SQI associated with the price item or price item bundle for the division. Note: It has a link. On clicking the link, the Service Quantity Identifier screen appears where you can view the details of the respective SQI. |

By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Characteristics for Price Item

The **Division-Specific Characteristics for Price Item** zone lists the characteristics of the price item or price item bundle which are defined for the division. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Date | Displays the date from when the price item or price item bundle characteristic is effective for the division. |
| Characteristic Type | Indicates the characteristic type. Note: It has a link. On clicking the link, the Characteristic Type screen appears where you can view the details of the respective characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Accrual Type Criteria for Price Item

Note: This topic is not applicable for the health insurance business.

The **Division-Specific Accrual Type Criteria for Price Item** zone lists the accrual type criteria of the price item or price item bundle which is defined for the division. It contains the following column:

| Column Name | Column Description |
|-----------------------|---|
| Accrual Type Criteria | Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual • Historical • Not Applicable |

By default, the **Division-Specific Accrual Type Criteria for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a division in the **Divisions** zone.

Division-Specific Hierarchy for Price Item

Note: This topic is not applicable for the health insurance business.

The **Division-Specific Hierarchy for Price Item** zone lists the following in a tree structure:

- Information string of the hierarchy entity at the first level in the entity hierarchy relationship
- Information string of the hierarchy entities at the subsequent levels in the entity hierarchy relationship
- Information string of the price items which are associated with the hierarchy entities at different levels in the entity hierarchy relationship

For example,

- ▲ [Cash Management, US](#)
 - ▲ [Payments, US](#)
 - > [ACH Payment](#)
 - > [ACH Return](#)
 - > [ACH Reversal](#)
 - ▲ [Statements, US](#)
 - > [Mini Statement](#)
 - > [Yearly Statement](#)

Here, the Cash Management, US (at the first level), Payments, US (at the second level), and Statements, US (at the second level) are the hierarchy entity nodes. And, the ACH Payment, ACH Return, ACH Reversal, Mini Statement, and Yearly Statement are the price item nodes.

Each node in the tree has a link. If you click the link on the hierarchy entity node, the **Hierarchy Entity** screen appears where you can view the details of the respective hierarchy entity. However, if you click the link on the price item node, the **Price Item** screen appears where you can view the details of the respective price item.

It contains the following field:

| Field Name | Field Description |
|------------|--|
| Hierarchy | Displays the entity hierarchy relationship code. |

In addition, it contains the following buttons:

| Button Name | Button Description |
|--------------|--|
| Expand All | Used to expand all nodes at once in the entity hierarchy relationship. |
| Collapse All | Used to collapse all nodes at once in the entity hierarchy relationship. |

By default, the **Division-Specific Hierarchy for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Cost for Price Item

Note: This topic is not applicable for the health insurance business.

The **Division-Specific Cost for Price Item** zone lists the costs of the price item or price item bundle which is defined for the division. It contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Effective Date | Displays the date from when the cost of the price item or price item bundle is effective for the division. |
| Cost Type | Indicates the type of cost incurred in the division for the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost |
| Cost Value | Displays the cost amount. |
| Cost Currency | Indicates the currency in which the cost is specified. |

| Column Name | Column Description |
|-------------|---|
| | Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the respective currency. |

By default, the **Division-Specific Cost for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Division-Specific Average Price Floor and Ceil Values for Price Item

Note: This topic is not applicable for the health insurance business.

The **Division-Specific Average Price Floor and Ceil Values for Price Item** zone lists the average price floor and ceil limits of the price item or price item bundle which are defined for the division. It contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| To Do Role | Indicates that users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. |
| Floor Value | Displays the floor (i.e. lower) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Limits list for a price item or price item bundle. |
| Ceil Value | Displays the ceil (i.e. upper) limit of the To Do role. Note: This column appears when the Absolute Value Range option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle. |
| Floor and Ceil Currency | Indicates the currency in which the average price floor and ceil limits are defined for the price item or price item bundle. Note: It has a link. On clicking the link, the Currency screen appears where you can view the details of the respective currency. |
| Spread Amount | Indicates the spread amount specified while defining a price item or price item bundle or assigned to a To Do role. Note: This column appears when the Spread Amount option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle. |
| Spread Percentage | Indicates the spread percentage specified while defining a price item or price item bundle or assigned to a To Do role. |

| Column Name | Column Description |
|-------------|--|
| | Note: This column appears when the Spread Percentage option is selected for the Average Price Floor and Ceil Type list for a price item or price item bundle. |

By default, the **Division-Specific Average Price Floor and Ceil Values for Price Item** zone does not appear in the **Price Item** screen. It appears when you click the **Broadcast** () icon corresponding to a division in the **Divisions** zone.

Price Item Relationship

Note: This topic is not applicable for the health insurance business.

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Price Item Information | Displays information about the price item or price item bundle. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. |
| Effective Start Date | Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle. |
| Effective End Date | Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle. |
| Relationship Type | Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Bundle • Child Price Item • Custom • Denominator • Numerator • Other • Price Item • Product Group • Service • Service Group |
| Bundle Type | Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio |

| Column Name | Column Description |
|-----------------------|--|
| | <ul style="list-style-type: none"> Regular |
| | Note: The data appears in this column when the associated price item is a bundle. |
| Price Item Parameters | Displays the parameters and their values based on which you want to determine pricing for the price item or price item bundle. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Editing a Price Item or Price Item Bundle

Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To edit a price item or price item bundle:

- Search for the price item or price item bundle in the **Price Item** screen.
- In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.

The **Price Item** screen appears.

- Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle

- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Price Item | Displays the price item or price item bundle. | Not applicable |
| Description | Used to specify the description for the price item or price item bundle. | Yes |
| Price Item Usage | Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| | <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <p>Note: You can change the price item usage of a price item or price item bundle from Pricing to Pricing and Billing. But, you cannot change the price item usage of a price item or price item bundle from Pricing and Billing to Pricing.</p> | |
| Price Item Type | <p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> | Yes |
| Bundle | <p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| | Note: This field is not applicable for the health insurance business. | |
| Bundle Type | Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are: <ul style="list-style-type: none"> • <i>Regular Bundle</i> • <i>Phantom Bundle</i> • <i>Ratio Bundle</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p> | Yes (Conditional) |
| | Note: This field is required when you are creating a price item bundle. | |
| Global Price List | Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Contract Type | Used to indicate the contract type that you want to associate with the price item or price item bundle. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------------|---|--|
| | <p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p> | |
| Price Item Manager To Do Type | <p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p> | No |
| Price Item Manager To Do Role | <p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p> |
| Average Price Floor and Ceil Type | Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is: | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|---|
| | <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. <p>Note:</p> <ul style="list-style-type: none"> • In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business. | <p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p> |
| Sort Sequence | Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module. | No |
| Variable Price | <p>Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.</p> <p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p> | No |

4. Modify the required details in the **Main** section.
5. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

Note:

You can edit the parameter details and remove a parameter from the price item or price item bundle when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

Note: If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.
8. Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define, edit or remove the rate negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.

14. Define, edit, or remove characteristics of the price item or price item bundle, if required.

15. Click **Save**.

The changes made to the price item or price item bundle are saved.

Price List

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.
- **Global Price List** – You can create one global price list in the system. It is used when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to define a price list. It contains the following zones:

- [Search Price List](#) on page 927
- [Price List Price Items](#) on page 931
- [Price Item Pricing](#)
- [Price Assignment Tree](#)

Through this screen, you can navigate to the following screens:

- [Price List Price Item Pricing](#) on page 948
- [Price List Assignments](#) on page 996
- [Entities Eligible for Price List Assignment](#) on page 998
- [Price Item Pricing \(Used for Viewing\)](#)

Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> • Price List Details | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| | Note: By default, the Price List Details option is selected. | |
| Price List ID | Used to search a particular price list. | No |
| Price List Description | Used to search price lists with a particular description. | No |
| Effective Start Date | Used to search price lists which are effective from a particular date onwards. | No |
| Effective End Date | Used to search price lists which are effective till a particular date. | No |
| Price List Type | Used to search price lists which belong to a particular type. The valid values are: <ul style="list-style-type: none"> • Promotional • Standard Note: By default, the Standard option is selected. | No |
| Global Price List | Used to indicate whether you want to search global price lists. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Availability Start Date | Used to search price lists which are available for assignment to an account or a person from a particular date. Note: This field appears when you click the Advanced Search link in the top right corner of this zone. | No |
| Availability End Date | Used to search price lists which are available for assignment to an account or a person till a particular date. Note: This field appears when you click the Advanced Search link in the top right corner of this zone. | No |
| Status | Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Template | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|--|-----------------------|
| | Note: This field appears when you click the Advanced Search link in the top right corner of this zone. | |
| Division | Used to search price lists which are associated with a particular division. Note: You can only view those divisions to which you have access in the Division list. | No |
| Parent Price List | Used to search price lists which inherit pricing from a particular parent price list. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears where you can search for the respective parent price list. This field appears when you click the Advanced Search link in the top right corner of this zone. | No |
| Parent Price List Effective Date | Used to search price lists that inherit pricing from a particular parent price list which is effective from a particular date onwards. Note: This field appears when you click the Advanced Search link in the top right corner of this zone. | No |

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Price List Information | Displays the concatenated string of information about the price list separated by a comma (.). Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list. |
| Status | Indicates the current status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Template |
| Effective Start Date | Displays the date from when the price list is effective. |

| Column Name | Column Description |
|---------------------------|--|
| Effective End Date | Displays the date till when the price list is effective. |
| Availability Start Date | Displays the date from when the price list is available for assignment to an account or a person. |
| Availability End Date | Displays the date till when the price list is available for assignment to an account or a person. |
| Duplicate | On clicking the Duplicate (📄) icon, the Price List screen appears where you can create a new price list using an existing price list. |
| Price List Pricing | On clicking the View (🔗) icon in the Price List Pricing column, the Price List Price Item Pricing screen appears where you can view and edit a list of price items pricing information assigned to the price list. |
| Price List Assigned To | On clicking the View (🔗) icon in the Price List Assigned To column, the Price List Assignments screen appears where you can view the details of the persons and accounts to which the price list is assigned. |
| Eligible Accounts/Persons | On clicking the View (🔗) icon in the Eligible Accounts/Persons column, the Entities Eligible for Price List Assignment screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division. |

Note:

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🗑️) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

| Column Name | Column Description |
|-----------------------|--|
| Pricing Information | <p>Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for the price list.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price list.</p> |
| Price Item | Displays the price item or price item bundle. |
| Pricing Parameters | <p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p> |
| Pricing Status | <p>Displays the status of pricing for the price item. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive |
| Rate Info | <p>Displays the rate of the price item.</p> <p>Note:</p> <p>If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column.</p> <p>However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen.</p> |
| Start Date | Displays the date from when the price item pricing is effective for the price list. |
| End Date | Displays the date till when the price item pricing is effective for the price list. |
| Price Assignment Type | <p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> Regular Post Processing Post Processing – Invoice Based Post Processing – Price Item Based |

| Column Name | Column Description |
|-------------|---|
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Duplicate | On clicking the Duplicate () icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing. |

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears when you click the **Broadcast** () icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to the **Pricing Information** field, the **Price Item Pricing** and **Pricing Structure** zones appear where you can view the details about the price item pricing and its structure.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Searching for a Price List

Prerequisites

To search for a price list, you should have:

- Divisions defined in the application
- Price list associated with the division to which the user belongs

Procedure

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Viewing Price Items Assigned to a Price List

Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Procedure

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the price list whose price items details you want to view.

The **Price List Price Items** zone appears.

3. View the price items that are assigned to the price list in the **Price List Price Items** zone.

Defining a Price List

Procedure

To define a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It consists the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a particular duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define the characteristics for the price list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Price List Description | Used to specify the description for the price list. | Yes |
| Effective Start Date | Used to specify the date from when the price list is effective. | Yes |
| | Note: By default, the current date appears in this field. | |
| Effective End Date | Used to specify the date till when the price list is effective. | No |
| | Note: The effective end date cannot be earlier than the effective start date. | |
| Price List Type | Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional | Yes |
| | Note: By default, the Standard option is selected. | |
| Global Price List | Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Availability Start Date | Used to the specify the date from when the price list is available for assignment to an account or a person. | No |
| | Note: At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use. | |
| Availability End Date | Used to the specify the date till when the price list is available for assignment to an account or a person. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| | <p>Note:</p> <p>The availability end date cannot be earlier than the availability start date.</p> <p>At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.</p> | |
| Available for Deal Pricing | Used to indicate whether the price list is available for deal pricing or not. | No |
| Standard for Deal Pricing | Used to indicate whether the price list is applicable for defining costs or floor and ceil limits or commitments at the time of deal pricing. | No |
| Validity Period (in Days) | Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person. | No |
| Status | <p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> • Active - Used to indicate that the price list is used for billing. • Inactive - Used to indicate that the price list is no longer used for billing. • Proposed - Used to indicate that the price list is used for quotations. • Template - Used to indicate that the price list is a template price list. | Yes |
| | <p>Note: By default, the Active option is selected.</p> | |

Tip: Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

Note: By default the **Main** section is displayed.

5. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:
- Associate the price list with one or more parent price list, if required.
 - Associate price list with one or more divisions, if required.
 - Define eligibility criteria for the price list, if required.
 - Define characteristics for the price list, if required.

6. Click **Save**.

Note: The price list ID is generated automatically when the price list is created.

Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------------|---|--|
| Parent Price List Effective From Date | Used to specify the date from when the price list inherits pricing from the parent price list. | Yes (Conditional) Note: This field is required when you are associating the price list with a parent price list. |
| Parent Price List Effective To Date | Used to specify the date till when the price list inherits pricing from the parent price list. Note: The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date. | No |
| Parent Price List | Used to specify the parent price list ID to which you want to associate the price list. | Yes (Conditional) Note: This field is required when you are associating the price list with a parent price list. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.</p> <p>On specifying the parent price list, the description of the parent price list appears corresponding to the Parent Price List field.</p> | |

- Enter the required details in the **Hierarchy** section.

Note: You can search for a price list by clicking the **Search** (🔍) icon corresponding to the **Parent Price List** field.

- If you want to associate the price list with more than one parent price list, click the **Add** (+) icon corresponding to the parent price list and then repeat step 2.

Note:

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

If you want to remove a parent price list from the price list hierarchy, click the **Delete** (🗑️) icon corresponding to the parent price list.

- Click **Save**.

The price list is associated with the parent price lists.

Defining a Characteristic for a Price List

Prerequisites

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

Procedure

To define a characteristics for a price list:

- Click the **Characteristics** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the price list. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the price list. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the price list. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the price list. |

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list.

Associating a Price List with a Division

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

Prerequisites

To associate a price list with a division, you should have:

- Divisions defined in the application

Procedure

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Division | Used to indicate the division to which you want to associate the price list. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add (+)** icon corresponding to the division and then repeat step 2.

Note: However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the divisions.

Tip: Alternatively, you can associate a price list with a division using the **Division** screen.

Defining Eligibility Criteria for a Price List**Prerequisites**

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

Procedure

To define eligibility criteria for a price list:

1. Click the **Eligibility** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------|---|--|
| Criteria | On clicking the Add (+) icon, you can associate eligibility criteria of parameters for the price list. | Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list. |
| Effective Start Date | Used to specify the date from when the criteria is effective for the price list. | Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list. |
| Effective End Date | Used to specify the date till when the criteria is effective for the price list. | No |
| Description | Used to specify the description for the criteria type. | Yes |

- Enter the required details in the **Eligibility** section.
- If you want to define more than one eligibility criteria for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the eligibility criteria, click the **Delete** (🗑️) icon corresponding to the criteria.

- Associate eligibility criteria of parameter for the price list, if required.
- If you want to define more than one eligibility criteria of parameter for the price item, click the **Add** (+) icon corresponding to the parameter.

Note: However, if you want to remove the eligibility criteria of parameter for the price item, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The eligibility criteria are defined for the price list.

Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions,

characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define the characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|-----------------------|
| Price List Description | Used to specify the description for the price list. | Yes |
| Effective Start Date | Used to specify the date from when the price list is effective | Yes |
| Effective End Date | Used to specify the date till when the price list is effective. | No |
| Price List Type | Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional | Yes |
| Global Price List | Used to Indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Availability Start Date | Used to specify the date from when the price list is available for assignment to an account or a person. | Yes |
| Availability End date | Used to specify the date till when the price list is available for assignment to an account or a person. | No |
| Available for Deal Pricing | Used to indicate whether the price list is available for deal pricing or not. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Standard for Deal Pricing | Used to indicate whether the price list is applicable for defining costs or floor and ceil limits or commitments at the time of deal pricing. | No |
| Validity Period (in Days) | Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person. | Yes |
| Status | Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> Active Proposed Template | Yes |
| Copy Pricing | Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> All None | Yes (Conditional) |

- Enter the required details in the **Main** section.
- Add, edit, or remove the parent price list details, if required.
- Associate or disassociate the price list from the required divisions.
- Define, edit, or remove the price list eligibility criteria and parameter eligibility criteria for price list in the, if required.
- Define, edit, or remove characteristics of the price list, if required.
- Click **Save**.

The new price list is defined.

Note: The price list ID is generated automatically when the price list is defined.

Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.
- **Price Item Pricing**
 - Displays the price item pricing for price items that are assigned to the price list.
- **Pricing Structure**
 - Displays the structure of the price item pricing for price item that are assigned to the price list.

Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

| Field Name | Field Description |
|------------------------|---|
| Price List ID | Displays the price list ID. |
| Price List Description | Displays the description for the price list. |
| Effective Start Date | Displays the date from when the price list is effective. |
| Effective End Date | Displays the date till when the price list is effective. |
| Price List Type | Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional |
| Global Price List | Indicates whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes |

| Field Name | Field Description |
|----------------------------|---|
| | <ul style="list-style-type: none"> No |
| Availability Start Date | Displays the date from when the price list is available for assignment to an account or a person. |
| Availability End date | Displays the date till when the price list is available for assignment to an account or a person. |
| Available for Deal Pricing | Indicates whether the price list can be assigned with a person or an account. |
| Standard for Deal Pricing | Indicates whether the price list can be considered to compare the average floor and ceil limit with the standard and average price of a price item associated with a price list. |
| Validity Period (in Days) | Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person. |
| Status | <p>Indicates the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> Active – Indicates that the price list is used for billing. Inactive – Indicates that the price list is no longer used for billing. Proposed – Indicates that the price list is used for quotations. Template – Indicates that the price list is a template price list. |

- **Hierarchy** - Lists the parent price list from which the price list has inherited the price item pricing for a particular duration. It contains the following columns:

| Column Name | Column Description |
|---------------------------------------|--|
| Parent Price List ID | Displays the ID of the parent price list. |
| Parent Price List Effective From Date | Displays the date from when the price list can inherit pricing from the parent price list. |
| Parent Price List Effective To Date | Displays the date till when the price list can inherit pricing from the parent price list. |

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

| Column Name | Column Description |
|-------------|--|
| Division | <p>Displays the division to which the price list is associated.</p> <p>Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.</p> |

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Date | Displays the date from when the characteristic is effective for the price list. |
| Characteristic Type | Displays the characteristic type. |
| Characteristic Value | Displays the value for the characteristic type. |

- **Record Actions** - This section contains the following button:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the price list. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Eligibility Criteria

The **Eligibility Criteria** zone lists the eligibility criteria of the price list. It contains the following columns:

| Field Name | Field Description |
|----------------------|--|
| Effective Start Date | Displays the date from when the criteria is effective for the price list. |
| Effective End Date | Displays the date till when the criteria is effective for the price list. |
| Description | Displays the description for the criteria type. |
| Sequence | Indicates the order in which the price list eligibility criteria should be executed. |
| Parameter | Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria. |
| Operator | Displays the relational operator to define the relation between the parameter name and value. |
| Parameter Value Type | Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value. |
| Parameter | Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side). |
| Parameter Value | Indicates the parameter value against which you want to compare the parameter (on the left hand side). |
| Is True | Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. |

| Field Name | Field Description |
|-----------------|---|
| | <ul style="list-style-type: none"> • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed. |
| Is False | <p>Indicates what happens when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed. |
| Is Insufficient | <p>Indicates what happens when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed. |

Editing a Price List

Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to define parent price list to inherit price item pricing for the price list for a particular duration.
- **Divisions** - Used to associate price list with one or more divisions.
- **Eligibility Criteria** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define the characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Price List Description | Used to specify the description for the price list. | Yes |
| Effective Start Date | Used to specify the date from when the price list is effective. | Yes |
| | <p>Note: The system will not allow you to change the effective start date when:</p> <ul style="list-style-type: none"> • There is a price item assigned to the price list on that date. • The price list is assigned to an account or a person on that date. | |
| Effective End Date | Used to specify the date till when the price list is effective. | No |
| | <p>Note: The effective end date cannot be earlier than the effective start date.</p> | |
| Price List Type | Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional | Yes |
| Global Price List | Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |
| Availability Start Date | Used to the specify the date from when the price list is available for assignment to an account or a person. <p>Note: At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.</p> | No |
| Availability End Date | Used to the specify the date till when the price list is available for assignment to an account or a person. | No |
| | <p>Note:</p> <p>The availability end date cannot be earlier than the availability start date.</p> <p>At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.</p> | |
| Validity Period (in Days) | Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Status | <p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> • Active – Used to indicate that the price list is used for billing. This value appears when you are editing a proposed price list • Proposed – Used to indicate that the price list is used for quotations. • Template – Used to indicate that the price list is a template price list. <p>Note: You cannot change the status of an active and a template price list.</p> | Yes |

4. Modify the details in the **Main** section, if required.

Note: By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.
6. Associate or disassociate the price list from the divisions, if required.

Note: You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

7. Define, edit, or remove eligibility criteria from the price list, if required
8. Define, edit, or remove characteristics of the price list, if required.
9. Click **Save**.

The changes made to the price list are saved.

Price List Price Item Pricing

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

The **Price List Price Item Pricing** screen contains the following zones:

- [Price List Price Items](#) on page 949
- [Search Price Item or Price Item Pricing](#) on page 951

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Pricing Information | Displays the concatenated string of information about the price item pricing separated by a comma (,). |
| | Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing. |
| Price Item | Displays the price item or price item bundle. |
| Pricing Parameters | Displays a comma-separated list of parameter values based on which the pricing is defined for the price item. The order in which the parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Pricing Status | Indicates the current status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active – Indicates that the price assignment is used for billing. • Draft – Indicates that the price assignment is created as a draft. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Rejected – Indicates that the price assignment is rejected. • Template – Indicates that the price assignment is a template price list. |
| Rate Info | Displays the rate of the price item. |
| | Note: If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column. However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen. |
| Effective Start Date | Displays the date from when the price item pricing is effective for the price list. |
| Effective End Date | Displays the date till when the price item pricing is effective for the price list. |
| Price Assignment Type | Indicates the type of price assignment. The valid values are: |

| Column Name | Column Description |
|-------------|--|
| | <ul style="list-style-type: none"> • Post Processing – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Indicates that the pricing is used to generate regular bill segment. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> </div> |
| Edit | On clicking the Edit () icon, you can edit the price item pricing for the price list. |
| Delete | On clicking the Delete () icon, you can remove the price item pricing from the price list. |
| | <p>Note:</p> <p>The Delete icon appears in this column only when the price list is not yet assigned to any account or person.</p> <p>This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p> |

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Search Price Item or Price Item Pricing

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item or Price Item Pricing** zone allows you to search for a price item pricing which is assigned to an account, person, or price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item or Price Item Pricing** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search price item, pricing assigned to price list and override pricing for an account, or person. The valid values are: <ul style="list-style-type: none"> • Price Item • Price list Pricing • Account Override Pricing • Person Override Pricing | Yes |
| Price Item | Used to search a particular price item or price item bundle. | No |
| Description | Used to search price items or price item bundles with a particular description. | No |
| | Note: This field appears when you select the Price Item option from the Search By list. | |
| Global Price List | Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Bundle | Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Price List ID | Used to search pricing of price items or price item bundles which are assigned to a particular price list. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | Note: This field appears when you select the Price List Pricing option from the Search By list. | |
| Effective Start Date | Used to search price item pricing on price lists which are effective from a particular date onwards. Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list. | No |
| Pricing Status | Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list. | No |
| Effective End Date | Used to search price item pricing on price lists which are effective till a particular date. Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list. | No |
| Price Assignment Type | Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based Note: This field appears when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list. | No |
| Account ID | Used to search pricing of price items or price item bundles which are assigned to a particular account. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| | <p>Note:</p> <p>This field appears when you select the Account Override Pricing option from the Search By list.</p> | |
| Person ID | <p>Used to search pricing of price items or price item bundles which are assigned to a particular person.</p> <p>Note:</p> <p>This field appears when you select the Person Override Pricing option from the Search By list.</p> | Yes |
| Product Code | | |

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

You can search for an account, person by clicking the **Search** (🔍) icon corresponding to the respective field.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Assign | On clicking the Assign (📌) icon, the Price Item Pricing screen appears where you can define a new price item pricing. |
| Price Item Information | <p>Displays details of the price item or price item bundle.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.</p> |
| Copy | On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing. |
| Pricing Information | <p>Displays details of the price item pricing.</p> <p>Note: It has a link. On clicking the link, the View Price Item Pricing window appears with the details of the respective price item pricing.</p> |
| Account Information | Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application. |

| Column Name | Column Description |
|------------------------|--|
| | <p>Note:</p> <p>This column appears when you select the Account Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> <p>The account information string appears when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p> |
| Person Information | <p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears only when you select the Person Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>The person information string appears when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p> |

Removing a Price Item from a Price List

Procedure

To remove a price item from a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the price list from which you want to remove a price item.
The **Price List Price Item Pricing** screen appears.
3. Filter the list in the **Price List Price Items** zone, if required.
4. Click the **Delete** () icon in the **Delete** column corresponding to the price item that you want to remove from the price list.

A message appears confirming whether you want to remove the price item from the price list.

Note: The **Delete** icon appears in the **Delete** column when the price list is not yet assigned to any account or person.

5. Click **OK**.

The price item is removed from the price list.

Editing a Price Item Pricing of a Price List

Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a price list:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Edit pricing of a price item that is assigned to a price list from Price List screen | <ol style="list-style-type: none"> 1. Search for the price list in the Price List screen. 2. In the Search Results section of Price List Price Items zone, click the link in the Pricing Information column corresponding to the price item whose pricing details you want to view. The Price Item Pricing screen appears. 3. Click the Edit button in the Record Actions section. The Price Item Pricing screen appears to edit the pricing details of a price item. |

| If you want to... | Then... |
|--|---|
| | <div style="border: 1px solid black; padding: 5px; background-color: #f0f0f0;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div> |
| <p>Edit pricing of a price item that is assigned to a price list from Price List Price Item Pricing screen</p> | <ol style="list-style-type: none"> 1. Search for the price list in the Price List screen. In the Search Results section, click the Price List Pricing () icon corresponding to the price list whose <i>details</i> you want to view. The Price List Price Item Pricing screen appears. 2. Price items assigned to the price list appears in the Price List Price Items zone. 3. You can edit the pricing item pricing through the following alternatives: <ol style="list-style-type: none"> a. First alternative, <ul style="list-style-type: none"> • In the Search Results section of Price List Price Items zone, click the Edit () icon in the Edit column corresponding to the price item pricing whose details you want to edit. The Price Item Pricing screen appears to edit the pricing details of a price item. b. Second alternative, <ul style="list-style-type: none"> • Search for a price item in the Search Price Item or Price Item Pricing zone. In the Search Results section, click the Assign () icon corresponding to the price item. • Enter the required details in the Price Item Pricing screen and click Save. The Price Item Pricing screen appears. • Click the Edit button in the Record Actions section. The Price Item Pricing screen appears to edit the pricing details of a price item. |

| If you want to... | Then... |
|-------------------|---|
| | <div data-bbox="1003 205 1398 317" style="border: 1px solid black; padding: 5px;"> <p>Note: The Edit button appears when the price item pricing is in the Draft status.</p> </div> |

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **Deal Information** – Used to indicate the average price floor and ceil type to define the floor and ceil limits for the price item or price item bundle
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define the characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears when **Price Assignment Type** is **Regular**.

- **Commitments** – Used to indicate the basic details about the pricing and commitments such as costs, floor and ceil limits, and negotiability specific to a division.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Start Date | <p>Used to specify the date from when the price item pricing is effective.</p> <div data-bbox="542 1276 1198 1612" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p> </div> | Yes |
| End Date | <p>Used to specify the date till when the price item pricing is effective.</p> <div data-bbox="542 1724 1198 1801" style="border: 1px solid black; padding: 5px;"> <p>Note: The effective end date cannot be earlier than the effective start date.</p> </div> | No |
| Price Assignment Type | Used to indicate the type of price assignment. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. Defining a Characteristic for a Price Item Pricing

Note: This topic is not applicable for the health insurance business.

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or overriding a price item pricing.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the price item pricing. | Yes (Conditional) |
| | | Note: This field is required while defining a characteristic for the price item pricing. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | | Note: The list includes only those characteristic types where the characteristic entity is set to Price Item . Note: This field is required while defining a characteristic for the price item pricing. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This field is required while defining a characteristic for the price item pricing. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price item pricing.

Defining a Parameter for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

| Field Name | Field Description |
|------------|---|
| Price Item | Indicates the price item or price item bundle whose pricing details are listed in this section. |

In addition, this section contains a grid which has the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Parameter | Used to indicate the parameter that you want to associate with the price item pricing. | Yes |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected. | |
| Parameter Information | Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> • Parameter Description • Mandatory (Yes or No) • Priority | Not applicable |
| Parameter Value | Used to specify the value of the parameter. | Yes |

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Note: This topic is not applicable for the health insurance business.

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or rating criteria to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining, editing, or overriding a price item pricing.

The **TFM Information** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|---|
| Ignore Transaction | Used to indicate whether the transactions mapped to the price item are considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes (Conditional) |
| | Note: By default, the No option is selected. | Note: This field is required while defining the TFM information in a price item pricing. |
| Aggregate Transactions | Used to indicate whether aggregation is required while rating the transactions mapped to the price item pricing before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates that aggregation is required while rating the transactions mapped to the price item pricing before billing. • No - Indicates that aggregation is not required while rating the transactions mapped to the price item pricing before billing. | Yes (Conditional) |
| | Note: By default, the Yes option is selected. | Note: This field is required while defining the TFM information in a price item pricing. |
| Aggregation Schedule | Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly | Yes (Conditional) |
| | | Note: This field is required while defining the TFM information in a price item pricing. |
| Transaction Rating Criteria | Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines | Yes (Conditional) |
| | Note: By default, the Do Not Rate Transactions option is selected. | Note: This field is required while defining the TFM information in a price item pricing. |

2. Enter the required details in the **TFM Information** section.

Note: TFM Information section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The TFM information is defined in the price item pricing.

Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 974
- [Price List Price Items](#) on page 976
- [Search Price List for Assignment](#) on page 978

Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|------------------------------|
| Search By | Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Current Price List Assignments • Inactive Price List Assignments • Historical Price List Assignments <p>Note: By default, the Current Price List Assignments option is selected.</p> | |
| Price List ID | <p>Used to search a particular price list assigned to an account or a person.</p> <p>Note: The Search (🔍) icon appears corresponding to the Price List ID field. On clicking the Search icon, the Price List Search window appears.</p> | No |
| Price List Description | Used to search price lists which are assigned to the account or person having a particular description. | No |
| Effective Start Date | Used to search price lists which are assigned to the account or person from a particular date. | No |
| Effective End Date | Used to search price lists which are assigned to the account or person till a particular date. | No |
| Assignment Status | <p>Used to search price list assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive <p>Note:</p> <p>The Inactive option is not available in the Assignment Status list when you have selected the Current Price List Assignments or Historical Price List Assignments option from the Search By list.</p> <p>This field is disabled, and by default, the Inactive option is selected when you select the Inactive Price List Assignments option from the Search By list.</p> | No |
| Price List Inheritance | <p>Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No | No |

Note: You must specify at least one search criterion while searching for price list assignments.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Price List Information | Displays information about the price list which is assigned to the account or person. Note: It has a link. On clicking the link, the Price List screen appears with the details of the respective price list. |
| Effective Start Date | Displays the date from when the price list is assigned to the account or person. |
| Effective End Date | Displays the date till when the price list is assigned to the account or person. |
| Priority | Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person. |
| Assignment Status | Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive |
| Price List Inheritance | Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy. |
| Edit | On clicking the Edit (✎) icon, the Price List Assignment screen appears where you can edit the price list assignment details. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Pricing | Displays information about the price item pricing. |
| | Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the price item pricing. |
| Pricing Parameters | Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Pricing Status | Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template |
| Rate Info | Displays the rate of the price item. |
| | Note: If the price assignment has only one price component, you can view the rate defined in the pricing directly through the Rate Info column. However, if the price assignment has more than one price components, then the Rate Info column contains a string indicating the tiering type and pricing currency. It also contains “...” which indicates that for more information about the pricing you should navigate to the Price Item Pricing screen. |
| Effective Start Date | Displays the date from when the price item pricing is effective for the price list. |
| Effective End Date | Displays the date till when the price item pricing is effective for the price list. |
| Price Assignment Type | Indicates the type of the price assignment for price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based |
| | Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Copy | On clicking the Copy  icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing. |

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> • Price List • Assigned Price List <p>Note: By default, the Price List option is selected.</p> | Yes |
| Price List ID | Used to search a particular price list. | No |
| Price List Description | Used to search price lists with a particular description. | No |
| Effective Start Date | If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards. | No |
| Effective End Date | If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective till a particular date. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person till a particular date. | No |
| Account ID | Used to search price lists assigned to a particular account. <p>Note: This field appears when you have selected the Assigned Price List option from the Search By list.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Person ID | Used to search price lists assigned to a particular person. | No |
| | Note: This field appears when you have selected the Assigned Price List option from the Search By list. | |
| Status | Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed | No |
| | Note: This field appears when you have selected the Price List option from the Search By list. | |
| Price List Type | Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional | No |
| | Note: This field appears when you have selected the Price List option from the Search By list. | |
| Only Eligible Price Lists | Used to search price lists which are eligible for the account or person. | No |
| | Note: This field appears when you have selected the Price List option from the Search By list. | |
| Eligibility Date | Used to search price lists which are eligible for the account or person from a particular date. | No |
| | Note: This field appears only when you have selected the Price List option from the Search By list. By default, the current date appears in this field when the Only Eligible Price Lists option is selected. You can change the value, if required. | |

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Assign | On clicking the Assign () icon, the Price List Assignment screen appears where you can assign the price list to the account or person. |
| Price List Information | Displays the information about the price list. |
| | Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list. |
| Account Information | Displays the information about the account. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Person Information | Displays the information about the person. |
| | Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. |
| Effective Start Date | If you have selected the Price List option from the Search By list, the date from when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date from when the price list is assigned to the account or person appears in this column. |
| Effective End Date | If you have selected the Price List option from the Search By list, the date till when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date till when the price list is assigned to the account or person appears in this column. |
| Availability Start Date | Displays the date from when the price list is available for assignment to an account or a person. |
| Availability End Date | Displays the date till when the price list is available for assignment to an account or a person. |

Assigning a Price List to an Account

Prerequisites

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the account.
 - **Price List Price Items** – Lists the price items that are assigned to the price list.
 - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
 5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the account.
- **Characteristics** – Used to define the characteristics for the price list assignment.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | |
|--|--|--|-------------|--------------------------------------|-------------|------------------------|---------|---|-------------|--|--|----|
| Account Information | Indicates the account to which you want to assign the price list. | Not applicable | | | | | | | | | | |
| Price List Information | Displays the information about the price list. | Not applicable | | | | | | | | | | |
| Effective Start Date | Used to specify the date from when you want to assign the price list to the account. Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date. | Yes | | | | | | | | | | |
| Effective End Date | Used to specify the date till when you want to assign the price list to the account. Note: The effective end date cannot be earlier than the effective start date. If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier: <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date Let us understand this with the help of the following example: <table border="1" data-bbox="516 1136 1141 1518"> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </table> In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date. | Price List Effective Start Date | 01-Jan-2015 | Price List Effective End Date | 31-Jan-2015 | Validity Period | 15 Days | Price List Assignment Start Date | 15-Jan-2015 | Price List Assignment Validity End Date | 30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days) | No |
| Price List Effective Start Date | 01-Jan-2015 | | | | | | | | | | | |
| Price List Effective End Date | 31-Jan-2015 | | | | | | | | | | | |
| Validity Period | 15 Days | | | | | | | | | | | |
| Price List Assignment Start Date | 15-Jan-2015 | | | | | | | | | | | |
| Price List Assignment Validity End Date | 30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days) | | | | | | | | | | | |
| Priority | Used to specify the order in which the price list should be considered while determining the price item pricing for the account. | Yes | | | | | | | | | | |
| Price List Inheritance | Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: | Yes | | | | | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| | <ul style="list-style-type: none"> Yes – Used to indicate that the account can inherit the price item pricing from the price list hierarchy. No – Used to indicate that the account cannot inherit the price item pricing from the price list hierarchy. | |
| Assignment Status | <p>Used to indicate the status of the price list assignment. The valid values are:</p> <ul style="list-style-type: none"> Active – Used to indicate that you want to use the price item pricing on the price list for billing. Proposed – Used to indicate that you want to use the price item pricing on the price list for quotations. | Yes |

- Enter the required details in the **Main** section.
- Define characteristics for the price list assignment, if required.
- Click **Save**.

The price list is assigned to the account.

Assigning a Price List to a Person

Prerequisites

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to a person:

- Search for the person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to edit.

A menu appears.

- Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the person.
 - **Price List Price Items** – Lists the price items that are assigned to the price list.
 - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the person.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
 5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign**  icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the person.
- **Characteristics** – Used to define the characteristics for the price list assignment.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Person Information | Indicates the person to whom you want to assign the price list. | Not applicable |
| Price List Information | Displays the information about the price list. | Not applicable |
| Effective Start Date | Used to specify the date from when you want to assign the price list to the person. Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date. | Yes |
| Effective End Date | Used to specify the date till when you want to assign the price list to the person. | No |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | |
|--|--|--|-------------|--------------------------------------|-------------|------------------------|---------|---|-------------|--|--|--|
| | <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date <p>Let us understand this with the help of the following example:</p> <table border="1"> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p> | Price List Effective Start Date | 01-Jan-2015 | Price List Effective End Date | 31-Jan-2015 | Validity Period | 15 Days | Price List Assignment Start Date | 15-Jan-2015 | Price List Assignment Validity End Date | 30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days) | |
| Price List Effective Start Date | 01-Jan-2015 | | | | | | | | | | | |
| Price List Effective End Date | 31-Jan-2015 | | | | | | | | | | | |
| Validity Period | 15 Days | | | | | | | | | | | |
| Price List Assignment Start Date | 15-Jan-2015 | | | | | | | | | | | |
| Price List Assignment Validity End Date | 30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days) | | | | | | | | | | | |
| Priority | Used to specify the order in which the price list should be considered while determining the price item pricing for the person. | Yes | | | | | | | | | | |
| Price List Inheritance | Used to indicate whether the person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> • Yes – Used to indicate that the person can inherit the price item pricing from the price list hierarchy. • No – Used to indicate that the person cannot inherit the price item pricing from the price list hierarchy. | Yes | | | | | | | | | | |
| Assignment Status | Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active – Used to indicate that you want to use the price item pricing on the price list for billing. • Proposed – Used to indicate that you want to use the price item pricing on the price list for quotations. | Yes | | | | | | | | | | |

8. Enter the required details in the **Main** section.

9. Define characteristics for the price list assignment, if required.

10. Click **Save**.

The price list is assigned to the person.

Defining a Characteristic for a Price List Assignment

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing characteristics for a price list assignment.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the price list assignment. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment . | Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment. |

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

On clicking the Search icon, the Person Search window appears where you can search for the respective person. On specifying the person, the person information appears corresponding to the Person ID field. The person information has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| Person Information | Displays the concatenated string of information about the person separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |

| Column Name | Column Description |
|-------------|--|
| | Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. |
| Assigned | Indicates whether the price list is assigned to the person or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |

You can select one or more persons for price list assignment by clicking the check box corresponding to the **Person Information** column.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, the **Search Results** section contains the following button:

| Button Name | Button Description |
|-------------|---|
| Assign | On clicking the Assign button, you can assign the price list to the selected person/persons. |

Assigning a Price List to One or More Eligible Accounts

Prerequisites

To assign a price list to one or more eligible accounts, you should have:

- Price list defined in the application
- Accounts created in the application
- Price list associated with the division to which the account/accounts belong.
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to one or more eligible accounts:

1. Search for the eligible accounts in the **Eligible Accounts** zone of the **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, click the check box corresponding to the account/accounts to which you want to assign the price list.
3. Click the **Assign** button available in the upper left corner of the **Search Results** section.

The **Price List Assignment** screen appears. It contains the following two sections:

- **Main** - Used to specify basic details about the price list assignment.
- **Characteristics** - Used to define a list of characteristics for the price list assignment.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Price List Information | Displays the concatenated string of information about the price list separated by a comma (,). | Not applicable |
| Effective Start Date | Used to specify the date from when the price list assignment is effective for the account/accounts. | Yes |
| Effective End Date | Used to specify the date till when the price list assignment is effective for the account/accounts. | No |
| Priority | Used to specify the order in which the price list is considered while determining the price item pricing for the account. | No |
| Price List Inheritance | Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Assignment Status | Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Proposed | No |
| Priority Indicator | Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Highest - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one. • Lowest - Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | assignment with lowest priority plus one. | |

4. Enter the required details in the **Main** section.
5. Define a list of characteristics for the price list assignment in the **Characteristics** section, if required/
6. Click **Save**.

The price list is assigned to the selected account/accounts.

Assigning a Price List to One or More Eligible Persons

Prerequisites

To assign a price list to one or more eligible persons, you should have:

- Price list defined in the application
- Persons created in the application
- Price list associated with the division to which the person/persons belong.
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to one or more eligible persons:

1. Search for the eligible persons in the **Eligible Persons** zone of the **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, click the check box corresponding to the person/persons to whom you want to assign the price list.
3. Click the **Assign** button available in the upper left corner of the **Search Results** section.

The **Price List Assignment** screen appears. It contains the following two sections:

- **Main** - Used to specify basic details about the price list assignment.
- **Characteristics** - Used to define a list of characteristics for the price list assignment.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Price List Information | Displays the concatenated string of information about the price list separated by a comma (,). | Not applicable |
| Effective Start Date | Used to specify the date from when the price list assignment is effective for the person/persons. | Yes |
| Effective End Date | Used to specify the date till when the price list assignment is effective for the person/persons. | No |
| Priority | Used to specify the order in which the price list is considered while determining the price item pricing for the person. | No |
| Price List Inheritance | Used to indicate whether the person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |
| Assignment Status | Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Proposed | No |
| Priority Indicator | Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Highest - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one. • Lowest - Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one. | No |

4. Enter the required details in the **Main** section.
5. Define a list of characteristics for the price list assignment in the **Characteristics** section, if required/
6. Click **Save**.

The price list is assigned to the selected person/persons.

Defining a Characteristic for a Price List Assignment

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are assigning a price list to multiple persons or accounts or when you are editing the price list assignment details of multiple persons or accounts.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the price list assignment. | Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment . | Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) Note: This field is required while defining a characteristic for the price list assignment. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | |

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price list assignment.

Rate Definition

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 1007
- [Create/Edit Rate Definition](#) on page 1008

Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|-----------------------------------|-----------------------|
| Rate Schedule | Used to select the rate schedule. | Yes |

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------------|--|
| Rate Schedule | Displays the rate schedule. |
| Rate Component Sequence | Displays the sequence number of the rate component. |
| Rate Component Description | Displays the description of the rate component. |
| Effective Start Date | Displays the date from when the rate version to which the rate component belongs is effective. |
| Tiering Type | Displays the tiering type. |
| Maximum Tiering Combinations | Displays the maximum number of tiering ranges supported by the rate component. Note: Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product. |
| Rate Component Map Description | Displays the description of the tiering setup of the rate component. |
| Action | Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> • Add — Allows you to define the tiering setup of the rate component • Edit — Allows you to edit the tiering setup of the rate component |
| Rate Component Map ID | Displays the rate component map ID. Note: This ID is generated automatically when you define the tiering setup of the rate component. |

On clicking the **Broadcast** () icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

Create/Edit Rate Definition

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Rate Schedule | Displays the code of the rate schedule. | Not applicable |
| Rate Component Description | Displays the description of the rate component. | Not applicable |
| Effective Start Date | Displays the date from when the rate version to which the rate component belongs is effective. | Not applicable |
| Rate Component Sequence | Displays the sequence number of the rate component. | Not applicable |
| Tiering Type | Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD | Yes |
| | Note: This field is non-editable when you edit the tiering setup of the rate component. | |
| Maximum Tiering Combinations | Used to specify the maximum number of tiering ranges supported by the rate component. | Yes |
| | Note: This field is non-editable when you: <ul style="list-style-type: none"> • Select the tiering type as FLAT or STEP • Edit the tiering setup of the rate component By default, 0 appears in this field when you select the tiering type as FLAT , and 1 appears when you select the tiering type as STEP . | |
| Rate Component Map Description | Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter Price Per Transaction in the Rate Component Map Description field. | Yes |

This zone contains the following buttons:

| Button Name | Button Description (When the Action is Add) | Button Description (When the Action is Edit) |
|-------------|---|--|
| Save | Used to create the tiering setup. | Used to save the changes made in this zone. |

| Button Name | Button Description (When the Action is Add) | Button Description (When the Action is Edit) |
|-------------|---|--|
| Delete | Note: This button is disabled when you define the tiering setup of the rate component. | Used to delete the tiering setup of the rate component. |
| | | Note: You can delete the tiering setup when the rate component is not yet used for any product pricing. |
| Cancel | Used to clear the fields in this zone. | Used to reset the changes made in this zone. |

Defining Tiering Setup of a Rate Component

Prerequisites

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

Procedure

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Rates** and then click **Rate Definition**.
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast** () icon corresponding to the rate component whose tiering setup you want to define.
The **Create/Edit Rate Definition** zone appears.
6. Select the tiering type from the list.
7. Enter the maximum number of tiering ranges supported by the rate component.

Note:

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**.
By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

8. Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

9. Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

Editing Tiering Setup of a Rate Component

Procedure

To edit tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Rates** and then click **Rate Definition**.
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to edit.
The **Create/Edit Rate Definition** zone appears.
6. Modify the details of the tiering setup.

Note: You can only modify the rate component map description.

7. Click **Save**.

The changes made to the tiering setup are saved.

Related Topics

Deleting Tiering Setup of a Rate Component

Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Rates** and then click **Rate Definition**.

The **Rate Definition** screen appears.

3. Select the rate schedule in the **Rate Schedule Components** zone.

4. Click **Search**.

The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to delete.

The **Create/Edit Rate Definition** zone appears.

6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup when the rate component is not yet used for any product pricing.

Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 1012
- [Edit Tiering Criterion](#) on page 1012
- [Create Tiering Criterion](#) on page 1012

Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Tiering Criterion | Displays the code of the tiering criterion. |
| Description | Displays the description of the tiering criterion. |
| Service Quantity Identifier | Displays the Service Quantity Identifier (SQI) of the tiering criterion. |

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

On clicking the **Broadcast** (📡) icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Tiering Criterion | Displays the code of the tiering criterion. | Not applicable |
| Description | Used to modify the description of the tiering criterion. | Yes |
| Service Quantity Identifier | Displays the Service Quantity Identifier (SQI) of the tiering criterion. | Not applicable |

This zone contains the following two buttons:

| Button Name | Button Description |
|-------------|--|
| Save | Used to save the changes made in this zone. |
| Cancel | Used to clear the changes made in this zone. |

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

Related Topics

Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Tiering Criterion | Used to specify the code that uniquely identifies the tiering criterion. | Yes |
| Description | Used to specify the description for the tiering criterion. | Yes |
| Service Quantity Identifier | Used to specify the Service Quantity Identifier (SQI) for the tiering criterion. | Yes |
| | Note: During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers. | |

This zone contains the following two buttons:

| Button Name | Button Description |
|-------------|--|
| Save | Used to create the tiering criterion. |
| Cancel | Used to clear the fields in this zone. |

Creating a Tiering Criterion

Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.

The tiering criterion is created.

Chapter 11

Division

Topics:

- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

Division

The **Division** screen allows you to define, edit, and delete a division. It consists of the following tabs:

| Tab Name | Tab Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Main | Used to define basic details of a division. | Yes |
| Access Groups | Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the Division list used across the application. | No |
| Price Items | Used to define which price items are available to persons or accounts in a division. | No |
| | Note: Once the price item is created, you need to associate it with a division. | |
| Price Lists | Used to define which price lists are available to persons or accounts in a division. | No |
| | Note: Once the price list is created, you need to associate it with a division. You can associate a price list with a division when all price items in the price list are already associated with the division. | |
| Languages | Used to limit the languages that you can select for a person's bills and correspondence in a division. | No |
| Invoice Currencies | Used to limit the invoice currencies that you can select for accounts in a division. | No |
| | Note: Invoice currency is a currency in which the accounts in the division can be billed. | |
| Person Identifier Types | Used to limit the person identifier types that you can select for persons in a division. | No |
| Algorithms | Used to associate algorithms with the division. Once a division is created, you must associate the Price Assignment Search algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm. | No |

| Tab Name | Tab Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| | <p>You can define algorithms in the Algorithm screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> • AGREED_PRICELIST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 583 1114 730" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> • AGREED_FIRST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 1024 1114 1171" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> | |
| Characteristics | Used to define the characteristics for a division. | No |

Division - Main

The **Main** tab displays the basic information about the division. It contains the following fields:

| Field Name | Field Description |
|---------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |
| Description | Displays the description of the division. |
| Work Calendar | Indicates the work calendar which is associated with the division. |
| Status | Indicates the status of the division. The valid values are: <ul style="list-style-type: none"> • Active • Pending • Retired |
| Bill Format | Indicates the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> • Detailed • Summary |

| Field Name | Field Description |
|----------------------|--|
| Bill Route Type | Indicates how the bills must be sent to the main customer of the accounts which belong to the division. |
| Base Currency | Indicates the currency in which the GL entries should be created for the accounts which belong to the division. |
| Time Zone | Indicates the time zones in which the division is operational. |
| Eligible for Accrual | Indicates whether accrual should be calculated for the accounts which belong to the division. |
| Accrual Cycle | Indicates the accrual cycle of the accounts which belong to the division. |
| Direct Credit Refund | Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the direct credit mode. |
| A/P Request Fund | Used to indicate whether you want to process immediate refund for the accounts belonging to the division through the A/P request mode. |
| Immediate Refund | Used to indicate whether you want to process immediate refund for the accounts belonging to the division. |
| | Note: This field is enabled when the Direct Credit Refund or A/P Request Refund option is selected. |
| Comments | Displays additional details about the division. |
| Business Object | Indicates the business object using which the division is created in the system. |

In addition, the **Main** tab contains the following fields in a grid:

| Field Name | Field Description |
|------------|--|
| To Do Type | Indicates the To Do type for which division-specific To Do role is defined. |
| To Do Role | Indicates the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division. |

Division - Access Groups

The **Access Groups** tab lists the access groups which are associated with the division. It contains the following field:

| Field Name | Field Description |
|------------|-------------------------|
| Division | Indicates the division. |

In addition, the following fields appear in a grid:

| Field Name | Field Description |
|--------------|---|
| Access Group | Indicates the access group which is associated with the division. |
| Description | Displays the description of the access group. |

Division - Price Items

The **Price Items** tab lists the price items which are associated with the division. It contains the following field:

| Field Name | Field Description |
|------------|-------------------------|
| Division | Indicates the division. |

In addition, the following fields appear in a grid:

| Field Name | Field Description |
|-----------------------|---|
| Price Item | Indicates the price item which is associated with the division. |
| Description | Displays the description of the price item. |
| Accrual Type Criteria | Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual • Historical • Not Applicable |

Division - Invoice Currencies

The **Invoice Currencies** tab lists the currencies which you can use for generating the invoice of the accounts in the division. It contains the following field:

| Field Name | Field Description |
|------------|-------------------------|
| Division | Indicates the division. |

In addition, the following fields appear in a grid:

| Field Name | Field Description |
|---------------|---|
| Currency | Indicates the currency. |
| Rounding Type | Indicates the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> • Down • Nearest • Up |

Division - Algorithms

The **Algorithms** tab lists the algorithms which are associated with the division. It contains the following field:

| Field Name | Field Description |
|------------|-------------------------|
| Division | Indicates the division. |

In addition, the following fields appear in a grid:

| Field Name | Field Description |
|---------------------------|---|
| Division Algorithm Entity | Indicates the algorithm entity to which you want to attach the algorithm. |
| Sequence Number | Displays the order in which the algorithms with the same entity should be executed. |
| Algorithm | Indicates the algorithm. |
| Description | Displays the description of the algorithm. |

Searching for a Division

Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.

The **Division Search** window appears. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Division | Used to search for a particular division. | No |
| Description | Used to search division with a particular name. | No |

Note: You must specify at least one search criterion while searching for a division.

- **Search Results** - On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Division | Displays the division. |
| Description | Displays the description of the division. |

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the division whose details you want to view or edit.

The **Division** screen appears.

Defining a Division

Prerequisites

To define a division, you should have:

- Required division business object defined in the application
- Work calendars, bill route types, currencies, time zones, accrual cycles, To Do types, and To Do roles defined in the application
- Values defined for the **BILL_FORMAT_FLG** lookup field

Procedure

To define a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Add** option from the **Division** sub-menu.
The **Division** screen appears.
4. Ensure that the **Main** tab is selected.

The **Main** tab contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Division | Used to specify the division. | Yes |
| Description | Used to specify the description for the division. | Yes |
| Work Calendar | Used to indicate the work calendar that you want to associate with the division. The work calendar indicates the days when the division is operational. It is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day. Note: The list includes only those work calendars which are already defined in the system. | Yes |
| Status | Used to indicate the status of the division. The valid values are: <ul style="list-style-type: none"> • Active - Indicates that you can use the division in the system. • Pending - Indicates that the division is not yet available for use. • Retired - Indicates that the division is no longer available for use. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| | Note: The list includes only those statuses which are defined in the DIVISION_STATUS_FLG lookup field. | |
| Bill Format | Used to specify the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> Detailed Summary Note: The list includes only those bill formats which are defined in the BILL_FORMAT_FLG lookup field. | No |
| Bill Route Type | Used to indicate how the bills must be sent to the main customer of the accounts which belong to the division. Note: The list includes only those bill route types which are already defined in the system. | No |
| Base Currency | Used to specify the currency in which the GL entries should be created for the accounts which belong to the division. If the account's invoice currency and division's base currency are different, the system converts the GL amount from the account's invoice currency to the division's base currency. In such cases, the system creates the financial transactions for the accounts in both the currencies (i.e. account's invoice currency and division's base currency). Note: The list includes only those currencies which are already defined in the system. | Yes |
| Time Zone | Used to indicate the time zone in which the division is operational. Note: The list includes only those time zones which are already defined in the system. | No |
| Eligible for Accrual | Used to indicate whether you can calculate accrual for the accounts which belong to the division. | No |
| Accrual Cycle | Used to indicate the accrual cycle for the accounts which belong to the division. | Yes (Conditional) Note: The field is required when the Eligible for Accrual option is selected. |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| | <p>Note:</p> <p>This field is enabled when the Eligible for Accrual option is selected.</p> <p>The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search window appears.</p> | |
| Comments | Used to specify additional details about the division. | No |
| Business Object | <p>Used to indicate the business object using which you want to create the division.</p> <p>Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the Search icon, the Business Object Search window appears.</p> | Yes |

In addition, the **Main** tab contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| To Do Type | Used to indicate the To Do type for which you want to define division-specific To Do role. | Yes (Conditional) |
| | <p>Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> | <p>Note: This field is required when you are defining the division-specific To Do role for a To Do type.</p> |
| To Do Role | Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division. | Yes (Conditional) |
| | <p>Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears.</p> | <p>Note: This field is required when you are defining the division-specific To Do role for a To Do type.</p> |

5. Enter the required details in the **Main** tab.
6. Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
7. Define characteristics for the division, if required.
8. Define division-specific characteristics for the price items, if required.
9. Click the **Save** button in the **Page Title** area.

The division is defined. The status of the division is set to **Pending**.

Associating an Access Group with a Division

On associating an access group with a division, the users which belong to the access group can view the division in the respective list across the system. These users can then create and edit the accounts of the division.

Prerequisites

To associate an access group with a division, you should have:

- Access groups defined in the application

Procedure

To associate an access group with a division:

1. Search for the division to which you want to associate an access group.
2. Click the **Access Groups** tab in the **Division** screen.

The **Access Groups** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|--|
| Division | Indicates the division. |
| | Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|--|
| Access Group | Used to indicate the access group which you want to associate with the division. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying an access group, the description of the access group appears in the Description field.</p> | <p>Note: This field is required when you are associating an access group with the division.</p> |
| Description | Displays the description of the access group. | Not applicable |

- Enter the required details in the **Access Groups** tab.
- If you want to associate more than one access group with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an access group from the division, click the **Delete** (🗑️) icon corresponding to the access group.

- Click the **Save** button in the **Page Title** area.

The access group is associated with the division.

Associating a Price Item or Price Item Bundle with a Division

On associating a price item with a division, you can assign the price item to the persons and accounts which belong to the division. While associating a price item with a division, you can specify the accrual type criteria for the price item. The accrual type criteria is referred when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

| If the accrual type criteria is set to... | Then... |
|---|---|
| Actual | The system considers the billable charges of the price item when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual . |
| Historical | The system considers the billable charges of the price item when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical . |

Prerequisites

To associate a price item with a division, you should have:

- Price items defined in the application

Procedure

To associate a price item with a division:

1. Search for the division to which you want to associate a price item.
2. Click the **Price Items** tab in the **Division** screen.

The **Price Items** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|--|
| Division | Indicates the division. |
| | Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|--|
| Price Item | Used to indicate the price item which you want to associate with the division. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying a price item, the description of the price item appears in the Description field. | Note: This field is required when you are associating a price item with the division. |
| Description | Displays the description of the price item. | Not applicable |
| Accrual Type Criteria | Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Actual. • Historical <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Historical. • Not Applicable | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | - Used to indicate that the billable charges of the price item should be considered for accrual irrespective of the accrual criteria specified in the accrual type | |

- Enter the required details in the **Price Items** tab.
- If you want to associate more than one price item with the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove a price item from the division, click the **Delete (🗑)** icon corresponding to the price item.

- Click the **Save** button in the **Page Title** area.
The price item is associated with the division.

Associating a Price List with a Division

Prerequisites

To associate a price list with a division, you should have:

- Price lists defined in the application

Procedure

To associate a price list with a division:

- Search for the division to which you want to associate a price list.
- Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|---|
| Price List ID | Used to specify the price list which you want to associate with the division. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.</p> <p>On specifying a price list, the description of the price list appears in the Description field.</p> | <p>Note: This field is required when you are associating a price list with a division.</p> |
| Description | Displays the description of the price list. | Not applicable |

- Enter the required details in the **Price Lists** tab.
- If you want to associate more than one price list with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a price list from the division, click the **Delete** (🗑️) icon corresponding to the price list.

- Click the **Save** button in the **Page Title** area.

The price list is associated with the division.

Associating a Language with a Division

Prerequisites

To associate a language with a division, you should have:

- Languages defined in the application

Procedure

To associate a language with a division:

- Search for the division to which you want to associate a language.
- Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|-------------------------|
| Division | Indicates the division. |

| Field Name | Field Description |
|------------|--|
| | Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Language | Used to specify the language which you want to select for generating invoice and correspondence for the accounts in the division. | No |

- Select the language from the list.
- If you want to associate more than one language with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a language from the division, click the **Delete** (🗑️) icon corresponding to the language.

- Click the **Save** button in the **Page Title** area.

The language is associated with the division.

Associating an Invoice Currency with a Division

Prerequisites

To associate an invoice currency with a division, you should have:

- Currencies defined in the application

Procedure

To associate an invoice currency with a division:

- Search for the division to which you want to associate an invoice currency.
- Click the **Invoice Currencies** tab in the **Divisions** screen.

The **Invoice Currencies** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|--|
| Division | Indicates the division. |
| | Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|--|
| Currency | Used to indicate the currency which you want to use for generating the invoice of the accounts in the division. | Yes (Conditional) Note: This field is required when you are associating an invoice currency with the division. |
| Rounding Type | Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> • Down • Nearest • Up | Yes (Conditional) Note: This field is required when you are associating an invoice currency with the division. |

3. Select the currency and its rounding type from the respective list.
4. If you want to associate more than one invoice currency with the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove an invoice currency from the division, click the **Delete (🗑)** icon corresponding to the currency.

5. Click the **Save** button in the **Page Title** area.

The invoice currency is associated with the division.

Associating a Person Identifier Type with a Division

Prerequisites

To associate a person identifier type with a division, you should have:

- Person identifier types defined in the application

Procedure

To associate a person identifier type with a division:

1. Search for the division to which you want to associate a person identifier type.
2. Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|--|
| Division | Indicates the division. |
| | Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|--|
| Person Identifier Type | Used to indicate the person identifier type. | Yes (Conditional) |
| | | Note: This field is required when you are associating a person identifier type with a division. |

3. Select the person identifier type from the list.
4. If you want to associate more than one person identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a person identifier type from the division, click the **Delete** (🗑️) icon corresponding to the person identifier type.

5. Click the **Save** button in the **Page Title** area.

The person identifier type is associated with the division.

Associating an Algorithm with a Division

Prerequisites

To associate an algorithm with a division, you should have:

- Required algorithms defined in the application

Procedure

To associate an algorithm with a division:

1. Search for the division to which you want to associate the algorithm.

The **Division** screen appears.

2. Click the **Algorithms** tab.

The **Algorithms** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|--|
| Division Algorithm Entity | <p>Used to indicate the algorithm entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> ASL Accumulation Post-Processing - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on the aggregate stop-loss accumulation amount. This algorithm is invoked when you execute the C1-ACASL batch. <p>Note: No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> ASL Accumulation Pre-Processing - Used to attach an algorithm which must be triggered for undertaking some pre-processing activities on the aggregate stop-loss accumulation records. This algorithm is invoked when you execute the C1-ACASL batch. <p>Note: No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> Account - Post Processing - Used to attach an algorithm which must be triggered when you create or edit an account. <p>Note: The C1-CLSACCT and C1-UACM-IC algorithm types are shipped with the product. For more information, see the algorithm type description.</p> Accrual - Used to attach an algorithm which must be triggered to create the accruals for the account. | <p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the division.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> Contract Derivation - Used to attach an algorithm which must be triggered to derive active contract for the account. This algorithm is invoked when you execute the C1-TXNVP batch. Note that this algorithm is invoked only when the account has multiple active contracts of the contract type which is associated with the price item. <div data-bbox="647 474 1128 619" style="border: 1px solid black; padding: 5px;"> <p>Note: The SA_DERV_POPC algorithm type is shipped with the product. For more information, see the algorithm type description.</p> </div> | |
| | <ul style="list-style-type: none"> Currency Conversion For Adjustments - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating adjustments and FT GL entries for adjustments. <div data-bbox="647 835 1128 1010" style="border: 1px solid black; padding: 5px;"> <p>Note: The C1_CURALGAD and C1_EXCRTAD algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> Currency Conversion For Bill Segments - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating bill segments and FT GL entries for bill segments. <div data-bbox="647 1203 1128 1377" style="border: 1px solid black; padding: 5px;"> <p>Note: The C1_CURALGBS and C1_EXCRTBS algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> Currency Conversion For Payments - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating payments, payment tenders, and FT GL entries for payments. <div data-bbox="647 1608 1128 1782" style="border: 1px solid black; padding: 5px;"> <p>Note: The C1_CURALGPY and C1_EXCRTPY algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> GL Account Validation - Used to attach an algorithm which must be triggered during dynamic GL account validation. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p data-bbox="651 212 1122 348">Note: The C1-GLVAL and C1-GLVAL-COB algorithm types are shipped with the product. For more information, see the algorithm type description.</p> <ul data-bbox="618 369 1122 653" style="list-style-type: none"> • GL Assign - • Generate Conditional GL Entries - • Price Assignment Eligibility - Used to attach an algorithm which must be triggered to determine whether the post-processing pricing is eligible for the account. This algorithm is invoked when you execute the C1-BLPPR and POSTPROC batches. <p data-bbox="651 674 1122 1104">Note: This algorithm is invoked while executing these batches when an algorithm created using the C1-GENBSICPA algorithm type is attached to the Post-Processing (Billing) algorithm spot of the respective contract type. The C1-ELIGPROR algorithm type is shipped with the product. For more information, see the algorithm type description.</p> | |
| | <ul data-bbox="618 1140 1122 1360" style="list-style-type: none"> • Price Assignment Search - Used to attach an algorithm which indicates the order in which the price item pricing must be determined while billing. It also indicates the order in which the price item pricing must be listed in the Pricing (Account) and Pricing (Person) screens. <p data-bbox="651 1381 1122 1518">Note: The C1_PRASN_PP algorithm type is shipped with the product. For more information, see the algorithm type description.</p> <ul data-bbox="618 1539 1122 1883" style="list-style-type: none"> • Pricing Fees Calculation Post-Processing - • Pricing Fees Calculation Pre-Processing - • Pricing Rate Post-Processing - • Pricing Rate Pre-Processing - • Sequential Bill Number Generation - Used to attach an algorithm which indicates how to sequence alternate bill numbers which are unique within the division. | |

Defining a Characteristic for a Division

Prerequisites

To define a characteristic for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To define a characteristic for a division:

- Search for the division for which you want to define a characteristic.
- Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the division. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the division. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the division. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) Note: This field is required when you are defining a characteristic for the division. |

- Enter the required details in the **Characteristics** tab.
- If you want to define more than one characteristic for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the division, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The characteristic is defined for the division.

Associating a Bill Message with a Division

Prerequisites

To associate a bill message with a division, you should have:

- Bill messages defined in the application

Procedure

To associate a bill message with a division:

1. Search for the division to which you want to associate a bill message.
2. Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|---|
| Start Date | Used to specify the date from when you want the bill message to appear on the bill for the accounts in the division. | Yes (Conditional) Note: This field is required when you are associating a bill message with the division. |
| End Date | Used to specify the date till when you want the bill message to appear on the bill for the accounts in the division. | No |
| Bill Message | Used to specify the bill message which is valid for the accounts in the division. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Bill Message Search window appears. On specifying a bill message, the description of the bill message appears in the Description field. | Yes (Conditional) Note: This field is required when you are associating a bill message with the division. |
| Description | Displays the description of the bill message. | Not applicable |

3. Enter the required details in the **Bill Messages** tab.
4. If you want to associate more than one bill message with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill message from the division, click the **Delete** (🗑️) icon corresponding to the bill message.

5. Click the **Save** button in the **Page Title** area.

The bill message is associated with the division.

Associating a Party Characteristic Type with a Division

Prerequisites

To associate a party char type with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To associate a party char type with a division:

1. Search for the division to which you want to associate a party char type.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|--|
| Characteristic Entity | Used to indicate whether the characteristic type is valid for a person or an account in the division. | Yes (Conditional) Note: This field is required when you are associating a party char type with the division. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division. | Yes (Conditional) Note: This field is required when you are associating a party char type with the division. |

3. Enter the required details in the **Party Char Types** tab.
4. If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

- Click the **Save** button in the **Page Title** area.

The party char type is associated with the division.

Associating a Bill Cycle with a Division

Prerequisites

To associate a bill cycle with a division, you should have:

- Bill cycles defined in the application

Procedure

To associate a bill cycle with a division:

- Search for the division to which you want to associate a bill cycle.
- Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| Bill Cycle | Used to specify the bill cycle that is valid for the accounts associated with the division. | Yes (Conditional) Note: This field is required when you are associating a bill cycle with the division. |

- Select the bill cycle from the list.
- If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

- Click the **Save** button in the **Page Title** area.

The bill cycle is associated with the division.

Associating an Account Identifier Type with a Division

Prerequisites

To associate an account identifier type with a division, you should have:

- Account identifier types defined in the application

Procedure

To associate an account identifier type with a division:

1. Search for the division to which you want to associate an account identifier type.
2. Click the **Account Identifier Types** tab in the **Division** screen.

The **Account Identifier Types** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| Account Identifier Type | Used to specify the account identifier type valid for the accounts associated with the division. | Yes (Conditional) Note: This field is required when you are associating an account identifier type with the division. |

3. Select the account identifier type from the list.
4. If you want to associate more than one account identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an account identifier type from the division, click the **Delete** (🗑️) icon corresponding to the account identifier type.

5. Click the **Save** button in the **Page Title** area.

The account identifier type is associated with the division.

Defining a Division-Specific Characteristic for a Price Item**Prerequisites**

To define a division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

Procedure

To define a division-specific characteristic for a price item:

1. Search for the division for which you want to define a price item characteristic.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following field:

| Field Name | Field Description |
|------------|---|
| Division | Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division. |

In addition, it contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|---|
| Price Item | Indicates the price item count associated with the selected division. | No |
| Price Item | Indicates the price item code associated with the division to which the user belongs. | Not applicable |
| Effective Date | Used to specify the date from when the price item characteristic is effective for the division. | Yes (Conditional) Note: This field is required when you are defining a division-specific characteristic for the price item. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| | <p>Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.</p> | <p>Note: This field is required when you are defining a division-specific characteristic for the price item.</p> |
| Characteristic Value | <p>Used to specify the value for the characteristic type.</p> <p>Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you are defining a division-specific characteristic for the price item.</p> |

- If the division has multiple price items associated with it, navigate to define a characteristic for the required price item.

Note: You can use the **Previous** (←) and **Next** (→) buttons to navigate through the price items while defining their characteristics.

- Enter the required details in the **Price Item Characteristics** tab.
- If you want to define more than one division-specific characteristic for the price item, click the **Add** (+) icon and then repeat step 4.

Note: However, if you want to remove a division-specific characteristic from the price item, click the **Delete** (🗑) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The division-specific characteristic is defined for the price item.

Associating a To Do Type and To Do Role with a Division

Prerequisites

To associate a To Do type and To Do role with a division, you should have:

- To Do types and to do roles defined in the application
- To Do roles associated to the respective to do types

Procedure

To associate a To Do type and To Do role with a division:

1. Search for the division to which you want to associate a To Do type and To Do role.
2. Click the **Main** tab in the **Divisions** screen.
The **Main** tab appears.
3. The **To Do** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|---|
| To Do Type | Used to indicate the To Do type for which you want to define division-specific To Do role. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears. | Note: This field is required when you are defining a To Do type for the division |
| To Do Role | Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears. | Note: This field is required when you are defining a division-specific To Do role for a To Do type |

4. If you want to associate more than one To Do type and To Do role with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a To Do type and To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do type.

5. Click the **Save** button in the **Page Title** area.

The To Do type and To Do role is associated with the division.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason
(Used for Viewing)*

Most Commonly Used Terms

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

| Term | Description |
|-------------------------|---|
| Submitter | A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter. |
| Approver | A person who approves any changes made to a business object is called an approver. |
| Approval Workflow Group | A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made. |
| Approval Workflow Chain | The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter. |

Approval Workflow Process

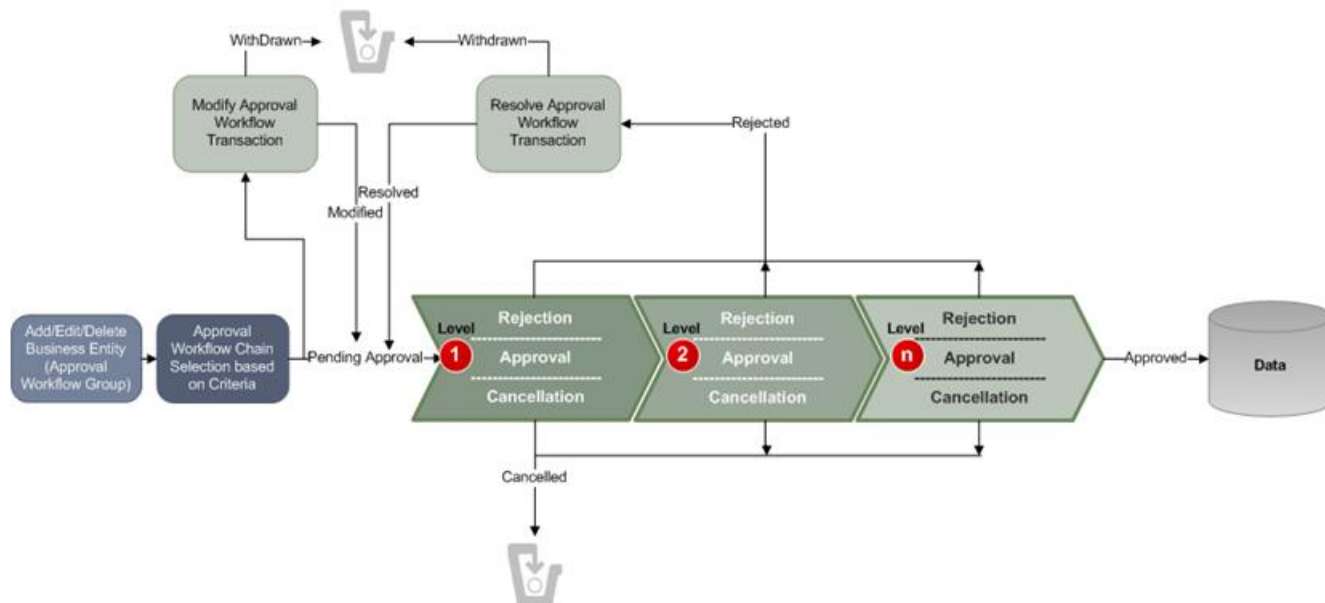

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 1110
- [Approval Workflow Chain \(Used for Searching\)](#) on page 1127
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 1133
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 1139
- [Approval Workflow Reason \(Used for Searching\)](#) on page 1157
- [Approval Workflow Setting \(Used for Searching\)](#) on page 1149

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1_PRICEITEM_BO business object
- **C1PRICELST** – Contains the C1_F_ADDPLBO business object
- **C1PRICEASG** – Contains the C1_PRICECOMP and C1_PRICEASGN_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

| | |
|-----------------------|---|
| <p>For Price Item</p> | <ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICEITEM maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEITEM_BO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEITEM MO. 3. Link the C1PRODUCT group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRODUCT group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y. |
|-----------------------|---|

| | |
|-----------------------|---|
| For Price List | <ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICELIST maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_F_ADDPLBO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICELIST MO. 3. Link the C1PRICELST group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRICELST group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y. |
| For Price Assignments | <ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICECOMP maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICECOMP as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICECOMP MO. 3. If a Determine BO algorithm is not specified for the C1_PRICEASGN maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEASGN_BO as the business object on this algorithm. 4. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEASGN MO. 5. Link the C1PRICEASG group to the appropriate approval workflow chain. 6. Activate the approval workflow for the C1PRICEASG group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y. |

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

Note: You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information about the **C1_AXENTITY** feature configuration, see [Setting the C1_AXENTITY Feature Configuration](#) on page 4035.
- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

| Business Object | Basic Validation Algorithm | Pending Transaction Validation Algorithm |
|-----------------------------|----------------------------|--|
| C1-AppBOChain | C1-GRPCHNALG | C1-APPGRPCHL |
| C1-AppGrp | C1-GRPALG | C1-APPGROUPV |
| C1-ApprovalChainEligible | C1-ADMALG | C1-APGBYPORT |
| C1-ApprovalTransactionChain | C1-APCHALGO | C1-APCHNPEND |

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the C1_AXENTITY Feature Configuration](#) on page 4035.
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

Note: User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you

can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 4015.

- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 4014.

Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#) on page 1059
- [Approval Transaction Log](#) on page 1063

Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> • Task Details • Approval Transaction Details | Yes |
| | Note: By default, the Task Details option is selected. | |
| Status | Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Deleted | No |
| | Note: This field appears when you select the Approval Transaction Details option from the Search By list. | |
| Task | Used to search approval transactions with a particular task. The valid values are: | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| | <ul style="list-style-type: none"> Approve Modify Resolve | Note: This field is required when you want to search approval transactions using the task details. |
| | Note: This field appears when you select the Task Details option from the Search By list. | |
| Approval Workflow Group | Used to search approval transactions created for the business objects that belong to a particular approval workflow group. | No |
| Division | Used to search approval transactions which belong to a particular division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Reference ID | Used to search approval transactions created for the business object with a particular reference ID. | No |
| Approval Transaction ID | Used to search for a particular approval transaction. | No |
| Created From | Used to search approval transactions which are created from a particular date onwards. | No |
| Created Until | Used to search approval transactions which are created till a particular date. | No |
| Action | Used to search approval transactions which are created while adding, updating, or deleting a business object. | No |
| Submitter ID | Used to search approval transactions which are created by a particular submitter. | No |
| | Note: This field appears either when you select the Task Details from the Search By list and Approve option from the Task list or when you select the Approval Transaction Details from the Search By list and Processing, Pending, or Deleted option from the Approval Transaction Status list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Submitter Id for Status window appears. | |
| Approver ID | Used to search approval transactions which are rejected by a particular approver. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Approver ID is displayed when the approval transaction is searched by Task Details and Task is Resolve. It is also displayed when the approval transaction is searched by Approval Transaction Details and Status is Approved, Canceled, or Rejected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approver ID Search window appears.</p> | |

Note: You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Approval Transaction ID | <p>Displays the approval transaction ID.</p> <p>Note: It has a link. The link appears when you select Task Details option from the Search By list. If the Approve option is selected from the Task list then on clicking the link, Comparison: New versus Existing window appears with the compared details of the new and existing approval transactions. If the Modify option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment. If the Resolve option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment.</p> |
| Approval Workflow Group | Displays the code of the approval workflow group. |
| Submitter Name | <p>Displays the name of submitter who submits the approval transaction details list.</p> <p>Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Processing, Pending, or Deleted option from the Approval Transaction Status list.</p> |
| Approver Name | <p>Displays the name of an approver who approves an approval transaction details list.</p> <p>Note: This column appears either when you select the Resolve option from the Task list or when you select the Approved, Canceled, or Rejected option from the Approval Transaction Status list.</p> |
| Submitted On | <p>Displays the date and time on which approval transaction is submitted for approval.</p> <p>Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Approved, Pending, or Deleted option from the Approval Transaction Details list.</p> |

| Column Name | Column Description |
|----------------------------------|---|
| Action | Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> • Add • Delete (DEL) • Update (UPD) |
| Division | Displays the division to which the approval transaction belongs. |
| Status | Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Processing • Pending • Deleted <p>Note: This column appears either when you select Approval Transaction Details option from the Search By list of the search criteria.</p> |
| To Do Type | Displays the type of To Do (notification) received for the approval transaction. |
| Approval Transaction Information | Displays additional information about the approval transaction. |
| Rejected On | Displays the date and time on which the transaction is rejected. <p>Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected, option from the Approval Transaction Details list.</p> |
| Reject Reason | Displays the reason for which the approval transaction is rejected by the approver. <p>Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected option from the Approval Transaction Details list.</p> |
| Canceled On | Displays the date and time on which the approval transaction is canceled by the user. <p>Note: This column appears when you select the Cancelled option from the Approval Transaction Details list.</p> |
| Cancel Reason | Displays the reason for which the approval transaction is canceled by the user. <p>Note: This column appears either when you select the Canceled option from the Approval Transaction Details list.</p> |
| Withdraw | Displays a link to withdraw an approval transaction. |

| Column Name | Column Description |
|-------------|---|
| | Note: This column appears either when you select the Modify or Resolve option from the Task list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction. |

On clicking the **Broadcast** (📢) icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

Related Topics

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

| Column Name | Column Description |
|---------------|---|
| Date Time | Displays the date and time when the action was performed on the approval transaction. |
| User Name | Indicates the user who has performed the action on the approval transaction. |
| Status | Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • InProcess • Pending • Deleted |
| View | It has a link. On clicking the View link, the Comparison: New versus Existing window appears where you can view the existing and new compared transactions". |
| Status Reason | Displays the status reason of the approval transaction. |
| Comments | Displays additional information about the approval transaction. |

By default, the **Banking Approval Transaction Log** zone does not appear. It appears when you click the **Broadcast** (📢) icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Searching for an Approval Transaction

Procedure

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow** and then click **Approval Transaction**.
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

| Search Approval Transaction zone | Search Approval Transaction on page 1059 |

Viewing the Log of an Approval Transaction

Procedure

To view the log of an approval transaction:

1. Search for the task or approval transaction details in the **Approval Transaction** screen.
2. In the Search Results section, click the **Broadcast** () icon corresponding to the approval transaction whose log details you want to view.
The **Approval Transaction Log** zone appears.
3. View the log details of the approval transactions in the **Approval Transaction Log** zone.

Related Topics

Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

Note: The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

Procedure

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

- Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

Rejecting an Approval Transaction**Prerequisites**

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To reject an approval transaction:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.
The **Comparison: New versus Existing** screen appears.
- Review the compared existing and new approval transactions.
- Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Approval Workflow Reason | Used to search a particular approval workflow reason. | Yes |
| Comments | Used to specify additional information while rejecting the usage record. | Yes |

- Enter the required details.
- Click **OK**.

The approval transaction is removed from the search results.

Canceling an Approval Transaction

Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

Note:

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Approval Workflow Reason | Used to search a particular approval workflow reason. | Yes |
| Comments | Used to specify additional information while rejecting the usage record. | Yes |

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

6. Click OK.

The approval transaction is removed from the search results.

Modifying an Approval Transaction**Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

Withdrawing an Approval Transaction

Procedure

To withdraw an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Withdraw** column corresponding to the approval transaction which you want to withdraw.

A message appears confirming whether you want to withdraw the approval transaction.

3. Click **OK**.

A message appears confirming whether you want to delete the approval transaction.

4. Click **OK**.

The approval transaction is deleted.

Resolving an Approval Transaction

Prerequisites

To resolve an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To resolve an approval transaction:

1. Search for approval transactions with task details and status as Resolve in the **Approval Transaction** screen.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to resolve.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is Update (UPD), you will be able to compare the existing and new data, and accordingly take an action.

3. Make the required changes.

4. Click **Save**.

The changes resolve for the approval transaction are saved.

Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 1070
- [List of Price Assignments](#) on page 1073
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 1074
- [Approval Transaction Log](#) on page 1063

Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID <p>Note: By default, the Person option is selected.</p> | Yes |
| Division | Used to search price assignments which are associated with a particular division. <p>Note: You can only view those divisions to which you have access in the Division list. This field appears when you select the Person or Account option from the Search By list.</p> | No |
| Person Identifier Type | Used to specify the value for the person identifier type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| | | Note: If you enter the person identifier as a search criteria, you have to select the person identifier type. |
| Person Identifier | Used to specify the ID linked to the person. | Yes (Conditional) |
| | Note: This field appears when you select the Person option from the Search By list. | Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier. |
| Account ID | Used to search price assignments which are created for a particular account. | No |
| | Note: This field appears when you select the Account option from the Search By list. | |
| Account Identifier Type | Used to select the identifier type based on which you want to search price assignments of an account. | Yes (Conditional) |
| | Note: This field appears when you select the Account option from the Search By list. | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | Used to specify the account whose price assignments you want to view. | Yes (Conditional) |
| | Note: This field appears when you select the Account option from the Search By list. | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |
| Price List Description | Used to search price lists with a particular description. | No |
| | Note: This field appears when you select the Price List option from the Search By list. | |
| Submitter ID | Used to search for price assignment requests that are created by a particular submitter. | No |
| | Note: This field appears when you select the Submitter ID option from the Search By list. | |
| Approval Transaction ID | This field appears when you select the Approval Transaction ID option from the Search By list. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears when you select the Transaction ID option from the Search By list.</p> | |

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Account ID | <p>Displays the account ID.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p> |
| Account Identifier Type | <p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears when you select the Account option from the Search By list.</p> |
| Account Identifier | <p>Displays the value of the account identifier type.</p> <p>Note: This column appears when you select the Account option from the Search By list.</p> |
| Price List ID | <p>Note: This column appears when you select the Price List option from the Search By list.</p> |
| Price List Description | <p>Displays the description for the price list.</p> <p>Note: This column appears when you select the Price List option from the Search By list.</p> |
| Person Identifier | <p>Note: This column appears when you select the Person option from the Search By list.</p> |
| Person Name | <p>Displays the name of the person.</p> <p>Note: This column appears when you select the Person option from the Search By list.</p> |
| Division | Displays the division to which the account, person, or price list belongs. |
| Submitter ID | Displays the ID of the submitter. |

| Column Name | Column Description |
|-------------------------|---|
| | Note: This column appears when you select the Submitter ID option from the Search By list. |
| Approval Transaction ID | Displays the approval transaction ID. Note: This column appears when you select the Approval Transaction ID option from the Search By list. |

On clicking the **Broadcast** (📡) icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Approval Transaction ID | Displays the approval transaction id. Note: The approval transaction id is generated automatically when the price assignment request is created. |
| Submitter Name | Displays the name of the submitter. |
| Action | Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) performed by the submitter during price assignment. |
| Submitted On | Indicates the submitter who has created the price assignment request. |
| To Do Type | Displays the type of To Do (notification) received for the price assignment request. |

| Column Name | Column Description |
|----------------------------------|--|
| Price Item | Displays the price item or price item code. |
| Description | Displays the description of the price item or price item code. |
| Pricing Currency | Indicates the currency in which the price item pricing is defined. |
| Start Date | Displays the date from when the price item pricing is effective. |
| End Date | Displays the date till when the price item pricing is effective. |
| Approval Transaction Information | Displays the additional information of an approval transaction. |

Note:

By default, the **List of Price Assignments** zone does not appear in the **Approve Price Assignment** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the account, person, or price list in the **Search** zone.

Approve Price Assignment - Comparison: New versus Existing

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

| Field Name | Field Description |
|-------------------------|---|
| Approval Transaction ID | Displays the approval transaction id. |
| Submitter ID | Displays the submitter id who has created the price assignment request. |

| Field Name | Field Description |
|----------------------------------|--|
| Approval Transaction Information | Displays information about the approval transaction |
| Action | Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> • Add – Allows you to define the tiering setup of the price assignment • DEL – Allows you to delete the tiering setup of the price assignment. • UPD – Allows you to upload the tiering setup of the price assignment. |

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

| Button Name | Button Description |
|---------------------|---------------------------------------|
| Approve | Used to approve the price assignment. |
| Return to Submitter | Used to reject the price assignment. |
| Revert to Original | Used to cancel the price assignment. |

Note:

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

| Column Name | Column Description |
|---------------|---|
| Date Time | Displays the date and time when the action was performed on the approval transaction. |
| User Name | Indicates the user who has performed the action on the approval transaction. |
| Status | Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Initial • Deleted |
| Status Reason | Indicates the reason why the approval transaction was rejected or cancelled. |
| Comments | Displays the additional details entered by the approver on rejecting or cancelling the approval transaction. |

Note:

By default, the **Approval Transaction Log** zone does not appear in the **Approve Price Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** () icon corresponding to the account whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast** () icon corresponding to the price assignment whose details you want to review and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.
A message appears with confirmation on transaction approved successfully.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Approving a Price Assignment for a Person

Procedure

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.

A list appears.

2. From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.

The **Approve Price Assignment** screen appears.

3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

Note:

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📡) icon corresponding to the person whose price assignments you want to review for approval.

The **List of Price Assignments** zone appears.

6. Click the **Broadcast** (📡) icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.

The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

Rejecting a Price Assignment for a Person

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To reject a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
- Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📢) icon corresponding to the person whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast** (📢) icon corresponding to the price assignment whose details you want to review.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Reason Code | Used to specify the reason why the approval workflow request is rejected. | Yes |
| Rejection/Cancellation Comment | Used to specify additional information while rejecting/cancelling the approval workflow request. | Yes |

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Approval Workflow Reason | Used to search a particular approval workflow reason. | Yes |
| Comments | Used to add additional comments. | No |

9. Enter the required details.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Note: Alternatively, you can cancel the price assignment by selecting the check box corresponding to the price assignment which you want to cancel and then click the **Revert to Original** button in the **List of Price Assignments** zone.

Rejecting a Price Assignment for a Price List

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To reject a price assignment for a price list:

1. Click the **Menu** link in the **Actions/Navigation** area.

A list appears.

2. From the **Main** menu, select **Approval Workflow** and then click **Approve Price Assignment**.

The **Approve Price Assignment** screen appears.

3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📢) icon corresponding to the price list whose price assignments you want to review.

The **List of Price Assignments** zone appears.

6. In the **List of Price Assignments** zone, click the **Broadcast** (📢) icon corresponding to the price assignment whose details you want to review.

The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 4035.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancelation Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| Approval Workflow Reason | Used to search a particular approval workflow reason. | Yes |
| Comments | Used to add additional comments. | No |

9. Enter the required details.

The **Approve** and **Revert to Original** buttons are disabled.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Tip: Alternatively, you can reject the price assignment by selecting the check box corresponding to the price assignment which you want to reject and then click the **Return to Submitter** button in the **List of Price Assignments** zone.

Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 1088
- [List of Price Assignments](#) on page 1102

Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| | <ul style="list-style-type: none"> Approval Transaction ID | |
| | Note: By default, the Person option is selected. | |
| Division | <p>Used to search price assignments which are associated with a particular division.</p> <p>Note: You can only view those divisions to which you have access in the Division list. This field appears when you select the Person or Account option from the Search By list.</p> | No |
| Person Identifier Type | <p>Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.</p> <p>Note: This field appears when you select the Person option from the Search By list.</p> | Yes (Conditional) |
| | | Note: If you enter the person identifier as a search criteria, you have to select the person identifier type. |
| Person Identifier | Used to specify the value for the person identifier type. | Yes (Conditional) |
| | | Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier. |
| Account ID | <p>Used to search price assignments which are created for a particular account.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | No |
| Account Identifier Type | <p>Used to select the identifier type based on which you want to search price assignments of an account.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | <p>Used to specify the account whose price assignments you want to view.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | Yes (Conditional) |
| | | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Price List Description | Used to search price lists with a particular description. | No |
| | Note: This field appears when you select the Price List option from the Search By list. | |
| Submitter ID | Used to search for price assignment requests that are created by a particular submitter. | No |
| | Note: This field appears when you select the Submitter ID option from the Search By list. | |
| Approval Transaction ID | Used to search the price assignment request using the approval transaction ID. | No |
| | Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears when you select the Approval Transaction ID option from the Search By list. | |

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Person Identifier | Indicates the person for whom the price assignment is created. |
| | Note: This column appears when you select the Person or Submitter ID option from the Search By list. |
| Person Name | Displays the name of the person. |
| | Note: This column appears when you select the Person or Submitter ID option from the Search By list. |
| Person Identifier Type | Displays the person identifier type. |
| | Note: This column appears when you select the Submitter ID option from the Search By list. |
| Division | Displays the division to which the account, person, or price list belongs. |
| Account Information | Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. |

| Column Name | Column Description |
|-------------------------|---|
| | <p>Note:</p> <p>This column appears when you select the Account or Submitter ID option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Account Identifier Type | <p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears when you select the Account or Submitter ID option from the Search By list.</p> |
| Account Identifier | <p>Displays the value of the account identifier type.</p> <p>Note: This column appears when you select the Account or Submitter ID option from the Search By list.</p> |
| Price List ID | <p>Displays the price list ID.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p> |
| Price List Description | <p>Displays the description for the price list.</p> <p>Note: This column appears when you select the Price List option from the Search By list.</p> <p>Note: This column appears when you are searching for price assignment requests of a price list.</p> |
| Submitter ID | <p>Displays the ID of the submitter.</p> <p>Note: This column appears when you select the Submitter ID option from the Search By list.</p> |

On clicking the **Broadcast** (📢) icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

| Column Name | Column Description |
|----------------------------------|---|
| Approval Transaction ID | Displays the approval transaction ID. |
| | Note: The approval transaction id is generated automatically when the price assignment request is created. |
| Submitter Name | Indicates the submitter who has created the price assignment request. |
| Action | Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) , performed by the submitter during price assignment. |
| Submitted On | Displays the date and time when the price assignment request was created by the submitter. |
| To Do Type | Displays the type of To Do (notification) received for the price assignment request. |
| Price Item | Displays the price item or price item code. |
| Description | Displays the description of the price item or price item code. |
| Pricing Currency | Indicates the currency in which the price item pricing is defined. |
| Start Date | Displays the date from when the price item pricing is effective. |
| End Date | Displays the date till when the price item pricing is effective. |
| Approval Transaction Information | Displays information about the approval transaction. |
| | Note: This information string is generated using the C1-APPTXNINF algorithm. |
| Modify | It has a link. On clicking the Modify link, the Modify/Resolve Price Assignment screen appears where you can modify the price assignment. |
| Withdraw | It has a link. On clicking the Withdraw link, you can withdraw and remove the approval transaction from the list of price assignments. |
| View | It has a link. On clicking the Log link, you can view the approval transaction log details. |

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the account, person, or price list in the **Search** zone.

Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow** and then click **Modify Price Assignment**.
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** () icon corresponding to the account whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.
The **Modify/Resolve Price Assignment** screen appears.

Note: Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.
The changes made to the price assignment are saved.

Withdrawing a Price Assignment for an Account

Procedure

To withdraw a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. Do the following:

| If you want to... | Then... |
|--|---|
| Withdraw a price assignment request when it is in the Pending Approval status | From the Main menu, select Approval Workflow and then click Modify Price Assignment . The Modify Price Assignment screen appears. |
| Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy | From the Main menu, select Approval Workflow and then click Resolve Price Assignment . The Resolve Price Assignment screen appears. |

3. In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** (📡) icon corresponding to the account whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

Note: The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

6. Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

7. Click **OK**.

You will no longer be able to view this request in your workflow.

Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver’s comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 1099
- [List of Price Assignments](#) on page 1102

Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> • Person • Account | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|---|
| | <ul style="list-style-type: none"> Price List Submitter ID Approver Transaction ID <p>Note: By default, the Person option is selected.</p> | |
| Division | <p>Used to search price assignments which belong to a particular division.</p> <p>Note: You can only view those divisions to which you have access in the Division list.</p> | No |
| Person Identifier Type | <p>Used to specify the identifier type based on which you want to search for price assignment requests of a person.</p> <p>Note: This field appears when you select the Person option from the Search By list.</p> | <p>Yes (Conditional)</p> <p>Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.</p> |
| Person Identifier | <p>Used to specify the ID linked to the person.</p> <p>Note: This field appears when you select the Person option from the Search By list.</p> | <p>Yes (Conditional)</p> <p>Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.</p> |
| Account ID | <p>Used to search for price assignment requests created for an account.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | No |
| Account Identifier Type | <p>Used to specify the account identifier type of the account whose price assignment requests you want to search.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | <p>Yes (Conditional)</p> <p>Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.</p> |
| Account Identifier | <p>Used to specify the value of the account identifier type.</p> <p>Note: This field appears when you select the Account option from the Search By list.</p> | <p>Yes (Conditional)</p> <p>Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.</p> |
| Price List Description | <p>Used to search for price assignment requests created for a price list.</p> <p>Note: This field appears when you select the Price List option from the Search By list.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Submitter ID | Used to search for price assignment requests that are created by a particular submitter. | No |
| | Note: This field appears when you select the Submitter ID option from the Search By list. | |
| Approval Transaction ID | Used to search the price assignment request using the approval transaction ID. | No |
| | Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears when you select the Approval Transaction ID option from the Search By list. | |

Note: You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Person Identifier | Displays the ID linked to the person. |
| | Note: This column appears when you are searching for price assignment requests of a person. |
| Person Name | Displays the name of the person. |
| | Note: This column appears when you are searching for price assignment requests of a person. |
| Division | Displays the division to which the account, person, or price list belongs. |
| Account Information | Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: This column appears when you are searching for price assignment requests of an account. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |
| Account Identifier Type | Displays the account identifier type. |
| | Note: This column appears when you are searching for price assignment requests of an account. |
| Account Identifier | Displays the value of the account identifier type. |

| Column Name | Column Description |
|-------------------------|--|
| | Note: This column appears when you are searching for price assignment requests of an account. |
| Price List ID | Displays the price list ID. Note: This column appears only when you are searching for price assignment requests of a price list. |
| Price List Description | Displays the description of the price list. Note: This column appears when you are searching for price assignment requests of a price list. |
| Owner ID | Displays the ID of the person for whose account the approval workflow request is created. |
| Approval Transaction ID | Displays the approval transaction ID. Note: The approval transaction ID is generated automatically when the price assignment request is created. |
| Person Identifier Type | Displays the person identifier type. Note: This column appears when you are searching for price assignment requests of a person. |

On clicking the **Broadcast** (📡) icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

| Column Name | Column Description |
|-------------------------|---------------------------------------|
| Approval Transaction ID | Displays the approval transaction ID. |

| Column Name | Column Description |
|----------------------------------|--|
| | Note: The approval transaction ID is generated automatically when the price assignment request is created. |
| Submitter Name | Indicates the submitter who has created the price assignment request. |
| Action | Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) performed by the submitter during price assignment. |
| Submitted On | Displays the date and time when the price assignment request was created by the submitter. |
| To Do Type | Displays the type of To Do (notification) received for the price assignment request. |
| Price Item | Displays the price item code. |
| Description | Displays the description of the product. |
| Pricing Currency | Indicates the currency in which the product pricing is defined. |
| Start Date | Displays the date from when the product pricing is effective. |
| End Date | Displays the date till when the product pricing is effective. |
| Approver Name | Indicates the approver who has rejected the price assignment request. |
| Rejected On | Displays the date and time when the price assignment request was rejected by an approver. |
| Reject Reason | Indicates the reason why the price assignment request was rejected. |
| Rejection Comments | Displays the additional details entered by an approver on rejecting the price assignment request. |
| Approval Transaction Information | Displays information about the approval transaction. Note: This information string is generated using the C1-APPTXNINF algorithm. |
| Resolve | On clicking the Resolve link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy. |
| Withdraw | On clicking the Withdraw link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request. |
| View | On clicking the Log link, you can view the log of the price assignment request from the Resolve Price Assignment screen before resolving or withdrawing a request. |

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears when you click the **Broadcast** () icon corresponding to the account, person, or price list in the **Search** zone.

Search Approval Workflow Group

The **Search Approval Workflow Group** zone allows you to search for an approval workflow group using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Approval Workflow Group | Used to search a particular approval workflow group. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| Description | Used to search approval workflow groups with a particular description. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Approval Workflow Group | Displays the approval workflow group. |
| Description | Displays the description of the approval workflow group. |
| | Note: It has a link. On clicking the link, the Approval Workflow Group screen appears where you can view the details of the respective approval workflow group. |

Note: You must specify at least one search criterion while searching for an Approval Workflow Group.

Searching for an Approval Workflow Group

Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow groups that meet the search criteria appear in the **Search Results** section.

Viewing the Approval Workflow Group Details

Procedure

To view the details of an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to view.

The **Approval Workflow Group** screen appears. It consists of the **Main** tab with the following zone:

- [Approval Workflow Group](#) on page 1119
3. View the details of the approval workflow group in the **Approval Workflow Group** zone.

Defining an Approval Workflow Group

Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

Note: Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Approval Transaction Type | Used to indicate the transaction type to which the approval workflow group belongs. | Yes |
| Approval Workflow Group | Used to specify the approval workflow group. | Yes |
| Description | Used to specify the approval workflow group with a particular description. | Yes |
| Display UI Map | <p>Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.</p> <p>Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Display UI Map field.</p> <p>Note: If you clear the Display UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.</p> | No |
| Input UI Map | <p>Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.</p> <p>Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Input UI Map field.</p> <p>Note: If you clear the Input UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.</p> | No |
| Dependency Algorithm | <p>Used to specify the algorithm that will be triggered before creating the approval workflow group.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Dependency Algorithm field.</p> <p>Note: This algorithm can be used to check all prerequisites before creating the approval workflow group.</p> | No |
| Approval Algorithm | Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB: | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • C1-APPROD - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB. • C1-APPPL - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB. • C1-APPASG - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB. • C1-APPALG - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required. <p>You can also create your own approval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Algorithm field.</p> | |
| Approval Post Processing Algorithm | <p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p> | No |
| Transaction Creation Algorithm | <p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPASGCR - Used to create approval workflow group for price assignment. • C1-AXPROD - Used to create approval workflow group for price item. • C1-AXUSR - Used to create approval workflow group for user. • C1-IGCREATE - Used to create approval workflow group for invoicing group. • C1-AXCREATE - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects. <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|-----------------------|
| | <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Transaction Creation Algorithm field.</p> | |
| Data Retrieval Algorithm | <p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPIGDR - Used to retrieve data for invoicing group. • C1-AXPRICEOV - Used to retrieve data for price assignment. • C1_APPDATA - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects. <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Data Retrieval Algorithm field.</p> | Yes |
| Information Algorithm | <p>Used to specify the algorithm information.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p> | No |
| Compare Map | <p>Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p> | No |
| Input Script | <p>Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p> | No |

4. Enter the required details.
5. Add business objects and group BO relation with the approval workflow group, if required.

6. Click **Save**.

The approval workflow group is defined.

Adding a Business Object

Prerequisites

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

Procedure

To add a business object in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

3. Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- **Main** - Used to specify basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Used to specify the Business Object Code that you want to include in the Approval Workflow Group. | Yes |
| Reference ID 1 | Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string. | Yes |
| Reference ID 2 | Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string. | Yes |
| Reference ID 3 | Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string. | Yes |
| Reference ID 4 | Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Reference Key 1 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Key 2 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Key 3 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Key 4 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Key 5 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Key 6 Foreign | Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| List | Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False. | Yes |
| Parent Object Business | Used to specify the parent business object. This should be one of the business objects within the group. | No |
| From Key | Used to specify the XPATH key of the field or list of fields in the parent business object. | No |
| To Key | Used to specify the XPATH key of the field or list of fields in the current business object. | No |

Note: You can search for a business object and parent business object, by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** field.

4. If you want to define more than one business and parent business object for the approval workflow group, click the **Add** (+) icon placed corresponding to the field.
5. Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
6. Click **Save**

The business object is added in the approval workflow group.

Note: When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** (🔄) icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this when you are using automatically generated UI maps, and not otherwise.

Defining a Group BO Relation

Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

Procedure

To define a relationship between business objects in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
 - **Main** - Used to specify basic details of the approval workflow group.
 - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
 - a) **Parent Business Object**
 - b) **From Key**
 - c) **To Key**

Note: If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

Approval Workflow Group (Used for Viewing)

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 1119

Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

| Field Name | Field Description |
|-------------------------|--|
| Approval Workflow Group | Displays the name of the approval workflow group. |
| Description | Displays the description of the approval workflow group. |
| Display UI Map | Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map. |
| Input UI Map | Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map. |
| Dependency Algorithm | Indicates the algorithm that will be triggered before creating the approval workflow request. Note: This algorithm can be used to check all prerequisites before creating the approval workflow request. |
| Approval Algorithm | Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy. |

| Field Name | Field Description |
|------------------------------------|---|
| Approval Post Processing Algorithm | Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database. |
| Transaction Creation Algorithm | Indicates the algorithm that will create approval workflow requests. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |
| Data Retrieval Algorithm | Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |
| Information Algorithm | Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs. |
| Compare Map | Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field. |
| Input Script | Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation. |
| Delete | Used to delete an approval workflow group. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the Business Object that you want to include in the Approval Workflow Group. |
| Reference ID 1 | Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string. |

| Field Name | Field Description |
|-------------------------|---|
| Reference ID 2 | Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string. |
| Reference ID 3 | Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string. |
| Reference ID 4 | Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string. |
| Reference Foreign Key 1 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| Reference Foreign Key 2 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| Reference Foreign Key 3 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| Reference Foreign Key 4 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| Reference Foreign Key 5 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| Reference Foreign Key 6 | Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. |
| List | Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False. |
| Parent Business Object | Indicates the parent business object. This should be one of the business objects within the group. |
| From Key | Indicates the XPATH key of the field or list of fields in the parent business object. |
| To Key | Indicates the XPATH key of the field or list of fields in the current business object. |

Editing an Approval Workflow Group

Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

Deleting an Approval Workflow Group**Procedure**

To delete an approval workflow group:

1. Search for the approval workflow group in the **Search Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.
3. Click the **Delete** button in the **Approval Workflow Group** zone.

A message appears confirming whether you want to delete the approval workflow group.

4. Click **OK**.

The approval workflow group is deleted.

Editing a Business Object**Procedure**

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Business Object | Displays the Business Object Code that is included in the Approval Workflow Group. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Reference ID 1 | Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups. | No |
| Reference ID 2 | Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups. | No |
| Reference ID 3 | Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups. | No |
| Reference ID 4 | Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups. | No |
| Reference Foreign Key 1 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Foreign Key 2 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Foreign Key 3 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Foreign Key 4 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Foreign Key 5 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| Reference Foreign Key 6 | Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system. | No |
| List | Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False. | Yes |
| Parent Business Object | Used to specify the parent business object. This should be one of the business objects within the group. | No |
| From Key | Display the XPATH key of the field or list of fields in the parent business object. | No |
| To Key | Display the XPATH key of the field or list of fields in the current business object. | No |

Note: You can search for a business object or parent business object by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add (+)** icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

Note: When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** () icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this when you are using automatically generated UI maps, and not otherwise.

Deleting a Business Object

Procedure

To delete a business object in the approval workflow group:

- Search for an approval workflow group in the **Approval Workflow Group** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** zone appears.

- In the View section of **Approval Workflow Group**, click the **Edit** button.

The **Approval Workflow Group** window appears.

- In the **Business Objects and Group BO Relation** zone, click the **Delete** () icon corresponding to the business object that you want to delete.
- Click **Save**.

The business object is deleted from the approval workflow group.

Editing a Group BO Relation

Procedure

To edit the business object's relationship details in the approval workflow group:

- If required, filter the approval workflow group in the **Approval Workflow Group** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
 - **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.
3. If required, define and edit the approval workflow group details from the **Main** section.
 4. The **Business Objects and Group BO Relation** section contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Business Object | Used to specify the business object that you want to add in the approval workflow group. | Yes |
| Reference ID 1 | Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string. | No |
| Reference ID 2 | Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string. | No |
| Reference ID 3 | Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string. | No |
| Reference ID 4 | Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string. | No |
| Reference Foreign Key 1 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| Reference Foreign Key 2 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| Reference Foreign Key 3 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| Reference Foreign Key 4 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| Reference Foreign Key 5 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| Reference Foreign Key 6 | Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system. | No |
| List | Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| | instance of the business object, you must set this flag for the business object to False. | |
| Parent Business Object | Displays the parent business object. This should be one of the business objects within the group. | No |
| From Key | Displays the XPATH key of the field or list of fields in the parent business object. | No |
| To Key | Displays the XPATH key of the field or list of fields in the current business object. | No |

Note: You can search for a parent business object by clicking the **Search** (🔍) icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** (+) icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

Deleting a Group BO Relation

Procedure

To delete the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
3. The **Approval Workflow Group** screen appears.
4. Click the **Edit** button in the **Record Actions** zone.
The **Approval Workflow Group** screen appears.
5. In the **Business Objects and Group BO Relation** section, click the **Delete** (🗑️) icon appearing next to the Business Object that you want to delete.
6. Click **Save**

The business object's relationship details are deleted from the approval workflow group.

Approval Workflow Chain (Used for Searching)

The **Approval Workflow Chain** screen allows you to search for approval workflow chain using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Chain \(Used for Viewing\)](#) on page 1130

This screen consists of the following zone:

- [Search Approval Workflow Chain](#) on page 1127

Search Approval Workflow Chain

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Approval Workflow Chain | Used to search a particular approval workflow chain. | No |
| Description | Used to search approval workflow chains with a particular description. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Approval Workflow Chain | Displays the approval workflow chain. |
| Description | Displays the description of the approval workflow chain. Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears where you can view the details of the respective approval workflow chain. |

Note: You must specify at least one search criterion while searching for an approval workflow chain.

Searching for an Approval Workflow Chain

Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.
The **Approval Workflow Chain** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

Defining an Approval Workflow Chain

Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.

The **Approval Workflow Chain** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the approval workflow chain.
- **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Approval Workflow Chain | Used to specify the approval workflow chain | Yes |
| Description | Used to specify the description for the approval workflow chain | Yes |
| To Do Role To Resolve | Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy. | Yes |

4. Enter the required details.
5. Define approval levels for the approval workflow chain, if required.
6. Click **Save**.

The approval workflow chain is defined.

Defining Approval Levels for an Approval Workflow Chain**Prerequisites**

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval levels for an approval workflow chain:

1. Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Action Algorithm | Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request. | Yes |
| | Note: You can search for an action algorithm by clicking the Search (🔍) icon corresponding to the Action Algorithm field. | |
| Approver To Do Role | Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy. | Yes |
| | Note: You can search for an approver to do role by clicking the Search (🔍) icon corresponding to the Approver To Do Role field. | |
| Approver To Do Type | Used to specify the type of notification that you want to generate when the approver approves or rejects the request. | Yes |
| | Note: You can search for an approver to do type by clicking the Search (🔍) icon corresponding to the Approver To Do Type field. | |

2. Enter the required details in the **Approval Levels** section.
3. If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑️) icon corresponding to the approval level.

Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 1131

Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- **Main** - Displays basic information about the approval workflow chain. It contains the following fields:

| Field Name | Field Description |
|-------------------------|---|
| Approval Workflow Chain | Displays the approval workflow chain and levels. |
| Description | Displays the description of the approval workflow chain and levels. |
| To Do Role To Resolve | Displays the description of To Do Role role type. |

- **Approval Levels** - Displays the levels defined in the approval workflow chain.

| Field Name | Field Description |
|---------------------|--|
| Action Algorithm | Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request. |
| Level | Indicates the level in the hierarchy. |
| Approver To Do Role | Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy. |
| Approval To Do Type | Indicates the type of notification that will be generated when the approver approves or rejects the request. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit and delete the approval workflow chain and approval levels. |
| Delete | Used to delete the approval workflow chain. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Editing an Approval Workflow Chain

Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Approval Workflow Chain | Displays the approval workflow chain. | Yes |
| Description | Displays the description for the approval workflow chain. | Yes |
| To Do Role To Resolve | Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy. | Yes |

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Action Algorithm | Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request. | Yes |
| Approver To Do Role | Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy. | Yes |
| Approval To Do Type | Displays the type of notification that you want to generate when the approver approves or rejects the request. | Yes |

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

Defining an Approval Workflow Criterion Type

Prerequisites

To define an approval workflow criterion type, you should have:

- Algorithm, Business object, and Field object defined in the application.

Procedure

To define an approval workflow criterion type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.

The **Approval Workflow Criterion Type** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Criterion Type** screen.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the approval workflow criterion type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Approval Workflow Criterion Type | Used to specify the approval workflow criterion type. | Yes |
| Description | Used to specify the description for the approval workflow criterion type. | Yes |
| Derived From | Used to indicate the option which triggers the approval workflow. The valid values are: <ul style="list-style-type: none"> • Algorithm • Business Object | Yes |
| Algorithm | Used to indicate the algorithm for which you want to define the approval workflow criterion type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>This field appears when you select the Algorithm option from the Derived From list.</p> </div> | Yes |
| Business Object | Used to indicate the business object for which you want to define the approval workflow criterion type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when you select the Business Object option form the Derived From list.</p> | |
| Field | <p>Used to indicate the field that you want to use to define the criteria for associating approval workflow requests with the approval workflow chains.</p> <p>Note:</p> <p>The Search (🔍) icon corresponding to this field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears when you select the Business Object option form the Derived From list.</p> | Yes |

4. Enter the required details.
5. Click **Save**.

The approval workflow criterion type is created.

Viewing the Approval Workflow Group Chain Linkage Details

Procedure

To view the details of an approval workflow chain linkage:

1. Search for the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 1146
3. View the details of the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** zone.

Defining an Approval Workflow Group Chain Linkage

Prerequisites

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

Procedure

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.

The **Approval Workflow Group Chain Linkage** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group chain linkage.
- **Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Approval Workflow Group | Used to indicate the approval workflow group. | Yes |
| | Note: You can search for an approval workflow group type by clicking the Search (🔍) icon corresponding to the field. | |
| Approval Workflow Chain | Used to indicate the approval workflow chain. | Yes |
| | Note: You can search for an approval workflow chain by clicking the Search (🔍) icon corresponding to the field. | |
| Field Approval Rule | Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No | Yes |

4. Enter the required details.
5. Define group chain linkage criteria for the approval workflow, if required.
6. Define field approval rule criteria for the approval workflow, if required.
7. Click **Save**.

The approval workflow group chain linkage is created.

Defining Group Chain Linkage Criteria for an Approval Workflow

Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

Procedure

To define group chain linkage criteria for an approval workflow:

- Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| Group Chain Linkage ID | Displays the Group Chain Linkage ID. | Yes |
| | Note: The data appears in this field when you are editing the details of an approval workflow criterion type. | |
| Criterion Type | Used to indicate the criteria type needed for defining the criterion. | Yes |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears. | |
| Operator | Used to indicate the relational operator used to define the relation between the criterion type and criterion value. | Yes |
| Criterion Value | Used to specify the criterion value. | Yes |

- Enter the required details.
- If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add (+)** icon, and then repeat step 2.

Note: However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete (🗑)** icon corresponding to the group chain linkage criteria.

Defining a Field Approval Rule

Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

Procedure

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

Field Approval Rule Criteria section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Sequence. | Used to indicate the order in which the rule criteria should be executed while adding or updating the field value. | Yes |
| Applicable For | Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> • Add • Update • Add and Update | Yes |
| Business Object | Used to indicate the business object in which the field is included. Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the search icon, the Search Group Based Business Object search window appears. | Yes |
| Field | Used to indicate the field for which you want to define the approval rule criteria. Note: The Search (🔍) icon appears corresponding to the Field search field. On clicking the search icon, the Field Search search window appears. | Yes |
| Approval Workflow Chain | Used to indicate the approval workflow chain that you want to use for the field value approval. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval Workflow Chain field. On clicking the search icon, the Approval Workflow Chain Search search window appears.</p> | |
| Value Range | <p>Used to indicate whether you want to define value based threshold limit for each approval level.</p> <p>Note: This field is enabled when the data type of the field is Numeric.</p> | No |
| Hierarchical | Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit. | No |

If the **Value Range** check box is selected, a grid appears with the following set of fields:

| Field | Field Description |
|----------------------------|--|
| Threshold Value | Used to specify the threshold value using which you want to control the approval hierarchy. |
| Approval Level | <p>Used to indicate the approval level at which approval is required when the field value is within the threshold value.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears.</p> <p>Note: The search results will include all those levels which are defined in the approval workflow chain.</p> |
| Approval Level Information | Displays additional information about the approval level. |

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow, click the **Delete** (🗑️) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

| Field Name | Field Description |
|-------------------------|---|
| Approval Workflow Group | Displays the approval workflow group for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Group screen appears with the details of the respective approval workflow group. |
| Approval Workflow Chain | Displays the approval workflow chain for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow group. |
| Field Approval Rule | Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria. |
| Delete | Used to delete the approval workflow group chain linkage. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Group Chain Linkage ID | Displays the ID which is generated automatically when the link is created. |
| Criterion Type | Displays the criterion type needed for defining the criterion. |
| | Note: It has a link. On clicking the link, the Approval Workflow Criterion Type screen appears where you can view the details of the respective criterion type. |
| Operator | Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> • EQUALS • IN |
| Criterion Value | Displays the criterion value. |

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Sequence | Indicates the order in which the rule criteria should be executed while adding or updating the field value. |
| Applicable For | Displays the rule criteria which should be considered while adding and/or updating the field value. |
| Business Object | Displays the business object in which the field is included. |
| Field | Displays the field for which you want to define the approval rule criteria. |
| | Note: The Context Menu () icon appears corresponding to the Field search field. On clicking the context menu icon, the Go to Field menu appears. On clicking the Go to Field menu item, the Field screen appears with the details of the respective field. |
| | Note: It has a link. On clicking the link, the Field screen appears with the details of the respective field. |
| Approval Workflow Chain | Indicates the approval workflow chain that you want to use for the field value approval. |

| Column Name | Column Description |
|-----------------------|---|
| | <p>Note:</p> <p>It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow chain.</p> |
| Value Range | <p>Indicates whether you want to define value based threshold limit for each approval level.</p> <p>Note: This field is enabled when the data type of the field is Numeric.</p> |
| Hierarchical Approval | <p>Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.</p> <p>Note: This field is enabled when the Value Range check box is selected.</p> |

If the **Value Range** check box is selected, a grid appears with the following set of fields:

| Field | Field Description |
|----------------------------|--|
| Threshold Value | Displays the threshold value using which you want to control the approval hierarchy. |
| Approval Level | <p>Displays the approval level at which approval is required when the field value is within the threshold value.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears.</p> <p>Note: The search results will include all those levels which are defined in the approval workflow chain.</p> |
| Approval Level Information | Displays additional information about the approval level. |

Editing an Approval Workflow Group Chain Linkage

Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Group Chain Linkage** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.

The **Approval Workflow Group Chain Linkage** screen appears.

4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

Searching for an Approval Workflow Group

Prerequisites

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.

The **Approval Workflow Setting** screen appears.

- Enter the search criteria in the **Search Approval Workflow Group** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

Defining Approval Workflow Group Settings

Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

Procedure

To define an approval workflow group setting:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.

The **Approval Workflow Settings** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------------|---|-----------------------|
| Approval Workflow Group | Used to specify the approval workflow group. | Yes |
| Approval Chain Selection Algorithm | Used to specify the algorithm that will be triggered before creating the approval workflow request. <div style="border: 1px solid black; padding: 2px;">Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.</div> <div style="border: 1px solid black; padding: 2px;">Note: You can search for an approval chain selection algorithm by clicking the Search (🔍) icon corresponding to the Approval Chain Selection Algorithm field.</div> | Yes |
| Prevalidation | Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> Yes No <div style="border: 1px solid black; padding: 2px;">Note: You can search for a prevalidation by clicking the Search (🔍) icon corresponding to the Prevalidation field.</div> | Yes |
| Approval Reason Required | Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> Yes No | Yes |
| Active | Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object. | |
| Conditional Algorithm | Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated. | Yes |
| | Note: This field appears when the Conditional option is selected from the Active list. | |

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

| Field Name | Field Description |
|------------------------------------|---|
| Approval Workflow Group | Displays the approval workflow group. |
| Approval Chain Selection Algorithm | <p>Displays the algorithm that will be triggered after creating the approval workflow request.</p> <p>Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective approval chain selection algorithm.</p> |
| Prevalidation | <p>Indicates whether validation must be done before the approval workflow request is created. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No |
| Approval Reason Required | <p>Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No |
| Active | <p>Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are:</p> <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object. |
| Conditional Algorithm | <p>Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.</p> <p>Note: This field appears when the Conditional option is selected from the Active list.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective conditional algorithm.</p> |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|--------------------|---|
| Edit | Used to edit the settings of the approval workflow group. |
| Delete | Used to delete the approval workflow group setting. |
| Regenerate UI Maps | Used to regenerate the approval workflow group setting UI Maps. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Editing Approval Workflow Group Settings

Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

Filtering the Approval Workflow Reasons

Procedure

To filter the approval workflow reasons:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.

The **Approval Workflow Reason** screen appears.

- Enter the required search criteria in the **Approval Workflow Reason List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

Viewing the Approval Workflow Reason Details

Procedure

To view the details of an approval workflow reason:

- If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to view.

The **Approval Workflow Reason** screen appears. It contains the following zone:

- [Approval Workflow Reason](#) on page 1159

- View the details of the approval workflow reason in the **Approval Workflow Reason** zone.

Related Topics

Defining an Approval Workflow Reason

Prerequisites

To define an approval workflow reason, you should have:

- Values defined for the **APPTXN_REASON_TYPE** lookup field

Procedure

To define an approval workflow reason:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.

The **Approval Workflow Reason** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Approval Workflow Reason | Used to specify the approval workflow reason. | Yes |
| Description | Used to specify the description for the approval workflow reason. | Yes |
| Reason Category | Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> Approve Cancel Reject | Yes |

- Enter the required details in the **Approval Workflow Reason** screen.
- Click **Save**.

The approval workflow reason is defined.

Approval Workflow Reason (Used for Viewing)

Once you define an approval workflow reason, the **Approval Workflow Reason** screen allows you to:

- View the details of an approval workflow reason
- Edit and delete an approval workflow reason

This screen contains the following zone:

- [Approval Workflow Reason](#) on page 1159

Approval Workflow Reason

The **Approval Workflow Reason** zone displays the details of the approval workflow reason. It contains the following sections:

- Main** - Displays basic information about the approval workflow reason. It contains the following fields:

| Field Name | Field Description |
|--------------------------|---|
| Approval Workflow Reason | Displays the approval workflow reason. |
| Description | Displays the description of the approval workflow reason. |
| Reason Category | Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> Approve |

| Field Name | Field Description |
|------------|--|
| | <ul style="list-style-type: none"> Cancel Reject |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the approval workflow reason. |
| Delete | Used to delete the approval workflow reason. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

Editing an Approval Workflow Reason

Prerequisites

To edit an approval workflow reason, you should have:

- Values defined for the **APPTXN_REASON_TYPE** lookup field

Procedure

To edit an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.
The **Approval Workflow Reason** screen appears.
3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to edit.
The **Approval Workflow Reason** screen appears.
5. Click the **Edit** button in the **Approval Workflow Reason** zone.
The **Approval Workflow Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Approval Workflow Reason | Displays the approval workflow reason. | Not applicable |
| Description | Used to specify the description for the approval workflow reason. | Yes |
| Reason Category | Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> • Approve • Cancel • Reject | Yes |

6. Modify the required details in the **Approval Workflow Reason** screen.

7. Click **Save**.

The changes made to the approval workflow reason are saved.

Deleting an Approval Workflow Reason

Procedure

To delete an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.

The **Approval Workflow Reason** screen appears.

3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.

4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason that you want to delete.

The **Approval Workflow Reason** screen appears.

5. Click the **Delete** button in the **Approval Workflow Reason** zone.

A message appears confirming whether you want to delete the approval workflow reason.

6. Click **OK**.

The approval workflow reason is deleted.

Chapter 13

Rules Engine

Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

Is True and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

Note: The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 1165

Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Rule Type | Used to search a particular rule type. | No |
| Description | Used to search rule types with a particular description. | No |
| Rule Type Usage | Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> • ASO Billing Line Item Eligibility • ASO Billing Markup/Down Eligibility • • Auto Pay | No |
| | Note: If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank. | |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Rule Type | Displays the rule type. |
| Description | Displays the description of the rule type. |

| Column Name | Column Description |
|-----------------|--|
| Rule Type Usage | Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. |
| View | On clicking the View () icon, the Rule Type screen appears where you can view the details of the rule type. |
| Edit | On clicking the Edit () icon, the Rule Type screen appears where you can edit the details of the rule type. |
| Delete | On clicking the Delete () icon, you can delete the rule type. |
| | Note: You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type. |
| Duplicate | On clicking the Duplicate () icon, the Rule Type screen appears where you can create a new rule type using an existing rule type. |

Searching for a Rule Type

Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

Defining a Rule Type

Prerequisites

To define a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field
- Values defined for the **RULE_TYPE_CAT_FLG** lookup field

Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Rule Type | Used to specify the rule type. | Yes |
| Rule Type Usage | Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| | <p>rules for mapping transactions with the price items. The valid values are:</p> <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p> | |
| Description | Used to specify the description for the rule type. | Yes |
| Maximum Rule Count | <p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when you select the Auto Pay option from the Rule Type Usage list. The maximum rule count cannot be less than or equal to zero.</p> | No |
| Rule Type Category | <p>Used to indicate whether you want to create a field based or parameter based rule type. The valid values are:</p> <ul style="list-style-type: none"> • Field Based • Parameter Based <p>Note: This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list. By default the value of this option type is set to Field Based.</p> | No |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

4. Enter the required details in the **Main** section.
5. Define input and output parameters for the rule type.

Note: On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- Associate one or more characteristic entities with the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

Defining Input and Output Parameters for a Rule Type

Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

Procedure

To define the input and output parameters for a rule type:

- Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Sequence | Used to specify the sequence number for the input or output parameter. | Yes |
| Field | Used to indicate the field that you want to use as the input or output parameter while defining a business rule. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| | <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears. On specifying the field, the description of the field appears corresponding to the Field.</p> | |
| Parameter | <p>Used to indicate the parameter that you want to use as the input or output parameter while defining a business rule.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Parameter field.</p> <p>This field appears when you select the Parameter Based option from the Rule Type Category field.</p> | Yes |
| Rule Input/Output | <p>Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are:</p> <ul style="list-style-type: none"> • Input • Input and Output • Output <p>Note:</p> <p>By default, the Input option is selected.</p> <p>This field appears when you do not select the Auto Pay option from the Rule Type Usage list.</p> | Yes |
| Search Zone | <p>Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone Search window appears.</p> <p>This field appears when you select the Auto Pay option from the Rule Type Usage list.</p> | No |

2. Enter the required details in the **Input and Output Parameters** section.

Note:

At present, the following fields are only supported while defining a rule type where the **Rule Type Usage** field is set to **Auto Pay**:

- Policy Number
- Plan Number
- Price Item

If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.

3. If you want to define more than one input or output parameter for the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an input or output parameter from the rule type, click the **Delete (🗑)** icon corresponding to the parameter.

Associating a Characteristic Entity with a Rule Type**Prerequisites**

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE_CRITERIA_ENTITY_FLG** lookup field

Procedure

To associate a characteristic entity with a rule type:

1. Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Characteristic Entity | Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement. | |

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Characteristic Entities** section.
3. If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

Associating an Algorithm with a Rule Type

Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

Procedure

To associate an algorithm with a rule type:

1. Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Sequence | Used to indicate the order in which the algorithm should be executed. | Yes |
| Algorithm | Used to attach an algorithm which you want to use for deriving the following from the financial transaction: <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. | |

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Enter the required details in the **Rule Criteria Derivation Algorithms** section.
- If you want to associate more than one algorithm with the rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

Editing a Rule Type

Procedure

To edit a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the rule type.
- Input and Output Parameters** - Used to define input and output parameters for the rule type.
- Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Rule Type | Displays the rule type. | Not applicable |
| | Note: This is a read-only field. | |
| Rule Type Usage | Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility | Not applicable |
| | Note: This is a read-only field. | |
| Description | Used to specify the description for the rule type. | Yes |
| Maximum Rule Count | Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. | No |
| | Note: This field appears when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules. | |
| Rule Type Category | Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> • Field Based • Parameter Based | No |
| | Note: This field appears when you have selected the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining a rule type. This is a read-only field. | |

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.

- Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Deleting a Rule Type

Procedure

To delete a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

Note: You can delete a rule type when the rule based auto pay instructions or business rules are not yet defined using the rule type.

- Click **OK**.

The rule type is deleted.

Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1_RULE_USAGE_FLG** lookup field
- Values defined for the **RULE_TYPE_CAT_FLG** lookup field

Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Rule Type | Used to specify the rule type. | Yes |
| Rule Type Usage | Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"> • Line Item Eligibility | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| | <ul style="list-style-type: none"> Mark Up/Mark Down Eligibility Domestic Provider Eligibility Auto Pay File Upload Interface Price Item Eligibility Related Pricing Rule Type Eligibility <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p> | |
| Description | Used to specify the description for the rule type. | Yes |
| Maximum Rule Count | <p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p>Note: This field appears when you select the Auto Pay option from the Rule Type Usage list. The maximum rule count cannot be less than or equal to zero.</p> | No |
| Rule Type Category | <p>Used to indicate whether you want to create a field based or parameter based rule type. The valid values are:</p> <ul style="list-style-type: none"> Field Based Parameter Based <p>Note: This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list. By default the value of this option type is set to Field Based.</p> | No |

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: On selecting the **Parameter Based** option from the **Rule Type Category** list, the **Parameter** column appears in the **Input and Output Parameters** section. Here, you can specify a parameter whether the parameter usage is set to **Rule Eligibility Criteria**.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 1178

Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- Main** - Displays basic information about the rule type. It contains the following fields:

| Field Name | Field Description |
|-------------------|---|
| Rule Type | Displays the rule type. |
| Rule Type Usage | Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"> Line Item Eligibility Mark Up/Mark Down Eligibility Domestic Provider Eligibility Auto Pay File Upload Interface Price Item Eligibility Related Pricing Rule Type Eligibility |

| Field Name | Field Description |
|--------------------|---|
| | Note: This field appears when the rule type usage is specified while defining the rule type. |
| Description | Displays the description of the rule type. |
| Maximum Rule Count | Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears when the Rule Type Usage field is set to Auto Pay . |
| Rule Type Category | Indicates whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> Field Based Parameter Based Note: This field appears when you select the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining the rule type. |

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

| Column Name | Column Description |
|-------------------|--|
| Sequence | Displays the sequence number of the input or output parameter. |
| Field | Indicates the field which is used as the input or output parameter. |
| Parameter | Indicates the parameter that you want to use as the input or output parameter. |
| Rule Input/Output | Indicates whether the field is used as input and/or output parameter while defining a business rule. |
| Search Zone | Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions. Note: It has a link. On clicking the link, the Zone screen appears where you can view the details of the zone. |

- **Rule Criteria Characteristic Entities** - This section contains the following column:

| Column Name | Column Description |
|-----------------------|---|
| Characteristic Entity | Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> Adjustment Billable Charge Policy Policy Plan Price Item |

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Sequence | Indicates the order in which the algorithm should be executed. |
| Algorithm | Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities |

Note: The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

Viewing the Rule Type Details

Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.

- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Rule Type | Displays the rule type. | Not applicable |
| | Note: This is a read-only field. | |
| Rule Type Usage | Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid values are: <ul style="list-style-type: none"> • Line Item Eligibility • Mark Up/Mark Down Eligibility • Domestic Provider Eligibility • Auto Pay • File Upload Interface • Price Item Eligibility • Related Pricing Rule Type Eligibility | Not applicable |
| | Note: This is a read-only field. | |
| Description | Used to specify the description for the rule type. | Yes |
| Maximum Rule Count | Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. | No |
| | Note: This field appears when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Rule Type Category | Used to indicate whether you want to create a field based or parameter based rule type. The valid values are: <ul style="list-style-type: none"> Field Based Parameter Based | No |
| | <p>Note:</p> <p>This field appears when you have selected the Price Item Eligibility or Related Pricing Rule Type Eligibility option from the Rule Type Usage list while defining a rule type.</p> <p>This is a read-only field.</p> | |

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search Rule](#) on page 1183

Search Rule

The **Search Rule** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Rule | Used to specify the rule code. | No |
| Rule Type | Used to specify the type of rule. | No |
| Description | Used to specify the description for the rule. | No |
| Rule Priority | Used to specify the priority of the rule. | No |
| Effective Start Date | Used to specify the date from when the rule is effective. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Rule Priority | Displays the priority of the rule. |
| Rule | Displays the rule code. |
| Description | Displays the description of the rule. |
| Rule Type | Displays the type of rule. |
| Effective Start Date | Displays the date from when the rule is effective. |
| Effective End Date | Displays the date till when the rule is effective. |
| Pre-Processing Algorithm | Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. |
| Post-Processing Algorithm | Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules. |
| View | On clicking the View () icon, the View Rule screen appears where you can view the details of the rule. |
| Edit | On clicking the Edit () icon, the Edit Rule screen appears where you can edit the details of the rule. |
| Delete | On clicking the Delete () icon, you can delete the rule. |

| Column Name | Column Description |
|-------------|--|
| | Note: You can delete a rule only if it is not used. |
| Duplicate | On clicking the Duplicate () icon, the Copy Rule screen appears where you can create a rule using an existing rule. |

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Rule

Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of rules that meet the search criteria appears in the **Search Results** section.

Defining a Rule

Prerequisites

To define a rule, you should have:

- Rule types defined in the application
- Pre-processing and post-processing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.

A sub-menu appears.

3. Click the **Add** option from the **Rule** sub-menu.

The **Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Rule | Used to specify the rule code. | Yes |
| Rule Type | Used to specify the type of rule. | Yes |
| Description | Used to specify the description for the rule. | Yes |
| Rule Priority | Used to specify the priority of the rule. | Yes |
| | Note: You cannot define two rules with the same rule type and priority in the same duration. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Effective Start Date | Used to specify the date from when the rule is effective. | Yes |
| Effective End Date | Used to specify the date till when the rule is effective. | No |
| | Note: The effective end date cannot be earlier than the effective start date. | |
| Pre-Processing Algorithm | Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Pre-Processing Algorithm field. | |
| Post-Processing Algorithm | Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Post-Processing Algorithm field. | |
| Rule True Action | Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. | Yes |
| Dependent Rule | Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|---|
| | | Note: This field is required when you select Next Dependent Rule from the Rule True Action list. |
| Rule False Action | Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. | Yes |
| Dependent Rule | Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list. | Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list. |

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Parameter Name | Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain) . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Input or Output Parameter window appears. On specifying the parameter, the parameter description appears corresponding to the Parameter Name field. | Yes |
| Parameter Value | Used to specify the value for the parameter. | Yes |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| | Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;); in the parameter value. | |

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) | | | | | | |
|--|--|--|---------|-------|---|-----------|---|-----|
| Sequence Number | Used to indicate the order in which the criteria should be executed in the rule. | Yes | | | | | | |
| Parameter Name | <p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are:</p> <ul style="list-style-type: none"> • Field • Algorithm <p>Note: By default, the Field option is selected.</p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field.</p> <table border="1"> <thead> <tr> <th>If the parameter name is selected as ...</th> <th>Then...</th> </tr> </thead> <tbody> <tr> <td>Field</td> <td> <p>The Search  icon appears corresponding to this field. | Is True | <p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | Yes | | | | | | |
| Is False | <p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. | Yes | | | | | | |

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| | <ul style="list-style-type: none"> Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | |
| Is Insufficient | <p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | Yes |

Tip: Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

4. Enter the required details.

Note:

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The rule is defined.

Editing a Rule

Prerequisites

To edit a rule, you should have:

- Pre-processing and post-processing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

Procedure

To edit a rule:

- Search for the rule in the **Rule** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Rule | Used to specify the rule code. | Yes |
| Rule Type | Used to specify the type of rule. | Yes |
| Description | Used to specify the description for the rule. | Yes |
| Rule Priority | Used to specify the priority of the rule. Note: You cannot define two rules with the same rule type and priority in the same duration. | Yes |
| Effective Start Date | Used to specify the date from when the rule is effective. | Yes |
| Effective End Date | Used to specify the date till when the rule is effective. Note: The effective end date cannot be earlier than the effective start date. | No |
| Pre-Processing Algorithm | Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Pre-Processing Algorithm field. | No |
| Post-Processing Algorithm | Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the Post-Processing Algorithm field. | No |
| Rule True Action | Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|---|
| | <ul style="list-style-type: none"> • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. | |
| Dependent Rule | Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list. | Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule True Action list. |
| Rule False Action | Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. | Yes |
| Dependent Rule | Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list. | Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list. |

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------|--------------------------------|-----------------------|
| Parameter Name | Used to specify the parameter. | Yes |

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| | <p>Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain).</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p> <p>On specifying the rule type field, the description of the rule type field appears corresponding to the Parameter Name field.</p> | |
| Parameter Value | <p>Used to specify the value for the parameter.</p> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> | Yes |

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Sequence Number | Used to indicate the order in which the criteria should be executed in the rule. | Yes |
| Parameter Name | <p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are:</p> <ul style="list-style-type: none"> • Field • Algorithm | Yes |

| Column Name | Column Description | Mandatory (Yes or No) | | | | | | |
|--|--|--|---------|-------|---|-----------|---|--|

| Is True | <p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | Yes | | | | | | |
| Is False | <p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. | Yes | | | | | | |

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| | <ul style="list-style-type: none"> Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | |
| Is Insufficient | <p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | Yes |

Tip: Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

Note: You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

Note: If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

Deleting a Rule

Procedure

To delete a rule:

- Search for the rule in the **Rule** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

Note: You can delete a rule when it is not yet used in the system.

- Click **OK**.

The rule is deleted.

Copying a Rule

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

Prerequisites

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** () icon corresponding to the rule whose copy you want to create.

The **Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Rule | Used to specify the rule code. | Yes |
| Rule Type | Used to specify the type of rule. | Yes |
| Description | Used to specify the description for the rule. | Yes |
| Rule Priority | Used to specify the priority of the rule. | Yes |
| | Note: You cannot define two rules with the same rule type and priority in the same duration. | |
| Effective Start Date | Used to specify the date from when the rule is effective. | Yes |
| Effective End Date | Used to specify the date till when the rule is effective. | No |
| | Note: The effective end date cannot be earlier than the effective start date. | |
| Pre-Processing Algorithm | Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Pre-Processing Algorithm field.</p> | |
| Post-Processing Algorithm | <p>Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Post-Processing Algorithm field.</p> | No |
| Rule True Action | <p>Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. | Yes |
| Dependent Rule | <p>Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select Next Dependent Rule from the Rule True Action list.</p> |
| Rule False Action | <p>Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|--|
| | <ul style="list-style-type: none"> Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. | |
| Dependent Rule | Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list. | Yes (Conditional) |
| | | Note: This field is required when you select Next Dependent Rule from the Rule False Action list. |

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Parameter Name | Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain) . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears. On specifying the rule type field, the description of the rule type field appears corresponding to the Parameter Name field. | Yes |
| Parameter Value | Used to specify the value for the parameter. Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(:) in the parameter value. | Yes |

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Sequence Number | Used to indicate the order in which the criteria should be executed in the rule. | Yes |
| Parameter Name | Used to indicate whether you want to specify a field or an algorithm as an input parameter. The valid values are: <ul style="list-style-type: none"> • Field | Yes |

Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. | Yes |

3. Modify the required details.
4. Add or remove the output parameters or criteria from the new rule, if required.

Note:

You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it. For more information on the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination \(Specific to Financial Services Domain\)](#).

5. Click **Save**.

The new rule is defined.

| How to define a rule | Defining a Rule on page 1185 |

Rule

The **Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 1203

Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

| Field Name | Field Description |
|---------------------------|--|
| Rule | Displays the rule code. |
| Rule Type | Indicates the type of rule. |
| Description | Displays the description of the rule. |
| Rule Priority | Indicates the priority of the rule. Note: You can use the Move Up () and Move Down () icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available when you access the View Rule screen through the Rule screen. |
| Effective Start Date | Displays the date from when the rule is effective. |
| Effective End Date | Displays the date till when the rule is effective. |
| Pre-Processing Algorithm | Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. |
| Post-Processing Algorithm | Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules. |
| Rule True Action | Indicates what should happen when all conditions in the rule are satisfied and returns Rule is True . |
| Dependent Rule | Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list. |
| Rule False Action | Indicates what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . |
| Dependent Rule | Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list. |

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Parameter Name | Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the Field screen. |
| Parameter Value | Displays the value of the parameter. |

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Sequence Number | Indicates the order in which the criteria should be executed in the rule. |
| Parameter Type | Indicates whether the input parameter is a field or an algorithm. |
| Parameter Name | Displays the field or algorithm name which is used as an input parameter. |
| Operator | Indicates the relational operator used to define the relation between the parameter name and value. |
| Parameter Value | Displays the parameter value. |
| Is True | Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed. |
| Is False | Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed. |
| Is Insufficient | Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed. |

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

Viewing the Rule Details

Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.

The **View Rule** screen appears.

3. View the details of the rule in the **Rule Information** zone.

Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Rule Type | Used to specify the rule type. | Yes |
| Effective Date | Used when you want to execute the rules which are effective on a particular date. | No |
| | Note: If you do not specify the effective date, the system executes all rules which are effective on the system date. | |
| Parameter Name | Indicates the input parameter. | Not applicable |
| | Note: The input parameters listed change depending on the rule type that you have selected. | |
| Parameter Value | Used to specify the value for the input parameter. | Yes |

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

Rule Output Parameters

The **Rule Output Parameters** section contains the following fields:

| Field Name | Field Description |
|----------------|--|
| Status | Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule. |
| Execution Time | Displays the total time taken to execute all effective rules with the specified rule type. |
| Error | Displays the error message indicating the error that occurred while executing a rule. <p>Note: This field appears when the status is Error.</p> |

In addition, this section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Parameter Name | Displays the output parameter of the rule that was successfully executed. |
| Parameter Value | Displays the value of the output parameter. |

Rule Execution

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| Rule | Indicates the rule that was executed. |
| Rule Type | Indicates the type of rule. |
| Rule Priority | Indicates the priority of the rule. |
| Rule Status | Indicates whether the rule was true or false. |
| Rule Next Action | Indicates the action that took place when the rule was true or false. |

Rule Check

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Rule Type | Used to specify the rule type. | Yes |
| Effective Date | Used when you want to execute the rules which are effective on a particular date. | No |
| Parameter Name | Indicates the input parameter. | Not applicable |
| | Note: The input parameters listed change depending on the rule type that you have selected. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| Parameter Value | Used to specify the value for the input parameter. | Yes |

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

| Field Name | Field Description |
|----------------|--|
| Status | Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule. |
| Execution Time | Displays the total time taken to execute a set of rules. |
| Error | Displays the error message indicating the error that occurred while executing a rule. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field appears when the status is Error. </div> |

In addition, this section contains the following columns:

| Column Name | Column Description |
|-----------------|---|
| Parameter Name | Displays the output parameter of the rule that was successfully executed. |
| Parameter Value | Displays the value of the output parameter. |

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

| Column Name | Column Description |
|------------------|---|
| Rule Code | Displays the rule code. |
| Rule Type | Displays the type of rule. |
| Rule Priority | Displays the priority of the rule. |
| Rule Status Flag | Indicates whether the rule was true or false. |
| Rule Next Action | Indicates the action that took place when the rule was true or false. |

Chapter 14

Alternate Sequential Bill Numbers

Topics:

- [Alternate Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers for the pending or completed bills, you must select the **Use Sequential Bill Numbers** option in the **Billing** tab of the **Installation Options** screen. You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for the completed or pending bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Alternate Sequential Bill Number Generation Algorithms

The following table lists the alternate sequential bill number generation algorithm types which are shipped with the product:

| If you want to generate... | Then create an algorithm using the following algorithm type... |
|---|--|
| Alternate sequential bill numbers unique throughout the system | C1_ALTBLLSYS on page 1210 |
| Alternate sequential bill numbers unique within the division | C1_ALTBLDV on page 1213 |
| Alternate sequential bill numbers unique throughout the system in the required format using a set of parameters | C1_ALTBLSYSI on page 1210 Note: The alternate sequential bill number will be unique throughout the system when you configure the algorithm parameters appropriately. |
| Alternate sequential bill numbers unique within the division in the required format using a set of parameters | C1_ALTBLDIVI on page 1213 Note: The alternate sequential bill number will be unique within the division when you configure the algorithm parameters appropriately. |

C1_ALTBLLSYS

The **C1_ALTBLLSYS** algorithm type is used to generate an alternate bill ID for the completed and pending bills. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

If you attach an algorithm created using the **C1_ALTBLLSYS** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

C1_ALTBLSYS1

The **C1_ALTBLSYS1** algorithm type is used to generate an alternate bill ID for the completed and pending bills. You can generate an alternate bill ID in the required format using the following parameters:

| Parameter | Description |
|---|--|
| 'X' | Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number. |
| CIS_DIVISION | The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters. |
| BILL_CYC_CD | The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters. |
| ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount> | Here, you need to specify the following information separated by a comma: <ul style="list-style-type: none"> <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. |

| Parameter | Description |
|---|---|
| | <ul style="list-style-type: none"> • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five. |
| CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> |
| CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p> |
| BILL_DT=MMddy | <p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> |

| Parameter | Description |
|---|---|
| | <ul style="list-style-type: none"> “yyyy” or “yy” for year “MM” or “M” for month “dd” or “d” for day |
| | Note: The date format should either start or end with the year. |
| SEQ_NBR | The sequence number generated by the database. It should not be more than 12 characters. |
| FIXED_SUFFIX=XX | Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number. |
| LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE | or Indicates whether you want to add zero or space when the number of characters derived from the account’s or person’s characteristic value is less than the character count. The padding is added to the left. |

You can specify the above mentioned parameters against any of the following parameters available in the **C1_ALTBLSYS1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — SEQ_NBR
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|SEQ_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ_NBR** parameter while creating an algorithm using the **C1_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1_ALTBLSYS1** algorithm type to the

Sequence Generation Algorithm field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

C1_ALTBLDV

The **C1_ALTBLDV** algorithm type is used to generate a unique alternate bill ID for the completed and pending bills within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameter:

| Parameter | Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| Initial Bill Sequence Number | Used to specify the initial alternate bill ID that you want to use while sequencing. Note: If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing. | No |

If you attach an algorithm created using the **C1_ALTBLDV** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

C1_ALTBLDIV1

The **C1_ALTBLDIV1** algorithm type is used to generate an alternate bill ID for the completed and pending bills. You can generate an alternate bill ID in the required format using the following parameters:

| Parameter | Description |
|--|--|
| 'X' | Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number. |
| CIS_DIVISION | The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters. |
| BILL_CYC_CD | The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters. |
| ACCT_INDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount> | Here, you need to specify the following information separated by a comma: <ul style="list-style-type: none"> <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five. |

| Parameter | Description |
|---|---|
| CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> |
| CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount> | <p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for a person, the characteristic value which is effective on the batch business date is considered.</p> |
| BILL_DT=MMddy | <p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • "yyyy" or "yy" for year • "MM" or "M" for month • "dd" or "d" for day <p>Note: The date format should either start or end with the year.</p> |
| FIXED_SUFFIX=XX | <p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p> |

| Parameter | Description |
|---|---|
| LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE | or Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left. |

You can specify the above mentioned parameters against any of the following parameters available in the **C1_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you create an algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — '|'
- Field3 — BILL_DT=MMddy
- Field4 — '-'
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for the completed and pending bills.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters. If you attach an algorithm created using the **C1_ALTBLDIV1** algorithm type to the **Sequence Generation Algorithm** field in the **Billing** tab of the **Installation Options** screen, the algorithm is invoked while executing the **Assign Sequential Bill Numbers (ASSGNSBN)** batch.

Enabling the Alternate Sequential Bill Numbers Feature

Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1_ALTBLLSYS**, **C1_ALTBLSYS1**, **C1_ALTBLDV**, or **C1_ALTBLDIV1** algorithm type that you want to use for alternate sequential bill number generation

Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Installation Options**.
The **Installation Options** screen appears.
3. Click the **Billing** tab.
The **Billing** tab appears.
4. Select the **Use Sequential Bill Numbers** option to indicate that you want to generate alternate sequential bill numbers for the completed and pending bills.
The **Sequential Invoice** field is enabled.
5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.
6. Do either of the following:

| If you want to generate... | Then |
|--|---|
| Alternate sequential bill numbers unique throughout the system | <ol style="list-style-type: none"> 1. Attach an algorithm created using the C1_ALTBLLSYS algorithm type to the Sequence Generation Algorithm field to indicate how an alternate bill number which is unique throughout the system should be sequenced. <div style="border: 1px solid black; padding: 5px; background-color: #f0f0f0;"> <p>Note: The Sequence Generation Algorithm field is enabled when the System-wide option is selected from the Sequential Invoice list.</p> </div> 2. Click the Save button in the Page Title area. The changes made to the installation options are saved. |
| Alternate sequential bill numbers unique within the division | <ol style="list-style-type: none"> 1. Click the Save button in the Page Title area. The changes made to the installation options are saved. 2. From the Admin menu, select D and then click Division. The Division screen appears. 3. Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division. 4. In the Division screen, click the Algorithms tab. The Algorithms tab appears. 5. Select the Sequential Bill Number Generation option from the Division Algorithm Entity list. 6. Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed. 7. Attach an algorithm created using the C1_ALTBLDV algorithm type to the respective field to indicate how an alternate bill number which is unique within the division should be sequenced. |

| If you want to generate... | Then |
|--|--|
| | <p>8. Click the Save button in the Page Title area.</p> <p>The changes made to the division are saved.</p> |
| <p>Alternate sequential bill numbers unique throughout the system in the required format using a set of parameters</p> | <p>1. Attach an algorithm created using the C1_ALTBLSYS1 algorithm type to the Sequence Generation Algorithm field to indicate how an alternate bill number which is unique throughout the system should be generated.</p> <div data-bbox="716 485 1399 772" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The Sequence Generation Algorithm field is enabled when the System-wide option is selected from the Sequential Invoice list.</p> <p>The alternate sequential bill number will be unique throughout the system when you configure the algorithm parameters appropriately.</p> </div> <p>2. Click the Save button in the Page Title area.</p> <p>The changes made to the installation options are saved.</p> |
| <p>Alternate sequential bill numbers unique within the division in the required format using a set of parameters</p> | <p>1. Click the Save button in the Page Title area.</p> <p>The changes made to the installation options are saved.</p> <p>2. From the Admin menu, select D and then click Division.</p> <p>The Division screen appears.</p> <p>3. Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division.</p> <p>4. In the Division screen, click the Algorithms tab.</p> <p>The Algorithms tab appears.</p> <p>5. Select the Sequential Bill Number Generation option from the Division Algorithm Entity list.</p> <p>6. Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed.</p> <p>7. Attach an algorithm created using the C1_ALTBLDIV1 algorithm type to the respective field to indicate how an alternate bill number which is unique within the division should be generated.</p> <div data-bbox="716 1671 1399 1780" style="border: 1px solid black; padding: 5px;"> <p>Note: The alternate sequential bill number will be unique within the division when you configure the algorithm parameters appropriately.</p> </div> <p>8. Click the Save button in the Page Title area.</p> <p>The changes made to the division are saved.</p> |

- [Feed Management Dashboard](#)
- [Transaction Details](#)
- [Transaction Source](#)
- [Transaction Record Type](#)
- [Transaction Aggregation Rule](#)
- [Schedule](#)
- [Disaggregation Request](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 1273.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#)
- [Transaction Disaggregation](#) on page 1255
- [Transaction Cancellation](#) on page 1266
- [Transaction Rollback](#) on page 1270

Prerequisites

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE_NUMBER lookup field
- Create an algorithm of the **C1_RTCL_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- [Setting the C1_RLENG Feature Configuration](#) on page 4069
- [Setting the C1-TXNDMYID Feature Configuration](#) on page 4070
- [Setting the C1_PPARM_FLG Feature Configuration](#) on page 4063
- [Setting the C1_FM Feature Configuration](#) on page 4052

Transaction Rating Before Billing

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
 - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. Ignore the Transaction Leg for Billing – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

Note:

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created when you attach an algorithm of the **C1_RTCL_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

| Transaction Rating Approach and Way | Ignore Transaction (Yes or No) | Aggregate Transaction (Yes or No) | Rating Criteria | Batch in which the Rate is Determined |
|-------------------------------------|--------------------------------|-----------------------------------|---------------------------------|---|
| 3a | Yes | Not applicable | Do Not Rate Transactions (DNRT) | Not applicable because ignored transactions are not considered for billing. |

| Transaction Rating Approach and Way | Ignore Transaction (Yes or No) | Aggregate Transaction (Yes or No) | Rating Criteria | Batch in which the Rate is Determined |
|-------------------------------------|--------------------------------|-----------------------------------|--|---|
| 3b | Yes | Not applicable | Rate Transactions (RITX) | Update Status (C1-TXNEX) |
| 1b | No | Yes | Do Not Rate Transactions (DNRT) | Not applicable because the rate is determined during billing. |
| 2b | No | Yes | Aggregate transactions and then rate aggregated SQs (AGTR) | Service Quantity Calculation (C1-TXNSQ) |
| 2a | No | Yes | Rate individual transactions and aggregate calc lines across transactions (RITA) | Update Status (C1-TXNEX) |
| 1a | No | No | Do Not Rate Transactions (DNRT) | Not applicable because the rate is determined during billing. |
| 2c | No | No | Rate Transactions (RITX) | Service Quantity Calculation (C1-TXNSQ) |

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

| Transaction | Transaction Volume | Transaction Date | Account | Price Item | Price Item Parameter Group ID | Price Assignment ID | Aggregation Schedule |
|-------------|--------------------|------------------|---------|------------|-------------------------------|---------------------|----------------------|
| T1 | 300 | 01/01/2015 | A1 | P1 | PG1 | PA1 | Monthly |
| T1 | 300 | 01/01/2015 | A2 | P1 | PG1 | PA2 | Monthly |
| T2 | 200 | 15/01/2015 | A1 | P1 | PG1 | PA1 | Monthly |
| T2 | 200 | 15/01/2015 | A3 | P1 | PG1 | PA3 | Monthly |

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

| Transaction | Price Assignment ID | Rate Component | Currency Code | Distribution Code | Description on Bill | Aggregation Parameter Group ID (Rate Component's Characteristics) |
|-------------|---------------------|----------------------------|---------------|-------------------|---------------------|---|
| T1 | PA1 | RC1-0.1*Transaction Volume | USD | BK-AR1 | XYZ | Char1=Y |
| T1 | PA1 | RC2-0.2*Transaction Volume | USD | BK-AR2 | ABC | Char2=Y |
| T1 | PA2 | RC3-0.3*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |
| T1 | PA2 | RC4-0.2*Transaction Volume | USD | BK-AR4 | ABC | Char2=Y |
| T2 | PA1 | RC1-0.1*Transaction Volume | USD | BK-AR1 | XYZ | Char1=Y |
| T2 | PA1 | RC2-0.2*Transaction Volume | USD | BK-AR2 | ABC | Char2=Y |
| T2 | PA3 | RC3-0.3*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |
| T2 | PA3 | RC4-0.2*Transaction Volume | USD | BK-AR3 | XYZ | Char1=Y |

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|--|----------------|---------------------------------|--------------------------|--|
| BC1 | 01/01/2015 | 31/01/2015 | T1- A1P1PG1- PA1, T2- A1P1PG1- PA1 | RC1 | $300*0.1 = 30$, $200*0.1 = 20$ | $30+20 = 50$ | The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate |

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|--|----------------|---|--------------------------|--|
| | | | | | | | components are same. |
| BC1 | 01/01/2015 | 31/01/2015 | T1– A1P1PG1– PA1, T2– A1P1PG1– PA1 | RC2 | $300 \times 0.2 = 60$, $200 \times 0.2 = 40$ | $60 + 40 = 100$ | The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |
| BC2 | 01/01/2015 | 31/01/2015 | T1– A2P1PG1– PA2 | RC3 | $300 \times 0.3 = 90$ | 90 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1– A2P1PG1– PA2 | RC4 | $300 \times 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2– A3P1PG1– PA3 | RC3, RC4 | $200 \times 0.3 = 60$, $200 \times 0.2 = 40$ | $60 + 40 = 100$ | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|--------------------|----------------|-----------------------|--------------------------|-------------------------|
| BC1 | 01/01/2015 | 31/01/2015 | T1–A1P1PG1– PA1 | RC1 | $300 \times 0.1 = 30$ | 30 | The pass through charge |

| Billable Charge | Start Date | End Date | Transaction Leg | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|-----------------|------------|------------|-----------------|----------------|--|--------------------------|--|
| | | | | | | | is calculated for the transaction leg. |
| BC1 | 01/01/2015 | 31/01/2015 | T1-A1P1PG1-PA1 | RC2 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1-A2P1PG1-PA2 | RC3 | $300 * 0.3 = 90$ | 90 | The pass through charge is calculated for the transaction leg. |
| BC2 | 01/01/2015 | 31/01/2015 | T1-A2P1PG1-PA2 | RC4 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2-A1P1PG1-PA1 | RC1 | $200 * 0.1 = 20$ | 20 | The pass through charge is calculated for the transaction leg. |
| BC3 | 01/01/2015 | 31/01/2015 | T2-A1P1PG1-PA1 | RC2 | $200 * 0.2 = 40$ | 40 | The pass through charge is calculated for the transaction leg. |
| BC4 | 01/01/2015 | 31/01/2015 | T2-A3P1PG1-PA3 | RC3, RC4 | $200 * 0.3 = 60$, $200 * 0.2 = 40$ | $60 + 40 = 100$ | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same. |

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

| Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------------|--------------------|---------------|------------|-------------------|------------------------|-----------------------------------|---|
| A1PIPG1- PA1- Monthly | 300+200 = 500 | BC1 | 01/01/2015 | 31/01/2015 | RC1 | 500*0.1 = 50 | 50 | The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities. |
| A1PIPG1- PA1- Monthly | 300+200 = 500 | BC1 | 01/01/2015 | 31/01/2015 | RC2 | 500*0.2 = 100 | 100 | The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose |

| Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------|-----------------|------------|------------|----------------|----------------------------------|--------------------------|---|
| | | | | | | | | transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities. |
| A2P1PG1-PA2-Monthly | 300 | BC2 | 01/01/2015 | 31/01/2015 | RC3 | $300 * 0.3 = 90$ | 90 | The pass through charge is calculated for the transaction leg. |
| A2P1PG1-PA2-Monthly | 300 | BC2 | 01/01/2015 | 31/01/2015 | RC4 | $300 * 0.2 = 60$ | 60 | The pass through charge is calculated for the transaction leg. |
| A3P1PG1-PA3-Monthly | 200 | BC3 | 01/01/2015 | 31/01/2015 | RC3, RC4 | $200 * 0.3 = 60, 200 * 0.2 = 40$ | $60 + 40 = 100$ | The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, |

| Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule | Total Transaction Volume | Billable Charge | Start Date | End Date | Rate Component | Calculation Details | Pass Through Charge (\$) | Comments |
|---|--------------------------|-----------------|------------|----------|----------------|---------------------|--------------------------|---|
| | | | | | | | | description on bill, and characteristics of the rate components are same. |

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 1229
- [Transaction Validation and Initial Price Item Determination \(Specific to Health Insurance Domain\)](#) on page 1231
- [Price Item Pricing Verification](#) on page 1242
- [Aggregation](#) on page 1246
- [Clean Up](#) on page 1250

The following figure graphically explains the transaction aggregation process:

Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to validate a particular transaction feed. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---|---|-----------------------|
| Transaction Source | Used when you want to validate the transaction feeds which are received from a particular transaction source. | No |
| Checksum Validation Required | Used to indicate whether the following should be validated: <ul style="list-style-type: none"> The number of transaction records in the file matches the total transaction records in the header. The sum of transaction amount matches the total transaction amount in the header. The sum of transaction volume matches the total transaction volume in the header. The valid values are: <ul style="list-style-type: none"> Y N | No |
| Duplicate Check Required | Used to indicate whether the following should be validated: <ul style="list-style-type: none"> File with the same header date and external header ID is not available in the system. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: The duplicate check is done only against the transaction feeds which are in the Validated (VALI) status and not against the transaction feeds which are in the Uploaded (UPLD) status.</p> | No |
| Allow Positive Transaction Volume in Header | Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to Y.</p> | Yes |
| Allow Negative Transaction Volume in Header | Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to N.</p> | Yes |
| Allow Zero Transaction Volume in Header | Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: | Yes |

| Parameter Name | Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Y • N | |
| | Note: By default, the parameter value is set to N. | |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Transaction Validation and Initial Price Item Determination (Specific to Health Insurance Domain)

This process includes the following two sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
 - Transaction source is defined in the system.
 - Transaction record type is defined for the transaction source in the system.
 - Division and currencies are defined in the system.
 - The account with the specified account identifier, account identifier type and division exists in the system.

Note: This validation is done when the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- Pricing Rule Type or Rule Type Determination** - If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
 - Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
 - Bill Group Derivation** - For more information, refer to the *Bill Group Derivation* on page 3121 section.
 - Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

| Pricing Rule Type Category | Algorithm | For more information on how the system derives the transaction legs, refer to... |
|---------------------------------|--------------|--|
| Claim | C1_ACCPRIDRV | <i>Account and Price Item Derivation (for the Claim Pricing Rule Type Category)</i> on page 3124 |
| Retention Type Enrollment Based | C1_ACCPRIDRV | <i>Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)</i> on page 3152 |
| Ancillary | C1_ACCPRIDRV | <i>Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)</i> on page 3163 |

Once the primary pricing rule type is called, the system calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

- Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
- Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

| Pricing Rule Type Category | Algorithm | For more information on how the system derives the transaction legs, refer to... |
|----------------------------|--------------|---|
| Specific Stop-Loss | C1_ACCPRISL | <i>Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</i> on page 3129 |
| Aggregate Stop-Loss | C1_ACCPRISL | <i>Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</i> on page 3129 |
| Retention Type Claim Based | C1_ACCPRIDRV | <i>Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)</i> on page 3141 |

However, if a primary pricing rule type is not specified in the transaction record type, the system determines the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped using rules which are invoked through the rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Note: The system determines rules which are effective based on the **TFM - Processing Date** characteristic defined for the division to which the transaction belongs. The system uses the **TFM - Processing Date** characteristic which is effective on the transaction date. If the **TFM - Processing Date** characteristic type is set to BATCH_DT, the system executes rules which are effective on the batch business date. However, if the **TFM - Processing Date** characteristic type is set to TXN_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **TFM - Processing Date** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT_NO1_Val - Account 1
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT_NO1_Val, DIVISION1_VAL and PRODUCT1_1_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT_NO1_Val set to Account 1, DIVISION1_VAL set to D1, PRODUCT1_1_Val set to Price Item X, and PRODUCT1_2_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - US
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - US
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - UK
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - UK
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD
- ACCT_NO2_Val - Account B
- DIVISION2_VAL - D2
- PRODUCT2_1_Val - Price Item A
- PCD2_1_1_VAL - Country
- PVL2_1_1_VAL - US
- PCD2_1_2_VAL - Currency
- PVL2_1_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

| Charges Borne By | Division to which the account belongs... | Price Item | Country | Currency |
|------------------|--|--------------|---------|----------|
| Account A | D1 | Price Item X | UK | USD |
| Account A | D1 | Price Item Y | UK | USD |
| Account B | D2 | Price Item A | US | USD |

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 1355. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

| Output Parameter | Naming Convention | Example | Description |
|-------------------------------------|--|--|--|
| Account Identifier | ACCT_NOX_Val | ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, | Used to indicate the account which must bear the charges for the transaction. |
| Account Identifier Column Name | ACCT_NOX_Col | ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ... | Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked. |
| Account Identifier Type | ACCT_NO_TYPEX_Val | ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ... | Used to indicate the type of account identifier. |
| Account Identifier Type Column Name | ACCT_NO_TYPEX_Col | ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ... | Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked. |
| Account Division | DIVISIONX_VAL | DIVISION1_VAL | Used to indicate the division to which the account belongs. |
| Account Division Column Name | DIVISIONX_COL | DIVISION1_COL | Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked. |
| Price Item Name | PRODUCTX_Y_Val | PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, | Used to indicate the price item to which the transaction must be mapped. |
| | Note: Here, X represents the account and Y represents the price item. | | |
| Price Item Column Name | PRODUCTX_Y_Col | PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ... | Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked. |
| | Note: Here, X represents the account and Y represents the price item. | | |
| TOU | TOUX_Y_Val | TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ... | Used to indicate the variance parameter which you want to use along with the price item for price determination. |
| | Note: Here, X represents the account and Y represents the price item. | | |
| | | | Note: This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |

| Output Parameter | Naming Convention | Example | Description |
|-----------------------------|---|---|--|
| TOU Column Name | TOUX_Y_Col | TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ... | Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked. Note: This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| | Note: Here, X represents the account and Y represents the price item. | | |
| Parameter Code | PCDX_Y_Z_VAL | PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ... | Used to indicate the parameter which you want to use along with the price item for price determination. Note: This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (EROR) . |
| | Note: At present, the system does not support the Parameter Code Column output parameter. | | |
| Parameter Value | PVLX_Y_Z_VAL | PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ... | Used to specify the value for the parameter. Note: This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR) . |
| | Note: Here, X represents the account, Y represents the price item, and Z represents the parameter. | | |
| Parameter Value Column Name | PVLX_Y_Z_COL | PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ... | Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked. |

| Output Parameter | Naming Convention | Example | Description |
|----------------------|---|---|--|
| | | | <p>Note:</p> <p>This output parameter appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p> |
| Processing Date Type | <p>PRCS_DTX_Y_TYP</p> <p>Note: Here, X represents the account and Y represents the price item.</p> | PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ... | <p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> • TXN_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date. • Batch_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date. |

| Output Parameter | Naming Convention | Example | Description |
|------------------|---|--|---|
| | | | <p>Note: Based on the TFM - Processing Date characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_TYP output parameter. In other words, the PRCS_DTX_Y_TYP output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p> |
| Processing Date | <p>PRCS_DTX_Y_VAL</p> <p>Note: Here, X represents the account and Y represents the price item.</p> | PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, | Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate. |

| Output Parameter | Naming Convention | Example | Description |
|--------------------|-------------------|---------|---|
| | | | <p>Note:</p> <p>The custom date must be a date other than the transaction or batch business date.</p> <p>Based on the TFM - Processing Date characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p> |
| Ignore Transaction | IGNORE_SW | | <p>Used to ignore transactions based on the transaction attributes. The valid values are:</p> <ul style="list-style-type: none"> • Y • N |

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

| Transaction | Charges Borne By | Division to which the account belongs... | Price Item | Variance Parameter | Price Item Parameters |
|-------------|------------------|--|------------|--------------------|--------------------------------------|
| T1 | A1 | D1 | P1 | - | Country - US, Currency - USD |
| T1 | A1 | D1 | P2 | - | Country - Germany, Currency - USD |

| Transaction | Charges Borne By | Division to which the account belongs... | Price Item | Variance Parameter | Price Item Parameters |
|-------------|------------------|--|------------|--------------------|--------------------------------------|
| T1 | A2 | D2 | P3 | USD | - |
| T2 | A1 | D1 | P1 | - | Country - US, Currency - USD |
| T2 | A2 | D2 | P2 | USD | - |
| T3 | A1 | D1 | P3 | - | Country - Germany, Currency - USD |

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:

- Account A, Price Item X, Country - US, Currency - USD
- Account A, Price Item Y, Country - Germany, Currency - USD
- Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Batch Business Date | Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | <p>Note:</p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the C1-TXNIP batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p> | |
| Transaction Header ID | Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to validate and derive price item for the transactions which are received from a particular transaction source. | No |
| Division | Used when you want to validate and derive price item for the transactions belonging to a particular division. | No |
| Shuffle Work Unit | <p>Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: By default, the parameter value is set to N.</p> | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

Note:

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1_PRDR_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1_PRDR_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

Price Item Pricing Verification

In this process, the system behaves in the following manner:

| If the Multi Parameter Based Pricing feature is... | Then... |
|--|--|
| Disabled | <p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the effective pricing</p> |

| If the Multi Parameter Based Pricing feature is... | Then... |
|--|---|
| | is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR) . |
| Enabled | <p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs)and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see Multi Parameter Based Pricing. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p> |

Note:

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.

- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health insurance business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the **SA_DERV_POPC** algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

| If the effective pricing rule stamped against the transaction leg is defined at ... | Then... |
|---|--|
| The bill group level | The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy. |
| The parent customer level | The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLLNG feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy. |

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to find the price item pricing for transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to find the price item pricing for transactions which are received from a particular transaction source. | No |
| Division | Used when you want to find the price item pricing for transactions belonging to a particular division. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 1220.

You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to change the status of transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to change the status of transactions which are received from a particular transaction source. | No |
| Division | Used when you want to change the status of transactions belonging to a particular division. | No |
| Shuffle Work Unit | Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N | No |
| | Note: By default, the parameter value is set to N. | |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI_PRC_AGRD
- CI_PRC_PL
- CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Division | Used when you want to update the price item pricing information of accounts belonging to a particular division. | No |
| Chunk Size | Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the **SQL** values in the billable charge. In the aggregation process, the system behaves in the following manner:

| If the Multi Parameter Based Pricing feature is... | Then... |
|--|--|
| Disabled | <p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> |
| Enabled | <p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> |

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 1220.

Note: If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the **self-funded health insurance** business:

- **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1_BCHG_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 3171 section.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Transaction Header ID | Used when you want to create the billable charges for transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to create the billable charges for transactions which are received from a particular transaction source. | No |
| Division | Used when you want to create the billable charges for transactions belonging to a particular division. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

| Rate for other transaction leg is determined using the following set of pricing attributes... | Then.... |
|--|---|
| Ignore Transaction is set to Yes and Rating Criteria is set to Rate Transactions (RITX) | The corresponding calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Rate Transactions (RITX) | The corresponding billable charge and calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA) | The corresponding calculation lines of the transaction leg are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The corresponding billable charge and calculation lines are not deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Do Not Rate Transactions | The corresponding non-aggregated billable charge is deleted. |

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to change the status of transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to change the status of transactions which are received from a particular transaction source. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Division | Used when you want to change the status of transactions belonging to a particular division. | No |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|--|
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions | The SQIs are recalculated in the billable charge. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate | The pass through charges are recalculated and accumulated accordingly. |

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|----------|
| individual transactions and aggregate calc lines across transactions (RITA) | |

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

| Billable charge contain transaction legs with the following set of pricing attributes... | Then.... |
|--|---|
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions | The aggregated billable charge is deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR) | The aggregated billable charge and the corresponding calculation lines are deleted. |
| Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA) | The aggregated billable charge is deleted. |

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|---|--|
| Transaction Header ID | Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed. | Yes (Conditional) |
| | Note: This parameter should not be used during the disaggregation process. | Note: This parameter is required when you set the request type to CNCL . |
| Transaction Source | Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source. | No |
| | Note: This parameter should not be used during the cancellation and disaggregation processes. | |
| Division | Used when you want to update or delete billable charges created for transactions belonging to a particular division. | No |
| | Note: This parameter should not be used during the cancellation process. | |
| Account ID | Used when you want to update or delete billable charges created for transactions of a particular account. | No |
| | Note: This parameter should be used only during the disaggregation process. | |
| Bill Cycle | Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle. | No |
| | Note: This parameter should be used only during the disaggregation process. | |
| Disaggregate Transactions From Date | Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards. | Yes (Conditional) |
| | Note: You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process. | Note: This parameter is required when you set the request type to DISAGG . |
| Request Type | Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> • CNCL • EROR • DISAGG | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI_TXN_DTL_PRITM_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

Note:

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
 - CI_PRC_AGRD
 - CI_PRC_PL
 - CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI_TXN_DISAGG_REQ table:

| If... | Then |
|---|--|
| A price item is assigned to an account | A disaggregation request is created for the account. |
| The following values in the price item pricing assigned to an account is changed: | A disaggregation request is created for the account. |

| If... | Then |
|---|--|
| <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter | |
| A price item is assigned to a person | A disaggregation request is created for each account of the person and its child person. |
| <p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter | A disaggregation request is created for each account of the person and its child person. |
| A price list is assigned to an account. | A disaggregation request is created for the account. |
| <p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance | A disaggregation request is created for the account. |
| A price list is assigned to a person. | A disaggregation request is created for each account of the person and its child person. |
| <p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance | A disaggregation request is created for each account of the person and its child person. |

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CI_TXN_DISAGG_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
 - Variance Parameter
 - Effective Start Date
 - Effective End Date
 - Aggregation Schedule
 - Ignore Transaction
 - Rating Criteria
 - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

| Transaction | Account | Price Item |
|-------------|---------|------------|
| T1 | A1 | P1 |
| T1 | A1 | P2 |
| T1 | A2 | P1 |
| T1 | A2 | P2 |

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is

a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Division | Used when you want to create disaggregation request for accounts belonging to a particular division. | No |
| Person ID | Used when you want to create disaggregation request for accounts belonging to a particular person. | No |
| Bill Cycle | Used when you want to create disaggregation request for accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards. | Yes |
| | Note: You must specify the date in the YYYY-MM-DD format. | |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note: The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI_TXN_DISAGG_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|---|-----------------------|
| Division | Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation. | No |
| Account ID | Used when you want to identify the transactions of a particular account for disaggregation. | No |
| Bill Cycle | Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation. | No |
| Disaggregate Transactions From Date | Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation. | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|--|--|-----------------------|
| | <p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the Disaggregate Transactions From Date parameter.</p> | |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Post-Processing Algorithm | Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation. | No |
| Exclude Canceled Billable Charges (Y or N) | <p>Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the Canceled status during the disaggregation process. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify any value, by default, the parameter value is set to N.</p> | No |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

- **Process Non-Aggregated Transactions (C1-PDTEXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The corresponding transaction leg and calculation lines (if any) are deleted.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Division | Used when you want to disaggregate the transactions of accounts belonging to a particular division. | No |
| Account ID | Used when you want to disaggregate the transactions of a particular account. | No |
| Bill Cycle | Used when you want to disaggregate the transactions of accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to disaggregate the transactions which were performed from a particular date onwards. Note: You must specify the date in the YYYY-MM-DD format. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_DSAG_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_DSAG_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 1250.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the CI_TXN_DISAGG_REQ table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|--|---|-----------------------|
| Account ID | Used when you want to update the disaggregation requests' status of a particular account. | No |
| Division | Used when you want to update the disaggregation requests' status of accounts belonging to a particular division. | No |
| Bill Cycle | Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle. | No |
| Disaggregate Transactions From Date | Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the Pending Cancel or Frozen status. Note: You must specify the date in the YYYY-MM-DD format. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Update Status Algorithm | Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to COMPLETE . Note: If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests. | No |
| Exclude Canceled Billable Charges (Y or N) | Used to indicate whether you want to change the status of the disaggregation request to COMPLETE when the canceled billable charges are excluded during the disaggregation process. The valid values are: <ul style="list-style-type: none"> • Y • N Note: If you do not specify any value, by default, the parameter value is set to N. You must specify the same value for this parameter while executing the Identify Transactions for Disaggregation (C1-IDENT) and Update Disaggregation Request Status (C1-DRSUA) batches during the disaggregation process. Otherwise, erroneous results will occur. | No |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

Reseeding (Specific to Health Insurance Domain)

In the self-funded health insurance business, there might be situations when you may want to disaggregate the claim, enrollment, and ancillary transactions. The system enables you to disaggregate the claim, enrollment, and ancillary transactions until these transactions are not billed to the customer. If a transaction is billed to the customer, you cannot disaggregate the transaction using the normal transaction disaggregation process.

In the following scenarios, you may want to disaggregate the claim or ancillary transactions once these are billed to the customer:

- The changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), discount arrangement, or level funded pricing rule which is used during the transaction aggregation process.
- A new pricing rule is created using a specific stop-loss (SSL) or aggregate stop-loss (ASL) pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a discount arrangement pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a level funded pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

- A specific stop-loss, aggregate stop-loss, discount arrangement, or level funded pricing rule type is added as related pricing rule type in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

The former scenario arises due to change in pricing rule, whereas the latter four scenarios arise due to the late setup. In such scenarios, you can create the **Accumulation Group Based Disaggregation Request** (also known as **Reseeding Request**) to disaggregate the claim and ancillary transactions. In the **Accumulation Group Based Disaggregation** (also known as **Reseeding**) feature, the system allows you to create the reseeding requests for the accounts using a parent accumulation group. At present, you can create the reseeding requests for the accounts only from the user interface and not through the **Disaggregation Request Creation (C1-DISTG)** batch.

While creating a reseeding request using the **Parent Accumulation Group** request type, you can specify the accumulation type (i.e. whether it is stop-loss or discount arrangement). If the accumulation type is set to **Stop Loss**, the system provides the **Disaggregate All Account** option. If you select the **Disaggregate All Account** option, the system considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account. However, if you do not select the **Disaggregate All Account** option, the system considers accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules and then creates a reseeding request for each such account. In addition, the system creates a reseeding request for the ASSL and ASL Credit accounts which are specified in the specific stop-loss and aggregate stop-loss pricing rules, respectively. Note that the reseeding requests are created for the ASSL and ASL Credit accounts irrespective of whether the **Disaggregate All Account** option is selected or not.

However, if the accumulation type is set to **Discount Arrangement**, the system does not provide the **Disaggregate All Account** option. In this case, the system, by default, considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account.

Note: In the late setup scenarios, you need to ensure that the pricing rules are created before you create the reseeding requests for accounts.

In the **Reseeding** process, you need to execute the following batches in the specified sequence:

1. **Identify Transactions for Disaggregation (C1-IDENT)** - It fetches the reseeding requests for accounts and then identifies the claim or ancillary transactions for disaggregation. If the reseeding request is created due to change in a pricing rule, the **BILLABLE_CHG_ACT_CD** column corresponding to the specific stop-loss, aggregate stop-loss, discount, or level-funded billable charges in the **CI_DISAGG_BCHG_DETAIL** table is set to **Billable Charge is Part of Frozen Bill Segment (40)**. It indicates that no action must be taken on these billable charges. And, if the reseeding request is created due to the late setup scenarios, the claim or ancillary transaction and its legs are moved to the **CI_TXN_DETAIL_STG** and **CI_TXN_DTL_PRITM_STG** tables, respectively. In addition, the status of the claim or ancillary transaction is changed to **Uploaded**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.
2. **Process Non-Aggregated Transactions (C1-PDTXN)** - If the reseeding request is created due to change in a pricing rule, it does the following:
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in the **Frozen** or **Pending Cancel** status, are forcibly deleted from the **CI_TXN_DTL_PRITM** table.
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in a status other than **Frozen** or **Pending Cancel**, are moved to the **CI_TXN_DTL_PRITM_STG** table. And, the claim or ancillary transaction is moved to the **CI_TXN_DETAIL_STG** table and its status is changed to **Uploaded**.

Irrespective of whether the reseeding request is created due to change in a pricing rule or the late setup scenarios, this batch does not perform any actions on the claim, claim based fee, and ancillary transaction legs and their billable charges. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

3. **Transaction Cleanup Batch (C1-TXNCU)** - While executing the **Clean Up (C1-TXNCU)** batch during reseeding, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- 4. Update Disaggregation Request Status (C1-DRSUA)** - Once the claim or ancillary transaction is successfully disaggregated, the status of the reseeded request is changed to **COMPLETE**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

When you re-aggregate the claim or ancillary transactions which were disaggregated due to late setup, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and their billable charges. However, when you re-aggregate the claim or ancillary transactions which were disaggregated due to change in a pricing rule, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and the billable charges for the delta amount (which resulted due to change in pricing).

If the accumulation type is set to **Stop Loss**, the system deletes the specific stop-loss transaction legs. In addition, it deletes the aggregate stop-loss transaction legs (if any), discount arrangement transaction legs (if any), and level funded transaction legs (if any) whose calculation is based on the specific stop-loss transaction legs.

However, if the accumulation type is set to **Discount Arrangement**, the system deletes the discount arrangement transaction legs. It deletes the specific stop-loss transaction legs (if any), aggregate stop-loss transaction legs (if any), and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the specific stop-loss pricing rule. However, it deletes the aggregate stop-loss transaction legs (if any) and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the aggregate stop-loss pricing rule.

For example, the CLAIM pricing rule type contains the SSL, ASL, DISCOUNT, and LEVEL FUNDED pricing rule types as the related pricing rule types, and the SSL and ASL pricing rules contain the following discount arrangement pricing rules:

| Discount Arrangement Pricing Rule | Included in the SSL Pricing Rule (Yes or No) | Included in the ASL Pricing Rule (Yes or No) |
|-----------------------------------|--|--|
| DISCOUNT1 | Yes | No |
| DISCOUNT2 | No | Yes |

Now, if the reseeded request (where the accumulation type is set to **Stop Loss**) is created for an account due to change in the SSL pricing rule, the system behaves in the following manner for the C1 claim transaction:

| Transaction Leg | Existing Transaction Leg Deleted (Yes or No) | New Transaction Leg Created (Yes or No) | Existing Billable Charge Deleted (Yes or No) | New Billable Charge Created for Delta Charges (Yes or No) |
|-----------------|--|---|--|---|
| Claim | No | No | No | No |
| SSL | Yes | Yes | No | Yes |
| ASL | Yes | Yes | No | Yes |
| DISCOUNT | No | No | No | No |
| LEVEL FUNDED | Yes | Yes | No | Yes |
| DISCOUNT1 | Yes | Yes | No | Yes |
| DISCOUNT2 | Yes | Yes | No | Yes |

However, if the reseeded request (where the accumulation type is set to **Discount Arrangement**) is created for an account due to change in the DISCOUNT2 pricing rule, the system behaves in the following manner for the C1 claim transaction:

| Transaction Leg | Existing Transaction Leg Deleted (Yes or No) | New Transaction Leg Created (Yes or No) | Existing Charge Deleted (Yes or No) | Billable Deleted | New Charge Created for Delta Charges (Yes or No) | Billable |
|-----------------|--|---|-------------------------------------|------------------|--|----------|
| Claim | No | No | No | | No | |
| SSL | No | No | No | | No | |
| ASL | Yes | Yes | No | | Yes | |
| DISCOUNT | No | No | No | | No | |
| LEVEL FUNDED | Yes | Yes | No | | Yes | |
| DISCOUNT1 | No | No | No | | No | |
| DISCOUNT2 | Yes | Yes | No | | Yes | |

Let us take another example where the related pricing rule types are not specified in the CLM1 pricing rule type. Therefore, the system just created claim-specific transaction legs and billable charges for the C2 claim transaction. These claim billable charges are then billed to the customer. Now, if you add the SSL and ASL pricing rule types as the related pricing rule types in the CLM1 pricing rule type and create a reseeding request (where the accumulation type is set to **Stop Loss**) for an account, the system behaves in the following manner for the C2 claim transaction when the transaction incurred and paid dates fall within the incurred and paid date ranges defined in the parent accumulation group:

| Transaction Leg | Existing Transaction Leg Deleted (Yes or No) | New Transaction Leg Created (Yes or No) | Existing Charge Deleted (Yes or No) | Billable Deleted | New Charge Created for Delta Charges (Yes or No) | Billable |
|-----------------|--|---|-------------------------------------|------------------|--|----------|
| Claim | No | No | No | | No | |
| SSL | Not applicable | Yes | Not applicable | | Yes | |
| ASL | Not applicable | Yes | Not applicable | | Yes | |
| DISCOUNT1 | Not applicable | Yes | Not applicable | | Yes | |
| DISCOUNT2 | Not applicable | Yes | Not applicable | | Yes | |

Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

| When you cancel a transaction feed for which... | Then |
|--|--|
| A bill (with the Pending status) is already generated in the system | The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL) . |

| When you cancel a transaction feed for which... | Then |
|---|---|
| | <p>Note:</p> <p>If a pending bill has a bill segment in the Frozen or Pending Cancel status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the Cancel status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • Deletes all other bill segments which are not in the Cancel status. • The billable charge corresponding to the bill segment which is not in the Cancel status is deleted if the billable charge is in the Billable status and if the billable charge only includes transactions from the feed that you want to cancel. • The billable charge corresponding to the bill segment which is not in the Cancel status is not deleted or recalculated if the billable charge is in the Cancelled status. • The billable charge corresponding to the bill segment which is in the Cancel status is cancelled if the billable charge only includes transactions from the feed that you want to cancel. • The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds. <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The bill and their corresponding bill segments are deleted. • The SQIs are recalculated in the corresponding billable charges. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)). |
| A bill (with the Complete status) already exists in the system | The system does not allow you to cancel the transaction feed. |
| A bill (with the Complete status) has all bill segments in the Cancelled status | The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL) . |

| When you cancel a transaction feed for which... | Then |
|---|---|
| A billable charge (with the Billable status) exists in the system | <p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The SQIs are recalculated in the billable charge. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)). |
| A billable charge (with the Cancelled status) exists in the system | The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to Cancelled (CNCL) . |

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 1250.
3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all

transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Header ID | Used when you want to cancel a particular transaction feed. | Yes |
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_CNCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_CNCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

| Transaction Leg Status Transition | Transaction Leg Status Transition on page 1274 |

Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)

Note: You must execute the **Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)** batch when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

| Parameter Name | Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Transaction Status | Used to indicate whether you want to rollback transactions which are in the Ignored or Error status. The valid values are: <ul style="list-style-type: none"> • IGNR • EROR | Yes |
| Transaction Header ID | Used when you want to rollback transactions which are received in a particular transaction feed. | No |
| Transaction Source | Used when you want to rollback transactions which are received from a particular transaction source. | No |
| Division | Used when you want to rollback transactions belonging to a particular division. | No |
| Rollback From Date | Used when you want to rollback transactions which were performed from a particular date onwards. <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> | No |
| Rollback To Date | Used when you want to rollback transactions which were performed till a particular date. <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> | No |

| Parameter Name | Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Chunk Size | Used to specify the number of transactions you want to execute in each work unit. | Yes |
| Maximum Batch Count | Used to specify the maximum number of transactions after which the data must be transferred to the database. | Yes |
| Thread Pool Name | Used to specify the thread pool on which you want to execute the batch. | No |

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_ROBK_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_ROBK_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Feed Status Transition

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

Transaction Status Transition

Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

Note: This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

Note: This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|-----------------------|--|------------------------------|--|-------------------------------|---|
| 1 | C1-TXNIP | Transaction validation fails due to incomplete transaction data | UPLOADED | Not applicable as the transaction legs are not yet created | INVALID | Not applicable as the transaction legs are not yet created |
| 2 | C1-TXNIP | Transaction validation fails due to invalid or incorrect transaction data | UPLOADED | Not applicable as the transaction legs are not yet created | ERROR | Not applicable as the transaction legs are not yet created |
| 3 | C1-TXNIP | Transaction validation is successful but no product is derived | UPLOADED | Not applicable as the transaction legs are not yet created | ERROR | Not applicable as the transaction legs are not yet created |
| 4 | C1-TXNIP | Transaction validation is successful and product is derived | UPLOADED | Not applicable as the transaction legs are not yet created | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED |
| 5 | C1-TXNIP | Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes | UPLOADED | Not applicable as the transaction legs are not yet created | IGNORED | Not applicable as the transaction legs are not yet created |
| 6 | C1-TXNVP and C1-TXNEX | Effective pricing is not found for any of the transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | ERROR | ERROR |
| 7 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to Y in the effective pricing for one or more transaction legs but not for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | IGNORED (when Ignore Transaction flag is set to Y in the effective pricing) INITIAL PRODUCT DETERMINED (when Ignore Transaction flag is set to N in the effective pricing) |
| 8 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to Y in the effective pricing for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | IGNORED | IGNORED |

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|-----------------------|--|------------------------------|----------------------------------|-------------------------------|-----------------------------------|
| 9 | C1-TXNVP and C1-TXNEX | Ignore Transaction flag is set to N in the effective pricing for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED |
| 10 | C1-TXNSQ and C1-TXNCM | SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | ERROR | ERROR |
| 11 | C1-TXNSQ and C1-TXNCM | Billable charges are created successfully for all transaction legs | INITIAL PRODUCT DETERMINED | INITIAL PRODUCT DETERMINED | COMPLETED | COMPLETED |

Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|---|------------------------------|----------------------------------|-------------------------------|--|
| 1 | C1-TXNRB | Transactions with the Error (EROR) status are rolled back | ERROR | ERROR | UPLOADED | Not applicable as the transaction legs are not yet created |
| 2 | C1-TXNRB | Transactions with the Ignored (IGNR) status are rolled back | IGNORED | IGNORED | UPLOADED | Not applicable as the transaction legs are not yet created |

Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|--|---|--|-------------------------------|-----------------------------------|
| 1 | C1-TXCNC | Transactions in any status are cancelled | UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED | INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED | CANCELLED | CANCELLED |

Transaction Disaggregation

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|---|---|---|-------------------------------|---|
| 1 | C1-DISTG | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | No change in the status | No change in the status |
| 2 | C1-DISTG | Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated. | CANCELLED, INVALID, or UPLOADED | Not applicable as the transactions will not have any legs in these statuses | No change in the status | Not applicable as the transactions will not have any legs in these statuses |
| 3 | C1-IDENT | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | No change in the status | No change in the status |
| 4 | C1-IDENT | Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, | UPLOADED | UPLOADED | No change in the status | No change in the status |

| Sr. No. | Batch | Event | Pre Event Transaction Status | Pre Event Transaction Leg Status | Post Event Transaction Status | Post Event Transaction Leg Status |
|---------|----------|--|---|----------------------------------|-------------------------------|---|
| | | then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status. | | | | |
| 5 | C1-PDTXN | Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated. | COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation. | COMPLETED, ERROR, or IGNORED | UPLOADED | Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table. |

Transaction Reaggregation

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|----------|--|--|--|--|--|
| 1 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y). | COMPLETED | COMPLETED, IGNORED | COMPLETED | Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED |
| 2 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED | COMPLETED | COMPLETED, IGNORED | IGNORED | Derived Leg: IGNORED Existing Legs: IGNORED |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|----------|---|--|--|--|---|
| | | status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y). | | | | |
| 3 | C1-TXNIP | Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg. | COMPLETED | COMPLETED | ERROR | Derived Leg: No new transaction leg was created Existing Legs: COMPLETED |
| 4 | C1-TXNIP | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction. | ERROR | No Transaction Legs Exist | ERROR | Derived Leg: No new transaction leg was created Existing Legs: None |
| 5 | C1-TXNIP | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction. | ERROR | No Transaction Legs Exist | INITIAL PRODUCT DETERMINED | Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None |
| 6 | C1-TXNVP | Transaction in the COMPLETED status was | COMPLETED | COMPLETED, IGNORED | ERROR | Derived Leg: ERROR |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|-----------------------|--|--|--|--|---|
| | and C1-TXNEX | disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg. | | | | Existing Legs: COMPLETED and IGNORED |
| 7 | C1-TXNVP and C1-TXNEX | Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs. | ERROR | No Transaction Legs Exist | INITIAL PRODUCT DETERMINED | Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None |
| 8 | C1-TXNVP and C1-TXNEX | Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y). | COMPLETED | COMPLETED, IGNORED | COMPLETED | Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED |
| 9 | C1-TXNVP and C1-TXNEX | Transaction in the COMPLETED status was disaggregated. It had one transaction | COMPLETED | COMPLETED, IGNORED | IGNORED | Derived Leg: IGNORED Existing Legs: IGNORED |

| Sr. No. | Batch | Event | Transaction Status Before Disaggregation | Transaction Leg Status Before Disaggregation | Transaction Status After Reaggregation | Transaction Leg Status After Reaggregation |
|---------|-----------------------|---|--|--|--|--|
| | | leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y). | | | | |
| 10 | C1-TXNSQ and C1-TXNCM | While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion. | COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status. | COMPLETED, ERROR | ERROR | Derived Legs: ERROR Existing Legs: No change in the status |
| 11 | C1-TXNSQ and C1-TXNCM | Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated. | COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status. | COMPLETED, ERROR | COMPLETED | Derived Leg: COMPLETED Existing Legs: No change in the status |

Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values

- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

| Header Data | Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| Transaction Source | Used to specify the source from where the transactions are received. | Yes |
| Header Date (YYYYMMDD) | Used to specify the header date. | Yes |
| Transaction Header ID | Used to specify the external transaction header ID. | Yes |
| File Name | Used to specify the file name. | Yes |
| Number of Transactions | Used to specify the total number of transaction records in the file. | Yes |
| Total Transaction Volume | Used to specify the total transaction volume. | Yes |
| Total Transaction Amount | Used to specify the total transaction amount. | Yes |

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

| Record Data | Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Source | Used to specify the source from where the transaction is received. | Yes |
| Transaction Date (YYYYMMDD) | Used to specify the date when the transaction was performed. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | Yes |
| Customer Reference Number | Used to indicate the customer who has performed the transaction. | No |
| Division | Used to specify the division to which the transaction belongs. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |
| Transaction Amount | Used to specify the transaction amount. | Yes |
| Transaction Currency | Used to specify the currency in which the transaction was performed. Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system. | Yes |

| Record Data | Description | Mandatory (Yes or No) |
|---|---|--|
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> • Plus (+) • Minus (-) | Yes |
| Account Identifier Type | Used to indicate the account identifier type. | Yes |
| Account Identifier | Used to indicate the account for which the transaction was performed. | Yes |
| UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20 | Used to specify additional information about the transaction. | No |
| UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 | Used to specify additional transaction amount. | Yes (Conditional) Note: The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified. |
| UDF_CCY_1, UDF_CCY_2, UDF_CCY_3,, UDF_CCY_10 | Used to specify additional transaction currency. Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system. | Yes (Conditional) Note: The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified. |
| UDF_DTTM_1, UDF_DTTM_2,, UDF_DTTM_5 | Used to specify additional information about the transaction. | No |
| UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50 | Used to specify additional information about the transaction. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns. | No |

Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|--|------------------|---|
| C1-TXNHV | 102 | {Checksum Validation Required} field invalid. | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Checksum Validation Required parameter. |
| C1-TXNHV | 102 | {Duplicate Check Required} field invalid. | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Duplicate Check Required parameter. |
| C1-TXNHV | 1314 | The Transaction Source is mandatory. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Source column. |
| C1-TXNHV | 1332 | Sum of transaction records in the header does not match the total number of records in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1333 | Sum of transaction volume in the header does not match the total transaction volume in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1334 | Sum of transaction amount in the header does not match the total transaction amount in the file. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1338 | The Transaction Header ID already exists in the system. Please enter unique header ID. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The same file is uploaded multiple times in the system. |
| C1-TXNHV | 1341 | Exception occurred during the transaction header validation. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the required format. |
| C1-TXNHV | 1421 | Transaction records does not exist in the file. Please check. | 17000 | The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system. |
| C1-TXNHV | 1422 | Sum of transaction records in the header cannot be zero. Please enter valid data in the header. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Number of Transactions column is less than or equal to zero. |
| C1-TXNHV | 1423 | Sum of transaction volume in the header cannot be zero. Please enter valid data in the header. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Volume column is less than or equal to zero. |

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|--|------------------|---|
| C1-TXNHV | 1663 | Transaction Header External Id is missing. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Header ID column. |
| C1-TXNHV | 1664 | Header Transaction Amount should be greater than 0. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Amount column is less than or equal to zero. |
| C1-TXNIP | 102 | { Chunk Size } field invalid | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Chunk Size parameter is less than or equal to one. |
| C1-TXNIP | 102 | { Maximum Batch Size } field invalid | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Maximum Batch Count parameter is greater than the value specified for the Chunk Size parameter. |
| C1-TXNIP | 106 | Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id } | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Header ID parameter exceeds the maximum length of 14 characters. |
| C1-TXNIP | 106 | Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code } | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Source parameter exceeds the maximum length of 30 characters. |
| C1-TXNIP | 106 | Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division } | 11001 | The possible issues could be: <ul style="list-style-type: none"> The value specified for the Division parameter exceeds the maximum length of 5 characters. |
| C1-TXNIP | 1301 | The account with the specified identifier does not exist in the system. Enter a valid identifier. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The account with the specified account identifier is not found in the system. |
| C1-TXNIP | 1302 | UDF_CURRENCY_1 is mandatory when UDF_AMT_1 is non-zero. Enter a valid currency code. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The currency is not available in the UDF_CURRENCY_CD_1 column of the CI_TXN_DETAIL table. |

| Batch Name | Message Number | Error Message | Message Category | Possible Issues |
|------------|----------------|--|------------------|---|
| C1-TXNIP | 1303 | UDF_AMT_1 is mandatory when UDF_CURRENCY_1 is specified. Enter the amount. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The amount is not available in the UDF_AMT_1 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1304 | UDF_CURRENCY_2 is mandatory when UDF_AMT_2 is non-zero. Enter a valid currency code. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The currency is not available in the UDF_CURRENCY_CD_2 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1305 | UDF_AMT_2 is mandatory when UDF_CURRENCY_2 is specified. Enter the amount. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The amount is not available in the UDF_AMT_2 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1306 | UDF_CURRENCY_3 is mandatory when UDF_AMT_3 is non-zero. Enter a valid currency code. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The currency is not available in the UDF_CURRENCY_CD_3 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1307 | UDF_AMT_3 is mandatory when UDF_CURRENCY_3 is specified. Enter the amount. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The amount is not available in the UDF_AMT_3 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1308 | UDF_CURRENCY_4 is mandatory when UDF_AMT_4 is non-zero. Enter a valid currency code. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The currency is not available in the UDF_CURRENCY_CD_4 column of the CI_TXN_DETAIL table. |
| C1-TXNIP | 1309 | UDF_AMT_4 is mandatory when UDF_CURRENCY_4 is specified. Enter the amount. | 17000 | The possible issues could be: <ul style="list-style-type: none"> The amount is not available in the UDF_AMT_4 column of the CI_TXN_DETAIL table. |

Alert Notification for Transaction Feed Management

Oracle Revenue Management and Billing enables you to configure alert notification for the **Transaction Feed Management** feature. At present, the system supports the following two alert notifications:

- To Do Creation
- Email Notification

The objective of these notifications is to create an alert for the records which are in the **Ignored** or **Error** status. Once a To Do is created, it indicates the number of records which are in the **Ignored** or **Error** status. However, the email notification provides the error summary statistics.

A new batch named **C1-ERRAL** is introduced in this release. While executing the **C1-ERRAL** batch, you need to set the **To Do Created For** parameter to **TFM**. In addition, you need to specify the transaction status (for example, EROR or IGNR) for which you want to create an alert notification. On executing the **C1-ERRAL** batch, the system creates a To Do using the **C1-TXNER** To Do type.

The **C1-ERRAL** batch must be executed only after all the transaction feed management batches are executed successfully. If the **C1-ERRAL** batch is executed for the first time, the system considers all the transactions whose **CURR_SYS_PRS_DT** is earlier than or equal to the batch business date. However, in the subsequent execution, the system considers only those transactions whose **CURR_SYS_PRS_DT** is later than the last To Do generation date and earlier than or equal to the batch business date.

On clicking the To Do notification in the **To Do List** screen, you can view the error records in the **Feed Management Dashboard** screen. Note that the system will not create a new To Do when the To Do for the same drill key combination already exists in the **Open** status.

To create an email notification, you need to attach an algorithm which is created using the **C1-TFMERREML** algorithm type to the **To Do Post-Processing** system event of the **C1-TXNER** To Do type. On creating a To Do, the batch creates an email outbound message which contains the error summary statistics.

Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics of each calculation line

The **Feed Management Dashboard** screen contains the following zones:

- [Search](#) on page 1319
- [Division Level Information](#) on page 1325

- [Transaction Level Information](#) on page 1326
- [Transaction Leg Information](#) on page 1327
- [Transaction Leg Service Quantity](#) on page 1328
- [Transaction Leg Calculation Lines](#) on page 1329
- [Transaction Leg Calc Line Characteristics](#) on page 1330

Search

The **Search** zone allows you to search for a transaction feed using various search criteria. It also allows you to view the details of a transaction feed which is already uploaded in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|--|
| Search By | Used to indicate whether you want to search for the transaction volume details of a feed at the division level or transaction level. The valid values are: <ul style="list-style-type: none"> • Feed Level Details - Used to indicate that you want to search for the transaction volume details of a feed at the division level. • Transaction Level Details - Used to indicate that you want to search for the transaction volume details of a feed at the transaction level. | Yes (Conditional) |
| | Note: By default, the Feed Level Details option is selected. | Note: This field is required for searching the transaction volume details at the division or transaction level. |
| Feed Header Date From | Used to search for transaction feeds having header date later than or equal to the specified date. | No |
| Transaction Source | Used to search for transaction feeds received from a particular transaction source. | No |
| Feed Header Date To | Used to search for transaction feeds having header date earlier than or equal to the specified date. | No |
| File Name | Used to search for a transaction feed based on the file name. | No |
| Feed Load Date From | Used to search for transaction feeds which are uploaded on or later than the specified date. | No |
| Transaction Header ID | Used to search for a transaction feed based on the header ID. | No |
| Feed Load Date To | Used to search for transaction feeds which are uploaded on or earlier than the specified date. | No |
| Account Identifier Type | Used to indicate the identifier type based on which you want to search transaction feed details of an account. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|---|
| | Note: This field appears when you select the Transaction Level Details option from the Search By field. | Note: If you enter the primary account identifier as a search criteria, you have to select the account identifier type. |
| Primary Account Identifier | Used to search transaction feed for a particular account. Note: This field appears when you select the Transaction Level Details option from the Search By field. | Yes (Conditional) Note: If you select the account identifier type as a search criteria, you have to enter the primary account identifier. |
| Transaction Record Type | Used to search transaction feeds for transactions with a particular record type. Note: This field appears when you select the Transaction Level Details option from the Search By field. | No |
| Transaction Source | Used to search transaction feeds received from a particular transaction source. Note: This field appears when you select the Transaction Level Details option from the Search By field. | No |
| Transaction ID | Used to search for a particular transaction feed. Note: This field appears when you select the Transaction Level Details option from the Search By field. | No |
| Transaction Date From | Used to search transaction feeds for transactions which are performed on or later than the specified date. Note: This field appears when you select the Transaction Level Details option from the Search By field. | Yes (Conditional) Note: This field is required while searching for transactions which are in the Error status. |
| External Reference Number | Used to search transaction feed with a particular external reference number. Note: This field appears when you select the Transaction Level Details option from the Search By field. | No |
| Transaction Date To | Used to search transaction feeds for transactions which are performed on or earlier than the specified date. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| | <p>Note:</p> <p>This field appears when you select the Transaction Level Details option from the Search By field.</p> <p>If you do not specify the date in the Transaction Date To field, the system by default sets it to the system date.</p> | |
| Transaction Status | <p>Used to search transaction feeds for transactions which are in a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Cancelled • Completed • Error • Ignored • Initial Product Derived • Invalid • Uploaded <p>Note: This field appears when you select the Transaction Level Details option from the Search By field.</p> | No |
| Division | <p>Used to search transaction feeds that belong to a particular division.</p> <p>Note:</p> <p>This field appears when you select the Transaction Level Details option from the Search By field.</p> <p>You can view only those divisions to which you have access in the Division list.</p> | No |
| Error Code/Message | <p>Used to search transaction feeds for transactions which are in the Error status and with a particular error message or error code.</p> <p>Note: This field appears when you select the Transaction Level Details option from the Search By field.</p> | No |
| Error Category | <p>Used to search transaction feeds for transactions which are in the Error status and which belong to a particular error category.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: This field appears when you select the Transaction Level Details option from the Search By field. | |

Note: You must specify at least one search criterion while searching for a transaction feed.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------------|---|
| File Name | Displays the name of the file from where the transaction feed is uploaded. |
| Transaction Source | Displays the transaction source from where the transaction feed is received. |
| Transaction Header ID | Displays the transaction header ID. Note: The transaction header ID is generated automatically when the file is uploaded. |
| Transaction Header External ID | Displays the ID mentioned in the file header. |
| Feed Header Date | Displays the date mentioned in the file header. |
| Feed Load Date | Displays the date when the transaction feed was uploaded in the system. |
| Feed Status | Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> • Uploaded - Indicates that the transaction feed is uploaded. • Validated - Indicates that the file header is validated. • Cancelled - Indicates that the transaction feed is cancelled. • Invalid - Indicates that the file header validation failed. |
| Error Message | Indicates the reason why the file header validation failed. |
| Total Volume | Displays the total transaction volume of the feed. |
| Total Amount | Displays the total amount of the transaction feeds. |
| Uploaded | Displays the total transactions which are uploaded in the system. |
| Price Item | Displays the total transactions which are validated and for which price items are determined in the system. |
| Completed | Displays the total transactions for which the billable charges are created and completed in the system. |
| Error Message | Displays the total transactions which could not pass through the validation, price item determination, or billable charge creation process. Note: If a transaction has only one transaction leg, the error message is displayed from the CI_TXN_DETAIL_EXCP table instead of the CI_TXN_DETAIL table. The objective is that the user should be able to view the transaction leg level error instead of the transaction level error. |
| Cancelled | Displays the total transactions which are cancelled in the system. |

| Column Name | Column Description |
|----------------------------|---|
| Ignored | Displays the total transactions which are ignored in the system. |
| Invalid | Displays the total transactions which are invalid. |
| Transactions Archived | Displays the total transaction volume which is archived in the system. |
| Transaction ID | <p>Displays the transaction record number for which the transaction information is saved in the system.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| External Reference Number | <p>Displays the external reference number of the transaction.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Division | <p>Indicates the division to which the transaction belongs.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Transaction Record Type | <p>Displays the record type of the transaction.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Transaction Date | <p>Displays the date when the transaction is performed.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Processing Date | <p>Displays the date when the transaction is processed in the system.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Account Information | <p>Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (,).</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Account Identifier Type | <p>Indicates the identifier type based on which the transaction is created for the account.</p> <p>Note: This column appears when you select the Transaction Level Details option from the Search By field.</p> |
| Primary Account Identifier | Indicates the account for which the transaction is performed. |

| Column Name | Column Description |
|---------------------------|---|
| | Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Transaction Volume | Displays the total transaction volume of the account. Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Transaction Amount | Displays the total transaction amount of the account. Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Credit/Debit Indicator | Indicates whether the transaction is a debit or credit transaction. Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Customer Reference Number | Indicates the customer who has performed the transaction. Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Transaction Status | Indicates the status of the transaction. Note: This column appears when you select the Transaction Level Details option from the Search By field. |
| Rule | Indicates the rule which was met while determining the initial price item for the transaction. Note: It has a link. On clicking the link, the Rule window appears where you can view the details of the rule that was applied while determining the initial price item for the transaction. This column appears when you select the Transaction Level Details option from the Search By field. |
| Transaction Information | Displays the concatenated string of information about the transaction separated by a comma (,). Note: It has a link. On clicking the link, the Transaction Detail View window appears where you can view the details of the respective transaction. This column appears when you select the Transaction Level Details option from the Search By field. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search Results** section, the **Division Level Information** zone or the **Transaction Leg Information** zone appears depending on whether you select the **Feed Level Details** or the **Transaction Level Details** option from the **Search By** field respectively.

Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Division | Used when you want to view the transaction volume details of a particular division received through the feed. Note: You can only view those divisions to which you have access in the Division list. | No |

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Division | Indicates the division. |
| Total Volume | Displays the total transaction volume of the division. |
| Uploaded Volume | Displays the total transaction volume (of the division) which is uploaded in the system. |
| Price Item Determined | Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system. |
| Completed Volume | Displays the total transaction volume (of the division) for which billable charges are created and completed in the system. |
| Error Volume | Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process. |
| Cancelled Volume | Displays the total transaction volume (of the division) which is cancelled in the system. |
| Ignored Volume | Displays the total transaction volume (of the division) which is ignored in the system. |
| Invalid Volume | Displays the total transaction volume (of the division) which is invalid. |

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you select the **Feed Level Details** option from the **Search By** field and click the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search Results** section of the **Search** zone.

Transaction Level Information

The **Transaction Level Information** zone lists the transactions in a feed which belong to a particular division. It contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Transaction ID | Displays the transaction ID. |
| External Reference Number | Displays the external reference number of the transaction. |
| Division | Indicates the division to which the transaction belongs. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Date | Displays the date when the transaction was performed. |
| Account Information | Displays the account for which the transaction is performed. Note: It has a link. On clicking the link, the Account screens appears where you can view the details of the respective account. |
| Account Identifier Type | Displays the type of account identifier. |
| Account Identifier | Indicates the account for which the transaction is performed. |
| Transaction Volume | Displays the transaction volume. |
| Transaction Amount | Displays the transaction amount. |
| Credit/Debit Indicator | Indicates whether the transaction is a debit or credit transaction. |
| Customer Reference Number | Indicates the customer who performed the transaction. |
| Transaction Status | Indicates the status of the transaction. |
| Error Message | Indicates the reason why the validation, price item determination, or billable charge creation process failed. |
| Rule | Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the respective rule. |
| Transaction Information | Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the respective transaction. |

By default, the **Transaction Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a division in the **Division Level Information** zone.

On clicking the **Broadcast** (📡) icon corresponding to a transaction, the **Transaction Leg Information** zone appears where you can view a list of transaction legs of a particular transaction.

You can filter the list using various search criteria (such as, **External Reference Number**, **Primary Account Identifier**, **Account Identifier Type**, **Transaction Source**, **Transaction Record Type**, and **Transaction Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon available in the upper right corner of this zone.

Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

| Column Name | Column Description |
|----------------------------|---|
| Transaction ID | Indicates the transaction to which the transaction leg belongs. |
| Display Sequence | Displays the sequence number of transaction leg. |
| Account Identifier Type | Indicates the type of account identifier to which the transaction is mapped. |
| Primary Account Identifier | Indicates the account which will bear the charges for the transaction. |
| Error Message | Indicates the reason why the validation, price item determination, or billable charge creation process failed. |
| Price Item | Indicates the price item to which the transaction is mapped. |
| | Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item. |
| Billable Charge ID | Indicates the billable charge which is created for the transaction leg. |
| | Note: The data appears in this column when the billable charge is created for the transaction leg. It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the billable charge. |
| Transaction Calculation ID | Displays the transaction calculation ID. |
| | Note: The data appears in this column when the transaction leg is rated before billing. |

| Column Name | Column Description |
|--------------------------------|--|
| Initial Price Item Code | Indicates the initial price item to which the transaction was mapped. |
| Bill ID | Indicates the bill in which the transaction leg of the billable charge is included for billing. |
| Bill Segment ID | Indicates the bill segment to which the bill belongs. |
| Variance | Indicates the variance parameter which is used along with the price item for determining price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False . |
| Price Item Parameters | Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. Note: This column appears when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Aggregation Parameter Group ID | Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction in the **Transaction Level Information** zone.

Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| SQI | Indicates the service quantity identifier. |
| Daily Service Quantity | Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item-division combination. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

| Column Name | Column Description |
|----------------------------|---|
| Transaction Calculation ID | Displays the transaction calculation ID. |
| Sequence | Indicates the sequence in which the calculation line is created. It is the sequence of the rate component which is used in the rate schedule. |
| Price Component ID | Indicates the price component which is used during calculation. |
| Rate Information | Displays the rate which is used for calculation. |
| SQI | Indicates the service quantity identifier. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |
| Calculated Amount | Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency. |
| Description on Bill | Displays the summarized information about the calculation line that will be printed on the bill. |
| Precise Calculated Amount | Displays the calculated charge amount. This amount appears in the invoice currency. |
| Exempt Amount | Displays the amount of the calculated charge that the person does not have to pay due to tax exemption. |
| Base Amount | Displays the total amount derived from the cross-referenced line(s) that the current line is then used to calculate the charge amount. |
| Pricing Amount | Displays the calculated charge amount. This amount appears in the pricing currency. |
| Exchange Rate | Indicates the exchange rate which is used when the invoice currency is different from the pricing currency. |
| Print | Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N |
| Distribution Code | Indicates the distribution code associated with the rate component. |
| Pricing Currency | Indicates the currency in which the price item pricing is defined. |

| Column Name | Column Description |
|--------------------------------|---|
| Aggregation Parameter Group ID | Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics of each calculation line. It contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Transaction Calculation ID | Displays the transaction calculation ID. |
| Sequence | Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Searching for a Transaction Feed

Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Feed Management Dashboard**.

The **Feed Management Dashboard** screen appears.

3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

Viewing Division Level Details of a Transaction Feed

Procedure

To view the division level details of a transaction feed:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the division level details of a transaction feed.
2. Click **Search**.

The search results appear based on the specified search criteria.

3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction feed whose *division level details* you want to view.

The **Division Level Information** zone appears.

4. View the transaction volume details of each division in the **Division Level Information** zone.

Viewing Transactions that Belong to a Division

Procedure

To view the transactions that belong to a division:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the transactions that belong to a division.

2. Click **Search**.

The search results appear based on the specified search criteria.

3. In the **Search Results** section, click the **Broadcast** () icon corresponding to the transaction feed whose details you want to view.

The **Division Level Information** zone appears.

4. Click the **Broadcast** () icon corresponding to the division whose transaction details you want to view.

The **Transaction Level Information** zone appears.

5. View the list of the transactions that belong to the division in the **Transaction Level Information** zone.

Transaction Details

The **Transaction Details** screen allows you to search for a transaction using various search criteria. It also allows you to add and copy an existing transaction. It contains the following zones:

- [Search](#) on page 1334
- [Transaction Legs](#) on page 1338
- [Transaction Error Messages](#) on page 1341

Search

The **Search** zone allows you to search for a transaction using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|---|--|
| Search By | Used to indicate whether you want to search transactions based on their current status. The valid values are: <ul style="list-style-type: none"> • Uploaded - Used to search transactions which are uploaded in the system. • Initial Price Item Determined - Used to search transactions for which a price item is determined. • Ignored - Used to search transactions which are ignored in the system. • Error - Used to search transactions with an error. • Cancelled - Used to search for transactions which are cancelled. • Completed - Used to search for transactions whose billable charge is completed. • Invalid - Used to search for invalid transactions. | Yes (Conditional) |
| | Note: By default the Uploaded option is selected. | Note: This field is required for searching transactions which are in a particular status. |
| External Reference Number | Used to search a transaction with a particular external reference number. | No |
| Division | Used to search transactions that belong to a particular division. | No |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Transaction Source | Used to search transactions received from a particular transaction source. | No |
| Transaction Record Type | Used to search transactions with a particular record type. | No |
| Account Identifier Type | Used to select the identifier type based on which you want to search transactions of an account. | Yes (Conditional) |
| | | Note: If you enter the primary account identifier as a search criteria, you have to select the account identifier type. |
| Primary Account Identifier | Used to search transactions which are performed for a particular account. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|--|
| | | Note: If you select the account identifier type as a search criteria, you have to enter the primary account identifier. |
| Transaction Date | Used to search transactions which are performed on a particular date. | No |
| Transaction Upload Date | Used to search transactions which are uploaded in the system on a particular date. | No |
| Transaction Header ID | Used to search transactions which are uploaded through a particular transaction feed. Note: This field appears when you select the Uploaded, Ignored, Error, Cancelled, or Invalid options from the Search By field. | No |
| Price Item | Used to search transactions which are mapped to a particular price item. Note: This field appears when you select the Initial Price Item Determined option from the Search By field. | No |
| Billable Charge ID | Used to search transactions which are included in a particular billable charge. Note: This field appears when you select the Completed option from the Search By field. | No |
| Disaggregated | Used to indicate whether you want to search transactions which are disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No | No |

Note: You must specify at least one search criterion while searching for a transaction.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Transaction ID | Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Detail View screen appears where you can view the details of the respective transaction. |
| Transaction Source | Displays the transaction source from where the transaction is received. |
| Transaction Record Type | Displays the record type of the transaction. |

| Column Name | Column Description |
|---------------------------|--|
| Transaction Upload Date | Displays the date when the transaction is uploaded in the system. |
| | Note: This column appears when you select the Uploaded, Initial Price Item Determined, Ignored, Error, Cancelled, or Invalid options from the Search By list. |
| Transaction Header ID | Indicates the transaction feed through which the transaction was uploaded in the system. |
| | Note: This column appears when you select the Uploaded, Ignored, Cancelled, or Invalid options from the Search By list. |
| External Reference Number | Displays the external reference number of the transaction. |
| Customer Reference Number | Displays the reference number of the customer for the particular transaction. |
| | Note: This column appears when you select the Error option from the Search By field. |
| Disaggregation Status | Indicates whether the transaction was disaggregated or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Manual Entry | Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| | Note: This column appears when you select the Uploaded or Cancelled options from the Search By list. |
| Transaction Date | Displays the date when the transaction was performed. |
| Transaction Amount | Displays the transaction amount. |
| Transaction Volume | Displays the transaction volume. |
| Division | Indicates the division to which the transaction belongs. |
| Error Message | Displays the reason why the validation, price item determination, or billable charge creation process failed. |
| | Note: This column appears when you select the Error, or Invalid options from the Search By list. |
| Account Information | Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (.). The string includes the account identifier type and account identifier. |
| Rule | Indicates the rule which was met while determining initial price item for the transaction. |

| Column Name | Column Description |
|-------------------------|---|
| | <p>Note:</p> <p>It has a link. On clicking the link, the Rule screen appears where you can view the details of the respective rule.</p> <p>This column appears when you select the Initial Price Item Determined, Ignored, Error, or Completed options from the Search By list.</p> |
| Transaction Information | <p>Displays additional information about the transaction.</p> <p>Note: It has a link. On clicking the link, the Transaction Detail View screen appears where you can view the details of the respective transaction.</p> |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a transaction in the **Search Results** section, the **Transaction Legs** or the **Transaction Error Messages** zone appears based on the status of the transaction.

Note: The **Broadcast** (📡) icon does not appear for transactions which are in the **Cancelled** status.

Transaction Legs

The **Transaction Legs** zone allows you to view the legs of a transaction. It contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Transaction ID | Indicates the transaction to which the transaction leg belongs. |
| Transaction Leg Status | <p>Indicates the status of the transaction leg. The valid values are:</p> <ul style="list-style-type: none"> • Uploaded • Initial Price Item Derived • Ignored • Error • Cancelled • Completed • Invalid |

| Column Name | Column Description |
|---------------------------|--|
| | Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Initial Price Item Code | Indicates the initial price item to which the transaction is mapped. Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Price Item Parameters | Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing. Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list and when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . |
| Final Price Item Code | Indicates the final price item to which the transaction is mapped. Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Pricing Rule Information | Note: This column appears only when you select the Initial Price Item Determined option from the Search By list and when the transaction is uploaded for the health care domain. |
| Price Assignment ID | Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date. Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Aggregate Transaction | Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Billable Charge ID | Indicates the billable charge in which the transaction leg is included for billing. Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Transaction Source | Displays the transaction source from where the transaction is received. |
| Transaction Record Type | Displays the record type of the transaction. |
| Transaction Upload Date | Displays the date when the transaction is uploaded in the system. |
| External Reference Number | Displays the external reference number of the transaction. |

| Column Name | Column Description |
|---------------------------|--|
| Customer Reference Number | Displays the reference number using which the error message is created for the transaction performed by particular customer. |
| | Note: This column appears only when you select the Error option from the Search By list. |
| Disaggregation Status | Indicates whether the transaction is disaggregated or not. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Transaction Date | Displays the date when the transaction is performed. |
| Transaction Amount | Displays the transaction amount. |
| Transaction Volume | Displays the total transaction volume. |
| Division | Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction. |
| Sequence | Displays the sequence number of the transaction leg. |
| | Note: This column appears only when you select the Initial Price Item Determined, Ignored, or Completed options from the Search By list. |
| Error Message | Indicates the reason why the price item pricing verification or billable charge creation process failed. |
| | Note: This column appears only when you select the Initial Price Item Determined, Ignored, Error, or Completed options from the Search By list. |
| Account Information | Displays the concatenated string of information about the account which bears the charges for the transaction separated by a comma (.). The string includes the account identifier type, account identifier, and division (to which the derived account belongs). |
| | Note: This column appears only when you select the Initial Price Item Determined, Ignored, Error, or Completed options from the Search By list. |
| Rule | Indicates the rule which was met while determining the initial price item for the transaction. |
| | <p>Note:</p> <p>It has a link. On clicking the link, the Rule screen appears where you can view the details of the respective rule.</p> <p>This column appears only when you select the Ignored, Error, or Completed options from the Search By list and when the transaction is uploaded for the financial services domain.</p> |
| Transaction Information | Displays the concatenated string of information about the transaction separated by a comma (.). |
| | Note: It has a link. On clicking the link, the Transaction Detail View screen appears where you can view the details of the respective transaction. |

Note:

The **Transaction Legs** zone does not appear for transactions which are in the **Uploaded**, **Cancelled**, or **Invalid** status. However, the **Transaction Legs** zone appears for transactions which are in the **Uploaded** status and partially disaggregated.

Searching for a Transaction**Procedure**

To search for a transaction:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section.

Viewing the Transaction Legs

Procedure

To view the legs of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears.

Note:

The **Broadcast** () icon appears corresponding to a transaction which is in the **Uploaded, Initial Price Item Determined, Ignored, Error, and Completed** status. This is because you can only view legs of an uploaded, initial price item determined, ignored, error, or completed transaction

You can only view the legs of an uploaded transaction which is partially disaggregated.

3. View the details of the transaction legs in the **Transaction Legs** zone.

Viewing Error Messages

Procedure

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid** or **Error** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears.

3. View the error messages in the **Transaction Error Messages** zone.

Note: The **Transaction Error Messages** zone appears for transactions which are in the **Invalid (INVL)** status only when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Details** screen.

The **Transaction Details** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|---|
| Transaction Source | Used to specify the transaction source from where the transaction is received. | Yes |
| Division | Used to specify the division to which the transaction belongs. | Yes |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Date | Used to specify the date when the transaction is performed. | Yes |
| Manual Entry | Indicates that the transaction is manually entered in the system. | Not applicable |
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or a credit transaction. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | No |
| Customer Reference Number | Used to indicate the person who performed the transaction. | No |
| Account Identifier Type | Used to specify the type of account identifier. | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Primary Account Identifier | Used to indicate the account for which the transaction is performed. | Yes (Conditional) |
| | | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |
| Transaction Amount | Used to specify the transaction amount. | Yes |
| Transaction Currency | Used to indicate the currency in which the transaction is performed. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |
| Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 | Used to specify additional information about the transaction. | Yes (Conditional) |
| | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | Note: This field is required when you are specifying the currency in the corresponding field. |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code | Used to specify additional information about the transaction. | Yes (Conditional) |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | Note: This field is required when you are specifying the amount in the corresponding field. |
| Additional Date 1, Additional Date 2, ..., Additional Date 5 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |

4. Enter the required details in the **Transaction Details** screen.
5. Click **Save**.

The transaction is added in the system.

Note:

If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

Copying a Transaction

Instead of creating a manual transaction from scratch, you can create a manual transaction using an existing transaction. This is possible through copying a transaction. On copying a transaction, the details including the division, account identifier type, primary account identifier, transaction source, transaction record type, external reference number, and customer reference number are also copied to the new transaction. You can then edit the details, if required.

Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** or the **Transaction Information** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears.

Note: The fields are in the read-only mode.

3. Click the **Copy** button available in the lower right corner of this screen.

The **Transaction Details** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|--|-----------------------|
| Transaction Source | Used to specify the transaction source from where the transaction is received. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|---|
| Division | Used to specify the division to which the transaction belongs. | Yes |
| | Note: You can only view those divisions to which you have access in the Division list. | |
| Transaction Record Type | Used to specify the record type of the transaction. | Yes |
| Transaction Date | Used to specify the date when the transaction is performed. | Yes |
| Manual Entry | Indicates that the transaction is manually entered in the system. | Not applicable |
| Credit/Debit Indicator | Used to indicate whether the transaction is a debit or a credit transaction. | Yes |
| External Reference Number | Used to specify the external reference number of the transaction. | No |
| Customer Reference Number | Used to indicate the person who performed the transaction. | No |
| Account Identifier Type | Used to specify the type of account identifier. | Yes (Conditional) |
| | | Note: If you enter the account identifier as a search criteria, you have to select the account identifier type. |
| Primary Account Identifier | Used to indicate the account for which the transaction is performed. | Yes (Conditional) |
| | | Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier. |
| Transaction Amount | Used to specify the transaction amount. | Yes |
| Transaction Currency | Used to indicate the currency in which the transaction is performed. | Yes |
| Transaction Volume | Used to specify the transaction volume. | Yes |
| Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 | Used to specify additional information about the transaction. | Yes (Conditional) |
| | Note: These fields appear when you select the transaction source and record type from the respective list. | Note: This field is required when you are specifying the currency in the corresponding field. |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | | |
| Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code | Used to specify additional information about the transaction. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|---|---|--|
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | Note: This field is required when you are specifying the amount in the corresponding field. |
| Additional Date 1, Additional Date 2,, Additional Date 5 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |
| Additional Data 1, Additional Data 2, Additional Data 3,, Additional Data 50 | Used to specify additional information about the transaction. | No |
| Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name. | Note: These fields appear when you select the transaction source and record type from the respective list. | |

4. Enter the required details in the **Transaction Details** screen.

5. Click **Save**.

The new transaction is added in the system.

Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. It contains the following zone:

- [Search Transaction Source](#) on page 1349

Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used to search for a particular transaction source. | No |
| Description | Used to search transaction sources having a particular description. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Transaction Source | Displays the transaction source. |
| Description | Displays the description of the transaction source. |
| Account Identifier Type | Indicates the type of account identifier that will be received from the transaction source. |
| Edit | On clicking the Edit (✎) icon, the Transaction Source screen appears where you can edit the details of the existing transaction source. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction source. |
| | Note: You can delete a transaction source only when it is not yet used in the system. |
| Copy | On clicking the Copy (📄) icon, the Transaction Source screen appears where you can define a new transaction source using an existing transaction source. |

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon available in the upper right corner of this zone.

Searching for a Transaction Source

Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
The **Transaction Source** screen appears.
3. Enter the search criteria in the **Search Transaction Source** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

Defining a Transaction Source

Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To define a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
The **Transaction Source** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Source** screen.

The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used to specify the transaction source. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| | Note: You cannot specify any special character except underscore (_) in the Transaction Source field. | |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

- Enter the required details in the **Transaction Source** screen.
- Click **Save**.

The transaction source is defined.

Editing a Transaction Source

Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To edit a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Displays the transaction source. | Not applicable |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

- Modify the required details in the **Transaction Source** screen.
- Click **Save**.

The changes made to the transaction source are saved.

Deleting a Transaction Source

Procedure

To delete a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the transaction source that you want to delete.

A message appears confirming whether you want to delete the transaction source.

3. Click **OK**.

The transaction source is deleted.

Note: You can delete a transaction source only when it is not yet used in the system.

Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. On copying a transaction source, the details including the description and account identifier type are also copied to the new transaction source. You can then edit the details, if required.

Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

Procedure

To copy a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used to specify the transaction source. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| | Note: You cannot specify any special character except underscore (_) in the Transaction Source field. | |
| Description | Used to specify the description for the transaction source. | Yes |
| Account Identifier Type | Used to indicate the type of account identifier that will be received from the transaction source. | Yes |

- Enter the required details in the **Transaction Source** screen.
- Click **Save**.

The new transaction source is defined.

Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

Note: At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 1353

Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Transaction Source | Used to search transaction record types defined for a particular transaction source. | No |
| Transaction Record Type | Used to search a particular transaction record type. | No |
| Description | Used to search transaction record types with a particular description. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Transaction Record Type | Displays the transaction record type. |
| Description | Displays the description of the transaction record type. |
| Transaction Source | Indicates the transaction source for which the transaction record type is defined. |
| Rule Type | Indicates the rule type that is invoked for the transaction record type. Note: It has a link. On clicking the link, the View Rule Type screen appears where you can view the details of the respective rule type. |
| Edit | On clicking the Edit (✎) icon, the Transaction Record Type screen appears where you can edit the details of the transaction record type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction record type. Note: You can delete a transaction record type when: <ul style="list-style-type: none"> • It is not yet used. • Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination. |
| Copy | On clicking the Copy (📄) icon, the Transaction Record Type screen appears where you can create a new transaction record type using an existing transaction record type. |

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

Defining a Transaction Record Type

Prerequisites

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.

The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.</p> | |
| Transaction Record Type | <p>Used to specify the transaction record type.</p> <p>Note: You cannot specify any special character except underscore (_) in the transaction record type.</p> | Yes |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | <p>Used to specify the rule type.</p> <p>Note: You cannot specify any special character except underscore (_) in the rule type.</p> | Yes |
| Rule Type Description | Used to specify the description for the rule type. | Yes |
| Rule Validation Algorithm | <p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> The values specified against the output parameters exist in the system The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |
| Info String Algorithm | <p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | No |
| Maximum Accounts to be charged | <p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> 01 | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p> | |
| Maximum Price Items to be mapped | <p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p> | Yes |
| Maximum Price Item Parameters | <p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 | |
| | <p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p> | |

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Rule Input/Output | Used to indicate whether you want to use the transaction detail field as input or output parameter. | No |
| Transaction Field | Displays the transaction field name. | Not applicable |
| Business Label | Used to specify a business label for the user defined fields. | No |
| | <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p> | |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

4. Enter the required details.

Note: You can search for a transaction source and algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

7. Click **Save**.

The transaction record type is defined.

Editing a Transaction Record Type

Prerequisites

To edit a transaction record type, you should have:

- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To edit a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. | Yes |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears. | |
| Transaction Record Type | Used to specify the transaction record type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the transaction record type. | |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | Used to specify the rule type. | Yes |
| | Note: You cannot specify any special character except underscore (_) in the rule type. | |
| Rule Type Description | Used to specify the description for the rule type. | Yes |
| Rule Validation Algorithm | Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type. | No |
| | Note: This algorithm checks whether: <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. | |
| Info String Algorithm | Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application. | No |
| | Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Maximum Accounts to be charged | <p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p> | Yes |
| Maximum Price Items to be mapped | <p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p> | Yes |
| Maximum Price Item Parameters | <p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <ul style="list-style-type: none"> • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 | |
| | <p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p> | |

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Rule Input/Output | Used to indicate whether you want to use the transaction detail field as input or output parameter. | No |
| Transaction Field | Displays the transaction field name. | Not applicable |
| Business Label | Used to specify a business label for the user defined fields. | No |
| | <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p> | |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

3. Modify the required details.

| |
|---|
| <p>Note:</p> <p>You can search for an algorithm and field by clicking the Search (🔍) icon corresponding to the respective field.</p> <p>You can edit and remove an input or output parameter from a rule type when it is not yet used in a rule (which is created using the rule type).</p> <p>If you want to add more than one temporary field to the transaction record type, click the Add (+) icon and then specify the details in the Temporary Fields section. However, if you want to remove a temporary field from the transaction record type, click the Delete (🗑️) icon corresponding to the temporary field.</p> |
|---|

4. Click **Save**.

The changes made to the transaction record type are saved.

Deleting a Transaction Record Type

Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

3. Click **OK**.

The transaction record type is deleted.

Note: You can delete a transaction record type only when it is not yet used in the system.

Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. On copying of a transaction record type, the details including the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|--|-----------------------|
| Transaction Source | Used to indicate the transaction source for which you want to define the transaction record type. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears where you can search for the required transaction source. | Yes |
| Transaction Record Type | Used to specify the transaction record type. Note: You cannot specify any special character except underscore (_) in the transaction record type. | Yes |
| Description | Used to specify the description for the transaction record type. | Yes |
| Rule Type | Used to specify the rule type. Note: You cannot specify any special character except underscore (_) in the rule type. | Yes |
| Rule Type Description | Used to specify the description for the rule type. | Yes |
| Rule Validation Algorithm | Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|--|-----------------------|
| | <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> | |
| Info String Algorithm | <p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> | No |
| Maximum Accounts to be charged | <p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p> | Yes |
| Maximum Price Items to be mapped | <p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p> </div> | |
| Maximum Price Item Parameters | <p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p> </div> | Yes |

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Rule Input/Output | Used to indicate whether you want to use the transaction detail field as input or output parameter. | No |
| Transaction Field | Displays the transaction field name. | Not applicable |
| Business Label | Used to specify a business label for the user defined fields. | No |
| | Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected. | |

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|---|-----------------------|
| Temporary Field | Used to indicate the non-transactional field that you want to use as input or output parameter. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p> | |

- Enter the required details.

Note: You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 1371

Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| SQL Description | Displays the description of the service quantity identifier (SQI). |
| Aggregation Function | Indicates the formula used in the transaction aggregation rule defined for the SQL. |

| Column Name | Column Description |
|-----------------------|---|
| Function | Indicates the function used for aggregation. |
| Transaction Parameter | Indicates the transaction parameter used for aggregation. |
| Edit | On clicking the Edit (✎) icon, the Transaction Aggregation Rule screen appears where you can edit the aggregation rule. |
| Delete | On clicking the Delete (🗑) icon, you can delete the transaction aggregation rule. |

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Defining Transaction Aggregation Rule for an SQI

Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| SQI | Used to indicate the SQI for which you want to define the transaction aggregation rule. | Yes |
| Function | Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> • SUM() • MIN() • MAX() | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | <ul style="list-style-type: none"> COUNT() | |
| Transaction Parameter | Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 | Yes |

- Enter the required details.
- Click **Save**.

The transaction aggregation rule is defined for the SQI.

Editing Transaction Aggregation Rule of an SQI

Procedure

To edit the transaction aggregation rule of an SQI:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
- Click the **Edit** (✎) icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| SQI | Indicates the SQI for which the transaction aggregation rule is defined. | Not applicable |
| Function | Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • COUNT() | |
| Transaction Parameter | Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> • TXN_AMT • TXN_VOL • UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 • UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 | Yes |

4. Modify the required details.

5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

Searching for a Schedule

Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of schedules that meet the search criteria appears in the **Search Results** section.

Viewing the Schedule Details**Procedure**

To view the details of a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the schedule whose details you want to view.
The **View Schedule UI Map** screen appears.
3. View the details of the schedule in the **View Schedule UI Map** screen.

Defining a Schedule**Prerequisites**

To define a schedule, you should have:

- Schedule types defined in the application.

Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **S** and then click **Schedule**.

The **Schedule** screen appears.

- Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| Aggregation Schedule | Used to specify the schedule code. | Yes |
| Description | Used to specify the description for the schedule. | Yes |

In addition, the **Add/Edit Schedule UI Map** screen contains the following two sections:

- Schedule Periods** - Used to specify schedule periods for the schedule. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Start Date | Used to specify the start date of the schedule period. | Yes |
| | Note: The start date cannot be later than the end date. | |
| End Date | Used to specify the end date of the schedule period. | Yes |
| | Note: The end date cannot be earlier than the start date. | |

Note: At least one schedule period must be defined for the schedule. Also, ensure that the schedule periods do not have overlapping days.

- Schedule Types** - Used to associate schedule types with the schedule. It contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Schedule Type | Used to indicate the functionality where you want to use the schedule. | Yes |
| | Note: You can associate multiple schedule types with a schedule. | |

- Enter the required details in the **Add/Edit Schedule UI Map** screen.
- If you want to define more than one schedule period for the schedule, click the **Add (+)** icon corresponding to the schedule period and then specify the *details*.

Note: However, if you want to remove a schedule period from the schedule, click the **Delete** (🗑️) icon corresponding to the schedule period.

6. Similarly, If you want to associate more than one schedule type with the schedule, click the **Add (+)** icon corresponding to the schedule type and then specify the *details*.

Note: However, if you want to remove a schedule type from the schedule, click the **Delete** (🗑️) icon corresponding to the schedule type.

7. Click **Save**.

The schedule is defined.

Editing a Schedule

Prerequisites

To edit a schedule, you should have:

- Schedules (which you want to edit) defined in the application
- Schedule types defined in the application.

Procedure

To edit a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the schedule whose details you want to edit.

The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Schedule | Displays the schedule code. | Not applicable |
| Description | Used to specify the description for the schedule. | Yes |

In addition, this screen contains the following two sections:

- **Schedule Periods** - Used to add, edit, or delete the schedule periods from the schedule. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Start Date | Used to specify the start date of the schedule period. | Yes |
| | Note: The start date cannot be later than the end date. | |
| End Date | Used to specify the end date of the schedule period. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: The end date cannot be earlier than the start date. | |

- **Schedule Types** - Used to associate or disassociate schedule types from the schedule. It contains the following field in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Schedule Type | Used to indicate the functionality where you want to use the schedule. | Yes |

3. Modify the required details in the **Add/Edit Schedule UI Map** screen.

4. Click **Save**.

The changes made to the schedule are saved.

Deleting a Schedule

Procedure

To delete a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the schedule that you want to delete.

A message appears confirming whether you want to delete the schedule.

Note: You can delete a schedule only when it is not yet used in the system.

3. Click **OK**.

The schedule is deleted.

Disaggregation Request

Oracle Revenue Management and Billing allows you to create disaggregation request of a person, account, price item, price assignment, billable charge, and parent accumulation group. You can create disaggregation request through either of the following:

- Disaggregation Request from User Interface

- Disaggregation Request through the C1-DISTG Batch
- Disaggregation Request through Audit Event

Disaggregation Request from User Interface

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account from the user interface in various ways. For more information, refer to [Disaggregation Request](#) on page 1381.

Disaggregation Request through the C1-DISTG Batch

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account through the **Disaggregation Request Creation (C1-DISTG)** batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Transaction Feed Management (TFM) - Batch Execution Guide*.

Disaggregation Request through Audit Event

Until now, the system enabled you to disaggregate transactions when a disaggregation request was created for an account. The system enabled you to manually create a disaggregation request for an account from the user interface. Now, the system enables you to automatically create a disaggregation request for an account through an audit event. The system enables you to create an automatic disaggregation request in the following scenarios:

- While changing the person's attributes (i.e. when a person's fields or characteristics are updated)
- While changing the account's attributes (i.e. when an account's fields or characteristics are updated)
- While adding or updating a price list
- While assigning a price list to a person or an account
- While updating the price list assignment of a person or an account
- While assigning a price item to a person, account, or price list
- While updating the price assignment of a person, account, or price list

To enable the automatic disaggregation request creation, you need to do the following:

- Attach the **C1-READEVNT** algorithm to the **Audit** system event of the **C1_PERSON_BO**, **C1_PLASGNEDIT**, **C1_PRICEASGN_BO**, **C1_F_ADDPLBO**, or **C1-AccountBO** business object, respectively
- Set the **Eligible for Audit Event** option type of the entity business object to **Y**
- Define an active audit event type for the entity business object in the system

For more information on how to create an audit event type, refer to the **Entity Audit** section in *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

If the **C1-READEVNT** algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you create, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Creating an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

Once the audit event is created in the **Pending** status, you need to execute the **Disaggregation Request through Audit Event (C1-DISTA)** batch. Until now, the **Disaggregation Request through Audit Event (C1-DISTA)** batch was used to process audit events which are created for a self-funded pricing rule. Now, this batch is used to process the audit events which are created for the persons, accounts, self-funded pricing rules, price lists, price list assignments, and price assignments.

Once a disaggregation request is created for an audit event, you need to execute the following batches in the specified sequence:

1. Pending Bill Segments Deletion (C1-BSEGD)
2. Pending Bill Deletion (C1-PNBD)
3. Identify Transactions for Disaggregation (C1-IDENT)
4. Process Non-Aggregated Transactions (C1-PDTXN)
5. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
6. Update Disaggregation Request Status (C1-DRSUA)

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person, account, price item, price assignment, billable charge, and parent accumulation group. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. It contains the following zone:

- [Search Disaggregation Request](#) on page 1381

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for a disaggregation request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a disaggregation request using the person, account, or accumulation group details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Accumulation Group <p>Note: By default, the Person option is selected.</p> | Yes |
| Person ID | Used to search disaggregation requests which are created for accounts of a particular person. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|--|
| | Note: This field appears only when the Person option is selected from the Search By list. | |
| Division | Used to search disaggregation requests which are created for accounts belonging to a particular division. Note: You can only view those divisions to which you have access in the Division list. This field appears only when the Person or Account option is selected from the Search By list. | Yes (Conditional) Note: This field is required while searching for a disaggregation request using the account details. |
| Person Name | Used to search disaggregation requests which are created for accounts belonging to persons with a particular name. Note: This field appears only when the Person option is selected from the Search By list. | No |
| Request Source | Used to search disaggregation requests which are created using a particular process. The valid values are: <ul style="list-style-type: none">• AUTOMATIC• BATCH• MANUAL | No |
| Person Identifier Type | Used to indicate the person identifier type based on which you want to search disaggregation requests created for a person. Note: This field appears when the Person option is selected from the Search By list. | Yes (Conditional) Note: If you specify the person identifier as a search criteria, you have to select the person identifier type. |
| Person Identifier | Used to specify the value for the person identifier type based on which you want to search disaggregation requests created for a person. Note: This field appears only when the Person option is selected from the Search By list. | Yes (Conditional) Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier. |
| Request Created From | Used to search disaggregation requests which are created from a particular date onwards. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|--|
| | | Note: This field is required while searching for a disaggregation request using the person or account details. |
| Request Created Until | Used to search disaggregation requests which are created till a particular date. | Yes (Conditional) Note: This field is required while searching for a disaggregation request using the person or account details. |
| From Processing Date | Used to search disaggregation requests which are processed from a particular date onwards. | No |
| To Processing Date | Used to search disaggregation requests which are processed till a particular date. | No |
| Request Type | Used to search disaggregation requests with a particular request type. The valid values are: <ul style="list-style-type: none"> • Account - Used to search disaggregation requests which are created for accounts. • Billable Charge - Used to search disaggregation requests which are created for billable charges. • Person - Used to search disaggregation requests which are created for all the accounts of a person. • Price Assignment - Used to search disaggregation requests which are created for price assignments. • Price Item - Used to search disaggregation requests which are created for price items. Note: This field appears only when the Person or Account option is selected from the Search By list. | No |
| Request Status | Used to search disaggregation requests which are in a particular status. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING | No |
| Price Item | Used to search disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|--|
| | Note: This field appears only when the Person or Account option is selected from the Search By list. | |
| Billable Charge ID | Used to search disaggregation request for an account for which a particular billable charge is created. Note: This field appears only when the Person or Account option is selected from the Search By list. | No |
| Price Assignment ID | Used to search disaggregation request for an account with a particular price assignment. Note: This field appears only when the Person or Account option is selected from the Search By list. | No |
| Account ID | Used to search disaggregation requests which are created for a particular account. Note: This field appears only when you select the Account option from the Search By list. | No |
| Account Identifier Type | Used to indicate the account identifier type based on which you want to search disaggregation requests created for an account. Note: This field appears when you select the Account option from the Search By list. | Yes (Conditional) Note: If you specify the account identifier as a search criteria, you have to select the account identifier type. |
| Account Identifier | Used to specify the value for the account identifier type based on which you want to search disaggregation requests created for an account. Note: This field appears only when you select the Account option from the Search By list. | Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier. |
| Accumulation Type | Used to indicate the accumulation type based on which you want to search disaggregation requests created for an accumulation group. Note: This field appears only when you select the Accumulation Group option from the Search By list. | No |
| Parent Accumulation Group ID | Used to search disaggregation requests created for a particular parent accumulation group. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | Note: This field appears only when you select the Accumulation Group option from the Search By list. | |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------|---|
| Request ID | Displays the disaggregation request ID. |
| Request Creation Date | Displays the date when the disaggregation request is created. |
| Status | Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING |
| Account ID | Indicates the account for which the disaggregation request is created. |
| Person ID | Indicates the person for whom the disaggregation request is created. |
| Person Information | Displays the concatenated string of information about the person separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Person screen appears with the details of the respective person.</p> |
| Account Information | Displays the concatenated string of information about the account separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <p>Note:</p> <p>It has a link. On clicking the link, the Account screen appears with the details of the respective account.</p> <p>This column appears only when you select the Account option from the Search By list.</p> |
| Processing Date | Displays the date when the disaggregation request is processed. |
| Request Type | Displays the request type based on which the disaggregation request is processed. The valid values are: <ul style="list-style-type: none"> • Account - Indicates that the disaggregation request is created for an account. • Billable Charge - Indicates that the disaggregation request is created for a billable charge. • Person - Indicates that the disaggregation request is created for a all the accounts of a person. • Price Assignment - Indicates that the disaggregation request is created for a price assignment. • Price Item - Indicates that the disaggregation request is created for a price item. |

| Column Name | Column Description |
|--------------------------|--|
| Price Item Information | Displays the concatenated string of information about the price item for which the disaggregation request is created separated by a comma (,). |
| | <p>Note:</p> <p>It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.</p> <p>The information in this column appears only when the disaggregation request is created for a price item</p> |
| Pricing Information | Displays the pricing details using which the disaggregation request is processed. |
| | <p>Note: It has a link. On clicking the link, the Pricing screen appears where you can view the details of the respective pricing.</p> |
| Billable Charge ID | Displays the charge id billable for the processed disaggregation request. |
| | <p>Note: It has a link. On clicking the link, the Billable Charge ID screen appears where you can view the details of the respective billable charge.</p> |
| Delete | On clicking the Delete (🗑️) icon, you can delete the disaggregation request. |
| | <p>Note: You can delete a disaggregation request only when it is in the Pending status.</p> |
| Accumulation Information | Displays the accumulation information. |
| | <p>Note: This column appears only when you select the Accumulation Group option from the Search By list.</p> |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Enter the search criteria in the **Search Disaggregation Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section.

Creating a Disaggregation Request for a Person

Prerequisites

To create a disaggregation request for a person, you should have:

- Person (for whom you want to create the disaggregation request) defined in the application
- Person associated with the division to which the user belongs
- Price list assigned to the person (in case you want to search a person based on an assigned price list)

Procedure

To create a disaggregation request for a person:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.

The **Disaggregation Request** screen appears.

3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Disaggregation Request Type | <p>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to create a disaggregation request for an account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> • Billable Charge - Used to create a disaggregation request for an account | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>for which a particular billable charge is created.</p> <div data-bbox="688 285 1122 394" style="border: 1px solid black; padding: 5px;"> <p>Note: In this case, the system will disaggregate a specific billable charge of the account.</p> </div> <ul style="list-style-type: none"> <li data-bbox="659 415 1122 604">• Parent Accumulation Group - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). <div data-bbox="688 625 1122 768" style="border: 1px solid black; padding: 5px;"> <p>Note: The Parent Accumulation Group option is used to create reseeding requests for accounts which belong to the healthcare domain.</p> </div> <ul style="list-style-type: none"> <li data-bbox="659 789 1122 898">• Person - Used to create a disaggregation request for one or more accounts of a person and its child persons. <div data-bbox="688 919 1122 1008" style="border: 1px solid black; padding: 5px;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> <li data-bbox="659 1029 1122 1138">• Price Assignment - Used to create a disaggregation request for an account with a particular price assignment. <div data-bbox="688 1159 1122 1281" style="border: 1px solid black; padding: 5px;"> <p>Note: In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</p> </div> <ul style="list-style-type: none"> <li data-bbox="659 1302 1122 1465">• Price Item - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. <div data-bbox="688 1486 1122 1629" style="border: 1px solid black; padding: 5px;"> <p>Note: In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</p> </div> | |

4. Select the **Person** option from the **Disaggregation Request Type** list.

5. Click **OK**.

The **Add Disaggregation Request For Person** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for a person and its child persons for whose accounts you want to create a disaggregation request. It contains the following fields:

| Filed Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|---|-----------------------|
| Request Type | Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> Person | Not applicable |
| Division | Used to search persons which belong to a particular division. Note: You can view only those divisions to which you have access in the Division list. | Yes |
| Person ID | Used to search for a particular person. Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears where you can search for the person. | No |
| Person Name | Used to search persons having a particular name. | No |
| Person Identifier Type | Used to indicate the person identifier type based on which you want to search for a person. Note: If you specify the person identifier as a search criteria, you have to select the person identifier type. | Yes (Conditional) |
| Person Identifier | Used to specify the value of the person identifier type using which you want to search for a person. Note: If you select the person identifier type as a search criteria, you have to specify the person identifier. | Yes (Conditional) |
| Price List Assignment Start Date | Used to search for a person based on an assigned price list which is effective from a particular date onwards. Note: If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date. | Yes (Conditional) |
| Price List Assignment End Date | Used to search for a person based on an assigned price list which is effective till a particular date. | Yes (Conditional) |

| Filed Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| | | Note: If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date. |
| Assigned Price List | Used when you want to search for a person to which a particular price list is assigned. | Yes (Conditional) |
| | Note: The Search (🔍) icon appears corresponding to the Assigned Price List field. On clicking the Search icon, the Price List Search window appears where you can search for the price list. | Note: If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list. |
| Price Assignment ID | Used to search for a person to whom a particular price item pricing is assigned. | No |
| Price Item | Used to search for persons to whom a particular price item is assigned. | No |
| | Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears where you can search for the price item. On specifying the price item, the details of the price item appears corresponding to the Price Item field. | |
| Billable Charge ID | Used to search for a person for whose accounts a particular billable charge is created. | No |
| | Note: The Search (🔍) icon appears corresponding to the Billable Charge ID field. On clicking the Search icon, the Billable Charge Search window appears where you can search for the billable charge. On specifying the billable charge, the details of the billable charge appears corresponding to the Billable Charge ID field. | |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------------|--|
| Account Identifier Type | Indicates the account identifier type using which the account is defined in the system. |
| | Note: The data appears in this column when you search for an account. |

Creating a Disaggregation Request for an Account

Prerequisites

To create a disaggregation request for an account, you should have:

- Account (for whom you want to create the disaggregation request) defined in the application
- Account associated with the division to which the user belongs
- Price list assigned to the account (in case you want to search an account based on an assigned price list)

Procedure

To create a disaggregation request for an account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.

The **Disaggregation Request** screen appears.

3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Disaggregation Request Type | <p>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to create a disaggregation request for an account. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> • Billable Charge - Used to create a disaggregation request for an account for which a particular billable charge is created. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate a specific billable charge of the account.</p> </div> <ul style="list-style-type: none"> • Parent Accumulation Group - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). <div style="border: 1px solid black; padding: 2px;"> <p>Note: The Parent Accumulation Group option is used to create reseeding requests for accounts which belong to the healthcare domain.</p> </div> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Person - Used to create a disaggregation request for one or more accounts of a person and its child persons. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> • Price Assignment - Used to create a disaggregation request for an account with a particular price assignment. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</p> </div> <ul style="list-style-type: none"> • Price Item - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</p> </div> | |

4. Select the **Account** option from the **Disaggregation Request Type** list.

5. Click **OK**.

The **Add Disaggregation Request For Account** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for an account for whose billable charges you want to create a disaggregation request. It contains the following fields:

| Filed Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Request Type | Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> • Account | Not applicable |
| Division | Used to search accounts which belong to a particular division. <div style="border: 1px solid black; padding: 2px;"> <p>Note: You can view only those divisions to which you have access in the Division list.</p> </div> | Yes |
| Account ID | Used to search for a particular account. | No |

| Filed Name | Field Description | Mandatory (Yes or No) |
|----------------------------------|--|--|
| | <p>Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears where you can search for the account.</p> | |
| Bill Cycle | Used to search accounts having a particular bill cycle. | No |
| Account Identifier Type | Used to indicate the account identifier type based on which you want to search for an account. | Yes (Conditional) |
| | | <p>Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.</p> |
| Account Identifier | Used to specify the value of the account identifier type using which you want to search for an account. | Yes (Conditional) |
| | | <p>Note: If you select the account identifier type as a search criteria, you have to specify the account identifier.</p> |
| Invoice Currency | Used to search accounts whose billable charges are defined using a particular invoice currency. | No |
| Assigned Price List | Used when you want to search for an account to which a particular price list is assigned. | Yes (Conditional) |
| | <p>Note: The Search (🔍) icon appears corresponding to the Assigned Price List field. On clicking the Search icon, the Price List Search window appears where you can search for the price list.</p> | <p>Note: If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.</p> |
| Price List Assignment Start Date | Used to search for an account based on an assigned price list which is effective from a particular date onwards. | Yes (Conditional) |
| | | <p>Note: If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.</p> |
| Price List Assignment End Date | Used to search for an account based on an assigned price list which is effective till a particular date. | Yes (Conditional) |

| Filed Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|---|
| | | Note: If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date. |
| Price Assignment ID | Used to search for an account to which a particular price item pricing is assigned. | No |
| Price Item | Used to search for accounts to which a particular price item is assigned. Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears where you can search for the price item. On specifying the price item, the details of the price item appears corresponding to the Price Item field. | No |
| Billable Charge ID | Used to search for an account for which a particular billable charge is created. Note: The Search (🔍) icon appears corresponding to the Billable Charge ID field. On clicking the Search icon, the Billable Charge Search window appears where you can search for the billable charge. On specifying the billable charge, the details of the billable charge appears corresponding to the Billable Charge ID field. | No |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Account Identifier Type | Indicates the account identifier type using which the account is defined in the system. |
| Account Identifier | Displays the value of the account identifier type. |
| Division | Displays the division to which the account belongs. |
| Person Identifier Type | Indicates the person identifier type using which the person is defined in the system. |
| | Note: The data appears in this column when you search for a person. |

| Column Name | Column Description |
|----------------------------------|--|
| Person Identifier | Displays the value of the person identifier type. |
| | Note: The data appears in this column when you search for a person. |
| Person Name | Displays the name of the person to whom the account belongs. |
| Assigned Price List | Displays the price list assigned to the account. |
| | Note: The data appears in this column when you search for an account based on an assigned price list. |
| Price List Assignment Start Date | Displays the date from when the price list is assigned to the account. |
| | Note: The data appears in this column when you search for an account based on an assigned price list. |
| Price List Assignment End Date | Displays the date till when the price list is assigned to the account. |
| | Note: The data appears in this column when you search for an account based on an assigned price list. |
| Account Information | Displays the concatenated string of information about the account separated by a comma (.). |
| Bill Cycle | Indicates the bill cycle defined for the account. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The **Page Limit** list includes only those values which are defined in the **PAGE_NUMBER** lookup field.

Creating a Disaggregation Request for a Price item

Prerequisites

To create a disaggregation request for a price item, you should have:

- Price item (for which you want to create the disaggregation request) defined in the application
- Price item associated with the division to which the user belongs
- Person or accounts defined in the application (in case you want to search for a price item associated to a person or an account)
- Price item associated with the price list (in case you want to search a price item based on an assigned price list)

Procedure

To create a disaggregation request for a price item:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Disaggregation Request Type | Used to indicate the entity for which you want to create a disaggregation request. The valid values are: | Yes |

| Request Type | Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> Price Assignment | Not applicable |
| Price Assignment ID | Used to search for an account to which a particular price item pricing is assigned. | Yes |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------------|---|
| Account Identifier Type | Indicates the account identifier type using which the account is defined in the system. Note: The data appears in this column when the price assignment belongs to an account. |
| Account Identifier | Displays the value of the account identifier type. Note: The data appears in this column when the price assignment belongs to an account. |
| Division | Displays the division to which the account belongs. |
| Person Identifier Type | Indicates the person identifier type using which the person is defined in the system. Note: The data appears in this column when the price assignment belongs to a persons account. |
| Person Identifier | Displays the value of the person identifier type. Note: The data appears in this column when the price assignment belongs to a persons account. |
| Person Name | Displays the name of the person to whom the account belongs. |
| Assigned Price List | Displays the price list assigned to the account. Note: The data appears in this column when the price item pricing is assigned through a price list. |
| Price List Assignment Start Date | Displays the date from when the price list is assigned to the account. Note: The data appears in this column when the price item pricing is assigned through a price list. |
| Price List Assignment End Date | Displays the date till when the price list is assigned to the account. Note: The data appears in this column when the price item pricing is assigned through a price list. |

| Column Name | Column Description |
|---------------------|---|
| Account Information | Displays the concatenated string of information about the account separated by a comma (,). |
| Bill Cycle | Indicates the bill cycle defined for the account. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The **Page Limit** list includes only those values which are defined in the **PAGE_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

| If you want to... | Then... |
|--|---|
| Create disaggregation request for price assignment of one or more accounts | <ol style="list-style-type: none"> 1. In the Search Results section, select the check box corresponding to the account for which you want to create a disaggregation request. 2. Click Disaggregate. A message appears confirming that the disaggregation request is created successfully. 3. Click OK. The disaggregation request is created for the price assignment of the selected account. |
| Create disaggregation request for all accounts that meet the search criteria | <ol style="list-style-type: none"> 1. Click Disaggregate All. The Disaggregate All Confirmation window appears confirming whether you want to create disaggregation requests for all records. 2. Click OK. The disaggregation request is created for all the price assignments of all accounts. |

Creating a Disaggregation Request for a Billable Charge

Prerequisites

To create a disaggregation request for a billable charge, you should have:

- Billable charge (for which you want to create a disaggregation request) created for the account or accounts of the person or child persons

Procedure

To create a disaggregation request for a billable charge:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Disaggregation Request Type | <p>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to create a disaggregation request for an account. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> • Billable Charge - Used to create a disaggregation request for an account for which a particular billable charge is created. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: In this case, the system will disaggregate a specific billable charge of the account.</p> </div> <ul style="list-style-type: none"> • Parent Accumulation Group - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | <p>Note: The Parent Accumulation Group option is used to create reseeding requests for accounts which belong to the healthcare domain.</p> <ul style="list-style-type: none"> • Person - Used to create a disaggregation request for one or more accounts of a person and its child persons. <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> <ul style="list-style-type: none"> • Price Assignment - Used to create a disaggregation request for an account with a particular price assignment. <p>Note: In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</p> <ul style="list-style-type: none"> • Price Item - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. <p>Note: In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</p> | |

4. Select the **Billable Charge** option from the **Disaggregation Request Type** list.
5. Click **OK**.

The **Add Disaggregation Request For Billable Charge** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for a billable charge of an account for which you want to create a disaggregation request. It contains the following fields:

| Filed Name | Field Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Request Type | Indicates the entity for which you want to create the disaggregation request. The valid value is: <ul style="list-style-type: none"> • Billable Charge | Not applicable |
| Billable Charge ID | Used to search for a particular billable charge of an account. | Yes |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------------|---|
| Account Identifier Type | Indicates the account identifier type using which the account is defined in the system. Note: The data appears in this column when the billable charge belongs to an account. |
| Account Identifier | Displays the value of the account identifier type. Note: The data appears in this column when the billable charge belongs to an account. |
| Division | Displays the division to which the account belongs. |
| Person Identifier Type | Indicates the person identifier type using which the person is defined in the system. Note: The data appears in this column when the billable charge belongs to an account of a person or child person. |
| Person Identifier | Displays the value of the person identifier type. Note: The data appears in this column when the billable charge belongs to an account of a person or child person. |
| Person Name | Displays the name of the person to whom the account belongs. |
| Assigned Price List | Displays the price list assigned to the account. Note: The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list. |
| Price List Assignment Start Date | Displays the date from when the price list is assigned to the account. Note: The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list. |
| Price List Assignment End Date | Displays the date till when the price list is assigned to the account. Note: The data appears in this column when the price item pricing for which the billable charge is created is assigned through a price list. |
| Account Information | Displays the concatenated string of information about the account separated by a comma (,). |
| Bill Cycle | Indicates the bill cycle defined for the account. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The **Page Limit** list includes only those values which are defined in the **PAGE_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

| If you want to... | Then... |
|--|--|
| Create disaggregation request for billable charge of one or more accounts | <ol style="list-style-type: none"> 1. In the Search Results section, select the check box corresponding to the account for whose billable charge you want to create a disaggregation request. 2. Click Disaggregate. A message appears confirming that the disaggregation request is created successfully. 3. Click OK. The disaggregation request is created for the billable charge of the selected account. |
| Create disaggregation request for all billable charges that meet the search criteria | <ol style="list-style-type: none"> 1. Click Disaggregate All. The Disaggregate All Confirmation window appears confirming whether you want to create disaggregation requests for all records. 2. Click OK. The disaggregation request is created for all the billable charges of all accounts. |

Creating a Reseeding Request for a Parent Accumulation Group (Specific to Health Insurance Domain)

Procedure

To create a reseeding request for a parent accumulation group:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.

The **Disaggregation Request** screen appears.

3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Disaggregation Request Type | <p>Used to indicate the entity for which you want to create a disaggregation request. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to create a disaggregation request for an account. <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> <ul style="list-style-type: none"> • Billable Charge - Used to create a disaggregation request for an account for which a particular billable charge is created. <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;"> <p>Note: In this case, the system will disaggregate a specific billable charge of the account.</p> </div> <ul style="list-style-type: none"> • Parent Accumulation Group - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;"> <p>Note: The Parent Accumulation Group option is used to create reseeding requests for accounts which belong to the healthcare domain.</p> </div> <ul style="list-style-type: none"> • Person - Used to create a disaggregation request for one or more accounts of a person and its child persons. <div style="border: 1px solid black; padding: 2px;"> <p>Note: In this case, the system will disaggregate all billable charges of the account.</p> </div> | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <ul style="list-style-type: none"> Price Assignment - Used to create a disaggregation request for an account with a particular price assignment. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment.</p> </div> <ul style="list-style-type: none"> Price Item - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.</p> </div> | |

- Select the **Parent Accumulation Group** option from the **Disaggregation Request Type** list.
- Click **OK**.

The **Add Disaggregation Request** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Accumulation Type | <p>Used to create reseeding request for a particular type of an accumulation group. The valid values are:</p> <ul style="list-style-type: none"> Discount Arrangement - Used to create reseeding request for accounts of all bill groups of a parent customer (for whom the parent accumulation group is created) where the claim settlement is based on a discount arrangement. Stop Loss - Used to create reseeding request for accounts of all bill groups of a parent customer (for whom the parent accumulation group is created) where changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), or level funded pricing rule. | Yes |

- Select the required option from the **Accumulation Type** field.

The following fields appear in the **Add Disaggregation Request** screen:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Parent Accumulation Group ID | Used to create reseeding request for accounts of all bill groups of a parent customer which belongs to a particular parent accumulation group. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parent Accumulation Group ID field. On clicking the Search icon, the Parent Accumulation Group ID Search window appears where you can search for the respective parent accumulation group.</p> | |
| Disaggregate All Account | <p>Used to indicate whether you want to create reseeding requests for accounts of all bill groups of a parent customer where the accumulation type is Stop Loss. If you do not select this option, the system creates reseeding requests for accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules.</p> <p>Note: This field appears only when you select the Stop Loss option from the Accumulation Type field.</p> | No |

7. Enter the required details in the **Add Disaggregation Request** screen.

8. Click **Save**.

The **Accumulation Based Disaggregation** screen appears with a list of accounts belonging to the parent accumulation group for which the reseeding request is created.

Deleting a Disaggregation Request

Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the disaggregation request that you want to delete.
A message appears confirming whether you want to delete the disaggregation request.
3. Click **OK**.
The disaggregation request is deleted.

Note:

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

Chapter 16

Upload Validated Payment Data

Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Sample CSV](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data - one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file
- Apply payments on the unpaid bills of an account or a statement

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1421. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 1418.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 1423 and [Payment Record Status Transition](#) on page 1424, respectively.

Payment Upload Process

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 1418
- [Move Payment Records to the Staging Area](#) on page 1419
- [Create Payment Events and Payments](#) on page 1419

Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 1421.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID, Tender Amount, Payment Amount, Date Received, Bank Account, and Payment Type** columns in the CSV file.
- The data is available in the **Match Type** and **Match Value** columns in the CSV file.

Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

Note: If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

Note: This validation is done when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.
- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 1424.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

Note: If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging**  icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging**  icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging**  icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the

system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events
- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Note: If you want to use the **Payment Upload** feature in an ORMB Cloud Service Premium Edition environment, you need to set the **Payment Upload Extendable Lookup and Bucket** option type of the **C1-CFS** feature configuration.

Related Topics

CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|---------------|--|--|
| Account ID | Used to specify the payee account ID. | Yes |
| Match Type | Used to specify the match type using which you want to match the payment. | Yes (Conditional) Note: This data is required when the match value is specified. |
| Match Value | Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment. Note: If you specify a match type where the entity type is set to Account , the match value should not be provided. The payee account ID is derived from the payment data record. If the payee account ID is not available in the payment data record, it is derived using the payee account identifier type and identifier value. The system then derives the unpaid bills of the payee account using the manual distribution algorithm attached to the respective match type. If you specify a match type where the entity type is set to Statement , the match value should not be provided. The statement ID is derived from the payment data record. The system then derives the unpaid bills of the statement using the manual distribution algorithm attached to the respective match type. | Yes (Conditional) Note: This data is required when the match type is specified. |
| Tender ID | Used to specify the payment tender ID. Note: If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event. | Yes |
| Tender Amount | Used to specify the tender amount. | Yes |

| Column Name | Column Description | Mandatory (Yes or No) |
|----------------------------------|--|--|
| | <p>Note:</p> <p>You must not specify the value less than or equal to 0.</p> <p>The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.</p> | |
| Payment Amount | <p>Used to specify the amount paid through the tender.</p> <p>Note:</p> <p>You must not specify the value less than or equal to 0.</p> <p>The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.</p> | Yes |
| Date Received | <p>Used to specify the date when the payment is made.</p> <p>Note: You must specify the date in the MM/DD/YYYY format.</p> | Yes |
| Bank Account | Used to specify the external source ID which is associated with the tender source. | Yes |
| Payment Type | Used to specify the type of tender through which the payment is made. | Yes |
| Check Number | Used to specify the check number if the payment is made through check. | No |
| Currency | <p>Used to specify the currency in which the payment is made.</p> <p>Note: If the currency is not specified, it is set to the payor account's invoice currency.</p> | No |
| External Reference Id | Used to specify the external reference ID which is associated with the tender source. | No |
| Account ID Type | Used to specify the account identifier type. | Yes (Conditional) |
| | | <p>Note: This data is required when the account identifier is specified.</p> |
| Account Identifier | Used to specify the account for which the payment is made. | Yes (Conditional) |
| | | <p>Note: This data is required when the account identifier type is specified.</p> |
| Payment Char Type1, Payment Char | Used to indicate the characteristic that must be defined for the payment. | Yes (Conditional) |

| Column Name | Column Description | Mandatory (Yes or No) |
|--|---|--|
| Type2,, Payment Char Type5 | | Note: This data is required when the characteristic value is specified. |
| Payment Char Value1, Payment Char Value2,, Payment Char Value5 | Used to specify the value for the characteristic type. | Yes (Conditional) Note: This data is required when the characteristic type is specified. |
| MICR ID | Used to specify the MICR code. | No |
| Payor ID | Used to specify the payor account ID. Note: If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same. | No |
| Statement ID | Used to specify the statement ID for applying payments at the statement level. | Yes (Conditional) Note: This data is required when the Statement ID is specified. |

Note:

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

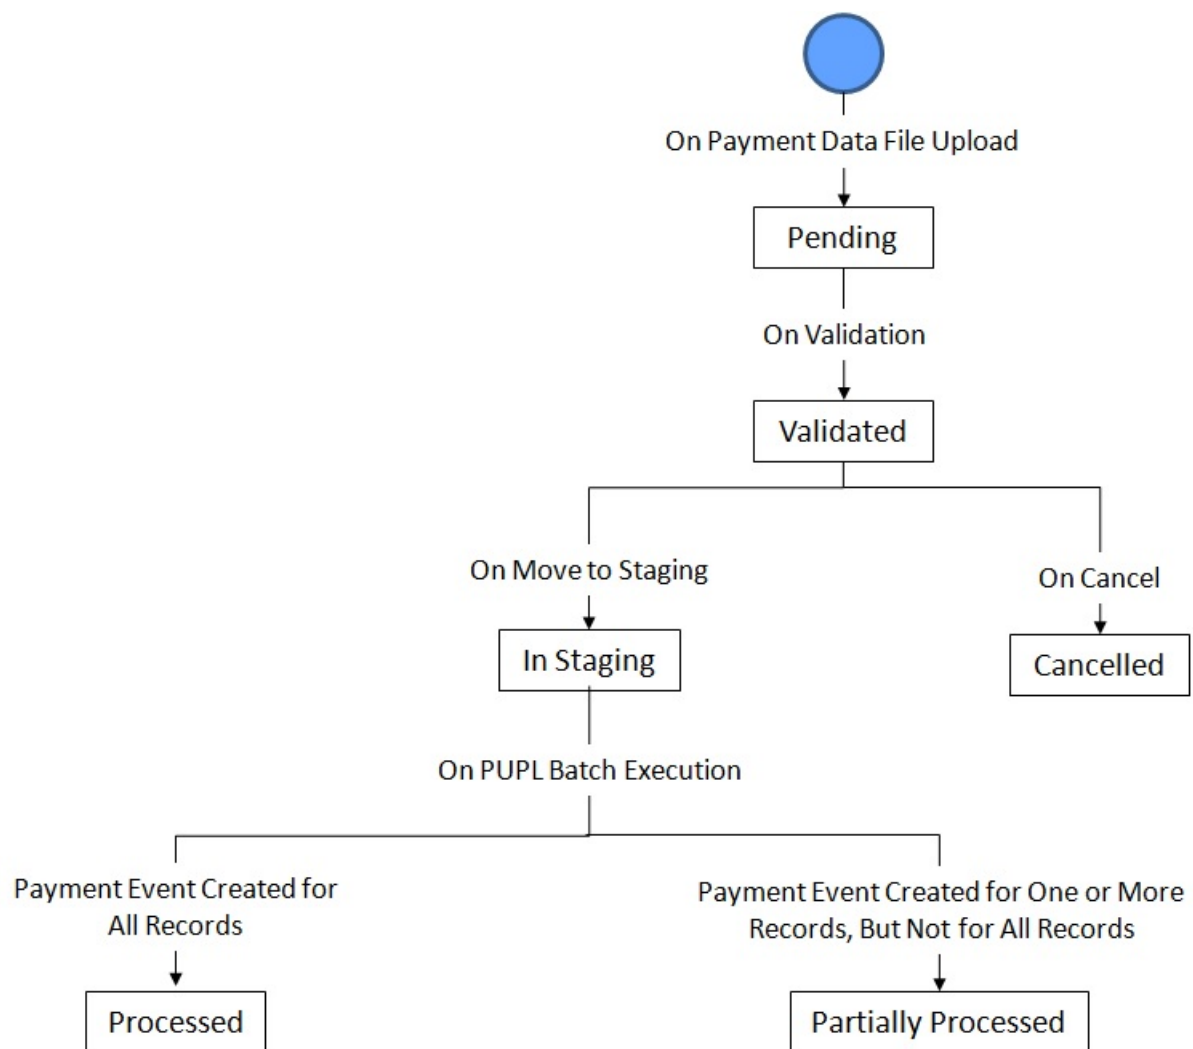

The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

Sample CSV

```
1640731871,STMTPAY,344749531005,0100232,500.85,500.85,08/1/2022,TEST_EXT_SRC,CASH,00100,U
```

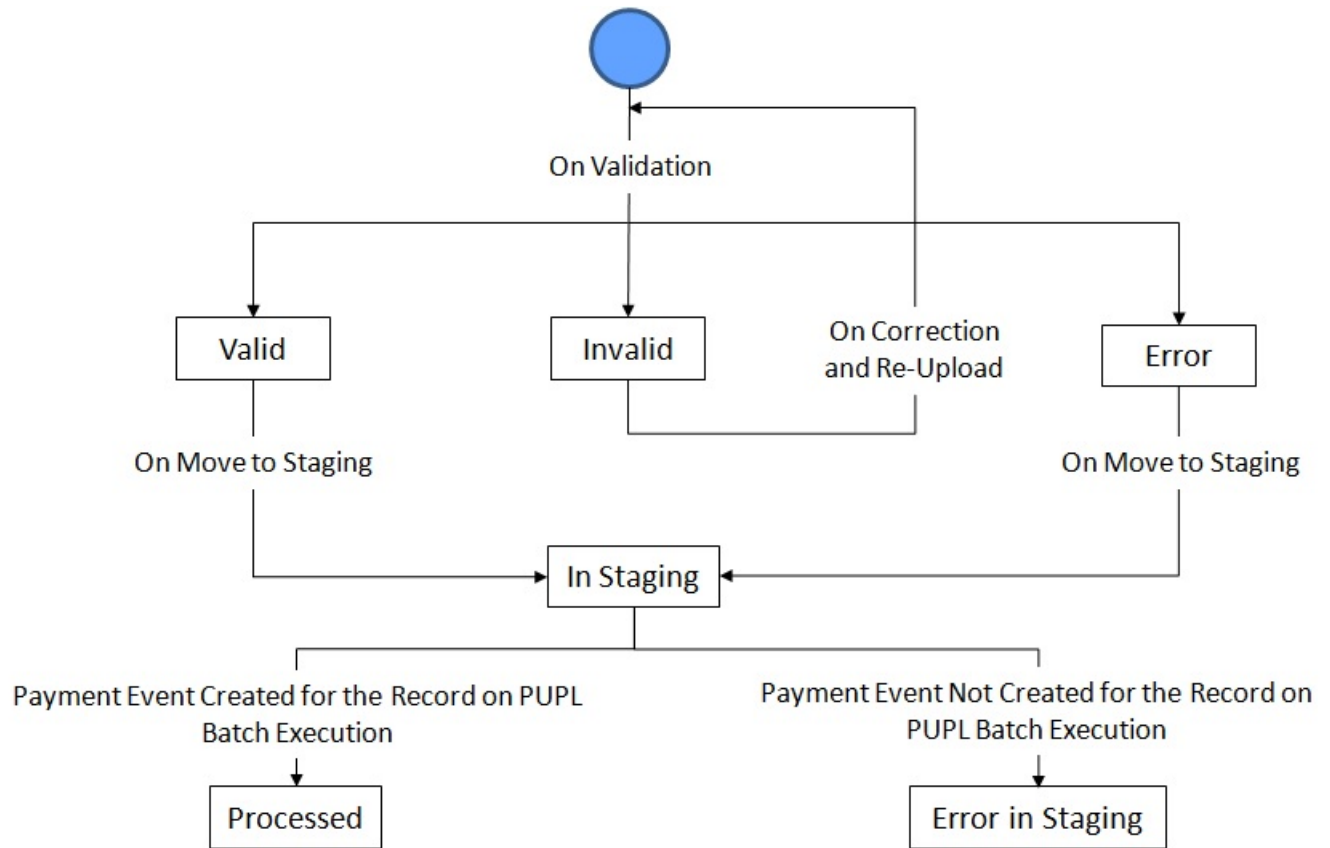

Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

Payment Record Status Transition

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

| Scenario | Payment Record Status |
|---|-----------------------|
| The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record. | Invalid |
| The payee account ID specified in the payment record does not exist in the system. | Invalid |
| The payee account ID, account identifier type, or account identifier are not specified in the payment record. | Invalid |
| The match type is not specified in the payment record. | Invalid |
| The match type specified in the payment record does not exist in the system. | Error |
| The match value is not specified in the payment record. | Invalid |
| The currency code does not exist in the system. | Invalid |
| The tender amount is either zero or not specified in the payment record. | Invalid |
| The payment amount is either zero or not specified in the payment record. | Invalid |
| The bank account is not specified in the payment record. | Invalid |
| The payment type (i.e. tender type) does not exist in the system. | Invalid |

| Scenario | Payment Record Status |
|---|-----------------------|
| The payment type is not specified in the payment record. | Invalid |
| The tender ID is not specified in the payment record. | Invalid |
| The date received is not specified in the payment record. | Invalid |
| The payor account ID specified in the payment record does not exist in the system. | Invalid |
| The characteristic type specified in the payment record does not exist in the system. | Invalid |
| If a characteristic type is specified, but the characteristic value is not specified in the payment record. | Invalid |
| If a characteristic value is specified, but the characteristic type is not specified in the payment record. | Invalid |
| The characteristic value does not match any predefined value when the characteristic value type is set to Predefined Value . | Invalid |

Note: The system does the match type and match value related validations when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

| Message Number | Error Message | Message Category | Possible Issues |
|----------------|--|------------------|---|
| 80110 | File cannot be reuploaded as some records have already been processed. | 11111 | The possible issues could be: <ul style="list-style-type: none"> You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created. |
| 1463 | This file already exists in the system. Please check. | 17000 | The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is already uploaded in the system without selecting the Replace Existing File check box. |
| 1465 | Please upload a file in the CSV format. | 17000 | The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is not in the CSV format. |
| 80113 | Duplicate Header for column %1 in file. | 11111 | The possible issues could be: <ul style="list-style-type: none"> The file has two or more columns with the same header. |

| Message Number | Error Message | Message Category | Possible Issues | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| | | | <ul style="list-style-type: none"> The match type is not specified in the payment record. The match value is not specified in the payment record. The payment type is not specified in the payment record. |

Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the staging records of a payment data record
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 1430
- [Payment Data Records](#) on page 1433
- [Payment Staging Records](#) on page 1434
- [Payment Data File Log](#) on page 1435

Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| File Name | Used to search a particular payment data file. | No |
| User ID | Used to search payment data files which are uploaded by a particular user. | No |
| File Type | Used to search payment data files which are uploaded using a particular file type. | No |
| Upload From Date | Used to search payment data files which are uploaded from a particular date onwards. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|---|-----------------------|
| | Note: By default, the date is set to the current date minus 7 days. You can change the date, if required. | |
| File Status | Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"> Cancelled In Staging Partially Processed Pending Processed Validated | No |
| Upload To Date | Used to search payment data files which are uploaded till a particular date. <p>Note: By default, the date is set to the current date. You can change the date, if required.</p> | No |

Note: You must specify at least one search criterion while searching for a payment data file.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-------------|--|
| File Name | Displays the name of the payment data file. |
| File Type | Indicates the type of the payment data file. |
| Upload Date | Displays the date and time when the payment data file was uploaded in the system. |
| Status | Indicates the status of the payment data file. The valid values are: <ul style="list-style-type: none"> Cancelled In Staging Partially Processed Pending Processed Validated |
| Total | Displays the total number of records that are uploaded through the payment data file. |
| Valid | Displays the number of records which are successfully validated in the system. |
| Invalid | Displays the number of records which could not pass through the validation process in the system. |
| Error | Displays the number of records where the data is incorrect. |

| Column Name | Column Description |
|-----------------|---|
| In Staging | Displays the number of records which are copied from the pre-staging to staging area. |
| Processed | Displays the number of records for which payment events are created. |
| Staging Error | Displays the number of records for which payment events could not be created. |
| Cancel | <p>On clicking the Cancel (🚫) icon, you can cancel the payment data file.</p> <p>Note: The Cancel icon appears when the status of the payment data file is Validated. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.</p> |
| Move to Staging | <p>On clicking the Move to Staging (📁) icon, you can move the valid and error records of the payment data file to the staging area.</p> <p>Note:</p> <p>The Move to Staging icon appears when:</p> <ul style="list-style-type: none"> • The status of the payment data file is Validated. • There are no invalid records in the payment data file. • The Disable Move to Staging check box is not selected in the respective file type. |

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can upload a payment data file by clicking the **Upload** button in the **Page Title** area of the **Payment Upload** screen. On clicking the **Broadcast** (📡) icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| Payor Account ID | Indicates the account through which the payment is made. |
| Payee Account ID | Indicates the account for which the payment is made. |
| Statement ID | Indicates the statement for which the payment is made. |
| Match Type | Indicates the match type using which the payment must be matched. |
| Match Value | Indicates the entity (such as bill, contract, and so on) against which the payment must be matched. |
| Entity Type | Indicates the entity type. |
| Pay Tender ID | Displays the payment tender ID. |
| Tender Amount | Displays the tender amount. |
| Payment Amount | Displays the amount paid through the tender. |
| Currency | Indicates the currency in which the payment is made. |
| Date Received | Displays the date when the payment is made. |
| Bank Account | Displays the bank account from which the payment is made. |
| Tender Type | Indicates the type of tender through which the payment is made. |
| Check Number | Displays the check number if the payment is made through check. |
| MICR ID | Displays the MICR code. |
| Status | Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Error • In Staging • Processed • Error in Staging |
| Payment Event Information | Displays information about the payment event which is created for the payment record. |

| Column Name | Column Description |
|-------------|---|
| | <p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.</p> <p>The data appears in this column when the status of the payment record is Processed.</p> |
| Messages | <p>On clicking the View () icon, the Error Messages window appears where you can view the reasons why the status of the payment record is Invalid or Error.</p> <p>Note: The View icon appears when the payment data record is in the Error or Invalid status.</p> |

Note:

Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Check Number**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** () icon corresponding to the payment data file in the **Search Payment Data File** zone.

Payment Staging Records

The **Payment Staging Records** zone lists the staging records of the payment data file. This zone contains the following columns:

| Column Name | Column Description |
|--------------------------|--|
| View | On clicking the View () icon, you can view the payment upload staging details. |
| External Source ID | Displays the external source ID which is associated with the tender source. |
| External Reference ID | Displays the external reference ID which is associated with the tender source. |
| External Transmission ID | Displays the external transmission ID which is associated with the tender source. |
| External Batch ID | Displays the batch of payments in a transmission. |
| Payee Account ID | Indicates the account for which the payment is made. |

| Column Name | Column Description |
|----------------|--|
| Match Type | Indicates the match type using which the payment is matched. |
| Match Value | Indicates the entity (such as bill, contract, and so on) against which the payment is matched. |
| Payment Amount | Displays the amount paid through the tender source. |

By default, the **Payment Staging Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** () icon corresponding to the payment data record in the **Payment Data Records** zone.

Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

| Column Name | Column Description |
|--------------------|---|
| Creation Date Time | Displays the date and time when the action is performed on the payment data file. |
| Log Details | Displays the details of the action performed on the payment data file. |
| User | Indicates the user who performed the action on the payment data file. |

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** () icon corresponding to the payment data file in the **Search Payment Data File** zone.

Searching for a Payment Data File

Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of payment data files that meet the search criteria appears in the **Search Results** section.

Uploading a Payment Data File

Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.

The **Upload Payment Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| File Type | Used to indicate the type of payment data file. | Yes |
| | Note: The list includes only those file types where the feed type is set to Payment Upload Data . | |
| File Name | Used to specify the name and path of the payment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the payment data file is available in the system. | |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |

4. Select the type of payment data file from the **File Type** list.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the payment data file that you want to upload is available.

7. Click **Open**.

The payment data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

Note: The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**.

Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

- If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
- If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the [Payment Record Status Transition](#) on page 1424.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

Replacing an Existing File

Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Payments** and then click **Payment Upload**.

The **Payment Upload** screen appears.

3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.

The **Upload Payment Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|--|-----------------------|
| File Type | Used to indicate the file type for uploading the payment data file. | Yes |
| | Note: The list includes only those file types where the feed type is set to Payment Upload Data . | |
| File Name | Used to indicate the name and path of the payment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse the location of the payment data file available in the system. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. | No |
| | Note: You must select this check box only when you want to upload the same file once again. You can replace an existing file when the payment data file is in the Validated status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created. | |

4. Select the type of payment data file from the **File Type** list.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the payment data file that you want to replace is available.

7. Click **Open**.

The payment data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully.

Note: The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**

Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

- If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
- If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the [Payment Record Status Transition](#) on page 1424.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

Cancelling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** () icon in the **Cancel** column corresponding to the payment data file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

Note: The **Cancel** icon appears when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

Moving the Payment Records to the Staging Area

Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.

2. In the **Search Results** section, click the **Move to Staging** () icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

Note:

The **Move to Staging** icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.

A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.

4. Click **OK** in the message box.

The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

Editing a Payment Staging Record

You can edit a payment record when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** section, click the **Broadcast** () icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Staging Records** zone appear.

4. In the **Payment Staging Records** zone, click the **View** () icon in the **Payment Staging Record** column corresponding to the payment staging record whose details you want to edit.

The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** - Enables you to view and edit the tender control staging details.
- **Payment Advice** - Enables you to view and edit the payment staging details.

- **Payment Characteristics** - Enables you to view and edit the payment characteristic staging details.
5. Edit or remove the tender details, if required.
 6. Edit or remove the payment advice details, if required.
 7. Edit or remove the payment characteristics, if required.
 8. Click the **Save** button in the **Page Title** area of the **Payment Upload Staging** screen.

The changes made to the payment staging record are saved.

Viewing the Records of a Payment Data File

Procedure

To view the records of a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose records you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. View the details of the payment records uploaded through the payment data file in the **Payment Data Records** zone.

Viewing the Staging Records of a Payment Data Record

Procedure

To view the staging records of a payment data record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose records you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **Broadcast** () icon corresponding to the payment data file whose staging records you want to view.

- View the details of the staging records in the **Payment Staging Records** zone.

Viewing the Log of a Payment Data File

Procedure

To view the log of a payment data file:

- Search for the payment data file in the **Payment Upload** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose log you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

- View the actions performed on the payment data file in the **Payment Data File Log** zone.

Viewing the Errors of a Payment Data Record

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

Procedure

To view the errors of a payment data record:

- Search for the payment data file in the **Payment Upload** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose payment records are in the **Error** or **Invalid** status.

The **Payment Data Records** and **Payment Data File Log** zones appear.

- In the **Payment Data Records** zone, click the **View** () icon in the **Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.

The **Error Messages** window appears.

- View the error messages of the payment data record in the **Error Messages** window.

Note:

The error messages window lists the reasons why the payment data record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add the missing information in the CSV file and then re-upload the CSV file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to staging area.

The **View** icon appears when the payment data record is in the **Error** or **Invalid** status.

5. Click **OK**.

Chapter 17

Freeze Payments on Notification

Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI_APAY_STAGE_UP
- CI_APAY_STAGE_UP_REM
- CI_APAY_STGUP_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 1447.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record when it is in the **Pending** or **Error** status, and you

can delete an automatic payment or refund clearing staging record when it is in the **Pending** status. During the freeze payments on notification process, the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 1451.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 1450.

Freeze Payments on Notification Process

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 1447
2. [Generating a Flat File](#) on page 1447
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 1447
4. [Retry Automatic Payment](#) on page 1448
5. [Freezing or Canceling Automatic Payments](#) on page 1449
6. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 1449
7. [Generating To Do Entries](#) on page 1450
8. [Creating Tender Controls](#) on page 1450

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Maintain Additional Information for Staging Record (C1-APRCH)
5. Upload Response from Auto Clearing House (C1-APACK)
6. Freeze or Cancel Automatic Payments (APAYRA)
7. Cancel Automatic Refunds (AREFRA)
8. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
9. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI_APAY_CLR_STG** and **CI_ADJ_CLR_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing ID in the **CI_APAY_STAGE_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. payment cancellation reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancellation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI_APAY_STGUP_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI_APAY_STGUP_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY_DIST_FRZ_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: An additional table named **CI_APAY_STGUP_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

Note: You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1452.

Retry Automatic Payment

In the Freeze Payments on Notification feature, the system enables you to freeze or cancel the automatic payment based on the review comments received from the auto clearing house. Until now, the system did not allow to resend the automatic payment clearing records to the auto clearing house for review in case of rejection. Now, the system enables you to resend the rejected automatic payment clearing records to the auto clearing house for review.

To enable this feature, you need to set the **C1-APMSG** characteristic type for the required divisions. Here, you must set the maximum automatic payment reattempts allowed while using the Freeze Payments on Notification feature.

A new batch named **C1-APRCH** is introduced in this release. You need to execute this batch in between the following two batches - **C1-APACK** and **APAYRA**. The **C1-APRCH** batch considers the automatic payment clearing staging records which are in the **Pending** status from the **CI_APAY_STAGE_UP** table. The system then checks whether the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is set to **SUCC** or **CANC**. If the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is

set to **SUCC**, the system updates the last extract date of the automatic payment clearing staging record to the extract date which is available corresponding to the clearing record in the **CI_APAY_CLR_STG** table. However, if the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is set to **CANC**, the system checks whether the number of automatic payment clearing staging records for the clearing record is equal to or greater than one. If the number of automatic payment clearing staging records for the clearing record is equal to or greater than one, the system increments the retry count of the clearing ID. If the retry count is greater than zero and less than the maximum automatic payment reattempt limit defined for the division, the system does the following:

- Recalculates the extract date and stamps it against the corresponding clearing record in the **SCHED_EXTRACT_DT** column of the **CI_APAY_CLR_STG** table
- Clears the **BATCH_NBR** column of the corresponding clearing record in the **CI_APAY_CLR_STG** table
- Clears the **APAY_DIST_FRZ_DT** column of the corresponding clearing record in the **CI_APAY_CLR_STG** table

Finally, the status of the automatic payment clearing staging record is set to **RETR**. A To Do is created using the **CI-APRET** To Do type to notify that the status of an automatic payment clearing staging record is changed to **RETR**.

Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e. NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancellation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI_APAY_STAGE_UP** – Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI_APAY_STAGE_UP_REM** – Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI_APAY_STGUP_CHAR** – Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If

the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the **APAYUPTD** To Do type when an exception is logged for an automatic payment clearing staging record in the **CI_APAY_STGUP_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI_APAY_STGUP_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

Note: You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.

- Define the required payment cancelation reasons in the system.
- Define values for the **APAY_UPL_NOC_LOOKUP** lookup field.

Note: The **APAY_UPL_NOC_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

Note: You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.
- Assign the **C1-ACH To Do** type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD To Do** type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
 - Line Separator
 - Field Separator
 - Reject Upload Reason
 - Success Upload Reason

Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

| Tag | Attribute | Description | Mandatory (Yes or No) |
|-----|----------------------|---|-----------------------|
| OTI | Reference Number | Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house. | Yes |
| OTI | Acknowledgement Code | Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify TE or TR as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can either specify any value other than TE or TR or leave this attribute blank. | No |
| TED | Error Code | Used to indicate either of the following: <ul style="list-style-type: none"> The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house. | Yes (Conditional) |

| Tag | Attribute | Description | Mandatory (Yes or No) |
|-----|-------------------|--|---|
| | | <p>Note: You must specify a payment cancellation reason which is already defined in the system.</p> <ul style="list-style-type: none"> The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC). <p>Note: You must specify a NOC reason which is already defined in the APAY_UPL_NOC_LOOKUP lookup field.</p> | <p>Note: This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.</p> |
| TED | Error Description | Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC). | No |

Sample EDI 824 File Format

```

OTI*TR*TN*411302586842\
TED*WA01*WRONG ACCOUNT\
OTI*TF*TN*411302525641\
OTI*TO*TN*806152348038\
TED*BR01*Bill Reopened\
OTI*TO*TN*806152307159\
OTI*TE*TN*806152307229\
TED*WA01*WRONG ACCOUNT\

```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string “WRONG ACCOUNT” and “Bill Reopened” are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 1452.

Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 1454

Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Upload Reason | Displays the upload reason. |
| Reason Type | Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success |
| Eligible for Processing | Indicates whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. The valid values are: <ul style="list-style-type: none"> • Y • N |
| Description | Displays the description of the upload reason. |
| Edit | On clicking the Edit (✎) icon, the Automatic Payment and Refund Upload Reason screen appears where you can edit the details of the upload reason. |
| Delete | On clicking the Delete (🗑) icon, you can delete the upload reason. |

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

| For more information on... | See... |
|--------------------------------|--|
| How to define an upload reason | Defining an Upload Reason on page 1454 |
| How to edit an upload reason | Editing an Upload Reason on page 1456 |
| How to delete an upload reason | Deleting an Upload Reason on page 1458 |

Defining an Upload Reason

Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|--|-----------------------|
| Upload Reason | Used to specify the upload reason. | Yes |
| Description | Used to specify the description for the upload reason. | Yes |
| Reason Type | Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. | Yes |
| Eligible for Processing | Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. | No |

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|---|--|
| Sequence | Used to indicate the order in which the algorithm must be triggered. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |
| Algorithm | Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| | depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears.</p> <p>On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.</p> | |

4. Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

5. Click **Save**.

The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------|---|-----------------------|
| Upload Reason | Displays the upload reason. | Not applicable |
| Description | Used to specify the description for the upload reason. | Yes |
| Reason Type | <p>Used to indicate the type of upload reason. The valid values are:</p> <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. | Yes |
| Eligible for Processing | Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. | No |

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|--|
| Sequence | Used to indicate the order in which the algorithm must be triggered. | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |
| Algorithm | Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be | Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason. |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------|--|-----------------------|
| | used for automatic payment or automatic refund cancelation. | |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears.</p> <p>On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.</p> | |

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

5. Click **Save**.

The changes made to the upload reason are saved.

Deleting an Upload Reason

Procedure

To delete an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload reason that you want to delete.
A message appears confirming whether you want to delete the upload reason.
4. Click **OK**.
The upload reason is deleted.

Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics of the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 1459
- [Associated Clearing Staging Records](#) on page 1461
- [Clearing Staging Upload Reasons](#) on page 1462
- [Clearing Staging Characteristics](#) on page 1463

Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"> • Automatic Payment • Automatic Refund | Yes |
| Clearing ID | Used to search a particular clearing record. | No |
| Account ID | Used to search clearing records which are created for a particular account. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|--|-----------------------|
| Person Name | Used to search clearing records which are created for accounts of a particular person. | No |
| Extract From Date | Used to search clearing records that are extracted on or after a particular date. | No |
| Extract To Date | Used to search clearing records that are extracted on or before a particular date. | No |
| Bill ID | Used to search clearing records which are created against a bill. | No |
| Alternate Bill ID | Used to search clearing records which are created against a bill with the specified alternate bill ID. | No |
| Batch Control | Used to search clearing records where the APAYACH batch control is stamped. The valid value is APAYACH . | No |
| Batch Run Number | Used to search clearing records which are activated in a particular batch run. | No |

Note: You must specify at least one search criterion while searching for a clearing record.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| Clearing ID | Displays the clearing ID. |
| Account Information | Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. |
| Bill Information | Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Payment Amount | Displays the payment amount. Note: This column appears only when you select the Automatic Payment option from the Search By list. |
| Pay Tender ID | Displays the payment tender ID. Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective tender. This column appears when you select the Automatic Payment option from the Search By list. |

| Column Name | Column Description |
|---------------------|--|
| Tender Status | Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> Valid Canceled |
| | Note: This column appears when you select the Automatic Payment option from the Search By list. |
| Extract Date | Displays the date when the clearing record is extracted in a flat file. |
| Payment Freeze Date | Displays the date when the automatic payment must be frozen in the system. |
| | Note: This column appears when you select the Automatic Payment option from the Search By list. |
| External Source ID | Indicates the tender source through which the payment was remitted. |
| Entity Type | Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"> Refund Request |
| | Note: This column appears when you select the Automatic Refund option from the Search By list. |
| Entity ID | Displays the entity ID. |
| | Note: This column appears when you select the Automatic Refund option from the Search By list. |
| Account Number | Indicates the bank account through which the automatic payment is made. |
| Batch Control | Indicates the batch control which is stamped on the clearing record. |
| Batch Run Number | Indicates the batch run in which the clearing record was activated. |
| Alternate Bill ID | Indicates the bill against which the clearing record is created. |

Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Status | Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> Pending Complete |

| Column Name | Column Description |
|-------------|--|
| | <ul style="list-style-type: none"> Error |
| Edit | <p>On clicking the Edit (✎) icon, the Edit Clearing Staging Record screen appears where you can edit the details of the clearing staging record.</p> <p>Note: You can edit a clearing staging record when it is in the Pending or Error status.</p> |
| Delete | <p>On clicking the Delete (🗑) icon, you can delete the clearing staging record.</p> <p>Note: You can delete a clearing staging record when it is in the Pending status.</p> |

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing record in the **Search Clearing Record** zone.

Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

| Column Name | Column Description |
|------------------------|---|
| Sequence | Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund. |
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Upload Reason | Indicates whether the auto clearing house has accepted or rejected the clearing record. |
| Cancel Reason | Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column. |
| NOC Reason | Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC). |
| NOC Reason Description | Displays the description of the NOC reason. |

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics of the automatic payment or refund clearing staging record. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Clearing Staging ID | Displays the clearing staging ID. |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the characteristic value. |

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** () icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Searching for a Clearing Record

Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Automatic Payment and Refund Clearing Staging**.
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for automatic payment or refund clearing records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of clearing records that meet the search criteria appears in the **Search Results** section.

Editing a Clearing Staging Record

Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY_UPL_NOC_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

Note: You can edit a clearing staging record when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI_APAY_STGUP_EXC** table.

Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose associated clearing staging record you want to edit.

The **Associated Clearing Staging Records** zone appears.

- In the **Associated Clearing Staging Records** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Clearing Staging ID | Displays the clearing staging ID. | Not applicable |
| Clearing ID | Indicates the clearing record against which the clearing staging record is added. | Not applicable |
| Status | Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> Pending Complete Error | Not applicable |
| Upload Date | Used to specify the date when the clearing staging record was uploaded or added in the system. | Yes |

In addition, this screen contains the following two sections:

- Upload Reasons** — Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Upload Reason | Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record. | Yes |
| Reason Type | Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> Cancel Success | Yes |
| Sub Reason Code | Used to specify either of the following: <ul style="list-style-type: none"> Payment cancelation reason or void status reason (for automatic refund) when the reason type is set to Cancel Notice to Change (NOC) reason when the reason type is set to Success | No |
| Sub Reason Description | Used to specify the description of the NOC reason. | No |

Note: The upload reason, payment cancelation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- Characteristics** — Used to define the characteristics for the clearing staging record.

- Modify the required details in the **Edit Clearing Staging Record** screen.

Note: If you want to add more than one reason or sub reason code, click the **Add (+)** icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete (🗑)** icon corresponding to the reason.

- Define characteristics for the clearing staging record, if required.

- Click **Save**.

The changes made to the clearing staging record are saved.

| How to define a characteristic for a clearing staging record | Defining a Characteristic for a Clearing Staging Record on page 1467 |

Defining a Characteristic for a Clearing Staging Record

Prerequisites

To define a characteristic for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

Procedure

To define a characteristic for a clearing staging record:

- Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Effective Date | Used to specify the date from when the characteristic is effective for the clearing staging record. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |
| Characteristic Type | Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Auto Payment Upload . | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |
| Characteristic Value | Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the clearing staging record. |

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the clearing staging record, click the **Delete** (🗑️) icon corresponding to the characteristic.

Related Topics

| For more information on... | See... |
|---------------------------------------|--|
| How to edit a clearing staging record | Editing a Clearing Staging Record on page 1465 |

Deleting a Clearing Staging Record

Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose associated clearing staging record you want to delete.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the clearing staging record that you want to delete.

A message appears confirming whether you want to delete the clearing staging record.

Note: You can delete a clearing staging record when it is in the **Pending** status.

4. Click **OK**.

The clearing staging record is deleted.

Chapter 18

Trial Billing

Topics:

- [Prerequisites](#)
- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** – This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** – This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

Note: The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills

you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** – This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account’s invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the trial billing feature, you need to do the following:

- Set the **Trial Bill Characteristics Conversion** option type of the **C1_FINTRANOP** feature configuration.

Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 1471

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 1474

Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** — The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"> • Trial Bill Details <p>Note: By default, the Trial Bill Details option is selected.</p> | Yes |
| Person ID | Used to search trial bills which are generated for a particular person. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p> | No |
| Trial Bill ID | Used to search for a particular trial bill. | No |
| Account ID | Used to search trial bills which are generated for a particular account. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|--|
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Division | Used to search trial bills which are generated for accounts belonging to a particular division. | No |
| From Trial Bill Date | Used to search trial bills which are generated from a particular date onwards. | No |
| Invoice Currency | Used to search trial bills which are generated in a particular invoice currency. | No |
| To Trial Bill Date | Used to search trial bills which are generated till a particular date. | No |
| Batch Run Date | Used to search trial bills which are generated on a particular batch run date. | No |
| Trial Bill Description | Used to search trial bills which are generated in a particular batch run. | Yes (Conditional) |
| | | Note: This field is required when you are searching for trial bills using the batch run date. |

Note: You must specify at least one search criterion while searching for a trial bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Trial Bill Information | Displays additional information about the trial bill. Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill. |
| Current Charges | Displays the trial bill amount. |
| Account Information | Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. |
| Person Name | Indicates the person for whom the trial bill is generated. |
| Division | Indicates the division to which the account belongs. |
| Batch Run Date | Displays the date when the batch is executed to generate the trial bill. |
| Batch Run Number | Indicates the batch run in which the trial bill is generated. |

Related Topics

Searching for a Trial Bill

Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Trial Bill**.
The **Trial Bill** screen appears.
3. Enter the search criteria in the **Search Trial Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of trial bills that meet the search criteria appears in the **Search Results** section.

Viewing the Trial Bill Details

Procedure

To view the details of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.
The **Trial Bill** screen appears.
3. View the basic details of the trial bill in the **Trial Bill** zone.
4. View the segments of the trial bill in the **Trial Bill Segments** zone.
5. View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.
6. View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.

7. View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment
- View the details of the policy, plan, and membership for which a trial bill segment is created

It contains the following zones:

- [Trial Bill](#) on page 1474
- [Trial Bill Segments](#) on page 1476
- [Trial Bill Segment Calc Lines](#) on page 1477
- [Trial Bill Segment SQ Details](#) on page 1478
- [Trial Bill Segment Financial Details](#) on page 1479
- [Policy Details](#) on page 1479

Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** — This section provides basic information about the trial bill. It contains the following fields:

| Field Name | Field Description |
|---------------|-----------------------------|
| Trial Bill ID | Displays the trial bill ID. |

| Field Name | Field Description |
|------------------------|---|
| Trial Bill Information | Displays additional information about the trial bill. |
| Trial Bill Description | Displays the description of the batch run in which the trial bill is generated. |
| Account Information | Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

- **Trial Bill Summary** — This section summarizes the financial impact of the bill. It contains the following fields:

| Field Name | Field Description |
|-------------------------------|---|
| New Charges | Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill. |
| Adjustments | Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill. |
| Corrections | Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill. |
| Total | Displays the sum of new charges, adjustments, and corrections. |
| No. of Bill Segments in Error | Indicates the number of bill segments in the trial bill which are in the Error status. |

- **Trial Bill Messages** — This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

| Column Name | Column Description |
|-----------------|--|
| Message Code | Displays the code that uniquely identifies the bill message. |
| Message on Bill | Displays the bill message. |
| Priority | Indicates the priority which determines the order in which the bill message must be printed on the trial bill. |
| Insert Code | Indicates whether the bill message must be sent separately along with the trial bill. |

- **Characteristics** — This section lists characteristics of the trial bill. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

Related Topics

Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Account ID | Used to search trial bill segments which are generated for a particular usage account. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Contract Type | Used to search trial bill segments which are generated against a particular type of contract. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears. | |
| Trial Bill Segment Type | Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"> • Post Processing • Regular | No |
| Price Item | Used to search trial bill segments which are generated for a particular price item. | No |
| | Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears. | |
| Trial Bill Segment Status | Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"> • Error • Freezable | No |

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------|--|
| Trial Bill Segment ID | Displays the trial bill segment ID. |
| Status | Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"> • Error • Freezable |
| Start Date | Displays the start date of the trial bill segment. |

| Column Name | Column Description |
|--------------------------------------|---|
| End Date | Displays the end date of the trial bill segment. |
| Calculated Amount (Pricing Currency) | Displays the trial bill segment amount in the pricing currency. |
| Price Item | Indicates the price item for which the trial bill segment is generated. |
| Pricing Parameters | Indicates the price item parameters which are used along with the price item for determining the price item pricing. |
| Rate Schedule | Indicates the rate schedule which is used for defining the price item pricing. |
| Price Assignment ID | Indicates the price item pricing which is used during calculation. |
| Billable Charge ID | Indicates the billable charge for which the trial bill segment is generated. Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge. |
| Construct ID | Indicates the construct through which the trial bill segment is generated. Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct. |

On clicking the **Broadcast** (📡) icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear with the details of the respective trial bill segment.

Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

| Column Name | Column Description |
|--------------------------------------|--|
| Sequence No. | Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount. |
| Description on Bill | Displays the summarized information about the calculation line that will be printed on the trial bill. |
| Calculated Amount (Pricing Currency) | Displays the calculated charge amount associated with the calculation line in the pricing currency. |
| Calculated Amount (Invoice Currency) | Displays the calculated charge amount associated with the calculation line in the invoice currency. |

| Column Name | Column Description |
|-----------------------------|--|
| Print | Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Appears in Summary | Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No |
| Exchange Rate | Indicates the exchange rate which is used when the invoice currency is different from the pricing currency. |
| Price Component ID | Indicates the price component which is used during calculation. |
| Service Quantity Identifier | Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |
| Base Amount | Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount. |
| Rate Component Sequence | Indicates the sequence of the rate component on the effective rate version which is used while calculating the line. |
| Exempt Amount | Displays the amount of the calculated charge that the person does not have to pay due to tax exemption. |
| Distribution Code | Indicates the distribution code associated with the rate component. |

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Related Topics

Trial Bill Segment SQ Details

The **Trial Bill Segment SQ Details** zone lists the service quantity identifiers associated with the contract against which the trial bill segment is created. It contains the following columns:

| Column Name | Column Description |
|---------------------------|--|
| SQI | Indicates the service quantity identifier. |
| Billable Service Quantity | Displays the SQI value used by the rates engine for calculation. |

By default, the **Trial Bill Segment SQ Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (🔊) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

| Column Name | Column Description |
|-------------------|--|
| Sequence No. | Indicates the sequence in which the distribution code will be considered for deriving the GL account. |
| Distribution Code | Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount. |
| Amount | Displays the amount that will be debited or credited to the GL account. |

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Policy Details

The **Policy Details** zone lists the policy, plan, and membership for which the trial bill segment is created. It contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Policy Information | Displays the information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy. |
| External Membership ID | Indicates the membership in which the member is included. |
| Member's Primary Identifier | Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:). |
| Member Name | Indicates the member for whom the trial bill segment is generated. |
| Plan Information | Displays information about the policy plan. Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan. |

By default, the **Policy Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Printing a Trial Bill in the PDF Format

Prerequisites

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

Procedure

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill that you want to print in the PDF format.

The **Trial Bill** screen appears.

3. Click the **Display Trial Bill** button in the **Trial Bill** zone.

The trial bill is printed in the PDF format.

Filtering the Trial Bill Segments

Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

Procedure

To filter the trial bill segments:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. Enter the search criteria in the **Trial Bill Segments** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

Viewing the SQ Details of a Trial Bill Segment

Procedure

To view the service quantity details of a trial bill segment:

- Search for the trial bill in the **Trial Bill** screen.
- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

- If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.
- In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

- View the service quantity details of the trial bill segment in the **Trial Bill Segment SQ Details** zone.

Viewing the Financial Details of a Trial Bill Segment

Procedure

To view the financial details of a trial bill segment:

- Search for the trial bill in the **Trial Bill** screen.

- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

- If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.

- In the **Search Results** section, click the **Broadcast** () icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

- View the financial details of the trial bill segment in the **Trial Bill Segment Financial Details** zone.

| Trial Bill Segment Financial Details zone | Trial Bill Segment Financial Details on page 1479 |

Viewing the Policy Details of a Trial Bill Segment

Procedure

To view the policy details of a trial bill:

- Search for the trial bill in the **Trial Bill** screen.
- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

- If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.

- In the **Trial Bill Segments** zone, click the **Broadcast** () icon corresponding to the trial bill segment whose policy details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear.

- View the policy details of the trial bill segment in the **Policy Details** zone.

Chapter 19

GL Account Validation

Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 1486 and [Dynamic GL Account Validation](#) on page 1486, respectively.

Static GL Account Validation

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

“GL Account is validated on YYYY-MM-DD”

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

“GL Account is invalid”

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

Dynamic GL Account Validation

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the **GLA_VAL_DT** column of the **CI_TRL_FT_GL** or **CI_FT_GL** table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the **C1-GLASN** or **GLASSGN2** batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

Chapter 20

Upload Validated Adjustment Data

Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Upload Request Type](#)
- [Adjustment Upload Request \(Used for Searching\)](#)
- [Adjustment Upload Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 1489.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 1491 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 1492.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object.

If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

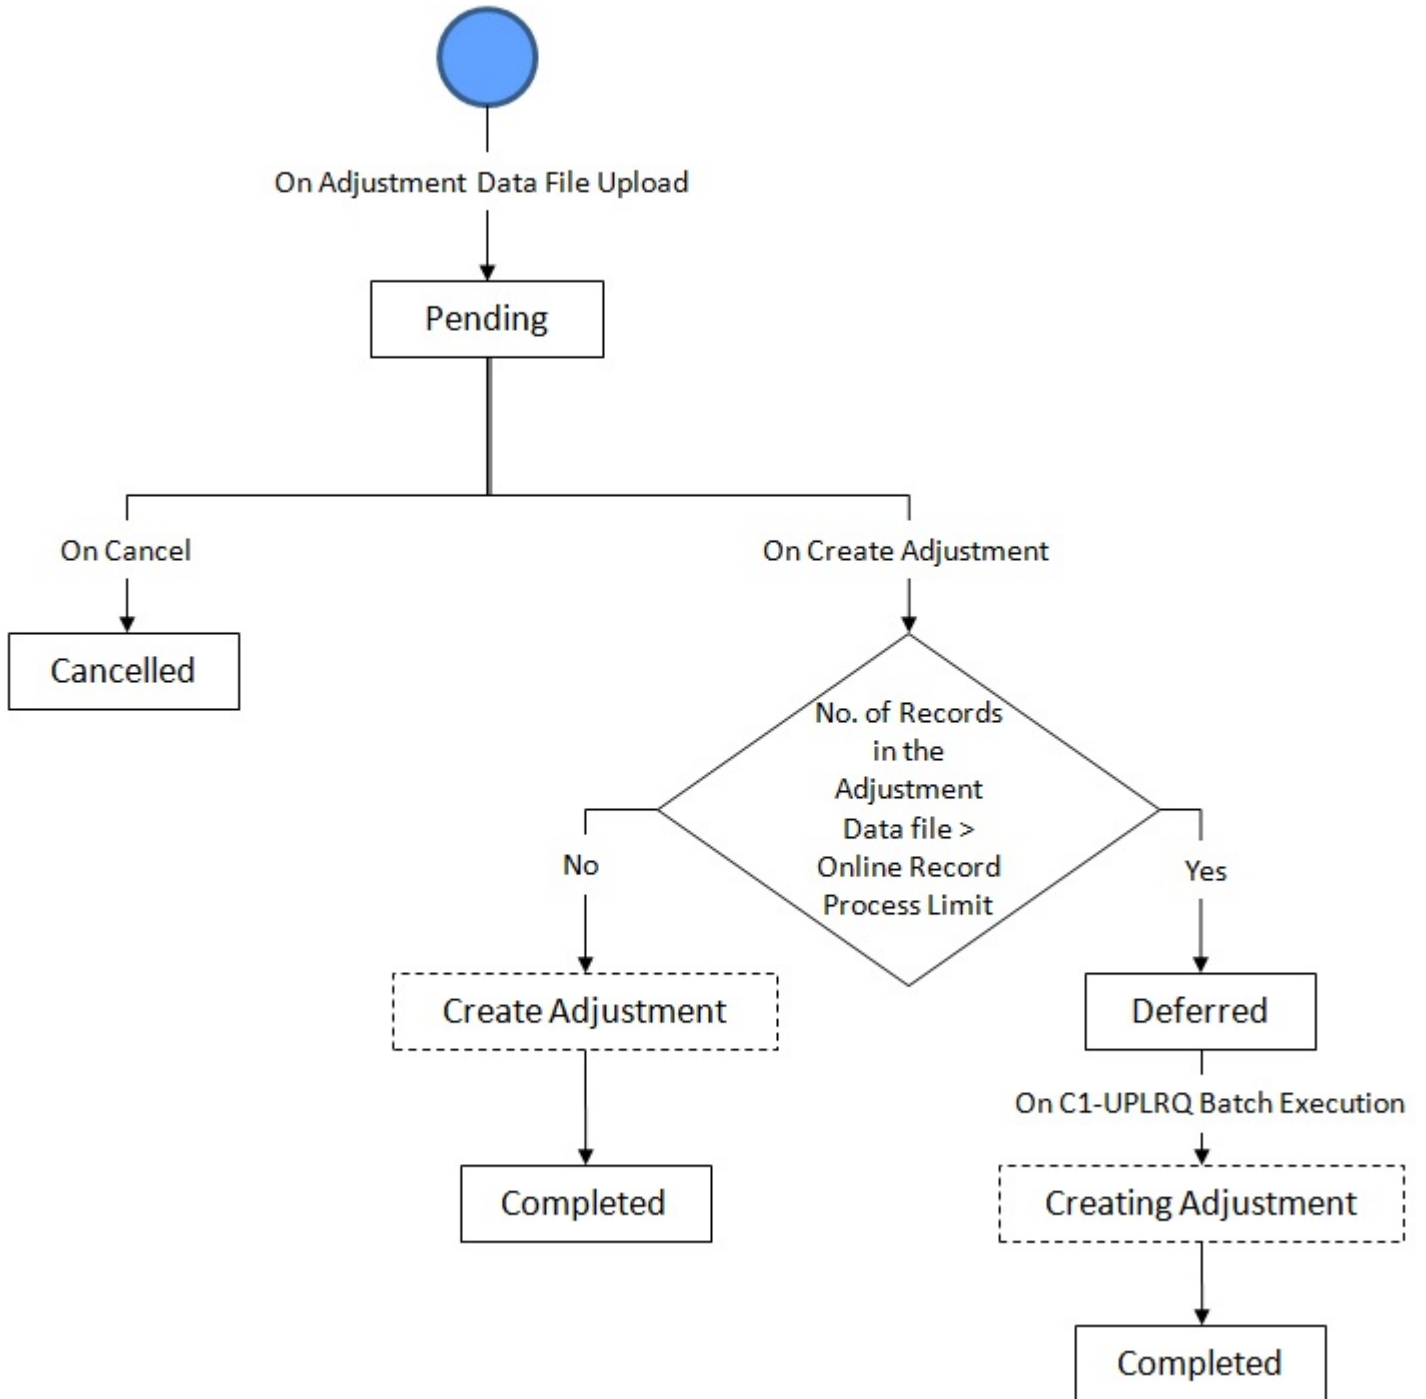

| Column Name | Description | Mandatory (Yes or No) |
|-------------------------|--|---|
| Account Identifier Type | Used to specify the account identifier type. | Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified. |
| Account Identifier | Used to specify the account identifier. | Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified. |
| Account ID | Used to indicate the account for which the adjustment must be created. | Yes (Conditional) |

| Column Name | Description | Mandatory (Yes or No) |
|---|--|---|
| | | Note: This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified. |
| Match Type | Used to indicate the match type using which the adjustment must be created. | Yes |
| Match Value | Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created. | Yes |
| Adjustment Type | Used to indicate the adjustment type using which the adjustment must be created. | Yes |
| | Note: The adjustment type must be included in the adjustment type profile which is attached to the contract type. | |
| Adjustment Amount | Used to specify the adjustment amount. | Yes |
| | Note: The adjustment amount precision must match the precision (decimal positions) defined for the currency. | |
| Currency Code | Used to indicate the currency in which the adjustment must be created. | Yes |
| Comments | Used to specify additional information about the adjustment. | No |
| Bill ID | Used to indicate the bill on which the adjustment must be created. | No |
| Arrears Date | Used to specify the date from when the amount is outstanding on the bill. | No |
| Char Type 1, Char Type 2,, Char Type 5 | Used to indicate the characteristic that must be defined for the adjustment. | Yes (Conditional) |
| | | Note: This data is required if the characteristic value is specified. |
| Char Value 1, Char Value 2,, Char Value 5 | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This data is required if the characteristic type is specified. |

Note: If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

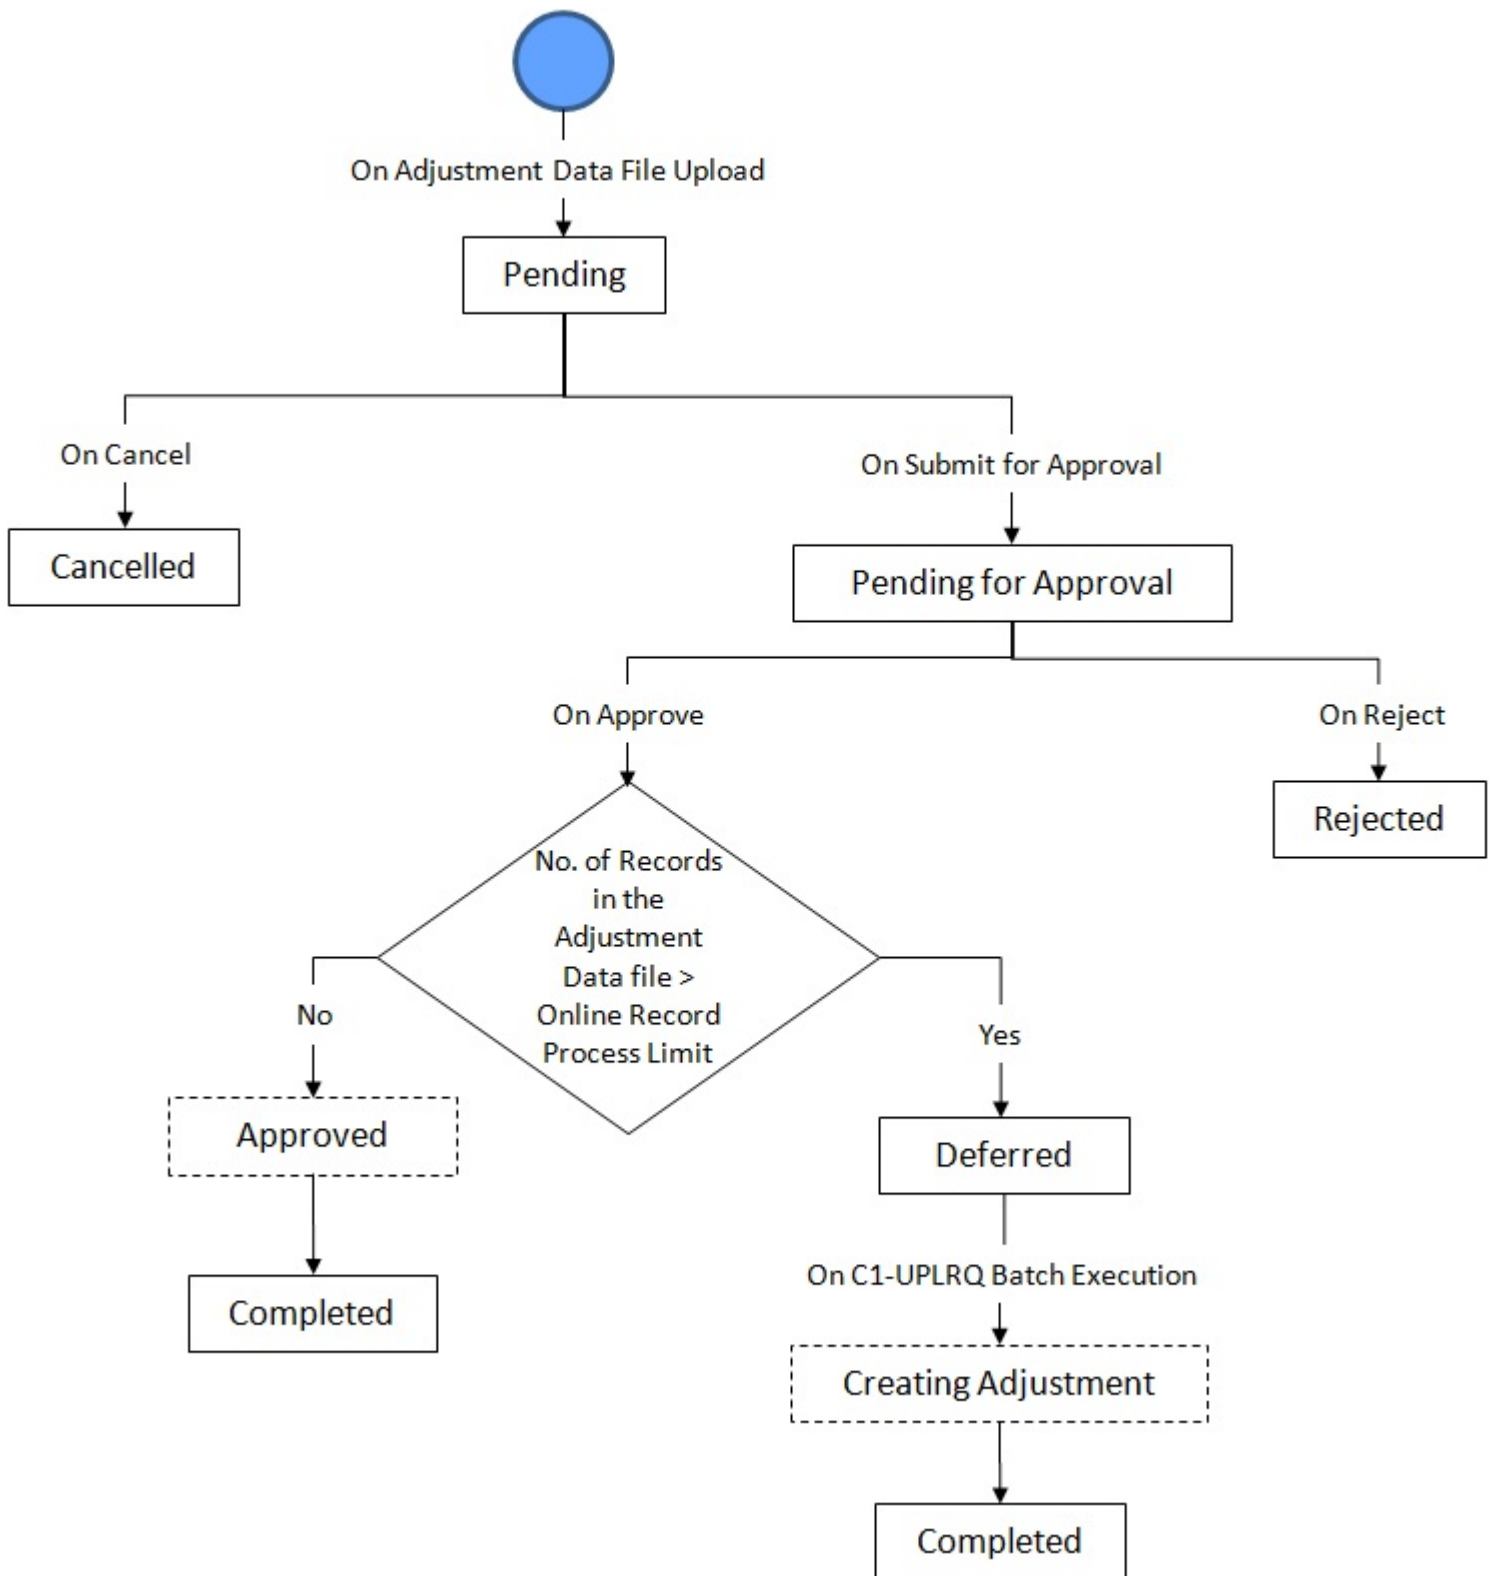

Adjustment Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is off:

Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|--|
| Information | C1-FLREQ-INF | C1-FLREQ-INF | <p>This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Upload Request Description • Upload Request ID |
| Validation | C1-ADVALREQ | C1-ADVALREQ | <p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below:</p> <ol style="list-style-type: none"> 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows: <ul style="list-style-type: none"> • Validating mandatory column data • Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. • Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID. |

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|-------------------|--------------|--------------|----------------|--|
| Draft | - | - | - | - |
| Cancelled | - | - | - | - |
| Create Adjustment | Enter | C1-ADJUPLDEF | C1-ADJUPLDEF | <p>This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the</p> |

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|---|
| | | | | Enter status algorithm when the request object is changed to Create or Approved status. |
| Deferred | Monitor | C1-ADJ-MNTR | C1-ADJ-MNTR | This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the Upload Request Monitor batch. This algorithm transitions the business object status from Deferred to Creating . |
| Pending for Approval | Enter | C1-ADJUPAPVL | C1-ADJUPAPVL | This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the Enter status algorithm when the request object enters Submitted - Pending For Approver status. |
| Approved | Enter | C1-ADJUPLDEF | C1-ADJUPLDEF | This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status. |
| Rejected | - | - | - | - |
| Completed | - | - | - | - |
| Creating Adjustment | Enter | C1-ADJCRTION | C1-ADJCRTION | This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated |

| Status | System Event | Algorithm | Algorithm Type | Description |
|--------|--------------|-----------|----------------|---|
| | | | | back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction. |

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

| Match Type | Algorithm Type | Sample Algorithm | Algorithm Description |
|---------------|----------------|------------------|--|
| Contract | C1-MTCIALG | C1-MTCIALG | This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) . |
| Contract Type | C1-MTCTALG | C1-MTCTALG | This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched. |

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1497
- [Upload Request Type](#) on page 1498

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|---------------------|---|
| Upload Request Type | Displays the upload request type. |
| Description | Displays the description of the upload request type. |
| Edit | On clicking the Edit (✎) icon, the Upload Request Type screen appears where you can edit the details of the upload request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the upload request type. |
| | Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type. |
| Mapping | On clicking the Mapping (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type. |

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

| Field Name | Field Description |
|--------------------------------|---|
| Upload Request Type | Displays the upload request type. |
| Upload Request Business Object | Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Description | Displays the description of the upload request type. |
| Detailed Description | Displays additional information about the upload request type. |
| Status | Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| File Size (KB) | Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. Note: This field appears when you create upload request type using Adjustment Upload Request Type business object. |
| Defer Algorithm | Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record |

| Field Name | Field Description |
|---------------------|---|
| | <p>process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note: This field appears when you create upload request type using Adjustment Upload Request Type business object. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> |
| Approval Required | Indicates whether approval is required for a file which is uploaded using the upload request type. |
| Approval To Do Type | <p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> |
| Approval To Do Role | <p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p>Note: This field appears when the Approval Required check box is selected. On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated. It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p> |
| FK Reference | <p>Indicates the foreign key reference which specifies the created upload request type.</p> <p>Note: This field appears when you create upload request type using Upload Request Type business object. It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p> |

In addition, this section has the following columns:

| Column Name | Column Description |
|-------------|--|
| Match Type | Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type |
| | Note: The Match Type column is displayed for Adjustment Upload Request Business Object. |
| Algorithm | Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. |
| | Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object. |

- **Characteristics** – This section lists the characteristics of the upload request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** – This section contains the following buttons:

| Button Name | Button Description |
|-------------|--|
| Edit | Used to edit the details of the upload request type. |
| Delete | Used to delete the upload request type. |
| | Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type. |
| Duplicate | Used to create a new upload request type using an existing upload request type. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval
- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type Business Object | Used to indicate the business object that you want to use to create the upload request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Used to specify the upload request type. | Yes |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type. | Not applicable |
| Upload Request Business Object | Used to indicate the business object that you want to use while creating the upload request. | Yes |
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|---|-----------------------|
| | <p>you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p>Note: This field appears when Adjustment Upload Request Type business object is selected.</p> | |
| Defer Algorithm | <p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | Yes |
| Entity Business Object | Used to indicate for creating Business Object of the entity using the upload request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | | | | | | | | | | | | | | | | | |
|--|--|--|------------|------------|----------|-------------------|----------|-----------------|---------|-----------------------|----------|--------------|----------|----------------|----------|-------------------|---------|----------------------|---------|--------------------|----------|--|----------|--|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p> | | | | | | | | | | | | | | | | | | | | | | | |
| Approval Required | Used to indicate whether approval is required for a file which is uploaded using the upload request type. | No | | | | | | | | | | | | | | | | | | | | | | |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table> | Upload Request | To Do Type | Adjustment | C1-ADJUP | Bill Cycle Update | C1-BCUUR | Billable Charge | C1-BCUR | Contract Rider Update | C1-CRUUR | Hold Request | C1-HLDUR | Refund Request | C1-REFUR | Write Off Request | C1-WOUR | Policy Reinstatement | C1-RPUR | Bill Group Sorting | C1-BGSRT | Bill Group Derivation and Pricing Parameters | C1-BGDVP | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |
| Upload Request | To Do Type | | | | | | | | | | | | | | | | | | | | | | | |
| Adjustment | C1-ADJUP | | | | | | | | | | | | | | | | | | | | | | | |
| Bill Cycle Update | C1-BCUUR | | | | | | | | | | | | | | | | | | | | | | | |
| Billable Charge | C1-BCUR | | | | | | | | | | | | | | | | | | | | | | | |
| Contract Rider Update | C1-CRUUR | | | | | | | | | | | | | | | | | | | | | | | |
| Hold Request | C1-HLDUR | | | | | | | | | | | | | | | | | | | | | | | |
| Refund Request | C1-REFUR | | | | | | | | | | | | | | | | | | | | | | | |
| Write Off Request | C1-WOUR | | | | | | | | | | | | | | | | | | | | | | | |
| Policy Reinstatement | C1-RPUR | | | | | | | | | | | | | | | | | | | | | | | |
| Bill Group Sorting | C1-BGSRT | | | | | | | | | | | | | | | | | | | | | | | |
| Bill Group Derivation and Pricing Parameters | C1-BGDVP | | | | | | | | | | | | | | | | | | | | | | | |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> | | | | | | | | | | | | | | | | | | | | | | |
| FK Reference | Used to indicate the FK Reference code to display the entity information. | No | | | | | | | | | | | | | | | | | | | | | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p> | |

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Match Type | <p>Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Contract • Contract Type | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.</p> |
| Algorithm | <p>Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the match type from the respective field.</p> |

6. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type. | Note: This field is required when you are defining a characteristic for the upload request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the upload request type. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Displays the upload request type. | Not applicable |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type. | Not applicable |
| Upload Request Business Object | Used to specify the business object that you want to use while creating the upload request. | Yes |
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. <p>Note: This field appears when the business object is Adjustment Upload Request Type.</p> | Yes |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p> | Yes |
| Entity Business Object | Used to indicate for creating Business Object of the entity using the upload request type. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| | <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> | |
| Approval Required | Used to indicate whether approval is required for a file which is uploaded using the upload request type. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |
| FK Reference | <p>Used to indicate the FK Reference code to display the entity information.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p> | No |

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|--|
| Match Type | <p>Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"> Contract Contract Type | <p>Yes (Conditional)</p> <p>Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.</p> |
| Algorithm | Used to attach an algorithm that will be triggered when you upload an adjustment data file. This | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|---|
| | algorithm determines the contract against which the adjustment must be created. | Note: This field is required when you select the match type from the respective field. |

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type

- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------------------------|--|-----------------------|
| Upload Request Type | Used to specify the upload request type. | Yes |
| Upload Request Type Business Object | Indicates the upload request type business object used while defining the upload request type (whose copy you want to create). | Not applicable |
| Upload Request Business Object | Used to specify the business object that you want to use while creating the upload request. | Yes |
| Description | Used to specify the description for the upload request type. | Yes |
| Detailed Description | Used to specify additional information about the upload request type. | No |
| Status | Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| File Size (KB) | Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. | Yes |
| | Note: This field appears when the business object is Adjustment Upload Request Type . | |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|--|
| | <p>example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note: Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments). | FK Reference | Used to indicate the FK Reference code to display the entity information. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type . | No |

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|---|
| Match Type | Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type | Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list. |
| Algorithm | Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. | Yes (Conditional) Note: This field is required when you select the match type from the respective field. |

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

| |
|--|
| <p>Note:</p> <p>You can search for an algorithm by clicking the Search (🔍) icon corresponding to the respective field.</p> <p>If you want to associate more than one match type with the upload request type, click the Add (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the Delete (🗑️) icon corresponding to the match type.</p> |
|--|

5. Define, edit, or remove characteristics of the upload request type, if required.

6. Click **Save**.

The new upload request type is defined.

Mapping an Upload Request Type

Prerequisites

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** () icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|------------------------------------|-----------------------|
| Upload Request Type | Indicates the upload request type. | Not applicable |

The **Upload Request Type Mapping** screen also contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| CSV Column Header | Used to specify the rows correspond to the columns in CSV file. | Yes (Conditional) |

| Column Name | Column Description | Mandatory (Yes or No) |
|-------------------|---|--|
| | | Note: This column is required when you search the Data Records zone in the Upload Request screen. |
| Use for Searching | Used to indicate whether the defined CSV Column Header is searchable or not. | Yes (Conditional) |
| | Note: Upto 10 rows can be selected as searchable rows. | Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen |
| Sequence Number | Used to specify the sequence of the searchable fields. | Yes (Conditional) |
| | Note: Searchable rows should have sequence less than or equal to 10. | Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen |

4. Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

5. Click **Save**.

The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete (🗑)** icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Broadcast** () icon corresponding to the upload request type whose details you want to view.
The **Upload Request Type** zone appears.
5. View the details of the upload request type in the **Upload Request Type** zone.

Adjustment Upload Request (Used for Searching)

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 1517
- [Adjustment Upload Request](#) on page 1526
- [Adjustment Data Records](#) on page 1528

Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Upload Request Type | Used to search adjustment upload requests which are created using a particular upload request type. | No |
| Status | Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending For Approval | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Upload From Date | Used to search adjustment upload requests which are created from a particular date onwards. | No |
| | Note: By default, the current date appears in this field. | |
| To | Used to search adjustment upload requests which are created till a particular date. | No |
| | Note: By default, the current date appears in this field. | |
| File Name | Used to search an adjustment upload request which is created while uploading an adjustment data file. | No |

Note: You must specify at least one search criterion while searching for an adjustment upload request.

- **Search Results** — On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------|--|
| Upload Date | Displays the date and time when the adjustment data file is uploaded in the system. |
| Upload Request Information | Displays information about the adjustment upload request. |
| | Note: It has a link. On clicking the link, the Adjustment Upload Request screen appears where you can view the details of the respective upload request. |
| Status | Indicates the status of the adjustment upload request. |
| Upload Request Type | Indicates the upload request type using which the adjustment data file is uploaded in the system. |
| File Name | Displays the name of the adjustment data file. |

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for an Adjustment Upload Request

Prerequisites

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

Uploading an Adjustment Data File

Prerequisites

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Upload Adjustment Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Upload Request Type | Used to indicate the upload request type using which you want to upload the adjustment data file. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| | Note: The list includes only those upload request types which are in the Active status. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. Note: You can replace an existing file when the adjustment upload request is in the Pending or Cancelled status. | No |
| File Name | Used to specify the name and path of the adjustment data file that you want to upload. Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system. | Yes |

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.
The adjustment data file name and path appears in the **File Name** field.
9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

| Column Name | Column Description |
|-------------------------|---|
| Errors | Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column. Note: This column appears when you click the Save button. |
| Account Identifier Type | Indicates the account identifier type. |
| Account Identifier | Displays the value of the account identifier type. |
| Account ID | Indicates the account for which the adjustment must be created. |
| Match Type | Indicates the match type using which the adjustment must be created. |
| Match Value | Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created. |
| Adjustment Type | Indicates the adjustment type using which the adjustment must be created. |
| Adjustment Amount | Displays the adjustment amount. |
| Currency Code | Indicates the currency in which the adjustment must be created. |
| Comments | Displays additional information about the adjustment. |
| Bill ID | Indicates the bill on which the adjustment must be created. |

| Column Name | Column Description |
|--------------|---|
| Arrears Date | Displays the date from when the amount is outstanding on the bill. |
| Char Type 1 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 1 | Displays the value of the characteristic type. |
| Char Type 2 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 2 | Displays the value of the characteristic type. |
| Char Type 3 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 3 | Displays the value of the characteristic type. |
| Char Type 4 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 4 | Displays the value of the characteristic type. |
| Char Type 5 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 5 | Displays the value of the characteristic type. |

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Replacing an Adjustment Data File

Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------|---|-----------------------|
| Upload Request Type | Used to indicate the upload request type using which you want to upload the adjustment data file. | Yes |
| | Note: The list includes only those upload request types which are in the Active status. | |
| Replace Existing File | Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. | No |
| | Note: You can replace an existing file when the adjustment upload request is in the Pending or Cancelled status. | |
| File Name | Used to specify the name and path of the adjustment data file that you want to upload. | Yes |
| | Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system. | |

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

10. Click Submit.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

| Column Name | Column Description |
|-------------------------|--|
| Errors | Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column. |
| | Note: This column appears when you click the Save button. |
| Account Identifier Type | Indicates the account identifier type. |
| Account Identifier | Displays the value of the account identifier type. |
| Account ID | Indicates the account for which the adjustment must be created. |
| Match Type | Indicates the match type using which the adjustment must be created. |
| Match Value | Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created. |
| Adjustment Type | Indicates the adjustment type using which the adjustment must be created. |
| Adjustment Amount | Displays the adjustment amount. |
| Currency Code | Indicates the currency in which the adjustment must be created. |
| Comments | Displays additional information about the adjustment. |
| Bill ID | Indicates the bill on which the adjustment must be created. |
| Arrears Date | Displays the date from when the amount is outstanding on the bill. |
| Char Type 1 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 1 | Displays the value of the characteristic type. |
| Char Type 2 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 2 | Displays the value of the characteristic type. |
| Char Type 3 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 3 | Displays the value of the characteristic type. |
| Char Type 4 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 4 | Displays the value of the characteristic type. |
| Char Type 5 | Indicates the characteristic that must be defined for the adjustment. |
| Char Value 5 | Displays the value of the characteristic type. |

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

11. Click Save.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.

- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Adjustment Upload Request (Used for Viewing)

The **Adjustment Upload Request** screen allows you to:

- Edit the details of an adjustment upload request
- Delete or cancel an adjustment upload request
- View the details of an adjustment upload request
- Submit an adjustment upload request for processing
- Approve or reject an adjustment upload request
- Request the submitter to resubmit an adjustment upload request for approval
- Withdraw an adjustment upload request
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

It consists of the following tabs:

- [Adjustment Upload Request - Main](#) on page 1525
-

Adjustment Upload Request - Main

The **Main** tab displays information about the adjustment upload request. It contains the following zones:

- [Adjustment Upload Request](#) on page 1526

- [Adjustment Data Records](#) on page 1528

Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- **Header** — This section provides basic information about the upload request. It contains the following fields:

| Field Name | Field Description |
|----------------------------|--|
| Upload Request Information | <p>Displays information about the adjustment upload request. The information string contains the following comma-separated values:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Status Description • Upload Request ID <p>Note: This information string is generated using the C1-FLREQ-INF algorithm which is attached to the Information system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.</p> |
| Status | <p>Indicates the status of the adjustment upload request. The valid values are:</p> <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending for Approval |
| Status Reason | <p>Indicates the reason why the adjustment data file is cancelled or rejected.</p> <p>Note: This field appears when the adjustment upload request is in the Cancelled or Rejected status.</p> |
| File Name | <p>Displays the name of the adjustment data file for which the adjustment upload request is created.</p> |

- **Record Actions** — This section contains the following buttons:

| Button Name | Button Description |
|-------------------|--|
| Cancel File | <p>Used to cancel an adjustment data file.</p> <p>Note: The Cancel File button appears when the adjustment upload request is in the Pending status.</p> |
| Create Adjustment | <p>Used to create adjustments for the records which are uploaded through the adjustment data file.</p> |

| Button Name | Button Description |
|---------------------|---|
| | <p>Note: The Create Adjustment button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded. |
| Submit for Approval | <p>Used to submit the adjustment data file for approval.</p> <p>Note: The Submit for Approval button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded. |
| Approve | <p>Used to approve the adjustment data file.</p> <p>Note: The Approve button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file. |
| Reject | <p>Used to reject the adjustment data file.</p> <p>Note: The Reject button appears when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file. |

Note: The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled, Completed, Deferred, or Rejected**.

- Record Information** — This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | <p>Indicates the business object using which the adjustment upload request is created.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.</p> |
| Status Date/Time | Displays the date and time when the adjustment upload request status is updated. |
| Create Date/Time | Displays the date and time when the adjustment upload request is created. |

Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file when the adjustment upload request is in the **Pending** status.

Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Cancellation Reason | Used to indicate the reason why you want to cancel the adjustment data file. | Yes |

Note: The **Cancel File** button appears when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.

The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Related Topics

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- Main** – This tab contains the following two zones:
 - Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

Submitting an Adjustment Data File for Approval

Procedure

To submit an adjustment data file for approval:

- Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
- Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

Note:

The **Submit for Approval** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

Approving an Adjustment Data File

Procedure

To approve an adjustment data file:

- Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
- Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 - If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

Rejecting an Adjustment Data File

Prerequisites

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

Procedure

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 4. If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Rejection Reason | Used to indicate the reason why you want to reject the adjustment data file. | Yes |

Note:

The **Reject** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

5. Select the rejection reason from the list.
6. Click **Save**.

The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

Viewing the Log of an Adjustment Upload Request

Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.

- **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

| Column Name | Column Description |
|----------------|--|
| Date/Time | Displays the date and time when the action was performed on the adjustment upload request. |
| Details | Displays the details about the action performed on the adjustment upload request. |
| User | Indicates the user who has performed the action on the adjustment upload request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the adjustment upload request. |
| Status Reason | Indicates the reason why the adjustment upload request was rejected or cancelled. |

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Adjustment Upload Request

Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Request Information | Displays information about the adjustment upload request. | Not applicable |
| Log Details | Used to specify additional comments for the adjustment upload request. | Yes |

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 21

Payment Request

Topics:

- [Prerequisites](#)
- [Payment Creation Request \(Without Approval\) Status Transition](#)
- [Payment Creation Request \(With Approval\) Status Transition](#)
- [Payment Transfer Request \(Without Approval\) Status Transition](#)
- [Payment Transfer Request \(With Approval\) Status Transition](#)

- [Algorithms Used in C1-PaymentTransferRequest](#)
- [Payment Request Type](#)
- [Payment Request \(Used for Searching\)](#)
- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments. If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Creation Request \(Without Approval\) Status Transition](#) on page 1540 and [Payment Creation Request \(With Approval\) Status Transition](#) on page 1541.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 1539.

Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

| Match Type | Description | Payment Distribution Override Algorithm | Manual Distribution Algorithm | Entity Type | Match Type Search Zone | Entity Flag |
|------------|--------------------------------------|---|-------------------------------|-------------|------------------------|--------------|
| BILLR | By Bill Regular | C1-PDOV-PYBL | C1-MD-BILL | Account | C1_ACCTSRCH | Bill |
| BILLW | By Bill Weighted | C1-PDOV-WTBS | C1-MD-BILL | Account | C1_ACCTSRCH | Bill |
| BILL-WO | By Bill Weighted Outstanding Amount | C1-PDOV-WTOA | | Account | C1_ACCT_SRCH | Bill |
| BILLSEG | By Bill Segment | C1-PDOV-PYBS | C1-MD-BSEG | Account | C1_ACCTSRCH | Bill Segment |
| BYSATY | By Suspense Contract | C1-PDOV-SATY | C1-MD-ONSA | Account | C1_ACCTSRCH | Contract |
| SETT-ID | By Settlement ID | C1-PDOV-PYSL | C1-MD-SID | Account | C1_ACCTSRCH | Settlement |
| BYBILL | By Bill | C1-PDOV-PYBL or C1-PDOV-WTBS | C1-MDBYBILL | Bill | CI_BILL | Bill |
| BILL-BS | By Bill - Pay By Bill Segment Oldest | C1-PDOV-BSDT | | Account | C1_ACCT_SRCH | Bill |

Note: The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

Note: The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen

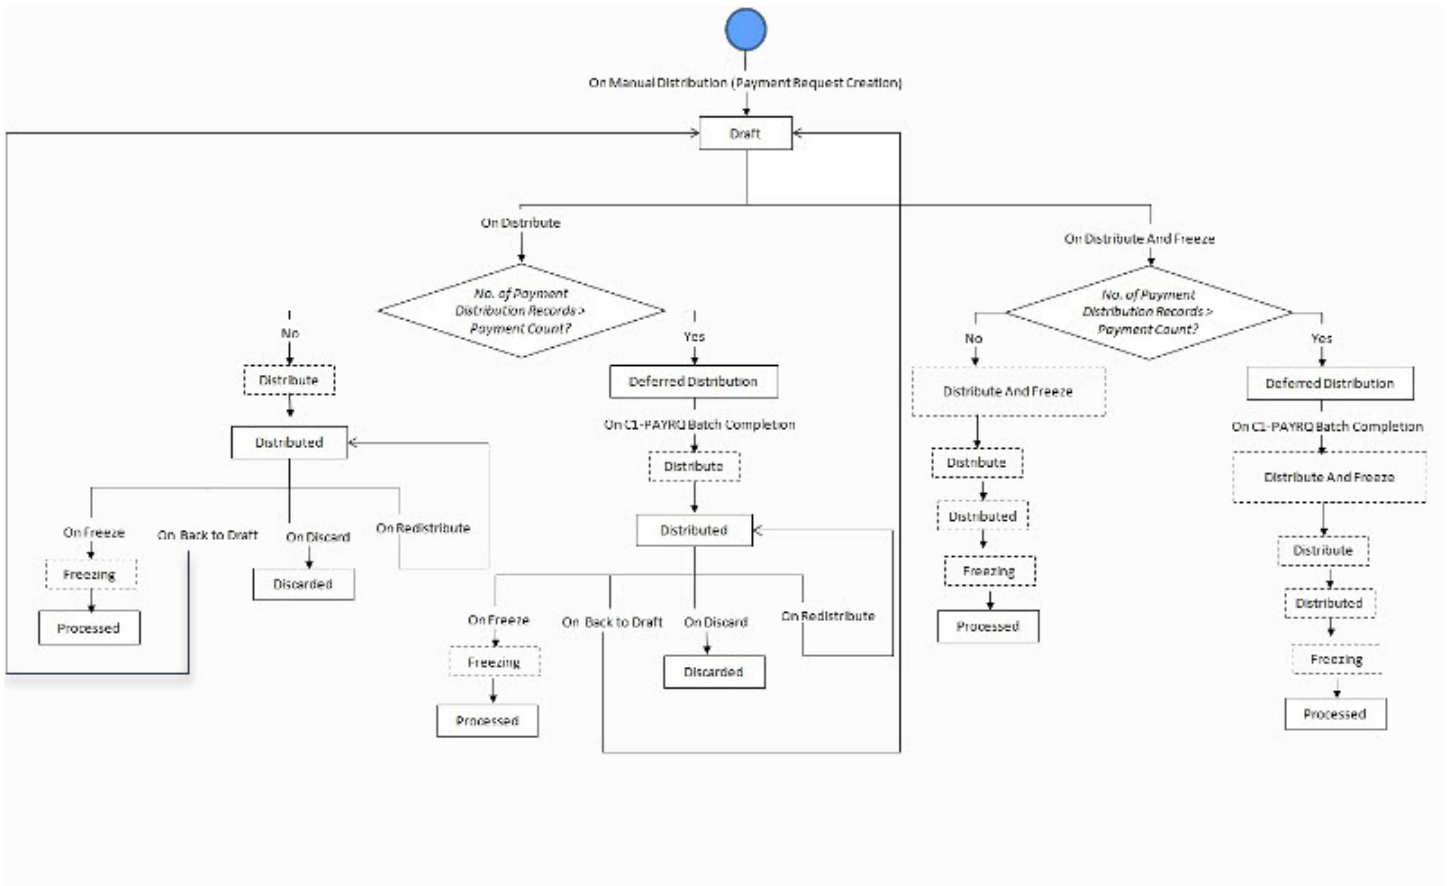

- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration
- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

C1-PAYRQ-INF

This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Request Type Description
- Payment Request Status Description
- Payment Request ID

C1-PAYREQPOS

This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the **C1_PAY_DISTRIBUTION** table when you remove a match type while editing a payment request.

C1-PAYREQVAL

This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the **Generate Auto Pay** option is selected. This algorithm is triggered when you click the **Manual Distribution** button.

Note: You do not specify the tender and auto pay details while creating a payment transfer request.

C1-PAY-DFT

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

C1-PAYDFTEXT

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

C1-PAY-PFA

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

C1-PAYPFAEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-PAY-APP

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

C1-PAY-DIST

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

C1-PAY-MONT

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

C1-PAYCREATE

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1_PAY_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1_PAY_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

C1-FRZ-VALID

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

C1-PAY-V-FRZ

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

C1-PAY-FRZ

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|--|
| Information | C1-PAYRQ-INF | C1-PAYRQ-INF | Refer to C1-PAYRQ-INF on page 1548 |

| System Event | Algorithm | Algorithm Type | Description |

| Status | System Event | Algorithm | Algorithm Type | Description |
|-------------------|--------------|-------------|----------------|---|
| Discarded | Enter | C1-PAY-RJT | C1-PAY-RJT | Refer to C1-PAY-RJT on page 1550 |
| Distribute Freeze | And Enter | C1-ISFREEZE | C1-ISFREEZE | Refer to C1-ISFREEZE on page 1550 |
| Cancel | - | - | - | - |

C1-PYTRDF

This algorithm invokes manual distribution algorithm of the match types that you have selected while creating a payment transfer request. It checks whether the payment transfer count exceeds the defer processing count. If the payment transfer count exceeds the defer processing count, the system changes the status of the payment transfer request to **Payment Derivation Pending**.

C1-PAY-DFT

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

C1-PAYDFTEXT

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

C1-PYTR-MONT

This algorithm is invoked from the **Payment Transfer Deferred Periodic Monitor (C1-PAYTR)** monitor batch. The system fetches the list of payments depending on whether payment transfer is done at the payment event or payment level. It then considers the payments which are eligible for transfer from the payment list based on the following transfer priority:

1. Payments created on the suspense contract (if any)
2. Payments created on the on account contract (if any)
3. Payments created on the excess credit contract (if any)
4. Payments created against bills in the descending order of bill date followed by the descending order of payment amount (when there two or more bills with the same bill date)

Once the system identifies the payments for transfer from the payment list, the payment transfer request is created and the status is changed from **Payment Derivation Pending** to **Draft**. A payment transfer record is created in the **C1_PAY_DETAILS** table along with the transfer priority and cancel switch.

C1-PYTR-UPDT

This algorithm is invoked when you click the **Update Transfer Amount** button. The system allows you to change the transfer amount, if required. On changing the transfer amount, system determines the payments which are eligible for transfer and changes the status of the payment transfer request to **Payment Derivation Pending** or **Draft**.

C1-PAY-PFA

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

C1-PAYPFAEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-PAY-APP

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

C1-PAY-DIST

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

C1-PAY-MONT

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

C1-PAYCREATE

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1_PAY_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1_PAY_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

C1-FRZ-VALID

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

C1-PAY-V-FRZ

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

C1-PAY-FRZ

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 1554
- [Payment Request Type](#) on page 1555

Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Payment Request Type | Displays the payment request type. |
| Description | Displays the description of the payment request type. |
| Edit | On clicking the Edit () icon, the Payment Request Type screen appears where you can edit the details of the payment request type. |
| Duplicate | On clicking the Duplicate () icon, the Payment Request Type screen appears where you can define a payment request type using an existing payment request type. |
| Delete | On clicking the Delete () icon, you can delete the payment request type. Note: You can delete a payment request type when you have not created a payment request using the payment request type. |

On clicking the **Broadcast** () icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** - This section provides basic information about the payment request type. It contains the following fields:

| Field Name | Field Description |
|---------------------------------|---|
| Payment Request Type | Displays the payment request type. |
| Payment Request Business Object | Indicates the business object that will be used to create the payment request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Description | Displays the description of the payment request type. |
| Detailed Description | Displays additional information about the payment request type. |
| Status | Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Defer Algorithm | Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode. |

| Field Name | Field Description |
|--------------------------------|--|
| | <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |
| Approval Required | Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type. |
| Approval To Do Type | <p>Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> |
| Approval To Do Role | <p>Indicates that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |
| Transfer | Indicates whether the payment request type will be used to create payment transfer or payment creation request. |
| Defer Payment Processing Count | <p>Indicates whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count.</p> <p>Note: This field appears when the Transfer option is selected.</p> |

- **Characteristics** - This section lists the characteristics of the payment request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the payment request type. |

| Button Name | Button Description |
|-------------|--|
| Delete | Used to delete the payment request type. |
| | Note: You can delete a payment request type when you have not created a payment request using the payment request type. |
| Duplicate | Used to create a new payment request type using an existing payment request type. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|-----------------|---|
| Business Object | Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to a payment request type in the **Payment Request Type List** zone.

Defining a Payment Request Type

Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Payment Request Type**.

A sub-menu appears.

- Click the **Add** option from the **Payment Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|---|-----------------------|
| Payment Request Type Business Object | Used to indicate the business object that you want to use to create the payment request type. | Yes |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

- Select the required payment request type business object from the respective field.
- Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request type.
- Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Payment Request Type | Used to specify the payment request type. | Yes |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> Active Inactive | Yes |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| | <p>payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note: Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. When the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked, the system checks whether there are any payment requests in the Deferred Distribution status. If there is a payment request in the Deferred Distribution status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> | |
| Approval Required | Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type. | No |
| Approval To Do Type | <p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p>Note: This field appears when the Approval Required check box is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p> |
| Transfer | Used to indicate whether the payment request type will be used to create payment transfer or payment creation request. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Defer Payment Processing Count | Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count. Note: This field appears when the Transfer option is selected. You cannot specify a negative value in the Defer Payment Processing Count field. If you do not specify the defer payment processing count, by default, it is set to zero (0). Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. For more information about the Payment Request Periodic Monitor (C1-PAYRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i> . If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately). | No |

6. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.

8. Click **Save**.

The payment request type is defined.

Defining a Characteristic for a Payment Request Type

Prerequisites

To define a characteristic for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

Procedure

To define a characteristic for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Request Type . | Note: This field is required when you are defining a characteristic for the payment request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment request type. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Payment Request Type

Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To edit a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Payment Request Type | Displays the payment request type. | Not applicable |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define the characteristics for the payment request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|--|-----------------------|
| Payment Request Type | Used to specify the payment request type. | Yes |
| Business Object | Indicates the payment request type business object used while defining the payment request type. | Not applicable |
| Payment Request Business Object | Used to indicate the business object that you want to use while creating the payment request. | Yes |
| Description | Used to specify the description for the payment request type. | Yes |
| Detailed Description | Used to specify additional information about the payment request type. | No |
| Status | Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive | Yes |
| Defer Algorithm | Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|--|
| | <p>If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). | Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|--|
| | Note: This field appears when the Approval Required check box is selected. | Note: This field is required when the Approval Required check box is selected. |
| Transfer | Used to indicate whether the payment request type will be used to create payment transfer or payment creation request. | No |
| Defer Payment Processing Count | Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceeds the defer processing count. Note: This field appears when the Transfer option is selected. You cannot specify a negative value in the Defer Payment Processing Count field. If you do not specify the defer payment processing count, by default, it is set to zero (0). Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. For more information about the Payment Request Periodic Monitor (C1-PAYRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i> . If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately). | No |

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Request Type** zone to create a copy of the payment request type.

5. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment request type, if required.
7. Click **Save**.

The new payment request type is defined.

Deleting a Payment Request Type

Procedure

To delete a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the payment request type that you want to delete.
A message appears confirming whether you want to delete the payment request type.

Note: You can delete a payment request type when you have not created a payment request using the payment request type.

Tip: Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.

5. Click **OK**.
The payment request type is deleted.

Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. It contains the following zone:

- [Search Payment Request](#) on page 1569

Through this screen, you can navigate to the following screen:

- [Payment Request \(Used for Viewing\)](#) on page 1573

Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"> Request Details Payment Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| Created From | Used to search payment requests which are created from a particular date and time onwards. | No |
| | Note: This field appears when you select the Request Details option from the Search By list. | |
| Payment Request Status | Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"> Approval In Progress | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Deferred Distribution • Discarded • Distribute And Freeze • Distributed • Draft • Processed • Rejected <p>Note: This field appears when you select the Request Details option from the Search By list.</p> | |
| Created To | <p>Used to search payment requests which are created till a particular date and time.</p> <p>Note: This field appears when you select the Request Details option from the Search By list.</p> | No |
| User ID | <p>Used to search payment requests which are created by a particular user.</p> <p>Note: This field appears when you select the Request Details option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the User Search window appears.</p> | No |
| Payment Request Type | <p>Used to search payment requests which are created using a particular payment request type.</p> <p>Note: This field appears when you select the Request Details option from the Search By list.</p> | No |
| Payment Request ID | <p>Used to search a particular payment request.</p> <p>Note: This field appears when you select the Request Details option from the Search By list.</p> | No |
| Payment Event ID | <p>Used to search a payment request through which a payment event is created.</p> <p>Note: This field appears when you select the Payment Details option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| Payor Account ID | Used to search payment requests which are created for a particular payor account. | No |
| | <p>Note:</p> <p>This field appears when you select the Payment Details option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | |
| Payment Date | Used to search payment requests through which payments are created on a particular date. | No |
| | <p>Note: This field appears when you select the Payment Details option from the Search By list.</p> | |
| Payor Name | Used to search payment requests which are created for a particular payor. | No |
| | <p>Note: This field appears when you select the Payment Details option from the Search By list.</p> | |

Note: You must specify at least one search criterion while searching for a payment request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|-----------------------------|--|
| Create Date/Time | Displays the date and time when the payment request was created in the system. |
| Payment Request Information | <p>Displays information about the payment request.</p> <p>Note: It has a link. On clicking the link, the Payment Request screen appears where you can view the details of the respective payment request.</p> |
| Status | <p>Indicates the status of the payment request. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected |
| Payment Event Information | Displays information about the payment event which is created through the payment request. |

| Column Name | Column Description |
|---------------------------|--|
| | Note: It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event. |
| Created By | Indicates the user who has created the payment request. |
| Payor Account Information | Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Payment Request

Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Request** sub-menu.
The **Payment Request** screen appears.
4. Enter the search criteria in the **Search Payment Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment requests that meet the search criteria appears in the **Search Results** section.

Viewing the Payment Request Details

Procedure

To view the details of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Details** – Displays the payments transferred through the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
3. View the details of the payment request in the **Payment Request** zone.
 4. View the payments transferred through the payment request in the **Payment Details** zone.
 5. View the payment distribution records of the payment request in the **Payment Distribution** zone.

Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount

- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request
- View the payments transferred through a payment request
- Update the transfer amount against each entity
- Redistribute the tender or payment amount of a payment segment

It consists of the following tabs:

- [Payment Request - Main](#) on page 1574
- [Payment Request - Log](#) on page 1582

Payment Request - Main

The **Main** tab displays information about the payment request. It contains the following zones:

- [Payment Request](#) on page 1574
- [Payment Details](#) on page 1579
- [Payment Distribution](#) on page 1580

Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** – This section provides basic information about the payment request. It contains the following fields:

| Field Name | Field Description |
|-----------------------------|---|
| Payment Request Information | Displays information about the payment request. |
| Payment Request Type | Indicates the payment request type using which the payment request is created. Note: It has a link. On clicking the link, the Payment Request Type screen appears where you can view the details of the payment request type. |
| Payment Request Status | Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected |
| Status Reason | Indicates the reason why the payment request is rejected. |

| Field Name | Field Description |
|---------------------------|---|
| | <p>Note:</p> <p>This field appears when the payment request is in the Rejected status.</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected reason.</p> |
| Payor Account Information | <p>Displays information about the payor's account for which the payment request is created.</p> <p>Note:</p> <p>This field appears when you are viewing the details of a payment creation request.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Payment Date | Displays the date when the payment event and payments are created. |
| Payment Event Information | <p>Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.</p> <p>Note:</p> <p>This field does not appear when the payment request is in the Rejected status.</p> <p>If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the Draft status.</p> <p>It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.</p> |
| Maximum Transfer Amount | <p>Displays the maximum amount which can be transferred.</p> <p>Note: This field appears when you are viewing the details of a payment transfer request.</p> |
| Transfer Amount | <p>Displays the total payment amount which you want to transfer.</p> <p>Note: This field appears when you are viewing the details of a payment transfer request.</p> |
| Transfer Reason | <p>Indicates the reason why you want to transfer the payment amount.</p> <p>Note: This field appears when you are viewing the details of a payment transfer request.</p> |

- **Tender Details** – This section provides details about the tender used in the payment request. This section appears when you are viewing the details of a payment creation request. It contains the following fields:

| Field Name | Field Description |
|-------------|--|
| Tender Type | Indicates the type of tender through which the payment was made. |

| Field Name | Field Description |
|------------------------------|---|
| Tender Amount | Displays the tender amount. |
| Currency | Indicates the currency in which the payment was made. |
| Check Number | Displays the cheque number if the payment is made through the cheque. |
| Auto Pay Route Type Code | Indicates when and how automatic payment request of the account is routed to a financial institution. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Schedule Extract Date | Displays the date when the automatic payment request is scheduled to be sent to a financial institution. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Auto Pay Source Code | Indicates the financial institution that receives the automatic payment request. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Distribution and Freeze Date | Displays the date when the automatic payment must be distributed and frozen in the system. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Account Number | Indicates the bank account number through which the automatic payment was made. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Expires On | Displays the date when the tender type will expire. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Name | Displays the name of the person as maintained in the financial institution's system. Note: This field appears when you select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. |
| Tender Control Information | Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |

| Field Name | Field Description |
|-----------------------------|--|
| | <p>Note:</p> <p>This field appears only when the payment request is in the Distributed, Approval In Progress, Processed , or Rejected status.</p> <p>It has a link. On clicking the link, the Tender Control screen appears where you can view the details of the respective tender control.</p> |
| Deposit Control Information | <p>Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This field appears only when the payment request is in the Distributed, Approval In Progress, Processed, or Rejected status.</p> <p>It has a link. On clicking the link, the Deposit Control screen appears where you can view the details of the respective deposit control.</p> |
| Pay Tender ID | <p>Displays the payment tender ID.</p> <p>Note: This field appears only when the payment request is in the Processed status.</p> |
| Tender Status | <p>Indicates the current status of the tender. The valid values are:</p> <ul style="list-style-type: none"> • Valid • Cancelled <p>Note: This field appears when the payment request is in the Processed status.</p> |
| MICR ID | Displays the MICR code on the payment. |
| Ext. Reference ID | Displays the external reference number of the payment as it appears in the payment upload interface record. |
| Person ID | Indicates the person's account ID as it appears in the payment upload interface record. |
| Name | Indicates the person name as it appears in the payment upload interface record. |

- **Characteristics** – This section lists the characteristics of the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** – This section contains the following buttons:

| Column Name | Column Description |
|-------------|--|
| Edit | Used to edit the details of the payment request. |

| Column Name | Column Description |
|------------------------|--|
| | Note: The Edit button appears when the payment request is in the Draft status. |
| Delete | Used to delete the payment request. Note: The Delete button appears when the payment request is in the Draft status. |
| Update Transfer Amount | Used to update the transfer amount. Note: The Update Transfer Amount button appears when the payment transfer request is in the Draft status. It is used for changing the transfer process from full to partial payment. |
| Update Tender Details | Used to update the tender details. Note: The Update Tender Details button appears when the payment transfer request is in the Processed status. |
| Distribute | Used to distribute the tender or payment amount. Note: The Distribute button appears when the payment request is in the Draft status. |
| Submit for Approval | Used to submit the payment request for approval. Note: The Submit for Approval button appears when: <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is selected in the payment request type using which the payment request is created. |
| Freeze | Used to freeze the payments which are created through the payment request. Note: The Freeze button appears when: <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is not selected in the payment request type using which the payment request is created. |
| Approve | Used to approve the payment request. Note: The Approve button appears when: <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request. |
| Reject | Used to reject the payment request. Note: The Reject button appears when: <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request. |

| Column Name | Column Description |
|-----------------------|---|
| Back to Draft | Used to change the status of the payment request to Draft . |
| | Note: The Back to Draft button appears when the payment request is in the Distributed status. |
| Discard | Used to discard the payment creation or transfer request. |
| | Note: The Discard button appears when the payment request is in the Distributed status. |
| Distribute And Freeze | Used to distribute and freeze the payments at the same time. |
| | Note: The Distribute And Freeze button appears only when the payment request is in the Draft status. |

- **Record Information** – This section contains the following fields:

| Field Name | Field Description |
|------------------|--|
| Business Object | Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the payment request status is updated |
| Create Date/Time | Displays the date and time when the payment request is created. |

- **Match Types** – This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

| Column Name | Column Description |
|-------------|---|
| Match Type | Indicates the match type using which you want to match the payment. |
| Match By | Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment. |

Payment Details

The **Payment Details** zone lists the payments which are transferred through the payment request. This zone contains the following column:

| Column Name | Column Description |
|---------------------|--|
| Payment Information | Displays the concatenated string consisting of payment information which is separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |

| Column Name | Column Description |
|-------------|---|
| | <p>Note:</p> <p>It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment.</p> <p>This zone appears only when the following conditions are met:</p> <ul style="list-style-type: none"> • Partial payment transfer is done at the payment event level • Full or partial payment transfer is done at the payment level |

Creating a Payment Creation Request

Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

Procedure

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Payment Request Type | Used to indicate the payment request type using which you want to create the payment creation request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|--|-----------------------|
| | Note: The list includes only those payment request types where the Transfer check box is not selected. | |

Tip: Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

4. Select the required payment request type from the respective field.
5. Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Payment Request Type | Indicates the payment request type using which you want to create the payment request. | Not applicable |
| Payor Account Information | Used to indicate the payor account for which you want to create the payment request. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. On specifying the account ID, the information about the account appears corresponding to the Payor Account Information field. | Yes |
| Payment Date | Used to specify the date when the payment was made. Note: By default, the current date appears in this field. | Yes |

- **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Tender Type | Used to indicate the type of tender through which the payment is made. | Yes |
| Tender Amount | Used to specify the tender amount. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|--|--|
| | <p>Note:</p> <p>By default, this field is disabled. It is enabled when you specify the payor account information.</p> <p>You must not specify the value less than or equal to 0.</p> <p>The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.</p> | |

| Name | <p>Used to specify the name of the person as maintained in the financial institution's system.</p> <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. By default, the payor name appears in this field.</p> | No |
| MICR ID | Used to specify the MICR code on the payment. | No |
| Ext. Reference ID | Used to specify the external reference number of the payment on the payment upload interface record. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Person ID | Used to specify the person's account ID mentioned in the payment upload interface record. | No |
| Name | Used to specify the name of the person as it appears in the payment upload interface record. | No |
| Tender Control ID | Used to indicate the tender control ID. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Tender Control Search window appears. On specifying the tender control ID, the description of the tender control ID appears corresponding to the Tender Control ID field. | No |
| Deposit Control Information | Used to indicate the deposit control ID. Note: It is a read-only field. The data appears in this field when the tender control ID is specified. | No |

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the payment tender. |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>On specifying the business object, the description of the business object appears corresponding to the Characteristic Value field.</p> | |

- **Match Types** - Used to define match types for the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | Used to indicate whether the default payment amount should be displayed against the match type entities. | No |
| | <p>Note: By default, the Show Default check box is selected when you select the match type.</p> | |
| Entity | <p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill - Enables you to select the unpaid bill against which you want to match the payment. • Statement - Enables you to select the statement against which you want to match the payment. | Not applicable |
| Entity ID | Used to specify the account, bill ID, or statement ID depending on the match type entity. | Yes |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, based on the selected match type, the relevant entity Search window appears.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Entity ID field.</p> | |

6. Enter the required details.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.
8. Click **Manual Distribution**.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

| Match Type | Match Entity | Entities |
|----------------------|--------------|---|
| By Bill Regular | Account | Unpaid bills of the account |
| By Bill Weighted | Account | Unpaid bills of the account |
| By Bill | Bill | Unpaid bill |
| By Bill Segments | Account | Unpaid bill segments |
| By Suspense Contract | Account | Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone. |
| By Settlement | Account | Unpaid bill segments where the settlement account is stamped |
| By Statement | Statement | Unpaid bills of the statement |

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Defining a Characteristic for a Payment Tender**Prerequisites**

To define a characteristic for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

Procedure

To define a characteristic for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment tender. |

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing the Payment Amount

Procedure

To edit the payment amount against each entity:

- Search for the payment creation or transfer request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request whose details you want to edit.

The **Payment Request** screen appears.

- Ensure that the **Main** tab is selected.
- Click the **Update Payment Amount** link in the upper right corner of the **Payment Distribution** zone.

The **Payment Request - Edit Payment Amount** screen appears. It contains the following sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description |
|-------------|---|
| Match Type | Used to search the entities which are considered using a particular match type. Note: By default, the All option is selected. |
| Sort By | Used to indicate the entity based on which the search result is sorted. Note: By default, the All option is selected. |
| Sort By | Used to indicate the entity fields based on which the search result is sorted. Note: By default, the All option is selected. The data in this field appears when the match type is selected. |
| Match Value | Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID). |
| Order | Used to indicate the sequence for the search result. The valid values are: |

| Field Name | Field Description |
|------------|---|
| | <ul style="list-style-type: none"> Ascending Descending |

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Match Type | Indicates the match type using which the entity is considered. |
| Payee Information | Displays information about the account for which the payment was made. |
| Entity Information | Displays information about the entity against which the payment was matched. |
| Original Bill Amount | Displays the entity amount. |
| | Note: In case of contract, the entity amount would be zero (0). |
| Paid Amount | Displays the amount which is already paid against the entity. |
| Unpaid Amount | Displays the amount which is eligible for payment against the entity. |
| Payment Amount | Used to specify the payment amount. |
| | Note: If the Allow Overpayment option type of the C1-PAYPORTAL feature configuration is set to true , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity. |
| Payment Currency | Indicates the currency in which the payment is made. |

In addition, the **Search Results** section contains the following fields:

| Field Name | Field Description |
|-----------------|--|
| Total Amount | Displays the tender or transfer amount. |
| Running Total | Displays the total payment amount which is specified against each entity. |
| Running Balance | Displays the difference between the total amount and running total. |
| | Note: The running balance is highlighted in the red color when the difference amount is non-zero. |

Note: Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (), **Next** (), and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

5. Modify the payment amount against an entity, if required.

Note: The sum of payment amount should be equal to the tender or transfer (payment) amount.

6. Click **Save**.

The changes made in the payment amount are saved.

7. Click **Close**.

The payment amount is updated in the **Payment Distribution** zone.

Editing a Payment Creation Request

Procedure

To edit a payment creation request:

1. Search for the payment creation request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|--|-----------------------|
| Payment Request Information | Displays information about the payment creation request. | Not applicable |
| Payment Request Type | Indicates the payment request type using which the payment creation request is created. | Not applicable |
| Payor Account Information | Used to indicate the payor account for which you want to create the payment creation request. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears. On specifying the payor account, the description of the payor account appears corresponding to the Payor Account Information field. | Yes |
| Payment Date | Used to specify the date when the payment is made. | Yes |

- **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------|---|---|
| Tender Type | Used to indicate the type of tender through which the payment is made. | Yes |
| Tender Amount | Used to specify the tender amount. Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system. | Yes |
| Currency | Used to indicate the currency in which the payment is made. | Yes |
| Check Number | Used to specify the check number if the payment is made through check. | No |
| Auto Pay Route Type Code | Used to indicate when and how automatic payment request of the account is routed to a financial institution. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Auto Pay Route Type Search window appears. On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the Auto Pay Route Type Code field. | Yes (Conditional) Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected. |
| Schedule Extract Date | Displays the date when the automatic payment request is scheduled to be sent to a financial institution. Note: The data appears only when you: <ul style="list-style-type: none"> Select a tender type where the Generate Auto Pay check box is selected. Specify the values for Auto Pay Route Type Code and Auto Pay Source Code fields. | Not applicable |
| Auto Pay Source Code | Used to indicate the financial institution that receives the automatic payment request. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|--|
| | <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Auto Pay Source Search window appears.</p> <p>On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the Auto Pay Source Code field.</p> | <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.</p> |
| Distribution and Freeze Date | <p>Displays the date when the automatic payment must be distributed and frozen in the system.</p> <p>Note: The data appears only when you:</p> <ul style="list-style-type: none"> Select a tender type where the Generate Auto Pay checkbox is selected in the Tender Type screen. Specify the values for Auto Pay Route Type Code and Auto Pay Source Code fields. | Not applicable |

| Expires On | <p>Used to specify the date till when the tender is effective.</p> <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.</p> | No |
| Name | <p>Used to specify the name of the person as it appears in the financial institution's system.</p> <p>Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.</p> | No |
| MICR ID | Used to specify the MICR code on the payment. | No |
| Ext. Reference ID | Used to specify the external reference number of the payment on the payment upload interface record. | No |
| Person ID | Used to specify the person's account ID mentioned in the payment upload interface record. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Name | Used to specify the name of the person as it appears in the payment upload interface record. | No |
| Tender Control ID | Used to indicate the payment tender ID. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Tender Control Search window appears. On specifying the tender control ID, the description of the tender control ID appears corresponding to the Tender Control ID field. | No |
| Deposit Control Information | Used to indicate the deposit control ID. Note: It is a read-only field. The data appears in this field when the tender control ID is specified. | No |

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to edit the characteristics for the payment tender. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender . | Note: This field is required when you are defining a characteristic for the payment tender. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears. On specifying the business object, the description of the business object appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the payment tender. |

- **Match Types** - Used to edit match types for the payment creation request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | Used to indicate whether the default payment amount should be displayed against the match type entities. | No |
| | Note: By default, the Show Default check box is selected when you select the match type. | |
| Entity | <p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill - Enables you to select the unpaid bill against which you want to match the payment. • Statement - Enables you to select the statement against which you want to match the payment. | Not applicable |
| Entity ID | Used to specify the account or bill ID depending on the match type entity. | Yes |
| | <p>Note:</p> <p>This field appears as read-only while you are viewing the match types which are added for the payment creation request.</p> <p>If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information.</p> <p>In that case, the Search (🔍) icon appears corresponding to this field. On clicking the Search icon, based on the selected match type, the relevant entity Search window appears. On specifying the entity, the description of the entity appears corresponding to the Entity ID field.</p> | |

Note: The **Edit** button appears when the payment creation request is in the **Draft** status.

4. Modify the details of the payment creation request, if required.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Define, edit, or remove characteristics of the payment request, if required.

6. Click **Manual Distribution**.

The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

Deleting a Payment Creation or Transfer Request**Procedure**

To delete a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request that you want to delete.

The **Payment Request** screen appears.

3. Click the **Delete** button in the **Payment Request** zone.

A message appears confirming whether you want to delete the payment creation or transfer request.

Note: The **Delete** button appears when the payment creation or transfer request is in the **Draft** status.

4. Click **OK**.

The payment creation or transfer request is deleted.

Distributing the Tender or Payment Amount

Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.

The **Payment Request** screen appears.

3. Click the **Distribute** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

Note:

The **Distribute** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Distributing and Freezing the Tender or Payment Amount**Procedure**

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.

The **Payment Request** screen appears.

3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status,

the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

Note:

The **Distribute And Freeze** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount

Procedure

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.

The **Payment Request** screen appears.

3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.

The required payment gets redistributed among the account's contracts.

Note: The **Redistribute** button appears when the payment status is in **Incomplete**, **Error**, or **Freezable** status.

| How to edit the payment amount against each entity | Editing the Payment Amount on page 1591 |

Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount when there are multiple pay segments in a payment.

Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

| Field Name | Field Description |
|---------------------------|---|
| Payment Event Information | Displays information about the payment event which is created through the payment request. |
| Payment Information | Displays information about the payment which is created through the payment event. |
| Payee Account Information | Displays information about the account for which the payment is made. |
| Match Value | Displays information about the entity against which the payment is matched. |
| Payment Amount | Displays the total payment amount. |
| Running Total | Displays the sum of payment amount specified against each pay segment. |
| Running Balance | Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero. |

In addition, this section contains the following columns:

| Column Name | Column Description | Mandatory (Yes or No) |
|--------------------|---|-----------------------|
| Sr No | Indicates the sequence number of the pay segment. | Not applicable |
| Entity Information | Displays information about the entity (such as bill segment or contract) against which the pay segment is created. | Not applicable |
| Total Amount | Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount. | Not applicable |
| Unpaid Amount | Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount. | Not applicable |
| Payment Amount | Used to specify the payment amount that you want to distribute against the pay segment. | Yes |

| Column Name | Column Description | Mandatory (Yes or No) |
|------------------|--|-----------------------|
| | <p>Note: This field is non-editable when:</p> <ul style="list-style-type: none"> • There is only one pay segment in a payment. • A user with the approval To Do role is reviewing the pay segment amount. | |
| Payment Currency | Indicates the currency in which the payment was made. | Not applicable |
| Pay Segment ID | Displays the pay segment ID. | Not applicable |

Note:

The **Detail** button appears in the **Detail** column when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.

The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

Freezing Payments Created Through a Payment Request**Procedure**

To freeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

| If you are... | Then |
|--|---|
| Freezing the payments created through a payment creation request | The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed . |
| Freezing the payments created through a payment transfer request | The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed . |

Note:

The **Freeze** button appears when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Creation or Transfer Request for Approval

Procedure

To submit a payment creation or transfer request for approval:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request that you want to submit for approval.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before submitting the payment creation or transfer request for approval.

4. Click the **Submit for Approval** button in the **Payment Request** zone.

The status of the payment creation or transfer request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

Note:

The **Submit for Approval** button appears when:

- The payment creation or transfer request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment creation or transfer request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment creation or transfer request for approval.

Approving a Payment Creation or Transfer Request

You can view the number of payment creation or transfer requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment creation or transfer request based on the observations.

Note: The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

Procedure

To approve a payment creation or transfer request:

1. Do either of the following:

| If you want to | Then |
|--|--|
| Approve a payment creation or transfer request through the Payment Request screen | <ol style="list-style-type: none"> 1. Search for the payment creation or transfer request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment creation or transfer request which you want to review. |
| Approve a payment creation or transfer request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. |

| If you want to | Then |
|----------------|--|
| | <p>The To Do Type for User Search window appears.</p> <ol style="list-style-type: none"> Enter C1-PAYRQ in the To Do Type field. Click the Search button corresponding to the To Do Type field. <p>The To Do List screen appears.</p> <ol style="list-style-type: none"> Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the payment creation or transfer request that you want to review. |

The **Payment Request** screen appears.

- Review the payment creation or transfer request details.
- Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

| If you are... | Then |
|--------------------------------------|--|
| Approving a payment creation request | The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment creation request is changed to Processed . |
| Approving a payment transfer request | The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment transfer request is changed to Processed . |

Note: The **Approve** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

Rejecting a Payment Creation or Transfer Request

Prerequisites

To reject a payment creation or transfer request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a payment creation or transfer request, you need to specify the reason why you want to reject the payment creation or transfer request. If you are rejecting a payment creation request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

Procedure

To reject a payment creation or transfer request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Reject a payment creation or transfer request through the Payment Request screen | <ol style="list-style-type: none"> 1. Search for the payment creation or transfer request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment creation or transfer request which you want to review. |
| Reject a payment creation or transfer request from the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-PAYRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the payment creation or transfer request that you want to review. |

The **Payment Request** screen appears.

2. Review the payment creation or transfer request details.
3. If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
4. Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the payment creation or transfer request. | Yes |

Note: The **Reject** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

5. Select the rejection reason from the **Status Reason** list.
6. Click **Save**.

If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

Discarding a Payment Creation or Transfer Request

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

Note:

The **Discard** button appears only when the payment creation or transfer request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment creation or transfer request is similar to rejecting a payment creation or transfer request. However, you can only reject a payment creation or transfer request, when the approval workflow is on while creating a payment creation or transfer request but discarding a payment creation or transfer request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Creation or Transfer Request

Procedure

To view the log of a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment creation or transfer request.
 - **Payment Distribution** – Lists the payment distribution records of the payment creation or transfer request.
 - **Log** – This tab lists the complete trail of actions performed on the payment creation or transfer request.
3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

| Column Name | Column Description |
|----------------|---|
| Date/Time | Displays the date and time when the action was performed on the payment creation or transfer request. |
| Details | Displays the details about the action performed on the payment creation or transfer request. |
| User | Indicates the user who has performed the action on the payment creation or transfer request. |
| Log Type | Indicates the type of log. |
| Related Object | Indicates the object or entity which is generated when the action is performed on the payment creation or transfer request. |
| Status Reason | Indicates the reason why the payment creation or transfer request was rejected. |

Note: You can manually add a log entry for the payment creation or transfer request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 1611
- [Payments](#) on page 1613
- [Payment Segments](#) on page 1615

Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------|---|-----------------------|
| Search By | <p>Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are:</p> <ul style="list-style-type: none"> • Payor Account/Payment Event • Tender Details • Suspense/Excess Credit Contract <p>Note: By default, the Payor Account/Payment Event option is selected.</p> | Yes |
| Payment Event ID | <p>Used to search a particular payment event.</p> <p>Note:</p> <p>This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.</p> | No |
| Payor Account ID | <p>Used to search payment events which are created for a particular payor account.</p> <p>Note:</p> <p>This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p> | No |
| Payor Name | <p>Used to search payment events which are created for a particular payor.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> | No |
| Payment Date | <p>Used to search payment events which are created on a particular date.</p> <p>Note: This field appears when you select the Payor Account/Payment Event option from the Search By list.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|---|-----------------------|
| Tender Type | Used to search payment events where a particular tender type is used. | No |
| | Note: This field appears when you select the Tender Details option from the Search By list. | |
| Check Number | Used to search a payment event which includes payments made through a particular check. | No |
| | Note: This field appears when you select the Tender Details option from the Search By list. | |
| MICR ID | Used to search payment events which include payments made with a particular MICR code. | No |
| | Note: This field appears when you select the Tender Details option from the Search By list. | |
| Contract ID | Used to search payment events which include payments made against a particular suspense or excess credit contract. | No |
| | <p>Note:</p> <p>This field appears when you select the Suspense/Excess Credit Contract option from the Search By list.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.</p> | |

Note: You must specify at least one search criterion while searching for a payment event.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|---------------------------|---|
| Payment Event Information | Displays additional information about the payment event. |
| | Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event. |
| Transfer | On clicking the Transfer button, you can transfer all payments (which are in either Frozen and Error status) of the payment event to another payee account. |
| | <p>Note: The Transfer button appears when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event. |

| Column Name | Column Description |
|------------------------|--|
| Cancel | On clicking the Cancel button, you can cancel all payments (which are in the Frozen status) of the payment event. |
| | <p>Note: The Cancel button appears when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen status. • One or more payments of the payment event are not in the Freezable or Error status. • There is no payment transfer request which is currently in progress for the payment event. |
| Delete | On clicking the Delete button, you can delete the payment event. |
| | <p>Note: The Delete button appears when the payments of a payment event are in the Freezable, Error or Incomplete status.</p> |
| Additional Information | Displays information about the status of the payment event. |
| Payment Date | Displays the date when the payment was made. |
| Payor Name | Indicates the person who has made the payment. |
| | <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> |
| Payor Account ID | Indicates the account which made the payment. |
| | <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |
| Tender Amount | Displays the tender amount. |
| Payment Event ID | Displays the payment event ID. |

Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

| Column Name | Column Description |
|-------------|--|
| Payment ID | Displays the payment ID. |
| | <p>Note: It has a link. On clicking the link, the Payment screen appears with the details of the respective payment.</p> |

| Column Name | Column Description |
|---------------------------|---|
| Payee Account Information | Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. |
| Payment Amount | Displays the amount paid through the tender. |
| Payment Currency | Indicates the currency in which the payment was made. |
| Payment Status | Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"> • Incomplete • Error • Freezable • Frozen • Canceled |
| Match Type | Indicates the match type using which the payment was matched. |
| Match Value | Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched. |
| Error Message | Indicates the reason why the payment is in the Error status. |
| Payor Account ID | Indicates the account which made the payment. |
| Refund Amount | Displays the amount which is already refunded to the payor account. |

In addition, this zone contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Transfer | Used to transfer the payment to another payee account. |
| | Note: You can transfer a payment when it is in the Frozen or Error status. |
| Cancel | Used to cancel the payment. |
| | Note: You can cancel a payment when it is in the Frozen status. |
| Delete | Used to delete the payment. |
| | Note: You can delete a payment when it is in the Freezable or Error status. |
| Refund | Used to refund the payment amount to the payor account. |
| | Note: You can refund the payment amount to the payor account when: <ul style="list-style-type: none"> • The payment is matched against the suspense or excess credit contract. • The payment is in the Frozen status. |

Searching for a Payment Event

Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.

- From the **Main Menu**, select **Payments** and then click **Payment Event Summary**.

The **Payment Event Summary** screen appears.

- Enter the search criteria in the **Search Payment Event** zone.

Note:

You can search for a payment event and payor account by clicking the **Search** (🔍) icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment events that meet the search criteria appears in the **Search Results** section.

Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

Prerequisites

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

Procedure

To create a payment transfer request:

- Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- Do either of the following:

| If you want to... | Then... |
|--|---|
| Transfer all payments of a payment event | <ol style="list-style-type: none"> In the Search Results section, click the Transfer button in the Transfer column corresponding to the payment event whose payments you want to transfer. <p>Note: The Transfer button appears only when:</p> <ul style="list-style-type: none"> One or more payments of the payment event are in the Frozen or Error status. There is no payment transfer request which is currently in progress for the payment event. |

| If you want to... | Then... |
|--|--|
| Transfer one or more payments of a payment event | <ol style="list-style-type: none"> 1. In the Search Results section, click the Broadcast () icon corresponding to the payment event whose payments you want to view. The Payments zone appears. 2. Select the check box corresponding to the payments that you want to transfer. 3. Click the Transfer button in the Payments zone. |
| | Note: You can transfer a payment when it is in the Frozen or Error status. |

The **Select Payment Request Type** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|-----------------------|
| Payment Request Type | Used to indicate the payment request type using which you want to create the payment transfer request. Note: The list includes only those payment request types where the Transfer check box is selected. | Yes |

3. Select the required payment request type from the respective field.
4. Click **OK**.
 - **Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|-----------------------|
| Payment Request Type | Indicates the payment request type using which you want to create the payment transfer request. | Not applicable |
| Payment Event Information | Displays information about the payment event whose payments you want to transfer. | Not applicable |
| Maximum Transfer Amount | Displays the maximum payment amount which you can transfer. Note: This is a read-only field. | Not applicable |
| Transfer Amount | Used to specify the total payment amount which you want to transfer. Note: By default, the maximum transfer amount appears in this field. | Yes |
| Payment Date | Used to specify the date when the payment is transferred. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------|--|-----------------------|
| | <p>Note:</p> <p>By default, the current date appears in this field.</p> <p>This field appears when you want to transfer all the payments of a payment event.</p> | |
| Transfer Reason | <p>Used to indicate the reason why you want to transfer the payments.</p> <p>Note: The list includes only those payment cancel reasons where the Payment Transfer check box is selected.</p> | Yes |

- **Match Types** - Used to define match types for the payment transfer request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Match Type | Used to indicate the match type using which you want to match the payment. | Yes |
| Show Default | <p>Used to indicate whether the default payment amount should be displayed against the match type entities.</p> <p>Note: The Show Default check box is selected when you select the match type.</p> | No |
| Entity | <p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill - Enables you to select the unpaid bill against which you want to match the payment. • Statement - Enables you to select the statement against which you want to match the payment. <p>Note: By default, this is a read-only field.</p> | Not applicable |
| Entity ID | <p>Used to indicate the account, bill ID, or statement ID depending on the match type entity.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, based on the selected match type, the relevant entity Search window appears.</p> | Yes |

5. Enter the required details.

Note: If you want to specify more than one match type within the payment transfer request, click the **Add (+)** icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete (🗑)** icon corresponding to the match type.

6. Click **Manual Distribution**.

The payment transfer request is created and the status of the payment transfer request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment transfer request, the following entities are listed in the **Payment Distribution** zone:

| Match Type | Match Entity | Entities |
|----------------------|--------------|---|
| By Bill Regular | Account | Unpaid bills of the account |
| By Bill Weighted | Account | Unpaid bills of the account |
| By Bill | Bill | Unpaid bill |
| By Bill Segments | Account | Unpaid bill segments |
| By Suspense Contract | Account | Contracts of the account |
| | | <p>Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone.</p> |
| By Settlement | Account | Unpaid bill segments where the settlement account is stamped |
| By Statement | Statement | Unpaid bills of the statement |

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment transfer request is already created for a payee account and is currently in progress, the system will not allow you to create another payment transfer request for the payee account until the previous payment transfer request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment transfer request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

If the entire refund amount is already processed for the payee account, the system will not allow you to create a payment transfer request.

Editing a Payment Transfer Request**Procedure**

To edit a payment transfer request:

1. Search for the payment transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment transfer request whose details you want to edit.

The **Payment Request** screen appears.

- Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-----------------------------|---|-----------------------|
| Payment Request Information | Displays information about the payment transfer request. | Not applicable |
| Payment Request Type | Indicates the payment request type using which the payment transfer request is created. | Not applicable |
| Payment Event Information | Displays information about the payment event. | Not applicable |
| Maximum Transfer Amount | Displays the maximum payment amount which you can transfer. | Not applicable |
| Transfer Amount | Displays the total payment amount which can be transferred. | Not applicable |
| | Note: This is a read-only field. | |
| Transfer Reason | Used to indicate the reason why you want to transfer the payments. | Yes |
| | Note: The list includes only those payment cancel reasons where the Payment Transfer check box is selected. | |
| Payment Date | Displays the date when the payment is made. | Yes |

- Match Types** - Used to edit match types for the payment transfer request. This section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------|--|-----------------------|
| Match Type | Indicates the match type using which you want to match the payment. | Yes |
| | Note: This field appears as read-only while you are viewing the match types which are added for the payment transfer request. | |
| Show Default | Indicates whether the default payment amount should be displayed against the match type entities. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| | <p>Note:</p> <p>This field appears as read-only while you are viewing the match types which are added for the payment transfer request.</p> <p>The Show Default check box is selected when you select the match type.</p> | |
| Entity | <p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill - Enables you to select the unpaid bill against which you want to match the payment. • Statement - Enables you to select the statement against which you want to match the payment. <p>Note: By default, this is a read-only field.</p> | Not applicable |
| Entity ID | <p>Used to indicate the account or bill ID depending on the match type entity.</p> <p>Note:</p> <p>This field appears as read-only while you are viewing the match types which are added for the payment transfer request.</p> <p>If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information. In that case, the Search (🔍) icon appears corresponding to this field. On clicking the Search icon, based on the selected match type, the relevant entity Search window appears. On specifying the entity, the description of the entity appears corresponding to the Entity ID field.</p> | Yes |

4. Modify the details of the payment transfer request, if required.

Note:

If you want to specify more than one match type within the payment transfer request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete** (🗑️) icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Click **Manual Distribution**.

The changes made to the payment transfer request are saved. The **Payment Request** screen appears. Depending on the information specified in the **Match Types** section, the following entities are listed in the **Payment Distribution** zone.

| Match Type | Match Entity | Entities |
|----------------------|--------------|---|
| By Bill Regular | Account | Unpaid bills of the account |
| By Bill Weighted | Account | Unpaid bills of the account |
| By Bill | Bill | Unpaid bill |
| By Bill Segments | Account | Unpaid bill segments |
| By Suspense Contract | Account | Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone. |
| By Settlement | Account | Unpaid bill segments where the settlement account is stamped |
| By Statement | Statement | Unpaid bills of the statement |

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Canceling a Payment Tender

Prerequisites

To cancel a payment tender, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment tender:

1. Search for the payment tender in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Tender Cancel** link in the **Cancel** column corresponding to the payment tender that you want to cancel.

The **Payment Event** screen appears.

Note: The **Tender Cancel** link appears when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

3. Ensure that the **Tenders** tab is selected.
4. Click the **Cancel** button in the **Tender Cancel** row.

The **Tender Cancel** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|------------------------|---|-----------------------|-------------------|-----------|--|------------------|---|-----|
| Cancel Reason | Used to indicate the reason why you want to cancel the payment tender. | Yes | | | | | | |
| Bank Account To Charge | Used to specify the bank details for cancellation charge purposes. <table border="1" data-bbox="527 1119 1218 1333"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Bank Code</td> <td>Used to indicate the bank code which should be charged for cancellation.</td> </tr> <tr> <td>Bank Account Key</td> <td>Used to indicate the bank account which should be charged for cancellation.</td> </tr> </tbody> </table> | Field Name | Field Description | Bank Code | Used to indicate the bank code which should be charged for cancellation. | Bank Account Key | Used to indicate the bank account which should be charged for cancellation. | Yes |
| Field Name | Field Description | | | | | | | |
| Bank Code | Used to indicate the bank code which should be charged for cancellation. | | | | | | | |
| Bank Account Key | Used to indicate the bank account which should be charged for cancellation. | | | | | | | |

5. Click **OK**.

The payment tender and all payments in the payment event are cancelled.

Chapter 22

Account Receivable Central

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Note: The **Unapply** button appears when the offset request is in the **Processed** status

| Bill Information | Original Outstanding Amount | Offset Amount | Remaining Bill Balance | Comments |
|------------------|-----------------------------|---------------|------------------------|---|
| Bill 1 | \$1200 | —\$800 | \$400 | Bill 1 amount \$1200 is offset against Bill 2. |
| Bill 2 | —\$1000 | \$500 | —\$500 | From Bill 2, \$500 is offset against from Bill 1. |
| Bill 3 | —\$300 | \$300 | 0 | From Bill 3, \$300 is offset against from Bill 1. |

Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

| Bill Information | Original Outstanding Amount | Offset Amount | Remaining Bill Balance | Comments |
|------------------|-----------------------------|---------------|------------------------|--|
| Bill 1 | \$2000 | —\$700 | \$1300 | The Offset amount \$400 is offset against Bill 2. |
| Bill 2 | —\$400 | \$400 | 0 | Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000. |
| Bill 3 | —\$300 | \$300 | 0 | Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600. |

Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

| Bill Information | Outstanding Amount | Outstanding Amount (in Offset currency) | Offset Amount | Remaining Bill Balance | Comments |
|------------------|--------------------|---|---------------|------------------------|--|
| Bill 1 | \$300 | \$300 | —\$130.1 | \$169.9 | Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$) |
| Bill 2 | —£100 | —\$130.1 | \$130.1 | 0 | Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1. |

Note: In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

Note: The adjustments are created in the currency of the bill.

Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

Refund

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

Write Off

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

Dispute

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

Account Receivable Central

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1634

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1689
- [Hold Request \(Used for Viewing\)](#) on page 1932
- [Refund Request](#) on page 1839
- [Write Off Request](#) on page 1872
- [Dispute Request \(Used for Viewing\)](#)

Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| Search By | Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details | Yes |
| | Note: By default, the Person Details option is selected. | |
| Person ID | Used to select the person ID based on which you want to search for bills of a person. | No |
| | Note: This field appears when you select the Person Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. | |
| Person Hierarchy | Used to indicate whether to display hierarchy of the person linked to a particular bill. | No |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Person Identifier Type | Used to select the identifier type based on which you want to search for bills of a person. | Yes (Conditional) |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Person Identifier | Used to specify the value of the person identifier type. | Yes (Conditional) |
| | Note: This field appears when you select the Person Details option from the Search By list. | |
| Bills on Hold | Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes | No |
| | | |
| Bill Balance | Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> • Equal to Zero | No |
| | | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|---|-----------------------|
| | <ul style="list-style-type: none"> • Greater Than Zero • Less Than Zero • Not Equal to Zero | |
| Pending Bills | Used to indicate whether the bill is pending. | No |
| Account ID | Used to search for bills of a particular account. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Account Identifier Type | Used to specify the account identifier type of the account whose bill you want to search. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Account Identifier | Used to select the account identifier based on which you want to search for bills of a particular account. Note: This field appears when you select the Account Details option from the Search By list. | No |
| Bill ID | Used to search a particular bill. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Alternate Bill ID | Used to search a particular bill using the alternate bill ID. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Invoice Currency | Used to search for bills which are billed in a particular currency. Note: This field appears when you select the Bill Details option from the Search By list. | No |
| Bill Date From | Used to search bills which are created from a particular date onwards. | No |
| To | Used to search bills which are created till a particular date. | No |
| Bill Outstanding Amount From | Used to search bills with a particular minimum outstanding amount. | |
| To | Used to search bills with a particular maximum outstanding amount. | |

Note: You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Bill Information | Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill. |
| Original Bill Amount | Displays the bill amount when the bill was generated. |
| Outstanding Amount | Displays the current bill balance amount. |
| Bill Date | Used to specify the date on which the bill was generated. |
| Hold Amount | Displays the amount from the bill that is on hold. |
| Account Information | Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective bill. |
| Person Information | Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective bill. |

This zone contains following buttons:

| Button Name | Button Description |
|-----------------------|--|
| Single Offset | Used to add the selected bill with same currency to an offset request. |
| Mass Offset | Used to add the selected bills with same currency to an offset request. |
| Cross Currency Offset | Used to add the selected bills with different currency to an offset request. |
| Hold | Used to add the selected bill to hold request to be put on hold. |
| Write Off | Used to add the selected bill to a write off request. |
| Refund | Used to add the selected bill to a refund request. |
| Dispute | Used to add the selected bill to a dispute request. |

Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- [Hold Details](#) on page 1638
- [Offset Details](#) on page 1638
- [Garnishment Details](#) on page 1638
- [Bill Line Items](#) on page 1639

Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

| Column Name | Column Description |
|----------------------------|---|
| Offset Request Information | Displays additional information about the offset request. |
| | Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request. |
| Offset Amount | Displays the total offset amount. |
| Creation Mode | Displays the mode of creation for offset request . The valid values are: <ul style="list-style-type: none"> • Automatic • Manual |

Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

| Column Name | Column Description |
|--------------------------|---|
| Hold Request Information | Displays additional information about the hold request. |
| | Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request. |
| Status | Indicates the status of the hold request. |
| Entity | Displays the type of entity. |
| Hold Entity | Displays additional information about the bill which is put on hold. |
| | Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Start Date | Displays the start date of the hold request. |
| End Date | Displays the end date of the hold request. |

Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

| Column Name | Column Description |
|----------------------|--|
| Garnishment Contract | Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |
| Garnishment Amount | Displays the total garnishment amount. |

Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

| Field Name | Field Description |
|----------------------------|--|
| Bill Line Item | Displays the bill line item (bill segment/adjustment) of the selected bills. |
| Bill Line Item Information | Displays the information about the bill line item. |
| | Note: It has a link. On clicking the link, the Bill Segment screen or Adjustments screen appears with the details of the respective bill line item or adjustments. |
| Amount | Displays the amount of the bill line item. |
| Contract Information | Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract. |

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**.
The **Account Receivable Central** screen appears.
3. Enter the search criteria in the **Search Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Note: The wild card search for searching bill in the **Search Bill** zone is applicable when you select the **Bill Details** option from the **Search By** list.

4. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the bill in the **Account Receivable Central** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▼) icon corresponding to the bill whose details you want to view.
A menu appears.
3. Click the **Go To Bill Information** menu option.
The **Bill Information** screen appears.
4. View the details of the bills in the **Bill Information** screen.

- [Offset Request Type](#)
- [Offset Request \(Used for Searching\)](#)
- [Offset Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to offset the credit and debit bills across accounts of the person and/or its hierarchy. However, you can offset bills across person's hierarchy when the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**.

You can offset a credit bill with a debit bill and vice-versa. You can offset one or more credit bills with one or more debit bills and vice-versa. You can offset the credit and debit bills in the same currency or in the different currencies. The system enables you to offset bills through an offset request. You can create an offset request from the following screens:

- [Account Receivable Central](#) on page 1634
- [Offset Request \(Used for Searching\)](#) on page 1683

You can create the following types of offset request from both the above screens:

- [Single Offset](#) on page 1643
- [Mass Offset](#) on page 1644
- [Cross Currency Offset](#) on page 1647

While creating an offset request, you need to specify an offset request type using which you want to create the offset request. It is the offset request type which helps the system to determine:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustment should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether the transfer or offset adjustments should be created while offsetting bills through an offset request.

In addition, while creating an offset request, you need to specify a primary bill for which you want to create the offset request. A primary bill can be a debit

or credit bill. Once the primary bill is added to an offset request, you can never remove it from the offset request.

Once you specify an offset request type and primary bill, the offset request is created in the **Draft** status. You can then add one or more debit or credit bills in the same or different currencies to the offset request depending on whether you want to create single, mass, or cross currency offset request. These bills are called as secondary bills. You can remove a secondary bill from the offset request when it is in the **Draft** status.

Once both the debit and credit bills are added to an offset request, the default offset amount is calculated for each bill. You can then update the offset amount of a bill, if required. Once the offset amount is specified for each bill, you can submit the offset request. On submitting an offset request, the system checks whether the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type). If the number of financial transactions does not exceed the defer processing count, the system creates the transfer or offset adjustments in the **Frozen** status. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. The batch then creates the transfer or offset adjustments for these offset requests in the **Frozen** status.

You can optionally configure the approval process for the offset request. The approver can either approve or reject an offset request based on the observations. The system also enables you to unapply (i.e. cancel) an offset request. On canceling an offset request, the transfer or offset adjustments created for bills through the offset request are canceled.

An offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1650 and [Offset Request \(With Approval\) Status Transition](#) on page 1651. Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request feature, see [Prerequisites](#) on page 1649.

Single Offset

Single offset means you can offset one credit bill against multiple debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for single offset:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|--|-------------|
| A1 | Bill 1 | 06-18-2018 | BS1 | 10 | -\$100 | -\$100 | -\$20 |
| | Bill 2 | 06-12-2018 | BS2 | 10 | \$30 | \$30 (This is because \$20 is already paid.) | \$10 |
| | | | BS3 | 20 | \$20 | | |
| | Bill 3 | 06-22-2018 | BS4 | 10 | \$30 | \$30 | \$10 |
| | Bill 4 | 06-28-2018 | BS5 | 20 | \$30 | \$40 | - |
| | | | BS6 | 30 | \$10 | | |

The system enables you to offset these bills through a single offset request. While creating a single offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 - (-\$20)) = (-\$100 + \$20) = -\$80$$

Sum of debit bills' amount which is available for offsetting:

$$((\$30 - \$10) + (\$30 - \$10) + (\$40)) = \$80$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a single offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the single offset with respect to the above example:

| Transfer | Transfer Adjustments |
|----------|--|
| 1 | <ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2 |
| 2 | <ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4 |
| 3 | <ul style="list-style-type: none"> \$30 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5 |
| 4 | <ul style="list-style-type: none"> \$10 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$10 transfer adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$80 offset adjustment is created for Bill 1 and matched to -\$100 Bill Segment Cancellation (BS1) FT 1
- \$20 offset adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2
- \$20 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- \$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5
- \$10 offset adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1660.

You can create a single offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a single offset request, see [Creating an Offset Request](#) on page 1687.

Mass Offset

Mass offset means you can offset one or more credit bills against one or more debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for mass offset:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| A11 | Bill 1 | 01-15-2019 | BS1 | 10 | -\$50 | -\$100 | - |
| | | | BS2 | 20 | -\$50 | | |

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| | Bill 2 | 01-20-2019 | BS3 | 10 | -\$50 | -\$50 | - |
| | Bill 3 | 01-18-2019 | BS4 | 10 | \$30 | \$50 | - |
| | | | BS5 | 10 | \$20 | | |
| A12 | Bill 4 | 01-21-2019 | BS6 | 10 | \$30 | \$30 | - |
| | Bill 5 | 01-25-2019 | BS7 | 20 | \$30 | \$40 | - |
| | | | BS8 | 30 | \$10 | | |
| A13 | Bill 6 | 01-29-2019 | BS9 | 10 | \$20 | \$20 | - |

The system enables you to offset these bills through a mass offset request. While creating a mass offset request, you can add the Bill 1 as the primary bill. Once the offset request is created, you can add another credit bill (i.e. Bill 2) and the debit bills – Bill 3, Bill 4, Bill 5, and Bill 6. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 + (-\$50)) = (-\$100 - \$50) = -\$150$$

Sum of debit bills' amount which is available for offsetting:

$$(\$50 + \$30 + \$40 + \$20) = \$140$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. In this case, the default offset amount is set to \$140. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a mass offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the mass offset with respect to the above example:

| Transfer | Transfer Adjustments |
|----------|---|
| 1 | <ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$30 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4 |

| Transfer | Transfer Adjustments |
|----------|---|
| 2 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$20 transfer adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5 |
| 3 | <ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6 |
| 4 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$20 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7 |
| 5 | <ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7 |
| 6 | <ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8 |
| 7 | <ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$20 transfer adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS1) FT 1
- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS2) FT 2
- \$40 offset adjustment is created for Bill 2 and matched to -\$50 Bill Segment Cancellation (BS3) FT 3
- -\$30 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- -\$20 offset adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5
- -\$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6
- -\$30 offset adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
- -\$10 offset adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8
- -\$20 offset adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1660.

You can create a mass offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a mass offset request, see [Creating an Offset Request](#) on page 1687.

Cross Currency Offset

Cross currency offset means you can offset one credit bill against multiple debit bills and vice-versa in the different currencies. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for cross currency offset:

| Account | Bill | Due Date | Bill Segment | Contract Type Priority | Bill Segment Amount | Outstanding Bill Amount | Hold Amount |
|---------|--------|------------|--------------|------------------------|---------------------|-------------------------|-------------|
| A1 | Bill 1 | 09-18-2018 | BS1 | 10 | -\$250 | -\$250 | - |
| | Bill 2 | 09-12-2018 | BS2 | 10 | €10 | €30 | - |
| | | | BS3 | 20 | €20 | | |
| | Bill 3 | 09-22-2018 | BS4 | 10 | €50 | €50 | - |
| | Bill 4 | 09-28-2018 | BS5 | 20 | €30 | €70 | - |
| | | | BS6 | 30 | €40 | | |

The system enables you to offset these bills through a cross currency offset request. While creating a cross currency offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. In a cross currency offset request, you can offset the bills which are in the currency different from the primary bill. For example, if you have added a primary bill with credit balance in USD, you can only add the debit bills in the currency other than USD. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

-\$250

Sum of credit bills' amount which is available for offsetting (in offset currency):

-€227

Sum of debit bills' amount which is available for offsetting:

(30€+50€+70€) =€150

Sum of debit bills' amount which is available for offsetting (in offset currency):

\$33+\$55+\$77=\$165

The system considers the credit or debit bills' total (in the primary bill's currency) whichever is less as the default offset amount. In this case, the default offset amount is set to \$165. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a cross currency offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the cross currency offset with respect to the above example:

| Transfer | Transfer Adjustments |
|----------|--|
| 1 | <ul style="list-style-type: none"> \$11 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€10 transfer adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2 |
| 2 | <ul style="list-style-type: none"> \$22 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€20 transfer adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3 |
| 3 | <ul style="list-style-type: none"> \$55 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€50 transfer adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4 |
| 4 | <ul style="list-style-type: none"> \$33 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€30 transfer adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5 |
| 5 | <ul style="list-style-type: none"> \$44 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€40 transfer adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6 |

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$165 offset adjustment is created for Bill 1 and matched to -\$250 Bill Segment Cancellation (BS1) FT 1
- €10 offset adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
- €20 offset adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
- €50 offset adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
- €30 offset adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
- €40 offset adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1660.

To use the cross currency offset request feature, you need to do the following:

- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.

You can create a cross currency offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a cross currency offset request, see [Creating an Offset Request](#) on page 1687.

Prerequisites

To setup the offset request feature, you need to do the following:

- Define the required offset adjustment types where the **A/P Request Type Code** field is not set to **REFUND**.
- Define a default offset amount algorithm using the **C1-OFST-AMT** algorithm type.
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive a To Do while submitting an offset request for approval.
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must not approve an offset request.
- Define the required offset request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Offset Request**.
- Define the values for the **CAN_RSN_CD_FLG** lookup field.
- Set the parameters of the **C1-UPD-FUND**, **C1-DFRUNAPLY**, **C1-WTBS-CRBL**, and **C1-OFST-DIST** algorithms.
- Define the status reasons for the **Rejected** and **Unapplied Offset** statuses of the **C1-OffsetRequest** business object in the **Status Reason** screen.
- Set the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration.
- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.
- Set the batch control type of the **Offset Request Periodic Monitor (C1-OFSRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

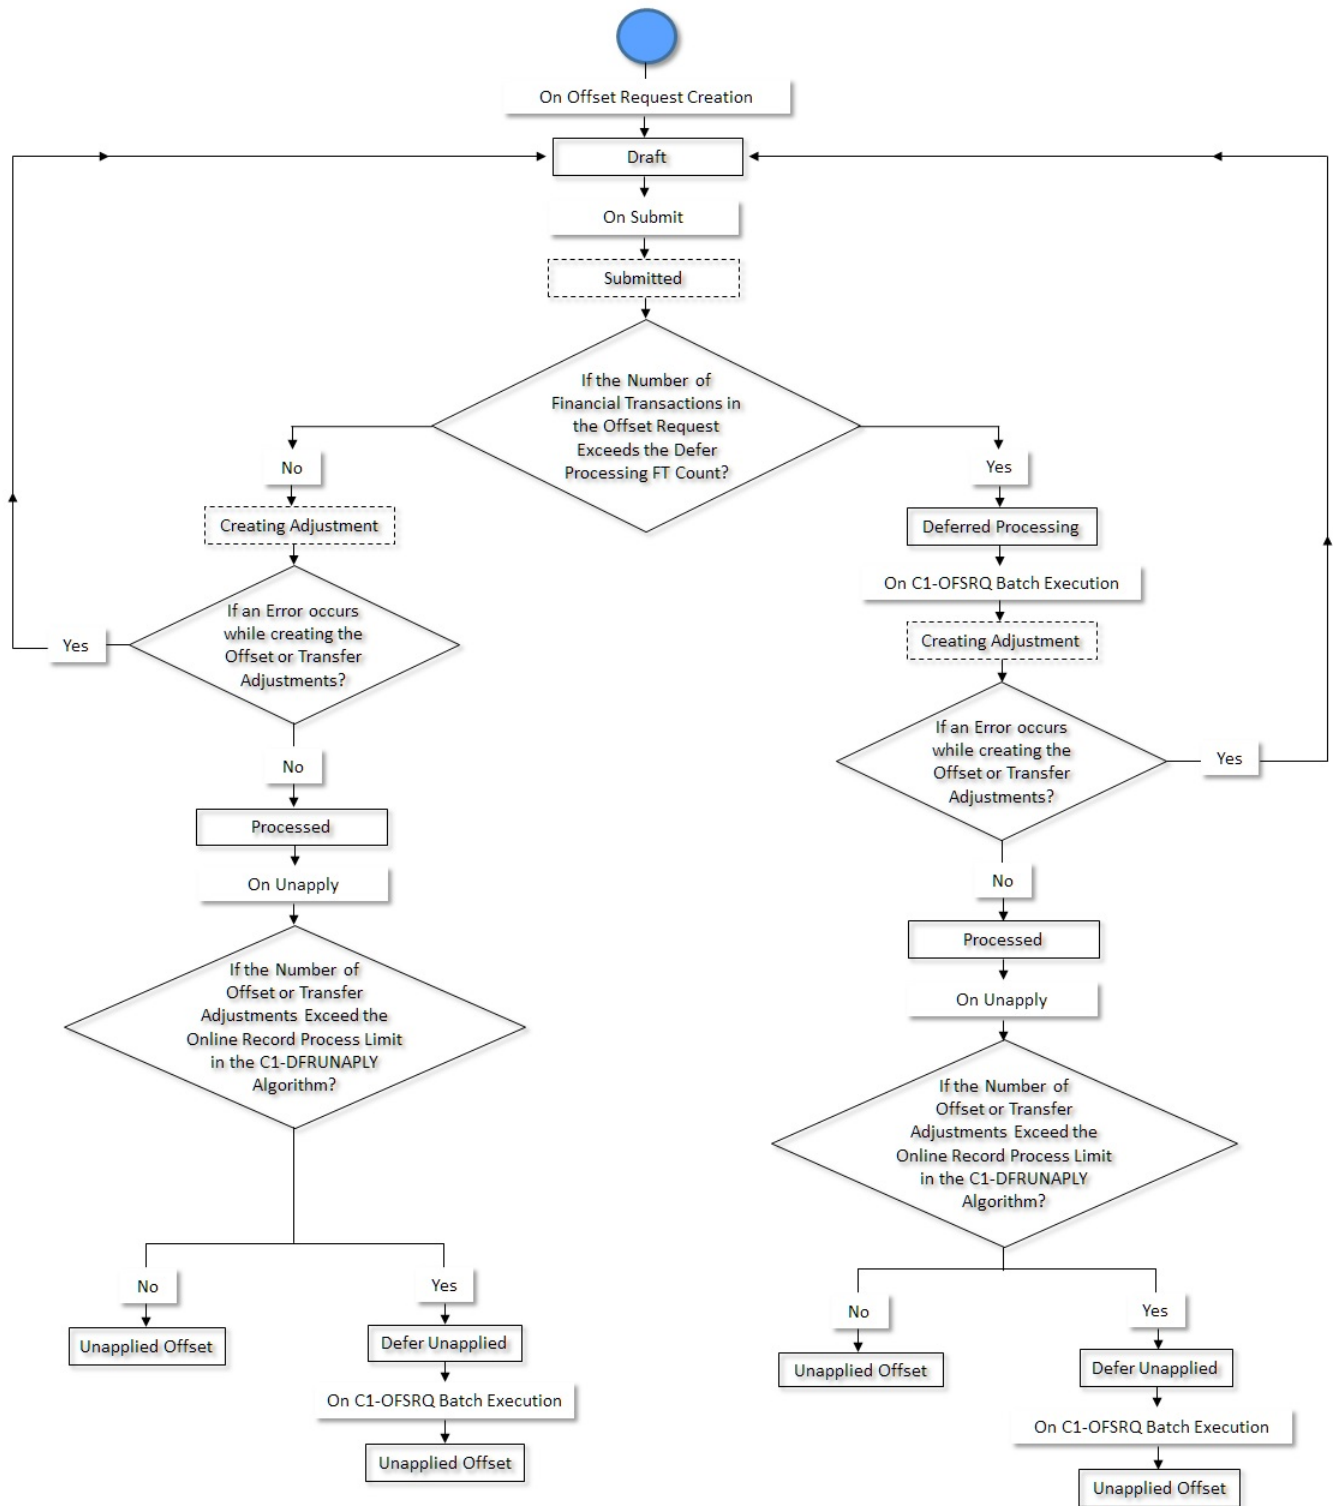

For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

Offset Request (Without Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when the approval process is not configured in the offset request type:

Offset Request (With Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when the approval process is configured in the offset request type:

Bill Line Items Level Offset

Until now, while offsetting two or more bills through an offset request, the system did not allow to consider a debit bill with a credit line item as a credit bill while offsetting. In addition, the system did not allow to add a bill with zero balance having debit and credit line items in an offset request.

Now, a new option named **Bill Line Items Level Offset** is available while defining an offset request type. If you select the **Bill Line Items Level Offset** option in an offset request type, the system allows you to do the following:

- Consider a debit bill with a credit line item as a credit bill while offsetting through an offset request
- Add a bill with zero balance having debit and credit line items in an offset request

For example, if you include a debit bill (BILL1) with the following line items in an offset request which is created using an offset request type where the **Bill Line Items Level Offset** option is selected:

| Bill Line Item | Amount |
|----------------|--------|
| BS1 | 100\$ |
| BS2 | 100\$ |
| BS3 | 200\$ |
| AD1 | -200\$ |

The system allows you add BILL1 as a credit bill in the offset request. Earlier, the system used to internally offset the bill and the outstanding bill amount was then available for offsetting with another bills in an offset request. Now, if you consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will not internally offset the bill and the credit line items would be available for offsetting with another bills in the offset request. However, if you do not consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will first internally offset the bill and then outstanding amount would be available for offsetting against another bills in the offset request.

If you select the **Bill Line Items Level Offset** option in an offset request type, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**. Otherwise, erroneous results might occur.

If you create an offset request using an offset request type where the **Bill Line Items Level Offset** option is selected, then:

- The following columns are additionally available in the **Offset Details** section while editing the offset request:
 - **Debit Balance** – Displays the sum of the unpaid debit line items of a bill
 - **Credit Balance** – Displays the sum of the open credit line items of a bill
 - **Credit Bill** – Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable. Note that you cannot select this option for a debit bill which no credit line item and therefore, in such case, this option is disabled.
- The default offset amount is set either to the sum of open credit balance of all credit bills in the offset request or to the sum of outstanding amount of all debit bills in the offset request whichever is less. While editing the offset amount, the system validates the following:
 - Offset amount is not greater than the outstanding amount of the debit bill
 - Offset amount is not greater than the open credit balance of the credit bill

- The **Debit Balance**, **Credit Balance**, and **Credit Bill** columns appear in the **Selected Bills** zone of the **Offset Request** screen.

As mentioned earlier, the system now allows you to add a bill with zero balance having debit and credit line items in an offset request. You can add a bill with zero balance from the following screens:

- Offset Request
- Account Receivable Central

While creating an offset request for a zero balance bill from the **Account Receivable Central** screen or while adding a zero balance bill to an offset request, the system validates the following:

- The **Bill Line Items Level Offset** option is selected the respective offset request type.
- The selected bill with zero balance is not fully matched.

We recommend you to add maximum 4 to 5 bills while offsetting the bills through an offset request using the **Bill Line Items Level Offset** feature.

Internal Offsetting of Zero Balance Bill

Oracle Revenue Management and Billing provides a new option type named **Avoid internal match event creation for zero dollar bill** in the **C1_FINTRANOP** feature configuration. You can set the value of this option type to:

- **Y** – Used when you do not want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.
- **N** – Used when you want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.

If you want to consider a zero balance bill for offsetting against another bills in an offset request, you should set the **Avoid internal match event creation for zero dollar bill** option type of the **C1_FINTRANOP** feature configuration to **Y**.

Automatic Offset of Debit and Credit Bill Line Items

The fully insured individual business do come across various scenarios wherein the customers would need a facility to automatically offset the debit and credit bill line items of an account. For example,

- An individual enrolls for a health plan. But the individual fails to pay the binder payment before the membership start date. As a result, the individual membership status is changed to **Canceled**. On canceling the individual membership, an adhoc invoice is generated in the system and the premium billed for the individual membership is reversed. In this scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account.
- An individual enrolls for a health plan having subsidy. The subsidy fully covers the premium, and therefore a zero balance bill is generated. If you internally offset a zero balance bill, the system matches the debit and credit line items of a zero balance bill on the bill completion. But, in this case, the match events are not created at the bill line item level. In such scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account such that match events are created at the bill line item level.

Oracle Revenue Management and Billing facilitates you with the auto maintenance process for accounts wherein the system will automatically offset the debit and credit bill line items of the accounts. The auto maintenance process is driven using the **Offset Request** feature ensuring that the match events are created at the bill line item level. Note that, at present, the auto maintenance process for accounts is only tested and certified for the different lines of business in the health insurance domain.

While running the auto maintenance process for an account, the system creates an auto maintenance offset request for the account when either of the following criteria is met:

- Total amount of the open and unmatched items of the account is equal to zero. For example, an A1 account has two bills – B1 for Jan 2023 with the open balance 200 and B2 for Feb 2023 with the open balance -200 and thereby the A1 account balance is zero.
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero. For example, an A2 account has three bills – B1 for Jan 2023 with the open balance 300, B2 for Feb 2023 with the open balance 300, and B3 for Feb 2023 with the open balance -300. Here, the overall account balance of A2 is not zero, but the account balance of A2 for Feb 2023 is zero.

Note: While running the auto maintenance process for an account, the system does not consider the payments applied on the On Account, Excess Credit, and Suspense contracts of the account.

The system creates an auto maintenance offset request for an account using an offset request type where the offset category is set to **Auto Maintenance**. A new field named **Offset Category** is available while defining an offset request type. It helps to differentiate between the traditional (i.e. manual) offset requests and automatic offset requests. If you want to create a manual offset request using an offset request type, you must set the offset category in the offset request type to **Regular**. However, if you want to create an automatic offset request using an offset request type, you must set the offset category in the offset request type to **Auto Maintenance**. By default, the offset category is set to **Regular**. Note that you cannot edit the offset category in an offset request type when an offset request is already created using the offset request type.

The system enables you to skip a set of accounts for which auto maintenance is not required. A new field named **SKIP_AUTOM_SW** is added in the **CI_ACCT** table. It indicates whether you want to skip auto maintenance for the account. At present, you can provide the skip auto maintenance information for an account through a healthcare inbound message and not from the user interface. The system then displays the skip auto maintenance information of an account in the **Main** section of the **Account Information** zone on the **Account** tab of the **Customer 360° Information** screen. Note that the **Skip Auto Maintenance** field appears in the **Main** section for the account only when it is set to **Y**.

To use the auto maintenance feature for accounts, you need to do the following:

- Create an offset request type where the offset category is set to **Auto Maintenance**

Note: While creating an offset request type for auto maintenance of accounts, you need to ensure that the **Bill Line Items Level Offset** option is selected and the **Transfer Adjustment** option is not selected.

- Set the **Avoid internal match event creation for zero dollar bill** option type of the **C1_FINTRANOP** feature configuration to **Y**

A new batch named **C1-AUTOM** is introduced in this release. It considers those accounts for auto maintenance where the **Skip Auto Maintenance** field is set to **N**. It then checks whether either of the following criteria is met for the account:

- Total amount of the open and unmatched items of the account is equal to zero
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero

Here, the system considers the eligible accounts with zero and non-zero balance. If the eligible account has zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items can be offset. If the eligible account has non-zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items of the same coverage period can be offset.

If either of the above two criteria is met, the system creates and processes an auto maintenance offset request. The auto maintenance offset request automatically closes the open and unmatched bill line items of the account that amounts to zero balance. To close an open and unmatched bill line item of the account, the system creates an offset request adjustment against each such debit or credit financial transaction. If the match event is present on any financial transaction, the same match event is stamped on the offset request adjustment. However, if the match event does not exist on any financial transaction, the system creates a new match event and stamps it against the financial transaction and its corresponding offset request adjustment.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

| Parameter Name | Mandatory (Yes or No) | Description |
|--|-----------------------|---|
| Division | Yes (Conditional) | Used when you want to run the auto maintenance process for the accounts which belong to a particular division. |
| | | Note: This parameter is required when you specify a customer class while executing this batch. |
| Customer Class | No | Used when you want to run the auto maintenance process for the accounts which belong to a particular customer class. |
| Offset Request Type | Yes | Used to indicate the offset request type using which you want to create auto maintenance offset requests for the accounts. |
| | | Note: Here, you must specify an offset request type where the offset category is set to Auto Maintenance . |
| Freeze Number of Days | Yes | Used to specify the number of days. The system considers those accounts for auto maintenance whose financial transactions are frozen in the last specified number of days. |
| | | Note: The parameter value must be greater than or equal to zero. |
| Skip Auto Maintenance for Accounts with Open Refund or Write Off Request (Y/N) | Yes | Used to indicate whether you want to skip auto maintenance for those accounts for which the refund or write off request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> • Y • N |
| | | Note: By default, the parameter value is set to Y. |
| Skip Auto Maintenance for Accounts with Open Payment, Payment Transfer Request (Y/N) | Yes | Used to indicate whether you want to skip auto maintenance for those accounts for which the payment creation or payment transfer request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> • Y • N |
| | | Note: By default, the parameter value is set to Y |
| Skip Auto Maintenance for Accounts with Open Offset Request (Y/N) | Yes | Used to indicate whether you want to skip auto maintenance for those accounts for which the manual offset request is still in the non-final status. The valid values are: <ul style="list-style-type: none"> • Y • N |
| | | Note: By default, the parameter value is set to Y |

| Parameter Name | Mandatory (Yes or No) | Description |
|------------------|-----------------------|--|
| Account ID | No | Used when you want to run the auto maintenance process for a particular account. |
| Thread Pool Name | No | Used to specify the thread pool on which you want to execute the batch. |

On successful completion of this batch, the system creates and processes an auto maintenance offset request for an account that meets the criteria. You can view the details of an auto maintenance offset request through the **Offset Request** screen.

While viewing the details of an auto maintenance offset request, the system displays the **Auto Maintenance Financial Transactions** zone instead of the **Selected Bills** and **Offset Request Adjustments** zones in the **Main** tab of the **Offset Request** screen. The system also displays the account information in the **Main** section of the **Offset Request** zone. The **Auto Maintenance Financial Transactions** zone lists the financial transactions of the account for which the corresponding offset request adjustments are created during the auto maintenance process.

To design the auto maintenance process for accounts, the following algorithms are enhanced:

- **C1-OFFSUBENT** – Here, some of the existing validations are skipped for an auto maintenance offset request and few new validations are introduced for an auto maintenance offset request.
- **C1-OFST-DIST** – Here, additional logic is added to handle the offset category and to create auto maintenance offset requests for accounts that meet the criteria. Note that the **Match Type**, **Match Type Entity**, and **Credit Bill Distribution Algorithm** parameters are not applicable while creating offset request adjustments for an auto maintenance offset request.

The system enables you to cancel an auto maintenance offset request, if required, through the **Unapply** button. While canceling an offset request, you need to specify a reason why you want to cancel an offset request. On canceling an auto maintenance offset request, the system cancels the offset request adjustments and opens the corresponding bill line items which were offset during auto maintenance of the account.

Algorithms Used in C1-OffsetRequest

The following table lists the algorithm which is attached to the **C1-OffsetRequest** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|--------------|----------------|---|
| Information | C1-OFFST-INF | C1-OFFST-INF | Refer to C1-OFFST-INF on page 1658. |

The following table lists the algorithms which are used in the lifecycle of the **C1-OffsetRequest** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |
|----------------------|--------------|--------------|----------------|---|
| Draft | Exit | F1-TODOCOMPL | F1-TODOCOMPL | Refer to F1-TODOCOMPL on page 1549. |

C1-OFFST-INF

This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Offset Request Type Description
2. Offset Request Status Description
3. Offset Request ID

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-OFFSUBENT

This algorithm is invoked when you click the **Submit** button. It validates the following:

- Whether the outstanding amount of the selected bills is not zero
- Whether the selected bills are in the **Complete** status
- Whether the overridden offset amount of a bill is not zero
- Whether the sum of the debit bills' offset amount is equal to the sum of the credit bills' offset amount
- Whether at least one debit and credit bills are selected in the offset request

If the validation is successful, it checks whether the **Approval Required** option is selected in the respective offset request type. If the **Approval Required** option is selected in the respective offset request type, it changes the status of the offset request to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective offset request type, it checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

C1-OFFAPPENT

This algorithm is invoked when the status of the offset request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type which is specified in the respective offset request type. Once a To Do is created, it is assigned to all users with the approval To Do role which is specified in the respective offset request type. In addition, it creates a log entry for the offset request when the To Do is created.

C1-OFFAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role which is specified in the respective offset request type. If so, it allows the approver to approve or reject the offset request. It also ensures that the submitter does not approve or reject the offset request.

C1-OFSAPRENT

This algorithm is invoked when you click the **Approve** button. It checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-OFST-DIST

This algorithm is invoked when the status of the offset request is changed to **Creating Adjustment**. It creates offset adjustments using the adjustment type specified in the offset request and sets the status of the offset adjustments to **Frozen**. If the **Transfer Adjustment** option is selected in the respective offset request type, it creates transfer adjustments in the **Frozen** status.

This algorithm distributes the offset amount of a bill in the following manner:

1. **Internal Offsetting Within Each Bill** - This happens when a bill contains both debit and credit line items. The internal offsetting happens either at the bill segment or contract level depending on the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. If the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BILL** or **SA**, the internal offsetting happens at the contract level. However, if the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BSEG**, the internal offsetting happens at the bill segment level. In the bill, the internal offsetting is done starting from a credit contract with highest payment priority against a debit contract with highest payment priority by creating transfer adjustments. This continues until the sum of credit or debit amount within a bill is exhausted.
2. **Offsetting Across Debit and Credit Bills** - This offsetting is always done from the credit bills to the debit bills with the objective to reduce the debit bill balance. This algorithm checks whether any match event is created for the bill. If so, it creates the offset adjustments against the bill using the existing match event. If there are no match events created for the bill, this algorithm creates match events using the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. It distributes the amount from the credit bill starting with the oldest due date. This continues until the credit bill balance is exhausted.

It contains the following parameters:

- **Match Type** - Used to specify the match type using which you want to distribute the offset amount. You must specify a match type where the payment distribution override algorithm is attached.

Note: If a bill which is offset is partially paid using a match type, this algorithm uses the same match type for offset distribution. However, if no payment is received for a bill which is offset, this algorithm uses the match type which is specified in the **Match Type** parameter for offset distribution.

- **Match Type Entity (Valid Values: BILL, BSEG, SA)** - Used to indicate the entity, such as bill, bill segment, or contract, against which you want to create match event. It is used to create match events for bills which are unpaid. The valid values are:
 - **BILL** - Used when you want to stamp same match event on all financial transactions of the bill.
 - **BSEG** - Used when you want to stamp unique match event on each bill segment or adjustment financial transaction.
 - **SA** - Used when you want to stamp same match event on all financial transactions which are created for the same contract.
- **Credit Bill Distribution Algorithm** - Used to specify an algorithm which helps to create offset adjustments for a credit bill at the bill segment level. This parameter is required when the **Transfer Adjustment** option is not selected in the respective offset request type.

Note: The **C1-WTBS-CRBL** algorithm type is shipped with the product. You can attach an algorithm created using the **C1-WTBS-CRBL** algorithm type to the **Credit Bill Distribution Algorithm** parameter. For more information, see [C1-WTBS-CRBL](#) on page 1661.

C1-UPD-HOLD

This algorithm updates the hold request whenever a bill on hold is offset through an offset request. If the remaining outstanding amount of a bill after offsetting is not zero and is less than the current hold amount, this algorithm updates the hold amount to the current hold amount plus remaining outstanding bill balance. For example, if the original outstanding amount is 80\$, hold amount is 40\$, offset amount is 20\$, then the remaining outstanding amount (i.e. $80\$ - 40\$ - 20\$ = 20\$$) is less than the current hold amount (i.e. 40\$). Therefore, this algorithm updates the hold amount of the bill in the hold request to 60\$ (i.e. $40\$ + 20\$$).

However, if the remaining outstanding amount of a bill after offsetting is zero and the bill is included in any active hold request, the hold end date of the bill in the hold request is changed to the system date.

In both the above scenarios, this algorithm creates a log entry for the offset and hold requests. The bill whose hold details (i.e. either hold amount or hold end date) are updated through the offset request is maintained in its log. Similarly, the old and updated hold amount and hold end date of the bill are maintained in the respective hold request log.

C1-UPD-FUND

If a bill which is offset through an offset request is present in a funding request which is in the **Draft** status, this algorithm updates the funding amount of the bill in the funding request. If entire sum of the funding and garnishment amount of a bill is offset through the offset request, the bill is excluded from the funding request.

It contains the following parameter:

- **Funding Exclusion Reason Code** - Used to indicate the reason why you want to exclude the bill from the funding request. This parameter is mandatory while excluding a bill from a funding request. You must specify a value which is already defined in the **CAN_RSN_CD_FLG** lookup field.

C1-DFRUNAPLY

This algorithm is invoked when you click the **Unapply** button. It checks whether the number of transfer or offset adjustments created through the offset request exceeds the online record process limit defined in this algorithm. If the number of transfer or offset adjustments does not exceed the online record process limit, the system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**. However, if the number of transfer or offset adjustments exceeds the online record process limit, the system changes the status of the offset request to **Defer Unapplied**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of transfer or offset adjustments you can process in the real time (i.e. immediately).

C1-UNAPOFST

This algorithm is invoked when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is executed. It cancels all transfer or offset adjustments created through the offset request and then changes the status of the offset request to **Unapplied Offset**.

C1-UPDT-FUND

Once the transfer or offset adjustments of a bill are canceled, it checks whether the bill is included in any funding request which is in the **Draft** status. If so, it updates the funding amount of the bill in the respective funding request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Additional Algorithms Used in Offset Request

Besides using the algorithms attached to the lifecycle, the system uses the following algorithms for the **Offset Request** feature:

- [C1-OFST-AMT](#) on page 1662
- [C1-WTBS-CRBL](#) on page 1661

C1-OFST-AMT

This algorithm calculates the default offset amount whenever a bill is added to the offset request. The default offset amount is equal to the sum of outstanding amount of the debit or credit bills whichever is less. For example, if the following bills are added to the offset request:

- Bill 1 (-100\$) where due date is set to 01-01-2018
- Bill 2 (-100\$) where due date is set to 01-01-2019
- Bill 3 (25\$) where due date is set to 01-01-2018
- Bill 4 (25\$) where due date is set to 06-01-2018

In such case, the system sets the default offset amount of Bill 1 to 50\$.

Note: This algorithm does not calculate the default offset amount until both the debit and credit bills are added to the offset request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Offset Request Type

Oracle Revenue Management and Billing allows you to define an offset request type using which you can create an offset request. It is the offset request type which helps the system to determine the following:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustments should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)

- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether transfer or offset adjustments should be created while offsetting bills through an offset request.
- Whether a debit bill with credit line item as a credit bill should be created in an offset request

The **Offset Request Type** screen allows you to define, edit, delete, and copy an offset request type. It contains the following zones:

- [Offset Request Type List](#) on page 1663
- [Offset Request Type](#) on page 1663

Offset Request Type List

The **Offset Request Type List** zone lists the offset request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|---------------------|--|
| Offset Request Type | Displays the offset request type. |
| Description | Displays the description of the offset request type. |
| Edit | On clicking the Edit (✎) icon, the Offset Request Type screen appears where you can edit the details of the offset request type. |
| Duplicate | On clicking the Duplicate (📄) icon, the Offset Request Type screen appears where you can define a new offset request type using an existing offset request type. |
| Delete | On clicking the Delete (🗑) icon, you can delete the offset request type. |
| | Note: You can delete an offset request type when an offset request is not created using the offset request type. |

On clicking the **Broadcast** (📡) icon corresponding to an offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. It contains the following sections:

- **Main** - Displays basic information about the offset request type. It contains the following fields:

| Field Name | Field Description |
|---------------------|--|
| Offset Request Type | Displays the offset request type. |
| Description | Displays the description of the offset request type. |

| Field Name | Field Description |
|---------------------------------|---|
| Offset Request Business Object | <p>Indicates the business object using which an offset request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> |
| Detailed Description | Displays additional information about the offset request type. |
| Status | <p>Indicates the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> Active Inactive |
| Offset Category | <p>Indicates the category of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> Auto Maintenance Regular |
| Adjustment Type | <p>Indicates the adjustment type using which the transfer or offset adjustments should be created.</p> <p>Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.</p> |
| Default Offset Amount Algorithm | <p>Indicates the algorithm using which the default offset amount should be calculated while adding a bill in an offset request.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> |
| Defer Processing FT Count | Displays the count which helps to determine whether an offset request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). |
| Approval Required | Indicates whether approval is required while offsetting bills through an offset request. |
| Approval To Do Type | <p>Indicates that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval.</p> <p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p> <p>This field appears when the Approval Required option is selected.</p> |
| Approval To Do Role | Indicates that users with the specified To Do role can only approve an offset request which is submitted for approval. |

| Field Name | Field Description |
|------------------------------|--|
| | <p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role.</p> <p>This field appears when the Approval Required option is selected.</p> |
| Submitter To Do Type | <p>Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the offset request type.</p> <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p> |
| Submitter To Do Role | <p>Indicates that users with the specified To Do role cannot approve an offset request which is submitted for approval.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p> |
| Bill Search Period | Displays the maximum search period (in days) which is allowed while searching bills in an offset request. |
| Transfer Adjustment | Indicates whether transfer adjustments should be created while offsetting bills through an offset request. |
| Bill Line Items Level Offset | <p>Indicates the following:</p> <ul style="list-style-type: none"> Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request Whether a bill with zero balance having debit and credit line items should be created in an offset request |

- **Characteristics** - Lists the characteristics defined for the offset request type. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the offset request type. |
| Delete | <p>Used to delete the offset request type.</p> <p>Note: You can delete an offset request type when an offset request is not created using the offset request type.</p> |
| Duplicate | Used to create a new offset request type using an existing offset request type. |

- **Record Information** - This section contains the following field:

| Field Name | Field Description |
|-----------------|--|
| Business Object | Indicates the business object using which the offset request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an offset request type in the **Offset Request Type List** zone.

Defining an Offset Request Type

Prerequisites

To define an offset request type, you should have:

- Offset request type business objects defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Offset Request Type** sub-menu.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|--|-----------------------|
| Offset Request Type | Used to specify the offset request type. | Yes |
| Business Object | Indicates the business object using which you are defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | <p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset.</p> | Yes |
| Offset Category | <p>Used to indicate the category of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Auto Maintenance - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to Auto Maintenance. • Regular - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to Regular. <p>Note: By default, the Regular option is selected.</p> | Yes |
| Adjustment Type | Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | |
| Default Offset Amount Algorithm | <p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | Yes |
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) |
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval. | Yes (Conditional) |
| | <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| | | Note: This field is required when the Approval Required option is selected. |
| Bill Search Period | Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. Note: If you do not specify any value, by default, it is set to 30 . If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request. | No |
| Transfer Adjustment | Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. Note: By default, the Transfer Adjustment option is selected. This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type. | No |
| Bill Line Items Level Offset | Used to indicate the following: <ul style="list-style-type: none"> Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request Whether a bill with zero balance having debit and credit line items should be created in an offset request Note: If you select the Bill Line Items Level Offset option, you need to ensure that Match Type Entity (Valid Values: BILL, BSEG, SA) parameter in the C1-OFST-DIST algorithm (which is attached to the Creating Adjustment status in the lifecycle of the C1-OffsetRequest business object) is set to BSEG . | No |

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

- Enter the required details in the **Main** section.

5. Define characteristics for the offset request type, if required.
6. Click **Save**.

The offset request type is defined.

Defining a Characteristic for an Offset Request Type

Prerequisites

To define a characteristic for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**).

Procedure

To define a characteristic for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request Type . | Note: This field is required when you are defining a characteristic for the offset request type. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. | Note: This field is required when you are defining a characteristic for the offset request type. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

| How to edit an offset request type | Editing an Offset Request Type on page 1672 |
| How to copy an offset request type | Copying an Offset Request Type on page 1677 |

Editing an Offset Request Type

Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Offset Request Type | Displays the offset request type. | Not applicable |
| Business Object | Indicates the business object which is used while defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | <p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset.</p> | Yes |
| Offset Category | <p>Indicates the category of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Auto Maintenance • Regular <p>Note: This is a read-only field.</p> | Not applicable |
| Adjustment Type | <p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Default Offset Amount Algorithm | Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request. | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------|---|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | |
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | No |
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |
| Approval To Do Type | Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval. | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | <p>At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | <p>Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval.</p> <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|-----------------------|
| Bill Search Period | Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. | No |
| | Note: If you do not specify any value, by default, it is set to 30 . | |
| Transfer Adjustment | Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. | No |
| | Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type. | |
| Bill Line Items Level Offset | Used to indicate the following: <ul style="list-style-type: none"> Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request Whether a bill with zero balance having debit and credit line items should be created in an offset request | No |
| | Note: If you select the Bill Line Items Level Offset option, you need to ensure that Match Type Entity (Valid Values: BILL, BSEG, SA) parameter in the C1-OFST-DIST algorithm (which is attached to the Creating Adjustment status in the lifecycle of the C1-OffsetRequest business object) is set to BSEG . | |

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Offset Request Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove characteristics of the offset request type, if required.
- Click **Save**.

The changes made to the offset request type are saved.

Deleting an Offset Request Type

Procedure

To delete an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the offset request type that you want to delete.
A message appears confirming whether you want to delete the offset request type.

Note: You can delete an offset request type when an offset request is not created using the offset request type.

Tip: Alternatively, you can delete an offset request type by clicking the **Delete** button in the **Offset Request Type** zone.

5. Click **OK**.
The offset request type is deleted.

Copying an Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type

- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **O** and then click **Offset Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Offset Request Type** sub-menu.

The **Offset Request Type** screen appears.

4. In the **Offset Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------|---|-----------------------|
| Offset Request Type | Used to specify the offset request type. | Yes |
| Business Object | Indicates the business object which is used while defining the offset request type. | Not applicable |
| Description | Used to specify the description for the offset request type. | Yes |
| Offset Request Business Object | Used to indicate the business object using which you want to create the respective offset request. | Yes |
| Detailed Description | Used to specify additional information about the offset request type. | No |
| Status | Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset. </div> | Yes |
| Offset Category | Used to indicate the category of the offset request type. The valid values are: <ul style="list-style-type: none"> • Auto Maintenance - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------------------|---|-----------------------|
| | <p>request type where the offset category is set to Auto Maintenance.</p> <ul style="list-style-type: none"> • Regular - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to Regular. | |
| Adjustment Type | <p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p> | Yes |
| Default Offset Amount Algorithm | <p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p> | Yes |
| Defer Processing FT Count | <p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|---|---|
| | <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p> | |
| Approval Required | Used to indicate whether approval is required while offsetting bills through an offset request. | No |
| Approval To Do Type | <p>Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Approval To Do Role | <p>Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Type | At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type. | Yes (Conditional) |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------------|--|---|
| | <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p> | <p>Note: This field is required when the Approval Required option is selected.</p> |
| Submitter To Do Role | <p>Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval.</p> <p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p> | <p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p> |
| Bill Search Period | <p>Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.</p> <p>Note: If you do not specify any value, by default, it is set to 30.</p> | No |
| Transfer Adjustment | <p>Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.</p> <p>Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. | | Note: If you select the Bill Line Items Level Offset option, you need to ensure that Match Type Entity (Valid Values: BILL, BSEG, SA) parameter in the C1-OFST-DIST algorithm (which is attached to the Creating Adjustment status in the lifecycle of the C1-OffsetRequest business object) is set to BSEG . | |

Tip: Alternatively, you can copy an offset request type by clicking the **Duplicate** button in the **Offset Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request type, if required.
7. Click **Save**.

The new offset request type is defined.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- [Search Offset Request](#) on page 1683

Through this screen, you can navigate to the following screen:

- [Offset Request \(Used for Viewing\)](#) on page 1689

Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for an offset request using the offset request or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details | Yes |
| | Note: By default, the Request Details option is selected. | |
| Offset Request ID | Used to search a particular offset request. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created From | Used to search offset requests which are created from a particular date onwards. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| User ID | Used to search offset requests which are created by a particular user. | No |
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Created To | Used to search offset requests which are created till a particular date. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| | Note: This field appears when the Request Details option is selected from the Search By list. | |
| Status | <p>Used to search offset requests with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset <p>Note: This field appears when the Request Details option is selected from the Search By list.</p> | No |
| Person ID | <p>Used to search offset requests which include bills of a particular person.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.</p> | No |
| Offset Request Type | <p>Used to search offset requests which are created using a particular offset request type.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list.</p> | No |
| Account ID | <p>Used to search offset requests which include bills of a particular account.</p> <p>Note: This field appears when the Request Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> | No |
| Bill ID | Used to search offset requests which include a particular bill. | No |

| Field Name | Field Description | Mandatory (Yes or No) |
|-------------------|---|-----------------------|
| | <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p> | |
| Bill Date From | <p>Used to search offset requests which include bills created from a particular date onwards.</p> <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | No |
| Alternate Bill ID | <p>Used to search offset requests which include a particular bill.</p> <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | No |
| Bill Date To | <p>Used to search offset requests which include bills created till a particular date.</p> <p>Note: This field appears when the Bill Details option is selected from the Search By list.</p> | No |

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|----------------------------|---|
| Creation Date Time | Displays the date and time when the offset request is created. |
| Offset Request Information | <p>Displays information about the offset request.</p> <p>Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.</p> |
| Offset Amount | Displays the total amount which is offset through the offset request. |
| Status | <p>Indicates the status of the offset request. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected |

| Column Name | Column Description |
|---------------|---|
| | <ul style="list-style-type: none"> Unapplied Offset |
| Created By | Indicates the user who has created the offset request. |
| Creation Mode | Indicates whether the offset request is created manually or automatically. The valid values are: <ul style="list-style-type: none"> Automatic Manual |
| Primary Bill | Indicates the bill for which the offset request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**.
A sub-menu appears.
- Click the **Search** option from the **Offset Request** sub-menu.
The **Offset Request** screen appears.
- Enter the search criteria in the **Search Offset Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

1. Do either of the following:

| If you want to... | Then... |
|--|---|
| Create a single offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a single offset request. 5. Click Single Offset. |
| Create a mass offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a mass offset request. |

| If you want to... | Then... |
|---|---|
| | 5. Click Mass Offset . |
| Create a cross currency offset request from the Account Receivable Central screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a cross currency offset request. 5. Click Cross Currency Offset. |
| Create a single, mass, or cross currency offset request from the Offset Request screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Accounting and Receivable and then click Offset Request. A sub-menu appears. 3. Click the Add option from the Offset Request sub-menu. |

The **Add Offset Request** screen appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|--|-----------------------|
| Offset Request Type | Used to indicate the offset request type using which you want to create the offset request. | Yes |
| Bill | <p>Used to indicate the bill which you want to offset through the offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Bill field. On clicking the Search icon, the Bill Search window appears.</p> <p>On specifying the bill, the information about the bill appears corresponding to the Bill field.</p> | Yes |

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

2. Enter the required details in the **Add Offset Request** screen.
3. Click **Save**.

The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.

4. Add debit and/or credit bills in the offset request.
5. Define characteristics for the offset request, if required.

Viewing the Offset Request Details

Procedure

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the offset request in the **Offset Request** zone.

Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- Search for a debit or credit bill based on bill, account, or person details
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request

- View the financial transactions of an auto maintenance offset request type
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request
- Add a log entry for the offset request

It consists of the following tabs:

- [Offset Request - Main](#) on page 1690
- [Offset Request - Log](#) on page 1701

Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- [Offset Request](#) on page 1690
- [Selected Bills](#) on page 1693

Note: This zone appears when you are viewing the debit and credit bills added to the offset request.

- [Search Bill](#) on page 1694
- [Offset Request Adjustments](#) on page 1698

Note: This zone appears when you are viewing the offset or transfer adjustments created for the bill through the offset request.

- [Auto Maintenance Financial Transactions](#) on page 1699

Note: This zone appears when you are viewing the details of an auto maintenance offset request.

Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

| Field Name | Field Description |
|----------------------------|---|
| Offset Request Information | Displays information about the offset request. |
| Offset Request Type | Indicates the offset request type using which the offset request is created. Note: It has a link. On clicking the link, the Offset Request Type screen appears where you can view the details of the respective offset request type. |
| Status | Indicates the status of the offset request. The valid values are: |

| Field Name | Field Description |
|---------------------|--|
| | <ul style="list-style-type: none"> Approval In Progress Defer Unapplied Deferred Processing Draft Rejected Processed Unapplied Offset |
| Status Reason | <p>Indicates the reason why the offset request is rejected or unapplied (i.e. canceled).</p> <p>Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason. This field appears when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status.</p> |
| Adjustment Type | <p>Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request.</p> <p>Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.</p> |
| Offset Amount | Displays the total amount which is offset through the offset request. |
| Account Information | <p>Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This field appears when you are viewing the details of an auto maintenance offset request.</p> |
| Comments | <p>Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request.</p> <p>Note: This field appears when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status.</p> |

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

| Column Name | Column Description |
|----------------------|---|
| Effective Date | Displays the date from when the characteristic is effective for the offset request. |
| Characteristic Type | Indicates the characteristic type. |
| Characteristic Value | Displays the value of the characteristic type. |

- **Record Actions** - This section contains the following buttons:

| Button Name | Button Description |
|-------------|---|
| Edit | Used to edit the details of the offset request. |
| | Note: The Edit button appears when the offset request is in the Draft status. |
| Delete | Used to delete the offset request. |
| | Note: The Delete button appears when the offset request is in the Draft status. |
| Submit | Used to submit the offset request. |
| | Note: The Submit button appears when the offset request is in the Draft status. |
| Approve | Used to approve the offset request. |
| | Note: The Approve button appears when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request. |
| Reject | Used to reject the offset request. |
| | Note: The Reject button appears when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request. |
| Unapply | Used to unapply (i.e. cancel) the offset request. |
| | Note: The Unapply button appears when the offset request is in the Processed status. |

- **Record Information** - This section contains the following fields:

| Field Name | Field Description |
|------------------|---|
| Business Object | Indicates the business object using which the offset request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Status Date/Time | Displays the date and time when the offset request status is updated |
| Create Date/Time | Displays the date and time when the offset request is created. |

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

| Column Name | Column Description |
|------------------------|--|
| Bill Information | Indicates the debit or credit bill which is added to the offset request. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill. |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. |
| Bill Date | Displays the date when the debit or credit bill is created. |
| Debit Balance | Displays the sum of unpaid debit line items of a bill. |
| Credit Balance | Displays the sum of open credit line items of a bill. |
| Credit Bill | Indicates whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through a hold request. |
| Offset Amount | Displays the amount which you want to offset from the debit or credit bill. |
| Remaining Bill Balance | Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status. |
| Updated Hold Amount | Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status. |
| Account Information | Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. |

| Column Name | Column Description |
|-------------|-----------------------|
| Bill ID | Displays the bill ID. |

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4010.

Search Bill

The bills listed in the **Search Bill** zone varies depending on the following scenarios:

| If... | Then... |
|--|---|
| The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed bills of all accounts of its effective child persons. If the primary bill is a debit bill, it lists credit bills of the main customer and its child persons. However, if the primary bill is a credit bill, it lists debit bills of the main customer and its child persons. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer and its child persons which are in USD. |
| The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). If the primary bill is a debit bill, it lists credit bills of the main customer. However, if the primary bill is a credit bill, it lists debit bills of the main customer. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer which are in USD. |
| The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD. |

| If... | Then... |
|--|--|
| The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD. |
| The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in the currency other than USD. |
| The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N | The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in the currency other than USD. |
| The offset request is created through the Offset Request screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y | <p>The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|------------|---|-----------------------|
| Search By | Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Person Details | Yes |

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| | <ul style="list-style-type: none"> Account Details Bill Details <p>Note: By default, the Person Details option is selected.</p> | |
| Person ID | <p>Used to search completed bills of a particular person.</p> <p>Note: This field appears when the Person Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.</p> | No |
| Bill Date From | <p>Used to search completed bills which are created from a particular date onwards.</p> <p>Note: By default, it is set to a date which is calculated as follows: Bill Date To - Bill Search Period (Specified in Offset Request Type)</p> | Yes |
| Bills on Hold | <p>Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are:</p> <ul style="list-style-type: none"> No Yes | No |
| Bill Date To | <p>Used to search completed bills which are created till a particular date.</p> <p>Note: By default, it is set to the current date.</p> | Yes |
| Bill Balance | <p>Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are:</p> <ul style="list-style-type: none"> Equal to Zero Greater Than Zero Less Than Zero Not Equal to Zero | No |

| Field Name | Field Description | Mandatory (Yes or No) | | | | | | |
|-----------------------------|---|-----------------------------|-----------------------|-------------|-------------------|------------|----------------|--|
| | <p>Note:</p> <p>If a single or cross currency offset request is created through the Account Receivable Central screen, this field is disabled, and by default, it is set to the following:</p> <table border="1"> <thead> <tr> <th>If the primary bill is a...</th> <th>Then, it is set to...</th> </tr> </thead> <tbody> <tr> <td>Credit Bill</td> <td>Greater Than Zero</td> </tr> <tr> <td>Debit Bill</td> <td>Less Than Zero</td> </tr> </tbody> </table> | If the primary bill is a... | Then, it is set to... | Credit Bill | Greater Than Zero | Debit Bill | Less Than Zero | |
| If the primary bill is a... | Then, it is set to... | | | | | | | |
| Credit Bill | Greater Than Zero | | | | | | | |
| Debit Bill | Less Than Zero | | | | | | | |
| Show Cross Currency Bills | <p>Used to indicate whether you want to search completed bills in the currencies different from the primary bill.</p> <p>Note:</p> <p>This option is disabled when a single or cross currency offset request is created through the Account Receivable Central screen.</p> <p>By default, this option is selected when a cross currency offset request is created through the Account Receivable Central screen.</p> | No | | | | | | |
| Account ID | <p>Used to search completed bills which created for a particular account.</p> <p>Note:</p> <p>This field appears when the Account Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p> | Yes | | | | | | |
| Bill ID | <p>Used to search a particular completed bill.</p> <p>Note:</p> <p>This field appears when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p> | No | | | | | | |

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

| Column Name | Column Description |
|--------------------------------------|---|
| Bill Information | <p>Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> |
| Bill Date | Displays the date when the debit or credit bill is created. |
| Due Date | Displays the date when the debit or credit bill is due for payment. |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through an hold request. |
| Outstanding Amount (Offset Currency) | <p>Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset.</p> <p>Note: This column appears when the offset request is a cross-currency offset request.</p> |
| Account Information | <p>Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> |

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

| Button Name | Button Description |
|-------------|---|
| Add | Used to add a bill to the offset request. |

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

Viewing the Debit and Credit Bills Added to an Offset Request

Procedure

To view the debit and credit bills which are added to an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.

- View the debit and credit bills added to the offset request in the **Selected Bills** zone.

Viewing the Adjustments Created Through an Offset Request

Procedure

To view the adjustments created through an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

- Ensure that the **Main** tab is selected.

- In the **Selected Bills** zone, click the

Broadcast () icon corresponding to the bill whose offset or transfer adjustments you want to view.

The **Offset Request Adjustments** zone appears.

Note: The **Broadcast** () icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

- View the offset or transfer adjustments created for the bill through the offset request in the **Offset Request Adjustments** zone.

Viewing the Advance Deposit Adjustment created through a Delinquency Process

Procedure

To view the advance deposit adjustments created through a delinquency process:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the advance deposit adjustment created through a delinquency process in the **Adjustment** zone.

Adding a Debit or Credit Bill to an Offset Request

Prerequisites

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

Procedure

To add a debit or credit bill to an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears when the offset request is in the **Draft** status.

The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of completed bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a completed bill that you want to add to the offset request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the offset request.

Note: You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

8. Click OK.

The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

Note: The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see [CI-OFFST-AMT](#) on page 1662.

Editing an Offset Request**Prerequisites**

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the offset request.
- **Characteristics** - Used to define the characteristics for the offset request.
- **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

Note: You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

The **Main** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Offset Request Information | Displays information about the offset request. | Not applicable |
| Offset Request Type | Indicates the offset request type using which the offset request is created. | Not applicable |
| Adjustment Type | Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request. Note: The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field. | Yes |
| Comments | Used to specify additional information about the offset request. | No |

Note: The **Edit** button appears when the offset request is in the **Draft** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request, if required.
7. Edit the offset amount of a debit or credit bill, if required.
8. Remove a debit or credit bill from the offset request, if required.
9. Click **Save**.

The changes made to the offset request are saved.

Defining a Characteristic for an Offset Request

Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

The **Characteristics** section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------|--|--|
| Effective Date | Used to specify the date from when the characteristic is effective for the offset request. | Yes (Conditional) |
| | | Note: This field is required when you are defining a characteristic for the offset request. |
| Characteristic Type | Used to indicate the characteristic type. | Yes (Conditional) |
| | Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request . | Note: This field is required when you are defining a characteristic for the offset request. |
| Characteristic Value | Used to specify the value for the characteristic type. | Yes (Conditional) |
| | <p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> | Note: This field is required when you are defining a characteristic for the offset request. |

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the offset request.

Editing the Offset Amount of a Debit or Credit Bill

Prerequisites

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

Procedure

To edit the offset amount of a debit or credit bill:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

The **Offset Details** section contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------------------|--|-----------------------|
| Total Debit Offset Amount | Displays the total offset amount of all debit bills which are included in the offset request. | Not applicable |
| Total Credit Offset Amount | Displays the total offset amount of all credit bills which are included in the offset request. | Not applicable |
| Total Offset Amount | Displays the sum of the total debit and credit offset amount. | Not applicable |

In addition, this section contains the following fields in a grid:

| Field Name | Field Description | Mandatory (Yes or No) |
|--------------------------------------|--|-----------------------|
| Bill ID | Indicates the debit or credit bill which is added to the offset request. | Not applicable |
| Outstanding Amount | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill. | Not applicable |
| Due Date | Displays the date when the debit or credit bill is due for payment. | Not applicable |
| Debit Balance | Displays the sum of the unpaid debit line items of a bill. | Not applicable |
| Credit Balance | Displays the sum of the open credit line items of a bill | Not applicable |
| Credit Bill | Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable. Note: You cannot select this option for a debit bill for which no credit line item exists, and therefore, in such case, this option is disabled. | No |
| Hold Amount | Displays the amount of the debit or credit bill which is kept on hold through an hold request. | Not applicable |
| Outstanding Amount (Offset Currency) | Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. | Not applicable |

| Field Name | Field Description | Mandatory (Yes or No) |
|------------------------|--|-----------------------|
| | Note: This field appears when the offset request is a cross-currency offset request. | |
| Offset Amount | Used to specify the amount which you want to offset from the debit or credit bill. | Yes |
| Remaining Bill Balance | Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). | Not applicable |
| Updated Hold Amount | Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. | Not applicable |

The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
3. Click **Save**.

The changes made to the offset request are saved.

Removing a Debit or Credit Bill from an Offset Request

Procedure

To remove a debit or credit bill from an offset request:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.
2. Click the **Delete** (🗑️) icon corresponding to the debit or credit bill that you want to remove from the offset request.

A message appears confirming whether you want to delete the bill.

Note: The **Delete** (🗑️) icon appears corresponding to the secondary debit or credit bills. It does not appear corresponding to the primary debit or credit bill. This is because you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

3. Click **OK**.

The debit or credit bill is removed from the offset request.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to submit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

| If... | Then |

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an offset request:

1. Do either of the following:

| If you want to... | Then... |
|--|--|
| Approve an offset request through the Offset Request screen | <ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review. |
| Approve an offset request through the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. |

| If you want to... | Then... |
|-------------------|---|
| | <ol style="list-style-type: none"> <li data-bbox="639 207 1349 279">2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. <li data-bbox="639 310 1143 338">3. Enter C1-OFSRQ in the To Do Type field. <li data-bbox="639 369 1360 441">4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. <li data-bbox="639 472 1393 543">5. Select the Open option from the Filter by list to view all unassigned To Dos. <li data-bbox="639 575 1393 646">6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review. |

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

The system behaves in the following manner:

Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

| If you want to... | Then... |
|---|--|
| Reject an offset request through the Offset Request screen | <ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review. |
| Reject an offset request through the To Do List screen | <ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review. |

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------|--|-----------------------|
| Status Reason | Used to indicate the reason why you want to reject the offset request. | Yes |
| Comments | Used to specify additional information while rejecting the offset request. | No |

Note: The **Reject** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Rejected**.

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request when the offset request is in the **Processed** status.

Prerequisites

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Procedure

To cancel an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to cancel.

The **Offset Request** screen appears.

- Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|----------------|--|-----------------------|
| Unapply Reason | Used to indicate the reason why you want to cancel the offset request. | Yes |
| Comments | Used to specify additional information while canceling the offset request. | No |

Note: The **Unapply** button appears when the offset request is in the **Processed** status.

- Select the reason for canceling the offset request from the **Unapply Reason** list.
- Click **Save**.

The system behaves in the following manner:

| If... | Then... |
|---|--|
| The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the C1-DFRUNAPPLY algorithm) | The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to Unapplied Offset . |
| The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the C1-DFRUNAPPLY algorithm) | The system changes the status of the offset request to Defer Unapplied . On executing the Offset Request Periodic Monitor (C1-OFSRQ) batch, the system considers the offset requests which are in the Defer Unapplied status. The system then cancels the frozen transfer or offset adjustments of the offset request and |

| If... | Then... |
|-------|---|
| | changes the status of the offset request to Unapplied Offset . |

Viewing the Log of an Offset Request

Procedure

To view the log of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the offset request in the **Offset Request Log** zone.

Adding a Log Entry for an Offset Request

Procedure

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request for which you want to add a log entry.

The **Offset Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

| Field Name | Field Description | Mandatory (Yes or No) |
|---------------------|---|-----------------------|
| Request Information | Displays information about the offset request. | Not applicable |
| Log Details | Used to specify additional comments for the offset request. | Yes |

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Offset Request Log** zone.

Chapter 24

Funding Request

Topics:

- [Prerequisites](#)
- [Funding Request \(Without Approval\) Status Transition](#)
- [Funding Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-FundingReq](#)
- [Funding Request Type](#)
- [Funding Request \(Used for Searching\)](#)
- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.

- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.
- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

| Bill Type | Funding Amount for the Bill |
|-------------|--|
| Debit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) |
| Credit Bill | Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in the funding request) |

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic**

Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1722.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Funding Request (Without Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

Algorithms Used in C1-FundingReq

The following table lists the algorithm which is attached to the **C1-FundingReq** business object:

| System Event | Algorithm | Algorithm Type | Description |
|--------------|-------------|----------------|---|
| Information | C1-FUNDINFO | C1-FUNDINFO | Refer to C1-FUNDINFO on page 1725 |

The following table lists the algorithms which are used in the lifecycle of the **C1-FundingReq** business object:

| Status | System Event | Algorithm | Algorithm Type | Description |

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding

request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm type completes the To Do entries that are linked to an object when the object exits the given status.

It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount}$). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount} - \text{Garnishment Amount}$). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
 - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
 - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).

- **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1728
- [Funding Request Type](#) on page 1729

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

| Column Name | Column Description |
|----------------------|--|
| Funding Request Type | Displays the funding request type. |
| Description | Displays the description of the funding request type. |
| Edit | On clicking the Edit (✎) icon, the Funding Request Type screen appears where you can edit the details of the funding request type. |

| Column Name | Column Description |
|-------------|---|
| Duplicate | On clicking the Duplicate (📄) icon, the Funding Request Type screen appears where you can define a new funding request type using an existing funding request type. |
| Delete | On clicking the Delete (🗑️) icon, you can delete the funding request type. |
| | Note: You can delete a funding request type when you have not created a funding request using the funding request type. |

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

| Field Name | Field Description |
|--|---|
| Funding Request Type | Displays the funding request type. |
| Description | Displays the description of the funding request type. |
| Funding Request Business Object | Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. |
| | Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. |
| Detailed Description | Displays additional information about the funding request type. |
| Status | Indicates the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive |
| Funding Amount Currency | Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone. |
| Account Funding Currency Characteristic Type | Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency. |

| Field Name | Field Description |
|-------------------------------------|--|
| Default Funding Adjustment Type | Indicates the adjustment type using which the funding adjustments must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type. |
| Default Garnishment Adjustment Type | Indicates the garnishment adjustment type using which the garnishment adjustments must be created. |
| | Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type. |
| Threshold Range Algorithm | Indicates the threshold range for a bill based on the payments done for the bill. |
| | Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. |
| Defer Processing Count | Displays the number of bills to determine if the funding request will be processed in deferred mode. |
| | Note: If the number of bills is less than the Defer Processing Count , the funding request will be processed in real time (i.e. immediately). |
| Approval Required | Indicates whether approval is required while creating the funding adjustments using the funding request type. |
| Approval Profile | Indicates the approval profile which must be used to define approval hierarchy for the funding request type. |
| | Note: The Approval Profile field appears when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile. |
